Your Company's trade for the year has increased at nearly double the rate of the national average, and so far this trend has continued since the beginning of our new financial year.

FERTILIZERS & CHEMICALS LIMITED

HAIFA, ISRAEL

OUTPUT CONTINUES TO RISE

INTERNATIONAL DEBENTURES LOAN FLOATED

The Annual General Meeting of FERTILIZERS & CHEMICALS LIMITED, was held in Haifa on October 6th, and the following are details of the report presented by the Board:

REVIEW

The liquidity position was strengthened as a result of the consolidation of outstanding Government loans into one long-term 5 per cent loan.

Production of several new chemicals was started during the year and the expansion programme progressed according to plan.

A comprehensive technical and financial survey of the Company was prepared by EBASCO, the noted New York firm of industrial consultants. The 84-page report summarises its conclusions as follows:

"The fiscal year ended March 31, 1958, may be considered the pivotal period wherein a sound basis for profitable operations was established. Assuming a reasonable political and economic climate, profits should increase substantially in the future.

"Most of the plants are less than five years old and were of the latest design available when constructed. They have been maintained in excellent condition and modifications in processes and equipment have uprated most of the units to well above the original design capacity. The plants are operated at very high efficiencies and are comparable to facilities throughout the world."

The labour force rose to 1,116 employees during the year.

OUTPUT AND SALES

Total sales increased by some 10 per cent over the previous year to reach IL 22,325,000. Production in excess of home requirements was exported.

Output of plants increased by 10 per cent to 50 per cent and improvements in equipment and processes raised production in most units to levels well beyond the capacity for which they were originally designed. Production costs per ton of output continued to decrease despite higher wages.

The range of fertilisers for the home market was further expanded whilst the production programme was diversified by including more industrial chemicals.

New products marketed for the first time during the year included nitric acid, concentrated nitrogenous solution and sodium pyrophosphate. Production of mixed liquid fertilisers containing nitrogen and phosphorus is planned to begin shortly. Developments during the first quarter of the current year were very satisfactory. Production and sales figures follow a steady upward trend.

KADIMAH CHEMICAL CORPORATION

With the acquisition of all assets and liabilities of the *Kadimah Chemical Corporation*, whose plant occupies an adjacent site, the Company entered the field of organic chemistry, taking over and expanding the production of detergents for household and industrial uses.

The Company also acquired all the rights for the *Kadimah* petrochemical process, which will enable it to manufacture a new type of synthetic detergent and organic by-products.

ENGINEERING DIVISION

The division was occupied mainly with design and construction connected with the nitrogen expansion programme. A dry ice plant is due to be completed in 1959 and plans for mixed granulated fertiliser and aluminium sulphate (from Negev clay) are being drawn up.

The division is equipped to take a project from initial research and economic evaluation through pilot plant and design stages to the handing over of a tested production unit to the client.

A number of plants were designed and built for other organisations in Israel and for the first time equipment developed by the Company was sold abroad. A Belgian company purchased the feed-grade di-calcium phosphate process, including three pressure filters designed by the Division. Negotiations with other foreign interests are in an advanced stage.

RESEARCH

The Research Division has been engaged in developing processes for new liquid and compound fertilisers and a broad range of industrial chemicals for sale at home and abroad.

Several new phosphate salts based on local raw materials were developed, and commercial production of these salts has begun. Research was also conducted on the manufacture and reactions of elemental phosphorus.

FINANCE

The ratio between fixed assets and bank credits improved, but difficulties are still experienced in adapting working capital resources to the continually rising turnover and the credits required by domestic consumers. Foreign exchange credits were granted by foreign institutions as a means of financing the expanding commercial operations.

To improve the position, two further measures were recently taken. A second agreement with the Government provides for the conversion of a further amount of IL 7 million of Government loans into ordinary shares. It was also decided to promote an issue of convertible debentures to the amount of IL 10 million. Half of the amount, to be raised in Israel, is earmarked for the financing of the expansion programme. The other IL 5 million is to be raised abroad against foreign exchange, for the purpose of liquidating current foreign debts and strengthening the liquidity position.

The local issue was oversubscribed and proved the growing interest of the wider public in the development of the local chemical industry.

PROFITS AND DIVIDENDS

Net profits amounted to IL 1,080,736 and it was accordingly proposed to distribute IL 259,369 as a 6½ per cent dividend on ordinary and approved investment shares: IL 680,387 as a 5½ per cent dividend on all preference shares; IL 42,836 representing dividend on all shares allotted on April 22, 1959; to carry forward the balance of IL 48,144.

The report, the accounts and the proposals put forward by the Board of Directors were adopted.

EXECUTIVE DIRECTORS

General Y. Dori, Chairman; A. Goldberg, Managing Director; Y. Ami, Administration; Dr H. Bernstein, Development; Dr M. Jacobsen, Commercial; J. Motiuk, Production.

ASSOCIATED ENGINEERING LIMITED

RAPID EXPANSION OF BUSINESS

RE-APPRAISAL OF CAPITAL EXPENDITURE PROGRAMME

The thirteenth annual general meeting of Associated Engineering Limited was held on January 15th in London, Mr Henry R. Moore (the Chairman) presiding.

The following is an extract from his circulated statement:

The results for the six months to March 31, 1959, reported on April 30, 1959, showed a material reduction over the corresponding period of 1958. In the spring of this year, however, the business of virtually all sections of the Group underwent a very marked change for the better, with the result that the profits before taxation for the second half of the year show an increase of approximately £592,000 over the same period of 1958.

Group Turnover for the year, in spite of the experience of the first half-year, has shown a substantial increase over last year; the profits before taxation of £2,955,590 have exceeded the record achieved last year. The major part of the year's increase has come from the expanding activity of the second half of the year both in the Home and Export Markets, which has been made possible by the large capital investment we have made during the past three years.

Owing to the reduction in the standard rate of income tax during the year, the tax charge in the accounts shows a small reduction to 48 per cent of profits, against 51 per cent in 1958. Total undistributed profits of the Group for the year amounted to £870,520, while the cash retention from Depreciation and Retained Profits amounted to £1,626,199. Out of this figure capital expenditure absorbed £746,000, leaving a useful amount to carry forward to meet the heavy programme contemplated for the future.

From the balance of profits after deducting taxation and dividends, and after adding the taxation and pension provisions no longer required, £1 million has been transferred to General Reserves and £87,449 to Capital Reserves. This latter figure is part of the sum required to write off the goodwill on the acquisition of the South African Subsidiaries.

The liquid position of the Group remains strong, with net current assets amounting to £5,170,122, including cash and realisable investments of £2,246,919. Your Board is confident that this figure, together with the anticipated retentions of the next few years, will be sufficient, without calling on shareholders, to enable us to carry out the further programme of modernisation and expansion which is outlined later in this statement.

In my statement last year, I said that in view of our commitments and the then reducing level of activity in our business, your Board did not feel justified in recommending any change in the rate of dividend on the Ordinary Stock. With the change in conditions generally and with greatly improved prospects ahead of us, this is no longer so. The Board has therefore recommended an increase in the total payment for the year from the previous equivalent rate of 13½ per cent, to 17½ per cent, less tax, by the payment of a final dividend of 12½ per cent, less tax, on the Ordinary Stock as increased by the capitalisation issue made in January, 1959. It is our intention to ensure that shareholders, in common with all who work in our Group, will continue to share in its future growth and development.

CAPITAL EXPENDITURE

The rapid expansion of the Group's business in the second half of the 1959 financial year and the projected demands of our chief customers for the next few years have necessitated a complete re-appraisal of our Capital Expenditure programme. It is clear that after the set-back in 1958 and early 1959, the level of activity of industry generally, and in particular of the vehicle industry, is now again on the increase. The British Motor Industry has announced a number of very large expansion schemes which will become operative over the next two to three years. It is therefore vital that our Group should have ready the increased production facilities to meet this anticipated expansion in demand.

It is not possible at the moment to give an accurate estimate of the cost of the next phase of our expansion programme, but it is expected that over the next three to four years the total may well exceed £5 million.

Capital Expenditure Schemes totalling £2,100,000 have already been sanctioned by the Board against which, at 30th September, 1959, commitments of £580,000 had been made. It is estimated that of this figure about £1,250,000 will be spent in the current year.

EUROPE AND THE COMMON MARKET AREA

The Common Market Area has probably the greatest potential for expansion of any industrialised trading area in the world, especially in the field of vehicle and engine manufacture. The effect of the formation of the Common Market on British trade with the countries concerned is now becoming clearer; we ourselves are finding it increasingly difficult to expand or even maintain the level of business which we had built up since the end of the war. It is not only the effect of tariff adjustments, but also the easier communications enjoyed between supplier and customer, which gives the Continental producer an advantage over us.

We have given this problem very serious consideration and have come to the conclusion that the only course to adopt, if we wish to maintain our existing share of the market and benefit from its expansion in the future, is to manufacture in the area ourselves.

In our view the best method of doing this was to purchase an existing producer, as a base on which to expand our activities, rather than start from scratch ourselves. Since the end of the financial year we have signed a contract for the purchase of the business of Pistone Borgo of Turin, Italy, the leading manufacturer of pistons in that country. One of our reasons for deciding on Italy as our base was that the Italian producers of pistons and piston rings do not by any means supply all the requirements of their own vehicle industry. We felt that with the benefit of our technical knowledge and financial backing it should be possible to obtain not only a big part of the Italian business now enjoyed by other Common Market countries but also to supply other countries in this trading area.

FUTURE PROSPECTS

At the present time there appears to be no sign of any slackening in the demands of our Motor, Commercial Vehicle and Engine Building customers and our Export business continues to expand satisfactorily. At the same time the level of activity in industry generally appears to be rising. I must, however, add that both at home and abroad competition is extremely keen and some prices are becoming difficult to maintain at an economic level.

Unless, however, circumstances arise to alter the present generally favourable outlook, I can see no reason why the results for the current year should not be even more satisfactory than the last.

The report and accounts were adopted.

APEX (TRINIDAD) OILFIELDS

The 40th Annual General Meeting of Apex (Trinidad) Oilfields, Limited was held on January 20th in London.

Mr F. R. Cottell, chairman and joint managing director, presided and said that after provision for depreciation of fixed assets net oil revenue was £672,000. After providing £323,000 for taxation in Trinidad and the United Kingdom the net profit for the year was £470,000. The Directors recommended a final dividend of 1s. 6d. per 5s. unit of stock making a total dividend for the year of 2s. free of income tax per unit of stock.

Capital and reserves employed in the business totalled £6,466,000 and net current assets amounted to £4,681,000.

The year's production of crude oil and casinghead gasolene was 3,032,000 barrels and deliveries were 3,011,000 barrels.

The fall in oil prices continued during the Company's financial year and had been the major factor in the reduction in net oil revenue. Under the current sales arrangement with Texaco Trinidad Incorporated deliveries were restricted to 8,250 barrels per day including casinghead gasolene and this was the second important factor which had affected the results for the year.

The company was in the fortunate position, with its large revenue reserves and strong finances, of being able, if necessary, to supplement current earnings so that the drilling programme might be operated to the extent considered desirable and at the same time the payment of substantial dividends could be continued. The report was adopted.

LANCASHIRE COTTON CORPORATION LIMITED

MR R. M. LEE'S STATEMENT ON TRADING CONDITIONS AND THE REORGANISATION SCHEME

The Thirty-first Annual General Meeting of the Lancashire Cotton Corporation Limited will be held in Manchester on February 18th.

The following are extracts from the Statement by Mr R. M. Lee, the Chairman, as circulated with the Accounts for the year ended October 31, 1959:

ACCOUNTS

The Group Trading Profit for the year amounts to £1,679,976 compared with £2,735,243 last year.

The Board has decided to allocate £450,000 to Replacement of Fixed Assets Reserve and £100,000 to General Reserve, and recommends a final dividend of 12½ per cent, less tax, on the Ordinary Stock, which is the same as last year, and with the interim dividend of 5 per cent, less tax, paid in August, gives a total of 17½ per cent, less tax, for the year. The amount carried forward is £1,071,170 of which £282,415 is retained in the accounts of our subsidiaries.

TRADING CONDITIONS

It will be recalled that after the concentration which took place during the war, the industry experienced several years of prosperous trading whilst the world wide shortage of cotton goods was replaced. A slackening of demand which then occurred soon disappeared with the outbreak of the war in Korea only to be followed by a world wide recession in textiles. It soon became apparent that there was surplus manufacturing capacity in Lancashire and once again contraction of the industry commenced. The struggle for orders in these circumstances would undoubtedly have produced chaotic conditions in the spinning section but for the existence of the Yarn Spinners Association under which the producers voluntarily agreed not to make sales below reasonable minimum prices.

Meanwhile the influx of cotton textiles from Commonwealth sources in Asia expanded whilst the industry continued to make representations to the Government for some limitation to be placed upon these imports.

By 1958 the United Kingdom was importing more cotton textiles than were being exported.

Against this background in January, 1959 the Restrictive Practices Court decided against the continuance of the Yarn Spinners agreement and immediately yarn spinners margins were drastically cut to such levels that few mills could operate at a profit.

It was therefore with relief that the producing sections of the Industry heard early in 1959 of the agreement with Hongkong for the limitation of exports of cotton textiles to the United Kingdom and of the Government schemes for reorganisation and re-equipment of the industry, and towards the end of the year the limitation agreements with India and Pakistan.

About the limitation agreements I wish to say that although the agreed figures are much higher than United Kingdom producers can welcome, giving as they do some 25 per cent of our home market to these overseas producers whose costs are so much lower than our own, they nevertheless provide a basis upon which realistic planning for the future might take place but for two factors. The first of these is that there is no limitation on yarn exports to the United Kingdom and the second is the relatively short period covered by the agreements.

Her Majesty's Government, by its offer of a re-equipment grant obviously has a keen interest in a sound and prosperous cotton textile industry in Britain, and it is to be hoped that a continuation of these limitation agreements can be arranged, for no matter how efficient British mills may be and no matter how well equipped, they could not hope to compete in price with goods produced by labour paid on Asiatic wages rates.

REORGANISATION AND REDUNDANCY SCHEME

The success of this scheme is naturally heartening to all those remaining in the industry as it will undoubtedly create a much healthier state of trade. I do not doubt that the remaining plant and equipment in the producing sections will be able to cater adequately for the requirements of the market once the transitional difficulties are overcome but they can only do so if they and the operatives who run them can be employed efficiently and regularly. There are buyers who withhold orders for long periods for speculative reasons, whilst producers are compelled to operate for only three days a week, and who still expect to obtain deliveries quickly whenever the time seems propitious for the placing of large orders.

After careful consideration the decision was made to close down the Dowry, Willow Bank, Heron, Waterside and Orme Mills. In addition a considerable amount of machinery in other mills was registered for scrapping.

I believe that the compensation arrangements for displaced operatives which have been evolved and which will be paid for, not by the Government, but by those remaining in the industry, are both generous and enlightened being well in the forefront of any such arrangements in industry. In the Corporation about 1,000 people will be displaced because of the redundancy schemes but fortunately we have been or will be able to offer similar jobs in other mills to over 900 of those displaced, so that the total number of displaced persons for whom we cannot find alternative employment is under 100 or less than 1 per cent of our total labour force.

SALES

Although the year began very badly indeed because of the withholding of orders by buyers pending the result of the Yarn Spinners case I am pleased to report that the final total for sales for the year was the highest reached since 1950, but deliveries and production were in fact lower than in any year since 1945. This was entirely due to the disturbance of production caused by the excessive fluctuation in demand which we experienced. Since the end of our financial year we have continued to make sales at a heavy rate and we are exerting all our efforts to expand production to meet requirements. Although we have increased margins from the unduly low levels to which they had been driven in a ruthless buyers' market we have exercised great restraint and we propose to continue this as we believe this course to be in the best interests of the Corporation, the industry and the national economy. Unfortunately this policy has not always been clearly apparent to our customers as the period of increased demand coincided with some very sharp increases in raw cotton prices.

APPOINTMENTS

THE QUEEN'S UNIVERSITY OF BELFAST

The Senate of The Queen's University of Belfast invites applications for a Lectureship in Political Science from October 1, 1960. Salary £900 to £1,650 plus F.S.S.U. Initial placing on the scale will depend on experience and qualifications. A special interest in political institutions or in public administration is desirable.—Applications should be received by March 1, 1960. Further particulars may be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR

Applications are invited for the post of ASSISTANT LECTURER in the DEPARTMENT of ECONOMICS, to teach ECONOMIC HISTORY.

The salary scale is £700 by £50 to £850 per annum, and in addition there are F.S.S.U. benefits and family allowances. The appointment will date from October 1, 1960.

TWO copies of the application should reach the undersigned, from whom further particulars may be obtained, not later than February 22, 1960.

KENNETH LAWRENCE, Secretary and Registrar.

UNIVERSITY OF LEICESTER

Applications are invited for ASSISTANT LECTURESHIPS in BRITISH ARCHAEOLOGY, ECONOMICS, ECONOMIC HISTORY, SOCIOLOGY, and SOCIAL STUDIES. Initial salary according to qualifications and experience; present scale £700 to £850 a year with family allowances and membership of F.S.S.U.—Further particulars from the Registrar, to whom applications should be sent by February 15th.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for two Assistant Lectureships in Economics (one of which will be particularly concerned with Monetary Economics). Salary scale £700 x £50–£850 a year plus £60 London Allowance with superannuation benefits and family allowances. In assessing the starting salary considerations will be given to age and experience. Candidates should indicate their special fields of interest.

Applications, with the names of three referees, should be received not later than February 12, 1960, by the Secretary, The London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2, from whom further particulars may be obtained.

For further appointments and other classified advertisements see pages 370 and 371

CAMBRIDGE UNIVERSITY

HAROLD SAMUEL STUDENTSHIPS

Studentships, value £400 per annum, tenable from October 1, 1960, are offered for research in economic, legal, or social matters relating to the use, tenure or development of land. Applications must reach the Registrary, The Old Schools, Cambridge, not later than March 15, 1960. Further particulars may be obtained from the Secretary, Board of Estate Management, 74 Trumpington Street, Cambridge.

FOREIGN OFFICE

offers an appointment to the Academic Staff of Wilton Park, Steyning, Sussex, for discussions on British policy and international relations with leaders of European public opinion. Practical experience in politics or international relations and/or degree in economics, history or other social sciences required. Bilingual French indispensable. Working knowledge of German desirable. The post is unestablished. Accommodation. Salary £1,315 rising to £1,590. Write, giving age, full details of experience and qualifications to Manager (P.F. 114), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Closing date February 25th.

COMPANY AFFAIRS

Watney Mann

THE new property company promised both in May and September last year by the chairman of Watney Mann, Mr Simon Combe, has been formed with a capital of £4.650.000 in 5s. ordinary shares. Just under half of these shares will be issued to ordinary stockholders of Watney Mann on the basis of one 5s. share for every £1 ordinary stock held. Giving shares in Watney Mann Property a hypothetical value of not more than 7s. 6d., this would bring the price of Watney Mann (Brewing) down to 77s. 9d. and the yield up to about 3.9 per cent on the twice covered 15 per cent dividend. The directors forecast that the property shares themselves will pay a dividend of 1½ per cent for the year ended September 30, 1960, and 3 per cent in 1961.

The parent company has sold properties, including 87 public houses, to its property-holding subsidiary for £4.656,750. Some of these properties will be leased back to the parent company at economic rents; leases of several properties at "rack rents" have been negotiated and this should mean the initial net rents of £121,500 will increase in the near future. Independent valuers have found that many of the properties are suitable for early development as shops, offices and "other commercial premises."

In his annual report Mr Combe says that there is a surplus of £3,928,330 over book value on the properties still held by the parent company: the accounts for the year to September 30, 1959, have not been altered to show the change. But the biggest effect on the company's balance sheet has been from the sale of parts of the Stag Brewery site.

The major part was sold on lease to the City of London Real Property company for a premium of £2¼ million, which has been paid in instalments. In three years the company will receive ground rent of £135,000 a year plus 10 per cent of the equity profit from development on the property. Two other parts of the site will be sold to the new Watney Mann Property Company for development: planning permission has been given for more than 60,000 square feet of office accommodation on one site and "provisional" planning permission for 30,000 square feet on another. If the ground rent is valued at 6 per cent the eventual worth of the site to the company will be more than £6 million, not including money from the sale and exchange of some other properties which balanced up the site. The premium will help to re-establish the company's cash resources, heavily drained by the modernisation and expansion of the Mortlake and Whitechapel breweries. Outstanding capital commitments on September 30th amounted to £1.279.000. covered by liquid funds of around £2 million. Mr Combe says, however, that the group's position is not as strong as the directors would like, but the balance of the premium (received after the end of the financial year) plus the benefits that should accrue from the concentration of production, should help augment the group's liquid balances.

Bowmaker

A DOUBLING of gross profit in the year to October 31, 1959, from £1,026,524 to £2,303,851, was broadly foreshadowed at the time of the rights issue in September, and is in line with the experience of other finance houses in this period, but it is still a remarkable result. Net profits show an even steeper increase, from £453,901 to £1,142,006. However, the preliminary statement still held an element of surprise, for the final dividend of 20 per cent is 2½ points more than that forecast in September. This makes the total for the year 27½ per cent and means an effective doubling of the dividend for ordinary shareholders, as the same rate was paid last year on the capital before the 100 per cent scrip issue. In addition, Lloyds Bank has this year received a full dividend on its 25 per cent holding. Bowmaker is to make a further scrip issue, which is to be on a one for two basis.

Over the year to end-October the company's HP debt soared from £22.4 million to £51.1 million. Unearned charges and interest have trebled from £1.7 million to £5.2 million and it is clear that Bowmaker's profits in the current year should be as impressive as those now announced. This is the justification for 3.1 per cent yield basis on which the 5s. units stand at the current price of 44s.

Granada

WHEN Granada Television's agreement with Associated Rediffusion for the net working of programmes comes to an end in July, it will have "a beneficial effect" on the results of the Granada group: but Mr Sidney Bernstein, reporting this week on the results for the year to September 26th last, was not to be drawn about how beneficial. Clearly the arrangement which, as Mr Bernstein said, protected Granada from the initial losses on television that other programme contractors encountered, has considerably dimmed the lustre of its "licence to print money" in the ensuing heyday of commercial television: this year when earnings may be levelling off and programme costs are tending to rise, Granada will cease to pay the price of that early, protective assistance. But since the financial year of its television subsidiary ends in April, it will not be until early 1962 that the results of terminating the agreement are reflected in the profits of the Granada group. From April last year to the present, Mr Bernstein added, television profits have been "comparable with that for the corresponding period last year."

Granada theatres—most of which, basically cinemas, can present live shows and several of which have recently done so—have done rather better in their attendances than the cinema trade as a whole, as might indeed be expected of this company. But the policy of the group appears to be quite hard-headed towards this, its original enterprise: Granadas often occupy very good trading sites, and whenever site values appear likely to yield more than cinema operation, the group is ready to dispose of the properties or convert them to other purposes. On its technical side, the group has developed a "standards converter" which makes it possible for recordings made on Britain's 405-line picture system to be shown readily on America's 625-line or Europe's 525-line system.

The group's dividend of 80 per cent for 1958-59, as forecast, plus a 25th anniversary bonus of 10 per cent, will absorb with payments on the first and second preference shares £419,025 of the net profit of £797,290, which compares with £257,129 for the year before. With continued development of its Manchester television centre, purchase of the freehold of its London offices, and expansion of its ancillary businesses, Granada's fixed assets now stand at £4,186,371.

F. W. Woolworth

SHAREHOLDERS should be fairly satisfied with the results of Woolworth's golden jubilee year, for profits before tax have risen by no less than 10½ per cent and the ordinary dividend is being raised from 40 per cent to 45 per cent. Nevertheless, the market was disappointed, as last year, that the preliminary statement made no mention of a scrip issue.

Profits before tax in the year to December 31st, 1959, have risen from £25,597,085 to £28,283,712. After a rise in the tax charge from £13,561,840 to £14,279,966 (including £530,000 to reserve for equalising capital allowances), net profits are left some £1.968,501 higher at £14,003,746 so that the increased ordinary dividend (absorbing £9,302,344) is still covered about one and a half times by earnings. In addition, ordinary shareholders have received this year a special dividend of 6¾ per cent to mark Woolworth's 50 years' trading.

This further major increase in trading profits has been achieved in a year in which Woolworth has advertised for the first time both in the national press and on television. No doubt the impact of its campaign has contributed to increased sales—which have also had the benefit of the general rise in spending. Contrary to the expectations of many people, Woolworth is continuing to hold its own in the chain store field. At 63s. 3d. its 5s. shares yield 3½ per cent on the 45 per cent dividend.

Richard Thomas and Baldwins

RICHARD THOMAS AND BALDWINS' preliminary figures are especially interesting on two counts. The rise of 26 per cent in trading profits in the year ended October 3, 1959, from £8,030,668 to £10,181,220 is one of the best performances reported by the steel makers; secondly, these are possibly the last yearly trading figures that will be available before the company is denationalised. Earnings have now climbed back to their 1956-57 level, thanks to the buoyant demand for sheet steel and tinplate together with economies following the closure of the group's old type works. The increase in net earnings from £1,614,037 to £1,872,085 is not quite so impressive, but this figure is struck after deducting the appropriation to fixed assets replacement reserve, which has almost doubled from £1,400,000 to £2,250,000. Depreciation takes £3,135,933 (against £2,596,519), taxation absorbs £2,980,814 compared with £2,638,598, and the ordinary dividend of 13½ per cent is covered about 2.1 times by earnings.

The group has won two new contracts worth £2 million each. One is for the supply of sinter plant which it is hoped will be in commission by 1961, and the other, due to be completed by March, 1961, is for the manufacture of handling plant such as coal crushing and conveying machinery.

Stewarts and Lloyds

Two factors were mainly responsible for the 20 per cent fall in Stewarts and Lloyds' net earnings, from £6.6 million to £5.4 million, in the year to September 30, 1959. Demand for tubes and pipes from the oil industry dropped sharply, home deliveries falling by 38 per cent and exports by 41 per cent; and increasing competition in export markets squeezed profit margins on most of the group's steel products. But the chairman, Mr A. G. Stewart, expects the improvement in demand from all the group's customers (except the oil industry), which got under way towards the end of the financial year, to continue—with a resultant increase in profits. At home the demand for general purpose tubes in the last quarter of 1959 showed "a marked upward trend" and demand for quality tubes has also continued to expand. Mr Stewart says that exports to customers other than the oil industry increased by 25 per cent in 1958-59. Some "good orders" for seamless tubes were obtained from the Soviet Union.

Stanton Ironworks had a difficult year. Demand for pig-iron at home fell, but the surplus output was switched to export markets and exports of pig-iron in 1958-59 were more than 30 per cent higher than in the previous year. Mr Stewart says that the directors are "taking active steps to meet the requirements of the newer industries such as nuclear power" and the production of alloy steel and alloy steel tubes is to be increased.

The full accounts show that bank overdrafts have risen to £11,251,000 from £5,940,000 at the beginning of the year. Capital expenditure during 1958-59 totalled £11,700.000 and the directors expect to spend about £18.719.000 on future capital developments. The "rights" issue made after the election brought in some £13.700,000, and although most of this will be used to pay off the group's overdraft, Mr Stewart says that the group will need "the assistance of our bankers for some time." Capital commitments of £5.990,000 (against £10.530,000) are comfortably covered by a cash flow (depreciation provisions plus retained profits) of some £6.700,000.

Colvilles

THE full report from Colvilles, which contains no chairman's statement, shows that the group's capital commitments at end-September, 1959, amounted to £12,300,000, covered by a cash flow of about £10 million and liquid funds of some £8.500,000. At the time of the publication of the preliminary statement the directors said that the Government had agreed to advance up to £50 million to help finance the new slabbing mill at Ravenscraig; but "as great a proportion as possible of the total capital expenditure for the strip mill scheme should come from the company's own resources." Clearly the directors' determination to finance the bulk of the heavy capital programme from retained earnings explains the strength of the company's liquid resources as well as the 5.4 times cover on the 1958-59 ordinary dividend.

One of the surprising features about Colvilles' trading experience in 1958-59 was that in spite of a marked fall in output of coke, pig-iron and steel ingots and castings gross profits advanced by 6 per cent from £11,152,075 to £11,813.912. This is now to some extent explained by the balance sheet which shows a fall in stocks from £17.431.000 to £15.559.000. The £1 ordinary shares at 75s. 6d. yield 3.7 per cent.

Lancashire Steel

EXPENDITURE on Lancashire Steel's development programme in 1958-59 totalled £2.035,721, comfortably covered by a cash flow of some £3,400,000. No chairman's statement accompanies the full report but the directors say that the second stage of the new blast furnace bunker system at the Irlam works was completed; the second large capacity blast furnace and the continuous billet mill are nearly ready. At Warrington a new cooling bed has almost been completed and at the Rylands factory new wire drawing machinery and nail packaging plant have been installed.

Lancashire Steel has the distinction of reporting the biggest jump in trading profits among the steel companies in 1958-59: a rise of 25 per cent, from £4.1 million to £5.2 million. Its broad range of products (from heavy nails to wire fencing) put the group in a good position to benefit from the expected spreading of economic recovery, which last year was confined mainly to the consumer goods industries. Thus with the main part of the expansion plan completed, the 1958-59 dividend of 8½ per cent covered 3.4 times by earnings and liquid funds up from £2.5 million to £4.6 million, the prospects of a more generous dividend policy seem fairly bright. The £1 ordinary shares at 51s. yield 3¼ per cent.

Leyland and ACV

LAST year a sharp revival in demand helped the commercial vehicle makers to climb out of the recession that hit them in 1957. The general improvement in trading conditions was not the only reason for the recovery: what Lord Brabazon, the

chairman of Associated Commercial Vehicles, calls the sudden "release of pent-up orders" which followed the abolition of the 30 per cent purchase tax on commercial vehicles in April, also played its part. **Leyland Motors,** which is the largest commercial vehicle maker in the United Kingdom, last week reported a rise in trading profits in the year ended September 30, 1959, from £5,937,646 to £6,277,135; after depreciation of £1,261,587 (against £1,228,550) and a tax charge of £2,156,137 compared with £2,237,982, net earnings are up by £639,885 to £2,685,630. The ordinary dividend is to be raised from 12½ per cent to 15 per cent.

Leyland makes a wider range of vehicles than **Associated Commercial Vehicles** and this may to some extent explain why the recovery in ACV's earnings is more spectacular. Trading profits in the year ended September 30th almost doubled from £432,000 to £966,000 and net earnings after tax shot up from £163,003 to £538,238; the ordinary dividend was duly raised from 15 per cent to 17½ per cent. In his statement with the full report Lord Brabazon says that the recovery in sales was not confined to the home market in spite of the tendency of some countries to manufacture locally. ACV's exports, in fact, increased substantially; but in the future foreign markets are bound to be affected by the growth of local manufacturers, so the directors have decided that ACV should establish its own manufacturing footholds in these markets. Last year, for instance, "a substantial holding" in a South African public company, J. H. Plane, was acquired, and in association with that company a new subsidiary has been set up (AEC Vehicles SA) which will manufacture and market the AEC range of vehicles in South Africa. An interest in the European common market has been established with the formation of AEC Continental SA—a joint enterprise with G. Spitals SA of Belgium, which has been marketing ACV's products for many years.

Demand for commercial vehicles has been given another fillip by the election result, which removed fears of nationalisation and has prompted many road hauliers to step up their re-equipment; the current financial year should therefore see no falling-off in business for the main commercial vehicle makers. ACV's £1 shares at 77s. 3d. yield 4½ per cent and Leyland's £1 shares at 76s. offer a return of nearly 4 per cent.

Westinghouse Brake

RECORD profits and an increase in the ordinary dividend from 10 per cent to 11 per cent are reported by the directors of Westinghouse Brake. In the year ended October 3rd trading profits advanced by some 25 per cent from £2,035,101 to £2,557,488, and a higher tax charge of £1,121,503 (against £997,683) leaves net earnings of £1,287,108, compared with £867,049. Following announcement of the results the £1 ordinary shares fell by 1s. 3d. to 55s., mainly because the market was hoping for an increase of 2 per cent in the distribution.

In 1958-59 trading conditions could hardly have been better. British Railways' modernisation programme involving the switch-over from steam to electric and diesel locomotives (for which Westinghouse makes the brakes); the modernisation of signalling equipment on the railways as well as in the coal mines; the recovery in the commercial vehicle trade; and the popularity of motor scooters made by the group's subsidiary Douglas (Kingswood)—all contributed to the group's best trading year ever. On the 11 per cent ordinary dividend, which is covered 2.7 times by earnings, the £1 shares yield 4.0 per cent.

British Industrial Plastics

IN his statement last year the chairman of British Industrial Plastics, Mr E. R. Crammond, warned shareholders that smaller profit margins were to be expected. Yet profits before depreciation and tax in the year to September 30th rose by 14 per cent, from £979,129 to £1,113,026. Achievement of this increase in profits in a period of diminishing margins indicates a marked rise in turnover.

Although the charge for depreciation rose by £29,595 to £310,110, tax was lower by almost the same amount so that net profits showed an increase of some 45 per cent, from £312,508 to £445,616. After being kept at 20 per cent for the past four years, the ordinary dividend is increased to 22½ per cent and is still covered more than twice by earnings. In addition the directors are to make a one for one scrip issue and shareholders are likely to take this as a favourable indication of further increases in distribution. Their optimism may be justified, for while BIP has shared fully in the postwar expansion in the plastics industry, several of its products, including Filon structural sheeting (used by the building industry) have only recently been put on the market. In addition BIP should gain an increasing benefit from trading links formed both in Holland and Germany. At 12s. 7½d. the 2s. shares show a rise of 1s. 3d. over the week and yield 3½ per cent.

Inveresk Paper

LAST September the chairman of Inveresk Paper, Mr C. Snelling, estimated that the group's trading profits for 1958-59 would not be "materially different" from those of the previous year. In the event, gross earnings have risen sharply from £3,012,268 to £3,207,940, and after a higher depreciation charge of £524,717 (against £482,064) the net profit is up some 21 per cent from £1,212,928 to £1,515,056. The ordinary dividend is to be raised by 2 per cent to 10 per cent tax free and the ordinary shares are to be written up from 6s. to 10s. by capitalising £2,610,000 of reserves.

London Stock Exchange

FIRST DEALINGS:	Jan. 11	Jan. 25	Feb. 8
LAST DEALINGS:	Jan. 22	Feb. 5	Feb. 19
ACCOUNT DAY:	Feb. 2	Feb. 16	Mar. 1

ON the Tuesday before Bank rate was raised to 5 per cent equity markets suffered their sharpest setback since September 19, 1957, when bank rate was raised to 7 per cent. Jobbers attributed the wave of small selling—which began with a persistent trickle on Monday—primarily to a gloomy television broadcast which compared the post-election boom with the 1929 crash; but warnings from bank chairmen on the present level of equity prices and continued fears of a rise in Bank rate—later to be well justified—also played their part. On Wednesday prices were still sensitive but a fair amount of buying by institutional investors taking advantage of lower prices induced a slight recovery and many shares showed net gains on the day. After the increase in Bank rate equity prices moved erratically but after some selling at the close they showed net losses.

Gilt-edged stocks were dull though a certain amount of two-way business developed on Wednesday. On Thursday, after the rise in Bank rate 3½ per cent War Loan dropped sharply by 1⅞ to 63 and in short-dated stocks 4½ per cent Conversion fell ⅞ to 99.

Industrial equities lost ground all along the line and the biggest falls were suffered by those shares which had been in the forefront of the recent advance. Steel shares took one of the worst knocks. Steel of Wales lost 1s. 1½d. to 49s. 7½d. United Steel, after dropping to 80s. 9d. showed a net loss of 1s. at 81s. 3d. Heavy engineering shares also lost some of their recent gains: William Doxford lost 6s. 9d. to 105s. 3d., Davy-United fell 7s. 4½d. to 109s. 6d. Textile shares also came back with English Sewing 1s. 9d. down at 47s. and Fine Spinners 1s. 3d. lower at 30s. Aircraft shares were fairly buoyant following the mergers within the industry and de Havilland gained 2s. 3d. to 31s. 3d., Westland put on 4½d. to 20s. and Hawker Siddeley closed 2s. better at 32s. 1½d. But aircraft shares also came down on Thursday, with Hawker Siddeley falling to 31s. 4½d.

Among equity shares which did not join the general decline were Triplex which shot up 7s. 9d. to 103s. 9d. following the 200 per cent scrip issue. Aspro Nicholas closed 8s. 9d. up at 38s. 9d. and Griffith Hughes gained 7s. 6d. at 57s. 6d. on the proposed take over.

Oil shares tended to drift lower in sympathy with Wall Street and in spite of a slight recovery on Wednesday most of the leaders showed net falls over the week to Wednesday. Burmah fell 1s. to 51s. 6d., Shell lost 2s. to 155s. 6d. and BP closed 2s. down at 57s. 9d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended January 16, 1960, there was an "above-line" surplus (after allowing for sinking funds) of £131,584,000 compared with a surplus of £73,199,000 in the previous 9 days and a surplus of £95,252,000 in the corresponding period of last year. There was a net expenditure "below-line" of £1,818,000, leaving a total cumulative deficit to date of £843,827,000 compared with £720,452,000 in 1958–59.

THE MONEY MARKET

BANK Rate went up from 4 per cent to 5 per cent on Thursday and the fixed rates in the money market moved correspondingly, the banks' deposit rate to 3 per cent and their minimum rate on call loans to the discount houses to a nominal 3⅜ per cent. Although the immediate timing of the Bank rate increase surprised the City as a whole, it had been discounted to more than the usual degree in the money market. On Friday of last week the Treasury bill rate rose above 3¾ per cent (which some people had thought of as the maximum under a 4 per cent Bank rate). The discount market lowered its bid for 91-day bills by a further 2d. to £99 1s. 1d. and the average rate of discount was £3 15s. 7.79d.

In America, by contrast, the Treasury bill rate for three months maturities fell back for the second week, from 4.590 per cent to 4.436 per cent.

Credit conditions turned easier this week and on Monday and Tuesday there was a surplus of funds. On Wednesday, with the clearing banks striking their monthly balances, money was in keen demand and two or three houses were forced to borrow a very small amount from the Bank at 4 per cent.

THE INDUSTRIAL AND GENERAL TRUST LIMITED

(Incorporated under the Companies Acts, 1862 to 1886)

SHARE CAPITAL

Authorised		*Issued and Fully Paid*
£1,750,000	in 4½% Cumulative Preference Shares of £1 each...	£1,750,000
£5,625,000	in 22,500,000 Ordinary Shares of 5s. each ...	£5,625,000
£625,000	in 2,500,000 Unclassified Shares of 5s. each ...	—
£8,000,000		£7,375,000

LOAN CAPITAL

£883,000 3½% Debenture Stock
(issued and outstanding)
£1,617,000 1960-80 Convertible 3½% Debenture Stock
(issued and outstanding)
£2,000,000 5½% Debenture Stock 1982 87
(the Stock now being issued)

With the exception of the above-mentioned Debenture Stocks the Company has no debentures, debenture stock, mortgages or other loan capital outstanding. The Company has unsecured advances from its Bankers which on 15th January, 1960, amounted to £51,008. The Company has the right to issue further stock ranking *pari passu* in point of security with the above debenture stocks to an aggregate amount not exceeding with the above debenture stocks the issued share capital for the time being of the Company.

The subscription list will open at 10 a.m. on Wednesday the 27th day of January, 1960, and will close on the same day.

ABRIDGED PARTICULARS

of an Issue of

£2,000,000 5½ per cent. DEBENTURE STOCK 1982 87 at £99 10s. PER CENT. payable as follows:—

On application	£50 0s. per cent.
On 1st June, 1960	£49 10s. per cent.
	£99 10s. per cent.

Applications must be for multiples of £100 Stock with a minimum of £100 and must be made on the Forms supplied.

Applications by Preference and Ordinary Shareholders of the Company and holders of the existing Debenture Stocks of the Company on the Register at the close of business on 11th January, 1960, will receive preferential treatment if made on the special pink form provided.

The Prospectus shows (*inter alia*):—

(1) The total net assets of the Company as shown by a Balance Sheet at 30th September, 1959, before deduction of Debenture Stocks amounted to ... £11,097,532
Add the estimated net proceeds of this issue ... £1,934,000
£13,031,532

The figure of £13,031,532 is sufficient to cover the £4,500,000 Debenture Stock (which includes the existing £2,500,000 Debenture Stock) over 2¾ times.

(2) A valuation of the Company's investments at 30th September, 1959, shows a total of £36,257,411. This is sufficient to cover the £4,500,000 Debenture Stock over 8 times.

(3) The average of the annual profits for the 5¼ years to 30th September, 1959, is £1,543,025, a sum sufficient to cover one year's interest on the £4,500,000 Debenture Stock 7¾ times.

(4) The profit for the year to 31st March, 1959, was £1,683,686 which is sufficient to cover one year's interest on the £4,500,000 Debenture Stock 8¼ times.

Copies of the Prospectus on the terms of which alone Applications will be considered, together with Forms of Application, may be obtained from NATIONAL PROVINCIAL BANK LIMITED, New Issue Department, P.O. Box No. 71, 22, Old Broad Street, London, E.C.2, or any branch of the Bank or from the Registered Office of the Company or from the Brokers named below.

YOU
MRS. POLICYHOLDER
have a hand in high finance

When your husband took out his life assurance policy, it was probably for purely family reasons. He wanted to protect you and the children if anything happened to him. He also planned to build up a nest-egg for his retirement. He thought—and so did you—that Life Assurance was by far the most sensible way of saving. Both of you value the freedom from worry which your policy gives you.

But your interest in your husband's policy is much more than a personal one. As the nation's most important form of personal saving, Life Assurance has played a big part in curbing inflation—and so has an influence for good on the size of the household bills. Money from Life Assurance provides finance for Britain's industrial expansion—and that means a higher standard of living, more and better paid jobs and more security for everyone.

Through LIFE ASSURANCE
a better life for you and for everyone

Issued by The Life Offices' Association, London, and Associated Scottish Life Offices, Edinburgh

AEI

A.E.I.-HOTPOINT LIMITED

wish to make the following appointments

CHIEF ACCOUNTANT

This is a challenging new appointment arising from the continued expansion of the Company

WITH THE FOLLOWING IMPORTANT DUTIES

* The preparation of financial accounts.
* The provision of accounting services including invoicing and machine accounting.
* The provision of management control reports for three factories and a number of Sales Offices in U.K.
* Control a Staff of about 250.

QUALIFICATIONS AND EXPERIENCE REQUIRED

Applicants should be Chartered Accountants and have held managerial responsibility for financial accounts, budgetary control and standard costing in a progressive company using modern mass production technique. The required age range is 30-40 and the location will be Kensington, London.

Salary. This is a senior appointment for which a really first class man is required. The policy of the company is to pay above average salaries for above average ability and performance. A first class pension scheme and other benefits are provided. (Ref.: 14/10/E.)

MANAGER OF FORECASTING

This appointment arises from the continued expansion of the Company and requires a man with first class intellect and breadth of vision.

WITH THE FOLLOWING IMPORTANT DUTIES

* Long range forecasting including cash flow, expenditure, sales and profits.
* Interpreting economic trends which may influence the Company's future operations.
* The preparation and supervision of budgets including capital expenditure cash, etc.
* In general alerting and guiding management as to the implications of long term financial developments.

QUALIFICATIONS AND EXPERIENCE REQUIRED

Applicants should be University graduates with a degree in Commerce or Economics and have had a sound training in accountancy. They must have had experience of forecasting in a large progressive company and also be accustomed to exercising a high degree of initiative and imagination. The required age range is 30-40 and the location will be Kensington, London.

Salary. The policy of the Company is to pay above average salaries for above average ability and performance. A first class pension scheme and other benefits are provided. (Ref.: 14/9/E.)

INTERNAL AUDITOR

WITH THE FOLLOWING IMPORTANT DUTIES

* The continuous review of financial records, costings, stock records, ordering procedure, plant registers and similar records and systems of internal check.
* Verification of assets and liabilities including stocks and cash balance held throughout the Company.

QUALIFICATIONS AND EXPERIENCE REQUIRED

Applicants should be Chartered Accountants and have had about three years' experience of professional auditing including the audit of large progressive manufacturing companies. They also should have had at least three years' experience as an Internal Auditor in a progressive mass-production company employing standard costing and budgetary control. The required age range is 30-40 and the location will be Kensington, London, but will entail frequent visits to factories and offices throughout the U.K. and later abroad.

Salary. The policy of the Company is to pay above average salaries for above average ability and performance. A first class pension scheme and other benefits are provided. (Ref.: 14/11/E.)

Applications, quoting appropriate reference, giving details of work history and training should be sent to :—

D. W. YORK, A.E.I.-HOTPOINT, LIMITED,
23, Grosvenor Place, London, S.W.1.

COUNCIL OF EUROPE RESEARCH FELLOWSHIPS

The Council of Europe awards annually a number of *Fellowships intended primarily to encourage research into the following questions, considered in the light of their present-day importance: (a) political, legal, economic, agricultural, social, educational and scientific problems connected with European integration; (b) European civilisation (philosophy, history, literature and the arts).*

The Fellowships are each of the value of 600,000 French francs and tenable for a period of eight months. The next awards will be made in July, 1960.

Candidates must normally be nationals of a Member State of the Council of Europe or of a State which has acceded to the European Cultural Convention. Refugees from European countries non-members of the Council, legally resident in the territory of a Member State, are also eligible.

The British Council assists in publicity and recruitment for these Fellowships in the United Kingdom.—Further particulars and forms of application, which must be submitted before March 1, 1960, may be obtained from the Director, Universities Department, The British Council, 65 Davies Street, London, W.1.

MSL *have been retained to advise on the appointment of*

INVESTMENT ASSESSORS & DEALERS

for

MINSTER TRUST LTD.

a group of investment companies which also undertakes new issues.

The company wishes to appoint two men who after a period of training, will be given responsibilities *including the constant supervision* of existing investments and the investigation and assessment of quoted securities.

Candidates must be between the ages of 25 and 30 and preferably should have had experience of stock exchange *practice and technique* or commercial experience. A degree is desirable.

Initial salary by negotiation, but will be up to £2,000 per annum.

Please send brief details in confidence, quoting reference N. 3165, to C. C. Dickinson. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given *full details* of the appointment.

MANAGEMENT SELECTION LIMITED
17, STRATTON STREET, LONDON, W.1

UNIVERSITY OF BELFAST

The Senate of the Queen's University of Belfast invites applications for an Assistant Lectureship in Political Science from October 1, 1960. Salary is on the scale £700 by £50 to £850 plus F.S.S.U. Initial placing on the scale will depend on qualifications and experience.—Applications should be received by March 1, 1960. Further particulars can be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

MATHEMATICIAN

for

OPERATIONAL RESEARCH

The Operational Research Department of The Steel Company of Wales Ltd., invites applications for the above position.

The successful candidate will have a joint responsibility with other mathematicians for advising his colleagues on mathematical questions and for the development of appropriate techniques. He will be expected to play a leading role in Operational Research projects.

The working environment is a very large and modern integrated iron and steel works, situated on the pleasant coastal plain of South Wales.

The Operational Research Department consists of about two dozen scientists, plus junior staff, working on a variety of problems, and employs its own Pegasus computer.

Please write, giving full details of age, experience, qualifications and any further information considered relevant, to :—

Superintendent, Personnel Services,
THE STEEL COMPANY OF WALES LIMITED
(STEEL DIVISION)
ABBEY WORKS, PORT TALBOT, GLAMORGANSHIRE

TUITION for English and modern European Languages. A New Language School will be opened in London. We invite tutors interested in lecturing and participating financially in this venture to write to our Accountants, R. C. Rudolf & Co., Balfour House, Finsbury Pavement, E.C.2.

THE UNIVERSITY OF LIVERPOOL

Applications are invited for TWO LEVERHULME POST-GRADUATE FELLOWSHIPS, one in the School of Architecture or the Department of Civic Design, and one in any Department of the Faculty of Arts. The Fellowships will be tenable for one year at a value of £600, but may be renewed for a second year.

Applications, three copies, stating age, qualifications and experience, proposed field of research, the names of two referees and, in the case of the Fellowship in Architecture or Civic Design, enclosing copies or photographs of work, should be received not later than March 1, 1960, by the Registrar, Quoting Ref. CVE, from whom further particulars may be obtained.

ORGANISATION & METHODS

The Birfield Group of Companies wishes to set up a central O & M Dept. An O & M Officer is needed to create and take charge of this function. He will be executively responsible to the parent company's Secretary who has been trained in O & M, and he will undertake assignments to advise companies of the Group. Applications are invited from men interested and experienced in this work. It is likely that the successful applicant will be aged 30-35, of sound commercial training, of 2 or 3 years' O & M experience, with the requisite personal qualities, and currently earning in excess of £1,000 p.a. This department will be located at the new offices of Hardy Spicer, Ltd., in Birmingham, and initial applications should be made stating age, education, training and experience to the Personnel Director, Hardy Spicer, Ltd., Chester Road, Erdington, Birmingham 24.

YOUNG man (age group 22-25) is offered interesting opportunity to assist in the management of the Investment Department of a middle-sized progressive Insurance Company. Economics and or statistical-mind research background would be useful and some previous commercial experience an advantage.—Write stating experience and salary required to Box 2269.

CONSETT IRON COMPANY LIMITED

MARKET RESEARCH

An interesting opportunity arises with the above Company for a young man, age 28-40, who wishes to break new ground in the fields of Market Research and Sales Development.

The successful candidate will be one who is a graduate in Economics or who holds a university degree with Economics as the principal subsidiary. He will have had some years' practical experience in Market Research, preferably in a large organisation in Heavy Industry.

He will be required to advise the Management of this large and integrated Steel Works on the development and extension of new and existing markets both in the home and export trade.

The Company is situated in North-West Durham, some 12 miles from Newcastle upon Tyne and is within very accessible distance of the seaside, the moors and the Lake District. Salary will be commensurate with age and experience but will certainly be such as to attract a first-class man.

A contributory Superannuation Scheme is provided as also is assistance with housing.

Applications, which will be treated in the strictest confidence, should be addressed to :—

THE PERSONNEL MANAGER,
CONSETT IRON COMPANY, LIMITED
CONSETT, Co. DURHAM.

THE UNIVERSITY OF MANCHESTER

Applications are invited for two posts at the grade of LECTURER or ASSISTANT LECTURER IN ECONOMICS at the Faculty of Economic and Social Studies. Candidates for one of the posts should have special interests in Banking and Monetary Institutions. Salary scales are: Lecturer £900 £50 £1,000 £50 £1,150 per annum; Assistant Lecturer £700 x £50 to £850 per annum; Senior Lecturer according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than February 20, 1960, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF NEW ENGLAND

ASSOCIATE PROFESSOR OF MATHEMATICAL STATISTICS.

Applications are invited for the above-mentioned position in the Department of Mathematics.

Salary will be at the rate of £A2,850 per annum. In addition a cost of living allowance is payable. Provision is made for Superannuation, travel and removal expenses, assistance in buying or building a house.

Further information may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on March 12, 1960.

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited for the post of Assistant Lecturer in Economics, the appointment being tenable from October 1, 1960. Salary in the scale £700 x £50 — £850 p.a., with F.S.S.U. and children's allowances. Applications should reach the Registrar, The College, Keele, Staffs., from whom application forms and further particulars may be obtained, not later than March 5, 1960.

THE British Wool Marketing Board invites applications for the post of ECONOMIST to the Board.

Candidates must *have good academic qualifications*, including statistics, and be capable of using accounting data. Experience of participation in commercial negotiations an advantage.

Starting salary between £1,100 and £1,350 according to qualifications and experience.

Applications should be sent to the Board at Templar House, 81-87 High Holborn, London, W.C.1, marked "Economist."

THE UNIVERSITY OF LIVERPOOL

Applications are invited for the post of Lecturer in either Economics or Economic History in the Department of Economics and Commerce. The initial salary will be within the range £900-£1,050 per annum, according to age, qualifications and experience.—Applications, stating age, *academic* qualifications and experience, together with the names of three referees, Quoting Ref. CVE, should be received not later than February 24, 1960, by the Registrar, from whom further particulars of the conditions of appointment may be obtained.

For other appointments see page 357

UNIVERSITY OF BELFAST

The Senate of The Queen's University of Belfast invites applications for a lectureship and an assistant lecturer in Economics from October 1, 1960. The salary scales are: Lecturer—£900 to £1,650; and Assistant Lecturer—£700 to £850, plus F.S.S.U. Initial placing on the scale will depend on experience and qualifications. The appointments are not restricted to any particular field, though an interest in modern economic history would be an advantage for one of them. Applications should be received by *February* 20, 1960.—Further particulars may be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary to the University.

PERSONNEL MANAGEMENT

A modern expanding industry with manufacturing and marketing interests in the U.K. and overseas has two vacancies in its Head Office Staff Department for men interested in Personnel Management either as a career in itself, or as valuable experience for the making of a career in some other direction.

A University education with some previous experience in industry are essential, and specialisation in recruitment at middle senior level, or in modern staff grading techniques, would be an advantage. Intelligence, personality, judgment and integrity of a high order are the personal qualities necessary to success in both positions. Which are of senior standing and importance and carry a starting salary of from £2,250 to £2,750 depending on experience, with excellent prospects for advancement.

Box 2270, The Economist, 22 Ryder Street, St. James's, S.W.1.

APPOINTMENTS REQUIRED

SENIOR EXECUTIVE 40, with wide financial and technical experience offers services to expanding Company engaged in light engineering, electronics, aviation or allied fields. Box 2271.

CHARTERED ACCOUNTANT (32), public school, OXFORD LAW GRADUATE, ex research worker, first class professional training and experience, seeks remunerative responsible appointment, London area. Box 2272.

THE ROYAL BANK OF CANADA
DIVIDEND NO. 209

Notice is hereby given that a DIVIDEND of 52½ cents per share upon the paid-up capital stock of this Bank has been declared for the current quarter and will be PAYABLE at the Bank and its branches on and after March 1, 1960, to shareholders of record at the close of business on January 30, 1960.

By Order of the Board,
K. M. SEDGEWICK,
General Manager.

January 20, 1960.

THE British Association of Accountants and Auditors, Limited (Incorporated 1923). The next Examinations will be held on Tuesday, Wednesday, Thursday and Friday, May 24, 25, 26 and 27, 1960. Membership can only be obtained by those who have passed the prescribed Examinations.—Copies of the Syllabus can be obtained from the Secretary, 4 Clareville Grove, South Kensington, London, S.W.7.

SHETLAND Faroe Services.—Provides the only direct link between Britain and the Faroe Islands. The luxurious ship m.v. "Tjaldur" will operate this service during the summer season of 1960, when once again holiday-makers are offered the opportunity of visiting the fascinating Faroe Islands.—Full particulars from sole booking agents, ROBERTSONS (LERWICK) LTD., Alexandra Wharf, Lerwick. Phone: Lerwick 34.

THIS IS YOUR LIFE when you project your colour slides of your children with the Feltz Prudorit F with armature control, £48 4s. od.—Wallace Heaton, Ltd., The Camera People, 127 New Bond Street, London, W.1.

REMPLOY SPONSORSHIP SCHEME

Send for details which show an attractive proposition to manufacturers.

Write to the Managing Director, Remploy Ltd., 25-28 Buckingham Gate, S.W.1, or telephone, VICtoria 8622 (12 lines).

TRANSLATORS wanted. All languages. Business and commercial. Good rates paid.—Box 2296, TEM 1202.

SAILING HOLIDAYS with Tuition. Enquiries: Captain R. R. Laws, R.I.N. (Rtd.), Ariadne Sailing School, Bembridge, Isle of Wight. Telephone Bembridge 355.

GOING TO IRELAND? Hire a 1960 car, self-drive or chauffeur driven, from John Purcell Car Hire, 36 Upper O'Connell Street, Dublin.—*Write for brochure and rates.*

INTELLIGENCE. May we test yours? Mensa needs more very bright people for its postal research panel. Send 9 in. x 4 in. s.a.e. to P. 9, Sandringham, Briscoe Road, Rainham, Essex.

MALE AND FEMALE office Vacancies.—Phone 7111 MISS STELLA FISHER BUREAU, 456 Strand, W.C.2. TEM 6644.

SAVILE ROW Suits or Overcoats from 10 gns. We have an excellent selection of Cancelled Export Orders, also, at most steep reductions, direct from leading Savile Row tailors including Huntsman, Sanders, Lesley & Roberts, Kilgour etc. Alterations carried out if necessary.—Regent Dress Company, 4 Dover Street (2nd Floor), Piccadilly, W.1. HYD 6233. Open 9 a.m.-5 p.m.; Sats., 1 p.m.

EDUCATION AND COURSES

UNIVERSITY OF EDINBURGH.

RESIDENTIAL COURSE FOR BUSINESS MANAGERS

The sixth RESIDENTIAL COURSE FOR BUSINESS MANAGERS will be held in the University from July 2 to 23, 1960. The aim is to encourage the development of a broader understanding of business problems and of the environment in which business operates, and then to assist in the transition from specialised to general management.

PROGRAMME OF STUDY

There will be three principal fields of study.—(i) Business in a Changing World. (ii) Problems of Business Policy. (iii) Aspects of Internal Administration. In addition to syndicate work and case-studies, seminars will be led by practising business and professional men as well as University teachers drawn from several departments, including Commerce, Political Economy, Accounting and Psychology.

ADMISSION

To encourage the exchange of knowledge and experience among members of the course, the number admitted will be strictly limited. There are no formal educational requirements. The fee for the course, including residence, is 90 guineas. Further particulars and nomination forms may be obtained from Professor N. G. Hunt, 29 George Square, Edinburgh, 8. Early application should be made: the closing date is March 12, 1960.

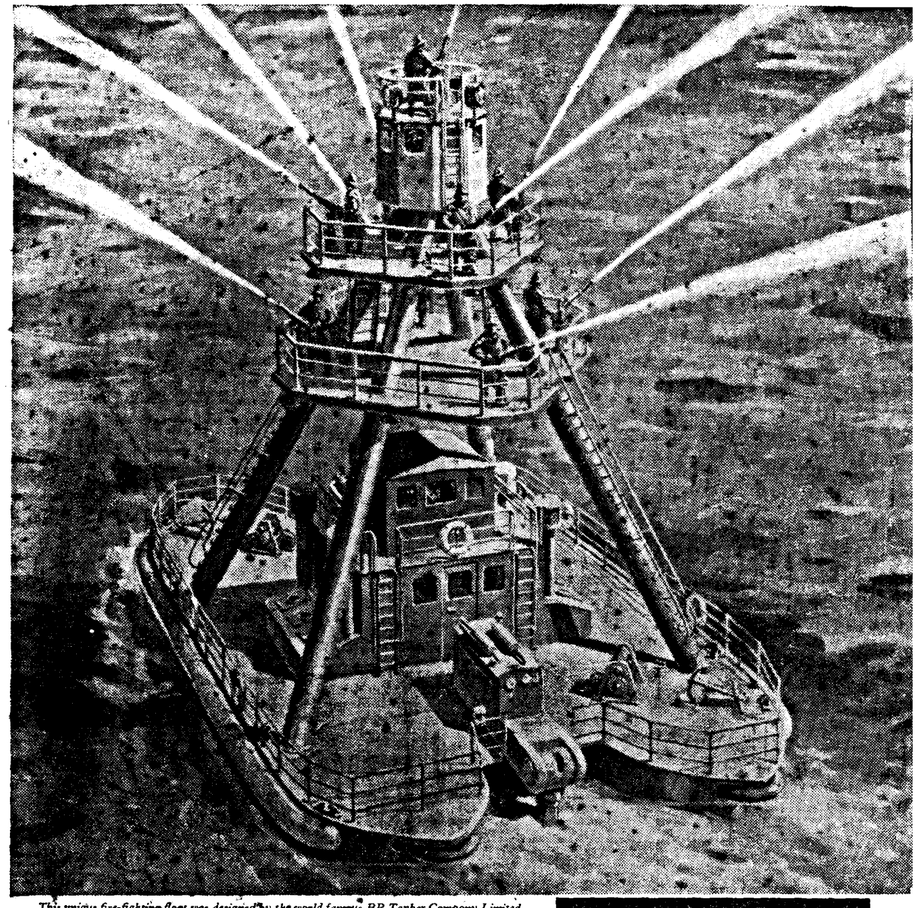
SUCCESSFUL TUITION FOR THE B.SC.ECON. DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ., three if entrance is included) at moderate fees. 1,149 Wolsey Hall students passed Lond. Univ. B.Sc.Econ. exams., 1956-58. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus *mention exams*) from C. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.25, WOLSEY HALL, OXFORD.

UNIVERSITY OF LONDON: A lecture entitled "Time in Economic Theory" will be delivered by Mrs. J. V. Robinson (Cambridge) at 5 p.m. on January 28th at the London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2. ADMISSION FREE, WITHOUT TICKET. Henry Green, Academic Registrar.

SECRETARIAL TRAINING, especially for university graduates, and older students; six-month and intensive one-week courses.—Write Oxford Secretarial, Dashwood House, 69 Holland Park Avenue, W.11. PARK 4654.

B.SC.(ECON.) LONDON UNIVERSITY



UNIVERSITY CORRESPONDENCE COLLEGE successfully prepares students for this Degree. Opportunity of Tutorial Classes which is a valuable examination aid, seeking executive appointments in commerce or industry, assessment of matriculation possible. Prospectus giving details of U.C.C. Courses for other London Degrees, G.C.E., Professional examinations in Secretarial and Business Subjects, from the Registrar, 60 Burgate, Canterbury.

EXPERT POSTAL TUITION

For Examinations: University, Law, Accountancy, Commercial, Civil Service, Management, Local, Company Secretaryship, Matriculation, G.C.E., Commercial Certificate of Education, etc. Also many practical non-examination courses in Business, Secretarial, Technical and Languages. Over 200 courses to choose from, including the complete course or subjects in which interested. Write for free prospectus stating your requirements to Dept. 1, METROPOLITAN COLLEGE, ST. ALBANS (or call at 30 Queen Victoria Street, London, E.C.4).

Registered as a Newspaper. Authorised as Second Class Mail, Post Office Dept., Ottawa. Printed in England by St. Clements Press, Ltd., London, E.C.4. Published by The Economist Newspaper Ltd., at 22 Ryder Street, London, S.W.1. Telephone: Whitehall 1511. Postage on this issue: U.K. 2d., Overseas 6d.

UNIQUE FIRE FLOAT FOR BP

This unique fire-fighting float was designed by the world famous BP Tanker Company Limited. It will patrol and protect Swansea Harbour against fire hazards.

PROTECTED BY **C-SENTRY** ZINC ALLOY ANODES.

For underwater protection of the float, C-Sentry zinc alloy anodes were chosen because of the remarkable success which has been achieved by this material in the field of cathodic protection. They have low initial and replacement costs and make good electrical contact with the structure protected. Advice on protection schemes is readily available.

New Office building in Finsbury Square, London for Finwil Properties Limited.
Architect: Reginald H. Gallannaugh, L.R.I.B.A., *Contractors:* Myton Limited.

"Is when a building stands behind it? Does the child mean a wall?"

"But of course he means a wall. A transparent wall, a translucent wall, or if you prefer it a wall of opaque panelling hung on concrete and steel."

"The child means WALLSPAN*?"*

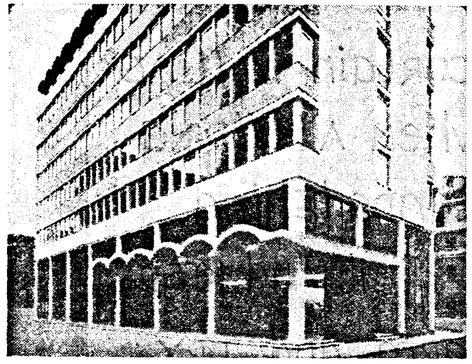
"That is undoubtedly what the child does mean—WALLSPAN—the name that Williams & Williams contributed to British Architecture—to World Architecture. The name for the glittering aluminium murals that form one or more sides of those soaring monolithic office-blocks, those airy garden-landscaped factories, those gay and utterly functional schools.

"With WALLSPAN the skeleton building is clad in days instead of weeks. WALLSPAN telescopes the time between the first glint in the architect's eye and moving-in day."

"Williams & Williams products make better buildings sooner?"

"Sooner—better—more beautiful even".

forward looking building products WILLIAMS & WILLIAMS



Williams & Williams make steel windows of every description, ALOMEGA and other aluminium windows, ROFTEN movable steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products.

STEEL FURNITURE AND PARTITIONING

in this impressive new building was supplied by

HARVEY

COTTS HOUSE

Camomile Street, London, E.C.3

Headquarters of the Mitchell Cotts Group of Companies

Architects: Sir Giles Scott, Son & Partners

THE SUPERIOR APPEARANCE and versatility of Harvey Steel Furniture and Equipment is strikingly demonstrated in this important City building. Adequate provision is made for the individual working needs of all members of the staff, whilst maintaining a harmonious effect throughout.

The many units supplied by Harvey include single and double pedestal DESKS, CHAIRS of various types, FILING CABINETS, CUPBOARDS, LOCKERS and SHELVING.

Certain offices are furnished with the Harvey 'CONFERENCE' DESK—the desk with the big top—together with supplementary units from the '400 - Style' range — BOOKCASES, TELEPHONE STANDS, SLIDING-DOOR CUPBOARDS, etc.

Six extensive floors were converted into offices by means of HARVEY STEEL PARTITIONING.

Excellent use is made of COLOUR in providing ideal working conditions. The general scheme is Duotone Grey, with desk tops in Terra Cotta. The Grey enamelled chairs are upholstered in Black moquette.

Harvey Steel Equipment is adaptable to the most modern conceptions of office planning, and is built to a standard which ensures prolonged trouble-free service.

THE MODERN LINES of Harvey Desks create an atmosphere of orderliness and efficiency. In open offices, as shown above, desks are arranged back-to-back, the tops being separated by shelf units which provide additional working area without encroaching on floor space.

TYPISTS' DESKS, illustrated above, are designed for maximum comfort and convenience. They provide all facilities for typing, yet occupy only 7 sq. ft. of floor space. The side pedestal incorporates a pull-out flap, 5 stationery drawers and a locking cupboard for personal belongings.

STEEL PARTITIONS in Cotts House are mostly of the Barrier type, with glass tops, as shown right. Full-height partitions, glazed, were also installed.

IF YOU ARE MOVING to new premises or wish to modernise your existing offices, ask for details of Harvey Steel Furniture and Partitions.

FRESH WATER FROM THE SEA

AT KUWAIT

Weir

SEA WATER DISTILLATION PLANT

at Kuwait will produce 3,120,000 gallons per day

The Government of Kuwait has recently ordered a Weir Multiflash Plant which will add 2,000,000 gallons of pure fresh water a day to the public supply of this thriving Sheikdom. This will bring the total contribution by Weir plant at Kuwait to 3,120,000 gallons a day—a record unequalled anywhere in the world.

Weir

PLANT

installed at or on order for

Andaman Is.
Egypt
Aden
Gibraltar
Lobitos
Kuwait
Bahamas
Aruba
Curaçao
Guernsey

WILL PRODUCE

10½ MILLION GALLONS PER DAY,

well over three quarters of the world's total output from land installations.

No other undertaking in the world can equal Weir "know-how" in the design, manufacture and installation of sea water distillation plant.

TO THE DELEGATES TO THE LAW-OF-THE-SEA CONFERENCE TO BE HELD AT GENEVA, AND THE GOVERNMENTS OF THE COUNTRIES CONCERNED

THIS IMPORTANT STATEMENT

IS ISSUED BY THE BRITISH TRAWLERS' FEDERATION, ON BEHALF OF THE BRITISH TRAWLING INDUSTRY, IN THE HOPE THAT IT WILL HELP TOWARDS A FAIR AND JUST SETTLEMENT OF FISHERY LIMITS

IT is in the world's interest that there should be a code of good conduct, with common wellbeing as the guiding principle, to govern international behaviour at sea.

During the Law-of-the-Sea Conference at Geneva in 1958, and in negotiations since then, Britain has tried to show that this country is not acting either selfishly or inflexibly. It hopes to find a like response from the majority of countries at the coming Geneva conference.

LIVE AND LET LIVE

The British distant-water fishermen are as vitally involved as anyone in the fishery limits dispute. They depend on these waters for their livelihood. But they believe that opposing interests can still be reconciled.

They are not aggressors; but they are concerned to ensure the future of an important industry that has been built up and sustained through the years. Since September, 1958, when Iceland unilaterally declared a twelve-mile fishery limit, British trawlers have had to be protected while they fish off Iceland. Throughout this period Iceland has refused either to enter into direct negotiations for a temporary settlement of the dispute pending an international agreement or to take the dispute before the International Court. Iceland has ignored all attempts to reach a temporary settlement.

THE NEED FOR CONSENT

The Iceland dispute is not simply one between a big power and a little power. It is about a principle that concerns all countries: the principle that the rights of states in international law depend on the consent of other states.

If this principle is wrong or outdated, Britain is not the only country that has been misled by it. The unilateral proclamation of new rights has serious consequences for everyone.

"EVERY STATE'S RIGHTS"

The British case against Iceland is in many ways the same case that Sweden and Denmark argued against the Soviet Union

British Trawlers' Federation's statement continued

in 1950-51, when they protested at what they called the "appropriation of the open sea, where the nationals of every state enjoy fishing and sailing rights without interference by other states".

But, of course, the Soviet Union has been willing to recognise certain customary fishing rights, despite its proclamation of a twelve-mile territorial limit and under the Anglo-Soviet Fishing Agreement of 1956, Britain continues to fish between twelve and three miles off parts of Russia's northern coast, an arrangement that is regularly used.

PREVENTING DISPUTES

Britain has upheld the three-mile limit in the belief that a uniform rule on that basis satisfied national sovereignty and prevented the multiplication of disputes. The rule was written into international agreements, such as the Convention of 1882, under which it was applied to western Europe.

But Britain has not contested the historic Norwegian limit of four nautical miles, based on the Scandinavian measurement of a marine league. Britain did not dispute this in the Anglo-Norwegian fisheries case of 1951.

BRITISH CONCESSIONS

At the start of the Law-of-the-Sea Conference in 1958, more countries still upheld the three-mile limit than any other single alternative. But Britain has been ready to make substantial concessions in order to reach a general agreement.

Britain gave its support at the conference to the United States' proposal for territorial waters of up to six miles and fishery limits up to twelve miles, with nations which have historically fished in individual areas being allowed to fish up to the six-mile limit. Britain has now signed an agreement with Denmark applying these ideas in Faroese waters.

SIX-PLUS-SIX

The six-plus-six proposal by the United States received 45 votes, including Britain's, and came closest of all to a two-thirds majority. It still seems the best compromise between modern security needs, fishery interests, and the fundamental freedom of navigation that all countries have an interest in preserving.

British policy is realistic. It is ready to distinguish between territorial limits and fishery limits. It is ready to admit that special economic needs exist in a country such as Iceland. This is recognised in the resolution on special situations relating to coastal fisheries adopted by the Law-of-the-Sea Conference on April 26, 1958 and supported by Britain. But we believe that any *universal* agreement must take account of the essential principles of international conduct. A most important one of these is surely the need for consent to changes.

"THE INTERNATIONAL ASPECT"

In 1951 the World Court ruling in the Anglo-Norwegian fisheries case pronounced against the arbitrary and unilateral extension of territorial waters. The court said: "The delimitation of sea areas has always an international aspect; it cannot be dependent merely upon the will of the coastal state as expressed in its municipal law".

UNANIMITY AND PERMANENCY

Britain believes that the Conference's guiding principle should be to give preference to solutions favouring *unanimity* and *permanency*. The general advantages that the old three-mile practice offered came largely from its attempt at uniformity.

It still seems possible for most states to accept a compromise settlement on territorial and fishery limits that is capable of universal application. If these limits are kept to a minimum, the invasion of existing interests on the high seas need not be unduly severe.

ACCEPTING ARBITRATION

Another principle that the British fishery industry supports is the necessity for arbitration and conciliation in disputes. This was admitted by the last Law-of-the-Sea Conference.

Together with the majority of nations, Britain is a signatory to the optional protocol on the compulsory settlement of disputes drawn up at the 1958 Conference. While Britain appreciates the reluctance of certain nations to subscribe to this protocol, it does believe that the practice of arbitration is necessary between states on complicated fishery issues. It is obviously desirable that when international agreement is reached, at whatever cost in concessions and exertions, there should be an assurance that it could not readily be upset again.

SCIENTIFIC CONSERVATION

The real answer is scientific conservation. It may be that some extension of territorial and fishery limits is necessary at this time for political reasons. But we believe that the proper way to satisfy claims for extended fishery limits for conservation's sake ought to be by scientific regulation, not simply by political action.

Knowledge of fish habits and movements has greatly increased, and it offers a much more effective and skilful system of control than proposals for broad fishery limits that sometimes may not, in fact, include the areas most in need of conservation. International opinion, including British opinion, is now more favourable toward scientific regulation than ever before. This is a chance to move with the times.

EXISTING CONVENTIONS

We fish in the north-east Atlantic where there has been in operation for some years past a convention that provides for certain types of conservation measures to be taken. Iceland has not taken the initiative under this convention in proposing any additional conservation measures.

Within the last year a new, and much more comprehensive, convention – the North-East Atlantic Fisheries Convention – has been adopted and signed by all the European states. Under this convention it will be possible to apply any kind of conservation measure to any species of fish that may appear necessary. The United Kingdom has been the first country to ratify this convention, and it hopes that the ratification of the other European states, including Iceland, will not be long delayed.

Continued overleaf

British Trawlers' Federation's statement continued

THE 1958 SOLUTION

The Law-of-the-Sea Conference in 1958 agreed on a comprehensive convention on fishing and the conservation of the living resources of the sea.

When this is ratified, coastal states will have the right to adopt unilateral but non-discriminatory conservation measures. These measures can become binding on other fishing states, subject to the resolution of disputes before a special commission of fishery experts. It is a sound solution because it requires the proper demonstration of the need for new conservation measures before disregarding other nations' rights.

FARMING THE SEA

The British fishing industry is ready to play its part with the fishermen of other countries who fish the north-east Atlantic in improving the scientific management of the fish stocks. The ideal should be for all countries to be able to farm the seas as efficiently as modern techniques now get the best out of the soil.

To achieve this it may be desirable to impose quantitative restrictions on the catch in certain areas. The British industry considers that such arrangements, which can be adequately enforced, are preferable to the total, and very possibly wasteful, enclosure of increasingly large sections of the high seas.

IMPORTANCE OF THE CONSUMER

The consumer matters. The British fishing industry belongs to north-west Europe, where there are 200 million people to feed. Other regions and countries have even larger tasks. It seems reasonable that each country should be able to bring home a substantial proportion of its fish in its own boats if it wants to.

In fact, the British share of the demersal fishery round Iceland has fallen from 37 per cent to 25 per cent in the past twenty years whilst the total catch has continued to rise. So it cannot be asserted fairly that there has been general overfishing off Iceland and certainly Britain is not seeking any monopoly. Yet a twelve-mile limit in the north-east Atlantic, and even a six-mile limit in particular areas, would deprive the British trawlers of the fishing grounds where they have been active for over 50 years.

ECONOMIC PROBLEMS

Even when proper conservation measures are taken to protect the fishery interests of all states, there are still economic problems to be solved. The true cause of certain claims for extended fishery limits is not conservation, but the desire of the coastal countries to secure a rising share of the catch.

This is understandable, particularly in regions where other sources of employment and earnings are not easily available. But it seems unfair that these legitimate interests should be pressed beyond the point where they endanger other communities and damage efficient fishing industries already in existence. The aim ought to be to increase the world's total supply of food by co-operation between all industries.

DRAWING THE LINE

Britain does not want to be unreasonable. It recognises that coastal fishermen have their own interests and want to raise their standard of living.

But it is frankly concerned that sectional interests should be given priority as a result of a subjective appreciation by the government of the coastal state alone. If fishery limits are to be put within the exclusive competence of coastal states, as some of their spokesmen have demanded, there seem to be few bounds to the claims they could make.

BIG AND LITTLE

It is not only the trawlers that are being excluded under current domestic legislation by coastal states. Iceland's new regulations have brought protests from the small fishermen of the Faroe Islands over their exclusion from waters that are every bit as important to the Faroese as to the Icelanders themselves.

If this practice is accepted by international opinion now, there is a danger of it spreading to other parts of the world.

SEEKING A COMPROMISE

We believe that in each major fishing region reasonable compromises can be reached that will satisfy the local countries concerned. In the north-east Atlantic, Britain and other states have already put forward suggestions to Iceland that are worth general consideration.

After the Geneva conference in 1958 Iceland was offered an arrangement to guarantee it a specified percentage of the total catch over the whole continental shelf, together with the reservation of new areas, outside the existing limits, for the line-fishing practised by the smaller Icelandic boats.

ANOTHER OFFER

When this proposal was refused, it was suggested that a provisional six-mile fishery limit should be agreed on, pending the outcome of the second Law-of-the-Sea Conference, coupled with new areas reserved for the smaller fishermen.

Under this temporary arrangement Iceland would not have been asked to give up its formal twelve-mile claim. But this proposal, too, was not accepted.

TRYING AGAIN

Britain is still ready to try again, at Geneva or elsewhere. By its proposals in the past two years it has tried to show good faith and willingness to co-operate. We in the fishing industry believe that the search for local compromises is the best way to settle problem cases, rather than the imposition of a flat twelve-mile rule.

To achieve a universal code, we believe that a combination of exclusive fishery limits, scientific conservation arrangements, and the quantitative division of the available catch in certain zones may be necessary. This certainly seems the best basis for fresh discussions.

THE OPPORTUNITY

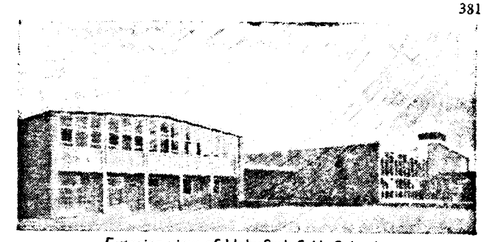
The approaching conference on the Law-of-the-Sea will be a last opportunity to produce new understanding and co-operation among the seafaring powers. We believe that it is better to unite for the common wellbeing than divide and restrict food resources that all countries need.

The British distant-water fishermen are eager to play their part in working out a solution that will satisfy all interests.

End

STRAMIT

STRUCTURAL INSULATING SLABS



have been used as Roof-decking on SCHOOLS in every county in the British Isles

Yes, thousands of tons are used annually, for roof-decking, ceilings and partitions, and here are five sound reasons for this magnificent achievement:

- Stramit resolutely defies fire. Official tests have proved this conclusively.
- It deadens sound. This is particularly beneficial where school-children are concerned.
- It has excellent powers of thermal insulation. Schools are kept warm in winter and cool in summer.
- It saves fuel costs. There is none of the enormous heat loss caused by uninsulated roofing.
- It has great strength and rigidity and is remarkably low in price.

JAPANESE SEWING MACHINE

Since 1953, more than 10 million sewing machines of various brands and types, including all of the latest Japanese models, have been sold all over the world. They have been welcomed into foreign homes because they are designed right, built and priced right for any budget.

Japanese inventive genius and mass production techniques insure top quality and dependable performance. Many of the features are exclusive—unobtainable in machines manufactured in other countries. Every machine is thoroughly tested and inspected—it must pass strict controls before export. Of Japan's current annual 2,500,000 production, 2,000,000 are exported.

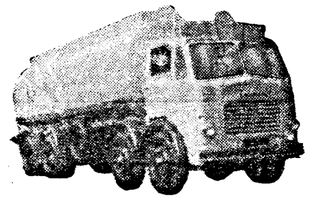
OTARD BRANDY

Retail Prices: 3 Star 46/- per bottle, V.S.O.P. 57/6 per decanter



The Chancellor can include us out!

The popular Leyland Comets 7-8 tonner sell in thousands all over the world. Real quality trucks at quantity prices.

Thrifty operation and long reliable life is the keynote of all Albions, and the 7-ton Chieftain lives right up to their traditional standards.

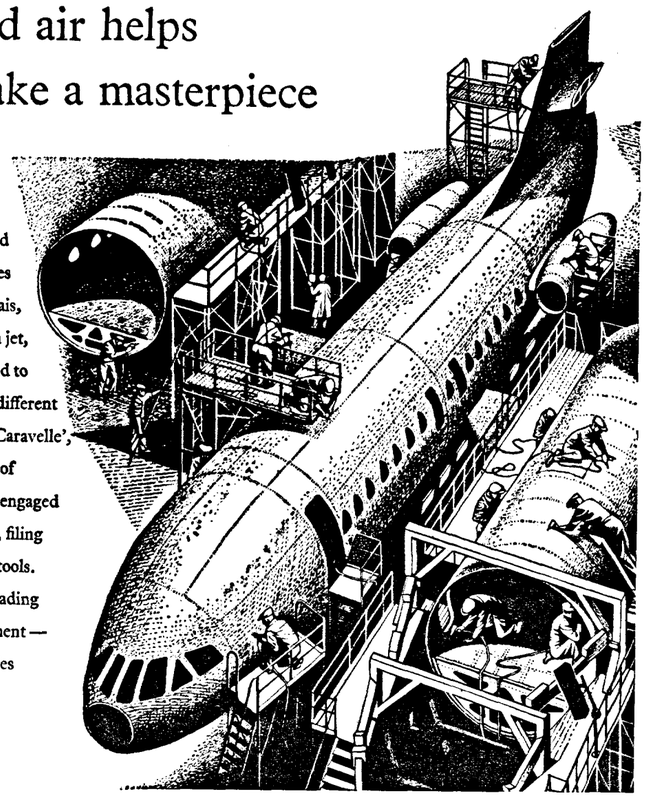
The Leyland 8-wheel Octopus (24 tons gross) is acknowledged everywhere as leader in economical heavy-duty haulage.

IN 18 MONTHS

The Leyland group has already made

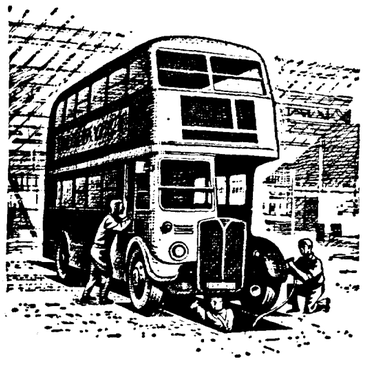
SEVEN PRICE-CUTS

- ★ June 1958 7-ton Chieftain reduced by £130
- ★ June 1958 4-5 ton Claymore reduced by £178
- ★ June 1958 16½-ton Caledonian reduced by £113
- ★ August 1958 All Comets reduced by 2½%
- ★ April 1959 12-ton Comet reduced by £50
- ★ April 1959 24-ton g.v.w. Octopus reduced by £100
- ★ November 1959 7-ton Chieftain Series II reduced by £50 for the U.K. market



Leyland

ECONOMY serves the nation's interests



Sharing the benefits with the customer is nothing new to Leyland. Since June 1958, the prices of the group's vehicles have fallen steadily—but *not* at the expense of quality. New improvements to specifications have included stepped-up power . . . heavier payloads and re-designed cabs for greater safety, road control and driver comfort. The Chancellor has asked for price stability—Leyland prefer price reduction.

Compressed air helps to make a masterpiece

France's new airliner—the famous 'Caravelle'—is a triumph of modern aeronautical engineering. Designed and built by Sud-Aviation in their factories at Toulouse, Marignane and Bouguenais, the 'Caravelle' is a medium-range twin jet, in which special attention has been paid to safety factors. No fewer than 400,000 different components go to the making of the 'Caravelle', involving an extremely high standard of precision engineering. The craftsmen engaged on this work use Atlas Copco grinders, filing machines, drills and other pneumatic tools. Atlas Copco equipment has played a leading part in this particular French achievement — as it continues to do in aircraft industries throughout the world.

London buses run on air

Compressed air is versatile. Atlas Copco provides the means for all its many applications. London Transport have recently installed a number of Atlas Copco compressors for general garage use—supplying air for bus tyres, pressure greasing and powering small pneumatic tools.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

France Feels the Dead Hand

ONCE again France stands at the edge of the precipice. Once again it looks to General de Gaulle, but this time not quite with the same trust in a miracle. The choice before him has narrowed in a few short days to one between changing the very nature of his regime in a decisive effort to impose his will upon Algiers, or departing yet again to Colombey-les-deux-Eglises. This ineluctable decision underlies whatever he chooses to say to his countrymen on Friday evening. Everything has now to be put to the test.

If he means to impose his authority on the army and the settlers across the Mediterranean he will need to call on the united voice, and purpose, of metropolitan France. But has France any will left? Does the brief and unsatisfactory history of the Fifth Republic encourage the hope that it has? This involves much more than calling a national referendum. It involves, in fact, the same questions that confronted France on the morrow of the Algiers coup on May 13, 1958, and were left unanswered then.

So much is in train that it is not possible to say how this crisis will yet end. General de Gaulle has given every sign of deciding to face the odds. But for how long? Unless a compromise, preserving at least some of his own prestige, is reached with the army within a matter of days, and even hours, the probability is that General de Gaulle must retire. But the very threat of his withdrawal may make the more responsible of the army leaders pause; and it may concentrate wonderfully the thoughts of the broad mass of Frenchmen whose wish, above all, has been to bring an end to the war in Algeria. For that task General de Gaulle has become indispensable. For the other task of avoiding civil strife and chaos in France itself he retains an authority that no other Frenchman can begin to rival. The alternative to him seems unthinkable. Yet it is one that France could now come to accept by default.

The new crisis in Algiers did not fall out of a clear sky. It has always appeared that between General de Gaulle and the army that called him back to power the gulf remained great, if unspoken. It has always seemed likely that the extremist settlers would attempt to find some point of common cause with the army, which otherwise has rejected the settlers' own ideas for their continued domination of Algeria under the political formula of integration. It has always been possible that General de Gaulle's contempt for the parliamentary process would deprive him of allies inside France at the time he most needed them. In much the same way, his personal interpretation of France's role in the outside world has whittled away the allied, or general, support that he could have drawn on in seeking a workable compromise with the Algerian Moslem rebels.

Despite all this, the present crisis has grown unexpectedly beyond bounds. It has developed as a compound of mischance, miscalculation and deliberate refusal to compromise. General de Gaulle cannot be acquitted of mistakes in failing to tackle certain aspects of the army's rule and the settlers' pretensions in Algeria when he had the opportunity, not least after the massive endorsements he received from the French electorate in 1958. Even so, the decline of the public power has come with sickening rapidity.

What went wrong? The crisis that began last Sunday seems to have been triggered by an army warning to General de Gaulle not to take any fresh steps in implementing his promise, made in a broadcast on September 16th, to give

eventual self-determination to the Algerians. Army opinion had been growing increasingly alarmed that General de Gaulle meant what he said. The reports that General de Gaulle meant to hold a referendum on Algerian policy in metropolitan France, and that the Moslem rebels had reformed their government, apparently with a view to negotiations with Paris, seemed to show the way the wind was blowing.

The army's purpose, from the beginning, may have been to have the September 16th speech torn up altogether; this is the position that the army appears to have adopted with M. Debré on his flying visit on the night of January 25th-26th. But the purpose, at least as far as General Challe, the commander-in-chief, was concerned, may simply have been to ensure that General de Gaulle took no fresh steps that would, among other things, finally controvert the gloss on official policy which M. Debré, in particular, had been presenting to the settlers. It seems unlikely that the army's aim, at that stage, was other than to secure a compromise with General de Gaulle that would satisfy the army's own desire to remain in Algeria. The extremists among the settlers may have had other ideas.

The army's warning had to be delivered not only to General de Gaulle but to French opinion generally, before further decisions committing the government along the course of the September 16th speech emerged from the policy discussions that were held at the Elysée on January 22nd. No doubt General Challe (and possibly M. Delouvrier, the civilian authority in Algiers, too) meant to speak their minds at the meeting anyway; but General de Gaulle might be expected to discount their protests in closed session. The interview that General Massu gave to Herr Kempski of the *Süddeutsche Zeitung* on January 16th seems to have been intended, at least by General Challe, to provide the missing, and compelling, element in the warning. Herr Kempski received the distinct impression that General Challe had sized him up with some care before arranging the meeting with General Massu.

THE warning thus reached Paris with the greatest *éclat*, and when General Massu was called upon to affirm his loyalty to General de Gaulle, he did so in terms that made it quite evident that the army's advice could not be withdrawn. All the same, compromise between the government and the army was still possible if General de Gaulle chose to bide his time, as he had in the past, and swallow this new impertinence. It is not clear whether it was the impertinence, or a judgment that time was no longer on his side, that finally prompted General de Gaulle to send General Massu packing there and then. There may have been a miscalculation. The authorities in Paris either were not aware that the settler organisations were getting ready in Algiers, or they trusted that the changes in the higher army command meant that the troops would be sufficiently disciplined to deal with any demonstrators. The first, uncertain stages of the settler revolt (up to Monday morning) appeared to justify the belief that General de Gaulle's previous policy had separated the army from the settlers, and that the probable suppression of the rising would merely reinforce the government's authority.

Twenty-four hours later it was quite plain that this was not happening. The high command, including both General Challe and Admiral Auboyneau, had uttered the right words of respect for authority, but they were not acting. Was the intention to insist on the army's own terms for Algerian policy, without an open break with General de Gaulle, before taking steps to clear the settlers' redoubt? Even at this stage, the prospect of some compromise between the government and the army was easily conceivable. The army certainly did not seem to be contemplating a change in regime in Paris, as it did by making common cause with the settlers two years before. But once again the situation slipped out of control. A group of colonels told General Challe that they would not open fire; by Tuesday General Challe fell into line.

Even so, General de Gaulle continued to behave as if General Challe and M. Delouvrier were both unquestionably loyal. There was, in fact, little else that he could do in addressing Algiers, although his orders, given peremptorily to General Challe on Sunday night, to put down the rising had not been obeyed. The laconic communiqué after the cabinet meeting on Wednesday evening suggested that the attempt to reach a compromise with the army was still being persevered with. Had the general made more drastic plans, there would certainly have been resignations from the government. Yet on Thursday the army's terms were still believed to be hardening.

General de Gaulle thus had to decide whether any bridge between him and Algiers still existed—and whether he could dare to cross it physically without either making himself the hostage of the extremists or meeting an even greater indignity than M. Mollet suffered on the day of tomatoes, February 6, 1956. For him to act, alone and against the odds, would not be out of character. Yet the question has become whether the four days of delay in Algiers, in which the army and the settlers have drawn together (so that on Thursday morning it was even found possible to lift the censorship in Algeria), have not made any initiative impossible unless at the price of accepting terms that would finally destroy Moslem faith in General de Gaulle himself.

For Moslem Algeria is an essential, if forgotten, part of the equation. If General de Gaulle is ever to succeed in his mission to pacify Algeria and to give it an identity in close friendship and association with France, he cannot now afford to neglect the wishes of the Algeria that has not been able to speak in the crisis. There was, however, one sign in the demonstration at Mostaganem on Wednesday (which was dispersed by gunfire) that the hopes of the Moslem community still rest in the general. It might have been possible to make effective use of this sympathy, particularly in reaching an accommodation with the army, if the situation had not deteriorated so rapidly since Sunday. Now General Challe is on record as declaring that "the fraternity of French settlers and Moslems" is something that "the army knows to be real." Just a week ago General Challe would have known this statement for what it is.

The Algerian rebel leaders, waiting in the wings at Tunis, have to draw their own conclusions from the disarray in Algiers. The more militant among them may conclude that French weakness may ultimately put total victory within their grasp. Those that have trusted to the possibility of negotiations with General de Gaulle can only be discouraged by every sign of the government's inability to resist the settlers' terms. Can General de Gaulle, by a supreme effort of personal will and authority, hold fast to his promise of September 16th? If he cannot, France must surely be sucked down in the perpetuation of an impossible course in Algeria, even to accepting the dead hand of military rule at home.

Here We Are Again?

The Chancellor's task in coping with the current upsurge of investment is to avoid the mistakes of 1951 and 1955 which led to crisis and stagnation

THE facts behind last week's increase in Bank rate to 5 per cent are simple enough; the important question is whether the country has learned enough from past experience to confront them efficiently. The British economy has reached a familiar and awkward stage of the trade cycle: the moment of the sudden superimposition of an investment boom on top of the existing consumer boom. Until the fourth quarter of last year (or, more probably, until October 8th), businessmen were expecting to spend perhaps £50 million less on new plant and capital equipment in 1960 than in 1959; according to a survey published by the Board of Trade last week they now expect to spend some £250 million more instead. This projected turn-round of £300 million is a very tentative figure; but everything that can be gauged from the behaviour of the market and everything that can be checked from the still-swelling investment plans of the motor manufacturers and the steelmen and other heavy industries suggests that, if they can get all the deliveries that they want, the figure is not likely to be an underestimate.

Until two weeks ago it was possible to hold a nicely-balanced debate about whether the British economy was still patchily underemployed or already generally overstrained. But if the Chancellor had suddenly decided to inject £300 million of additional spending into the market (say, by giving us a New Year present of 1s. 3d. off the income tax), even the most enthusiastic expansionist would certainly have boggled. Now it looks as if an extra £300 million a year of spending is going to be generated by a spontaneous investment upsurge instead, and everybody should, therefore, equally agree that Mr Amory would be irresponsible if he did not make some cut-back. There is no logical scope for political gibes about this, for one of the better policy planks on which Labour fought the election was that Britain ought to increase its investment and moderate its consumption, which is what is now to happen because of businessmen's cheerfulness about the Conservatives' return. The only real scope for argument is how the cut-back should be effected, and how far it should go.

On this point the best model for all economic and political commentators is Mrs Heep, whose sole and constant advice to her son Uriah was "Be 'umble." There is a danger that the smooth way in which Britain extricated itself from its last period of economic trouble, in 1957, may lead people to suppose that clever men have already worked out exactly what steps to take whenever trouble reappears. But the crisis of 1957 was not at all the same thing as the emerging problem of 1960; it was not primarily due to a sudden large upsurge of domestic demand—indeed, it occurred at a time when many people were more worried about the threat of world recession than of world boom. The 1957 disturbance was caused by two other factors that have intermittently plagued Britain since the war: a run on sterling by foreigners who considered it safer to hold funds in Frankfurt or New York (a run which was swiftly checked by raising interest rates to make it more profitable to hold funds here), and a cost-push inflation generated by the British trade unions (which was eventually countered by the way in which Londoners withstood the bus strike).

The last two occasions on which Britain had to absorb sudden and inconvenient upsurges of internal demand within a taut economy were in early 1951 (with Korea rearmament and a restocking boom) and early 1955 (with an investment upsurge very similar to today's, also coming nine months after the introduction of investment allowances and also fed by businessmen's cheerfulness over a Conservative electoral advance). Both these upsurges were mishandled into becoming crises. In a search for what not to do in 1960, let us examine the strikingly similar (though by no means identical) patterns that then emerged. They were a story of crisis in five acts, and any resemblance to what *could* happen in 1960 is obviously far from coincidental.

(1) *The First Half-Steps.* In 1951 the Labour Government met the situation with a very courageous budgetary policy (Mr Gaitskell increased taxation by £388 million in a full year), but it stuck timidly to its cheap money policy (Bank rate at 2 per cent) until it was thrown out of office in October. In 1955 Mr Butler reacted with a courageous monetary policy (Bank rate raised by 1½ per cent, in two steps, in January-February), but followed this with £155 million of tax reliefs in a pre-election budget.

(2) *The Railway Surrenders.* In February, 1951, Mr Bevan, as Minister of Labour, told British Railways that it must give its workers a larger wage increase than a court of inquiry had recommended because otherwise there would be a railway strike. In January, 1955, the Cameron court of inquiry told the nation that it must "will the means" to give railway workers a bigger wage increase than British Railways could afford because the railways were an important national service. On both occasions the labour correspondents of the daily newspapers wrote exactly the same articles as they were writing last week to urge Sir Brian Robertson to yield to the latest demands of the National Union of Railwaymen; it was said in 1951 and 1955 that railwaymen had a very special case for a rise, but on each occasion the increase that they secured was allowed to set the pace for general wage inflation.

(3) *The Summer Controls.* As a result of (1) and (2) above, by midsummer of both years price inflation was in full swing and foreigners were fleeing from the pound. In July, 1951, Mr Gaitskell announced that he was going to introduce price and dividend controls; because Labour fell from power, these never became operative but the announcement of them had a deplorable effect abroad. In July, 1955, Mr Butler announced that he was slowing public investment programmes, tightening hire purchase restrictions and addressing a letter about credit restraint to the banks. The gold drain in the following month was larger than ever.

(4) *The Second Half-Steps.* In November, 1951, therefore,

the new Conservative government repaired Mr Gaitskell's omission of the previous spring by at last raising Bank rate and introducing a harder money policy. In October, 1955, Mr Butler repaired his own omission of the previous spring by imposing approximately as much new taxation in his special autumn budget as he had remitted in his April one.

(5) *The Period of Stagnation.* By the beginning of the following new year, internal demand seemed much less buoyant, and the Government might normally have been expected to restimulate activity. But inflation had bitten home deeply during the crisis, foreigners were still suspicious of the pound, and the authorities felt obliged to stay on the opposite tack. So, in January, 1952, Mr Butler—and in February, 1956, Mr Macmillan—introduced some further consequential measures (hire purchase restrictions, slowing of public investment programmes). Two months later the complicated budgets of 1952 and 1956 were both slightly deflationary in effect. As internal demand was no longer pressing on resources, the result was to check the growth in production for the rest of the year.

By September of 1952 the economy had at last reached a state of equipoise, and the authorities could start thinking of re-expansion; by September of 1956 they were thinking of re-expansion also, but the Suez crisis intervened. The spoor of the crisis of 1951-52 was a drain on the gold reserve of $2,205 million in all, a 19 per cent rise in prices in two years, and the damping down of production during 1952. The spoor of the crisis of 1955-56 was a gold drain of $798 million in all, a price rise of 9 per cent in two years, and a much longer period of stagnation in production. It would be a boon to avoid a similar tragedy in five acts this time.

It also should not really be difficult. The essence of Mr Amory's task is not (or not yet) to cut back the whole prospective increase in demand in 1960, but merely the part of the new upsurge which is excessive—the part which cannot be met by a production that goes on growing at the maximum safely attainable rate. Only if too timid a policy is followed initially, so that inflation intervenes, is it quite certain that later months will have to see a bigger cut than this—so that for a time production may once again have to be stopped from growing at all. Mr Amory starts with certain great advantages that were not to hand for Mr Gaitskell in 1951 or Mr Butler in 1955: the foreign balance is much sounder now, international respect for sterling much stronger, the record of recent price stability is there for all to see. But the key to 1960 will lie in the opening two acts of the play.

The first resolution for 1960 should be that budgetary policy this year will not pull the other way from monetary policy; whether this means a standstill budget or a slightly deflationary one is a matter of detail that can and should be judged only as the situation develops. The second necessary resolution for 1960—about railway wages—is once again painfully obvious; as *The Economist* went to press Sir Brian Robertson had not yet replied to the NUR's demand that he should at once give them a wage increase, which some newspapers considered quite essential in order to avoid an unofficial one-day strike in some railway districts next Monday. *Plus ça change. . . .*

Are Unions Necessary?

The 5 per cent increase in the standard of living of the British industrial worker in the twelve months to last October was a singularly interesting achievement in a year in which union militancy was at its lowest ebb for a decade. Indeed the most remarkable of the figures in the new Ministry of Labour survey—the 9s. 6d. a week rise in the average real earnings of adult male factory workers in the six months after last April—means that these earnings were rising at the unprecedented annual real rate of nearly £1 a week during a period when very few new union agreements were negotiated at all.

As a note on page 457 shows, a part, but only a part, of this increase was due to longer overtime hours at work; most of the rest has come from increased payments by employers above the union rate. The director of the Engineering Employers' Federation, Mr Macarty, gave a concrete example on Tuesday. Over 90 per cent of engineering labourers on time rates and over 99 per cent of skilled fitters were, according to a federation survey, getting amounts from 5s. to well over £3 a week above the union rate even in June, 1959. Pieceworkers, who make up the majority of the industry's labour force, would have been doing better still. In a year in which the cost of living has remained stable, increases in these "plus payments" have raised the workers' standard of living at a rate seldom attained before.

The awkward question that arises for the labour movement (and the country) is whether central trade union bargaining does any good to anybody at all. A case can be made for arguing that market forces on the shop floor always give the worker what he has earned, and that the increases negotiated by the unions merely put up the cost of living. Nevertheless, trade union demands are now on the march again—with the engineering unions' leaders themselves firmly near to the van. Having finally secured a promise of a two-hour reduction in the working week, which they were originally expected to accept as adequate for this year, they began on Tuesday to press their wage claim as well.

Wisely, they have also left themselves a possible avenue of retreat in the form of a special sub-committee which is to look into the effect that the hours award will have on piecework earnings. Since time and piece rates are usually closely linked on the factory floor, its report can probably be made as favourable as is necessary to save any face that needs saving. The possibility of trouble in engineering may depend to some extent on the tactics of the Electrical Trades Union, which wants to be able to say that any objection to the forthcoming announcement of its election results comes from right wing people who dislike its militancy; there is nothing much that concessions by either side can do about this. But the possibility of an inflationary settlement in this industry will be much more largely affected by Sir Brian Robertson's decision on the railways; he is making that decision against the background of the warning of inflation that the new Bank rate has flashed to the country. He should stand his ground.

Pushing India's Plan

How best to support the Indian and Pakistani development plans is one problem. How the West should share the burden is another

A fortnight from today, three distinguished bankers will begin a reconnaissance of India and Pakistan that means much to the future of the 500 million inhabitants of those countries—and which may mean almost as much to the world. Sir Oliver Franks, chairman of Lloyds Bank, Dr Hermann Abs, chairman of the Deutsche Bank, and Mr Allan Sproul, a former president of the Federal Reserve Bank of New York, are not merely men who have the ear of their own governments. The mandate loosely but pointedly given them by the World Bank, to which they will report, represents a general acceptance by the principal governments of the West of an appropriate share of responsibility for supporting the Indian and Pakistani development programmes—and in particular India's third five-year plan, which begins in April, 1961. Briefly, the task of the three wise men from the West is to define "appropriate."

It is a less daunting task than it would have been a year ago: though still a formidable one. The western wind stands fair. Since the 1958 Commonwealth conference at Montreal, the cogency of the case for a sizeable and sustained western effort in support of the Asian development plans has gripped informed opinion. The lesson of 1958, when America, Britain, Germany and Japan had to improvise emergency aid for an overstrained India, seems to have been learnt. Last month, President Eisenhower's visits to Delhi and Karachi gave symbolic assurance of the extent of American readiness to underwrite south Asia's endeavours; and at the same time British and continental European opinion was accepting the idea that this must be an Atlantic operation, that Europe's new prosperity carried with it an obligation to shoulder more of the load. We have come a long way since the imaginative but modest beginnings of the Colombo plan ten years ago.

At the Asian end, too, the wise men will find much to hearten them. In Karachi, where they begin their tour on February 13th, their hosts can demonstrate that, however long it may take to revitalise Pakistan's political life, its economic affairs are now in the hands of men who mean business. The second five-year plan, the outline of which was approved at the end of last month, is clearly going to be a very different affair from Pakistan's first plan, which, nominally operating from 1955, was not even given official definition until 1958, and never amounted to more than a bone of contention between squabbling interests. Since the military government took over in 1958, it has set up a planning body with wide powers, galvanised it into action, and silenced the obstructionists. Pakistan's plans, like its resources, are on a more modest scale than India's—it is now envisaging a total development plan outlay of about £1,400 million over five years, as against the Indian £7,500 million, and this figure is more likely to be reduced than increased—but President Ayub Khan has already shown a firm preference for committing his regime's prestige to nothing that it cannot in the event achieve.

One achievement for which he must receive his full share of credit is the improvement in Indo-Pakistani relations in recent months. This has been assisted by China's Himalayan blunders, by a new (if tacit) awareness in Delhi that the new government in Karachi is better placed than its predecessors to clinch deals, and, in the case of the crucial dispute over the Punjab river waters, by the patience of the World Bank's representatives. Final agreement on the Punjab waters has stayed tantalisingly just out of reach for several months now; but the general feeling that failure to reach it would be unforgivable, now that the gap is so narrow, helps to make the atmosphere in Delhi and Karachi more encouraging for the three visitors; and their visit may provide the last little push that is still needed to get it through.

Their hosts in Delhi have further reasons for feeling buoyant. India has had a good year in several respects. The 1958-59 harvests yielded a record 73 million tons of grain. Exports have picked up. Industrial advances have been recorded along a scale ranging from locomotives to paper. Somewhat to its own surprise, the state was able to borrow more than £270 million on the domestic market in 1959. There have been setbacks, among them the acute shortage of high-grade coal owing to the mines' lamentable failure to reach the target set them. But the New Year sky has been bright with the glow from the new steelworks. The first blast furnace at Durgapur has been inaugurated; the most modern steelmaking plant has been set up at Rourkela; Bhilai has been producing steel since October; the Jamshedpur expansion has been on a scale to match these new giants; further expansion at Rourkela and Bhilai is already being urgently discussed. Self-sufficiency in steel is now so close that serious debate is beginning about the best means of deploying the imminent surplus.

Real national income rose by an unprecedented 6.8 per cent in 1958-59, according to preliminary official estimates. The qualms and heartsearchings of 1957-58 have been replaced by a serene confidence that the second five-year plan (1956-61) will be fulfilled—in the planed-down form that had to be accepted as early as 1957. But it is the third plan that Indians are now thinking about; and the voyage of the three wise men from the West is to them reassuring evidence that this time their western friends accept the idea of working out the role of foreign aid in advance, rather than waiting for urgent distress signals before they launch the lifeboat.

It has taken about £250 million a year of foreign aid to see India through its second plan. More than £300 million a year will be called for in the third, the outline of which is now almost ready for publication. Of this sum, India cannot on past experience count on getting more than about 15 per cent from the Soviet block. The rest may come directly from the principal western nations or indirectly through the various international agencies of which they are the main support; but the source will be much the same either way.

The wise men, the World Bank and the western governments now face several complex problems. The purely quantitative one is perhaps the least difficult to solve: the

order of magnitude involved is not so much greater than in the case of the second plan, and western resources have visibly increased in recent years—particularly European resources. But, to take the most obvious difficulty first, how firmly can a massive enterprise extending over several years be underwritten by foreign governments which must obtain their funds annually from parliaments elected by, and acutely aware of, their taxpayers? This is still an unsolved problem.

SUPPOSE, moreover, that such a firm commitment is given: if the contributing parties later come to fear that the beneficiaries have thereby gained an exaggerated sense of security, and are ceasing to look after the pence as carefully as they should, can the contributors tighten their purse strings without seeming to go back on their word—and if so, how? If they seem at any point to be giving orders about how the money is to be spent, they are liable to arouse an indignation that will erase all memory of their original generosity. And what if, having pledged their help for a fixed term of years to an effort designed to make the recipient country's economy self-sustaining, they find that that goal is nowhere in sight at the end? A strong case can be made out that India, at least, is already nearing its "take-off" and can soon become independent of large-scale aid; but that is a complex calculation and one for the three wise, and authoritative, bankers.

One of them, Sir Oliver Franks, spoke out loud and clear this week, making it plain that solutions must be found to these problems if the developing countries of the southern world are to get the help from the West that alone can enable them to break out of poverty without succumbing to tyranny. But he also drew attention to the most urgent question at the western end of the line—that of sharing out the contributors' burden. Sir Oliver believes that some new "informal group" must be organised for this purpose. Shudder as one may at the prospect of more international machinery, this task of burden-sharing must indeed be taken seriously and handled in the most efficient manner possible. Sir Oliver's own warning to the Americans that their natural anxiety to shift some of the load to a newly prosperous Europe should not go too far is itself an indication of the difficulties of accommodation that lie ahead.

NOTES OF THE WEEK

POLITICS

Tories Balance of Power

PARLIAMENT returned on Tuesday with a slightly greater anticipation of possible excitement to come than had been evident when the Christmas recess began. This may, in fact, be a more crucial moment for both parties than most correspondents from Westminster have credited.

So far, despite its larger majority, this new Conservative government has kept on the liberal tack in all its policies; that is the direction in which senior ministers personally want to go. They have kept to this course while always watching for, and intermittently expecting, ructions from their right. This expectancy has been especially great in colonial affairs. In Cyprus and in East and Central Africa ministers privately want to do things which in bygone days would have brought forth a great cry from the right that they were letting the British Empire down. If Mr Mboya and Dr Banda do not smooth the way for the Government to make the agreements with them which the Cabinet would like, it has hitherto been assumed that there is a certain limit to placating tiresome Africans (or Archbishops) beyond which the right-wing-defying courage of even this Conservative Government cannot go. But now ministers are beginning to wonder—half-hopefully—whether failure to reach agreements might not bring forth some Conservative mutterings, from what might be called the Bow Group wing, that they did not go far enough.

In domestic affairs, the Government has been worried that problems affecting youth are soon due to have a run in the headlines: the report on the disturbances at the Carlton approved school was being published on Thursday, the Albemarle Commission on the youth services reports next week, and some time before the end of the session a new bill on the treatment of young offenders is to be laid before Parliament. The Conservative constituency associations' instinctive desire is that the Government's main policy on this matter should be to promise to cane more people; quite a lot of right wing Conservative MPs feel that they would like that too; but a growing number of middle-of-the-road and left wing Conservative MPs have intimated to the whips that they do wish their fellow Tories would not say these things, because they make Toryism look unrespectable.

The next few weeks may therefore make it distinctly clearer with which wing the balance of influence in the Conservative party lies. One's own assessment is that the Government would arouse more angry speeches if it annoyed the right, but deeper-seated (and eventually more important) disillusionment if it let down the new left.

Labour's Strife

IN Labour's ranks, there was a certain nervous thrill as Mr Gaitskell flew home last weekend from his holiday in Jamaica—a portentous place for a holiday-making statesman to fly back from, at least to those whose political memories are three years old. While he was away, the opposition to him had been in full play. In preparation for Wednesday's meeting of Labour's national executive, Mr Greenwood had let it be known that he was going to oppose changes in the wording of the nationalisation clause in Labour's constitution. Mr Wilson had carefully let nothing be known of his own intentions at all. Every Labour politician would resent any suggestion that a struggle was in progress for the mantle that Mr Bevan once wore as leader of the left wing, but . . . However, everybody was able to agree that it would be quite improper to start discussing the constitution while Mr Bevan was still seriously ill, and Wednesday's projected battle was seemlily postponed.

It is becoming increasingly clear that the odds which Mr Gaitskell has accepted in the battle over nationalisation are those of a hiding to nothing. Nothing, in this context, would mean an alteration in Labour's constitution which Wilsonites would feel that they could defend before nationalisation-worshippers in the party, and which those who oppose Labour in the country because they dislike nationalisation would therefore regard as completely meaningless; some such meaningless change is what Mr Gaitskell is now most likely to get. A hiding would presumably mean his being forced out of the leadership. This is only likely to happen if by-elections run so heavily against Labour that all the office-seekers in the party conclude that, come 1964, Mr Gaitskell will have no chance of winning the premiership in order to have offices to allot. Much may depend for him on whether the 5 per cent Bank rate, and any further economic measures that follow, persuade voters at by-elections that Tory prosperity is not really prosperity so long as Mr Amory has to tinker with it; if they do, the swing back of leading Labour politicians to Mr Gaitskell could be as dramatic as their recent swing away from him has been.

If they do not, the next question may be the effect of internal party ructions on the man himself. If Mr Bevan were no longer able to stand there at his side, to show doubters what a left wing team his is, these sickening ructions would increase. Mr Gaitskell is a man who likes either to be loved, or else to be able to convince himself in his own heart that he is indispensable for some great purpose. As his rather silly intervention at question time on Tuesday confirmed, the chief purpose which now uplifts him, which above all others sustains his political enthusiasm, is the belief that he stands between some twenty million Africans and slavery. If the Government were soon to solve the Kenya and Nyasaland problems on liberal lines, there might be a real and sudden vacuum in the place of the mechanism that makes the present rude buffetings of political life seem worth while to him.

KENYA

Hopes Rising?

GRAVELY though he shocked Group Captain Briggs, the Colonial Secretary showed great resolution and good sense last weekend, when he finally bared his teeth after the frustrations of the first week of the Kenya conference. If his "imposed settlement" of the Koinange affair proves to be a pattern of his handling of Kenya's problems as a whole, there is yet hope that a sensible system of self-government with an African majority, but fair play for all races, may take shape at this conference. Mr Macleod is no longer looking for an agreed settlement. He is collecting advice and the "general sense" of the Kenya political set-up, as well as knocking the heads of the Kenya leaders together; evidently he will have to make up his own mind at the end of this educative process. The Africans, in their speeches, are now bidding hard for a one-man one-vote common roll, with no special safeguards for minorities beyond a declaration of rights under a written constitution, with a supreme court to interpret it. They can probably be induced to accept arrangements whereby the minorities' voices will be kept alive in the Legislature by a system of reserved seats as well. The New Kenya group is evidently awaiting the stage of "working papers" before it discloses its full counter-proposals, but a landmark of the conference has been the declaration of one of its leaders, Mr Nathoo, who speaks for Muslims, in favour of a common roll without safeguards. This must put the whole future of Mr Blundell's group in question.

The Europeans are correspondingly downcast. They see that a decisive transfer of power looms, and that no Algiers is open to them. There is now one concession that Mr Macleod should be urged to make to them. The farmers among them, who are specially vulnerable because of African paranoia over land, should be enabled, if they should wish to do so, to realise their assets, on a willing-buyer-willing-seller basis, over an agreed period of years. So far the Colonial Secretary has rejected this idea, afraid of its complications and of the Treasury's fearful estimate that it might cost £100 million to buy out the 5,000 or so owner-occupied farms involved. Even at this cost it would be worthwhile to give the whites the security which would remove the fear that drives men, especially men who possess land, to extremes. The details would be intricate; but because the Africans are going to get justice, as they see it, the whites should not be denied fair play. Mr Mboya and Dr Kiano will yet come to see, furthermore, that any Kenyan (a new word on African lips) with an efficient farm or factory, whether white or brown skinned, is an asset to keep in Kenya. If European farmers were assured that they could take compensation at any time after, say, two years and before, say, ten years, most of them would stay on to give life under an African government a trial, and if that trial succeeded the financial burden falling on Britain would be very small indeed.

FRANCE

Pacifying the Bretons

BEFORE more pressing matters claimed his attention, M. Debré went off to Brittany last Sunday to confront the embattled and discontented farmers of the province. Although the Breton farms and co-operatives have been at special pains to increase their productivity and efficiency since the war, they still have a hard struggle for markets, and the Bretons' particular complaints range from the unfavourable freight rate system of the French railways to annoying British practices in agricultural protection. But, besides these local worries, most of France's small farmers believe that they have been badly done by under Gaullist austerity, and this rural feeling has been given voice in a series of protest meetings.

Under M. Pinay's stewardship the price of industrial products has risen appreciably faster in the past year than that of agricultural products, a trend that has not only hurt all farmers but has hurt particularly those who are most modern in their methods and dependent on manufactured goods like machinery and fertiliser. Peasant dissatisfaction has been all the greater because the familiar protection of the automatic sliding scale that used to tie farm prices to the cost of living has been abolished as a necessary anti-inflation measure. These discontents meant that M. Debré faced a cool reception from the tightly organised Breton farmers when he arrived at Rennes; but he was not two hours in the town before the news from Algiers caught up with him.

The farmers would have been even chillier if they had not heard M. Debré on the radio the previous evening declaring that the government had become increasingly preoccupied with rural problems. He promised some alleviation of their troubles. To tackle the general malaise of the countryside he announced that the government would provide for development credits, rural education and health insurance. He refused to reintroduce the sliding scale, but argued that major agricultural products like grain, wine, meat, milk and sugar beet already benefited from guaranteed prices. For the future he agreed to set up an annual review of farm prices and incomes, taking retail prices and the level of other incomes into account.

M. Debré seems to have made concessions that must bring some rises in food prices in the shops. This part of the line that M. Pinay held is giving way. But it is clear that, politically, the government needs to mend its fences with the farmers, as well as setting its mind to a general policy to remedy the rural stagnation. M. Debré could ruefully reflect, if he had time this week, that the regime needs all the friends it can get.

TUNISIA

On the Rebound

AS if to exasperate General de Gaulle still further, President Bourguiba chose to welcome the Pan-African conference to Tunis on Tuesday by demanding that France should evacuate the Bizerta naval base by February 8th—the second anniversary of the bombing of Sakiet village by French planes. This is one threat which the general may safely fence with for a while. The call for the evacuation of Bizerta is a customary outlet for M. Bourguiba's dissatisfaction. French fears of new incidents have been greatly lessened since the isolated units guarding airstrips in southern Tunisia were withdrawn in 1958. While the Bizerta garrison must expect to stand some form of blockade next month (and Tunisian labour at the base was withdrawn on Wednesday), there is every reason to suppose that neither side will provoke a clash. M. Bourguiba himself cannot expect serious negotiations to be taken up again until Paris is rid of its other, much more pressing distractions.

Although the Pan-African conference heard an Algerian appeal for volunteers to carry on the guerrilla war against the French, it was not Algeria that pushed M. Bourguiba into action but the French bomb in the Sahara. The *politique de grandeur*

that General de Gaulle has assiduously followed since his return two years ago, has thus rebounded at the one moment that he would wish to be free of embarrassments like the Bizerta question. The need to retain the sympathy of M. Bourguiba has always played a leading part in the general's plans for both Algeria and the Maghreb as a whole. If General de Gaulle has it in mind to address an appeal of any kind to the Moslem community in Algeria at this time, M. Bourguiba's tacit approval—such as he gave to the self-determination proposal on September 16th—would not be without value. But now it seems more than ever clear that what the general does, he must do alone.

GERMANY AND ITALY

Dr Adenauer in Rome

ONE of the hazards of diplomacy is that the international situation never remains quite stationary, whereas visits by foreign statesmen usually take some time to arrange. Thus what seemed in the first place an excellent idea may have become unfortunate, if not downright embarrassing, when it comes to be realised. This helps to explain why Dr Adenauer's visit to Rome last weekend was only a qualified success, although, up to now, relations between Bonn and Rome had been markedly harmonious.

When the visit was first mooted some months ago, the Italian government was anxious to lose no opportunity of keeping in the international swim ; moreover, it was not unsympathetic towards Dr Adenauer's views on European integration and the possible dangers of an international "thaw." Since then, however, Signor Segni has been to London ; President Eisenhower has visited Rome ; President Gronchi is about to take off for Moscow. Partly, no doubt, as a result of these developments, there has been a shift of emphasis in the Italian government's thinking. It is readier to explore the possibilities of improvement in east-west relations. It has begun to see good sense in the Anglo-American interest in a possible separate interim Berlin settlement at the summit meeting. It has, moreover, become in some ways disenchanted with a western European continental system in which Italy can easily find itself playing third fiddle to France and Germany.

To Dr Adenauer, on the other hand, his journey to Rome last weekend must have appeared to be much more urgently needed than when it had first been suggested. His Italian friends were straying off what he sees as the straight and narrow path, and he was not the man to be deterred by a slight frostiness in the atmosphere from trying to put them right again. He lost, it seems, no opportunity of emphasising the communist threat, of insisting that Berlin cannot be discussed separately from Germany as a whole, and of urging a still closer solidarity of western Europe. Dr Adenauer's undiplomatic force of expression, however, apparently had less effect than President Eisenhower's friendly counsels in December ; the Segni government, moreover, seems to have made up its mind to make the best of President Gronchi's trip to Moscow and to reap what dividends it can from it. The "substantial identity of views" recorded in an Italian communiqué on Dr Adenauer's discussions is a polite indication that the two governments still do not see eye to eye on everything.

UGANDA

Another Declaration of Independence?

THE riots in the Bukedi province of Uganda, though tragic enough in all conscience, are no more than incidental to the new crisis towards which the protectorate is moving. This crisis, as always, concerns the separatism of Buganda. The Kabaka's government has followed up its representations to Mr Macleod by publishing 20,000 copies of a pamphlet entitled "Buganda's Position," which besides reprinting previous memorials demanding complete independence for Buganda, now adds even more forthright claims. In it the Kabaka's government demands new ministries to take over functions now exercised for Uganda as a whole by the central government, and even that it should have its own army. It puts forward some flat misstatements of fact, such as that Buganda subsidises the rest of the protectorate. It marshals new arguments to show that Britain, not Buganda, has broken the original protectorate agreement ; the strength of these may be judged by the fact that one of them is that Britain has "undermined the loyalty of the Kabaka's subjects" by asking them to give evidence to the Wild committee on constitutional advance for Uganda.

Although the pamphlet is signed by the Katikiro, Mr Kintu, it is obvious that the hand behind it is that of the Kabaka himself, who is now virtually an absolute monarch again as well as the mystical father-figure of the Baganda people ; his recent actions are hardly consistent with the "solemn declaration" of good behaviour which he made in 1955. In effect he and the British Government are back to the position they reached just before his banishment in 1953. The Kabaka probably reckons—or hopes—that the British Government dare not take that course again. What infuriates him now is the promise in the Wild report of a fully democratic regime and responsible government for Africans for Uganda as a whole ; he sees this as a method engineered by the British Government to weaken his power and overcome his refusal to send Baganda representatives to the present central government of Uganda. He does not even seem to be waiting for an appeal to the Privy Council on his claim (which the High Court turned down) that the British Government are in breach of the 1955 agreement. This is a challenge to democracy by a man who is proud, autocratic, obstinate and a king—not an unprecedented combination in history. But there are also precedents for meeting it.

YOUNG SOCIALISTS

Rosy Youth

THE Young Socialists, Labour's new youth movement now being formed at national level, is intended partly as an answer to the social success of the Young Conservatives. In many towns, the Young Conservatives are the smart group to belong to: girls in search of successful husbands, young men in search of careers, find them a useful meeting point. The Young Socialists would neither wish nor perhaps be able to emulate this particular type of appeal. But they plan to offer as rich a menu as they possibly can of dances, jazz sessions, visits to theatres and sports events, plays and socials.

They will have to overcome several handicaps and risks. The first is a certain indifference to youth shown by many Labour leaders, especially in the trade unions and in local government. There are comparatively few young Labour councillors. It was lack of backing from the party hierarchy that helped to kill its previous youth movement, the Labour Leagues of Youth which were disbanded in 1955 after nine years' existence, having seen their branches fall from 788 to 214. The new movement will have a larger share of party funds ; and it will be allowed to discuss policy as well as youth matters at its own annual conference—a privilege denied to the Leagues of Youth. This, however, raises a second danger: that the movement may become so serious-minded and dissension-torn that it frightens a wider but less politically-minded membership away. The Conservatives have always been skilful in identifying their cause with that of Britain, and in letting their youth group discussions take the form of "whither the nation ?" rather than "whither the party ?" Endless debates on "whither socialism ?" between teenage Foots and teenage Jays would not be likely to promote an exciting Labour image among Britain's youth.

A third danger is that the Young Socialists might move to the left of their authors' intentions. This has happened before. The inter-war League of Youth had to be disbanded in 1936 when it fell under communist influence, and even the Bevanite tendencies of the postwar Leagues were not always to the liking of the orthodox party leadership. Some enthusiasts are now saying confidently that the movement is to concentrate on producing majority resolutions in favour of public ownership and nuclear disarmament. It will fail both as a social group and a political force if it does.

Up the wall ?

Don't we all know it—there can be more headaches than bricks in a building project ! Plans, costs, time schedules—now, where do we start ?
Well, if you believe that walls are not for being driven up you will start *by contacting Costain.* And that applies to every conceivable sort of building project. For the sooner you make use of Costain's skills, experience and resources, the sooner you will learn how efficiently and economically a building operation can really be conducted.

For example, here are a few projects recently completed by Costain:
TRANSISTOR FACTORY SWINDON · THE KARIBA TOWNSHIP
BEA WEST LONDON TERMINAL · BP RESEARCH STATION
IBADAN TEACHING HOSPITAL · CIBA PROCESS BUILDING

It's never too soon to call in Richard COSTAIN Limited

CUBA

Envoys Out of the Ring

WASHINGTON'S conscientious search for a warmer relationship with its southern neighbours stops short at the brash revolutionaries in Cuba. The American ambassador in Havana, Mr Bonsal, has been recalled; the Secretary of State, Mr Christian Herter, has spoken sharply about Señor Castro's insulting behaviour, and, more seriously, the submerged threat of a punitive cutting of the Cuban sugar quota has broken surface. According to the present quota arrangement, which comes up for renewal this year, the United States buys 3 million tons of Cuban sugar a year at 5 cents a lb: 2 cents a lb more than the current world price. The Administration is now known to be thinking of asking Congress to give the President authority to adjust it at will; by this means the danger may be avoided of Congress forcing more drastic adjustments on the Administration.

The immediate cause of the shindy was Señor Castro's radio and television speech on January 21st. The Cuban leader, who has a Napoleonic disregard for the niceties of protocol, suggested that both the American and Spanish embassies were implicated in counter-revolutionary movements. The Spanish ambassador, Señor Pablo de Lojendio, reacted splendidly, if undiplomatically, by charging into the studio and in front of the camera with an indignant denial. Ordered out of the country, the ambassador had a last-minute talk with Mr Bonsal, returned to a demonstrative welcome in Madrid, and has since been relieved of his post.

Señor Castro said nothing about the Americans in his latest speech that he has not said as vigorously before. The deeper reason for American exasperation is the State Department's failure to get any satisfaction from the Cubans about compensation for American citizens who have lost their property under the land reform act. The Cubans have promised to pay the former landowners in 20-year bonds based on the tax value of the land; Washington wants cash. The Cubans do not deny the legality of the American case; on the other hand they blithely point out that it is no use going on about it as they have not at the moment got the money to pay.

(The condition of Cuba under the Castro regime is described on page 437.)

BELGIAN CONGO

Scramble from Africa

THE round table conference at Brussels this week reached agreement on the granting of independence to the Congo by June 30th. The original Belgian timetable of a year ago, though later accelerated, has now been thrown out of the window. The timetable proposed to have six elected Congolese provincial councils in working order by September, 1960, and to create a Congolese central government drawn from them then, leading to independence in 1961 —though this step was not given a date. But the Africans of all parties have demanded that independence must come before any further creation of the machinery of government, and a makeshift central executive will now obviously have to be erected on the basis of local elections already held—and which were partly boycotted by the major parties.

Not only will independence precede the final settlement of the constitution, it will precede even a full agreement between the African leaders on the shape it is to take. One of the larger parties, the National Liberation Movement, whose leader M. Lumumba has been rushed from jail (for inciting the Stanleyville riots) to the conference table, stands firmly for a unitary Congo with devolution of local government power to the provinces. The other major party, the Abako, led by M. Kasavubu, is set on a loose federal structure, which shall take full account of the strong separatist feelings of the Bakongo tribe, and their ultimate ambition to recreate (partly from Portuguese territory and the République du Congo) the old lower Congo kingdom. But both joined forces against the unhappy Belgians and are cheerfully reconciled to fighting out their differences later.

The Belgian government, after King Baudouin's visit to the Congo, has evidently decided it is better to risk administrative chaos with Africans in charge of it than to risk more fighting between Belgians and Africans by seeking to put the brake even slightly on. They may have been encouraged by the success of many small moderate parties in the local elections. But clearly the implications of this move—if it is not upset—are immense. It is good news for the All-African People's conference at Tunis; it seems certain to hasten the march towards African rule in Kenya and Uganda; and it will bring an independent African state to the frontiers of the Central African Federation (and Angola). But just what that impact will mean will in part be decided by whether the new African state proves capable of governing itself at all.

NATIONAL FARMERS' UNION

The Swan's Song

DELEGATES of the National Farmers' Union, assembled for the last of the fifteen-year-long series of annual general meetings to be presided over by Lord Netherthorpe (Sir James Turner as was), applauded their outgoing president's opening speech, gave him a standing ovation, and sang "For he's a jolly good fellow." When, however, they got down to the business of resolutions on the annual report, this demonstration of gratitude and confidence was shown to be a tribute, all the more striking because unconscious, to Lord Netherthorpe's political dexterity; for the contrast between the attitude expressed in his speech and the Neanderthal man sentiments voiced, and applauded, from the floor was such as to produce at best coolness, at worst open dissension, under less consummately skilled handling.

Lord Netherthorpe presented the picture of an interdependent, expanding, rapidly changing world economy in which isolation is impossible, flexibility is essential, and international stability can be achieved only by co-operative agreement for the mutual benefit of primary and industrial producers. From the farmer, the situation demanded adaptability to changing consumer demands, a steady concentration on lower unit costs, and willingness to co-operate. From the Government, he thought that it demanded, in addition to the long-term guarantees secured by the 1947 and 1957 Acts, "the determination to create conditions of commodity price stabilisation through international action"—this action comprising both aid to underdeveloped countries and an urgent effort towards European agreement between the Six and the Seven, so that their farm produce may flow to its natural markets rather than be diverted by mutual barriers to Britain.

Almost point by point, the resolutions from the floor denied both the picture and the policy. What the movers wanted—and what, with rare dissentient voices, their fellow delegates wanted too—was a total and unqualified insulation from the effects of economic change. Not only must agriculture as a whole be protected and supported; every producer of every commodity has an inalienable right to profitable expansion, without cut-backs, halts, or economically-enforced switches of productive effort. Not only must expansion be profitable; the right extends to a full *pro rata* share in any national prosperity that may be going—prosperity being something to be bestowed or withheld by governments according to the principle of fair shares. And so on, in successive contexts. The "collective leadership" which is to succeed Lord Netherthorpe will have a heavy diplomatic load to bear.

HOLIDAYS

Off the August Peak?

EVERY summer, the Midland car industry closes down for a short annual holiday; the factories find this much more economic than an attempt to run short-handed through an extended holiday period. Hitherto the closures have coincided with the horrors of the August holiday peak, with its crammed and expensive accommodation, its thrombosed traffic, and its generally deteriorating weather. The car workers of Birmingham have now followed the lead given last year by their fellows of Coventry in voting, through a

union ballot, for a holiday during the first fortnight of July instead ; and those of Oxford are understood to agree with them.

One's first inclination is to applaud this move. The spreading of the holiday season would be an unqualified benefit both to the comfort of holiday makers and to the finances of holiday resorts. A discriminate timetable of annual closures in industry is a far more promising means to this end than appeals to individuals to take their holidays early or late ; and the Midland unions deserve credit for their initiative. But the obvious snag is the school holidays. Can these be staggered too—regionally—to fit the holiday programmes of local industry ? Many educationists say they cannot ; as the Oxfordshire education authorities have pointed out, the car-workers' chosen holiday period clashes head on with the GCE examinations. Possibly this difficulty could be overcome; but the right solution is probably more radical.

What is wanted is not a regional staggering—at best a desperately awkward expedient—but a national recasting of the term-and-holiday sequence, with a considerably longer school break in summer and correspondingly shorter breaks at Christmas, Easter, or both. (If the GCE ordeal were shifted away from the hottest time of the year, so much the better.) The experience of other countries shows that there is nothing inevitable about the present British system—which was appropriate enough to a society in which holidays were a minority privilege, but simply does not fit an era when nearly everybody hopes to flock annually to the sea.

NORTH VIETNAM

The Crime of Freedom

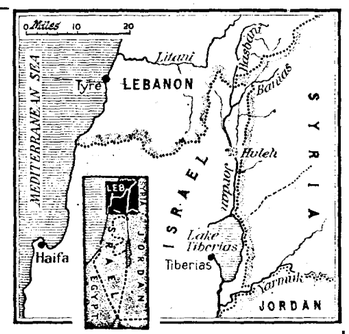
After nearly two years, the communist regime of north Vietnam has now brought to trial the intellectuals arrested in April, 1958, following a prolonged dispute over the right of artists and writers to freedom of expression. Three of them, together with two others whose date of arrest is not known, have been sentenced to terms of imprisonment varying from 5 to 15 years. They have been given until February 3rd to appeal.

The accused were charged with belonging to a counter-revolutionary spy organisation which "carried out sabotaging activities in Hanoi and waged psychological warfare under the cloak of artistic and literary activities in 1956, 1957 and 1958." The ones known to have been arrested in 1958 are Nguyen Huu Dang, Thuy An—a woman—and Minh Duc ; the first two, described as ringleaders, got 15 years, and the third 10 years.

These sentences appear to close a curious and at times exhilarating chapter which began when north Vietnam imitated Mao Tse-tung's policy of letting "a hundred flowers bloom, a hundred schools of thought contend." Taken in by the apparent tolerance of the regime, north Vietnamese writers and cartoonists published many articles and drawings criticising almost every aspect of life in Ho Chi Minh's "democratic

Ring round Israel

Lebanon's scheme to run part of the headwaters of the Jordan into the Mediterranean is the latest ploy in the Arab sport of baiting Israel. The Jordan is fed by three main tributaries, the Yarmuk, the Hasbani and the Banias. The Israelis have already allowed for the loss of some of the Yarmuk water, which is to be drawn away for a Jordanian irrigation scheme financed by the Americans. The threat to the Hasbani and Banias is of an entirely different, and more irresponsible, order; Lebanon and Syria are threatening to divert the rivers not, primarily, to use the water themselves, but to deny it to Israel.



Changing the course of a river is an expensive form of spite. The Lebanese foreign minister in announcing the plan to divert the Hasbani into the Litani (and thence into the Mediterranean) estimated that it would take two years and cost well over £1 million. Probably the Lebanese will not get around to putting the scheme into practice; possibly, they never even intend to do so. The threat alone is enough to help Beirut, commonly suspected of half-heartedness towards Israel, to hold its head high at the coming conference of Arab foreign ministers in Cairo.

The timing is significant for another reason. Officials from the Israeli water board have recently been in Washington arguing for American support for their Jordan irrigation project; their case is made no easier by the Arab noises offstage. The Israelis are determined to go ahead with the scheme come what may, but without American money the timetable will have to be stretched indefinitely. Therefore the threats are a serious embarrassment to them. Should they be implemented, there is nobody better placed than President Nasser himself to guess the reaction of a government to interference with the headwaters of a river that has come to be vitally important to a country's economic development.

President Nasser's particular contribution to the anti-Israeli campaign is his continued refusal to allow Israeli cargo through the Suez Canal. At present two ships are stuck at Port Said: the **Inge Toft,** which has been there since May, and the **Astypalea.** Mr Hammarskjöld has become personally involved in extricating the **Astypalea,** since its interception on December 18th was a breach of the private bargain agreed earlier between President Nasser and himself; this Greek schooner was not chartered by an Israeli company and its cargo technically no longer belonged to Israel. On January 21st the secretary-general himself called at Cairo, but President Nasser, riding high between East and West, seems to have stuck to his guns. The only public announcement after their meeting was the president's declaration on Monday that the two ships would not be released until they had been unloaded. The Israelis, who have been lying low in order to give the secretary-general's negotiations a better chance, may, before long, start looking around for a solution of their own.

The Arabs' most effective weapon against Israel has been the boycott. The precise results of the bluff and bluster that goes on in the Arab League's boycott office are impossible to gauge. In the last few months, several important deals between Israel and the West have fallen through, one at least because of Arab pressure, others probably for commercial reasons. The Israelis feel the boycott closing in all round them. Only last week there were reports that the American navy had decided to play safe by advising the tankers that supplied it with oil to avoid calling at Israeli ports.

Since none of Israel's neighbours dares to risk a repetition of the break-out in 1956, they presumably feel that their actions are well within the limits of Israeli endurance. Probably they are right. The danger is that the sum of provocation from the Arabs, and indifference from everyone else, may in the end build up the tension, the isolation and the sense of strangulation that existed in Israel before the explosion of the Sinai campaign.

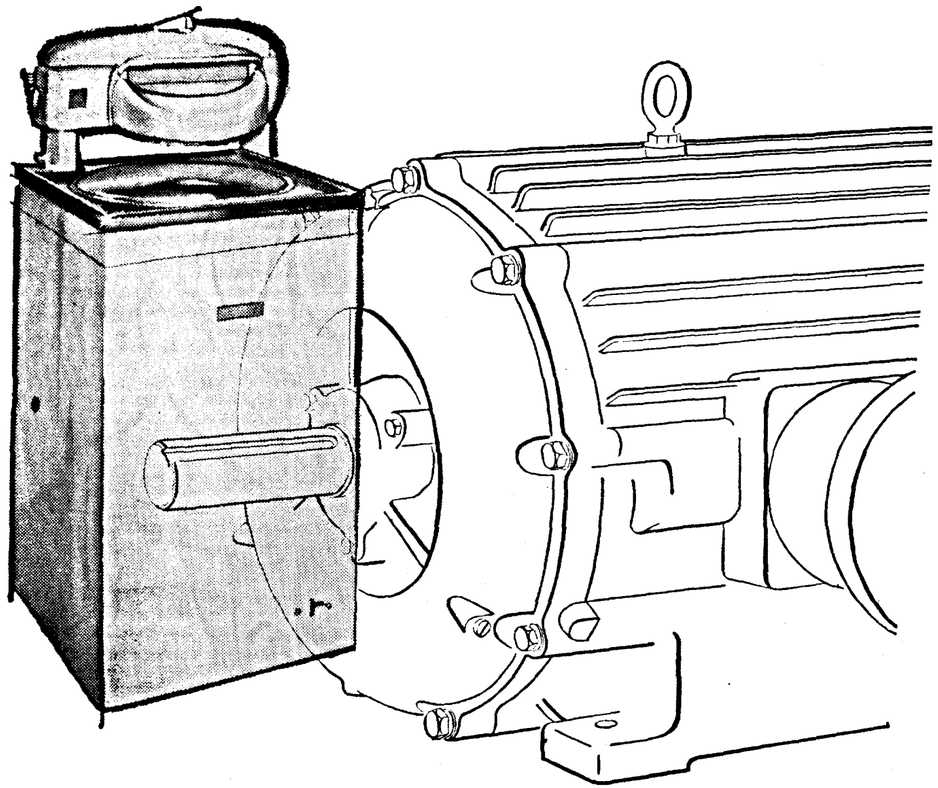
WE'RE USING WOMEN'S WEEKLIES THIS YEAR, BUT FIRST ON OUR LIST IS

RADIO TIMES

Whatever other media we decide to use we always head our list of publications with RADIO TIMES.

Our product is for the housewife. By advertising in 7 leading women's weekly publications we can reach, without duplication, approximately 61% of them. But Radio Times alone covers 54% of all housewives in the country—a far greater proportion than any other single publication.

Obviously Radio Times must come first on our list. With Radio Times and even only two women's weekly magazines, we can reach 73% of the country's housewives.



*Figures of unduplicated readership based on special tabulation by IPA. fieldwork period—July 1958—June 1959.

BALL ROLLER AND NEEDLE BEARINGS FOR PRACTICALLY EVERYTHING

republic." Their main organ, a magazine called *The Humanities* (*Nhan Van*) ran for five issues but was suppressed at the end of 1956. The communist party launched a new literary periodical, *Van*, but the dreariness of its contents provoked criticism even in the party press. The editors of *Van* turned to contributors of the defunct *Nhan Van*, who wrote further articles criticising and ridiculing the regime. In February, 1958, *Van* itself was suppressed and the intellectuals who had contributed to it were subjected to a re-education culminating in the arrests of the following April.

It is now officially suggested that "the people" have been clamouring for the intellectuals to be punished; and Hanoi alleges that their "spy ring" was in touch with spies employed by the United States and by President Diem of south Vietnam. The truth seems simpler. If the appeals are disallowed, the Vietnamese communists will have turned the clock back.

LIBYA

On Their Own

LIBYA has chosen a middle way in the Middle East. On January 17th the Libyans elected a western-style parliament without indulging in the luxury of western-style political parties. Each candidate ran on his personal merits. The complexion of the government that emerges from this exercise is, therefore, not likely to become clear until parliament meets on February 7th. Probably it means the mixture as before—the balance between Tripolitanians and Cyrenaicans carefully maintained, and the pro-Nasser elements heavily outweighed by those who wish to preserve the country's freedom of action in external affairs.

The Libyan war of independence was fought, largely by Cyrenaicans, against Italy from 1912 to 1931, and lost. For a generation thereafter the country was an Italian colony in which roads were built, wells bored, trees planted and towns improved—all for the benefit of Italian peasant colonists. By the end of the second world war, however, as a colony of a defeated power Libya was farther along the road to independence than its more sophisticated neighbours in Tunisia and Algeria. There was no need for a long struggle against an occupying power, and a Soviet offer to assume trusteeship on behalf of the United Nations may have hastened the desire of the western powers to set the Libyans free.

By the time the UN, the British and French administrations, and the Libyans had sorted out local affairs it was fortunately too late for the country to become militarily involved in the Palestine war. Saved by circumstance from a protracted struggle for independence and from the stigma of a defeat in battle, the Libyans set out on their own in 1951. Since then grave financial problems have been overcome only by accepting foreign aid, but now oil discoveries promise to add economic self-sufficiency to Libya's blessings.

A prosperous middle way in the future may be more difficult to maintain than a poverty-stricken one in the past. Already the carpet-baggers are beginning to appear in Tripoli. Arabs elsewhere anxiously assure themselves that the Libyans, being Arabs, will behave as Arabs. They should not be too sure: the Libyans are bursting with self-confidence; they have a healthy disdain for all things beyond their own borders; and they feel themselves beholden to nobody.

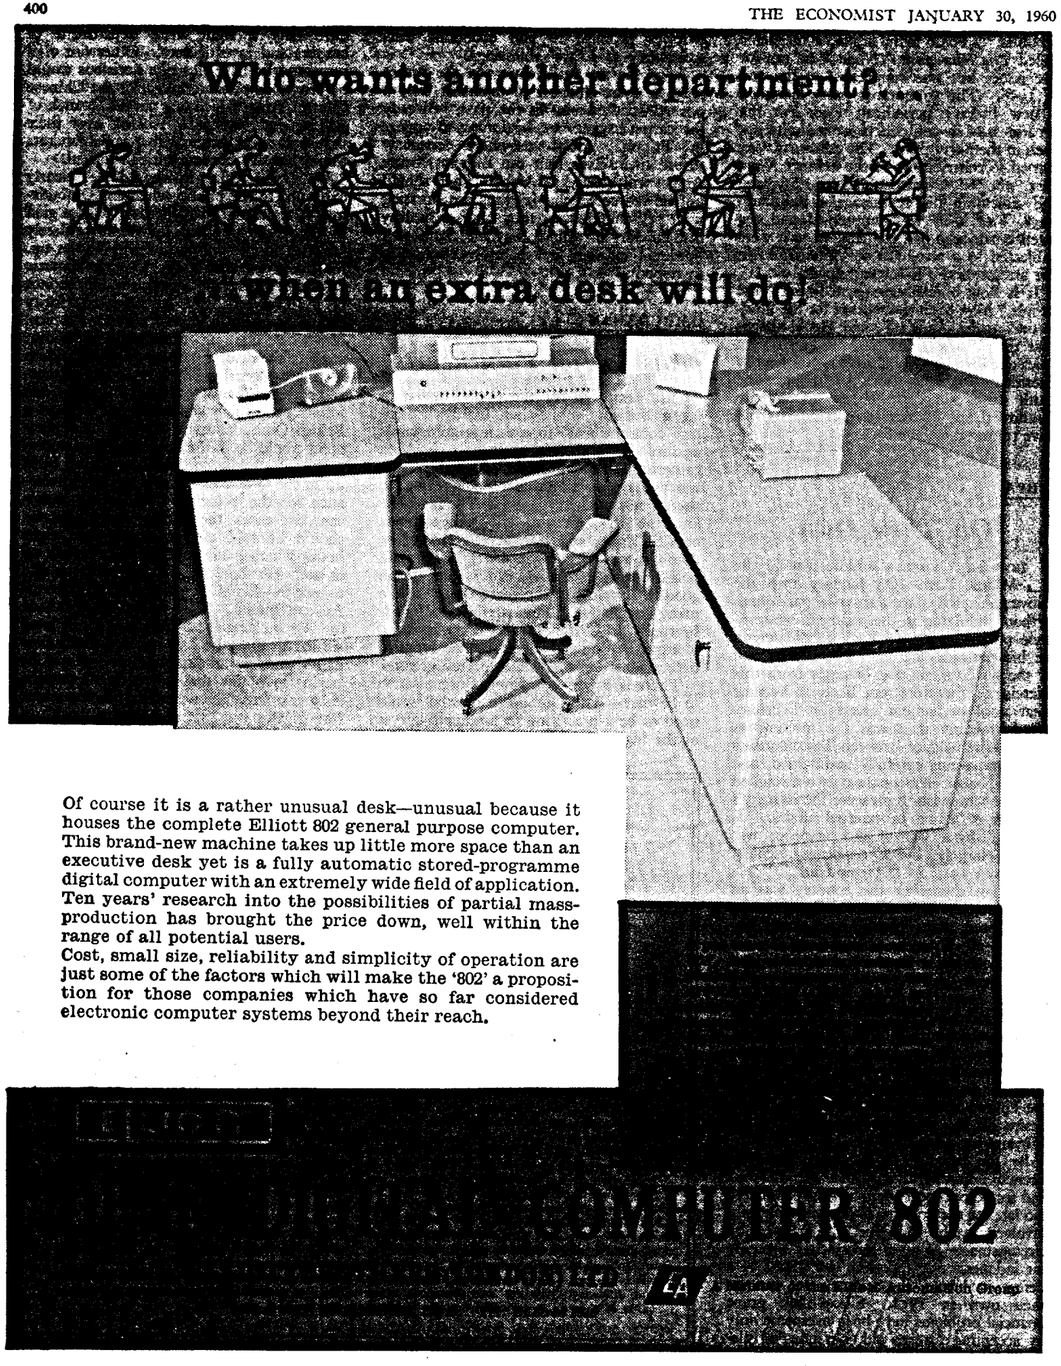
OMBUDSMAN

Answers for Fainthearts

THE campaign for the establishment of a British Ombudsman (or Parliamentary commissioner) to look into complaints against official behaviour has lately been gathering such significant support that it was perhaps inevitable that a counter-attack should be launched against it. The favourite line for this, in the editorial columns of *The Times* and elsewhere, seems to be that the system may be all right in small Scandinavian countries, but would be no good in Britain because there would be too many complaints. This is really too faint-hearted. It is standing logic on its head to argue that a need should not be supplied because the demand would be too great.

There is, however, a point of organisation to be met. The Ombudsman, who would need to be a practising or academic lawyer of the highest standing and calibre, should have only a tight little department of lawyers and investigators. Otherwise civil servants who have to make decisions would be conscious of something like the Chinese Control Yuan, which is a parallel branch of government, constantly looking over their shoulders; and the custodian of bureaucrats would himself become bureaucratised.

To avoid this, it should be clearly explained to the public, when any Ombudsman is appointed, that while he will be glad to receive all complaints he will be ruthlessly selective in the ones which he follows up. No doubt he should tackle some esoteric cases where flagrant injustice is, on the face of it, involved. But, in general, priority should be given to instances that are typical of a whole class of bureaucratic behaviour.



Since the disillusionment with officialdom is caused more by delays in answering correspondence than by anything else, the one indulgence which should be allowed to a British Ombudsman in staffing his department would be in the employment of secretaries. If public confidence is to be built up in the Ombudsman, together with tolerance for the principle of selecting representative cases, the citizen who complains should be told clearly within forty-eight hours whether his case is to be taken up or not. He should also be advised who else to turn to—his MP, perhaps, or the Citizens' Advice Bureau. This would not preclude the Ombudsman's taking up cases later similar to those he had rejected if the flow of his work permits it—and especially if he begins to notice that a significant pattern is developing. Now, with that argument out of the way, let Parliament push on with the experiment.

The Economist

JANUARY 28, 1860

TRADE TREATY WITH FRANCE

Within ten days at latest the Commercial Treaty which our Ministers have concluded with France will be most likely in the hands of our readers . . . but we think that we may, with some hope of being useful, state the principles by which it will have to be estimated, *and the mode in which, as Free-traders*, we are bound to view all conventions of the kind. In the first place, **as Free-traders we must not** bargain for commercial advantages. This is one of the truths which mercantile nations have found it most difficult to learn. In England, however, it is now generally understood that we are benefited by our trade with a country in proportion to the quantity and utility of the articles we import from it. We know that we obtain in that way many commodities which we could obtain in no other way, and that we economise our own labour by producing commodities in which we have the greatest facility, and in exporting them to change for others in which we have comparatively a disadvantage and difficulty. We are now aware that the value of a trade is derived from the comforts and enjoyments which we find by experience that it gives to us, and not in any balance of the precious metals or supposed pecuniary profit to be obtained by overreaching the foreigner. From this simple view of commerce, it follows that, so far from making it a matter of favour to France to reduce our duties on the importation of French manufactures, we ought for our **own sakes to be desirous to reduce them. . . .** Secondly, **we cannot be parties to a fraud on the** French, or on any other foreign people. We cannot condescend even to use the language of bargaining. **We cannot truthfully say to them,** 'If you will take our productions free of duty, we will injure ourselves by taking yours free of duty,' because we believe that, by so taking those commodities, we shall not be injuring, but be benefiting ourselves. We cannot allow that the profitableness of any treaty with us shall be measured by France, or by any other country on any other principle than this. We cannot permit it to be measured by any profit and loss account computed in accordance with maxims that we disown.

What's *Wrong* with Local Government?

A Thirteen Page Inquiry

Respected in theory, less admired in practice, British local government is thought by many to deal with trivial and unimportant things. Local councillors are reputed to be muddled and myopic; many people think Whitehall really decides everything anyway. Why bother with local government?

The simple answer is that local self-government remains of great importance, not as a matter of theory, but as a sober matter of machinery. The elected local councils still run the great bulk of public services. On them they spend more than £1,500 million a year; more, if municipal bus lines, etc., are taken into account. Their capital outlay on new schools, houses, roads, clinics, sewage works, and so on, was over £500 million last year.

Whitehall controls the activities of local authorities in a variety of ways, certainly; but while Whitehall may propose it cannot accomplish. The achievement of many "national" objectives turns in practice on the skills and energies of local authorities. The Crowther proposals for developing secondary and further education, for example, depend on them. So do other urgent aims such as unchoking the highways, clearing the slums, coping with teenage delinquency, and providing for the growing army of the aged.

The controversy over comprehensive schools emphasises the scope for local variety and experiment even in a service where national standards have become increasingly emphasised. In such services as town planning, parks, housing and libraries local councils are largely free to do (or not do) whatever they choose, subject to safeguards for individual rights. The public is often chiefly aware of the negative controls which local councils apply, but the scope for constructive municipal enterprise is considerable—and it is growing.

Birmingham Corporation is completely refashioning the core of the city with its inner ring road and its promotion of new shopping and office projects, and it is rehousing 100,000 citizens and relocating 3,000 firms, including most of the jewellery district. The twin problems of urban decay and traffic congestion are forcing other cities into similar partnerships between municipal and private enterprise. It is local government which shapes the cultural and architectural quality of our cities; and it is local government, too, which is responsible for protecting and for nourishing (through new services) the rural heritage.

Whether these tasks are well or badly done, they are incontestably important. They ought to concern responsible citizens. Too often it seems that they do not. Particular local issues—the closing of a rural school or the Cotton project for Piccadilly—recurrently stir up interest or indignation. But this interest is not meshed in with the general workings of local government, with the result that it usually comes too late and accomplishes little. No doubt the important part played by the town hall is unappreciated. But why is there so much ignorance and apathy about local government, and how (if at all) can these be overcome?

To answer these questions, it is necessary to take a new, hard look at British local government as it actually functions today. Now is a good time to do so, since both a new Local Government Commission and (in London) a separate Royal Commission are busily reviewing the structure of local government. Their reports may provide

occasion for large reforms. To assist such rethinking is the aim of this supplement. A readable survey must be selective—the detail is as various as the kingdom. Three aspects have therefore been isolated.

First the mechanics of local government are reviewed. What kind of people sit today on local councils? (p. 402). What impact do they make on their constituents, and what influence has party politics? (p. 403).

Next come reports on the present state of three major local government services—housing (p. 404), education (p. 403) and highways (p. 406). These are alike in being both preponderant in importance and also subjects of current controversy. There follows a note on finance (p. 408), the lynchpin of the whole system.

Thirdly, a group of correspondents offer personal impressions of local government in four "sample" areas—a Northern city (p. 409), an English county (p. 410), a Highland county (p. 411) and Greater London (p. 412). The aim here is to get away from generalisations and to uncover what seems significant or shocking in particular places to someone on the spot. The result will at least undeceive anyone who supposes that local government is much the same up and down the country.

The final article (p. 413) gathers the evidence together to answer the question: what has gone wrong with local government? And how can it be put right?

Who Are the Councillors?

1. *The Great Unpaid*

The next two articles examine the human material which takes charge of local authorities—and the party machines they operate, or which operate them

OVER 50,000 men and women serve on local councils. What sort of people are they? Perhaps the first point to be noted is that most of them are rather old. One interested observer unkindly compared his council to "old age pensioners playing charades."

Tradition and habit place a strong premium on seniority. It takes time to get offered the more interesting and worthwhile posts such as Committee chairmanships. Equally, once a councillor is well established it takes a political landslide to remove him. His colleagues will not do so—partly because of a dearth of alternative talent, and partly because of the aldermanic system with its emphasis on honouring the party stalwart and its popular association with age and venerability.

The rhythm of a councillor's life is well suited to the middle-aged man. Local government becomes an obsession; it gets into the blood like rose-fancying or bowls. The longer he remains on the council the more his local activities multiply: nomination to a board of school governors and a local charities committee, a seat on the divisional executive and the county council, perhaps finally a justiceship. Most councils consequently have few members under 40 but many over 60.

The greatest numbers of retired people (often as many as a quarter of the members) and also the largest number of housewives are to be found on county councils. It is easy to understand why. County councils mainly meet during the day, so that the frequently long journey to the county town for council and committee meetings debars all but those with time to spare. The proportion of women on the county councils is particularly welcome in view of the concentration there of health and welfare services, to whose running a feminine viewpoint can contribute much. The proportion of women on town councils is generally lower; it varied between 5 and 20 per cent in eleven boroughs which were studied.

Local councils are still mainly middle-class preserves. The only real exceptions are those concentrated working-class areas (such as parts of the West Riding, South Wales, and East London) where a middle class hardly exists. Elsewhere the Labour penetration of local government has no more than dinted the middle-class hegemony. Labour representatives contain a fair proportion of skilled workers (few unskilled ones), but professional grades are also well represented. The Conservatives, on the other hand, are drawn overwhelmingly from professional and managerial groups. These points are illustrated by the table on the next page, which classifies the social status of councillors in six boroughs (three Conservative and three Labour).

The traditional mainstay of municipal government—the local businessman and shopkeeper—still finds his way on to local councils, often in the unsound presumption that time devoted to council work will enhance his business more than the equivalent time actually devoted to the business itself. He is, nevertheless, on the decline. He does not take kindly to the rough and tumble of party warfare. He is not fond, if he is a chairman, of criticism (he might call it abuse) at the monthly council meetings. Least of all does he like it from people whom he considers to be his social inferiors. And when council membership involves a session or two in opposition with only the dim hope of a mayoralty, he soon finds he is too busy.

On the other hand, particularly in mining districts, the local trade union movement is well entrenched. And most Labour councils contain a scattering of trade union officials (even some from Nalgo). However the Glossop survey demonstrated that the more radical trade unionists prefer the less arduous and inhibiting atmosphere of the local trades council.

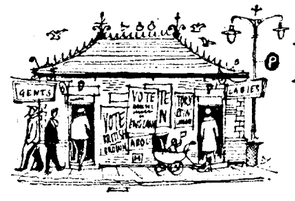
There is a real difference between the boroughs and the counties. Whilst borough councils (other than those which are Labour-dominated) have always attracted the petit bourgeoisie, the county councils have a more "gentlemanly" tradition. On some of them the hold of the squirearchy has been as little affected by the rise of the Labour party as it was by the 1888 Act. Today, however, the ranks of the country gentlemen are diluted by suburban folk.

Since the war, and in some areas earlier, there has emerged a new breed of councillor. He is there not so much for personal prestige or a burning desire to serve the community, but because his party asked him to stand. He is less concerned with the precise amount of the rate than with the quality

of service provided by the two or three committees on which he sits; but mostly with the national fortunes of his political party.

The increasing complexity of local government services calls for much greater technical knowledge on the part of councillors. On the county and county borough councils in particular, a mass of intelligent homework must be done if members are to keep up with events, let alone control them. Many councillors are unable or unwilling to do this. They become passengers, whose interventions are limited to petty points of detail or procedure; the real work of local authorities is done by the officials and a handful of knowledgeable councillors. This latter group are an indispensable element in local government, whose prospects would be desperate without them. But is the supply of such councillors drying up? The tendency for those in control to be "grand old men"—often survivors from an earlier and more individualist era—raises fears that it is. Will the newer party stalwarts be willing to work so hard and so unselfishly for little reward?

The quality of existing councils could be improved if greater use were made of the permissive powers of co-option to committees, which are seldom exercised to anything like their statutory limit. But the tendency is to slip in a local political worthy rather than a qualified outsider.



The vast majority of councillors are still amateurs, devoting much of their spare time to their work entirely unpaid. Most of this work goes unnoticed, receiving none of the respect reserved for workers in the voluntary services nor the publicity accorded to MPs. In fact, the work of the local councillor suffers from being both unglamorous and political—a combination the British public finds distasteful. And yet he is responsible for a vast range of services which intimately affect the daily lives of everyone. In an age of increasing professionalism his unpaid and largely unsung devotion to the community ought to have two cheers. He would be disastrously missed.

Politics in Lilliput

A NINETEENTH century German professor described English local government as the "glowing centre" of the Constitution. In Britain, too, the virtues of electing sensible laymen ("lay gents" as Bentham neatly called them) to keep a close watch on the excesses of local officials are often sung—in theory. In practice, of course, it is not impartial amateurs but party machines which now largely run local government, insofar as the officials do not do so. Instead of just deploring this fact and then forgetting about it, it would be better to take a closer look at how local democracy now works.

As the "glowing centre" of our democracy, many local authorities cut a rather poor figure at elections. Even in the traditionally high voting areas in the North the poll seldom exceeds 50 per cent. The average for the country is nearer 30 per cent. In rural areas of England and Wales this figure disguises the fact that there are often no local contested elections at all.

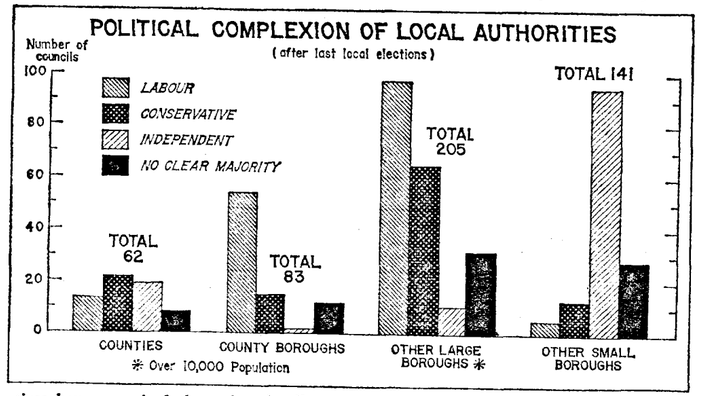
In the 1955 elections there were no contests for over 90 per cent of the seats in seven counties (Anglesey, Cambridgeshire, Cornwall, Huntingdonshire, Isle of Ely, Merionethshire and Westmorland), and only in one county were all seats contested. In the Rural District elections in the same year there was only one county (Surrey) where contests occurred in a majority of the seats.

It is not fair, of course, to compare the interest in local and national elections. But if the minority who voted for local councils really were interested in their affairs, there would be interest enough to keep local government alive and on its toes.

But are they? Few actually attend meetings. A nationwide survey conducted by Nalgo in 1957 revealed that only 6 per cent of those interviewed had ever done so. Nor is there much encouragement. Most of the public galleries are tucked away up obscure corridors and have seating for less than 50—not that 50 usually appear. The view of the Chamber is usually obstructed and it is extremely difficult to hear what is being said or to follow the complicated agenda—assuming one is available.

Nor does there appear to be any evidence that local councillors have personal ties with their electorate. A study carried out in Crewe in 1954. for example, revealed that only seven out of the one hundred and twenty people interviewed had ever met their councillor. In some areas the local councillor holds his own "surgeries" and in others the local party organisation does so. Even so, MPs are often sought out when the councillor would seem more appropriate. Much of the business at MPs' "surgeries" is concerned with essentially local government matters, particularly housing.

Ordinary people find local government baffling—an inexplicable unglamorous morass of areas, powers and committees. It is sometimes simply identified with the provision of sanitary services; all too rarely with new designs for living. The pretentious air of local government ceremonies and the Victorian Gothic revival flavour of much of its architecture, official literature and ceremonial clothing, raise a deprecatory grin rather than active interest. The result is that even those who claim political consciousness—the "opinion leaders" of the political sociologist—maintain a studied indifference to their local government.



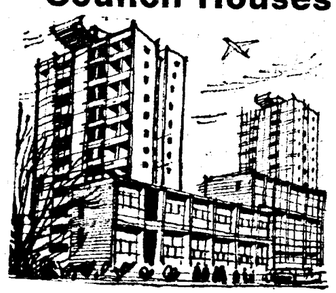
Citizens are, of course, frequently concerned with local government services, particularly health, welfare, town planning and housing. But the contact is made rather with officials than through the elective machinery. (34 per cent of those interviewed in the Nalgo survey claimed to have had dealings with a council official in a year preceding the interview.) Since the war, public relations has caught on. Some councils have a separate PR committee. They do not get as much help as they might from local newspapers whose coverage of council affairs is often very lopsided.

Specific issues produce an occasional burst of activity. Tenants' associations often descend on the Town Hall and have even secured independent representations on some councils, e.g. Aberdare and Westminster. Generally, however, the greatest interest is reserved for cases in which the opposition party or the press can point to some apparent example of self-indulgence by the council. The public, having failed to

bat an eyelid at other expenditure, suddenly becomes obsessed with a Gladstonian passion for candle-ends. Dunstable (trips to Sweden), Middlesex (cocktail party), and Nottingham (gifts of cameras and expenses) are each in their way recent examples of this attitude. All this is rather unfair. Councillors *do* sometimes spread themselves at the ratepayers' expense, but there is relatively little venality or corruption considering the opportunities: a small change in the local scheme of town and country planning can make thousands of pounds difference to site values.

Universal suffrage is a postwar addition to local government. The time has passed when the local council's first duty was to keep the rates down in the interest of ratepayers. It is now a representative agent of the whole community. But this has worked against local autonomy: the development of comprehensive and expensive services has increased central control; where the popular demand for more uniform services has come into conflict with the older democratic ideal of local self-government, the former has generally triumphed. Inevitably, public interest has been diverted to Whitehall.

These changes have contributed to the great development of the party system in local government. Voting at large urban council elections is not for candidates but for parties. The party group on the council is a section of the national party and the national party battle is carried on in the council chamber. The Labour party led the onslaught and still controls almost 60 county boroughs, as well as 28 UDCs in the West Riding, 25 in South Wales, and 19 of the 28 metropolitan boroughs. The Conservatives have organised themselves locally to counter-attack, sometimes displacing Independents and Ratepayers' groups in the process. Old-style Independents have resented and resisted the doctrinaire, welfare-minded, party-oriented approach of the new Conservatives. Independents are still dominant, however, in many counties, rural districts and smaller boroughs.



The party system fosters an authoritarian party caucus. Free discussion is often driven out of the council chamber, majority party members are gagged, and all major political decisions are made at private party meetings. Party organisation is frequently pushed in local government to unnecessary and unpalatable lengths. But at least the parties put local issues in terms which are recognisable to a largely non-political public and provide candidates around whom differences of local opinion can coalesce. The seven counties cited earlier which had no election for over ninety per cent of their seats in 1955 are all listed as "non-political" in the Municipal Year Book. An average of 75 per cent of seats in all the "non-political" counties were uncontested.

Party politics raises a different and more serious problem—the perpetual control of many councils by a single party whose position is unassailable. In the Greater London area alone there are more than twenty boroughs where the opposition party is either non-existent or puny. Here the party system loses such virtue as it possesses; apathy grows (even within the dominant party) and local government comes under the sway of a more tiresome and doctrinaire oligarchy than any clique of independents ever provided.

Three Million Council Houses

2. *How Efficient are Local Services?*

Local councils manage schools, clinics, parks, libraries, slaughter-houses and graveyards; they control the police, put out fires, remove garbage, shelter the homeless and keep Britain tidy. A review of three main functions illustrates the basic issues in local vis-a-vis central government today, and the impact of national controversy in local life.

OF all services, housing is the most irrational, controversial, and politically "hot." Who is entitled to a council house? How many should be built and of what quality? What rents should be asked and what subsidies paid? Should they be flats or traditional family houses? These are questions which make councillors, and local electors, as hot under the collar as comprehensive schools. Everyone these days either lives in a council house or helps to pay for them. The former category, now that there are three million council houses, is at once so large and so interested in low rents that it provides much the most formidable pressure group to be found in local government politics.

Since 1956, too, the Government has deliberately tossed the housing problem back to the local authorities. They get subsidies (over £70 million a year) for slum clearance and associated "overspill" schemes but not (with a few exceptions) for any other purpose. Further housing must be financed entirely from the rates. As a *quid pro quo*, however, local councils were allowed to pool all the subsidies received under previous acts. This enables a council to weigh up its total housing expenditure and revenue and to fix whatever rents it likes for any dwelling. The Exchequer contribution is fixed and given, so that every penny on rents is a penny saved off rates. The intention was to encourage economy and to limit Exchequer commitments.

What has happened? First, the annual output of council houses has fallen from about 150,000 in 1955 to around 90,000 this year. Almost two-thirds of the present programme is geared to slum clearance, and general-purpose housebuilding, though by no means negligible, has been drastically cut. Local government collectively has responded strongly to the Government's purposes. Total rate subsidies on housing last year were £1 million less than in 1957-58, although they had to be spread over 270,000 more houses.

These generalised figures disguise enormous variations of policy and attitude. For example, the *average* rent charged for a postwar 3-bedroom house is 16s. 3d. in Newcastle-upon-Tyne, 31s. 6d. in Newport, and £3 in Hampstead. Partly these differences are the results of luck or judgment—the question of when and at what cost the local authority did its building. But they also reflect deliberate policies, since many councils dip heavily into the rate fund for housing purposes while many others rely exclusively on existing Exchequer subsidies.

Local politics play a critical part in these issues. Generally, Labour councils are more disposed both to build more houses and to keep down rents, with the Conservatives favouring greater "realism"—although there are striking exceptions both ways. In recent years, however, the Labour approach has become increasingly impracticable. Most councils now operate some kind of differential rent scheme. The idea that "all have won and all shall have prizes" dies hard in housing ideology; many councils remain reluctant to charge their wealthier tenants a "means test" rent.

Moreover, the grip of the ideology of cheap public housing now obstructs many desirable improvements. Council houses are like as peas in a pod because the rent which tenants will willingly pay for an average house is still too low, with the result that few councils will entertain the idea of building a proportion of better houses and charging extra for them. Greater variety in public housing is much needed for both social and aesthetic reasons. It should include a proportion of larger dwellings, since the present standard of about 900 square feet for a three-bedroom house will seem sadly claustrophobic and slumlike in 1970.

Another future liability is promised by the great increase in flats, which now amount to over 40 per cent of all new council dwellings. A proportion of flats in comprehensive city projects is certainly desirable, but it is getting too large. Flats are more cramped, less popular, and more expensive; but their numbers are growing because the Government pays a special and very large subsidy to encourage cities to "build upwards" rather than face the difficulties which any other policy would produce.

Every locality has its special housing problems, but two general problems predominate. One is that of the larger and more congested cities which have run out of sites. Flat-building on cleared sites is not a complete answer. Birmingham, Manchester, Sheffield, Newcastle, and the LCC are all urgently seeking means of building either adjacent satellite towns or new towns at a distance. The latter is the preferable alternative, but so far neither has surmounted the opposition of agricultural interests and adjacent counties. The Government dithers in terror of these and slum clearance in Manchester and Birmingham is seriously delayed. Mr Brooke and his ministry know perfectly well what is needed, but cannot get the Cabinet to face the music.

Secondly, there is the special plight of many northern towns whose slums are both more extensive and also much grimmer than those elsewhere; places to which the Government is now hoping to attract new industry. Can it hope to succeed while they remain such miserable places to live in? And is it right that dwellings already listed as slums should fester on in towns like Nelson or Blackburn many years after they have vanished elsewhere? If not, some special aid is necessary to these towns. The local resources do not exist.

The present direction of public housing is fairly clear. The emphasis is on two things—slum clearance everywhere and the relief of congestion in the larger cities. By contrast many smaller authorities have now bowed out of new housing altogether. But just around the corner are fresh problems. Acres of dreary "bye-law" housing, built in the 1870s, are ripe for replacement. Is nothing to be done until these dwellings start falling down, or will the opportunity be taken to redevelop these areas now? If so, the best approach would be a combined operation by public and private enterprise which cannot be started too soon.

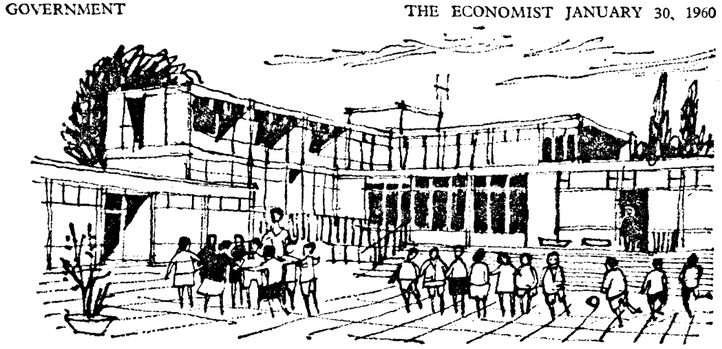
One thing is certain about council housing. It has put a great deal of fire and controversy back into local government. It is also the one important service which remains genuinely local, as it is the responsibility of boroughs, urban districts, and rural districts. In many ways this is beneficial, since housing is a highly "personal" service and fairly small local authorities *can* be as efficient as large ones—which is not to say that they generally are so. However, if local government housing is to remain at all satisfactory, it is essential for councils to educate their tenants in the value of what they are receiving, and to fight off demands for unreasonable concessions.

How Good Are the Schools?

PERHAPS the most important part played in education by the 146 Local Education Authorities is the preservation of England from a completely centralised system of public instruction, as in France, or a completely decentralised system of parent-teacher classroom control, as practised in parts of the United States, both of which horrify British educationalists almost equally. The Local Education Authorities stand between the school child and Whitehall on the one hand, and on the other, they provide a buffer between the teacher and the parent. As committees of elective bodies, they can claim to stand *in loco parentis* to the school children: against Whitehall they can stand on their rights on the ground that they fulfil many other functions besides the management of education and therefore know far more about local feelings (i.e., tricky denominational politics).

The result, say the apologists for the present system, is a degree of variety and experiment unknown in France (which lags sadly behind British education psychologically and in curriculum); yet it resists whims and fashions and fads which (in the name of Dewey) have made American education barely literate at some points. From this system of checks and balances, in which the civil servant, the local government official, the county and county borough councillor, the teacher, HM Inspector of Education, the churches, and the tax- and rate-payer all have a say, has arisen not only nationally higher standards than are usually realised, but also the variety of ways of handling selection at 11, the comprehensive school, the progress in the new secondary moderns, the growth of sixth forms in grammar schools and so on.

This is, however, a very delicate balance; and even if it works in this way, plenty of criticism may be levelled against it. Two problems stand out: the first is the effect of the great range in the size of the LEAs themselves, and the second is the disproportion between the cost and importance of the educational service and the other services administered by local authorities. The size of LEAs varies enormously—it is only necessary to compare the LCC, dealing with over a million children and young people, and Brighton which has a total population of 160,000, of which 21,000 are in school. The counties vary nearly as much: compare the West Riding of Yorkshire with 266,000 children and Westmorland with 10,000. This may have mattered little when LEAs dealt mainly with "elementary education" to the age of 14. But what is an efficient unit of control for primary schools is not necessarily so for secondary schools; still less for further education. A small authority today may have only two or three grammar schools in



its area, and this is insufficient for experiment, for growth, or even to provide large enough sixth forms. Small authorities hotly deny this, of course, saying that they can easily arrange with neighbours for additional secondary school places if they need them—as Somerset does with Bath. In practice secondary education suffers.

Still more obvious are the deficiencies of the smaller authorities in further education—an expanding service. There are now local, regional, and technical colleges as well as colleges of Advanced Technology and one National College. (And one day there will be "County Colleges.") The catchment areas of these cannot be confined to the territory of any but the very largest authorities (such as the LCC). All attempts to make the authorities take a regional view have failed; they have conceded the formation of regional advisory councils to mediate between their policies on "FE," but they are generally bitterly jealous of them.

The Ministry of Education would like regional control over the colleges; the LEAs retort that education must be handled as a whole, and there is something in this, particularly if part-time day-release as an alternative to extended secondary schooling is to spread. The authorities' real motive, however, is the fear of being stripped of any more functions; the loss of hospitals, electricity, and gas has given education a lopsided preponderance. Of the local authorities' total expenditure almost half now goes for educational purposes. This produces curious strains. Chief education officers have overwhelmingly the largest departments (especially in large authorities) and, in their view, the most important work; and they are professional men—almost always ex-teachers and frequently holding university degrees. Yet they are paid only as much, as a rule, as the local surveyor and only two-thirds the salary of the clerk of the council, both of whom are often inferior in qualifications and background. The control by the finance committee, which is supposed to adjudicate between the claims of equally sized departments, becomes ludicrous.

But the trouble goes deeper. Because education is so important, local authorities tend to become obsessed with it. They are tempted to interfere too much, either through or behind the backs of their chief

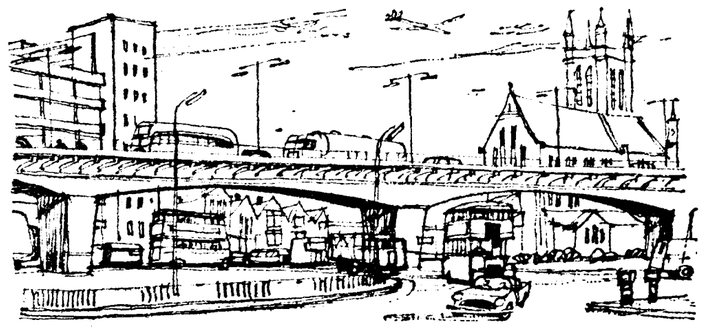
education officer. In theory, local administration of education is a safeguard of the teacher's professional independence. In practice, they often have too little. They may find it advisable to adopt the methods suggested by the local authorities' own inspectors—whose job is to show them approved ways. Only a few authorities (such as Hertfordshire) give each headmaster a discretionary cash float to expend on such things as he wants quickly, or does not want to explain endlessly, or to build up his own school traditions. In general every farthing has to be accounted for. Some authorities are notoriously skinflint: happy enough to provide new schools out of capital grant, they may economise on writing paper. Most important of all, politics go very deep nowadays. In some areas a teacher is wise to carry a party card (Socialist) to have any hope of a headship. When the control of county hall changes, school governors (except in aided schools) are ruthlessly changed to subserve the new boss. Feelings run high over comprehensive schools; some Labour authorities, frustrated by seeing their party out so long at Westminster, are trying to force through the social revolution by schools policy at county borough level.

But the ministry's control is great and growing. Through its control of capital expenditure, it can stop an LEA from opening a new school (or "institution") or from closing an old one; it controls building and educational standards too. Because of the teacher shortage the authorities have had to call in the minister to operate a zoning scheme; it is typical that the majority of authorities are quite unready to let the best among them recruit freely, though they get all the best teachers even so. As more and more money comes from taxes, as distinct from rates, for education, the very number and smallness of the authorities will make them the less able to resist pressure from central government.

In these conditions, some reformers have suggested that it would be best if the local administration of education were taken away from the LEAs as at present constituted, and given to a smaller number of regional boards, which would at once be more expert in education and be stronger in their dealings with the ministry. It is an attractive solution at first sight; but the regional hospital boards are neither so efficient nor so popular as to suggest it would work. The LEAs are in touch with local people, and the larger ones have more localised divisional executives to which the district councils nominate members. Education is becoming a subject of intense public interest, and there is no ground for transferring it from popularly elected into expert hands.

Nevertheless the "ideal" size for an LEA is probably close to half a million population. Any reorganisation of local government which yielded larger units would therefore be welcome from an educational standpoint. As a *quid pro quo*, it would be desirable to extend the system of divisional executives—so as to preserve local contacts—and to strengthen these bodies' effective powers.

The desirability of leaving education with local government is not in question. But to check the excesses of councillors and their officers a lively public interest is indispensable. Education cannot be taken out of politics. Local government electors ought to realise that they are voting for men and women much of whose time will be spent on influencing the education of their children.

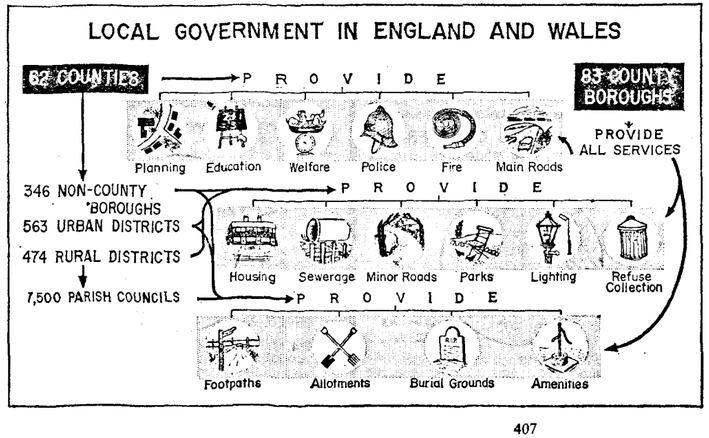


Highways Under Pressure

It is almost exactly fifty years since the highways of Britain became a joint responsibility of central and local government. Apart from the removal of highway powers from rural district councils in 1929 and the creation a few years later of the trunk road system under the direct control of Whitehall, the broad pattern of highway administration fashioned at the dawn of the motor age still serves today. Government grants towards the cost of building and maintaining the more important road, gave belated recognition to the idea that the country's main communications are of national rather than local concern. A classification of those roads of more than local traffic

value now governs the amount of the central government's contribution. But responsibility for the actual highways, their lighting and control of traffic still rests in local hands. Even on the trunk roads, local authorities act as agents for the central departments, except in London and most county boroughs.

After the lean war and austerity years, when even road maintenance was skimped, this highway administration was almost bound to show some signs of strain under the impact of a sudden and substantial programme of new works and improvements. A shortage of staff has handicapped many local authorities and the ministries' divisional engineers. Despite the admirable pioneering of the Road Research Laboratory, there are still precious few scientific studies of traffic, construction methods and materials on which to base a sound and proper road programme. Schemes take much time to prepare, particularly when land has to be acquired with a proper regard for the right of individuals. The government's broad priorities of revamping the main industrial routes, easing urban congestion, and removing the worst accident "black spots," have in practice had to be tailored to the schemes that were ready to proceed. But administrative dilatoriness has also caused delay: the administrative cost of getting road projects mounted has in some cases actually exceeded their cost of construction.



Many of these troubles are being ironed out as the roads programme gets into gear. It is six years now since the restriction of road investment was first eased: total capital outlays have risen from £6-7 million then to more than £60 million this year. But problems remain. Is the relationship between the ministries and highway authorities working as well as it might, particularly in the larger built-up areas? Is the distribution of powers in these areas the right one? Responsibility for the 56,500 miles of urban roads in Britain, thirty per cent of the total system, is in the hands of nearly 1,200 metropolitan, county

borough, borough, and urban district authorities—an average of 47 miles of road apiece. Yet the 127,400 miles of rural roads—again other than trunk roads—are controlled by only 94 county councils and joint county boards.

It is hardly surprising that the administration of highways between cities functions more smoothly. Larger authorities can employ larger staff, and can more readily afford the specialists that modern highway and traffic engineering demand. The maintenance standards of British roads stand international comparison. The Road Research Laboratory has calculated that maintenance expenditure on the minor rural roads is higher considering the traffic they carry than on any other type of road. Much of the present heavy volume of new construction and major improvement is being devoted to the main traffic arteries across the country: outside the cities, it is these roads that have the heaviest (often overheavy) traffic loads. Thus much of the present activity falls upon the counties and several of them have been irked by the amount of detailed control and checking that they suffer from the Ministry of Transport.

But ministerial oversight of some kind seems unavoidable. Only the government can decide priorities, not only in general, but between one scheme and a similar one in another part of the country—though local authorities, and other observers, too, would be happier if the government had developed proper tools for measuring these priorities. On the trunk road system and perhaps on the more important classified roads as well, the ministries are best fitted to ensure that standards are up-to-date. Thirdly, too, it is exchequer moneys that are being spent as well as ratepayers', and Parliament as well as the Treasury expect the two ministries to answer for the way their appropriations have been spent. In practice the relations between the county engineers and the ministries' divisional staff, through whom the departments work, are good; and this eases friction.

It is easy to build or revamp roads between cities, even in Britain. The problem of urban congestion, to which the new motorways will undoubtedly contribute, is more intractable. And the distribution of responsibility—in London and one or two of the "conurbations," one might even say dispersal of responsibility—is undoubtedly a contributory factor. In London and most county boroughs, trunk roads become ordinary classified roads (with a few exceptions) on the reasonable argument that once in the city the road serves a far higher proportion of local traffic. The exchequer grant of 100 per cent becomes a grant of only 75 per cent (for a Class I road). Consequently the ministry at times cannot get the local authority to agree to a particular project because it prefers to spend its 25 per cent contribution from the rate fund elsewhere (or not at all). Likewise local authorities may decide not to go ahead with a scheme of their own because the ministry refuses to give it priority and, thus, a grant.

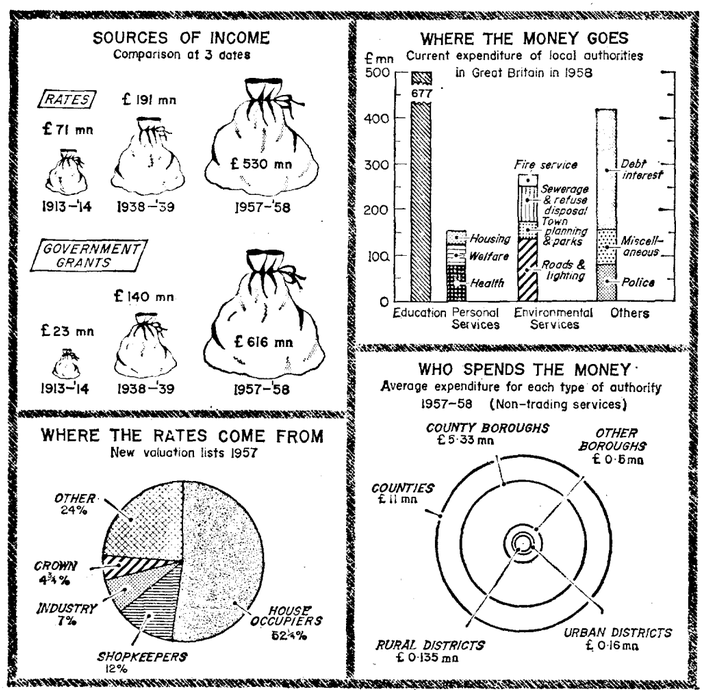
But this battle of opposing vetoes is overshadowed by the way in which urban sprawl is outstripping the cities' responsibilities for highways, traffic, street lighting, and police. Five of the conurbations have been persuaded by the Ministry of Transport to set up joint study groups, but London's experience shows that advisory or planning powers alone cut no ice. A large, single authority would be able to command the specialists and undertake the research that the traffic problems of Britain's major

cities so grotesquely lack. It could also consider roads and their traffic in relation to the planning, land use and architecture of the whole city-conurbation, particularly if it was freed from detailed supervision from the central government. Mr Marples appears to be about to take direct control of a large area of inner London for a year or two with the idea of making "an impact upon its traffic problems." His Ministry, however, has come round to the view that there ought to be a London-wide elected authority tackling highways and traffic; and what goes for London would be equally right for other conurbations. To be effective such bodies would have to have more fiscal responsibility (perhaps through merging highways in the block grant). The government has put a high priority on tackling urban traffic congestion: let the cities, themselves, decide the detail of how it should be done.

Three Suggestions for Local Finance

MORE apathy is evoked by local authority finance than by any other worthy subject. This ought not to be. Democracy at the grass roots is bound up with good housekeeping in the counties, boroughs and districts. The public, stifling its yawns but ready to howl when its rates poundages are put up by sixpence, gets good housekeeping largely because it is well served by the treasurers and finance officers of the local authorities. Ratepayers ought to be ready to back any arguments to strengthen local authority finance so long as they offer good value for their money. Here are three for their consideration.

First, should we still pay rates, or pay local dues in some other way? The old agitation for a local taxation system is still alive. The short answer to it is that a local tax system would soon cease to be independent; it would become a slice off the national system, carved by the Treasury and leaving no independent source of income to the local authorities. The case for it is that it would give local treasurers a prompt share of increases in the national income. Yet the rating system, properly worked, is capable of doing just this and doing it equitably. What other financial system could expect to survive a generation of inflation carrying such burdens as these:



- *House valuations* for rates are mainly based on 1939 rents.
- *Agricultural properties* have paid no rates since 1929.
- *Industrial premises* still pay on only half their true value even after the revolutionary change last April; until then they had paid only a quarter for thirty years.
- *Shops and commercial properties* got a one-fifth rebate in 1957.

The reforms needed to make the rating system more efficient and more equitable are simple to state: to bring valuations up to a current rental basis for all classes of property, and revalue them every three years; and to make prosperous users of local services with no current excuse for relief pay the full rate. The history of rating is littered with political cowardice and compromise; but a government that has shown itself surprisingly liberal in trade and financial policies ought to be prepared to extend its recipes to local finance—and to remember that decontrol of rents did not provoke riots.

Secondly, the government deserves credit for the reforms in the grant system made last April. The whole muscular tone of local finance has been vastly tautened as a result of this; and none of the absurdly exaggerated forecasts that local authorities would neglect the services for which they no longer get a percentage grant has been true. Something like two-thirds of the grants from central funds can be used at local discretion; there is a case for some further untying of items now covered by specific grants—highways perhaps being one of them.

The importance of the general grant and of the rate deficiency grant is to level out standards of local services and to help the poorer authorities; it follows that the complicated formulas that determine the grants will need periodical revision as economic and social conditions change in different areas of the country. These revisions would be much less demanding if rating valuations and poundages were revised to full and current levels for all classes of property.

Thirdly, a more convenient instrument for local borrowing is needed. Told to go into the market for their needs, after the door of the Public Works Loan Board was shut to them, the local authorities have been borrowing freely in other ways. Even before Thursday of last week, to borrow at long term meant waiting one's turn in a very slow queue and then paying for, say, 20 years, nearly 5¾ per cent in interest and charges. To borrow on shorter term, even at a higher rate of interest if necessary, at least leaves open to the borrower the option of refunding on more advantageous terms. But the instrument of borrowing for any term exceeding 364 days is a mortgage, not very readily negotiable and subject to 2 per cent stamp duty on transfer if a new buyer can be found. Why not introduce a more readily transferable form of loan certificate with some arrangements for compounding stamp duty? The small saver (and the large saver too) has shown himself very ready to support the local authorities. But it should not be more difficult for him to do so than it is for him to buy a unit trust holding.

England and Wales unless otherwise stated

3. *Far Flung Local Democracy*

Local government is not a dull, uniform officialdom run by a dull mediocre bumbledom. Even in times of national standards it varies in tone and structure and approach. What are the questions which interest local citizens and make Councillors tick? Four local correspondents were asked to report on their parish pump politics.

Northern City — MANCHESTER

"GIVE us a vision of our city, fair as she might be." This invocation is part of the prayer with which the monthly meeting of Manchester city council is opened. It goes on to define a fair city as a municipal Utopia bursting with social justice, "where none shall prey on others." And where, the more irreverent might add, the rates are low.

High rates constitute the most urgent problem facing the 152 members of the city council. They are a reasonable cross-section in outlook, skills, and ability. But they do not appear to be as imaginative, clear-thinking, forceful and forward looking as one might expect in a city which regards itself as a regional capital and still boasts occasionally that what it thinks today the rest of the country will think tomorrow.

At 24s. 6d. the city's rates are the highest in England; they went up 2s. 6d. in April, and further increases are inevitable. The city treasurer, Mr H. R. Page, has dismissed the chances of rate stabilisation during the next five years as "quite impossible." He adds that if corporation spending continues to increase at its present level, the rate could be as high as 35s. by 1965.

But instead of setting about the problem and giving the ratepayers some idea they meant to tackle it, the council merely continued a drawn-out political slanging match. The Conservatives, with 57 seats to Labour's 92 (there are three Liberals) blame the high rate on "Socialist mismanagement." Pilate-like they wash their hands of responsibility and say naively that Labour must take the blame because it controls the chairmanships and deputy chairmanships of the principal spending and policy making committees.

But the Conservatives have never responded to Labour's challenge to name the services they are prepared to cut or the developments which should be deferred until there is money to pay for them. This is typical of the reluctance to tackle problems as a council rather than as political parties. Nobody wants to look much beyond the next municipal elections, and the provision of new schools, old people's homes, improved services. Necessary as these things are, they have become expected and accepted, and there is no feeling that Manchester is an exciting place to live in from a local government point of view.

The rates problem has frozen the council immobile. A good example of what Manchester is *not* doing today concerns a £6 million scheme to build 1¼ miles of new road and flyover, which the traffic experts claim to be an essential if complete chaos is to be avoided in the central area within the next few years. The finance committee went pale with anxiety when it found that ratepayers would have to pay £2 million towards the scheme and urged a 12 months' delay during which the financial implications of this and other major road proposals could be investigated.

Because it had been sprung on the council rather quickly, the new plan was explained to them by the officials who had designed it; there was also a full report giving the arguments for and against the scheme. But the council, after agreeing that the new road was essential, decided not to seek powers for it in the current session of Parliament, thus achieving the 12 months' delay urged by the finance committee.

Three points emerged from this farcical situation:

(1) The fear that local authorities are being priced out of existence by having to adopt schemes they cannot really afford, and the need for a review of the present system of local government finance.

(2) A warning by a young Labour councillor (which may have some influence on the Labour group) that the central area of the city which contributes about one-third of the rates, must not be stifled by failure to deal with the traffic.

(3) A protest from the younger backbenchers of *both* parties that they object to being regarded as a rubber stamp for the views of their seniors.

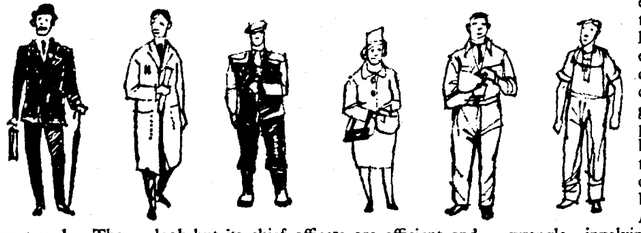
One last word on money. Recently, to the joy of the Conservatives, it was agreed to invest £4 million in equities. The money —from the corporation's superannuation fund—is being invested at £500,000 a year, and the first £2.9 million is now worth more than £4 million. Manchester *was* first in the field with this idea.

But if rates are the surface problem, and traffic the one demanding immediate attention, the most serious is housing. The official estimate is that 60,000 houses are unfit for habitation; so unfit that 700 fall down every year from old age. There are more than 20,000 families on the housing waiting list, but the city is so short of building land that only 1,649 houses were built last year compared with the postwar target of 3,000 a year, which has never been reached.

Manchester is pressed hard against her boundaries, and the council's efforts to get building land in Cheshire, on a site large enough to keep the building force occupied for a number of years, have failed; now another at Westhoughton is being sought. No one wants the city's surplus families, and people in other local authority areas protest about being swallowed by the "Manchester octopus." The urgency of this desire among the surrounding authorities may be seen from the fact that they are considering local amalgamation to resist Manchester.

BUT in the city centre redevelopment has been slow. Manchester lagged behind other cities in healing its bomb scars. Recently work has started at last on the redevelopment of Piccadilly, the most important vacant central site. There was delay here because of the credit squeeze, and also because the council insisted on the comprehensive redevelopment of the Piccadilly site, including the provision of a new hotel.

The feeling persists, however, that redevelopment is not pushed with the vigour it demands, and this may be because the emphasis in recent years has been on social improvement, with an understandable feeling among members of both parties that human problems must take priority. It is only fair to say that in cities like Manchester—badly planned and hurriedly built —an inheritance of human problems from the Victorians is heavy.



Fifty-four million is earmarked for capital schemes in the next five years. Many services being improved are widely used by commuters and local visitors, and this strengthens the case for a wider local authority. To make this acceptable the city council must grow up and stop its adolescent habits of political bickering. It could begin by putting meaning into its monthly prayer.

English County—

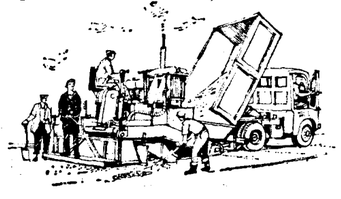
BUCKINGHAMSHIRE

BUCKINGHAMSHIRE stands 50 miles high, her feet in the Thames, her head between Northampton and Bedford, her other dimensions, in the usual places and in miles, being 20-15-20. Mainly rural, with no county boroughs, she has only one town aspiring to that independence, on whom John Betjeman unkindly called down a local destruction ("Come, friendly bombs, and fall on Slough, It isn't fit for humans now"). High Wycombe (45,270) of furniture and light industry and a southeast dormitory fringe at Beaconsfield, Amersham and Chesham help to raise the total population to 440,600, while Aylesbury (22,960) and Bletchley (14,610) are quickly growing sons. Since the war, the general increase in population has been considerable as the metropolis increases its pressure and "Bucks" becomes more fashionable on private headed writing paper than "Berks" or "Herts." Still, of the 479,411 acres, as many as 402,468 are still arable or grass land, rough grazing or woodlands. There are 4 boroughs, 8 urban districts, 8 rural districts and 201 parishes.

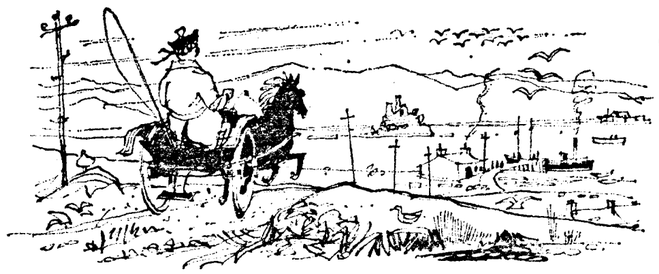
The County Council sits at Aylesbury in a chamber of no distinction and a few practical advantages, being stuffy if the windows are shut, noisy if they are open, and acoustically abominable either way. The Press are housed in a jury box where they look at once more intelligent and less interested than most juries. The Public occupy a confined space at the back which would be a lot more confined if there were any public. The main body of the hall possesses, like the House of Commons in this respect only, too few seats for all its members.

No council of 85 (including 21 aldermen) could be said to present a generalised or composite face and there are many sorts, conditions, trades and occupations represented. Retired officers, farmers of course, barristers, accountants, housewives, Lords and Ladies, former teachers, railwaymen, and so on: the pattern is almost stereotyped. The Front Bench is perhaps notable in presenting a vaguely weatherbeaten appearance, having been there for some time and accustomed to the outdoor life. The whole is presided over by an able, shrewd, vastly experienced and fair chairman who generally manages to get his own way, when he has to, without causing offence.

Most of the members are present without having had the tiresome bother of elections. Thirty-eight of the sixty-four councillors were unopposed in 1958, to whom must be added half of the aldermen who were in mid-term. Very rarely does an alderman offering himself for re-election not succeed, so we may say that some fifty-nine of the full membership of eighty-five are there without benefit of contest.



Party politics rears its head from time to time though the Conservatives and Independents, holding two-thirds of the seats, are quite strong enough to show distaste but not petrification at the sight of that gorgon. The independence of the Independents is by no means wholly false. On an issue made dogmatic by the Labour group, they will no doubt vote with the Conservatives, but no one knows how they would vote on an issue made dogmatic by the Conservatives, because the latter carefully never speak *ex cathedra*. On most questions, lines of voting run zig-zag across the chamber as town versus country, "progress" versus "preservation," south versus north. Personalities count for much. This freedom sounds very well but it does not always result in either efficient government or efficient opposition.



The Front Bench contains most of the ablest of the Conservatives and Independents, with one or two elder statesmen sitting, so to speak, below the gangway. The Leader of the Labour group is vice-chairman of the Education Committee (his chairman is Leader of the Conservatives) and so perhaps ranks as a junior Minister in a Government of All the Talents. The compromise is a little uneasy and certainly there is no nonsense about the Labour group having its proportion of aldermen, for this would mean that some aldermen would have to be displaced. No one could call Bucks CC a body with a radical outlook but its chief officers are efficient and influential and do not attempt unduly to run their chairmen or committees. The backbenchers vary in quality but exercise little power over policy; there is a tendency for the less vociferous to be brushed aside with firmness and courtesy. A backbencher must seek to walk the ridge between the valleys of unpopularity and ineffectiveness. Tenacity is essential, for nuisance-value is his best weapon. Long-winded persistence is his worst enemy.

Education is the great spender, as elsewhere. But in Bucks there is a long heritage of neglect, especially in the rural areas. Many of the old church schools are appallingly decrepit, far transcending all bulges and birthrates. Each year the education committee asks for more new schools than the Minister will sanction. Each year, more and more families pour into the county, and the county district councils will not realise that no net financial benefit can conceivably result if each new house with its lovely rateable value holds one or two schoolchildren. The highways committee builds what it has money and staff for. Police is something the standing joint committee and the chief constable do. The health committee contemplates the mental health legislation. The children committee asks for more foster homes.

The will to do its job pervades the Council but money is lacking. And the will to spend the necessary money is not strong. It would be unfair to suggest that Bucks is worse in this respect than the average county. Moreover, as we have said, the Government is sometimes more unwilling than the authority.

The county districts defy generalisation. The population of the rural district of Buckingham is spread at 120 persons per square mile; Slough at 7,000. Three of the four boroughs have populations appreciably greater than those of any of the eight urban districts, but the fourth borough (Buckingham) is smaller in population than all but one of the urban districts. Rural district councils are the most unsatisfactory of all local government authorities. They are residual, with no unity or meaning. In the larger towns, local government politics is lively—occasionally impassioned. Prominent Labour councillors, as elsewhere, sometimes take to their tents and occasionally fold them and steal away to the Other Side. Prominent Conservative councillors, as elsewhere, do nothing of the sort. Only Slough has the population to exercise any considerable delegated powers. Slum clearance and housing generally can involve policy and controversy but, otherwise, most of the sound and the fury come from the beating of breasts or empty drums. A good north versus south wrangle, involving also county districts, was recently fought over water supply, ultimately in the House of Commons by way of private Bills. By-passes and bridges, swimming pools and public lavatories, building development and industrial location, all and more fly as bubbles to the surface, pop, and sink back. The population remains receptive and perfectly apathetic.

Celtic Fringes—

THE SCOTTISH HIGHLANDS

IN a widespread Highland county, with very difficult communications, where councillors travel by boat, ferry, car, occasionally bus, but hardly ever by train, there is no question of holding evening meetings so that men and women with steady jobs could attend. An active county councillor (who is *ex officio* also on the district council) must be prepared to spend at least thirty days a year on council work. More if he or she is on sub-committees. A Burgh member (most Highland counties have one or two sizeable towns which send some members to the county council) may have to spend still more man-days on local government work, though his town council meetings will not take up travelling time. A convenor (anglicé Chairman) of a committee must spend even more time, as he must work closely with his officials over matters of detail, often involving long journeys. No wonder it is extraordinarily difficult to get good county councillors.

Who are they? Well, there are several possibilities. There are the traditional lairds, MacDonalds, MacLeods, Camerons, Campbells *et al*, but the present generation of these may have to work for their living out of the county; they cannot be counted on as replacements. There are the people with small businesses which are sufficiently successful to be left for a time or even to be aided by the fact that the proprietor is a councillor. There are ministers of religion, unkindly said by some to work but one day a week. There are retired men and women who may have been teachers, doctors and so on. Professional people still at work must be very devoted to take on the job. Wage-earners are rare and must be even more devoted. Argyll was lucky at one time to have a Vice-Convenor who was a working engine-driver. But the Bull—he is known all over the highlands—used to come to a meeting off a morning shift, toss his enemies over the wall with one sweep of his notional horns, and then go off on night shift to the quite unnecessary anxiety of his friends.

Such people are rare and infinitely valuable. As to the rest the intelligent and honest have on the whole got more interesting things to do and little spare time. The stupid and honest can't contribute much. The retired are sometimes not up to the wear and tear, physical and moral. An ex-MP once said that after the peace and order of the House of Commons, the Argyll county council was too much for him. But there are a number of people who are on the county councils of remote areas for local power of some kind, and who are willing to put a lot of thought and ingenuity into it. Sometimes it is all too simple: drinks and the occasional fiver in bars. Sometimes it is more complicated, involving contracts and such. This has become rather scandalous in some of the larger Scottish Burghs. The councillor directly involved duly leaves the Chamber. But he has friends, and when it is their turn. . . . Those who are not used to this kind of thing find themselves a little lost.

The few who are intelligent, honest and hard working are worth their weight in gold, but only get a travel allowance and expenses which barely cover what they are almost bound to spend. But I doubt if more of this kind would be attracted, even if you paid them well. It is not simply that their firms may not let them off. The Forestry Commission for instance—one of the main employers in the Highlands—would certainly give leave, but how could a forester get away during the fire-danger period?

PROBABLY most Highland county councils are over-weighted with ministers, most of whom want to get on to the education committee, where they are joined by co-opted members also representing organised churches. The rest of us realise that Scottish education was started by John Knox, but still feel that we are too often relegated to discussions on school drains and stoves.

It is astonishing how good the council officials are. Luckily perhaps, there are medical officers, architects, engineers and so on who choose to come to such counties for the sake of sentiment and natural beauty, or because they were born there. Highland counties are equally lucky about teachers, who often ask specially for the tiny one-teacher school.

In the Highlands the county builds houses, though the district councils allocate them. This must be so, since only the local people know their housing list; the Burghs, often very small by English standards, though with ancient histories, do their own housing. Many rural areas are fully housed and even worried lest houses fall vacant as populations drop. As they get the remote area grant, every housing scheme has to be passed by the Department of Health, which has a horrid habit of sending round a circular asking for increased use of local materials and then turning them down because they are too dear.

Roads are the main financial headache and we try hard to trunk them, so that everything should be 100 per cent grant. We nag at the Department of Agriculture to give us more than a 75 per cent grant for township roads. These may service only a dozen de-rated families but without them vans will not call and the transport of children to school over more than 3 miles becomes almost impossible. The Crofter counties' scheme for special help for Highland roads goes slowly and does not cover the special problems of islands, the linking up of Shetland and Orkney communities, for instance, who want to live in reasonably modern conditions.

Educating a scattered population means extra complications. Few Highland councils can afford any frills and Directors are worried about the Block Grant. A fairly steady building programme goes on in all counties. Inverness has a secondary school at Daliburgh in South Uist which is a real beauty, but they were lucky in having an unusually brilliant county architect, Col. Cullen. In several counties some officials are water-diviners, which is a real though unconventional help with water supply-problems.

For people demand water supplies and drains; if they don't have them or if the water gets peaty in dry weather, then the councillor is made to feel it. They are well aware of being rate payers, especially if they used to live in bad houses with minimal rates and have now moved to council or Forestry Commission houses. Including the demands of numerous special districts, frequently found in the Highlands for such purposes as drains, water, lighting, once-a-week scavenging and occasionally even a harbour, rates are well over twenty shillings. Ratepayers don't think of dull things like police—who, after all, are not always welcome in an only fairly law-abiding community! But at least they know who represents them, and are interested in elections. Often there are quite high voting percentages, meetings attract vocal audiences and stories fly about to the personal credit or discredit of candidates. The churches join in merrily, especially in Free Presbyterian areas. One would never be surprised to see whisky flowing. It is dull when nobody, however crazy, can be got to put up an opposition. And yet, because of the difficulties that council business entails, this is what often happens.

The Government of Megalopolis—

GREATER LONDON

To a foreigner London's government must seem an absurd jigsaw puzzle. There are the City of London, the County of London, the metropolitan boroughs, and surrounding these are a maze of other boroughs and urban districts and other counties such as Middlesex, Kent and Essex. All these bodies are elected, all perform a varied range of services. What are the keys to this puzzle?

The first key of course is the English passion for localism. Parish pumps as such may have disappeared, but borough pumps are still vigorously defended—by the councillors anyhow. There are a hundred boroughs in Greater London, and some of them (Bethnal Green and Chelsea, for example) possess some correspondence to local communities. Most, however, do not, but are a coalition of still more localised neighbourhoods—the Blackheaths, Crouch Ends, Muswell Hills and Kentish Towns which still constitute (if anything does) the community plums in the London pudding.

But the boroughs of London are absurdly small. With the partial persistence of local neighbourhoods goes the great mobility of Londoners. Those who cross a dozen borough boundaries on their daily round are naturally more concerned with the quality of the roads, schools and other services than with which local body provides them. A hundred different systems of education, health and highways are bound to seem and to be wasteful, confusing, Dickensian and absurd. The boroughs have steadily been losing powers to the county councils, and those which they retain get increasingly hard to justify. What is the rationale of keeping a hundred skilled borough engineers, many of whom maintain only a short length of classified highways?

The boroughs of London stand for a community ideal so imperfect and so frankly inefficient that everyone but the councillors themselves must doubt its reality. It is an ideal sustained by the trappings of power, by mayoral robes and ancient dignities. Most dignified of all, of course, is the Lord Mayor of London, presiding over the City's golden square mile. To visitors, even to most Londoners perhaps, he appears as London's chief spokesman; yet in terms of actual power he is nobody when compared with a much plainer figure—the chairman of the London County Council who presides over the vast bureaucracy across the river.

The LCC is the most remarkable local authority in Britain. There is indeed something more Gallic than English in its logical radicalism and its cultural enthusiasm. Its council is unique in being drawn mainly from the professional middle-class. The Labour "intellectuals" (men and women) who dominate its proceedings have set going many unusual policies. It is impossible to be indifferent to what the LCC does, and each will cast the balance sheet differently. Those who detest its educational obsessions may admire its imaginative (if expensive) housing projects, or vice versa. It is full of contradictions. It has promoted dispersal from London more vigorously than the Government, but its highway policy is timid.

THE LCC has one great asset—enough rateable wealth to go in for experiments which are impractical for lesser bodies. Though waste has occurred, it is a good thing that London should have one body of this kind—a body equally prepared to support the arts, to buy historic buildings, to provide concert parties and to build a sports centre. It also has one great defect—the excessive rule of a high-minded but rigid Labour caucus. It is only fair to note, however, that an unusually vigorous and public-spirited opposition also exists which may still get its turn. Meanwhile the Labour majority on the LCC, mesmerised by its position in the vanguard of socialism, seems unable to free itself from a grimly authoritarian caucus or (for fear of losing sway) to look at local government beyond its own doorstep.

Outside the County of London, the administrative map of the metropolis becomes indeed blurred and confused. Middlesex, Essex, Kent, Surrey and Hertfordshire are all London authorities in whole or part, and they are also in general well-run county councils. Their trouble is their unwieldy areas and their lack of metropolitan roots. What has Dover to do with Penge or Saffron Walden with Leytonstone? Paradoxically, however, this drawback seems to be less felt in the metropolitan parts of Kent and Surrey (perhaps because they put themselves "outside" London) than in urbanised Middlesex and Essex.

This, then, is London government. What can or should be done about it? The Royal Commission studying the subject will soon have to report. It will first have to answer one obvious but often-ignored question. Why not have just one London government? New York City, also with 8 million people, elects one and only one municipal body. Why keep a hundred councils in London, a city which is equally integrated and mobile and in which local "community" (in so far as it exists) no longer has much relevance to the shapes of the boroughs. Would not the result be better services, better planning, and a livelier political tempo?

There is much—very much—to be said for this solution. Those who say that the result would not be *local* government in the traditional sense are beside the point. Already today the London County Council is a miniature state, and its unpaid councillors spend a third of their time in administration. The councillors of a Greater London body would have to be full-time and paid. So long as they are not too numerous need this matter?

A weightier objection is that Greater London (like New York City) is rapidly becoming merged in a still wider "city-region." Increasing numbers of London workers live up to 60 miles out. Conversely hundreds of London industries have now moved out to the new towns, and economic links between London and surrounding towns are becoming much closer. An integrated city-region with a radius of at least 50 miles is rapidly being forged, with people and jobs steadily moving from centre towards periphery. The pattern affects social services: the pursuit of better schools is a principal reason for migration to such areas as mid-Hertfordshire.

It is a pity that the Royal Commission is precluded by its terms of reference from considering these wider questions. They urgently need attention. Small local government units in the London area tend to be socially and politically lopsided, as well as being too narrow and weak for the services now required. They lack vitality. On the other hand, complete uniformity has obvious drawbacks. It rules out the healthy variety and competition in the provision of schools, clinics and cultural facilities. For most services what is wanted is neither a plethora of local councils nor so few that real choices are absent. For others—highways and planning—a single vision of London's complex and growing problems is vital. Somehow the Royal Commission must try to satisfy these two objectives.

4. *The Summing Up:*

Policy and the Public

IN many ways the verdict on local government which emerges from this supplement is a favourable one. Most local services are being efficiently delivered. Local government officers are on the whole competent and maintain professional standards. There is little corruption, venality, or rank inefficiency. The tradition of altruistic public service in local government still exists.

These are valuable qualities, but they do not suffice. One critical weakness emerges, which in time could easily topple the entire edifice. This is the low energy content of democratic interest which ought to be putting force into the entire machine. This is the cause and the effect of the popular ignorance and indifference, the silliness of local political dogfights, the paucity of talent among councillors and aldermen, and the cumbersome creaking of council and committee routines.

Need this matter? So long as the officials continue to be competent, cannot local government these days pretty well run itself? This is a dangerously easy line of thought, whose actual results would be anything but happy. Bureaucratic control in this country has hardly become so wise or so mild that the contributions of sensible, unbiased laymen to administration can be abandoned. Many, perhaps most, councillors are not sensible, but things would hardly be improved by surrendering such democratic safeguards as still stand.

Moreover, *all* the main problems of local government can be traced, at least in part, to the central issue of public apathy. Rates, for example, are inevitably more resented where the value and potential benefits of local government are little understood. Resistance to a higher level of local taxation increases the town hall's dependence on the Treasury and brings treasury control. Again, if popular indifference allows the local council to become a mindless cipher or a petty one-party state, the reaction will be towards centralised administration. If rule by officials comes to be preferred, it is the (bigger) man in Whitehall who will make the decisions. Local government officers know this and try to uphold at least the form of council control. But the form alone cannot survive.

It is not fanciful to see still greater dangers in the low repute of the democratic side of local government. Parliament on its own is too overworked and insufficiently powerful to exercise an effective control over the entire bureaucracy. The test of democracy which asks whether two critical services, schools and police, are under popular *local* control is by no means a bad one. Democracy would be a narrow and precarious affair if it were confined to central institutions. The 50,000 councillors are at least getting and giving a lesson in the democratic procedures of open discussion. The stifling of it by a party caucus is equally a warning of worse.

The real trouble lies in outworn beliefs about the purpose and functioning of local government. Traditionally it was closely tied to *numerous* and *distinct* local communities, each with its own special needs. This conception no longer tallies. The smaller local authorities—those closest to older ideas of local communities—have little to do. Finance amply proves this. All the 563 urban districts combined spend less in a year on current services than the London County Council. Attempts to shore up these smaller authorities by "delegating" to them additional functions merely produces a cumbrous division of responsibility (which confuses the public), extra costs, and additional delays. It is more a political sop to established interests than a way to revive genuine local government.

Real power has now passed to the 62 counties and the 83 county boroughs. Unfortunately, public interest is not properly harnessed to the affairs of these bodies. Most counties have scattered and somewhat irrational areas, and all "precept" (i.e. secure) their rates from the urban and rural districts and non-county boroughs. Popular attention is still focused on the immediate local council which issues the rate demand note, and the county council gets all too little attention.

County boroughs suffer from the exodus of large numbers of the middle classes beyond their borders. This explains why so many of them are strongly Labour. Politically this is not healthy, any more than is the permanent domination of many counties by a Conservative or Independent squirarchy. It has a bad effect on local services. Cities are understandably reluctant to build roads and provide other services for the thousands of commuters who live outside their borders. Lacking a substantial middle class, their concern with civic improvements and cultural facilities is often far too limited. The business and professional classes, for their part, are becoming increasingly disinterested in borough government. Working in one local government unit and sleeping in another, they confine their citizenship to an occasional grumble about the rates.

These problems cannot be overcome by nostalgia for the old days of the highly localised authority. It is far better to admit openly that larger units of local government have become essential for efficiency, and to devise units which will work tolerably. To preserve local democracy, two things should be done. *First*, responsibility should be concentrated upon a *limited* number of "all-purpose" or "most-purpose" bodies. *Secondly*, these units should be as "balanced" as possible in a social and political sense.

This will mean abandoning a lot of shibboleths. The distinction between "urban" and "rural" has lost most of its point in providing modern services, yet is deeply embedded in the local government system. Equally pointless is the plethora of small local government units in highly urbanised areas where the population has become highly mobile. A much broader authority, representing most of those who live and work in the area and containing a good cross-section of social classes, has advantages which outweigh any argument against "remoteness."

These are general principles. To implement them will not be easy and will require much careful attention to local circumstances. That essentially is the task of the two Local Government Commissions now at work and of the Royal Commission investigating London government. These bodies are hampered by deliberately restricted terms of reference; but they have the opportunity to lay the foundations of a better system—if the central Government will back them up.

It is here that the final uncertainty lies. Ministers are generally very polite about local government and eager enough, when it suits their purposes, to respect the rights of local authorities (when it does not do so, or they come under political pressure, they cheerfully interfere). But no Minister since the war has shown the understanding of a Goschen—or even of a Chamberlain—in tackling local government as a whole.

General policy for local government should start by regarding local government as a lever of democratic control over the main public services, and not as a collection of traditional institutions. Local authorities need to cover rather wide areas and to have stronger financial resources of their own. To function well democratically, units should comprise a fair cross-section of the population and the diffusion of responsibility between different "levels" of local government should be minimal.

No Minister could pursue a policy such as this without treading on a goodly number of sensitive toes. But is it better to let British local government decline into a sham façade while real power steals away elsewhere? Once again the final answer is up to public opinion. If nobody (except a few dedicated councillors) really cares, then the days of local *self*-government in this country are numbered.

BOOKS

General and President

The Truman-MacArthur Controversy and the Korean War

By John W. Spanier.
Harvard University Press. London: *Oxford University Press.* 323 pages. 52s.

THE Truman-MacArthur crisis was, in its day, almost as traumatic an experience for the United States as Suez was for Britain. That day already seems long ago; the general has faded away more rapidly and completely than he can have foreseen. Why were so many Americans prepared, in April, 1951, to applaud the general's intransigence and to decry President Truman's insistence on his constitutional rights as commander-in-chief of the armed forces? The answer, Mr Spanier suggests, lay less in the general's flamboyant personality than in the desire of his countrymen for "a foreign policy which would have the supreme distinction of rendering any further foreign policy unnecessary." After the second world war, the American public had learned to accept continuing involvement in world affairs. But when it came to Korea, the public—or at least a very large and vocal section of it—refused to be educated further. The loss of American lives—even more, perhaps, the frustrations and humiliations of this inconclusive kind of war—created the fierce resentments and suspicions to which General MacArthur, like Senator McCarthy in the years immediately following, appealed. And, ironically, the discontent summed up in the slogan "Communism, Corruption and Korea" brought about the election to the Presidency, in 1952, of a very different sort of general from MacArthur.

Was that the end of it? Can the MacArthur episode be considered an historical aberration, without relevance to the present or future? Mr Spanier does not think so. Too many Americans, he argues, fail to understand the meaning of war. They see it, not as an extension of politics, but as a process beyond politics. Until war comes, the President and the Secretary of State are regarded as statesmen, engaged in the proper (if never beloved) business of diplomacy; once the shooting starts, however, they must hand over the reins to the military, or risk being condemned as politicians interfering in matters beyond their ken. Thus General MacArthur was able to play the part of the straightforward and hitherto brilliantly successful military man, now kept from pursuit of a clearcut victory by meddling politicians. In fact, of course, the general's and the President's interpretations of the Korean conflict were both "political," just as both were "military"; they had to be, for a war without politics is as unthinkable as a war without weapons. But Mr Spanier doubts whether the majority of American voters have ever fully realised this. After all, it was only by rallying the Joint Chiefs of Staff to their defence that the President and his Secretary of State managed to ride out the storm: the military man's challenge had to be met by a military man's defence.

This book is well organised, solidly documented, and fair; it is severe with the general, but it convicts him mainly by his own testimony or that of his friends, and it overlooks neither the shortcomings of his antagonists in Washington nor their willingness, up to a very dangerous point, to appease him. One only wishes that Mr Spanier had resisted certain tricks of American news magazine style, such as the substitution of a colon for the verb of a sentence. The result: annoyance to lovers of the Queen's English on whichever side of the Atlantic.

Personalisation Is Not Enough

Selfridge

By Reginald Pound.
Heinemann. 268 pages. 25s.

GORDON SELFRIDGE was the greatest showman in the history of British shopkeeping. He was already in his fifties when he crossed the Atlantic to build that huge palace which still dominates Oxford Street. But such was his enterprise and vigour that, within a few years of its opening in 1909, he had established a large and successful business against heavy odds.

Much of this was achieved by a use of advertising far in advance of his time. He took acres of space in the newspapers (only the complete front page of *The Times* eluded him) and reinforced it by articles under the name of Callisthenes. He tried to have the new Bond Street Tube Station called "Selfridge's." When this plan failed, he removed the name plates from the front of the store on noticing that bus conductors had no such hesitation in describing their Oxford Street stop.

Blériot crossed the Channel, and the next morning his plane was on view in Selfridge's. There were attractive window displays, an index of quality rather than of variety to the goods within. Every unusual feature of the store was turned to account, from the telephone number—Gerrard 1—to the free information bureau.

Selfridge advertised himself no less in a sustained campaign of what we today call personalisation. His daily top-hatted progress from department to department; his regular appearance at theatre first nights; his extravagant parties, particularly on election nights—such foibles made him the only shopkeeper in England known by sight to the public. At the time of George VI's Coronation, *Punch* carried a picture of the Selfridge building's decorations, which had cost £50,000. Outside, a policeman is saying to an old lady: "No, madam, I understand Mr Selfridge will not be appearing on his balcony tonight."

Yet, when he died in 1947, he was nearly bankrupt. A genius for showmanship was not matched by a genius for management. He set up a vast business but did little to run it and nothing to ensure that others should run it for him. At an age when even such remarkable vitality as his own was beginning to ebb, he squandered it on a sensational social charade. His megalomania drove him to incur personal debts of £155,000 to the company and £250,000 to the Inland Revenue.

Mr Pound, an experienced and fluent biographer, has written an agreeably anecdotal book about Selfridge, which will no doubt be widely read. But there is still room for a further volume on his subject—an analysis of Selfridge's business career in terms of modern management practice. Its themes would include his flair for attracting public attention and for holding it by skilful personalisation; his art of presenting a business, but not of running it; his power to dominate, though not to delegate. It would be a study of ultimate failure: success stories, however, do not always make the best textbooks.

Lament of the Shirt

Makers of Distinction

By Thomas Girtin.
Collins-Harvill. 256 pages. 18s.

HAS your silk hunting hat been coodled with the proper degree of skill? You should be able to place a plank across the crown and stand on it without signs of strain appearing in the hat. Any reader whose silk hat fails this test would be well advised to acquire another soon, for bespoke hatmaking, in common with a number of other trades serving the sartorial tastes of the well-to-do, is in some danger of disappearing. This is not because of any shortage of prosperous people waiting to be fitted out; though the clientèle has changed vastly in character in two generations its numbers have been well maintained. The difficulties arise on the other side; in getting young men and women to come into small workshops and learn highly specialised skills of kinds remote from those of the modern archetypes of motor, electrical or nuclear engineering.

This is the generalisation about these trades that emerges from Mr Girtin's lucid, entertaining and apparently soundly based study of them. Perhaps the writer is unduly (if fashionably) hard on that special Fiend of the Fifties, the teenager, who is here depicted as ruining our noblest crafts by a frivolous refusal to enter them on the ground that they require too much application, interest and willingness to learn. This is a doubtful argument to use when technical institutes are packed as never before with youths who spend their evenings, for three or four years, studying the more esoteric practices of such crafts as bricklaying, machine woodcutting, or telecommunications engineering—some of them (dare one suggest?) requiring the acquisition of more difficult and complicated skills than basting a jacket or shaping a last.

After all, it is not really on quality clothes, umbrellas and sporting guns that Britain's industrial prestige rests in the modern world, but on the products of the most highly mechanised factory industries, employing labour of varying skills adjusted to the kinds of machinery available. Factories not only provide such amenities as Muzak, canteens and a social life; they are also more obviously parts of today's, rather than yesterday's, world, and this fact has its natural attractiveness to the young and to those responsible for launching them on lifetime careers. Mr Girtin should agitate for the quadrupling of the salaries of Youth Employment Officers; when these officials can afford hand-made shirts, they will be more easily convinced that it is vital, in the national interest, that people should be encouraged to make them.

History Plainly Told

The Fourteenth Century, 1307-1399

By May McKisack.
Oxford University Press. 612 pages. 35s.

THE Oxford History of England is now approaching the end of its long journey and we shall soon be able to assess its achievement. Meanwhile, it is already clear that the volumes have tended to fall into two types: those which attempt to present a sustained and co-ordinated historical image of a period (of this type the volume of Sir Robert Ensor is the outstanding example); and those which are primarily guides to the problems of a period, and to the literature on it. The present volume is of the second type, and this was a wise choice on Professor McKisack's part. It is wise because, however much we may deplore the division between the general reader and the academic student of the subject, this volume will be read mainly by the latter. For the purposes of the university student, indeed, it is hard to see how this volume could have been better done: it will be indispensable for many years to come. On every page there are sound, unprovocative judgments, fair-minded narrative, plenty of signposts for further study. It establishes itself at once as the perfect student's guide.

It is interesting to compare the present volume with the parallel volume in Longmans' Political History of England written more than fifty years ago by Tout. To some extent, Professor McKisack—or perhaps the academic climate of the present day—suffers

OXFORD UNIVERSITY PRESS

GOVERNMENT AND PARLIAMENT
A Survey from the Inside
HERBERT MORRISON First published in 1954 and three times reprinted, this work now appears in a revised edition for which the author has written a new Epilogue to bring it up to date. 'There is no better introduction to how things actually are done. . . .' **The Times**
Second edition 30s net

THE COMMUNIST SUBVERSION OF CZECHOSLOVAKIA 1938-1948
The Failure of Coexistence
JOSEF KORBEL, writing from first-hand knowledge, reveals the gradual erosion of all areas of the nation's life – political, economic, military, social – by the Communist techniques. (*Princeton University Press*) 32s 6d net. **4 February**

THE CRIMINAL PROSECUTION IN ENGLAND
PATRICK DEVLIN deals with the prosecution of crime from the time of arrest until the time of arraignment, and with the rights and duties of the Crown and of the accused while the case for prosecution is being prepared for trial. 15s net

COMMUNISM IN SOUTH-EAST ASIA
A Political Analysis
J. H. BRIMMELL gives as objective an account as possible of the impact of the world Communist movement upon and its significance for South-East Asia. He also tries to present a picture of Communism as it appears to the inhabitants of South-East Asia. (*Chatham House*) 42s net

FIVE ELECTIONS IN AFRICA
A Group of Electoral Studies
Edited by **W. J. M. MACKENZIE** *and* **KENNETH ROBINSON** An attempt to elucidate some of the problems involved in the development of democratic self-government in non-European countries, by independent study of the operation of European-style elections in Western and Eastern Nigeria, Sierra Leone, Senegal, and Kenya, in 1956 and 1957. *Illustrated* 55s net

THE ECONOMIC DEVELOPMENT OF COMMUNIST CHINA
T. J. HUGHES *and* **D. E. T. LUARD**
A short factual account of the economic development of China since the foundation of the People's Republic. It surveys the previous economic pattern and shows how the Chinese Government dealt with the situation facing it when it came to power.
(Chatham House) 2 maps 22s 6d net

THE ETHIOPIANS
An Introduction to Country and People
EDWARD ULLENDORFF Though primarily for the general reader, this is a serious study and will be a valuable reference book. There are chapters on the country's history and exploration, detailed studies of the people, and a concluding chapter on the country today. *Illustrated* 30s net

STRATEGY IN THE MISSILE AGE
BERNARD BRODIE This book, in two sections, presents an outline history of air strategy and deals broadly with air policies since the advent of nuclear weapons; it states clearly the theory of balanced deterrents, and shows the meaning of limited war and the colossal spending on national self-defence which nuclear strategy involves. (*Princeton University Press*) 37s 6d net **4 February**

TOWN AND COUNTRY PLANNING
SIR PATRICK ABERCROMBIE *Revised by* **D. Rigby Childs.** This edition makes only minor alterations and preserves the historical balance. There is a new chapter briefly describing planning developments in Great Britain since 1945 and giving a concise review of planning trends here and abroad. (*Home University Library*)
Third edition 8s 6d net

SCIENCE IN INDUSTRY
Policy for Progress
C. F. CARTER *and* **B. R. WILLIAMS**
'. . . appears at a most opportune time. It will suggest many fruitful lines of thought and action to the Minister for Science and will provide substantial ammunition for the members of parliament who are already encouraging him by their criticisms.'
Glasgow Herald 21s net

in the comparison. When Tout wrote, the gap between the student and the general reader was less wide. However artificial the limits of "political history" may be, they enabled him to tell a story that was more dramatic and more coherent than that which Professor McKisack has to tell. Tout was no literary giant, but in a rough and ready way his book is more readable. He wrote of men and movements with a bluff familiarity, which does not go very deep, but which carries the reader along and sometimes rises to dramatic intensity. By contrast, Miss McKisack's book is like those pale but, to the observant eye, thrilling scenes which R. L. Stevenson describes in "A Penny Plain and Twopence Coloured": all the material for drama is here—"gesticulating villains, epileptic combats, bosky forests, palaces and warships, frowning fortresses and prison vaults"—but the reader must provide his own crimson lake and Prussian blue to experience the joy of illumination.

For those who wish to have their scenes ready-coloured, the chapters on Edward II and Richard II may be specially recommended. These kings, whatever their faults, are always good and patient sitters. They seem to smile faintly as Professor McKisack lays her delicate wash over their well-drawn features, conscious that they might have been much more roughly handled. They can scarcely be expecting the final step which dismisses the one as "a weakling and a fool" and the other as "dangerous, perhaps dangerously mad." Of Edward III Professor McKisack has much good to say: her words are worth listening to as a corrective to the austere moralists of a previous generation; but the effect is somewhat spoiled because we cannot help noticing that Edward is made of cardboard.

It is a striking proof of the strong tradition that guides the writing of English history that, although the word "political" does not appear in the title, the political chapters are much the best in the book. The chapters on "Rural Society," "Trade, Industry and Towns," and "Learning, Lollards and Literature" give the appearance of having been inserted in response to the edicts of editorial policy rather than from love of the thing. But even these chapters present the careful reader with an array of well-ordered facts and references from which many a good essay will be written.

Lessons from Abroad

Public Enterprise in Sweden

By Douglas V. Verney.
Liverpool University Press. 142 pages. 21s.

Public Ownership and Accountability: *The Canadian Experience*

By Lloyd D. Musolf.
Harvard University Press. London: *Oxford University Press.* 190 pages. 32s.

How does public enterprise work in other democracies with mixed economies? Those who dispute about public ownership in Britain would do well to find out, rather than dogmatise in ignorance. So these two volumes are useful and timely, although they are unfortunately also rather legalistic. They tell us how Canadian and Swedish public enterprises are set up, what is their legal form, to whom they are constitutionally responsible; but not so fully how they work, whether they are successful and whether they raise the standard of living of the ordinary public.

Any information on the scope of public enterprise in these two countries is nevertheless valuable. In both countries its extent is wide and varied, but it is largely limited to public utilities, natural monopolies, agricultural support agencies, and finance institutions. In Canada there are the Canadian National Railways, Canadian Broadcasting Corporation, Trans-Canada Airways, Canada Wheat Board, Atomic Energy of Canada, National Harbour Board, Saint Lawrence Seaway Authority, Bank of Canada, Central Mortgage and Housing Corporation, Industrial Development Bank, and many smaller enterprises.

Sweden, despite twenty years of Social-Democratic government, has not extended public ownership much farther than—if as far as—Britain and Canada. Railways and postal services are wholly in state ownership. Wine and tobacco (this is the main difference from Britain) are out-and-out state monopolies. But electric power is in part state, part municipal and part private ownership. Gas is privately and municipally owned. The State Forest Board covers only 17 per cent of the country's forest areas. Elsewhere there are numerous state companies, wholly or partly in public ownership, which compete with private enterprise—for instance, the Swedish Credit Bank, and other companies in the steel, road transport, pool and betting, restaurants and other trades.

In Canada the form is usually similar to the traditional British public corporation, and indeed consciously modelled on it; an independent commercial organisation, responsible to a minister (but also to the Cabinet in some cases) for general policy, but not day-to-day business. But often the corporations—and most of all the CNR and TCA—operate in acutely competitive industries. Controversy in Canada over ministerial responsibility and parliamentary questions read absurdly like those in Britain. The tentative conclusion seems to be: the less these corporations are politically harassed, the more successful they are. Canada has, of course, a motive for public enterprise quite different from any ideological one in Britain. National bodies like the CNR, St Lawrence Seaway, and TCA were essential to the development of so vast a country. In this job they seem to have largely satisfied public opinion, though naturally not without lively controversy.

The forms in Sweden are stranger to Anglo-Saxon minds, because in the Swedish constitution the Crown is much more important, in contrast to ministers and Parliament. Departments are formally responsible to the Crown; and the King presides at Cabinet meetings. There are two main forms: the "trading agency"—what we should call a civil service department, like the Post Office—responsible to the Crown; and the "state company," set up under the company laws and financed by Parliament. In both cases the minister is a sort of referee kept on the far side of the touch line—or at least on the telephone.

But it apparently works. The Swedes are evidently so empirical and sceptical about these issues that any generalisation is risky. Two conclusions, however, do seem to emerge. First, the company form is being more and more preferred because it is simple and flexible. Secondly, strangely enough, the "trading agencies" have tended to be more profitable than the "state companies." Thirdly, the accountability problem for the state companies is far from solved, since day-to-day interference by Parliament is usually avoided.

So these are perhaps the lessons from Sweden and Canada that these two books provide for British public enterprise. We should be wise, in the light of their experience, to be empirical, to argue the case over each industry and enterprise; to prefer the competitive to the monopoly body, other things being equal; and to keep down political interference with commercial decisions to the minimum which basic accountability can be shown to demand.

Testing Trade Cycle Theory

American Business Cycles, 1865-1897

By Rendigs Fels.
North Carolina University Press. London: *Oxford University Press.* 244 pages. 48s.

This study, it should be said at once, is for well-read professional economists familiar with the work of such trade cycle theorists as Kondratieff and Juglar, not for the general reader or the man with the relics of an inkling. Nevertheless, it is of wider interest than its title would suggest. As Dr Fels says in his preface, he is not a historian studying a particular aspect of his field; he is a specialist in business cycles working on a particular topic—with the aim of testing business cycle theory, in its widest sense, against the historical evidence. He has none of the sectarian zeal that leads "political arithmeticians" to denounce model-building deductive theorists, or vice versa; he begins with the common-sense methodological judgment that every kind of approach—deductive, econometric, historical—has a contribution to make to the understanding of economic events.

The period 1865-1897 in the United States was one of weak booms, numerous depressions, sagging prices and—though this is less certain—retarded growth; with some difference of timing, it corresponds closely to that of the "Great Depression" concurrently affecting Britain. Dr Fels sorts out major from minor swings, analyses particular components, distinguishes "real" from monetary influences, and estimates the relative importance of economically generated or "endogenous" and external or "exogenous" disturbances (e.g., crop fluctuations, gold discoveries, changes of government policy). The latter, he finds, were much less influential than the former. They may have set off the minor cycles; the big swings, on which these were confusingly superimposed, were generated, amplified and eventually reversed by the economic mechanism itself.

No single existing theory of the cycle, he concludes, explains this mechanism as it can be seen at work over the period, but a judicious amalgam of Schumpeter (innovations, "competing-down," monetary forces), Gordon (investment opportunities) and Hicks (a less important contributor except on growth and the lower turning point) stands up reasonably well to the test and "seems to have some validity" for present-day America. "For other countries," Dr Fels cautiously concludes, "the theory can hardly have much validity in the future," and, in his closing footnote, "Cycles persist because of a few fundamental forces, making a simple general theory possible; but continuous institutional changes, and developments that are fundamentally new, frustrate a general theory that also predicts details." Economists should probably lay this to heart in other contexts than that of business cycles.

Fact and Fiction in Washington

Advise and Consent

By Allen Drury.
Collins. 638 pages. 21s.

Mr Drury has had the wit to see what drama there is in the Senate and he has the knowledge, born of long observation, to paint a recognisable facsimile of life in Washington. Very little in this monumental novel lacks some basis in fact; like a magpie, Mr Drury has picked up a blackmailing case from one era, a McCarthy from another, a disappointed presidential candidate from one party, a dying and unscrupulous President from another, to people his enormous canvas. The result is readable, even if it does not have much life of its own. For one thing Mr Drury's appetite for drama is insatiable; the scene is set in the sixties, when the United States must choose between fighting an immediate war with the Soviet Union or adopting a policy of appeasement that would only postpone the evil day. By the end of the book the Russians have landed on the moon and issued an ultimatum to the United States.

In such circumstances the liberals and conciliators appear unfailingly as villains, the conservatives monotonously as heroes. All this nationalism has a rather old-fashioned air, like pre-sputnik space fiction, and detracts from the virtues of the book, which are Mr Drury's almost excessive affection for the Senate and his knowledge of how government in Washington operates—at least as seen from the outside.

Self-Analysis

Free Associations

By Ernest Jones.
The Hogarth Press. 264 pages. 25s.

This is a book that will appeal differently to different types of reader. A touchstone is provided quite early (page 14) in the sentence "Perhaps indeed, in centuries to be, the medical psychologist may, like the priest of ancient times, come to serve as a source of practical wisdom and a stabilising influence in this chaotic world, whom the community would consult before embarking on any important social or political enterprise." If you think this is silly you will find Dr Jones lively and readable, but a bit pretentious. An odd teutonic solemnity clouds his Celtic charm every now and again as the psychoanalyst takes the writer's pen from his fingers.

On the other hand, if you look forward to a future in which the medical psychologist replaces Plato's philosopher king, then you simply must get to know the man who has helped us to get to know Freud. He could never have been a master, but he is a worthy pupil, and he describes his own life with clarity and charm. Occasionally dogmatic but always modest, his book should be read as an appendix to "Sigmund Freud: Life and Work." Though it can stand on its own feet, its characters and allusions draw much of their significance from the larger study. The four volumes are a major contribution to the psychological literature of our times.

Business Partnership

Gezira: *A Story of Development in the Sudan*

By Arthur Gaitskell.
Faber. 372 pages. 42s.

The Gezira scheme—to irrigate portions of the triangle formed by the lower reaches of the Blue Nile and the White Nile near Khartoum for the production of cotton—began as a private enterprise. In the years after the Anglo-Egyptian reconquest of the Sudan in 1899, the country desperately needed allies to help the government raise the standard of living. Among those needed were men with a merchant-adventurer spirit who were ready for risks and prepared to push into untried areas. Fortunately for the Sudan, men of that spirit were available and merchant-adventuring was still a respectable calling.

From its beginning as a private venture the Gezira scheme soon turned into a partnership of government, the people of the region and the private shareholders. There was never any question or pretence of aid; it was a business proposition suited to the principles of development, in which the partners shared the risks, the losses and the profits. The pattern of Sudanese life was little disturbed by it and the people soon began to recognise what they had to gain from it. It was not, however, all smooth sailing. Plant diseases caused a series of crop failures; war and world depression brought financial crises; and the recovery from these disasters was slow and sometimes heartbreaking.

Mr Gaitskell spent nearly thirty years with the Gezira scheme. His book should be required reading for every wide-eyed technician setting forth for work in an underdeveloped area. Not every country has the natural advantages of the Sudan—a suitable climate for the work to be done, a site prepared by nature and potential tenants already there. The economic factors of other areas may not permit easy concentration on one cash crop or give time for a lengthy experimental approach by pilot schemes. The technician who begins work today will most likely be exposed to the vagaries of a newly independent and self-conscious local government.

The supervisors and technicians at Gezira were not expected to complete the project in a few given years and then move off, perhaps halfway around the world, to start another. They were concerned only with the orderly development of the work at hand. Independent governments, international agencies and governments granting aid would do well to bear this in mind. Technicians or supervisors on short-term contracts are apt to take an equally short-term view of the project to be developed.

REGINALD POUND'S

"engrossing study of the character of Mr. Selfridge . . . it describes so faithfully the road to success, the perils of success, and the clear road downhill from those heights.

SELF-RIDGE

"There is a wealth of material in this book for people interested in the technique of business and its development."
THE EARL OF WOOLTON, *Sunday Times. Illustrated,* 25s.

HEINEMANN

OTHER BOOKS

THE DIARIES OF LORD LUGARD. Edited by Margery Perham and Mary Bull. Three Vols. *Faber.* 1367 pages. 8 gns.

It was a wise plan to bring out the diaries of Lord Lugard while Miss Perham is still working on the definitive biography. Most people who want to reappraise Lugard's influence in Africa and on colonial administration and concepts generally will be content to follow the biography, with its skilled use of illuminating excerpts; but Africanists will want to go to the sources—and these are they. At a time when the universities of the newly independent states of West Africa wish to extend their own historical studies, and the African public has to frame its own attitudes to its nationhood and past in the light of what its new breed of historians tell it, it is commonsense to provide these basic documents of the early colonial period.

MERCHANTS OF PEACE. By George L. Ridgeway. *Little, Brown and Company, Boston.* 310 pages. $4.50.

This new edition of the standard history of the International Chambers of Commerce, which first appeared in 1938, brings the account up-to-date and covers the postwar period. The heart of the prewar story was the chamber's contribution to the Dawes plan and to the world economic conferences of 1927 and 1933. Since the war the chamber has been on the sidelines of a far more successful drive to free trade—both in Europe and in the world at large. It is instructive to be reminded of the struggle between free traders and French protectionists that animated the economic conference of 1927. And the postwar story covers many still live issues. There are moments when one begins to doubt whether Mr Ridgeway's merchants really played quite so notable a part in selling peace and influencing governments as he appears to believe. But there is a real element of truth in his underlying argument that the free traders in the chamber, by contrast with autarkic-minded nationalists, have, in a sense, been contributing to the creation of a single world economy and thus to a more stable peaceful world.

INTERNATIONAL ECONOMIC PAPERS. Translations prepared for the International Economic Association. *Macmillan.* 248 pages. 21s.

This ninth collection of International Economic Papers is perhaps more elastic than its predecessors. It includes two papers whose centre of gravity is really outside economics altogether: a historical gem, the "Discoveries on Progressive Taxation of Land Values," essentially a confrontation of political philosophies, by Francesco Guicciardini, a sixteenth-century Florentine statesman, and a recent essay on the relationship of Roman Catholic theology to market economics, by Professor Daniel Villey. A paper on Paretian welfare theory, by Professor Ragnar Frisch, can be appreciated only by connoisseurs of mathematical virtuosity; another on "The Basic Principles of the Money Economy" (Karl Schlesinger, 1914) has the specialised interest attaching to good work that somehow failed in its day to make an impact. There are two econometric essays, one by Professor Lomberdini, of Milan, on investment criteria in underdeveloped areas, the other by Professor Hoffmann, of Münster, "On Forecasting Productivity Changes in an Expanding Economy." Finally—a new and interesting departure—there are a dozen Scandinavian book reviews, published during the 1950s, which between them allow the English-speaking reader an otherwise unobtainable glimpse of Scandinavian economic thought in the process of formation. This is a line which the International Economic Association might well explore further; such insights are surely more helpful to the cross-fertilisation of ideas, and to the recognition of international likenesses and differences, than are even the most fascinating antiquarian exercises.

LETTERS

Cut Prices

SIR—Your special article "Cut Price Competition" makes a reasonable and valuable contribution to the debate on the individual maintenance of resale prices. Is it, however, necessary that the outcome should be the general prohibition of this practice? May there not be cases for special exemption? Some acquaintance with the American position would suggest that you dismiss the case of books too lightly. It is not so much the availability of reprints of "classical" books as the relatively cheap publication of new non-fiction and scholarly books that is in question. Perhaps the case of books will be more easily considered after the Restrictive Trade Practices Court has adjudicated the net book agreement.

In the two arguments which you examine there is no mention of the peculiar case of the, relatively, small and specialist manufacturer of consumers' goods. The large firm controlling a wide range of products may well be able to insist on service, etc. in an adequate number of outlets and, in general, can retain a good deal of control over the resale price, whether enforceable in the courts or not. It is the smaller business with a good product which, on the basis of the American experience, seems so especially vulnerable to loss-leader selling by prominent distributors. In view of the present tendencies we should, I submit, look very carefully at anything which will unnecessarily increase the concentration of manufacturing industry which other restrictive practice legislation is hastening. If the Government does decide on general prohibition should there not be provision for application by individual firms for special dispensation?

One postscript: is it really true that "no leading product" has "been victimised" in the grocery trade? Offhand I should have thought that *Nescafé* was an instance. Indeed, the grocery trade seems to prove that individual resale price maintenance goes by the board whether legally enforceable or not, when fundamental economics move against it, given the impossibility of collective enforcement of prices.—Yours faithfully,

Nuffield College, Oxford. P. W. S. ANDREWS

SIR—Can you name a single country where there is cut price competition which has an effective bookselling service? All those, like the Scandinavian countries, which enjoy a really good service, rely upon price maintenance. May I say how wholeheartedly I agree with your objection to the restrictions on one-man shops.—Yours faithfully,

STANLEY UNWIN

George Allen & Unwin Ltd.
London, WC1

SIR—I was interested to see your reference to the price of *The Economist,* as being 1s. 6d. in every shop in the country.

You may be interested to know that our wholesaler's sheets are printed, and the printed price to us is 1s. 3¾d. We do not know whether you would call this a sufficient margin. We don't. But on the top of that, we are debited each week with "a service charge" (formerly described as carriage) so that we do not really receive even 2¼d. and in so far as this is not sufficient, our profits on other things are subsidising your paper and its buyers.

Your paper is not alone in the small margin given, but you may as well know that there is great discontent with such, although it is quite likely that wholesaler-retailers, receiving two margins, are not so dissatisfied.—Yours faithfully,

Stokesley, Yorks. D. W. RICHARDSON

The Bar

SIR—I am concerned only with that part of your article which deals with legal education and I am perturbed because young men from abroad may have their morale affected by uninformed criticism of the education to receive which they have travelled from all parts of the Commonwealth.

The Council of Legal Education is making every attempt to train these students in a way which will fill them with legitimate pride in the English legal system of which they are already becoming ardent and understanding supporters. Collectively and individually the members of the council do much to ensure that Commonwealth students shall return to their own countries feeling that they have been welcomed in London and well treated and educated during their sojourn here and surely everyone will agree that the attainment of this object will have an effect throughout the Commonwealth which can only be for the good and lead to the strengthening of the Commonwealth as a whole.

But the attainment of this object is made incalculably more unlikely by the undermining of bar students' morale by references to their education as being "little better than a sham" and to their qualifications as "merely an additional cachet to impress future employers."

I have called the criticism of the article uninformed and realise that it is incumbent upon me to show it to be so. This onus is best discharged by referring to that part of the article which alleges that "no practical training is required" for those words could not have been written by anyone who had taken the trouble to peruse the Council's current calendar and to inform himself therefrom of the elaborate system of group training which includes post final practical

training courses for home students and overseas students as well as pre-examination tutorial classes and tutorial classes for graduates, all of which are conducted upon lines essentially practical extending even to the recording of students' voices to enable them to detect their own errors in elocution.—Yours faithfully,

FRED PRITCHARD

Council of Legal Education,
London, WC2

Dehydrated Foods

SIR—In last week's issue of *The Economist* your useful article on dehydrated complete meals referred to "the difficulty of guessing how housewives will react to foods processed in a way that had an unloved reputation in wartime."

I would like to point out that today dehydrated vegetables and packet meals are composed of ingredients greatly superior in quality to those produced in bulk during the war. While some of the methods of drying are similar in principle to those used in the war, much has been learnt since then through research. There are now stringent specifications for all raw materials, processing methods, times and temperatures of drying, etc. Quality control systems operate from start to finish.

During the war dehydration was used in order to preserve foodstuffs for mass feeding: nutritional value was the first consideration and the quality of only secondary importance. Now, however, the products of the modern process of dehydration are markedly different; for instance the vegetables, thanks to careful selection of suitable varieties, have a much better colour, taste and texture. Rehydration, also, is very much quicker.—Yours faithfully,

R. H. EDMONDSTONE

Batchelors Foods Limited,
London

Graduated State Pensions

SIR—Your correspondent Mr H. C. Green of Penarth appears to have been misled, in common with many others, regarding the system of deduction of graduated contributions which will have to be operated by employers who do not contract out of the new state scheme.

The original White Paper of October, 1958 (Cmd. 538), and the more recent simple explanatory leaflet issued by the Ministry of Pensions (N.I. 111) have both stated that collection will be "in association with PAYE income tax." This does not mean, however, that it will form part of the PAYE coding, but merely that the inland revenue will be used to collect graduated contributions, while flat rate contributions are still paid by means of stamps—the Ministry of Pensions having no *collecting* machinery of its own.

Although the National Insurance Act, 1959, does envisage the possibility of the inland revenue becoming the sole collecting agent at some time, this does not mean that collection could ever be effected under PAYE as such. In this connection your correspondent appears to have overlooked that PAYE represents a system of accumulation and averaging, whereas graduated contributions under the new Act are based on the actual earnings of each week taken on their own. The only averaging contemplated is of special periodical payments, e.g. half-yearly production bonuses, and, as yet, no explanations have been furnished as to how this can work.

The other point which your correspondent seems to have overlooked is that the graduated contributions are related not to "the total payroll," but to that part of the payroll which represents earnings between £9 and £15 per week. Employers with highly mechanised systems of accounting will, I think, be allowed to take an exact 4¼ per cent of earnings in this band, instead of using the form of tables which it is understood will be provided.

The one point on which I do agree with Mr Green is that, in respect of employees who are not contracted out of the new scheme, employers are definitely faced with the necessity for a further column for graduated contributions under the national scheme. This constitutes a strong practical reason for contracting out to the greatest possible extent.—Yours faithfully,

GORDON W. PINGSTONE

Beckenham, Kent

Raw Cotton Stocks

SIR—Your Note recording the remarkable recovery in cotton textile activity makes it appropriate to draw attention to what appears to be a dangerously small stock of raw cotton in Lancashire.

Forwardings of cotton to the mills are running between 20,000 and 30,000 bales a week. Warehouse stocks in Liverpool and Manchester are just over 140,000 bales, of which less than 50,000 bales are likely to be available for sale. Recent experience suggests that a considerable proportion of this free stock may not be in the qualities currently required.

This situation reflects the fact that spinners nowadays obtain the bulk of their supplies direct from shippers overseas, in order to cut out the cost of handling in and out of warehouse. Theoretically, this may be sound policy; in practice it has several undesirable features:

(a) The local merchant, whose principal function should be to import and maintain a buffer stock, is discouraged from accepting the considerable risks of stock holding by the knowledge that his potential customers will do their best to by-pass him and purchase for direct shipment.

(b) Reliance on direct shipment does not allow for interruptions in supplies, such as labour disputes at American and British ports.

(c) The specialised demands of many spinners have forced them to stipulate that the quality shall be checked on arrival and before final delivery. This has led to the practice of sampling cotton on the quays and generally using them as temporary warehouses, causing mistakes, congestion and expensive delays to ships, land transport and handlers.

It would be unfortunate if it needed a serious interruption of supplies to make the industry look more closely at the real economics of cotton procurement. For a purely theoretical saving of around ½d. per lb—a small figure in relation to spinning margins—the industry is not only running the risk of being caught short if local stocks proved inadequate to meet any unexpected demand, but is allowing to rust away through disuse the established machinery for efficient and reliable supply through the expert buying of merchants and the use of available warehouse and handling facilities.—Yours faithfully,

W. B. HUTCHINSON
Past President
Liverpool Cotton Association

Population

SIR—You write on page 298 of your issue of January 23rd about the appeal for funds which has been launched in this country on behalf of the International Planned Parenthood Federation. This is not, however, being conducted by the British member of the IPPF, the Family Planning Association, but by the World Population and Planned Parenthood Appeal, the sole body concerned with raising these funds in Europe.—Yours faithfully,

ANNE HUMPAGE

69, Eccleston Square, SW1

Aircraft

SIR,—We are surprised that you credit our company with so little work in hand. In fact, this is considerable—although security restrictions do not allow us to give its exact extent.

For example, in one sphere alone we shall be kept very busy for several years in building Victor B2 bombers and keeping them in front-line RAF service.—Yours faithfully,

G. C. D. RUSSELL.

Handley Page Ltd.,
London, NW1

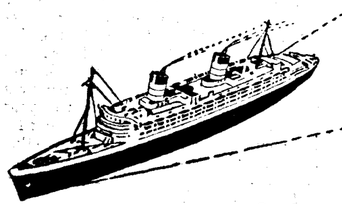
Lord Bracken

SIR—I am engaged upon a memoir of the late Lord Bracken, formerly chairman of the Financial Times Ltd. and of Union Corporation, and Minister of Information in Sir Winston Churchill's wartime Government. I should be grateful for the sight of any letters of his in possession of your readers and for any information about his numerous business, political and other activities that can be supplied.—Yours faithfully,

ALAN HODGE

6, Lancaster Road,
London, SW19

Travel in a BIG way...



Dinner is always a great occasion at sea, and never more so than aboard a Cunard ship.

When you cross the Atlantic by Cunard, the price of your fare covers so much that is *beyond* price. For several days you will have the holiday of your life . . . superbly fed, faultlessly served, royally entertained. You will live in spacious luxury and enjoy endless opportunities for rest and recreation. If you are travelling on business, the voyage is an ideal prelude to the strenuous days ahead. Should you need to mix a little business with your pleasure, you will find the ship's secretarial service most helpful and efficient.

STEADY AS YOU GO . . . R.M.S. Queen Elizabeth and R.M.S. Queen Mary together with many other ships of the Cunard fleet, are fitted with anti-roll stabilisers to smooth your way across the Atlantic, thus adding still further to your comfort and carefree enjoyment.

GOOD NEWS FOR TRAVELLERS! Dollars are off the ration! Now you can enjoy the holiday of a lifetime in the United States and Canada. Your Atlantic crossing is a wonderful holiday too, when you travel Cunard.

Much more space... much more fun...

when you travel

Cunard

to USA and Canada

Consult your local travel agent or CUNARD LINE, Cunard Building, Liverpool 3 (Liverpool CENtral 9201); 15 Lower Regent Street, London, S.W.1 (WHItehall 7890); 88 Leadenhall Street, London, E.C.3 (Avenue 3010).

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Colour Bar— Five Years After

FROM A CORRESPONDENT IN VIRGINIA

IT is now more than five years since the Supreme Court declared that tax-supported schools in which pupils were segregated compulsorily by race could not be regarded as affording the equal educational opportunity which is constitutionally required. At that time such segregation existed in some or all of the school districts of twenty states. Today at least the first steps to dismantle the colour bar in the schools have been taken in all but five, and the various patterns of compliance have been in operation long enough to make a preliminary assessment of them possible.

The time which the Court allowed for the South to make this far-reaching adjustment has few parallels in constitutional history. Recognising how widely communities in the South vary, the Court stipulated only that there should be a prompt and reasonable start toward full compliance, pursued in good faith and with "all deliberate speed." The Court allowed for further local variations by indicating that it would give a broad discretion to the lower courts, which must decide in the first instance whether communities are doing all they can.

The South has used the delay which it was granted in two quite opposite ways. Where Southerners and their representatives, from the Governor and State Legislature down to the local school boards, accepted the necessity of making a start toward compliance, the time was spent in perfecting administrative arrangements and preparing parents, teachers and pupils for the new era. On the other hand, where the Court's mandate was resisted the reprieve was used, and in some cases is still being used, to throw up elaborate legal barriers calculated at least to gain further time by invoking the slow process of judicial review. Meanwhile, racial antagonism was sharpened in these states by organisations such as the White Citizens' Councils and by inflammatory speeches from elected officials. This will make future adjustments all the harder when they can be avoided no longer. Already this year in Georgia, one of the five recalcitrant states in the old South, where the Atlanta school board, under court order, has drawn up a pupil placement plan which, in principle, if not in practice, envisages admitting a few Negro children to formerly all-white schools, the State Legislature is determined not to let it go into effect without a fight.

Outside the five still defiant states compliance has taken three main forms. In a number of big cities such as Washington, DC, Louisville and St Louis the colour bar was removed for students of all ages at the same time. Similar action was also taken voluntarily by certain school districts in Arkansas, Kentucky, North Carolina and Texas. Other communities such as Nashville, Tennessee, are proceeding on a form-a-year basis, starting with the youngest pupils. Still others have allowed a few Negro children to enter all-white schools when this has been ordered by a court or authorised under a state pupil placement plan; these establish various criteria which may be used to keep most Negroes out without discriminating against them openly. Only Prince Edward County, in Virginia, has chosen to abandon its system of public education rather than obey a court order to admit Negro children into its white schools.

THE first phase of the struggle is now ending, but new and perplexing problems are emerging. For example, the situation in Prince Edward County is likely to be duplicated elsewhere, particularly in the Deep South. A legal question is involved. In Virginia the statutes under which the state closed schools in certain communities last year were struck down by the courts; the problem now arises, can a county do what a state cannot? But the greater issue is whether steps should be taken by the federal government to combat illiteracy if Prince Edward's example is imitated elsewhere. Intervention might be justified on the ground that the high rate of migration from the South to states such as California and Michigan would put unfair burdens on them if illiteracy increases. So far only the Negro children in Prince Edward County have been deprived wholly of education. But throughout Virginia the repeal of the compulsory school attendance laws means an unspectacular but steady erosion of attendance among both white and Negro children.

A second group of considerations concerns the "private" schools which have been established for white children in areas where racial bars have been lowered in the tax-supported ones. These schools are financed by tuition grants from state funds to white parents who do not want their children to mingle with Negroes, and by voluntary contributions of money, time and facilities. Eventually they are likely to be challenged in the courts, with Negro pupils seeking admittance on the ground that such "private" schools are actually performing a public function.

A third group of cases is taking shape around the pupil assignment plans. The Supreme Court has found a number of these "valid on their face," but it intends to watch the way in which they are administered. In Virginia several decisions of the lower courts have reviewed the requirements to see whether they are more rigid for Negroes than for whites and one school board has been told that it may not refuse admission to a Negro child simply because his academic attainments are not equal to the average of the white students in the class.

The pupil placement laws may be attacked eventually on the broader ground that they assume the permanent existence of two school systems, one entirely for Negroes and the other primarily for whites, to which a few exceptional Negroes may be admitted. They also put the heavy burden of individual application, in each case, on Negro families. Finally, under such placement plans, no date can be fixed for the completion of the racial integration which was presumably implied in the Court's stipulation of "full compliance." Even school boards which are proceeding on the basis of one form at a time may be challenged by Negro students whose present schools do not provide the courses needed for college entrance and who cannot wait for the slow pace of reform.

Where the colour bar has disappeared, administrative problems remain, though they vary only in degree from the usual difficulties of running schools. In some areas it is hard for Negro teachers and administrators to find jobs in mixed schools. The Negro children come, as a rule, from homes that are poorer, both economically and culturally, than those of the white ones. This makes them lag behind in class, although there is considerable

evidence that the gap is being closed. On the other hand, Negroes are often so good at sports that they strengthen their school teams and so win favour in the community.

Two lucky coincidences have helped to ease the transition. One is that great numbers of new schools are being built to accommodate the rapid growth in the numbers of school-age children; this makes change more acceptable than it would be in a static system. More important is the trend, in most American schools, toward special programmes for gifted children and the provision of a "track" system which enables pupils of varying abilities to work at different speeds and different intellectual levels. This helps to allay the fear of many white parents that the admission of large numbers of Negroes from inferior schools would result in a sharp lowering of academic standards in the formerly all-white schools. This would be disastrous when it is becoming so much harder to get into a good college. At the same time some special efforts are being made to identify the gifted children in generally under-privileged groups, such as Spanish-Americans whose abilities are obscured by language difficulties and able Negroes who, in the past, have not encountered enough intellectual competition to bring out their talents.

At Stake in Wisconsin

STILL protesting about the risks he is running, Senator Kennedy announced last week that he would enter the Wisconsin primary, which is held on April 5th to enable voters of both parties to show which presidential candidates they prefer. It would have been far more dangerous to stay out, for Senator Kennedy's hopes of winning the Democratic nomination depend on demonstrating his popularity with the voters and, aside from Oregon, Wisconsin is the only state, so far, where the Senator can provoke a serious contender to oppose him. That this contender should be Senator Humphrey rather than the more deadly Senator Symington, who is playing a waiting game in Missouri, is a disappointment to Senator Kennedy; Senator Humphrey is both less likely to win the nomination and more likely to do well in Wisconsin, which is next door to his own state of Minnesota and in which Mr Humphrey is both well known and popular, particularly with farmers.

The public opinion polls which have helped Senator Kennedy to make up his mind show, it is said, that he is likely to win well over half of the Democratic vote in Wisconsin. What makes the result unpredictable is that of the state's 31 votes at the Democratic convention only ten—or perhaps only five, depending on an argument now going on in Wisconsin—are pledged to the candidate who carries the state as a whole. One other is controlled by party officials, who are split between the Humphrey and Kennedy camps; the majority will be determined in ten districts and in at least three of these, in the western rural part of the state, Senator Humphrey is leading. To complicate matters further, Wisconsin is the only state which allows voters to take part in the primary of either party. As Republicans have no contest of their own, now that Governor Rockefeller has left the field clear for the Vice-President, many of them may invade the Democratic primary, probably to the advantage of Senator Kennedy, who is less left-wing than Senator Humphrey.

With characteristic caution, Senator Kennedy declares that he will consider it a victory if he wins 16 of the 31 convention votes, a bare majority. But he must hope for a more rousing result that would sweep some of the big undecided states—New York, Illinois and Michigan, for example—into the Kennedy camp. An outright defeat, or a draw, might not destroy all Mr Kennedy's chances of the nomination—as it would those of Mr Humphrey—but it would slow down the Kennedy band wagon, which has seemed to be gathering speed, and enhance the chances of the nomination falling to one of the unannounced contenders, such as Senator Symington, who are risking nothing. But that a victory in Wisconsin would clinch the nomination, as Senator Kennedy has been suggesting, is exceedingly doubtful.

Ageing Bulls

NEW YORK

THE prices of equity shares on Wall Street have been declining steadily since reaching an all-time high in the first week of the new year; the rate of decline has slowed in recent days but few observers expect a quick or vigorous rise or a return to the elasticity of 1959. There are plenty of prospective buyers ready and willing to invest in equities but they are displaying a cautious attitude in the hope that the longer they hold off the better will be the bargains available to them.

This cautiousness seems to be based mainly on uncertainties about the long-term business outlook. Wall Street is absolutely sure that business will be booming during the next six months, but there are doubts about the second half of the year. These have been reinforced by the Administration's prediction that there will be a big surplus in the coming financial year; this suggests that inflationary pressures will lessen. Moreover, while there are some signs of credit becoming easier, money is tight enough to worry many investors and to attract others to fixed income obligations which offer yields far superior to those available on the more popular growth stocks. Most managers of financial institutions say that they will be going back into the equity market but, for the present, they prefer safety and income. And it is this lack of buying rather than any strong selling wave that has depressed equity prices; trading volume is running 20 per cent below that of last year. Veteran professionals say that this reduction, accompanied by a drop in prices, is typical of the temporary but lengthening declines that punctuate the latter stages of a bull market.

While Wall Street showed signs of nervousness the money managers at the Federal Reserve Board were calm; they are letting it be known that an increase in the discount rate will be held off until the Treasury completes its financing operations in mid-February. They do not expect that the rise in the British bank rate will lead to a big withdrawal of funds from New York; while dealers in the money market itself are not as sanguine, yields have moved down to the lowest level since last November. This year the demand for credit, which is usually slack during January, had been expected to be strong because of the need to rebuild reserve supplies after the steel strike; but it seems to be conforming to the seasonal pattern, for the moment. There is a clear split in the banking world between those who seek another rise in the prime rate, now 5 per cent, charged to the most creditworthy corporate customers and those who want to hold the line; but all the bankers want a rise in the 3 per cent interest rate that is allowed on foreign deposits, a level which the Federal Reserve has been reluctant to change.

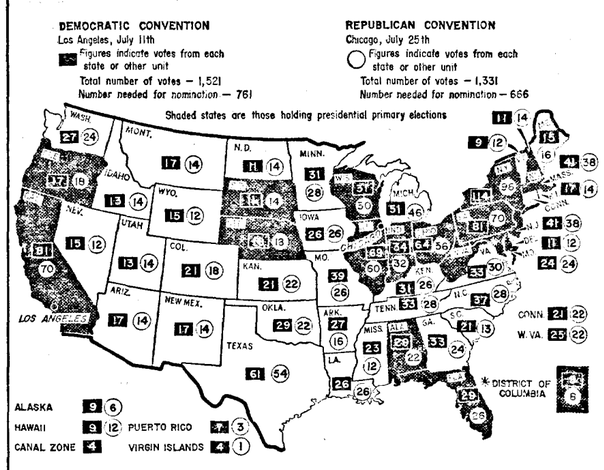
Bombers Fight Back

FROM A SPECIAL CORRESPONDENT

CONGRESS had hardly reassembled when the Air Force Chief of Staff, General White, offered to tell the committees which have begun to hold hearings on defence why it was a mistake for President Eisenhower to cut to the bone the money for the B-70 supersonic bomber. This apple of the Air Force's eye is being designed to have a range of over 10,000 miles and to fly at over three times the speed of sound at altitudes exceeding 70,000 feet; this is thanks largely to a newly applied aerodynamic principle which permits it to ride, in effect, on the waves of pressure which it creates, much as a speedboat rides over, rather than through, the water. This 2,000-mile-an-hour bomber was to be fitted with equally impressive new fire-controls and communication and detection systems, but all the work on these has been cancelled and only two prototypes are to be built, empty shells without any of the new equipment which would justify their speed. The President defends his decision on the ground that the B-70 would not be ready for several years—probably not until 1965—and that by then second generation missiles, such as the Minuteman, will be in use.

Primary Considerations

THE first stage of this year's presidential election, which culminates on Tuesday, November 8th, began this week with the arrival of the filing dates—the last day on which candidates' names may be entered—for the presidential primary elections in New Hampshire, the first in the series, and in Illinois. But with no one challenging Vice President Nixon for the Republican nomination and with only two—Senators Kennedy and Humphrey—of the serious Democratic possibilities proposing to take part in primaries, these may be less significant than usual this year.



The original idea of these preliminary contests was to give the ordinary voter a direct voice in the selection of his party's presidential nominee and to take the choice away from the party "bosses" negotiating in secret in "smoke-filled rooms" at the national nominating conventions. While the laws and practices governing primary elections differ in every state which has them, there are two main patterns, which sometimes overlap. In the direct preference poll the voters choose between those of their party's candidates whose names have been entered; usually they are also able to write in the name of anyone else they prefer. The other type of primary elects delegates to the national convention who are pledged to support a particular candidate. Where delegates are not pledged they are sometimes required and usually expected to vote for the winner of their state's preference poll, for at least the first ballot at the convention. Since some of a state's delegates are normally elected from separate districts, all of them are not necessarily pledged to the same candidate.

To be nominated a candidate must have a clear majority of the votes at his party's convention. Both parties base the number of these votes from each state on its congressional representation, which is linked to its population. In states which do not elect delegates these are appointed either at a state nominating convention or by local party officials. Delegates chosen by this means slightly outnumber those from states holding presidential primary elections. There are only eighteen of the latter this year; Alaska, Minnesota and Montana have all given up the system since 1956.

Success in the primaries does not carry with it any assurance of winning the nomination. But it may demonstrate that a candidate has nation-wide support which the convention will ignore at the party's peril; this is what happened to General Eisenhower in 1952 and what both Senator Kennedy and Senator Humphrey hope will happen to them this year. A candidate can be nominated without having entered any primaries at all, but a failure in one of them can knock him out of the running altogether. This is particularly true if the primary is in a strategic state whose support is considered to be vital to a particular candidate; this year Senator Kennedy, coming from Massachusetts, must show in the primaries that he can win votes in the middle and far west—in Wisconsin and Oregon.

Therefore candidates try to enter only primaries where they should do well; and the *bona fide* runners hesitate to compete with a "favourite son," the well-known local political figure, such as Governor Brown of California or Senator Smathers of Florida, who has no chance of becoming a presidential nominee but who enters his state primary knowing he is sure to win. Thus he goes to the convention with his state's delegates in his pocket and can use their votes for making bargains with the serious candidates for the nomination. While in some primaries a candidate may be entered by his supporters against his will, he is usually able to withdraw, although in Oregon a new law now makes this impossible.

1960 Presidential Nominations

PRESIDENTIAL PRIMARIES, 1960

State	Filing Dates	Election Dates	Direct Preference	Pledged Delegates
New Hampshire	Jan. 27	March 8	Yes	Yes
Wisconsin	March 4	April 5	No	Yes
Illinois	Jan. 25	April 12	Yes	No
New Jersey	March 10	April 19	Yes	Yes
Massachusetts	March 8	April 26	No*	Yes
Pennsylvania	Feb. 23	April 26	Yes	No
Indiana	March 24	May 3	Yes	No
Ohio	Feb. 3	May 3	No	Yes
District of Columbia	April 2	May 3	Yes	Yes
Nebraska	March 11	May 10	Yes	No
West Virginia	Feb. 6	May 10	Yes	No
Maryland	March 14	May 17	Yes	No
Oregon	March 11	May 20	Yes	Yes
Florida	March 1	May 24	No	Yes
California	April 8	June 7	No	Yes
South Dakota	May 8	June 7	No	Yes

** Voters may write in the name of their preferred candidate.*

In **Alabama** Democrats on **May 3rd** and in **New York** both parties on **June 7th** will elect delegates but these will not be pledged to presidential candidates; nor will there be a vote on presidential preferences. Thus there will be no direct contest between presidential candidates in these states.

Who can vote?

Normally a voter can only participate in the primary of a party to which he is affiliated in some way. But Wisconsin still has an "open" primary in which any qualified voter may cast his ballot for the candidate of whichever party he chooses.

to the Air Force, however, the B-70 represents a first step toward the dream of a multi-purpose aircraft. It would provide an ideal and certainly highly mobile launching platform for the Skybolt, a new air-to-surface ballistic missile, still in its infancy, which the Air Force unveiled, not altogether by coincidence, early this month; if all the technical problems can be solved, the Skybolt could reach a target from 1,000 miles away, making it even less vulnerable to enemy detection and attack than its predecessor, the Hound Dog, which is to have a range of 500 miles. Launching a missile 70,000 feet up means that it can dispense with the bulky first-stage booster rocket needed for missiles fired from the ground; it can also remain longer under human control.

Other military arguments for the B-70 are that in four hours it could carry half-a-dozen Honest John nuclear missiles, or a priority force of perhaps 80 men, from the United States to the Far East. Equipped with a large dish-radar, it could also detect enemy activities long before earthbound radar could do so. The aircraft would carry its own defensive air-to-air missiles, which would make it independent of fighter escort. Moreover, the design of the B-70 holds out hopes to the eager aircraft industry of an enormously efficient commercial transport.

In an election year Congress may prefer to concentrate on means of plugging the disturbing "missile gap" of the next two or three years, rather than to spend money on an aircraft which will not be ready to fly until later. But General White's outspoken protest suggests that the Air Force is fairly confident that it can win this battle to bring back the manned bomber, now in full retreat before the advancing missile.

How Unsafe in the Air?

EVEN if it is true, which is not yet proved, that two recent air crashes which cost 76 lives were caused deliberately, there is not very much that can be done to protect the public against such outrages. To search every piece of luggage would take too long and the machines which might do the job without opening the bags are unable, as yet, to distinguish between a clock and an infernal machine. Making it impossible for beneficiaries named in insurance policies to profit from the destruction of an airliner might help, but only if would-be suicides (or murderers) are convinced that such crimes are always detected. The problem is a baffling one; fortunately it is rare.

Sensational speculation over bombs in the baggage has swept almost out of sight a more significant quarrel over how to improve air safety in ordinary circumstances. It is still about four times as safe to make a journey by air as by car, but there were 295 deaths last year in accidents to American airliners, the worst death-roll since the nineteen-forties; there was also a slight, and probably not very significant, rise in the number of deaths for each 100 million passenger miles flown. The 70,000 or so private or company aircraft added another unpublished 778 fatalities. Now 1960 has begun badly.

No single pattern of causes can be found, which makes prevention difficult. But to Mr Quesada, the hard-driving head of the new Federal Aviation Agency, the fact that about half of the crashes are attributed to human error is more than sufficient justification for his present crusade to tighten up the rules laid down by his agency and to require pilots and other members of crews to obey them. For example, pilots over 60 are no longer to be allowed to fly commercial airliners; crews are to stay in their cockpits throughout flights. The airlines are raising no objection to Mr Quesada's new broom, but the pilots, long accustomed to more freedom, are fighting back in the courts and before the Senate Aviation Committee; they accuse the FAA and its inspectors of dangerous bureaucratic inflexibility.

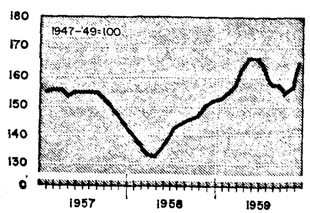
The pilots say that the real cause of accidents is the lack of adequate navigational guides and safety aids. Mr Quesada admits frankly that in the past these have been starved of funds (in one year less than $7 million was spent), but this year and next over $300 million is to be invested in making up the deficiency. In addition, all commercial airliners have been ordered to be equipped with radar by January, 1962; from May 1st the airlines will have to submit the training programmes for their crews for official approval; standards are being raised for flight engineers, pilots, co-pilots and mechanics and for maintenance; the regulations governing air-worthiness may be changed. By the middle of the nineteen-sixties Mr Quesada hopes to have in operation a completely automatic system of controlling air traffic which will make collisions in the air nearly impossible. There has not been one since 1957, but the number of near-misses in the crowded skies grows more and more frightening.

Manhattan Running Aground

FROM A CORRESPONDENT IN NEW YORK

BEHIND the recent willingness of the dockers in New York to come to terms with their employers lies a problem of change and obsolescence: the city's pre-eminence as a port is vanishing. The Port of New York Authority is said to have been losing $215,000 a year on the expensive floating grain elevators which it bought in an effort to bolster the city's reputation as a great centre for shipping grain; it now believes that this trade is disappearing from New York. The New York Shipping Association warns workers that their constant demands for higher wages are driving more than grain handling away from the port. In the background looms the growing competition of that nightmare-come-true which New York tried for so many years to keep at bay—the St Lawrence Seaway. Figures showing the effect of the seaway's first full year of operation have moved the head of the Port Authority to predict that it will deprive New York ultimately of prime cargo amounting, perhaps, to 1.5 million tons a year.

The City Marine and Aviation Department (its bifurcated name is symbolic of modern trends) wants to tackle the problem by spending $40 million on replacing a few old piers east of the financial district. That district itself, however, echoes with rumblings from a private group, headed by Mr David Rockefeller, which would prefer to see this historical bit of waterfront developed with an eye to the growth of Wall Street's present occupations rather than in an attempt to revive departed maritime glories.

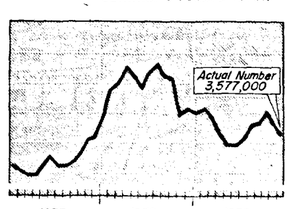


New York is still a port, and an important one, but a growing number of transatlantic passengers and an increasing flow of goods go by air and aircraft do not land on piers. It is still a railway centre, but the railways are dropping one passenger train after another. As manufacturers find costs in the city too high, as office buildings replace blocks of flats, as office workers move out to the suburbs, New York is more and more a city where goods must compete with people for traffic facilities. The old picture of a sea-girt island with busy piers handling primary products no longer fits the reality.

The figures on shipments of grain in 1959 illustrate what is happening. Even before the seaway was completed the exporters of grain to foreign ports were finding New York's handling charges too expensive, and were going to Boston, to Philadelphia, or to Baltimore, where labour costs are much less. This year, with the St Lawrence become a highway from the centre of the continent to the sea, loaded grain cargoes needed no coastal trans-shipping, and New York's share of the grain traffic, 20 million bushels in the good days, but fallen recently to 5 million, is 40 per cent lower than it was last year.

The imminent disappearance of the grain trade in the port of New York is only one symptom of the trend. Hardly less startling is the changed handling of fresh fruit, vegetables and fish, which used to come by boat and train and now come mostly by lorry. The produce market, still served by a few ancient piers on the Hudson River, just above the financial district, now gets only 27 per cent of its goods across those piers. The Fulton Fish Market, occupying expensive space on the East River, gets only 7 per cent of its fish by sea; the rest arrives by lorry. The inefficiency of these crowded and insanitary markets increases the cost of food to the consumer, but so far plans to shift them have been frustrated by inertia and special interests.

On its southerly waterfronts Manhattan Island, which has always compensated for lack of space by building upward, is faced with a situation in which that solution does not apply. Neither ships nor lorries can operate twenty storeys up. Even if the obsolete piers were rebuilt (against the advice of regional planning experts and at a cost which makes the city fathers blench) space would still be lacking in the city's streets for lorries to carry the goods away. Shipping, at least of bulk commodities, seems to be bound for other sections of the New York waterfront where it can be handled on the level and can spread sideways.



Until the regional planning group completes its nine-volume study, the clearest picture of the complex and inter-related problems of land and water which confront the city is to be found in

QUICK RECOVERY

The ending of the steel strike in November brought a sharp upturn in industrial production in the United States. The gain of 6 per cent in December, shown in the chart on the left, was one of the largest in recent years and brought the total almost back to last summer's record level.

As a result a record number of people for the month — 65,699,000 — were in jobs. Employment went up in December for the first time in this month since the war and the number out of work dropped instead of showing the usual rise; this brought a fall in unemployment as a percentage of the civilian labour force, shown in the chart on the right.

Both charts show seasonally-adjusted figures

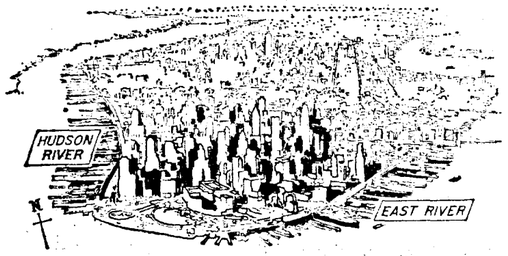
Justice Out of Order?

FROM A SPECIAL CORRESPONDENT

CRITICISM of the Supreme Court is not new, but it has been increasing in the last few years. The latest attack, a novel study of how much time the Justices of the Court have for its work and how they use it, comes from Professor Hart of the Harvard Law School and was published in a recent issue of the *Harvard Law Review*. Starting from the premise that the quality of the Supreme Court's decisions has deteriorated, he asserts that this is most marked where the theory and functioning of government are involved, so that the Court's present weakness is undermining the structure of the government itself. He also argues that the deterioration is lessening the professional respect of first-rate lawyers for the Court at a time when both the institution and the Justices themselves are especially in need of the bar's confidence and support.

The Court sits for thirty-six weeks a year, from October to June; the other sixteen are devoted, theoretically, to rest and recreation. Assuming that each Justice is capable of eight hours of intensive application every day, six days a week, this gives him 1,728 hours of annual working time. In this he must listen to oral argument, read briefs, confer with his fellows, make his decisions and write the opinions assigned to him. Last year about 1,540 cases required some, though not always extended, consideration. Moreover, every Justice must participate in every case; otherwise it might be claimed that a decision was the work of an individual rather than of the whole Court.

After analysing the work accomplished during five years, Professor Hart concludes that, on the average, each Justice spent 372 hours annually in collective deliberation, 242 in deciding which of 1,300 claimants had a right to be heard, 918 hours in private study of the 125 cases accepted, including the writing of opinions on some of them, and 196 hours in a variety of other tasks. Further calculation suggests that about 24 hours is spent on the preparation of each published opinion.



Admittedly this figure is a statistical figment; Professor Hart notes that a number of the opinions written in each term had obviously received more time. The loudest complaint, however, is that some of those handed down in 1958-59 read as if they had less, rather than more, than the average 24 hours of work devoted to them, even though they concerned complicated and far-reaching issues. The implication is clear that some way must be found either to increase the working time available to the Justices or to lessen the load of their work.

Both courses are possible, but the second one seems more desirable and more feasible. The Court controls the kind and number of cases which it will hear, yet the total has risen by more than a third in the last five years and is still growing. In common with some of the Justices, Professor Hart believes that the Court is not only accepting more cases than it can deal with adequately, but also that some of these, such as injury cases, should properly have been refused a hearing under any circumstances. The result is that it has too little time to straighten out basic confusions such as those now surrounding *habeas corpus*.

Professor Hart also notes an increasing tendency on the part of the Justices to dissipate the Court's time by writing an unnecessary proliferation of individual concurring or dissenting opinions; he suggests that the Justices have ceased to feel that they are part of that collective personality called the Supreme Court, and are under a disintegrating compulsion to make their individual views known. Finally, the Court's practice of voting on each case at the end of the week in which it was argued tends to rule out changes in view which might result from a longer study of the record; this may be responsible, in part, for the growing lack of a consensus in the work of the Court as a whole.

From all this it seems clear that the Court needs a new Charles Evans Hughes; he was the Chief Justice who set its house in order in an earlier period of dissatisfaction with the Court. That the genial Governor from California who now occupies that post may not have sufficient iron in his backbone for this task is at least suggested. Professor Hart also criticises the bar and the law schools for the inadequacy of the oral and written arguments presented to the Court and for the absence of an "adequate tradition of sustained, disinterested and competent criticism of the professional quality of the Court's opinions."

the review that Mr Rockefeller's group put together last year. Limiting itself to the foot of the island, it marked out an irregular area not more than a square mile in size, studied the existing use and values of the land and projects for traffic improvements and the redevelopment of decayed sections. Its survey included the great clutch of business skyscrapers, the crumbling East River piers at their feet, and the attendant small brick buildings that once saw the webbed rigging of clipper ships. The contrasts are illustrated by one street where land and buildings on one side are worth $115 a square foot and those on the other only $17.

It is the contention of this group that "eventual business occupancy of the greater part of lower Manhattan will represent the most logical and economically sound use of land in the area." To that end it proposes a couple of waterside housing projects so that employees could walk to work; it agrees with the city that a helicopter port is needed to fly business men to the airports to the east or west. Rather than spend $40 million on replacing old piers, it would provide a small shipping basin where tycoons could park the boats which bring them to the office; additional garage and parking space for motor cars is of primary importance. Just this week it has suggested, more boldly, that the Port of New York Authority should undertake, on the East River, a $250 million development to include offices, a hotel, and a world trade centre and to offer a new home to the New York Stock Exchange. But the waterfront tradition, visibly rotting though it is, dies hard.

Activity About Radioactivity

Last year saw the beginning of a campaign, under the health and safety regulations established in 1957, to deal with the dangerous radioactivity which may spread from uranium processing mills. Altogether eleven companies have now been ordered to comply with the regulations: most of them had failed to keep the required watch on radioactivity in their plants or to put up warning signs. The worst offences appear to have been at a Union Carbide Company plant in Rifle, Colorado, where employees were exposed to more than the permissible safety limit of radioactivity and where no check was kept on the extent to which the Colorado River was being polluted by water from the plant.

Contamination of this river and its subsidiaries is particularly serious because it rises in the Rocky Mountains in the middle of the uranium mining country and spreads out to the Pacific coast, providing the water not only for direct human consumption but also for irrigating food crops over one-twelfth of the United States. Plans are now being made for protecting all the rivers in the region and action has already been taken to cleanse the Animas River, polluted by radioactive waste coming from the Vanadium Corporation's uranium mill at Durango, Colorado. But this also served to illustrate the difficulties: by passing the waste through settling ponds contamination was reduced by 80 per cent, but the radium in the drinking water at a near-by town was down by only 50 per cent and was still well above the permissible level because so much had already been deposited in the river bed and in the town's filtering system.

The danger that radioactivity may eventually seep through into the water-bearing strata deep underground and thus make the country's water supplies permanently unsafe is one of the objections to burying the waste from atomic plants. This may remain poisonous for centuries and how to dispose of steadily increasing quantities of it will become an ever more serious problem as industrial uses of nuclear fission expand. The usual method so far has been to dump the waste far out to sea in cement-lined barrels, but it may be difficult to go on doing this on the large scale which will become necessary before long. Safe as these barrels are supposed to be there have already been protests in Los Angeles against a salvage operator who allowed them to pile up on his premises. And the licence for another firm which wants to sink similar wastes in the Gulf of Mexico has been delayed for two years by the objections of local officials and of fishermen.

Fund Goes West

The Fund for the Republic, set up in 1952 with a grant of $15 million from the Ford Foundation, was unusual in the foundation world in that it was required to expend its capital within a reasonable time and then wind up its activities. To begin with, it was concerned with a crash programme to counter McCarthyism, making grants for studies which would stimulate the vitality of the traditional rights and liberties of the American people. But by 1957 that vitality had been reasserted and the fund decided to devote its remaining $4 million to studying the effect on those rights and liberties of institutions—business corporations, trade unions, mass media of communication, political parties, religious bodies, defence organisations—which had developed since the American Constitution was drawn up. This is the Basic Issues Programme, being carried out by a team of permanent consultants who work with outside experts and scholars to clarify, although not necessarily to solve, the problems facing free societies in countries which lack experience in self-government as well as in established democracies.

The upper floors of a Manhattan skyscraper were not an ideal setting for such discussions and during 1959 the project was moved to the more favourable atmosphere of Santa Barbara in southern California, rapidly becoming a west coast cultural centre. Here the climate and attractive setting will encourage the experts to come often and to stay longer and there may be fewer interruptions and distractions while they are there. During the coming year they will include Professors Galbraith and Nevins, the economist and the historian, Mr Arthur Goldberg, the labour lawyer, Dr Mortimer Adler, the philosopher, Mr Aldous Huxley and Mr Harry Ashmore, late of the *Arkansas Gazette*.

But with all this new activity the idea of being self-liquidating has been thrown overboard: this Centre for the Study of Democratic Institutions is to be permanent, for by going west the fund has saved itself from going west in another way, through lack of money. It was offered substantial gifts, by whom is not disclosed, on condition that it moved to Santa Barbara and has now been promised $155,000 altogether. How to supplement this is presumably one of the questions facing Dr George Shuster, of Hunter College, who is working out plans for the centre's future work. Dr Robert Hutchins, chairman of the consultants, emphasises that it is designed not for action but for thought. It will be in effect a university without students and, if all goes well, and particularly if the consultants and experts devote as much time to the project as it deserves, then it might even become a modern equivalent of the academy of ancient times.

I

A new concept in contract building

INTERCON

Too many buildings are finished after target date! Too many buildings cost more than was originally anticipated! The reasons: a lack of co-ordination between all the divergent elements —Architects, Quantity Surveyors, Building Contractors, Technicians and the rest at the pre-planning stage, and the need for one capable authority responsible for each entire project from start to finish. This is just the service that INTERCON CONSTRUCTIONS LIMITED is equipped to provide. The day of the 'package deal' has arrived.

INTERCON undertake to plan and design the building to your requirements, to organise and progress its erection to completion, and it will assist its clients in the negotiation of arrangements to finance the project if so desired. Then it is handed over—often well ahead of time—on terms previously agreed. INTERCON buy ahead, and plan ahead. The final sum paid by you, their client, is safe from the fluctuations of labour and raw material prices. More than this, the control this one company has over all aspects of a building's progress means they can cut paper work and planning time to a minimum. Time and money are saved throughout the scheme because this modern way of contract building sweeps away the anachronisms of the present system—replacing it by an enterprising new method that gets things done fast; gets buildings up on target date, and provides them cheaper than the old-fashioned and outdated methods.

Read 'A New Concept in Contract Building' for a full explanation of the INTERCON way of working. It gives full details of the service INTERCON provide. Write for a copy to:—

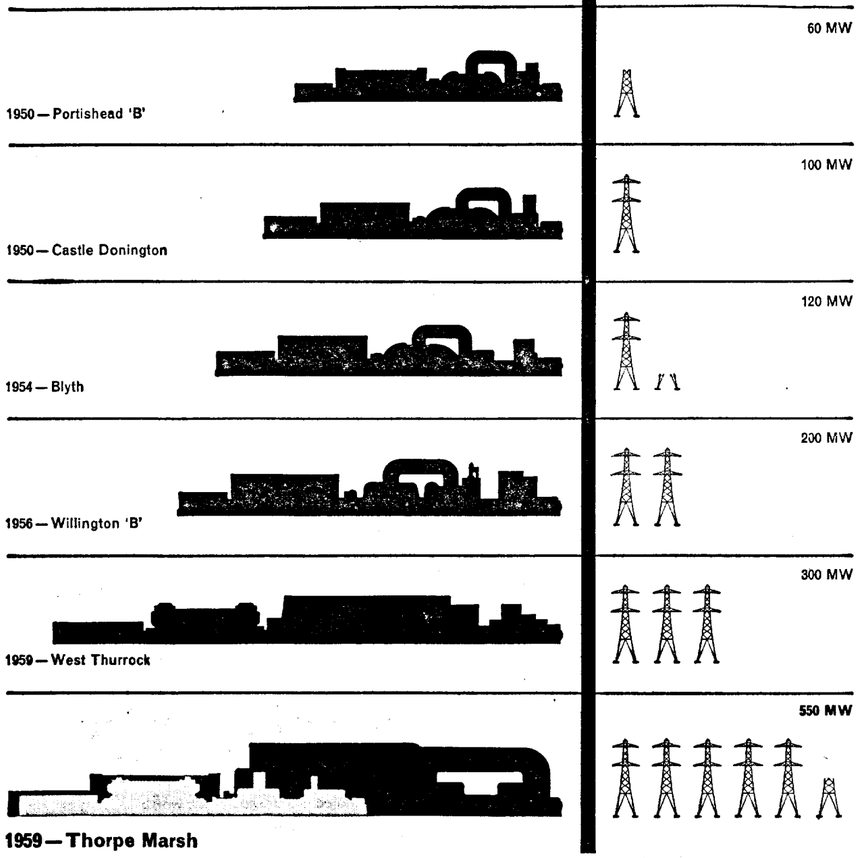
TEN YEARS OF ELECTRICAL PROGRESS



National Supply Doubled—Rapid Technical Advances—Prices Held Down

THE AEI CONTRIBUTION: TURBINE-GENERATORS

4 TIMES LARGER, TEN TIMES MORE POWERFUL

Six examples of AEI turbine-generators, illustrating AEI design progress during the past 10 years.

OUTPUT
(1 complete pylon equals 100 MW)

NOW—the World's Largest 2-Speed 50 cycle Turbine-Generator—550,000 kilowatts to boost Britain's Grid

AEI's latest contribution to the Central Electricity Generating Board's programme of more—and more efficiently produced—power for Britain is the 550 MW turbine-generator—the world's largest of its type—now in hand for Thorpe Marsh power station.

When completed it is calculated that this new unit will have a station efficiency 7 per cent higher than Castle Donington — the most efficient power station listed in the C.E.G.B.'s last annual report—which is also equipped with AEI turbine-generators.

It is estimated that owing to the advanced design of steam raising plant and generating equipment, Thorpe Marsh will produce 35 per cent more electricity per ton of fuel than the average power station at present.

The AEI turbine-generator, while producing nearly ten times more power, is only just over four times as big as conventional 1949 machines. This means not only fuel savings, but also important savings in building and other capital costs.

Britain's demand for electrical power doubles every 10 years and power costs must be held down to keep our industries competitive in world markets and to help our rising standard of living.

While fuel has gone up 67 per cent and civil engineering materials 46 per cent, electricity has gone up only 31 per cent—an achievement in which AEI shares.

AEI

—4 major world-wide orders in the last few months

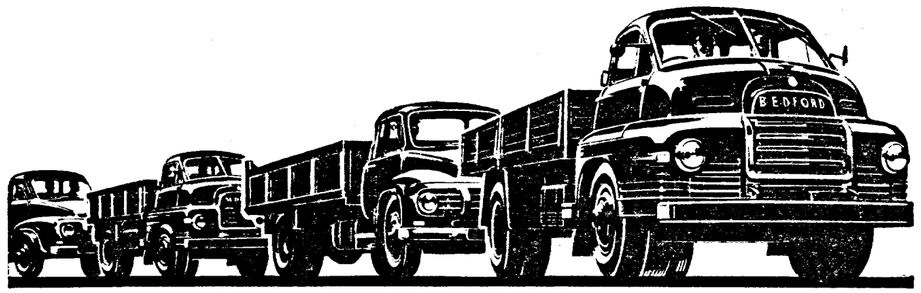
AEI progress in design not only helps to keep Britain's power costs down—it also brings orders to Britain for AEI equipment. Orders received during the last few months include :—

Two 300 MW TURBINE-GENERATOR SETS and feed heating plant for the C.E.G.B. West Thurrock Power Station.

Two 200 MW TURBINE-GENERATOR SETS for the Hazlewood Station of the State Electricity Commission, Victoria, Australia.

One 550 MW TURBINE-GENERATOR SET for the C.E.G.B. Thorpe Marsh.

Two 300 MW TURBINE-GENERATOR SETS for the Lakeview Station of the Hydro-Electric Power Commission, Ontario, Canada.



The combined output of these machines is enough to meet the entire needs of Birmingham, Bristol, Edinburgh, Glasgow, Manchester and Sheffield.

Bedford No. 1 British truck the world over

Bedford No. 1 British truck the world over
50,000 Bedford trucks built in 1959

Bedford No. 1 British truck the world over
Highest-ever sales in 1959

Bedford No. 1 British truck the world over
4 in 10 new British trucks are Bedfords

A great year, 1959, for the British Motor Industry. And right out in front, leading the leaders, is Bedford . . . . more firmly established than ever before as No. 1 British truck the world over.

Bedford's success is based on leadership in design, leadership in value-for-money, and leadership in service-after-sales. No wonder 400,000 Bedford trucks were sold in the nineteen-fifties alone !

The Bedford truck range is carefully graded to cover every load from 25 cwt. to 12 tons, with diesel or petrol power. See your local Bedford dealer. He'll be glad to recommend the Bedford best suited to *your* job.

50,000 Bedford trucks built in 1959. A truck production record never achieved before by any British manufacturer.
***Highest-ever truck sales in 1959.** Latest figures for 1959 show that, while British truck production increased overall by 31%, *Bedford* production increased by 63%!
***4 in 10 new British trucks are Bedfords.** Latest figures for 1959 show that 39.9% of all new trucks built in Britain were Bedfords.
30,000 Bedford DIESEL trucks built in 1959. Diesel-engined models accounted for 60% of Bedford's 1959 production record.
On all counts Bedford sweeps the board . . . 43% of all buses and coaches registered in the 27/48 str. class were Bedfords. And Britain's best-selling light van comes from the Bedford stable too.
Bedford van sales rose by 55% in 1959.

**Based on latest available Board of Trade statistics for first nine months of 1959, compared with Bedford production for the same period.*

THE WORLD OVERSEAS

Mr Macmillan's Trail of Doubt

FROM A CORRESPONDENT IN SOUTHERN RHODESIA

WHATEVER success Mr Macmillan achieved on the first two legs of his African tour—in Ghana and in Nigeria—has certainly not been repeated in the Federation of Rhodesia and Nyasaland. And rash though it may be to prophesy what may happen on the fourth leg in South Africa, it seems likely that his visit to the federation will stand out as the notable failure of the Prime Minister's African pilgrimage. The blame for this lies less at Mr Macmillan's door than at that of the Rhodesians and Nyasalanders of all races who have largely failed to appreciate what the Prime Minister had come for. Mr Macmillan himself has made it clear often enough that he regards his African tour as the logical extension of the visits he has already made as prime minister to other parts of the Commonwealth. Ghana and Nigeria fully appreciated this and treated his visit as one of goodwill and, to some extent, ceremonial.

Rhodesians and Nyasalanders—black and white—on the other hand, expected great things. The supporters of federation hoped for a categorical assurance that the British Government will not in any circumstances allow the federation to be broken up. Its opponents hoped for a whole range of undertakings, from a pledge that Nyasaland and Northern Rhodesia would be allowed to secede from the federation either immediately or in a year's time, to a definite assurance about the release of Dr Banda. Such expectations may have been mistaken, but they were easily understandable after the year of doubt and confusion about the future through which the federation has just lived. Rhodesians and Nyasalanders of all races want nothing so much as an end to their doubts—even if this confirms the worst fears of one group or another.

But Mr Macmillan has, if anything, sharpened the edge of doubt. His supply of clichés has been inexhaustible, his pronouncements always meticulously correct. During his major public speech in the federation—at the Rhodes cinema in Salisbury last week—he spoke fluently for thirty-five minutes without saying a single word that mattered. He reaffirmed the British Government's determination to stand by the terms of reference of the Monckton Commission. These, in most people's understanding, including presumably Mr Gaitskell's, preclude the commission from recommending that the federation should be broken up—though it will scarcely be feasible to prevent evidence on this vital issue from being offered to the commission if it is to serve any useful purpose at all. On the other hand, Mr Macmillan has pointedly declined Sir Roy Welensky's invitations to say publicly in so many words that the federation will not be broken up. Equally pointedly, he has avoided the gambits designed to elicit a commitment to permit the secession of the northern territories from the federation, or an undertaking to release Dr Banda, or to end the Nyasaland emergency. Instead, in Nyasaland on Tuesday, he warned African politicians against "developing an intense African racialism" and against shouting slogans, adding that no one "can live by eating votes and constitutions"—perhaps his most positive public statement of the whole tour.

It was in Nyasaland, incidentally, that he met the most forceful African demonstration against him as the man who invented the Monckton Commission. The hotel at which he was addressing a civic luncheon in Blantyre was stoned by a crowd led by members of the Malawi Congress party. But even this demonstration seemed half-hearted, while all the other African nationalist demonstrators have been downright apathetic. They have rarely numbered more than a hundred in any one place, and most of them have been teenagers or very young men. Mr Macmillan has in most centres made a point of going over to talk to them, and has usually left them smiling ; in one place they actually cheered. Even the much-publicised "bomb plot" at Ndola was peculiarly half-hearted. The bomb was placed in a part of the hotel where, if it had exploded, the Prime Minister would not have been likely to have heard it, let alone been injured. And the bomb had no fuse.

FINALLY, after a press conference in Salisbury on Tuesday night which was a superb demonstration of how to field reporters' questions and lob them back without giving offence but at the same time without giving answers, the Prime Minister flew off to South Africa, leaving behind him more doubts and a greater malaise than he had found. For this Mr Macmillan himself can scarcely be blamed (though it might be argued that his advisers should have warned him of the false hopes his visit would arouse): it rather illustrates the failure of people in central Africa to realise that they have ahead of them an even more agonisingly doubtful year than the one just ended. During 1960 the Monckton Commission will investigate and report and the political conference on the review of the federal constitution will, according to present plans, meet to take some firm decisions. Not until these things are completed will today's doubts be resolved.

Mr Macmillan apparently extended his public non-commital attitude to his private discussions with Sir Roy Welensky and other political leaders—except about his immediate plans for Nyasaland. On the general questions of secession from the federation, the future independence of the federation, the status of the northern territories and the British Government's responsibilities there as protecting power, there were probably few exchanges. The two prime ministers clearly agree that these matters cannot be profitably discussed until the federal constitutional review, and certainly not until Lord Monckton has reported. But it does seem likely that Mr Macmillan has told Sir Roy Welensky of his and Mr Macleod's immediate plans for Nyasaland. These are believed to include the early release of Dr Banda, the lifting of the state of emergency before the middle of the year and immediate talks on a new Nyasaland constitution—talks which it had been expected would be delayed until the federal constitutional review or after it.

Sir Roy Welensky's reaction to these decisions remains to be seen. Dr Banda's imminent release is likely to be his greatest concern, as it is of many senior Nyasaland government officials in Zomba who fear that further bloodshed will follow it. But there seems little doubt that Mr Macmillan has made it clear both to Sir Roy and to the Nyasaland government that he and Mr Macleod are firmly committed to all these moves and that Sir Roy, with an eye to the federal constitutional review, would be wise to concede them with the minimum of fuss.

Struggle in a Vacuum

FROM OUR PARIS CORRESPONDENT

A FEW days of real crisis were sufficient to reveal the political emptiness behind the institutional façade of the Fifth Republic. The façade could glitter and the new institutions could impress superficial observers as long as the machinery of government met no resistance. The executive looked strong when faced with a submissive parliament and an apathetic country still stunned by the events of May, 1958. But when, this week it came up against the first solid obstacle—the passive resistance of the soldiers in Algeria, "neglecting" to carry out orders—the institutional façade crumbled. Behind it was revealed the solitary figure of the man in the Elysée.

General de Gaulle was at once faced with a choice. He might seek a compromise with the army—a compromise which in fact would be a surrender with face-saving devices—and thus recognise it as the dominant power in the country. Or he could try to resist. In that case he had to counter the effective power of the military with a popular force in France. In other words, he had to try to fill the political vacuum which nearly two years of reliance on the "saviour" have created in the country. He has one major advantage, however, which the men he displaced in 1958 did not enjoy. There is no de Gaulle at Colombey now who can be produced and presented to the French people as an alternative to clash or surrender.

Wise after the event, some commentators have been pointing out that General de Gaulle would have been in a better position for a trial of strength with the army and the Algerian settlers, say, in the autumn of 1958, after his overwhelming success in the referendum. Since then, his popularity has decreased. The government's measures of economic austerity antagonised large groups in the nation. The general's foreign policy set him at odds with the "Europeans" and with the faithful supporters of the Atlantic alliance. The manner in which the schools issue was handled increased the hostility of the Left. M. Pinay's departure was a sign that the conservative opposition was not limited to the advocates of "French Algeria" led by M. Duchet and M. Bidault. Even in the Gaullist UNR itself there were elements of hostility (as illustrated by rumours that M. Soustelle was going to resign from the government).

And yet it is safe to assume that if a referendum were held in France on the policy of self-determination for Algeria, the general would muster an overwhelming majority (though its composition would be very different now from the majority that subscribed to his return to power). And so by the mid-week it was, indeed, being suggested in Paris that such a referendum was the general's answer to the passive resistance of the military. M. Mollet's Socialists made this proposal officially on Wednesday. To some it seemed a better weapon than the full powers the general could obtain by invoking Article 16 of the Constitution, because what was now needed was popular support and not the empty trappings of authority.

Technically the matter looked simple. Parliament would have had to be recalled because, as the constitution provides, a referendum can only be ordered when parliament is in session. All this, however, would have taken time. Judging by the various pronouncements issued by parties and trade unions so far, and the letters of support reaching the Elysée, there is little doubt that the communists and other left-wing groups would urge their supporters to vote for the policy of Algerian self-determination. The cleavage between General de Gaulle and the army would thus widen. Appearances of unity would be dropped and the risks of a clash would be increased. If the army refused to bow to the popular will of France, President de Gaulle would ultimately have to take the decision M. Pflimlin never dared to take—threaten the army with a nation in arms.

Symbolically, the president's choice can be described as between the de Gaulle of 1958, who was brought back to power by a military *putsch* in Algeria, and the de Gaulle of 1944, who returned to France as the head of a Resistance in which left-wing elements were strong. The second alternative cannot appeal to him: it would destroy the myth of unity and the general's pretension to be an arbiter above parties. But it seems in Paris that the present ambiguity—with General Challe proclaiming the army's loyalty both to the government and to an Algeria French for ever—cannot be preserved for very long. Soon, if the army does not give in, President de Gaulle will have to take a decision, if only to end the apathy of metropolitan France and throw its weight into the balance against militant European Algeria. By Thursday, right-wing extremists like M. Le Pen were being arrested in Paris but the idea of the referendum was apparently being abandoned and the government's next move was hard to see. Not to act is also a policy, though M. Pflimlin did not find it a paying one. To pretend that the army is loyal and obedient is no solution either. Whatever the general decides to do within the next few days, the veil has been lifted and the Fifth Republic will never have the same face again.

The French Army—I

FROM OUR PARIS CORRESPONDENT

THE army's wishes and the army's intentions are the question-marks that have seemed this week to govern France's immediate future. In a way, the political problem is now much more circumscribed than during the crisis of May, 1958, which brought about the end of the previous regime. Then, it was relevant to wonder about the attitude of parliament, the parties or the trade unions. Only when M. Pflimlin—the head of the government at the time—renounced any attempt to bring popular forces into play was he compelled to surrender to the army and accept the conditions of its commanders. In the Fifth Republic the political and institutional void surrounding the monarch is such that the whole affair is, from the start, reduced to a secret dialogue between General de Gaulle and the army commanders controlling the situation in Algeria.

In fairness, it must be stated that the army's importance in politics is by no means a new phenomenon. At the turn of the century, after the Dreyfus case, a bitter struggle was necessary to curb the political ambitions of the General Staff. After the second world war the army's part in politics grew as successive governments of the Fourth Republic abdicated their responsibilities and allowed commanding officers to run the country's colonial policy. A trial of strength became inevitable. It came in May, 1958, when the army command in effect vetoed parliament's choice of government. After a parody of resistance, government and deputies gave in and France changed regimes. To grasp the ambiguous relationship between the army and the President of its choice—a choice since endorsed by a massive popular vote—it is necessary to glance back at the events which have helped to shape the attitudes of the military cadres.

Many French officers are haunted by memories of defeat. The army's last real victory is over forty years old; and even at Port Said in 1956, when victory of a kind came within its grasp, it was snatched away. The feeling is the more bitter since the French forces have been fighting, in colonial conflicts, almost uninterruptedly ever since the end of the second world war. The Indo-Chinese war culminating, in 1954, in the disaster of Dien Bien Phu left a deep mark. Officers emerged from this traumatic shock with three fixed ideas: resentment against the civilian government in Paris "which has let them down"; a crude conception of a world in permanent struggle between the Christian good and the communist evil; finally, an admiration for communist techniques coupled with hate for communist ideology. Mao Tse-tung's writings on revolutionary strategy were translated into French. They did more than provide military writers with quotations about the nature of revolutionary war; they became the bedside reading of many officers serving in Algeria.

One war was, in fact, succeeded by another. Algeria provided a fertile ground for the seeds brought from Indo-China. A glance at French military publications or conversations with French officers shows that many are still convinced that colonial wars form a vital part of the anti-communist crusade. Communists, according to this version, are trying to bring western Christendom down by striking at its soft under-belly in the Middle East, in Africa, even in Latin America. In Algeria, faced with the nationalist rebellion of the FLN, the French command could use its new arsenal of counter-revolutionary weapons: strict control of the Moslem population, indoctrination, brain-washing—the task of the psychological warfare specialists was made easier by a huge re-settlement of the Moslem population (involving more than a million people). In vain was it objected that Mao's methods succeeded because his was a national programme and a programme of social revolution. The soldiers came to believe that if their policy did not bring the expected results, the blame must be put on the civilian government in Paris, perverted by "defeatist" influences.

No blame could be put on lack of men. In 1956 M. Mollet's government decided to send national servicemen and reservists across the Mediterranean; ever since, the military command in Algeria has had close to half a million men at its disposal. Since only a tenth were actually involved in fighting at any one time, the rest could be spared for other tasks. Such a wealth of manpower enabled the French army to extend its administrative control to remote villages and at the same time to embark on social work on a massive scale. The army supplied teachers, doctors, nurses, builders, engineers and many more specialists besides.

Two important consequences have resulted. The army is now in full control of the country. No economic programme—the Constantine plan, for example—can be carried out without its help. No elections can be held without its consent. Secondly, social work among the Moslem population has given the soldiers a sense of mission which renders them proof against liberal humanitarian agitation about the torture and other horrors which mark the war. Often contemptuous of the French settlers and their obsession with privilege, many of the soldiers firmly believe that they are working for the good of the Moslem population exclusively. Everywhere the officers have assured their Moslem collaborators that France has come to stay and will never abandon them. ("We shall not let our friends be punished as traitors, as in Tunisia or Morocco. We shall not allow them to be massacred by the FLN" is a refrain often heard in conversations with officers about the future of Algeria.)

Service in Algeria thus gives the army a sense of power and a sense of mission. By now this mood marks the French officer corps as a whole, and it is more relevant to General de Gaulle's decisions than any "threats" from politically minded colonels. Many officers who had close links with extremist settlers' organisations have been gradually removed from their posts through promotions and transfers. But their successors have been rapidly infected with the general mood. The war has its logic and the colonial atmosphere of Algiers is insidious.

Twenty months ago the army had a striking confirmation of its political power. The Fifth Republic did not produce any political forces to restore the balance. General de Gaulle has implicitly admitted that in the crucial Algerian question the mood in officers' messes is more important to him than that prevailing in the lobbies of the Palais Bourbon. Before revealing his policy of "self-determination" for Algeria on September 16th, the general did not consult parliament; but he made a special trip to Algeria in order to consult commanders of all ranks. Those officers who accepted the general's new plan (reluctantly, since it conflicted with the magic slogan of integration) did so on the

Morocco's Parting Guests

FROM A CORRESPONDENT

THE news given by President Eisenhower during his recent visit to Morocco that the American air bases there would be evacuated by 1963 was not really news. It had been known for some time. But it did serve to bring it home to shopkeepers, hoteliers, and the 8,000 Moroccans employed on the bases that in the course of the next few years they will lose another large and particularly free-spending part of their alien population. There are several thousand Americans in Morocco, and they spend about $40 million a year.

It is also a reminder of two other large-scale departures which have been going on and are probably by no means ended. The first is the exodus of the French settlers. There used to be nearly half a million Europeans in Morocco; the great majority were French *colons*. In the last five years a third of these have packed up and left. For the moment this outflow has largely ceased. Whether it will continue depends as much perhaps on the maintenance of the personal position of King Mohammed V as on the more obvious question mark which hangs over the future of the French Army in Morocco.

The other exodus is that of the Jews. There has been a large population of Sephardic Jews in Morocco certainly since the days of the Spanish Inquisition and probably for longer. There were about 400,000 of them. In the last nine or ten years, since the writing on the wall began to spell "Moroccan independence" in more distinct letters, about 150,000 have left. At first their departure was openly conducted and financed by an organisation of the Jewish Agency at Casablanca called Cadima. But in 1956 this was closed down largely as a result of the emotions engendered by the Suez crisis and of the growing power of the pro-Nasser Istiqlal party in Morocco. Since then emigration has been clandestine.

For a time the refugees managed to get away in small parties through Tangier. But this door was closed soon after the international zone was incorporated in Morocco, and since then their only route of escape has been a precarious one through the Spanish praesidios of Ceuta and Melilla into Spain by sea, and thence overland to Gibraltar, where they can go east by ship or by specially chartered aircraft.

There are two main reasons why the Moroccan government objects to this exodus. In the first place it does not want to lose the urban Jew, who is an almost essential element in the business and professional life of the country, particularly at a time when Morocco wants to reduce its present formidable dependence on the French in these and other respects. The second reason is that every Jew who goes to Israel is regarded as an extra thorn in the pan-Arab flesh, and almost every nationalist in Morocco pays at least lip service to the pan-Arab idea.

The result is that the government tries to persuade them to stay with one hand, and to stop them going with the other. Assurances of equal treatment and of fair opportunity have been given many times, and as a sign that they are accepted as part of the community a Jew was given a seat in the Cabinet. But however much the government encourages them to stay and however much it tries to prevent them leaving, the Jews still leave for Israel.

assumption that it was prompted by international considerations and really designed for a distant future. Then came the rumours of a deal with the Moslem rebels (FLN), and the inevitable inference that the army's days in Algeria might be numbered. The mood was radically altered by such talk. In the last three months comment hostile to General de Gaulle's Algerian policy—on the lines of General Massu's now historic interview—was the rule, not the exception, in officers' messes.

The attitude of the officers towards General de Gaulle is not the same as it had been towards M. Pflimlin. The general is a man of their choice. The army cannot stage a *Putsch* every year. It does not want now to change regimes, simply to put a check on the Algerian policy of the present one. The riots in Algiers gave it an excellent opportunity to show who is master there. The immediate question is: what guarantees about policy will the army insist upon before it will agree to carry out the President's orders? Assuming that a compromise will be reached in the present crisis, the wider issue will remain whether General de Gaulle can ever offer the professional soldiers a sufficiently dazzling prospect in France, and Europe, to attract them away from the Algerian mission which has brought them the power and the prestige that they have.

(To be concluded)

Round the Tribal Drum

FROM OUR BONN CORRESPONDENT

SINCE the beginning of the year several attempts have been made independently to catalogue the organisations in western Germany that invite whomsoever it may please to gather round the primitive tribal drum. The ministry of the interior, the major political parties, the trades unions and many foreign missions have had their men out looking and listening. The investigators' findings are all much the same. There exist quite a number of crudely nationalist groups with totalitarian leanings; but their membership is small, their manner largely apologetic, their appearance often ludicrous, their purse slender, and their influence at present consequently negligible.

Students and teenagers apart, it is confidently reckoned that at the most 25,000 persons belong to parties, or to other less ambitiously organised groups, professing beliefs that derive directly from the root stock of national socialism. Of these, some 19,000 are enrolled members of four licensed political parties—the *Deutsche Reichspartei* (17,000), the *Deutsche Gemeinschaft* (1,000), the *Deutscher Block* (400), and the *Deutsch-Soziale Union* (600). The *Deutsche Reichspartei* is led by Wilhelm Meinberg, a middle-aged malcontent who joined the Nazi party as early as 1930 and rose to senior rank in the SS. The *Deutsche Gemeinschaft's* pocket Führer, August Haussleiter, was even earlier afield; he took part in Hitler's unsuccessful Putsch at Munich in 1923. And Otto Strasser, the once-burned yet not twice-shy founder of the *Deutsch-Soziale Union*, is the old party comrade whose brother Gregor was breezily butchered in the 1934 settling of scores. The sporadic appearances of these tatty, unteachable ghosts command scarcely any attention and no respect. The remainder of the organised nationalist bigots—some 6,000 at most—are members of eight different groups. Their names alone sufficiently proclaim their eccentricity: the *Notgemeinschaft Reichstreuer Verbände*, the *Neutral-Deutsche-Soziale Union*, the *Bewegung fur Götterkenntnis*, and the like.

The activities of all the above-mentioned organisations are watched by the Office for the Protection of the Federal Constitution, which is responsible to the minister of the interior (unhappily at present a man whose past is not entirely without a trace of brown). The Office's efficiency varies with its staffing in the Land branches; but under Herr Hubert Schrübbers it seems to be generally winning back the respect which it lost under Dr Otto John—although at the moment Dr John, who saw a Nazi under every table, is probably rather enjoying the latest pother. Herr Schrübbers and his men still keep in touch with representatives of the western powers that were lately responsible for German security.

It is possible to name as many as 18 youth groups appealing more or less frankly to the primitive national prejudices that most sensible Europeans today are trying to overcome. The majority are led by grizzled survivors of petty Nazidom. Scaremongers put their total strength at 40,000; responsible investigators at 10,000. Among them are the *Bund Nationaler Studenten* (800 members), the *Wiking Jugend*, the *Bismarck Jugend*, the *Schiller Jugend*, the *Jugendkorps Scharnhorst*, the *Jungdeutsche Freischar*, and also the *Deutscher Jugendbund Kyffhäuser*, which is not wildly nationalist in temper. None of these groups makes a conspicuous mark on the political scene. A failing of contemporary German youth is its detachment from politics. After the somersaults of recent history, its perplexity and distaste for engagement are to some extent understandable.

Two associations that might be suspected of trying to revive Nazi ideas are the *Bundesverband ehemaliger Internierter und Entnazifizierungsgeschädigter* (Federal association of former internees and victims of denazification) and the *Hilfsgemeinschaft auf Gegenseitigkeit der ehemaligen Waffen-SS* (Mutual welfare association of soldiers of the former Waffen-SS). Yet these two organisations, each of which has some 10,000 members and is steadily diminishing, do in practice confine themselves to helping those who, through their association with the Nazi past, find themselves handicapped in the business of earning a living. More disquieting noises are heard occasionally wafting from the regional associations of refugees (*Landsmannschaften*) and from some of the ex-servicemen's organisations. The current issue of the circular letter addressed monthly to refugees from Pomerania contains, for example, the following exhortation: "Read the *Pommersche Zeitung!* Attend our meetings! Order your books from the Pomeranian book distributing centre! And—whoever can afford it—get ready for the traditional Whitsun meeting of Pomeranians in Bochum; for this rally is being held no more under the slogan 'Pomerania lives' but under the war-cry 'Pomerania belongs to us!'."

IT would be surprising if the ex-servicemen's organisations did not house some anti-democratic diehards. But they are seldom heard, and seem to have no say in determining policy. The *Verband deutscher Soldaten* (approximately 100,000 members) and the *Kyffhäuserbund* (50,000) behave sensibly and unobtrusively, serving mainly the social and economic interests of their members. The hoary *Stahlhelm* (2,500) tries to cultivate a martial and nationalist mystique; it remains woodenly earthbound.

A variety of periodicals and books are being published whose aim is to titillate the sillier fancies of all these various organisations. The *Deutsche Reichspartei's* weekly, *Der Reichsruf*, has a print of 25,000 copies. How many are sold is another matter. It is nowhere conspicuously on sale, and, like other publications of its kind, cannot be bought casually at any kiosk. The most energetically promoted extreme right-wing newspaper is the *Deutsche Soldaten Zeitung*, which has a circulation of just under 20,000 copies. It has lately come increasingly under fire from responsible and influential Germans. A handful of obscure publishing houses have long been producing sacred canon for the lunatic fringe.

Most Germans have lately been discouraged by the vehemence and exaggerations with which the existence of these vestiges of

Heracles comes to town

Outside ancient Argos in the Peloponnesus, shadowed by sombre purple-lined mountains, lies the plain of Argolis—once the scene of one of the Twelve Labours of Heracles and today one of the principal vegetable-growing areas of Greece. Beans, potatoes, tomatoes and other vegetables are grown, chiefly for the home market. Soil and climate are ideally suited to these crops—and to the pests that prey upon them.

Aphids are the chief menace, pests so prolific that an outbreak in one spot can spread throughout the plain within a matter of days. Against them several insecticides have proved highly effective, but most cannot be used for close-to-harvest application (essential where late attacks occur) as this may lead to dangerous residues. An effective insecticide of short persistence, with quick, sure-kill properties, has long been wanted—and has at last been found.

Phosdrin has proved to be the answer the farmers of Argolis were looking for. Applied to beans as a spray, it produced a 95% kill of aphids after 30 minutes, and a 100% kill within 3 hours of application. Most important of all, Phosdrin can be applied *up to 48 hours before harvest*, without any harmful residues persisting in the crop. With this new systemic Shell insecticide keeping the aphids completely under control, today's young Heracles is coming to town, to market his produce, with vegetable baskets fuller than ever before.

Aphis fabae

Phosdrin

new systemic Shell insecticide

Phosdrin is the sixth in the series of Shell pesticides. In addition to its use on vegetables, it also controls insects and mites on fruit, tobacco, ornamentals and many other crops. If you have a pest problem, consult your Shell Company. Between them, aldrin, dieldrin, endrin, Phosdrin, D-D and Nemagon offer control of almost every significant world pest.

Powder and paint

Think of a clown and you think of water. It is the clown's sad fate never to keep his powder (and paint) dry. And the fate of nitrocellulose, a white powder that is made into 'paint', never to be kept dry. In the case of clowns the dampening agent is water, liberal buckets of it: with nitrocellulose it is alcohol, often the IPA (isopropyl alcohol) made by Shell.

Nitrocellulose, the raw material of quick-drying furniture lacquers, must always be kept damp. Water could be used but would show up in the resultant lacquer and mar its finish. With IPA as dampener though, the finish is improved; for the alcohol is, in its own right, part of the subsequent manufacturing process. Used as an aid to the ketone solvent in which the nitrocellulose is dissolved, it improves the ketone's solvent power. Other Shell-made alcohols, such as secondary butyl alcohol and methyl isobutyl carbinol, are used to give the lacquer greater gloss and 'flow' properties than it otherwise would have had. Pharmaceuticals and cosmetics manufacturers also find many uses for IPA. Steel foundries too, use it, in carburising steel and as a mould wash to give a smoother finish to cast steel articles.

Besides alcohols, Shell manufacture a range of chemicals that serves virtually every industrial purpose. Plastics, synthetic rubbers, detergents, additives and many other industrial chemicals today stem from Shell. A word to your Shell Company will bring you full details.

Shell Alcohols

the past have been discussed abroad, particularly in England. The more thoughtful of them are saying that, if Germany should ever again endanger Europe, it would not be through indulgence in "neo-Nazism," but through yielding wearily to the temptations of an opportunist neutralism. Were such a mood to spread, some of the organisations whose discredited warcries go unheeded today might flourish mightily by slightly changing their appeal.

Cubans in Control

FROM A CORRESPONDENT LATELY IN HAVANA

SEÑOR FIDEL CASTRO'S immense popularity is the outstanding fact in Cuba today. His appearance brings out crowds of hundreds in the small towns, and hundreds of thousands in Havana; his speeches are listened to and quoted everywhere. The new film about him, *El Gran Fidel*, plays to packed and enthusiastic audiences all over the island; his picture beams down from government buildings, from banners strung across country roads, from the walls of countless private homes. During the Christmas season his bearded image replaced that of the "Yankee" Santa Claus, and Cubans abandoned the traditional Spanish toast of *Salud* for *Fidelidad*. "Elections now," he has explained, "would be a waste of time, because all the people support me anyway."

His popularity is easy to understand. The rest of the world, which has had a plethora of news from Cuba in the past year, knew little and cared less about the cruelty of the preceding Batista regime. But every Cuban city and village, and almost every family, has good reason to remember the dishonesty, the brutality, and the downright sadism of the dictator's secret police. For Cubans, Castro's revolution meant deliverance from a regime that kept itself in power by torture and murder. The public trials, so much criticised outside the island, dealt out a rough justice that most of the islanders welcomed.

Señor Castro's economic edicts, while hasty and carelessly drafted, have benefited the average Cuban. Reductions in fares, telephone charges, and electricity rates and a fifty per cent cut in most rents have brought about an important redistribution of income; sales of food and inexpensive consumer goods are booming. In the backward Oriente province, where half the population is illiterate and few of the farmers wear shoes, the national agrarian reform institute (INRA) has given work on the new agricultural co-operatives to men who were formerly landless and unemployed. New schools have been opened, and bridges and roads are linking up communities that were once isolated; unhampered by budgetary considerations, the prime minister is in the habit of writing out cheques for $50,000 or even $1 million for these projects on the spur of the moment. The new government, which is conceded to be the first honest administration Cuba has ever had, is helped in its extravagance by several important windfalls, such as the collection of back taxes, the seizure of funds that were stolen or extorted by General Batista's henchmen, and some advance tax payments by industry.

In the long term, the financial picture is dimmer. General Batista left a foreign debt of $1.5 billion, and the current deficit is more than $50 million a year. The land reform institute has not yet issued the bonds with which it promised to pay for the million acres of land that it has expropriated, and the flow of American investment has slowed down to a trickle. The sugar industry, which accounts for two-thirds of the national income and 80 per cent of exports, is heading for trouble because of the higher labour costs and the lack of money for modernisation. A million tons of sugar will be carried over from the present crop, and the world price has fallen from 5 cents a pound in 1957 to 3 cents in 1959. Tourism, which is Cuba's second largest industry, has also dropped off disastrously as a result of Castro's anti-American speeches. The government now refunds half the cost of tourist flights to Havana, and has hired the former heavyweight champion, Mr Joe Louis, to persuade American negroes to come to Cuba for their winter holiday; he has not had much success.

Señor Castro seems determined not to modify his anti-American stand, costly as it is. For half a century American corporations have dominated the island's economy; when Batista fell, they controlled nearly half the sugar mills, 80 per cent of the public utilities, 90 per cent of the cattle industry, and all the production and sale of petroleum products. The island, with its six and a half million people, was the seventh largest importer of American goods in 1958. Cubans were completely dependent on the United States for manufactured goods, and even had to buy $20 million worth of rice from Texas and Louisiana each year to feed themselves. Señor Castro and his followers remember that the United States government supplied General Batista with the aircraft, tanks, and military training that were used against the rebel forces in the Sierra Maestra. They angrily point out that the United States continues to lend money to the Dominican Republic, whose leader has sworn to destroy Castro, while refusing either to sell arms to the Cubans or to countenance British arms sales to them.

Señor Castro has decided to go his way without American help. His main hope is that the land reform co-operatives will make Cuba self-sufficient in the production of food crops and expand production of such export staples as tobacco, coffee, rum, and pineapples. He is looking for new sources of investment and munitions in half a dozen countries in Europe and Asia. He hopes to exploit Cuba's reserves of copper, iron, and nickel, and to develop light industries that will give jobs to 500,000 chronically unemployed workers.

Cubans, despite all the government propaganda, remain friendly towards the United States, and American capital is welcome when the offer of it fits in with government plans. An American-financed lamp factory, a copper-tubing mill, and a nickel refining plant are all scheduled to begin production this year. Castro and the men around him are young and inexperienced; they make many mistakes, and are undoubtedly too sensitive to criticisms of their movement in the American press. But, for good or evil, Cubans, for the first time since the landing of Columbus, have their destinies in their own hands.

Austria's European Choice

FROM A CORRESPONDENT IN AUSTRIA

HOLIDAYING in Kitzbühel and Mariazell at the New Year, the Austrian foreign minister (Dr Kreisky) and minister of trade (Dr Böck) put their signatures to the treaty of the European Free Trade Association. What led the Austrian government to come to a decision which, on the face of it, is not what the country's economic interest would dictate? Half Austria's exports go to the common market countries; Austria's imports from them rose in October from 56 per cent to 60 per cent. The government's reasons for joining the free trade association instead are based not on economic considerations, but on an interpretation of Austria's neutral status. The government's view of neutrality was expressed by Professor Alfred Verdross, the international lawyer, in these terms:

> A permanently neutral state cannot join a multinational economic group such as the common market because (such an organisation) aims at fusion of the national economies concerned, and to this

end it deputes authority to a central organ to follow a united economic policy, which is binding on the member states.

A neutral state, the argument runs, cannot be bound by majority decisions. In case of war, it must be able to free itself from restrictions on the course of its trade which might hamper it in the protection of its physical independence. It is true that the EFTA provides for some majority decisions, but certain concessions have, it is understood, been granted to Austria.

Neutrality, in fact, is an empirical matter. Paragraph 2 of article 4 of the Austrian State Treaty forbids "all agreements having the effect, either directly or indirectly, of promoting political or economic union with Germany." The government's advisers on constitutional law believe that article 4 does not, in itself, preclude membership of the common market; common membership with Germany of a supranational organisation would, they argue, be very different from a union of the two countries. For the rest, nothing in the Treaty forbids Austria to join any political or economic organisation. The hindrance lies entirely in Austria's declaration of neutrality.

ECHOES, of course, have been audible in various quarters. At one juncture there were cries of "*Anschluss!*" among the Socialists. Others alleged that the Russians had been allowed to interfere. It is generally believed that the Russians did inform Dr Kreisky—a hint would have been enough—that they would regard Austria's entry into the common market as a breach of neutrality. The belief was strengthened by a sentence in Dr Kreisky's speech to Parliament:

> Whether international lawyers discuss a question like this, or whether the Austrian federal government discusses it with one of the great powers, are two different matters.

But although the government's critics agree with the Chancellor, Herr Raab, that Austria's main preoccupation must be to foster trust in its integrity as a neutral state, they maintain that it would be fatal to begin with an anxious canvass of opinion among the great powers of what is or is not consistent with neutrality. To do this, they say, would lead inevitably to total loss of freedom of decision. This country's chance of an independent neutrality, they insist, rests solely on the basis of international law. It may demand its legal rights to the full, and the common interest of the great powers will protect Austria; if the country submits to dictation, trouble will follow. The critics complain that Austria should not have accepted exclusion from the common market without an earnest attempt to discover terms under which entry would have been feasible.

The *Anschluss* aspect is, however, worth probing below the purely legalistic level when bridge-building efforts are being made in Paris and elsewhere, and when an economically integrated Europe, though remote, is still not impossible. There is probably not any sizeable body of opinion in Austria which sighs for some politely disguised form of *Anschluss* with Germany. The *Grossdeutsch* romantics either were radically disillusioned long ago, or have retreated to the backwoods. Industry and commerce only ask that they should not be discriminated against in the European market. Western Austria lives on the influx of tourists from Germany and is highly prosperous; the motives of 1938 are not operative. This, perhaps, is the crucial factor. So long as Austria retains something like its present degree of prosperity, no guilty longings for closer union with Germany *as such* will arise. Meanwhile great efforts are being made to increase trade with overseas countries, to compensate for loss of trade nearer home.

At present the coalition cabinet, in foreign affairs, if in little else, presents a united front. But Dr Kreisky, a Socialist of remarkable talents, is well in advance of general opinion in his party. By tradition far more internationally-minded than the conservative Volkspartei, the Socialists are now displaying acute sensitivity to any prospect of majority decisions within the free trade association affecting Austrian independence. This "anti-European" attitude, as the Volkspartei calls it, may be caused by the Socialists' awareness that Socialist delegates are, at present, in a minority at the conference tables of Europe, rather than by any apprehension on Austria's behalf. Dr Pittermann, the vice-chancellor and Socialist chairman, in an article in the party organ *Arbeiter-Zeitung*, denounced the common market and Nato states for "crushing the workers' organisations" and for attempting to "counter the Communist power by forming an alternative power group." This attack can be taken as a warning that the Socialists are not wholly behind Dr Kreisky's foreign policy. The exigencies of coalition government lead to a high degree of double-speak, and to assent to cabinet policy during the week, while attacking it at the week-end is in the ordinary run of affairs.

On the right wing the small Freedom party was, and is, for membership of the common market. It contains the majority of ex-Nazis, and it could be argued that their motives in this are suspect; here the word *Anschluss* comes up again. But their party structure and policy are not neo-Nazi in character, and they may support the common market because they feel the need to oppose government policy in all things in order to retain their *raison d'être*. There are also those for whom commercial interest outweighs other considerations. But above all there are those who fear nothing so much as Austria's isolation, in any degree, from the West, and who deplore the division of western Europe into two camps, the common market and the free trade association. To the fore among the press critics are the leader-writers of the independent *Salzburger Nachrichten*, who have for years been educating their readers towards European integration. On December 4th this newspaper prominently reported Signor Segni's statement to the Foreign Press Association in London, in which he emphasised the essentially non-political character of the common market.

Those who favour closer ties with the common market have been encouraged by a statement by Professor Hallstein that the common market would welcome Austria as an associate, and is prepared to make all necessary concessions in respect of Austria's neutrality and trade with the east; he said this in response to a question by Dr Taucher, the former minister of trade, who is doing a study on the European market for the Federation of Austrian Industries. In Vienna the possibility is being examined of a switch to the common market before the free trade association is ratified. The crucial question is, of course, what terms the community is prepared to offer. Could it or could it not offer non-discrimination, side by side with safeguards for neutrality? Those Austrians who back the Seven point out that there was no sign of friendly gestures of this kind before their group was formed.

The man behind an international star

Dr. FRITZ KÖNECKE leads Germany's famous Daimler-Benz A.G., whose star symbol shines in 136 countries.
Under his direction, cars, trucks, municipal vehicles, buses, vans constantly pour out of plants in Germany, Argentina, Brazil, Australia and India; come off assembly lines in Mexico, Belgium, South Africa, Ireland. These products must be sold—the Daimler-Benz star must be kept bright in the commercial skies of the world. To ensure this, Dr. KÖNECKE advertises his company internationally—where his export programme is served best—in TIME, The Weekly Newsmagazine.
TIME, The Weekly Newsmagazine, Berliner Allee 61, Düsseldorf.

'don't thank me—thank our Ferranti computer'

Thanks, also, to the Ferranti programmers, who showed us how an electronic computer could be integrated economically with our existing data-processing system.

We know we went to the right people—their operating experience is unrivalled. Ferranti built the first electronic digital computer ever marketed. Now they have not one computer, but a full range—the most complete of any manufacturer in Europe—and all of them proved by actual operation.

Ferranti trained our programmers, as they've trained 1,000 others. We've had access to their unique programme library. Our system has already been extended—and Ferranti showed us how to adapt our computer for different types of work.

Of course, we're in good company. Ferranti systems are in use by over 50 of the largest companies, such as Shell, I.C.I., United Steel, de Havilland.

Many more companies, whose needs are intermittent, make use of the Ferranti Computer Centre, where one can always see a Computer at work. It is an interesting thing to do. Write or telephone for an appointment—Ferranti Ltd., 21 Portland Place, London, W.1 (Langham 9211) or West Gorton, Manchester 12 (East 1301).

THE BUSINESS WORLD

Machine Tools under Criticism

If the motor industry intends to invest half as much again this year as it did last, and manufacturing industries in general to invest 17 per cent more in new plant and machinery, as businessmen have reported, then Britain's machine tool industry may by now have experienced a very rapid increase in the rate of new ordering. The remarks of some individual companies suggest that they have—though the record of orders for the industry as a whole, which reaches only up to last October, does not show any dramatic increase to that date. Ordering had reached a nadir at about the end of 1958, with only about two-thirds as much business coming in the door as went out, and deliveries had already been cut by about a quarter from the peak levels of 1957. New orders began to pick up last spring: by the third quarter they had reached about £21 million, which might best be compared with orders of just over £20 million in the last quarter of 1954, at the beginning of the last investment boom (prices having risen by perhaps a quarter in the meantime). In October, home orders came in at roughly the same rate, and export orders at a higher rate than in the previous quarter. But the total orderbook of the industry, at the end of October, stood at no more than £53 million, or say eight months' deliveries at its peak rate of recent years. At the peak of pressure on the industry during the 1954-57 investment boom its accumulated orderbook, some £100-£105 million, represented 15 months' deliveries.

This difference suggests that there is at present no need for anxiety, such as was expressed when that last boom was being generated, about the capacity of this industry to produce the quantity of British machine tools that its customers require. That anxiety was never expressed by the industry, but by one group of its more vociferous critics who thought it had not expanded its capacity enough. Their opinion had been founded upon experience during the rearmament boom following the outbreak of the Korean war, when it was decided to rely partly on imports for the machine tools specially required: in the event imports, albeit at inflated prices, substantially exceeded the value of home deliveries of machine tools in 1952-53 (though the British manufacturers had increased output somewhat, and maintained their exports).

It is only fair to say that in the private investment boom of 1954-57 the British machine tool industry did not "fail the nation" in volume of output, as those critics had suggested it might. There were complaints about deliveries by motor manufacturers, who had first bunched their orders for similar types of tools all at the same time, and some of whom later decided to telescope four years' expansion into three. There were fairly substantial imports of foreign tools—but at the rate of £15-£25 million a year, only about a third of the value imported in 1952. But the output of the industry rose within 2½ years, in real terms, by probably 19 per cent,* and home deliveries by over 20 per cent. This was partly achieved by sub-contracting: the industry's critics had not taken into account the extent to which industries that make machinery of one kind can help make machinery of another, and the fact that capital goods industries are seldom all under pressure at the same time. But it was achieved, and economically; and those who berated the machine tool industry for not expanding capacity by more than the quite substantial proportion that it did saw it during 1958-59 in a deepish recession, having been subjected to another of the wide fluctuations in demand to which free economies are in the habit of subjecting their manufacturers of capital goods.

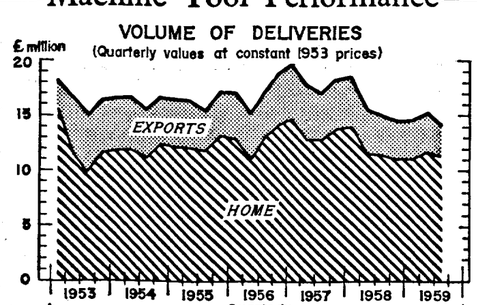
Nor is the industry's record on exports, to date, particularly discreditable. In recent years it has been selling about a quarter of its output overseas, and has had about 15 per cent of world trade (excluding Russia, China, and the satellite countries), against some 7 per cent in the thirties. West Germany has the biggest share of this trade, about 30 per cent; compared with 45-50 per cent in the thirties; America's share has fallen off in recent years but is still about 25 per cent; and Switzerland, whose exports have been growing rapidly, now has a share equivalent to Britain's. Some British makers have recently been selling successfully in Germany and the United States; but a large part of the industry's exports has continued to be to less industrialised countries, largely in the Commonwealth, and these customers usually want general-purpose tools, or less complex and specialised machines than its customers at home tend increasingly to demand.

It is against these varying and indeed divergent patterns of home and export demand that Professor Seymour Melman's report on the West European machine tool industry to the European Productivity Agency last autumn has to be considered—as it is now to be considered by a committee set up this week by the Board of Trade under the chairmanship of Sir Steuart Mitchell of the Ministry of Aviation. This report did not, as has been widely suggested, make sweeping criticisms of the British machine tool industry. It hardly could have

* Estimates are shaky, since the only price indices available are based on only a few "standard" types of tool.

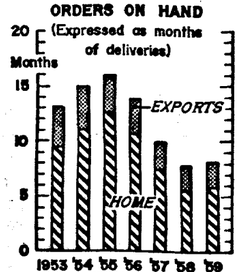
done so. Professor Melman did not see anything of the British machine tool industry during his stay in Europe last summer, being rebuffed not by the industry but (apparently with scant courtesy) by the same Board of Trade which now wants his report studied, as the "production department" for machine tools and as one of the official sponsors of the agency that had asked Professor Melman to make the survey. (The Board presumably felt that manufacturers might not take kindly to further outside inquiries, as the Department of Scientific and Industrial Research had just completed a lengthy survey.

What Professor Melman did report to EPA, after looking at 15 machine tool factories in Western Europe and talking to a large number of tool users (here as well as on the Continent), was his impression that "the machines now produced, while of high quality, are being built under high cost and low productivity conditions." What he saw in a brief look at the Russian machine tool industry, moreover, made him fear that in future international competition



> the West European machinery producers, with their inefficient production methods, will be ill-equipped to compete against a Soviet machine tool industry that is based upon mass-production methods.

These challenging conclusions were, Professor Melman admitted, necessarily tentative, from a sketchy survey, lacking data to suggest constructive changes in policy; his recommendations to EPA were for a series of concise studies to be initiated on various aspects of design, technical performance and requirements, production methods, and machine tool marketing. Among other things for study he suggested: the building of machine tools from standard components; the use of modular "building block" units for general and special purpose machines; how far "special" tools are really needed; the extent and deployment of resources for research; the extent to which customers really require high precision; comparison of the economics of high precision machinery against multiple machining; alternative methods of tool production; the cheapening of numerically-controlled tools; and quality control of precise components. His final recommendation was a large-scale study of market prospects for machine tools.



Professor Melman's general conclusion was that "mass production methods" ought rapidly to be introduced into the West European machine tool industry. It sprang largely from his conviction that these already existed and were being spread in the Soviet machine tool industry. Returning from Russia imbued in about equal parts with grudging admiration and abhorrence, he felt—as others in and about the West European machine tool industry have concluded before him—that the Soviet machine tool industry, having been built up during the last generation to develop a formerly undeveloped territory at breakneck speed, and having developed quantity production methods, for some tools at least, to a level hardly matched in the West, would be able to make great inroads into the underdeveloped markets that so far have bought Western tools.

These fears concerned all the West European tool manufacturers; in the body of Professor Melman's report the British industry is in fact mentioned only once. What seems to have made the British industry react sharply to this report is Professor Melman's quotation of the somewhat similar criticisms and suggestions to his own made in an Anglo-American productivity report from within the British industry itself in 1953. The industry—unusually for any taking part in that postwar Anglo-American exchange—publicly repudiated many of the recommendations of that report. What may have irritated British makers were Professor Melman's comments, about these earlier, internal recommendations to the industry, that "from 1953 to 1959 these recommendations have been largely ignored" in the West but that "they are being implemented in the machine tool industry of the USSR."

CRITICS seldom agree with everything each other says about the same subject. The British machine tool industry attracts the attention of a wide variety of critics: from the left, trade unionists and Labour supporters in general who have advocated some undefined form of nationalisation, without ever thinking about the subject (though Mr Albu and Mr Carron have); from the right, many of its engineering customers and some of the electronics manufacturers who have attempted to co-operate with it in recent years; at the centre, the DSIR investigators who have recently reported upon its attention to design, development and research; and, perhaps its bitterest critics of all, some of its own liveliest-minded members. Many of these would agree that at least some of Professor Melman's specific recommendations need further study; but quite a number of the best-informed, without any particular tenderness towards the industry, would question his main conclusion. Should countries such as Britain try to "mass produce" machine tools?

The weight of criticism of this industry within Britain, on balance, probably leans the other way. It is difficult to know quite what "mass production" means in this context; one does not need machines to make motor cars in the same numbers as motor cars. Assembly of machines in very much larger batches than at present, from units and components which might be made common to different types and hence machined and put together in yet larger quantities, would still in a market the size of Britain's fall far short of mass production. Enlargement of that market by closer links with Europe is conceivable, but beyond the control of machine tool makers. Further rationalisation of production within and between factories is also possible in Britain as elsewhere. But the main anxiety of British critics has been with the quality of Britain's design, research and development, and the extent to which it can compete in producing the most advanced types of tool; and this is an anxiety which the industry now shares.

These criticisms of the industry's technical prowess, and the possible measures that might be taken to advance it, will be discussed in a second article. What perhaps needs saying at this point is that, unless these technical improvements can be brought about fairly certainly and rapidly, Britain's exports would probably be more vulnerable to Soviet competition *à la* Melman than those of the other main exporters: for it has, by comparison, sold abroad up to now more of those standard and general purpose tools that Russia may be able to produce cheaply in much larger quantities. The industry's most fruitful line of effort may well be towards technical advance in its products rather than towards making them by quantity production. But what the industry is unlikely to go on prospering with—as it now apparently recognises—is the mixture as heretofore.

Building Society Reform

BUILDING societies began as clubs of people to finance the construction of houses for themselves. In a century they have grown into permanent institutions responsible for £2,700 million of the savings of four million people, most of it lent on mortgage to owner-occupiers. House purchase societies would be a more apt title; but if "building society" is here to stay it should not be misappropriated and exploited by sharp gentlemen who use it and the benevolent protection of the Building Societies Acts for purposes of property speculation and development quite other than those normally pursued by a building society. The first object of the forthcoming new bill for building societies must be to ensure that investors can recognise the genuine article.

So it will have to discriminate. Only those societies that lend the bulk of their money on the security of owner occupier property or invest it in designated securities should be allowed the name "building society" and the protection of the Building Societies Acts. The chastening thought is that this elementary reform has had to wait until the revelations about the State Building Society last autumn. This belated move towards reform is a sad comment on the short-sightedness of some members of the movement. But not all; Sir Bruce Wycherley of the Abbey National has protested vigorously against the appropriation of "building society" as a cover for property development and speculation.

This has been a postwar phenomenon and it has owed much to the artificial distortion of the property market by rent controls. Handsome capital profits were made from the difference between the value of houses at controlled rents and their values to sitting tenants—and later, after rents were decontrolled, between sitting tenant values and free market prices. The first need was to finance the initial bid for a block of property and the second to finance mortgages to sitting tenants. While the credit squeeze was on, some property companies found (as hire purchase finance companies had found) that the least encumbered way to raise new money was to appeal directly to the small saver. New building societies were created or moribund societies resurrected for this purpose. Mutuality was their masquerade; they looked for their profit from property deals financed at one or two removes out of savings attracted by fancy rates of interest—four or five per cent, tax paid. Even fancier rates of eight or nine per cent had to be charged on mortgages to keep the business solvent, but what was that to property companies who could see handsome capital profits at the end of the street? By leaning on the title of "building society," such companies were able to attract a steady stream of savings without detailed disclosure about their use.

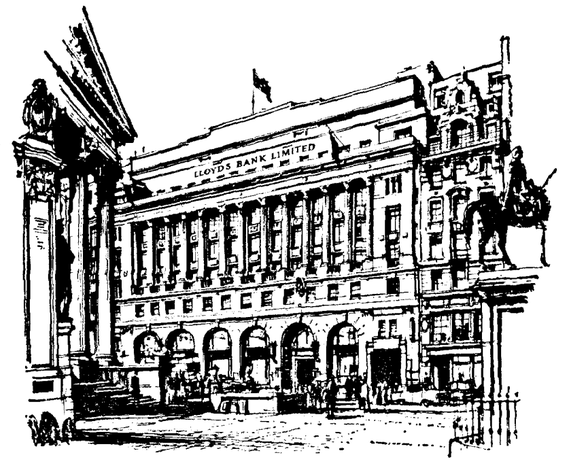
Sir Cecil Crabbe, whose work as Chief Registrar of Friendly Societies has been notable, has kept a close eye on recent developments in the movement. But his power to act sharply or even quickly is limited. He can move on three basic counts. First, if he judges the financial position of a society to be unsatisfactory; but many of the mushroom societies are financially strong, and could easily show the reserve ratios laid down in the Housing and House Purchase Act as a criterion of trustee status for their deposits. Secondly, if he thinks that money is being lent on doubtful security; but the mortgage security of these societies is often sound and properly valued. Thirdly, if he thinks that a society's funds are financing the business of companies in which the society's directors have substantial interests; the trouble here is that laborious investigation is needed to substantiate the facts. And whatever the facts unearthed, Sir Cecil, lacking any firm directive from on high, has been understandably reluctant to apply a drastic "stop order" on advertising for money. The mushroom societies may have gone to the limit of the law but they did not go beyond it and if the money of shareholders and depositors was at greater risk than many of them supposed, it was not usually in outright peril. A spate of "stop orders" might have shaken confidence in the whole movement.

THE new bill must draw a firm line between such property businesses dressed up as building societies and building societies proper. The principle is easy to state; it is difficult to define it equitably. Apart from owner occupiers, there are other classes of lending that the societies are reasonably expected to accommodate. They include loans on tenanted or part-tenanted properties, to builders erecting houses for sale or to let, to firms providing accommodation for employees, and to commercial borrowers on shops, offices and boarding houses. Many leading societies were last year lending 98 per cent

of their advances to owner-occupiers. To limit other mortgages to as little as 2 per cent would be too stringent ; to put the limit as high as 20 per cent would be asking for trouble. Five or ten per cent would give enough room and at the same time compel societies already beyond this limit to mend their ways. But wherever the limit is first set, there should be in the new Act power to alter it.

It is quite inappropriate nowadays that as few as four people, paying a fee of not more than £20, can start a new building society, or that it should be so simple to resurrect a moribund society without having to put any money in it. What began as a simple way of starting a friendly society among poor people has become an absurdly easy way of getting money from the public. The more splendid the name, the bigger the appeal ; yet the Registrar of Friendly Societies has none of the powers of the Company Registrar to disallow words or titles. These are two obvious matters for reform. On others, there may be room for argument. Real security is not inevitably achieved by laying down rules ; reserve and liquidity ratios are incorporated in the Housing and House Purchase Act as a qualification for trustee status of deposits, but they still leave immense differences between the lending policies of the different societies that have so qualified. Should there be limits to the amount that can be accepted by any one society from an investor ? There should certainly be disclosure of the size of loans to any one borrower or grouping of borrowers. The mortgage schedules have been tightened up to stop the abuse of accommodation companies ; they must be tightened further if necessary. Some rules must govern the content of advertisements ; building societies, like HP finance companies, can solicit deposits without any of the public safeguards that are imposed on companies. Should an absolute ban or limit, at least, be put on loans to concerns in which the directors of the society have a pecuniary interest ? This sounds reasonable, but it might make life difficult for the very small societies. Perhaps full disclosure of the directors' interests in a contract might be sufficient. Rules are not the best way of securing effective and continuing control. For this it is much better, given a sound statutory framework, to strengthen the discretionary powers of the Chief Registrar—to make him Chief Registrar, Counsellor and Inspector. For this he must be given a bigger staff.

WHAT should be done with those institutions which fail or do not wish to pass the test as "building societies"? Established tradesmen may not like street traders, but they do a useful job. Sources of finance for property development or speculation are in themselves necessary and desirable. What is inadmissible is that undertakings that are in reality property finance companies should be allowed to operate in the guise of friendly societies. They have a role to play but they should play it as limited liability companies, appealing for deposits under strict rules and subject to regulations at least as stringent as those that are applied to building societies and governed by a much stiffer Sharepushing Act. It will then be up to the investor to decide whether he wants to entrust his money with them or not.



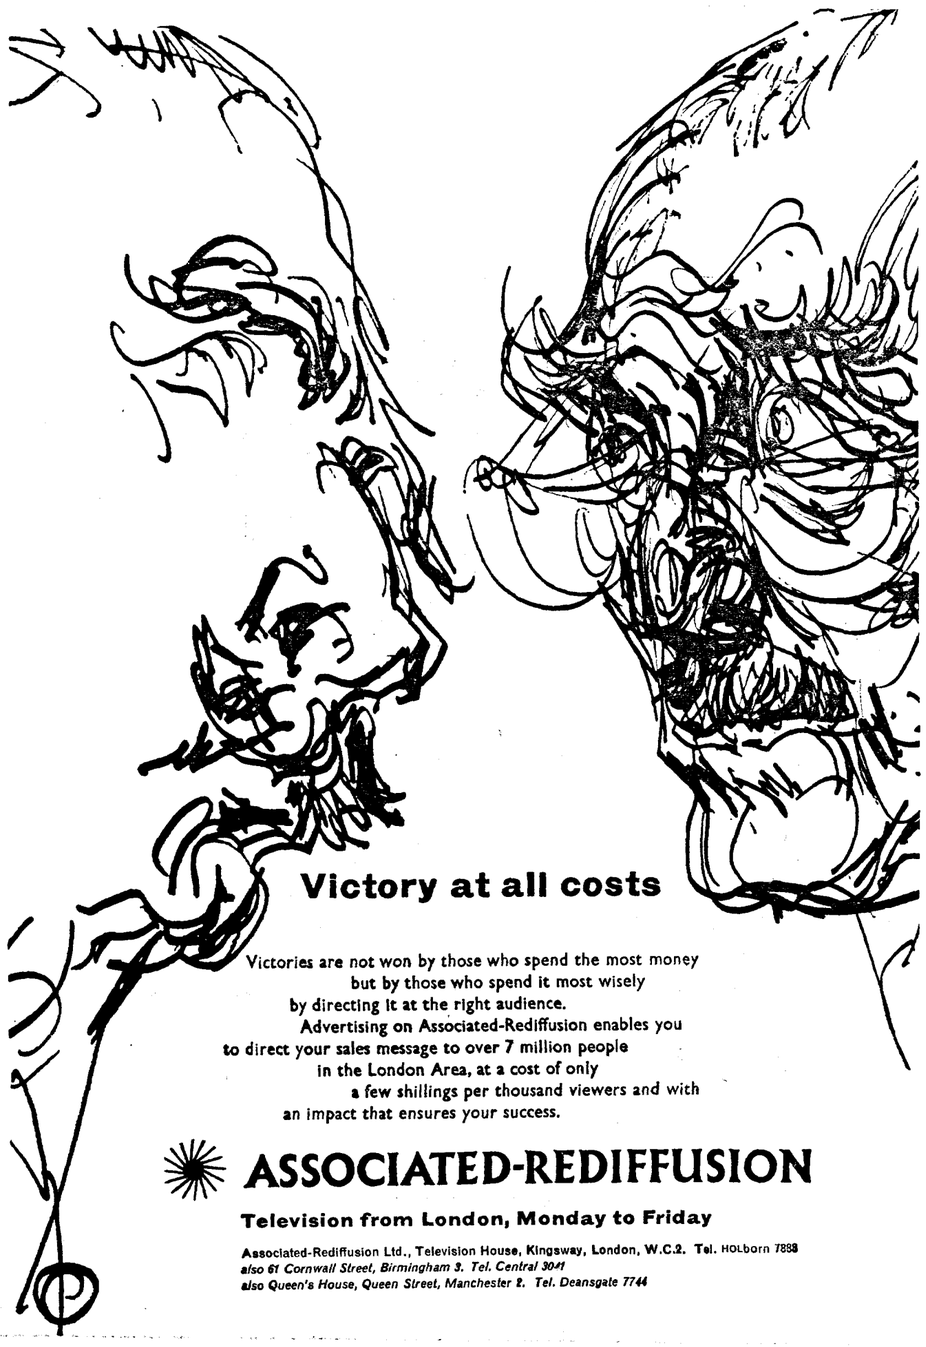
The organisers of building societies (like the creators of companies) have had it too good and too easy for too long. Shareholders and depositors should be brought more closely in touch with a society's affairs. Voting procedures are often archaic. Shareholders and depositors have no automatic right to receive a society's accounts. They have power (such as shareholders have) to demand an inspection and vote directors off the board ; what they do not have is any right to information about who the other shareholders are. If shareholders feel remote from their company affairs, investors in (that is, members of) building societies are immensely more remote.

Secondly, the societies must always maintain their guard against mismanagement. The temptation to lend too generously on doubtful security must always be resisted. Good building society management is bound up with realistic valuations for mortgage purposes. If they are right, little else can go wrong. But the directors of societies, especially the smaller ones, should now ask themselves how carefully they perform the duty imposed on them by the 1939 Act to ensure that the adequacy of any security has been assessed by a "competent and prudent person." Should the law demand the name of the valuer on any sizeable mortgage or prohibit any director himself from making a valuation ?

If it were certain that all valuations were at arm's length, there would be no need for any guarantee to protect the investor's money. The new bill may, however, provide an opportunity for members of the Labour party to raise again the old question of a central guarantee fund run by the societies themselves. A better idea would be to consider insuring each investor's stake at the expense of the society but to leave the insurance company to charge the premium it considers appropriate to the risks involved. That ought to provide an independent view of the efficiency of different managements which a central fund would not.

Finally, under a new and protective act, the building societies and the Building Societies Association should reconsider the adhesive that now holds this great mutual movement together—recommendation of given rates of interest on deposits and shares. The Halifax, whose ways are its own and not less good than the Association's, seems unlikely to come back into the Association unless the policy of recommending rates is dropped. How is the Association to answer —particularly when some of its members already disregard its recommendations? Why differing rates for differing societies should necessarily be bad, given competition among societies for savings and mortgage business, is hard to see. Unfortunately, the Government itself, in the Housing and House Purchase Act, has imposed a stumbling block in the way of greater freedom to compete in rates. Most of the time in recent years building societies have been turning borrowers away, not because they offered bad security but because the societies had insufficient funds to meet the full demand for mortgages at prevailing rates. They kept their rate structure too low and rationed mortgages to make things fit. And this in turn has been a powerful encouragement to the growth of mushroom societies that is so often deplored in Park Street. The principal task of a building society is to lend to owner-occupiers, and to satisfy the demand at realistic current rates of interest, whatever politicians and popular newspapers say. That argument in a year when the number of new built dwellings for sale is likely to rise from 150,000 to 170,000 is now reinforced by a Bank rate of 5 per cent.

EARNING OUR KEEP



THE CITY

BRITAIN earns foreign exchange not only by selling goods abroad, but also by providing services – part of our "invisible exports". The contribution of the City of London in this respect, through commissions and premiums earned overseas by insurance companies, bankers, brokers and merchants, has been put at between £125-£150 millions a year – enough, for example, to pay for all our imports of dairy products in 1958.

This is an impressive measure of the immediate worth of the City to Britain's economy. Perhaps of greater value is the indirect benefit which our exporters and other traders derive from the City's position as a world financial and trading centre.

More than 350,000 people pour into the City every day to work in the offices of the 20,000 firms, companies and other institutions within its boundaries. A great many of them depend on the expert services of

BUSINESS NOTES

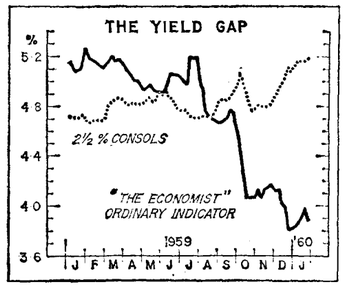
AFTER BANK RATE

The Chancellor and Gilt-Edged

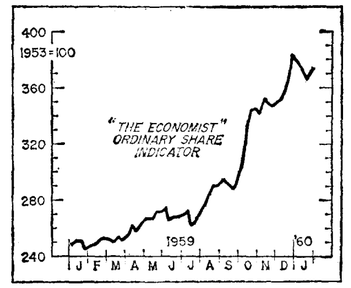
MR HEATHCOAT AMORY'S explanations of the Bank rate increase nine days ago have added little that is new and nothing that is exciting about the reasons for the change. The questions that Mr Harold Wilson, the Shadow Chancellor, put to him on Tuesday in the House of Commons were not, perhaps, best designed to promote a helpful discussion of the justification for 5 per cent. While Mr Wilson put his political points, the Chancellor stuck to his flat explanations: the indications that some strains may be developing after six months of rapid expansion; the need for a "moderating factor" to check any re-emergence of inflationary pressures; regard to external as well as internal circumstances, which presumably implies that gold losses had been taken into account as well as the resurgence of industrial investment.

The explanations still invite the question put here last week: Can Bank rate do it? Not, it has seemed on one or two days, without taking a thicker stick to beat the equity share market. Two quite different arguments are going on there. Sober investors whose belief in equity shares is undimmed are reflective about the wisdom of buying more at the current level of the market. Opposed to this is the crude belief, still marked every other day this week by the operations of small and large speculators, that quick profits are still to be had. The fact that these buyers come in on every setback (or have done, so far) does not upset the wisdom of the first view. And the fact that *The Economist* indicator has risen further from 366.4 to 374.0 in the past week owes a good deal to the week-end post and does not give the full impression of the edgy state of the market in the middle of the week.

Where do gilt-edged now stand? The rise in Bank rate, it had seemed, was substantially discounted before the event. The immediate reaction was a fall in the long-dated stocks by some three-quarters of a point; but this decline might have been narrowed by the considerable buying orders that they developed—had it not been for a free supply of stock in other quarters. To this extent, it seems, the authorities themselves were giving the market a lead on their intentions about the long-term rate of interest.



But with a floor firmly established, for the time being, it was a suitable moment to bring out the £200 million cash offer of 4½ per cent Conversion stock at 99¼, exactly on the market price. But for the possibility of a Bank rate change, it is conceivable that this offer might have formed part of the plan for dealing with the maturing 2 and 3 per cent Exchequer stocks which were largely in the hands of the authorities. A day after the increase in Bank rate, there was such a big take-off of short bonds that the "tap" in 4½ per cent Conversion ran dry. The new tranche thus gives the authorities the pabulum they need to keep control at the short end of the market, just as they manage the medium and long end through the 1971 and 1986-98 "taps."



Peering Ahead

How the authorities will handle the gilt-edged market remains a matter for intriguing argument. Until it is clear beyond doubt that no further rise in Bank rate will be required to keep the economy in order, the prospect of gently rising prices (which in the market's view provide the background essential for funding sales) must be regarded as rather dim. It is not of much avail that gilt-edged yields look attractive if they may be even more attractive before too long. So buyers may be cautious; and the authorities, even if they were to take a more austere view about funding, can hardly be stiff-necked in their selling. On a longer view, with the prospect of a Budget that gives away the minimum and saves the maximum, they may not need to be.

For the shuffling local authority queue, those at or near the head must be a little unnerved. It would not be the thing to give up one's turn; yet it would be inadvisable to borrow for 20 years at an effective all-in charge of 5¾ per cent for more than is absolutely necessary. The finding of money in the mortgage market, which is never too easy, is at any rate less difficult than it was a year ago. Those authorities who must have money for twenty years have been getting it at 5¾ per cent and perhaps could get it still after Bank rate, if not in the big amounts previously obtainable. Advertisements for loans of £100 or more at 5½ per cent for two to ten years are still attracting a good response; indeed the only real change since Bank rate was increased has been a natural adjustment in the seven day rate from 3⅝ to 4½-4⅞ per cent.

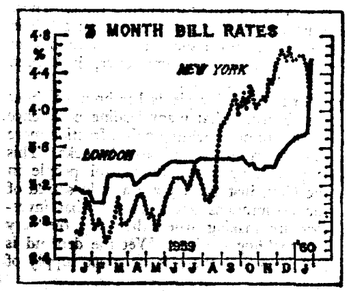
The Bank rate increase came unfortunately for the Industrial and General Trust's issue of £2 million of 5½ per cent debenture stock 1982-87; the spare terms on which investment trust debentures are commonly made is bound to leave exposed any particular issue that happens to coincide with a change in interest rates. There is no reason to expect more than a lull in good debenture issues—some of the recent ones, like the Odhams offer, had been markedly successful.

The search for yields has brought about the absurdity that many leading preference shares are now yielding only a fraction more than the return on gilt-edged stocks. This is perturbing many thoughtful people in the City, just as they are a little scared of the assumptions about growth that investors are making when they buy the very low yielding equities. Yet the demand is still keen and there is no great supply of



shares after the intermittent setbacks. It will take more than a 5 per cent Bank rate and a stable price level, one would guess, to woo these investors back to gilt-edged.

New Rate Pattern

THE Treasury bill rate has responded rather more sharply to the rise in Bank rate than many people had first expected. In spite of the fact that over the preceding eight weeks fears of a Bank rate increase had driven the bill rate up by fully ¾ per cent, to within ¼ per cent of Bank rate, at last week's tender it rose by over ¼ per cent, to almost 4 9/16 per cent, its highest since early June, 1958, when Bank rate stood at 5½ per cent. Already, therefore, its margin under Bank rate is little more than 7/16 per cent, which is a much narrower margin than has obtained over the past two years of falling and then broadly stable rates.

One reason for the sharpness of the rise was the natural desire of the discount market to recoup as quickly as possible its losses on financing bills bought at the lower rates. It was supported in these tactics by an apparent falling off in competition—total applications for the bills declined from £406 million to £378 million—and by uncertainties about its future money costs. The clearing banks, while raising their minimum rate for short loans to the market from 2½ to 3½ per cent, are no longer indicating any "target" rate that they aim to secure, on the average, on their market loans as a whole. In November, 1958, when Bank rate came down to 4 per cent, this average had been fixed at 2⅝ per cent, a narrower margin below Bank rate than formerly; subsequently, however, even this average had ceased to be much of a guide in practice, and the effective margin had narrowed still further. It is not clear whether a further tightening of this kind is intended, but day-to-day conditions in the past week have enabled the banks to secure relatively high rates for marginal money. On Tuesday, indeed, the stringency was sufficient to force one or two houses into the Bank, for a small amount of seven-day loans at Bank rate.

All the other rates of the clearing banks have moved as expected. On the one hand, funds at seven-day notice on deposit account now command 3 per cent, while lending rates are 5 per cent for advances to the State boards, 5½ per cent for the limited range of highest grade industrial companies, 6 per cent for the majority of other borrowers, whether corporate or private, and 6½ per cent in marginal cases. The basic rate for new personal instalment loans, however, remains at 5 per cent, since this is charged on the full amount of the loan until the last instalment is paid. The Treasury has raised its rate on tax certificates from 2¼ to 2½ per cent tax free—the first change in this rate since end-November, 1958.

It remains to be seen whether the rise in rates will reinforce the slackening that seems to have shown itself lately in the demand for new bank advances. To judge from the individual statements of the majority of clearing banks at their January make-up, the rise in advances in the five weeks since mid-December was easily the smallest for any make-up period since the big surge of demand began in the autumn of 1958. It will be well to await, however, the detailed figures, excluding the distorting transit items, before forming a final estimate of the trend. Meanwhile, it may be noted that Barclays, although showing an actual decline in its advances, cut its gilt-edged portfolio by £19 million in the five weeks; nearly half this movement occurred after the turn of the year.

Little Change in HP Rates

FURTHER voices have been raised this week against the present trend in hire purchase business towards smaller deposits and longer periods of repayment. In "Credit," the first quarterly review of the Finance Houses Association, Mr P. J. Greaves, the joint managing director of North Central Wagon and Finance, said that the present terms for down payments and periods of hire offered on motor vehicles go far beyond the terms currently offered in the United States. He is not alone in believing that some inexperienced fingers will get burnt before long. Mr Ian Macdonald, the chairman of Lloyds and Scottish Finance, referred this week to the same tendency; his company could have had an even greater share of the hire purchase business if it had not followed a selective policy.

Will the increase in Bank rate check the competitive scramble? Some hire purchase companies might even welcome the return of some hire purchase controls, so long as they were gentle ones, and the rise in bank rate will no doubt give them an excuse for refusing the more marginal business—particularly in second-hand cars. In recent months, rates as low as 6 per cent have been quoted for new cars and an increase of up to one half of one per cent in hire purchase rates on motor cars now seems likely. The FHA expects rates to settle down at about 7 per cent for new cars and about 8 per cent for the better type of second-hand cars. But rates vary quite widely and Godfrey Davis, the car hire firm and Ford main dealers, have this week raised their rates from the low level of 5 per cent to 6 per cent. Competition in the field of consumer durables has been less intense and with rates averaging between 9 and 10 per cent an increase seems unlikely.

Many finance houses will now have to pay more for deposits from the public; a number of houses link their rates to Bank rate, and these were put up automatically by the full one per cent. Lombard Banking has raised its rate on deposits subject to six months' notice of withdrawal from 5 per cent to 5½ per cent. The newest member of the Finance Houses Association, Campbell Discount, has lifted its rate for money at one month's call from 4½ per cent to 5 per cent but left unchanged its rates of 5½ per cent and 6 per cent for 3 and 6 months money.

STEEL

Five Strip Mills Plus

FIFTEEN months ago Britain had three wide-strip mills, and the steel industry was not at all sure when it would need a fourth : now it is committed to five by 1961, and one of the industry's conservatives in the earlier argument would have liked to make that six. This week the Iron and Steel Board reached its decision on an investment project submitted by the Steel Company of Wales that originally included a new hot strip mill and cold reduction plant to raise its output of sheet and tinplate by 400,000 tons a year. The decision, accepted by the company, was to put off the hot mill for the present, reducing the capital cost from £33 million to £20 million, but to build the extra cold-rolling capacity and carry through the modifications to iron and steel plant at Margam and Port Talbot to raise crude steel capacity there from 3 million to 3.6 million tons. The steel will be converted into slabs in a new continuous casting plant, the first to be installed in any major British steelworks, and these sent for hot rolling to the new Spencer works that Richard Thomas and Baldwins is building at Newport ; thence returned as hot strip in coil to Margam to be cold-rolled down into sheet and tinplate.

This at first sight roundabout arrangement should, according to the board, prove a highly economic way of ensuring Britain all and more of the thin flat steel it will need during the early sixties. The cut in capital costs will save Steel of Wales perhaps £5 a ton of finished steel in capital charges, against which extra transport might come to about £1 a ton: this leaves room for a fair charge to be agreed for RTB's job of reheating the slabs and "hire-rolling" them down to hot-rolled coil. The work, moreover, will offer better utilisation of RTB's hot mill, designed for an eventual capacity of say 2-2½ million tons of finished steel, which otherwise would have been utilised to little more than 50 per cent of capacity during its early years. Both plants

should be in production by early 1962 ; the hire-rolling arrangement is for a minimum of five years.

Abundance for the Sixties?

EXTRA capacity at Port Talbot, plus an enlargement to the capacity of the mill that Colvilles is building at Ravenscraig which the Iron and Steel Board also approved this week, will bring Britain's capacity to make steel sheet and tinplate, at a conservative estimate, to 4.9 million tons by 1962, and to 6.1 million tons by 1965. This plan would offer a margin of 6 per cent by 1962 over the demand that steel consumers, the industry, and the board agree in expecting by then: in 1963-1965 the margin over expected demand for sheet and tinplate would be of the order of 16 per cent (20 per cent for sheet alone). This allows for more than a doubling of sheet exports from the strip mills.

SHEET AND TINPLATE BALANCE
(mn. tons)

	1962	1965
Estimated total demand.....	4·6	5·3
Potential supply of sheet and tinplate :—		
1. From existing works	4·4	4·4
2. With R.T.B. Newport ...	4·6	5·3
3. With Colvilles as approved	4·7	5·5
4. With Colvilles extension .	4·7	5·8
5. With S.C.W. addition....	4·9	6·1
Margin between demand and potential supply	0·3	0·8
Per cent margin.....	6%	16%

Production	Sheet	Tinplate	Total
1958.....	2·2	1·0	3·2
1959 (est.).....	2·5	1·1	3·6

The board's reluctance to see a sixth hot strip mill built so soon was based partly on the extreme pressure, leading possibly to delays, that this bunching of demand might impose on the steel plant makers, and partly on the feeling that it would have been a costly way to cover a forecast marginal shortage. It has incidentally imposed a condition upon its approval of the extensions by Steel of Wales: "that arrangements will be made to enable large ore-carrying ships to be used." Port Talbot's inability to take more than 8,000-tonners has always imposed one limitation on the efficiency obtainable at one of the world's finest steelworks. The board has in mind genuinely large ore-carriers: perhaps larger than the 22,000-tonners that have so far set the largest standard in the industry's part-owned ore fleet. The deepening and reconstruction this will require is now being discussed between SCOW and the Transport Commission: it may require the promotion of a private bill in Parliament.

THE EXCHANGES

Sterling Keeps its Premium

THE beneficial effect of the rise in Bank rate on the sterling dollar rate, a jump from 2.79⅞ to 2.80⅞, has been well held this week in spite of a considerable amount of profit-taking on the part of dealers who took a substantial bull position in sterling immediately after the announcement on Thursday of last week. On the last two working days of last week the Exchange Equalisation Account is thought to have accumulated a substantial amount of dollars and other foreign currencies. When profit-taking sales of sterling hit the market on Monday and Tuesday of this week there was some evidence of small official intervention to steady the rate, but on balance a fair amount of gold must have gone into the Exchange Equalisation Account since Bank rate was increased. The trend of sterling against Continental currencies has, for the most part, followed its movements against the dollar with the main exception of French francs, where special factors have understandably intervened.

The most interesting aspect of sterling's reaction to the rise in Bank rate is to be found in the fact that despite the reversal in the relation of Treasury bill rates in New York and London, sterling has maintained its small premium on the dollar in the forward market. The interest rate on US 13-week Treasury bills has fallen this week to 4.116 per cent as against the rate of about 4⅛ per cent to which the Treasury bill rate in London has jumped. This disparity of rates should give sterling a discount of about ⅝ cents on the 3-months dollar. In fact the 3 months' forward rate still shows a premium of around ⅛ on sterling. It is evident from the forward market that no substantial movement of funds is taking place as a result of the increase in Bank rate. This may well be due to the fact that the relative Treasury bill rates are not the only criterion for movements of short-term money. In many respects credit is still tighter in New York than it is in London and the average bank loan rate is still higher in the New York market with its rediscount rate of 4 per cent than it is in London with a Bank rate of 5 per cent.

Pressure on the Franc

EVENTS in Algeria, superimposing themselves on the departure of M. Pinay from the Ministry of Finance, have brought considerably increased pressure on the French franc. The Bank of France, by intervening vigorously though unostentatiously in the dollar market, has succeeded in veiling the symptoms of any flight from the currency. The support needed to keep the franc/dollar rate at around 4.91 and the franc/sterling rate at the corresponding rate of 13.75¾ has probably been considerable. Signs of strain have also appeared in the forward market where the discount on three months' francs has widened to 3 centimes. Reports from Paris also indicate some increase in turnover in the gold market where prices have been rising modestly. The demand has been met by official selling and there has been little evidence of direct buying of gold on French account in the London market. But events in Algeria must be counted a contributory factor in the rise in the world price of gold from $35.09 to $35.10½ this week.

In the face of these difficulties the French authorities have clung with some bravura to their prearranged plan for easing foreign exchange regulations. They have this week announced considerable relaxations which include the freeing from exchange control of all export and import transactions which do not exceed 5,000 new francs. Importers in France have also been informed that they may now cover in the official forward market not only the amount of their purchases but incidental expenses such as insurance and transport costs. French tourists are to be allowed to keep at their free disposal any unspent portion of the annual travel allocation of 1,500 new francs up to the equivalent of 250 new francs. Concessions have also been made for the export of capital by French residents who decide to reside abroad and for the import and export of bank notes. These further steps towards convertibility are a brave gesture against the background of this week's events.

AIR FARES

IATA's Last Chance

THE emergency meeting on air fares that the International Air Transport Association is calling within the next week or so may be a turning point in IATA's history as a fare-fixing cartel of the airlines. In Honolulu last autumn, when the airlines met to decide international air fares from April 1st next, they failed to agree on the rates to be charged on certain key routes in Africa and the Far East; they also failed to agree on how many different classes of service they should provide on the most important route of all, the North Atlantic. The emergency meeting is to settle these unresolved questions before April 1st, the date when according to IATA's constitution, all agreed levels of fare lapse and airlines are in theory free to charge whatever they choose. IATA's difficulty is that a good many airlines now think it might not be a bad thing if this in fact were to happen. There is growing disenchantment with international regulation of fares and operators are beginning to strike private bargains with each other.

IATA officials say privately that the airlines have put sand in its gears by striking fixed attitudes and refusing to admit any compromise. They are bitterly critical of BOAC's tactics in the recent Honolulu meeting, where the corporation demanded the introduction of third-class fares on a variety of routes and insisted at the same time on retaining a four-tier fare structure on the North Atlantic. It had every right to do both these things : can it be criticised for refusing to compromise on either? IATA argues that the whole purpose

of its international meetings is to provide for some give-and-take between airlines so that they can reach a mutually satisfactory compromise—whether it is on fares, navigation aids, or the ingredients that go into sandwiches. Airlines that are prepared only to take and not to give, make such a system unworkable ; the trouble here is that this is a club of which the members often have opposed commercial interests and a duty not to compromise. In this case compromise would require an agreement between BOAC and the American airlines on the number of routes on which fares shall be cut and the amount by which they shall be cut (the corporation was not prepared to go as far at Honolulu as the Americans would have liked). It would also mean an agreement about retaining the tourist class service.

BOAC is one of the few airlines that still obtains some tourist, or second-class traffic: the pecking order in British government departments and some big businesses prescribes tourist class travel for staff who do not rate de luxe or first-class seats, but qualify for something better than the cramped, third-class service. This seems a harmless enough vanity and the fact that BOAC chooses to cater for it would not offer sufficient grounds for breaking up an international meeting. The real point at issue is whether international air fares will drop faster if airlines work through IATA than if they go it alone.

DOLLAR IMPORTS

Nearer to Freedom

DISCRIMINATION against dollar imports will be almost whittled away on February 1st, when restrictions on tobacco (except cigars), fresh, chilled and frozen fish, synthetic rubber and transistors will be removed. The remittance of American film earnings from Britain, hitherto restricted to a basic $17 million a year, will be freed on the same date and the Anglo-American film agreement abolished. No significant increase in Britain's total import bill is expected to follow this relaxation. That is not surprising ; what is surprising is that these controls were not removed at the time of the last liberalisation on November 4th.

The only major item is tobacco. Imports of tobacco and manufactures last year amounted to £84.7 million, of which the United States accounted for £41.8 million, Canada for £7.4 million and Rhodesia for £23.4 million. British manufacturers have been obliged to limit their purchases of North American tobacco to about 60 per cent of their total imports. Public taste has grown accustomed to the postwar mixture, and freedom is not expected to bring an appreciable increase in dollar imports, though it will allow manufacturers to time their purchases in the most advantageous way. Salmon is the principal fish imported from North America, and this was freed from control last November. Britain now produces general purpose synthetic rubber, and imports of all types from North America last year fell by £3½ million to £8.6 million.

Discrimination now applies only to aircraft, alcoholic beverages except whisky, cigars, canned fruit, bananas, fresh grapefruit and grapefruit and orange juices, pigmeat and pharmaceuticals. It seems that the British West Indies must continue to be protected against Cuban tobacco, rum, and American fruit. A quota for 25,000 tons of pork from the dollar area was opened this year, and one for £200,000 worth of pharmaceutical preparations packed ready for retail sale. Controls on this item are presumably intended to prevent doctors from freely prescribing American drugs under the health service.

BIDS AND DEALS

Offers and Denials

THE City's battlefront in take-over bids has been somewhat quieter this week. Even so, a few shots have been exchanged:

1. The directors of Apex Trinidad Oil have said that no negotiations are being conducted and that they have no knowledge that take-over proposals of any kind are likely to be made. Since Christmas the Apex shares have risen from 47s. to 66s. 6d. on persistent bid rumours. On the denial they fell back to 55s. 9d.
2. Albright and Wilson, the chemical company with interests in plastics, and Boake Roberts, the plastics company with interests in chemicals, have agreed on the terms of a merger. One 5 per cent preference share in Albright and Wilson plus 1s. in cash is offered for each 5 per cent preference share in Boake Roberts and one ordinary share in Albright plus 2s. in cash for every Boake Robert ordinary. On the eve of the amount, Albright ordinary were 26s. 9d. and Boake Roberts ordinary 25s. Albright have since risen to 27s. 7½d. and Boake Roberts to 28s. 3d.
3. The directors of EMI are standing pat on their offer of 150 EMI ordinary for every £100 ordinary in Lancashire Dynamo. With EMI ordinary at 53s. this bid is worth 79s. 6d. With Metal Industries ordinary at 69s. this company's rival bid (one ordinary share plus 12s. in cash or half of an ordinary share plus 45s. in cash) is worth at best 81s. These values turn on market fluctuations from day to day, there is little to choose between the two bids. Both expire next Tuesday and shareholders have a hard decision. The directors of Lancashire Dynamo, however, continue to urge them to accept EMI's bid, on grounds that seem logical. Lancashire Dynamo ordinary fell on Thursday from 78s. to 75s. 6d., suggesting that some shareholders were finding a way out of their dilemma by selling through the market.

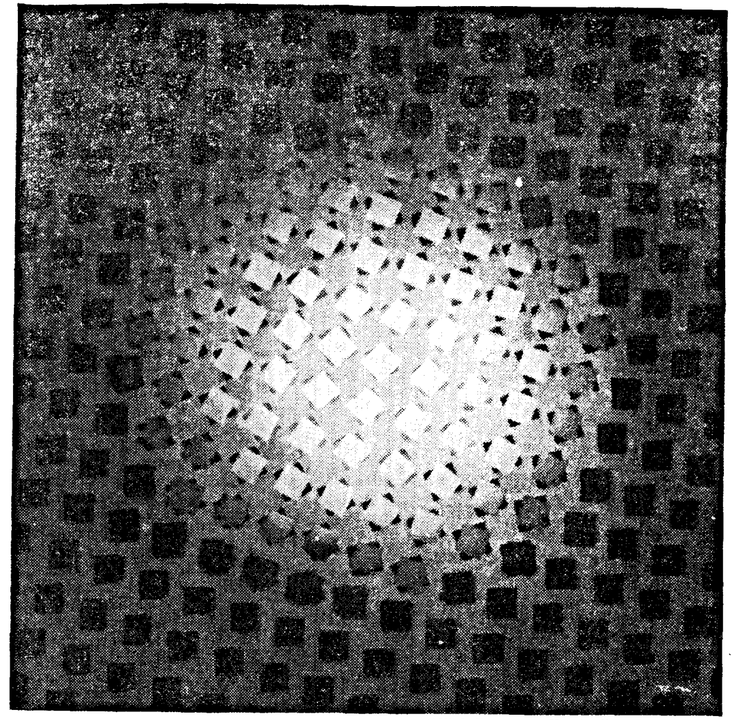
LLOYDS BANK

Our Wise Man

SIR OLIVER FRANKS'S main theme in his statement to the shareholders of Lloyds Bank (appropriate, indeed, at the moment of his departure with the two other wise men to study the needs and aspirations of Pakistan and India) is the responsibility of the industrialised North for assisting the economic development of the emergent South. Reference to this part of his discussion is made in an early leading article—and to his confirmation of the part that hire purchase has been making to Lloyds Bank profits in a company note on page 474.

Sir Oliver's ruminations on the changed position of the American dollar, however, are no less interesting. He notes that the one surely disastrous way for the United States to deal with its problem of deficit would be to attempt to get rid of it by one drastic surgical operation:

> It is of vital importance to all of us that the Americans do not try to shrug off their difficulties by a large and violent lurch of policy, and I do not think that they will.



Both the United States and Western Europe can do things to ease the strain. On this side of the Atlantic, the dismantling of dollar discrimination in trade and payments and fair contributions towards the assembling of funds for international aid are essential. In the United States, new attention could be given to export markets. The release of the $12 billion of gold now fruitlessly earmarked as backing for the American note issue would improve the gold cover available for the liabilities of such financial centres as London and New York. This suggestion, which echoes a recent speech by Mr Roy Reierson of the Bankers Trust, is not a sovereign remedy in the sense that it puts a payments deficit right ; but it would make the strain easier to carry while it is being put right.

ATOMIC ENERGY

More Work

AFTER two years in the doldrums, prospects for the surviving atomic energy consortiums brightened perceptibly this week with the Ministry of Power's consent for the construction of a base-load nuclear power station at Sizewell in Suffolk and the Ministry of Transport's invitations to tender for the construction of a nuclear powered tanker. The industry's "big three" thus find themselves tendering simultaneously for two separate nuclear stations, a 550-megawatt plant at Dungeness and a 650 megawatt one at Sizewell. Bids for both will be submitted to the Central Electricity Generating Board within the next three months and work on both stations should be started before the end of the summer and be finished in 1965.

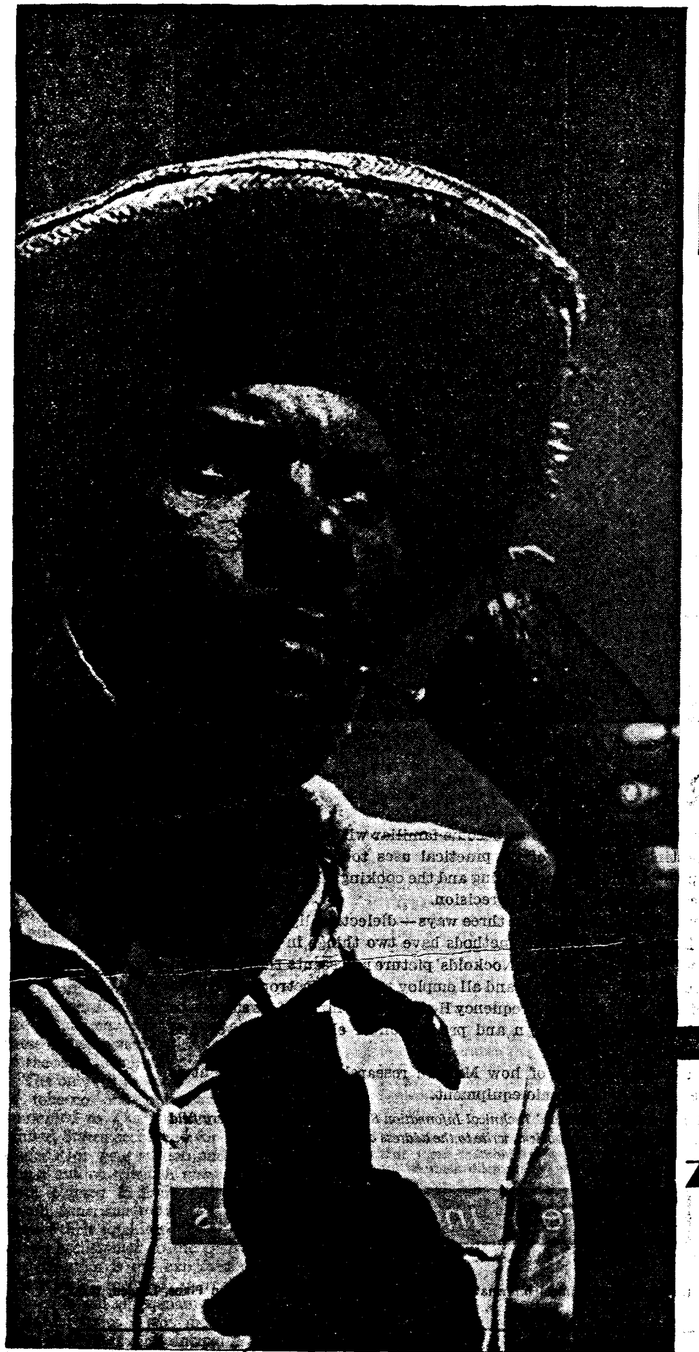
Unless something goes seriously wrong with the experimental power station due to be finished at Windscale next year, these two will be the last Calder Hall type stations built in this country. The next generation, which will start with a station of perhaps 300 megawatts to be built at Oldbury (permission has actually been

"High Frequency Heating" by Roy Nockolds

Hot and Quick

Over the past ten years or so industry has become familiar with a process known as High Frequency Heating. Examples of its practical uses today include smelting, surface hardening, plastic welding, wood gluing and the cooking of biscuits and cakes—all of which it does with great speed and precision.

This 'high frequency heat' is generated in three ways—dielectrically, by induction, and by microwave irradiation. All these methods have two things in common—the heat is created by molecular friction (Roy Nockolds' picture represents the controlled movement of molecules *inside* a material) and all employ types of electronic valves in which Mullard specialise. In fact, High Frequency Heating owes much of its success to Mullard's long experience in the design and production of electronic power and transmitting valves.



Here, then, is yet another example of how Mullard research and development is serving Britain's designers of electronic equipment.

Technical Information Services. *Mullard Technical Information Services cover almost every field of electronics. If you have an applications problem, write to the address below.*

From ribbons to Rio

O Brasil! Incredible contrast, staggering potential. City sophistication alongside jungle savagery. *Samba* to trackless, steaming *sertão*, gasping under a brassy sun. Markets, present and to come, challenge business enterprise everywhere. And everywhere, modern office equipment—from ribbons to calculators to photo-copiers—speeds the paper-work that goes with every transaction.

Since Remington introduced, over 80 years ago, the first-ever item of mechanised office equipment—the typewriter—the Company's range of products has expanded to take in virtually the whole field of office automation. Hand in hand, however, with the manufacture of Remington equipment and supplies has gone relentless research into every aspect of business practice. The results, applied by specialists in office systems and machines, are reflected daily in maximum efficiency achieved at lowest cost in routine and administrative operations, large and small.

Times have changed radically since 1873. Remington Rand, more often than not, have been instrumental in changing them—to the lasting benefit of business everywhere.

Accounting, Adding, Calculating, Dictating, Duplicating and Photo-Copying Machines. Univac Electronic Computing Systems. O & M Service. Filing, Visible Record and Charting Systems. Fire Resistant Equipment. Electric, Noiseless and Standard Typewriters. Office Furniture and Supplies.

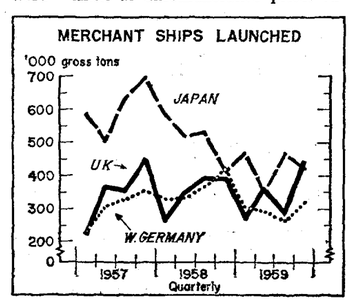
requested for a capacity of 1,000 megawatts on this site, but it will not all be built at once) will operate at higher temperatures, use different fuel and have costs, if all assumptions work out correctly, approaching parity with the best thermal stations. Whichever group is odd man out in the present contest will, therefore, have to write off all hope of recouping any further development expenditure on the present type of station.



Intensive development, and some relaxation of CEGB specifications may make it possible for these groups to bring their quotations down from £120 a kilowatt on the first stations and £104 a kilowatt on last year's Welsh station to between £95 and £100 a kilowatt for Dungeness and Sizewell. Stations at this cost cannot compete with thermal power stations and it is therefore with some relief that two members of these groups, English Electric and Associated Electrical Industries, will turn to invitations from the Minister of Transport to tender for a 65,000-ton nuclear tanker, which no one expects to be economic. They will be competing with three other contenders, Babcock and Wilcox, Hawker Siddeley and Mitchell Engineering. The rub is, however, that the Ministry is neither clear about which of two types of reactor it favours (two companies build one type and three the other) nor sure whether it intends to build a nuclear tanker at all.

SHIPBUILDING

Prospects No Brighter

DESPITE an increase in the rate of new orders right at the end of last year, future prospects for British shipyards are not "measurably brighter," the Shipbuilding Conference reported this week. New orders placed during the last three months —for 69 ships of 172,000 tons gross— brought the total of new orders for the year to 198 ships of 319,000 tons; and after deducting cancellations (16 ships of 234,000 tons gross), net new orders received during 1959 were a mere 85,000 tons. Even the relative improvement in December, when orders for 31 ships totalling 122,000 gross tons—over a fourth of the year's total—were received, is illusory: the Conference points out that most of these new orders were "taken at unremunerative prices in the interests of shipbuilding production programmes and of maintaining employment." The industry's total order book at December 31st stood at 498 ships of 4.17 million tons gross, valued at about £625 million; this is about three years' work, and represents a reduction in orders on hand of about 20 per cent during the year.

In terms of launchings, Britain regained second place among shipbuilding countries, with 1,365,000 tons launched during the year compared with 1,402,000 in 1958, according to Lloyd's Register of Shipping. Japan continued to lead in launchings, though it too recorded a decline from 2,067,000 tons in 1958 to 1,715,000 tons last year. West Germany dropped to third place, with 1,202,000 tons launched against 1,429,000 in 1958. At the end of December there were 276 steamships and motorships being built in Britain, of just over two million tons gross: this was some 65,000 tons lower than at the end of the previous quarter, and the lowest figure since June, 1956. Of this total 48.5 per cent was accounted for by oil tankers. Only 259,000 tons—12.7 per cent—of the industry's tonnage under construction is for foreign owners; and by contrast 293,000 tons are now being built abroad for British owners.

BRITISH MATCH

More Factory-Made Timber

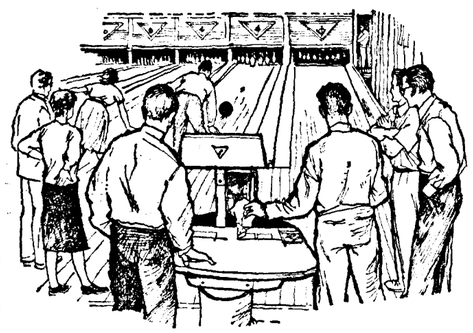
MATCH manufacturing is not an expanding industry, so the British Match Corporation, which is responsible for nearly all the matches made in Britain, is to diversify its interests further by doubling the capacity of its wood chipboard plant: the old process of breaking wood into tiny pieces will be supplemented by the new process of pressing and gluing tiny pieces of wood together. Through a subsidiary, Airscrew Company and Jicwood, it will spend £2 million over the next two to three years on a new chipboard factory, which may be sited in Scotland. The money will be raised by bank loan, and the directors will consider the question of funding the loan (which will include another £500,000 of working capital) at some time in the future. The new plant will make Airscrew Company and Jicwood the largest manufacturer of "man-made timber" in the world.

The company's two factories are presently able to produce 35 million square feet of chipboard a year between them. About 60 per cent of chipboard production goes into furniture and the rest to the building and allied trades. Demand for "man-made timber" appears to be growing rapidly: world production rose from 20,000 tons in 1950 to about 2 million tons last year. At present, Germany is the main producer, with an industry five times as large as the British.

This is the biggest step taken so far by British Match in the drive towards diversification that has been made necessary by the decline in sales of home-produced matches before 1957-58 and the levelling-out of sales since then. Already, £1,350,000 has been invested in Airscrew (taken over in 1958) and 15½ per cent of the parent company's assets are employed outside the match industry. The intention is to diversify in two main directions: printing and packaging, and timber. Making chipboard is a logical development, for much of the raw material can be provided by the waste coming from the match factories, in the form of wooden cores previously discarded. Thinnings from the group's forests will also be used.

FURNITURE

A Show of Prosperity



MAKERS of British furniture have come to the industry's annual show, which opened at Earls Court this week, after the best year in their history. Production in 1959 is now estimated to have been about 9 per cent higher than in 1958, with a wholesale value of some £120 million, and the industry expects that 1960 will prove at least as good a year. One big question mark is the possibility that hire purchase controls might be re-imposed, if the government should consider that such convenient but crudely discriminatory measures are needed to supplement the effects of a higher Bank rate. The industry feels that unfettered hire purchase has moved sales on to a higher level, rather than giving any once-for-all stimulus; there was no meteoric rise in sales of furniture after restrictions were ended, nor has there been any falling-off in sales in the last six months.

This exhibition shows the steady but slow progress that the industry is making towards improving its design—the prerequisite of its ambition to become a fashion industry, with a higher rate of "fashion obsolescence." Much of the furniture shown can only be called ghastly; bulbous beds and chairs and rotund walnut wardrobes remain distressingly common, but the "contemporary" square box, which has at least the merit of clean lines, has become the most popular design for sideboards and is becoming so for wardrobes. As a class, kitchen furniture is the most attractive in appearance; but what is supposed to fill all the cupboards under its continuous working surfaces?

Some new materials and finishes are to be seen in the show. Polyester resin is used both in transparent forms to give high-gloss finishes to veneered pieces, which then look as if they are coated with a sheet of transparent cellulose, and in opaque forms to give a shiny coloured finish to kitchen fittings. Chipboard is becoming more widely used instead of plywood. Plastic foam is another raw material that is gaining popularity; for cushions and mattresses it is 20-25 per cent cheaper than foamed rubber and much lighter. Dunlop plans to add this to its existing Dunlopillo range soon; smaller companies are already selling it on an increasing scale.

THE USES OF LEISURE

Skittles Without Beer

THE opening of Britain's first American-style bowling alley, at Stamford Hill in outer London, could mark a considerable change in the economics of British leisure. In recent years this sport (not to be confused with the ancient and dignified game of bowls) has shot up in popularity in the United States, and now probably has the third biggest following of any sport of its kind there: it has been estimated that there are more than 22 million American bowlers, a third of whom play the game *at least one night* a week. As with all American pastimes, women do it too: it has been estimated that they account for more than a third of the $300 million spent on the game in the United States.

The Stamford Hill emporium was built by the AMF Ten Pin Bowling Company, a subsidiary of American Machine and Foundry; formerly a cinema, the building was leased to AMF by Associated British Cinemas. In addition, the Rank Organisation will open its first bowling alley on March 17th, having converted the Regal Cinema in Golders Green. Both Rank and Associated British have uneconomic cinemas which they would like to dispose of (Rank has over 100), and bowling alleys are one of the few things into which cinema buildings can readily be turned. In addition, AMF are building several other alleys, or converting cinemas into them, in a number of towns, including four new towns. (Inevitably Woburn Abbey will have one.)

THE game of bowling, similar to skittles and descended from the English game of ninepins, was introduced into America by Dutch settlers in 1622. It returns to its ancestral home in a rather different form: not only has a tenth pin been added (to get around a troublesome "blue law" in Connecticut in 1841) but an awesome lot of automation has taken place. This has helped to change American bowling alleys from wholly masculine and vaguely shady establishments, which many of the few remaining billiard halls still are in both Britain and the United States, to elegant —*and increasingly expensive*—places patronised by the entire family. In Britain bowling alleys will be mechanised from the outset. The Stamford Hill alleys boast automatic "Pinspotters" (for replacing pins knocked down, named after the urchins who once did the job in American alleys); an electric signalling screen to show the bowler the number of pins still standing (if he cannot see them 63 feet away); a mechanical ball-return device with a hot-air hand-dryer; and an electronic foul indicator and scoreboard. In addition there is a fully staffed nursery linked to the alleys by closed-circuit television, and a snack bar.

There are fourteen lanes at Stamford Hill, on each of which up to ten players—five on a side—may take part in the game; admission to the building will be free, but each bowler will pay 3s. a game and—if smaller sides are chosen—may play two or three games (known as "lines") in an evening. AMF, which is the largest manufacturer of bowling equipment in the United States, puts the cost of converting a cinema and installing alleys and equipment at £2,000 a lane.

HOW much will the British public spend on this new sport? At 3s. per game, the cost may be rather more than is now spent on a night out at the cinema—or the pub; and the more ardent American bowlers also spend a fair amount on bowling balls and special shoes, which can also be hired at the alleys. AMF's alleys will be open from 11 a.m. to 11 p.m. every day except Sunday; but play will probably be heaviest in the evenings, and unless all the lanes are heavily used this might not be enough. AMF will try to promote regular teams, organised into leagues, which will book lanes in advance and insure more constant play.

Under present licensing laws it will not be possible to serve beer or spirits on the premises; this may limit their appeal unless there happens to be a pub nearby. On the other hand, any suggestion of the old-time billiard-hall atmosphere would seem likely to make the game unpopular with women. And the idea put forth by Mr George Lord, manager of AMF, that teddy boys should be induced to become regular patrons of the bowling alleys would not augur too well for the sport's chances of becoming a family entertainment. The notion that these patrons should "dissipate surplus energy and sublimate violent desires" with 16-lb bowling balls instead of, say, billiard cues or bicycle chains, could become disastrous.

EUROPEAN ENERGY

Cold Water on Fuel

"THERE is unlikely to be any persistent long-term shortage of supplies of primary energy by 1975 . . . [OEEC] countries should not therefore frame their energy policies on the assumption of a probable 'gap' in European energy supplies." These sentences indicate the keynote of the report upon possible demand for and potential supplies of energy in Western Europe made public this week by the Energy Advisory Commission of OEEC, headed by Professor Austin Robinson. This committee of experts foresees no less expansion in the demand for energy that a prosperous and growing European economy will make than a similar commission headed by Sir Harold Hartley did in spring 1956: what has changed, however, is the prospect of supply, which seemed liable to pose onerous problems then and now seems to present "no serious difficulties."

Some conclusions of this report on the European energy market in future (which will be summarised in a later issue) have particular relevance for Britain. New capital should normally be invested in the fuel industries, private or nationalised, say these wise men, only if it can earn "the return that could be earned in the long run, with similar risk, in the most profitable alternative use"—regardless of the long-term rates at which governments find it possible to borrow. A more flexible price policy might do something to defend European coal industries against the particular competition of American coal when recession *pulls down freight rates*; but the only long-term chances of avoiding a further large contraction in coal markets depends on raising productivity enough to hold down the relative price of coal. Adjustments in mining employment ought not, as a matter of policy, to be artificially delayed; pension schemes in declining coal industries may require study. The commission considers that the nuclear power stations at present being designed can become economic only "in the somewhat improbable conditions" of very low interest rates and construction costs, high-cost coal, and operation wholly on base load. It adds that "*in present circumstances an active policy* of developing nuclear energy secures a relatively small immediate saving of foreign exchange at the cost of a large indigenous investment of indigenous European resources."

COTTON TRADE

Lancashire's Share Falls

WORLD exports of cotton piece goods started to recover in the second quarter of last year, and in the third quarter were nearly a fifth higher than a year

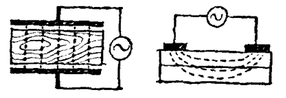
GATEWAY TO THE WESTERN U.S.A.

Many of the world's leading shipping lines and their shipper customers now use the modern, economical facilities of the Port of Long Beach. Tonnage and ship arrivals are at the highest point in our history. A continuous expansion program is providing new piers, berths and transit sheds which will be available in the near future. We invite inquiries from shipping lines, importers and exporters regarding present facilities and those under construction.

SHIPPING LINES, IMPORTERS, EXPORTERS:
Please write (on your letterhead) for complete details and for "Harbor Highlights," the Port's free, quarterly news magazine.



THE PORT OF LONG BEACH OFFERS:
1. Fast access by truck via non-stop "freeways" to Los Angeles and other Western U.S.A. cities.
2. Modern piers, transit sheds and warehouses.
3. Excellent stevedoring services for all general and bulk cargoes, grain and steel scrap.
4. 10 to 20 minute run from berth to open sea.
5. Dockside rail trackage connecting with major transcontinental railroads.
6. Radar-radio ship pilotage.

PORT OF LONG BEACH

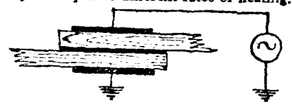
Electrical Aids in Industry — *Data Sheet* **No. 10**

Dielectric Heating - 1

When an electrically non-conducting material is placed between two metal plates, called electrodes, connected to an A.C. supply, the alternating electrostatic field between the electrodes considerably speeds up the molecular movements in the material (termed a 'dielectric') as a result of which the temperature of the material under treatment rises. A similar effect is produced where the two electrodes are positioned on the same side of the dielectric; in this case the electrostatic field between them is generally known as a 'stray' or 'fringe' field. For industrial application, the applied voltage of the order of 15,000 volts supplied by an electronic generator alternates at frequencies of some millions of cycles per second.

The amount of heat generated in the dielectric is determined by the frequency, the square of the applied voltage, the dimensions of the object and a physical property of the material termed 'loss factor' and is represented by the equation:—

Power = 1.41 E^2 f.F. $\frac{A}{t}$ x 10^{-15} kW.



Where E = applied voltage, f = frequency, F = loss factor.
A = area of the dielectric in square inches.
t = thickness of the dielectric in inches.
F, the loss factor, is itself equal to the expression K Cos ϕ in which:
K = the dielectric constant of the material.
Cos ϕ = the dielectric power factor of the material.

Therefore, 'loss factor' is a property of the material and a measure of the ease with which it can be heated by this method. Like other physical properties, it varies considerably for different substances. The equation shows that the heat generated in a dielectric is proportional to its loss factor, but the rate of rise of temperature will also depend upon its specific heat and density. The following table gives approximate values of the dielectric constant, power factor and loss factor of a few typical dielectric materials for frequencies around a million cycles a second.

MATERIAL	DIELECTRIC CONSTANT	POWER FACTOR	LOSS FACTOR
Natural Rubber	2·9	0·02	0·058
Oak, dry	3·3	0·04	0·132
P.V.C.	5·3	0·06	0·318
Nylon	3·7	0·05	0·185
Water, pure	80·0	0·03	2·40
Water, tap	80·0	0·5/5·0	40/400

The high loss factor of water means that materials which are difficult to heat when completely dry will often heat efficiently when moisture is present. The voltage must be increased towards the end of the process in some cases to remove the final moisture traces, the reduction in loss factor as the material dries out providing a safeguard against overheating.

If the workpiece is made up of a number of materials, each material will heat up uniformly but each at a rate depending upon its loss factor, thermal properties and density. The degree of temperature uniformity throughout the workpiece will then depend upon the extent to which thermal conductivity can equalise different rates of heating.

Such different rates of heating can be turned to good account in certain applications. For example, in wood glue setting, the glue lines heat up much more rapidly than the wood pieces being joined and the glue sets before the wood heats up substantially, wood having a lower loss factor than glue.

For further information get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, London, W.C.2. Tel: TEMple Bar 9434.

Excellent reference books on electricity and productivity (8/6 each, or 9/- post free) are available—"Induction and Dielectric Heating" is an example.

E.D.A. also have available on free loan in the United Kingdom a series of films on the industrial uses of electricity. Ask for a catalogue.

4274-8

LIFE'S GETTING SIMPLER EVERY DAY...

Every discovery makes life simpler for somebody. I.C.I.'s discovery of polythene, for example, has made life easier for housewives by providing them with light, strong, colourful 'Alkathene' kitchenware — from beakers and baby-baths to baskets and brooms. 'Alkathene' has also laid the bogey of the winter "freeze-up", for domestic cold-water pipes of 'Alkathene', instead of bursting, simply expand. In the form of packaging film, 'Alkathene' is protecting and preserving foodstuffs, keeping them field- or factory-fresh. Discovery — and development — are I.C.I.'s business. In spending £15 million a year on the search for and development of labour-saving materials like 'Alkathene', I.C.I. is doing its best to iron out some of life's complications.

IMPERIAL CHEMICAL INDUSTRIES LTD., LONDON, S.W.1

ICI

earlier. British exports showed signs of revival in the fourth quarter, too late to offset the previous decline. Full returns of exports are not yet available, but it seems certain that Lancashire's share declined further last year from the 9 per cent recorded in 1958. Total British exports of yarns and fabrics of both cotton and man-made fibres dropped by nearly £9 million to £90.3 million last year. Man-made fibre yarns alone showed an increase, rising by £1.6 million to £16 million. Cotton fabrics, the largest item, fell by £5½ million to £45.4 million, and the volume dropped by 37 million yards to a new low of 347 million yards; this was about two-fifths of the best postwar total and below the lowest figure recorded during the war. The biggest falls occurred in Lancashire's three main markets, Australia, South Africa and New Zealand, shipments to which fell by £4¼ million to £14.8 million. Lancashire can blame higher duties in South Africa and smaller import quotas in New Zealand for part of the decline, but in Australia, where import restrictions were relaxed, the trouble was simply increased competition from Japan and from some European countries too. Many people think that the money now being spent on the reorganisation of the cotton industry will have been wasted if Lancashire fails to get a larger share of world trade.

The sharp recovery in home demand last year stimulated imports of cotton yarns and fabrics, which rose by nearly £12 million to £44 million. Imports of yarn doubled in value and volume, but the main increase was in grey cloth, which rose in value by nearly £4½ million to £24.8 million, and in volume by over a third to 461 million yards. Arrivals of Indian grey cloth increased by a half to 185 million yards while Pakistan sent 34 million yards against almost nothing in 1958. In 1958 Lancashire became, by a slight margin, a net importer of cotton cloth; last year net imports reached nearly 200 million yards. Shipments of cotton textiles (excluding yarn) from the three Commonwealth suppliers, for retention in the British market, are now limited by voluntary agreement to a total of 377 million yards a year, and last year's retained imports are estimated at about 350 million yards. Hongkong slightly exceeded its quota (at the expense of this year's sales), while shipments from India late last year were running at an annual rate equal to the quota introduced on January 1st.

HARD FIBRES

Boomlet in Sisal

SISAL is enjoying a modest boom, and prices are at the highest level for nearly six years. This month the top grade of British East African fibre has risen by £3 to £101 a ton cif UK; this is just above the price that prevailed briefly last summer, before it dropped back to £79 a ton. The extent of the recovery has taken most traders by surprise. East African producers have already sold much of this year's crop, and sold some quantities as far forward as 1961. Though spinners bought heavily early last year they ended the season with low stocks. More twine was used on European farms, owing to bumper harvests in some countries; industry also used more sisal, particularly in the United States, and more sisal was used in the manufacture of rope, particularly in Japan. Finally some East European countries and China took more sisal last year.

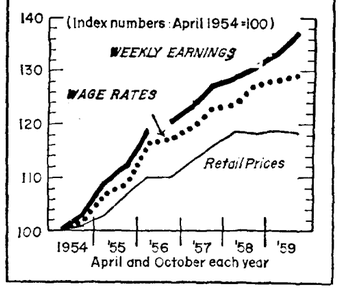
Spinners cannot predict how much twine farmers will buy this year, but they are evidently anxious about supplies and do not want to risk being short. Production in some countries, notably Indonesia and Portuguese Africa, seems likely to fall, and it is anyone's guess whether the loss will be offset, or more than offset, by higher output by the largest producers, East Africa and Brazil. Sisal growers in Brazil have recently been granted a more favourable rate of exchange, but offers have not increased, and prices in the interior are reported to be going up.

PLATINUM

Consumption Growing

AFTER remaining stable for ten months, the price of platinum set by the two major refiners has been raised by 35s. to £30 5s. an ounce, and the price on the open market—supplied mainly by Russia—has moved up to nearly £29 an ounce. Johnson Matthey, which refines the output of the Rustenburg group of South Africa, initiated the rise, and Baker Platinum, which refines Canadian metal, followed a few days later. The official price is now £10 15s. above the depressed level of a year ago, before the sharp recovery to £28 10s. last March. Trading on the open market has been quiet for months, but the major producers have experienced a general improvement in demand. This is believed to reflect a genuine growth in industrial consumption, rather than any desire to build up stocks. Speculation in a commodity as costly as platinum probably has little appeal to consumers.

Producers will be thankful that the depression is behind them, and their customers need have no fear of shortage. In his statement published shortly before the general meeting of Rustenburg Platinum Mines the chairman, Mr D. A. B. Watson, said that in the financial year starting on September 1st production has been increased to a rate exceeding the current level of sales and could be expanded further. The policy is to keep prices stable and hold ample stocks to encourage consumption and the development of new uses, though he pointed out that the cost of stock-holding has to be recovered in selling prices in the long run. A gradual rise in world consumption, not necessarily at an even pace, would continue, he thought, irrespective of the possible re-entry of the oil industry, which remains a minor outlet for Rustenburg at present. He did not pretend to know whether the reduction in Russian exports of platinum in the past year will prove temporary.



COPPER

Prices Pushed Higher

IT'S an ill strike that brings no one any good. Last summer world production of copper was running ahead of consumption. Outside the United States producers' stocks were rising rapidly; in the United States they were not, because consumers were grabbing copper in anticipation of a strike at American mines and smelters. Prices were weakening and were headed for a fall unless production was cut voluntarily or involuntarily. In August the strikes began, spread for one month to a Chilean mine, and have not yet been completely settled. Consumers outside the United States have had enough copper, though they have had to pay more to get it. Instead of having to restrict their operations other producers have been able to raise output and have enjoyed higher prices as well. According to the Copper Institute free world production of refined copper last year rose by 115,000 short tons to 2,926,000 tons. Production outside the United States went up by as much as 340,000 tons to 1,705,000 tons, while American output dropped by 225,000 tons to 1,222,000 tons. Outside the United States deliveries dropped by 78,000 tons while producers' stocks rose by 46,000 tons; the balance of supplies went to the American market and this copper,

Industrial Pay

Last October, according to the latest half-yearly inquiry by the Ministry of Labour, the weekly pay of industrial workers averaged £11 8s. 6d.—11s. 2d. or 5 per cent more than in October 1958. Over these twelve months wage-rates rose 1 per cent and the working week lengthened from 46.0 to 46.7 hours. These two factors alone would have put up earnings by 2½ per cent. With prices on a plateau, the 5 per cent rise in pay represents a 5 per cent rise in the standard of living of industrial workers.

plus the stocks previously built up, kept starvation from the American fabricators' door.

Two of the big three American producers, Anaconda and Phelps Dodge, are still strike-bound, and Kennecott's big Utah properties have been kept idle by the dispute between the company and some small unions, though on Thursday it seemed that agreement had been reached. Even after nearly seven months' sparring the prospects for a complete settlement do not look bright. Though the strikes have dragged on far longer than anyone foresaw, prices have not risen as high as might have been expected. This week three months' copper in London touched £255 a ton, but then reacted on the Kennecott news to £250 10s.; this left it £3 higher on the week, and only £25 dearer than before the strikes began. The pressure for prompt metal was reflected in a widening of the premium to £18 a ton. American, British, German and other European consumers and the Japanese have all been buying. Americans have paid well over the odds for electrolytic wirebars for arrival in February, and also bought copper —at less fancy prices—for arrival in later months.

LONDON TRAFFIC

Vertical Parking in the City

Most of the plans put forward for improving the flow of traffic in London have stipulated that long-term parking should be permitted only in parking garages; in fact, the Minister of Transport has said that it would be difficult to impose an extensive ban on kerbside parking until garages or other parking facilities are available. The Committee on London Roads estimated last year that off-street parking would cost about £1,500 per car space, or £45 million for the present 30,000 long-term parkers; and without a guarantee that parking restrictions will be strictly enforced, no one has yet been willing to invest in building the garages required.

There are three parking garages now in operation in central London, two in the West End and one underneath Route Eleven in the City, all owned or managed by Lex Garages. The two West End garages, with a capacity of 1,800 cars between them, are usually about two-thirds full; the 250-car Route Eleven garage, however, has seldom been used as heavily as that. Now the City Corporation has approved plans submitted by the firm of Parcar Ltd. to build another garage, in Shoe Lane, near Holborn Circus. The ten-storey building will accommodate about 240 cars, which will be raised by lifts and parked by mechanical "dollies," a method that allows a more compact building. The total cost of the building alone will be about £100,000, or about £400 per car space. Even after adding a capitalised value for ground rent at 11s. a square foot—admittedly a lower than average rent—the total capital cost should be well under the figure of £1,500 per car estimated last year.

Rates for parking have not yet been set, since Parcar will lease the building to an operator rather than run it themselves. At present the other London garages charge about 7s. for the period from 9 a.m. to 5 p.m. (1s. an hour with a 2s. minimum) and Parcar believes that, with revenues from servicing and petrol sales, these rates should provide a profit in the Shoe Lane site. Work on the garage—and on an adjacent seven-storey office building—is expected to begin in June, and to be completed in about a year. The company stated some months ago that they would not consider building in London unless they were assured that kerbside parking in the area of the garage would be banned; while no formal assurance of this has been given, Parcar now says "it believes that restrictions on kerbside parking are likely to be in effect by the time the building is completed."

SHORTER NOTES

The directors of British Relay propose to make a rights issue to ordinary shareholders on the basis of two new 5s. ordinary shares for every five shares held at a price not yet fixed. The proceeds of the issue will be used to finance the purchase of Marathon Holdings and Investments (Glasgow) which controls a chain of retail and rental companies in the radio and television trades. An interim ordinary dividend of 5 per cent on the capital as increased by last October's one-for-two scrip issue has been declared and a total distribution of 16 per cent (against the equivalent of 13⅓ per cent) is forecast on the increased capital.

★

In an article, "Free Pistons Find Their Uses," in *The Economist* of January 16th the GS34 gasifier was referred to as "a Muntz product." It was in fact designed and developed by the French company SIGMA, not the British company Alan Muntz.

★

Details and discussion of the construction of the index of industrial production are now available in a booklet published by the Central Statistical Office (HMSO, 6s.). Those who would like to know exactly what adjustments are made for seasonal variations in the computation of the index are not unfortunately given any details.

★

The first foreign loan to be floated on the Swiss capital market this year has been issued this week. It is a 4½ per cent loan with a life of 12 years of 60 million Swiss francs for the World Bank and it will be followed by another of a similar amount for British Petroleum, which successfully floated a loan there last year.

★

The Pressed Steel Company, jointly with the merchant banking house of J. Henry Schroder (with which it is closely associated), is forming a hire purchase subsidiary, Prestcold Finance, to finance purchases of its refrigeration products. The chairman of the new company is Mr Alexander Cairns, a managing director of Schroders.

★

Consolidated trading profits of Associated Paper Mills for the year to October 3, 1959, rose from £563,938 to £683,131. The ordinary dividend is being raised from 25 per cent, which included a special interim of 5 per cent, to 27½ per cent. In addition the directors propose to make a one for two scrip issue. The 5s. ordinary shares are currently priced at 27s. 6d. and yield 5½ per cent.

★

According to the official statisticians, consumers spent some 3½ per cent more money in the third quarter of 1959 than in the same months of 1958 and obtained about 3¼ per cent more goods and services. This increase is no more than had been forecast unofficially: the confusion between the income and expenditure sides of the national accounts remains unexplained. Indeed the gap seems to have been widened: fixed capital spending by manufacturing industry in the third quarter is now estimated to have been lower by 8 per cent than a year before, in place of the earlier estimate of 5 per cent.

LLOYDS BANK LIMITED

SIR OLIVER FRANKS REVIEWS A RECORD YEAR

EXPANDING SCOPE OF OPERATIONS AT HOME AND OVERSEAS

INTERNATIONAL ECONOMIC SITUATION: THE PROBLEMS OF 1960

The Annual General Meeting of Lloyds Bank Limited will be held on February 19th at the Head Office, 71 Lombard Street, London, EC3.

The following is the Statement by the Chairman, The Right Honourable Sir Oliver Franks, GCMG, KCB, CBE, which has been circulated with the report and accounts for the year ended December 31, 1959:

It is with regret that on this occasion I have to report the retirement of Major Jeans, who has been a director of the Bank for nine years. We on the Board will all miss him, but I am happy to say that he will continue as chairman of the Salisbury Committee for the time being.

We congratulate three members of the Board on the honours conferred upon them and announced in the New Year's list: Sir George Nelson, Bart, on his elevation to the peerage and Mr D. M. Oppenheim and Mr A. B. Waring on the conferment of knighthood.

There are a number of changes on our Local Committees. The North-West Committee loses Lieutenant Colonel Albert Buckley on retirement by reason of age. He has helped us as a member of this Committee for twenty years and has been chairman for the last two. We count ourselves fortunate to have found as successor to him in the chairmanship The Right Honourable Lord Kenyon, LLD, DL. A very long-standing link with the bank was broken when Sir Evan Williams, chairman of the South Wales Committee, died last February. He had been a member of the Board from 1922 to 1951 and had a very great knowledge of Welsh affairs. We have welcomed Mr E. Whitley-Jones as chairman in his stead and also Sir Julian Pode, the Honourable Hanning Philipps, MBE and Mr John H. Watts as members of this Committee. At Salisbury I am glad to report that Major C. J. P. Ball, DSO, MC, has joined our Committee. At Bristol we congratulate Colonel T. F. Hood on becoming a Companion of the Bath.

There has been a change in the general management: Mr E. J. N. Warburton, formerly a Deputy Chief General Manager, has been made a Chief General Manager.

I also record with regret the retirement of our Secretary, Mr J. E. Way, who has served the bank with distinction in this capacity for the last thirteen years. He has been succeeded by Mr R. J. Blanch.

PROFIT AND LOSS ACCOUNT AND BALANCE SHEET

The profit for the year, at £3,424,614, is £697,079 higher than in 1958 and the dividends paid or proposed represent an effective increase of 2 per cent per annum.

The past year has been one of record activity in all branches of our business. It will be seen from the balance sheet that deposits have risen on the year by £80 million to £1,377 million, whilst loans and advances to customers show an increase of £121 million; on the other hand, investments are lower by £51 million. By far the greater portion of our increased lending has gone to trade and industry and has made its contribution to the renewed expansion of production. In the export field we continue to provide—as we have done for some years now—very substantial facilities by way of medium-term credit for the sale of capital goods overseas, and this section of our advances continues to grow in volume. After a long period of restriction we are happy, too, to be able to provide once again for the requirements of our private customers, although it is noteworthy that the increase here is relatively small judged by pre-war standards and represents a much lower percentage than formerly of our total advances.

Further steps were taken during the year towards full convertibility of the pound sterling, with a result that our overseas business has increased greatly in volume, particularly in the sphere of exchange operations. This is reflected in the large increase in the balance sheet item of "Liabilities of customers for endorsements, etc."

The growth in banking business generally has resulted in a large addition to our circle of customers. We are delighted to see the steady widening of the use of banking services through more and more of the community. It has been necessary to increase our staff and the number of our branches; 28 were opened during the past year and further expansion is planned for the future, particularly in developing areas.

An enlarged staff and a further improvement in scales of remuneration have brought about a substantial rise in our operating costs, which are likely to grow still further in future.

The staff of the bank both at home and overseas have had an arduous year, involving in many cases long hours of work; they have dealt most successfully with a large increase in business and merit our warm thanks.

DIRECTORS' FEES

The last occasion on which shareholders were invited to consider the directors' fees was as long ago as 1918, when a Resolution was passed approving a pool of remuneration of £60,000 per annum if and when there are 36 directors, or a less sum in proportion when the number of directors is below that figure. That Resolution was passed under an Article which is now Article 77 of the bank's Articles of Association, but since 1918 Articles 78 and 101 have been added, providing respectively for the remuneration which may be paid to office holding directors and to directors performing special services as members of Committees of the Board or of Local Committees. These Articles are reproduced on page 23, together with Article 80.

Article 80 currently has no application and Article 101 has been used to a comparatively small extent. Article 78 has not been fully used since its introduction in 1946, when my predecessor, Lord Balfour of Burleigh, informed shareholders that the new powers conferred upon the Board by that Article would be used only "to provide the additional remuneration now required for office holding directors."

We feel it is right after so long an interval that shareholders should be invited to reconsider the matter, but that apart, there are advantages in simplifying the arrangements for directors' remuneration and bringing them more into line with modern practice. It is, therefore, proposed that each director should receive a fee of £1,500 per annum, that the office holding directors (at present myself, the Deputy Chairman and the two Vice-Chairmen) should draw the remainder of their remuneration under Article 78, and that special services rendered by other directors should be chargeable under Article 101. The effect of passing the Resolution, of which notice has been given, would be to increase by approximately £25,000 as compared with 1959 the total remuneration receivable by the directors for the year 1960. The amount of the directors' emoluments will of course continue to be published with the bank's balance sheet.

NATIONAL COMMERCIAL BANK OF SCOTLAND LIMITED

The merger between The National Bank of Scotland Limited and The Commercial Bank of Scotland Limited was completed in September last. The National Bank of Scotland thereupon ceased to be a subsidiary of Lloyds Bank, and our shareholding therein was exchanged for shares representing approximately 37 per cent of the capital of the combined institution.

Lloyds Bank's close association with Scottish banking dates from 1918, and we are glad that it will continue through our substantial share interest in what is now the largest bank in Scotland.

HIRE PURCHASE INTERESTS

This is the first year in which our results have been affected by our investments in the field of hire purchase finance. These are now represented by our holding of almost 25 per cent of the equity capital of Bowmaker Limited and 50 per cent of the capital of Lloyds and Scottish Finance Limited, together with a further indirect interest in that company through our shareholding in the National Commercial Bank of Scotland Limited, which owns the remaining half of the capital.

During the year we have exercised our rights under the scrip issue to take up additional shares in Bowmaker Limited, so that our participation

in that company's equity remains unchanged at just under one-quarter of the whole. Together with the National Commercial Bank of Scotland Limited we have also subscribed during the year further capital to Lloyds and Scottish Finance Limited to finance the very substantial growth in that group's activities.

The two principal operating companies under the direction of Lloyds and Scottish Finance Limited, (Olds Discount Company Limited and Scottish Midland Guarantee Trust Limited), now have open 100 offices in the United Kingdom. As we had hoped, the two businesses have proved complementary one to the other, and satisfactory and close working arrangements between them have been established. For the nine months from January 1st to September 30, 1959 (the date upon which the financial year of Lloyds and Scottish Finance Limited ended) the trading profit of the group before tax was £2,275,836, and unearned charges of £6,889,874 were carried forward. At the present time, balances outstanding under hire purchase and other agreements in the United Kingdom are of the order of £60 million. There are also overseas interests in Trinidad, Jamaica, Rhodesia and South Africa.

The cost to us of the investments in Bowmaker Limited and Lloyds and Scottish Finance Limited is £16,348,163, upon which we have received a satisfactory return, larger than could have been earned by the employment of these funds in ordinary banking operations. But here I must utter a word of caution. The amount involved is but a small proportion of the assets of the bank, and while we may, I think, confidently look for an increasingly useful return from this source, one must be careful not to exaggerate the potentiality of our investment in hire purchase finance in the perspective of the profitability of the operations of the bank as a whole.

EASTERN BRANCHES

The business of our branches in the East during 1959 was maintained at a satisfactory level. There has been some easing of restrictions on imports, but conditions are still difficult for those of our merchant customers who, in freer conditions, would make much greater use of our services. Reduced activity in this field over the past few years has, however, been offset to a considerable extent by sustained activity in the domestic sector of our business, which is steadily becoming of increasing importance. Since the war we have seen significant changes in the pattern of our business and we are glad to feel that we have been able to play our part in supporting the development of old and the fostering of new industries.

EXECUTOR AND TRUSTEE DEPARTMENT

Over 150,000 customers have already appointed the bank as executor or trustee and it would seem that more and more customers, when thinking about their wills, give consideration to the appointment of the bank as their executor. More than 20,000 estates and trusts are now being administered in 32 area offices.

The Department is now operating an Investment management Service which is becoming increasingly popular. This service is designed to be of use to those who lack either the time or the knowledge and experience to look after their investments, or who through ill health or absence abroad find the management of their investments a worry to them. The Department also acts as trustee and investment adviser of pension funds, and many companies are finding this a useful service in operating their pension schemes.

LLOYDS BANK (FOREIGN) LIMITED

Our Foreign Bank and its subsidiaries, Lloyds Bank (Belgium) SA, and the Banque de Cannes, SA continue to show satisfactory results. The combined profits, though slightly lower, again permit a substantial transfer to reserve and payment of a dividend of 6 per cent.

During the year, conditions in France became more difficult, with diminished earnings due to lower interest rates, compulsory reductions in banking charges and rising staff costs; it is hoped this may prove but a phase in the adjustments now taking place. We have re-established a branch in Nice and our whole organisation is well equipped to take full advantage of the economic expansion which should follow the introduction of the Common Market and the progressive liberalisation of foreign trade.

In Belgium many new connections were gained but demands for advances have been light. In Switzerland our steadily expanding resources have been employed with increased profitability and plans have been approved for the rebuilding of our Geneva premises.

BRITAIN'S ECONOMIC ACHIEVEMENT

It is now twenty years since the beginning of the second world war. During this period the British people seem to me to have been preoccupied with the pursuit and attainment of two great aims. The first of these was survival and victory in war; it took six long years to achieve. The second was less dramatic and its attainment took even longer. Starting soon after the end of the war, it took twelve years of concentrated effort to secure the economic survival of Britain and to prove we could earn a satisfactory living in the world, enough to give us a decent and rising standard of living and at the same time to play a significant part in world affairs. These choices were not made as the result of conscious deliberation; the British people, confronted with the facts, took what seemed the obvious course of action, put first things first and each day did the day's work, never relenting.

We all know this was true of the war years, but we tend to forget nowadays how many foreign newspapers carried articles in 1947 and 1948 explaining why Britain could no longer survive and how hopeless was her economic predicament. Much as in war, we concentrated on the obvious and for the next twelve years never let up until the economic survival of our country was assured. In between the wars the Rektor of Berlin University, Dr Dibelius, published a book on England in which he referred to the "*ungeheuren politischen Willen*" of the people. I wondered at the time why he picked on our "enormous political strength of will" as the deepest characteristic of our nation. The last twenty years have proved him right, the twelve dull unromantic years of the struggle for economic survival no less than the six years' war for political survival.

FOCUS ON DOMESTIC AFFAIRS

During the last two years we have genuinely reached a point of strength in our economy and of stability in our trading relationships up and down the world which entitles us to expect, another world war apart, that we shall be all right and have a margin in future years, provided only that we go on being reasonably sensible in the management of our affairs. This has been a very great achievement but it has had its price: a general myopia about other projects and activities. The world around us has been changing very rapidly in the last twelve years; new political ideas have emerged, new constellations of power have appeared. On the whole we have refused to be distracted by the changing world and have stuck to our last. All along we have found it difficult, almost impossible, to lift our eyes from the prime object of concentration.

This, I am sure, is the explanation of our negative attitude to the successive phases of the European Idea. Early on we were in continuous trouble because we did not seem to be taking a sufficiently active interest in the integration of Europe: this was when we were said to be dragging our feet. Then came the Schuman Plan for an Iron and Steel Community. What could have been more manifest than our desire not to have to think and reckon with this novel idea, though when the idea had become fact we found a method of accommodating ourselves to the situation? Why were we so slow and indeed unwilling to recognise the significance of the Treaty of Rome, and why were we so unable in the long subsequent negotiations with the Six to understand and allow for the political implications of the European Economic Community?

It would be misleading to suggest that throughout the postwar period we have paid no attention to anything save economic survival. To begin with, immediately after the war the electorate decided in favour of large changes in our society and, until these were well under way, we did not begin our steady effort. Then again we knew instant danger when we met it. The Berlin Air Lift and the unprecedented commitments of the North Atlantic Treaty Organisation and, soon after, the threat to world peace of the war in Korea, all these were met by a swift and practical response from the nation. And beyond this we have maintained and in some ways intensified our living relationships with the other nations of the Commonwealth and have actively shared in their development with men, ideas and money. This is not an exception to the general position I have outlined. The other nations of the Commonwealth have been bound up with our own history for so long that we have found it natural, while recognising and insisting upon their complete independence and national sovereignty, to think of them and feel with them as we have faced together the uncertainties of the world.

I am convinced that this general account is true. Like the Phoenix that no second knows nor third, we have put first things first. But now we have broadly achieved our objective. It is time that we lifted our heads and, as a nation, began seriously to consider some of the developments in the world around us. I have in mind, of course, some of the changes and movements in the international economic situation.

THE NORTH-SOUTH PROBLEM

The first thing we have to notice is how much the pattern of 1960 differs from that of earlier years. During the late 1940s and most of the 1950s the great political and strategic problem of the world was that of East-West tension, polarised in Washington and Moscow. In broad parallel with this there were two main objectives in the international economy: the recovery of Western Europe and the strengthening of world liquidity. It would be foolish to suppose that we had reached ultimate and enduring solutions in this context; but when we consider how strongly international trade has

grown, the extent to which the manufacturing industries of Western Europe have been rebuilt, how the reserves of the central banks have been increased and a better distribution of gold stocks of the free world brought about, when we add to all this the increase in the resources of the International Monetary Fund and also the increased strength of sterling, one of the two great international trading currencies, then the contrast between now and the earlier years after the war is absolute. We have moved into a different sort of world.

Furthermore, it is no longer true that the East-West problem is the sole great political issue; we now have a second problem of equal importance. It has connections with the first but has its own independent quality and being. I call it the North-South problem and I mean by this phrase the general problems of the relationships of the industrialised nations of the north of the globe to the under-developed and developing countries that lie to the south, whether in Central or South America, in Africa, in the Middle East or South Asia or in the Island Archipelagos of the Pacific. In 1947 the balance of the world turned on the recovery of Western Europe; now it turns on a right relationship between the industrial North and the developing South.

This political North-South issue has its immediate economic side. Many of the new or newly free nations intend to develop at all costs. It is no good our wondering whether it is wise for them to force the pace. We developed ourselves earlier and won from it power and position in the world: they are now going to develop themselves in turn. But in so doing they face a vicious circle. Low living standards and free broadly democratic societies cannot produce sufficient savings for the rapid economic development they will not forgo. They need more capital to increase output: low output prevents sufficient saving for capital.

This circle can be broken in one of two ways. It can be broken by tyranny which, by enforcing hardships on the people and holding down their standards of living, forces the savings for rapid development: or it can be broken by the inflow of capital from outside, giving a free society the chance both to develop and to remain free. In coming years for country after country this vicious circle will be broken one way or the other. We have already had evidence in the Middle East how real and how urgent these problems are.

A FORUM FOR THE INDUSTRIAL NATIONS

There are a number of other issues to which we should be wise to turn our attention now that our election is over and we may expect to have the same government for a number of years, and before the American Presidential election of November, 1960. The new Administration there is certain to bring as usual a new energy and sense of urgency to the problems which concern the United States and the world. We have a year in which to clear our minds.

The first issue on which we might well reflect concerns one aspect of the economic relations between the industrialised nations and the developing nations. At present there is a general lack of co-ordination in this regard between the industrialised nations. There is not even the most general kind of programming. There is a pronounced lack of continuity in what is done. Again, there is no general view of how much over a period of years the industrialised North can expect to make available for the developing countries. Beyond these issues there are others emerging. It is already clear that the United States will wish to press on with discussions already begun on the appropriate shares to be borne by the different nations of the industrialised world.

There can be no doubt that preliminary discussion of such issues is needed between the industrialised nations. These are not questions of the distribution or use of the help and resources which can be made available. As we get into that field it is obvious that such issues fall to be discussed where both North and South meet, the providers and the recipients. This is what happens in the case of by far the most important single agency now at work in this field, the International Bank for Reconstruction and Development. But how and where should preliminary questions like those which I have indicated be discussed?

One would think some appropriate international meeting-place must already exist. In the last twenty years there has been a transformation in the international scene. We have the economic organs of the United Nations. We have the great postwar creations, the International Bank, the Monetary Fund and the General Agreement on Tariffs and Trade. The International Development Association has been born. In the European region there is the OEEC. More recently, since Europe found itself at sixes and sevens, there is a European Economic Community and a newly born European Free Trade Association. One would think that the last thing wanted is more international machinery.

I doubt if this is right. Only one of all the institutions I have named has been able to maintain regular, searching, intimate discussion of the general economic problems which concern the member countries: namely, the OEEC. It has played a novel and creative role for, by the techniques of discussion it has evolved, it has at times directly influenced the domestic policies, monetary and fiscal, of member countries: fiscal policies which might have exported unemployment, monetary policies which might have built up reserves too fast in one country to the detriment of others. These are matters which by common consent have been modified in particular European countries.

All the same I have doubts whether the OEEC is the natural vehicle for the discussion of these preliminary problems in the economic relationships of North and South. For one thing, the OEEC is a European institution and to use it for this purpose would alter its nature and diminish its European quality. This might well be a mistake if there are specifically European economic problems of great importance which could well be discussed in it, as I think there are. Secondly, the working out of these preliminary questions of sharing, co-ordination, programming and amount must involve the United States in the first place, because the United States possesses a full half of the industrial capacity of the entire free world. But in the OEEC the North American countries, the United States and Canada, are not full members.

Nor do the other existing international institutions seem to me quite right for these purposes. The Six and the Seven in Europe are too small and exclusive: the great international institutions, the economic organs of the United Nations, the Bank, the Fund and the GATT are too large. These preliminary questions need a forum which would bring together all the industrialised nations of the North to confront their new tasks. I feel they require the setting up of a new informal group, though I realise the suggestion involves genuine problems of political organisation—there are always questions of inclusion and exclusion and, even today, some governments are prone to worry whether talks like these could infringe traditional ideas of national sovereignty.

THE LIBERALISATION OF EUROPEAN TRADE

Next, the problems of our relationships with Western Europe claim major interest and attention. During the last three years we have failed to reach an understanding with the Six and have been forced to devise the Seven. Some people already speak of the emergence of economic blocks in Europe. It seems a mistake to fall back on such a description, for it implies a permanence and a defensive attitude not present in the existing situation. Given our real difficulties for the time being with the Six, the Seven became inevitable as a stage. But it is the task of statesmanship to see that these are temporary phases in the adjustment of Western Europe to the European Idea.

The idea of the unity of Western Europe is the one creative political idea that has emerged since the war. We do not know yet whether the idea will successfully translate itself into reality, but if the notion of one country, one society in Europe is to have any validity it must gradually clothe itself with economic meaning. Any country, Britain or the United States, which failed to recognise this would put itself in the wrong with history.

The United States, and for that matter Canada, is troubled at the possibility of a recovered Western Europe, even though split in two, building discriminatory fortifications, with North America—and of course Japan—left on the outside. It does not seem to me in the interest of the outside world to try to break down these European groupings, still less to favour one against the other. There are bound to be regional economic groupings in the world half-way between the single nation states of today and the universality of all the nations. The plain fact is the world is too big, and the individual nation is too small. Regional groupings are a natural occurrence. The United States sometimes forgets that it is both a great nation and a large regional group.

The true interest of the international community is to see that the existing two groupings merge in the end, so that the dream of the free movement of men, goods and ideas comes true in Western Europe, and in addition to work with the Six and the Seven, or with the group that may emerge, so that together we progressively lower economic discrimination in the free world.

We do not yet know for certain whether the Six will tend to be a defensive community with a high wall round it or whether it will look outwards, surrounded only by a low wall which it steadily reduces. I suppose a test will be the decisions taken by the European Economic Community on List G of the Treaty of Rome, those seventy tariff headings which were left over for future negotiation and not settled in the Treaty, and which include petroleum, sulphur, aluminium, lead and zinc, all commodities of importance to the United States and the Commonwealth. I myself believe that the principal architects of the European Economic Community see it as an outward-looking liberal association. It is of general importance to them, to the Seven and to the world as a whole that their development should progressively increase the possibilities of world trade.

It does not appear likely that there will be a quick and complete solution to the difficulties between the Seven and the Six, nor will the United States and Canada be content that things should stay as they are. It is of great importance that there should be a place where the interested parties can meet and talk and argue without the continuous searchlight of publicity playing upon them. We have such a place in the OEEC and it may well prove that this established and vigorous organisation, where the United States and Canada already sit in, is the natural forum for demonstrating the proposition that 6+7=15.

CHANGED POSITION OF THE DOLLAR

The third issue we have to face is the changed relationship of the United States to us and to Western Europe implied in the scale of the deficit on the American balance of payments in 1958 and 1959. For the two years together this is likely to have been of the order of $7 billion, with a loss of gold approaching half that amount. The United States cannot, and of course will not, live with a deficit on this scale for long, but, as compared with the rest of us, the Americans still have comfortable reserves, with the corresponding advantage that they have time to decide on and apply a sensible course of action.

The one surely disastrous way of dealing with this problem would be for the United States to attempt to rid itself of a deficit on the balance of payments by one drastic surgical operation. It is obvious why the consequences of this would be disastrous for all the neighbours of the United States in the free world. But it would also be disastrous for the United States because it would mean risking, and probably losing, a considerable part of that large area of the world won for freedom since the end of the war. It is of vital importance to all of us that the Americans do not try to shrug off their difficulties by a large and violent lurch of policy, and I do not think that they will do so.

It follows, therefore, that the means by which the American deficit on the balance of payments is reduced must be numerous. Something of everything that helps must be done: no one line must be pressed to its logical extreme. What does this mean in more detail? There are the things which the United States will wish to do and the things which we and Western Europe should undertake to ease the strain.

One measure already adopted by the United States is to campaign for more manufactured exports from the United States to other industrialised countries. How easy it must be for manufacturers in a vast economy like that of the United States to think of exports only as marginal and not understand the relevance of their efforts to the national balance of payments. Further, given that in certain limited lines of export American products are a little dear as compared with those of their competitors, there are steps which the United States can take internally to change this situation. And there is one suggestion, aired by at least one well-known American economist, which could be relevant. It is that the $12 billion of gold—nearly one-third of the entire gold stock of the free world—at present locked up as backing for Federal Reserve notes and deposits should be set free for effective use. There are those who would oppose such a step on the ground that it might aggravate fears of inflation among the American public. It is, of course, for the American authorities to decide where the balance of advantage lies. I wish only to offer one or two comments, based on our own experience, which suggests that if the United States decided to take the plunge the water may not really be as cold as it thinks.

RELEASE OF STERILISED GOLD?

It is now thirty years since the Macmillan Committee pointed out that the effect of holding gold as backing for the currency was to forbid the Bank of England to use its gold "for the only purpose for which it is held or could be used," namely the settlement of international payments. The Committee therefore urged that central banks should "give collective consideration from time to time to the question whether it would be in the general interest that the legal requirements in force in different countries as to gold reserves should be relaxed or tightened." It is now twenty years since virtually the whole of the Bank of England's gold was swept into the Exchange Equalisation Account, thus setting it free to help finance the war in its early stages. These transactions were received with complete indifference by the British public and it can be stated categorically that in the inflation that has taken place since 1939 the fact that our note issue has been entirely a fiduciary issue has played no part whatever.

If the United States were to liberate their $12,000 million of sterilised gold, therefore, this step would not lack precedent and would be quite in line with a natural process of evolution in the management of money. Nor are the advantages of such a step related solely to the fact that the United States happens to be losing gold at present. Both sterling and the dollar are important reserve currencies. Over a period, international exchange reserves will have to grow steadily if world trade is not to be hampered by a shortage of liquidity. Since the gold component of the reserves (assuming an unchanged gold price) will expand only very slowly, we must look to a continued growth in the foreign exchange component. This means that the short-term liabilities of financial centres like London and New York will tend constantly to expand in relation to their gold holdings. Hence it is very important, for the preservation of world confidence and the prevention of disruptive flights of hot money, that those liabilities should have the effective backing of all the gold that can be mustered for use.

Quite apart from American action, it is clearly the job of a recovered Europe to dismantle dollar discriminations in trade which had their justification in an earlier period. This has already happened on a considerable scale and can go further. Convertibility of European currencies as against the dollar has already gone a long way. In Britain we have pretty well abolished the travel allowance for dollar countries as well as others. We have repaid in advance our drawing of $250 million from the Export-Import Bank, and we have freed most of our imports from quota restrictions. I should agree also that in our part of the world we should stand ready to work out afresh fair shares in constructive help to developing countries and I should suppose that an increase in effort and contribution should come from the recovered nations of Western Europe, including Britain.

Here there is one point which should be made: it is important that the Americans do not expect too much. They are so disproportionate to the rest of us in the size of their economy and the vast power of their productive machine, their standards of living so much higher, that what in fact is fair can easily seem the reverse. It is our job in Europe to do more: we shall help, but we cannot stand in the shoes of the United States. Nor is it the case, as is sometimes assumed abroad, that Britain has been doing little for the development of developing countries. If we take the countries of the Commonwealth alone, the British Treasury has stated that in recent years private investment has averaged about £150 million, public loans and grants £88 million, a total of around £240 million. This is equivalent to more than 1¼ per cent of the average national income for the three years 1956-58.

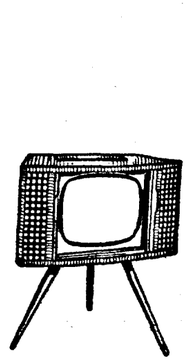
Beyond this, everyone is aware that countries faced with difficulties in the balance of payments are subject to internal political pressures. In the period since the war the United States, by economic aid and expenditure abroad on a very large scale, has created conditions in which international trade has expanded freely. It has provided a growing market for imported goods, free from quantitative control, apart from a few well-known exceptions. It has progressively reduced the level of the tariff under the Reciprocal Trade Agreements programme. On occasion the straight line of policy has to become a little wavy in places to accommodate an existing political situation. But there is all the difference in the world between a rare concession and a breaking of the line. This last would be to deny that leadership of the free world which history in this half-century has given the American nation.

* * *

These are among the problems which face us in 1960, and now that our economy has been rebuilt and is reasonably strong we can give attention to them. It is important that we do so. For one thing it is expected of us by our friends both across the Atlantic and in Western Europe. For another we owe it to ourselves, since only in this way can we make time our ally.

BRUNNER INVESTMENT TRUST

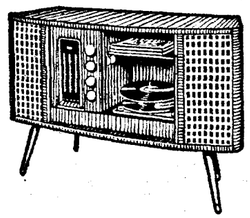
SUBSTANTIAL PROGRESS



The Annual General Meeting of The Brunner Investment Trust Limited will be held on February 16th at the office of the company, Aldermanbury House, London, E.C.

The following is an extract from the circulated statement of the Chairman, Sir Felix J. M. Brunner, Bart, for the year ended November 30, 1959:

I am glad to be able to report that the gross income at £274,252 has once again risen to a substantial extent after a year of little progress. This fact, coupled with the encouraging outlook for the current year, has enabled the Directors to recommend an increase of 1 per cent in the Final Dividend, making with the Interim Dividend already increased by 1 per cent, 19 per cent for the year against 17 per cent last time. This involves the distribution of 80½ per cent of available revenue against 78¾ per cent last year, and, compared with the practice of many other investment trusts, may still be considered quite a conservative distribution.



On November 30th last, when the *Financial Times* Index of Ordinary Shares stood at 306, the net asset value of the 5s. units of Ordinary Stock was 31s. 2d. compared with 20s. a year earlier.

Subject to unforeseen events arising, it is proposed to raise the Interim Dividend payable in July next from 6 per cent to 7 per cent.

TURNOVER, EXPORTS & PROFITS REACH NEW PEAKS

MR E. R. LEWIS FORECASTS CONTINUED PROGRESS IN NEW "DECCADE"

The thirtieth annual general meeting of The Decca Record Company Limited was held on January 21st at Winchester House, Old Broad Street, London, EC2.

Mr E. R. Lewis (the chairman) presided and in the course of his speech, said:

In the Consolidated Profit and Loss Account the balance from Trading Account, which amounts to £3,305,313, shows an increase over that of the previous year of £352,774.

Maintenance and Depreciation amount to £1,121,612 an increase of £183,722 and interest charges at £198,749 were £76,977 higher. The balance of profit for the year at £1,952,826 shows an increase of £91,141 over the previous year. After charging taxation and tax equalisation, including £75,465 credit against £71,419 from previous years, the net profit amounts to £1,031,205 an increase of £100,221.

The balance carried forward shows an increase of £436,497 at £1,392,248.

I am sure you will regard these results as highly satisfactory.

Consolidated turnover for the year to March, 1959, at £21,800,000 was £850,000 greater than that of the previous year and the highest in the Company's history.

We are recommending a Final Dividend of 1s. 5d., less tax, making a total for the year of 2s. per share, less tax, the same as that of the previous year.

Exports reached the record total of £5,860,000, including £1,380,000 to the USA and Canada.

Review of Operations

On the record side of our business, which accounted for rather more than 50 per cent of our total turnover, we more than maintained our position. Despite a slackening in demand in the home market our turnover and profits were maintained at about last year's level. Our USA subsidiary had an exceptionally good year and improved results were also shown by our Canadian subsidiary. Our associated companies in Germany and Italy continued to make a valuable contribution. Exports were maintained at a high level particularly to the dollar areas.

The pattern of last year's trading continued during the first months of the current year with a strong recovery in demand setting in in the home market during December and continuing into the New Year.

Sales of London Records in the USA have increased though some reduction in profit is anticipated due to increased selling costs. London Records of Canada has increased both sales and profits to date.

We are operating with increased efficiency and we anticipate another excellent year's trading.

In 1958 we introduced low priced but high quality long playing classical records under the Ace of Clubs label in order to give the dealer a record with which to compete with the sale direct to the public by the so-called record clubs. This label caters for the growing public for classical records, unable to pay the higher price resulting from the onerous purchase tax and the high costs of recording new works. This series, which represents such outstanding value has been received most enthusiastically by trade and public alike.

Success of Operatic Recordings

Our recording of major works and in particular our series of spectacular operatic recordings has continued on a considerable scale.

Notable Achievements

Perhaps this might be an opportune moment to remind you of some of the notable achievements of your company during recent years.

We introduced FFRR, the first high fidelity records with the full range of frequencies audible to the normal ear and the Decola the first machine capable of reproducing such frequencies.

We were the first company to export records manufactured in England on a large commercial scale to the USA and Canada. We were the first Company in this country to produce Long Playing records and to export them in large quantities throughout the world.

We were also the first Company to introduce a low priced high quality Long Playing record through the dealers. Production from our factories in England during the ten years to March 31st last has amounted to 41 million Long Playing records, 150 million 78 r.p.m. records and 33 million 45 r.p.m. records. Our total direct exports during the same period have amounted to £14½ million, including dollar sales of £6½ million. These are significant achievements and are an encouragement to even greater efforts to improve the quality of our records and expand our operations in the future.

The demand for television has been sustained at a high level and there has been a marked increase in the sale of stereo radio gramophones. In this connection we are now launching a Stereo Decola record and radio reproducer which will, we are confident, set a new standard of quality in the domestic field.

The Navigator

For the Decca Navigator the year was one of considerable achievement, the most significant being the decision of the Canadian Department of Transport to purchase the Decca chains on Newfoundland and the mainland of Canada, which we had constructed and also operated for a trial period of some two years.

A successful Survey Trial operation in the Arctic Circle was conducted during the year and is the forerunner of a series of operations commencing in the spring of this year. The Decca Navigator was again successfully used during the continuation of the British Nuclear Tests in the Pacific, in special projects in East Pakistan, in New Guinea, in Holland in connection with the Delta Plan project for the conservation of fresh water and the repair of damage. The Nigerian chain was brought into service and the New York chain was brought into operation and used by New York Airways for an experimental programme by the USA Federal Aviation Agency in respect of helicopter flights.

I referred last year to the ICAO decision at Montreal in favour of the adoption of the VOR/DMET system as the standard equipment for short range air navigation. This decision comes up for confirmation or rejection at a meeting of the ICAO council in the spring, the outcome of which is far from certain.

Despite the slump in shipping, contracts for the hire of Decca equipment showed a net increase on the year of over 700, further proof of the great value of the system. This progress has continued during the current year; the increase in hirings to Danish and Scottish fishing fleets being an outstanding feature.

It is expected that the rate of new hirings will be maintained during the ensuing year.

The outcome of the current year's activities will be satisfactory and will represent a substantial contribution to the profits of the Group.

Radar

I will now turn to the Radar Company. During the year under review our Marine business was maintained on a very substantial scale; over one thousand orders were received, more than 80 per cent being for foreign ships. True Motion radar, pioneered by Decca and now accepted by the Marine world as a most important contribution to marine safety continued to be in great demand.

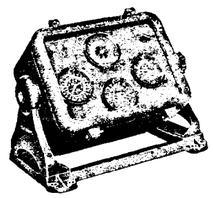
We supplied the Royal Navy with substantial numbers of new naval radars, the Type 978. This equipment has been standardised by the Royal Navy as a navigational radar and is being provided on a large scale to a N.A.T.O. naval force.

Sales of the Decca approach and landing aid, Type 424, were maintained and this equipment is installed at 100 civil and military airfields in many parts of the world.

During the year we announced an entirely new surveillance radar, the DASRI for civil aviation suitable for landing modern turbo-prop and jet aircraft.

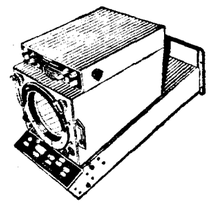
Decca continued to play a dominant part in the application of radar to meteorology.

By November 5, 1959 our total marine sales and hirings stood at the impressive total of 9,000.



Our development work in the field of national defence systems has continued on an increasing scale.

Our Decca Radar subsidiary has now been in operation for ten years. During this period it has established itself as the world's leading marine radar company, having fitted approximately 40 per cent of all merchant ships so far equipped with radar. In addition this company has become a leader in a broad field of radar work and is widely recognised as a most progressive and efficient organisation setting a high standard of design and of production quality. It made a substantial contribution towards last year's Group profits and we anticipate a similar contribution during the current year.



Turnover since March 31st last has increased substantially and subject only to unforeseen circumstances we look forward with confidence to considerably improved results for this year's trading and to continued progress in the new "Deccade."

Your directors have this morning declared a first interim dividend of 4d. per share, less tax (against 3d.) payable on April 7th.

The report and accounts were adopted.

DECCA

DECCA HOUSE, ALBERT EMBANKMENT, LONDON, S.E.11

TANGANYIKA CONCESSIONS LIMITED

CAPTAIN CHARLES WATERHOUSE'S REVIEW

The Annual General Meeting of Tanganyika Concessions Limited was held on January 21, 1960, at the Head Office of the Company, Tanganyika House, Salisbury, Southern Rhodesia, Captain The Right Honourable Charles Waterhouse, MC, DL, the Chairman, presiding.

The Chairman addressed the Meeting as follows:

The financial year which ended on July 31, 1959, showed a profit, after taxation, of £3,293,993, a slight fall as compared with the £3,446,103 earned in the year to July 31, 1958. Last year you confirmed the recommendation of the Board that a final dividend of 2s. 3d. should be paid, 6d. of which was taken out of certain revenue reserves of the Company which had borne United Kingdom tax. Although no such agreeable nest egg is available this year, the Board recommends that the final dividend shall again be 2s. 3d., making, with the Interim Dividend of 1s. 6d. paid last June, the same total as last year, 3s. 9d. You will remember that the ordinary stock capital of the Company was doubled by means of a bonus issue in 1958.

COPPER PRICE

The improvement in the copper market during the financial year has been well maintained in recent months. The highest price quoted on the London Market since the end of July was £266 10s. on November 10th, the lowest £224 10s. on September 21st. The average for 1959 was £237 16s. 8d. and on December 31, 1959, the price was £255 10s. per long ton as compared with £225 on July 31st quoted in my review. World markets have, however, been affected by the strikes in the United States steel industry and in copper mines on that side of the world, and consequently 1959 prices cannot be taken as a safe pointer to the price level for 1960.

In accordance with the present policy of the Union Miniere to pay interim dividends at a fixed rate, we have just received payment of 600 Belgian francs per part sociale on account of its financial year ending December 31, 1959. It is reasonable to hope that, when the figures for that year are prepared, the Directors of that Company may find it possible somewhat to increase the amount of the final distribution.

In November, 1959, I visited the Katanga as a guest of the Union Miniere. I was much impressed by the great developments of the past two years in opencast mining operations and in the progress of new plants, now nearing completion, for handling and for treating ores. The morale of the staff, both European and African, is clearly of the highest. The advantages of ever improving methods of production and treatment are being shared with the workers. Earnings are increasing and succeeding years show a steady improvement in the conditions of work and of living and in facilities for the enjoyment of leisure.

The production of copper estimated in my review at 270,000 metric tons for the year 1959 has been exceeded and an all time record production of 280,000 metric tons achieved. It is understood that the plans for 1960 envisage some further expansion, which must, however, as always, be dependent on the absorptive capacity of world markets.

THE BENGUELA RAILWAY COMPANY

On the Benguela Railway the difficult conditions prevailing in 1958, to which I referred in my last year's report, continued in the first half of 1959. Thereafter a marked improvement took place. Traffic arising in Angola, both minerals and agricultural products, showed a healthy revival. Mineral traffic from the Belgian Congo, manganese ore, copper and zinc, materially increased in volume.

The line has again carried a considerable tonnage of copper from Northern Rhodesia to the West coast port of Lobito. At the same time a larger tonnage of copper from the Union Miniere mines and works in the Belgian Congo has been moved south over the Rhodesia Railways system to the East coast port of Beira. This interchange of traffic has the useful effect of keeping alternative transport routes open to both the great Central African copper producing areas.

Better metal prices resulted in better freight rates. The fall in the net revenue of the earlier months was more than recovered and results for the year 1959 are expected to show a small but encouraging improvement on 1958.

Towards the end of 1959 I returned to Africa, landing at Lobito. I was much struck by the great improvements recently carried out by the Harbour Authority in the port itself and saw the newly completed ore handling plant in operational trials. My journey on the Railway across Angola enables me to give a most favourable report on the condition of the track which is now ballasted in stone throughout almost the whole of its length, on the high state of efficiency of the rolling stock, and on the fine equipment of workshops and repair depots.

Throughout the whole system the staff of the Railway, from the General Manager, Engineer Augusto Bandeira, to the last joined African recruit, have shown the finest possible spirit in meeting the exceptional demands which the rapid expansion of traffic during the last four or five months has imposed upon them.

IMPORTANT DEVELOPMENTS

As mentioned in my review, your Company, through its wholly owned subsidiary, Tanganyika Properties (Rhodesia) Limited, has increased its participation in Border Forests (Rhodesia) Limited, a company which owns extensive conifer forests on the eastern boundary of Southern Rhodesia. The newly erected sawmill, equipped with the most up-to-date machinery having an initial capacity of 1¼ million cubic feet of logs per annum, is now in operation.

An opportunity arose for Tanganyika Concessions to acquire a controlling interest in Boxes & Shooks Ltd., Saw Millers, Box Manufacturers and Timber Merchants, and their subsidiary company, Novobord Ltd., manufacturers of particle board. The main works of the group are in and around Port Elizabeth in the Union of South Africa. The parent company and its subsidiary have had a satisfactory profit record over a number of years.

We have signed an Agreement with the owners of the group, under which it is proposed to register in Salisbury a new company, Commonwealth Timber Industries Limited, with an authorised capital of £2¼ million. Tanganyika Concessions will take up 60 per cent of the initial capital and the vendors will hold the remaining 40 per cent. The object of the company is to acquire the whole of the issued capital of Boxes & Shooks Ltd. and to finance and organise the manufacture of the Novopan type of particle board and a new type of box wood in the British Commonwealth. The Managing Directors of Boxes & Shooks have agreed to enter into long term contracts of service with that company so that a continuance of the present expert and successful management is assured.

Work has continued in prospecting the area in Northern Rhodesia in which Tanganyika Holdings Limited is associated with the Rio Tinto Group, and in that east of Lake Tanganyika, which is being conducted by the Anglo American Corporation of South Africa Ltd. and in which Tanganyika Properties (Rhodesia) Limited has a share. No fresh discoveries have been made in the former and nothing of economic value has yet been disclosed in the latter area.

On behalf of the Board and the Shareholders of Tanks I take this opportunity of thanking the staffs, both of this Company and of its associates, for their work during the year.

The Report and Accounts were adopted, the payment of the final dividend was approved and the retiring Directors were re-elected.

THE AVON INDIA RUBBER COMPANY

HIGHER VOLUME OF GROUP SALES

The seventieth ordinary general meeting of The Avon India Rubber Company Limited was held on January 25th at Melksham, Wiltshire, Mr C. M. Floyd, OBE (the chairman), presiding.

The following is an extract from his circulated statement:

The Group profit for the period after providing for taxation of £120,761 amounted to £296,725. Of this total £4,352 is attributable to minority shareholders in our subsidiaries, leaving £292,373 attributable to the Company compared with £299,651 last year.

In the light of the expansion of the motor industry better trading results might have been expected, but the rising price of natural rubber throughout the year has been a very adverse factor.

In spite of a considerable fall in the requirements of British Railways for certain specialised products Group sales volume is higher than last year.

The high quality products of your subsidiaries have continued in demand and every effort is being made to expand the General Rubber Goods side of your Company's affairs.

Since the end of the financial year there has been every indication that the market for your Company's products will continue to expand. I must, however, also say that so long as the present relationship between natural rubber costs and the selling prices of our products persists satisfactory profits will be very hard to achieve.

The report was adopted and the final dividend of 8 per cent making 11 per cent for the year was approved.

AMPOL

PETROLEUM LIMITED

Highlights of Chairman's Address

In his address to the annual meeting of Stockowners held in Sydney (and simultaneously relayed to subsidiary meetings in all capital cities within the Commonwealth) on Friday, January 15, 1960, the Chairman, Mr. L. J. Thompson reported:

Sales: Sales and other revenue amounted to £32,547,000, an increase of 10½ per cent.

Profits: Net profit after tax provision was £1,866,000, an increase of 6 per cent. After allowing for dividend on preference capital, earning rate of profit on ordinary paid-up stock was 19.4 per cent.

Reserves: Reserves and undivided profits now total nearly £5,500,000, an increase for the year of over £1,200,000, of which £750,000 was derived from premium on the recent share placement.

Dividend: Maintained at 13½ per cent.

Stockowners' Funds: Now total £17,144,078—up 26 per cent.

Assets: Assets of the Company and its subsidiaries are now in excess of £33,500,000, an increase of 35 per cent.

New Share & Note Issues: As previously announced, the Registers closed on January 15 for a New Issue at par of over £4,000,000 of 6 per cent. Registered Unsecured Convertible Notes of 5s. each in the ratio of one Note for each three Stock Units or Convertible Notes currently held.
One million shares, underwritten for placement at 20s. 6d., were issued during September, 1959. These funds were needed urgently for expansion.
Some stockowners, mostly overseas, were critical of the Board's action, wondering, no doubt, whether the Board intended to depart from its usual practice of raising Capital by means of Rights Issues. I would like to give an assurance on behalf of the Board that there is no such intention. The reason for the placement was that the Board had an exceptional opportunity to acquire sites and construct *quickly* a number of Service Stations in areas where we have not been able to meet the demands for the Company's products. It was expedient to resort to a placement issue *at a very high premium* in order to counteract the inflationary prices which sites for Service Stations are commanding. In other words, we used the high purchasing power of the shares to pay for the inflationary-priced sites.

New Tankers: During the year the Company took delivery of a new tanker and a super tanker is at present under construction in Australia for delivery within the next two years.

Partnership with International B. F. Goodrich: The Board's policy of increasing the diversification of our business has resulted in our becoming associated with the world renowned International B. F. Goodrich for the purpose of manufacturing tyres and allied products in Australia. It is anticipated that marketing of tyres will commence on March 1st.

Oil Search: Exploration work has continued steadily during the year with the emphasis on geophysical operations.

People: The Board is fully conscious that the secret of the Company's success is its people, and they are the Company's greatest asset. The Board expresses thanks to the Managing Director, General Manager, Executive and all members of the staff.

Ampol Investment Trust: The Board heartily supports the Managing Director's proposal for the formation of a Staff Investment Trust to be managed free of cost to the staff.

The Future: Ampol faces a new year with unbounded confidence in the future of Australia and our Company's ability to maintain a high rate of progress.

THE UNION DISCOUNT COMPANY OF LONDON LIMITED

A YEAR OF STEADY PROGRESS AND CONSOLIDATION

MR ERIC O. FAULKNER'S STATEMENT

The Annual General Meeting of The Union Discount Company of London Limited, will be held on February 19, 1960, in London.

The following is the circulated statement of the chairman, Mr Eric O. Faulkner, MBE:

The past year has been one of steady progress and consolidation for your Company and this has been achieved without experiencing any of the reductions in Bank Rate which so materially assisted us in 1958. It is therefore particularly satisfactory to be able to report that we have again had a record year as indicated by the profit figure of £666,850. In this we have been fortunate that the margins between the rates at which we borrow money from our friends and those at which we can employ it have been so consistently favourable.

We cannot always expect such plain sailing, and your Board and Management continue to regard as of the highest importance the possession of reserves adequate to meet the more difficult conditions which are certain to come again sometime. Very satisfactory progress has been made over the last two years in building up the resources of your Company and the Board now feel justified in transferring to Reserve from Reserve for Contingencies the sum of £1,250,000 as shown in the Directors' Report. This more than replaces the amount capitalised during the year and the total of our Capital and Reserve at £10 million is now a better indication of the actual resources employed in the business and the inherent strength of your Company.

This consolidation of our resources has also permitted us again to enlarge our holding of both Bonds and Bills, and to fulfil our additional function as Jobbers in short-dated Government Bonds.

THE ROLE OF THE DISCOUNT MARKET

The role of the Discount Market was outlined in the Report of the Radcliffe Committee which was published during the summer. Its verdict was that the Market does its work effectively and "at trifling cost in terms of labour and real resources."

In response to the Committee's suggestion that the publication of fuller statistics is desirable, we have this year for the first time shown separately our holdings of Treasury Bills and other Bills of Exchange. It will be observed that our holding of other Bills is almost £7 million higher at £24,477,999, whereas our contingent liability on Bills rediscounted is lower at £28,088,383. These two latter figures when combined give a truer picture of our business in Commercial Bills, and it will be seen that the overall total is approximately 10 per cent higher than at the end of last year.

The year 1959 saw the retirement of Lord Kennet of the Dene, our Chairman since 1945, and the sudden death of Sir Archibald Jamieson, Chairman of the Company from 1943-1945, and a Director for over 30 years. The debt which the Company owes to them for their wise counsel and unfailing kindliness is a large one indeed, and we shall miss them very much.

Sadly, too, there occurred the death, only shortly after his retirement, of Mr A. W. Trinder, our brilliant Manager for so many years, and a figure admired and respected not only in our Market, but in financial circles throughout the City of London and elsewhere.

On the retirement of Lord Kennet I was appointed Chairman by the Board and Mr M. R. Norman was appointed Deputy Chairman.

Finally, I would like on behalf of the Board to thank the Management and Staff most warmly for their work during a very successful year's trading and to express our gratitude to our many friends and customers for their continued co-operation.

BROOK MOTORS LIMITED

TRADING IMPROVEMENT IN SECOND HALF OF THE YEAR

The Tenth Annual General Meeting of Brook Motors Limited was held on January 23, 1960, at Huddersfield. Mr Frank V. Brook, the Chairman and Joint Managing Director presided.

The following is an extract from his statement circulated with the report and accounts:

"The year under review has been one of variable experience. After sharing in the general trade recession in which the majority of companies in both the electrical and engineering fields were particularly affected, resulting in a substantial drop in our profits over the first half of the year, a considerable improvement in demand during the final six months helped our turnover substantially.

At the moment with the revival continuing in most industries, the demand for our products is exceedingly good, but I must issue a note of warning, that with the abandonment of price agreements since the introduction of the Restrictive Practices Act, there is a general move by many companies to obtain a larger share of the available demand by reducing prices, and competition will be keen. This can only result in everyone finding difficulty in retaining profit margins which have been the experience in the last few years unless substantially greater turnover figures are obtained.

Your Company enjoys a substantial direct export trade, not the least of which is through our subsidiary companies in both the United States and Canada. The former now contributes satisfactorily to our overseas demand and is self supporting. Canada has exceeded expectations in its first year of operation. We are now able to offer the service required and expected by our customers, to that country, who incorporate our products in their equipment.

Our other overseas markets have shown varying conditions. Whilst a decline has been experienced in some traditional markets, increased demand came from unexpected quarters, resulting in a general improvement in direct export sales.

All the staff and employees have co-operated in meeting production demands and I take this opportunity of thanking them on your behalf for their continued loyalty."

At an Extraordinary General Meeting which followed, the proposal by the Board to capitalise some of the Reserves, by allocating to the holders of ordinary shares in the proportion of one ordinary share for every six ordinary shares held, was approved. These new shares would not entitle the holders to participate in the final dividend for the financial year ending September 30, 1959.

The report and accounts were adopted.

ARTHUR LEE & SONS LIMITED

EMINENTLY SATISFACTORY RESULTS

The second annual general meeting of Arthur Lee & Sons Limited was held on January 29th at Sheffield.

The following is an extract from the circulated statement of the chairman and managing director, Mr G. Wilton Lee, TD, JP:

When my last Statement was published there were signs of improvement in trade and I expressed a note of optimism for the future. The tempo, however, was rather slower in acceleration than I anticipated and it was not until the Spring, when the Budget changes were published, that activity in all our products reached a satisfactory level.

In the circumstances, I consider that the Trading Profit of £925,280, compared with £794,395 for the previous year, is eminently satisfactory. Furthermore, it clearly demonstrates the profit earning ability of the Group when full capacity working can be achieved.

It should be noted that this trading profit is after charging £228,667 for Depreciation and a further £119,000 Additional Depreciation to provide for the current cost of replacement. Other income totalled £51,295 compared with £44,096, resulting in a profit before tax of £976,575, compared with £838,491 last year.

BALANCE SHEET

Our Group Balance Sheet demonstrates strength by whatever standard it is judged. We have an excess of Current Assets over Current Liabilities of more than £3½ million compared with £3¼ million a year ago. This provides us with sufficient resources to meet the considerable expansion in trade anticipated during the current year.

Turning to Total Share Capital and Reserves, it will be seen that these have increased during the year by more than £450,000 to the impressive total of £4,722,332. At September 30, 1952, the corresponding total was £2,662,690, so that in seven years the total has increased by £2,059,642 in spite of the fact that only £5,095 of new "A" Preference Capital has been received and that we have distributed to our members shares in Arthur Lee (Investments) Ltd. to the value of £200,000.

For the years ended September 30, 1955, 1956 and 1957 we paid dividends on the Ordinary Stock of 10 per cent per annum, plus 2½ per cent bonus from capital surplus not subject to Income Tax; these were equivalent to 14.3 per cent gross per annum. For the year ended September 30, 1958, when the Reconstruction was carried out, a bonus of 8⅓ per cent was paid from capital surplus, not subject to Income Tax. Again, this was equivalent to approximately 14.3 per cent gross. For the year just ended we have paid or recommended dividends totalling 17½ per cent. At first sight you may think that we have been unduly conservative in our dividend policy, but I submit that this was the correct course in view of the threat of Nationalisation which precluded the raising of capital to finance expansion. When it is realised that we have spent in the last eight years more than £2,800,000 on the expansion and modernisation of our plant and premises, you will appreciate that such a course was necessary. Now that the threat of Nationalisation has been removed, we shall be able to raise

fresh capital if your Board deems it necessary for the greater expansion of your business.

The Share Premium Account at present stands at £1,741,818. In order to bring the issued capital more in line with the capital employed, we propose to capitalise a substantial portion of the Share Premium Account by means of a free issue of shares. As a first step towards this, we propose to increase the Authorised Capital of the Company in the near future and appropriate details will be sent to you in due course.

DEVELOPMENT

Our new Wire Factory at Ecclesfield, to which I briefly referred last year, is now nearing completion and will shortly commence production. Whilst we do not expect to see any real benefits during this financial year we are more than ever convinced that it was a necessity and will be of great benefit to the Company, particularly during the periods of increased business activity such as we are now passing through. We anticipate lower production costs with greater earning power, and the ability more easily to meet the needs of our many good customers. Eventually we anticipate that the concentration of all wire products in this new plant will enable us to close down entirely one, if not both, of our older works in Sheffield without creating any appreciable redundancy.

The capital expenditure incurred in our Hot Rolled Strip Mill in recent years has borne fruit and our current output is now approximately 30 per cent greater than two years ago. This increase has come at a most appropriate time, coinciding with increased demands from our own Cold Rolling Mills and for those special types of hot rolled strip which we produce for outside customers. We have plans for further improvements in both quality and quantity.

Our Cold Strip Company is facing demands for its products, particularly in stainless and high carbon steels, in which we specialise, considerably in excess of those of any previous period. To assist in meeting these demands we are shortly installing another Sendzimir Type Cold Rolling Mill.

Finally, my Board and I once again acknowledge the hard work and co-operation of our staff and employees of every grade, who have helped so much in the achievement of such good results in a rather difficult period.

I look forward to the future with confidence.

A COMPLETE BANKING SERVICE FOR TRANSACTIONS WITH KUWAIT

LLOYDS AND SCOTTISH FINANCE LIMITED

GROWING VOLUME OF HIRE PURCHASE BUSINESS

Mr Ian W. Macdonald's statement

The first annual general meeting of Lloyds and Scottish Finance Limited was held recently at Vigo House, 115, Regent Street, London, W.1.

The following is the statement by the chairman, Mr Ian W. Macdonald, which has been circulated with the report and accounts:

I have pleasure in submitting the first statement of Lloyds and Scottish Finance Limited. This company was formed towards the end of 1958 to acquire the whole of the share capital of Olds Discount Company Limited and Scottish Midland Guarantee Trust Limited. The original issued capital of Lloyds and Scottish was £6 million but during the year this has been increased to £11,150,000, represented by ordinary shares which are held equally by Lloyds Bank Limited and National Commercial Bank of Scotland Limited.

Home and Overseas Activities

In geographical terms the group's main activities are in the United Kingdom where some 90 per cent of total business is conducted at 100 offices. Overseas the group has subsidiaries in South Africa, Rhodesia, Trinidad and Jamaica. It also has a subsidiary in Eire. Towards the end of the financial year we extended our interests in South Africa by joining a consortium with the Netherlands Bank of South Africa Limited and British and Commonwealth Shipping Company Limited to acquire some 85 per cent of the ordinary shares of Credit Corporation of South Africa Limited. Our proportion of the consortium's investment is shown under Trade Investments in our accounts.

As regards the classification of business, considerably more than half of our hire purchase turnover involves the financing of motor vehicles. On the other hand, more than half of our hire purchase contracts—in number but not in value—cover the finance of domestic durables such as furniture, radio, television, and electrical household equipment. Of the two main operating subsidiaries, S.M.G.T. concentrates on the motor vehicle and machinery fields while Olds continues its long established specialist business in the smaller units. Accordingly, as a group we cater for every class of hire purchase business and at present we have 364,000 active accounts.

Growing Volume of Business

Since Lloyds and Scottish commenced business on January 1, 1959, there has been a continuously growing volume of hire purchase business available in the United Kingdom, of which we have obtained a highly satisfactory share. We could have had an even larger proportion if we had been willing to accept all the business offered, but we have thought it right to follow a selective policy and reject business which does not attain a high standard of credit rating. Since the termination in 1958 of all statutory controls on hire purchase transactions, the trend has been towards smaller down-payments and longer repayment periods. Such a trend obviously increases the underwriting risk. Moreover, rates charged to the users have been lowered during 1959, thus giving the finance houses a smaller margin for cover against the greater risk. In such circumstances, it is clearly prudent to be rather more discriminating in our trading, and such has been our management policy over the past year. In consequence, we have had a most satisfactory experience as regards bad debts.

Our overseas subsidiaries are now firmly established and each is making a useful contribution to the local financial economy. It is our policy to have a minority of resident shareholders—either institutions or individuals—and in this way we obtain a valuable measure of local goodwill. In South Africa our associated shareholders are the Netherlands Bank of South Africa Limited and British and Commonwealth Shipping Company Limited: in Rhodesia, The London and Rhodesian Mining and Land Company Limited: in Jamaica and in Trinidad local residents. We feel confident that, with our "know-how" and their support, these companies will continue to develop successfully and increasingly add their contributions to the earnings of our group.

The Accounts

You will see from the accounts that the profit for the nine months' trading amounts to £2,275,836 before tax. The charge in the accounts for taxation at £1,253,354 is relatively heavy, as we thought it wise to set aside sums sufficient to meet taxation liabilities, both current and future, up to April 5, 1961. After allowing for the share of net profit attributable to outside shareholders, we have made appropriations in the group's accounts aggregating £236,218 and we have distributed a net amount of £687,837 by way of dividend to our shareholders, Lloyds Bank and National Commercial Bank, leaving a carry forward of £6,959 in the parent company.

The consolidated balance sheet shows our hire purchase and other debtors at £69 million. The comparative amount at the commencement of business on January 1st was £45 million, a 53 per cent increase between the two dates. Since the date of the balance sheet our business has continued to expand both by volume and by outstandings. The longer period now covered by the average hire purchase contract in itself implies a growing amount of indebtedness. Many of the two-year contracts—which was the statutory limit until 1958—are well on the way to final repayment, while many of the new contracts have a longer life and consequently employ more funds. This upward trend in total hire purchase debtors will continue throughout 1960 unless the volume of new business begins to fall, and so far there is no evidence of that. However, any change in official policy, if associated with the re-imposition of statutory limitations, would probably result in an immediate contraction in the volume of business.

Allied to the amount of hire purchase debtors is the figure in the consolidated balance sheet for Unearned Finance Charges at £6.89 million—almost 10 per cent of the debtors. This, of course, is a cushion for the future, and will be brought into the profit and loss account as the instalments are paid.

Turning to the methods we have adopted to finance our hire purchase paper, it will be seen that the shareholders' issued capital stands at over £11 million. The reserves and future taxation provide £2½ million. The two other main sources of finance are Joint Stock Banks and Acceptance Houses (£13¾ million) and deposits (£34½ million). From these figures it is evident that the group has obtained finance from many quarters other than the parent banks.

Confidence in the Future

Overall these first accounts reflect the size of this new group and its earning capacity. The directors are confident that the wide diversification of business through many branches here and overseas, the specialised managements, and the support of the parent banks are all factors which should enable us to hold—and, we hope, to improve—our position in this rapidly developing sphere of financial activity.

My final word must be personal—an expression of our gratitude to the managing directors, managers and staff who have energetically supported this fusion of interests and at the same time have worked so hard in getting and handling a formidable increase in business.

Main operating subsidiaries :

OLDS DISCOUNT COMPANY LIMITED
SCOTTISH MIDLAND GUARANTEE TRUST LIMITED

Overseas:

SOUTH AFRICA · RHODESIA · TRINIDAD · JAMAICA · EIRE

RANKS LIMITED

SATISFACTORY RESULTS

The annual general meeting of Ranks Limited was held on January 26th in London, The Lord Rank, JP (the chairman), presiding.

The following is an extract from his circulated review:

The accounts show the results to be closely comparable with those of the previous year as regards Profit on Trading and that we have had the benefit of lower rates of Taxation.

Flour Mills: As I mentioned last year, the productive capacity of the flour milling industry in the United Kingdom is more than is required to meet the present demand and this makes the Industry a highly competitive one. It is in the interests of the customer that there is keen competition in regard to quality. All the efforts of our Group have been directed with considerable success to making the flour which will produce the most satisfactory loaf.

Bakeries: The policy outlined last year of taking advantage as opportunity occurred to strengthen further the position of our bakery interests, having regard to the location of our flour mills, has continued. During the year we acquired additional businesses in suitable areas and in so doing have extended the scope and diversity of user of that part of our flour output which reaches the public through businesses in which we are interested.

Our offer to acquire the whole of the share capital of Inglis & Company Limited, the largest bakery business in Northern Ireland, became unconditional on August 28, 1959.

Since last year Energen Foods Co. Ltd. has introduced with success in a test area a new product, Energen Crispbread. Within a few months this product will be generally available.

Blue Cross Animal Feeding Stuffs: It is quite evident that our Blue Cross Foods are becoming more and more popular with farmers and we have every reason to believe that we have had a very fair share of the increase in national tonnage. Scientific advancement continues in all directions and it is our policy to keep pace with all such improvements.

Ranks (Ireland) Limited: Our colleagues in Ireland have been taking active steps to meet the many difficulties over there and the trend of Industry in that country. For the year under review these steps are showing in improved results and I am hopeful that this improvement will continue.

Accounts: £2 million has been transferred to Revenue Reserves and after the Preference Dividends and providing for a final dividend of 7½ per cent on the Ordinary Capital (making a total of 12½ per cent, as against 10 per cent for the last year) the balance carried forward is increased by approximately £178,000 to £1,430,000.

The excess of current assets over current liabilities is less than a year ago, but the position has been reinforced by the cash proceeds of the issue of £7,500,000 Unsecured Loan made at the turn of the year.

The capital and reserves now total almost £49 million.

Conclusion: All the operations of the Company are closely inter-related and whilst all are subject to factors beyond the control of the Board the breadth of the business is such that one can hope that the current year which has started quite well will justify the expectation of a satisfactory result.

The report was adopted.

ALEXANDERS DISCOUNT COMPANY LIMITED

A YEAR OF PROGRESS

SIR ERIC GORE BROWNE'S STATEMENT

The Ninety-second Annual General Meeting of Alexanders Discount Company Limited will be held on February 18th in London.

The following is the circulated statement of the Chairman, Sir Eric Gore Browne, DSO, OBE, TD:

During the year 1959 for which we now account, we invited Mr Daniel Meinertzhagen, a Director of Messrs Lazard Brothers and Company Limited, and other Companies, to join our Board. He has already made a valuable contribution to our counsels.

Now it is interesting to record that, on July 16th of this year, 150 years will have passed since William Alexander started business on his own account at No. 33, Lombard Street, only a few yards from where this building stands. Before that date he had been engaged in Bill Broking in partnership with a certain John Rickman, but since William Alexander was at that time employed by a well-known Banking House his name did not appear in the title of the Bill Broking business. We are proud to think that from this small beginning your Company has grown to its present strength and standing, and that one of William Alexander's direct descendants still occupies a seat on the Board.

THE YEAR'S RESULTS

The year 1959 was a year of real progress in our long history. Throughout the year the Bank Rate remained at 4 per cent, while the Treasury Bill Rate, starting at 3$\frac{5}{8}$, ended at 3$\frac{1}{16}$; a very different picture to that shown in 1957 and 1958. In the result, if you will turn to the figures which accompany this statement, you will see that your Capital, Share Premium Account and General Reserve remain unchanged, that the Balance Carried Forward has been increased to £247,000, that our holding of Securities is £33,160,222 and of Bills £93,695,875, and that the increased dividend which we propose has been fully earned. Our holding of Treasury Bills has increased by 8 per cent, and our aggregate of Commercial Bills by 4 per cent. And you will note that the phrase "Contingency Account" once more appears on the left hand side of the Balance Sheet. You will not, I am sure, forget that I told you last year that my colleagues and I regard it as our primary duty to reconstitute your Company's reserves, having in mind all the time not only the interests of the Shareholders, whose servants we are, but also the risks incurred by a Discount House operating in a controlled economy.

As you know, the fortunes of your Company depend largely on the fluctuating margins which exist between the rates at which it can borrow money and the yield on the bills and short dated Government Bonds which constitute its portfolio. The variety in the life of a Discount Broker under modern conditions will be apparent from a study of the variations in the Bank Rate, the yield on short dated Government Bonds and Treasury Bills, and the average cost of money for the last three years. After weathering the storms of 1957 and 1958, in the year 1959 your Company's ship has sailed in calmer waters.

THE RADCLIFFE REPORT

In my statement which was circulated with

the Accounts for 1958 I told you that we awaited with keen interest the report of the Radcliffe Committee on the working of the monetary system. This interesting and instructive report has since been published. It is satisfactory to note that the Committee expressed the view that "The Discount Market, by smoothing out irregularities in the ebb and flow of funds among the Commercial Banks and others, does simplify the functioning of the Banks and enables them, free from embarrassment of temporary disturbances in their liquidity, to concentrate on their major task of providing credit for the production of goods and services." The Committee also emphasised the important element which the Discount Houses provide in the market for Bonds and went on to say "If the Discount Market does indeed cease to provide an effective service as jobbers, the appetite of some institutions for short bonds is bound to decline." The publication of statistics by the Discount Market, as recommended by the Committee, is still under consideration. I think it is fair to say, in view of the findings of the Committee, that it is now confirmed that the Discount Market plays a really important part in our National economy. We welcome this assurance.

Once again our grateful thanks are due to the Banks for their unfailing support and to Sir Antony Macnaghten, to Mr Dawkins, to our Assistant Managers and to all our Staff for a good year's work. We have a young team in whom you may have every confidence.

R. A. LISTER & CO. LTD.

The Annual General Meeting of R. A. Lister & Co. Ltd. was held at Dursley on January 25th.

Sir Percy Lister, the Chairman, who presided, said:

It is customary on these occasions for me to draw your attention to items of special interest in the Consolidated Balance Sheet and the accounts before you.

You will have observed that the Trading and Profit figures establish another record year in the operation of your widely spread undertakings.

The increase in the Group's Consolidated Profits of over £100,000 indicates the increased productivity of your Factories, and the benefits accruing from the considerable capital expenditure during the past two years on the latest plant and machinery as well as the increased volume of sales in both the Domestic and Export Markets, which increase I am pleased to say currently continues.

The increase in the interim dividend from 2½ per cent to 5 per cent was made to bring the interim more into line with the final dividend and the increase in the total dividend for the year from 12½ per cent to 14 per cent is justified by the improved year's trading.

The increased value of your fixed assets represents purchases made during the year for your Factories. The reduction in the Cash Position and Government Securities is accounted for by the increased Receivables and Stocks which are in line with the greater volume of production and Sales.

BIG DEMAND FOR LISTER ENGINES

The increased power range of the Lister Air Cooled Diesel Engines has been a source of great satisfaction to users and distributors alike both at home and overseas. Your Group's Industrial, Marine, Electrical and Agricultural products continue to enjoy an expanding demand. The demand for Lister Engines for use as prime movers of engine-driven Contractors' Plant, Pumps and Generating Plants has reached an encouragingly high volume.

The increased Home Trade reflects the increased confidence of the British public in the Political, Financial and Economic stability of our Country, and improving conditions and confidence in a number of overseas markets in which your Company has established Subsidiary Companies justifies our anticipating a growing demand for our products in them.

Having recently returned from an extensive overseas tour embracing visits to distributors and your own companies in Australia, Canada, the United States and Mexico, I feel that to meet the vigorous competition from Continental Europe, North America and local manufacturers in these markets, and to cater for the demands of tomorrow's clients, we must continue to keep the importance of design trend and production costs always before us.

Whilst the demand in the expanding markets of the World necessitates the supply of many products on State Aided Credit Terms, it is to be hoped that by Inter-Governmental co-operation or through the World Bank or such other organisation as may be effective, such credit will be kept within reasonable limits and in accordance with the best trading interests of the exporting countries.

The R. A. Lister Pensions Trustees Limited to which I made reference last year, has made satisfactory progress during the year under review, and the benefits from the Policies issued have been greatly appreciated by all concerned as was your Directors' decision to increase the weekly payments to existing pensioners who had retired prior to the formation of the Pension Trustee Company.

In conclusion may I on your behalf as well as on behalf of my colleagues and myself convey to the Chairman and Boards of our Associated and Subsidiary Companies, to all those in our Offices and Factories at Home and Overseas, our appreciative thanks for the part they have played in producing these record results, for only by their collaboration and effort have they been made possible.

The report and accounts were adopted.

FINANCIAL NOTICES

THE COMMITTEE of LONDON CLEARING BANKERS. Notice is hereby given that the MAXIMUM RATE of INTEREST allowed by the under-mentioned London Clearing Banks on deposits, which must be lodged for a minimum period of 7 days and be subject to a minimum notice of withdrawal of 7 days, will be THREE per CENT per annum until further notice.

BENGUELA RAILWAY COMPANY

The following preliminary traffic results for the year 1959 compared with the year 1958 have been issued.

	1959		
Kilometres run			*6,524,179*
	Tons		
Passenger Traffic	1,530	—Esc.	18,194,000
Local Traffic: Minerals	245,728	—Esc.	33,670,000
Other	605,135	—Esc.	73,575,000
Transit Traffic: Minerals	514,311	—Esc.	210,931,000
Other	105,638	—Esc.	68,451,000
Miscellaneous: Receipts	—	—Esc.	16,199,000
Tons (excluding Service Traffic)	1,472,542	—Esc.	451,020,000
Working Expenses in Africa			Esc. 250,756,000
Net Operating Receipts			Esc. 200,264,000
	1958		
Kilometres run			*6,094,635*
	Tons		
Passenger Traffic	1,608	—Esc.	17,008,000
Local Traffic: Minerals	197,109	—Esc.	27,061,000
Other	599,502	—Esc.	71,230,000
Transit Traffic: Minerals	461,809	—Esc.	223,556,000
Other	104,620	—Esc.	73,944,000
Miscellaneous: Receipts	—	—Esc.	15,840,000
Tons (excluding Service Traffic)	1,369,648	—Esc.	428,645,000
Working Expenses in Africa			Esc. 240,816,000
Net Operating Receipts			Esc. 187,829,000

Tanganyika Concessions Limited owns all the Debentures and 90 per cent of the equity of the Benguela Railway.

APPOINTMENTS

QUALIFIED ACCOUNTANTS AND **UNIVERSITY GRADUATES**

A large group of Companies of international repute in the electronic engineering field requires a number of qualified accountants.

Vacancies occur in various fields of industrial administration and management accounting in factories situated in various parts of the British Isles including the London area, South and North of England, Wales, Northern Ireland, Scotland and the Home Counties.

Applicants in the age range of 25-40 who have suitable professional qualifications will be considered, and for the more senior appointments, a university degree in Economics or Engineering will be an advantage. Suitable facilities for training will be afforded throughout the group before appointment to executive position.

Salary range £1,000-£2,000 per annum, according to age, qualifications and experience.

Excellent prospects in a rapidly expanding industry.

Good employment conditions including superannuation scheme.

Full details of age, qualification, experience and present salary, to Box E 877, LPE, Romano House, 399-401 Strand, London, W.C.2.

CAMBRIDGE UNIVERSITY

HAROLD SAMUEL STUDENTSHIPS

Studentships, value £400 per annum, tenable from October 1, 1960, are offered for research in economic, legal, or social matters relating to the use, tenure or development of land. Applications must reach the Registrary, The Old Schools, Cambridge, not later than March 15, 1960.—Further particulars may be obtained from the Secretary, Board of Estate Management, 74 Trumpington Street, Cambridge.

ACTUARIAL ASSISTANT (MALE). R. Watson & Sons, Consulting Actuaries, of Ringley, Reigate Road, Reigate, Surrey, require additional qualified or partly qualified actuarial staff for interesting and important work with good starting salary and prospects.—Applicants, who should be under age 30 and have passed at least Part II of the Institute of Actuaries Examinations, should write, marking letters "Strictly Confidential," giving particulars of age, education, actuarial qualifications and experience.

For further appointments see pages 483

COMPANY AFFAIRS

Lloyds and Scottish Finance

THE first accounts of Lloyds and Scottish Finance are impressive. The company is owned jointly by Lloyds Bank and National Commercial Bank of Scotland (in which Lloyds Bank has a 37 per cent interest) and controls Olds Discount and Scottish Midland Guarantee Trust, together with other hire purchase subsidiaries in Commonwealth countries. The accounts cover nine months to September 30, 1959, when hire purchase debtors and other charges amounted to £69 million—a total only exceeded by United Dominions Trust among hire purchase finance houses—compared with £45 million on January 1st. Unearned charges of nearly £7 million represent about 10 per cent of total debtors and represent an effective cushion for future profit and loss accounts. That they are so large is due to the lengthening terms of new hire purchase business over the last eighteen months. The group's liquid assets are small at £669,391 but the company has the resources of the two banks behind it and can afford to put its maximum funds to profitable purposes rather than to leave any on deposit.

The big increase in hire purchase business has been financed in three ways. Bank loans and acceptances total over £13 million; deposits (mainly from the customers of Lloyds and National Commercial) amount to £34.6 million; and the ordinary capital had been increased from £6 million to just over £11 million by September 30th. (Since then it has been raised further to £15 million.) The proceeds of the recent rights issue by National Commercial Bank (the last date for payment is February 2nd) will bring in some £6½ million and this will easily cover its further participation in the capital of Lloyds and Scottish Finance.

Both banks must be well satisfied with their interest in the company which has its origin in the first direct bank participation in hire purchase in this country in 1954, when the Commercial Bank of Scotland took over the Scottish Midland Guarantee Trust. The indications are, indeed, that it will not be many years before the greater part of the profits of the National Commercial will be derived from its hire purchase interests. Although Sir Oliver Franks, the chairman of Lloyds Bank, this week warns shareholders against exaggerating "the potentiality of our investment in hire purchase finance" in relation to the profitability of the bank's operations as a whole, he admits that the bank is earning from its hire purchase investments "a satisfactory return, larger than could have been earned by the employment of these funds in ordinary banking operations"; it appears that over half of Lloyds Bank's increase in profits came from its hire purchase interests, without counting a final dividend from Bowmaker.

Discount Houses

DETAILS of the merger foreshadowed last November between **Cater Brightwen** and **Ryders Discount** have now been announced. Ryders Discount will change its name to Cater, Ryder and Company and will become the operating company. Cater Brightwen is to make a one for six scrip issue to bring the ordinary capital of the two companies roughly into line. Following this issue, Cater Ryder will make a one for one offer for Cater Brightwen ordinary. Holders of Cater Brightwen 5 per cent preference stocks will be offered an exchange into a similar stock in Cater Ryder. As with recent bank mergers, undisclosed reserves make it difficult to assess the respective merits of the terms but these reserves have been disclosed to the auditors of the two companies who consider the terms fair and equitable.

The new company intends to pay a 13 per cent dividend for the year to May 31, 1961, which would give a useful increase in income to Ryders Discount shareholders, who expect to receive a dividend of 10 per cent for the current year. For Cater Brightwen there would be a slight increase, from the equivalent of 12 6/7 per cent to 13 per cent.

On the news of the terms of the merger Cater Brightwen shares hardened to 58s. and the £1 shares of Ryders Discount remained unchanged at 49s. 3d. With total holdings of bonds and bills amounting to £168 million at the balance sheet dates the new house will be the third largest in the market.

The three leading houses at the moment have published their annual reports this week. They show the benefits of easier conditions in the money market in 1959.

In his first statement as chairman of **Union Discount,** Mr Eric Faulkner describes the past year as one of steady progress and consolidation for the company. Following the Radcliffe Committee's suggestion that the publication of fuller statistics was desirable, Union Discount shows separately its holdings of Treasury bills and commercial bills. Treasury bills rose from £148.2 million to £161.9 million while commercial bills show a sharper rise, from £17.5 million to £24.5 million. Its bond portfolio has risen from £88.3 million to £101.5 million. From contingencies £1¼ million has been transferred to published reserves, which together with the issued capital now amounts to £10 million (compared with £8 million a year ago). At 58s. 6d. xd the £1 units yield 4¼ per cent on the 12½ per cent dividend.

Holdings by **National Discount** of bills rose from £142.2 million to £160.7 million while turnover in bills rose even more—by 17 per cent. The bond portfolio has risen by 37 per cent from £62.9 million to £86.1 million. These have an average life of under three years and the chairman, the Hon. Lovel W. Coke, draws attention to the fact that profits are adjusted at the end of the year to provide for the amortisation of premiums or a proportion of the discounts, where short dated securities have been purchased above or below redemption values. This method avoids the inclusion of large debits or credits not strictly applicable to the year in question. The substantial increase in issued capital and the share premium account reflects the one for three rights issue made to "B" stockholders during the year. The £1 "B" shares at 55s. 6d. yield 5½ per cent.

Now in its 150th year, **Alexanders Discount** has reported an increase from £80.4 million to £93.7 million in bills discounted. Its holding of British Government securities has been reduced from £42.5 million to £30.7 million but against this there has been an increase of £2.1 million in Corporation and Dominion securities. Sir Eric Gore Brown, the chairman, emphasised last year the directors' wish to strengthen the reserves of the company and in this connection he now points out that the phrase "contingency account" appears again in the balance sheet. Thus it seems that Alexanders, in common with other houses, has taken advantage of the calmer waters of 1959 to put itself in a stronger position to weather any storms in the future. At 37s. 3d. xd. the £1 shares yield 5¼ per cent.

British Oxygen

THE significant point in the preliminary results of British Oxygen is that the 14 per cent rise in trading profits from £11.3 million to £12.9 million was mainly attributable to the success of the group's overseas operations and to "important contracts undertaken at home and overseas by the engineering division." Clearly earnings from the United Kingdom industrial gases division (which, in terms of total assets, constitutes about half of the group) were hit in the early months of the year by the recession in the steel industry—its main customer; to some extent this explains why trading profits in the last six months of the financial year, when the steel makers were climbing out of recession, show a rise of 25 per cent, against one of 13 per cent in the first half. After an almost unchanged depreciation charge of £4,339,723 and higher tax of £4,065,754 (against £3,890,438) the group's net profit is up by no less than 35 per cent, from £3,334,062 to £4,521,390 and the ordinary dividend is raised from 12 per cent (including a special interim of 2 per cent) to 14 per cent.

Prospects for the current year seem encouraging, for the directors' policy of establishing overseas subsidiaries in the emergent countries of the Commonwealth to match their industrial growth is now bearing fruit. At the same time, with steel output rising to record levels, with further increases in steel-making capacity planned, and with the development of new steel-making techniques involving greater use of oxygen, earnings of the United Kingdom division this year should show a sharp recovery. The group's capital development programme (which was begun in 1958 and is to be completed by 1961) will cost in all £24 million. Given a cash flow of some £6,700,000 and liquid balances of some £2,410,000, the final stages of this programme should not unduly burden the group's capital resources. Equity earnings in 1958-59 amounted to 37 per cent against 28½ per cent, so that the 14 per cent dividend is covered 2½ times. Not surprisingly, the £1 units were marked up by 5s. 6d. to 86s. 6d. and now yield 3¼ per cent.

Unit Trusts

THE rather poor response to the Commonwealth Unit Fund's block offer in December and news last week from the **Electrical and Industrial Development Trust** that it had received 932,875 applications for the 1 million units recently offered to the public seemed to suggest that the unit trusts had passed the peak of their popularity. Any such impression has been dispelled with this week's announcement by Unicorn Securities that the initial offer of 5 million units at 5s. each in their new **Falcon Trust** was heavily oversubscribed. No less than 58,000 applications were received for more than 27,500,000 units, involving some £6,750,000.

The response to Falcon's offer—even heavier than that given to Scotshares, which was especially designed with a Scottish appeal—is probably attributable to two features. The low priced units clearly appealed to the smallest of investors; and the yield of £4 2s. 6d. per cent, which is higher than the average yield of 3.9 per cent on *The Economist* indicator and higher than can be obtained on most leading unit trusts, obviously had a strong pull. To achieve this, the managers have put together a more eclectic portfolio than some of their competitors.

Bass

AWAY round the legal obstacles which have prevented the long-awaited scrip issue to ordinary shareholders of Bass, Ratcliffe has at last been found. The company is capitalising £4,471,280 of reserves by issuing 4,471,280 £1 ordinary shares to stockholders, on the basis of two new £1 shares for every £1 share held. The 537,742 of Bass ordinary shares held by Worthington (which cannot by law receive shares as free scrip from its parent) are to be sold to Philip Hill, Higginson, Erlangers at a price to be settled later and who will then be allotted its due proportion of the scrip. The shares will then be sub-divided into 2,150,968 5s. units, of which 1,966,769 units will be offered to ordinary shareholders on a one-for-four basis at a price not yet fixed. The balance of shares will be placed privately by Philip Hill. The directors say that the net proceeds of this operation will bring in around £2 million which will be used to finance expansion and development: this suggests that the issue price will be around 20s. a share. The directors add that the rate of dividend can only be determined when the trading results of the current year are known. But the market seems to be assuming something more generous than the equivalent of 57½ per cent paid in 1958-59 on the old capital, for the 5s. ordinary shares were marked up 5s. 6d. to 81s.

Decca Record

THE 10 months' leeway between the end of Decca Record's financial year, and the publication of the full accounts and chairman's statement, has the advantage that shareholders, while learning of the trading experience in the last financial year, can also be told how the group has fared through most of the current year. There is little doubt that Mr E. R. Lewis is confident of another record year in 1959-60. All sectors of the group did well last year and all indications point to "continued progress" this year.

As the preliminary figures suggested, last year's slight recession in gramophone record sales did not affect the big groups: in fact Decca's record sales—which now account for just over 50 per cent of the group's turnover—maintained in 1958-59 the previous year's level. Mr Lewis added that "the pattern of last year's trading continued during the first months of the current year" and a strong recovery in demand developed in the home market in December and continued in the new year. Decca's sales of records in the United States have risen, though fiercer competition is squeezing profit margins. The group's radio and television sets are now being made in Battersea and despite some teething-troubles earnings for the current year should exceed those of any previous period. Mr Lewis says that 1958-59 was a year of considerable achievement for the Decca Navigator and despite the shipping slump hirings of the "Navigator" showed a net increase of around 700 contracts. The group's radar subsidiary has now been trading for ten years and it enjoys the distinction of having supplied 40 per cent of all merchant ships so far equipped with radar. Mr Lewis anticipates a considerable contribution to the group's profits in 1959-60 from this source.

The first ordinary interim dividend for the current year has been raised from 2½ per cent to 3¼ per cent and on the minimum assumption that the second interim (last year, 3¼ per cent) and the final dividend (14⅛ per cent) are maintained, the 10s. ordinary shares at 55s. yield 3¼ per cent.

Liebigs

TRADING profits of Liebigs Extract of Meat in the year ended August 31st rose by 4 per cent, from £2,022,101 to £2,105,636, and after a tax charge of £1,028,000 (against £1,102,000) net earnings advanced from £993,496 to £1,164,301. The final dividend of 9 per cent on the £4.5 million capital (as increased by the 100 per cent scrip issue and the one-for-four rights issue), plus the interim dividend of 8 per cent on the smaller capital is equivalent to an effective rate of 13 per cent and compares with an equivalent total distribution of 10.6 per cent in 1957-58. For the second year running, therefore, shareholders have received a bigger payment.

Last March when the chairman, Mr K. R. M. Carlisle, forecast a final dividend of 8 per cent, he referred to the high cost of Argentine beef: the shortage of cattle in Argentina has persisted and presumably bigger earnings from the group's African subsidiaries have largely offset any losses incurred by the Argentine company. At the same time, Oxo's canned soups should have benefited from that expanding market even though its share in this market is relatively small. The 13 per cent dividend is covered almost 3 times by earnings and the £1 shares at 73s. 9d. yield 3½ per cent.

Asquith Machine Tool

ACTIVITY in the machine tool trades began to pick up only in the latter half of 1959 so the fall in Asquith Machine Tool's trading profits in the year ended September 30, 1959, from £815,105 to £563,475 was not surprising. The fall in earnings would have been even sharper but for the inclusion of £127,555 representing twelve months' profits of subsidiaries acquired during the year. The group's net earnings after a lower tax charge of £249,500 (against £441,400) have fallen from £373,705 to £313,975; the dividend at 15 per cent is unchanged after allowing for the 100 per cent scrip issue.

What did shock the market, where the 5s. shares were marked down 3s. 6d. to 14s. 10½d. following the results, was the directors' statement that the order book has further deteriorated and that the bulk of the profits earned in 1958-59 was due to the steady working through of orders placed in earlier years. In December both BSA and Charles Churchill reported a marked increase in orders and enquiries, and this revival has not altogether by-passed the Asquith group for the directors say that there have been some signs of revival in certain subsidiaries: but in those companies making heavier and "special" machines "the deliveries are such that any improvement in the order position would now be too late to benefit the current year's results." In the light of these prospects it is not sur-

prising that the directors propose to pass the current year's interim dividend and are unable to forecast the dividend rate for 1959-60. The yield of 5 per cent on the 5s. shares is the highest return offered among leading machine tool shares; the 15 per cent dividend is only just covered by earnings.

Co-operative Permanent

QUITE deliberately, not least because it wanted to secure trustee status under the provisions of the Housing and House Purchase Act, the Co-operative Permanent Building Society slowed down last year the rate at which it was expanding. As the accompanying table shows, withdrawals were quite high, especially after the reduction in the net rate on shares from 3½ per cent to 3¼ per cent and again, though to a lesser extent, after the revelations in the Jasper affair. That was true of almost all societies, but in the Co-operative Permanent's case it reinforced the policy of caution on mortgage advances. These remained on quota,

ASSETS AND RATIOS
(£'000s)

Year to December 31,	1958	1959
Received from shareholders	42,428	45,866
Withdrawn by shareholders (cum interest)	29,942	39,324
Mortgage advances	30,265	33,385
Liquid assets	32,368	35,165
Liquidity ratio* (per cent)	15·0	15·2
Reserves	5,663	6,418
Reserve ratio* (per cent)	2·0	2·4
Total assets	204,473	221,087

* *Calculated on the market value of investments.*

since the Co-op's primary need was to build up its reserve ratio. This was done —so much so that the ratio at the end of last year of 2.4 per cent (taking investments at market value) was well above the 2 per cent required for trustee status. By the end of this year the reserve has to be built up to 2½ per cent. To achieve this, the Co-op must keep the expansion of its total assets down to about £16½ million as last year. The increase in Bank rate, the directors say, will mean no early review of the society's interest rates; but this is one big society which would find life a little more comfortable if the mortgage rate were 6 per cent and the rate paid on shares 3½ per cent, net.

Lancashire Cotton

MR ROGER LEE'S statement to shareholders of Lancashire Cotton Corporation is much more encouraging than the one he made a year ago. The improvement in the sales of Lancashire Cotton over the second half of the year to October 31, 1959, which brought their total to the highest level since 1950, has continued in the current year. There has also been some improvement in profit margins from the low level to which they had been brought in the "ruthless buyers' market" which followed the decision of the Restrictive Practices Court against the Yarn Spinners' Agreement.

The corporation has taken substantial advantage of the Government's redundancy scheme and over a third of its mule equivalent spindles (1.2 million out of 3.4 million) have been registered for scrapping. Compensation is estimated to amount to £700,000 which will swell liquid assets. These already amount to almost £11 million and compare with an ordinary capital of just over £8 million. Mr Lee is confident that the remaining plant and equipment in the cotton industry, after the reorganisation has been carried through, will be adequate to meet the needs of the market once transitional difficulties have been overcome.

By maintaining the ordinary dividend at 17½ per cent despite a substantial fall in earnings the board has shown its confidence in the future prospects of the company. Since the results were published in mid-December the £1 shares have fallen from the very high level to which they had been pushed by speculative buying and now at 62s. 9d. they yield 5½ per cent.

Massey-Ferguson

TRADING results from Massey-Ferguson for the year ended October 31, 1959, show a spectacular increase in net income from $13 million (including tax credits of $3.4 million) to $21 million (including tax credits of $7.2 million); a rise in net sales of 13 per cent from $420.2 million to a record $475.5 million; and an increase in net income per common share from $1.25 to $1.65 a share. Although earnings in 1958-59 include the operations of F. Perkins since April 1st and those of the Banner Lane tractor plant since August 31st, the directors say that the improvement in trading was due mainly to the buoyancy of the North American market where net sales rose by 24 per cent in the United States and by 38 per cent in Canada. Sales in Europe rose by only 3 per cent; increases of 49 per cent in Western Germany, of 25 per cent in Yugoslavia and of 16 per cent in Scandinavia being largely offset by a decline of 19 per cent in France. While there may still be scope for an expanding market in Europe it is doubtful whether the pace of expansion in North America can be maintained, for the directors say that the probable fall in farming income in the United States would be bound to affect sales in 1960.

The acquisition of F. Perkins, the tractor interests of Standard in this country and the Standard-Hotchkiss company in France completes the policy of securing greater control over the manufacture of the group's products, and it is in the fuller integration of the group's resources that the directors see the most likely cause of any future big rises in income. Capital expenditure in 1958-59 (including the new acquisitions) amounted to $69 million (against a total $61 million in the four years preceding 1958-59) and this no doubt helps to explain why the directors have been conservative in leaving the dividend unchanged at 40 cents a share. At $21⅜ the shares offer a yield of 3½ per cent.

London Stock Exchange

FIRST DEALINGS:	Jan. 11	Jan. 25	Feb. 8
LAST DEALINGS:	Jan. 22	Feb. 5	Feb. 19
ACCOUNT DAY:	Feb. 2	Feb. 16	Mar. 1

ON Monday all sections of the industrial market recovered from last week's setback following the rise in Bank rate and the *Financial Times* ordinary share index rose six points to 329.3—over four points more than the level on the eve of the change in Bank rate. Even on Thursday and Friday of last week selling of equities was not heavy and the fall in prices was due mainly to jobbers' marking down prices to discourage selling. Gilt-edged stocks, on the other hand, came in for a good deal of two-way business and the demand from institutions and small investors which developed immediately after the increase in Bank rate was offset by persistent selling. The market remained quiet with prices tending to drift lower. Over the week to the close on Wednesday most of the Funds showed net losses. In undated stocks 3½ per cent War Loan lost 1/16 to 63⅛, and in short-dated stocks 4½ per cent Conversion 1964 lost 1/16 to 99 7/8 on the news of the £200 million issue of this stock at 99½. Medium-dated stocks lost ground with 3 per cent British Electricity 1974-77 falling ¼ to 74½. Home Corporation loans were lower with 5½ per cent LCC 1977-81 closing ⅜ down at 102.

Buying of industrial equities by the institutions and the unit trusts as well as by small investors has provided the main buttress to equity prices throughout the week and *The Economist* indicator rose 7.6 points to 374.0. Steel shares led the recovery—partly because they took the worst knocks in the previous week. Steel of Wales gained 4½d. to 50s. 10½d., United Steel were 6d. better at 83s. 3d. and Whitehead Iron, gaining 3s. at 114s. 3d., showed the biggest rise of all. Heavy engineering shares also gained ground: Guest Keen improved 3s. to 92s. 6d., Reyrolle put on 2s. 6d. to 101s., Harland Wolff gained 1s. 9d. to 32s. 3d. and William Doxford closed 2s. 9d. up at 108s. 6d. Machine tool shares fell back following the poor results from Asquith, and news that home orders in October showed an unexpected fall; Alfred Herbert lost 3s. 9d. to 51s.

Textile shares were firm with English Sewing Cotton 2s. 6d. up at 49s. 6d., Fine Spinners 2s. better at 32s. and heavy investment buying helped Courtaulds to put on 2s. at 63s. 3d. Hire purchase shares were marked down substantially after the rise in bank rate but the absence of sellers meant that most of the leaders still showed net gains over the week: thus Mercantile Credit were 6d. better at 27s. 6d. and United Dominion Trust were 1/16 up at 10⅛. In the aircraft section Fairey improved 9d. to 23s. 6d., De Havilland gained 1s. to 32s. 3d. and Hawker Siddeley closed 6d. up at 32s. 7½d. Oil shares tended to drift: BP gained 3d. at 58s., but Burmah were unchanged at 51s. 6d. and Shell lost 6d. to 115s.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended January 23, 1960, there was an "above-line" surplus (after allowing for sinking funds) of £136,222,000 compared with a surplus of £131,584,000 in the previous week, and a surplus of £157,180,000 in the corresponding period of last year. There was a net expenditure "below-line" of £13,058,000, leaving a total cumulative deficit to date of £720,663,000 compared with £555,943,000 in 1958-59.

THE MONEY MARKET

THE increase of over ¾ per cent in the Treasury bill rate at last Friday's tender was larger than had been generally expected. The discount market cut its concerted bid by 3s. 10d. to £98 17s. 3d. and the average rate of discount rose from £3 15s. 7.79d. to £4 11s. 1.19d. With applications falling by £28 million to £378 million the market's allotment at the basic rate rose from 52 per cent to 67 per cent.

In New York the Treasury bill rate for three months' maturities fell sharply from 4.436 per cent to 4.116 per cent, and 1/16 per cent below the rate in this country. The rate on six months bills fell from 4.665 per cent to 4.608 per cent.

Apart from Wednesday, credit has not been easy and help has been given by the authorities in varying amounts. On Tuesday, one or two houses borrowed a marginal amount from the Bank at 5 per cent. Rates on overnight money have ranged up to 4⅛ per cent but on Wednesday conditions improved and rates drifted down to the new basic minimum of 3⅞ per cent and to 3 per cent for outside banks. Dealing rates in April maturities have generally been around 4 3/16 per cent with 4½ per cent the upper limit.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) Surveys made twice a year; annual figures relate to October survey. (5) Figures relate to April survey. (6) In general males under 21 and females under 18 years of age. (7) Certain changes have been made in the classification and coverage of the Board of Trade's index numbers in this section. (8) The series for "all items" and "other items" have been revised throughout; quotations for Middle East and Venezuelan crude oil now replace the previous quotation for gasoline. Owing to a change in the tea quotation used, some revisions have also been made in the series for "all items" and "food" from June 2, 1959.

Did you know that

this nut

could buckle your business?

A steam loco-type crane runs on a track. If the track is faulty—if, for example, a nut is loose on a fish-plate, chair, or sprag, a travelling crane may wobble, tilt, and topple, to end up overturned. The cost of such a mishap is impossible to predict: while it may be measured in time lost, profits lost, it could also very possibly spell a life lost.

Vulcan know

Cranes overturn for a number of reasons—most often for a combination of reasons only discernible to the expert eye. That eye belongs to the Vulcan Engineer Surveyor. He not only knows where to look for the likely faults but is trained to see any potential danger spots in the immediate vicinity. Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection *and* protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

Vulcan are specialists

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17.

THE VULCAN BOILER & GENERAL INSURANCE CO. LTD.

67 KING STREET, MANCHESTER 2

A PERSONAL SERVICE

Manufacturers and traders wishing to extend their activities to Australia are invited to take advantage of our specialised Information Service.

Upon request we will furnish, without obligation, an individually prepared survey of any industry. Full reports are available on all matters incidental to establishing a business.

An expert advisory staff is always at your disposal.

APPOINTMENTS

The Y.M.C.A. of the Rhodesias and Nyasaland invites applications from men of Christian conviction for appointment as Association Secretaries, to establish new work in Kitwe and Salisbury. An academic, business or technical education essential. Four-year contracts with attractive salaries and emoluments offered.—Further particulars obtainable from the Overseas Secretary, National Council of Y.M.C.A.s, 11 Great Russell Street, London, W.C.1.

COMPUTER PROGRAMMER

COURTAULDS

A vacancy exists in COURTAULDS' Organisation and Methods Department, Coventry, to assist in the planning and programming of commercial integrated data processing operations on the Company's National-Elliott 405 computer.

Applicants should have had practical programming experience (preferably, but not necessarily, on this type of computer) and some commercial background.

The vacancy involves interesting work and provides scope in the computer field.

Candidates should write, giving full personal particulars, details of education and previous experience, to the Director of Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number C.21.

EAST MIDLANDS GAS BOARD

ASSISTANT STATISTICIAN

A vacancy occurs in the Commercial Manager's department of the Board at their Headquarters in Leicester for an Assistant Statistician. The post is open to graduates in economics with qualifications and/or experience in statistical work and preference will be given to those who have knowledge or experience of market research.

The commencing salary will be within Grades A.P.T. 5/6/7 (£629-£810) of the National Salary Scales according to qualifications and experience.

The position is pensionable and the successful candidate will be required to pass a medical examination.

Applications, stating age, experience, qualifications, present appointment and salary, together with the names of two referees, should be sent to the Secretary of the Board, Beverley House, University Road, Leicester, within 14 days of the appearance of this advertisement.

A. GWYNNE DAVIES,
Secretary.

MATHEMATICIAN
for
OPERATIONAL RESEARCH

The Operational Research Department of The Steel Company of Wales Ltd., invites applications for the above position.

The successful candidate will have a joint responsibility with other mathematicians for advising his colleagues on mathematical questions and for the development of appropriate techniques. He will be expected to play a leading role in Operational Research projects.

The working environment is a very large and modern integrated iron and steel works, situated on the pleasant coastal plain of South Wales.

The Operational Research Department consists of about two dozen scientists, plus junior staff, working on a variety of problems, and employs its own Pegasus computer.

Please write, giving full details of age, experience, qualifications and any further information considered relevant, to:—

Superintendent, Personnel Services,
THE STEEL COMPANY OF WALES LIMITED
(STEEL DIVISION)
ABBEY WORKS, PORT TALBOT, GLAMORGANSHIRE

For other appointments see page 473

UNIVERSITY OF EXETER

Applications are invited for the post of Assistant Lecturer or Lecturer in Economic and Social Statistics.

Salary scales:
Assistant Lecturer: £700-£850 per annum.
Lecturer: £900-£1,650 (with efficiency bar at £1,300).

Further particulars may be obtained from the Secretary of the University. Closing date for applications, February 27, 1960.

SMITHS

ORGANISATION AND METHODS OFFICERS

Assistants aged 23-27 years are required for the Organisation and Methods Department. This interesting and expanding sphere of industrial administration involves the investigation and analysis of administrative procedures with the object of developing improved working methods.

Applications are invited from young men who are able to report verbally and in writing in a lucid manner and who are either

(a) University Graduates, preferably in Economics, or
(b) qualified Accountants, or
(c) already engaged in this type of work.

Some experience of industrial administration is desirable but not essential.

The successful applicants will join an established department and the prospects for future progress are excellent. They will receive good commencing salaries and a training in O. and M. techniques will be given.

MANAGEMENT ACCOUNTING TRAINEES

Young qualified accountants aged 23-27 seeking a career in Industry are invited to apply for engagement as Management Accounting Trainees.

This is a first-class opportunity for those who wish to gain experience in standard costing, budgetary control, and other aspects of modern industrial accounting as applied in a large organisation.

The Company operates 20 factories in the U.K. engaged in the development, manufacture and marketing of motor, aviation and marine instruments and accessories, clocks and watches, and numerous other products, and provides a wide variety of experience.

After a period of training in the operation of the management accounting system at one or more locations, trainees would be considered for appointment as Accountants or as members of the O. and M. Department.

Applicants should supply details of age, qualifications, previous experience and present salary.

Write in confidence, quoting ref. SM.274, to
Staff Manager,
S. SMITH & SONS (ENGLAND) LTD.,
Cricklewood, London, N.W.2.

IBM UNITED KINGDOM LIMITED

MARKET RESEARCH AND PRODUCT PLANNING

IBM UNITED KINGDOM LIMITED require a young Graduate Economist aged about 25/28 to join the team of specialists now being formed by the Company.

Applicants should have 3/5 years' commercial experience including some in Market Research and an interest in Office Machinery and Computers.

The ability to assess markets and conditions is desirable.

The size and operations of this team will be considerably expanded in the near future and there will be excellent prospects for promotion.

Applications in writing to the Personnel Manager,

IBM UNITED KINGDOM LIMITED,
101, Wigmore Street, London, W.1,
quoting reference PP/1.

BUSINESS AND PERSONAL

DISTINCTIVE British family holiday. Family room reductions. Children's Supper 6 p.m. Five-course Dinner 7.30 onwards. Sands, sailing, open swimpool, terraced garden, golf, club bar. Panoramic sea/harbour heights views. Enquire now. Colour brochure. Three star.—Greystoke Hotel, Canford Cliffs 772-6, Bournemouth.

SAILING HOLIDAYS with Tuition. Enquiries: Captain R. R. Cass, R.I.N. (Rtd.), Ariadne Sailing School, Bembridge, Isle of Wight. Telephone Bembridge 55.

"THE WORLD'S FINEST CAMERAS." Leica, Rollei, Contaflex, Rotina, etc., now freely available.—Illustrated booklet free from Wallace Heaton Ltd., The Camera Specialists, 127 New Bond Street, London, W.1.

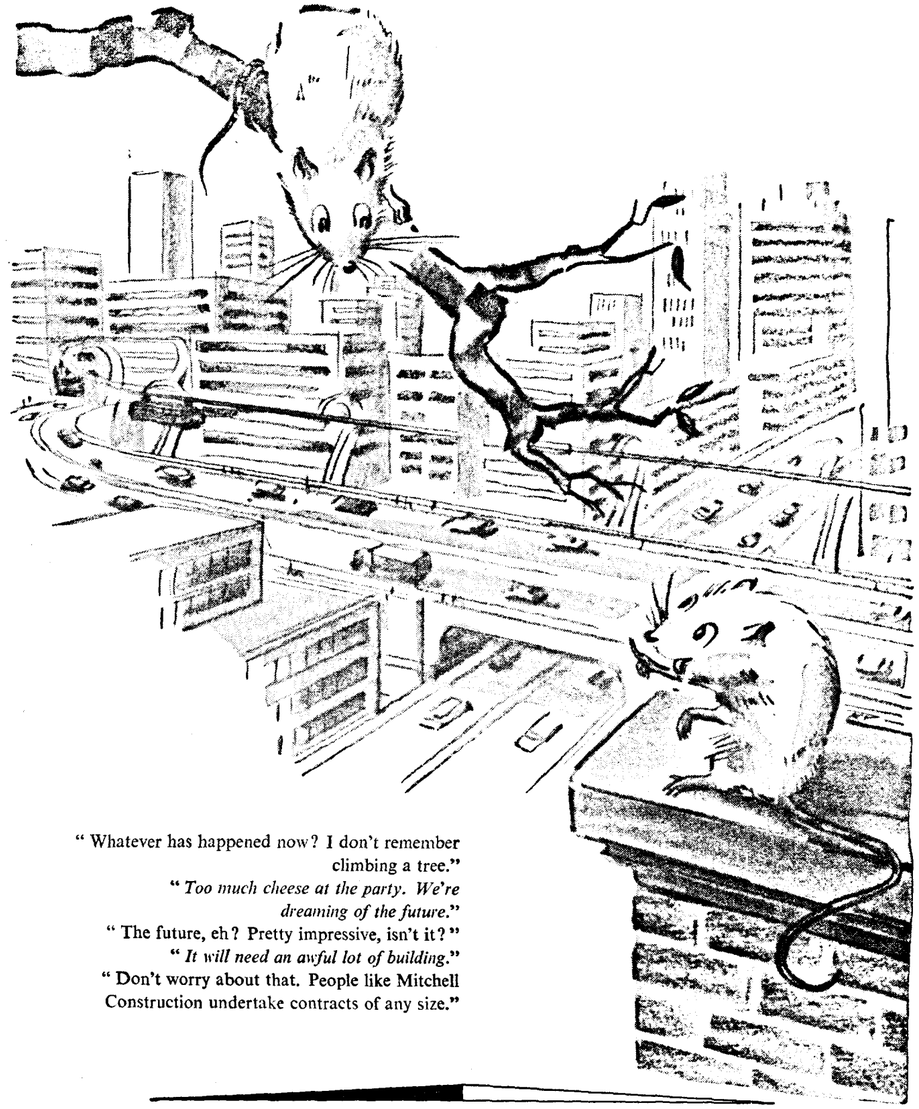
SATCO

Automatic Air Traffic Control System



SATCO comprises the ground equipment to predict, co-ordinate, check and display the movement of air traffic control en-route and in terminal areas. It provides an extremely rapid means for calculating flight paths, for detecting potential conflicts and for coordination of traffic control between controllers and between Area Control Centres. Special features are included for military/civil coordination and for controlling jet traffic.

The system has been ordered by the Netherlands' government and the first phase is now under operational test.

Avis Unileverensis

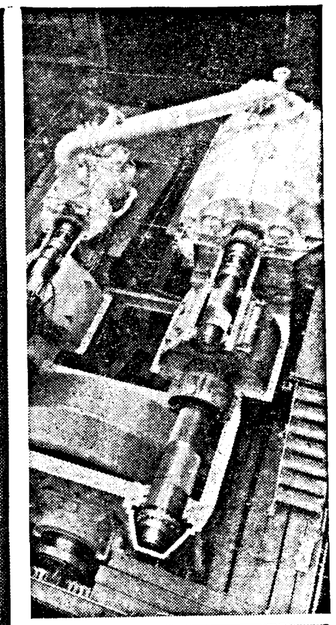
(MANAGERIALIS)

PLUMAGE: HIGHLY VARIEGATED
HABITS: TOO VARIOUS TO LIST
HABITAT: THE WORLD
DISTINCTIVE CHARACTERISTIC: A HIGH FLYER

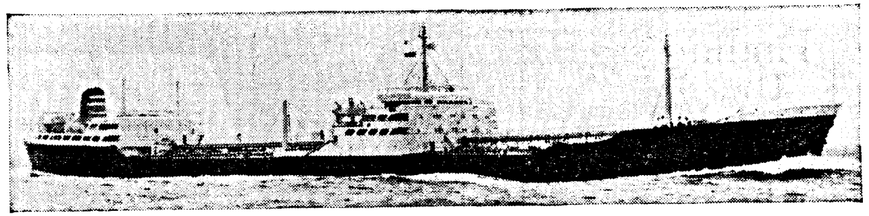
The birds who run Unilever come in many shapes and sizes. To classify them by genus and species would defy the skills of ornithologists. They are, in fact, as diverse as Unilever itself (some 400 companies in 50 different countries). The one thing they all have in common is their work as managers.

What does being a manager mean? Well, let's put it this way. Some men are specialists—their talents lie in a particular field. A manager, on the other hand, must be able to employ his talents in many different fields. Trained in one, he must have the ability to command in many.

This breadth of outlook is one of the qualities we look for at our trainee selection boards. When a man has joined us, we develop this quality right from the beginning by giving him a variety of experience during his training.



As a man goes higher his responsibilities broaden. We are looking for people who, if they make senior level as managers, will be expected to take very wide responsibilities indeed. The Parent Board of Unilever itself and the Management of our 400 companies are peopled by men like this—men who have worked their way up through the business as managers, all of them.



And on their way up they are getting a variety of experience to fit them for the jobs at the top. For a marketing man, for example, a spell in a sales team in Yorkshire may lead to experience in an advertising agency in London. Later, from London, our man may go to Brazil—or Pakistan, or Australia, or to one of many such overseas stations. From abroad he will come back to greater responsibilities at home. Products, peoples, markets—these and many other facets of business life are constantly changing for Unilever. The Unilever manager must develop with them—or ahead of them.

So if you're a bird who likes a varied habitat—if you welcome the chance of a migration or two—above all, if you're feathered for flight into the higher realms, Unilever atmosphere may be congenial to you. The booklet, Six Men on Business, will tell you more about us. Ask your University Appointments Officer for a copy, or write to us at:

UNILEVER TRAINEE DIVISION (PRC 316), UNILEVER HOUSE, UNILEVER LIMITED, BLACKFRIARS, LONDON, E.C.4.

R W G

The first successful turbine vessel ever built was Sir Charles Parsons' Turbinia. She gave her name to the works in which she was built and which, a few years later also built the first geared turbines to be put in to a ship. To-day Turbinia works builds the finest of marine turbine machinery for ships of every class and power.

Finding the job that fits the man

Each year in The Guardian, a number of leading industrial and commercial companies take full pages to talk about themselves and the openings they offer to school-leavers and graduates. In this way they are able to attract the interest of the lively-minded student who reads The Guardian. They are able to tell him the sort of firm they are, the prospects they offer, and the qualifications and qualities they require.

These announcements have proved extremely useful and productive in the past, both to the companies seeking the right sort of recruit and the man (and woman) seeking a job with a future. The series began on January 18th, and is continuing each day for several weeks.

Lively minds like

QUALITY PRODUCTS AT MODEST PRICES

JAPANESE SEWING MACHINE

Since 1953, more than 10 million sewing machines of various brands and types, including all of the latest Japanese models, have been sold all over the world. They have been welcomed into foreign homes because they are designed right, built and priced right for any budget.
Japanese inventive genius and mass production techniques insure top quality and dependable performance. Many of the features are exclusive—unobtainable in machines manufactured in other countries. Every machine is thoroughly tested and inspected—it must pass strict controls before export. Of Japan's current annual 2,500,000 production, 2,000,000 are exported.

JAPAN SEWING MACHINE EXPORTERS' ASSOCIATION

International NU-SWIFT News No. 2

HAVE YOU MET THESE PEOPLE?

22. In arctic SPITZBERGEN (Norwegian: SVALBARD), divided by an invisible iron curtain, but where Norwegian and Russian workers fraternise, the NORWEGIAN COLLIERIES of STORE NORDISKE SPITSBERGEN KULKOMPAGNI are protected by Nu-Swift.

23. THE ROYAL CANADIAN NAVY, which in 1947 standardised on the Nu-Swift Universal Water/CO_2 Extinguisher, has placed further orders.

24. HAILE SELASSIE, H.I.M. of ETHIOPIA, is reported to take a keen interest in fire extinguishers. Nu-Swift has been approved and the first consignments have been sent to ADDIS ABABA.

25. Since MOROCCO gained her independence, a Nu-Swift sales concessionaire has been appointed and the first supplies of extinguishers have been shipped to glamorous CASABLANCA.

26. Narrow and winding alleyways in the ancient town of ST. GEORGE, first British settlement in now fashionable BERMUDA, sometimes prevent the Fire Brigade from getting close enough for effective fire fighting. Fire engines are therefore fitted with extinguishers to enable firemen to fight inaccessible fires with reliable Nu-Swift.

27. A.T.A.C. the MUNICIPAL TRAFFIC COMBINE of the City of ROME, and reputed to be the largest surface passenger transport organisation in Europe has decided, after tests extending over two years, to standardise on Nu-Swift.

28. YUGO-SLAVIAN STATE-OWNED CORPORATIONS are among the Nu-Swift customers situated on the edge of the East-West iron curtain.

29. In HELSINKI, capital of gallant little Finland, and almost within a taxi ride of Leningrad, the FINNISH POSTS AND TELEGRAPHS DEPARTMENT have decided to standardise on Nu-Swift Dry Powder extinguishers, especially suitable for use under severe arctic conditions, common each winter in Northern Finland. Substantial orders have already been placed.

HAVE YOU BEEN TO THESE PLACES?

30. GERMAN SHIPOWNERS are now also able to fit Nu-Swift in their ships, thanks to the approval of the SEE - BERUFSGENOSSENSCHAFT in Hamburg.

31. At TULLN, Austria, in the presence of high ranking Austrian fire fighting officials, including BRANDDIREKTOR DUFEK, Chief Fire Officer of Vienna, two Nu-Swift Dry Powder Extinguishers, Model 1604, bonded for 2 years for reliability tests were recently discharged. They passed with flying colours and OBERBRANDRAT SPEIL, the official responsible, signed the Certificate of approval on the spot.

32. The Government of the FALKLAND ISLANDS, British sheep farming colony in the South Atlantic, near Argentina, recently placed their first Nu-Swift order. Sheep vastly outnumber human inhabitants in the Colony, previously of great strategic *importance, but* GREASY WOOL has high fire risk.

33. INDEPENDENT TELEVISION AUTHORITY, always in keen competition with the BBC, is determined that programme transmission shall never be interrupted through preventible causes. All its stations are now protected by Nu-Swift.

34. Reputedly being let at £25 a day or more, NEW LUXURY SUITES on the top floor of the DORCHESTER, London's premier Park Lane Hotel, are protected by Nu-Swift.

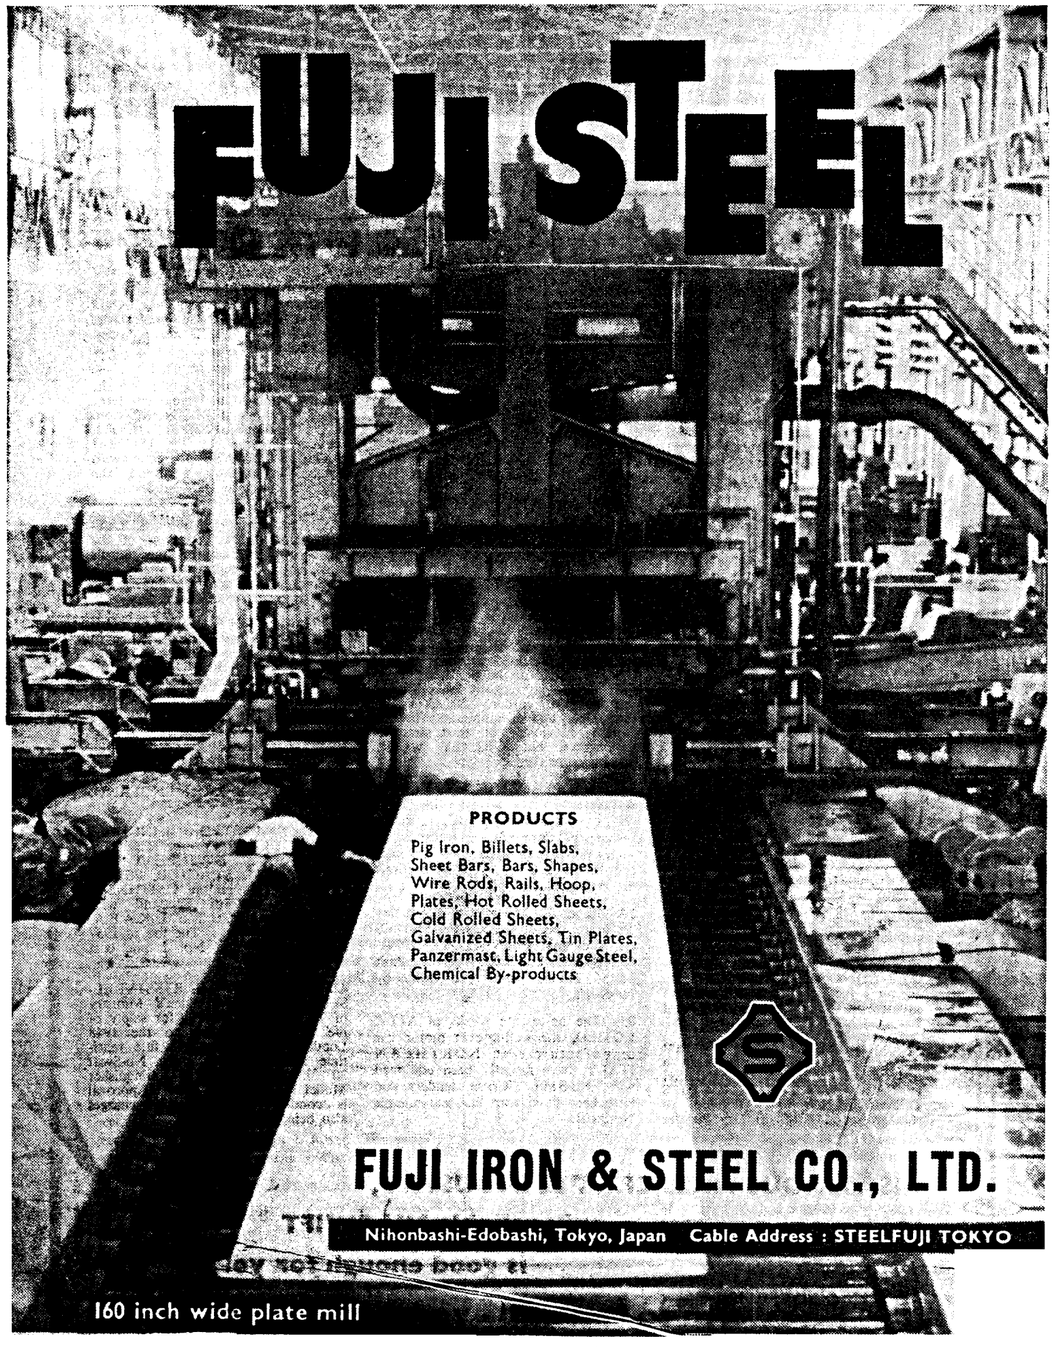
35. The up-to-date works of ALFA ROMEO, the well-known motor car manufacturers in NORTHERN ITALY, have recently been equipped with Nu-Swift. Crash tenders too have been fitted with fast and reliable Nu-Swift.

36. In NASSAU, BAHAMAS, eldorado of all YACHTING AND DEEP-SEA FISHING enthusiasts, many of the YACHTS are equipped with Nu-Swift.

37. PRINCESS BENEDIKTE, teenage daughter of the King of Denmark, recently launched a large train ferry named after her at ELSINORE close to the *legendary* home of Hamlet. Required urgently by the DANISH STATE RAILWAYS to cope with increase in cross-water traffic, the ferry was equipped with Nu-Swift.

38. The Trustees of SHAKESPEARE'S Birthplace in STRATFORD-ON-AVON, conscious of the dollar-earning value of the Bard's home, has protected the property with Nu-Swift. Last year the house was visited by over 200,000 sightseers.

39. H.M. THE KING OF SWEDEN has had Nu-Swift fitted in his cars and other vehicles. On board H.S.M.S. 'TRE KRONOR,' Sweden's premier man of war, His Majesty is similarly protected. Three other reigning Sovereigns are also protected on board their yachts by Nu-Swift.



40. ESSO RESEARCH, LTD. have equipped their new offices at ABINGDON, BERKS., ENGLAND, with Nu-Swift.

41. The UNITED KINGDOM ATOMIC ENERGY AUTHORITY have protected DOUNREAY EXPERIMENTAL REACTOR ESTABLISHMENT in remote CAITHNESS in the North of Scotland with reliable Nu-Swift. The U.K.A.E.A. has some fire risks: The fire in 1957 at their Windscale No. 1 pile cost £1,967,826.

42. KUNGL. SJÖ FARTSSTYRELSEN, progressive Sweden's Ministry of Transport responsible for safety of life at sea according to the 1948 London Convention, was first maritime authority to approve Nu-Swift 30 lb. Dry Powder Extinguisher Model 1630, for use afloat. Approval is conditional upon spare charges also being carried.

ANNUS MIRABILIS

In 1884, Charles—later Sir Charles—Parsons built a practical steam turbine. His invention made it possible to employ units producing great power in relation to their size and weight, and providing very smooth and regular rotation. Fifty-five years later the internal combustion turbine was used in an airframe; aircraft performance improved spectacularly and the piston aero engine was superseded.

Revolutionary advances

Redux metal bonding and Aeroweb honeycomb are inventions contemporary with that of the jet engine. They enable aircraft designers to reconcile a reasonable payload with a heavy weight of fuel and to combat fatigue failure. Today more than seventy types of aircraft are Redux bonded; for the supersonic air liner of tomorrow, bonding and honeycomb constructions are economically indispensable. May we send you further details?

Components of the English Electric Lightning incorporate Redux bonding and Aeroweb metal honeycomb.

Redux adhesives for metals

Redux and Aeroweb are registered trade names

who

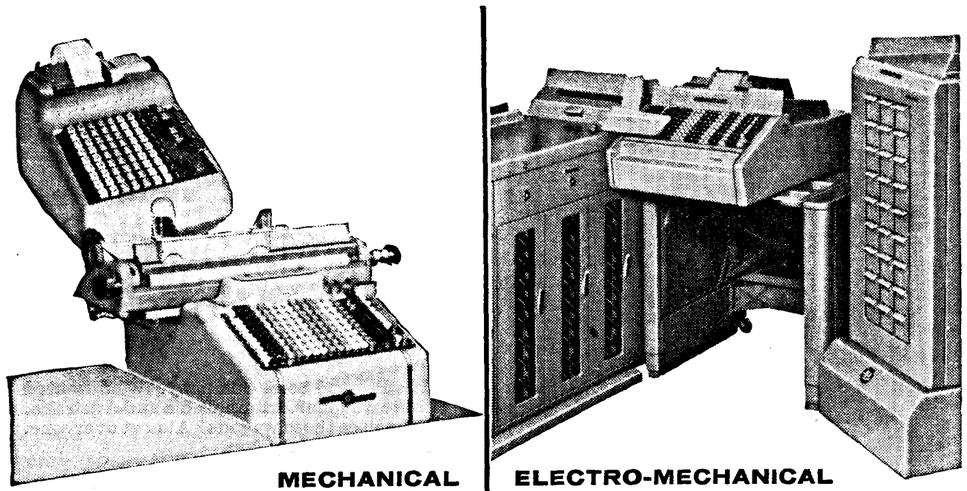
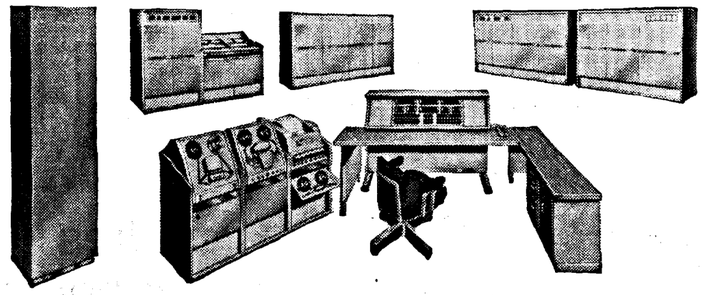
made 90,000 wagons?

The Pressed Steel Company. Who wanted these wagons? Britain, India and Australia. Who uses these wagons? Almost everyone. Almost certainly you.



---

who



makes a car body in 20 seconds?

The Pressed Steel Company. Every working day they roll car bodies off the production line at the unprecedented rate of three a minute.

PS is for Pressed Steel, and the Pressed Steel Company is all for getting on with the job as quickly as possible. But don't be misled by the speed of delivery: months of design and planning, years of engineering experience go into every finished job.

ELECTRONIC SYSTEMS

Whatever your business...whatever its size...Burroughs build equipment to meet your every data processing requirement!

The reason Burroughs can meet your every data processing requirement is this: Burroughs produce the widest range of business machines in the world.

In adding machines, Burroughs offer you a choice of full-keyboard and multiple-total models. It's the same with accounting machines—you have a choice with Burroughs. To name three: new low-cost, fully automatic Director accounting machine... Sensimatic, with unlimited programming flexibility... Sensitronic, for automatic electronic accounting. In electronic computing equipment, too, Burroughs can virtually custom-fit a machine to your job. For business computations it's the new Burroughs F2000 ...for more complex, medium-range computing, the new desk-size E101... and for large-scale computing, the new Burroughs 220.

No problem is too small... no application is too big for Burroughs data processing equipment. And the beauty of it is, a Burroughs machine will pay for itself in savings, over and over again.

GALA NIGHT—AMERICAN STYLE—

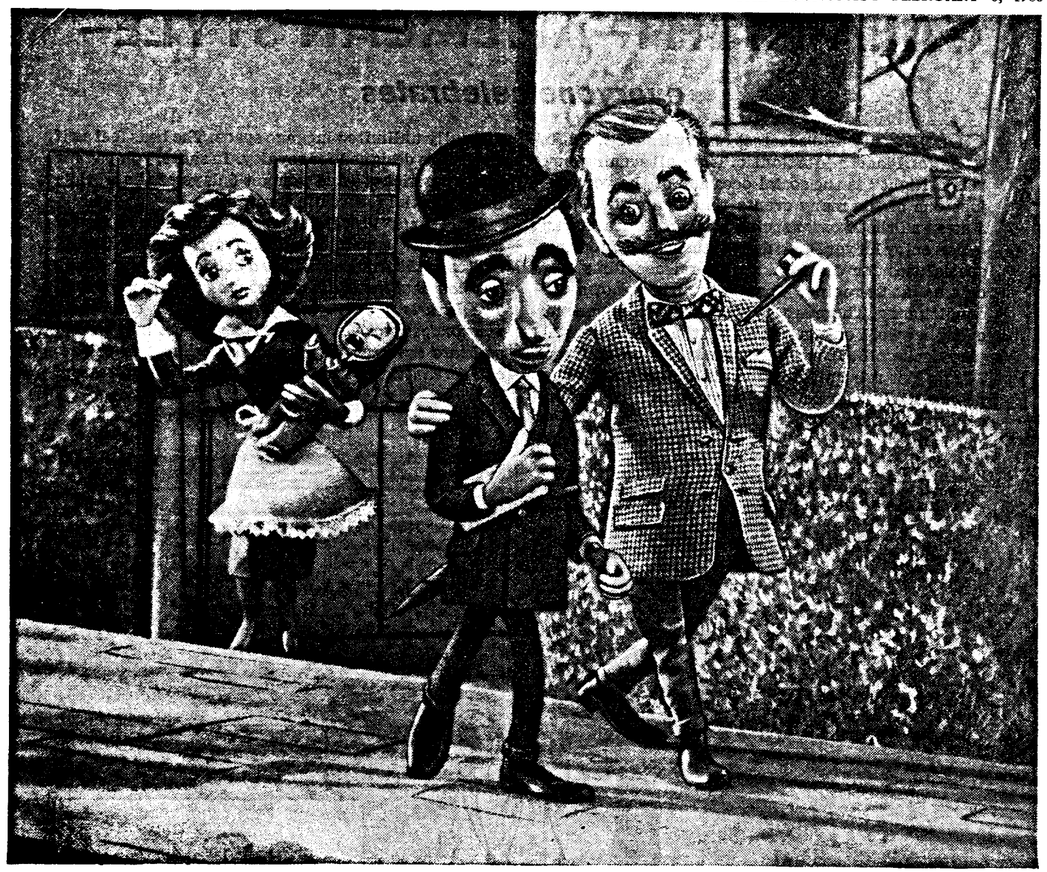
everyone celebrates

SCENE: the world's fastest luxury liner *s.s. United States*. Place: mid-Atlantic. Time: all evening long. "Gala Night" is the social occasion of the voyage—just one of the many events that make the *United States* and the *America* such a pleasure to travel in.

You enjoy Meyer Davis dance music... 100 gourmet specialities for dinner... pre-release films... cinema horse-racing. Your room has its own air-conditioning. There are 800 stewards—nearly one for every couple. You can exercise in the gymnasium... play deck golf... swim in a heated salt-water pool ... or just relax with the world's most interesting people, while your children have fun in a professionally supervised playroom.

You have acres of deck space to relax in—and virtually unlimited luggage space. The beds feel as if they were designed for royalty. In short, you pay for just your ticket—and you get 5 days of the world's most palatial resort life thrown in!

This year is "Visit U.S.A. Year"—and there's a special welcome for you in America. Travel on the United States *or the* America *will be a holiday for your family too, now that travel allowances are virtually unlimited. The luxurious Cabin and Tourist classes could beat your budget problem. All fares to your destination and on-board expenses are payable in sterling, and there is a 10% reduction on return fares during the off-season.*



Everyone sees the stately gaiety of shipboard life through different eyes. This is how the famous artist Feliks Topolski interprets Gala Night aboard.

Danger of Settlement

IF Sir Brian Robertson had given an immediate wage increase to the National Union of Railwaymen on Friday last week, it is highly probable that the country would have been sent gently careering again up the well-trodden spiral of inflation. Behind all the usual arguments that this year's bargaining provided a very special case, behind all the undoubted public sympathy with many underpaid railwaymen, the questions at issue were the old familiar ones of whether wages should be determined by economic forces or by considerations of very short-term expediency—and whether signed agreements that have become inconvenient to union leaders should be regarded as no longer binding.

By threatening a national strike on February 15th, the NUR is in open breach both of the railways' normal conciliation machinery and of its previous specific promise to await the publication of the forthcoming Guillebaud report. Its change of front is not the result of anything that has happened in the past four weeks which makes an immediate claim more justifiable to propound or any safer for the commission to grant. The only thing that has happened since January 11th (when the union last agreed to wait) has been an increase in the pressure on the NUR's moderate leader from his militant lieutenants and NCOs. Yet when the unhappy Mr Greene appeared a week ago brandishing his two broken pledges and his strike weapon, like a worried old lady made to carry her Teddy boy son's cosh, the public and Sir Brian Robertson and (presumably) the Government at once opined that the most convenient thing to do might be to give way before the threat. The day was saved only because the other two railway unions, representing the engine drivers and the railway booking clerks, refused to agree that the Guillebaud report should be prejudged.

It is very important that behind-the-scenes pressure should not now prevail upon these two craft unions to change their minds and yield to the NUR. This is no doubt a wildly unpopular thing to say. The easier and more conventional plea is that the Trades Union Congress or the Minister of Labour or somebody/anybody should persuade the engine drivers and the clerks to accept an interim increase for all railwaymen now, pretending that this would not prejudice any developments that might follow later. But of course it would prejudice them. For one thing, the leaders of these two unions have stood by their promises and against their own impatient militants more tenaciously than Mr Greene has done; if Mr Greene is given an increase now, they will be for ever reminded that surrendering to militants has proved the best way of securing benefits for members. But, even more important, an interim increase for all railwaymen now would militate against precisely those considerations that are most eagerly urged by ordinary people who feel vaguely that some concessions should be made.

In part, the present pressure for compromise springs from a general feeling that many railwaymen are sadly underpaid. But one of the NUR's main objects, in trying to rush through an interim increase in advance of the Guillebaud report, is to prevent the Transport Commission's money from going principally to those who are underpaid most. Far be it from *The Economist* to suggest that a body like the Guillebaud committee is the ideal instrument for discovering which workers suffer wages and conditions that are demonstrably lower than they could earn elsewhere; we believe that this is better demonstrated by the men's own movements in the market. Whenever it

is impossible to recruit or retain a sufficient staff in a particular grade, that grade is underpaid. But the NUR's aim in trying to rush through an interim rise for everybody now is that money should go equally to those grades whom the railways employ in sufficiency or superfluity (who are mainly represented by the NUR) as to those who are in short supply ; many of the latter are represented by the craft unions. As a matter of cold market fact it is the craftsmen's differentials that have been eroded most in recent years, and the Guillebaud report is almost bound to say so.

IN still greater part, the present public clamour for a compromise arises from the realisation that a railway strike would be a most uncomfortable misfortune. But why does anybody suppose that concessions to the NUR now would avert a strike, as distinct from merely postponing it?

When the Guillebaud report appears there is going to be a bitter controversy between those who think that the main concentration should be on raising the wages of the lowest paid, and those who want the chief emphasis to be on the restoration of differentials ; because the railways are in deficit and have not got limitless money to spend, one side or the other is going to be grievously disappointed. Until now, it has been possible to hope that the fact that everybody should then get some rise might prevent the controversy being pushed to the point of strike. If the NUR can be jostled out of its intention to strike on February 15th, without being given concessions, that hope can still persist. But consider what will happen if the Guillebaud report appears after an interim increase has been granted in response to the NUR's current pressure.

The battle between the NUR, representing the lowest paid unskilled workers, and the two insulted craft unions, striving for higher differentials, will then be a battle for face. It will take place in the knowledge that threats of a strike have already proved advantageous. A strike started by the NUR on February 15th, for reasons that many of its members would be bound to regard as pretty silly, would at least have some terminable elements about it. If it limped as badly as, say, the 1958 bus strike did, then a ladder could fairly easily be provided for a defeated NUR to climb down ; the most obvious device would be to bring the Guillebaud report forward into March (a solution the union refused last week). If the strike succeeded in crippling the economy, the concessions which Sir Brian wanted to hand out last week would no doubt have to be offered anew then—but after the NUR had depleted some of its strike funds. The additional money that is to be paid out after the Guillebaud report could then be directed to increasing the craft unions' differentials, in the knowledge that the NUR would be in no financial position to start another strike.

But if concessions are given to the NUR now, Sir Brian Robertson will be confronted at the time of the Guillebaud report with two main groups of unions, each of which will be capable of starting a strike if the other group gains more than itself. Any unsuccessful strike in these circumstances would be liable to last for a long time, because there would be no ready-made ladder for the losers to climb down. Any strike that successfully crippled the economy would no doubt have to be settled on inflationary terms—but with the difference that, because of the earlier concessions, the jumping-off point for inflation would be higher than it would be for the settlement of any strike that started on February 15th.

These are not Machiavellian calculations. They are a sober weighing of the most reasonable probabilities. That is why all discussions of the undoubted damage that a strike would do to the economy, to the Railway Executive, and to the public are irrelevant to the main immediate question. That question is whether it would be wise to buy a respite with an inflationary settlement—at the worst time for it, industrially, strategically, and tactically in its effect on other wage claims—in order to run into the high possibility of facing a different strike under worse conditions and in a worse place later.

The King and the Barons

General de Gaulle's task is still to strengthen his authority with the army in Algeria

IS it a famous victory? France has survived: it is a merciful remission for the western world. The Fifth Republic is still in being: honour to General de Gaulle, alone (*M. Debré dixit*), whose achievement it is. The barricades came down in Algiers on Monday; thus the army did what it should have done a week before. But the success that General de Gaulle has won in Algeria is not in rounding up the settler bully-boys. The crisis is not over simply because MM. Lagaillarde and Biaggi are behind bars, M. Ortiz is in (apparently) assisted flight, and about a hundred of their followers are voluntarily attached to the Foreign Legion. The general's triumph is that, at an hour of exceptional and undenied crisis for the regime, he summoned, persuaded and compelled the army to do its duty. And the extent and permanence of this success have still to be discovered. At present it looks more clear-cut from Paris than in Algiers.

The army's obedience to the state is the crux, as it has been ever since General de Gaulle returned from Colombey at the army's bidding two years ago. It was the army, after all, that began this crisis when General Massu delivered his awful warning ; MM. Ortiz and Lagaillarde merely seized on the evidence of military disaffection to start a revolt that they seem to have had in mind for April. Now the crisis has finally stripped away the illusory constitutional paraphernalia that surrounded the reality of power in France. It is not upon the votes of a docile Assembly, now effectively dismissed for fifteen months, or upon the loyal messages descending, after some hesitant days, upon the Elysée from every commune in France, that General de Gaulle's rule presently rests, or has rested. It is on the uneasy workings of the feudal relationship between him and the army in Algeria that the future of France still depends.

General de Gaulle embodies the legal sovereignty of the state. The army accepted this sovereignty last weekend. If the generals had denied it, they would ultimately have had to face the necessity of legalising their insubordination by bringing about a change of sovereign in Paris. Two years ago the army did this. The alternative monarch at Colombey was visible then and ready to serve ; what was more, he had personal claims to sovereignty that could, at a pinch, be made to seem superior to the Fourth Republic's. Last weekend there was no such evident alternative ; the army would have had to go it alone, with M. Bidault (or M. Soustelle) in its baggage train. It was the chief merit of General de Gaulle's speech that he made this abundantly clear.

The army was not willing to cross this Rubicon. It was divided, and apparently even its active wing was unprepared for drastic steps in France itself. All that General Challe, for one, seems to have had in mind at the beginning was the exercise of his feudal duty to counsel and warn his sovereign that policy should not be pressed to the point at which the foundation of their relationship—the army's right to permanent occupation of its fief in North Africa—was liable to be broken. General de Gaulle's reply was that the army could, in fact, go on holding its feudality, and that his policy was simply directed towards pacifying the fief and, eventually, securing the legal approbation of the native population. Since this was exactly what the army wanted, as General de Gaulle emphasised, it had no public ground for persisting in its disobedience.

To all appearance the feudal compact continues. Some of the chief insurgents of last week have been removed from baronial hands to the royal court. But the army still seems to be protecting its other retainers (M. Ortiz's disappearance is intriguing), and it even allowed one of them, M. Demarquet, to hold a press conference in Algiers as late as Tuesday in which he promised a different outcome to the next revolt. But efforts to enforce monarchic authority must now be expected. General de Gaulle may mean to purge his cabinet, where the army has its sympathisers ; but this, when it comes, will merely be a reorganisation of the household clerks. He must also move against those barons (like General Gracieux, who held the Algiers command for five days last week) whose loyalty has been too scandalously in question. He has the clear right to banish such public offenders, as General Massu has discovered.

THE real tests of General de Gaulle's present authority and intentions go deeper. Can he now, simply acting on suspicion, remove all the disaffected officers *en masse*, a course that is likely to lead to their banding together in self-defence ? Or does he mean to tear up the feudal compact in the most decisive way by hastening a political settlement in Algeria ? The difficulty is that while the army has found it cannot get along at present without General de Gaulle, he, too, can hope to do little in enforcing his policy in Algeria without the sympathy of a united army. They have to live together, and this means compromises on both sides. Had General de Gaulle meant to impose his will openly on the army he would have needed to conjure up a continuous manifestation of popular support in metropolitan France: the support that only an active parliament can give. But he has not chosen this course ; on the contrary, the Fifth Republic does not work that way. When the trade unions wanted to show their approval of the general's policy, the only way they could find to do it was by calling an hour's strike on Monday. Even if the general had thought to use a new Assembly against the army in the coming months, this is not a course to which his personal taste inclines. The army knows this. It is likely to accept the Assembly's dismissal as a reassurance that the general means to abide by the feudal law. This covenant is the chief issue to be settled when he eventually crosses the Mediterranean.

But General de Gaulle does seem to be evolving the idea of a different political future for Algeria. He spoke pointedly to the parliamentary leaders on Tuesday about a federal solution. This could mean that self-determination would result in four separate entities: a European, an Arab, a Kabyle and (possibly) a Jewish Algeria, all federated and directly linked with France. Despite the rip tide of nationalism in the rest of Africa, the intention would be to persuade enough Moslems to vote for a solution that would at least give them self-government. Since political boundaries would be difficult to draw, it may be that the general is considering an application of the Cyprus solution of separate communal assemblies. A version of the Swiss federation has also been suggested. Such a solution might well be acceptable to the army, because the weakness of the resulting state would ensure its dependence on France. But it seems an idea that must further separate the general's plans for Algeria from those of the Moslem rebels.

The mass of the Moslem population of Algeria put its faith in General de Gaulle in the past fortnight. The Casbah did not repeat the manifestations of *Algérie Française* that were staged in 1958. The Moslems want the promise of self-determination, given by General de Gaulle on September 16th, to be honoured. In his speech last Friday he seemed to keep faith with them. Would they consider a federal settlement in keeping with the spirit of the September offer ?

IT may be some time before the precise direction in which General de Gaulle's mind is moving becomes plain. His immediate task is to exploit the tactical advantage that the failure of the settlers' revolt has given him. Yet it would be out of character with his past performance if he did not also give some thought to the reassertion of France's role as a major power. This, after all, is one of the concepts by which he may hope to draw the army to him (particularly, as our Paris correspondent writes on page 531, the air force and the technological branches) and diminish its preoccupation with the political responsibility for Algeria.

General de Gaulle already has an exhaustive diplomatic round arranged before the summit meeting in May. He entertains Mr Khrushchev on March 15th ; then comes his own visit to London on April 5th and to Washington later that month. His allies will leave him in no doubt of their thankfulness that he, and not a military junta, rules in Paris ; and Mr Khrushchev, for his own reasons, may concur. Yet the week in which the French army stood immobile before the Algiers barricades cannot be erased by the appearance of a mushroom cloud over the Sahara. Had the army acted on the first Sunday of the revolt, as it was ordered to do, General de Gaulle might now truly stand forward as the master of the

164808

situation. That mastery has still to be demonstrated beyond doubt in the steps he takes in Algeria. Until then there must be hesitations about the stability of a regime that depends on the power, the will and the very existence of one man.

France's allies have every reason to wish for the re-emergence of a strong, coherent and actively democratic France. If they express reservations now on, say, the political advisability of extending full nuclear partnership to France, it will not be because they court division or misunderstanding. France's release from the bitter tragedy of Algeria is the victory that all its friends wish for. They, too, can count themselves fortunate that General de Gaulle stood in the breach last week. They, too, must hope now that his course in Algeria will be realistic, strong and sure. Their trust might only be greater if he did not seem to stand, by his own and his countrymen's wish, quite so alone.

Goodwill or Real Estate?

If attention continues to be paid more to shadow than substance, the Cyprus negotiations may break down

NEITHER polite euphemisms, nor expressions of goodwill and sweet reason, can disguise the fact that the future of Cyprus is again in jeopardy. After days of hard slogging round the conference table, Archbishop Makarios left London last Saturday without reaching agreement on the military facilities that the British are to retain in the island. Unless this stumbling-block can be removed within the next few days independence will have to be again postponed, and this time—owing to the exigencies of the British parliamentary timetable—at least until May 19th. As the governor, Sir Hugh Foot, has rightly emphasised, such a delay will be dangerous and might be disastrous.

Archbishop Makarios does not deny the undertaking written into the London agreements that Britain should retain sovereignty over its bases in the island. But in his view 36 square miles should amply meet the British needs, provided the Cypriots are willing—as he says they are—to meet all reasonable British military requirements outside the sovereign areas. The archbishop further insists—and this is what really matters to him—that the island should be one single administrative and economic unit. To this end the British have put forward proposals under which the administration of Cypriot civilians living inside the bases would be delegated as completely as possible to the Cyprus government; but these apparently do not satisfy him.

The British, for their part, point out that they have already scaled down the size of the sovereign areas from between 150 and 170 square miles, including about 4,500 Cypriots, to about 120 square miles, including less than a thousand Cypriots; they maintain that they cannot go below this "minimum." They have, moreover, reduced the number of permanent sites that they wish to retain outside the sovereign areas from more than a hundred to nineteen; and among other concessions, they are ready to increase substantially their offers of financial help to the new republic.

Thus both the British and the Cypriots have tried to be reasonable and accommodating, and on the face of it, the British have tried the harder. But compromises tend to be unimpressive and ineffective when each party is arguing from a quite different point of view, and when neither has any clear idea of how much the other believes itself to be sacrificing. Although the British military requirements were described in some detail in the London agreements, the archbishop clearly failed to grasp exactly what was involved. (Or if he did, he gravely miscalculated the political consequences to himself.) And while he is concerned with achieving a settlement that is acceptable to the majority of Cypriots, the British are primarily concerned with securing the arrangements that they believe to be necessary if their bases are to be viable and efficient.

In their pursuit of these ends, both sides have tended to lose touch with reality—the British, perhaps, the more. The thinking of British statesmen on military matters remains, apparently, doggedly devoted to the fallacy that sovereignty equals security. (This fallacy does not, it seems, trouble the American military planners in, say, England or Japan.) But since important military facilities, such as Nicosia airfield and the ports of Limassol and Famagusta, will in any case remain outside the sovereign areas, is the actual size of these areas so vitally important that it is worth risking the whole settlement to secure it? As so often, the trouble is that although history is being studied for its lessons, it is not being studied dispassionately enough. The experience of Egypt is believed to have demonstrated that a base, to be effective, needs to be on the sovereign territory of the power that is to use it. What it really demonstrated was that a military base that is held without the goodwill of the local government and population is more of a nuisance than an asset. Even if its maximum requirements had been met, it is unlikely, in fact, that the British Government would ever have been able to make effective use of its bases in Cyprus against the opposition of a Cypriot government.

THE Cypriots, for their part, have persisted in an unfounded belief that the British cherish the secret idea of establishing a sort of Mediterranean Hongkong on their coast. They have ignored the fact that in ordinary times the bases will make scarcely any practical difference to the ordinary Cypriot, whether he lives inside or outside them—beyond, perhaps, providing him with a job. The British negotiators have evidently tried hard to disabuse the Cypriots of these delusions, and one may hope that they have succeeded, at any rate with the leaders. Even so, Archbishop Makarios cannot accept a settlement which will lay him open to attack from his political opponents, both on the Left and on the Right, for accepting what seems to the Cypriot imagination like a perpetuation of colonial rule in an enclave. Hence his insistence on only one civil administration, and an undivided economy.

On the face of it, it is puzzling that the archbishop should not have accepted the British proposals, since they seem to offer him at any rate the substance of what he wants in the administrative question. With this in his pocket, does the size of the sovereign areas matter so very much to him either? Evidently in his view it does. Confronted with a situation in which, psychologically, appearances count for as much as substance, he perhaps calculates that only if he gains further concessions over the size of the sovereign areas can he successfully sell even the favourable British administrative proposals. And since nobody has a greater personal interest in preventing the London agreements from breaking down, the archbishop must be presumed to know what he is about.

In an ideal world, one could no doubt disregard the ambitions of extremist politicians and the nationalist fears and phobias of simple people. But in real life this is not possible. Nor is it possible for the British Government to concentrate on its military facilities in Cyprus and wash its hands of the island's future. The usefulness of the first depends entirely on the stability of the second—and on the amount of goodwill that the British manage to leave behind them. Both moral obligation and practical self-interest demand that the first priority of British policy should be to get the new republic off to a good, firm start.

The Debate on Growth

Reactions to "Rostow on Growth" show that this new analysis of how nations achieve prosperity has set a cat among the pigeons of both communism and capitalism

A HARD-HITTING international debate has developed around Professor W. W. Rostow's analysis of the stages of economic growth of nations, which was first published in summary in *The Economist* of August 15 and 22, 1959, and will shortly be published in book form by the Cambridge University Press. "Rostow on Growth" has excited interest and argument in countries that range from India to Argentina, and has been translated into Japanese, Swedish, Portuguese, Czech and other languages. There are indications that it has been studied in the higher ranks of the Soviet hierarchy but overt Russian reaction has been limited to Mr Yuri Zhukov's impassioned and uncomprehending tirade in *Pravda*, extracts from which appeared in our issue of November 7th; our own invitations to the Soviet press to offer us a reasoned criticism, either for publication or in confidence, have been rebuffed, and *Pravda* does not yet seem to have published the letter to its editor which Professor Rostow wrote on November 17th. (We are therefore publishing the substance of this letter on page 512.)

Strong criticisms of the Rostow thesis also appeared in the December issues of *Fortune* and *Encounter*. *Fortune* may, in this context, be not unfairly taken to represent the opposite pole from *Pravda*, as it is primarily dedicated to preaching the pure gospel of free enterprise to its audience of American business men. It prints a shorter version of Professor Rostow's argument, but firmly rejects it, and follows it with a vigorous counter-attack by Professor David McCord Wright of McGill University. In the December *Encounter*, Mr Peter Wiles of Oxford indulged what he amiably calls "the academic's instinctive reaction . . . to pick holes"; and in the January issue Professor Rostow has briefly answered some of his points. These are representative of the lively and variegated fire drawn from all sides.

One approach is common to Messrs Wiles, Wright and Zhukov. All three, in their somewhat different ways, criticise Professor Rostow along the lines here rendered by Mr Wiles:

> Neither classes nor ideologies bother him at all. There is no analysis of the exact *kind* of obstacle that traditional society opposes to growth, nor of the kind of person—so very various from case to case—who overcomes these obstacles.

It is curious that the one point of agreement between the three critics should be so demonstrably unfounded. Professor Rostow has refuted the accusation that he ignores classes, and the importance of human character and group interest, in his letters to *Encounter* and *Pravda*. Readers of *The Economist* need only glance at, say, pages 410, 411 and 414 of our issue of August 15th last to be reminded that he makes some most original suggestions in just this section of his analysis; notably when he takes issue with Marx about (to quote his letter to *Encounter*)

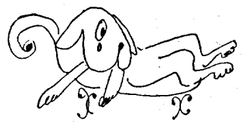
> the kinds of people and groups who carry forward the modernisation programme. . . . I do not believe that the commercial and industrial middle class and the profit motive played the preponderant role he assigned to them. The modern men are—in the past and at present—a much wider spectrum, embracing some kinds of soldiers, intellectuals, civil servants, etc., as well. . . . They often want modernisation for very different reasons; but a reactive nationalism is initially, at least, a common point of meeting.

ONE is tempted to supplement the ripostes that Professor Rostow has given to his critics on a number of points; but the picking of holes can be overdone. It is more to the point here to show how sharp have been the reactions to his empirical finding that "there are many roads to economic growth." Mr Zhukov, not surprisingly, is horrified by this sort of blasphemy, and accuses him of "digging about in old rubbish dumps" to refute Marx. Professor Wright, more politely but no less resolutely, attacks from the other flank under the banner "true growth must come from freedom."

Mr Wiles snipes from a third, and apparently a rather shifting, position. "The superiority of communist growth" is to him self-evident; indeed, in a communist country, he says, take-off "follows immediately the seizure of power, whatever the present level of poverty, and maturity comes more rapidly." (If he seriously applies this dogma to, say, the communist seizure of power in Mongolia forty years ago, his definitions must be so different from Professor Rostow's that he is not really in the same argument.) But he no longer believes that this superiority is "the main fact in modern history," because the peoples of South-East Asia, the Middle East and Africa have recently shown that they "prefer freedom with slower growth." (In Laos, Iraq, Guinea, perhaps?)

While Mr Wiles and Mr Zhukov complain that the Rostow analysis slurs over the "superiority" of communist growth,

Professor Wright is just as perturbed by its supposed failure to recognise that



> continued growth involves the continued discovery and use of new ideas. . . . The new ideas, or at any rate their introduction, come to a very significant extent from the new man. There must be a chance to rise on relatively independent terms. . . . Mere planning, mere centralism, will not of itself keep alive the necessary dynamism. . . .

The quoted statements are quite sound, but they hardly amount to a refutation of the Rostow analysis, which stresses, for example, "inspired gadgeteering" at the beginning of modernisation and the "Buddenbrooks dynamic" that, at a more advanced stage, sets each generation off on new pursuits. And what is one to make of Professor Wright's apparent anguish over the Rostow proposition that aid should be given to under-developed countries without political strings? He seems ignorant on the one hand of Professor Rostow's insistence that "the central challenge of our time" is that of "creating, in association with the leaders and peoples of the preconditions and early take-off areas, a partnership which will see them through into sustained growth on a basis which keeps open the possibility of democratic development"; on the other, of his own claim, made apparently in the name of the United States, that "we desire only that each nation be free to make its own choices."

Fortune's wheel is evidently jolted by the way the Rostow analysis brings out the strong role that the state must play, and has everywhere played, at certain stages in economic growth. It is equally painful for both *Pravda* and Mr Wiles to be reminded that the Russian communists "inherited an economy which had already taken off . . . for two decades before 1914, Russia's industrial output as a whole had been increasing on the average at about 8 per cent per annum." Professor Rostow has indeed put an empirical wildcat among the theoreticians' favourite pigeons. When the flutter in the sacred dovecots has died down, we may find that this new international debate has cleared the air of a number of ageing birds whose hovering served only to darken counsel.

The Animals' Friend

Veterinary surgeons in Britain have never had it so busy

NEARLY 45 million cattle, sheep, and pigs; more than 200,000 horses; 100 million poultry; 3½ million dogs, perhaps 5 million cats, 6½ million cage birds; and an unguessable number of hamsters, white mice, and zoological exhibits make up the population of British domestic animals—possibly more than 200 million in all. To deal with their ills, there are in Britain about 4,600 veterinary surgeons, compared with 35,000 doctors for the 50 million of the human species. The profession is changing fast. In a curious blend of tradition and modern technique, yesterday's old single-handed vet with stethoscope and big pills survives—but beside modern four-man or six-man organisations with X-rays, switchboards, and even radio-controlled cars, against a background of advanced pharmacy and large-scale research.

To practise medicine on other than one's own animals requires membership of the Register of the Royal College of Veterinary Surgeons; this may be gained after five or six years' training at one of six British or five Commonwealth universities. Of 6,200 vets at present on this register, about 3,150 are in general practice in Britain, nearly 700 work for the Ministry of Agriculture, about 450 are academics or researchers, 300 are retired vets and 1,600 are abroad. The vet wishing to enter general practice will at present find situations vacant galore, a boomtime in prescriptions for pets. With modern research carving out constant advances in technique, he has a continual chance to improve the quality of his work; its quantity usually depends on his capital and his stamina.

So, too, does his income; this is still likely to represent many individual items rather than a few high fees for specialist treatment. There is no prescribed scale of fees. To a basic consultation fee of probably between 5s. and 15s. may be added extra charges for surgery or drugs; some vets make up prescriptions themselves, others prefer to have them filled by chemists. The newly-qualified vet without capital will nowadays find it easiest to begin by becoming an assistant in an established practice. The pay may be reasonably lush; he may be offered a rent-free house, free use of a car, plus anything from £1,000 to £1,500 a year as a starting salary. He is less likely to be offered an immediate share in the practice in return for his work alone; he will probably have to save up quite a lot to buy his way in. Today an increasingly sophisticated public demands high-quality service from the vet—which means elaborate and expensive equipment. As in the old medical profession, vets' practices are bought and sold. The price is usually calculated as their capital value plus (for the goodwill) one and a half times the mean of the three previous years' gross; which means that a fair-sized urban practice—bringing in the senior partner, say, £3,000 a year—is likely to cost about £15,000.

IN towns, the work is mostly with small animals. Since the war, to the customary British love of animals has been added an interest in their origins; pedigree dogs have doubled in number since 1946, and more careful treatment is demanded for these more expensive creatures. Moreover, a new generation of flat-dwellers has created a market for new tiny pets; there are now almost twice as many pet birds as dogs. Vets have to deal not so much with new diseases as with new situations. They prescribe for St Bernards exhausted by life in liftless pent-

houses, Alsations flabby with metropolitan indolence, French poodles as inbred as Hapsburgs. "Animal psychiatry" is no longer a music-hall joke; it is a term denoting an increasingly scientific approach to animal welfare. The vet's work is limited, as well as by the hours he sets himself, by the types of animals that he is willing to handle. Some still try to avoid birds, much as in the early years of this century older horse-specialists despised the upstart dog. The horse-specialists were unable to stick to their affectation for long.

SOME practitioners, mainly in towns, are worried by the animal welfare societies. Under the Veterinary Surgeons Act of 1948, these may employ unqualified veterinarians under special licence—on condition that they use qualified vets wherever possible, that they are supported by voluntary contributions, and that they give free treatment. Between them all the societies handle at least a million and a half cases a year; the two largest each have an annual income, from bequests, voluntary contributions, gifts from individual owners, and so on, of about £250,000. The societies claim that all they do is to provide free service for those who cannot afford to go to a vet. Vets claim that the societies' means tests are not stringent enough, and that the societies undercut the profession while not always providing adequate treatment. Probably not every charitable organisation can calmly turn away poor bandaged pussy on the strength of a guess at its owner's pay-packet, but at the moment neither patients nor the veterinary profession as a whole seem to be suffering noticeably as a result.

Outside the towns, economics are more important than emotions, and large animals more important than small; even cats in the country are less family friends than anti-mouse devices. Once upon a time vets could move easily from country practices to town ones, because horses were their principal concern in each; now horses have been replaced as the main patients in the towns by dogs, birds, and cats—and in the country by cows, pigs, and sheep. The present generation of British farmers, richer and better educated, is more willing than ever before to try prevention as well as cure. The vets are even readier to help, more certain than twenty years ago that their bills will be paid. Government activity has aided both sides. Since the 1930s the national tuberculin-testing scheme has expanded, so that it now includes 93 per cent of all herds. Vets designated as local veterinary inspectors have carried out the testing, in return for a regular payment from the Ministry of Agriculture; farmers, still encouraged with bonuses for each animal tested, have come to accept the presence of the vet and the value of his services.

With the increased scale of farming has come increased scale in veterinary practice. The chief partner in a country practice may have to drive 25,000 miles a year. He will need assistants to stay behind to deal with emergencies while he is away on call—and probably one or two other assistants for the time-consuming tuberculin-testing work. With several partners or assistants, anything up to six or eight cars, a thousand pounds or more worth of stored drugs, buildings for surgery, kennels and storeroom, the large sort of country practice can become a small business with much of its assets in fixed capital. But with the advantages of large-scale enterprise come the complexities of management and the difficulties of finally selling such a business; the latter factor alone suggests that there may be a real limit to expansion. Moreover, country vets face the fact that all British herds are expected to have been tuberculin-tested by 1960 or 1961. Some country practices may then actually have to contract.

But in general, the average vet has never had it so good. He is nowadays very much the member of a profession, with its rules and official bodies. For all registered vets the Council of the Royal College of Veterinary Surgeons acts as protector and as judge. It defends their prerogatives and regulates their conduct, sternly telling them that they must "insist on standards of good taste in the face of the lure of publicity and popularity," and that their conduct "must be measured by a higher and stricter code of ethics than applies to citizens owing no special duty to the public." More closely integrated with everyday life is the British Veterinary Association, with about 75 per cent of registered vets in its voluntary membership; the vets' BMA, it sees its chief function as the collection and exchange of information. Thus, centrally-controlled and locally respected, the vet's position is one that many in the profession now compare favourably with that of the medical GP, which they see as going down in the promiscuous drudgery of the health service. Whatever the position in the community of the vet today, it seems very unlikely to go down—and an animal health service is still far enough off for the idea to be one to make a cat (and a vet) laugh.

The Economist

FEBRUARY 4, 1860

PREVENTION OF CRIME

¶ Education, with an unsparing, if not always with a judicious hand, has been forced upon every portion of society:—and this method of reducing crime has taken almost every conceivable shape of day schools and night schools; ragged, reformatory, and industrial schools; evening classes; lectures; reading rooms; and mechanics' institutes. Homes and model lodging houses have been established to help persons, by various inducements, to keep free from crime: and refuges, penitentiaries, and prisoners' aid societies, to assist them to return to an honest course of conduct when they have fallen into wickedness. Our prison system has been changed—and not only altered, but improved—step by step, until, *as far as it goes*, the English system of convict management leaves little to be desired. . . . And, lastly, there has been lately established, throughout the country, a Constabulary Force—and one which, even in its infancy, has proved itself to be something more decidedly beneficial than a hopeful organisation. . . . [But] at present, the Police Establishment completely stultifies the object of its existence, which is not, primarily—and this cannot be too strongly insisted upon—to apprehend crime committed, but to prevent crime prospective. As far as the means within our reach enable us to effect this end, it can be done in but one single manner—by breaking up, and by dispersing the avowedly professional class of habitual offenders, which subsists only by preying upon society. No other plan possesses the slightest chance of permanent success. Industrial education may teach. Religion may train. Refuges may receive. Penitentiaries may reform. Pains and penalties may deter. A Police Force may capture, and the gaols may incarcerate, and for a time suspend the operations of, individual depredators—but all in vain. Neither prisons, nor Police, nor punishments, nor penitentiaries, nor refuges, nor education—and Religion is out of the question, in such cases—will at all avail, so long as there exists, contemporaneous with a population which respects the laws, a class of society which, with all the nonchalance of professional right, systematically and openly sets all laws, human and Divine, at defiance.

NOTES OF THE WEEK

WARSAW PACT

Eastern Summit

Moscow has seen a great gathering of the communist clans this week. On Tuesday all the east European party leaders plus their agricultural ministers and experts met to discuss agriculture—the Achilles heel of the communist block. (No doubt plenty of other things were discussed on the side.) The slow and hesitant increase in production and the wide discrepancies in the rate of collectivisation in the different countries were probably the chief topics discussed. Observers from North Korea and Outer Mongolia attended these meetings, but there was nobody from China. It is unlikely that the Russians failed to send an invitation to Peking ; perhaps the Chinese preferred to stay away from displeasure at the marked lack of Russian enthusiasm for the Chinese communes.

Chinese observers did, however, turn up for the meeting of the consultative committee of the Warsaw pact which opened in Moscow on Thursday, attended by communist defence and foreign ministers as well as by the political leaders. This conference was in effect the eastern summit, the communist equivalent of the December meeting of the Nato heads of government. Like the Nato powers, the communist block must streamline its policies in preparation for the east-west summit in Paris in May. Mr Khrushchev may want to follow up his much publicised announcement on January 14th of a cut in the Soviet armed forces by similar reductions in the rest of the block. A report from Budapest, believed in London to be reliable, says that he is also contemplating a complete withdrawal of Soviet troops from Hungary, a gradual withdrawal from Poland, and a partial withdrawal from east Germany.

No doubt Mr Khrushchev himself wants this withdrawal to play its part in creating a general atmosphere of *détente* before the summit meeting. But it is unlikely that he has all his colleagues, either in Moscow or in the other communist capitals, completely behind him ; this may well be why he wants to discuss it with them all now. Apart from the Chinese, whose involvement is secondary, men like Herr Ulbricht and Mr Kadar may well feel that measures of *détente* will endanger more than improve their situations. (Mr Gomulka's position is more complex.) Herr Ulbricht's hopes of acquiring rockets are discussed in the following note ; Mr Zhivkov, the Bulgarian party leader, has also threatened to ask Russia to install rocket launching sites in his country. The communiqué at the end of the meeting had not been published when this issue of *The Economist* went to press ; it may throw some light on the part to be played not only by peaceful gestures, but also by threats of action, in Russia's pre-summit tactics.

GERMANY

Below Zero Again

The continual delays in bringing the exchanges between east and west to the point have always carried the danger that a new freeze would set in in east-west relations before the old ice-jam had broken. Mr Khrushchev's speech to the Supreme Soviet on January 14th has already provided one warning sign. So has the reaction of some influential American opinion against the talk of disarmament. Now an exchange of letters between Mr Khrushchev and Dr Adenauer provides clear evidence of a sharp drop in the German temperature. In a note of January 8th, Dr Adenauer accused Mr Khrushchev of continuing the cold war and complained of Russian attacks on Bonn ; the main topic at the summit, he said once again, should be disarmament. In his reply, dated January 28th, Mr Khrushchev compared Dr Adenauer to Hitler and revived the threat of a peace treaty between Russia and east Germany if the west did not negotiate on Berlin.

This less than cordial exchange is not unrelated to Bonn's diplomatic campaign to block any negotiations on Berlin. Dr Adenauer's remark last month (that he considered the work of last year's Geneva conference to be dead) has been followed up this week by the announcement that he and Herr Brandt, the governing Burgomaster of Berlin, have agreed on certain vital principles concerning the city: continuation of four-power control, guaranteed access to the city and freedom of movement within it, no change in the ties between Berlin and the federal republic, no new agreement without the approval of the Berliners. These principles are not necessarily inconsistent with an interim agreement. But the Bonn government's zeal in whipping up opposition to virtually any negotiation about Berlin is not auspicious for the summit meeting.

Typically, Herr Ulbricht has taken the opportunity provided by the worsening atmosphere to make threatening noises of his own. If the federal republic was going to have atomic arms, east Germany would ask Russia for rockets too, he said last week. There is logic in the idea that the putting of atomic arms in west German hands will increase the pressure on Russia to give such weapons to its own allies. But it seems clear, at present, that the Russians have small inclination to do so. All the same, the fact that Herr Ulbricht can get away with such talk is a danger signal. On the western side the time may be approaching when the issue, whether an interim settlement in Berlin can be discussed or not, may have to be fought out once more.

SOUTH AFRICA

Frankness between Friends

In measured cadence and in broad but unevasive terms, Mr Macmillan's speech to the South African members of parliament on Wednesday pointed out that Britons and South Africans feel differently about human rights. This difference, he warned his frozen listeners, prevents the British Government from giving the Union the full support and encouragement that would otherwise be its right as a fellow member of the Commonwealth. So from a plank of stately cliché, Mr Macmillan has taken a plunge into the sort of honesty that everybody had been waiting for since he arrived in the Union a week before.

For the first week of his ten days in the Union, the Prime Minister appeared to be in a more relaxed mood than at any other stage of his African journey. His hosts arranged for him a bustling programme of activities. Unlike the ordinary perspiring victim of this sort of conducted tour, Mr Macmillan may have been delighted to have had his time filled up with visits to universities, descents into gold mines, and the bestowal of chiefly dignities.

The racial issue was crystallised for the purpose of the visit in two questions: would Mr Macmillan meet any African leaders, and would he say anything that mattered in his speech to parliament ? His performance over the African leaders has probably satisfied everybody but the Africans themselves. He has needed all his aplomb to avoid the sin of bad manners as a guest and yet at the same time to give the impression, at least at home, that he genuinely tried to meet some Africans. At first he could plead the exigencies of his programme ; then, having let it be known that a meeting with, say, Chief Luthuli would be agreeable to him, he tossed the ball to the Union government. At a garden party in Cape Town he had a chat with a few prominent white liberals and that, protocol decreed, was that.

For the British Government, the inclusion of the Union in his African tour was an embarrassment but also a necessity. To have left South Africa out would have been a signal discourtesy ; it would then have been the only dominion not visited by Mr Macmillan since he became Prime Minister. Damage and disillusion were inevitable, and it was the Prime Minister's task to minimise them. He could have done this by more positive persistence to get in touch with African leaders, by keeping his tour as brief and formal as possible, or, as he has done, by a full-blooded goodwill tour rounded off by a frank statement of the basic difference in political thought between Britain and the Union. Outside the South African parliament, this would not have been much to say ; as it is, it has probably saved Mr Macmillan's African day—it will certainly save him a lot of explanation when he gets home.

KENYA

Mr Macleod's Initiative

Mr Macleod, when he outlined to the Kenya conference at Lancaster House on Monday his ideas for a new constitution, threw all the parties into consternation, but the Briggs group most of all. In effect he has now taken the major step of formally recognising that Kenya must progress to becoming a black-ruled country, but he is trying to strike a balance between the Blundell group and the Mboya group as regards the next immediate steps. He is evidently going along with the New Kenya group to the extent of suggesting that there should be more than one franchise in Kenya —a common roll, but also a communal roll ; and even the common roll apparently may be divided into two—one a low qualification roll, and one a high qualification roll. If the leaked reports of his plan are correct, they suggest that the Colonial Office is going to excel itself in complexity ; such an outline promises a Kenya franchise even more complicated than the Northern Rhodesian one, which no layman understands.

The worries of Mr Blundell's followers turn less upon the complexity of the franchise than upon its predictable results. If they can be satisfied that it is designed both to ensure that a considerable number of their present New Kenya group members will get elected under the plan, and also to prevent the house being immediately and irrevocably at the mercy of an overall majority of African elected members on the low-qualification roll, then they will probably be quite happy. But what would make them happy would be quite unacceptable to Mr Mboya and most of his group. Mr Mboya is first and foremost concerned to make sure that on any low-qualification common roll alone, the African representatives have a majority in the council. Provided he can be sure of this—the key of the front door—he will probably accept some complexity, even if he does not like it, because he knows that he will win the power to get rid of it later (which is just what Group Captain Briggs fears). But he cannot go too far ; if he did, his own left wing in Kenya might declare that he had betrayed the one-man one-vote principle, and beat him at the polls by drumming up the mob. This diagnosis assumes that there is someone to the left of Mr Mboya, which the Europeans in their folly deny ; but there is, just as in his own group there are a few members ready for rather more compromise with the Blundellites than he or Dr Kiano are. These differences must now be fought out in the committee stages. Clearly Mr McLeod must look on this as the worst part of his ordeal. But he deserves high marks for his handling of the conference so far.

CENTRAL AFRICA

The Moffat Formula

The Monckton Commission would be wise to make a note of the formula proffered by Sir John Moffat in the debate on federation in the Northern Rhodesian territorial legislature last week. Sir John suggested that the right form of association to aim at between the three territories (Northern and Southern Rhodesia and Nyasaland) is " the strongest link that it is possible to forge by mutual consent " ; the eventual constitution should be based on a compromise between the minimum of powers that could be operated from the centre in a federal set-up, and the maximum that autonomous territories would concede. To his mind the result might work out about at the level of the East African High Commission (which operates the transport, currency, higher education and research and the customs union that embraces Kenya, Tanganyika and Uganda). A slightly more advanced federal tie would be that used by the West Indian Federation. To doctrinaire Central African federalists this may seem much too loose an association to be effective ; but the real problem facing the Monckton Commission is to find a formula which will peaceably maintain any association at all. The right approach is to decide that in this matter a quarter of a loaf may be better than no bread.

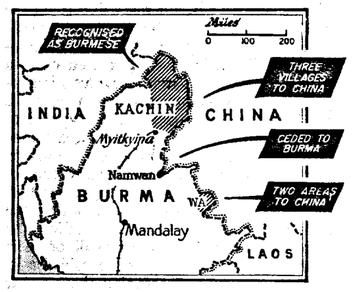
How difficult the task of the commission will be is illustrated by the provocative remarks deliberately made by Sir Edgar Whitehead, prime minister of Southern Rhodesia, upon the departure of Mr Macmillan. Sir Edgar admitted that if Southern Rhodesia seceded from the federation it would suffer a severe economic recession " for at least three or four years." This is an underestimate. Nevertheless Sir Edgar said that he would favour such secession unless his country continues to get all that it thinks went into the original federal bond—notably an undertaking that the federal government will stay by hook or crook in " civilised " hands, and that African nationalist politicians will be kept out of power in Northern Rhodesia and Nyasaland. In Sir Edgar's vocabulary " civilised " is a euphemism for an extremely high property and educational franchise to keep Africans off the electoral roll; his other condition amounts to a demand that Britain shall permanently stall on constitutional advance in the protectorates, which means permanently keeping the Africans down. There is no prospect of any British government agreeing to this.

The logic of the present situation should incline both Sir Edgar and Dr Banda to favour some looser and largely economic tie, such as that suggested by the Moffat formula. By talking emotionally of breaking up all forms of association instead, both are making exactly the same mistake. Sir Edgar and Dr Banda now stand revealed as brothers under the skin.

LICENSING LAWS

Let Freedom Work

Last week's parliamentary debate on the licensing laws—the first incidentally since the war—was generally, but insufficiently, liberal in tone. It got off on to a wrong track when Mr Butler gave his support to the constantly repeated plea for a tightening of the law on drinking clubs, which have certainly increased fantastically in recent years, from a pre-war figure of 8,000 to a contemporary 22,000. Within the framework of the present law, the Home Secretary's suggestion that the right of registration should be restricted to clubs run by and for the benefit of their members has something to be said for it. But the best way of reducing the number of clubs is not to impose new controls, but to remove some of the archaic restrictions on pubs that give the clubs their *raison d'être*. A nine or ten hour permitted period for drinking should be extended to the whole country, the actual hours being left to local discretion, provided pubs closed by midnight. At the moment, little can be done in public houses except drink ; they could be made very much more attractive if petty restrictions forbidding card-playing for small stakes, listening to gramophone records or sports broadcasts, or playing billiards on a Sunday, were done away with.



The tourist trade has been severely handicapped because the concession which allows drink to be consumed up to 2.30 a.m. on weekdays as an ancillary to meals, music or dancing is restricted to London ; it should be extended to the rest of the country. Another unnecessary distinction is that between a hotel resident allowed to buy a drink for himself at any time, and his guest who can be treated only during the permitted hours. Rules governing off-licence sales also need overhauling. Confinement of these to the " permitted hours " has become ridiculous ; there seems to be no reason why rules about the hours during which liquor can be sold should be any different from those governing anything else sold by the retail trade. Magistrates' policy in granting applications for off-

licences should also be re-examined. At present they enforce what is virtually a restrictive practice by allowing other licence holders within a quarter-mile radius to object to a new application ; if objection is raised, the licence is usually refused. Applications for off-licences should be assimilated to those for tobacco licences, which are granted on request, subject only to the good character of the applicant.

BURMA

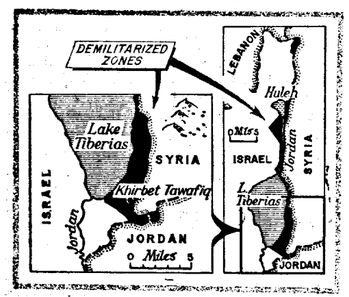
General's Parting Shot

On paper, General Ne Win, the Burmese prime minister, has reason to congratulate himself on the settlement he has negotiated in Peking of the long standing border dispute between Burma and China. True, China gets three villages in Kachin

state and two fairly large areas to the south in the Wa district, which tradition considers wild and ungovernable. But all the giving is not on one side: Burma is to retain most of the large area in Kachin which China had contested ; China abandons its claim to the small pocket known as the "Namwan assigned tract," for which Burma paid previous Chinese governments £75 a year.

The Chinese, who brought the dispute to crisis point in 1956 by marching into Wa, seem inordinately jubilant about the settlement, although they could easily have negotiated a similar one with one of General Ne Win's predecessors. They may feel, however, that by settling their border dispute with Burma they will regain some of the ground they lost with Asian public opinion as a consequence of their more recent quarrels with India and Indonesia. The fact that they have now accepted the Burmese segment of the McMahon Line could foreshadow a bargain with Mr Nehru —who might be asked to hand over the Ladakh area of Kashmir which the Chinese have already occupied ; and the Chinese, in return, might offer to recognise the eastern part of the border between China and India, defined, as far as India is concerned, by the McMahon Line.

The boundary agreement is accompanied by a treaty of non-aggression which has caused the spokesmen of both sides to recall the traditional friendship between the two countries. In colder historical fact, there have been repeated clashes between them and these have not always ended to China's advantage. In 1770, the Burmese king Hsinbyushin drove the Chinese out of the Shan states and demanded one of the Emperor of China's daughters for his harem. Mr Chou En-lai will not have drawn General Ne Win's attention to the claim in Chinese annals that, in fact, a prostitute was dressed up and fobbed off on the Burmese king as an imperial princess.



It is believed in Rangoon that General Ne Win, who has given Burma fifteen months of relatively efficient, semi-military rule, was determined to settle the border question before handing power back to the civilians. Burma goes to the polls this weekend.

ISRAEL AND SYRIA

Warning Light

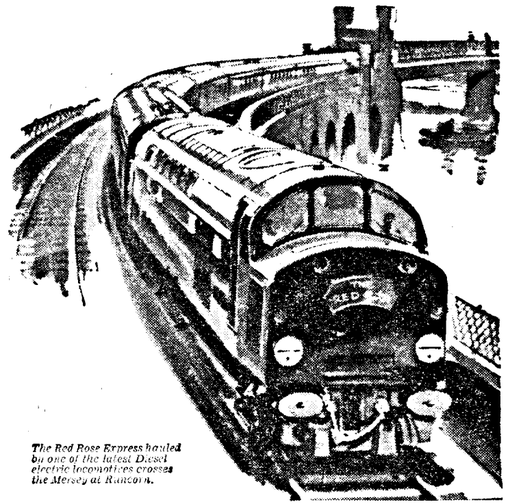
Israel's punitive raid on Sunday night on Khirbet Tawafiq, a Syrian village in the demilitarised zone south-east of Lake Tiberias, serves a warning. Nothing that the Syrians had done in the area justified a reprisal of this severity. There had, during the past few weeks, been a number of minor incidents and Syrians (either soldiers masquerading as farmers or else, as in the neighbouring Israeli settlements, farmers who are armed) had been trying to enlarge their territorial claims by ploughing up land that had previously lain fallow.

The point of the rather squalid incident is that it marks the end of the three-year period during which Israel, having shot its bolt in Sinai, was prepared to lie low with more or less gentlemanly rectitude, while its complaints went through the proper channels and its frustrations were bottled up. But the Arabs continued to drag their net round Israel's schemes for economic ex-

pansion, while the rest of the world looked the other way. Pressure has grown up in Israel to react against this passivity, to show the world, and particularly the Arabs, that at a pinch Israel is ready to take matters into its own hands. The Tawafiq incident may also have been planned to counter President Nasser's triumph over the *Inge Toft*, which at long last the Israelis have allowed to be unloaded at Port Said.

The demilitarised zones between Israel and the Syrian region of the United Arab Republic are one of the more absurd vestiges of the armistice agreement. The demarcation line, drawn between the opposing forces at the point where the fighting stopped, at first gave Syria three small bulges of territory north and south-east of Lake Tiberias and in the north-east corner of Israel. During the armistice talks in 1949, the Syrian government was persuaded to withdraw its forces from these parcels of land but only on condition that they were demilitarised ; the people living there should be allowed to stay, but neither Israel nor Syria should be allowed to keep any soldiers there. This expedient has been a persistent source of trouble.

It is not easy to see a realistic alternative. Neither side is in the mood for compromise. And Israel's claim to sovereignty over the zones has become vitally important because of its bearing on the Jordan irrigation scheme. When the scheme is completed, the demilitarised zone south of Huleh will be the link between the water pipeline network and the Jordan. For this reason alone, neither side will be prepared to give an inch.



ALBEMARLE COMMITTEE

A Little Fling on Youth

It was inevitable that the first recommendation of the Albemarle Committee on the Youth Services, which Sir David Eccles has promptly and rightly accepted, should be simply that the Government must spend more money on them ; it was perhaps also inevitable that the committee should admit its inability to settle on a specific necessary sum. Last year's total public expenditure on the Youth Services was about £2¾ million, of which £2½ million came from local authorities. The £250,000 from the Government was 17 per cent lower than the sum paid in 1946-47—and the pound is now worth 40 per cent less. Tiny grants from the taxpayer have been dribbled out to well-known voluntary organisations (such as a £7,000 grant last year to the Boy Scouts) and even tinier grants to smaller private ventures and clubs. Local authorities' expenditure on the provision of facilities for the majority of British teenagers who are no longer at school amounted last year to 16s. a head ; this is a derisory fraction of the sums that are rightly spent on playing fields and other extra-curricular facilities for the minority of teenagers who are still in full-time education.

Till now, the local authorities' Youth Services have hardly been a strong force in the community. Their voluntary nature and decentralised administration seem to have been among their main charms. But they have also been one of the reasons why organised youth services have never attracted the participation of more than a third of teenagers. Thus perhaps the

A sign of the times...

The Red Rose Express hauled by one of the latest Diesel electric locomotives crosses the Mersey at Runcorn.

It's a sign of the times, too, to have a share account with the Abbey National Building Society. Today, over 650,000 people all over the country have their savings safely invested in this great national institution. The return is good, 3¼% per annum with income tax paid by the Society. This represents £5.6.1 per cent when income tax is paid at the standard rate. Regular savers should enquire about Abbey National Build-Up Shares which yield 3¼% per annum with tax paid by the Society. DEPOSITS IN THIS SOCIETY ARE TRUSTEE INVESTMENTS.

Long John WHISKY

DISTILLED, MATURED, BLENDED AND BOTTLED IN SCOTLAND

Albemarle Committee's most significant recommendation is for the immediate setting up of a Youth Service Development Council, to advise at the centre and draw together all the uncoordinated experimentation at the circumference. Sir David Eccles has decided to be chairman of this council himself. The report has also at last pointed out that, in a booming labour market, even idealists will demand a living wage and some prospects: organised training, better salaries and a recognised status for youth club leaders should help to make their profession desirable to the able as well as to the merely ascetic. A particularly important point is that the report recognises that professional service in youth clubs should become a step up a ladder rather than a step into a dead end; successful service with them should be an important qualification for applicants for secondary school headmasterships and county college work.

But easy though it is to agree with the committee's findings, where do they take us? Better personnel, better facilities, better training are the agreed aims of every social service. So is better understanding of the problems involved; the Albemarle Committee's contribution to this is to parade the usual liberal clichés about modern youth, which are better than the other kind of clichés but do not provide a real torch. The Youth Services in this country are still awaiting the injection of those sudden rushes of new ideas that were associated, in the nineteenth century, with the emergence of occasional geniuses of social reform.

ATOMIC ALLIES

To Share or Not?

PRESIDENT EISENHOWER'S tentative thoughts on sharing out nuclear weapons, revealed to his press conference on Wednesday, must have set allied, and other, ears cocking around the globe. Mr Eisenhower said he favoured the liberalisation of the present Atomic Energy Act in favour of countries which would stand by the United States in time of trouble. This is precisely the quality to which any self-respecting ally must lay claim: henceforth, it may become a point of honour to demand a nuclear armoury from Washington.

An administration that attempts to classify its friends in degrees of stability and faithfulness must expect ructions. Whatever else the Atomic Energy Act has done, it has hitherto saved the State Department from this public embarrassment. General de Gaulle will travel hopefully to Washington in April after exploding his own atomic device. Now that Mr Eisenhower has had his say it will be taken as an insult indeed if the general is not tipped a pretty strong wink on nuclear partnership.

Canada may have been one country uppermost in Mr Eisenhower's mind. The Canadian prime minister, Mr Diefenbaker, said in Parliament last month that Canada was already negotiating with the United States for nuclear weapons. These would remain under United States ownership, but the control would be wholly Canadian. This seems a difficult concept, but it may be a necessary one in terms of ensuring the defence of the North American continent. It has been suggested that, for example, atomic depth charges carried on Canadian ships would be formally in the charge of a United States officer; yet it must remain a moot point whether his authority could, in practice, withstand the wishes of his Canadian commander in an emergency.

If such a system were applied to other allied armed forces, the risks involved in the nuclear share-out would be substantially greater all round. This aspect of American rethinking will not have been lost on the defence ministers of the communist powers at their meeting in Moscow on Thursday, nor on the Russian negotiators at Geneva.

CAR STRIKES

Trouble Again

THE disruption of the motor industry by strikes continues apace. Mulliners, Rootes and Rover have all had stoppages in the past ten days. But as usual the main sufferer has been the British Motor Corporation; also typical was the fact that the strikers were electricians, that the Electrical Trades Union immediately recognised the strike as official, and that the cause of the strike was a pay claim arising out of the large differential at the factory between work done on time and piece rates. This differential has been a bone of contention ever since output and piecework earnings started booming three years ago. The electricians in this case were employed on maintenance work at time rates and wanted their earnings linked to those on the assembly lines. Lengthy negotiations produced no result; and after a last desperate offer by the management had been rejected, the men went on strike. The ETU, which wants to distract attention from its election problems, did not dissuade them.

Fifty-five men were involved at this stage, but ten days later 32,000 workers had had to be laid off. It is this snowball effect—and the bullying of workers by shop stewards that is said to go on behind the scenes at BMC—which gives an initially trivial strike its importance. In other industries which are less highly integrated or which have larger stocks, the absence of fifty-five men out of tens of thousands might hardly matter. As it is, half the motor industry has been crippled by a few well-placed strikers, as happened in the pre-election strike at British Oxygen. An encouraging sign this time was that the general union, whose members have been laid off, became thoroughly fed up, and called a meeting of the BMC unions to see what could be done. But two questions still seem to face the management. The first is whether, if labour troubles at the BMC are to continue at their present rate, a higher level of stocks might not be a worthwhile investment. The second is if something should not be done to devote more time, money and personnel to labour relations in an organisation where strikes are such a costly business.

BROADCASTING

More Open Air

ANY breach in the curtain of mental apartheid with which communist governments (and other authoritarian systems, too) surround their subjects is welcome. Nothing is more important than that these people's increasingly impatient demand for more contact with the outside world should be satisfied. The Russians, in the cultural agreement signed in London on December 1st, agreed to study whether relations could be "normalised" in the field of broadcasting. On Wednesday the Russian jamming of British programmes stopped. This may be long overdue; it can be justified on reasons of economy alone (sixty transmitters are thought to have been used, at a cost of about £25 million a year, in a jamming operation which has never been wholly effective); but it is good news.

Soviet jamming of the BBC was temporarily suspended when Marshal Bulganin and Mr Khrushchev visited Britain in 1956; it began again when the Hungarians rose in revolt. Russia stopped jamming the Voice of America when Mr Khrushchev visited the United States last September; this week's move thus ends a curious anomaly. Once again the improvement may prove temporary. Still, it is a reward for all the patient nagging that Mr Mayhew and others concerned with cultural contacts have had to employ on their Soviet counterparts. One hopes that Russian public, its appetite whetted, will now start to heckle Sovpechat, the monopoly that distributes foreign papers in Russia, about its silly pretence that it can get only one British paper, the *Daily Worker,* on to the bookstalls.

MALDIVE ISLANDS

The Gift of Gan

BRITAIN has secured a favourable arrangement with the Maldive government by which it has been given the island of Gan for use as an air staging post in the Indian Ocean for the next 30 years. To the extent that better terms can secure it, the chance of the new agreement lasting out its full course looks sensibly greater than that of its unlucky precursor, which fell victim to a change of regime at Malé in 1957. But regimes can change again.

Britain has amended its original idea of a 100-year lease at a rent of £2,000. (Who still thinks up these antediluvian ideas?) Instead, the Maldives are to get a direct grant of £100,000, plus £750,000 for improving the fishing industry, communications, health and education. At the same time the 1887 protectorate has been modified, allowing the Maldives to conduct their own external relations in so far as these involve economics and culture. The real inducements remain the creation of new jobs and the influx of money for the Gan islanders themselves, whose revolt against the Malé authorities demonstrated that they, at least, recognise the main chance when they see it.

The one question remaining is whether the RAF will really find a use for Gan for as long as 30 years. By then Kenya will certainly be lost as a base; Aden, perhaps, too. The overflying problem has reached such dimensions in the Middle East that the speediest all-red route from Britain to Sydney or Singapore may eventually prove to be westward and across the Pacific. It is something for the taxpayer to keep in mind.

CONTEMPT OF COURT BILL

Scope for Improvement

THE Contempt of Court Bill, introduced this week into the House of Lords by Lord Shawcross as a private member's measure, is unlikely to be prejudiced by the absence of its sponsor in Africa. It enjoys the favour of lawyers of all parties, and can probably count on judicial support in the Lords ranging from Lord Denning to Lord Goddard. The law officers are thought to favour the bill and it may well be taken over by the Government at a later stage.

Contempt of court may be civil (i.e. disobedience to a court order made in civil proceedings, made familiar recently by the amatory ardours of suitors of court wards); or criminal. The most common case of criminal contempt is publication of prejudicial newspaper comment on pending criminal cases, but contempt can also be committed in face of the court by using blasphemous or insulting language, or after the case is closed by "scandalous" reference to the judge's conduct. At present there is no appeal from a conviction for contempt; the bill's principal reform is to provide one. It further provides that leave of the Attorney General shall be required for bringing an indictment for criminal contempt or application to the High Court for attachment or committal orders, and that proceedings shall be held in public.

On the whole, the bill is obviously to be welcomed, although the provisions for publicity may need modification to protect infants (perhaps by a provision similar to that applied by statute in divorce cases, forbidding publication of intimate or indecent particulars?) But in some respects the bill does not go far enough. Criminal contempt is a common law misdemeanour and hence no limits are set to the punishment which may be imposed. The bill should be amended to include maximum penalties; there is a precedent for this in the penalties laid down by statute for contempt of a county court. The bill does not define contempt and thus misses an opportunity to restrict an offence which at times has been given absurdly wide interpretation. Honest criticism of judges and their decisions, made after the conclusion of a trial, should be immune from prosecution. Perhaps the best way to deal with this problem would be to provide that the defences permitted in libel, such as truth, fair comment, etc., should be applicable. There is some justification for leaving rude remarks passed *in facie curiæ* summarily punishable, but apart from these there seems no reason to exclude jury trial for contempt cases, especially as the personal interests of the judiciary may be involved.

BRITISH HONDURAS

Expensive Exit

A DELEGATION from British Honduras, led by the Governor, Sir Colin Thornley, has come to London to talk about the colony's economic and political future. Two years ago a similar discussion broke up in disarray when it was discovered that Mr George Price, the leader of the majority People's United party, was carrying on simultaneous negotiations with the Guatemalan embassy. Mr Price and his friends were only finding out which country had most to offer. Since then he has come down, although still a bit tentatively, on the side of the British connection; his platform at the moment is self-government within the Commonwealth by 1965. The pull towards Guatemala is partly religious—the colony's only secondary school is run by a Roman Catholic order—partly muddled nationalism. On the other hand, most British Honduranians speak English and 60 per cent are negro; they may well have been wondering what future they can look for in a Spanish-speaking country that is not notorious for racial enlightenment.

Of the two sets of discussion now going on, the economic talks are much more meaningful than the constitutional. A few months ago, Sir Hilary Blood was sent to the colony as constitutional commissioner to advise on the pattern of political advance. Inevitably, his proposals fall short of what local nationalists demand, and the argument is now over pace and methods. But at the Treasury, the delegates have to try to make economic sense of the idea of an independent British Honduras.

Honduranians are dead against the idea, once favoured by the Colonial Office, of joining up with the Caribbean Federation. But how can the colony, largely jungle, with most of the 86,000 inhabitants clustered semi-employed round the towns, manage on its own? Mr Jack Downie, senior economic adviser to the Treasury, recently came to the conclusion that it could not unless the population was substantially increased. He suggested a policy of bringing in agricultural settlers from outside (presumably from overcrowded Jamaica) to bring the population up to 300,000 by 1975. He also recommended a development plan for the next four years that would need a contribution of about £7 million from London. The shipwreck that landed a party of British pirates on the shore of the Gulf of Mexico in 1638, and started them off on a career as timber merchants, was a costly mishap.

THE APPROVED SCHOOLS

Conclusions from Carlton

INCIDENTS at approved schools are rarely such as to reach the headlines, and unlike "borstal boy" the term "approved school boy" has not passed into the language. Thus, the mass mutiny of boys at Carlton school in Bedfordshire last summer roused public interest that quickly turned into concern when the subsequent public inquiry disclosed the reasons for the disturbances and the difficult conditions in which a hard-pressed staff was working.

But Mr Victor Durand's postmortem on the disturbances, which has now been published (Cmnd 937, 3s. 6d.), shows that the main cause for concern is not the behaviour of masters who, though technically breaking approved school rules, were, after all, following the well-tried principle "Never hit a child except in anger." It is rather the complacency of public and Home Office alike, which apparently comfortably assumed that the approved schools could stand the strain of the additional numbers being sent to them without breaking down or sagging. The approved schools and juvenile offenders were left out of last year's white paper on penal reform, because they are within the terms of reference of the Ingleby committee. The committee will presumably now be considering Mr Durand's recommendation that the senior approved schools should be partly integrated with the borstals under the ægis of the prison commissioners, a recommendation that has caused Mr Butler to postpone introducing his bill for integrating borstals with young prisoners' centres.

In the meantime, the Home Office is faced with Mr Durand's statement that it is "urgently necessary" to provide more approved school places. Its white paper made clear that the department is putting its weight behind the establishment of detention centres, which in a sense are competitors for funds and staff with the approved school system. The Carlton school disturbances showed up the dangers of neglecting the approved schools and of underpaying their housemasters. As the Albemarle committee has made the same point about the staffs of the youth services, the problem of finding all the trained social workers needed to mend the weaknesses of the welfare state has suddenly become acute.

Rostow Replies to Pravda

On October 19th last, "Pravda" printed, and Moscow radio broadcast, an article in which Mr Yuri Zhukov, the head of the Soviet State Committee for Cultural Relations with Foreign Countries, attacked Professor Rostow's analysis of the economic growth of nations, which had appeared in "The Economist" of August 15th and 22nd. Extracts from Mr Zhukov's article were published in our issue of November 7th; though entertaining, it was abusive rather than reasoned.

Professor Rostow wrote, on November 17th, a letter to the editor of "Pravda," which has not yet, to our knowledge, been published or commented on in that paper. A shortened version of this letter follows. The wider controversy aroused by "Rostow on Growth" is the subject of a leading article on page 503.

The Editor, November 17, 1959.
Pravda

DEAR SIR—Mr Yuri Zhukov's comment on my views, published in *Pravda* on October 19th, has been brought to my attention; and I request the courtesy of your columns for a reply.

Mr Zhukov says a good many things which, I would guess, he expected neither his readers nor me to take very seriously. But he says one thing which deserves serious discussion between us:

Professor Rostow offers a theory of the stages of development of modern society that completely excludes the concept of class struggle and social formations.

This is not true. My theory does have a place for class conflicts and social formations. I would simply assign them a different place than did Karl Marx. How does my view of classes and their conflicts differ from Marx? It differs in two major respects.

First, Marx grouped classes in a few grand categories: peasants, feudal landlords, bourgeoisie, etc. This was convenient for theoretical purposes, but it was not realistic, because in many circumstances there are important differences of interest within these broad classes, and they do not think or act together. For example, the feudal class in Japan contained within it the *Samurai*. It was this group within the feudal class which proved the principal agent of Japanese modernisation, rather than the *chonin*, who, as the merchant "bourgeoisie," would have been expected to play that part in Marx's theory.

In this connection, it should be recalled that from the very origins of American political life in the eighteenth century, we Americans, basing ourselves on a long western tradition, have taken for granted the reality of group interests based on shared economic activities. In the Constitutional Convention of 1787, for example, there was an interesting exchange between two delegates as follows:

He (Mr Pinkney) remarked that there were five distinct commercial interests: (1) The fisheries and West India trade, which belonged to the New England states; (2) The interest of New York lay in a free trade; (3) Wheat and flour, the staples of the two Middle States (New Jersey and Pennsylvania); (4) Tobacco, the staple of Maryland and Virginia (and partly of North Carolina); (5) Rice and indigo, the staples of South Carolina and Georgia. These different interests would be a source of oppressive regulations if no check to a bare majority should be provided. States pursue their interests with less scruple than individuals. . . . Mr Sherman, alluding to Mr Pinkney's enumeration of particular interests, as requiring a security against abuse of the power, observed that the diversity was of itself a security.

The whole issue of factions, as they were then called, was discussed at length in the *Federalist Papers*, notably No. X, where in a celebrated passage, Madison said: "the most common and durable source of factions has been the various and unequal distribution of property." Our experience of 172 years under the constitution confirms Sherman's view that the diversity of factions constitutes one important restraint against the abuse of power.

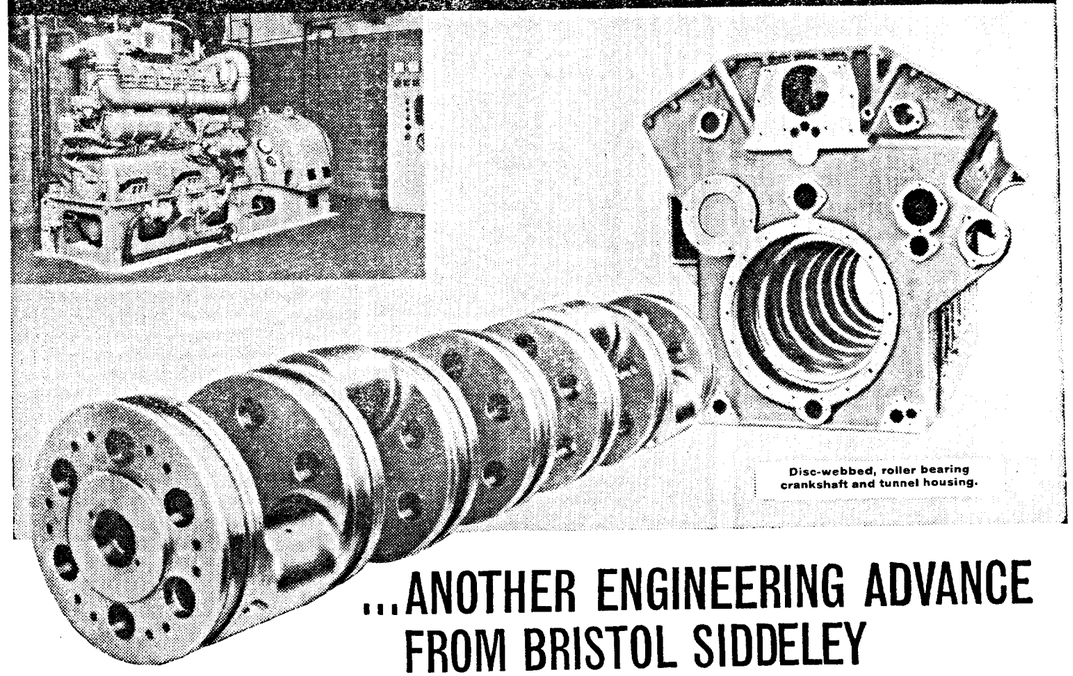
I believe this older western view of the multiplicity of groups that form up around economic interests is more realistic than Marx's simpler view.

The second difference between Marx's view and mine is that he believed that, in the end, the political behaviour of men was determined by their economic interests; and that groups of men with similar economic interests would, in the end, act together in politics. This again has proved too simple a view. Sometimes men in politics do act to protect their economic interests; but sometimes they act to advance the interests of their region, their nation, or their religion. Sometimes they act out of loyalty to a leader. And sometimes simply to help other human beings with whom they share life on this planet.

By assuming a few unified classes and the dominance of the profit motive, Marx deduced that history must move forward in a series of bloody conflicts. His predictions have not proved accurate in many parts of the world. And where open conflict has marked the course of history, it has rarely been rooted in economic interests alone. By assuming a world of more fragmented social groups and multiple human motives, my stages of growth yield, I believe, a more realistic account of history.

But I would not request *Pravda's* columns simply to make that point. These two differences between Marx's view and mine have an importance which goes beyond the analysis of history. If Marx were right, then the world would be an even more dangerous and disrupted place than it is. There would be no prospect but bloody conflict within societies, and no prospect on the world scene but an extension of such class conflicts in the form of international wars.

The truth is different: because there are many social groupings and many human motives, men in many countries have learned to resolve their conflicts within societies by peaceful compromise; and on the world scene, men of many nations are finding in their common humanity and a common concern for the children a basis for seeking a peaceful resolution to international conflicts.



It was evident even to a casual tourist in the USSR last May that Soviet life and politics, like that of other nations, reflects the existence of many diverse interests, regions, and social groups; and that Soviet life not only is suffused by the interplay of such factions, but is also touched and unified by a wholly understandable pride in national achievements from, say, the defence of Stalingrad to the latest lunik. And it is evident on the world scene that Soviet policy is determined by many elements other than a commitment to carry forward the class struggle on an international basis.

In all societies there is a gap between formal ideology and the way men conduct their affairs from day to day. In my view the gap in the Soviet Union has become excessive.

Although it is for you to decide, I believe it is time for communist theory to accept what Soviet life (and Russian culture) reflect, and what Soviet policy is already beginning to accept: namely, that conflict between a few social classes, rooted in their economic interests, is certainly not the sole basis for political life and the dynamics of history.—Sincerely yours,

W. W. ROSTOW

Maybach industrial diesel engines—from 300 to 1,800 hp—can achieve 16,000 hours between major overhauls...

...ANOTHER ENGINEERING ADVANCE FROM BRISTOL SIDDELEY

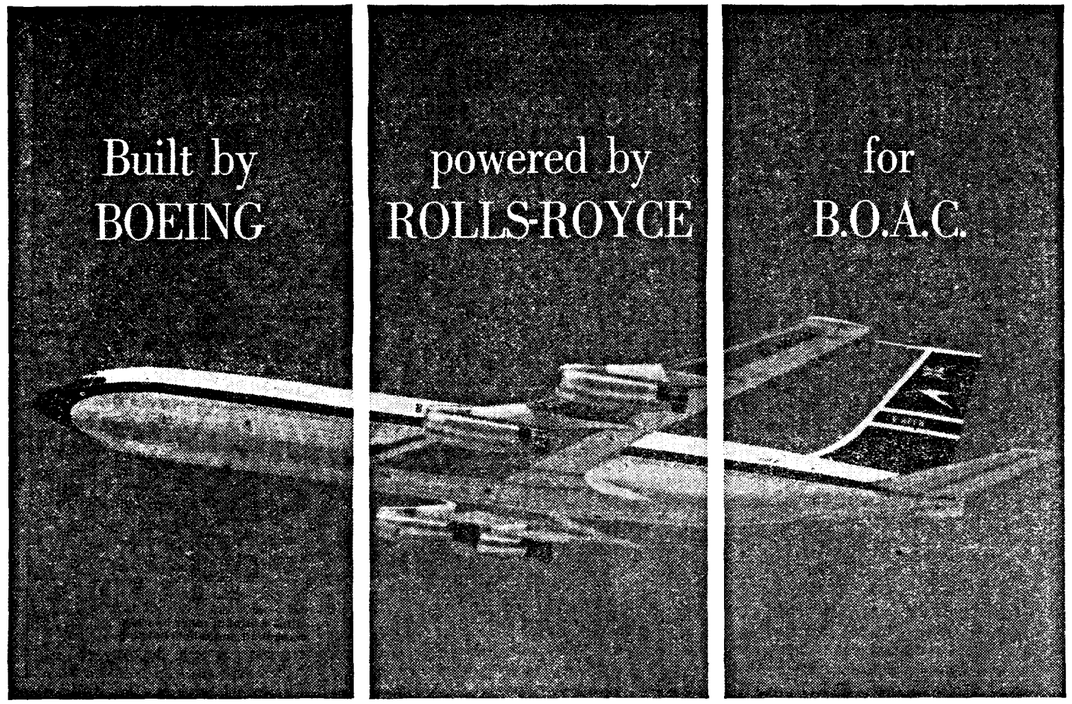
Bristol Siddeley Engines Limited produce Maybach* diesel engines. Covering a power range from 300 to 1,800 hp. Maybach diesels are amazingly reliable and have shown that they can achieve major overhaul lives of between 12,000 and 16,000 hours.

The *proven* basic design features of the whole range (straight 4 to 16-cylinder V) are the same, and each unit can be turbo-charged, or turbo-charged and intercooled. The range operates between 1,200 and 1,600 rpm and *combines the best performance and design qualities of high, medium and low-speed diesel engines:* light weight and compactness, excellent thermal efficiency and extremely long life.

Advanced design features

The pistons are pressure-oil cooled. This gives very efficient heat dissipation and reduces liner and gas ring wear to a minimum. The roller bearing, disc-webbed crankshaft is exceptionally rigid within its tunnel housing, and in practice withdrawal is not normally necessary before 12,000 hours running. So low is big end bearing wear that in some cases the protective lead flash has been found intact when examined after 15,000 hours running!

Since the cylinder bore and stroke, and the majority of components, are identical in all models, spares stocks are considerably reduced. And during servicing semi-skilled labour can be used because great thought has been given to easy accessibility and removal of components.



World-wide application

Bristol Siddeley Maybach diesel engines are designed for a wide variety of industrial applications, from stationary and mobile light and power generator sets to oil-drilling rigs and pumping stations. Maybach diesel engines are in service all over the world and have built up an unrivalled record for reliable and economic operation.

For further information please write to: Maybach Sales Manager, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

BRISTOL SIDDELEY ENGINES LIMITED

Transatlantic teamwork
brings you
THE NEW 707 INTERCONTINENTAL
world's fastest,
longest-range jetliner

B·O·A·C
BRITISH OVERSEAS AIRWAYS CORPORATION

The new 707 Intercontinental, which British Overseas Airways Corporation will soon put into service, is a distinguished product of British and American partnership. This luxurious jetliner is powered by world-famous Rolls-Royce Conway engines.

BOAC's Intercontinentals will bring you the travel advantages of unprecedented speed and comfort. With a range of more than 5000 miles, Intercontinental jetliners will carry you non-stop over the longest stages of BOAC's routes. You'll travel in restful, vibration-free comfort, at 600-miles-an-hour speeds. Adding to the pleasure of your flight will be superlative BOAC cabin service, renowned throughout the air-travel world.

You'll want to plan an early flight aboard a superb new BOAC Intercontinental!

BOEING 707 Intercontinental

LETTERS

Local Government

SIR—As the Labour councillor to whose speech in support of Manchester's £6 million flyover road you refer, may I indicate some ways in which I think your correspondent's report on Manchester unfair.

First he makes it appear that the city council having voted in support of the road voted against seeking the necessary Parliamentary powers. All three votes on the road were free votes of both parties. The finance committee's recommendation of a year's deferment was defeated 69-66. The town planning committee's proposal that the road be built was then upheld by 73 to 60 odd. However, a decision to promote a Parliamentary Bill requires an absolute majority of all members—in the case of Manchester 77. In fact there were only 76 affirmative votes for the bill.

Secondly, my appeal to the council to live up to its regional responsibilities was not made specifically to the Labour group. The road had been opposed by the leaders of both parties as well as by a finance committee unanimous except for myself and one Labour colleague.

Thirdly your correspondent states that the rates problem has frozen the council immobile. As he says, at 24s. 6d. the city's rate is the highest in England. The finance committee has just recommended a further increase of 1s. 6d. for 1960-61. The council spends more per head of its population on local government services than any comparable authority.

EXPENDITURE PER HEAD OF POPULATION, 1959-60

	Education	Museums, Libraries, Art Galleries	All Services
	s. d.	s. d.	s. d.
Manchester	306 11	14 3	634 4
Birmingham	289 0	10 6	581 7
Leeds	260 0	10 4	545 6
Liverpool	287 3	14 0	612 2
Sheffield	254 0	12 11	524 9

Fourthly, as one who had to fight hard to persuade the council to invest part of its superannuation fund in equities, I find laughable the suggestion that this was done "to the joy of the Conservatives." A leading opponent was the Conservative group's expert on finance. The decision was taken on a free vote of the council with its large Labour majority. Incidentally Manchester led the country in something more important than equity investment—smoke abatement.

Finally, if there is political bickering this is because the Conservative group, while vocal in council and committee in support of development of services, turns its back on such development immediately it comes to levying the necessary rate. This is irresponsibility of a particularly unpleasant kind. Despite the problems this irresponsibility creates, Manchester's Labour group persists in its policy of permitting all its members almost complete freedom of individual judgment, hardly ever imposing the whip. My own speech in support of the road came immediately after that of my leader opposing it.—Yours faithfully,

Manchester EDMUND DELL

SIR—It was most refreshing to find local government, so much taken for granted, being given such full and thoughtful treatment in your last issue. I was rather surprised to see, however, that one quite outstanding problem was touched upon so lightly.

This is the failure of councils to attract and to keep enough qualified staff, both for technical and for administrative work. Such people are essential for the current development in, for example, education, slum clearance and water supply. There is also a growing inability to recruit the type of junior that is needed for training for the future.

The key lies of course in the conditions and salaries offered, which have failed to match up to modern times and which are no longer competitive.—Yours faithfully,

Hove J. R. FISHER

SIR—You say that there is relatively little venality and corruption in local government considering the opportunities. This may be true, in spite of what your Highland correspondent says, but I notice that you say nothing about the nepotism in the making of staff appointments, and, in particular, nothing about the selection of articled pupils to town and county clerks and surveyors. Since few authorities recruit executive trainees, these pupils are almost the only local government employees who receive any systematic training for the higher posts. You would think, therefore, that they would be chosen with especial care, and that, since anyone who is likely ever to be worth fifteen hundred a year can, and generally does, get a university scholarship, that they would be selected from among honours graduates. Nothing of the sort. A local authority will advertise a dead-end clerical assistant's job, but an articled pupilship will be awarded entirely by influence. So a mediocre seventeen-year-old will be given a job that a dozen outstanding graduates would be glad to have.—Yours faithfully, R. HARRIS

London, NW3

Banks and Investors

SIR—In your comment on the Stock Exchange Council's proposal to allow banks to advertise in the press their investment management service, the statement was made that so far the National Commercial Bank of Scotland is the only bank to offer such a service.

This is not so; the Executor and Trustee Department of Lloyds Bank provides an investment management service for its customers and a large number of cases are handled.—Yours faithfully,

Lloyds Bank Ltd., London, EC2 D. H. TURNER General Manager

Price Cutting

SIR—I have read your article "Cut Price Competition" on January 23rd with much concern. Why cannot matters be left as they are? Who are we, through the Government we elect, to say at what prices our customers may sell or may not sell the other fellow's merchandise? If I choose to sell my product on the condition that it is re-sold at a fixed price, that surely is entirely my affair, and if my customers do not like it, I shall soon be out of business. Moreover, I want the service from the competent retailer which he can offer under the protection of fixed retail prices.

Perhaps it is as well that your policy and that of the other daily and weekly journals for which I subscribe is to fix the retail selling price, because I live in a town some 20-odd miles from London and catch the 8.18 train each morning. Because I know that my papers cost the same at each of the many newsagents in my town, I am saved from the awful problem of rushing round to each before I leave every morning to find if one newsagent is offering ½d. off my *Times* or 1d. off *Punch*; or perhaps on Friday, first one of them, and next week another is offering *The Economist* as a "loss leader," hoping that I shall buy my *Times* and local paper there that day!

Heaven preserve retail price maintenance and thereby the equanimity of—Yours faithfully, ERNEST GOODALE

London, W1

Aircraft

SIR—In your article on the aircraft mergers in your issue of January 16th, you mentioned the missiles being built for the Navy by Messrs Hawker Siddeley and Shorts.

Some of your readers may have been misled by the implication that, while Shorts' Sea Cat is of pretty general application for ship fitting, Hawker Siddeley's Sea Slug requires specially built ships which, as the article says, are lacking.

The First Lord's Explanatory Statement on the Navy Estimates last year showed that

specialised ships were keeping pace with the development of the missile. Four such ships had been ordered and work would have commenced on three of them before the end of the current financial year.—Yours faithfully, J. G. LANG

Admiralty

Universities

SIR—Your article entitled "Academic Go-Between" was a very fair description of the universities as they are today. But the final sentence contained a challenge, describing it as our task "to ensure that the bark of scholarship shall still float on the sea of mass education."

If there should be a genuine demand for more higher education and study the universities, given the money and a little time, will undoubtedly rise to the occasion, as they did in the difficult years immediately after the last war. But if there is a further large increase of applicants who want to acquire just the prestige of a degree, three years of a good time at public expense, and the (in fact highly doubtful) prospect of a better paid post at the end, then I hope that the universities will firmly close their doors.

After more than twelve years the nation has just woken up to the fact that financial inflation does not pay. Educational inflation has started already in the country and surely it is not too much to hope that *The Economist,* which has campaigned so long for a strong pound sterling, will not lend its assistance to a depreciation of our educational currency.—Yours faithfully,

University of Bristol H. HEILBRONN

Economic Co-existence

SIR—You are right to remind us in your article that we should beware, as a new decade opens, of any further moves towards sealing off the trade of the western and eastern halves of Europe. The strategic export embargo, which lasted most of the previous decade, was quite disastrous enough in its contracting effects on the market for our machinery in the eastern block. The last impression those of us who are interested in these markets want to give is that, having been relieved of one big barrier to trade with the Eastern block countries, we are now preparing to sit tight on a second—namely discrimination against their exports.

You have mentioned the timing of the cut in imports of Polish bacon. I would extend the picture as far as China, where the sudden drastic cut in our open general licence list has produced a similar feeling. We are going to need these countries' trade in the 1960s and now is the time to start acting as if we wanted to get more of it.—Yours faithfully,

ROBERT W. ASQUITH

Asquith Machine Tool Corporation, London, W.C.

BOOKS

Nasty Guys Finish Last

Senator Joe McCarthy

By Richard Rovere.
Methuen. 224 pages. 18s.

THE focus of Mr Rovere's continuously entertaining and illuminating book is on McCarthy the man, the personal phenomenon, what he was and what he did. Primarily his pages are a brilliant character study of an American demagogue who was more than a mere exemplification, however outstanding, of a type. McCarthy was, indubitably, himself. "He was inner-directed," Mr. Rovere rightly insists—no Organisation Man but a chronic oppositionist, a devotee of the negative, of the destructive. He wanted glory, not power. He never organised. "Beyond mischief, he never accomplished anything." He was a delinquent who was his own gang and who used the whole United States for his razor-slashing. As a thorough-going cynic he was incapable of real hatred; even his animosity was a fake. Mr Rovere contends that not only did he share the human desire to be liked (even by those he had just been kicking in the teeth), but also that it was in fact his loyalty to his friends, Senators Jenner and Welker, that made him refuse the compromise by which he could have escaped his eventual condemnation at the hands of the Senate.

This, and more, Mr Rovere depicts in a bravura narrative that covers (or uncovers) McCarthy's early days, his rise to national eminence, most of the extraordinary manifestations of his power, and finally his collapse. Even (perhaps indeed especially) to the English reader the story will prove gripping; only at one point, in describing the Army-McCarthy hearings, does Mr Rovere presuppose a familiarity with the facts which those who were not among the twenty million television viewers of this drama may not have.

McCarthy the man is, however, only half the story; McCarthy the phenomenon is no less remarkable and, to the historian surely, even more important. What was it in his time and place that enabled this imp of destruction to wield such frightening power? On this Mr Rovere has a great many penetrating things to say, but he shies away from answering the question directly. This is a pity, both because he comes so close in his *obiter dicta* to the heart of the matter, and because in order to tell his story he has to make certain causal assumptions that beg many of the questions we should like to see him answer. He passes too lightly, for example, over the role of the press. What he calls the Multiple Untruth succeeded largely because the canons of "objective reporting" and "news value" became straitjackets within which the most experienced corps of political correspondents in the world became helpless when faced by a figure whom they knew to be a phoney and a wrecker. Without this what Mr Rovere here hails as McCarthy's "unmatched talent for publicity" would have counted for little.

Similarly with the Senate. In this great historic legislature "in the early fifties hardly anyone ever protested against anything McCarthy did." It was television more than his colleagues that brought about his downfall. Even after the censure the Senate would not deprive him of his chairmanship, still less remove him from his committee assignment. Mr Rovere graphically describes the way in which McCarthy made circles round his fellow Senators, and concludes that it was "the mad force of circumstances" that "compelled them to sit and listen for days and weeks and months on end" to these dangerous ravings. It was nothing of the kind. It was the Senate's refusal to conduct its own proceedings with a minimum of procedural competence—that and the inability of its members, until the very end, to rise above the narrowest party and personal considerations.

In a brilliant passage at the heart of his book Mr Rovere compares his subject to a certain type of American athlete, "the kind who earns and revels in such sobriquets as Killer and Slugger," the kind exalted in Leo Durocher's famous maxim: "Nice guys finish last." This is a dangerous moral minefield for any foreigner to cross, but it does seem as if this lies very near the centre of McCarthy's appeal. The most remarkable thing about his triumphs was how long they went on before they evoked any spontaneous outburst of righteous indignation either from a victim or from a bystander of any consequence. The wise guys tried to handle him their way. It did not work, because in the currency McCarthy was using the nasty guys could buy the wise guys out every time; they were minting it themselves.

Eventually there turned out to be no alternative to a moral showdown, an old-fashioned insistence on the rules. Surprisingly, once seriously tried, this solution was found to work. Nastiness, it was revealed, was not after all enough. By itself, it finished last.

Chronicles of Clare Market

An Epic of Clare Market

By Janet Beveridge.
Bell. 111 pages, 15s.

The London School of Economics and Its Problems, 1919-1937

By Lord Beveridge.
Allen & Unwin. 138 pages, 21s.

FOUNDING the London School of Economics was the most liberal-minded thing that the Webbs ever did. In the splendid scientific faith that truth must prevail, they used the legacy of a fellow-Fabian to establish not, as they were urged to do, a sounding-board for collectivism but an institution for the entirely detached and impartial study of the social sciences. That was in 1895, when the School—manned by part-time teachers and serving an eager handful of evening students—was established in John Street, Adelphi. The two books under review chronicle these events and the School's rise to what was already essentially, when Sir Alexander Carr-Saunders became director in 1937, the large and world-famous institution of today. Lady Beveridge deals with the "birth and early years," Lord Beveridge with the period of his own directorship.

Taken together, the two books can be read not merely as a rather specialised piece of history, of limited public appeal, but as a case study in the art of getting things done—a pendant on the one hand to Beatrice Webb's "Our Partnership" and on the other to Lord Beveridge's "Power and Influence" and Lady Beveridge's "Beveridge and His Plan"; or, in the case of the second, as a personal record and apologia. From all these aspects they are interesting; from none are they satisfying. With "An Epic of Clare Market," indeed, there is nothing much wrong except its portentous title; it is, in fact, a brief, competent essay padded to book length with a certain amount of not-always-relevant biographical matter and not-always-interesting quoted reminiscence. Lord Beveridge's book is more substantial. Its strength lies in its handling of administrative history; of the School's and its director's relationship with the University of London, with local authorities, with benefactors and opponents; its finances, its physical growth, its organisation. The history thus revealed is an impressive one: that of the School's virtual "re-founding" (to quote Sidney Webb's tribute to the director on his retirement) both as an institution of learning and as a *milieu* of vigorous student life. Of its weaknesses, one lies precisely in the fact that it presents an administrator's eye view; one learns, of the great teaching figures of those years, mostly that they were full-time or part-time, hard or easy to recruit, assets or liabilities to the School's campaigns for recognition or funds. The hall porters figure more largely than Harold Laski; one need hardly say more.

The Guilt of Desertion

Joseph Conrad

By Jocelyn Baines.
Weidenfeld and Nicolson. 507 pages. 42s.

PRIMARILY, one suspects, because of the influence of Dr Leavis's critical writings, Conrad's reputation has undergone a wonderful sea-change. His stature has been amply measured; his status is fully secure. What was lacking was a first-class critical biography. Now we have it, in full measure. Its base is skilled, patient and scholarly research. Mr Baines, for example, has established beyond all reasonable doubt that the young Conrad tried to commit suicide in Marseilles. This is a startling discovery to make and to substantiate. A lesser biographer would have harped on his triumph; Mr Baines firmly puts the episode in its place, giving it its due weight but not letting it distort his analysis. His edifice is critical admiration and insight. He finds the clue to Conrad's preoccupation with the corruptibility of even the finest of human natures, with betrayal and with evil in his turning his back upon Poland and upon his father's ideals. We are made aware that Conrad the exile had to examine and to expiate, in his own writings, the guilt of desertion.

It is as if Conrad was saying, as Lord Jim said in explaining his own moral failure at the moment of crisis, "I had jumped... It seems." The qualification of "it seems" is important, because both in his life and his work Conrad often avoided stating the simple, irrevocable fact. In his life, as Mr Baines makes absolutely clear, he consistently and possibly deliberately dramatised his own past to the point where its moments of failure and shame were hidden in one of his own impregnable darknesses. In his work, too, his moral judgments often appear to be ambiguous and disguised in rhetoric. One can sense the honesty that lies behind the doubting, and the despair behind the equivocation, and can recognise the greatness of a novelist who so consciously and conscientiously toiled to give imaginative life to those doubts and despairs. Now, because of Mr Baines's analysis, it is possible to understand much more fully why at moments in his own life Conrad was beset by pessimistic, almost neurotic, doubts about his own powers as a novelist; why at others he was triumphantly certain of his own worth; why, in his own novels, he avoided moral affirmation; and why in both his life and work he found an anodyne in fidelity to the only seemingly simple ideas of courage, self-sacrifice and work.

But there is a much graver weakness than this. It results from the attempt to combine the style of a smoothly authoritative communiqué with that of a highly personal, indeed often embarrassingly intimate, individual story; a combination which, given the matter of this particular narrative, simply will not work. To the even moderately instructed ear, Lord Beveridge's studied omissions, generalities and circumlocutions convey not so much a discreet and decent silence on painful topics as the supersonic hiss of old animosities passing by. One might be reading a version of the "Last Chronicles of Barset" drafted from the episcopal palace. Such a chronicle has a certain wry entertainment value; but it makes painful reading, especially for the many who have personal reasons for gratitude and esteem towards its author. Fortunately, it is not on this sad little book that his great reputation will rest.

Conrad lived and worked, Mr Baines suggests, in a state of "precarious equilibrium" and now, because of Mr Baines's admiration and understanding, we can see why and, in our turn, understand and admire Conrad more.

High Drama

The Third Voice: *Modern British and American Verse Drama*

By Denis Donoghue.
Princeton University Press. London: *Oxford University Press.* 286 pages. 30s.

MR DONOGHUE has a fascinating theme: the attempt of modern poets to kindle new life in the ancient form of verse drama. At the beginning of the twentieth century, this attempt seemed like a hopeless anachronism. The romantic and Victorian poets had pursued the ideal of high poetic drama with an ardour commensurate only to their dismal lack of success. Every major writer tried his hand at it: Coleridge, Keats, Shelley, Browning, Tennyson, Swinburne, Hardy. Only Byron produced any plays worth taking seriously. The rest brought forth monstrous hybrids of Elizabethan blank verse and romantic sentiment. The verse, in particular, lay in the destroying shadow of the Shakespearian ideal. The moment a nineteenth century poet sat down to write dramatic blank verse, the remembrance of Shakespeare stole into every line. At its best, in the close of *The Cenci* for example, this helpless fidelity to the master produced good pastiche. Byron saw the danger clearly. He said that Shakespeare was the greatest example but the worst model. But in vain; from the plays of Coleridge to those of Stephen Phillips, English verse drama is a series of more or less inspired variations on Shakespearian themes.

But then something happened. Mr Pound and Mr Eliot came from America bringing into their use of language the vivid freshness of talents unencumbered by an excess of tradition. Messrs Auden and Isherwood began using dramatic verse for purposes of political indignation. Yeats discovered the Japanese theatre. The progress of sound broadcasting opened a new dimension to spoken dramatic verse. Above all, the modernist movements in poetry broke the spell of blank verse and iambic pentameter. The literate ear grew prepared to accept as poetry metrical forms at once looser and more intricate. The result has been an

extraordinary resurgence in the writing and enjoyment of verse drama. Mr Eliot is the *doyen* of the craft. But the range of work done or in progress extends all the way from radio-plays by Dylan Thomas to the hit production on Broadway of Archibald MacLeish's *J.B.*

The history of modern poetic drama and the critical judgment of what it has actually accomplished should give occasion for a first class study. Unfortunately, Mr Donoghue's is a series of rather scrappy essays, some of which get at the heart of the subject (the best part of the book being the chapters on Eliot's successive plays), but most of which deal with individual works arbitrarily chosen. Neither Wallace Stevens's early experimental sketch *Three Travellers Watch a Sunrise*, nor Cummings's *Santa Claus* contributes anything to a living body of drama. The treatment of Eliot's *Sweeney Agonistes*, on the other hand, is plainly inadequate. That is where the "third voice" first took on its modern intonation. And there is something perverse about a treatment of Yeats's dramas which hardly refers to the finest of the lot, that miraculous fragment, *Purgatory*. Even where Mr Donoghue has much to say, as in his excellent chapter on Christopher Fry, the tone goes wrong. And on every page he pauses from the matters at hand to polemicise against, or do obeisance to, some other critic.

The important questions are whether or not verse drama can mend the breach between literature and the commercial stage; and whether the notion of tragedy is still viable in a living theatre. What needs explaining is not so much the metrics of Mr Eliot's recent plays, but their increasing brittleness. Why has Mr Auden turned away from the drama? Have audiences thronged to *J.B.* to hear Mr MacLeish's verse or to see Mr Kazan's incomparable directing? To these matters Mr Donoghue does not address himself.

Preliminary Proceedings

The Criminal Prosecution in England

By Patrick Devlin.
Oxford University Press. 126 pages. 15s.

THE Sherrill Lectures for 1957 (not 1956 as stated on the jacket) were given at Yale University by, then, Mr Justice Devlin, and are now made available to a wider audience in book form. The title of the book is perhaps a little ambiguous, since it does not deal with the criminal trial itself—a subject skilfully analysed by Dr Glanville Williams in the 1955 Hamlyn lectures—but with the preliminary proceedings from arrest to arraignment. These fall into three stages: the inquiry by the police, the inquiry before the magistrates and the preferment of the indictment.

Every legal system has to solve the problem of how criminal proceedings are to be brought before the courts. In France a semi-judicial process has been elaborated, conducted by a state official, the *juge d'instruction*. In England, theoretically, any private person can bring a prosecution for most crimes, but in practice responsibility falls on the police, and the check provided, apart from civil actions for false imprisonment and malicious prosecution, is the Judges' Rules. These provide that once the police have decided to charge a suspect, they must caution him that anything he says may be taken down and used in evidence before asking him further questions. Any statement must be voluntary and not elicited by cross-examination; it must be taken down in writing if possible and signed by the accused; and the times when it began and finished must be recorded. Any violation of the rules may result in exclusion of the evidence by the trial judge, although this is a discretionary power and has nothing to do with the common law rule that involuntary confessions must be excluded. Whether the rules have been observed is established in court by cross-examination, but their effectiveness as a safeguard for personal liberty will depend on an attitude of fairness in the police. Lord Justice Devlin thinks the police do well, but the Royal Commission on Police Powers of 1929, with its exposure of the practices of keeping the suspect in suspense, bluffing assertions that all the facts are known, and meretricious promises that to make "a clean breast" of it will make things easier at the trial, point to a more astringent conclusion. Doubtless the new royal commission will throw more light on the matter. Other topics touched on by the author are the delays between arrest and trial and telephone tapping, and here again recent developments make one think that Lord Justice Devlin is perhaps over-optimistic.

An important question discussed is the prejudice that may be incurred by the defendant from the publicity given at the preliminary hearing in the magistrate's court. Under the Magistrates' Courts Act of 1952, preliminary hearings may be held *in camera*, a privilege rarely used, and in 1958 the Tucker Committee recommended that the power to sit in private should be abrogated, but that the Press should be limited to publication of the bare particulars of the proceedings. On these and other controversial matters, Lord Justice Devlin does not make any clear recommendations. Doubtless he felt it would have been unsuitable for one of Her Majesty's judges, lecturing to a foreign audience, to have done so. His book is not then a brief for the law reformer, but it is a valuable exposition of the *status quaestionis*, as he sees it.

Love and Logic

Three Traditions in Moral Thought

By Dorothea Krook.
Cambridge University Press. 368 pages. 30s.

IT is usual, when appraising historical examples of moral philosophy, to present as fairly and as imaginatively as possible the answers which a philosopher gave to what he thought important questions and to assess the validity of the arguments which he used. Mrs Krook does not do this, for her main interest is in what past philosophers have made of love.

This somewhat unusual pre-occupation goes along with Mrs Krook's conviction that philosophy and poetry are very much akin because both are products of the author's "interpretation of reality." "Leviathan" is as intensely personal a statement of Hobbes's vision of human life as "King Lear" is of Shakespeare's. What is usually thought of as incidental to philosophy, the style of its execution, is therefore taken to be as significant as its arguments. Thus the views of Matthew Arnold and of D. H. Lawrence are discussed with the same seriousness, and with more enthusiasm, than those of Aristotle and Hume. Kant's views are not discussed at all.

The net result of this eccentricity of approach is not difficult to imagine. Philosophers are classified together not because they developed a certain kind of argument (e.g. naturalism) but because they down-graded or up-graded love. Aristotle, Hobbes and Hume are representatives of those who took a low view of human nature. Plato, St Paul, and St Augustine, on the other hand, gave love a decisive place in their moral systems. There is then what Mrs Krook calls the humanist tradition (religious, not scientific) which is surprisingly represented by J. S. Mill, Matthew Arnold, F. H. Bradley and D. H. Lawrence. It is only to be expected that in such an incongruous pastiche the actual problems of philosophers should be largely forgotten and their views somewhat distorted; an arbitrary selection of their works, too, like a concentration on Mill's "Three Essays on Religion," is understandable. But few would have expected learned appendices on "Socrates' Dialectical Method" and "Two meanings of Dialectic" to be followed by one entitled "The Lambeth Conference, 1958: Theology of Sexuality."

Such anomalies of execution are not surprising, perhaps, if the conception of the book is once conceded. For why should what modern bishops say about sex be any more or any less relevant to philosophy than what Hume said about sympathy or Hobbes about curiosity? Of course something, philosophically speaking, might be made of "love." Its distinctive character as a concept might be studied. It might play a very important role in an argument that showed the connection between man's "nature" and what he ought to do. But Mrs Krook never looks like doing this; she mistakes the articulation of ideas for philosophical argument.

Her book is therefore to be seen as a rich store of suggestive thoughts. It is not an argument, though it might provide material for argument. When considered as a work of literature, on the other hand, it does not exemplify her thesis that style is an important source of illumination to those who wish to understand its doctrine. It is, unfortunately, what it was—a course of lectures given at Cambridge to students reading for the paper called "The English Moralists" in Part II of the English Tripos.

Not All Black and White

African Nationalism

By Ndabaningi Sithole.
Oxford University Press. 174 pages. 12s. 6d.

IN the political anger of present-day Africa, milder sentiments often pass unnoticed. Regret for missed opportunity is one such: if only nineteenth century imperialism could have embodied some of the concepts of the Age of Reason, and have brought moral as well as technological progress. Mr Sithole's book is full of regret for this state of affairs that never was. It is full also of expectation for a future state of affairs that perhaps never may be—for that day when Africans, on their own at last, will live in independent self-sufficient democracies as it was always intended they should.

In his optimism, Mr Sithole is far removed from those who have suggested that western-type democracy may not be the natural form of government for new African states, or that aid from outside will still be needed—from the communist bloc if necessary. Nor does he indicate that any African leaders may be motivated by more than the uncomplicated desire to set their peoples free. In discounting differences of opinion among Africans themselves, he over simplifies. To see the Kabaka of Buganda as typically representative of Ugandan public sentiment is to ignore a problem of inter-African relations on which the whole situation depends; and surely today it is dangerously ingenuous to argue that the African desire to be completely independent is an adequate guarantee against communist influence.

It is his own acceptance of western values that leads Mr Sithole into inconsistencies. He makes the standard protest that Africans need not demonstrate to outsiders their capacity for self-rule, but has to qualify it by arguing elsewhere that Africans fully know and accept the principles of liberty and democratic representation. In general, he is reasonable in his demands for what an American journal called "the imprescriptible right to make a mess of their own affairs"; but to view the present mess in such exclusively black-and-white terms is to see only the half of it.

OTHER BOOKS

HOW THE CITY WORKS. By Oscar R. Hobson. 6th edition. *News Chronicle.* 176 pages. 8s. 6d.

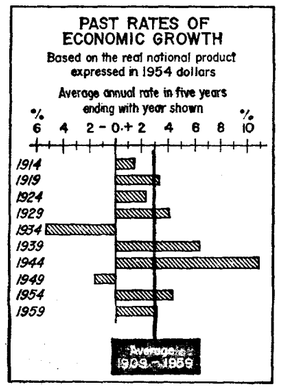
This invaluable book describing the City, its main institutions and their working, has now been brought up to date completely and this sixth edition contains additional chapters on building societies and hire purchase finance houses.

A SHORT HISTORY OF FRANCE TO THE PRESENT DAY. Edited by J. Hampden Jackson. *Cambridge University Press.* 231 pages. 20s.

The present volume represents in an abbreviated form the contents of the Handbook on France prepared by the Naval Intelligence Division of the Admiralty during the war. Many distinguished authorities, including Professor Brogan and the present Vice-Chancellor of Cambridge University, co-operated in this work, yet it is perhaps fair to say that the most useful feature for the student will be the excellent series of maps—though why the Navy should have needed to know the extent of the penetration of the Albigensian heresy is a matter for wild surmise. The editor's final chapter is rather breathless, and not very revealing on the nature of the events of May 1958 with which it concludes.

CAPITAL. By Karl Marx. *Foreign Languages Publishing House*, Moscow. London: *Lawrence and Wishart.* 923 pages. 9s. 6d.

In 1954 the missionary zeal of the Foreign Languages Publishing House provided the English-speaking public with a new edition of the sacred text—"Capital." Volume I—at a price of something under a tenth of a penny per closely-packed page Volume II followed in 1957; and here is Volume III, complete with preface and supplement by Engels (who laboured for ten years after Marx's death to bring the fragmentary manuscript to publishable form) and an index which, as befits a sacred text, is practically a concordance. Obviously the value for money is superb, despite vile type and viler binding. It should in fairness be noted that while Volumes I and II smelt abominably of fish-glue (or possibly bone-meal), Volume III scarcely smells at all. As an artifact, however, it belongs, like its contents, rather to the worst nineteenth-century period than to the age of the Lunik.



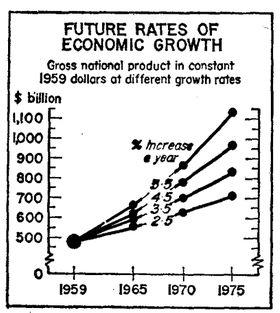
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

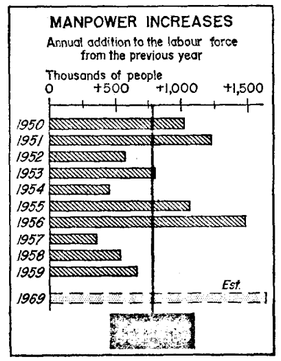
Growth by Numbers

WASHINGTON, DC

LAST week's report from Congress's Joint Economic Committee contains a new table, compiled by the Committee for Economic Development, which should provide ample material for politicians who want to juggle with statistics this year. In it can be found the average annual rate of economic growth between any two pairs of years since 1909, and it can be used for or against Democrats or Republicans, budget balancers or deficit spenders, monetary inflationists or deflationists. To the economic historian it shows how widely rates of growth in America have varied around the long-term average of 2.9 per cent a year. The great question at the moment—both political and economic—is whether that long-term average can be bettered in the future, and particularly in the golden nineteen-sixties. Surprisingly, there is considerable agreement—although not by any means unanimity—that it can be and will be.



The President's advisers are betting, unofficially, on a rise to 4 per cent in the annual average. The Joint Committee, using a remarkable new statistical device that the dissenting Republican minority among its members called "prestidigitation," looks for 4.5 per cent. Mr Leon Keyserling, the favourite economist of the left-wing Democrats, insists he is being conservative in shooting for 5 per cent and the panel of liberal experts from both parties, who worked under the auspices of the Rockefeller Brothers Fund, held out the glittering hope of 6 per cent. After picking a number, all the competitors—including now even the President—then use it to calculate magically large figures for the gross national product at some year in the future like 1965 or 1970, and to show that America can indeed have its cake and eat it too. Thus, according to all these estimates, the painful choice between more consumption and more public services will never have to be made, since the outpouring of resources will produce such a flood of government revenues that any imaginable public need can be met painlessly without increasing tax rates.



Oddly enough, this glittering prospect may in fact be realised. There are good reasons to expect the American rate of growth in the nineteen-sixties to be higher than the long-term average. For one thing, since the last world war the economy has shown, even allowing for the strange slowdown after the Korean outbreak, that it is capable of faster growth than it was in the past; presumably this is because technology and efficiency have been advancing more rapidly than ever. Those whose forecasts are in the top range are dazzled, no doubt rightly, by the enormous increase in expenditures on research during the decade just ended. In addition, the President's advisers, in their latest Economic Report, put together a deceptively simple equation and come to the conclusion that a higher rate of growth in the nineteen-sixties is all but inevitable. The equation starts with one known fact: the labour force, reflecting the postwar flood of births, will grow more rapidly in this decade than it did in the last. If this labour force is to be employed, there will have to be an increase in the national rate of investment. Therefore, with the input of both labour and capital going up, the rate of growth of output is bound to rise.

Besides this impressive amount of agreement on the prospects for economic growth in the nineteen-sixties, there is also considerable agreement on what the government should do to ensure that this growth actually happens and to make the performance even better. There are three items on everyone's list: improvements in education, more spending on research and the avoidance of severe fluctuations in the economy. The conservatives add the prevention of inflation, creeping or otherwise; the liberals lay more stress on taking care that an over-enthusiastic attack on inflation with the monetary weapon does not thwart the economy's upward momentum. But even this disagreement is not as great as it seems, for both sides now insist that the government should budget for bigger surpluses in times of prosperity, to remove some of the burden from monetary policy and to add to the country's total supply of savings. Above all, everyone agrees that the real thrust in the economy comes from the private sector and that actions by the government—always assuming that the government does act, and acts properly, to prevent the business cycle from getting out of hand—are marginal.

In the real world of the politician, the heady prospect of more rapid growth ahead will probably make its impact rather quickly—next year, in fact. Whoever is elected President in November is quite likely to find himself almost at once with something of the order of 7 or 8 billion dollars of surplus revenues to play with. He can then relieve some of the agony of government agencies who have not been allowed for three years to try anything new or bigger; cut taxes, preferably in such a way as to spur investment rather than consumption; and reduce the National Debt. Or he can, if he chooses, spend more on defence at home or aid abroad.

This possibility, of course, will not be the fruit of the higher rate of growth which is expected for the decade as a whole, but simply of the rapid growth during 1959 and 1960. And if things go at all well, the budget dilemma in the nineteen-sixties will become steadily less painful and the United States may be able to mount its long-delayed and much-needed attack on urban and other domestic problems. In addition, even as "low" an average rate of growth as 4 per cent a year should pretty well calm the current alarm about Russians outstripping Americans. True, the Russians have almost certainly been doing better than that, probably reaching 6 or 7 per cent. But if the United States hits an annual average of 4 per cent for a whole decade, it will be farther ahead of the Russians in total output at the end of the decade than at the beginning, even if they do not falter, as many people feel they are almost bound to do sooner or later.

Are there any flaws in this gratifying picture? To glance back first at the Joint Committee's new table, why has American growth proceeded so unevenly? The business cycle is, of course, the answer, but not the whole answer. Economic growth is such a mystifying process that no one can really tell from the past what will happen in the future, except that there will be growth of some sort. Then there is the nagging question about the equation in the President's Economic Report: will there be savings available to provide the capital investment needed to employ the bigger labour force, even assuming that the state of demand favours a higher rate of investment? The doubters raise other points; for example, will the average productivity of American labour begin to suffer at last from the fact that almost all the new entrants to the labour force are now being employed in ways other than the direct production of goods? And finally, if there is a real depression—as little as two consecutive years of slump—all bets are off.

Nonetheless, the odds at this point lie with the optimists. While in the coming election campaign the politicians will be wrangling over the country's economic performance in the Republican years from 1953 to 1959, with the Democrats making every effort to show how bad it has been, the days of slowdown are very probably over. With any luck at all, the American economy is off to the races.

Rights Turn

WHEN last week the Attorney General, Mr Rogers, pulled out of his hat a plan to provide more protection for Negro voting rights in the South, the Republican Administration snatched the initiative in this field from a laggard Democratic Congress and Vice President Nixon, Mr Rogers's close friend, got a long stride ahead of the Democrat, whoever he may be, who will be competing with Mr Nixon next November for Negro votes. The congressional leaders of both parties have been promising that the Civil Rights Act of 1957 will be strengthened in this election year, but they have shown no inclination to press for more than a bare minimum: federal penalties for violent obstruction of court orders against racial segregation in schools and guaranteed access to voting records for federal officials investigating alleged discrimination against Negro voters. These are the main provisions of the Bill approved by the House Judiciary Committee last summer, held up since then in the Rules Committee by southern obstruction and now at last, it seems, perhaps to be cleared for a final vote. Whether the clearance will be granted in a form which permits amendments on the floor, and therefore broadening of the Bill, remains to be seen.

In the Senate hearings are being held on last autumn's far-reaching recommendation from the Civil Rights Commission, set up under the 1957 Act, that the President should appoint federal officials to register voters in districts where state officials deny registration to Negroes. The Attorney General's plan is an alternative to this proposal and it caused a sensation, not only because until then the Administration had shown every sign of wanting to keep out of the controversy, but also because Mr Rogers's approach appears to be more effective than that of the commission.

There is some doubt whether the appointment of federal registrars by the President would be constitutional; in any case the idea is anathema to those Southerners who are determined to keep Negroes from voting and to people everywhere who resent any further encroachment by the federal government on the rights of individual states—of which control over electoral machinery is one of the most jealously guarded. Mr Rogers wants referees to be appointed, when needed, by federal district judges; almost undoubtedly this would be constitutional and it smells less of interference with local affairs by the executive in Washington. Mr Rogers's plan would apply to local as well as to federal elections and his referees would have power to ensure not only that qualified Negroes were registered but that their votes were registered also. The whole Senate is due to consider civil rights in about ten days' time; it will be interesting to see how the embarrassing situation time and the situation looks like being an embarrassing one for Senator Lyndon Johnson, the only Democratic presidential hopeful who is also a Southerner and the man whose iron hand normally rules the Senate—not always with a velvet glove.

Republican Fare

WHEN 100,000 Republicans sat down to "dinner with Ike" last week in 80 cities all over the country, to eat for their party's financial good, their "$100 plates" were piled high with old-fashioned American fare, the kind that the Eisenhower boys found on the table in Kansas at the turn of the century: roast beef, corn pudding, home-made bread, cole slaw, apple-pie, topped off with jugs of ice-cold milk. Mr Eisenhower, speaking from the 7,000-strong dinner at Los Angeles, displayed a similar sturdy conservatism. But when the giant television screens brought before the diners the Vice President, who was eating his dinner at the Amphitheatre in Chicago where he will almost certainly be nominated for the Presidency in July, it became apparent that Mr Nixon is looking to the future, not the past.

The Vice President payed a glowing tribute to the Eisenhower record of peace and prosperity, on which he must stand, but he made it plain that he is no stand-patter, but regards the past as a foundation for further achievements. Good as the Eisenhower years have been, Mr Nixon implied that they could be bettered if vigorous action is taken to relieve the patches of chronic unemployment and the distress of the old; to stride on toward equal civil rights for the Negro; to replace the obsolete farm programme and improve the country's schools. He promised to try to find more effective methods of settling industrial disputes and even to keep the defence budget under constant review—a hint, at least, that the budgetary considerations which weigh so heavily with Mr Eisenhower would rank lower with his successor.

The Democrats may complain privately that the Vice President has stolen much of their menu; so, too, may Mr Nelson Rockefeller, his routed rival for the Republican nomination who, a thousand miles to the East, was making a speech very like Mr Nixon's, calling

for leadership and a sense of purpose and warning his hearers against the risks of smugness. But in fact it was Mr Rockefeller who, by withdrawing from the race, helped to free the Vice-President to strike out on a line which appeals to independent voters; Mr Nixon need worry no longer about placating the Republican conservatives in order to secure the nomination. What does worry him and the party's leaders is the need to find attractive new Republican candidates for Congress, where the party is woefully weak; unpopular local men are a drag on a presidential nominee and they would endanger the slim chance the Republicans have of recovering control of the House of Representatives (the Senate is beyond their reach). Mr Eisenhower spoke of this need for "able, personable" men but, characteristically, Mr Nixon has done something about it: he has seized the chance to put his own choice, Representative Miller, in charge of the House campaign committee.

Space for Saturn

PRESIDENT EISENHOWER is standing firmly behind his own judgment that $41 billion for defence is enough to make America safe. On the American lag behind the Russians in space, however, the President has had sudden second thoughts. In his budget message he tried to appease the critics of parsimony by claiming that spending for civilian space projects would be doubled, very nearly, in the fiscal year which begins in July. This ingenuous manœuvre failed completely. Spending was to rise, it is true, from $325 million this year to $600 million next year, but the National Space Administration had to find out of this $60 million for the Saturn, which had previously been a responsibility of the Defence Department. This project, to develop an engine with 1.5 million pounds of thrust, is the best immediate hope for a more ambitious space programme. Moreover, the agency's authority to make contracts, which involves its ability to plan ahead and governs the rate of spending in future years, was to rise only from $524 million to $802 million; if the $140 million allocated to the Saturn was disregarded, the increase amounted to a trifling $138 million.

Such penny-pinching reflected the President's own conviction, which he repeated this week, that the prestige of the United States is not at stake in any "race" with the Russians and that the American space programme, if it has not been spectacular, has produced admirable scientific results. This complacency is not shared by most of the Democrats on the congressional space committees and it has been openly challenged in recent weeks by spokesmen for the State Department and the information services and by Dr Glennan, the head of Mr Eisenhower's own space agency. Moreover, Mr Nixon may well feel that the Administration's record in space will be a millstone round his neck if, as seems probable, he is the Republican presidential candidate this year.

Whatever the reason, the President has announced that he will ask Congress for another $113 million in spending authority for fiscal 1961, all to develop huge rocket boosters. This is about what Dr von Braun, the Saturn's creator, has been demanding to hasten its appearance by a year and brings the space budget nearer the $1 billion which many think it needs. Even so, Dr Glennan, who has outlined a glittering ten-year trail into space, does not expect to catch up with the Russians for four or five years; they will not stand still while America advances. Indeed, some great new Russian stroke in space may be announced while the committees are still debating, sweeping aside any hesitations they may feel about Project Mercury—the man-in-space scheme which has been criticised by many scientists—or about the irritating refusal of Dr Glennan to give Congress full information on how space contracts are awarded.

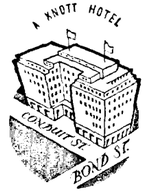
From Suez to Tulsa

THIS week there opened in Tulsa, Oklahoma, America's oil capital, the latest in the series of long anti-trust prosecutions which have kept the petroleum industry under continuous and much-resented attack from the government for almost twenty-five years and have frustrated all the efforts of public relations officers to wipe from the popular memory the reputation for monopolistic exploitation pinned on the industry by the notorious Standard Oil case fifty years ago. The present prosecution has in fact come to trial remarkably quickly, although the same will not necessarily be true of the verdict. It was just three years ago, when world oil markets were completely disrupted by the closing of the Suez Canal, that the prices charged by the 29 leading domestic petroleum companies for both crude oil and petrol went up almost simultaneously. According to the Department of Justice this was the result of concerted planning, that is, of illegal collusion, by all the companies concerned to raise, and then fix, prices.

The department admits that its case is mainly circumstantial and a congressional investigation of this and related matters in 1957 reached no definite conclusion, but a grand jury found sufficient evidence to warrant the present indictment. The companies argue that an increase in the price of American crude oil was long overdue even before demand rose as a result of the Suez crisis; that once prices begin to go up, a company which lags behind risks losing its sources of supply, since it is the buyer, not the seller, who sets the price paid for crude oil; and that the telephone conversations and other contacts of which so much is made in the government's case were part of the industry's regular routine and not of a criminal conspiracy.

The case will involve a hundred or more lawyers and enough documents to stretch all the way back to Suez and will cost the 29 defendants an average of $1 million each. The maximum penalty on any one firm is only $50,000, but conviction would lay the companies open to civil suits for damages, would make the public still more suspicious of them and might upset their normal business and pricing practices. What these in fact are should at least become clearer, during the trial, to the motorist who has never been able to understand why the price of petrol always moves in concert at each of the four filling stations at the corners of his local cross-roads, even though each belongs to a different company and all supposedly compete with each other.

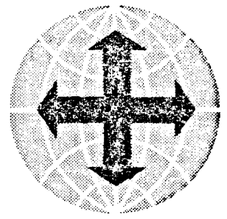
Spirit of Bermuda



FROM A SPECIAL CORRESPONDENT

LATER this month American and British officials meet in Barbados to discuss revision of the 14-year-old Bermuda agreement which regulates air traffic between their two countries and their territories. The original agreement includes a statesmanlike definition of the basic economic freedoms of the air, as well as providing for exchanges of routes. But lately both countries seem to have had difficulty in keeping the spirit of the Bermuda pact in mind. One of its clauses requires each party to give permission for named routes to be served by any *bona fide* airline designated by the other. Yet recently the British Overseas Airways Corporation's application to fly a trans-Pacific route provided for in the agreement was delayed for nearly a year by the American Civil Aeronautics Board. Whenever British officials in Washington pressed the United States too hard about this delay, it was only necessary for the State Department to ask: "And how is Northwest Airlines' permit to serve Hongkong coming along?" Northwest was chosen nearly five years ago as the second American air-

Chairmen vote for the Westbury



London's NEWEST Luxury Hotel in the Centre of Things

Let the Westbury take over your entertainment problems. Superb dining service. International cuisine. Air-conditioned banqueting rooms. Meet in the Polo Bar...

Bookings taken for all Knott Hotels in the U.S.A. and the Westbury, Toronto (immediate confirmation).

Get to the core of your advertising problems

How many Advertisers there must be, with appropriations of up to £30,000, who know they are not really getting the return that they should! Are you one?

What to do? You must be expertly advised by the *right* Advertising Agency.

To you, RIGHT means the readiness to see and meet *your* needs first . . .

To employ your £10,000, £20,000 or £30,000 with a high sense of responsibility ; to prosper *with you* rather than before you.

You need a medium sized Agency which provides constant, penetrating and personal service—the Agency in which you are an important account.

Gordon & Gotch Advertising may well be your right choice. We have carefully set ourselves out to grasp the problems of the smaller Advertiser; and have often built a small manufacturer into a national success.

We start by asking the complete confidence of the Advertiser. We like to be accepted as part of their Sales Organisation. From then on, our clients receive a very personal service and each account is under the day to day supervision of a Director. We employ all the advertising arts in their logical sequence —market research, marketing, merchandising, public and press relations—all are seen as individual parts which we relate into a programme to achieve results.

We are now ready to give this service to one or two additional Advertisers. If your Promotion is a problem, and you would like us to get our teeth into it, the Managing Director will be pleased to hear from you.

GORDON & GOTCH Advertising Limited

20 St. Bride Street, London, E.C.4. Tel: FLEet Street 4030

line to fly this route, already being served by Pan American Airways, but British permission has never been forthcoming.

Multiple designation—the naming of more than one carrier of a given country to serve a single route—was the subject of bitter argument at Bermuda. British policy in 1946 favoured the "chosen instrument": one carrier from each country for each service. American policy was just as strongly in favour of multiple designation and maximum competition. American officials argued that the public would be served best in the long run by having several airlines on each route. Moreover, each carrier should be allowed to offer as many seats as seemed economically feasible to it and should be encouraged to drum up the traffic to fill those seats.

In 1946 the difference of views was blunted by the fact that only the United States had the aircraft to provide regular overseas services. In addition, most countries were seeking tourist dollars, so the more American flights the better. Now, with the coming of the jet age, matters have changed. Today there is a large and growing surplus of seats available in the air. New jet aircraft are coming into service steadily—all but three of the fifteen North Atlantic airlines will be offering jet service this summer—and governments which subsidise their airlines are apprehensive over possible losses.

A SYMPTOM of the deteriorating situation was the recent decision of the British authorities to stop Pan American from flying a jet route from New York to Jamaica in the British West Indies by way of Ciudad Trujillo in the Dominican Republic. The Bermuda agreement gives the United States traffic rights from Miami to Jamaica; another bilateral pact permits flights between New York and the Dominican Republic. When Pan American introduced its new Boeing 707 jets in the Caribbean it decided to put the two services together and offer flights from New York to Jamaica. A half-hour stop at Ciudad Trujillo, and a change of flight numbers, was considered adequate separation for the two routes though the same aircraft was used throughout. Now, as a result of British protests, Pan American is turning its jets around at Ciudad Trujillo and the passengers are transferred to a DC-6B for the rest of the journey to Jamaica. The American negotiators at Barbados are certain to ask for the right to fly from New York to Jamaica with intermediate stops.

Extensions of routes, however, are not likely to take up much time at the meeting. It is basic principles that are in conflict, and some way of reconciling them must be found. Britain would not object—nor would the other protectionist countries such as France, Japan, Italy, Spain and most of the rest which have government-owned airlines—to a new agreement continuing multiple designation, if the United States would agree in return to control of the number of seats offered, and to division of the traffic between each country with this to be distributed in turn among the carriers of each country serving the route. In fact, the State Department has had to resign itself to several arrangements of this kind; one is actually included in the text of the bilateral agreement between India and the United States.

But there is a danger that not only the travelling public, but also a good number of the smaller foreign airlines, may suffer if the United States, which has already sacrificed some of the ideas for which it fought so hard at Bermuda, retreats any further from its free trade principles. Pan American and, to a lesser extent, Trans World Airlines have been growing increasingly critical of the volume of traffic being carried in and out of the United States by small foreign airlines. A shift of American policy towards some form of protection—with traffic divided up not simply among selected carriers, but among selected large carriers—would not be at all unwelcome to Pan American, which has long cherished the hope that some day it may become the "chosen instrument" of the United States in the air.

Clean Sweep for Elections?

THE Senate has astonished itself and delighted most observers by making a clean federal election Bill its first major legislation in this election year. Senator Hennings of Missouri has been struggling since 1955 to modernise the law on campaign contributions and expenditures which was passed in 1925, when the population was smaller, the dollar was worth more and television and radio, with their astronomical costs, did not have to be considered. Last week—too late for the reforms to apply to this year's contest—Senator Hennings won a great victory when the Bill, much strengthened on the floor, was passed by the impressive margin of 59 votes to 22. Unfortunately, in the House the Bill's strength is likely to be its weakness. For the first time almost all spending in states (including that on primaries, the intra-party elections at which candidates are chosen) would have to be reported. The Southerners who fought this change, and the Republican leader who, in the absence of any strong lead from the President, stood with them, were defeated on the sound ground that in one-party states, like most of those in the South, the primary contest is the only one that counts. But in the House, where the Texan Speaker, Mr Rayburn, opposes the inclusion of primaries, the choice may lie between dropping this important reform or losing the whole Bill.

What would be left is worth saving. The Senate Bill begins by raising, all round, the amount which may be spent legally. This is because the old limits are so low and so full of holes that they restrain no one. For example, candidates standing for the Senate would be allowed to spend $50,000, compared with $25,000 today, and a formula based on the number of votes would permit contestants in populous states, such as New York, to spend over ten times as much. The present limit of $3 million a year on the spending of a political committee operating in two or more states —that is the national committee of each party—would be raised to about $12 million. Such figures seem large until it is remembered that in 1956 the presidential campaigns alone cost over $30 million. Greater realism about costs would, it is hoped, induce more obedience to the law and it is necessary in a Bill which requires far more publicity about the source of contributions and about where the money goes.

The meaningless present restriction of $5,000 on individual contributions to the various political committees will disappear if the new Bill becomes law ; it has only encouraged a multiplicity of committees. In 1956 a single family contributed $250,000 in all to the Republican cause and a single individual $70,000 to the Democrats. Instead, the Bill would impose a limit of $10,000 on all political contributions from an individual. but this would not be easy to enforce.

What Mr Marples Saw

NEW YORK

On his recent tour of American cities, it seems unlikely that Mr Marples, the British Minister of Transport, found much in New York's traffic to remind him of home. The heart of the city, the borough of Manhattan, is surrounded by water and its streets, except in the older section, are broad and laid out in strict grid-iron formation like those in most American towns. From the rim of the island, high speed tentacles (on which the only stop sign is a stationary line of cars ahead) reach out hundreds of miles into the surrounding countryside. Indeed, for those who can avoid the daily surge of commuters and the stampede out of town and back on summer week-ends the journey through this metropolitan region of 16 million people is remarkably painless.

In Manhattan itself, postwar "improvements" have been less spectacular. An express highway goes round its entire perimeter; some of the avenues which run up and down the island have been made into one-way thoroughfares with traffic lights synchronised for a given cruising speed; and most of the cross-streets are also one-way, something which reduces the temptation to make U-turns, although these are forbidden only in business districts. In certain areas and at certain times of day a pedestrian can often make better time than a taxi. But New York's traffic is by no means paralysed; indeed, where circumstances allow, it moves at speeds far greater than the legal 35 miles an hour.

New York's "pink zone," if it had one to correspond to the London area where parking is specially restricted, would cover the lower half of Manhattan—the part just south of Central Park. Here, within an area of nine square miles, are both the old business district around Wall Street, where the ratio of office space to road space is such that pedestrians run the automobiles off the streets at rush hours; mid-Manhattan, with its theatres and shops, its growing number of new office skyscrapers and its shrinking residential zone; and, as well, a major centre of manufacturing employment. About 3.3 million people visit New York's "pink zone" daily, quite apart from the large numbers who move around within it. Most of the outsiders arrive by various forms of public transport but, even so, well over half a million cars, taxis and lorries come in each day, and the private automobile (with only two occupants on the average) is steadily gaining ground.

The moving vehicle is a problem, but the stationary vehicle is a greater one. Searching for a parking space in New York might ennoble the character if the searcher did not so often land, in the end, on an illegal pitch. On most streets parking is permitted on both sides during the night, but during the day, and particularly at rush hours, it is restricted to certain hours or prohibited altogether. In theory at least, all streets are cleared down one side each day (by allowing parking on alternate sides on alternate days) so that street cleaners can do their job. Violation of traffic regulations when the car is moving necessitates an appearance in court, but a "ticket" for a stationary violation can be settled by sending in the fine, usually $5 or $10 for a first offence; the amount rises steeply for repeated violations.

In addition to the private car, the lorry—usually of dimensions which make it look quite out of place in a city—is a major hazard when it is loading and unloading. In theory these operations are prohibited during rush hours in congested districts. But, in practice, the police turn a blind eye, particularly in an area like the garment district which is so dependent on road transport.

In the lower half of Manhattan there are facilities for parking about 80,000 cars. About a third of these spaces are in open car parks where buildings have been demolished to make way (temporarily at least) for the more profitable automobile. Unlike newer cities, like Los Angeles, the centre of New York has as yet few multi-storey garages. For an off-street space, the customer pays anything from 50 cents to $1.25 an hour, with cheaper rates for longer periods. The city also does a profitable business in parking meters; it collected $7 million last year. The charge is fixed by law at 10 cents, but the time limit varies from half an hour to three hours according to location.

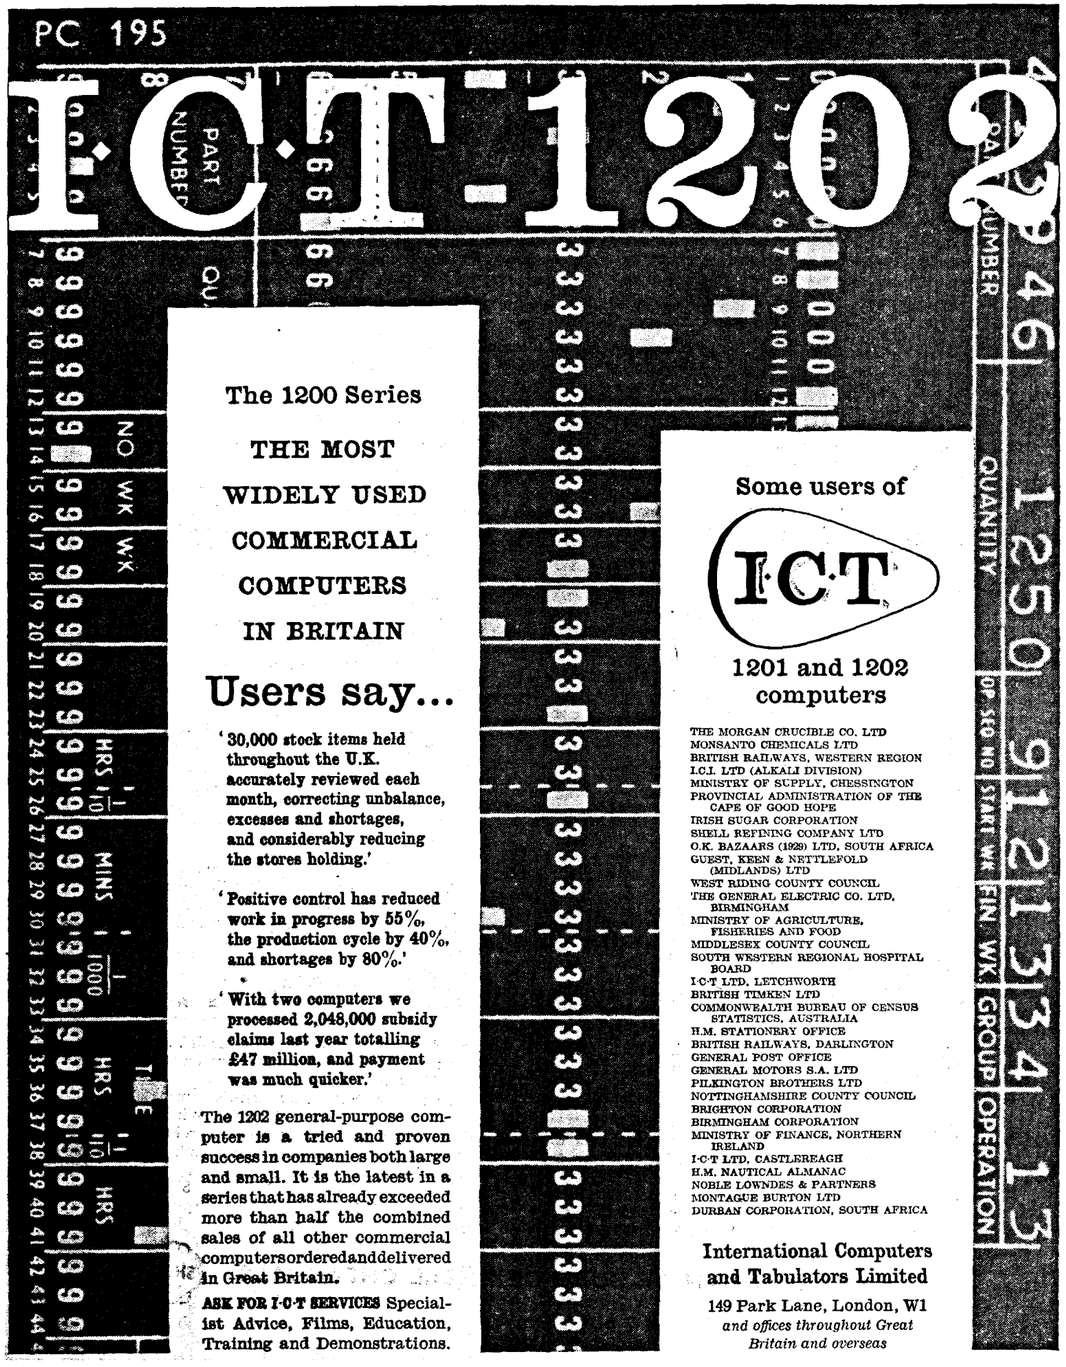
Looking to the future, it is generally agreed that through traffic, which pounds across the congested city streets only because all routes lead inevitably to Manhattan, should be diverted. A bridge is to be built across the Narrows at the mouth of New York harbour to enable north-south traffic to by-pass the centre of the city, and a fight is now on for an elevated highway across lower Manhattan, with eight traffic lanes above and six below, which would link the bridges over the East River with the tunnels under the Hudson River. It is also agreed that more rigorous enforcement of existing restrictions on parking and loading could work wonders; at present a no parking sign may, on occasion, carry a supplementary "No Parking Today" notice to indicate that the police mean business. The main problem, of course, is manpower. This spring the Traffic Department is introducing a small band of "Meter Maids"—women whose job will be confined to checking parking meters and handing out "tickets" to offenders; their training includes a course in *ju-jitsu* as well as one in make-up and hair-styling. If New Yorkers take kindly to this innovation, it may be extended to cover other restrictions on parking.

But on the general question of the future of the automobile in New York City, opinion is divided into two opposing camps. For the traffic engineer, for the retail shop which has lost customers to the suburban shopping centres, and for those who would like to drive to work, the answer is still more express highways, more bridges and tunnels, and above all more parking space. Emphasising that traffic is the life-blood of any city, the New York Traffic Commissioner recently proposed a $52.5 million scheme to provide garage space for 10,000 more cars in 15 multi-storey self-service garages. A charge of 25 cents an hour would make the project self-financing—providing it was well patronised.

On the other side are those who protest that the demand from commuters for rush-hour road space can never be satisfied, and that the ownership of cars in the city, which has already doubled since 1946, would inevitably soar if more parking space were provided. Los Angeles, with one car to every two residents, is an object lesson in what happens to a city which bends over backwards to accommodate the private automobile. Instead of carving up New York to make way for the traffic, this school of thought would cut down the traffic to fit the city. Suggestions for achieving this have included higher tolls on the bridges and tunnels leading into Manhattan; a higher tax on car registrations in the city; and a modest tax on those who wish to garage their cars at the kerbside. It has even been proposed that central Fifth Avenue should become a pedestrian mall.

Being beastly to the motorist is a rather un-American sentiment. But those who want to preserve the centre of the city against an avalanche of automobiles can also claim that their plan offers the only hope of rescuing public transport from the present vicious circle of declining patronage and deteriorating services.

Everything's under control . . .



What a fine figure of a scarecrow he is! Although bird traffic seems somewhat slack at the moment, who can doubt that those vast white gloves are capable of dealing with any emergency. Unfortunately, his command of the situation does not extend to the other pests of growing crops — the insects, the fungus spores and the weeds. To keep *them* under control the best weapons are chemicals from Shell.

Shell agricultural products include a comprehensive range of insecticides, fungicides, weed killers and seed dressings. And, of course, Nitra-Shell fertilisers. Shell scientists are always seeking better materials and methods . . . last season Britain's first liquid seed dressings came on the market — introduced by Shell.

To the farmer, Shell offer first-class materials, swift distribution, and free technical service. Whether you are in agriculture or in industry, if you have a problem involving the use of chemicals, Shell may well be able to help you. To find out is easy.

Write to the Advertising Manager, Shell Chemical Company Limited, Marlborough House, 15-17, Gt. Marlborough Street, London, W.1.

THE WORLD OVERSEAS

The Disappearing Energy Gap

In May, 1956, from the Headquarters of the Organisation for European Economic Co-operation in Paris, there was published a slim red booklet entitled "Europe's Growing Needs of Energy —How Can They Be Met?" It was the report of a group of fuel experts headed by Sir Harold Hartley, who had been asked to estimate the likely future growth of demand for energy in the OEEC area and the ways in which this could be supplied. Its approach was simple. By chancy but sophisticated arithmetic, it arrived at "ranges of demand" against which western Europe ought to prepare, for 1965 and for 1975. From the evidence of Europe's own fuel industries and its own judgment, it reckoned the extent to which indigenous production of primary fuels—chiefly coal and hydro-electricity, plus some oil and natural gas—could be increased by those dates. And to fill the "energy gap" that it saw between these two sets of projections, it set what it considered the maximum practicable development of nuclear electricity during the period and showed the remaining gap that would have to be filled with imported oil and coal—the financing of which imports, it reckoned, might prove a formidable burden upon western Europe's future balances of payments.

Last week, from the same source, there was published an equally slim (though blue) booklet, "Towards A New Energy Pattern in Europe," the report of a second, similar group of experts under Professor Austin Robinson. It would be hard to find a more diametrically opposed, if equally reasonable, approach to the prospect that the Hartley Commission considered than has become possible, in the meantime, for the Robinson report. It is not the distinction between a scientist and administrator and a (temperately) liberal economist that has substituted reliance on consumers' choice in the free market for "crash programmes" to develop indigenous energy production; it is the transformation of Europe's energy market from apparently chronic shortage to glut.

The bringing into production of new and highly productive oil sources since 1955-56, the current prospect of yet more; the readiness of the American coal industry to offer, given low freight rates, massive imports of coal; the prospect of transporting natural gas across oceans—these additions to prospective supplies have altered the whole climate of the market. At the same time the European consumer has demonstrated his intention to switch rapidly over towards oil, there has been no difficulty in importing the oil, and it has proved no burden to finance the imports. So the indigenous coal supplies that the Hartley Commission was so concerned to expand have faced a steadily falling demand; though production has been cut, unsold stocks have piled up. And the nuclear programmes, left high and dry as the tide of conventional fuel prices has failed to go on rising, look steadily sillier in terms of hard economics—which is not to say that they have been dropped, or even resolutely cut.

The fascinating point is that the arithmetic is the same. There is virtually no difference in the Robinson estimates of likely demand for energy in 1965 and the Hartley estimates; the estimates for 1975 differ by only about 5 per cent, well within the huge margin of error inherent in such flights of the higher guesswork. Total OEEC demand in 1975 is now put at the equivalent of 970-1,050 million tons of coal; the earlier report put it at 960-1,060 million tons; for 1975 the Robinson figures are the equivalent of 1,225-1,425 million tons, against the Hartley figure of 1,160-1,360 million tons. The differences only come in the pattern of fuels that the Robinson Commission thinks may be demanded; the Hartley Commission felt it could only tell Europe what it could hope to produce and what it must therefore try to import.

This change of emphasis has two particular implications, one economic and technical, the other political and strategic. Holding that there is no justification for the protection of indigenous production, and counselling Europe to concentrate on making its coal industries efficient rather than keeping them any given size, the Robinson report is inevitably cold-blooded about the development of nuclear power. Making every allowance for the purchase of experience (if not the pursuit of prestige) in pressing forward this new technology, it has to point out that it thinks nuclear generation unlikely to be able to compete in cost during the next ten years, and that its development is imposing a heavy cost in additional investment upon the countries concerned. Unkinder still: even in terms of import-saving, ignoring the investment burden, the import cost involved in nuclear development might buy enough coal or oil to generate three-quarters of the power that nuclear stations might be expected to provide in 1965.

The political and strategic implications, not of this report, but of the transformation of circumstances between these two reports, are more fundamental—and more chastening. No economic concept can have played a more important role in the politics of western Europe than "the energy gap" did in 1955-57. This divergence between two extrapolations, for example, was one of the few economic arguments that Sir Anthony Eden ever managed to get into his head; the pages of his autobiography are studded with its implications, and so is the history of policy during his premiership. The development of nuclear energy "is essential to the future of our industry and our national life"; energy investment was reshaped the wrong way. "I told the Russians that the uninterrupted supply of oil was literally vital to our economy . . . we would fight for it"; we did—and cut it off. The energy gap, again, was at the core of French policy, in its vast efforts to regain great power status by obtaining in the Sahara oil within French national control, and escaping the stranglehold of the Arabs. The west Germans got off cheaply, if not without pain; from their appreciation of the energy gap followed only long-term contracts for supplies of American coal which arrived neatly in time to undercut their marginal mines. By the time the policies had had their effects, the concept was already evaporating; now it is gone—for the moment? Moral: a moratorium on forecasts? Or should politicians simply be forbidden to read them?

Algiers from the Wings

FROM OUR SPECIAL CORRESPONDENT LATELY IN TUNIS

On the night of General de Gaulle's speech on the Algiers crisis President Bourguiba entertained the FLN leaders to dinner so that they could listen to it together. Previously the members of the Algerian provisional government, whose strong man, M. Belkacem Krim, is not so silent now that he has become foreign

minister, had been indicating to delegates and journalists, gathered in Tunis for the All-African People's conference, what they were looking for. They sought the "demystification of De Gaulle" and the production by France of an *interlocuteur valable*. M. Krim and others had been at pains to point out that while they think General de Gaulle is sincere about self-determination, they cannot be expected to rely solely on his word and that, even if he is sincere, the Algiers revolt exactly illustrated their doubts of his ability to carry out his word.

They also expressed themselves as pained at the idea that their recent action in nominating the imprisoned M. Ben Bella and two colleagues who are likewise *hors de combat* as their negotiators with France implied any insincerity on their part. M. Ben Bella, they said, was the man whose word would be most fully obeyed by FLN (Moslem rebel) forces if he agreed to terms. It would appear that if M. Krim were the Michael Collins of the Algerian rebellion, and M. Ferhat Abbas the Michael Griffith, then M. Ben Bella was the De Valera. Moreover, it was untrue, one gathered, that M. Ben Bella was out of touch with the Algerian provisional government, of which he is still a titular vice-premier.

To return to the Bourguiba dining table. The reactions of the presidential guests varied as the speech proceeded. Some expressed surprise at the absence of new content. Others shrugged their shoulders. The president was on the whole relieved. Although some of his advisers had been urging the net advantage to Tunis of a French civil war, during which the Tunisians could quietly gobble up Bizerta and the French army in Algeria might turn against itself, Mr Bourguiba himself steadily favoured the restoration of General de Gaulle's authority. Unlike some, he foresaw that the speech did in fact foreshadow a victory for the French president in Algiers. In his press conference the following day President Bourguiba fastidiously distinguished between his pleasure at the passages which assured the restoration of the authority of the French state and his sorrow that General de Gaulle had brought his peace no nearer in Algeria.

ALTHOUGH the Algerians repeatedly insist that they are moderates, who are willing to look at a reasonable compromise, there are few if any signs in Tunis of regular underground contact between them and representatives of General de Gaulle. Self-appointed mediators are for ever turning up, but they never produce results. The passage in President de Gaulle's speech which aroused greatest disfavour at the dinner table was the one in which the general enlarged on the long period of pacification, during which economic, social and educational reforms would be enacted, before the holding of the Algerian referendum. Unless the French retreat from this condition, an end to the war seems out of the question.

It is in this context that the FLN has reversed its previous opposition to the idea of an international brigade in Algeria. In actual fact, as M. Ben Yahir in a television interview was keen to point out, it does not need extra soldiers—though it does happen to be seeking foreign technicians, preferably from China, to teach its men to use some of the more complicated weapons it has been receiving. The purpose of the brigade would be the symbolic pressure it would bring to bear on France. However, despite his painstaking efforts to show himself publicly at one with the Algerians, President Bourguiba's lively distaste for the idea of a foreign legion being trained on his soil, and his celebrated talent for mimicry, got the better of him on the very day after the dinner party. The African legion, he said—and illustrated with his mobile hands—was a non-starter, but was a splendid ruse to arouse a conference to applause.

Mr Bourguiba's relations with the more strident parts of the Arab world remain ambivalent. He is cultivating exceptionally friendly relations with Iraq, which he has never believed would go communist, is comfortably far away, and is a useful counter to President Nasser. At the same time, his own sense of strength at home—after the last election he is unchallenged even in Mr Salah ben Youssef's southern stamping ground—enables him to look the Egyptians more steadily in the eye. The UAR has adjusted itself to Mr Bourguiba's new stature. Abuse from Cairo radio has been turned off; Mr Fuad Galal, the head of the United Arab Republic delegation to the All-African People's Conference, stayed on after the steering committee meeting in Tunis in October to help forward the reconciliation (though the effect was somewhat damaged by the landing of a fully-equipped assassin while he was there); and there are rumours that Mr Salah ben Youssef is to be shifted out of Egypt altogether.

But while President Bourguiba was no doubt anxious to display his capacity to be an African nationalist with the best of them while all-Africa was his guest, the timing of his challenge over Bizerta had nothing to do with Algiers. Quite to the contrary. The harangue to the vast, colourful demonstration outside the Casbah against the French bomb would hardly have included this titbit at all if the orator had had any idea that the French crisis would develop so dramatically.

The ultimatum on Bizerta had been planned before the Algiers rising. The last thing Mr Bourguiba wanted was to be held responsible by world opinion for driving the ultras to despair and propelling France towards civil war. There was even an apparently genuine fear in government circles as the crisis developed that President de Gaulle might seek to restore the morale of the French army by using the Bizerta ultimatum as the excuse for a quick march on Tunis. No one felt sure that in these circumstances world opinion would be on the Tunisian side.

While President Bourguiba was (and is) in deadly earnest in wanting Bizerta, even at the cost of heavy unemployment in the port, his language on the subject underwent a swift strategic readjustment. The original Arabic of his speech demanded a French withdrawal by February 8th, the second anniversary of the bombing of Sakiet. The official French version spoke of the need to conclude negotiations by that date, with the implication that otherwise force would be used. By the time of his press conference five days later, Mr Bourguiba explained that what he required by the deadline was a serious opening of negotiations, conceding the principle of French withdrawal; and there was now no talk of military action if the deadline passed—only of the breaking off of economic, social and cultural relations.

The fact is that the last thing Mr Bourguiba wants is the intervention of the FLN army to fight for Bizerta or to have to appeal to it to protect him against a French invasion. Cordial though his social relations with M. Krim and his fellow guests at dinner may be, he knows full well that it is a lion that he is stroking.

France Foots the Bill

FROM OUR PARIS CORRESPONDENT

GENERAL DE GAULLE has won this round; he must still win the whole fight. For this he needs greater powers. The government has therefore asked for the right during a whole year to take by decree all measures necessary to ensure the maintenance of order, the safeguarding of the state and the pacification and administration of Algeria. Parliament will go on pretending that it exists; it will even debate certain matters such as the budget. Basic liberties, it is promised, will not be affected. The general merely wants more power in order to prepare a solution for Algeria,

punish the culprits and purge the administration, both civilian and military. Caesar needs power to cleanse the republic.

This official version was duly endorsed on Tuesday by a massive vote in the National Assembly. The debate had its comic side. Journalists not suffering from amnesia had to smile when M. Debré, the prime minister, spoke in horror of people plotting against the state or when another neo-gaullist leader vituperated against colonels interfering in politics. M. Le Pen, on remand, commented bitterly in the lobbies on the difference between plots that succeed and those that do not. Another comic touch was that in theory the special powers are granted to the government, but every speaker insisted that in practice they are given to the president. A provision was even introduced that the president must sign all decrees. Socialists and Radicals tried without avail to shorten the period of application and narrow the dangerously wide scope of the law.

Watching this strange assembly which in its brief life has managed to vote massively for two contradictory Algeria policies and which, if pushed, would probably decree that all red-headed Frenchmen should be deprived of their rights, the first reaction was to remain unperturbed by the further curtailment of its prerogatives. But on second thoughts it appeared that such an assembly was hardly an obstacle to action. Both *Le Monde* and *Le Figaro* pointed out that if the government had not acted so far against the conspirators it was certainly not for lack of legal powers. The reason was different and was connected with the origins of the Fifth Republic. The conspirators who had contributed to the downfall of the previous regime were rewarded and promoted by its successor. They had allies, sponsors and sympathisers at very high levels. Only when they tried to repeat their performance—this time against General de Gaulle because of his Algerian policy—was it decided to counter-attack.

Gaullism will now attempt to get rid of its former allies turned enemies. The general is apparently in no mood for mercy. Ministers who wavered and preached concessions during the crisis will pay the price; the departure of M. Soustelle and a new job for M. Guillaumat are taken for granted and other changes may follow. The administration and police are to be purged both here and in Algeria. There should be plenty of jobs for faithful gaullists. The army may provide a stiffer test since there not only the men but the general mood has to be purged. In the fertile breeding ground of Algeria at war other conspirators may spring up.

GENERAL DE GAULLE may have decided to kill two birds with one stone. It was everybody's secret that he was already dissatisfied with the new institutions. Parliament's faint echoes of opposition to his economic, social and foreign policies bothered him. At the time of the Pinay crisis there were persistent rumours that the president intended to take more power into his own hands. In May, 1958, he had wanted full powers for two years and he accepted seven months only to overcome resistance to his return. Now, with his prestige in the country greatly boosted, he has a fine opportunity to increase his prerogatives and he has seized it.

And so French political life will return to the apathy from which it was slightly awakened towards the end of last week when the prospect of naked aggression from Algeria stirred metropolitan France. Letters were then sent to the president, petitions signed, and all the trade unions together staged a token general strike. The expressions of popular support in the country certainly did the president no harm. The government, however, is to revive the reign of secrecy. The new French maxim seems to be that the best cure for democracy is less democracy.

Few Frenchmen are perturbed by what could be decreed in the name of safeguarding the state. Fewer still seem perturbed by the prospect of the further removal of the people out of politics. The liberals console themselves with the thought that this price must be paid to give the general the opportunity to carry through reforms in Algeria and bring peace nearer. They add "in Algeria" to the slogan fashionable in the time of Napoleon III: "*L'Empire c'est la paix*." If the new empire does not succeed in ending the war rapidly, it will not even be liberal.

THE FRENCH ARMY—II

In Search of Status

FROM OUR PARIS CORRESPONDENT

"OURS is the army best prepared for subversive wars." True or not, this claim, often repeated by French officers, hides the other side of the picture: that it is prepared for virtually nothing else. Five years of concentration on the Algerian war have distorted the French military machine and turned it into the army of the *djebels*, trained for fighting a guerrilla enemy, for controlling the population, and for psychological warfare. Many officers consider that this is all France will ever need, because atomic weapons are so destructive as to be unusable. But this is not the official French view. General de Gaulle plainly wants to have at his disposal diversified armed forces, with up-to-date conventional weapons, the nuclear deterrent and all.

Some of the general's closest military advisers try to justify his well-known distaste for military integration within Nato by the psychological needs of the French army in its particular predicament. A nationalist force obsessed with colonial warfare and convinced of its patriotic mission across the Mediterranean cannot, they argue, simply be brought back and turned into a "stateless" army. The argument sounds far-fetched, since Nato integration is at the top, and the forces remain national forces. Admittedly, among French officers serving in Algeria there are strong anti-American feelings, because, in their opinion, the United States has failed to grasp the importance of subversive war and pays too much deference to Arab nationalism. It is also true that Frenchmen often complain that they are treated as junior partners in Shape (the stock complaint concerns documents marked AEO—for American Eyes Only). But they stop short of suggesting that French standing does not correspond to the French military contribution. General Jean Valluy is commander-in-chief of allied forces in the central (the most important) sector; his appointment could not be justified by the strength of the depleted French divisions stationed in Germany.

French opposition to integration may well be essentially tactical. It may be a means of pressure to obtain atomic secrets and allied help in the ballistic field. General de Gaulle is convinced that a nuclear deterrent is now an indispensable requirement for an independent foreign policy; once in possession of it, he holds, France would automatically gain the place in an Atlantic triumvirate, and the greater say in allied decisions in the world outside Europe, that he demanded in his memorandum of September, 1958. It is argued in Paris that France would then be able to agree to integrate the rest of its air forces and to accept American nuclear bombs on its soil under dual control. Until then, it will continue to be awkward, trying to trade the advantages of geography against American technical knowledge.

General de Gaulle's demands on the alliance are based not so much on existing strength as on his vision of a future army, still mostly at the paper stage. The atomic device to be exploded next month is usually reported as weighing around five tons. To slim it down will take years. The Mirage IV-01, the means of delivery now being prepared, is a light bomber with insufficient range to fly to Moscow and back at full speed. The project of a heavier and longer-range version of the Mirage was dropped in August partly to save money and partly because, by the time the French bomb is ready for action, nothing short of a missile will do. Several French firms have joined together to form a

company for ballistic research (SEREB). Sceptics in Paris, however, suggest that, without foreign aid, it will take at least a decade to fit French nuclear warheads to French missiles.

Thus the French deterrent is still in its infancy, while modern conventional French divisions, capable of waging war in Europe, are almost non-existent. In 1954 France had a nucleus of modern divisions and plans for expansion. All this was disrupted by the Algerian war. Troops moved from Germany to North Africa left their heavy equipment behind; by now it is obsolete. In this year's defence budget of 16,530 million new francs, about half goes for the pay and upkeep of the overgrown forces. The army in Algeria is a great consumer of equipment, particularly of means of transport. Conventional forces in Europe have, therefore, become the Cinderella of the budget. Talking of up-to-date weapons for conventional divisions, M. Guillaumat, the minister of the armed forces, had to admit that "for the army, our effort in this field had to be merely symbolic because of the necessities of the Algerian war."

France may not have the means at present. General de Gaulle and his advisers know their military ends. France should have a nuclear striking force capable of hitting "any point on earth." It must also have several divisions on European soil—the number is still undecided—strong enough and well enough equipped to make France once again a major military power in western Europe. France must have air transport and mobile troops which can be sent overseas at short notice, particularly to Africa, where the army is to serve as a vital link in a fast evolving community. Finally, the army must be able to put down subversion at home.

THE shape of the French army to come thus corresponds to General de Gaulle's design of 25 years ago, set out in his book "Vers l'Armée de Métier," naturally with variations imposed by changes in technology. The mobile units of the future and the increasingly complex weapons will require professional soldiers for preference. They will be supplemented by national servicemen with a technical background or bent, who would serve a longer stretch even than they do now. The rest of the population could serve an initial short term with subsequent periods of training. A decree of January, 1959, which set out the framework of the future organisation of defence, provided for this development.

The mainly professional army is also thought to be more reliable for anti-subversive action at home than a big conscript force. A political ferment can spread to national servicemen. Professional soldiers, aloof and rootless, are more immune to such contagions—or so it is obstinately supposed. The January decree already mentioned put yet another weapon in the constitutional arsenal of emergency measures. The *mise en garde* can be proclaimed for all sorts of reasons (threat to a part of the territory, to a sector of national life, to a fraction of the population) and gives the authorities discretionary powers such as the power to requisition manpower, goods and services.

General de Gaulle's relationship with the army can now be seen in its complexity. When last week he talked of his love for the army, it was not a mere figure of speech. He sees the armed forces not only as the pillar and guardian of the regime, but as the instrument of greatness and stability. But it must be obedient; while many of the commanders who brought him to power have a categorical imperative of their own—the permanence of the French army's mission in Algeria. As has been seen, the relationship contains the seeds of misunderstanding and even of conflict.

It is no accident that among the "loyal" commanders pushed forward in recent months, airmen, tank specialists and technicians predominate. They are the men who can contemplate a modernisation of the armed forces with equanimity. Among infantry officers, who have most reason to fear the bowler hat, and paratroop commanders—the knights of guerrilla warfare—are to be found the men willing to enter into an alliance with semi-fascist settlers and extremists at home in order to impose on France any sort of regime that will put Algeria first. Last week the French army saved its unity by coupling *Vive de Gaulle* with *Algérie Française*. But the general must now know that this state of things will not allow him to shape the armed forces into an obedient tool or into a modern force with international standing. The simultaneous development of a deterrent and of conventional forces is likely to prove too much for a country with the national income of France (or, for that matter, of Britain). Coupled with a major colonial war, the idea cannot even be seriously contemplated. General de Gaulle remains faced with the task of transforming the French army from an Algerian force into a gaullist instrument of power. Unless he is permitted to put an end to the Algerian war, he can hardly begin.

(Concluded)

Trouble at Tawafiq

FROM OUR MIDDLE EAST CORRESPONDENT

THE shooting that broke out last week in and about the demilitarised zone between Israel and Syria, at the south-eastern end of the sea of Galilee, ended after a four-hour cannonade and a brush between Israeli and Syrian aircraft. Officers of the United Nations Truce Supervision Organisation, who negotiated the cease-fire, are now investigating responsibility for the incident. The Syrians claim that the Israelis fired on Arab farmers going about their lawful occupations in the zone; the Israelis counter-claim that the Syrians sent troops into the zone in the guise of farmers in order to establish fortified posts. The Syrians say they shot down at least one Israeli Mystère, but Arab military claims are generally suspect. If a Mystère really was brought down by Syrian Migs, then the Israelis are unlikely to let the matter rest.

This incident is probably the most serious border clash since the Israeli irruption into the Sinai peninsula in 1956. Yet it fell short of the "retaliations in force," on the Qibya and Qalqilya pattern, by which the Israelis once sought to overawe the Arabs. Since the Sinai campaign the Jews have had no need to impress the Arabs with their military superiority; and the Arabs, whatever they may say, have had no wish to invite further demonstrations of the obvious. The question therefore arises whether the "battle of Tawafiq"—the village which saw most of the fighting—was an isolated incident or the beginning of a new series of frontier skirmishes. Both the time and the place of the incident suggest that it was connected with the Israeli plan to irrigate the southern Negev desert by diverting the waters of the Jordan. A statement about this plan, made by the Israeli minister of finance in mid-November, was countered by the Lebanese foreign minister saying in January that Lebanon intended to deny Israel the waters of the Hasbani river, which joins the Jordan at Huleh. This last statement, incidentally, aroused some perturbation in Beirut, since the Lebanese are not accustomed to sitting furthest out on the Arab limb. (*The Lebanese plan was described on page* 396 *of* The Economist *last week.*)

The publicity about the Israeli project has caused a flurry of consultations between the other Arab states on ways and means of frustrating it. The question is on the agenda of the conference of the Arab foreign ministers that opens in Cairo on Monday. Iraq, which usually speaks loudest on Israeli questions—presumably shouting to bridge the desert which providentially separates Baghdad from Tel Aviv—will be a conspicuous absentee unless the customary Lebanese efforts at mediation succeed.

The depressing question arises: what means are available to them in their resolve to keep the Jordan river where it is? The current Arab opinion is that the foreign ministers will decide on an appeal to the United Nations. But the reception of the Arab case in New York may well be disappointing. Israel can earn good marks by pointing to the essentially constructive nature of its plan, especially as it proposes to take no more water than was allotted to Israel under the Johnston plan; and Arabs will doubtless have to refurbish their arguments for detaining the *Inge Toft* and the *Astypalea*. Lebanese lawyers may find they have fashioned a two-edged sword by rushing to defend the diversion of the Hasbani in international law.

Western observers in this area see a correlation between friendly American gestures to President Nasser and the Israeli activity on the border. This view cannot be pressed too far, but it is clearly in Israel's interest to remind the United States government from time to time that the Arab-Jewish quarrel is still smouldering and could burst into flame. The Israelis are disappointed that the West is taking an active interest in the improvement of the Suez Canal, while doing little to solve the problem of Israeli cargoes; and their disappointment has been sharpened by recent signs that western governments may be ready to consider further participation in UAR development schemes.

In this context both sides have an interest in limited border incidents that goes beyond the obvious purpose of warning each other against this or that. The Israelis exploit them to remind world opinion that they are still blockaded and must have scope for their energies in such directions as free passage through the canal or the irrigation of the Negev. The Arabs use them to keep alive a memory of Israeli aggression and to convince the world that the Jews are a dangerously explosive force which must be checked. Whatever pretext sparked the battle of Tawafiq, both sides find in it material for propagating their causes. The danger is that appetites will grow with eating.

Socialist Split in Japan

FROM OUR CORRESPONDENT IN TOKYO

"REACTIONARIES to right of us, crypto-Communists to left of us!" is the battle-cry of Japan's brand-new Democratic Socialist party. The party, consisting of 54 bolting Dietmen, came into existence officially in January, amid shouts of "Deviationists" from the main-line Socialists, and smoke-bombs hurled by hooligans of the Great Japan Patriotic party, an ultra-nationalist organisation. In their domestic policy, the Democratic Socialists stand by parliamentary democracy, and want a welfare state built on the ballot-box. In their foreign policy, they want to be regarded as the friends of every country including their own, and call themselves Japan's only true neutralists.

The Dietmen have bolted the Social Democrat party, which retains this moderate name but has long since lost its moderate nature, if indeed it ever had one. It was a coalition of Marxist and other Socialists, with the Marxists predominating, and it had lasted four years, breaking down last October, when the non-Marxists accused the majority of being tools of Moscow and Peking, and the Marxists tried to "discipline" the recalcitrant minority.

The new party's leaders, Mr Suehiro Nishio and Mr Eki Sone, believe that Japan can be wooed and won for Socialism through the ballot-box. But win or lose, they insist that the new party will always abide by the voters' freely expressed wishes. This, they explain, is the chief difference between themselves and the Social Democrats, whose tactics of political strikes and Diet fisticuffs have estranged Japanese voters, who do not want a revolution (the Communist vote in Japan is only one per cent). The left-wing Socialists constantly preach class-war and, what is worse, they do so mainly in order to win kudos from Mr Khrushchev and cheers from Chou En-Lai.

So, in summary, says the new party: and the exposition, while not intended to bring comfort to either, is obviously more derogatory of Japan's rival Socialist school than of the ruling Liberal-Democrats, who according to themselves are also devoted to the ballot-box and parliamentary democracy. Unparliamentary tactics employed in the service of foreign communist masters: thus do the Democratic Socialists define the chief danger now facing Japan, and they have no hesitation in identifying it with their former Socialist colleagues. Although Japanese politicians, even after having seemed to burn every boat, frequently turn out to have retained a couple of inflatable dinghies up their kimono sleeves, it does look as though Mr Nishio, Mr Sone and their followers are not contemplating an early row-back to the Marxist shore. What they have done, however, is to leave a time-bomb or Trojan horse there, in the person of Mr Jotaro Kawakami, another right-wing Socialist who decided to remain with his personal following in the Social Democratic party, but whose publicly expressed sympathies are all with the bolters.

That these developments should chafe the majority Socialists is understandable; but the fault appears to be entirely their own. They call themselves Social Democrats but deride the parliamentary system as bourgeois and insist that the manual working-class is the only class that matters. They say they want Japan to be neutral, then announce that the United States is Japan's enemy as well as China's. Mr Kawakami says he decided to stay with the main party to try to soften such attitudes, but more probably he is waiting to see how the Liberal-Democrats react to the Socialist split. If they seize it as an excuse to push the helm hard to starboard, political moderation will be seen not to pay off and the left-wing Socialists will with some justification be able to cry: "Told you so!" Should this not happen, however, the new Socialist party may survive long enough to attract allies in its task of protecting parliamentary democracy against onslaughts from either the right or the left. The new Socialists have already announced that they are willing to work with, though not to merge with, any group prepared to dedicate itself to that task. They are backed by the trade union combination *Zenro* which, unlike the left-wing *Sohyo*, is not utterly opposed to all manifestations of capitalism. The question for Japan is whether the Democratic Socialists and *Zenro* can find counterparts within the rag-bag Liberal-Democrats and also among Japanese capitalists.

The Last Individualist

FROM OUR BONN CORRESPONDENT

THE enduring shadow of Dr Adenauer lay vexatiously across the Free Democrats' annual conference at Stuttgart last week as their retiring chairman, Dr Reinhold Maier, carefully sighted his parting shot. It was a warning round high across the bows of the ship of state. As a man giving up ambition at 70, Dr Maier addressed himself to the Chancellor of 85, bent on winning next year's election and carrying on:

> The one-party regime with an absolute majority is now finally concentrated in a single man. He makes the decisions. The others have to fall in line. Contradiction is becoming rarer and rarer, objections more quickly brushed aside. . . . There is less and less manly pride before the chancellor's throne. . . . Do we really not want to learn anything from our history?

More, said Dr Maier: industrial concentration was proceeding uncannily apace. That meant, internally, fewer and fewer independent livelihoods; externally, "a shrinking of the powers and personalities with which communism will have to reckon on the last lap." And at this moment when democracy was in jeopardy throughout the world there was in western Germany a minister of the interior rummaging in the arsenal of the totalitarian state for ugly weapons, including a Goebbelesian state-controlled radio and television system and a Goeringesque bill for arming the government with devastating emergency powers.

Despite his dark thoughts and the sad occasion of his departure from federal politics, Herr Maier was in excellent form. The Free Democrats, who hold 44 seats in the present Bundestag and

represent two and a half million voters, reckon they stand a good chance of being in a position in 1961 to determine whether the Christian Democrats or the Social Democrats will provide the chancellor. If last week's mood persists, they would then almost certainly opt for the Christian Democrat. It might even be Dr Adenauer, whom they do not love ; but they hope that, if not in 1961, then not long after, Dr Adenauer will hand over to a leader with whom they could enjoy a workable coalition.

It was part of the conference's preparations for 1961 to elect a personable, and comparatively young, one-time professional army officer as Dr Reinhold Maier's successor. Herr Erich Mende is 43. To refugees, he is a fellow victim, having been born and gone to school at Gross Strehlitz (Strzelce-Opolskie to its present population) in Upper Silesia. To former soldiers, Herr Mende is the unashamedly well-decorated regimental commander who ended the war in British captivity and, as soon as he was free, robustly tackled his new world by studying law and political science. To the Bundestag, he is the parliamentary leader of the Free Democrats, able and courteous in debate, industrious in committee. To television addicts he is the well-mannered, good-looking deputy, the patently decent chap who has liberal ideas about Germany co-operating with a Europe embracing more than six states, yet insists at the same time on German unity and just frontiers. The party publicists are diligently putting it about that the new chairman will continue to be mentored at his own request by the two veteran Württemberg liberals—his predecessor Reinhold Maier, and no less a personage than ex-president Theodor Heuss.

Herr Mende's inaugural address reflected much of the political wisdom of these two philosophers. It also sounded now and then a precise note, now military, now national, of the speaker's own. Thus: "The immediate objective for 1961 is to come out of the federal elections in such strength that nobody can govern without, or against the wishes of, the Free Democrats." And:

> The German nation has paid for the last war, and is still paying. But we must all join to prevent the German people from having to pay in addition for the political mistakes of the last ten years.

The delegates listened with a decorum suggesting that they have learned at last that public displays of dissension and obstreperousness have to be paid for, as well as lost wars. Whatever mutinies may have been bubbling in his heart, that charming no-man Dr Dehler exuded a sad submissiveness. Even the "young Turks" of North Rhine-Westphalia were on their best behaviour ; and the reformed Nazis who seem to feel more at home in this party than in any other kept as unobtrusively in the background as they have done ever since the embarrassing Naumann affair. For all his precision, Herr Mende mentioned only one of the party's two immediate objectives in 1961. The second is to get hold of more money.

Africans in Congress—I

BY OUR SPECIAL CORRESPONDENT LATELY IN TUNIS

For all its periodic frustrations and confusions, the second All-African People's Conference supplied additional momentum to the idea of a common African personality. This was partly due simply to Africans learning more about each other—there was, for example, the excited discovery of East Africans that Tunis, which they had thought to be a desert, had grass and hills and singularly beautiful buildings ; and partly to the exchange of common experiences of the old enemy, colonialism, and the subtler new enemy defined as "neo-colonialism." But underlying the aspirations for continental unity lay an inspiring ambition—to show that it was possible to emulate the pride of Europe's nationalism without copying its tragedies.

But if Africans are to run a continent, they must learn first to run their own organisations more efficiently. The efficiency of the host country's arrangements contrasted painfully with the hectic improvisations from Accra, the seat of the secretariat. The secretary-general, M. Diallo of Guinea, weighed down by his huge white Gandhi cap and in trouble with a refractory manuscript, claimed credit in his report for practically everything that had happened in Africa in the past year. But Chief Anthony Enahoro, the "shadow foreign secretary" of the Nigerian Opposition, influenced doubtless by the fact that the Nigerians had scarcely received their invitations to Tunis in time, questioned drily whether any event at all had been influenced by the All-African People's organisation. In fact, as the hard-headed Nigerians and Kenyans were at pains to point out, practically nothing had been done about the resolutions taken at the first conference in Accra. To do M. Diallo justice, it had taken the steering committee nine months to confirm him in office. The notion of choosing active politicians from east and west as chairman and secretary-general in order to achieve geographical balance has proved an unhappy one. Moreover, because of the absence of adequate finance for the secretariat, M. Diallo has been combining his job with that of resident Guinea minister in Ghana, a position which under the terms of the Guinea-Ghana union involves him in membership of both partners' cabinets.

It was typical of the contrast between the French- and English-speaking delegates that while the former should concentrate on ideological formulations, the latter's main preoccupation should be the strengthening of the practical machinery and the planning of concrete action. Led by Mr Josef Mathenege of Kenya, the eastern and central group, which caucussed and worked closely together and on most issues had the support of the Nigerians, secured amendments to the draft constitution providing for a full-time secretary-general with a three-year term, an adequate staff and regional sub-divisions. These are designed to provide the nucleus of the regional federations, which are considered the indispensable first stepping-stone to a continental union.

The task of raising money has been left to the independent African states, which found themselves under continuous criticism from nationalist parties of still dependent territories for doing insufficient for the cause ; contributions from governments or organisations outside Africa have been virtuously banned, and even a grant of £E11,250 from the United Arab Republic was felt by some to be a little embarrassing because of its disproportionate size. Perhaps more serious than the problem of finance, however, is that of personnel. The abler people may criticise the work of the centre, but they are unwilling to take it on themselves because they feel they must work for their own countries.

While at Accra the English-speaking delegates had run the show, at Tunis, they were forced to acknowledge the importance of French-speaking Africa. Generally speaking, M. Tlili of Tunis —who, as a delegate from the host state, had been chosen to preside to avoid the embarrassing contest that would have resulted from any attempt to re-elect Mr Mboya—was a firm chairman. He had little time for the secretary-general ; at a particularly chaotic meeting of the presidium he sharply ordered him to switch off the portable radio with which he was constantly fiddling. But possibly because he was strongly influenced by his single-minded Algerian colleague, M. Boumandjel, whose sole purpose was to produce the most impressive possible anti-French demonstration, M. Tlili rigged the speaking list so flagrantly in favour of the French speakers that he defeated his own purpose—to dispose in the first two days of the rhetoric of the heads of delegation and then get down to serious business in committee. When the plenary session should have finished the whole English-speaking eastern and central group was clamouring for recognition and the chance of tanning British colonialism for a change. The grim prospect of the session continuing till 6 am was only averted by an interpreters' strike ; the conference went on into Sunday at the expense of the trip laid on by the Tunisian government.

(To be concluded)

The BLUE NILE Viscount, maintained and crewed by Airwork for Sudan Airways, is the only service that exists primarily to serve the Sudan. Every Monday at Noon it leaves Gatwick Airport (only 35 minutes from London by fast train) and reaches Khartoum next morning stopping at Rome, Athens, and Cairo. If, for reasons of business or pleasure, you wish to break your journey at one of these 'Fabled Cities' and complete it later on you may do so* *at no extra cost.* The same concession applies on the return journey —every Thursday evening from Khartoum.

VISCOUNT comfort—ROLLS-ROYCE speed

The VISCOUNT 831, used for the Blue Nile Service to Khartoum, is larger, faster, and even more luxurious than earlier ones. An unusual feature is the FREE INFORMATION SERVICE on board, which supplies passengers with up-to-date news of Sudanese business, political, and social events—very helpful to newcomers and to those returning after a long leave of absence.

**Athens traffic rights are subject to Government approval.*

ASK YOUR TRAVEL AGENT ABOUT THE BLUE NILE ***VISCOUNT*** SERVICE TO KHARTOUM *and about the special 'stop-over' facilities*

SUDAN AIRWAYS' *technical maintenance is provided under contract by Airwork Limited who are also the UK General Sales Agents.*

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

MACHINE TOOLS UNDER CRITICISM—II

Shaping New Tools

ALL that can be said of the report on research and development in the British machine tool industry which was completed last autumn by the Department of Scientific and Industrial Research is that it shows some signs of achieving results. Having been based upon information supplied in confidence, the report is not being published ; some inklings of its more critical findings, no doubt garbled, have leaked out, but the quality of its analysis will never presumably become open to public assessment. The report is said to have received praise from the machine tool industry itself ; that would be open to more than one interpretation. It was clearly by no means wholly critical. But it was prepared by an economist and an engineer who managed to see factories producing 70 per cent or more of Britain's output of machine tools ; and, however temperate, its criticisms have been followed, *propter hoc* or merely *post hoc*, by a declared readiness on the part of the industry to make significant changes in its whole approach to research and development.

By its terms of reference, this DSIR inquiry was focused more upon technical progress in the industry's products, as most other British critics of the industry have been, than upon the methods of manufacturing those products, upon which Professor Melman of Columbia University concentrated in his recent report upon the machine tool industries of Western Europe which was discussed in these columns last week. Other critics of the rate and the breadth of technical advance in the British industry have fastened upon two major weaknesses that appear to limit this:

Its comparatively limited expenditure on research and development. A published DSIR estimate put this at some £800,000, or 1.1 per cent of net output in 1955-56, against an average of 2 per cent in most manufacturing industries and much higher proportions in technically advanced industries. The industry itself, in 1958, put its expenditure on research and development at more than £20 million from 1948-1957, which would imply a far higher proportion. But whatever the figuring, the industry appears now to accept that its efforts in research have been inadequate.

Its remarkably limited recruitment of scientifically and technically trained personnel. A recent official report reckoned that only about 1.3 per cent of the industry's 45,000 employees were scientists or engineers ; and of these less than half were graduates. A sample of about 90 companies, asked for such details in 1957 by the Machine Tool Trades Association, said that they employed, out of 30,000 people, 25 engineering graduates, and during the past year had taken on only two men from universities (though recruiting more from technical colleges).

Failure to recruit graduates was no doubt largely a matter of inclination. But the industry since the war has also had difficulties in getting and keeping enough of the skilled people it knows it needs: skilled engineering workers for production and draughtsmen for design. It trains a fair number of apprentices, but loses a higher proportion of these than it can afford: and it has often complained of losing skilled men to industries such as motor manufacture which pay the men much more for less demanding work. All these difficulties have contributed to a problem of succession in the design of British machine tools. An outstanding designer, himself perhaps not equipped (in less demanding days) with the theoretical background he would now consider necessary in his successors, is liable to find himself lacking the technical reinforcement both of a flow of ideas from a good research department and of an entourage of young graduates working up below him.

Succession in design is technically the most critical aspect of a wider problem in this industry's management. The British machine tool industry consists of about 300 companies and employs about 45,000 people ; in a business making many variants of say 20 basic types of tools, the small specialist firm is a natural unit. Many are private concerns, and even among the industry's largest units there is often a tradition of family control. In some companies, this family succession has been accompanied by great age in the dominant personalities ; in others, it has led to the sale of the concern to outside interests largely for sheer lack of promising men coming up through the business. At its best, the comparatively simple and direct structure of control typical of machine tool companies, with few intermediate levels of management, has operational advantages ; but beneath a family hierarchy, it does not tend to develop or retain the dynamic executive or to attract the ambitious and highly-qualified recruit.

TECHNICAL weaknesses in research or recruitment do not necessarily show their results in the actual machine tools that this industry is now selling. Even the general run of British tools has a high reputation for quality, though (to quote a phrase from inside the industry) this is sometimes vintage quality. Their results would show, rather, in the frequency and variety with which British makers offer wholly new or radically improved designs of machine or standards of performance as compared with makers in other countries,

particularly Western Germany, the United States and Switzerland. Many of its customers feel that as a whole the industry lags behind in such a comparison of innovations, though there are some impressive exceptions in its liveliest concerns.

To a large extent, British design seems to them to rest still upon the empiricism that gave it world leadership in this and other kinds of engineering design in the nineteenth century, as against the stronger theoretical basis informing German, Swiss, American and perhaps now Russian design in the twentieth. A Continental designer, for example, may try to design faults such as vibration out of a machine ; the British manufacturer is alleged too often to counter such faults by improvised modification of the machine, sometimes setting up trouble elsewhere by destroying the unity of the original concept. A British representative may well quite rightly argue that his firm's machine, lacking the innovation or the styling or a competitor's, is perfectly suited to a possible customer's production problem ; but that does not necessarily mean that he will get the order.

Others, less philosophically, argue that this industry has suffered from too much reliance upon imports of advanced machines and, of recent years, upon the production of foreign designs under licence. In principle, this is sensible enough: the British engineering customer needs the widest choice of tools ; his purchase of competitive imports, in theory, should stimulate design at home. The practical complication, however, is that many of the British manufacturers, including several of the largest, are themselves actively engaged as importing agents. This is an unusual phenomenon ; competition among major firms to handle crack German tools is seldom matched by any corresponding eagerness of the German prinicipal to sell a complementary British machine tool inside the *Bundesrepublik*. Whether the sensible principle has been taken too far is a matter of continuing argument—within the industry as well as outside. It could, obviously, become an alternative to real efforts to advance home design rather than a stimulant.

Such technical weaknesses as hamper the British machine tool industry are in no sense peculiar to it or exceptional in British engineering ; in the production of machinery and capital goods, in particular, it is not difficult to think of other industries which in every sense are weaker. Manufacturers may well feel that the constant focus of criticism upon their industry rather than others is unfair: it is the penalty of their central importance. The manufacture of machine tools is not only a significant export industry operating in conditions of bitter international competition ; it is also perhaps the most important single determinant of the rate of technical progress attainable within the engineering industries of any economy.

WHAT matters is to help the industry make up such shortcomings, not to put it in the pillory. There had been some evidence of readiness within it to attend to admitted weaknesses, before DSIR submittted its report ; there has been a definite declaration of intent since. The MTTA, in conjunction with the Manchester College of Science and Technology, had already inaugurated a post-graduate course in advanced machine tool design and had put up the money for 12 scholarships a year on a two-year course—though this prospective supply of six specially-trained designers a year is a puny beginning in comparison with the *Technische Hochschule* at Aachen, which turns out about 120 machine tool engineers a year, to say nothing of the American and Russian institutes of technology. There is little doubt that the industry will attempt to increase its recruitment of scientific and technical graduates (needed on the sales side as well as in production and research).

Responsibility for technical progress within this industry cannot wholly rest inside. Whether any of its major customers have ever exerted as fruitful an influence as, say, Imperial Chemical Industries does upon the design of chemical plant is doubtful. Austin at Longbridge did, as Renault in France does still, design some of its own transfer equipment on the unit principle ; the British Motor Corporation now prefers to help the machine tool makers design it. The aircraft manufacturers, one of the few groups of customers accustomed to as much precision as is required in parts of machine tool manufacture, have been demanding customers for very advanced equipment and have toyed with developing some machines on their own. But they have not—surprisingly—diversified or bought their way into machine tools during their recent doldrums, which might have seemed a good long-term investment for them and for the country. Electronics firms have provided almost all the impetus for the development of computer-controlled equipment. Various large outside companies, mainly from elsewhere in engineering, have bought their way in, providing fresh sources of managerial and technical personnel and assisting in the process of amalgamation into somewhat larger units that the industry needs.

In an industry where firms are often too small to support a useful research department or even to finance the development of radically new tools, one might expect co-operative arrangements. The industry has a share in the Production Engineering Research Association, but its attitude towards this or any co-operative research has always been mixed. The MTTA is now committed, however, to formulating its views about the right kind of organisation for research in this industry. And some opinion inside as well as outside the industry is reported to go rather further: towards building up some centre of development and design, not merely of research, which would go beyond the work ordinarily done by the DSIR or by the research associations of other industries. It is not easy to see what form this could take, or how far a central development centre could venture into design ; but it might for a time offer the most effective deployment of some of the resources and men that the industry can muster for this purpose. An alternative or supplementary arrangement might be the strengthening of design and development work in the more advanced companies by Government development contracts. This Government is not inhibited in its support of such technical effort in other industries.

But such a technical effort would have to be directed from within. And this raises the question whether some broadening and strengthening of the industry's central organisation might not assist too. Something on the lines of the British Iron and Steel Federation, founded at the behest of the Government before the war—with an independent chairman, backed by a secretariat strengthened on the side of statistics and economics and able to organise the direction of technical policy—has been suggested. (Radicals in the industry have suggested that MTTA should fade into MTMA ; that the existing organisation should be at least partly replaced by one which specifically concentrated on the manufacturer's interest.) Such a strengthened central organisation, whatever its pattern, might take as a first task the study of some of the problems of this industry which are not, or not in the first instance, technical. These might include a thorough investigation of the size, nature and potential growth of the market for machine tools at home and abroad ; of the possibility that Russia may capture the West's markets for standard tools in the underdeveloped countries, as Professor Melman fears and as some of the British technical critics (though not the industry itself) are prepared almost indifferently to concede ; and whether the rationalisation of production methods and the, economically and technically, advance of design—higher productivity in the machine, or in making it—must always and necessarily conflict.

Cables Find a Lead

Price leadership, which may replace the price agreements of many British industries, has made an appearance in the cable industry

AMONG the British industries that have recently had to find an alternative to collective price-fixing, the cable industry is one of the most interesting for the onlooker. Within seven months it completed the full circle. The ring was broken up ; there followed a bout of vicious in-fighting, forcing prices during most of the time well below total production costs ; then price leadership supervened, and with it a partial return of stability.

The battle is by no means yet over. British Insulated Callender's Cables made its first essay in price leadership last November in the market for mains power cable which accounts for about a third of the £100 million or so now spent on cables annually in this country. Roughly another third of this market consists of "general wire," such as that used in the electrical wiring of buildings, for portable tools, or in more specialised applications as, for instance, coal mines. Here competition in prices lasted for another two months, and the industry is anxiously waiting to see whether BICC's initiative last week in setting a round of price increases in motion will be followed by every other firm. The remaining third of the cable market comprises, in the main, submarine, telephone, and super-tension cable and covered conductors—the insulated wires and strips that are found in most electrical apparatus. Agreements covering telephone and super-tension cable have not been abandoned. They have been lodged with the Registrar of Restrictive Trade Practices and will presumably in time be called before the Court and defended. Submarine, telephone, and super-tension cables are made by few firms and for each there is a dominating buyer: the voluntary ending of the price agreement for covered conductors happened to coincide with a boom in business.

Setting up the Restrictive Practices Court was the immediate reason why the cable makers abandoned three of their price agreements. But this was in fact the second bite that the government had taken at this industry's restrictive practices. The Monopolies Commission spent three years, from 1949 to 1952, investigating the cable makers' agreements (other than those affecting international trade, which are still broadly in effect); and as a result of its recommendations, certain quota and allocation schemes, exclusive dealing arrangements, and rebate systems covering both cables and covered conductors were brought to an end "by voluntary undertaking" at the end of 1954. In addition, the industry's system of common prices was replaced by a scheme of "minimum prices" subject to periodic government review. The effect of this change was, however, not very much. The prices of mains cables and general wire sold by members of the associations affiliated to the Cable Makers' Association had previously been based upon the average of the five lowest total costs of member firms. The new minimum price was based upon the lowest-cost single producer's figures, and on most types of cable the difference between the two was much less than five per cent.

But the Cable Markers' Association had already been coming under steadily mounting pressure from elsewhere. At one time in the twenties and early thirties, CMA members handled about 90 per cent of the total British cable market ; they reacted in a lively way to competition from outside their association either by getting these firms to join or by buying them out and, sometimes, by closing down the factories bought up. Since the last war things have been somewhat different. The investment needed to enter the industry, particularly to manufacture general wire, is not exceptionally high. Several new firms that started up in the later thirties, specialising in fewer lines of cable, have managed to preserve their independence. They obtained some protection from the wartime system of allocating raw materials ; later, CMA's somewhat gentler attitude towards competition after the war enabled them to nibble steadily away at the CMA members' business by offering significantly lower prices. Moreover, several CMA members, with substantial investments in rubber plantations and production facilities, failed to keep abreast of the replace-

CABLE PRICES AND YIELDS

	Jan. 1, 1959	June 30, 1959	Dec. 31, 1959	Feb. 4, 1960	Earnings per cent	Divd. per cent	Yield per cent
Aberdare 5/-	15/9	18/-	17/7½	17/9	38·9	17½	4·93

General Electric £1	39/9	31/3	46/-	44/-	16·7	10	4·55

† Adjusted for scrip issue.

ment of rubber by plastic as an insulating material for general wire ; this gave the independents a big chance which they did not let slip. Home sales became increasingly important when export sales, which at one time had taken almost a third of the industry's output, began to dwindle through the development of local manufacture overseas. Then, just as the shadow of the Restrictive Trade Practices Court began to loom the Government imposed restrictions upon the capital expenditure programmes of public authorities, from which almost half of the domestic cable business comes.

The first clear sign of a fissure in the CMA structure came three years ago when Crompton Parkinson removed its subsidiary, Derby Cables, from the CMA. Then, about a year ago, BICC and AEI, the two largest groups in cables, began bidding for other firms. AEI, which had added Siemens to its Edison-Swan interests in 1954, acquired both W. T. Henley's and London Electric Wire, together with the latter's subsidiary, Liverpool Electric Cable. It has since closed down one of the three Henley factories as well as the plant of Liverpool Electric. BICC, which has been steadily concentrating its operations since 1955 at the substantially rebuilt and modernised plant at Erith, in Kent, also in preparation for the return of full competition in the cable industry, bought Telcon (Telegraph Construction and Maintenance), Scottish Cables, and, more recently, Metropolitan Electric Cable—whose operations it has since removed to Erith. This is likely to be only the beginning of re-grouping among cable makers. Enfield Rolling Mills, for instance, took over its former parent company, Enfield Cables, last year and and has since merged its power cable activities with Standard Telephones and Cables.

But it would appear that the period of rapid change is nearer to an end in mains cables than in general wire. There are now about eleven distinct manufacturing groups supplying mains power cables: all followed BICC's initiative last November in bringing the sharpest phase of the price war to a close. Price-cutting on this type of cables started a year ago with a 5 per cent cut by the Mains Cable Manufacturers' Association, followed by another cut of the same proportion to come into effect on the day after the association's price agreement was formally abandoned at the end of April. Prices very quickly fell another 10-15 per cent, to a point well below the total costs of most manufacturers. The new price level, following the increase initiated by BICC, is claimed to just about cover the break-even points of the more efficient firms.

THE industry is hoping that BICC will essay another increase before very long. For the time being the attempt at price leadership by this firm seems to have succeeded. It is the largest producer, with perhaps 40 per cent or more of total British cable production (against AEI's 15-20 per cent) though hardly the lowest-cost producer in every single type of cable. Home sales have been reviving, and the remaining "independent" makers appear to be quite keen to keep their identity, in response to several suggestions to join up with other manufacturers. The industry is no doubt conscious, too, that if amalgamation continues to the point where questions of public interest arise, the government could decide to remove or reduce the 17½ per cent tariff on mains cable and take action to limit the operations of the international cartel, the International Cable Development Corporation, whose rules still broadly govern imports of mains cables by this country.

But the process of shaking out general wire manufacturing has still some way to go. The number of separate producers of mains cables has been sharply reduced, but there are still more than forty making general wire, roughly the same number as the Monopolies Commission found in 1948. Several have been kept in business simply by the industry's six decades of restrictive practice. The spread of costs between CMA members reported upon by the commission was as wide as 20-30 per cent. Most general wire is sold through wholesalers, and though list prices remained the same after last April the discount prices actually paid by wholesalers and by the contractors or manufacturers who finally use this wire came down very sharply: whereas the contractor used to pay some 80-85 per cent of the list price, he had been paying no more than 55-60 per cent immediately before last week. Then, BICC cut both its list prices and its discount rates (between wholesaler and contractor these are recommended rates of discount), thus increasing the effective price paid by users of general wire by about 5-7½ per cent. This was a calculated risk for, though BICC had been given the clear impression at meetings of the Electrical Cable Makers' Federation, the new trade association that has been formed for the whole industry, including CMA members and others, that the industry was hoping for such a move from BICC, it could not be sure that its initiative would be completely followed. And it could not count on getting any firm assurance of support, moreover, without the industry once again running foul of the Court.

MANY firms have already followed suit, adjusting their list prices and recommended discounts accordingly, and they are now watching to see if the rest will also bide by BICC's lead. Even the more efficient firms outside CMA claim, however, that the new prices give a return too low to cover overheads as well as direct costs of manufacture. Many cable manufacturers have "diversified" into other industries and could, therefore, withstand a loss on their cable business for the time being. This is quite probably what they will have to do, for even if this present attempt at price leadership in general wire sticks, it may be some time before prices are brought back to any generally profitable level. For the weaker fry there is likely to be only one way out, unless some of the stronger fish make them an offer—while they still have a business worth selling. But for those in the cable business with long memories there is a certain irony in their present experience. Sixty years ago there was a similar outbreak, also short-lived, of strenuous price competition, when the expiry of the first patents for paper insulation coincided with a recession in sales. Before very long—but not before a number of manufacturers had disappeared altogether or by merger—the survivors got together and began composing the patchwork of restrictive trade agreements that public interest has now decided should cease. It is now their turn to see if they can operate under the system of price leadership that other industries have used for years as an equally comfortable, or politically less unpopular, alternative to price competition.

CAPITAL
can be a
decisive factor

in expansion and progress.
ICFC provides capital to small and medium concerns in Great Britain in the form of share capital, and long-period loans on fixed terms

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital £544,000
Assets exceed £3,000,000

Directors: J. B. Campbell, J. W. W. Huntrods
P. H. Russell Smith, A.C.A., P. J. Cannon, G. Keighley

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms :

Money at 1 month's call,
4½% per annum, maximum £5,000
Money at 3 months' call,
5½% per annum, maximum £25,000
Money at 6 months' call,
6% per annum, maximum £50,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC11 explaining our mode of operation.

BUSINESS NOTES

MOTORS

Cars for Merseyside and Scotland

THE moves of Ford Motor Company to Merseyside and of the Rootes Group to Scotland are more significant successes for the government's policy of getting the motor industry to expand outside its traditional areas of manufacture than the agreement it reached with the British Motor Corporation two weeks ago. Whereas BMC is to transfer its production of tractors and heavy lorries to Scotland and to expand its output of cars and vans in its existing locations at Birmingham and Oxford (admittedly, without an overall increase in employment at those centres), both Ford and Rootes intend to make cars at their new plants.

The plans that Ford has now announced cover about half of the £50 million that it proposes to spend on increasing its vehicle making capacity. So it is not certain yet that the company will be prevented from locating some expansion at or near Dagenham, which is what it originally wished to do, though its announcement states that it intends "to locate major expansion of its car production on Merseyside . . . subject to the successful outcome of discussions now proceeding with the Board of Trade." Presumably these negotiations include the question whether Ford is to get any government assistance for this relocation in a "development district." The site of the new plant will be at Halewood, to the south east of Liverpool, and here Ford will build "an integrated car body plant, including stamping, body assembly, paint, trim and final assembly operations, to employ about 8,000 in the production of 200,000 cars a year." The Shotton steel mill of John Summers, in neighbouring Cheshire, will presumably be the main source of the new plant's sheet steel. Output is due to rise somewhat there, though Ford's demand at the most northerly motor plant in England might offer some orders for Colvilles at Ravenscraig. Ford's present vehicle-making capacity is about 550,000 to 600,000 a year, of which two-thirds would be cars. The company expects to develop its new Halewood site beyond this first stage and also envisages "improved and more efficient lay-outs and equipment in (its) present plants": a further statement is to be made later.

So far the Rootes group has said no more about its plans beyond announcing that it hopes to establish a factory to make cars in Scotland, at Linwood, near Paisley, where Pressed Steel is already planning to produce bodies for the Swedish Volvo car. It is reported locally that this may mean employment for about 3,500 workers. Vauxhall and Standard-Triumph-International are still discussing their expansion plans with the Board of Trade.

AIRCRAFT INDUSTRY

The Jig-Saw's Last Pieces

WITH the purchase of the Fairey group's aviation division by Westland Aircraft for £3.3 million, the last pieces of Mr Sandys's jig-saw are now falling into place. Westland becomes responsible for Fairey's most embarrassing asset, the Rotodyne, which has already cost Fairey about £2 million—which it must now presumably write off completely—and the Government perhaps four times as much. Westland and the Ministry of Aviation have agreed to invest a further £8 million between them in attempting to produce a commercial and economic version of the Rotodyne—which will involve providing it with new engines. Fairey leaves the aircraft industry altogether, to concentrate on the development of a new business in machine tools, boat building and atomic energy, where it already makes all the fuel cans used in the eight reactors at the Calder Hall and Chapel Cross atomic power stations.

The stock market reaction was to mark up Fairey by 4s. to 29s. 6d. but to leave Westland unchanged at 19s.; Westland will rank for a tax free dividend of 8 per cent this year but there will not be another rights issue. Westland will hand over to Fairey about £1,400,000 in cash and two million 5s. ordinary shares in satisfaction of the offer. These will be distributed one for two to Fairey ordinary shareholders. In effect about 8s. 9d. of the current price of Fairey represents this distribution, ex the Westland dividend. After the sale of its aircraft interests Fairey will have net assets of nearly £8 million (including nearly £3 million in cash) which suggests that its heavily written down aircraft assets have been sold at a book profit. It was this revelation about assets as much as the decision to pay a dividend of 15 per cent this year which prompted the marking-up of the Fairey shares.

Mr Sandys's picture is all but complete, with two big engine manufacturers, two airframe manufacturing groups and one helicopter company. The only pieces still loose are Handley Page, Short Brothers and Harland and such small companies as Auster and Scottish Aviation. The Minister appears to be holding to his side of the bargain and to be offering direct financial help to companies that are prepared to form big groupings. That help seems to amount to half the total cost of approved development, the other half being borne by the member companies. Mr Sandys is thus showing signs of being willing to meet half the cost of developing the Vickers-Armstrong medium range jet VC11, in which case the remaining half would be found in the proportion of two-fifths Vickers, two-fifths English Electric and one-fifth Bristol Aeroplane. But he is insisting that the Government gets a royalty on every sale made, so that the process of repaying the Government's contribution starts long before the cost of building the aircraft has been recovered. An arrangement of this kind has presumably been made with Westland to cover the special case of the Rotodyne; Westland has been developing its own more conventional helicopters out of its own resources and has been quietly expanding its range and acquiring its competitors until the company is one of the biggest helicopter manufacturers in the world. However, the terms on which it is acquiring Bristol's helicopter interests have still to be announced.

IN THE MARKETS

Check to Exuberance

EQUITY prices have drifted downward in London in the past week, while gilt-edged have attracted steady demand and prices have edged upward. The monetary authorities are no doubt pleased with this conjuncture; a resumption of the boom in equity prices would be a serious blow to the current official effort to check over-exuberance among business men. The threat of the rail strike has been cited as a depressing influence this week, but surely the logic of official policy itself gives reason for restraint. Selling has not been large, and on Wednesday the number of recorded bargains was the lowest since the election. *The Economist* ordinary indicator dropped in the week to Wednesday by 4.5 points to 369.5, still a shade higher than a fortnight before on the eve of the Bank rate increase. The *Financial Times* index, which fell on Thursday by 3.2 points to 322.4, is 6 per cent below its peak on the first Monday of the new year.

Wall Street's reaction has been notably sharper, though markets there also have been thin. By Friday of last week both the Dow Jones and Standard and Poor's indices were around 9 per cent below their peak at the beginning of the month—a movement

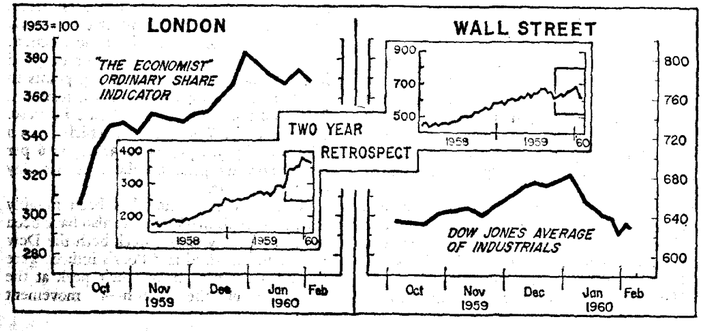
notably different from what had been forecast for the morrow of the steel settlement. Prices recovered at the beginning of this week but on Wednesday again fell back. The high yields obtainable in the money market are now exerting their pull, and institutional investors who retain their underlying faith in equities have judged this a time to go liquid. The bond market has remained unaffected by a report that the Federal Reserve Board is considering the extension of margin requirements to this market.

In the London gilt-edged market the government broker has been able to sell a fair amount of his "tap" stocks. The official announcement on reception of the £200 million 4½ per cent Conversion Stock 1964 at the end of last week was in a new form—more "dignified," as the Chancellor had promised, but unfortunately even less informative. It states baldly that "all applications from the public" were allotted in full ; the former fiction of oversubscription (contrived by official applications) and scaling down of allotments occasionally gave the initiated some clue to the public response. An offer by Tate and Lyle of £5 million of 5¼ per cent debenture stock, 1980-85, is being made at 98½, a point below the unfortunately timed issue by Industrial & General Trust, 77 per cent of which was left with the underwriters. But this week's improvement in the gilt-edged market has brought that issue to par, and if the market holds steady Tate and Lyle should attract a good response next Thursday. Liebig's Extract of Meat has conceded a coupon of 5¾ per cent on a placing of £3 million at the same price and with the same redemption dates as the Tate and Lyle issue, but this company has not quite the stature of the sugar giant.

STERLING

Reserves After Bank Rate

In the two weeks since the increase in London Bank rate the drain of funds appears to have come to an end. From November, the pull of interest rates and the influence of tight money in the United States were drawing reserves from London at the steady though not alarming rate of about $50 million a month. In January as a whole, the reserves fell by $50 million, or £18 million, but two-thirds of this was attributable to special payments ($20 million to European creditors for old debts under the European Payments Union and $14 million as the first monthly instalment to pay off Britain's remaining indebtedness to the International Monetary Fund by the end of 1961). In the last ten days of January the reserves probably showed a modest improvement, and this week sterling has continued strong in the market, rising to 2.80^{5}_{8}$.



Seasonal influences are at their most favourable to sterling in the early months of the year, and now that London money rates have been adjusted one might expect recent losses in the reserves to be made

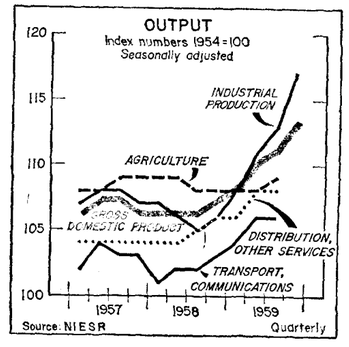
good. While London bill rates have risen, to more than 4½ per cent, rates in New York have at last begun to fall ; three months bills are selling in the market below 4 per cent, and this week's tender rate of 4.04 per cent compared with a peak of 4.67 per cent just before Christmas. This easing is in part seasonal, though it also reflects the response of investors to the attraction of high yields in the money market.

While bill rate is now half a point higher in London than New York, sterling still stands at a slight premium in the forward market. This is an unusual conjuncture, showing a clear advantage in covered arbitrage towards London. One explanation is that other interest rates are still higher in New York. Canada also offers tempting opportunities ; this week's offer of Government bonds to yield 5¼ per cent to 1962, and extendable at the holder's option to

1975, must be difficult to match. And for the time being borrowing is certainly more difficult across the Atlantic than in Britain. Thus it is too early to be sure that the shift of borrowing by international concerns from New York to London, a major element in the recent outflow, has stopped.

BIDS AND DEALS

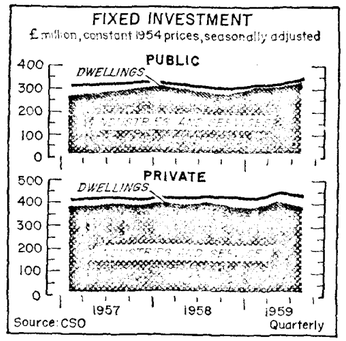
Ends and Beginnings



Among the important moves in mergers and take-overs this week were the following :

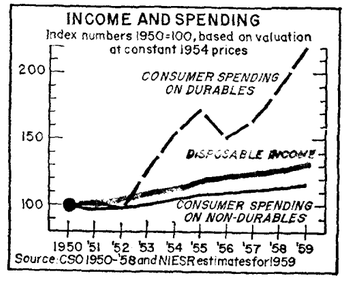
1. Before last week end, Metal Industries was an aggressive buyer of the ordinary shares of Lancashire Dynamo in the stock market. The price of these shares rose from 75s. 6d. to 81s. 6d. before falling back to 77s. 6d. In all, MI secured about 500,000 shares in Lancashire Dynamo at an average price of just over 80s. and after the week end its offer (one ordinary plus 12s. in cash or half an ordinary plus 45s. in cash for every Lancashire Dynamo ordinary) was declared unconditional. On Tuesday, MI, which throughout the struggle had received the support of the Lancashire Dynamo directors, withdrew its bid of 150 of its ordinary for every 100 ordinary in Lancashire Dynamo. This, the MI directors said, was the highest price they were prepared to pay and they were not prepared to pay to individuals a price not offered to all other shareholders. The closing date of the MI bid has been extended another week, but on the news that MI was the victor its ordinaries fell from 69s. 3d. to 64s. 3d. (making its bid worth at best 77s. 1½d.) and the Lancashire Dynamo ordinaries came down to 75s. 9d.
2. Discussions are taking place with a view to a merger between Watney Mann and Phipps Northampton Brewery on the basis of an exchange of shares, the shares of Watney being valued ex the rights to the new property company shares. Last year Phipps bought 159 licensed properties from Ind Coope and renewed its trading agreements with that company. The merger will lead to an increase in production at Northampton and the Watney Mann-Phipps concern will rival Ind Coope in being the biggest brewing group in this country. In the stock market, the Watney Mann ordinary shares rose slightly to 90s. and Phipps ordinary shares were marked up by 11s. 3d. to 84s. 3d.
3. The formal offer by Albright and Wilson to acquire the ordinary capital of Boake Roberts on the basis of one ordinary in Albright plus 2s. in cash for every Boake Roberts ordinary has been posted to shareholders and the Boake Roberts directors have unanimously recommended them to accept it. The profits of Albright recovered sharply in the second half of 1959 and its directors expect to be able to maintain the current dividend rate of 18.3 per cent on the capital as increased by this offer. The Albright ordinaries stand at 27s. 9d. and the Boake Roberts ordinaries at 29s.
4. Fisons, which recently lost the struggle for Crosse and Blackwell to Nestlé, has made an offer of one ordinary share plus 5s. cash for every two ordinary shares in British Drug Houses, the manufacturing chemists, and six 4½ per cent preference shares plus 5s. cash for every five 5¼ per cent preference shares in BDH. With Fisons ordinaries at 49s. 6d., its bid is worth 27s. 3d. for BDH ordinary, which stood at 20s. 6d. before the offer and were immediately marked up at 29s. 6d. and later fell back to 28s. 3d.

Double-take on the Economy



One can usually rely on the National Institute of Economic and Social Research not to sit on the fence. In the latest issue of its *Economic Review* it hazards that, given an economic policy of "no change" from the Government, "total demand seems likely to rise during 1960 by roughly 4 per cent—almost as fast as during 1959."

Confidence in the exactness of this or any other forecast, however, was hardly encouraged by the publication, almost simultaneously with the review, of two sets of official statistics. The industrial production index for November, previously expected to be 116 or 117 (1954 = 100) is now put at the lower of these two figures, the same as in October, with the first estimate for December 116 or 117. On the face of it, the Institute's estimate of 117 in the fourth quarter is too high. But the first shots at the production index last year mostly erred on the low side ; maybe the institute should be credited with having made allowance for this bias.



More disturbing is the continued discrepancy between the two sides of the official national income accounts. With disarming honesty, the Central Statistical Office admits defeat. In the latest issue of *Economic Trends* the CSO discloses that ". . . measured by expenditure data, the gross domestic product is estimated to have been 3½ per cent higher in the third quarter of 1959 than in the same period a year earlier. Alternative and equally valid estimates of the change in the gross domestic product based on income data show an increase of 5½ per cent between the two periods." A discrepancy of much the same order also appeared in the estimates for the first quarter of the year.

How, then, can extra demand this year be forecast when there is no agreement about how much it amounted to last year? If the larger estimate of growth is accepted —and from the indications of production it seems the more likely one—suspicion falls on the figures of stocks. But this would imply that investment in extra stocks changed from £50 million (at 1954 prices) in 1958 to some £350 million last year. There is certainly no direct evidence that re-stocking was as substantial as this.

To add to the layman's sense of bewilderment, the Central Statistical Office has decided no longer to leave the sophistication of seasonal correction in national income accounting entirely to private enterprise. There are now indeed three different sets of seasonally adjusted estimates, as the National Institute and the London and Cambridge Economic Service both run their own. While the institute's estimates are in broad agreement with the new official figures of seasonally adjusted personal income and expenditure, there are differences in the figuring on capital formation. For instance, the institute judged that in the third quarter of last year, private investment in industries and services rose fractionally ; the official view is that it fell 3 per cent.

This carping about the statistical framework does not invalidate the general trends foreseen by the institute ; and it may well be that its main forecast will prove to be a good shot. It assumes that personal incomes, after tax and in real terms, are likely to rise 3 or 4 per cent this year and that the general tendency for the growth in spending on durables to outstrip incomes will continue, but less sharply than last year, with more of the extra money going on other goods and services. In total, real consumer spending may rise about 3½ per cent—as fast as in 1959. Discounting a part of the revised investment plans of the steel industry as unlikely to be realised this year, the institute expects investment in manufacturing to rise 10 per cent, bringing it back to its 1958 level—with expenditure on plant and machinery rising faster than expenditure on industrial buildings. A rapid increase from now onwards in public investment this year may bring total fixed investment to 8 or 9 per cent higher than last year's. The institute is optimistic about exports, which it suggests, may on average be 10 per cent higher in volume than last year ; this implies a rise of 7 per cent during the course of this year. These estimates lead to the view that "total demand, apart from investment in stocks, seems likely to rise slightly faster during 1960 than it did during 1959." It does not expect stocks to rise as much this year as they are thought to have risen in 1959.

The institute's second inquiry into capacity in certain industries last November upholds the view that industry should be able to meet such a rise in demand. In the engineering industry spare capacity did not seem to be much less than in the middle of 1958, although under-employment obviously varied considerably, and, as the table below shows, about a quarter of the firms had no more than 5 per cent spare capacity, if any. But these were manufacturers of cars and other consumer durables and they are planning further expansion.

SPARE CAPACITY IN METAL-USING INDUSTRIES

Potential increase in output per cent	Number of firms 1958	Number of firms 1959	Employment 1959 '000
0.....	8	14	97
5.....	2	11	187
10.....	11	6	13
15.....	4	13	210
20.....	8	14	124
25.....	5	10	70
30.....	4	7	24
40.....	3	5	26
45 and over	7	12	30
Total	52	92	781

With the possible exceptions of sheet steel and bricks, materials are less likely than the supply of labour to limit the growth of output. A rise in output of 3 to 4 per cent should, it is argued, require only a 1 per cent increase in employment and this, or even a little more, should be available. But over any figuring of labour and productivity there hangs the annual revision of the manpower statistics, some of which are due later this month. Moreover, additional labour is not always where it is wanted ; reserves are mainly in the North, Scotland and Wales so that any shortages of labour will develop in the South and Midlands. This is one danger to smooth expansion; the other is that in spite of all these theoretical calculations, demand will rise faster than the capacity to meet it and set off another round of inflation.

STEEL

Some Cuts in Prices

REDUCTIONS of £1 a ton in the prices of heavy steel plate and of tinplate, and of 9s. a ton in the prices of heavy steel sections, announced by the Iron and Steel Board this week, have not resulted from any cut in the prime costs of steelmaking. Contracts for iron ore made last year will have been made at slightly lower fob prices, but freight rates if anything have hardened: moreover, a cut in the prices of imported ore made more than a year ago had taken account of the softening of this market. In the case of tinplate, the recent rise in tin prices would indeed have brought about a rise of about 8s. a ton from April 1st (this will not take place). A cut of 9s. a ton in the price of basic pig iron is also announced: this would ordinarily bring steelmaking costs down, but in fact the recovery in demand for steel has meant the use of a higher proportion of pig iron in the furnaces, which at some £20 a ton, against say £12 a ton for scrap, has actually been tending to raise costs, and the cut will do no more than offset this. Nor have the cuts anything directly to do with the industry's general recovery to a high rate of capacity: prices had never been raised during the steel recession when the industry was operating far below its normal rate.

These selective cuts, made after a general review by the board, represent the greater efficiency that has been achieved as modern equipment has come fully into operation. Greater output has been achieved from the mills rolling tinplate than had been reckoned, and higher productivity from the new section and joist mills and the new plate mills. For some years the board has set its prices broadly according to the total costs attainable at the most modern plant, in a favourable location, operating at a high rate; over a widening sector of the industry, this formula is now beginning to exert a downward influence on prices. Cuts in these three groups of products, indeed, will mean a 2½-3 per cent reduction in the general level of steel prices.

Recovery under Way

STEEL shares are now much quieter than at any other time since the election. Prices have been adjusted both to the changed long-term outlook and to the prospect of bigger profits and dividends at the end of this year. The current recovery in demand for steel products has been uneven but it is spreading back to the heavy end of the industry. This is made clear in the supplementary remarks of Sir Ellis Hunter, at this week's annual general meeting of Dorman Long. Sir Ellis makes a virtue of caution (even apart from the changes in prices that have been made public since), but he said that orders on hand are substantial and describes the outlook as encouraging. Three shifts have been worked on Dorman Long's universal beam mill since October. Output there has been picking up with the growing experience of the labour force, with the result that the record production of rolled steel achieved early in November has recently been surpassed. Sir Ellis also expects that the structural engineering members of the group will share increasingly in the recovery.

Another indication of recovery out of the recession may also be discerned in the decision by the directors of Hadfields, makers of special steels and machinery (particularly, through Millspaugh, for the paper industry) to pay a final dividend of 4 per cent. As the interim was cut from 4 to 2 per cent, this means that the total payment is unchanged at 6 per cent in the face of a sharp fall in gross profits in the year to October 3rd, from £609,005 to £486,536 (including £112,500 relating to the previous year).

LOCAL LOANS

Forcing the Pace?

LENDING rates charged by the Public Works Loan Board are kept in line with those prevailing in the market. That is the sensible policy; there is little to be said for the popular suggestion, endorsed by the Radcliffe committee, that local authorities should again be allowed to borrow on artificial terms. But the increase in PWLB rates announced at the end of last week was rather surprising. Rates in the mortgage market had not risen perceptibly after the increase in Bank rate, except for very short term money; and local borrowers were still showing resistance to paying 5¾ per cent for 20 years.

After the increase in official rates, the mortgage market hardened. Lenders are now asking 5⅞ per cent for twenty-year money, and up to 6 per cent has been paid this week for ten-year mortgages. The

THE NEW PWLB RATES

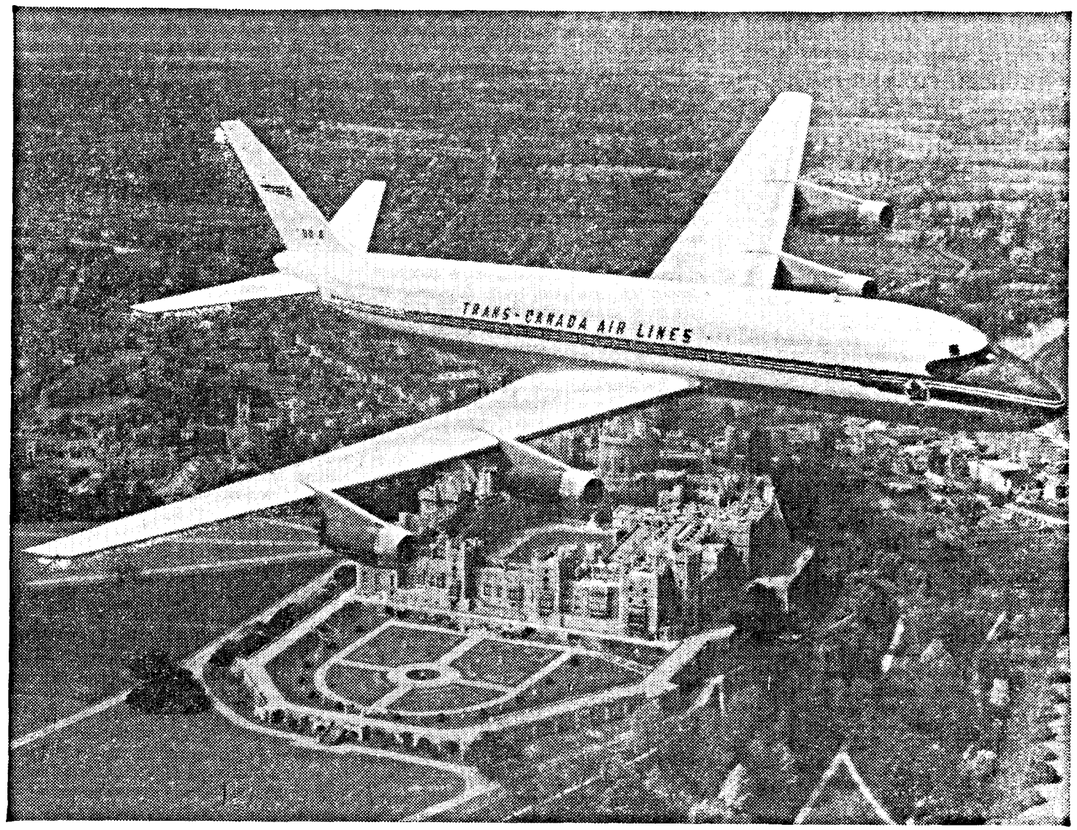
Loans for	Old rates per cent	New rates per cent
Less than 5 years	5	5 ½
5–15 years.....	5 ¾	6
15–30 years.....	5 ¾	6
More than 30 years...	5 ¾	5 ⅞

market and the Treasury are now roughly in line; though in this case the Treasury, it seems inadvertently, has forced the pace a little.

HIRE PURCHASE

Anxious Eyes

BOTH the monetary authorities and the finance houses, from their different standpoints, must be keeping a close eye on the trend of hire purchase just now. Total instalment debt continues to rise steadily; there is still no firm evidence of the slackening that has been awaited for many months. Naturally the pace is not as hot as immediately after the lifting of restrictions in autumn 1958. But December showed an increase of £26 million in hire purchase and other instalment debt, a slightly larger increase than in the two preceding months and a shade above the average monthly increase in 1959 as a whole (of £25 million, carrying the total debt covered by the official figures from £559 million to £857 million). December's rise was more marked for household goods shops than for finance houses, reflecting in part the seasonal slackening in motor sales, which figure strongly in finance houses' business. But new hire purchase contracts registered with Hire Purchase Information in January show a sharp increase in motor business, carrying total HP contracts 4½ per cent above their level a year ago. The biggest increase was in new cars, reflecting increased deliveries on the home market as production of the new models builds up.



The finance houses entertain no hopes of another year like 1959; though much of the benefit to profits has still to be shown, as the agreements run their course and deferred charges are brought into the profit and loss account. Sir Arthur Morse, chairman of Bowmaker, could safely forecast this week that profits in the year to end-October next will show another rise, having more than doubled in 1958-59. The course of business will probably continue to depend almost entirely on the public's demand for credit facilities—unless this were checked by official controls. None of the big finance houses now has much problem in finding funds. The only members of the Finance Houses Association that still advertise for deposits are Lombard Banking and Campbell Discount (the new member which continues as a leading light in the Industrial Bankers Association and may thus help to bring these bodies closer together). Both these houses, significantly, have no link with a deposit bank.

The majority of the big houses have found that their banking link has provided new sources of funds in a number of ways. Banks have pointed out to big customers with idle funds that deposits in their associated finance house, at Bank rate or thereabouts, are difficult to rival in attraction; yet for the finance house this rate is relatively cheap.

BANK CREDIT

Advances for Taxpayers

IN the full statement of the London clearing banks for the five weeks to January 20th the banks together show a rise in advances of £27 million to £2,963 million. But not for the first time transit items have distorted the picture, and the table shows that true advances rose by £51 million. Furthermore, advances to State boards fell by £10 million; the rise of £60 million in

Three more firsts for TCA

*The Commonwealth's largest airline**

FIRST DC-8 Jetliner Service across Canada. Daily Montreal-Toronto-Vancouver service starts this April.

FIRST DC-8 Jetliner Service Britain to Canada. Britain to Montreal service starts June.

FIRST DC-8 Jetliner service to *and* across Canada. Through services from London and Prestwick to Montreal, Toronto, Winnipeg and Vancouver start in June.

Meet TCA's fabulous new Douglas DC-8, powered by Rolls-Royce engines. Here's the Giant Jet that offers the best of two worlds—Douglas experience and Rolls-Royce dependability. It's so soothingly quiet, you can actually listen to high-fi music whilst you are smoothed through the air at 550 m.p.h. So comfortably roomy that there's even room for a stand-up bar. Wonderfully, unashamedly modern and luxurious, TCA's DC-8 will set five-star hotel standards in passenger comfort.

* Excluding items in course of collection. † Excluding all transit items. ‡ Excluding all transit items except for ratio to gross deposits. § Ratios to gross deposits.

There has been a further reduction in investment portfolios, of £22 million, and much of this presumably represents sales to the government broker of the 3 per cent stocks maturing this month and next. Total liquid assets have fallen a shade, but the average liquidity ratio (measured against gross deposits) has edged up from 34.2 per cent to 34.3 per cent. This compares with 34.9 per cent at the same time last year; the margin to meet seasonal strains is not large, but some banks still hold a substantial amount in the maturing stocks.

STOCK EXCHANGE

Rules and Rights

THE Council of the Stock Exchange is nowadays more active than it was in giving a lead. It has tightened up the rules to give the investor greater protection and it has relaxed rules to encourage fuller use of the facilities of the stock exchange. This week the council has published the new rules governing advertising. The prohibition on advertising by members is, of course, maintained but under the new rules the banks will be able to display notices inside their branches advertising their readiness to undertake stock exchange business—provided that customers are reminded of their freedom to choose their broker. In practice, any newcomer to investment is likely to leave the choice to the bank. But the principle of equity is preserved, just as it is to be enforced by another rule which will permit stock exchange members and registered agents to issue bid circulars to all shareholders in the company concerned. Under the old rules, brokers and agents (such as the clearing banks) could circularise only their own clients. Now they are put on an equal footing with others (such as solicitors) in acting as agents in the distribution of documents relating to take-over bids. They must, however, behave simply as agents in this specific respect and may not use this means to drum up custom for themselves.

The Council is also doing more to make its voice heard with practical force (though not legal authority) on matters of good practice. It was represented on the committee which made recommendations about the practices that ought to be followed in take-over bids. More recently, it has fostered the debate on stock exchange mechanisation and on the possibility of issues by tender. And this week it has re-emphasised the principle that the interests of ordinary shareholders in a company should be protected from dilution. Its statement argues that in normal circumstances issues of ordinary shares or of other stocks which contain an option to convert into ordinary shares should be offered in the first instance to existing shareholders. This would ensure that any bonus element in the issues comes to holders of the equity. There are other occasions where issues to "outsiders" could be regarded as benefiting the company and its shareholders—banks buying interests in hire purchase finance houses or insurance companies taking up debentures in property companies, with rights of later conversion into ordinary shares. But in some such cases shareholders have not been consulted first and, as the council rightly urges, they should be.

CIGARETTES

Yet More Filters

CONTROVERSY about smoking and cancer has not yet dented sales of cigarettes in this country, as it did in the United States in the early fifties. But it appears to have had a similar impact in both countries on smokers' preferences for tipped or non-tipped brands. Whether cigarette filters do in fact trap any harmful substances better than the unburnt length of an ordinary cigarette is something else again, but it would seem that a growing number of smokers would like to think so. Sales of filter-tipped cigarettes in the United States grew from less than one per cent of the total cigarette market in 1951 to about an eighth three years or so later. Here, sales of tipped cigarettes started their upward climb somewhat later. Their share of the total market was still quite insignificant as recently as 1954 and 1955, but their growth since then has been almost as rapid as across the Atlantic: by last year their share had risen here, too, to about an eighth. American filter sales have continued to soar: by 1956 they had captured a quarter of the market and, assisted by such inducements as menthol flavours and now also rum, maple and vanilla, filters last year just topped half of all cigarette sales.

On this comparison there could still be considerable room for expansion of sales of tipped cigarettes in this country. The manufacturers, it appears, are keen to find out. Though there are already between 40 and 50 different kinds of tipped brands on sale, three more are to be launched in the next month or so. The Wills branch of The Imperial Tobacco Company plans to bring out "Strand" at 3s. for 20. Gallaher is to introduce "Nelson," selling at 3s. 4d. And now Players (another branch of Imps) is to produce a "king-size" tipped cigarette with another nautical name, "Admiral," priced at 3s. 11d.

So far king-size cigarettes, tipped or not, have not attracted anything like the same popularity here as in the United States (the first one was marketed here, it is believed, as far back as 1899) and their share of total sales is still not much more than 1½ per cent. The really big tipped sellers are in the 3s. 4d. price range, with over half of all filter sales (or 6 per cent, say, of the total cigarette market). At this price their attraction appears to rest upon economy for smokers previously wedded to 3s. 11d. brands, and "filter-protection" for both these smokers and those who hitherto bought non-tipped 3s. cigarettes.

DRUG PRICES

End of the Truce

DISPUTES over the prices of and profits on drugs supplied to the National Health Service have been a feature of relations between the pharmaceutical industry and the Treasury for eleven years, but the salvo fired by the Comptroller and Auditor General in his report on the Civil Appropriation Accounts is the sharpest attack made on the industry for some time. He accuses it obliquely of having misled the Ministry of Health into believing that the voluntary price control scheme introduced three years ago would lead to savings that have never in fact materialised and to price cuts that have never been made. The drug bill has continued to rise; so has the cost of individual prescriptions; and so have the industry's profits which "expressed as a percentage of capital employed, had been above those of general industry ... and had lately tended to increase whereas the rate for general industry had been falling ... the profit rates of the British subsidiaries of American concerns had consistently been much higher than those of general industry."

On the face of it, these are telling accusations. But the industry's price structure is a curious one in which the high profits on a few best selling drugs are expected to pay for the costs of research on other less successful, and sometimes wholly unsuccessful, ones. Because American companies do their research in the United States they expect their British subsidiaries, which are merely production factories, to make their due contribution to research done by the parent company. Moreover, new drugs tend to be more complex than the older preparations they displace and so more expensive. The current batch of drugs for the treatment of heart diseases is certainly pushing up the nation's drug bill—but until recently many of these conditions were incurable. Another factor raising the cost of individual prescriptions is the large quantities in which doctors prescribe drugs in order to reduce their surgery queues: they have now been asked to limit these to one week's treatment.

In June, the voluntary scheme of price control on drugs comes up for review, and although the industry feels that its own conscience is clear, it may find difficulty in getting the Ministry of Health to extend the arrangement under which new drugs are free from price control for their first three years of commercial life. But if the high profits earned during those debutante years have to be cut, the industry may have to reconsider the whole of its price structure.

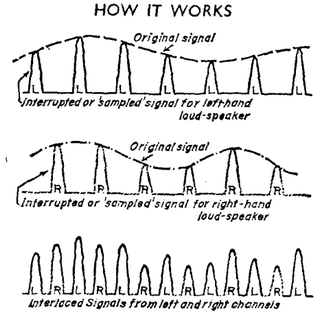
IDA

Soft Loans Agency

THE World Bank has now drawn up, after consultation with member governments, articles of agreement for the International Development Association, the new agency to grant "soft" loans. It should be set up by the autumn. Some people in the financial world still have their misgivings about the project, fearing that the availability of this finance may make it more difficult to encourage countries to pay the going rate for other capital; but the more realistic recognise political pressures for what they are and have concentrated their attention on minimising the potential dangers of IDA. On the whole they have succeeded. The best safeguard is that IDA will be run by the experienced, trusted and prudent administrators of the Bank; at least initially, it will have no separate staff. And wisely, the articles have allowed wide latitude to shape financing to individual needs. The association may finance any project that makes "an important contribution" to development, whether or not it is revenue producing. Thus water supply, pilot housing or sanitation would be suitable, although it is expected that most of the money will be for projects similar to those financed by the Bank. Government guarantees will not be essential (as they are for the Bank).

Terms of assistance will be such as IDA "may deem appropriate." The association may allow long periods of repayment or long periods of grace; it may make an especially low interest charge or waive interest altogether; it may accept repayment in local currency. Of these alternatives (which may be used in combination) the last is probably the least desirable. A country that makes a strong plea to be allowed to repay in its own money should rather be told it need not repay at all; then it may be more careful to prevent its money losing its worth.

IDA's loans, of course, are designed as a "last resort" when the normal instruments of lending cannot meet the need. In practice the Association's role will be strictly limited by its funds. Subscriptions for the first five years total $1,000 million and are roughly in line with those in the Bank; but member countries—all members of the Bank are eligible—are divided into two groups. Seventeen "more industrialised" countries will pay the whole of their subscriptions (totalling $763 million) in gold or freely convertible currency (presumably this includes sterling and the main European currencies). This group consists of the United States (subscription $320 million), the United Kingdom ($131



Sound in 3-D

LIKE colour television, stereophonic sound broadcasting is something that engineers have known how to do for some time, but not how to do it at an acceptable cost. The experimental transmissions of stereophonic sound that the BBC puts out for enthusiasts use two separate radio channels, one for each of the two loudspeakers needed to get the stereophonic effect: this extravagant use of scarce frequencies could never be tolerated for regular broadcasting. Nor would stations transmit stereophonic broadcasts that could be picked up only by people with the right receivers; whatever system is used must be audible in an ordinary radio receiver as well as a "three-dimensional" one.

About twenty different systems, some good and some exceedingly bad, have been demonstrated to the European Broadcasting Union meeting at Cannes during the past few days in the hope of reaching international agreement on a standard method of stereophonic broadcasting. The question is more pressing than it seems because a decision has apparently been taken to introduce stereophonic broadcasting in Germany, and it is known that 27 different systems are on trial in the United States. This week the Mullard Research Laboratories demonstrated to the BBC a system that the company had already shown at Cannes and which it believes has the virtue of being exceedingly cheap—both for the broadcasting authorities and for the owners of radio receivers.

It manages to combine two sound signals, one for the left and one for the right-hand loudspeakers, into one radio channel by using a "time multiplexing technique" already used in some telephone systems. This meets the first requirement, that the system should not require two separate radio channels. The technique depends on the fact that if regular interruptions are made to a sound signal, the ear tends to ignore them and the hearer reacts as if this were a continuous flow of sound. Signals for the left-hand loudspeaker are therefore sent out as a series of pulses each followed by a short period of silence (one thirty-thousandth of a second's duration). The signals for the right-hand loudspeaker are broken up in the same fashion, and these are transmitted alternately, thus marrying with those of the left-hand loudspeaker in the way shown in the diagrams.

HOW IT WORKS

For anyone who already has a collection of stereo records, Mullard estimates that it would cost perhaps £3 to £5 to modify his existing stereophonic radiogram to receive stereo sound broadcasts sent out on this system; it might take £12 to adapt an ordinary radio receiver for stereo reception. The cost at the transmitting end is negligible, although some broadcasting authorities might flinch at having to lay two separate sound circuits to feed the two separate sets of signals into the transmitter. An ordinary radio receiver mushes up the two signals to produce monaural sound; moreover, the stereo receiver can pick up non-stereophonic signals (which is important because only a proportion of broadcasts are ever expected to be in stereo). An interesting possibility of this multiplexing system is its use for bi-lingual broadcasting in countries with two natural languages, like Belgium, South Africa or parts of the Far East. It would offer economy both in broadcasting channels and in transmitters.

Mullard is by no means the only company to put forward this kind of system, but it may have hit on the cheapest method of operation. But if the company's system is adopted, the most that it can expect to gain from it is prestige accompanied by some indirect benefit in the form of sales of the two valves (or the single transistor and pair of diodes) needed to convert stereo radiograms into stereo radio receivers.

million), Canada, Australia, South Africa, Japan, and the main Continental countries, including Italy; it excludes Greece, Turkey, Spain and Iceland.

The second group of countries will pay only 10 per cent in gold or convertible currency, the rest in local currency. IDA is also given authority to acquire existing blocks of local currency owned by the United States through sales of farm surpluses. This, sensibly, may not be converted or used to finance exports without the country's consent, though the more developed of the less developed group will be encouraged to release local funds as soon as possible. But the British authorities seem satisfied that they have secured adequate safeguards against use of these currencies for commodity dumping.

THE JASPER CASE

The Hearing Begins

THE hearing began this week in the Mayor's and City of London Court of the charges against Mr Harry Jasper, Mr Friedrich Grunwald and Mr Herbert Murray, detailed in *The Economist* of January 16, 1960. Mr Mervyn Griffith Jones, opening for the prosecution, alleged that since 1955 Mr Grunwald and Mr Murray with Mr Jasper helping them by the loan of his name and in other ways, had embarked on a systematic course of conduct, fraudulently to take and to use the State Building Society's money to finance take-over transactions on their own account; the allegation was that money was paid out by the building society ostensibly for mortgage advances but was in fact used to buy controlling interests in companies.

Mr Griffith Jones said that it appeared that in 1946 Mr Murray and his chairman, Mr N. Cow, of the State Building Society, acquired a property-owning company called Stevenson Westminster Limited. Owing mainly to the ability of Mr Murray, the company prospered and developed until about 1957 there was some £400,000 advanced on mortgage to it, there being nothing irregular in these advances. In February of that year the Registrar of Building Societies objected to the State Building Society advancing moneys on these properties on the grounds that they were properties in which two of the society's directors had an interest. Mr Murray gave an undertaking that he and Mr Cow would dispose of their interest. There followed what Mr Griffith Jones described as "a ruse." On the suggestion of Mr Grunwald, "shell" companies were acquired so that the "wool was pulled over the eyes" of the Registrar, though the interests in the Stevenson properties were retained. Mr Griffith Jones then gave details of the way in which Coppon Plantations, Capital and Provincial News Theatres, National Model Dwellings, Victory Real Estates and Honywood Hotels were taken over.

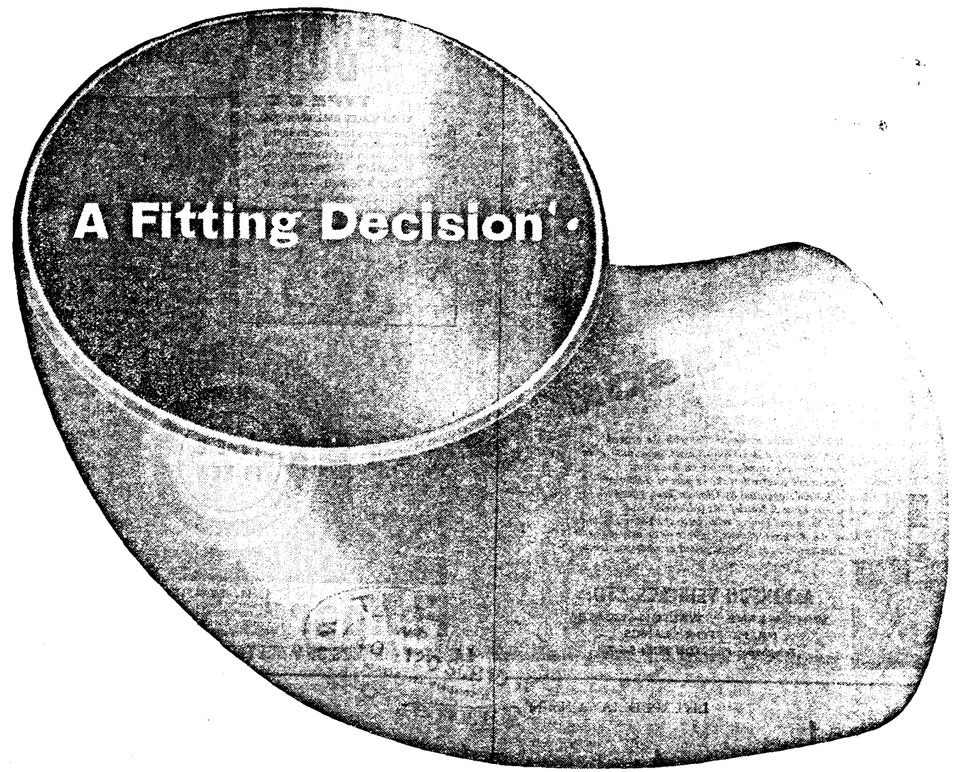
In June, 1959, according to the prosecution's account, Mr Grunwald offered to buy Lintang investments from Mr Maxwell Joseph and his fellow directors. Mr Murray, as an expert valuer, looked over the properties (Dolphin Square and Hyde Park North Estate) and agreed that £3,255,000 should be advanced by the State Building Society on mortgages of these properties. Arrangements were made that this sum would be split up into loans to 156 subsidiary companies. (In giving evidence later, a former secretary of Mr Grunwald said she undertook part-time work, at a salary of £5 a week, in forming and naming new companies, of which, she said, a stock of fifty was kept on hand.) Mr Griffith Jones said that altogether about £8,700,000 was needed to finance this take-over, and that on hearing of the deal Mr Jasper had said to Mr Grunwald: "You are crazy. Where are you going to get the money from?" Mr Grunwald said that a Mr Berger would be putting up some of the money. It was clear, said Mr Griffith Jones, that grossly inadequate arrangements had been made and at the time when the majority holdings were to be acquired on July 30th, there was little more available than the money advanced by the State Building Society. At the same time negotiations were in progress for purchasing a majority holding in Ely Brewery at a cost of £1,250,000. In the end Mr Grunwald was short of £250,000 to complete the Lintang deal and it was then that he went to Israel; Mr Griffith Jones emphasised that he did not suggest that Mr Grunwald took any of the £3,250,000 away with him.

The proceedings continued on Friday.

ALUMINIUM

More Americans in Aluminium

KAISER ALUMINIUM AND CHEMICAL CORPORATION, which has purchased a half share in Delta Metal's new subsidiary, James Booth Aluminium, is the third American aluminium producer in the past year to have gained access to the British market. James Booth is an old-established alloyer and fabricator of non-ferrous metals; the new company contains only its aluminium interests, which are valued at £5 million. Kaiser is providing another £5 million in cash and access to its own know-how.



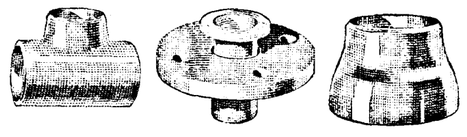
One purpose of the agreement is to allow Booths to expand the capacity of its plant and the range of its products; as a fabricator of aluminium, Kaiser can offer Booths experience from the more highly-developed American market. Another is to give Booths a link with an aluminium producer; Kaiser is integrated back to the raw materials, while Booths has been dependent on other companies for its supplies of the raw metal. This and the other examples of American interest in British aluminium producers confirm that American producers regard the British market for aluminium as one offering a large potential expansion; the incursion of their own technical knowledge —and perhaps their commercial methods —should help bring this about.

AUTOMATIC SELLING

The Gaping Slot

SLOT machines are again becoming more numerous in British streets; at a conference on automatic vending held in London last week the chairman of the Automatic Vending Machine Association, Mr F. L. Timmins, estimated that there are now 160,000 columns in use, compared with none in 1953—sweet rationing had cut off slot selling—4-5,000 in 1955, and 120,000 in 1939. Slot machines began to be operated in 1883; the rebirth of the industry seems to have been more rapid than its birth. How much money the consumer pushes into the slots of the machines is unknown, but it is certainly rising fast; works and office canteens are becoming increasingly popular sites for slot machines, though the reaction of the workers to paying the premium prices that are usually charged for their contents as against the subsidised prices of a canteen has not been recorded. But the success of the milk machines, 2,241 of which are stated to have been in use last December compared with 512 in December, 1958, and only four in December, 1957, suggests that a premium of about 30 per cent on the price will be accepted for the advantage of twenty-four-hour availability.

There is traditionally a close connection between the manufacturers and the operators of the machines; British Automatic, the oldest British company, is both. The companies that have been attracted into the industry from outside by the recent rapid expansion — usually making foreign machines under licence—have had either to set up their own organisation to rent their machines to operators, as Associated Automation does, or to combine with a company that can employ the machines—as Hawker Siddeley has done by forming Primapax, a company jointly owned with J. Lyons. Cigarette and chocolate makers, however, often buy machines which they loan or lease out themselves, though their products are also sold from independently owned machines. So far cigarettes, confectionery and films are the most common items that shopowners sell after hours; since shopping hours are so short, there would seem to be room for the German practice of selling almost everything that a shop stocks by machine when it is closed.



Light wall piping systems are now being specified for chemical, petro-chemical and process plants throughout the world and the demand for light wall elbows and fittings has increased accordingly.

As a result of Wilmot Breeden's recent decision to manufacture the TRUFLO range of extra low carbon stainless steel, nickel, Monel,* Inconel,* Corronel 210* and aluminium fittings in a variety of scheduled wall thicknesses, British construction engineers can, for the first time, be sure of a regular and convenient source of supply.

Many industries will have need of this service; the petroleum, chemical, nuclear and processing industries in particular, where stainless steel and nickel alloy fittings ensure the necessary safety factor.

Because TRUFLO fittings are mass-produced in the United Kingdom, their price is favourable and their availability assured.

TRUFLO fittings are manufactured to a very high quality standard of finish and conform to the dimensional requirements of American standards ASA.B36.19 and MSS.SP-43 for schedule 5s and 10s wall thicknesses and ASA.B16.9 for schedule 40s and greater. British standard BS.1640 also applies and in all cases, materials conform to ASTM.A312 and A.403 (stainless) and ASTM.B127 and B162 (nickel alloy).

PARKING

A Garage in Every Home

MIDDLESEX COUNTY COUNCIL is the latest local planning authority to raise its requirements for the amount of garage space to be provided for residents' cars in new housing development—to the ratio of one car space for every new house or flat to be built. This means that if developers, whether they are constructing one house or a whole estate, do not from now on provide garage accommodation in accordance with this rule within the limits of the actual site they are developing they will be unlikely to get planning permission. Middlesex is not the first council, since these powers were conferred on planning authorities in 1947, to have raised its stipulation to this ratio of one for one. Surrey has required a garage to be provided for every new dwelling since last April. Kent is also now proposing to adopt this standard. London County Council has applied it since 1957 for houses that do not form part of a comprehensive scheme of redevelopment. For such schemes and for new blocks of flats, the LCC is prepared to accept a ratio of one to two (but, in practice, tries to get a higher ratio) for new residential building in the central area and a standard of one to four elsewhere.

Local authorities are not alone in having underestimated the growth of car ownership in Britain, and many still either have low ratios in their "parking standard codes," as these requirements are called, or simply apply no rules at all. Where they exist, however, these codes usually embrace all the principal types of new buildings. Surrey maintains what are probably the highest requirements: one garage or car space for every 500 square feet of floor space in new offices, shops and industrial premises, with individual consideration for other new construction, such as restaurants, schools, halls and public houses. These are standards all authorities would do well to adopt.

The LCC code, which sets a slightly lower set of requirements, allows for almost every kind of new building and has been adopted as a basis by a number of other councils, including Edinburgh, Manchester, Liverpool and Bristol. Among other large cities, Birmingham, Coventry and Cardiff have devised their own codes. Gradually, too, these requirements are being applied with increasing rigour. Between 1947 and 1957, for example, the total number of car parking spaces provided in new office buildings in central London as a result of these powers reached just over 5,000. But since 1957, when the LCC's code came into full effect, the number of such new parking spaces has risen to the rate of 4,000 a year.

NICKEL

A Good Surplus

THERE are some stout-hearted producers to whom a surplus is a Good Thing. International Nickel Company of Canada is one, and fortunately it so dominates the world market that there is little risk of its competitors cramping its style. In his annual review the chairman, Dr John F. Thompson, said that free world consumption (presumably deliveries) of nickel recovered sharply last year, rising by 25 per cent to over 400 million lb; it did not quite regain, however, the 1957 figure of 415 million lb. Despite the steel strike, consumption in the United States went up by about 35 per cent, and there were marked gains in European countries. "Intensified marketing activities and research produced gratifying results in the face of keen competition from other materials." Even so, free world capacity exceeded consumption of nickel last year by 150 million lb, and in the next two years Dr Thompson predicts that capacity will grow by at least 100 million lb to 650 million lb a year, to which Inco itself will contribute an extra 75 million lb when its big new properties in Manitoba come into full production in 1961. The United States government is adding its own mite to the surplus. It cancelled or reduced its commitments to purchase nickel last year, and last month it offered for sale 35 million lb of the excess stock of 137 million lb bought under the Defence Production Act. These actions, Dr Thompson comments bravely, "assisted the nickel consuming and producing industries in expanding market development activities. . . ."

Inco traditionally takes the long view. It knows that consumption is best encouraged by stable prices—which have remained at £600 a ton for over three years—and by assuring consumers of ample supplies. And if the surplus is rather bigger than the company would like, that is the best incentive for developing new uses. Dr Thompson's statement gives several examples of success. Reflecting last year's improvement and the expectation of a substantial increase in sales again this year, the board has raised the quarterly dividend on the common stock to 75 (US) cents from the rate of 65 cents that has been paid since September, 1955. A two-for-one split in the stock is also recommended, and the new shares are expected to carry a dividend of 37½ cents a quarter.

BUILDING MATERIALS

Signs of Strain

RECOVERY in the building industry last year, after the mild depression of 1957-58, was substantial but uneven: housebuilding—particularly in the private sector—increased most rapidly, while private industrial building lagged behind. Total demand has risen even more rapidly since the beginning of this year, in terms of new orders and of manufacturers' investment intentions; the National Federation of Building Trades Employers reported this week that the volume of work actually under construction is now approaching the level of 1955, which was as high as any in the industry's history. This sudden increase in activity has, however, thrown a strain on some producers of building materials, and it is possible that further expansion in some sectors of the building industry may be hampered by shortages or delayed deliveries, particularly of bricks. This in turn could mean some rises in prices of building materials, which have been relatively stable during the past two years.

Deliveries of bricks of all types rose during 1959 to 599.6 million, just a shade under the record level of 1955, compared with 539 million in 1958. Demand rose even faster, however, bolstered both by favourable weather and by the removal of credit restrictions. The result was that manufacturers' stocks fell to 113 million at the end of last year, compared with 349.2 million a year earlier; this was the lowest figure since December 1953. Production is reported to be still rising, but delivery dates are lengthening as well; over 100 brickworks were closed down during 1957-58, and it is thought unlikely that many of these will be reopened.

Similar shortages and delivery delays have been reported for building steel, the greatest delays—as much as nine months—being for reinforcing rods, though no building work has yet been seriously held up. In part this reflects stockbuilding by the steel industry's other customers as well as a revival of demand in building. The position is less critical where heavier sections are concerned, partly because industrial building, which accounts for a large part of the demand for constructional steel, has been slower to recover than other work. Deliveries of Portland cement reached a record level of 11.6 million tons last year, compared with 10.6 million tons in both 1958 and 1957; it is reported that most of the leading cement manufacturers have been working at or near full capacity for some time. The Cement Makers' Federation, which is the industry's price-fixing trade association, this week announced a price cut of 2s. a ton, bringing the price in the London area to 110s. a ton. The federation has moreover stated that it will not increase prices before next July 1st, unless there is an increase in the price of coal or "unless something unexpected or exceptional happens."

RESEARCH REACTORS

. . . And Now Vickers

VICKERS-ARMSTRONGS is the fourth British company and the second member of the aircraft industry to decide there may be business in small nuclear reactors for research purposes. Like its competitor Hawker Siddeley, Vickers-Armstrongs is diversifying into atomic energy and finding the going tough where the big league of power-producing reactors are concerned. Last week it signed an agreement with the American General

Dynamics Corporation—with which Vickers is already working on nuclear submarines—to market the American company's Triga research reactor in this country. Research reactors come in a variety of sizes ; the best-known British one to date is the Dido type costing several million pounds, built to the design of the Atomic Energy Authority by Head Wrightson. Several sizes smaller and cheaper is the Merlin offered by Associated Electrical Industries, and at the very small end of the scale come the shrimps of the industry, such as Triga and its competitor Argonaut, also designed in America, which is built in this country by Hawker Siddeley under the name Jason.

Reactors in this class cost about £100,000, or considerably less if their fuel supply can be arranged in the United States and not obtained from the Atomic Energy Authority. This reduces the installed cost of the Jason type by £30,000. Vickers is still extremely vague about which country will supply Triga's special fuel, which for special technical reasons is not the usual uranium metal but a uranium-zirconium hydride. The main use of such small reactors is for teaching, limited experiment and still more limited production of radioactive materials—of the two, Jason's design suits it better for investigations bearing on the design of big reactors and Triga is more suited to chemical work. How many universities and research institutes are prepared to invest even in these scaled-down reactors is a matter of conjecture ; but the prospects are brighter than they seemed a few years ago when no British company thought it worth while to put such a reactor on the stocks.

SUGAR MARKET

Cuba Out of Step

No international commodity scheme can succeed unless the members give it full support. Sugar prices are low not because the International Sugar Council has fallen down on its job, but because the principal exporter, Cuba, persists in being a weak seller. Cuba admittedly has problems of its own, but other exporters cannot be expected to extend too much sympathy on that account. In the first month of the new year raw sugar sagged from 3.05 to 2.92 cents a lb for Cuban spot, and as the average for seventeen consecutive market days was below 3.25 cents the council met in London this week to discuss what it should do. Export quotas had already been cut to 87½ per cent of the basic tonnages, so a further reduction was not automatic. The council might have taken the view that it could do nothing useful because the market's weakness was not statistical. A majority of members decided that it should act, in the hope of at least preventing a further decline.

Export quotas have therefore been cut by another 2½ per cent to 5,630,000 metric tons. The estimate of probable exports from non-members appears to have been raised sharply by 240,000 tons to about 440,000 tons, no doubt reflecting increased offerings from Turkey and Argentina, making a total supply of 6,070,000 tons. The forecast of requirements has been raised by 150,000 to 5,850,000 tons, leaving an apparent surplus of only about 220,000 tons, compared with over 300,000 tons before. The true balance could be finer still. Russia, an exporting member, is understood to have said that it will almost certainly be a net importer this year, and the needs of Japan and others may increase. Moreover the council still has a further cut of five per cent (315,000 tons) in exports up its sleeve. On paper, then, everything looks rosy, and prices should recover in time. In practice, much will depend on Cuba, as in 1959.

SHORTER NOTES

Canadian Shell is to join Constock International Methane, the American company that has been working with the Gas Council in shipping liquefied methane to Britain, in the formation of a new company, Conch International Methane, to accelerate development of the technique. Constock International, itself a joint subsidiary of Continental Oil and Union Stockyards and Transport of Chicago, shares ownership with the Gas Council of *Methane Pioneer*, the experimental ship that has been carrying this liquefied natural gas to Britain during recent months for reforming and pumping into the gas supply of London and South-Eastern England.

★

The Russian *Volga* and *Moskvich* cars are to be marketed in Britain by Thomson and Taylor, the sports car specialists. Both cars are family saloons ; the price, including tax, of the 2½-litre *Volga* will be about £1,120 and that of the 1.36-litre *Moskvich* under £800. Imports will begin next April ; though the prices are lower than those of most imported cars in their size groups, they are still higher than those of British cars.

★

Five new diamond tool factories are to be built in the Soviet Union according to an official announcement from Moscow this week. The new factories will be built in the Caucasus, Siberia and in the Ukraine. The news follows an earlier announcement that Russia is to step up diamond output some sixteen times over the next five years.

★

The directors of the Beecham group have announced a second ordinary interim dividend of 8 per cent compared with 7 per cent last year. The first interim payment, declared last October, was also raised from 7 per cent to 8 per cent.

★

The Orange Free State Investment Trust has declared a final dividend of 27½ per cent for 1959 making a total of 47½ per cent for the year, compared with 40 per cent last year. The ordinary dividend of the West Rand Investment Trust for 1959 is unchanged at 35 per cent.

★

A day after the International Gold Corporation of South Africa launched its gold certificate scheme in Frankfurt the German Bundesbank decided to forbid dealings in the corporation's certificates. The objection, shared by the Swiss National Bank, is that the certificates are in bearer form and for small amounts: they are regarded as possible competition for currency.

★

Stocks of butter are rising, and prices have fallen further. New Zealand and Australian butter was reduced last week by 20s. and 22s. respectively to 370s. and 367s. a cwt.

★

A bill to permit foreign banks to open branches in New York has been introduced into the state legislature. At present foreign banks with agencies in New York may not accept deposit business.

★

Supplementary estimates have been presented this week to a total of £76.5 million. The largest single item is £25.6 million for the health service ; agriculture and national assistance also need additional funds. As always, these supplementaries are an incomplete guide to the budget outturn as they take no account of underspending on other votes.

EXTRA QUALITY

People who can buy Player's No. 3 – by the hundred

Player's No. 3 are top-class, but very *unpompous* about it all. (Rather like the people who smoke them.)
These discreetly expensive cigarettes—they are 4/4 for 20—in their plain white and brown packets, put on no airs for the very adequate reason that they do *deserve* to be smoked. Their tobacco is quite excellent.

COMPANY MEETINGS

COLVILLES LIMITED

PROFIT AGAIN BENEFITS FROM OPERATIONS AT RAVENSCRAIG

BALANCE SHEET SHOWS SATISFACTORY LIQUID POSITION

MODERNISATION BEARS FRUIT

The 29th annual general meeting of Colvilles Limited was held on February 5th at Glasgow.

The following is the circulated statement by Sir Andrew McCance, DSc, LLD, FRS, DL, chairman and managing director, for the year to September 30, 1959:

It is a matter of great regret to record that Mr Robert Marshall, who had to retire from the Board a year ago owing to ill-health, passed away in the autumn of last year. His association with Colvilles goes back for many years and throughout the steel industry he was widely known and greatly respected.

ACCOUNTS

The manufacturing and trading profit has again benefited from the economic operations at Ravenscraig in spite of a reduced demand. The policy of spending money during the postwar years on modernisation and on modifications to the established works is now bearing fruit. We have been able to maintain the works at less cost without in any way lowering standards. The reduction in pressure on producing departments, in consequence of the recession, enabled some accumulation of lower priced stocks of semi-finished and finished materials to be liquidated. These factors have all contributed to the improved trading results.

For some time the Board had been considering the desirability of introducing a scheme of pensions for workers, which would contribute to their greater security by making provision for the future and would enable them to enjoy additional benefits when the time came for retiral. On September 1, 1959, in association with the Scottish Amicable Life Assurance Society, a scheme for pensions and life assurance for male employees was introduced, which has met with a warm welcome throughout the Colville group. No contributions are required from employees, but the scheme allows members to make voluntary contributions to obtain additional benefits for themselves. The Board have been encouraged and gratified at the very large percentage of the employees who have availed themselves of this provision. The scheme has been designed to fit in readily to the Government's national scheme. This first year it was considered preferable to charge a full year's premium to the accounts rather than make a strict accounting apportionment. In this way the accounts show the measure of the annual charge that can be expected in future to cover this scheme of social betterment for those who work for the company.

Since it cannot be assumed that the future will be free from inflation, it has been decided to set aside £2 million to capital reserve for replacement of assets with the intention of augmenting the depreciation which is still based to some extent on the historical cost of plant at prewar levels.

The provision for taxation this year is less than that for last year. This is in part explained by the reduction in the standard rate of income tax and by a favourable settlement in the Courts of a case which had a bearing on the adjustment of our own profits. The taxation for the remaining postwar years has now been settled apart from the adjustment of the profits tax for the period when the company was a member of the Iron and Steel Holding and Realisation Agency group. In consequence certain provisions are now no longer necessary and they have been added back to the profit and loss account. The net profits this year have been increased by those non-recurring items.

When the construction of Ravenscraig was started, investment allowances were in force, but shortly afterwards these were terminated and replaced by the grant of initial allowances. More recently a dual system involving both allowances was introduced. These changes gave rise to some dubiety in their application to a large capital development like Ravenscraig where construction was spread over several years. I am glad however to report that all questions in this connection have now been settled and a substantial part of the amount of £1,336,623 added back as provision for tax no longer required, arose from such settlements.

The balance sheet shows a satisfactory liquid position, although it should be stated that substantial cash resources will be required for our capital commitments. The capital commitments stated on the balance sheet are our present firm commitments. They do not reflect all the expenditure involved in the new strip mill and other development plans, the orders for which are now nearing the final stages of their technical adjustment. The contracts for the hot and cold mills have been placed, together with their electric drives. By the time the annual meeting takes place, the commitments for the blast furnace and coke ovens, buildings and steelmaking plant will all have been finally concluded. These items in total will cover approximately two-thirds of the total estimated expenditure. Having such commitments in mind, £3 million has been transferred to general reserve.

The Board recommend that a final dividend of 8 per cent be paid to make a total of 14 per cent for the year.

SUBSIDIARY COMPANIES

Like the parent company the subsidiary companies felt the effects of the recession during the early part of the present year, but I am glad to say they have shared in the recovery which has since followed. The greater part of their earnings has been transferred by way of dividend to strengthen the cash reserves of the parent company in anticipation of our commitments for development which, with the progress in construction, will require steadily increasing payments in the coming year.

In the case of The Lanarkshire Steel Company Limited, whose principal products are steel joists and heavy sections, the effect of the recession was increased owing to changes in the type of joist in demand. The availability of universal beams in this country reduced the sale of normal joists manufactured to British Standard Specifications, which are not only heavier for the same strength but are also less convenient in other ways. The consequences of such a development had been under close consideration for some time and experiments to produce the new profile in the ordinary section mill had been in progress for the past three years. I am glad to say that in this the company was successful and it has been shown that with the addition to the existing mill of universal stands and run-out roller tables a full range of universal beams up to 24 in deep can be produced. The order for these additions has been placed and it is anticipated that their installation will be completed and in production in about 15 months' time. When completed the range and type of joist and section which the company can market will be greatly extended. This should place the company in a favourable position in regard to home and export markets in the future.

New contracts for constructional steel have been scarce in recent years. In part this is but another aspect of the recession in trade through which the country has been passing, but it is also a reflection of competition from ferro-concrete construction which has been growing in spite of the trade set-back. The proportion of buildings erected in ferro-concrete has always been less in Britain than in continental countries and it would seem that this difference is now being narrowed. This is confirmed by the demand for ferro-concrete bars, the output of which from the bar mills in the group has reached record tonnages in recent months.

The insistence in building regulations on casing steel columns in concrete for fire protection, without permitting the added strength of the concrete to be taken into account, has had an unfavourable effect on the cost of steel frame buildings and has made their use uncompetitive in many cases. This, I am glad to say, has now been put right and with the advent of universal beams I fully anticipate that steel construction will now become more competitive than has previously been possible.

The Colville Constructional Company Limited with their diversified production have had a satisfactory year and can look forward to an active period from the contracts placed with them for the buildings required for our strip mill scheme. In welded fabrication for engineering components, their works have been fully employed during the year. A large contract for fabricated valves for an atomic energy power station is nearing completion but, in common with the experience of others in this field, the work has not proved remunerative.

With the record British production of motor cars, demand for special steels has been good during recent months and The Clyde Alloy Steel Company Limited are producing their full quota of the supplies required by this virile industry. Looking at the steady growth in production which has continued in the motor industry, the need for a larger output of special steels was foreseen some time ago and steps were taken to rebuild the Hallside Works of The Steel Company of Scotland Limited to form a modern and economic unit laid out and specially designed for the production of these highly diversified steel compositions. This has been an operation of some magnitude, but it has progressed steadily. The falling away in trade, which applied to special steels equally with other qualities, has enabled the reconstruction work to be carried through without undue pressure and therefore with reasonable economy. The location at Hallside was satisfactory, but the layout of the works and the plant were not in line with modern ideas. All this has now been changed. The new mills are nearing completion and the modernisation of the melting shop is in progress. It has been decided to install an 80-ton electric furnace and experience with this, particularly in regard to production costs, will be awaited before deciding on any further extension in the use of this type of large furnace.

The management and control of this division have been transferred to The Clyde Alloy Steel Company Limited, who are also integrating the steel foundry production at Hallside with their own. As from the current year, the results relating to these activities will be included in those of this subsidiary.

Correspondingly, the plate production of The Steel Company of Scotland Limited at Blochairn Works has been amalgamated with the plate production of Colvilles and is now controlled from the head office of the parent company.

Plans are in progress for expanding the production of bright turned and bright drawn bars from the Govan Shafting and Engineering Works and merging this with a similar but somewhat more restricted class of work now carried on at Dalzell Works, Motherwell.

It is anticipated that these changes will result in administrative and production economies. The increasing use now being made of mechanised methods in office control and accounts has of necessity compelled greater centralisation and a greater concentration of work in fewer centres.

After a very slack period the hand mills of Smith & McLean Limited at Gartcosh are now well employed helping to meet the shortage in the supply of sheets. When strip mill sheets were available, users were no longer contented with hand mill quality, but the recurrence of demand is helping to bridge the time before the strip mill comes into operation. These changes however are recognised as being conditioned by the fluctuation in the state of supply and demand and, in competition with the superior quality of the strip mill product, the future prospects for the hand mills have not been changed by this temporary demand. To those directly interested however, it is a very welcome respite. The galvanising units at Mavisbank have been suffering from the falling off in orders, but have been able to maintain a reasonable level of work and they are now fairly fully committed for some months ahead.

The only other subsidiary I need refer to is The Carnlough Lime Company Limited. During the last few years the equipment has been modernised and the methods of handling at the quarry improved in order to meet the increasing demand for small limestone arising from the greater use of sinter in our own blast furnaces. There is a limit however to the output that can be obtained from the quarries without resorting to mining, which would not be economic, and our plans pitch the future output no higher than the present economic limit. This smaller member of our subsidiary group, as a result of the changes which have been made in recent years, is at last giving a satisfactory return on the capital invested.

I am glad to be able to state that all the subsidiary companies have this year earned profits. Apart from small balances added to the amounts carried forward, these profits have been transferred to the parent company.

PRODUCTION AND COSTS

The production of coke, pig iron and steel during the past financial year has been:

	Six months to 31st March	Six months to 30th Sept.	Total
Coke	251,082	217,050	468,132
Pig Iron	344,256	328,907	673,163
Steel	705,246	737,066	1,442,312

These figures reflect the reduced demand which existed during the period. In addition, however, the coke and pig iron production at Clyde Iron Works was affected by substantial rebuilding and relining operations. When it became evident that a reduced demand would continue for some time, the opportunity was taken to close down two batteries of coke ovens which had been in continuous production for twenty years and were in need of reconstruction. Whilst reconstruction could probably have been delayed for a few more years, it was considered that rebuilding might then have been required at a time when the pressure of demand would have made it inconvenient. The reconstruction is now completed and several improvements have been introduced to make the new batteries modern in every respect. The total cost has amounted to £667,863 and, in view of the improvements, this sum has been charged to capital account in conformity with the national agreement with the Inland Revenue. A reconditioning fund of £317,605 had been accumulated over the years and, being no longer required, has been returned to the revenue account.

Two of the blast furnaces were also shut down and relined and the opportunity has been taken to convert a second furnace not yet adapted for high top pressure blowing. During the period of relining, steelmaking was continued from stocks of pig iron accumulated for this purpose. At the beginning of September, one of the blast furnaces was again brought back into operation. The total tonnage of pig iron produced in this furnace during the 10½ years of continuous use was 2,352,136 tons which is believed to be a record for this country.

We have now had the benefit of a full year's operation of the ore unloading plant at General Terminus. The rate of unloading has come up fully to expectations and large cargoes have been handled expeditiously. The largest single cargo of ore discharged so far has been 24,000 tons brought in by a 35,000 ton ore carrier. Experience has demonstrated that the plant would be capable of still better discharge rates if the conveyor belts were speeded up by the use of motors of higher horse power and this change is now in progress.

At Glengarnock Works the last steam engine driving the section mill has been scrapped and replaced by an electric drive with beneficial effects to the cost of rolling, in spite of the fact that much of the steam came from waste heat. The conversion of this rolling mill completes the electrification plans for our mills, which have been in progress now for some years and which have been carried through in every case without sensible loss of production.

DEVELOPMENT

A preliminary scheme for the new strip mill was approved by the Iron and Steel Board and the British Iron and Steel Federation in April, 1959. This enabled negotiations for the purchase of the plant to begin with the manufacturers. Throughout the year visits have been paid by teams of engineers and metallurgists to corresponding installations in this country and I would like to express appreciation for all the assistance which has been freely given and which has proved most helpful. In addition, visits have been paid to America, Holland, Germany, Italy, Belgium and Austria and, as a result of a careful study, it was decided to install L-D oxygen converters with lime injection to increase the steelmaking capacity at Ravenscraig by 700,000 tons which, with the addition to the present open hearth shop of a fourth furnace already planned, will give a total annual production of 1,260,000 tons at that works.

Large quantities of oxygen will be required and negotiations are being concluded with the British Oxygen Company Limited for the erection of a plant to produce 200 tons of liquid oxygen per day. A second plant with the same capacity will follow immediately afterwards to enable the application of oxygen to be further extended to the melting shops at Dalzell and Lanarkshire Works.

Good progress is being made with the construction of the slabbing mill, and the integration of production from this mill with the requirements of the strip mill has been made without difficulty.

A more detailed examination of the probable market has shown that our original production targets were too low and a revision has been necessary. The target output for the mill is now 500,000 tons of finished sheets and 175,000 tons of light plates. The hot mill itself will produce finished strip up to 60 in. wide as this was considered the most useful width to meet the general demand. Before the width of the mill was finally determined, a study of the present requirements was made and consultation took place with the principal users. As a result, the conclusion was reached that the demand for sheets in excess of this width was so moderate a percentage of the total demand that expenditure on the duplication of facilities for the supply of very wide sheets would not be justified.

Following the changes mentioned above, it was found necessary to install a 4-stand tandem cold reduction mill at Gartcosh of the same width as the hot strip mill. This mill will have ample latent capacity to meet any likely increase in demand that may arise at a later date. Work has already started on the preparation of the site at Gartcosh and good progress has been made. It is anticipated that the cold reduction plant will be completed by the end of 1961, and the hot strip mill by the third quarter of 1962.

I am glad to be able to state that most of the

staff positions for the control and supervision of our increased steel production and for the strip mill are being filled from within our own organisation. Arrangements have been made or are in process to enable those selected for such positions to obtain training in operational practice both at home and abroad in order that they may be adequately equipped to take over their new responsibilities when the construction of the strip mill is completed.

The opportunity occurred during the year of acquiring the site and buildings belonging to Hurst, Nelson & Company Limited at Motherwell and the purchase was concluded. This land adjoins the land of Lanarkshire Works on the one side and that of Dalzell Works on the other, whilst to the north it is bounded by the railway sidings of Ravenscraig. Its purchase will therefore enable improvements to be made in the access to all these works as and when required. The possibility of utilising some of the area and buildings to develop and extend the production of turned and bright drawn bars and certain other products is now being examined.

Production of coke and pig iron ceased at Dixon's Ironworks Limited in November 1958, although trading in coke continues. Work has now started on dismantling the plant and clearing the site. Interest in the re-utilisation of the site has been shown and negotiations for its sale are proceeding. Meantime agreement has been reached on the purchase by another concern of approximately one-third of the area for the erection of a substantial modern factory.

RAW MATERIALS

For some years it has been recognised that the increase in our pig iron production would demand larger quantities of limestone, and exploration work has been carried out over a wide area in Scotland to find a suitable deposit for these additional requirements. Unfortunately none of the Scottish deposits has been found suitable in quality: all contained numerous sand streaks throughout, which render them unsuitable for steel making. Nor are the reserves at Carnlough sufficient for our larger requirements. A deposit located near Penrith has been extensively explored and work carried out during the past three years has confirmed the suitability of this limestone. An option has been taken on the site. A scheme for the development of this reserve by modern methods and its transport to the works is now under active consideration, and it is planned to have supplies available by the time the additional blast furnaces at Ravenscraig have been constructed.

From time to time public reference has been made to deposits of iron ore in Scotland and we have thought it desirable that the known deposits should be thoroughly explored to determine whether they contain any potentiality as a supply for our works. The particular deposits which justified examination were those on the Island of Raasay and the Island of Tiree. This work has now been completed and it has been found that, while the deposit on the surface at Tiree gave promising indications of iron content, the disseminated rock containing the ironstone was irregular and fell away rapidly in iron content with the depth from which samples were taken. Extensive boring has shown that this falling away in value would make the Tiree deposit uneconomic to develop.

The iron ore deposit on the Island of Raasay, which was worked for some years by another Scottish ironmaking company, has been closely studied. It has a low iron and a very high phosphorus content and the cost of steelmaking with pig iron from this iron ore would be so high as to limit seriously the commercial prospects of its use. It is a matter of regret that no economic workable iron deposit is known to exist in Scotland.

FUTURE OUTLOOK

Whilst the year under review commenced in the midst of a trade recession, the recovery since it started has been rapid. The demand for steel has been rising steadily during the past half year and there is every indication that this is likely to continue. This change reflects the increasing confidence in the trade prospects of the United Kingdom, both in the field of home trade and in the export markets. It is a reflection of the confidence which has grown with the evidence of stability in costs and prices engendered by the success of the Government's economic policies.

The state of trade is very sensitive to changes in public sentiment and can be adversely affected by unrest and by wages demands which do not have increased productivity as their justification. There have been some signs recently that the pressures which caused the inflationary increases in the cost of living during the postwar years may recur and may upset the stability which has brought the return of good trade and employment from which we are now all benefiting. It is to be hoped that counsels of restraint in such matters will be followed so that the present expectations of prosperity throughout the country may be encouraged and prolonged.

Our position as an exporter of steel products has been well maintained and new markets are being opened up which offer good prospects for future business. The development of such new markets is essential to offset the diminishing demand from certain traditional markets in countries now establishing their own steel plants.

The Board have once again been excellently supported during a period which has not been easy by an able and enthusiastic staff and they wish to record their sincere appreciation for the great assistance they have received from everyone in the service of the company.

APPENDIX

ANALYSIS OF INCOME AND EXPENDITURE

	1959 (£'000)	1958 (£'000)
Income from sales, interest, etc..	58,600	75,480
Cost of materials, trade expenses and services bought.....	23,680	36,247
Cost of fuel.....	9,578	13,883
Depreciation.....	2,462	2,500
Debenture interest.....	794	643
	36,514	53,273
Balance available for wages, salaries, taxation, dividends and re-investment by way of reserves	22,086	22,207
Distributed as follows:—		
Wages, salaries, national insurance and superannuation contributions.....	11,496	13,223
Taxation.....	3,025	3,791
Dividends—Gross.....	1,672	1,520
Reserves.....	5,893	3,673
	22,086	22,207

Note.—Since wages and salaries are paid before deduction of tax, dividends have been treated on the same basis and the amount of taxation has been adjusted accordingly.

Number of Employees, 16,500. Number of Shareholders 36,500.

MALAYA GENERAL COMPANY

IMPROVING CROPS

The Fifty-first Annual General Meeting of the Malaya General Company Limited, was held on January 28th in London.

Sir Henry Birkmyre, Bart, chairman, in the course of his speech, said: The accounts present the Consolidated Balance Sheet and Profit and Loss Accounts, consequent upon the merger with Sedenak Rubber Estates Limited, in which Malaya General Company Limited acquired 100 per cent interest in the Subsidiary Company.

RESULT OF YEAR'S OPERATIONS

The net profit amounted to £72,229, including Cess Refunds and Government Replanting Grants received during the year. These repayments totalled £31,847 as against which expenditure on Replanting during the year charged to Revenue Account amounted to £58,563. With the amount of £24,325 brought in from last year and £3,249 Excess Tax Provisions the total amount available in Appropriation Account is £76,974, after transferring £22,829 to Capital Reserve in respect of profits of the Subsidiary Company earned during the year but relating to the pre-acquisition period.

Proceeds of the crop, which was 422,117 lb higher than in the previous periods, were 24.38d. per lb compared with 21.41d. per lb in 1957-58. The crop on the mature areas of both Estates was 576 lb per acre. This is a distinct advance on last year and is, I hope, the forerunner of better crops to come.

Fixed Assets stand at a value of £45 per planted acre. Your Board and that of Sedenak Rubber Estates Limited, have decided during the current year to write up the Estates to a figure more commensurate with present day values, reflecting the improvements achieved in the course of Replanting operations which have been carried out over the years from Revenue Account. As a result, the Company's combined assets have been written up by a total of £144,552. It is proposed, subject to your passing of the necessary Resolution to make a Scrip Capitalisation to Members in the proportion of two shares of 2s. each, fully paid, for every five shares of 2s. each held.

VISIT TO ESTATES

During the year I visited your Estates. I spent a most interesting three days at Rengam, and I am very glad to be able to tell you that the improvement since I last saw it was most impressive. I also spent three days on Sedenak, and the general state of cultivation and tapping was very satisfactory.

Your Directors have entered into an Agreement for the sale of the Rengam Section "C" and Jungle Reserve for the sum of £43,750. The capital profit arising from this sale amounts to not less than £24,803. Your Directors feel that this should be distributed to the shareholders. To that end the Board propose to call an Extraordinary General Meeting as soon as possible at which the resolution to give effect to this will be put forward.

The report was adopted; the authorised share capital was increased from £350,000 to £500,000; new Articles of Association were adopted and the capitalisation of reserves was approved.

THE ROYAL BANK OF SCOTLAND

A HIGHLY SATISFACTORY AND RECORD YEAR

RIGHTS ISSUE

STRENGTH OF BALANCE SHEET POSITION

SOUND PROGRESS IN COUNTRY'S ECONOMIC RECOVERY

THE DUKE OF BUCCLEUCH ON UNSOLVED PROBLEM OF MONETARY STABILITY

The Annual General Court of Proprietors of The Royal Bank of Scotland will be held on February 23rd in Edinburgh.

The following is the circulated statement of the Governor of the Bank, His Grace The Duke of Buccleuch and Queensberry, KT, PC, GCVO, LLD:

Before I review our Accounts and the events of the past year, I wish first of all to refer to the loss which we have sustained through the death of Mr Bertram Francis George Currie who had been an Extraordinary Director since the association of our Bank with Glyn, Mills & Co. in August 1939. He was a Director of that Bank until his death and we shall miss him greatly. During the year under review Sir Francis Maurice Grosvenor Glyn, KCMG, Chairman of Glyn, Mills & Co., in order to lighten his commitments, tendered his resignation as an Ordinary Director. Sir Francis also joined our Court in August 1939 and we have greatly valued the benefit of his wise counsel and wide experience. We shall miss his presence at our Ordinary Court but I am happy, however, to say that he has agreed to serve as an Extraordinary Director.

We welcome two new Ordinary Directors, Mr Eric Odin Faulkner, MBE, a managing Director of Glyn, Mills & Co. since January 1950 and now a Deputy Chairman of that Bank, and also Mr James Ogilvy Blair-Cunynghame, OBE, MA, who until the end of last year was a full time member of the National Coal Board. These gentlemen, having been appointed to fill the vacancies on the Court, will, in accordance with the constitution of the Bank, retire at the Annual Court of Proprietors on February 23rd but are being nominated for re-election.

The present size of the Ordinary Court of Directors is based on a Resolution of the Court of Proprietors passed on March 14, 1951, which gave the Court of Directors authority to fix the number of Ordinary Directors at not less than ten and not more than sixteen. In view of the expansion which has taken place in the Bank's business it is now considered desirable that power should be given to increase the number of Ordinary Directors beyond sixteen. It is therefore proposed to ask you at the Annual Court on February 23rd to pass a Resolution giving the Court of Directors authority to fix the number of Ordinary Directors at a maximum of eighteen, two more than the present limit. I trust the proposal will commend itself to you.

RIGHTS ISSUE

At a special General Court of Proprietors held on January 26, 1960, Resolutions were passed authorising an increase in the Capital by the issue of new Stock amounting to £1,650,000, which, when fully paid up, will raise the Capital Stock of the Bank to £7,600,000. It is proposed to apply part of the premium resulting from this issue to bring the Reserve Fund up to £7,600,000 and the balance will be added to Inner Reserves. The ratio of our Capital and Reserves to the Deposits of our Group will thereby be considerably strengthened and the funds made available from the issue will enable us to take advantage of any opportunities which may arise for further expansion.

Out of the new Capital Stock of £1,650,000 the special General Court of Proprietors provisionally allotted an amount of £162,500 to Trustees on behalf of the Staffs of our Bank, Williams Deacon's Bank Ltd. and Glyn, Mills & Co. and an invitation is being extended to all members of the Staffs with three years or more service to apply for a share in the distribution of this stock at the same price as the new Stock is being offered to the Proprietors by way of "rights." It is hoped that there will be a good response by the Staffs to participate in this offer, which allows them the opportunity of acquiring on favourable terms a financial interest in the Capital of the Group which they serve.

Your Directors have considered it desirable to provide that those Proprietors who for one reason or another, perhaps because of illness or absence abroad, fail to exercise their rights to take up their provisional allotments of the new Stock do not thereby forfeit their rights. Accordingly it has been decided as a part of the terms of the issue that all rights not taken up by February 15th are to be sold and the net proceeds divided *pro rata* amongst the Proprietors entitled thereto.

WALL STREET OFFICE

I am sure you would be interested to see the intimation of the recent opening in New York of a Representative Office to serve the interests of the Group in the United States of America. This is a development which has been under consideration for some time and has been undertaken so that the three Banks in the Group may be better able to maintain liaison with their Banking Correspondents on the North American continent. It will also enable the Group to give a fuller service to those customers who have business affiliates or connections in North America and to those who may consider extending their trade with that part of the world or who may be thinking of entering into trade with North America for the first time. We judge ourselves to be fortunate in having secured as our Representative Mr Francis Harold Blaxill, until recently Manager of the New York Agency of The Standard Bank of South Africa, and who has been in the United States for a period of almost forty years. Such long experience there has given him an intimate knowledge of American Banking and American industry, trade and commerce, and we consider him to be ideally suited to represent our Group in the United States. We have appointed as his assistant Mr Maurice G. Burnett who was from October 1954, a Local Director of Glyn, Mills & Co. and who some years ago spent a period with an American Bank. Suitable premises have been secured at 63 Wall Street in the heart of New York's financial district. If any of our Proprietors or customers have occasion to be in New York at any time they will be most warmly welcomed at 63 Wall Street by Mr Blaxill and Mr Burnett.

RESULT OF YEAR'S OPERATIONS

I should now like to refer in some detail to the Bank's affairs as shown in the Annual Report and Accounts, a copy of which accompanies this Statement. The year was a highly satisfactory one. The net Profit, after providing for taxation and making transfers to Reserves for Contingencies out of which provisions have been made for all Bad and Doubtful Debts, fluctuations in the value of Investments and other Contingencies, was £813,191. This is an increase of £122,420 or 17.7 per cent over the figure for 1958. It is a record for the Bank and it has enabled the Court of Directors to recommend a final dividend of 9 per cent for the year which, with the interim dividend paid in September, will make the total for the year 17 per cent, an increase of 1 per cent on the rate paid for 1958. As already intimated in the General Manager's circular letter of January 5, 1960, which accompanied the Notice convening the special General Court of Proprietors of January 26th, your Directors, in the absence of unforeseen circumstances expect to be able to maintain this rate of dividend in 1960 on the Capital as increased by the issue of £1,650,000 of new Capital Stock.

INCREASED DEPOSITS AND ADVANCES

Deposits at £137 million were £2 million above the figure at December, 1958. It is not, however, the figure at any particular date which is most important but the level maintained throughout the year, and in this regard I can tell you that the increase shown at the end of the year fairly represents the increase in the average level of our Deposits during the year as compared with the average level in 1958.

Advances at £59,500,000 show the substantial increase of almost £14 million over the total at the end of 1958. As I indicated in my Statement last year, an increase in our Advances during 1959 was to be expected and part of the increase now shown reflects the implementation of commitments undertaken prior to the end of 1958. The increase is well spread over the whole range of our customers. There has been a further expansion in our Personal Loans but the total outstanding in this category is responsible only in a minor degree for the increase in our Advances. The introduction of this new category of loan has brought a useful accretion to the business of the Bank. We are in a sense

pioneering in a new sphere and I am glad to be able to report that it has brought us many new customers from a section of the community which formerly had little or no contact with the Joint Stock Banking system. There are indications that, after the initial rush of applicants in the early stages, a stable level of activity in this section has been reached, with repayments from existing loans more or less keeping pace with fresh lendings.

Notes in Circulation throughout the year have remained more or less on the level of the previous year and call for no comments.

STRONG LIQUID POSITION

The Balance Sheet continues to show a strong liquid position, the ratio of our liquidity being broadly in line with the level of previous years. With only a modest expansion in our Deposits it has been necessary to realise investments to provide for the major part of our increased lending and this is the explanation of the drop of approximately £10 million in our Investments as compared with last year. In accordance with our usual practice, the Investments are shown at or under their market value at the end of the year. The increase in Trade Investments is the result of the Industrial & Commercial Finance Corporation having called on its Shareholders during the year for payment of the uncalled portion of the Share Capital, which, previously paid up to the extent of only 50 per cent, has now become fully paid.

PROGRESS OF ASSOCIATE BANKS

I am pleased to report that our Associate Banks also continue to make good progress. Strong liquid positions are shown by their Balance Sheets. The changes in the principal figures as compared with December, 1958, are very much in line with our own.

Williams Deacon's Bank Ltd. has continued its policy of extending its Branch system, six new Branches having been opened during the year. It is the intention to push ahead with this policy as fast as circumstances will permit and the real benefit will be felt in the years to come. The total rate of dividend proposed by Williams Deacon's Bank Ltd. for 1959 is 2 per cent more than for 1958.

Just before the end of the year Glyn, Mills & Co. increased their Capital by £300,000 by a transfer from Inner Reserves and out of last year's Profit they have allocated £100,000 to Published Reserve Fund. As our practice is to value the holdings in our Associate Banks at Paid Up Capital plus Published Reserve Fund, you will observe that our Investments in Subsidiaries are now shown at £7,800,000 as against £7,400,000 last year. The £400,000 resulting from this revaluation, together with £200,000 allocated from our own Profits, was transferred to our Published Reserve Fund, raising it from £5,300,000 to £5,900,000.

CONSOLIDATED ACCOUNTS

Looking at the Consolidated Balance Sheet of the Group, the total of Deposits amounts to £349,614,728 as compared with £341,838,679 for the previous year, while Advances at £144,731,296 show an increase of almost £31 million. The Consolidated Profit of the Group amounts to £1,168,133 as compared with £996,289 in 1958, an increase of £171,844.

HIRE PURCHASE INTEREST

You will also be pleased to learn that the business of the British Wagon Company, in which our Group has a 40 per cent interest, has continued to expand, and we feel sure that in the years to come our association with that Company will prove to be of increasing benefit to our Group, not only in respect of the return on our investment in it but also because of the help which it is able to provide to the customers of the Group who may wish to cover part of their financing requirements by hire purchase.

STAFF TRAINING SCHEME

I mentioned last year that the Bank had started a Staff Training Scheme and had set up a Staff College in Edinburgh. We have now had more than a full year's experience in running the College and your Directors are satisfied that this is something well worth while and advantageous to the Staff of the Bank. The knowledge which is imparted by the lecturers is instructive and informative and in addition the College affords opportunities to Branch Managers and other Members of the Staff at varying levels to meet and discuss with their contemporaries the various problems of their work at their particular Branches.

DEVELOPMENTS IN BRITISH BANKING

Looking ahead, we are probably on the threshold of developments which may bring about changes—some perhaps of a far reaching character—in British Banking. Two which are very much in the forefront at the present time are automation and the payment of wages by cheque. Automation has been under close study by all the Banks for some time and its introduction into Banks now seems a practical proposition within the next few years. The extent to which the payment of wages by cheque will take place will depend on the wishes of the wage earners, for in the legislation which it is proposed to introduce for the amendment of the Truck Acts there is no intention of making it compulsory on the employee to accept payment of his wages by cheque. The question of costs is important in this context. At present many of the accounts maintained with the Banks are, on the basis of the existing scale of charges, operated at a loss and yet, notwithstanding this, it would give tremendous encouragement to the extension of the banking habit, which we are all so very desirous of promoting, if a form of account could be introduced subject to a cheaper rate of charge for those who do not wish a full banking service. The Government itself could help towards this end by abolishing the Stamp Duty on cheques, and it would not be unreasonable to expect them to do so.

THE ECONOMIC SCENE

During the year the recovery in the economic and financial state of the country continued. There was an expansion in industrial production and a rise in productivity. Helped by the welcome stability in wage rates and the continuance of favourable prices for our commodity imports, our price level remained stable throughout the year. Sterling has remained strong and there has been a further strengthening of our external reserves. We have made sound progress since September, 1957, but I am not sure that the problem of how to maintain stability in the value of money with continuing economic growth has yet been solved.

The experience of the past year has been encouraging and the immediate outlook appears reasonably favourable, although the longer term prospects are being slightly darkened by a renewed round of claims for higher rates of wages. If these claims result in increases which are not matched by increased productivity, they will inevitably, as has been pointed out before, again set in motion the forces of inflation with all the consequences that we know so well.

So far the recovery in demand has been mainly confined to the consumer goods industries but there are definite indications that capital investment is now beginning to expand again. Short-term rates of interest in this country have for some time been lower than rates in other parts of the world, particularly in the United States and Western Germany, with a resultant tendency for money to be withdrawn from this country to obtain the benefit of these higher rates. The recent increase of 1 per cent in Bank Rate is intended to correct this, but in addition it is also intended to act as a yellow warning to the country as a whole that the Government does not wish to see expansion proceeding at a rate which might endanger the stability of the economy.

SCOTTISH INDUSTRY

In Scotland, because of the structure of our economy, we have not as yet benefited from the recovery to the same extent as other parts of the United Kingdom. We are so much more dependent than most other areas of the country on our capital goods industries that anything which would retard the recovery from spreading itself through to this side of industry would be most unfortunate for us. The unemployment situation in Scotland has improved marginally since last year but as things are at present there cannot be any substantial betterment until there is some recovery in the activity of our heavy industries.

There is as yet no sign of any break in the clouds for the shipbuilding industry, on which directly and indirectly the livelihood of so many of our people depends, and this in turn is still having its effect on our steel industry. A slight improvement in demand has led to a small recovery in steel production but the industry is still operating below capacity.

The whisky industry has had another good year and has yet again set up another export record, with still more supplies going to the United States. There has been also a revival in our woollen industry and the immediate prospects appear favourable.

I should like to say a word about the courageous way in which the City of Glasgow, in co-operation with other Local Authorities, is tackling its overspill and industrial re-development problems. Glasgow has faced up to the fact that it has almost reached its physical limits and I think that the steps which it and the other Local Authorities throughout Scotland are taking to deal with this problem on a country-wide basis are correct.

REAL OPPORTUNITIES FOR INDUSTRIAL DEVELOPMENT

There are real opportunities in Scotland for industries which are prepared to move out from the heavily populated industrial belt and so give themselves room to manoeuvre. The Markets will still be readily to hand. We in Scotland would welcome also the setting up of new industrial plants here and we believe that Scotland can offer very favourable opportunities for this sort of development. Everyone who has the interests of Scotland at heart must have been encouraged by the announcement of the decision of the British Motor Corporation to set up a factory at Bathgate, which it is anticipated will provide work for over 5,000 people.

Scotland also has space to provide for leisure and the advent of the Highland Tourist Finance Corporation shows a well advised and timely effort to support, in an organised way, the development of the tourist industry in this country. And I may say that we are ready to co-operate with and to support the Corporation in any suitable plans suggested for assisting the tourist industry.

SURVEY COMMITTEE

Behind all this and yet looking forward stands the Survey Committee which has just been set up under the aegis of the Scottish Council (Development and Industry) to study the natural resources of Scotland and, from the results of that study, to form plans how best to make use of these resources. Mr Elgood, one of your Directors, is Chairman of this Committee. I understand that his main task will be to co-ordinate the reports which will come from the various scientists and others engaged in the survey, and I am sure we all wish him well in the important task which he has undertaken.

Last year was one of the most favourable that our farmers have experienced in the matter of weather for a very long time and the long periods of sunshine in the autumn enabled good harvests to be ingathered quickly and without loss. Yields from all grain crops were good but some of our other farming products were affected by the prolonged drought. For instance, lamb prices at the autumn sales were much lower than the previous year. This is a reminder to us that in agriculture there is no common denominator. The type of weather suitable for one type of farming may be unfavourable for others, and a period of prolonged sunshine such as we had last year by producing a serious drought can, as well as periods of excessive rain, disturb the balance of our agricultural production.

RADCLIFFE REPORT

After work extending over a period of more than two years the Radcliffe Committee presented its Report to Parliament last August—in circumstances entirely different from those which obtained when the Committee was set up in May, 1957. The Report is a unanimous one and provides us with a most comprehensive and lucid analysis of our present monetary system. The Committee's recommendations have not all found universal acceptance and the Government have decided against some of them. Others are still being considered and it is as yet too early to say what changes they may give rise to in banking policies and practices. No serious criticism was found with the banking system. The Committee recommended that a more comprehensive collection and collation of banking statistics should be undertaken and, as this is one of the recommendations which has been welcomed by both the Chancellor of the Exchequer and the Governor of the Bank of England, this matter is receiving close study at the moment.

TRIBUTE TO EXECUTIVE AND STAFF

With the relaxation of a number of controls and the freeing of credit our Staff has had a strenuous year. I would like to take this opportunity of thanking our General Manager, his Assistant General Managers, our Branch Managers and all the Staff of the Bank, both men and women, for their loyal and excellent service; all of them in their varying capacities have contributed to the satisfactory results which have been placed before you.

THOS. FIRTH & JOHN BROWN LIMITED

SIR JOHN GREEN'S STATEMENT

The Seventy-ninth Annual General Meeting of Thos. Firth & John Brown Limited was held on January 28th at Atlas Works, Sheffield, Sir John Green, JP (the Chairman) presiding.

The following is an extract from his circulated statement:

The gross surplus after providing for Directors' remuneration, but before providing for Debenture Interest £131,756, Depreciation £660,721, Additional Depreciation £648,000 amounts to £5,067,543, a reduction of £789,336 as compared with last year.

United Kingdom Taxation amounts to £1,957,786, a reduction of £653,937 compared with the previous year.

The amount of unappropriated profit brought forward is £1,239,918, giving a net amount of £3,259,198 to be dealt with in the Consolidated Accounts of the Group, an increase of £276,530.

Your Directors propose to transfer £1,280,000 to General Reserve, and to pay a final dividend of 6 per cent, which together with the interim dividend of 4 per cent absorbs £542,369, leaving £1,436,829 to be carried forward.

The Current Assets of the Group amount to £17,917,058, as compared with the Current Liabilities of £5,222,864, giving a cover of the latter 3.4 times.

The increase in Trade Investments mainly represents an increase in the book value of the Company's investment in Firth-Vickers Stainless Steels Limited. On September 29, 1959 that Company increased its Issued Share Capital from £3 million to £6 million. 1,500,000 Shares of £1 each were issued for cash at par to the Parent Companies, and also 1,500,000 Shares were distributed by capitalising part of the existing Reserves of the Company. Consequent upon this increase of Share Capital, Firth-Vickers were able to repay £750,000 of the outstanding Loan to each Parent Company.

The Issued Capital of The Firth-Derihon Stampings Limited was increased on April 14, 1959 from £240,000 to £500,000 by a transfer of £260,000 from Capital Reserve. The book value of this wholly-owned subsidiary has not been altered in the Accounts of the Company following on this capitalisation of Reserves.

The profit of the Firth-Derihon Stampings Limited was about 20 per cent higher than in the previous year. This improved result was brought about by a substantial increase in turnover during the year under review, and the bringing into full commission important items of new equipment and plant associated with the production of Stampings for the vehicle industry. The results of this Company continue to be very satisfactory, and it is making a notable contribution to the Group Profit.

Our Associated Company, Firth-Vickers Stainless Steels Limited, had a satisfactory year. The quality of the product produced in their modern sheet and strip plants is quite outstanding. Technical problems associated with the bringing into production of the 40 in. wide Rolling Mill at Shepcote Lane Works were to a large extent overcome, and the profit for the year was good, having regard to the difficult trading conditions in the early period of the year.

Orders for all types and specifications of the Company's flat products increased, and the demand for stainless steel other than bars is running at a high level.

CAPITAL EXPENDITURE

During the year £1,648,960 has been spent on land, buildings, plant and machinery by the Group.

The capital expenditure of the Associated Company, Firth-Vickers Stainless Steels Limited, was approximately £400,000.

The total estimated cost of completing the various capital schemes on hand is approximately £2,750,000 of which commitments already entered into amount to £1,031,000.

TRADING CONDITIONS AND PROSPECTS

During the year under review, the demand for heavy forgings and castings from the shipbuilding industry has deteriorated still further, and at the present time outstanding orders still to be executed are much smaller than they were a year ago. There does not appear to be any improvement in demand likely in the near future. Such business as is available is subject to the most severe competition, both at home and abroad. Competitive prices and quick deliveries are being offered, and every effort is being made to assist our potential customers.

The demand for forgings from the Electrical Generating Plant manufacturers is still poor. Some orders are being lost to continental manufacturers on price. In this field the pattern of products required is changing and the larger capacity units now being designed and built have the effect of reducing the overall tonnage of forgings and castings required, notwithstanding the substantial increase in installed generating capacity.

The demand for the qualities of special steels produced by your Company in the form of bars and billets has improved during the year, and at this moment our manufacturing capacity in this particular field is fully occupied and the immediate prospects appear to be favourable. Whilst consumption is rising to a high level, orders placed are still higher, but it is too soon to accurately assess the extent to which the increased demand is governed by the building up of stocks and the anxiety on the part of the consumer to secure ample reserves for the immediate future.

It is in this particular field of production that the outlook both in the short and long term appears most promising, and your Board is examining new proposals for expanding capacity both in Sheffield and at Beardmores.

STRONG FINANCIAL POSITION

The Balance Sheet discloses a financial position of great strength and stability. The strong liquid position will enable the Company to take advantage of opportunities which may arise in the field of expansion and investment. At the same time, Shareholders have enjoyed the steadily improving position.

The removal for the time being of the threat of renationalisation has enabled the market to place a value on the Shares of the Company more in line with its earning capacity, distribution, and the value of its assets.

The satisfactory results have been made possible by the loyal and steady co-operation of all our Workpeople and Staff, and the devoted effort and constant attention to duty by all executives employed by the Company.

The report and accounts were adopted.

LLOYD'S PACKING WAREHOUSES (HOLDINGS)

IMPROVED RESULTS

SIR ERIC A. CARPENTER'S REVIEW OF OPERATIONS

The Sixty-fourth Annual General Meeting of Lloyd's Packing Warehouses (Holdings) Limited was held on February 3rd in Manchester, Sir Eric A. Carpenter, OBE (the Chairman), presiding.

The following is an extract from his circulated statement:

The Consolidated Profit and Loss Account shows the Group Trading Profit, including Regentone Products Ltd., as £561,510 as against £91,990 for the previous year.

After making provision for Taxation £274,207 as against £62,659 last year, there is an aggregate Net Profit of £287,303 compared with £29,331 a year ago. Deducting £8,443, the proportion attributable to outside shareholders' interests, £8,148, the net transfer to Reserve, and adding the balance brought forward from the previous year £292,048, there is an available balance in the Group of £562,760.

In January, 1959, a special interim dividend of 6 per cent was paid, the reason for which was fully explained in my statement last year. To avoid confusion as to the dividends really applicable to each year, the special interim has been treated as a deduction from the amount brought forward from 1958.

An interim dividend of 6 per cent (less income tax) was paid on the Ordinary Stock in July, 1959, and your Directors recommend a Final Dividend of 9 per cent (less income tax) on that Stock, making a total of 15 per cent (less income tax) for the year.

The dividends on the Preference and Ordinary Stock already paid in respect of the year to September 30, 1959, together with the recommended dividend absorbs £144,925, leaving a balance to carry forward in the Group of £417,835 as against £292,048 brought in after deduction of the special interim dividend on the Ordinary Stock.

Consequent upon the continued fall in the volume of textile packing, many of the Group's properties originally providing packing services for export merchant tenants have ceased to perform that function. In the circumstances and in view of the prevailing property market, your Directors deemed it prudent to sell such properties, retaining leases of the comparatively small portions of them still required for packing services. Although the sale was completed subsequent to the close of the year under review, the resultant surplus over book value amounting to £702,876 has been shown in the Balance Sheet as an addition to both Fixed Assets and Capital Reserve.

PACKING DIVISION

Taken over the year the volume of textile packing still remained low, but the last few months showed an encouraging improvement, not entirely of a seasonal nature. This coincided with the holiday period and an already depleted staff was stretched to the limit to complete shipments on time.

In the field of machinery packing, there is an ever growing demand for our services and the premises, which last year we believed to be fully adequate, are now working to full capacity. Further expansion is in progress, which will keep us in the forefront in this valuable service to the Engineering Industry, catering as we do for packages up to 30 tons in weight. The rising flow of capital equipment for Eastern Europe calls for a precise time-table, as well as a high standard of workmanship to satisfy rigid inspection and we have made it our business to satisfy both these requirements.

We have packed thousands of tons of machinery for despatch to Russia and are grateful to those important British Companies who have entrusted their products to our care. Although the market emphasis has been on heavy machinery, we are also engaged in the highly skilled task of packing and forwarding electronic computers and allied equipment. It is fortunate that we are able to call upon other Group services, such as transport and warehousing, to service our customers.

The flow of business shows every sign of increasing as international relations continue to improve, and we expect to reap the benefit of our highly specialised knowledge and equipment in this field of packing. Our customers may be assured that it is our intention to offer a service second to none in this country.

PAPER AND PACKAGING DIVISION

At the close of the year under review we established jointly with The Packing Materials Association Ltd. a Company entitled Packaging Products (Holdings) Ltd. for the purpose of amalgamating the waterproof and waxed paper manufacturing interests of the two Groups. This enables the concentration of production in two large modern and efficient units at Manchester and Liverpool and the closing of two comparatively obsolete factories with consequent manufacturing economies.

The printing strike, which occurred during the last quarter of the financial year, caused a serious fall in the profits relating to the manufacture of cartons.

We have recently acquired two well-established carton concerns—Alfred Eva & Son Ltd. and T. A. Lever & Sons Ltd., both of Manchester. They will be integrated to work closely with our London subsidiary, F. T. Pillivant Ltd., under the title of Lloyd's Cartons Ltd.

TIMBER DIVISION

The Timber Trade, particularly in connection with Softwoods, started the year on a weak uncertain market, but with the summer, the situation changed very considerably, finishing with an increased demand and a rising market. This demand shows every sign of continuing and, providing some restraint is used, 1960 should be a much more prosperous year with better margins.

Hardwood activities have recently been augmented by the acquisition of Williams, Richards (Timber) Limited, a small but old established and respected Liverpool company.

RADIO AND TELEVISION DIVISION

Following the relaxation of Credit Restrictions in October, 1958, the Radio and Television Industry enjoyed a period of exceptionally high demand.

The Regentone Group took full advantage of these conditions, with the result that both turnover and profit were the highest in the history of the Company. There are signs, however, that the market peak has been reached and it is reasonably certain that the current year will be one of keener competition.

However, the reception accorded by the public to the current "RGD," "Regentone" and "Argosy" Radio and Television models gives me confidence that the Regentone Group will continue, at least, to maintain their proportion of the turnover of the industry.

The report and accounts were adopted.

KOLOK MANUFACTURING

(Manufacturers of Carbon Papers and Inked Ribbons for Typewriters and Office Machinery)

SATISFACTORY PROFIT

The fifty-first annual general meeting of Kolok Manufacturing Company Limited was held on January 29th in London, Mr E. S. Dumont (chairman and managing director) presiding. The following is an extract from his circulated statement for the year ended August 31, 1959:

The Net Profit of the Company for the year under review is £150,444 and the Net Profit of the Group is £175,822 as compared with £159,908 and £178,815 for the previous year.

Bearing in mind the mild recession in general trading conditions which temporarily affected us, the small reduction in the Consolidated Profit is, in the circumstances, satisfactory.

Output and orders in hand exceed those for the same period last year although it must be borne in mind that costs continue to increase.

The excess of Current Assets over Current Liabilities for the Group is £470,805, an increase of £26,881 over the preceding year.

The increase in the Fixed Assets of £41,328 is almost entirely due to the cost of extending the Factory premises. The work is not completed and further expenditure during the current year will approximate £10,000.

Your Directors propose to recommend a Final Dividend of 18½ per cent, an Interim Dividend of 5½ per cent having been paid. The total Dividend will then be 24 per cent for the year.

During the year Mr P. H. Franc, who has very successfully managed and developed one of our Subsidiary Companies, was appointed a Director of your Company.

Excellent support has been given by our Executives, Staff and all other employees and, on your behalf and my own, I take this opportunity to express to them our thanks.

The report and accounts were adopted.

AVELING-BARFORD LIMITED

INCREASE IN ORDERS

The 65th annual general meeting of Aveling-Barford Limited, was held on February 2nd at Grantham, Mr Edward Barford, MC, Executive Chairman, presiding.

The following is an extract from his circulated statement:

The profits of the Group for the year ended September 30, 1959, after charging all expenses of working and management, amounted to £502,684 which is below the profits of last year, although the Group turnover was higher. However, mainly due to the reduction in the standard rate of tax, the balance available is £253,247 as against £216,237 last year.

Information available to us still suggests that manufacturing capacity in our industry exceeds demand—with consequent price cutting.

During the last three months of the year, and the first three months of the current year, there has been a welcome increase in the number of orders placed with us both overseas and at home.

It is indeed fortunate that it has been possible to largely complete the reorganisation of the production units of the Group during the year. Although this has entailed abnormal expenditure and effort, we are now in a position to take advantage of the improved trading conditions which appear to be with us. We shall reap some reward as well from the abnormally extensive design and development programme upon which we have been engaged during the past three years.

Stocks have been reduced for the third year in succession and the Bank Overdraft at £75,684 is £193,000 lower than last year.

ROAD PROGRAMME

As the needs of Great Britain form but a small fraction of the world demand for our products, we are predominantly an exporting company and we stand or fall by our ability to compete in the markets of the world.

Nevertheless, a substantial increase in home business would be most welcome to us and we are pleased to see that the road programme continues to gather momentum, but the amount of money allocated for it is still woefully inadequate. Recent figures published by the British Road Federation point out that revenue from motor taxation in Britain is 10 times more than it was 25 years ago, while during the same period expenditure on our roads has not quite doubled.

The increased business which we might expect from the Road Programme will be partly offset by the reduction in opencast mining, which we had hoped would prove a large customer for certain of our latest products.

THE FUTURE

As to the future, I feel that we can face it with more confidence. Production from our factories in this country should be at a substantially higher level than last year and with more settled conditions throughout the world, we should see some benefit from the ambitious road schemes and other civil engineering projects that have been announced in many countries.

The directors recommend the same final dividend as last year, namely 7½ per cent, making a total of 12½ per cent for the full year.

The report and accounts were adopted.

BOWMAKER LIMITED

RECORD INCREASE IN VOLUME OF BUSINESS

PROPOSED SCRIP ISSUE

"Profits of the year under review should be surpassed in the current financial year" — SIR ARTHUR MORSE

The thirty-second annual general meeting of Bowmaker Limited will be held on February 23rd in London.

The following is an extract from the circulated statement of the chairman, Sir Arthur Morse, CBE:

In conditions of newly found freedom from restrictions your directors are able to present results which I venture to suggest you will consider very satisfactory.

On October 31st, last, the hire purchase debtors of our group had increased to £51,100,891 compared with £22,394,197 at the corresponding date in the previous year. These figures relate to business in the British Isles. With greater freedom, competition has naturally increased and continues to do so.

Just over a year ago a scheme was devised to encourage investment in good class stocks and shares. This has met with a satisfactory response which has resulted in business being accepted through no less than one hundred and fifty stockbrokers throughout the British Isles.

The deposits of the group have continued to increase and were in excess of £22 million at the close of the financial year.

CAPITAL AND RESERVES

As a result of two issues made during the year the paid up Ordinary share capital now amounts to £4,438,500.

Your Board is of the opinion that the reserves of the company are unnecessarily high in relation to the issued capital. It is, therefore, proposed to increase the authorised share capital of the company from £6 million to £10 million and to apply £2,219,250 of the amount of £2,717,122 standing to the credit of share premium account in paying up in full new Ordinary shares of 5s. each and to distribute these in the proportion of one new Ordinary share for each two Ordinary shares of 5s. each held on January 15, 1960.

ACCOUNTS

The group profit for the year, before tax, amounted to £2,303,851 as compared with £1,026,524 in the previous year. The group profit, after tax, amounted to £1,202,006. The final dividend of 20 per cent makes a total distribution of 27½ per cent for the year.

Commenting on the consolidated balance sheet, Sir Arthur said: Capital and reserves of the group as at October 31, 1959, total £11,139,905 as compared with £8,138,285.

OPERATING SUBSIDIARIES AND ASSOCIATED COMPANY

The three wholly owned subsidiary companies, Bowmaker (Commercial) Limited, Yeoman Credit Limited and Midland Counties Motor Finance Company Limited, continue to operate as separate entities but work in close collaboration with each other. Each company has made substantial progress during the year under review and has materially increased its profits.

Economic conditions in Eire, although not as good as in the United Kingdom, remain satisfactory and Bowmaker (Ireland) Limited has continued to make excellent progress.

The financial year of our associated company in the Federation of Rhodesia, Bowmaker (C.A.) (Pvt.) Limited, in which one-third of the share capital is owned by your company, ends on May 31st, and as anticipated in my statement last year the financial year which ended on May 31, 1959, proved a most difficult one and a small loss was incurred. Conditions in the Federation have, however, improved and since the commencement of the current financial year there has been a marked increase in the volume of new business.

Bowmaker (Plant) Limited, the only operating subsidiary company in the group not directly engaged in hire purchase, has increased its turnover despite the serious sales problem which has arisen in the field of heavy equipment as a result of the cut-back in the production of opencast coal. The large increase in sales of smaller units has, however, necessitated a considerable increase in overheads which has affected profits. The additional range of Caterpillar equipment now being produced in the United Kingdom together with an entirely new range of rubber-tyred tractors shortly to be available in this country will further expand the scope of the company's business.

CURRENT YEAR'S PROSPECTS

After commenting on proposed changes to the company's Articles of Association, Sir Arthur concluded: The sharp increase in demand which followed the lifting of restrictions must have spent itself and it is not to be expected that an increase of anything like this magnitude can take place in the current year. Nevertheless, I hope I am not being unduly optimistic in saying that the profits of the year under review should be surpassed in the current financial year.

Main operating subsidiary companies:

BOWMAKER (COMMERCIAL) LIMITED

YEOMAN CREDIT LIMITED

MIDLAND COUNTIES MOTOR FINANCE COMPANY LIMITED

SALTS (SALTAIRE) LIMITED

LORD WILMOT'S REASONED OPTIMISM

The Thirty-seventh Annual General Meeting of Salts (Saltaire) Limited was held on February 3rd at Saltaire, Shipley, Yorkshire, The Right Honourable Lord Wilmot of Selmeston, PC, JP, the chairman, presiding.

The following is an extract from his circulated statement:

Your Board decided to change the accounting year of the Company to September 30th to coincide with that of the Holding Company, Illingworth, Morris & Company, Limited, and the Accounts are for the period of six months ended September 30, 1959.

Trading Results.—Profit on Trading of the Group for the six months ended September 30, 1959, amounts to £498,947.

After charging £263,500 for Taxation on the Profits of the Period, the Net Profit of the Group amounts to £252,476.

Appropriations and Dividends.—The Board has declared an interim dividend of 5 per cent on the Ordinary Shares (in lieu of a final dividend), subject to income tax, and the dividends for the six months absorb net £127,706.

Machinery Activity.—The machinery in all Departments has been fully employed between April 1st and September 30th and a large percentage has run on overtime. The concentration policy outlined in my last statement has proved to be a wise one, and has shown benefit during the six months. We have experienced a strong demand for our productions, and orders on hand should ensure a continuance of this high machinery activity for several months.

Wool.—At September 30th wool prices were approximately 10 per cent above the basis at the commencement of the six months, which has obviated the writing-down of stocks necessary in recent years. Since the end of our financial year, although there have been slight fluctuations in the interval, wool prices have continued to rise.

Common Market and European Free Trade Area.—It is difficult to ascertain at this stage what, if any, benefits will accrue to the Wool Textile Industry from the Common Market and the Outer Seven. The Wool Textile Delegation is greatly disappointed with the Government's decisions in regard to the Outer Seven, which are likely to have serious adverse effects on both our Home and Export Trade. The Delegation has kept the Government fully informed of the Industry's views, but apparently little heed has been taken of their advice.

Future Prospects.—The competition for orders for both Yarn and Cloth is still very keen. Our percentage of Export has been maintained and we continue, by visits of Directors and high Executives to Commonwealth and foreign countries, to make the greatest efforts to increase still further our sales to Export markets. If our present high machinery activity is maintained throughout the year, and subject to no international crises, we can look forward with reasoned optimism to a satisfactory year's trading.

The report and accounts were adopted.

THE STANDARD TRUST

HIGHER GROSS INCOME

The fifty-seventh Annual General Meeting of The Standard Trust Limited will be held on February 24th in London.

The following is an extract from the circulated statement of the chairman, Captain A. R. S. Nutting, OBE, MC:

The gross income for the year was £770,017, being an increase of £42,310 on the comparable figure for the previous year. After deducting all charges, including expenses, debenture interest, preference dividend and taxation, there remains a balance of £352,730.

The Directors propose the payment of a final dividend of 13 per cent on the Ordinary Stock which, with the interim dividend of 8 per cent, makes a total for the year of 21 per cent compared with 19 per cent for the previous year. This represents a distribution in interest and dividends of 81¼ per cent of the earnings available.

The substantial upward movement in market prices during the year here, and to a lesser extent in North America, culminated in almost peak prices at the year end and this is reflected in the valuation of investments on the consolidated Balance Sheet, which shows an appreciation of 152 per cent compared with 82 per cent a year ago. On this basis an ordinary stock unit of 5s. is represented by a net asset value of 35s. 3d. but it must be reiterated that the warning given a year ago with regard to Stock Exchange price fluctuations still applies.

The main event of the past year has been the General Election in Great Britain and the impetus provided by the return to power of the Conservative Party with an adequate working majority and a sound financial policy. Largely as a result of this, 1959, for industry generally, has been a year of recovery and renewed confidence with particular emphasis on the closing months.

For the investor it has been one of outstanding prosperity with *The Financial Times* industrial index showing a rise of no less than 100 points. Records have also been achieved in Bank advances, hire purchase finance, the note circulation, national spending and saving.

THE OUTLOOK

The basic factors which have brought about this improved state of affairs still prevail and with the apparent lessening of international tension the future remains promising. Although in the United Kingdom higher industrial production, with all its implications, can be anticipated, one hesitates to expect a corresponding increase of profitability.

In the USA the outlook is somewhat clouded owing to the uncertainties arising from the forthcoming Presidential election and the repercussions throughout industry as a result of the recent wage award in the steel industry. That American industry is not to suffer further disruption is certainly a relief, but the inflationary indications of this settlement must be borne in mind, since a policy of dearer money in New York, which the authorities there seem likely to pursue, must eventually have its effect in London.

For the current year it looks, on present estimates, as if our gross income will be more than maintained and the Directors expect to be able to repeat the present rate of dividend after the proposed issue of Ordinary Shares.

WILLIAM TIMPSON LIMITED

Manufacturers, Retailers and Repairers of Footwear

YEAR 1959

Issued Capital	£1,875,910	Current Assets	£2,398,137
Reserves	1,586,854	less Current Liabilities	1,284,693
			1,113,444
		Fixed Assets at cost less Depreciation	2,349,320
	£3,462,764		£3,462,764

Profit for Year 1959		£672,596
Taxation	£320,000	
Dividends	176,899	
Retained in business	175,697	£672,596

Extract from the Chairman's Address

William Timpson Limited has been established for ninety-four years and our original Shops are still doing good business. One of our main considerations is to keep every Shop up-to-date with modern fixtures and fittings, whatever the date of its foundation; we pride ourselves that no Shop is neglected. Our display windows have been modernised and obviously prove attractive to our customers. Service is our watchword, and we consider this a primary necessity.

Property values have continued to rise, and arrangements have now been made to have our properties revalued. These stand in our Balance Sheet at cost less depreciation, and your Directors considered that a revaluation was necessary.

A bonus of £55,000 has been allocated to employees.

RADIO RENTALS LIMITED

A RECORD TRADING YEAR

MR P. PERRING-THOMS ON CONTINUED EXPANSION

The twenty-third annual general meeting of Radio Rentals Limited was held on February 3rd at The Dorchester Hotel, Park Lane, London, W.1, Mr P. Perring-Thoms (chairman and joint managing director) presiding.

The following is an extract from his circulated statement:

The year to August 31, 1959, was a year of important changes in Government Controls and Taxation for the television and radio industry. In September, 1958, the Control of Hiring Order was altered from requiring nine months rentals to be paid in advance to four months, and six weeks later the Order was cancelled altogether. In April, 1959, Purchase Tax on television and radio sets was reduced from 60 per cent to 50 per cent while on replacement cathode ray tubes it was abolished. Each of these changes involved material adjustments to our terms of trading and were introduced satisfactorily with no interruption to progress.

GROWTH OF NEW BUSINESS

Since I last reported to you, our policy of expansion has continued and a recent survey we have completed shows that our service covers over 80 per cent of the population of England, Scotland and Wales and month by month this percentage is increasing. It is worthy of emphasis that Radio Rentals Limited was the pioneer of the renting of radio and television sets and today the Group continues to be the largest television and radio renting organisation in the world.

I am of the opinion that it is not widely enough known by shareholders and the public that the Group manufactures all its own sets. Our Subsidiary, Mains Radio Gramophones Limited, of Bradford, is one of the oldest established manufacturers in the industry. In the year under review the output was increased to a new record level and in the last three months, with the addition of only an extra 10,000 square feet of working space, the rate of output has again been increased by a further 25 per cent.

The Accounts of the Group for the year to August 31, 1959, show a record profit and I am pleased to report that the figures reflect a considerable measure of further progress and expansion.

In the Consolidated Profit and Loss Account the increase in the figures over the previous year for trading profit was £908,320 to £5,102,963 and for depreciation £660,391 to £2,968,104, indicating the expansion of business during the year. In fact the number of television sets installed exceeded that for any previous year. The net profit of the Group, after meeting all charges other than taxation, amounted to £1,949,895 an increase over the previous year of £213,008. The net profit of the Group, after taxation, increased as compared with the previous year by £293,958 to £1,098,616.

MEETING THE CHANCELLOR'S APPEAL

I shall now refer to Purchase Tax which is not a popular tax. Any reduction is welcomed by the public and most traders, and the public expects an immediate reduction in prices. It is a tax on the consumer but it is charged on the wholesale price or where no wholesaler is involved as in our case it is paid by our manufacturing Subsidiary on a notional price. Many representations have been made but no method has been accepted for rebating tax on stocks held when a reduction takes place and with a rental company the problem is on a much larger scale than the Government can have realised. Reduced Purchase Tax ensures lower rentals for new subscribers and had we not given a reduction proportionately to existing subscribers they could have cancelled their agreements and rented sets at the new rates or gone elsewhere. Your Directors have always been aware of this problem and, although they hoped that the authorities would see the injustice and devise some relief, adequate reserves have been made in prior years to deal with it. The adjustment of Purchase Tax has accordingly been dealt with as shown in the note on the Consolidated Profit and Loss Account from which you will see that capital losses of £432,329 incurred in writing down the Purchase Tax element of sets on or for rental have been charged to General Reserve. We are sure that our subscribers are satisfied and that our goodwill has been enhanced by passing on even more than the net reductions, thus meeting the Chancellor's appeal for lower prices.

BALANCE SHEET FEATURES

In the Consolidated Balance Sheet I must draw your attention to the figures for Current Liabilities and Current Assets which include the cash position of the Group. The position has been considerably changed by the issue to shareholders on September 11, 1959, of 1,600,000 Ordinary Shares at 20s. per share. The proceeds of this issue increased the cash resources of the Group by £1,575,000 and the Share Premium Account by £1,175,000.

Dealing now with the matter of appropriation, your Directors propose to transfer £720,700 to General Reserve, bringing the amount at credit in the Consolidated Balance Sheet to £2,200,000 and they recommend the payment of a Final Dividend of 15 per cent (ninepence per share) on the 11,200,000 Ordinary Shares of the Company, a First and Special Interim Dividend at the rate of 5 per cent (threepence per share) on 8 million shares and a Second Interim of 7½ per cent (four and a half pence per share) on 9,600,000 shares having been paid on February 5, 1959, and June 1, 1959, respectively.

The Annual General Meeting is to be followed by an Extraordinary General Meeting to consider Resolutions to increase the Authorised Capital of the Company and to approve the issue of 5,600,000 Ordinary Shares of 5s. each credited as fully paid up, on the basis of one for every two held, by way of capitalisation of part of the reserves standing to the credit of the Share Premium Account, as increased as I have said by the issue made on September 11, 1959.

THE OUTLOOK

Since the end of the financial year trading has been on a satisfactory scale and indeed installations up to Christmas, 1959, considerably exceeded those carried out in the same months of the previous year. In the television industry the appeal and reputation of renting has grown tremendously in recent years with the result that a number of companies have entered the field. We can, therefore, in the future expect increasing competition in a market which can only be a diminishing one as regards people having a set for the first time. Fortunately your Company is achieving an increasing amount of business with customers who have previously owned a set, and we may look forward to taking our full share of the replacement market.

The report and accounts were adopted.

At the subsequent extraordinary general meeting the capitalisation and scrip issue proposals were approved.

LIEBIG'S EXTRACT OF MEAT COMPANY

ANOTHER SUCCESSFUL YEAR

The ninety-fifth annual general meeting of Liebig's Extract of Meat Company, Limited, will be held on February 25th in London.

The following is an extract from the circulated statement of the chairman, Mr K. R. M. Carlisle:

The accounts reflect a successful year of trading for the Group, with an overall profit slightly in excess of the previous year's figure. The profit before taxation, amounting to £2,106,000, was after charging £144,000 in respect of exchange losses, the greater part of which arose in respect of our activities in Argentina and Paraguay. It is proposed to transfer £100,000 to General Reserve and to recommend a Final Ordinary Dividend of 9 per cent, less Income Tax, on the increased Ordinary Capital of £4,500,000.

When your directors decided, last March, to invite Ordinary Stockholders to subscribe £500,000 new money in the form of a 'rights' issue, they were aware that further permanent finance might well be needed, possibly on a substantial scale, but they were not then in a position to assess either the mount required or the form which any funding should take. This matter has recently been studied further and the possibility of a private placing of loan capital is now under active discussion.

OXO LIMITED

The Oxo Company maintained the high level of activity achieved in the previous year.

The Oxo Cube continued to flourish, while the value of sales of Corned Beef, under both the 'Fray Bentos' and 'Beefex' brands, responded in some measure to the relatively short supply—and consequent higher prices—of fresh meat. Further development of the Fray Bentos 'Ready Meals' range of products is now being planned.

Export turnover as a whole improved, in spite of import restrictions in some of our more promising territories.

Sales of 'Oxoid' Culture Media have made headway, both at home and overseas.

Last year I referred to changes which had been, and were being, made in the Company's Sales Organisation. This re-organisation has been largely completed and the Oxo Company

is now taking a lead in the grocery world in its development of new marketing methods.

CONTINENT OF EUROPE

In Western Europe, where we manufacture and sell a wide range of products under trade marks as familiar as is Oxo in the United Kingdom, highly competitive conditions continued. Despite a slight increase in turnover, profits as a whole were only maintained at the previous year's level.

These conditions call for the highest degree of efficiency, and far-reaching reorganisation of our European interests was continued at an intensified pace in the year under review.

After a detailed review of the Group's world-wide activities, the statement concluded:

In the United Kingdom and Europe returns for the current year to date are reasonably satisfactory although costs, particularly of administration, marketing and research, continue to increase and tend to absorb the extra profits arising from greater efficiency in the factories and from increased sales. This expenditure is, however, very necessary to enable us to maintain and improve our position in the many and varied markets in which we are operating.

Taking an overall view and provided no unfavourable factors develop, I see no reason why the current year's results should not be satisfactory.

ARUSHA INDUSTRIES LIMITED

GROUP PROFITS OF £589,001

The Directors of Arusha Industries Limited issued the following Preliminary Statement after their Board meeting on February 1st:

"The Group profit for the 15 months ended September 30, 1959, was £589,001 (against £66,653 for the year ended June 30, 1958). The Group profit for the 15 months' period contains nine months' profits of Barrow Haematite Steel Company Limited which incorporates six months' profits of Darwen & Mostyn Iron Company, six months' profits of Sheffield Steel Products Limited, and Webley & Scott Limited, all of which together with Vigilant Investments Limited and the Three Star (Luton) Limited Group, whose profits cover varying periods, were acquired during the latter part of the current financial period.

In the aggregate the profit shown does not give a fair indication of the profit earned by the companies constituting the Group for a full period of 15 months.

A final dividend of 35 per cent is proposed on capital of approximately £291,000 against

(a) forecast in April, 1959 of 25 per cent on the then capital of £203,634; and

(b) the total of 20 per cent for year ended June 30, 1958 on capital of £67,878.

Interim dividend of 15 per cent for current period already paid."

The Board proposed a Scrip Issue of six new 2s. shares for every four 2s. shares now held and consolidation of increased capital into shares of 4s. each, giving shareholders five new 4s. shares for every four 2s. shares now held.

It is the intention to hold the Annual General Meeting on March 7, 1960, and the accounts will be circulated to shareholders on or before February 14, 1960.

KULIM RUBBER PLANTATIONS LIMITED

MR P. B. L. COGHLAN'S REVIEW

The twenty-sixth annual general meeting of Kulim Rubber Plantations Limited will be held on February 11th at the Rubber Growers' Association (Inc.), 19, Fenchurch Street, London, E.C.3.

In his circulated review, the Chairman (Mr P. B. L. Coghlan) comments on the Company's Accounts for the year ended June 30, 1959, which show a Trading Profit of £86,381 compared with £43,570 for 1957/58. This sharp rise was largely due to an increase of 1.81d. per lb in the average market price of rubber during the year, augmented by a modest improvement in the premia obtained for the special products such as sole crepe and concentrated latex which form a large proportion of the Company's output. Other satisfactory features of the year's working were a reduction of nearly £8,000 in Revenue Expenditure, achieved despite a rise of 167,000 lbs, in the crop, and an increase in income from the Trade Investments—£3,683 against £447 for 1957/58. The total output of 3,055,000 lbs—a new record for the Company—represented over 750 lbs per acre from the area in production. This was due not only to steadily rising yields from the young rubber but also to special methods of tapping the old trees to ensure their maximum exploitation before they become due for replanting.

Mr Coghlan goes on to refer to the rapid progress being made in planting up a second block of approximately 500 acres of new land. At the present rate of progress this would be completed by Autumn, 1961, and the Company would then have a total of 2,264 acres of new pedigree rubber planted or replanted since the War and financed entirely out of profits. Of this total, 676 acres were already in production and further substantial blocks would henceforth be brought into tapping each year. It could therefore confidently be predicted that overall output would continue to rise despite the cutting out and replanting of additional blocks of old rubber.

An important move in the Company's progressive policy had been the acquisition of virtually the whole of the issued share capital of Gopeng (Perak) Rubber Estates Limited and Kapala Rubber Estates of Malaya Limited which had, in effect, resulted in a merger of the three Companies. Mr Coghlan remarks that the fact that the offers had been accepted by an overwhelming majority in each case indicated that there was a general recognition of the mutual benefits that would accrue to the three Companies from this merger. Completed accounts for the last financial year of each Company were not yet available but it was already clear that these would make a favourable showing.

With regard to prospects of the current year, reference had been made in an earlier Circular to the probability of the payment of a dividend of not less than 20 per cent on the increased issued share capital of the Company, in respect of earnings for the twelve months January-December, 1960. Mr Coghlan states that the price of rubber had been well maintained since the issue of that Circular and there was no reason to alter that forecast—in fact, it would appear that there had been an improvement in the general dividend prospects of the Company.

Mr Coghlan concludes:

The overall position of the rubber producing industry remains sound; the shortage of spot and nearby rubber is now being eased by releases from Government stockpiles and if these supplies are marketed with intelligent anticipation they should act as a stabilising influence on the market and prevent undue fluctuation in the price of rubber—a very welcome state of affairs both to consumers and producers.

HENLYS LIMITED

GRATIFYING RESULTS

The thirty-first annual general meeting of Henlys Limited was held on January 28th in London.

Mr H. G. Henly (Chairman and Joint Managing Director) presided and said:

I am very happy to tell you that the profits for the five months to date, by comparison with the five months of the preceding year, show a very satisfactory increase. They would have been even greater if our manufacturers had not had to contend with a series of strikes. It is most unfortunate, because it is doing considerable harm, not only to ourselves but to the country's exports, and I hope that within a short time the unions will be able to deal with this small number of malcontents.

The following are extracts from the Directors' Report:

For the year ended August 31, 1958, your Board was pleased to announce that your Company had just completed the most successful year of trading since its incorporation, so it is most gratifying to be able to report that the year to August 31, 1959, was even more successful.

The Net Trading Profits of the Group amount to £902,454, an improvement over the previous year of £223,956. Interim Dividends on the Ordinary capital totalling £86,381 have been paid, and your Directors recommend that a Final Dividend be paid on the Ordinary Capital of 20 per cent at a net cost of £133,634.

The Report was adopted.

APPOINTMENTS

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS AND RESEARCH GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships and Grants for research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology or Sociology, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The Studentships are normally of the value of £350 or £400. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University. Applications should be sent not later than February 15, 1960, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited from suitably qualified candidates for the following posts:—
LECTURER IN SOCIAL SCIENCE
LECTURER IN SOCIAL PSYCHOLOGY *OR* IN SOCIOLOGY
TWO LEVERHULME RESEARCH FELLOWSHIPS
Salary scales, according to age, qualifications and experience: *Lectureships* £900 x £50 to £1,350 x £75 to £1,650. *Fellowships* £900 to £1,200 per annum.
Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, to whom applications (6 copies) must be sent by March 5, 1960.

UNIVERSITY OF QUEENSLAND

SENIOR LECTURER IN POLITICAL SCIENCE

Applications are invited for the above-mentioned position. Applicants should possess either an Honours or a Post-graduate Degree in Political Science and experience in research.
Salary £A2,160/£A2,510 p.a.
Further particulars are obtainable from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.
Applications close, in Australia and London, on *March* 12, 1960.

UNIVERSITY OF GLASGOW

ASSISTANTSHIPS IN MATHEMATICS AND STATISTICS

Applications are invited for two ASSISTANTSHIPS, one in Mathematics and one in Statistics. Salary scale: £700-£850 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.
Applications (3 copies) should be lodged, not later than March 5, 1960, with the undersigned, from whom further particulars may be obtained.
ROBT. T. HUTCHESON,
Secretary of University Court.

For further appointments see pages 577, 578 and 579

COMPANY AFFAIRS

P & O

THE final dividend on the deferred stock of P & O is normally declared early in March. This year it is being paid earlier in the form of a second interim because of technical difficulties connected with the offer to acquire minority shareholdings in Orient Steam. The dividend for the year to September 30, 1959, has been maintained at 11 per cent. As expected the directors report a very sharp fall in net profits from £6.6 million to about £3 million so that the maintained dividend is barely covered.

The board's decision to leave the dividend unchanged may have been influenced by the appearance of slightly more favourable trading conditions. Sir William Currie, the retiring chairman, points out that freight rates are now 10 per cent to 15 per cent higher than at the very depressed levels of 1958/59 so that the operating results of some of the group's fleets show some improvement. Some liner trades are also improving; five tankers are now trading and four more are due to come into service by September, all at profitable rates. He however ends his statement with a distinct note of caution, saying it is impossible to say whether these more encouraging trends will continue or whether they will be reflected in increased profits for the group as a whole. But the directors hope to maintain the dividend for 1960 at 11 per cent on the capital as increased by the share exchange offer for the minority holdings in Orient Steam. At 47s. P & O's £1 deferred shares yield 4¾ per cent.

Peachey Property

HERE, surely, from Peachey Property, is the biggest and glossiest interim report ever issued by a British company. Signed by Mr Hutley and Mr Farrow, the joint managing directors, it is 95 pages long and contains detailed schedules of properties and rents, photographs of many of these properties, a discussion of the policies to be pursued by the directors, and a forecast of income. The icing is thick. But what about the cake? From an estate agency at Petts Wood, Mr Hutley and Mr Farrow built up the Peachey Property empire as dealers, buying estates of houses and then selling them at "sitting tenant" prices to the occupants. These prices were below vacant possession values but above the prices paid by Peachey. In order to deal, the hundreds of small companies controlled by Mr Hutley and Mr Farrow had to rely in part on mushroom building societies, first to finance their purchases and secondly to provide the sitting tenants with mortgages. As the valuations were sound, they found little difficulty in this direction; recently they have been able to secure some "block" mortgages from building societies proper.

Having firmly established themselves, the directors last year decided upon a fundamental change in policy. Dealings have been slowed down (not least because there are not so many suitable blocks of property coming on the market for sale) and the aim now is to raise rental income. The new rent act prompted this change and the policy of the directors, acting perfectly in the spirit of economic men, is to try to free the properties from rent control (if necessary, by offering the sitting tenant a cash sum to move house) and to charge full decontrolled rents. The new leases offered have been described by Mr Hutley as the tightest in London.

Many of the properties are still subject to rent control and the directors estimate that such rents are equivalent to only about one third of open market rentals. The build-up in Peachey's income thus depends on the success with which sitting tenants can be persuaded to move or to accept new leases at uncontrolled rents. This policy is being vigorously pursued and the directors now estimate that pre-tax income by end-June 1961 will be running at a rate of over £1.1 million. For 1960-61 equity earnings, after deducting £580,000 in loan interest, may therefore be in the region of 30 per cent. The directors have already forecast a dividend equivalent to 23⅓ per cent on the present capital of £1,500,000 for the current financial year.

Such a report is welcome from a group of companies whose shape and policies have been radically altered and whose published accounts only carried the story up to the end of 1957. But it seems to presage an appeal to the capital market. The average rate the company is paying on its loans and mortgages is now 6.28 per cent and the directors say that in the coming months they will give detailed consideration to plans to re-finance short-term loans and mortgages on a long-term basis. The market's reaction to the report was to mark the 2s. shares down from 14s. 3d. to 12s. 1½d. To buy them on a yield of just over 3¾ per cent is to assume that Mr Hutley and Mr Farrow will be just as successful as rentiers as they were as dealers.

Unit Trusts

THE first unit trust designed specifically for charities, the **Equities Investment Fund for Charities** ("Charifund"), has now been formed and the first sale of units will take place on March 1st. Applications for the £1 units will be restricted to charities recognised by the Inland Revenue which pay no tax and have the power to invest in equities—which a number of them have already and all will have when the proposed trustee legislation takes effect. A new management company has been formed by the M & G group, Charities Investment Fund; this is itself a charity and as such enjoys the privilege of paying only one per cent in stamp duty when purchasing shares; unit holders in turn will have to pay only one per cent in stamp duty on the purchase of units. The management charges are very low compared with other unit trusts. The initial charge will be one per cent and the annual servicing charge will initially not exceed 0.3 of one per cent (6s. 6d. per £100); the managers hope that even this small charge will be reduced at a later stage. Some economies in servicing are likely to be secured but quite obviously the managers' fees have been pared to the bone.

Municipal and General Securities is to administer the fund, which will make distributions quarterly; the managers are to reclaim tax deducted from dividends received so the quarterly payments made to the unit holders will be free of tax. The managers have wide powers in the choice of investments but certain limitations have been imposed, similar in kind but different in detail to those suggested in the recent white paper on trustee investment. Thus the paid-up share capital of a company in which the trust holds ordinary shares must not be less than £500,000 and the shares must be dealt in on certain specified stock exchanges; at the same time, the value of the trust's holdings in any one company must not exceed 5 per cent of the value of the fund. When choosing investments the managers will pay particular attention to the net UK rate of tax. The minimum holding in the new trust will be 25 units and the initial yield is expected to be around 3½ per cent. Because of the scanty statistics on the amount of money held by trustees of all kinds the response to the offer must be a matter for conjecture though obviously "Charifund" offers more advantages to a charitable fund than other unit trusts do.

Atomic Electronic and General Unit Trust, which was formed in 1957, made its fifth block offer this week of 1,000,000 units at 15s. 7½d. a unit. The yield of £2 12s. 3d. is merely a nominal guide since the managers reinvest the income of the trust which specifically caters for highly-taxed investors who are interested in capital appreciation. AEG's portfolio consists mainly of ordinary shares in the capital goods industries.

Ashdown Investment Trust

ASHDOWN INVESTMENT TRUST, under the chairmanship of Mr C. H. Villiers, a managing director of Helbert, Wagg and

Company made a further issue of ordinary shares to the public on Thursday, which attracted a substantial over-subscription. A leader in the movement for a wider market for investment trust shares, Ashdown made an issue of shares last June at a price a little above their break-up value. Of the 2,500,000 5s. shares offered at 17s., applications were received for 1,136,000 shares. Nevertheless as a result of this issue the number of ordinary shareholders in the trust rose from 250 to 3,500, considerably widening the market for the shares.

Last month a 50 per cent scrip issue was made and now Helbert, Wagg arranged to purchase from certain institutional investors (which hold over 40 per cent of the Ashdown equity) up to one million of these new shares at 13s. 3d. per share. These shares were offered for sale to the public at 13s. 6d. each (yielding just over 3½ per cent on an estimated dividend of not less than 9½ per cent). The issue does not raise any new money and unlike the previous issue the shares were offered at a price below their current break-up value of 14s. 3d.

Cable and Wireless (Holding)

LAST year the consolidated gross income of Cable and Wireless (Holding), whose directors, like those of Ashdown, are anxious to promote the popularity of investment trusts, rose from £1,302,611 to £1,441,000. This increase of 11 per cent is slightly less than that achieved in 1958. Tax has taken £34,000 more at £594,000, leaving net income £105,000 higher at £847,000. As forecast, the dividend is maintained at 10 per cent and for an investment trust it has the generous earnings cover of 1⅔ times. Thus, the directors have ploughed back some £345,000, or just over 40 per cent of net earnings.

For 1960, however, shareholders can expect to receive a higher income, for the directors propose to maintain the present rate of dividend on the capital as increased by a 20 per cent scrip issue and a rights issue. The new shares are to be offered on a one-for-eight basis at 10s. each and the issue (which will raise £1,966,250 before expenses) is primarily to provide funds for the redemption at the end of the year of the remaining £2 million of 4 per cent unsecured loan stock. The new shares will not receive the first interim dividend for the current year. At the current price of 21s. 9d. the 5s. shares on an "ex all" basis of 17s. 3d. yield 2.9 per cent on the forecast dividend.

General Electric

SHAREHOLDERS who were hoping for an increase in the General Electric interim dividend have been disappointed: after being cut in the two preceding years, the interim ordinary dividend for 1959-60 has been left unchanged at 3 per cent. Shareholders, however, may gain some reassurance from the directors' statement that an increase in both turnover and profits is indicated by the provisional results for the first eight months' trading and the estimated figures for the rest of the year to March 31st. Thus the improvement in trading reported for the first months of 1959 seems to have been maintained. But by how much has the decline in profit margins been reversed? From a level of 9½ per cent in 1954-55, margins had shrunk to just under 4 per cent in 1958-59 on sales which ran at a record figure of £108 million. At 44s. the £1 ordinary shares yield 4½ per cent on the basis of an unchanged total dividend of 10 per cent, and a bigger dividend than that could be justified only if profit margins have taken a clear turn for the better.

Leyland Motors

HELPED by the abolition of the 30 per cent purchase tax last April and a rapidly expanding market abroad, the commercial vehicle makers were last year able to shake themselves free from the earlier recession. Sir Henry Spurrier, the chairman of Leyland Motors, the biggest commercial vehicle makers in the United Kingdom, says in his annual statement that a tremendous influx of orders came in once the uncertainty about purchase tax had been removed and, in its wake, an upward trend in overseas orders developed so that by the end of the financial year the group's order book had been replenished and its factories were working to full capacity.

Substantial contracts have been received from British Road Services and the BET group and Leyland now supplies no less than 64 per cent of all the heavy vehicles bought by local authorities. Orders from the emergent countries of the Commonwealth and the East have shown a marked increase: Ghana is to buy 150 buses worth £1 million, and Indonesia has placed a second order for 100 Aberdonian vehicles. Big orders have also been placed by India, Ceylon, Cuba and by countries in the Middle East. The sudden turn-round in the fortunes of the commercial vehicle makers prompts the question: how much longer will this level of demand continue?

Sir Henry is confident that the removal of the threat of nationalisation following the election, which has encouraged many road hauliers to revise their re-equipment programmes, has provided an extra impetus to demand; at the same time he says that "there appears to be no limit to the scope offered in development overseas." Certainly the immediate prospects of the group justify the modest increase in the ordinary dividend for 1958-59 from 12½ per cent to 15 per cent (covered nearly three times by earnings) in the face of a decline in the group's liquid balances from £3½ million to £1 million. The £1 ordinary shares at 78s. 6d. offer a yield of 3.8 per cent.

EXCEPT for a mild rally on Tuesday following the overnight recovery on Wall Street, industrial markets remained unsettled throughout the week and most sections drifted lower. There was a steady contraction in the amount of business and on Wednesday the number of bargains marked fell to 14,303—the lowest level since October 2nd. Gilt-edged stocks on the other hand improved and there was some evidence of institutional buying as well as small switching operations from equities. Undated stocks were in demand in the early part of the week and over the week to the close on Wednesday 3½ per cent War Loan put on 13/16 to 63 15/16. Medium-dated stocks showed some of the best gains with 3 per cent British Electricity 1974-77 gaining ½ to 75⅝. Home Corporation loans also advanced; typically, 5½ per cent LCC 1977-81 rose by ⅜ to 102¾.

Industrial equities suffered their sharpest setback on Monday since the day following the change in bank rate; the threat of a national rail strike and the weakness of Wall Street induced small but persistent selling and few buyers moved in to take advantage of lower prices. On Tuesday, however, markets began to pick up although most of the gains were not sustained on Wednesday. Over the week to Wednesday's close *The Economist* indicator lost 4.5 points to 369.5. Steels lost ground with Steel Company of Wales 1s. 10½d. lower at 49s., United Steel 1s. 3d. down at 82s. and Colvilles 1s. 6d. worse at 78s. Exceptionally, Whitehead improved on yield considerations and put on 3d. to 114s. 6d. Most heavy engineering shares lost some of their recent gains: Vickers dropped 10½d. to 35s. 4½d., Guest Keen fell 3s. 3d. to 89s. 3d. and C. A. Parsons lost 1s. at 53s. Davy-United and Power and Gas both advanced on the expected merger announcement, the former gaining 3s. to 110s. and the latter improving 2s. to 83s. 3d. William Doxford were a strong feature in the shipbuilding section, closing 7s. up at 115s. 6d.; Harland Wolff, on the other hand, lost 1s. 6d. to 30s. 9d. One of the strongest sections of the industrial market was textiles: Fine Spinners put on 9d. to 32s. 9d. and English Sewing Cotton closed unchanged at 49s. 6d.

With markets generally in the doldrums the biggest rises were seen in those shares subject to take-over moves: thus Phipps shot up 10s. to 83s. Similarly, Fairey, who are to be taken over by Westland, advanced 7s. to 29s. 6d. Hire purchase shares were fairly firm with United Dominion Trust closing unchanged at 10⅞. Machine tool shares lost further ground with Asquith down 3d. at 15s. and Alfred Herbert 2s. lower at 49s. 3d. Oils drifted lower and over the week most of the leaders showed net losses. Shell lost 4s. 6d. to 150s. 6d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended January 30, 1960, there was an "above-line" surplus (after allowing for sinking funds) of £102,262,000 compared with a surplus of £136,222,000 in the previous week, and a surplus of £104,457,000 in the corresponding period of last year. There was a net receipt "below-line" of £27,388,000 leaving a total cumulative deficit to date of £591,013,000 compared with £477,711,000 in 1958-59.

THE MONEY MARKET

AT last Friday's Treasury bill tender the discount houses kept their bid at £98 17s. 3d. but received an allotment of only 17 per cent, which is believed to be the lowest on record. There was keen competition for bills; applications rose from £379 million to £437 million and the average rate of discount fell by 4d. to £4 10s. 9.18d., almost 6d. less than the rate indicated by the market's bid. The Treasury allotted only £230 million of the £250 million offered.

For the fourth consecutive week the discount rate on Treasury bills in the United States has fallen; the average rate for three months bills fell from 4.116 per cent to 4.039 per cent and on six months bills fell from 4.608 per cent to 4.501 per cent.

The Bank of England has given a large amount of help to tide the market over the customary shortage of funds in the tax paying season but credit has remained short. One or two houses were forced to borrow a very small amount from the Bank last Thursday and rates on overnight money have ranged up to 4½ per cent. Dealing rates in April maturities and "hot" bills have remained at around 4 7/16 per cent, though 4½ per cent has been conceded.

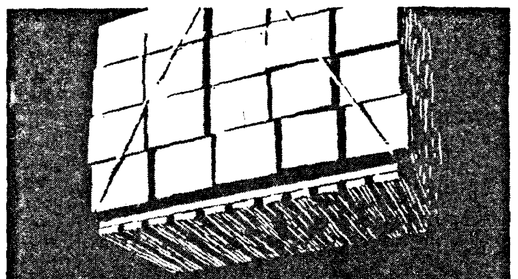
(1) Retained imports. (2) Owing to changes in classification 1959 figures are not strictly comparable with those for earlier years. (3) Average for third quarter. (4) Average for fourth quarter. (5) In 1959 indices for total imports and exports, but not for the classes, are adjusted to include trade with the Channel Islands. (6) Figures in *italics* are not strictly comparable with 1959 figures; the major difference is that they include trade with the Channel Islands, now excluded from the value figures.

OXFORDSHIRE *for 'Rumpty Tummer'*
but YORKSHIRE
for Insurance

In Oxfordshire, any large fruit is still called a "Rumpty Tummer", and it is not hard to guess the reason for this curious dialect name. The apple illustrated is the famous "Blenheim Orange", originated in Oxfordshire and now known throughout the world.



So it is with the Yorkshire Insurance Company! Founded in 1824 in York, it has now many thousands of satisfied policy-holders all over the world. If you are not already one of them, the "Yorkshire" will be pleased to give *you* the same help and service with all your insurance problems.

Old established yet progressing with modern ideas, it provides all types of modern insurance* and a first-class executor and trustee service. Enquire of our local Branch Manager right away.

**For instance the "Everyman's" Accident Policy which provides £10 per week for 100 weeks if you are totally disabled in an accident. A lump sum is payable in the event of certain permanent injuries or death. The cost is little—it ensures a good deal!*

APPOINTMENTS

ORGANISATION AND METHODS

COURTAULDS

Varied and Complex Investigations

COURTAULDS' Organisation and Methods Department in Coventry has vacancies for men and women of real intellectual ability who possess a flair for solving complex problems. The work of the department is unusually varied and rewarding. There is an operational electronic computer which may help to solve some of the problems.

Candidates should have had previous experience of similar investigational work and be between 25 and 35.

Candidates should write for a detailed form of application to the Director of Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number C.22.

INTELLIGENT SECRETARY required by considerate chairman of group of Companies. This is an opportunity which will appeal to a senior girl with a wide variety of interests who is meticulous, conscientious and keen. Considerable scope exists and advantage will be taken of ability to work on own initiative. The group is fast growing, flexible and versatile and has world-wide connections, thus a knowledge of extra languages would be useful—although not essential. A tactful personality, sense of humour and about 5 years' experience in similar position would qualify. Location, W.1 (Baker Street). Interviews arranged at time most convenient to applicants. Will you indicate your present salary, hours of work, ties, present duties, specus and when available to the chairman.—Box 1276.

MARKET RESEARCH STATISTICIAN

required by Erwin Wasey Ruthrauff & Ryan Ltd. Experience is not essential but good academic qualifications are. Age in the 20's (but fairly mature) or low 30's. The successful candidate must be able to express himself well in both speech and writing and capable of assuming responsibility.

Write with full details to:—

Mr. R. L. Day,
BUREAU OF COMMERCIAL RESEARCH,
Williams House,
Eastbourne Terrace, W.2.

UNIVERSITY OF GLASGOW

RESEARCH FELLOWSHIP IN MATHEMATICS

Applications are invited for a RESEARCH FELLOWSHIP IN MATHEMATICS. Salary scale: £700-£850 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (3 copies) should be lodged, not later than March 5, 1960, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

ADMIRALTY.—Temporary ASSISTANT STATISTICIANS required for service in London. Applicants must normally be British subjects and possess either an Honours Degree in Mathematics or Economics with Statistics as a special subject. Salary (men) £635-£1,010 plus London Weighting Allowance £45-£180 plus London Allowance (equal pay for men and women). Annual leave 4 weeks, 2 days plus public holidays. Write giving age, full details of qualifications and experience to Ministry of Labour, Professional and Executive Recruitment, Almack House, Jermyn Street, London, S.W.1. Only those candidates selected for interview will be advised.

A GENERAL MANAGER required for group of newspaper companies. Applicants should have broad knowledge and experience in the merchant field, be keen to serve abroad on two year change and have flair for organisation and management. Age 35/50. Must be sound administrator, hard worker, clear thinker with imaginative sense of possibilities. Knowledge of and personal contacts with some top people in industry, commerce and politics an advantage. This appointment requires a practical man and whose loyalty and integrity are proverbial. Highest salary paid to right applicant with great security. The present Board team is not overcrowded. If you do not measure up completely to these requirements you will not qualify. Please be succinct and restrict to essentials: past experience, present position and salary in confidence. Reason for application, age, education and when available, to the Chairman.—Box 1278.

QUEEN'S UNIVERSITY KINGSTON, CANADA

LECTURER (ASSISTANT PROFESSOR IN POLITICAL SCIENCE

Duties to commence September, 1960.

Salary according to qualifications and experience within the range of $5,000-$6,500 for a Lecturer and $6,000-$8,500 for Assistant Professor. Qualifications in political theory preferred. Applications and names of referees to reach J. A. Corry, Queen's University, Kingston, before March 7, 1960.

THOMAS TILLING LIMITED

An additional ASSISTANT ACCOUNTANT is required by the company for their Mayfair Headquarters. Applicants should be Chartered Accountants under 30, with not less than two years' post-qualification experience. Duties will primarily include statistical analysis, investigations, and reports. An interest in management accounting and economic trends is essential and a degree in Economics or Commerce would be an advantage. Reply with full particulars to the Assistant Secretary, Crewe House, Curzon Street, London, W.1.

New Zealand Meat Producers' Board

ECONOMIST / STATISTICIAN

The New Zealand Meat Producers' Board requires a young ECONOMIST/STATISTICIAN. Applicant should be in his twenties and hold a B.A.(Econ.) or B.Sc.(Econ.) Degree. Qualification in statistics is essential and in agricultural economics an advantage. Salary according to experience and ability.—Apply New Zealand Meat Producers' Board, 53/64 Chancery Lane, W.C.2.

MEDIA STATISTICIAN required by Mayfair Advertising Agency. The position involves the analysis and application of statistical data relating to all advertising media. A degree including the study of statistics is an advantage.—Apply in writing, giving full details of education and experience (if any), to the Media Director, Everetts Advertising Ltd., 40 Hertford Street, W.1.

FORMICA LIMITED

require an

ECONOMIST

The applicant should be between the ages of 28-32 and should have a good degree with some knowledge of statistics, experience of industrial market research, a lively interest in people and economic affairs. He should be capable of growing with the job, which consists of product and market research in its widest aspects, and business forecasting.

Excellent salary, superannuation scheme and other benefits

Send full details to

THE CHIEF PERSONNEL OFFICER,
FORMICA LTD.,
DE LA RUE HOUSE,
84/86 REGENT STREET,
LONDON, W.1

quoting reference 5/1.

AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA

RESEARCH SCHOOL OF PACIFIC STUDIES

READERSHIP IN ECONOMICS

Applications are invited for appointment to a Readership in the Department of Economics of the Research School of Pacific Studies.

The Department is a new one to be devoted to the study of under-developed areas; it will offer scope for theoretical work in the economics of development and emphasise the building up of systematic empirical knowledge of the Pacific and South East Asia. Studies in current problems of economic growth and of Australia's economic relations with the region are contemplated. A particular field of study of several Departments of the School is the development of New Guinea.

The salary range for Readers is £A2,763-3,213. A Reader is appointed to the permanent staff; retiring age is sixty-five, with the option of retiring after the age of sixty. A Reader is entitled to one year's study leave on full pay, with a contribution of up to £A1,342 towards travel and other expenses, in every six years. Superannuation on the F.S.S.U. pattern is provided and reasonable removal expenses are paid.

Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close on *March 1, 1960.*

The University reserves the right to fill the vacancy by invitation.

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail £4 . 10; overseas £5. **By air see below**

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

The Economist, 22 Ryder Street, SW1

ORGANISATION AND METHODS ASSISTANT

Applications are invited for the above post in the Finance Department of the Co-operative Union Limited. Duties will consist of participation in the provision of an Organisation and Methods Advisory Service to retail Co-operative Societies. Applicants should have a sound knowledge of clerical methods, office machines and principles of accounting. Salary will be up to £1,000 per annum, dependent on qualifications and experience. Request for application form, marked Organisation and Methods, Ref. G, should be made to the Cashier and Accountant, Co-operative Union Limited, Holyoake House, Hanover Street, Manchester, 4. The closing date for applications will be March 15, 1960.

COMPUTER PROGRAMMER

COURTAULDS

A vacancy exists in COURTAULDS' Organisation and Methods Department, Coventry, to assist in the planning and programming of commercial integrated data processing operations on the Company's National-Elliott 405 computer.

Applicants should have had practical programming experience (preferably, but not necessarily, on this type of computer) and some commercial background.

The vacancy involves interesting work and provides scope in the computer field.

Candidates should write, giving full personal particulars, details of education and previous experience, to the Director of Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number C.21.

THE BRISTOL COLLEGE OF SCIENCE AND TECHNOLOGY

(COLLEGE OF ADVANCED TECHNOLOGY FROM SEPTEMBER)

The Governors invite applications for post of SENIOR LECTURER in the newly established Department of General Studies.

Applicants must possess a good honours degree in the social sciences, preferably economics, appropriate teaching experience, and industrial or research experience. An interest in the History of Science or the Theory of Economic Growth would be a particular recommendation.

Salary: Burnham Scale, 1959—£1,550 x £50-£1,750.

Initial salary dependent upon qualifications and previous appropriate experience.

Application forms, returnable within two weeks of date of advertisement, and details from Registrar, College of Technology, Ashley Down, Bristol 7.

MANAGEMENT ACCOUNTANT

Applications are invited for the position of MANAGEMENT ACCOUNTANT to the Co-operative Wholesale Society Limited.

Candidates will be required to maintain and be capable of developing management accounting techniques in the Society's widely spread manufacturing establishments and distributive organisations.

Candidates should preferably be Members of either the Institute of Chartered Accountants or Cost and Works Accountants or hold equivalent qualifications and should have had experience of Management Accounting procedures and the application of Budgetary Control and Standard Costing.

The position is a responsible one and offers considerable scope. The appointee will be located at the Society's headquarters in Manchester, but fairly extensive travelling will be entailed.

The appointment is pensionable and the salary will be commensurate with experience, qualifications and the responsibility of the position.

Applications, giving full details of education, qualifications and personal data, should be addressed to the Co-operative Wholesale Society Ltd., Central Labour Department, 1 Balloon Street, Manchester, 4, endorsed "Management Accounting," to be received not later than February 12, 1960.

UNIVERSITY OF HONG KONG

ASSISTANT LECTURESHIP IN ECONOMICS

Applications are invited for the above-mentioned post. Applicants will be expected to conduct courses in Business Administration and assist in the courses in Accountancy and General Economics at B.A. degree level. They should hold a University degree in Economics or Commerce; suitable professional qualification (e.g. C.A., C.I.S., I.L.N., C.W.A., C.C.A.) plus business, teaching and research experience would be an advantage. Successful candidates will be requested to commence duties in September, 1960.

Annual salary (superannuable) is £1,375 x £50-£1,525 for a man or £1,040 x £40-£1,160 for a woman. There is also an expatriation allowance of £225 a year if applicable. The equivalent of income tax in the Colony is comparatively low.

First-class sea passages are provided for expatriate staff and their families on first appointment and leaves.

Further particulars and information as to the method of application should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Hong Kong and London, on *March 8, 1960.*

SENIOR STATISTICIAN

Mullard

The Mullard Radio Valve Co., Ltd., has a vacancy for a SENIOR STATISTICIAN in its Statistical Advisory Service at the Mitcham Plant, Surrey. The Advisory Service works on behalf of all the varied departments of this Plant and includes all aspects of design and analysis of experiments, quality control and some operational research. Training will be given in the techniques used in the Organisation. The successful applicant will be required to meet staff at a similar level and be required to prepare and deliver lectures and other training techniques to small groups to further an appreciation and understanding of statistical work.

Applicants are invited from qualified mathematicians or from engineers and physicists who have a bias towards statistical work. There is scope for development and excellent prospects. Applications, in confidence, should be addressed to the

Personnel Department
The Mullard Radio Valve Co., Ltd.
New Road, Mitcham Junction, Surrey
quoting reference JFG/MS

"Mullard" is the Trade Mark of Mullard Limited.

CENTRAL OFFICE OF INFORMATION require an INFORMATION OFFICER (unestablished). Duties involve study of economic, social and political developments in the Commonwealth particularly in the U.K. dependencies, and the selection and presentation in the form of reference papers of factual information. A University degree, a good knowledge of relevant sources of information, and experience in preparing basic material to serve information purposes (e.g. factual articles, reports, lectures or broadcasts) are desirable qualifications. Salary £1,150 to £1,330 (men); £1,126 to £1,306 (women).—Write, giving age, full details of experience and qualifications to Manager (P.E.149), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Only those candidates selected for interview will be advised.

SALES MANAGER. A well-known Company in South Midlands, manufacturing and marketing a wide range of materials for the Building Industry, invites applications for this EXECUTIVE APPOINTMENT. Essential qualifications comprise a first-class education, preferably a University Degree, and sound industrial training and experience in all aspects of Sales Management and Administration. Knowledge of building materials and the industry is highly desirable. Responsibility will be directly to the Company's Sales Director. Initial salary dependent on experience but will be not less than £1,500 per annum with Life Assurance and Pension benefits. —Apply, in confidence, stating age and full details of qualifications and experience, including remuneration received, to Box 1273.

MARKET DEVELOPMENT

Applications are invited for a new post in an important chemical company, manufacturing and selling heavy organic and inorganic chemicals. The successful applicant should have at least a Second Class Honours degree in Chemistry, or equivalent qualifications, plus a minimum of two years' active experience in industry.

The work will cover all aspects of market development, from the recording of current market performance to the investigation of possible markets for proposed new products. The position, which will report directly to the Sales Director, will be based in London, but will involve outside contacts in the U.K. and on the Continent.

Salary in accordance with age and qualifications.

The position is progressive and carries a Contributory Pension Scheme.

Please write to

Box 1277, "The Economist."

TRAINING ADVISERS. The Industrial Welfare Society plans to reinforce its services in Management and Supervisory Training, and wishes to appoint (a) a Head of Training Services and (b) a Training Adviser.

The successful candidates will advise on Company Training matters, organise the Society's courses and conferences on Training, and develop the future work of the Society in this and related fields.

A broad knowledge and practical experience in industry of modern training methods is essential.

Salaries according to qualifications and experience.

Write fully in each case in confidence to the Secretary, 48 Bryanston Square, London, W.1.

UNIVERSITY OF EXETER

Applications are invited for the post of Assistant Lecturer or Lecturer in Economic and Social Statistics.

Salary scales:
Assistant Lecturer: £700-£850 per annum.
Lecturer: £900-£1,650 (with efficiency bar at £1,300).

Further particulars may be obtained from the Secretary of the University. Closing date for applications, February 27, 1960.

THE UNIVERSITY OF LEEDS

THE FACULTIES OF ARTS, ECONOMIC AND SOCIAL STUDIES AND LAW

Postgraduate Scholarships

Applications are invited for not more than three POST-GRADUATE RESEARCH SCHOLARSHIPS tenable at the University of Leeds by graduates of other Universities. These Scholarships, each of the value of £360 a year plus fees, will be tenable from October 1, 1960, for advanced study or research in the Faculties of Arts, Economic and Social Studies and Law, and will be renewable annually. Maximum tenure three years. Applications (including those of students who will graduate in June, 1960) should be submitted on forms obtainable from The Registrar, The University, Leeds, 2. Closing date May 1, 1960.

NEWLY qualified ACCOUNTANT or A.C.I.S. aged in early twenties required by Helbert Wagg & Co., Ltd., for new issue department. Work includes analysing accounts, investigating and reporting on companies, drafting and preparation of documents and general assistance in negotiating and arrangements. Position offered is permanent with good salary and pension.—Write, stating age, experience, etc., to Staff Manager, 41 Threadneedle Street, E.C.2, marked "Confidential."

WRITER, versed in foreign affairs, wanted by large corporation in Cleveland, Ohio, U.S.A. Experience in newspaper or magazine leader writing, honours degree in Modern History or Economics desirable. Send résumé, samples of writing and photograph.

Box CHR.
THE ROBERT T. KENYON COMPANY,
527 Madison Avenue,
New York 22, N.Y.

A SMALL Organisation and Methods Department requires a FEMALE ASSISTANT. The duties include some typing and general office work but the major emphasis will be upon O. & M. work for which training will be given. This is a good opportunity for a tactful person to assist in the development of a valuable service department. Minimum educational standard: G.C.E. (ADV) in two subjects, one of which should be English or Mathematics. For a person with suitable qualifications and experience a starting salary of approximately £500 per annum is envisaged.—Please send full details age, education and experience to Box E897, L.P.E., Romano House, 399/401 Strand, London, W.C.2.

PREPARATION FOR RETIREMENT. Interesting pioneer three-year appointment with National Old People's Welfare Council. Scope for promotional work for man or woman with degree, initiative and personality. Educational or public/industrial relations experience an advantage. Salary £1,000 p.a. S.a.e. marked "OPW" for application form to National Council of Social Service, 26 Bedford Square, W.C.1. Closing date February 22nd.

PRESSED STEEL COMPANY LIMITED

With the continued expansion of Education and Training within the Pressed Steel organisation, the Company now wishes to appoint a

LECTURER IN MANAGEMENT STUDIES

who will initially assist the Group Training Manager in the running of the Company's Executive Development Course and therefore a sound knowledge of management subjects together with lecturing experience is essential. Applicants should also possess engineering qualifications and some experience in a large industrial concern is desirable. Preferred age range 30-35. Location, Head Office at Cowley, Oxford. Salary will be commensurate with experience and the post offers considerable opportunity for promotion. Conditions of employment accord with best industrial practice.

Applications with full curriculum vitae including details of salaries earned may be made in strict confidence to the Staff Officer, Pressed Steel Company Limited, Cowley, Oxford.

THE ECONOMIST INTELLIGENCE UNIT LIMITED

invites applications for posts on the research staff of its Overseas, Industries and Marketing Departments. Candidates should have a first or upper second-class degree preferably, but not necessarily, in Economics; at least 2 years' experience of industry, commerce or finance; and a good knowledge of at least one foreign language. Please send full particulars including age, experience, qualifications and present salary to "Research," The Economist Intelligence Unit, 22 Ryder Street, St. James's, London, S.W.1.

MARKET RESEARCH OFFICER

A well-known food manufacturing firm near London invites applications for the post of MARKET RESEARCH OFFICER who will be responsible to the Market Research Manager for the planning and development of the Company's activities in the consumer field. The Company attaches a great deal of importance to this aspect of its development work and the successful candidate will have considerable scope for the initiation and execution of research projects connected with the development of new products and consumer research on existing products.

Applicants should be in the age range 25-30 years, possess a degree in Economics and have spent 2-3 years in the Market Research Department of a manufacturing Company or an advertising agency with particular experience of research into consumer attitudes and preferences. The starting salary will be £1,450 p.a. on a salary range up to £1,830 p.a., together with a generous non-contributory social security scheme covering pension, life assurance and sickness.

Please write giving full details to the Personnel Officer,

Box MR 1809 AUSTIN KNIGHT LIMITED,
212a, Shaftesbury Avenue, London, W.C.2.

TRAIN FOR A CAREER IN TEACHING

COMMERCIAL SUBJECTS

Persons aged between about 25 and about 45, with good commercial experience, are invited to apply for training as FULL-TIME TEACHERS OF GENERAL AND PROFESSIONAL COMMERCIAL SUBJECTS OR SECRETARIAL WORK IN TECHNICAL COLLEGES AND SCHOOLS.

EXCELLENT CAREER PROSPECTS

NEXT COURSE: SEPTEMBER, 1960, TO JUNE, 1961.

Applicants should possess suitable qualifications, e.g. university degree, associate membership of a professional institution, Higher National Certificate, advanced certificates of recognised bodies and/or Typewriting. Shorthand

NO TUITION FEES.

PERSONAL MAINTENANCE, DEPENDANTS' AND TRAVELLING GRANTS PAYABLE.

For details write immediately, quoting S 13, to either:

The Director, Bolton Training College, Manchester Road, Bolton;
The Director, Huddersfield Training College, Holly Bank Road, Huddersfield;
The Principal, Garnett College, 83 New Kent Road, London, S.E.1.

ASSISTANT STATISTICIAN (female) required by marketing consultants. Work involves statistical research covering wide range of subjects. Some similar experience and aptitude and liking for figures more important than formal qualifications. Salary in £600-£700 per annum range.—Apply with full details to Marketing Development Co., Ltd., 12 Grosvenor Place, London, S.W.1.

AUSTRALIAN NATIONAL UNIVERSITY

Research School of Pacific Studies

FELLOWSHIP OR SENIOR FELLOWSHIP
NEW GUINEA RESEARCH UNIT

Applications are invited for a FELLOWSHIP or SENIOR FELLOWSHIP in the Research School of Pacific Studies. The person appointed will become Executive Officer of a New Guinea Research Unit which is to be established in the School, and will be responsible for organising research projects in New Guinea to supplement the work of existing Departments.

The salary range of a Fellowship is from £A1,832 to £2,562 and of a Senior Fellowship from £A2,592 to £3,102. Increments for Fellows are £70 per annum, Senior Fellows £85 per annum. The successful applicant will, in the first instance, be appointed at a salary and an incremental limit fixed within those ranges by reference to his standing and experience. Appointment is made for an initial period of five years; thereafter it may be made for a longer term.

The person appointed will be entitled to one year's study leave on full pay, plus a contribution towards travel and other expenses in every six years (6 as Senior Fellow) or every seven years (7 as a Fellow).

Superannuation on the F.S.S.U. pattern will be provided and reasonable removal expenses will be paid.

Further particulars are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on *March 31, 1960.*

STATISTICIAN

The Electronic Valve Division at our new Head Offices in Sidcup, Kent; require a STATISTICIAN to analyse commercial and production planning information and present it statistically for the Division Head and Sales Manager. Ability and experience of presenting significant facts and figures quickly and clearly is more important than a degree. Attractive salary offered together with non-contributory Pension and Sickness plan.

Apply in confidence to:
W. J. Yeomans, Personnel Manager,
STANDARD TELEPHONES & CABLES LIMITED,
Footscray, Sidcup, Kent.

or Telephone FOOtscray 3333, Ext. 220.

CAMBRIDGE UNIVERSITY

curtain WALLING is when A BUILDING stands behind it AND KEEPS warm and DRY and looks pretty and...

New Office building in Finsbury Square, London for Finwil Properties Limited.
Architect: Reginald H. Gallannaugh, L.R.I.B.A., *Contractors:* Myton Limited.

"Is when a building stands behind it? Does the child mean a wall?"

"But of course he means a wall. A transparent wall, a translucent wall, or if you prefer it a wall of opaque panelling hung on concrete and steel."

"The child means WALLSPAN*?"*

"That is undoubtedly what the child does mean—WALLSPAN—the name that Williams & Williams contributed to British Architecture—to World Architecture. The name for the glittering aluminium murals that form one or more sides of those soaring monolithic office-blocks, those airy garden-landscaped factories, those gay and utterly functional schools.

"With WALLSPAN the skeleton building is clad in days instead of weeks. WALLSPAN telescopes the time between the first glint in the architect's eye and moving-in day."

"Williams & Williams products make better buildings sooner?"

"Sooner—better—more beautiful even".

forward looking building products **WILLIAMS & WILLIAMS**

Williams & Williams make steel windows of every description, ALOMEGA and other aluminium windows, ROFTEN movable steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products.

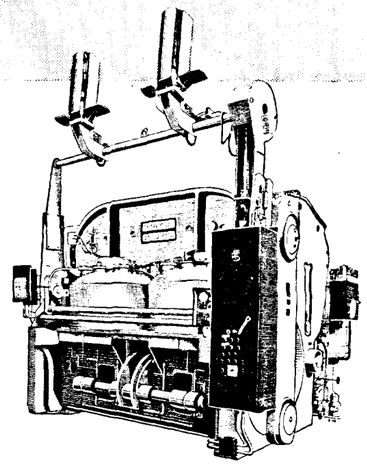
The way you take...



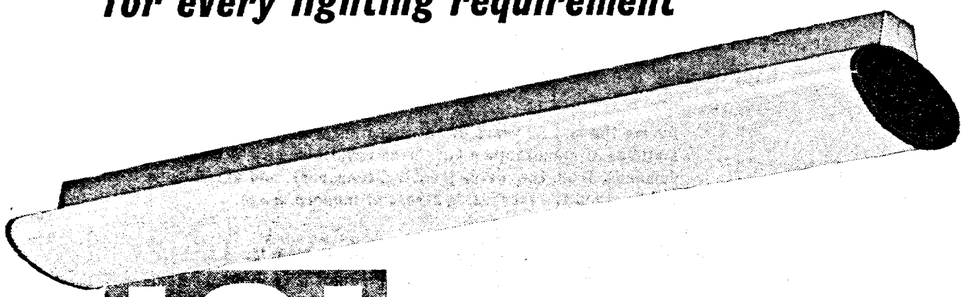
... is marked with tyre tracks leading onward to undisclosed destinations ... and backward to the beginning, to the making of the tyres.

During the last 50 years or so, their materials, design and methods of manufacture have been revolutionised to meet new demands, from the motor industry, transport, and agriculture and to stand the increasing stress of modern usage.

Francis Shaw have helped the industry to grow by developing high production machines to increase output, and to keep pace with rapid technical improvements. They make machines for all stages of tyre manufacture and for all types of tyres from scooter sizes to giants. Francis Shaw machines derive from long co-operation with tyre makers, from constant research and development, leading to advanced designs and skilled manufacture from selected materials.

Features of Shaw McNeil Bag-o-matic Tyre Presses include:

- ★ Range of sizes from scooter tyres to giant tyres.
- ★ Automatic control of cycle to customers' requirements.
- ★ Quicker work cycles and lower costs of labour.
- ★ Built-in safety devices protect the operator and the press.
- ★ All types of curing available — steam platens, steam back moulds, or steam domes.
- ★ Full automation if required.



Take the way to better production — with Francis Shaw tyre-making machinery

Since man discovered refrigeration...

he's been looking for something...

to prevent those melting moments.

This is it!

What keeps most refrigerators cold? Insulation with Fibreglass. What keeps most cookers hot? Fibreglass again. And, now that there's a new kind of Fibreglass, cookers are going to stay hotter and refrigerators colder than they've ever stayed before. This new material is called *Fibreglass Crown*. It represents not just a step forward in insulation, but a leap forward! A major advance in every way.

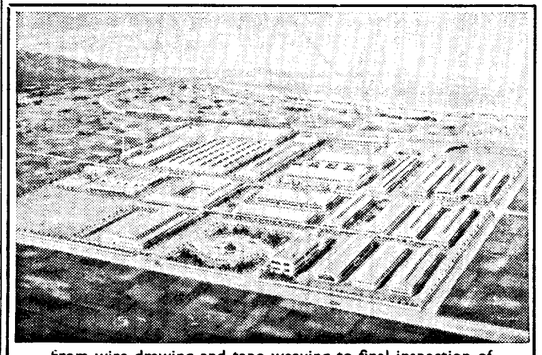
Invest in a holiday in *Ireland*

and all your interests will be assured



When you're tired of stocks and shares, bulls and bears, meetings and memos . . . take a holiday in Ireland. Whatever your interests, you'll be well catered for. Splendid roads make driving a pleasure. Relax at the wheel and see for yourself the beauty of the Irish countryside. Keen on fishing? Irish rivers and lakes are teeming with fish, both coarse and game. The golfer will find first-class courses set in some of the world's loveliest scenery; the horseman will find excellent hunting and superb racing. The gourmet can delight in Irish menus . . . specialities are tasty steaks, home-bred mutton and lamb, smoked salmon, Galway Bay oysters, Dublin Bay prawns. And have 'Irish Coffee' as a chaser!

Yes, Ireland is just the place for a spur-of-the-moment holiday. It's a holiday 'abroad' without any passport or currency formalities. And it's so near.

For information and a wide range of literature covering all aspects of Irish holidays write or call at the

The Case of the Tidy Corpse

An odd corpse or two around the house is one thing; but when your better half finds herself knee deep in crime she is liable to take a sudden passionate interest in the vegetable garden. If you find she has prepared an onion bed 6 feet long by 2 feet wide and 6 feet deep, it's time to stand well back from high cliffs, or you may well end up with policemen drawing chalk lines round the body—*your* body.

You have been warned. Don't risk it. *Today* (for it may well be later than you think) buy a Minty bookcase...and put your murderers where they ought to be—'Inside'—condemned to stay neat, tidy and dust-free for life. Your wife will admire the elegant prison, which can expand to take in the entire criminal fraternity. What's more, she'll plant onions in the onion bed.

Minty bookcases are *sectional* and may be started from as little as £10.1.0—on deferred terms if you prefer. Only at the Minty Centres shown below can you see and buy Minty bookcases (and furniture). These Centres are so placed that Minty furniture is within reasonably easy reach of most people. If, however, for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Write to Dept. E.6, Minty Ltd., 44-45 High Street, Oxford.

PAPER IN BRITAIN'S FUTURE · A REPORT FROM THE REED PAPER GROUP

How soon will Britain double its consumption of paper?

In the last ten years, Britain's consumption of paper and board products has risen by 55 per cent — actually far faster than the total private expenditure on goods and services.

Many economists predict that this expansion will continue and that our present consumption will have doubled in 20 years time.

This article examines the reasons for the growth in consumption to date and discusses the factors which make such a vast further increase highly probable.

AN INEVITABLE DEVELOPMENT

Between 1950 and 1960 our total consumption of paper and board products rose by no less than 55 per cent.

This was no freak development due to post-war shortages, for by 1954 we had already got back to our pre-war level of paper consumption. On the contrary, it was the inevitable result of our increased purchasing power and of our greater sophistication as consumers. Also of the unusually high versatility of paper and board, which has made it possible to put them to many new uses.

USING OUR HIGHER PURCHASING POWER

What has happened is not that products which were once the preserve of the rich have now become accepted by all sections of the community. In the experience of the Reed Paper Group, it is rather that the greater leisure and changed cultural patterns of our society are being reflected directly in the ways we are using our higher purchasing power.

For example, our reading habits have changed considerably. Thousands of people, who in former times would have had to rely on their local library for all their serious reading, can today afford a personal library, thanks to the development of the paperback editions, whose sales of books were 4½ times higher in 1958 than in 1950. Nowadays, too, our newspapers have become larger and more informative and our magazines more colourful and varied. The result of all this has been a rise in our newsprint consumption by over 40 per cent, and in our printing paper consumption for mass-circulation magazines by over 50 per cent, above 1950 levels. This in spite of the advent of television.

THE "PACKAGING REVOLUTION"

Advertising is, of course, partly responsible for our larger newspapers and magazines, yet newspaper advertising is nowadays only one of

the important ways in which consumer goods manufacturers seek to appeal to the public's fancy. More and more the product's *package*, not so long ago regarded as a purely functional matter, is becoming a key selling weapon.

In this "Packaging Revolution", older forms of packaging are being replaced increasingly by converted paper and paperboard products which are easier to print with "How to use" instructions and colourful designs. Thus the gaily coloured folding carton or "pack", inherently versatile in shape, size and suitability for printing, is increasingly replacing the loose sheet of plain wrapping paper in all sections of the food trade. It has developed to become the standard container for biscuits, cereals, soap flakes and detergents. Still more recently, it has helped frozen foods successfully to invade our kitchens. Paper cartons are even beginning to gain acceptance for selling milk, cream and soft drinks.

Cartons and other converted paper products are also used more and more to present goods which were not packaged at all before: bottled products, shirts, ties, socks, underwear, and many other household goods. Reed research also shows that new and colourful

jackets have played a major part in the gramophone record boom on the prosperous teenage market. Finally, an increasing use is made of cleverly designed display cartons to brighten up our shop windows and signpost the most interesting new products.

All these factors account for the 50 per cent increase in the use of folding cartons and the 35 per cent increase in the use of food wrapping papers between 1950 and 1958.

NEW USES FOR PAPER PRODUCTS

The versatility of paper and board has also enabled them to be applied for many uses that would never have been suspected a generation ago.

Decorative laminated plastics, for example, which in fact have a paper base, have created new scope for gay colours and sophisticated designs in interior decoration and furniture making. Between 1950 and 1958, their sales increased many times over. Wallpapers, too, have assumed a new and practical guise, with the creation of the washable wallpapers that are becoming so evident in our kitchens and bathrooms.

Cellulose wadding or "paper tissue" pro-

ducts, in the use of which we as a nation are well behind the Americans, offer another market with big potential for expansion. *Facial tissues*, once used only for colds and other emergencies, are now beginning to replace the handkerchief in daily use. They are also being sold for many other household and motoring uses, to men as well as women. These factors account for a 25 per cent annual increase in their sales. Paper towelling likewise is showing a healthy annual sales increase of 10 per cent.

THE EXPANSION WILL CONTINUE

The expansion in the use of paper and board products is expected to continue in the sixties and seventies, though there may be temporary setbacks in less prosperous years. Informed economists expect that consumption will go on increasing by between 3½ and 4 per cent every year, resulting in a total expansion of possibly 100 per cent in the next twenty years.

Where does the potential for such a huge increase lie? Certainly, one of the main factors that has boosted the packaging revolution and total paper consumption in America has been the rise of self-service shops and "supermarkets". In these, good packaging becomes absolutely essential: not only on grounds of hygiene and convenience, but because the great variety of products must compete in "selling themselves" through eye-appeal. Here in Britain, the number of self-service shops and "supermarkets" is increasing by an average of 25 per cent every year.

Furthermore, of course, completely new uses for paper are constantly being devised. Reed market research indicates that the next few years may well see the advent of many new and interesting products, such as paper fabrics for factory workers, painters and kitchen workers. But without question, the major increases in consumption will not be due to glamorous new products. They will come from continuing expansion of all the existing markets where paper has already established its supremacy.

THINKING FORWARD

How is Britain's paper industry preparing to meet the challenge of the markets of the sixties?

The Reed Paper Group, whose interests embrace every aspect of paper making and conversion is laying maximum stress upon forward thinking. Over and above intensive research by the Group's Technical Division to devise new and better paper products for industry, the retail trade and for the home, the Group's Economic Research Department is engaged in long-term forecasting of the trends in demand. For example, among the special investigations it has carried out recently has been a study of the possible effects of the "Outer Seven" Free Trade Association on paper supply and consumer habits in this country.

This sane flexible thinking pervades all the Group's activities at every level — product marketing, machine and production planning, management selection and personnel training. Everywhere there is an alert awareness of the nation's growing and changing needs. The Reed Group is determined to meet these needs by realistic forward planning *now*.

Where is paper's greatest future in packaging — protection or display? The Reed Paper Group sets out to answer this question in a further article in this series, appearing in the Economist on the 9th of April.

world in a hurry

What is Hawker Siddeley doing here?

In a world excited by its own technical mastery, the problem has become not "If only . . ." but "How soon?". How fast can we produce the thousand things that will allow all the world's people to live in happiness and dignity? How soon replace the last oxen with the diesel-driven harvester, how soon give a giant's strength to the work of men's hands with electric power plants? In the race for a better life Brush Electrical has an active role. ☐ Think of almost any kind of power equipment and you'll find that Brush has a part in it. Power to speed ships and trains, power for factories and townships or power for an entire electric generating plant . . . this is the work of Brush Electrical, one of the companies of the world-wide Hawker Siddeley Group. Whenever, wherever you wonder "Who can do this?" it will pay you to tap the enormous resources of the Group for information. ☐ There is a representative in your part of the world who can speak for the group — call him. HAWKER SIDDELEY GROUP

Consequences of Unreason

SENSE, and last minute moves, may still persuade the railwaymen that they face nothing but loss if they go on. But, late on Thursday evening, it seems that the National Union of Railwaymen are sticking to the course which it set itself a fortnight ago: to strike unless they get a cash offer in advance of the publication of the Guillebaud report. It is a strike after the pattern of the London bus strike in 1958, when Mr Frank Cousins led out his men for a matter of 2s. a week and was roundly defeated. It would be claiming too much for Mr Sidney Greene that he has led his colleagues; they and the militants in the branches have taken matters into their own hands. The only justification he can advance is the NUR's unwillingness to wait just over a fortnight to learn what wage levels are proposed for them (and for the two other main railway unions) by Mr Guillebaud and his colleagues. Sir Brian Robertson has promised an interim pay increase backdated to January 11th if the report, in the week beginning February 29th, justifies one. But against all arguments of reason and their members' own self-interest the NUR is still demanding money down now.

It is a case for a psychiatrist rather than a rationalist. The NUR has succeeded in the near-impossible by alienating public sympathy for its case. The two sister unions (if that is not too affectionate a term for the locomotive-men and the salaried staffs) are aghast at the plight in which Mr Greene has involved his members. After days of argument the Trades Union Congress has neither persuaded the NUR of the dangers it runs nor impressed it with the harm that will closely follow for millions of other workers—coal miners first of all. The Government has been preparing emergency plans without intervening in the argument until the TUC had clearly failed. And on Wednesday it soon became clear that the role of the Chief Industrial Commissioner this time was to be very different from earlier occasions when strikes have been bought off at Ministers' orders. Unless a settlement is contrived at the last minute by the Government (which will do infinite harm to the economy if it offers rewards for the breaking of agreements and the buying off of agitation) Britain will be without trains next Monday.

A strike will be represented as a tragedy for a Britain emerging into full and brilliant prosperity. This is overdoing the harm it could conceivably do and underestimating the advantages, on a longer view, of resisting a strike that makes no economic sense, that puts impatience (no matter how understandable) way above policy and bases itself on broken agreements. The British economy could get along with inconvenience and discomfort while the strike lasts, and it need not take too long to recover lost output afterwards. It can discover in the process new ways of doing without railway service—as if it needed any provocation here—which will further reduce the chances that British Railways, no matter how bright and shining with new hardware, can ever be made to pay or pay good wages. The public, whose esteem of trade unionism is already low enough to worry the TUC and to lose Labour votes, will increasingly turn to the Government's side if it wants to add trade union reform to its other commitments. It is the irresponsibility of the trade unions quite as much as their power that is frightening.

The public is already giving this stricken railway industry a costly blood transfusion of new capital. It will have to consider seriously what scale of

railway service it is really prepared to pay for—which is not at all the same thing as the scale of railway service that it wants but is not prepared to pay for. The danger for the railwaymen is that when this question is coldly examined, their livelihood looks very far from secure. It is useless now to go over past ground in railway history. All sorts of mistakes are apparent: too late a start in new investment after the war, when there were so many other claimants ; and an improvement plan, when it did come, that committed public funds to a scale of railway service that was dubiously capable (even without any further increase in costs) of earning its keep sometime in the early sixties. The century-old legacy of public control still hangs round the neck of the railway business. The experiments and back-tracking towards finding good commercial and operating arrangements for the main lines have brought no clear solutions. In financial terms the railways' case is deplorable—current annual deficits of the order of £90 million, and no better expectation by the time 1963 is reached than a working surplus of between £50 and £100 million, which will be barely sufficient to pay interest on the railways' capital, leaving nothing to pay the interest on the deficts that are now accumulating, much less to repay them.

The Economist was a supporter (with qualifications) of the first improvement plan published four years ago. It then felt that the plan held out a sporting chance of proving a worthwhile investment ; it now feels that the gamble has been lost. This is not all the Commission's fault though some of the decisions (including electrification to Euston) and many of the delays are challengeable. The railway user must take part of the blame. He demands a seat or a goods wagon when he wants it—that is, when he finds it inconvenient to go by car or has some awkward load that is too much for his lorry. It may be that a superfluity of transport is emerging as one of the conspicuous wastes of a society that is growing richer. If so, the sooner the implications for railway economics are faced the better. If the public regards itself as entitled to railways burdened with all their historical obligations to provide public service, but will use that service only as it pleases or when it has to, it must accept the present cost of modernisation as only the first instalment of the heavy price. But if the public is sensible, its thinking about the amount of railway service it needs and is prepared to pay for, in conjunction with all the other public and private transport it is determined to have around, should become much sharper.

THAT is the first obvious conclusion from the mixed collection of ideas that are now floating about on the handling of the railways' financial problems. All these in the end can be summed up as different ways of faking the books or brushing the subsidy under the mat. They range from a crude subvention from the Exchequer (and what happens to wages and discipline then ?) to convoluted schemes by which the railway "track" (which would mean all its fixed gear) would be taken over by a public authority and leased back to the railways to operate on payment of a rent and toll. This would have some resemblances to the Independent Television Authority, but one quite crucial difference in that it would forever be committed to losses and dependence on the Exchequer. Somewhere between these extremes come the suggestions that the Commission should be excused payment of interest on its capital, the cost of which will have risen by the early sixties to £85 million ; even if it were so excused, it would still not be making genuine money.

One does not take railways out of economics by dressing up the figures in a different way. If the mounting deficits (now more than £400 million) must be regarded as a write-off, and if no part of the railways' capital, old or new, can reckon on a secure return, it is obvious that a sensible public would not be prepared to find even more money for running services that are already losing money. It is equally obvious that a realistic attempt to produce a rational structure for railway wages, which the Guillebaud Committee was set up to do, will involve a lot more money which can only come from public funds. It is being suggested that the report may propose a general increase in railway pay of the order of 10 per cent, with differentials on top of this for skilled men. It would be absurd to suppose that the required £40 million or more could come from public readiness to pay higher charges for services that they only half use already. It would be equally absurd to expect that any rational division of an award between skilled and unskilled grades could ever follow a last-minute surrender to the NUR.

The provision of such part of the increase as might be backdated to January 11th would be worrying enough. On any longer view, the terms of public assistance on such a scale must be worked out so that there is the minimum of public obligation on the railways (and therefore of subsidy from the public purse into private pockets) and the maximum of commercial pricing in the services that the railways offer. It is on the trunk routes, both passenger and freight, that the best opportunities lie for increased efficiency and more satisfactory profit. Two examples will show that the abandoning of public obligation would be anything but popular: the city commuting traffics ought to pay perhaps 20 per cent more than they do to match the costs that they incur ; and if the difficulties of getting sanction to take a hopelessly unprofitable line out of service cannot be overcome, the onus ought to be put squarely on the Transport Tribunal to sanction an explicit subsidy for any unremunerative service that it decided must be kept.

There is, indeed, no rational way out of a radical reduction of general railway service and a much greater concentration on economically priced (which does not mean cheaper) long distance and suburban services. A great amount of the railways' labour cost is as "indirect" as their capital costs, and given its productivity it is beyond what the railways or the public can afford. The one certain result of the miserable events of the past fortnight is that good employment and earnings in the railways have been further jeopardised by the NUR itself. More money may have to be found, but the public (which calls the tune as well as paying the piper) will make sure that it is found for fewer railway workers.

Apartheid in One Country

The Prime Minister evidently intends Britain to work with, not against, African nationalism; but nationalism's worst enemy can still be itself

WHEREVER Mr Macmillan spoke in Africa he produced a rumpus, and his speech to the South African parliamentarians in Capetown produced in the end the biggest rumpus of all. Its echoes will long be heard—not least in the House of Commons on his return next week. Yet in every speech the Prime Minister stuck with consummate skill to statements of known British policy. Nowhere did he add anything substantial that was new ; whenever possible he quoted what had already been propounded at Westminster or the United Nations. Thus in Lagos he made no new promises to the Africans of Northern Rhodesia and Nyasaland, so that in Salisbury he had nothing to withdraw ; in Bechuanaland he solemnly pledged Britain to do exactly what is required by the South Africa Act of 1910 ; in Capetown he said the best of friends must bluntly differ sometimes on matters of principle. Yet everywhere the impression exists that Mr Macmillan has boldly put a new and liberal face on British policy in Africa.

All of this must have given Mr Macmillan, as he has hugged his secret thoughts on the voyage home, exquisite personal pleasure. But he would be wrong to think that he is returning with no more commitments than when he left. For it is the reaction to his words not the words themselves that is decisive —not what he said, or intended to say, but what he was thought by the African masses to have said with all the authority of the head of the British government. And the judgment is clear: Africans and the outside world have concluded that Mr Macmillan has come down firmly for coming to terms with African nationalism, and they have applauded ; the white Africans—not just those in South Africa, but in Southern Rhodesia and Kenya—have been correspondingly horror-struck. This is the remarkable dénouement when basic British colonial policy is simply restated with precision by the Prime Minister: it turns out to be devastatingly liberal.

This should not really surprise anyone. It is a matter of history that the pace of political advance in Africa has been set by the British. African nationalism was the child of British imperialism: that liberal imperialism which brought not only India and Ceylon to independence but Australia and Canada before them. The radical—even reckless—decision of the Belgian government to rush independence to the Congolese by next June, though it may have both startled and emboldened the Prime Minister in the course of his conducted tour of South Africa, is simply the end-product of the process inevitably set in motion by Britain in West Africa on the morrow of Indian independence.

Mr Macmillan will now be expected to live up to his sentiments—not in theory, but in pace and place. This means, immediately, Kenya and Central Africa. In this (post-Macmillan) week there are some encouraging signs that Mr Blundell's multi-racial group are realistically getting down to an agreement with Mr Mboya and his African colleagues on a basis that will give the Africans a majority in the government, and on terms that will enable the Africans to be generous in conceding to the minorities a rightful voice in Kenya affairs. The next step will be Central Africa ; and whatever fuss may be made about the demonstrations that greeted Mr Macmillan in Blantyre, it is evident that the release of Dr Banda is now the logical concomitant (for all its risks) of the assembly of the Monckton commission next week in Livingstone.

For Mr Macmillan, when he spoke of human rights and of the African national tide, made no exceptions in principle about territories that have large white minorities ; even if he did make some tactical reservations, and paid the Europeans a proper tribute for their achievements for Africa. While his white hosts were waiting in the rain to be told that their case was different, General de Gaulle was firmly disillusioning the white settlers of Algeria on the same point. Whatever variants of the Gold Coast solution Britain may endorse for Kenya, Northern Rhodesia and Nyasaland, they will be no more than variants to direct, not stem, the tide. King Canute is dead. The response of the South Africans has been prompt. They have proclaimed (as our correspondent explains on page 631) an unofficial state of emergency in their relations with the West ; they have nailed their flag to the mast in spite of the winds blowing through Africa, much as the Russians once nailed theirs—and have declared for apartheid in one country. As allies in their obduracy they may have Portugal and Southern Rhodesia. The white tip of Africa is going into laager.

BLACK nationalists are jubilant. Some of their white liberal friends are sharpening their knives for use in southern Africa on their behalf. But at this moment when their triumph seems in sight—when even Basutoland in the heart of the Union has defiantly voted nationalist—it is worth while, indeed it is obligatory, to sound a warning. Success can be its own disaster ; and the very speed and ease with which African nationalism has swept forward in the wake of Asian conceal its own weaknesses. Its capacity is untested yet: Ghana has only been a state for three years, the Sudan for four. The rest of independent black Africa is largely scaffolding under which the white administrator, the factor forgotten by political commentators, still obediently toils away, with his bag half-packed at his side.

The problems of creating and administering an African state of any size and efficiency, let it be remembered, are unsolved. Nigeria is only a hope (if a bright one) on paper ; French West and Equatorial Africa have been torn to bits by Africans themselves. Dr Nkrumah snatched the headlines from Mr Macmillan during his visit to Ghana by calling for a "United States of Africa" and a halt to the balkanisation of the continent into "tinpot" states by the "imperialists"; but

it is unclear what practicable plans he has for this, aside from the "liberation" of his tinpot neighbour Togoland and its integration into Ghana when it gets its independence. Already African blood has been spilt by Africans—after self government in Cameroun and French Congo, and on its eve in Ruanda Urundi and the Belgian Congo. Above all, the possibility of the dissolution of the vast, hitherto well-run Belgian territory must restrain any confident predictions about black nationalism in Africa.

Obviously, if with so little training and preparation Africans prove capable of running great modern states with efficiency enough, and with the restraint that rule imposes on rulers if they are to go on ruling, the days of the remaining white-ruled states are numbered. Practical demonstration will have been given that Africans here and now can sufficiently match the white man on his own ground—the modern organisation of society. But if they do badly, then the embattled white minority at the tip of Africa may yet make a most determined stand in their laager. Black and white baaskap states may long have to co-exist—and it is typical of Mr Macmillan that he carefully left his hands entirely free to accept such a situation and be friends with both.

Europe's Outsiders

In forming the European Free Trade Association Britain has made the problems of the European neutrals its own

WHEN the British took the decision last spring to form the European Free Trade Association of seven countries outside the common market, they gained a tactical advantage, but complicated the strategy of their European problem. On the one hand they drew the bargaining strength of the scattered outsiders together and won a respite; on the other, association with a group of countries with widely different interests must tie Britain's hands in its relations with the Six.

Economically, it is true, Britain's new partners all share two convenient views. Small size makes them individually chary—even more chary than the British—of sticking their heads into the lion's mouth and talking with the Six alone. Each, on the other hand, sends a larger proportion of its exports to the Six than Britain does; in that way they are under greater pressure than the British to work for an agreement with the common market. Britain's small partners thus promise to be both conveniently loyal to the Seven, and conveniently willing to fall in line with a British initiative to bridge the gulf, if and when any British initiative is devised; the case is still hypothetical.

The complication for British policy is political, not economic. Denmark and Norway would probably be glad in the end to accept almost any agreement so long as it embraced their main allies and their main export markets in Britain and the Six. Sweden, Austria and Switzerland have deep political reservations that arise from the fact that they are, in one sense or another, neutral. And while Britain's difficulties in taking on greater political commitments in Europe are mainly psychological and intangible, arising as they do from a long history of island separateness, the difficulties of these neutrals are tangible and clear. In forming the European Free Trade Association Britain has made the problem of neutrality its own. Has it, by that fact, made it more difficult for itself to take the plunge when the plunge—to put it crudely, joining the common market—becomes possible?

A look at the neutrals suggests at once that some are more neutral than others, that neutrality has very different meanings in the Alps, on the Danube and on the Arctic Circle. Switzerland's neutrality is almost as old as the idea of a Swiss nation, older than Switzerland's reputation as an international banker, not very much younger than its military traditions. But it was M. Spaak, the secretary-general of Nato, who remarked a few years back that he wished he could count on the rest of Nato as well as he could on the Swiss. In a time when any European war was likely to involve French, Germans, Austrians and Italians, or some of them, neutrality was a *sine qua non* of the existence of the Swiss state, with its French, German and Italian populations. Now that the three parent cultures are joined in one community that argument seems to have lost its force. Switzerland has no Russian cantons to worry about.

AUSTRIA'S neutrality has, by contrast, no basis in the past. But, as the Austrian foreign minister made clear when he visited London this week, it is very deeply rooted in the problems of today; for geography has made Austria and Sweden neutrals in the east-west struggle. True, it is not just neutrality that has made Austria choose the Seven. The ties of trade, language and culture with neighbouring Germany have produced both a strong current of opinion in favour of joining the common market and a strong revulsion against it. The fear of a disguised *Anschluss*, with German capital buying its way to a commanding position in Austrian economic life, is perhaps an even more important source of the Austrian government's caution towards the common market than neutrality itself.

Looking forward a little, it might be argued that European integration could itself resolve some of Austria's contradictory hopes and fears; Germany and its neighbours have, after all, to learn to live together one day. The perplexities of neutral Austria also reflect crucial difficulties that have been sadly neglected by the professional integrators in the west. The eastern frontier of the common market, just like the western frontier of the Soviet block, cuts across the natural trade routes of central Europe. Since these are political as well as economic frontiers, they leave no room for a stable position for a country placed as Austria is. Austria's problem of association probably cannot be really settled until the relationships between western and eastern Europe changes, and what used to be Central Europe can, in some form, come into existence again. Until then, the Austrians can only improvise.

Sweden, like Austria, has mixed motives for its caution in Europe. Distrust of colonialism probably makes a settlement in Algeria a precondition for any close Scandinavian political involvement with the Six. Full employment on a national basis is so axiomatic that the fact that either a free trade area or a common market must mean in time common economic policies on a great many matters is only accepted with reluctance. Sweden is like Switzerland and Britain in that it has not been fought over, occupied and humiliated as the rest of Europe has. There has been no devastating personal experience to devalue the idea of the nation and open the way to a revolutionary new idea. With four hundred years of illustrious national history behind them it is not surprising that the Swedes, like the Swiss and British, have an isolationist streak.

YET if feelings and prejudices make Sweden a natural leader of the free trade association, it remains true that the one vital interest behind its caution is neutrality. For centuries Sweden, at times withdrawn into itself, at times sallying forth on to the European stage, has balanced on the rim of European conflicts. East, south and west it has faced in turn. And today, though there is no doubt of the direction in which Sweden must face for its defence, the Swedish people are probably unanimous in supporting neutrality in the conflicts of other powers unless Sweden is actually attacked. They believe, probably rightly, that any decisive move by them to join the western camp would mean a Russian occupation of Finland as a countermove. And this balance in the Baltic, resting as it does on diplomacy, not force, provides a model whose spirit might, in the interests of other countries too, be usefully extended southward in Europe. All this does not necessarily rule out closer political and economic integration for Sweden one day, if the British should choose to lead the Seven that way in pursuit of agreement with the Six. But it does mean that full Swedish participation might be dependent on a favourable east-west climate, and on the pursuit of relatively friendly policies towards each other by the western continental governments and the communist world. The Swedes could not join so long as joining meant taking sides in a conflict.

The next few months may actually see a certain pressure from the smaller members of the Seven on Britain for some compromise on the basic economic issues that were at stake in the dispute over the dead free trade area; and notably about the question whether tariffs can or should be harmonised. Austria, Denmark, Norway and even Sweden all seem ready to move nearer to the conception of a customs union than they were in Paris in 1958. As long as Commonwealth free entry is treated as a special problem to be negotiated, it is difficult to see why the British should object to this approach.

In other words the political difficulties of the neutrals provide no excuse for British inaction. Their problems would probably be more, not less, easy to resolve if Britain could establish a close political relationship with the Six. "Europe House," a body which has organised a series of talks on Europe during the past year, has just published lectures delivered last autumn by two key figures in the organisations of "big Europe," M. Sergent, secretary-general of the Organisation for European Economic Co-operation, and Mr Dunstan Curtis, deputy secretary-general of the Council of Europe. Both revive the idea that in any new negotiation the British should "explain how the commonwealth preference can be dovetailed into the European system," to use M. Sergent's phrase. To Mr Curtis the gesture of bringing in the Commonwealth should be a political act, designed to break down the political gulf between Britain and the Continent. Thus the advocates of a bigger Europe have not ceased to produce ideas, even though a period of diplomatic confusion and political frustration lies between them and the time when their ideas can be fruitfully used.

Back to Palestine

The money and energy wasted by Arabs and Israelis on a precarious armistice could be saved by the discovery that they had more in common than a quarrel

A TIME must come for the nations of the Middle East to stop looking backward; perhaps it has come now. Arabs and Israelis are still entangled in the expedient half-settlements they were persuaded to make, more than ten years ago, so that they might stop shooting each other. But the shooting has not stopped, it has only died down to a mutter. Each side continues to justify irresponsible actions and intransigent attitudes by blaming the other, or by recalling the sins of the great powers. If it were not for the Balfour declaration, the MacMahon correspondence, the Sykes-Picot agreement, Ernest Bevin, the State Department or the international oil companies, they say, all would be well in the Middle East. Palestine was one of the two subjects for discussion by the Arab foreign ministers at Cairo this week. Last week the United Nations truce supervisors were called in to hear conflicting claims about a clash of arms on the Israeli-Syrian border. Neither Arabs nor Israelis can be sure that next week will not bring more troubles again.

Instead of wasting their energies on arguments that have no end, and their substance on arms to damage each other, the Arabs and Israelis might look for a way to settle their differences. Would it be too far beyond the realm of fancy to hope that the following retrospect of a permanent settlement of the Palestine problem could be published in *The Economist* for, say, August 7, 1964?

★

AS readers will recall, it was on November 16, 1960, that Mr Hammarskjöld revealed what was probably the best-kept secret in modern diplomatic history. Without special introduction or warning of any kind, he told the United Nations General Assembly that President Nasser of the United Arab Republic, King Hussein of Jordan, President Shihab of Lebanon and Mr David Ben-Gurion, the prime minister of Israel, had agreed on a plan to settle all outstanding differences between Israel and its Arab neighbours.

When order had been restored it was noticed by a few that the Iraqi and Saudi Arabian delegations were missing. The secretary-general went on to say that Israel had agreed to pay all Palestine Arab refugees a reasonable sum and, in addition, would compensate owners of property taken over by Israel. Former Arab residents of Palestine could return to Israel if they chose to do so on condition that they would become citizens of Israel ; the Gaza strip was recognised as part of the southern region of the UAR ; Jordanian sovereignty over those parts of Palestine now administered by Jordan was recognised ; and all restrictions on the movement of Arabs in Israel were to be removed. The United Nations and the government of Israel would set up a programme offering 10,000 Arabs annually a course in agricultural, mechanical or other technical training.

The three Arab governments had agreed to accept as citizens any Palestine Arabs who did not choose to return to Israel ; to cancel the boycott of Israel as an official policy ; to permit Israeli shipping to use the Suez Canal ; and to recognise the demilitarised zones as parts of the state of Israel.

The secretary-general asked the assembly to approve the establishment of a commission with equal Arab and Jewish representation to carry out the plan. A member government would lend $500 million to Israel through the United Nations. With the assembly's approval, payments to Arab refugees could begin, he said, on January 1, 1961 ; Arab refugees would be able to start moving into Israel, at the rate of 25,000 a month, on May 1, 1961 ; and the affairs of the United Nations Relief and Works Agency, the United Nations Emergency Force, and the United Nations Truce Supervisory Organisation would be wound up by June 1, 1964.

WHILE Mr Hammarskjöld was still speaking, Cairo radio broadcast a speech by President Nasser in which he said that, through Arab efforts, Arab rights in Israel had been recognised and restored. He had nothing, he said, against the Jewish people and intended to stand by Mr Hammarskjöld in carrying out the plan which Arabs had long demanded but which imperialism had always prevented. He reminded the Palestinians that the country to which they were returning was not, after ten years, going to be as they had known it. He urged them to be good citizens if they chose to stay there. If any Arab wanted to leave Israel, President Nasser offered him a home and friends in Egypt or Syria.

In Jerusalem, Mr Ben-Gurion said that he welcomed the Arabs to Israel and promised them full rights as Israeli citizens. He, too, reminded them of changes and that his was a Jewish state in which they might not like to live. The choice was theirs, however, and if they chose to leave again they could do so. In Amman, King Hussein agreed with everything that President Nasser had said and hoped the refugees would remember that Jordan had given them shelter in their time of need. Those who wished to remain in Jordan could do so, and those who went away would be welcome to return if they wished. No statement was issued by the Lebanese government for several days but the Israeli pound took its place in the windows of the Beirut money-changers within 24 hours.

Dancing crowds filled the streets of Cairo, Damascus and Amman that night ; but there was no joy in Tel Aviv or New York. World Jewry was profoundly shocked: had Mr Ben-Gurion given away all that had been worked and fought for for so long ? For several weeks thereafter the prime minister of Israel could not have been elected chairman of the smallest Zionist group in the world. Sooner than anyone dared hope, however, world Jewry realised that Mr Ben-Gurion had not only saved Israel but had won for it a place in the Middle East, where it belonged. True, it might become more difficult to raise money for Zionist funds, but if Israel could trade with its neighbours it need no longer live on charity. The exclusive Jewishness of Israel's first decade was a luxury that the tiny state, and Zionism generally, could not afford to keep up. It was still a home for any Jew who wished, or needed, to go there, but it would be a better home for having found its natural place among the nations of the world.

WHAT upset Zionists eveywhere was Mr Hammarskjöld's figure of 25,000 Arabs a month. As it turned out the quota was never filled and by the end of the allotted three years, when a million Arabs might have been added to Israel's crowded acres, the net gain was less than 150,000. During the resettlement period, 325,000 Arabs had crossed over the border but more than half had left again, mostly for the new towns and farms in north-eastern Syria.

Israeli fears of an Arab fifth column proved groundless. The technical training camps were, on the whole, a success, and the Arab governments have agreed to finance them for another five years. In June, 1963, Arabic became the second official language of Israel. The most noticeable change among the Israelis themselves has been the emergence of oriental Jews into positions of eminence and responsibility in the community. Long a source of worry to the European Jews, they have gained confidence by the knowledge that they are no longer an oddity in a nation cut off from the world from which they came.

The Israelis soon discovered that President Nasser was not Hitler. He continues to make extravagant statements but the success of his great public works programme in Syria has given him something to shout about. The Iraqis took a long time to accept the arrangements President Nasser had made for the Palestinians. At first they threatened to stop sending their oil across Syria, but on reflection, found this too expensive a gesture ; and by the spring of 1965, the doubling of the pipeline to Haifa will have been completed.

The Saudis were the last to acknowledge the existence of Israel, but they no longer object to American Jewish airmen coming to the base at Dhahran. It was a point which had embarrassed the US government and much had been made of it by Jewish organisations in New York. The only complaints came from Jewish members of the US Air Force, who found themselves moved to Dhahran from pleasanter places ; some were heard to say that they could do with a little anti-Jewish discrimination again.

It would be pointless to pretend that this great upheaval was accomplished without any trouble. There were misunderstandings, minor demonstrations and cases of individual hardship, but once the principles had been clearly stated there was never any serious talk of going back to the bad old days. President Nasser and Mr Ben-Gurion were right when they guessed that Arabs, Jews, and friends of both were more anxious for peace between them than for the tired old arguments to continue.

NOTES OF THE WEEK

GERMAN ARMS

Pause in the Pause?

BY asking for a two-day debate on the supply of nuclear weapons to West Germany the Opposition provided the occasion for a mildly interesting exchange of views, but not the material for a motion of censure. On Wednesday, the Foreign Secretary, who had recovered swiftly from his bout of stubbornness over Cyprus the previous day, was easily able to show that he had in fact been busy advancing most of the notions on disarmament favoured by Mr Denis Healey.

The Government's dialectical advantage lies in the fact that both the Labour party's principal spokesmen, Mr Healey and Mr George Brown, have more or less endorsed the prevailing Nato strategy of enforcing a "pause" on a local communist aggression in Europe so as to give the Kremlin time for second thoughts to decide whether it really wants to involve itself in a nuclear war. If there is to be such a pause—and given the denuding of Nato's ground forces by both the French and the British—the predominantly German conventional troops will have to be equipped with tactical nuclear weapons. These decisions having been made progressively over the years, with the Opposition to some degree acquiescent, it is logically a little difficult for them to take a stand here and now against giving Germans any nuclear weapons at all.

The Labour Party's current stand, which is not an unreasonable one, though difficult to put across in debate, is that, balancing one set of risks against another, it is preferable now to accept a pause in developing the strategy of the pause, in order to see whether the summit meeting cannot do away with the need for this strategy (and hence for German nuclear arms) altogether. It was felt necessary to dress this contention up in the language of a censure motion in order to take the play away from Mr Mendelson and his supporters who had placed a different (and factually inaccurate) motion on the order paper before Christmas.

In the absence of Mr Bevan and with Mr Gaitskell bogged down in the arid wrangle over Clause 4 in the Labour party's constitution, it is now left to Mr Healey and Mr Brown, who necessarily do not carry the same political weight, to keep the parliamentary party in line over foreign policy. For the time being they are on top —they had a highly successful session of the parliamentary party before the debate. But the remarks of Mr Crossman, Sir Lynn Ungoed-Thomas, Mr Leslie Hale and others make it plain that there may be trouble brewing if the summit in the end leads nowhere. They will be opposed to the pause strategy if it means German nuclear arms whatever happens; the party's defence experts will not. Ironically, the Labour party's unity will depend on Mr Macmillan's success at Paris.

EAST-WEST RELATIONS

Limbering Up

THE diplomatic approaches to the summit rendezvous in May are gradually taking on significance. But these are still early days. With three months to go this is the time for the statesmanlike stiffening of terms, less to frighten the enemy than to stifle critics at home. Mr Khrushchev, for one, has become tougher in tone. He was hard on President Gronchi at an Italian reception in Moscow on Monday, but this was the kind of convivial offensiveness that, coming from Mr Khrushchev, is a tribute ; it implied that Signor Gronchi had stood up to him in their private talks. As Mr Herter reassured his press conference on Monday, the meaning of Mr Khrushchev's pronouncements still remains within the rather indeterminate limits of the compromise reached at Camp David.

Mr Khrushchev chose to ignore his Chinese allies' advice and dictated a restrained commentary on current events for the Warsaw Pact powers to sign in Moscow on February 4th. It did not insist on a precise time limit (reckoned in summits or anything else) in which a German peace treaty must be signed. But it emphasised once again that the penalty for western procrastination would be irrevocable action to sign a separate peace with east Germany and "to solve on this basis the question of west Berlin as well." What that means, nobody knows ; as Mr Khrushchev must by now be aware, action on that "basis" might complicate the Berlin question irretrievably ; it could hardly solve it. No high priority was given to any form of disengagement. The Warsaw powers offered the familiar non-aggression pact to Nato, together with the banning of nuclear weapons and missiles from central Europe.

The report that Mr Khrushchev was considering a form of *de facto* disengagement in conventional forces by withdrawing Soviet troops from Hungary and reducing those in east Germany and Poland (a course that the West could hardly have ignored) was not borne out by the Moscow declaration. Was it a sign that the strains of the alliance are still too great for the liberal Tsar ?

Waiting Game

THE strains in the western alliance just now originate in Bonn. West German reluctance to approve the negotiation of a new statute for west Berlin received substance in the shape of a Christian Democrat resolution tabled before the Bundestag debate on foreign affairs on Wednesday. It claimed (perhaps with one eye on next year's election campaign) that west Berlin belonged to the Federal Republic and that, consequently, the Federal Republic possessed the power of veto over any arrangements for Berlin's future. Although the CDU quietly dropped the resolution before the debate began, the majority of opinion in the Bundestag clearly favoured a firm stand. Dr Adenauer, perhaps still provoked by Herr Ulbricht's virulent letter to him last month, was dogmatic in rejecting any change in Berlin's present situation.

The State Department received the CDU thesis with reserve, although it recognised that the United States could not, in practice, accept a solution to which opinion in west Germany (and, even more, west Berlin) was resolutely opposed. Dr Adenauer is likely to encourage this feeling when he visits Washington next month.

In London, the Foreign Office pointed out that the legal basis for the presence of western troops in Berlin was that the western powers had never given up their rights of occupation. A CDU motion is not a statement by the west German government ; if it were, it could not be accepted without destroying the case which the West proposes to argue at the summit, and forcing it to find another one.

The western foreign ministers are expected to meet to try to co-ordinate policy in the second half of April, and a further opportunity will arise during the Nato meeting at Istanbul at the beginning of May. But the chief British tactic still seems to be to wait until the crunch comes in Paris before attempting to detach Berlin from the bulky "packages" presented by both sides. It may prove a tricky business, even if Mr Khrushchev lends a hand.

CHINA

Minority Report

PEKING did not join the Warsaw Pact powers last week in their mutual congratulations on the marked reduction of tension between East and West. When the eye of the Chinese observer at the Moscow talks, Mr Kang Sheng, lighted on the complacent scene he was moved to deliver an awful warning ; and it was promptly repeated on Peking radio. Mr Kang saw

"certain tendencies towards relaxation" in the world, but on the United States' side these were not sincere and were merely a ruse to gain time in the arms race. While the Warsaw Pact allies studiously avoided direct attacks on the Americans (and even wished President Eisenhower a successful visit to the Soviet Union this summer), Mr Kang talked knowingly of "the USA's war plan," criticised Mr Eisenhower's state of the union message, and castigated American imperialism as "the principal enemy of world peace." To Peking, co-existence is still something to be defined solely in Chinese terms.

No doubt Mr Kang's sentiments found secret, and possibly public, approval among the older guard in eastern Europe. The existence of a pro-Peking faction in the Soviet Union itself cannot be discounted. The belief that Peking and east Berlin might be making common cause against Mr Khrushchev's more liberal policies seemed confirmed when the Chinese backed Herr Ulbricht's claim for rockets if the west Germans received nuclear weapons from the Americans. So far, Mr Khrushchev has not promised anything of the kind, and the east Germans have had to content themselves with a poor second best, the creation of a National Security Council.

The celebrations of the tenth anniversary of the Sino-Soviet alliance have found Peking insisting on an identity of its own in the world. Mr Kang pointedly repeated Marshal Chen Yi's refusal to accept a disarmament agreement, no matter who else signed it, if Chinese delegates did not take part in the talks and sign the treaty. Even so, Peking has begun to satisfy Mr Khrushchev on one point: the improvement of relations with some of its South East Asian neighbours. Mr Kang was able to describe the new settlements with Burma and Indonesia in his Moscow speech. Mr Khrushchev could set off for Delhi, Rangoon and Jakarta on Wednesday with a somewhat lighter heart.

SOVIET BLOCK

Agricultural Troubles

THE conference on agriculture held in Moscow last week by the Soviet block governments, before the Warsaw pact meeting, ended with a brief and unrevealing communiqué. But the problems that the conference discussed were undoubtedly weighty; and the solutions it may have set in train could have important consequences throughout the block. Agriculture has always been the weakest spot in the communist economic system; this conference may have been prompted by a whole series of failures and difficulties.

Last year's harvest in eastern Europe was uneven; although good in Rumania and Hungary, in east Germany and Czechoslovakia it was very bad and in Bulgaria no more than fair. The Poles have again had to import some 1.5 million tons of grain, mostly from the United States; and in October their meat supplies ran out. Throughout the block supplies of fodder are inadequate, and the Russians are not well-placed to supplement them; they will find it hard enough to reach even the reduced target for their own meat production under their seven-year plan. Mr Khrushchev was no doubt at pains to make this clear at the Moscow conference; one Czech official, broadcasting about the meeting, significantly emphasised that Czechoslovakia must in future "substantially" depend on its own production of fodder. There is also a shortage of agricultural machinery in the Soviet block. The Moscow communiqué suggests that Mr Khrushchev may be planning to overcome this by organising the production of agricultural machinery on a block-wide basis.

Greater specialisation and more co-ordinated planning of the output of the whole range of agricultural products is in fact about to be attempted, on the lines of the industrial specialisation already undertaken. But there is no sign that the greatest single factor holding down agricultural production —the pressure to collectivise—will be removed. On the contrary, the communiqué merely says that the peasants are increasingly coming to realise "all the advantages" of collectivisation. This does not suggest that the laggard countries—in particular Poland, where only 13 per cent of the land is collectivised—got much sympathy; but there is no evidence that Mr Gomulka, who is politically committed not to interfere with Polish agriculture, has been forced to change his policy yet.

RAILWAY DISPUTE

Eleventh Hour

THE intervention of the Minister of Labour in the railway dispute on Tuesday evening gave official recognition to the threat of a national emergency. The Trades Union Congress had admitted failure in its peace-making efforts, the National Union of Railwaymen had refused an offer to bring the Guillebaud report forward by a month, and the British Transport Commission had repeated that it could not grant an immediate increase at the request of one union alone; and in spite of the commission's offer to backdate any future award to January 11th, the NUR's strike for next Monday was still on. Three features of the stricken field stand out.

The first concerns the tactics of the NUR, which are no longer in the hands of Mr Greene, the union's general secretary. Have they failed? The answer depends upon whether or not the strike happens. If brinkmanship was the union's only aim, it has drawn attention to the poverty of railwaymen, tightened Mr Guillebaud's schedule by a month and made it very difficult indeed for the Government to back pedal on the large increases which his report is said to propose. If, and this is the crux, the NUR can call its strike off by Friday—for administrative reasons, the last possible day—it may claim not to have done too badly. But if the railwaymen do actually strike next week for an immediate increase it will be, for them, a disaster. No one will be hurt more than they by the stoppage. It will almost certainly achieve nothing. And it will seriously weaken the NUR in the bargaining on the Guillebaud report when it comes.

Meanwhile, the other two railway unions have not budged from their position. They feel that only a certain amount of money will be made available for extra railway wages and they want the bulk of it to go into raising differentials. These should indeed be higher than at present, not only between skilled and unskilled men but also between workers in high wage areas (where there is alternative factory employment) and in low wage ones (where there is only agriculture). Since they expect the Guillebaud report to emphasise the differentials, these unions prefer to wait.

The third question is what the Minister of Labour can do about the dispute. To buy off the strike by anticipating or prejudicing the Guillebaud report is unthinkable; and the report itself is already being brought forward to within three weeks from now. The commitments already conceded are heavy. All Mr Heath can do is to talk sense to the men in the hope that at last, with so little time to wait, they may listen.

THE QUEEN'S DESCENDANTS

What's in a Name?

IT is hard to see why some people have got so hot under the collar because the Queen wants her peripheral and untitled descendants to be called Mountbatten-Windsor. The only likely grievance would seem to belong to the double-barrelled descendants themselves. The other more heretical suggestion that the Queen should now change her own and her children's family name to the paternal Mountbatten was a different matter. It would have meant going back altogether on her very acceptable decision, eight years ago, that "I and My children shall be styled and known as of the House and Family of Windsor"; it would therefore have aroused a deal of unnecessary perplexity and suspicion. As it is, the Queen has chosen a modest and unobtrusive enough way, if rather an awkward one, of keeping her husband's name in being.

This is surely no bad thing. One would imagine, from the ill-natured protests in some places and the disapproving silences in others, that, by means of the Queen's simple domestic gesture, the Mountbattens had made a takeover bid for the throne. In fact the Battenbergs who became Mountbattens, from Prince Louis to his son, Lord Mountbatten, and Prince Philip himself, deserve very well of this country; and the spite which inspires the campaigns against them nowadays is as unfounded and unscrupulous as that which drove Prince Louis out of office in the first world war. The proposed change of name is really very remote and unimportant, except to the Queen herself. None of the names is of ancient standing; both Windsor and Mountbatten were invented, very ingeniously, as wartime expedients forty-three years ago; and Mountbatten itself is not even Prince Philip's own father's name, but his mother's. There is nothing here for anybody to make a fuss about.

ALGERIA

The Price of Revolt

GENERAL DE GAULLE has felt able to strike some telling blows against Algiers. Although direct action has been taken against fewer than 20 officers, these include the notorious General Faure (whose command post at Tizi Ouzou was not among those to speak up for General de Gaulle last month) and two brigadiers. More important still, the army's fifth bureau, whose chief, Colonel Godard, was already in disgrace, is abolished and its functions are to be decentralised. It was this group that directed the essays in psychological warfare to which many of the regular officers, particularly those who served in Indo-China and imbibed the tenets of Mao Tse-tung, have been inordinately attached. The bureau had worked assiduously to propagate the policy of integration. Its disappearance may not upset the more senior commanders, but it deals an undoubted blow to the army's inflated sense of domestic mission.

Postings at the rank of colonel and below are not being disclosed, although at least eleven changes have been reported unofficially. It is not clear whether such changes as have taken place were fully envisaged by the army in the negotiations (chiefly conducted by General Ely) that went on between Paris and Algiers during the crisis. There is certainly no reason why his fellow officers should wish to close ranks to protect the poujadist General Faure. But General de Gaulle seems to have gone as far as he could without inviting an open breach with his barons across the Mediterranean.

The settlers have been slapped down by the loss of their militia, the reorganisation of the too-friendly police, and the disbanding of some extremist organisations. There is now less likelihood of a repetition of last month's happenings, although it may be doubted if the militants would have considered acting again without the army's express support. The possibility of the Moslem rebels (FLN) going to Paris for talks still keeps the prospect of such an alliance very much in evidence.

General de Gaulle's proposal to hold local elections in Algeria before the summer may, in fact, be meant as a hint to the FLN to make haste if it does not want to be cut out of his plans entirely. Since the army will expect to control these elections (and it is hard to see how they could be held otherwise) the next crisis may not be very far away. It is a situation on which M. Soustelle, relieved of his cabinet responsibilities, is certainly brooding.

NUCLEAR TESTS

Still in a Hole

ON Monday *Pravda* published an article, attributed to the Soviet scientists who have been taking part in the Geneva talks on nuclear test cessation, which rejected once again the argument that it is not practicable to identify underground nuclear explosions below a certain size. The Russians repeated their proposal that a total cessation of tests should be agreed without further delay, leaving the control system to be improved as it went along. Apparently undeterred, Mr Herter disclosed a few hours later that a newly formulated American proposal for a ban on all tests except the smaller underground ones would be presented at Geneva this week.

The Secretary of State must be aware how slender are the chances of the Russians accepting this proposal. His tactics are presumably designed less in hope of their bearing fruit than with an eye to the impatience of those military and scientific figures in Washington who have been fretting for fifteen months at their government's self-imposed ban on all tests. The terms of the new American offer evidently represent the result of a long and hard tussle between the rival factions in the Administration. They do not seem likely to be affected by the arrival in Washington of Mr Ormsby-Gore and his opposite numbers for preliminary talks about the ten-power disarmament conference that will begin in Geneva on March 15th. But it is an open secret that the British are dubious about the American case on underground explosions, and primarily anxious to get started with a control system of sorts, imperfect though it must be.

One argument for getting started is that it will, in any case, take a year or two to create a world-wide monitoring network—and, as research is moving pretty fast in this field, by the time the system is ready the difficulty of identifying underground explosions, whether in "big holes" or little ones, may have been overcome. Another is that the establishment of international observer teams on both sides of the "curtain of silence" will be a real break-through towards a general disarmament inspection system.

ELECTRICAL TRADES UNION

Fair Election?

THERE was no widespread astonishment when it was revealed that Mr Haxell had been re-elected last week to his post of general secretary of the Electrical Trades Union. His majority—reduced from 13,000 in 1955 to a mere thousand—was even alleged by some observers to have been fixed by the union executive before the election took place. The result was surrounded by a screen of contradictory comment. Before it was announced, the ETU anti-communists claimed to have proof from a survey of branches that Mr Haxell had lost; Mr Foulkes, after announcing Mr Haxell's victory, hurriedly replied by reading off a long list of branches whose votes had been disqualified. Whether disqualification had been done strictly according to union rules, and whether the remarkably large pro-communist tally marked up by some other branches would have stood up to close scrutiny, are both open questions.

Whatever the outcome—for further bitter argument is certain—this election has been a sorry affair. It leaves the communists in full control of a union of 230,000 members which is reputed to contain not more than 500 card carrying communists. Most of these are, of course, in key offices; by relying on their own voting efficiency, other peoples' apathy, and a good record of wage increases for members, they have until recently avoided running into any well organised opposition. It should be said that the accusations of chicanery are unconfirmed, but Mr Haxell has not yet risked taking anyone to court about them.

This state of affairs, more perhaps than any other current union problem, would be a profitable field for bold action by the TUC. A full scale investigation under rule 13 of the TUC's constitution would be best —if only because general disquiet with the ETU needs some impartial body, and not just professional anti-communists, round which it can coalesce. As a possible alternative, the TUC might ask to be allowed to appoint a neutral referee in any future election if a certain proportion of a union's membership requests it. A union with nothing to hide could hardly object.

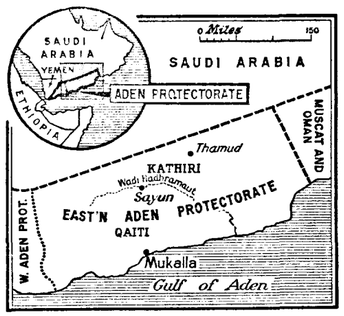
THE ARMED SERVICES

Keeping Up with the Bowlers

THE first of the biennial reviews of service pay and pensions, which became standard procedure two years ago upon the recommendations of the Grigg Committee on recruiting, was published on Wednesday (Cmnd. 945). It lays down the principle that officers' pay shall be broadly linked with civil service pay; since the civil service has had increases in pay in

the past two years, this means that officers' pay has been put up too—although there has been relatively little increase in the cost of living in this period. The percentage increases for each rank are fairly substantial. A second lieutenant's pay has been put up by 16 per cent, and a lieutenant of three years' seniority by 11 per cent. For captains (and of course equivalent ranks in the Royal Navy and RAF) the increase is 9.5 per cent for captains in their first year and 7.4 per cent for those in their seventh year. Majors are now to receive a special increment in their tenth to twelfth years, presumably to meet the problems of those that miss promotion, but do not then leave the service; there is a similar increment for colonels in their eighth year.

A new pay and gratuities code for retired officers has also been announced to match the new career structures being designed to get younger officers out into civil life early, if they are not to stay the full course. More will be heard of this in Mr Watkinson's defence white paper next week. Meanwhile, though linking armed service pay to civil service pay may produce some difficulties, especially for junior officers who are equated to "executive" grade civil servants, this increase comes fortunately at a time when the decline in the recruitment of officers is worrying the army particularly. The decision to link the pay of other ranks and above all technicians to wages in "manufacturing and certain other industries" notified by the Ministry of Labour is inevitable if the services are to have technicians—and it means that the services, though ununionised, will get the direct benefit of union wage bargaining, that of the ETU and AEU in particular.



ADEN PROTECTORATE

Disputed Sands

THE rulers of the petty protected states of southern Arabia have long felt neglected. They are not sure whether their lack of oil revenues is due to the foibles of nature or to the inscrutable ways of foreign oil companies; but they suspect that the companies just have not tried hard enough.

In 1938 the governor of Aden granted to Petroleum Concessions Limited, a subsidiary of the Iraq Petroleum Company, an exploration licence for the whole Aden Protectorate. Since then parties of geologists have intermittently surveyed, as extensively as terrain and local insecurity permitted, the Mahra country, Wadi Hadhramaut, Beihan and Shabwa. Only the upper reaches of Wadi Hadhramaut looked promising. This area, however, is the subject of a tangle of boundary disputes. Saudi Arabia claims parts of it, the British Government claims it on behalf of the protected rulers, the protected rulers cannot agree on its ownership among themselves, and unattached local tribes have cast an eye upon it since people from the oil company began to move about in it.

Representatives of the Qaiti and Kathiri sultanates met at Aden in September and found that they could not reach a compromise on their territorial claims; but the lure of oil revenues led them to agree on sharing income. Any payments by the oil company, for fees, rents, royalties or profits, are to be divided between them—two shares for the Qaitis and one for the Kathiris. The administration of the concession area is to be turned over to a committee, "The Petroleum Affairs and Disputed Areas Authority," on which the two sultanates will have equal representation.

A draft concession agreement has been submitted by the company, an Arab oil adviser has been retained by the sultanates, and word is anxiously awaited from Mukalla that the agreement has been concluded. The makeshift arrangements for the control of the area contribute nothing towards the permanent settlement that is so desperately needed for all southern Arabia. If oil is eventually discovered, the local rulers will be even less willing to compromise than they have been in the past.

OXFORD'S CHANCELLOR

Send for Sir Oliver?

BUT for one thing, the best next Chancellor of the University of Oxford, to follow the late and admirable Lord Halifax, would certainly be Lord Attlee. In character and distinction of career he stands out among Oxford's elders. The one thing is his age; he was 77 last month. To say this, however, is not to say either that Lord Attlee definitely would not do or, as some seem to be saying, that what Oxford now needs is a youthful bustling Chancellor to wrestle with the state and the wide world outside on the university's behalf. Wrestling there will no doubt have to be, but this is the job, not of the next Chancellor, but of the successive Vice-Chancellors and the university's own officials.

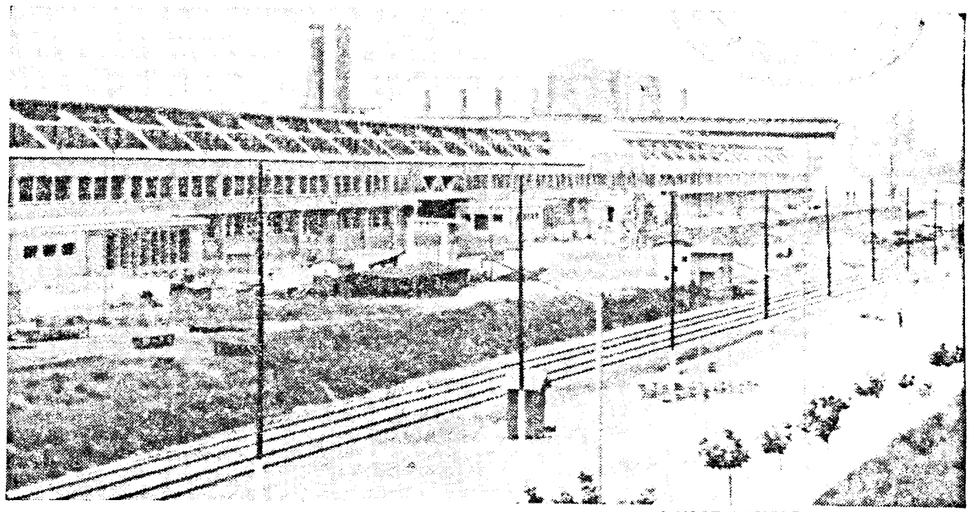
In fact, it is hard to discard the suspicion that, in persuading Sir Oliver Franks to accept nomination, the caucus of the heads of Oxford colleges has proposed a good choice for bad reasons. It is not because Sir Oliver is in his active prime and, after his mission to India, will have time on his hands that he may be a good choice; and the fact that he lives on the spot in Oxford could be a positive disadvantage. He is apt for this lofty office because, at 55, he is known the world over to be an uncommonly distinguished and dutiful man. No doubt, if he did become Chancellor, he would know his high place and represent, not try to run, the university's affairs.

Sir Oliver is not, of course, the only possible choice. It is perhaps surprising that the idea of having another Salisbury as Oxford's Chancellor has not made headway. The dons who healthily disagree with the top caucus's nap selection have followed the earlier Salisbury precedent in another way; they want the present Prime Minister. But even if he thought fit to contemplate this added honour now, Mr Macmillan would clearly do nothing while Sir Oliver's hat is in the ring.

BROADCASTING

Get on With It

FEW men have been offered, or considered for, so many top jobs when so young as Sir Oliver Franks has been. Inevitably he has been thought of by the Government as a possible chairman of the grand inquest on all sorts of broadcasting that has got to be held between now and the next election. The BBC's charter runs out in 1962, and the Independent Television Authority's first span ends in 1964. What the Government apparently intends to do is to continue the BBC's charter also until 1964, and meanwhile, with the aid of a royal commission, to prepare legislation to cover the future set-up and control of the whole of television and sound radio (including the destiny of the sound monopoly). Although 1964 may look a long way off, this is already a matter of the greatest urgency to be got on with as quickly as possible.



DURABLE CONSUMER GOODS

Will the boom continue in 1960? How near is the market to saturation? What features are consumers looking for?

Answers to these questions are to be found in the current series of reports in our Durable Consumer Goods Service. This combines economic forecasting with nationwide consumer research in order to give an estimate of ownership and of the scale and character of demand for the following goods over the next six months:

Electric washing machines and spin driers—Refrigerators—Vacuum cleaners—Electric fires and convector heaters—Gas and electric cookers—Space heating appliances—Passenger cars—Radios, radiograms and record-players—Television sets.

A VAST COMPLEX
This building at the new steelworks of Empresa Nacional Siderurgica at Aviles contains the first steel blooming mill in Spain to be driven by twin motors. The 7,000 h.p. drive was supplied by English Electric under a comprehensive contract.

'SINEWS'

FOR SPAIN'S NEW STEEL GIANT

How English Electric put power to work

The sinews, nerves and arteries of the giant new steelworks at Aviles in northern Spain were all engineered and installed by the English Electric Company under a comprehensive contract.

Its *sinews* are the powerful motors driving the three mills, which together roll red-hot steel ingots the size of a desk into rails and girders; its *nerves* are the control circuits which enable men to operate these huge machines with delicate accuracy, its *arteries* the switchgear and transformers which distribute electric power throughout the steelworks.

In the hills above Aviles, English Electric generating equipment in the hydro-electric stations at Salime and Silvon helps to supply power for the new steel mills.

Aviles will produce up to 1,000,000 tons of steel a year. For Spain this abundant supply of first-class steel means an upsurge in her industrial growth.

For us in Britain, this very large contract has added yet further to the wealth of technical experience—experience which works for Britain . . . as it worked for Spain.

Power for every need The English Electric Company is concerned with *all* aspects of power. *Producing* it from coal, oil, gas, water, the atom. *Distributing* it—through the most efficient transformers and switchgear. *Using* it—whether in electric locomotives or domestic appliances.

And this production of all kinds of power equipment has one aim—the prosperity that makes for a more fruitful life.

FROM ITS MAIN "NERVE-CENTRE"
these two men control the operation of Spain's vast new steel blooming mill at Aviles. Over 14,000 electrical connections link the main drive and its auxiliaries to this control unit.

POWER IS THE BUSINESS OF

'ENGLISH ELECTRIC'

THE LABOURS OF HERCULES

THE SIXTH LABOUR

THE CRETAN BULL

Come to think of it, Hercules of old had a pretty rough time. All the Gods and Goddesses of mythology ganged up on him — and he was only a Demi-God at best. And those 12 Labours were no sinecure. Consider the Cretan Bull . . . not only a menace of extraordinary size and power, but breathing fire and smoke into the bargain. It took courage and resource — and brain racking — to devise the means of overcoming it.

Today, of course, Hercules has shed his leopard skin and is mantled in respectability as an international company. But he still knows there are likely to be many angles to any one industrial chemical problem. Making finishes for railway coaches, for example, which must look beautiful and may also need to resist such things as fire and abrasion. Hercules has solutions for problems like this. If they are troubling you, why not ask him for his answers? Quite possibly, they will involve Ethyl Cellulose, which has a number of other technical advantages too.

HERCULES POWDER COMPANY LIMITED

ONE GREAT CUMBERLAND PLACE · LONDON · W.1

The reason is that 1964 is also very likely to be an election year. The new legislation will settle the entire future of the most important modern medium of communication, and it would be lamentable if it had to be thrashed out in the 1963-64 session, when the babble of electioneering will be deafening. The only sensible plan, therefore, is to introduce the legislation, and get it over and done with, during the 1962-63 session (though it would not come into force until after the election was over). This means setting up the royal commission straight away, with the aim of getting its report finished by the end of 1961 or early 1962 at the latest.

In a too leisurely way the Government is at the moment searching for someone sufficiently pompous and, especially, sufficiently uncommitted on broadcasting matters to be the commission's chairman. Obviously it is important that the chairman and other members should not, for instance, actively hate television—as so many intellectuals secretly do. On the other hand it is probably a mistake to rule out everybody who has ever expressed a view on how broadcasting should be run ; this could simply mean a clutter of members who have never thought at all. Equally it would be an egregious mistake to make the commission a large one in order to squeeze in every shade of prejudice ; the result would simply be a compromising report, which is just what is not wanted. The commission in fact, should be deliberately small, not more than ten at the most ; and it should be set up now.

CYPRUS

Dead End

ALTHOUGH the Foreign Secretary prefers not to say so, the negotiations on the British bases in Cyprus have broken down. The British Government's "final position" is unacceptable to the Cypriots ; both sides maintain that they have reached the limit of their concessions ; the independence of the island has been indefinitely postponed. All this does not rule out a fresh start ; on the contrary, it makes it imperative. A last minute effort at mediation by Dr Kutchuk on Wednesday came to nothing ; but it may contain within it the seeds of a future compromise.

Archbishop Makarios is no doubt a most difficult and exasperating negotiator ; and the British have certainly retreated a long way from their original demands in an effort to reach agreement. Moreover there is bound to be trouble when two sides have quite different conceptions of what they have signed. Still, it is hard to believe that the present deadlock would have been reached if the British Government had got the fact clear in its mind that it cannot usefully operate bases in the middle of other people's territory without any reference to the hostility or good will of the local population. Certainly it cannot in Cyprus, where, whatever happens, there will be some military facilities that are essential to the base but lie outside the sovereign areas. In the Commons debate on Tuesday, Mr Selwyn Lloyd and Mr Watkinson listed the successive concessions that the British have made. It does not seem to have occurred to them that concession has already, and necessarily, gone so far that they cannot rely on sovereignty alone.

The archbishop himself would not agree that he is trying to go back on his undertakings of a year ago, as he interprets them. He certainly cannot want to wreck the whole settlement, but is trying to extract the last possible concession from the British in order to make his domestic political position as impregnable as he can ; he may be calculating—probably over-optimistically—that the British have already run down their establishment on the island so much that they will be forced to give in soon. The British, for their part, should remember that the archbishop is the best representative of Cyprus they have. If they go on turning down his demands as extreme, they will eventually find themselves faced, not with more conciliatory Cypriot leaders, but with more extreme ones ; and if that happens they may very well finish up with no Cyprus base at all. A prolonged period of uncertainty holds great dangers for both the archbishop and the British Government.

CHARITABLE TRUSTS

Overdue Reform

THE first reforms in the law of charitable trusts for nearly a century are outlined in the Government Bill published this week ; its investment implications are considered in a business note. In law, charitable trusts are essentially private funds devoted to public benefit, and enjoy exemption from taxation and the rules relating to uncertainty and perpetuity. The bill first consolidates numerous acts and abolishes mortmain, a medieval device which ensures payment of death duties and prevents accumulations of property in certain corporations, especially the Church. It then goes on to enact certain new principles based on recommendations made by the admirable Nathan committee in 1952 and accepted in the government white paper of 1955.

The central problem to be solved today is not the misapplication of trust funds, the great issue of the last century and the theme of Trollope's novel *The Warden*, but the role of charitable trusts in the contemporary welfare state. The basic assumption of the bill is that charitable trusts still have a useful function to fulfil, especially of a pioneering character, that they should not be superseded by state services, but should work in co-operation with them, as partners not subordinates. Accordingly it rejects one recommendation of the Nathan committee —that local authorities should have power to vary the terms of a trust. In this it is clearly right, both in principle, since the wishes of testators should as far as possible be respected, and in practice, since nothing would be more discouraging to private philanthropy than the knowledge that the causes intended to benefit could at any time be abandoned. Instead the bill proposes to modify the *cy-près* rule, by which a surplus can be devoted only to objects very similar to those laid down in the trust deed, and broaden it to accord with the flexibility already conceded to educational trusts.

To ensure full information about existing trusts—an essential preliminary for intelligent co-operation between state and private bodies—a central register is to be maintained by the Charity Commissioners, entry on which will be conclusive proof of a trust's charitable nature, subject to an appeal to the High Court. Registration will be compulsory, subject to a number of exemptions. Local authorities are empowered by the bill to maintain public indices of local charities and to make arrangements for co-ordinating their work with national and local services. The bill deserves support as a realistic attempt to keep alive the voluntary principle in the circumstances of today.

DEREQUISITIONING

A Bill to Amend

THE Requisitioned Houses Bill, which got its second reading on February 4th, is regarded by the Government as a small tidying-up job and by the Opposition as both a confession of failure and a piece of gross social injustice. The Requisitioned Houses and Housing (Amendment) Act of 1955 imposed on local authorities the duty of realising requisitioned property by March 31st of this year. Of the 62,000 properties under requisition in 1955, all but 7,608 had been released by the end of 1959; by the end of March it is estimated that only ten or eleven authorities, nearly all in London, will be left with a total of some 1,500 properties whose occupants would, in default of further protection, become legal trespassers. The Bill empowers the Minister to grant these authorities a maximum extension of twelve months—subject to authorisation for each particular property retained, and to an increased rental to the owners—in which to finish the job.

Opposition criticism follows three main lines. The first is that the fact that the job is not finished shows how wrong the Government was, in 1955, to agree that it could be. The second is that all derequisitioning is damnable, since it restores property to owners who can make a profit out of it and upsets the priorities of the housing list. Thirdly, it was alleged that the Bill's financial powers are grossly unfair to those authorities who as a matter of history had to rely heavily on requisitioning because of especially heavy wartime damage and who as a matter of geography are desperately short of new housing sites.

The first argument is a debating point; the second is all of a piece with the Labour assumption that any batch of property owners, however fortuitously selected, are vermin whom it is right to keep out of their property not merely for fifteen years after the end of the war but for ever. In the third criticism, however, there is more substance. Whatever failures may be attributed to the inadequate zeal of Labour-dominated councils in pursuing the uncongenial task imposed by the 1955 Act, the facts of history and geography remain. Some part at least of the 1,500 properties concerned are a proportionately small but intractable hard core which no good will could have melted away within the existing time limit, and the effort over the next twelve months will be correspondingly difficult and expensive. It is right that property owners should receive, in compensation for their disappointed legitimate expectations, a less derisory rent. But it is unrealistic—some would even say vindictive—to withdraw the greater part of the Exchequer aid now available, whether statutorily or at the Minister's discretion, to local authorities acquiring or leasing property for the rehousing of affected occupants. This Bill is a basically sound Bill, but needs amendment in committee.

THE HEALTH SERVICE

Private Pills

There has been perennial agitation, ever since the health service was introduced, to allow patients who consult their doctor privately to obtain, at the state's expense, the drugs he prescribes for them. In other ways, it is argued, a person can be a part-private, part-health service patient; so why should this particular concession be denied?

The short answer is that it would cost money. Against a total drug bill of nearly £70 million, an extra sum of £2 million to £3 million—the amount estimated in 1955—seems ludicrously small for the state to cavil at. But the concession is being asked for in a branch of the health service whose cost it has proved quite impossible to keep down and which is wide open to abuse. It is quite true that a plea of hardship can be made for some cases—diabetics, for instance, who depend on a drug for the rest of their lives. But no one is refusing them free supplies of insulin if they cannot afford to pay for it. All the law says is that if you can afford to pay, say, two guineas each time you consult your general practitioner, you can afford to pay for the drugs he prescribes, just as it is laid down that if you opt for a private bed in a health service hospital, you also have to meet the surgeon's fee.

It is a pity that in 1949 the Conservative party, as part of its general championship of private enterprise, committed itself to granting a concession to private patients which has accordingly embarrassed Conservative governments ever since—to the extent now of a motion signed by at least 110 backbenchers. It is also bad judgment that the present government has not taken its stand on the issue of cost and the danger of abuse, instead of entering into the nebulous question of whether private practice has diminished, is diminishing and ought to be increased.

CUBA

Sugar for Honey

Time and again Latin American economists have hammered home their preference for trade over aid. Certainly both are needed, but a development loan or grant is no substitute for an ordered trading policy. The Latin American states have, as yet, little but raw materials to sell and for their national self-respect, if for nothing else, their insistent plea is for steady outlets at assured prices. The Russians have taken this point; their incursions into Latin America have strictly been along the ordinary trade routes. They have bought quantities of Brazilian coffee and Uruguayan wool, and now, as Mr Mikoyan on his second visit to Central America within three months was able to announce with a flourish, they have put in a big order for Cuban sugar.

The Soviet Union has ordered 345,000 tons of sugar at 2.78 cents a lb; this is a little below the world price but does not look unreasonable for an order of this size. The deal falls into place when it is compared with the yearly purchase of 3 million tons of Cuban sugar at 5 cents a lb by the United States. All the same, it has turned up very handily for the Cuban government, which has a lot of sugar to sell, including an unsold stock of a million tons at a time when it needs every cent that it can lay its hands on.

Relations between the United States and Cuba have grown more temperate again in the last week or two, and it would be a pity if Mr Mikoyan's visit were allowed to inflame them again. Señor Castro, for his part, would do well to ignore the poisoned honey of Mr Mikoyan's advice about confiscating means of production without compensation. As a model, the Soviet revolution has to be cut to Cuban size and circumstance.

The Economist

FEBRUARY 11, 1860

BUDGET PROSPECTS

If Mr Gladstone's Budget of 1860 is a very different one from that which he expected to propose at the present time when he brought forward his last great Budget in 1853. Almost all the material circumstances of Finance have changed since; the expenditure of the country, as Mr Gladstone is justly anxious to inform us, has augmented exceedingly, and we are now asked to give our assent to financial propositions which no one would have believed to be even possible seven years ago. The year which was to have been marked by the disappearance of the income tax, is to be signalised not only by its increase, but, also, by its seemingly permanent establishment in our financial system. . . . The total sum . . . which must be provided for by new taxes, independently of those just alluded to, supposing Mr Gladstone's Budget to be adopted, is £11,508,000. This sum must strike every one as a very large one, and any one but a bold Chancellor of the Exchequer would have shrank at it. It includes, it may be briefly said, the cost of four great operations,—first, the increase of the Army and Navy Estimates to such an amount as the Government consider necessary for the adequate protection of the country; secondly, the cost of the Commercial Treaty with France, from which Mr Gladstone hopes so much; thirdly, the abolition of many remains of our protective system . . . fourthly, the repeal of the paper duty. . . . The first remark which must strike every one as they consider the subject is, that Mr Gladstone proposes to us to do a great deal at once. With regard to the Army and Navy Estimates, the country will not, we apprehend, make any objection to their large amount . . . requisite for the substantial protection of the country; but it is very unfortunate that, just when we have to make such large military exertions, we should be required also, to make such large *pacific* exertions,—that we have to give up money just when we want money. Mr Gladstone tells us, indeed, that there is a natural connection between the two; he says that we ought to reduce indirect taxes, at the moment we are increasing our military expenditure, because the relief given to industry by the repeal of such taxes will be far more than sufficient to enable us in other ways to meet that expenditure. We should, he argues, take measures to augment our wealth at the moment when it is necessary to augment our outlay. . . . [But], on the whole, few persons will doubt that if we make the changes which Mr Gladstone suggests to us, we shall, before long, be paying an income tax at a shilling in the pound.

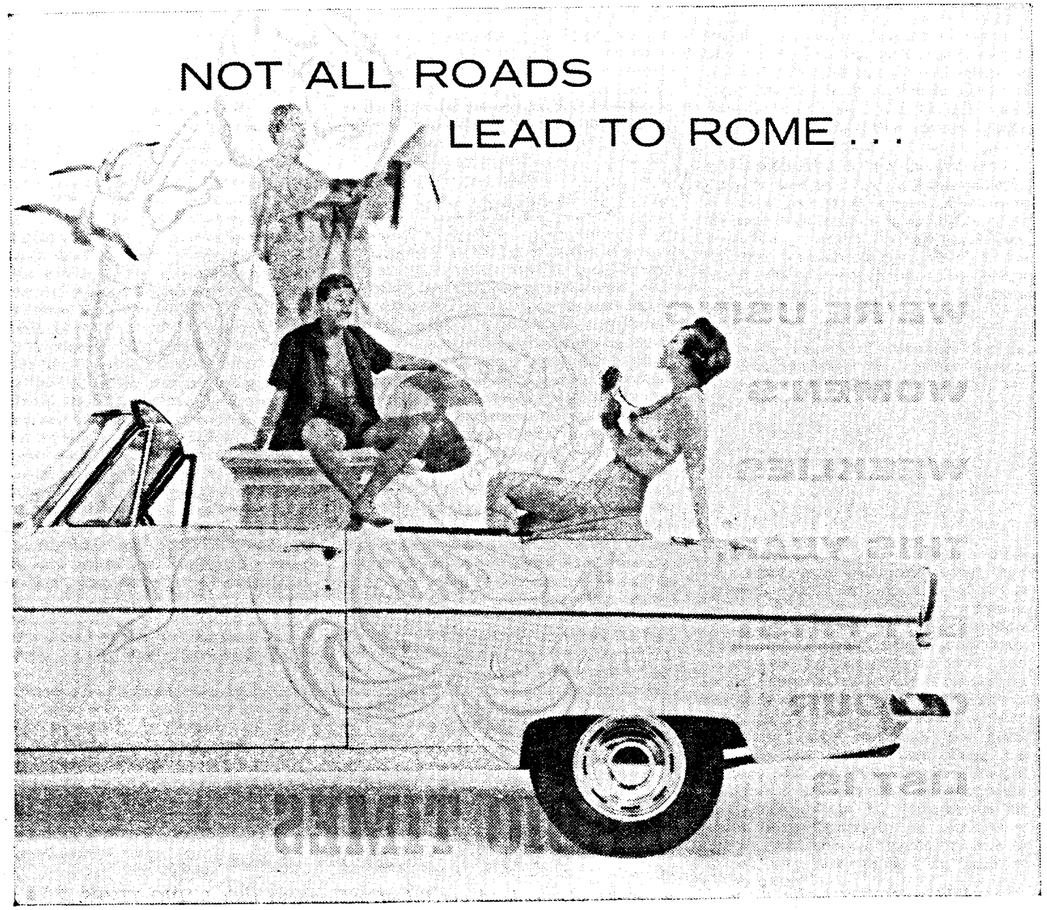
WE'RE USING WOMEN'S WEEKLIES THIS YEAR, BUT FIRST ON OUR LIST IS

RADIO TIMES

Whatever other media we decide to use we always head our list of publications with RADIO TIMES.

Our product is for the housewife. By advertising in 7 leading women's weekly publications we can reach, without duplication, approximately 61% of them. But Radio Times alone covers 54% of all housewives in the country—a far greater proportion than any other single publication.*

Obviously Radio Times must come first on our list. With Radio Times and even only two women's weekly magazines, we can reach 73% of the country's housewives.



*Figures of unduplicated readership based on special tabulation by IPA, fieldwork period—July 1958—June 1959.

DOMINICAN REPUBLIC

Borrowed Time

At Washington, the Organisation of American States is trying to find out more about the recent wave of political arrests in the Dominican Republic. In the past the organisation has often found itself faced with a clash of principles, its passionate belief in the principle of non-intervention cancelling out its effectiveness as a champion of human rights. But this time the American states have decided that affairs in the Dominican Republic are too shocking to be respected as private.

The Dominican Republic has acknowledged that 40 business and professional men and women have been sent to prison for 30 years for security reasons. But these arrests are believed to be only part of a much wider purge that last month swept hundreds of prominent citizens into custody. Not only do these mass arrests reflect the extent of the rebellious movement within the republic ; they have also broken the long alliance between the Dominican Church and General Trujillo. In a pastoral letter last week, six bishops pointed out that the suppression of human rights is a " grave offence against God." The general has been suppressing human rights for thirty years, but the swiftly changing order in Latin America has now left him high and dry. The Church's disaffection will be harder to survive than his neighbours' disapproval.

EUROPE

An Agricultural Puzzle

While the nature of the European common market for industrial products is plain for all to see, the agricultural deal struck by the Six in their treaty is an enigma. The Six agreed to set up a single common market for farm as for industrial products. But they did not settle in advance at what price level that market was to operate. Since this crucial consideration determines how protectionist the community will be, not only farmers inside it, but exporters outside, have been waiting impatiently to hear the answer. Some first indications were given to the British press in mid-January when Mr Mansholt, the Dutch member of the European commission responsible for drawing up its proposals on agricultural policy, visited London. Now PEP has summarised and commented on them in a short pamphlet.*

Even now, it is less easy to judge how protectionist the community will be than to make out the shape of the marketing methods it will use. The commission has made a variety of suggestions for marketing machinery. In grain, it suggests a common European marketing organisation which will buy the entire crop. Protection will be given through a system of variable levies on imports used to maintain a predetermined price. In animal products a co-ordination of separate national marketing systems is suggested, while the external tariff will provide protection. But at what level grain prices, for instance, will settle, and how big the protective levies will be, remains impossible to judge.

It is clear, and encouraging, that the commission's own intentions are good. It regards a structural reform of European agriculture, slashing the number of producers, as its first task. It holds that consumption, above all of high quality products, will rise so rapidly that there will be room not only for a big expansion of home production, but for a steady flow of imports from outside as well. Mr Mansholt has managed to give quotas a relatively small part in his marketing plans.

But the battle to decide where community prices will settle has still to be fought out over the years. As productivity rises, some embarrassing surpluses may be produced. It is easy to see why the Danes and the New Zealanders, as well as the retiring President of the National Farmers' Union, Lord Netherthorpe, are anxious to negotiate agreements with the community. The policies it evolves may have a decisive effect on world markets for farm products. And the commission, which now proposes to complete the common agricultural market within six years, instead of the twelve envisaged in the treaty, is not wasting any time.

* Proposals for a Common Agricultural Policy in EEC. PEP. Three shillings and sixpence.

BOOKS

Interest Dethroned

Capital, Interest and Profits
By B. S. Keirstead.
Basil Blackwell. 190 pages. 22s. 6d.

This is an important book. It is, perhaps, more destructive than constructive ; it will probably annoy both econometricians and model-builders ; but it deals with the relationship between the three elements of its title in terms of recognisable realities, not in those of ivory-tower abstraction. It has its perversities, especially prominent in the separate essays comprising its less important second part ; but these are largely a matter of emphasis. While a comparison with the "General Theory" itself would be exaggerated, it shares with that H-bomb of economic debate the property of making its subject look permanently different.

Professor Keirstead's analysis, respectfully rejecting both the classics and Keynes, owes a large and fully acknowledged debt to Professor Shackle and a smaller and unacknowledged debt to Marx. (It could be called an expectation-plus-exploitation theory ; but Professor Keirstead emphasises that the exploitation that he describes is most ruthlessly imposed by communism itself.) Investment, in the real sense of addition to real capital, results from the specific decisions of entrepreneurs to invest. They make these decisions because, after duly weighing greater or lesser degrees of uncertainty and greater or lesser potential rewards, they expect them to be profitable ; the greater the uncertainty the more glittering must be the incentive. In this double estimate of prospects, based on general expectations about national prosperity or stagnation and particular expectations about the firm's costs and markets, the rate of interest is not entirely inoperative, but is massively outweighed by other considerations. The more dynamic the economy, and hence the greater the element of uncertainty and the rate of profit required to outweigh it, the less its role becomes. As for the decision to "save," forgoing present consumption in order to reap a reward for providing loanable funds for investment, Professor Keirstead denies that it is generally a real, voluntary decision at all. Abstinence is typically imposed by those who do not themselves practise it ; by the "ploughing-back" policy of companies, the effects of the banking mechanism on prices, government fiscal action, technological unemployment, the squeeze on unsuccessful competitors, and, historically, the use of monopoly bargaining power to depress wages and the extinction of customary peasant rights. Voluntary individual saving (much of which responds in any case inversely to the rate of interest) is a minor element in the total. As a determinant of the supply, no less than of the demand, for loanable funds, the rate of interest is dethroned.

Some of this is decidedly controvertible. Even if interest rates have, compared with profit expectations and uncertainty, a negligible direct effect on investment decisions, they indirectly and powerfully affect those expectations themselves. Business does not, in recorded fact, laugh off credit squeezes. Moreover, interest charges directly affect that large volume of investment which uncertainty hardly touches—that of public bodies. The unimportance of voluntary thrift, and hence of its reward, needs more than dogmatic assertion. The rich have squeezed the poor through most of history, but squeezing alone has not produced investment. Among other necessary factors (such as technical knowledge) one must surely rank the willingness of the exploiters

to refrain from blueing the fruits of exploitation. The difference between eighteenth-century France and eighteenth-century England is not that between less-exploited Frenchmen and more-exploited Englishmen; it is that between a spendthrift and a provident ruling class. And Professor Keirstead dismisses over-readily what he describes as the "semi-voluntary" element in abstinence: the acquiescence of shareholders in restrictive dividend policy and of voters in fiscal policy. Here, surely, the valuation set on jam tomorrow is a real determinant.

Nevertheless, it would take stronger arguments than these to demolish his main contention—especially as it applies to policy. The rate of interest emerges as, at best, a very imperfect instrument of control, erratic in its incidence and producing effects whose timing and magnitude are alike unpredictable. More important perhaps in the long run—the bearing on Professor Rostow's "preconditions" and "take-off" stages of economic growth is obvious—is the unwelcome conclusion that coercive power is a necessary element in the process of capital accumulation, as necessary as the margin of squeezable resources on which it operates. Someone—enclosing landlord, exploiting industrialist, financial manipulator, commissar, or democratically trusted leader—has got to be tough; the narrower the squeezable margin, the tougher he must be. And in toughness, if not in other respects, the commissar has a long lead over the democratically trusted leader and even the not-too-scrupulous private oligarchy. The practical moral is the same as Professor Rostow's. The commissar's advantage must be neutralised, in those developing countries whose success or failure in development will ultimately determine their allegiance, by whatever amount of outside aid is needed to supplement that margin whose inadequacy makes toughness the supreme economic virtue.

From Knives to Guns

A History of Labour in Sheffield

By Sidney Pollard.

Liverpool University Press. 392 pages. 35s.

Most histories of the working classes concentrate on politics. The "common people" are the politically articulate. Dr Pollard's scholarly and extremely well-documented volume is a conspicuous exception. It is concerned with labour as much as with the labour movement, with conditions of life as much as with ways of thinking and acting. Unfortunately the effect is somewhat disjointed, and the different aspects of the story are treated in parallel rather than related to each other. The political sections of the book are rather too sketchy and the social sections too stereotyped. It is the sections on industrial organisation that are fullest and most revealing.

Dr Pollard's main theme is the place of labour in a shifting local economy, an economy of contrasts. The "light" trades of cutlery, silverware and tool-making were at their height in 1850 when the book begins. They were bound by tradition, but they enjoyed almost a world monopoly. During the later nineteenth century they declined both in numbers and in status, and the "heavy" industries of steel making, engineering and armaments grew rapidly in importance. Part III of Dr Pollard's book is concerned with the "end of an epoch," the years from 1893 to 1914, and Part IV discusses the inter-war years when the "light" trades were depressed and the "heavy" industries were subject to fluctuations of exceptional intensity. The book ends abruptly and artificially. There is no hint of what was to happen in Sheffield after 1939. The author seems too close to the facts of twentieth-century Sheffield history to see them in perspective. A few general conclusions would have given point to the details, which in places are almost overwhelming.

What the study does reveal is the great interest of this field of historical investigation. There is no similar book to this on the history of labour in any other British city. Perhaps it is fitting that Sheffield, which is such a working-class city, should have been the first source of inspiration. Its history lacks outstanding personalities—at least since the days of Roebuck and Ironside—and it is the "common people" who provide both content and continuity. The economic, social and political structures of other cities provide notable contrasts. Where else, for example, did "Lib-Labs" survive until the 1930s? In an interesting note, Dr Pollard remarks that "the débâcle of 1931 had little effect on local organisations, founded on class rather than doctrine. Only towards the end of the period did the progressive absorption of local politics by national issues begin to press the stamp of Labour party orthodoxy on local labour organisations." More perceptive generalisations would have enlivened this book, which nevertheless is a mine of useful information, gathered together with patience and industry.

A Slice of Naval Life

A Social History of the Navy, 1793-1815

By Michael Lewis.

Allen & Unwin. 467 pages. 42s.

The novelists' conception of a "slice of life" is now increasingly being taken over by historians. In this clearly written and beautifully illustrated book Professor Lewis aims at achieving just such a "slice of life" by a detailed study of the daily life of the officers and men of the British Navy during the Revolutionary and Napoleonic Wars; and he is completely successful. Not only does he give a convincing general picture of the recruitment and conditions of service of the relatively large force that made up the Navy in these years, but he also lightens and informs his study with individual touches that give life to the whole. In short, his book is fun to read.

But there is much useful instruction besides. It is, for instance, valuable to be reminded that the purpose of the notorious press-gang was to enforce the transfer of trained seamen from the merchant marine to the Navy, and that it was not, as respectable historians have sometimes claimed, aimed at recruiting landsmen. The pressure of the war with France forced the extension of this hated system by the establishment in the early 1790s of the Impress Service to work in all the main ports. By 1797, so Professor Lewis shows, this service was employing 128 officers under the central control of the Admiralty. Equally instructive is his fair and full treatment of the social origins of the officer class. He shows that while opportunity for advancement was much greater for those of gentle birth with influential friends than for those without these two worldly qualifications, yet the Navy was far from being officered by a closed caste. Thus Nelson's first lieutenant and his signals officer on board the *Victory* were both of "lower deck" origin.

It is when an attempt is made to relate Professor Lewis's work to the wider political scene that a faint feeling of disappointment creeps in. In particular he makes no attempt to explain the mutinies of 1797. Here was the moment when a social upheaval within the Navy seriously influenced high policy. England's negotiations for peace at Lille were conducted against the background of a mutinous fleet. Yet in treating the mutinies in a few pages Professor Lewis is more loyal to his service and its good name than helpful as an historian. He is content to blame the "infection" of the landsmen conscripted into the Navy under the Quota Acts of 1795. Yet, as he later shows, those feeble creatures even as late as 1812 represented only 12 per cent of any crew. Or again, in dealing with the important part played by political "influence" within the Navy, Professor Lewis seems ready to accept an exaggerated view of the corruption of politics in the age of Pitt. He talks of "the well-known parliamentary racket" and deplores the intervention of civilian First Lords in promotions and appointments. But this obscures one of the most interesting and significant parts of his work. The truth is that the numerous reforms he lists in the administration of the Navy during these years were part of a general political movement, inspired by Pitt, of wide administrative reform. The Navy here was moving with the times.

But these are small matters to set against Professor Lewis's large achievement. He has filled in the background of the Navy's successes in the age of Nelson. Here is the record of loyalty, of courage, of devotion to duty and above all of efficient seamanship that explains the defeat of Napoleon's ambitions.

Challenge to Asia

Communism in South East Asia: *A Political Analysis.*

By J. H. Brimmell.

Oxford University Press for the *Royal Institute of International Affairs.* 425 pages. 42s.

This able, painstaking and intelligent book inevitably invites comparison with another book that deserved these adjectives and covered roughly the same ground: Captain Kennedy's "Communism in Asia" (reviewed on page 29 of *The Economist* of July 6, 1957). In fact, Captain Kennedy dealt only with east Asia, and Mr Brimmell, understandably, has found it impossible to deal with South East Asia in isolation, so that he ends up by devoting as much space to China, and even to Japan, as Captain Kennedy did. Again, both authors started—as they must—from Lenin, and both had to deal, in succession, with the formative Comintern period of the twenties and thirties, the second world war and the Japanese new order, the creation of the Cominform and the concerted communist insurrections of 1948, in Malaya, the Philippines and elsewhere, and the transition to peaceful co-existence.

Because Mr Brimmell's book comes two years after Captain Kennedy's, he is able to do greater justice to the last of these phases. But, as he remarks in his foreword, it is impossible, in a book of this kind, to be up to date. Some of the assumptions of a penetrating last chapter read a little strangely, in the light of the Chinese repression in Tibet and border incursions at India's expense. It is quite true that the Chinese communists, by smiling at Bandung and adopting the "five principles," made the Americans look foolish for advocating the Seato alliance as a means of deterring Peking from aggressive aims that most Asians preferred to discount. Events in Tibet and the Indian border incidents have jolted much of South East Asia out of its complacency. It does not follow, however, that the sudden loss of support for China will mean a corresponding gain for the United States.

Whether right or wrong about Peking's intentions, Mr Brimmell's general thesis is therefore likely to remain valid. This is that South East Asia is, broadly speaking, a distinctive region of Hindu-Buddhist traditions, which does not, *a priori*, welcome either communist or capitalist methods. In finding its own way to economic betterment, most countries in the area are likely to adopt some form of co-operative socialism. The further argument that even if those countries allow their communist parties to play an important part in government, they need not become communist in the Sino-Russian sense is qualified by the rider "unless, of course, they come under Sino-Soviet domination." The trouble is that they probably would.

All things considered, this is a worthy addition to the long line of authoritative Chatham House surveys.

Nine Days' Rout

To Appomattox

By Burke Davis.

Eyre and Spottiswoode. 433 pages. 50s.

Much is known about the surrender at McLean's Horse, but it still moves us, not simply because it was the inevitable dénouement of the tragedy of the Civil War but because General Horace Porter was there. We know, in fact, so much about the American civil war and can still be moved by what we read because there were Horace Porters throughout the ranks of the Federal and Confederate armies. Many of the successful (and unsuccessful) generals of that war were professional West Pointers, but they were surrounded by intelligent, articulate amateurs who were conscious that history was in the making and were anxious to record the part they played and the events they observed.

It is the memoirs and the regimental histories of these intelligent amateurs as much as the controversies of the top-ranking generals and the documents of the "Official Records" that give the civil war its vivid actuality a century later. The trouble is that the memoirs, the histories written ten, fifteen, twenty years after the event, put a romantic gloss on the war. It is a particular kind of romanticism (perhaps specifically an American kind), for it is realistic in the sense that the pain and the suffering and the trivial are not forgotten in the heroism and the significant. But it is still romantic in being just a shade larger than life.

The profusion of contemporary narratives and comments has led as the centenary draws near to a number of impressionistic, day-by-day, blow-by-blow reconstructions of separate facets of the war. Inevitably, they too take on this slight romantic glow. Mr Davis's book, describing the nine days' rout that began at Five Forks and the breaking of the siege lines at Petersburg and ended with the surrender of Lee's Army, is better than most. The little known anecdote is blended with the familiar and there is sufficient comment to prevent the reader from becoming confused. It is a merit of this book, for instance, that it shows how much Lincoln had got inside Grant's mind (and Grant in his) by reporting a comment by Lincoln, four days before the surrender at Appomattox, on seeing some Confederate prisoners. Lincoln then said: "If Grant is wise he will leave them their guns to shoot crows with, and their horses to plough with. It would do no harm." A few days later Grant, it will be recalled, ordered the Confederate arms to be stacked but let the rank and file as well as the officers keep their horses—to plough with.

Input-Output

Interindustry Economics

By Hollis B. Chenery and Paul G. Clark. *John Wiley & Sons.* London: *Chapman & Hall.* 360 pages. 64s.

Whether or not Input-output analysis is regarded by economists as a "monument to be admired" from a safe distance rather than "a technique to be acquired," there can be no question that Professors Chenery and Clark have written a first-class book, serving two very useful functions. Primarily, it is an authoritative textbook, consolidating and drawing upon the many input-output studies that have been carried out in some twenty countries, studies to which the authors have themselves made signal contributions. The first half of the book, extending to six chapters, explains the nature and uses of input-output tabulations, sets out the properties of the basic Leontief model, and demonstrates methods of solving the systems of equations upon which the method relies. There is a helpful exposition of linear programming technique in the fourth chapter and an invaluable summary in the sixth of various tests that have been carried out to assess the potentialities of input-output analysis.

The second half of the book fulfils a different purpose, in that it is in effect a progress report on applications of the techniques expounded in the earlier chapters. Starting with a brief survey of interindustry study and research in selected countries, the authors apply interindustry analysis and linear programming to the problems of comparing productive structures over a period of time and between nations, both in an historical and a predictive setting. Illustrative of the widespread use that has already been made of these techniques is the fact that countries as widely separated as Columbia, Argentina, Italy, Japan and Norway figure in this treatment.

The book is itself a "model of production"; not only is it well thought out and carefully documented with bibliographies at the end of each chapter, it is also well arranged and printed. If there is a fault, it is perhaps that the specialist will not find very much that is new, while the more general reader may experience some difficulty in getting through the thickest of matrix algebra in the initial stages.

Individual Responsibility

Authority, Responsibility and Education

By R. S. Peters.

Allen and Unwin. 137 pages. 12s. 6d.

The ten essays comprising this book have a good deal more unity than is generally found in a collection of reprinted broadcast talks and lectures, even when revised for purposes of publication. Their central theme—not only in the literal sense—is personal responsibility; its relation on the one hand to external authority, on the

other to the "blind forces" of social pressure and infantile psychology. From the nature and genesis of responsibility, as thus described, there follow certain conclusions about the rôle of the educator and the techniques of education. The last two papers were originally delivered as lectures to teachers or to teachers in training. But it would be a great mistake to assume that only those professionally concerned with education or other youth services will find Dr Peters worth reading. Parents, and the intelligent young themselves, could profit considerably from what he has to say.

It is, no doubt, possible to accuse Dr Peters of paddling overconfidently about at the shallow edge of very deep waters. The ultimate question of free will and determinism is unlikely to be settled, if ever, at the commonsense level. It is on the commonsense level, however, that human beings have to live in society, and for living in society responsibility is the only practicable working hypothesis. Dr Peters has next to nothing in common with the old-fashioned moralist who froths and sputters at the notion that aberrant behaviour may be compulsively determined by social or phychological causes. He respects Freud ; he even respects, within limits, Marx. But he argues forcefully and patiently that free responsibility is the norm, compulsion the pathological exception ; what he calls "the contemporary malaise" comes largely from a confusion between antecedents and exonerating circumstances. "If people believe they are not responsible for their actions, they tend in fact to be less responsible for them."

Dr Peters has other, subsidiary themes: the stress imposed by the shift from a static, paternalistically authoritative society to one in which the "rules" must be constantly re-framed to meet changing circumstances ; the relation of ends and means in education; the nature of "character," the "maturation levels" described by the Swiss psychologist Piaget. Whatever he has to say on these is marked by the same lucid, sensible, and almost always charitable tone. (The oddly assorted exceptions to his charity are Angry Young Men and some modern learning theorists.) This is an unpretentious but genuine contribution to a healthier and saner society.

Darwin's Failings

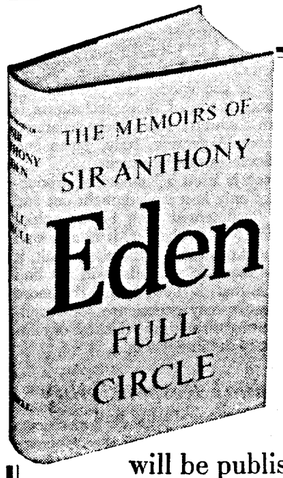
Darwin's Place in History

By C. D. Darlington.

Basil Blackwell. 111 pages. 9s. 6d.

PROFESSOR DARLINGTON'S short book is very different from most of those that have appeared in celebration of the Charles Darwin centenary. In the first place he gives what is almost always a proper though unpalatable answer to the question of scientific priority—"Who discovered?"—(whatever it may be). Darwin, he says, and he brings much documentary evidence to prove it, was much less of an innovator than is generally believed.

The great man, according to Professor Darlington, had three kinds of vices:—



> A conservative outlook in every respect except the evolutionary hypothesis, a failure to recognise or to relate . . . his larger ideas, with those of others working in the same field; and a flexible strategy which is not to be reconciled with even average intellectual integrity . . . . Darwin was slippery.

The book suggests that the points on which Darwin chiefly failed, was in never deciding, or at any rate never making clear, whether he believed in "hard" heredity—the sort he might have accepted if Mendel's work had been available—or whether he favoured the ideas of "soft" heredity associated with Lamarck, and believed that "aspirations" induced by, say, education, environment and habit can influence heredity.

It is difficult for the layman to take sides in such a controversy, but the argument is well set out. Here and there the author branches into interesting discussion. For instance, he suggests an answer to the question of why—granted "the survival of the fittest" and "adaptation"—with such a similar environment, Indian tribes in tropical America do not resemble the negro inhabitants of Africa.

> It is only a thousand generations, [he says] since they crossed into America and were sieved, as it were, through the climate of the Behring Straits.

African peoples, an the other hand, "have had fifty times as long" to adapt themselves to tropical conditions. Is this why Africans so quickly replaced the native peoples in the Americas ?

The most important political and diplomatic memoirs of our time *& 1960's most controversial book*

will be published world wide at 35s.

A TRACT ON THE REFORM OF TAX AFFECTING THE "INDIVIDUAL." By Oliver Piers Stutchbury. *Hepburn.* 28 pages. 5s.

Mr Stutchbury believes, and few would contradict him, that it is easier to make money than to earn money, and he fires full blooded salvoes at the three evils that are now built into our tax system—benefits in kind, confiscatory rates of taxation and the exemption from tax of much fortuitous wealth. His diagnosis is pungent, and will be accepted by most who believe that the tax base is being eroded. His remedies—the taxation of perquisites, the abolition of surtax and a tax on fortuitous enrichment—will not be so readily embraced, but those who object will have to think hard to find good reasons for their dissent.

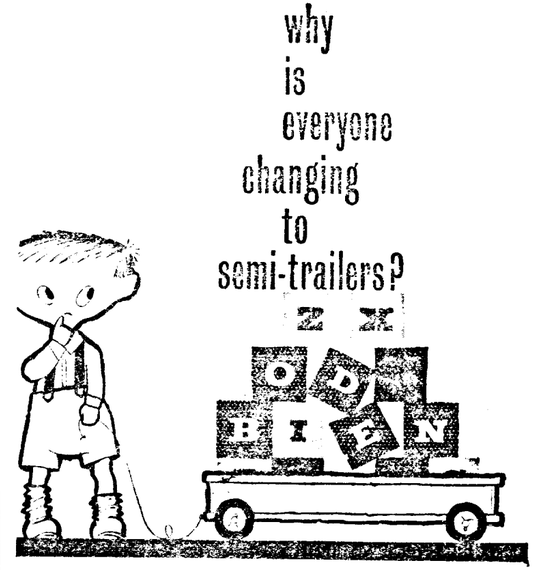
New Periodicals : The first issue of *Race* (10s. twice yearly), the journal of the Institute of Race Relations, appeared for November, 1959. It contains *inter alia* a useful psychological analysis of subjective feelings about people of other races (out-groups) by H. V. Dicks ; an article on the franchise and race relations from the African point of view by B. T. G. Chidzero, which is far less biased than most similar studies written by Rhodesian whites ; and an article by Philip Mason setting the study of race relations in a general perspective.

Tsopano (8s. for 12 issues from P.O. Box 2719, Salisbury), of which the third issue has now reached London, is run by a liberal group, mainly white, to keep political discussion in Nyasaland alive even during the emergency, and has survived a certain unofficial harrying by the CID. It is a valuable window on a darkened scene, though it mainly concerns itself with grievances. But there is probably no other *ombudsman* available in the area.

Marchon adds a sparkle to the world

People all over the world use detergents to make life easier and brighter. *Detergent manufacturers* all over the world know Marchon as the producers of a versatile, highly developed range of detergent raw materials.

Marchon make detergent chemicals and sell them all over the world.



Marchon
PRODUCTS LIMITED

Manufacturers of: Fatty alcohol sulphates (EMPICOLS), Emulsifiers (EMPILANS), Self-emulsifying waxes (EMPIWAXES), Alkylaryl sulphonates (NANSA), Hydrotropes (ELTESOLS), and other detergent bases in powder, paste and liquid forms, Fatty alcohols (LAUREX), Phosphoric acid and complex phosphates (EMPIPHOS).

Cut Price Competition

SIR—Mr P. W. S. Andrews writes as follows on cut prices "It is the smaller business with a good product which, on the basis of the American experience, seems so especially vulnerable to loss-leader selling by prominent distributors."

One must first inquire what is meant by "loss-leader selling." If we accept, for argument's sake, the definition that a loss-leader is an item or service furnished at less than cost of production or invoice cost, then we can find no documented examples of such sales in either Canadian or United States official governmental inquiries. I must, of course, admit that the sales by Doc Webb's St Petersburg Florida Pharmacy of $1 bills for 98 cents were loss-leaders, and also one must admit that popular magazines are sold for less than physical production cost, as are free television shows, because the advertiser subsidises the publication or showing.

There is much loose talk of loss-leaders and little proof of their existence or resultant harm. Texas has survived with a fair share of all sorts of retailers, large and small, despite a ban on resale price maintenance that has an uninterrupted history beginning in the late 1800s.

Mr Unwin, who is also concerned with price fixing should know that I consider myself well served by bookdealers who give my mail orders a 30 per cent discount in the United States. I also purchase by mail in England where prices are sometimes lower than list, less 30 per cent, in the United States.—Yours faithfully,

E. ERNEST GOLDSTEIN
University of Texas

Cameroun

SIR—The letter in your issue of January 16th from Dr Moumié and M. Ouandie, the exiled leaders of the *Union des Populations Camerounaises*, may be misleading to readers unfamiliar with developments in the Cameroons in recent years. I do not wish to deal here with the personal positions in the UPC of M. Mayi Matip or M. Dika Akwa, to whom they referred in their letter. But the basis of their claim to speak on behalf of the Cameroun people, whose present independence they appear to question, calls for examination.

What are the facts? Prior to independence, Cameroun was neither a French colony nor a member-state of the French community. It was a trusteeship territory administered by the French government on behalf of the United Nations, to whom the French government were responsible. In May, 1955, after riots instigated by the UPC, that party was banned by the French government and its leaders, including Dr Moumié and M. Ouandie, fled to the British Cameroons, whence they were later evicted for stirring up further trouble. Not being able to gain their ends by legitimate means they organised a campaign of terrorism and violence, which has not only resulted in considerable loss of life, but has inevitably hindered the economic development of the country.

When the French government decided—with United Nations approval—to grant independence to Cameroun on January 1, 1960, the UPC leaders and their friends requested the UN to arrange for further elections to be held before independence was declared. The request was, however, rejected, and on January 1st Cameroun became an independent sovereign state. M. Ahidjo's government has since offered an amnesty to the exiled UPC leaders and full freedom to return to the country provided they renounce terrorism. This they have failed to do.

It is interesting to note that throughout this period, and particularly since the stepping-up of the terrorist campaign following the rejection of the UPC appeal to the UN, the exiled UPC leaders have received the clear support of the communist powers. Both Dr Moumié and M. Ouandie have several times visited Moscow and Peking, where they have received "red carpet" treatment; and when last in Peking Dr Moumié was reported as having publicly condemned the United Nations for their resolution criticising the Chinese subjugation of Tibet.

The UPC record speaks for itself; it is one of violence, intransigence, open contempt for the United Nations, a total failure to contribute to the well-being of Cameroun, and subservience to the policies of communist imperialism. This is scarcely a record that is likely to appeal to an African people anxious to strengthen the independence they have so recently acquired. As Dr Moumié and M. Ouandie claim, history will judge. There would seem to be little doubt what its verdict will be.—Yours faithfully,

FRANCIS MORRIS
Effingham

What's Wrong with Local Government?

SIR—It is extremely difficult to reduce very complex issues to simple language; and I trust you will accept a criticism of your statement on housing subsidies in the spirit in which it is offered—a spirit of admiration of your courage in attempting the useful survey of current local government problems. The wording of your statement that housing authorities get over £70 million a year in subsidies for slum clearance and "overspill," but not (with a few exceptions) for any other purpose is hardly correct.

Firstly the £70 million (Great Britain figure) includes subsidies on all houses built since 1919, and while in theory authorities could spend them all on slum clearance or "overspill" houses, in practice, much of this total continues to go on houses built for general and other needs. Secondly, since 1956 there has been a special subsidy for 1-bedroom council houses of £10 p.a. in England and Wales. This subsidy was intended to encourage the building of houses suitable for old people and has been effective: 25 per cent of council houses built are now of this type. This is now an important priority.—Yours faithfully,

London, NW1 GEOFFREY BLOCK

★

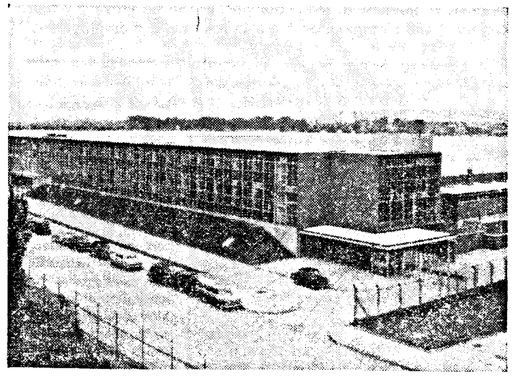
SIR—To a Scotsman your articles on British local government are particularly interesting, since they make it so clear to him that no uniform system of British local government exists.

Here, in Scotland, we have no county boroughs. The four counties of cities have similar powers, but the position of the large burghs is rather different from that of any group of English authorities. The 62 counties to which you refer do not include some 30 Scottish ones—more or less according to one's view of what constitutes an effective shire. We have no aldermanic tradition, our local authorities seldom deal directly with Whitehall and the Labour party controls many of the most important county councils.

It is very much to be hoped that any reforms based on the conditions you describe will not be applied to Scotland. It is quite contrary to experience here that "larger units of local government have become essential for efficiency": on the contrary, we still suffer from the effects of the ill-considered Acts of 1918 and 1929 which destroyed the liveliest local authorities outside the towns—school boards, the independent education authorities which followed them and parish councils—and weakened the smaller burgh councils which often did their work cheaply and well. It is only now that the district councils, introduced as a compromise in 1929, are beginning to assert themselves effectively.

What is most needed in Scotland is some arrangement which would give the local authorities a more sufficient revenue of their own, independent of government grants. This would ensure a sense of true responsibility and real self-government in local affairs which could do more than anything else to bring the best available men and women into the councils. It could also encourage a federal approach to the problem of larger areas such as the Clydeside conurbation.—Yours faithfully,

Glasgow, S1 J. M. REID



"OUR DECISION TO MANUFACTURE IN NORTHERN IRELAND, FULLY JUSTIFIED BY RESULTS"

Sir Cecil Weir, Chairman of International Computers & Tabulators Limited pays tribute to Northern Ireland's "magnificent contribution"

"Soon after the war growing demand for Hollerith (now I.C.T.) Punched Card equipment and a decision to make machines in the U.K. led us to expand our production substantially. At Castlereagh, near Belfast, we were offered and accepted two Government-built factories covering a total area of 268,323 sq. ft.

The first extension of 100,000 sq. ft. is already in full operation and we hope soon to be commencing production in a second extension, also of 100,000 sq. ft. The plant now covers about half a million square feet and is the largest in area of the 20 factories in the I.C.T. Group. It is already employing over 1700 people and this number will rise considerably in the months and years to come. This, by any measure, is a large and important production undertaking and to have consolidated this development in ten years is an achievement to which the Northern Ireland Government and people have made a magnificent contribution. It has been a team effort.

This extension of 200,000 sq. ft. nearly doubles the capacity of the Castlereagh factory of I.C.T.—the largest in area of the twenty factories in the I.C.T. Group.

The site at Castlereagh allowed us to plan a layout that gave us the flexibility we required. The policy of the Ministry of Commerce to earmark generous areas of land adjacent to their factories for possible future expansion needs has enabled us nearly to double the size of the original factory. The quality of the factory buildings is excellent and we now occupy a factory which not only provides us with the accommodation we need but is also quite an industrial show place.

The manufacture of high speed automatic calculating and accounting machines and general purpose electronic computers calls for skill and precision. I.C.T. find Northern Ireland workers learn new techniques quickly and well.

We were attracted to Northern Ireland by, among other things, the availability of labour and the tradition of engineering skill and craftsmanship for which the province is noted.

Valve chassis assembly at the Castlereagh works.

The manufacture of electro-mechanical and electronic machines requires a high standard of precision work. We were able to recruit a number of electronic engineers locally and although our employees had a different background from our own, early difficulties were overcome, and we have found the Ulster man and woman to be keen, hard-working and adaptable. We started with the assembly of electro-mechanical machines, but with progressive

NORTHERN IRELAND MEANS BUSINESS

Within the past fourteen years 140 British and American firms, large and small – and including many who are recognised internationally as leaders in their respective fields – have selected Northern Ireland as the location for new plants to serve the United Kingdom, European, British Commonwealth and other overseas markets.

But there is nothing new or tentative about Northern Ireland's industrial background. There is here, in Government, in management and in workers, a long experience in meeting the exacting needs of progressive manufacturing businesses.

In Northern Ireland there is plentiful available labour of first class rating – men and women of the kind who have a world-wide reputation for the high quality of their products and their inherent skill in engineering and other manufacturing processes.

The Northern Ireland Government can offer a wide selection of plant sites and can provide individual facilities which make all the difference to the ease and speed and cost of bringing a new factory into being and into production.

There is, in Northern Ireland, a continuing programme of Advance Standard Factory building – some of these are ready to walk into now. Standard Factories built to order or Special Purpose Factories to meet individual structural requirements can readily be negotiated.

Over and above all this the Northern Ireland Government is able to ease considerably the initial burden of capital costs by paying as much as one-third (33⅓%) not only of the cost of building a factory but also of the cost of machinery for the plant.

In many other ways, which can only be summarised here (but details of which the Ministry of Commerce will very gladly supply) the Northern Ireland Government is able to make the path plain, the way simple and the result a success. And without red-tape!

THE ADVANTAGES IN A NUTSHELL

1 Plentiful trainable labour
2 Possibility of multiple shifts
3 Little absenteeism: low labour turnover
4 High output per man
5 33⅓% capital grants for plant, machinery and new buildings
6 Grants towards transfer of machinery to Northern Ireland
7 Government factories to meet your needs on rental or repayment
8 Grants for training and services
9 Concession rents
10 Industrial fuel rebate
11 Housing priorities
12 Active help by Government departments

Some of the 140 Companies with factories established in Northern Ireland since 1945

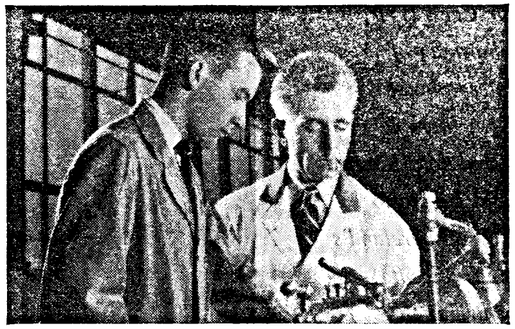
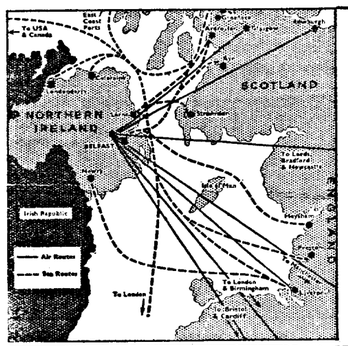
works for progressive industries



YOU CAN BE THERE IN 2 HOURS

By B.E.A. from London 1¼ hrs.–Birmingham (direct) 1 hr. 50 mins.
Glasgow 1 hr.–Manchester 1¼ hrs.

For details of how Northern Ireland's development plans can help you write to: NORTHERN IRELAND DEVELOPMENT COUNCIL (Chairman: The Viscount Chandos) · 13 LOWER REGENT STREET · LONDON · SW1 · (Tel: WHI 0651) or 99 PARK AVENUE, NEW YORK 16, N.Y. · (Tel: Murray Hill 2-6820) or, if you prefer, direct to THE MINISTRY OF COMMERCE · CHICHESTER STREET BELFAST · (Tel: Belfast 28271) All enquiries will be treated in the strictest confidence.



training we now manufacture and assemble a wide range of electronic multipliers, calculators and computers.

Obviously there was a big training exercise to be carried through in the first few years in manufacturing an entirely unfamiliar type of equipment. This training was undertaken successfully. Our

Wilbert Aiken, a young apprentice of I.C.T. at Castlereagh, receiving centre-lathe instruction in the Training School. Aiken is one of over 100 craft apprentices who are at various stages of training as fitters, machinists and I.C.T. machine builders. After 18 months he is ready for production experience and has obtained three distinctions in his second year O.N.C. examinations by day release studies. Apart from technical training he has been to the Outward Bound School, and has nearly completed the test for the Duke of Edinburgh's Silver Award.

apprentice scheme is working well, and the quality of local entrants is good. Vacancies present our school with the difficult task of selecting from a great number of applicants. Supervision has now been taken over at all levels mainly by local men and women. The number of executives stemming from our English works is now very small. The growth of the factory speaks for itself and we enjoy an informal partnership with the Ministry of Commerce which we value very highly—in short, our decision to manufacture a substantial number of our products in Northern Ireland has been fully justified by the results. Productivity is developing in accordance with our expectations and we hope continuously to increase it, make our production progressively more economic, and to expand both our output and our employment."

In addition to fast sea-freight services, Northern Ireland is well served by passenger and freight air services to and from the leading industrial centres of Gt. Britain. A one-day return business journey to Northern Ireland by air need present no more of a problem than most similiar journeys within the mainland—and is often simpler.

JUST PUBLISHED. Write for a free copy of the second edition of "Freight Services to and from Northern Ireland" published by the Northern Ireland Development Council which reviews, in detail, the methods and services available for the movement of freight between Northern Ireland and Great Britain and World Ports.

TBW.9

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Targets for Missiles

WASHINGTON, DC

ONLY in America—to use a current phrase—can public opinion undress its government, as the Administration has been undressed in the last two weeks, right down to the naked essentials of its defence policy. Six different committees of Congress, an assortment of generals and ex-generals and most of the Washington press corps have spent a happy fortnight laying bare all but the most secret details of the "missile gap" that is expected to open between the Soviet Union and the United States in the next few years. The result has been some damage to the English language—military men, who used merely to swear, now use words like "surviveability" and "over-kill"—and a good deal of disagreement among the experts. The *New York Times*, tallying insignia on shoulder-straps, finds fifteen stars' worth of generals who think that America's defences are adequate and thirteen stars' worth who do not.

But enough information is now available to clear away some of the confusion that clouded the last debate on the subject a year ago. The bulk of the evidence suggests that President Eisenhower has been right, and his critics wrong, on the chief point at issue. The Russians' lead in missiles is unlikely ever to become so great that they could destroy the Americans' entire retaliatory power at a single blow. Where the President is on weaker ground is in thinking that the minimum retaliatory power which the United States looks like retaining between 1961 and 1963 is enough to keep the Russians on their good behaviour.

The problem can be defined with an almost mathematical precision. The Americans undoubtedly have more than enough strength at the moment. The Strategic Air Command could put some 1,400 bombers into the air tomorrow with a load of up to 20 megatons of nuclear weapons apiece, and it is calculated that more than half of them would get through the Soviet anti-aircraft defences. Thus, even though the Russians could destroy some of the bombers before take-off with the comparatively few missiles which they now possess, the equivalent of several billion tons of TNT would land on the Soviet Union. The critical point will come when—and if—this awesome force can be obliterated on the ground by a surprise missile attack.

General Power, the commander of the SAC, pointed out recently in New York that there are at present fifty bases in the United States and fifty more overseas—the latter mainly tactical airfields—from which nuclear weapons can be despatched against the Soviet Union. Only three missiles would be needed to knock each of them out. It is generally agreed that the fifty overseas bases are already at the mercy of the Russians' ample supply of intermediate-range missiles. The question, therefore, is how soon Mr Khrushchev is likely to acquire the 150 intercontinental ballistic missiles needed to destroy the bases in the United States; and whether, in the meantime, the Americans can make this harder to accomplish by increasing the number of targets he would have to hit and by reducing the vulnerability of their nuclear striking force.

The answer to the first part of the question was given to a Senate committee last week by Mr Allen Dulles, the head of the Central Intelligence Agency. Unfortunately for the journalist, the meeting was secret but, after the brief delay customary to congressional committees, three separate versions of what he said have now trickled out. It is clear that the CIA, on the basis of the peculiar blend of information it derives from spying, radar observation of test flights and economic deduction, does not expect Mr Khrushchev to have his magic figure of 150 ICBMs until some time in the first half of next year.

THIS estimate has been attacked by the Administration's critics on the ground that it is based on the number of missiles the Russians are expected to produce, rather than the number they could produce, in theory, if they set their industry going at full speed. It is possible that the CIA is wrong, as it has been on other occasions in the past. But Mr Dulles, who is more warmly respected than his late brother ever was, has been at some pains to explain why it is possible to refine the method of calculation now that Soviet missiles are in the production stage. Only Mr Joseph Alsop, the most persistent of pessimists, says roundly that the estimate is unreliable. The rest of the critics seem disconcerted. No one has produced a rival estimate: even Senator Symington, the Democratic candidate for the Presidency who has made defence his special preserve and who accuses the Administration of "juggling" the intelligence books, has been careful not to attack Mr Dulles's figures.

Furthermore, if Mr Khrushchev's 150 ICBMs are still a year or more in the future, there are three reasons for thinking that the Americans will be in a much healthier position by the time he gets them. In the first place, they will have brought several more intercontinental missile squadrons of their own into service, thus increasing the number of targets the Russians must count on destroying. To these will be added two or three Polaris submarines, each carrying sixteen missiles; these are far less vulnerable than fixed launching sites on land. In the second place, a third of the new early warning system—the part covering the path that most Soviet missiles are expected to follow—will be in operation by early next year. This far-flung radar screen gives fifteen minutes' warning of the approach of missiles. The SAC now keeps about 500 of its bombers at fifteen minutes' readiness on the ground; the new warning system might give them just time enough to get off the runways before the runways vanish.

Finally, it may be possible by early 1961 to keep a significant number of the SAC's aircraft permanently in the air and thus out of the way of attacking missiles. A dozen bombers are already being kept aloft in an experimental airborne alert; and the money allocated by the Administration this year would keep fifty of them airborne for a sufficient part of the time to confuse Soviet calculations. Since it costs a million dollars a month to maintain a B-52 bomber in the air round the clock, there are limits to what can be done in this direction. But by a doubling or tripling of the Administration's fairly modest request—such as was proposed last weekend by Congressman Mahon, one of the defence experts in the House of Representatives—a respectable number of B-52s could be put on permanent patrol.

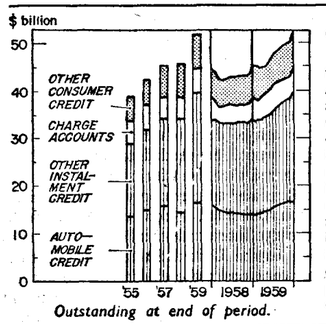
Thus it may soon be possible for Americans to breathe more

easily, if Mr Dulles has done his homework properly and if the Soviet Union does not conjure a few hundred extra missiles out of its hat. The trouble is that a sudden knock-out is not the only danger confronting the United States. The country has been so obsessed with this problem that it has almost ignored another possibility: that a retaliatory force big enough to deter the Russians from launching a missile assault may not be big enough to stop them from using their superiority as a shield behind which they can conduct "conventional" military adventures. The Air Force, which has been worrying about this, thinks that the Russians will have roughly the same degree of nuclear superiority between 1961 and 1963 as the Americans had towards the end of the Korean war. At that time the planners calculated that, if atomic weapons were used, it would be impossible to stop enough Soviet bombers from getting through to the United States to kill several million people. But this did not deter the Americans from devastating North Korea with ordinary bombs and using the threat of a nuclear strike to keep the Communists from hitting back at American airfields. It is possible to envisage the same kind of "nuclear blackmail" being used, the other way around, in the next few years.

Thus Mr Khrushchev might be able to get away with conventional murder behind the threat of using atomic weapons; and he might think that the risk of several million Russians being killed if his bluff failed would be no greater than the risk Americans accepted a few years ago. In fact, unless he is a more bloodthirsty fellow than he looks, this is a far likelier danger than a direct missile attack on the United States. It raises the question of how strong the American retaliatory force ought to be to make such nuclear bluffing too risky. This is a factor that ought to be taken into account in the Administration's defence plans; otherwise the United States might be in the position of having both hands in front of its chin and none to guard its solar plexus.

Candidates Go to School

THE first big Democratic challenge to the President at this election year session of Congress has come over federal aid to education. The battlefield is well chosen. Last year a public opinion poll showed Americans to feel that education had the first claim on any increase in federal spending and in the coming financial year the President hopes that there will be a budget surplus of over $4 billion. He would like to use it to pay off a bit of the public debt, but last week the Senate voted, by 51 to 34, to grant the states $1.8 billion in the next two years for education, to be used either to build new schools or to raise teachers' salaries. The debate gave all four of the Democratic candidates for the Presidency in the Senate a chance to go on record in favour of substantial federal help for education. It also forced Mr Nixon, the sole Republican candidate, who as Vice President presides over the Senate, to go on record against a similar, but even more generous, Bill; some think that the tie which he had to break was not altogether accidental.



Politically the Democrats could hope for nothing better in the Senate. But the House of Representatives will determine whether, in fact, Mr Eisenhower is to be presented with a Bill at all and, incidentally, whether any help is to be forthcoming this year for the schools. At present the federal government pays only a marginal 3.5 per cent of the cost of education, which is a state and local responsibility; all attempts to provide federal money to raise standards throughout the country, and particularly in the states which suffer from too many children and too little cash, have come to grief over local fears of federal interference or over the questions of racial segregation in the South and of the Roman Catholic schools. The Committee for Economic Development, an association of forward-looking businessmen, recently issued a report recommending that federal aid should be confined to the eleven poorest states, ten of them in the South.

This educational means test has little political appeal. But even the liberal Democrats recognise that the Senate Bill will have to be trimmed if it is to slip through the needle's eye of the Rules Committee in the House and be passed on the floor. The Democrats' strategy there is apparently to ask for grants of only $325 million a year, in the hope that this might be raised a bit when the Senate and House versions of the Bill have to be reconciled, and to confine the use of the money to construction. If this strategy succeeds, then the Democrats will have set the Administration a real problem; Mr Nixon, with all his brave campaign talk about raising standards in the schools, will not be happy about a veto of a relatively modest Bill.

Compact Impact

THE new "compact" cars, which represent such a revolution in the idea of what the American motorist wants, had no chance, because of the steel strike, to show off their sales paces in the concluding months of last year. But the automobile manufacturers consoled themselves by forecasting that buyers, ashamed of their 1955, 1956 and 1957 vintage cars and attracted by the novelty of the new ones, would use the money and credit at their disposal to demand about 6.5 million new American cars in 1960; if imports of about 500,000 foreign ones are added in, the total would be close to the record sales of 7.2 million in the peak year of 1955. Production duly hit a record last month, nearly a quarter of it consisting of the compact models. But sales were only 10 per cent higher than they were in January, 1959. This does not look like the beginning of a 6.5 million car year, although buyers may come swarming in now that showrooms are full of cars and dealers are busy cutting prices. For the moment, however, manufacturers are applying a discreet brake to their assembly lines.

Sales of the compact cars, which are smaller, cheaper and more economical to run than the standard-sized ones, have done well so far, partly, no doubt, because of their novelty. But they are cutting into purchases of the larger models; Ford's Falcon and Chrysler's Valiant have been particularly popular. However, the manufacturers are far from certain that they have at last caught the consumers' exact wavelength, and they are experimenting with a bewildering array of choices. Compact cars are available with engines of higher horse-power than were offered originally; Ford is only the first to bring out a "luxury" compact, the Comet, and it is talking of a still smaller car which would compete more directly with the foreign-made models. (The Volkswagen and Renault still cost about $300 less than the cheapest American car.) Sizes are graduated almost as carefully for motor

CONSUMER CREDIT

Because there were so few cars for sale in America in December, as a result of the steel strike, new hire purchase loans extended on automobiles in that month fell below repayments by $79 million. During the last four months of 1959 the average monthly increase in instalment debt outstanding for motor cars was only $75 million, compared with $360 million during the summer.

For the man who really cares

Are you three men in one – part business man, part family man and with a dash of the debonair sportsman? There is just a little coterie of such enthusiasts to whom we think the Riley 4/Sixty-Eight will appeal.

Visit your nearest Riley dealer and see for yourself what this elegant new Riley has to offer you... brilliant acceleration, carefree high cruising speeds, and low running costs — combined with luxurious appointments to make it outstanding by any standards... better still—*drive* the Riley 4/Sixty-Eight, then you will be convinced that this is indeed *the* car—made for the man who really cares.

Price **£725** *plus £305.4.2 P.T. Duotone colours extra.*

Every RILEY *carries a* 12 MONTHS' WARRANTY *and is backed by Europe's most comprehensive service—*B.M.C.

Riley 4 SIXTY EIGHT

for Magnificent Motoring

RILEY MOTORS LTD., Sales Division, COWLEY, OXFORD
London Showroom: 8-10 North Audley St., Grosvenor Sq., W.1
Overseas Division: Nuffield Exports Ltd., Oxford and 41-46 Piccadilly, W.1

For the motorist who wants big performance but not a big car—the lively *Riley One-Point-Five* is the answer. A sports-tuned engine developing 68 b.h.p. gives long-stride motoring, combined with a compact body designed to seat four people in real comfort. What is more, you can enjoy this big hearted performance at surprisingly low running costs. Price **£575** plus £240.14.2 P.T.

R465/58

cars as they are for dresses. The producers are waiting anxiously for the motorist's verdict.

So are the foreign manufacturers, who sold about 600,000 cars in the United States last year, over 50 per cent more than the 377,548 sold in 1958. But one development which will lose none of them a night's sleep at present is the announcement that Russian Moskvich cars are to be offered to American buyers, for only 10,000 are to be imported in the next two years.

Atoms out of the Bag

By blurting out at his press conference that he favoured amendment of the Atomic Energy Act to permit American nuclear weapons to be shared more freely with trusted allies, President Eisenhower embarrassed those government officials who had been hoping to relax the restrictions without asking for changes in existing legislation. Congress's Joint Committee on Atomic Energy, already suspicious that it was being circumvented in some way, will now insist on the strictest application of the promise made by the Administration, when the Act was amended in 1958 to permit closer co-operation with allied countries on nuclear matters, that actual atomic warheads should remain in American custody until war breaks out. If the Administration does ask for further amendments—and it has not yet decided to do this—the committee will certainly scrutinise the request at length; it is therefore doubtful whether there would be time for final action during this session and even more doubtful whether that action would be favourable.

The immediate reason why the military experts have brought up the point is because the present interpretation of the Act requires atomic warheads to be kept entirely separate from the weapons which are to carry them and which are already in the hands of various members of the North Atlantic Treaty Organisation. To bring the two together, if war broke out, would take so long, it is argued, that the weapons would not be ready in time to be of any use. At the moment Britain, with its Thor intermediate-range ballistic missiles and its Genie air-to-air missiles, is more concerned than anyone else; but soon Italy and Turkey, also to have IRBMs, will be involved; and eventually, if the United States equips its allies with the tactical atomic arms which are becoming conventional for Americans, they will all be affected.

This raises the question whether West Germany can be left without atomic weapons if other allies have them. Yet nuclear arms for Germany would provide the Russians with a good excuse for giving similar weapons to its own allies, including perhaps Communist China. The "nuclear club" would thus become world-wide. The President wants to avoid this by negotiating an agreed ban on atomic tests; meanwhile, he sees no point in denying to America's allies weapons and information which the Soviet Union has already obtained for itself. But both among his advisers and in Congress are many who do not feel so generous, especially as regards France, with its supposedly unsatisfactory security arrangements and its uncompromising leader; moreover, they dread the proliferation of potential sources of nuclear war which would accompany any proliferation of nuclear weapons.

Roving Commission

It has taken the White House over a year to put flesh on the bare bones of the President's idea of a Committee on National Goals, which now joins the thirty or more study groups and commissions created by Mr Eisenhower and still in existence; many more have disbanded or faded quietly away. The chairman is to be Dr Wriston, the former president of Brown University and the head of the American Assembly, the body created by Mr Eisenhower when he was president of Columbia University to study problems of broad national interest; the new committee will operate through the Assembly. Its other members include Mr Pace, who was Mr Truman's Secretary of the Army and Director of the Budget, Judge Learned Hand, General Gruenther, Mr Meany, the labour leader, Dr Conant and other eminent representatives of the business and academic worlds. What is still unknown is where the committee's money is coming from. Mr Eisenhower feels strongly that the task of plotting American goals for the next decade can best be done by private individuals, privately financed, but the view of at least some of the great charitable foundations which have been approached has been that the Administration lacked a sufficiently clear idea of what the committee was to do.

In his Message on the State of the Union last year Mr Eisenhower spoke of updating the monumental work of the Committee on Social Trends which President Hoover appointed in 1929, and which was financed by the Rockefeller Foundation. But the Hoover committee's task, which it discharged admirably, was essentially a fact-finding one. It was headed by a distinguished economist, the late Wesley Mitchell, it was staffed by social scientists, and it disavowed explicitly any intention of leading Americans into the promised land. The new committee, by comparison, is staffed by laymen and administrators.

It is understandable that a Republican President may not have cared to say so, but the job of laying down objectives for the country and finding ways of reaching them seems much closer to the work done under President Roosevelt by the National Resources Planning Board, which mapped out the problems and challenges to come in the postwar period. However, the mission of the Wriston committee may be changed when a new President is installed next January. Mr Eisenhower has waited so long to create it—the idea was first discussed inside the Administration five years ago—that the committee, at best, will be able to present only an interim report to Mr Eisenhower before he leaves the White House.

Head-on on Lend-Lease

If last month's negotiations in Washington on the repayment of the Russian lend-lease debt were to be regarded as a test of the "spirit of Camp David," then that conciliatory draught has obviously lost most of its potency. Admittedly Mr Bohlen, who represented the State Department, and Mr Menshikov, the Russian Ambassador, remained friendly throughout, but their minds never met even though they clashed head on and in the process knocked out the negotiations after only four rounds. They never even got down to the point at issue—how much the Soviet Union should pay the United States for civilian goods received under lend-lease arrangements and left over after the war ended. These were originally valued by the United States at $2.6 billion but during earlier negotiations the demand had been scaled down to $800 million, repayable over 30 years at 2 per cent interest; this was the lowest the Americans felt they could go without giving the Russians far better terms than more faithful allies had received in their lend-lease settlements.

The highest Soviet offer, made in 1952, was for $300 million but this year Mr Menshikov, with typical Russian insistence on a "package deal," made any negotiations on the debt dependent on a promise to restore most-favoured-nation treatment to Soviet imports into the United States and on long-term credits for Russia. The first was withdrawn by Congress from the Soviet Union during the Korean war; the second is forbidden under the 1935 Johnson Act which prohibits loans to countries which are in default on

Consumer's Champions

NEW YORK

THE well-being of the American consumer —as regards both his stomach and his pocket—is receiving an unaccustomed flurry of attention. The indignation let loose by the television quiz scandals has ricochetted into every corner of the advertising world, breeding a general suspicion of the claims made for the wares being sold. On a separate tack Mr Arthur Flemming, the Secretary of Health, Education and Welfare, has been plunged, by a recent change in the law, into noisy combat on the whole question of chemicals added to foods. The public, roused from its customary inertia by the suggestion that some of these ingredients may induce cancer, is beginning to wonder whether the contents of those immaculate packages that line grocery shelves are as pure as they look.

True to its reputation for rating cleanliness at least on a par with godliness, the United States first provided for the federal inspection of food supplies as long ago as 1906. Nevertheless, the few enthusiasts who have laboured since then to equip public agencies with adequate legal powers and enough money to do their job have had an uphill struggle. The Agriculture Department inspects meat, but in general the Food and Drug Administration, now part of the Department of Health, Education and Welfare, is responsible for seeing that foodstuffs, medicines and cosmetics are clean and wholesome and that their contents are listed clearly and comprehensively on their labels. The FDA makes spot checks, to the limit of its resources, of factories and warehouses all over the country and follows up complaints. Offenders are taken to court where they may be fined or, in some criminal cases, given a prison sentence.

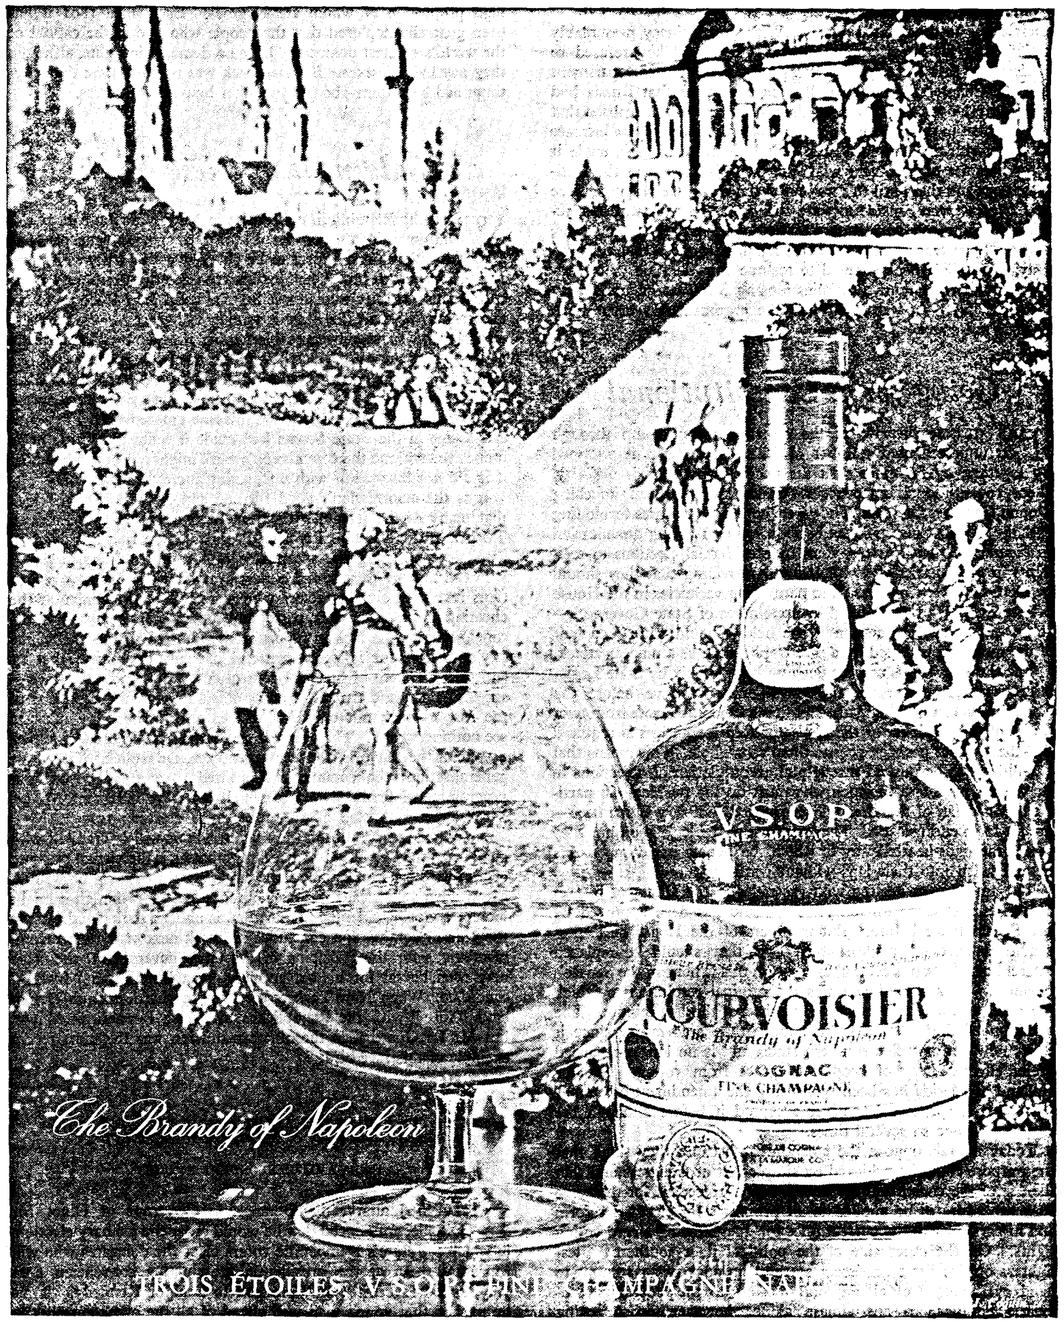
The agency has built up elaborate rules for labels: they must not be misleading about quality (noodles with chicken cannot be passed off as Chicken with Noodles) nor about quantity (the container must not be larger than the contents warrant). Colouring can now be added to margarine to make it look like butter, but in restaurants it must be served on triangular-shaped or labelled dishes. For many products such as jams and jellies the FDA has established formulas and products which do not meet these must be labelled accordingly. Substandard and mislabelled goods are confiscated and a recent month's haul included cocoa with bits of shell in it, tins of tuna fish inadequately filled, vitamin tablets below strength, six alleged weight reducers and a new "Ten Day Press-on Nail Polish" which displayed a tendency to destroy the nails beneath.

THE march of science has complicated immeasurably the work of the FDA. It must now test insulin, penicillin, various antibiotic drugs and the coal-tar dyes used in foods and cosmetics. A controversial problem is posed by the enormous postwar increase in the use of chemicals in food—to bleach or colour, to flavour or deodorise, to moisten or dry out, to thicken or stabilise. Of the 700 or so chemical compounds in regular use, perhaps 550 have been adequately tested. In the past, these additives have been presumed harmless until proved otherwise by the FDA. But in 1958 the onus of proof was shifted to manufacturers, who were given eighteen months to submit their evidence.

The deadline is in March and the squeals of food-producers are mounting. They claim that they have not had enough time; testing usually requires the feeding of additives to different species of animals for several years. Moreover, most chemicals are poisonous if taken in large enough doses, and the fixing of safe quantities or "tolerances" (which must be suggested by the manufacturer and approved by the FDA) is a difficult and arbitrary business. The new law has substituted the word "toxic" for the more drastic distinctions of "poisonous" and "non-poisonous," but it has done nothing to define how much poison is in fact poisonous. Another crisis is brewing because the FDA has shifted from the "safe" to the "doubtful" list a group of coal-tar dyes used in the manufacture of lipsticks. Nobody imagines that women eat lipsticks by the mouthful, but a special provision of the law prohibits the use of these dyes in small quantities if they are injurious to animals in large doses—as they have been shown to be. Faced with the ghoulish prospect of a nation of white-lipped women, Congress may give Mr Flemming the discretion which he would like to have.

The FDA has also been training its guns on the chemicals left on foodstuffs from sprays, fertilisers and other processes. Here again, it must establish "tolerances," which may run from zero upwards. The *cause célèbre* was Mr Flemming's warning to housewives that the cranberries being bought for Thanksgiving dinners might in some cases prove to be garnished with a weed killer that had produced cancer when fed to rats. Mr Flemming has been criticised by many, including even the Secretary of Agriculture, Mr Benson, for alarming the public—and harming the producers—unduly; but since 1958 the law has banned rigidly the use of cancer-inducing chemicals which leave a residue in any food.

CONTROL over advertising was vested over twenty years ago in the Federal Trade Commission, an independent regulatory agency whose larger task is to prevent the unfair trade practices which anti-trust legislation forbids. When the FTC deems an advertisement deceptive, it makes a complaint and (unless the manufacturer concurs) issues a cease and desist order. If the offender then objects, hearings are held by the FTC; if the order is upheld by the commission and the manufacturer is still recalcitrant, the matter passes to the courts. Only when life and limb are threatened can



the FTC get the advertisement withdrawn pending a decision by the court.

Unlike the FDA, which can move forward with reasonable speed, the FTC must negotiate formidable legal hurdles. It has, for instance, taken 16 years of litigation to establish that Carter's Little Liver Pills have no discernible effect on the liver, and to succeed in having the offending word omitted. Many of the commission's cases rest, like this one, on medical or clinical evidence on which reasonable men can differ, and the argument drags on in the courts until every legal loophole has been explored. But any scheme for cutting through these legal knots—by substituting a measure of administrative decision for the due process of law—is frowned upon as distinctly "un-American."

IT has often been objected that the FTC exists to ensure fair play among producers rather than protection for consumers; most of the complaints about advertising come not from consumers but from injured competitors. The public, of course, often benefits from the commission's actions; a good example is its labelling programme for certain fabrics and furs, which was started to protect manufacturers from imitations. But now, stimulated by a new chairman, Mr Kintner, and by the television scandals, the FTC is unusually active on the consumer's behalf. It watches advertising on television, and recently it has accused manufacturers of using shaving cream to ice cakes, of soaping glasses to produce a good head on beer and of other visual misdemeanours. Advertisers, to whom such techniques of "imaginative" promotion are routine, are up in arms.

There is a limit to what lengthy legal proceedings can accomplish, and so the commission is working hard to keep alive public interest in advertising; in December, for instance, it convened a conference of consumer groups for this purpose. It also intends to extend the practice, used with some success in the past, of getting manufacturers together to work out standard advertising rules for individual products; the cigarette industry has just done so.

The task of protecting the consumer has grown far more rapidly in the last twenty years than the money provided for it. A Citizens' Advisory Committee, which scrutinised the FDA in 1954, was appalled by the inadequacy of its funds and demanded that its budget be tripled or quadrupled within a decade; in granting a current budget of $13.8 million, against one of only $5.5 million in 1955, Congress has moved some way in this direction. But there is much less agreement on what can and should be done about the thorny problem of advertising. At present the FTC spends some $2.5 million in this field out of its annual budget of $7 million. Some think that a large increase in funds is the answer to the problem, but others question whether effective control is possible in a country that spends $10.3 billion a year on advertising with all the ingenuity of Madison Avenue thrown in.

Entrevue de l'Empereur Napoléon et du Grand Duc dans les jardins du Palais de Wurtzbourg - 2 octobre 1806

Continued from page 623

their debts to the United States. With an obstinacy presumably ordered by his superiors in Moscow Mr Menshikov refused to understand that these were matters not for the State Department but for Congress, although it had been thought that Russia had agreed to re-open negotiations on lend-lease because it realised that a settlement in this field was an essential preliminary of any increase in trade with the United States. Mr Bohlen on his side made it clear that the only subject which he would discuss was the lend-lease debt and that until this was out of the way there was no chance of Congress even considering any change in the legislative restrictions on commerce with Russia. The Soviet Embassy now insists, and the State Department denies with equal firmness, that at Camp David Mr Khrushchev agreed to resume consideration of a lend-lease settlement only if discriminations against Russian trade were also included. At least, for once, the argument has been short, even if not sweet.

Going for a Constitutional

THE greatest surprise of the Senate's recent romp through an unprecedented number of Bills came when it wrapped up together, by far more than the necessary two-thirds majority, three constitutional amendments which had all been knocking around Congress for years. The parcel contains measures forbidding that the payment of a poll tax be required as a voting qualification in federal elections; giving votes in presidential elections to residents in the District of Columbia and providing that they should be represented in Congress; and permitting vacancies in the House of Representatives to be filled by appointees of State Governors—at present special elections must be held—should more than half of the members be killed by a catastrophe such as a nuclear attack.

The three measures may be dealt with separately by State Legislatures; three-quarters of these—38—must approve before the Constitution can be amended. But first a favourable vote from two-thirds of the members of the House of Representatives is required and the surprise package goes to them as a whole. This means that it will have to be pushed through an accumulation of objections to its various parts and the men who must do the pushing—in particular Mr Celler of the already over-worked Judiciary Committee—are far from enthusiastic. They approve of the legislation but they resent the light-hearted way in which the Senate has dumped this extra burden into their laps without warning.

The amendment dealing with vacancies in the House of Representatives first came up ten years ago and has been approved by the Senate twice before. But members of the House of Representatives have other ideas about how they should be replaced after a holocaust and feel that in any case this is none of the Senate's business. This amendment was the original resolution to which the other two amendments were attached at the last minute. The abolition of the poll tax is little more than a formality since it exists now in only five southern states and is no longer regarded as an effective way of keeping Negroes from voting. Senator Holland of Florida has been sponsoring the amendment ever since 1949, but the Senate has never accepted it before although the House has done so several times.

Today liberals oppose the amendment because they think that the purpose could be achieved by simple Act of Congress and that the use of the constitutional process sets a precedent for the same slow procedure to be applied to all proposals for electoral reform and in particular to the current ones for guaranteeing Negro voting rights. On the other side of the political floor southern states-righters oppose the amendment as the thin edge of an attempt to hand over control of all electoral matters to the federal government. Southerners are almost alone, however, in opposing enfranchisement for the residents of the District of Columbia, a high proportion of whom are Negroes. Ever since 1801 it has been generally deplored that the people who live in the capital of the world's greatest democracy have no democratic rights, although they pay federal taxes. But last week was the first time that anything had been done about it by either house of Congress.

Judgment on New York

WHEN the Republican authorities in New York State authorise an investigation of the Democratic government of New York City, they must expect to be charged with partisan bias and political opportunism. Relations between the two are bound to be bad because the city wants more State aid and more freedom to tax and to borrow than the State is willing to cede. Moreover, State inquiries are suspect because blackening the name of Democratic office-holders helps to elect Republican members of the State Legislature from constituencies in the city. The Nelson commission, which has just turned in the preliminary report required by February 1st, is no exception to this rule; moreover, the Republican leader in the State Senate had made it quite plain that more money to continue the commission's work might not be forthcoming if it did not busy itself with uncovering more "irregularities."

It is the commission's good fortune and New York's bad luck that many of the irregularities have been uncovering themselves. Two of the city's five Borough Presidents are now involved in scandals concerning the acceptance of favours from businessmen who had favours to seek and almost every week brings new revelations involving city inspectors who were bribed to connive at the cheating of buyers of milk, petrol and fuel oil. By comparison, the conclusions of the Nelson report seem almost restrained: that the city's government is weak, wasteful and ultra-political; that its antiquated system of financial control costs the taxpayers unnecessary millions; and that most of its officials—with the exception of the Mayor—lack not only any will to reform, but also affect to see nothing wrong. The sharpest criticisms were drafted, it seems, by one of the Mayor's own two appointees, Dr Gulick. With these generalisations the committee submitted a carefully worked out programme of financial reform which even the indignant Mayor, Mr Wagner, admitted might prove to be useful.

No one likes to condemn the Mayor, who is widely credited with good intentions. The report itself says that he is the virtual prisoner of his own Board of Estimate, the city's main governing body. But Mr Wagner's political future, which once looked as though it might include a vice-presidential nomination, is under a dark cloud. When the Nelson commission concludes its work next year with recommendations for the reshaping of the city's government, the stage may even be set for his replacement by a Republican "fusion" candidate. When New Yorkers are tried too hard, enough Democrats "fuse" with the Republicans to elect a Republican Mayor, but Mr La Guardia, in the nineteen-thirties, was the most recent example of this rare bird.

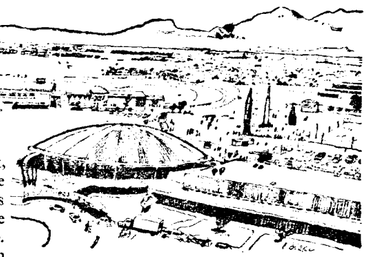
DiSalle's Clever Deal

FROM A CORRESPONDENT IN OHIO

EARLY in January, the Democratic Governor of Ohio, Mr DiSalle, announced that he would enter the primary election, in which the state's Democratic voters elect the delegates who will represent them at the presidential nominating convention next July, as a "favourite son" pledged to Senator Kennedy. Thus he pushed that young man well ahead of all the other entrants in the race for the Democratic nomination and so far this lead has not been lost. The delegates will be pledged nominally to Mr DiSalle but his promise meant that Mr Kennedy could count on their votes; the Ohio delegation is the fourth largest at the convention and represents an important industrial state. Moreover, Mr DiSalle's unexpected support came at a strategic moment and encouraged doubtful Democrats in other states to favour Mr Kennedy.

Mr DiSalle did not bestow this gift on the Senator out of personal affection, or because both are Roman Catholics; religion is an issue which they would prefer to keep out of the campaign. Mr DiSalle was forced to act as he did by hard political facts: Senator Kennedy was proposing to enter delegates in the primary pledged to himself to oppose Mr DiSalle's. Public opinion polls showed that Mr Kennedy might win as many as 80 per cent of the Democratic votes and he was backed by Mr DiSalle's chief rival for control of the party in Ohio, Mr Ray Miller, boss of the city of Cleveland. All this meant that Mr DiSalle was in danger of being defeated, of losing control of the Ohio delegation at the convention and, more important, of losing control of his party in the state when he had still three years of his term as Governor to run.

By plumping for Senator Kennedy, Mr DiSalle outfoxed Mr Miller, although the latter is still running delegates in opposition to Mr DiSalle's in Cleveland. Ohio may therefore send a divided delegation to the convention but since Mr Miller's delegates will also be pledged to Mr Kennedy the Senator can count on all Ohio's 64 votes, for the first ballots at least. And he has been saved the expense and exhaustion of fighting a campaign in Ohio. By making his announcement only four weeks before the final date, February 3rd, for entering the primary, Mr DiSalle left no time for any other candidate to organise support or a list of delegates. Even Senator Lausche, who denounced Mr DiSalle's move bitterly as a "deal" which had "stripped" the Democrats of Ohio of their right to make a choice in the primary, could spare neither time nor money to enter.



In addition to shoring up his position at home Mr DiSalle has left himself free, should Senator Kennedy fail to win the nomination, to hand his delegates to another candidate. And should the man he supports win the Presidency, then Governor DiSalle might be rewarded with a post in the Cabinet. There are rumours that he was happier in Washington as price stabiliser in Mr Truman's day than he is now in Columbus, the state capital.

SHORTER NOTE

The decline in the bill rate since December has enabled the Treasury to shave a trifle off the interest on the two new securities offered in exchange for nearly $11.6 billion worth of maturing government debt. One, a note coming due in four years and nine months, is priced to yield 4.93 per cent; the other, a 4⅞ per cent one-year certificate, is offered at par. Holders of only $500 million of the maturing securities have requested cash and this successful outcome of the refunding makes it unlikely that the Treasury will need to go to the market for new money before April.

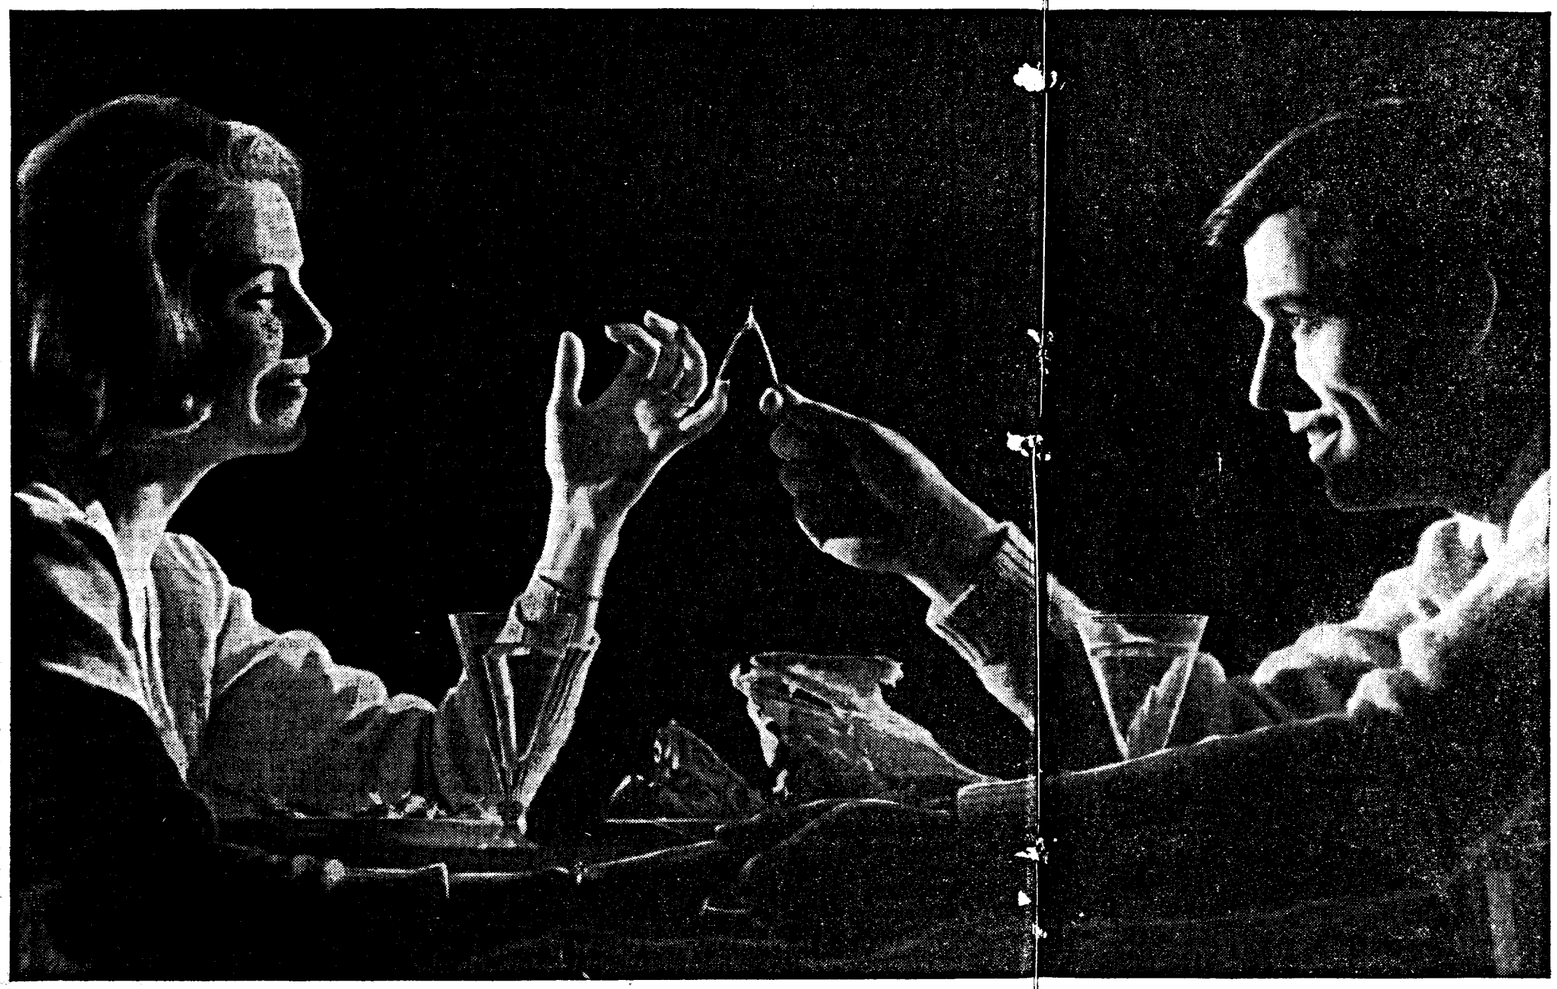
Las Vegas Goes Respectable

FROM A CORRESPONDENT IN NEVADA

WHEN the World Congress of Flight, America's attempt to rival the Farnborough Air Show, was held in Las Vegas last spring, the whole tone of the famous gambling town went up. Admittedly delegates, nearly 6,500 of them from 51 different countries, were free to play until all hours of the night at roulette, blackjack, chemin-de-fer, twenty-one or baccarat (introduced for the first time recently), at the dice tables or on the slot machines. But by day they took seriously the business of addresses, symposiums, exhibitions and demonstrations on every aspect of air-space. Never before had a gathering of such prestige come to this wide-open town. Never before had it been possible. For the Congress of Flight marked the opening of the new Convention Centre; until then Las Vegas had been unable to accommodate a large conference and its ancillary activities.

With some 12,000 hotel rooms, about one-third more than the city of San Francisco, Las Vegas has had for some time one of the qualifications needed by a city which wants to attract the conventions that can bring so much business to a town. In the off-season (from October to May), when conventions are particularly helpful, it is possible to get a room for two people at a plush hotel for as little as $10 a day, and to see revues with the best stars from New York or Hollywood for the price of a $7 dinner or for the $3 charged for a midnight drink. The relatives and hangers-on who accompany the serious conventioneers can spend the day seeing the western desert at first hand and visiting such national parks as the Grand Canyon or Hoover Dam. Or they can concentrate on recouping the expenses of the trip by gambling.

Of course, this subsidises everything else in Las Vegas and is its main attraction and source of revenue; but even the gambling is tailored to suit the pocket of everyone. Stakes as low as 25 cents may be placed at any of the captive casinos in the hotels and 5 cents can win $5 dollars from one of the slot machines which are found in batteries everywhere, even in drug stores and supermarkets. However, gambling is not an unmixed blessing to Las Vegas; its sinful reputation has frightened off some convention business. But the new centre is keeping clear of betting and of the gangster element which is said to control it. The centre, giving the town a symbol of legitimacy, should gradually overcome its reputation for being only a gambling hell; thus it will encourage the tourist trade and put the economy of Las Vegas on a sounder basis.



While no other international gathering like the Congress of Flight has yet been booked, those coming before long include the American Mining Congress and gatherings of the American Federation of Musicians, the National Electrical Contractors, the National Auto Accessory Manufacturers and the National Council of Catholic Women. The centre, built at a cost of some $6.2 million, seats 18,756 in the auditorium beneath a gleaming aluminium dome, and the adjoining exhibition area has 119,000 square feet. Air conditioning throughout makes it comfortable even in mid-summer, when daytime temperatures outside rise to above 100 degrees Fahrenheit.

The centre was financed by two bond issues offered nationally, and interest payments are being met out of the proceeds of a special tax on hotel rooms. This tax on visitors is expected easily to cover the maximum annual interest payment of $752,000, leaving funds over for advertising the centre and keeping up the parks and swimming pools which were financed by the same issues of bonds. Because visitors are paying for it indirectly the auditorium is offered free and the rest of the space is relatively cheap.

Monsanto

Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities

Millions of wishes come true in plastic film

ONCE, chicken was a rare and longed-for delicacy on most British tables.

Today, over 60 million are bought each year, very many of them attractively packed in plastic film. Monsanto produces special grades of polyethylene for this kind of display packaging. Polyethylene wrapping makes chicken and many other foodstuffs even more appealing: it keeps them fresh and free from dirt, yet lets the housewife see exactly what she is buying.

Besides many grades for plastic films, Monsanto also makes polyethylene for bottle-blowing, pipe extrusion, cable covering and injection moulding. And a big investment in research is enabling Monsanto chemists to discover new, important uses for this remarkable material—in fields as far apart as textiles, building and agriculture.

So, in production and in research, Monsanto is helping manufacturers and consumers alike to reap the full benefits of polyethylene: yet another way in which Monsanto brings a better future closer.

MONSANTO CHEMICALS *bring a better future closer*

If you, as a manufacturer, are interested in chemicals or plastics, it will pay you to get in touch with Monsanto.

THE WORLD OVERSEAS

Nato's Next Steps

FROM OUR DEFENCE CORRESPONDENT

A YEAR ago, the North Atlantic Treaty Organisation faced with a well-founded trepidation the blows which General de Gaulle had in store for it. A week ago, it was sighing with relief that the crisis in France, which might have compelled it to consider moving its centre of operations from its newly completed building at the Porte Dauphine to some more stable metropolis, had been avoided by General de Gaulle's disciplining of his army and of the Algerian settlers. Perhaps as a result, there was a widespread feeling that the year of crisis was over; that calmer waters for the alliance lay ahead.

The arguments on which these hopes are based are three. In the first place the general had to be rough with Nato last year in order to establish his prestige and his independence as a leader; but now his handling of Algiers has established his position as France personified far beyond anything that paper victories over his wretched allies could do, and he will not, therefore, go further. Indeed, it is even whispered that he might be inveigled back into the integration of air defence after all; for he is being assured by his missile experts that air defence is fatuous anyhow, little more than a means of keeping air vice-marshals happy and out of mischief. The second argument is that there is little more that he *could* do to the alliance, except perhaps pull the French Atlantic fleet out of the command of the Supreme Allied Commander, Atlantic; and for this he would have no such excuse as he had for withdrawing France's Mediterranean fleet. Finally it is urged that the general has achieved his great object, a place in the summit talks, at which he will quickly find that the alliance, and especially its military teeth in Nato, are a bargaining weapon, which he will learn to value.

But, in fact, there are several unpleasant things that the general could still do to Nato—such as finally detaching his divisions in Germany (just now, only two) from General Norstad's command, but keeping them there as an independent and allied force by virtue of the Paris treaties. The general's power of making trouble is in fact only limited by Nato's readiness to call his bluff at some point. There are not wanting voices in Nato and in Supreme Allied Headquarters to point out that this could be done. The Nato shield is not mounted on any French frontier. Given that Russia is increasingly proposing to rely on nuclear-headed missiles for defence, the West will increasingly have to do the same. This would mean that the military philosophy which assumed a fairly prolonged resistance on land in Europe, using conventional weapons, would again tend to give place to the idea that the shield forces are simply a tripwire laid to the growing batteries of missiles, to the tactical air forces in Germany, and to the strategic air forces. A return to the tripwire concept of European defence, though hideous, would at least make the French infrastructure—the lines of communication through France to the shield divisions (and especially the American divisions)—less of a necessity than it is. General de Gaulle has it in his power to hasten this process. And the defence of the Scandinavian, Greek and Turkish frontiers does not depend on France at all.

To appease General de Gaulle within the alliance might carry greater dangers than bluntly to tell him that at a pinch Nato can perform its function, after a fashion, without him. It may not be wise to demonstrate to the "middle powers" of the alliance that bullying pays off. Italy is already asking itself (or so the Nato experts say) whether virtue pays; and if the general and Dr Adenauer fell out, Germany, too, might try a little blackmail. From the point of view of the smaller powers, the alliance has already lost a certain sense of reality through the practice of summitry. Any more attempts to push through big-power decisions without consulting them might lead to trouble. But here the difficulty is that General de Gaulle is most unlikely to think trouble inconvenient.

Meanwhile, the stockpiles of atomic weapons and warheads are growing—mainly in Germany. France is not yet a nuclear power; and many Nato observers still do not think that one nuclear explosion (even if, as is probable, it is a bomb, not a device) will make it a nuclear power. But as west German bombardiers gradually master the technique of fitting and fusing atomic warheads, west Germany is becoming in effect a nuclear-armed country, and the emphasis on dual control of the warhead is, or will soon begin to be, academic. At this stage, Nato experts are beginning to look round for new formulae to create a Nato deterrent, avoiding the threatened spread of national deterrents and yet impressing the Russians sufficiently. Any British Labour party scheme to put Bomber Command (or Bluestreak when we have it, if we ever do) in Nato hands would to Nato now appear rather a typical piece of British left-wing hypocrisy than a contribution to making the deterrent credible.

The experts are casting around for a scheme whereby the Supreme Allied Commander, Europe, might give the signal, in an emergency, to press the atomic button; his decision would be subject to the veto of the Nato powers. This would give France and the United States—and, for that matter Turkey or Denmark—an equal voice. But whether it would meet General de Gaulle's requirements for France's great power status may be doubted; and it may even be doubted whether having fifteen vetoes, rather than fifteen fingers on the button, would much enhance the credibility of the deterrent either. But it would be wrong to dismiss debates on these subjects as the mere vapourings of bureaucrats—they are, after all, very relevant to the common aspiration of preventing mankind from being incinerated by miscalculation, whether General de Gaulle's or anyone else's.

Trojan Horse in the Laager

FROM OUR CORRESPONDENT IN SOUTH AFRICA

FOR Dr Verwoerd the visit of Mr Harold Macmillan to South Africa was a double gamble. He and his government hoped, first, that the British prime minister would at best commend the sincerity of the protagonists of apartheid and at worst refuse to discuss it because it is a domestic matter; and secondly, that he would give assurances about South Africa's continued membership of the Commonwealth if it becomes a republic. Mr Macmillan did neither. In unambiguous terms, although with superb tact

and sensitivity, he made it clear that South Africa's race policies are anathema to Britain. He also left no doubt in the Nationalist mind that the question of South Africa's continued membership of the Commonwealth must be decided by all the other members, and that consent could certainly not be taken for granted. Although there was nothing new in this, the realisation that the votes of non-white member states might in fact keep a republic of South Africa out of the "club" came as a shock.

It is a measure of the high skill with which Mr Macmillan tackled the ticklish race issue that although Dr Verwoerd and his colleagues were patently taken aback by the forthrightness of his address to the joint session of Parliament, they showed no immediate umbrage. Dismay was more difficult to hide, and Dr Verwoerd's prestige obviously received a blow; after all it was he who had brought this Trojan horse into the Nationalist kraal, and for everything that emerged from the visit he had to take responsibility.

Dr Verwoerd, however, reacted with dignity. He lost no time in saying firmly that no matter what the rest of the world thought of its colour policy, South Africa was determined to carry on, if necessary alone. And with that, the lines between South Africa and the rest of the free world were clearly drawn. Britain is committed to come to terms with African nationalism; Nationalist South Africa refuses (in the words of a leading newspaper) to abdicate in order to make it easier for the West to win a struggle with methods and with a haste "which leave us in grave doubt as to the outcome." In Dr Verwoerd's words, "We are white, but we are in Africa,"; and at a farewell banquet in Cape Town he went so far as to tell Mr Macmillan in very friendly terms that if only he could live in Africa for some years and see things as white Africans see them, he would change his mind.

But even before Mr Macmillan had left for home, the full implications of his frank repudiation of Nationalist policy had begun to sink into the Nationalist consciousness; Dr Verwoerd's parting words to his guest were for understanding and sympathy in the hard days ahead. And Mr Eric Louw's delayed reaction to the Macmillan visit in a newspaper interview given last Monday shows that the Cape Town speech hurt the Nationalists far more than they were prepared initially to admit. Dismay is gradually turning to anger and bitterness as the rank and file realise the extent and depth of South Africa's isolation on the colour question. Some commentators are now talking of a "state of emergency in our relations with the West and in our situation in Africa." The West, they say, has chosen the side of the blacks in Africa and the consequences may be grave indeed. South Africa must become a bastion of civilisation in the continent, great parts of which will be handed back to black rule and chaos.

At the same time the white non-Nationalists, who at first had sighed with relief that Mr Macmillan had made up his own mind, are beginning to realise that the British prime minister's speech may come to affect them as much as the government, for the gap separating them from Mr Macmillan is almost as great as that between them and the Nationalists. They, too, will have to indulge in an agonising reappraisal of their colour policy if they wish to keep in step with Britain and the western world.

This leaves only the non-Europeans uninhibitedly rejoicing in Mr Macmillan's speech. In one stroke their fears about the possibly damaging effects of the British prime minister's visit to apartheidland were swept away; and although there was great disappointment that it had not been possible for Mr Macmillan to see men like ex-Chief Albert Luthuli and other African National Congress leaders, the spirit of the Cape Town declaration satisfied the Africans that here was an enemy of apartheid and that the danger of the distinguished visitor "doing a Montgomery" on them had vanished. Mr Macmillan's carefully stage-managed visit to a regimented African tribal authority in the Northern Transvaal fell into perspective as a tourist jaunt; and the African public was left with the memory of a white prime minister shaking hands with black men in a Johannesburg township, and the Africans' full-throated response.

One important question that remains unanswered is what effect the now open divergence between British and South African views will have on the future of the three high commission territories. Mr Macmillan arrived in South Africa on the morrow of an unexpected victory for outspoken nationalism over traditionalism in Basutoland's first western-style general election; and in his brief visit to that territory he was made aware of hostility to South Africa. Dr Verwoerd and his colleagues are clearly worried about the existence within the Union of a radical African enclave, and they know that incorporation has become a purely theoretical matter under present circumstances. Although the two prime ministers must have discussed this problem, there was no indication of what they said. Up to now Dr Verwoerd has consoled his followers with the suggestion that his own Bantustans and the British protectorates are moving in the same direction, and that incorporation was no longer therefore a matter of urgency. But the Basutoland elections are bound to have produced serious second thoughts in Cape Town and stronger pressure on Mr Macmillan to reconsider the matter.

How Algiers Sees It

FROM A CORRESPONDENT IN ALGIERS

Before the paving stones uprooted by the insurgents to build their barricades have been completely replaced and the routine of ordinary life has returned to the centre of Algiers, it is perhaps worth while trying to see exactly what happened during the tense ten days between January 24th and February 2nd—and what led up to it. It is not an easy task. There are a dozen different versions, and the opinions even of eye-witnesses are often contradictory. As for the Paris versions, they seem to the people of Algiers so wildly improbable that they might refer to some other insurrection in an entirely different country.

President de Gaulle's broadcast of September 16, 1959, announcing his self-determination policy for Algeria, with the implication to the French settlers that it would inevitably lead to independence, led to considerable activity within the extremist organisations. Various plots were hatched by many of the men whose previous plots had met and exploded in the May 13th revolt. But apart from collecting considerable quantities of arms and ammunition, including hand-grenades, sub-machine guns and a few bazookas, and putting out feelers towards other organisations and the army, nothing positive was done: the time was obviously not ripe. The leaders were said to be quite confident of obtaining the support of practically the entire French community in Algeria, but only when it was sufficiently worked up or alarmed: this would obviously be when cease-fire talks were opened with the National Liberation Front (FLN).

In Paris that disappointed former Resistance leader, M. Georges Bidault, tried again to set himself up as the standard-bearer of the *Algérie Française* faction by forming a new party, the Rally for French Algeria, of which he remains president and practically the entire membership. But in Algiers recruiting was far more successful. The former poujadist cafe-owner, M. Joseph Ortiz, founded the French National Front and soon boasted of some 15,000 paid-up members, many of them from the "poor white" suburb of Bab-el-Oued. South of Algiers, M. Robert Martel, leader of the Popular Movement of May 13th, roused the farmers of the rich Mitidja plain, where FLN terrorism had recently taken a heavy toll. M. Pierre Lagaillarde, the notorious former leader of the Algiers students who had become a deputy, deserted Paris and

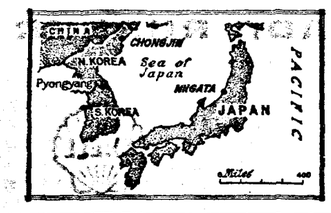
Korean Styx

FROM OUR CORRESPONDENT IN TOKYO



CAPTAIN KONSTANTIN BOIKO of the good Soviet ship *Tobolsk* has now acted as genial Charon to some 5,000 Koreans, ferrying them from Niigata in Japan to Chongjin in North Korea. Though the repatriates are poor—their average cash holding, representing a lifetime's savings, is £15 per family—they do not behave like dead souls; and they evidently believe that they are going to a land of the living. Before boarding the Soviet ship the Koreans are accommodated in Niigata in a Red Cross centre that was formerly an American air force barracks. With their shoes off, they sit cross-legged on fresh straw-mats, surrounded by their few belongings in suitcases, baskets and bundles —and also by red banners with five-pointed red stars.

Fully half the repatriates are under sixteen. A girl with long black pigtails, wearing a black jersey and black trousers, says with solemn confidence: "I look forward to taking part in building up a socialist Korea." There are between 600,000 and 800,000 Koreans in Japan. Most of the children attend schools that have been built by Korean Communists.

The most frequent reason given by the older repatriates for accepting the offer of a new life in communist Korea is: "Our children have no future here." But some have hopes for themselves also. A composer, aged 33, says: "In North Korea I shall have a house, a piano, a studio and a guaranteed income." A 36-year-old teacher says: "My wife and I did not dare to have children, but now we plan to have six, for in North Korea our livelihood is guaranteed." A 43-year-old labourer says: "I am guaranteed work of my own choosing." In Japan, he and his wife between them managed to earn only ten shillings a day.

The Koreans in Japan get their information about life in North Korea from the *Soren* (a communist organisation), and from the Pyongyang radio. Few have ever seen North Korea, for most of those not born in Japan came originally from South Korea, where they still have relatives and friends. But, it seems, the letters they get from the south of their country are uniformly discouraging, telling of poverty and unemployment, whereas the Pyongyang radio talks only of socialist construction and consequent labour shortages.

WHEN the first batch of repatriates arrives in Pyongyang, they were welcomed by the North Korean prime minister, Kim Il Sung, lodged in large apartment-houses, and entertained at a welcome party held in a giant gymnasium. The entertainment included an epic "dance drama" that went on for three hours and had a cast of 3,000. Describing this marathon, a Japanese newspaper reporter who attended it wrote: "Symbolising the nation-wide irrigation movement, girls in blue dresses performed dances representing streams and waves, while a mass of people in red dresses, representing pig-iron flowing from a furnace, staged a dance of joy." The same reporter noted that Pyongyang's factories operate in shifts around the clock, but when he asked a North Korean whether he did not have complaints about working so hard, he was told: "The more we work, the more conspicuous becomes the improvement in our livelihood."

Conspicuous indeed, it seems, are the new blocks of flats, each five or six storeys high and housing 300 families: it is claimed that a new one goes up every forty days. Still, Kim Il Sung was not boastful when he made a speech to the newcomers from Japan. He told them: "We were once slaves, but now we have attained the status of poor peasants. We should have welcomed you earlier, but because of our poverty it was impossible. We still cannot offer you luxury, but we do offer you food, clothing, shelter and hard work to improve our common lot."

Captain Boiko, a large, good-humoured man who is complacent about his facial resemblance to Mr Khrushchev, was formerly on the regular Sakhalin-Vladivostok run. If, however, the repatriation of Koreans goes as *Soren* says it will, he or some other Soviet captain will be on the Niigata-Chongjin run a long time; for *Soren* says it expects about 130,000 Koreans to register for emigration to North Korea. At present, Koreans are leaving Japan for North Korea at the rate of about 1,000 a week, but *Soren* declares that this could and should be speeded up. The Japanese might not demur, as their chief anxiety seems to be to get rid of their Koreans at all costs. But South Korea naturally does not feel very happy about it, and neither does the United States. Both regard the departure of Koreans from the "free world" to a communist country as a poor advertisement. (Kim Il Sung presumably regards it as a very good one.) The North Koreans really do need more workers, whereas South Korea has a grievous unemployment problem despite its army of 700,000.

South Korea has announced, nevertheless, that it is ready to accept Koreans from Japan—even communist ones—provided Japan pays a suitable compensation. The compensation that has been unofficially suggested is reported to be about £100 a head. This apparently would accrue not to the Korean repatriates themselves, but to the South Korean government, which would, however, agree to spend the money on housing and other amenities for the repatriates. Some at any rate of Japan's ruling politicians would like to put relations between Japan and South Korea on a better footing, and might even pay South Korea £100 per repatriate—if the United States could be persuaded to advance Japan the money.

Meanwhile, Korean repatriation continues to be directed towards North, not South Korea; and the discreetly conducted haggling between Japan and South Korea seems to ignore the essential question of how many Koreans in Japan would, in fact, be prepared to live under the rule of Syngman Rhee—even at so much a head.

(*Continued from page 632*)

the National Assembly and returned to organise the Algiers students, whose official leader was M. Jacques Susini. The other important body was the alliance of various ex-servicemen's organisations led by M. Arnould.

These organisations, and many of lesser importance, were in place but not really ready for action—although their leaders had formed a kind of council of war—when the Massu incident brought Algiers to a premature boiling point. General Massu, a tough and courageous soldier, the hero of Algiers' French community, is not one of the great intellects of our time. He alleges bitterly that in giving his famous interview to a German correspondent he fell into a trap. Evidence of a kind has been produced tending to show that some kind of plot existed involving other generals and leading up to the interview. No one has explained what was intended to be achieved, for the rising, from the point of view of the men who afterwards became the insurgent leaders, was clearly premature. The views General Massu expressed are just those that he might have voiced in an unguarded moment, and they are the views, as subsequent days demonstrated, held by a surprisingly large number of officers.

A similar fog of uncertainty covers the firing of the shots which turned a pro-Massu demonstration into "a rising in arms of Frenchmen against the authority of France." In all probability the first shot was accidental; but its effect in a great, excited mob of people nearly all armed, and at a moment when heartily disliked riot police were coming in to break up the crowds, was that of a detonator: the inevitable fusillade followed. Nearly everyone has a different story or a different theory. But it is likely that one of the paratroopers "guarding" the barricade summed it up sensibly when he said: "It was an accident. They knew we would never fire on them. We knew they wouldn't fire at us. And I don't think they'd deliberately fire at the *flics* unless they fired first."

There was little danger that the shooting would be renewed: except for little moments of tension the atmosphere of the next ten days was relaxed and friendly. Even an FLN bomb which exploded, probably also by accident, and killed five paratroopers caused neither panic nor retaliation. Throughout this time the insurgents occupied their home-made fortress, covering an area about the size of Victoria Station. They were using municipal gas, electricity and water; they borrowed from the French Army loud-speakers through which they addressed their supporters; and when telephone communications with the outside world were officially cut, and neither the ordinary public nor newspaper correspondents could obtain calls to Paris or London or anywhere, the insurgents were in constant touch with their political allies in Paris.

WHEN the sun shone the barricades were guarded, on the inside, by insurgents festooned with hand grenades; when it rained, as it did some of the time, the barricades were deserted. Nothing could have been more friendly than the attitude of the troops outside the barricades; they fraternised with the insurgents and with the huge crowds of ordinary French of Algeria who came daily to give the insurgents moral support. It was a party, a picnic. "This is not serious: we are being made fools of," a German correspondent complained.

The hostility of the demonstrators to General de Gaulle increased as the insurrection dragged on, and every time the insurgents' loud-speakers roared "De Gaulle to the gallows," the crowd screamed its delight. It will be a long time before the offensive remarks about the general, scrawled on countless walls, wear off. His broadcast, which had so profound an effect outside Algeria, made an impression on the soldiers but left the Algiers crowd unmoved in its hostility. Why, then, did the insurrection suddenly and quietly fold up?

The reason was probably economic. The general strike called by the insurgent leaders was observed almost totally, and caused the greatest possible inconvenience. Food was becoming short; the lack of public transport was a hardship for nearly everybody; bread-winners inside or outside the barricades were earning nothing. The insurgent leaders had not foreseen this economic chaos and, possibly because the revolt was premature, more likely through sheer incompetence, had made no emergency arrangements; they had no funds of any kind with which to pay their supporters and their dependants. It is an interesting and significant sidelight that the only place where life was normal was the Casbah, and in increasing numbers the stalwarts of the French community were slipping into the Moslem quarter—many in a state of quite exaggerated fear—to buy cigarettes.

On the side of law and order—to coin a phrase—some still unknown genius in the art of psychological warfare let it be known to the paratroopers that if they went over to the insurgents they would receive neither their pay nor their splendid rations. And so, with the bulk of their supporters having quietly melted away, the hard core of the insurgents were allowed to march out, flags flying, to receive military honours from the watchful troops—a fact which the high command has tried and failed to conceal.

When police searched the deserted strongholds they found practically no weapons at all: all the huge quantity taken in at the beginning of the insurrection was quietly taken out during the "peace" negotiations of the last couple of days. The basic situation remains: for want of a firm hand in Paris, opposition to President de Gaulle's policy is as widespread and as deeply rooted as ever. Apart from a few unimportant leaders, the insurgents and their supporters have withdrawn in good order—ready to fight seriously another day. But next time they may have a real leader, M. Jacques Soustelle.

Togliatti's "Parliamentary Way"

FROM OUR CORRESPONDENT IN ROME

THE end justifies the means and the means are determined by historical opportunity. This seems to be the moral of the Italian Communist party's ninth congress, held in Rome last week, which has officially chosen the democratic or parliamentary road to socialism and power. Beyond that the party's course is unmapped, but Signor Togliatti and his lieutenants suggested that *la dolce vita for* Italy's middle classes might continue in a system which would allow small property and small enterprise to survive, and other parties to manifest their "organised dissent." Could they also hope to displace the Communists, once installed, from government? Probably not. The question was not raised at the congress; but Signor Nenni, in *l'Avanti*, has given the impression that this is the main point that differentiates communist "democracy" from his own. In the meantime, since power is not for tomorrow, Signor Togliatti has offered communist support to any government that will make a few structural reforms. Almost casually he mentioned a check on monopolies and the nationalisation of electric power. The other members of the proposed "new majority" would be the Catholics and, if they wished, the Socialists; but the Catholics, one gathered, mattered most.

This extraordinary bid to take the Communists into a government majority with the Christian Democrats, and with or without the Socialists, is the most audacious gambit in Signor Togliatti's career, which includes a compromise with the Monarchy in 1944 and the vote—decisive, as it happened—to put the Concordat into the Constitution in 1947. Is the present move a mere tactical manœuvre to prevent the Communist party from being isolated by a possible Catholic-Socialist entente? Or is it (like previous Togliatti gambits) part of a strategy dictated by the Kremlin, this

time with a view to obtaining a diplomatic springboard in Rome? It comes while President Gronchi is being entertained in Moscow, and when Soviet agents have put out feelers for a truce with the Vatican. In his speech to the congress, Signor Togliatti urged the Roman Catholic church not to complicate *détente* by raising the question of ideologies. "Religious freedoms can best be obtained through reasonable contacts with the Communist world."

The future course of east-west relations will decide whether its ninth congress is to be a permanent landmark in the history of the Italian Communist party. It has recovered from the disarray which Mr Khrushchev's report to the 20th Soviet party congress and the Hungarian revolt produced in its ranks in 1956. Since then the more obstreperous "revisionists" have gone, and the admitted loss of 200,000 members has been made good, thanks mainly to the sputniks and enhanced Soviet prestige. Membership stands officially at 1,800,000, and the party appears to be a constant, almost a stable, element in the country's political balance. Just under a quarter of the electorate votes communist, a fact which is probably due less to the efficiency of the party leaders than to the inequitable division of wealth in Italy. The economy progresses but the gap between North and South remains; and, as living standards rise higher and faster in the North, the communist vote moves south.

Numerical stability does not imply that the Italian communist leaders have no worries. However laborious, the beginnings of international *détente* set problems for the party. It is in danger of losing its "peace" platform; and Picasso's dove was a formidable public relations officer. Today the peace partisans are a sad little band of intellectuals. But the main problem is how to keep up a revolutionary party's élan when it no longer expects the revolution. There is a danger that the party officers will settle down to the comfortable life of lazy bureaucrats, and the party degenerate into a system of clientèles. This is Signor Amendola's fear and, as organising secretary, he voiced it most vigorously in the only speech in the whole congress which was addressed to the party and not to the outside world. While Signor Togliatti appears to be thinking in terms of parliamentary manœuvres at the highest level, his lieutenants are concerned with what may happen to the party's rank and file. Like Signor Togliatti, they are worried by the prospect of isolation. Hence Signor Amendola's appeal to intensify action in the trade unions: "The new majority must be formed at the Fiat or not at all." And hence Signor Ingrao's advice to put still more effort into the propaganda for regional autonomy; in this, the Socialists could hardly stand aloof from the Communists.

THE different emphasis used by Signor Togliatti and his lieutenants has been interpreted by outsiders as evidence of conflict. Probably the conflict exists. But there is also a kind of natural division of labour inside the Communist party which enables it, like the Catholic church, to pursue two or more policies at once. Time will show which is the right one. At present the party's main worry is isolation. This is as much a neurosis as an ordinary political preoccupation. The Socialists' repudiation of their "unity of action" pact with the Communists flowed from the events of 1956 which taught the bulk of Italian Socialists the value of freedom and democracy in the western sense. It was a traumatic experience. Since then the Socialists may co-operate with the Communists on town councils and trade unions, but they can never overcome the uneasiness that separates them from the Italian Communist party. Mr Suslov, the Soviet guest of honour, quite failed to understand the nature of the malaise which divides the Italian Socialists from the Communists. He accused the Socialists of having lost faith in the creative energy of the working class. His intervention made things worse for the Communists, who reacted truculently by applauding the Hungarian delegate, Mr Marosan, for his denial of the alleged hangings of 150 young people in Budapest. The denial was not accepted by *Avanti*, and the Hungarian question continues to throw up a wall of fear between the two parties. But, of the two, it is the Communists who are the more afraid. They cannot bear to stand alone.

Greece Under the Peace Offensive

FROM OUR ATHENS CORRESPONDENT

"LET us keep nuclear weapons out of the Balkans," said the Russians. "Why not sign a non-aggression pact, then reduce our armies and save money?" added the Bulgarians. "Can't we all sit at a table and talk it over?" urged the Rumanians. Greece is evidently being subjected by the Communists to a test of negative endurance. How long can this country—an old pioneer in policies of Balkan *entente*—resist the peaceful overtures relentlessly fired by concerted communist propaganda batteries? The first cracks are already showing. Opposition politicians who can hardly be suspected of communist sympathies have been censuring the Greek government for its inflexibly negative attitude. Ever since the so-called spirit of *détente* first glowed on the leaden horizon of international relations, the Greek government has been opposing a stubborn negative to a flow of communist diplomatic notes, personal letters, public speeches, and press interviews. Each contained some bold new offer and a sprinkling of exhortations for closer trade and cultural ties. It has been the longest communist "peace offensive" endured by Greece. Its inexplicable, though brief, interludes of hostility and intimidation lent it a touch of enigma. Despite Greek reticence, the Communists are expected to persevere, at least until the summit conference.

But why pick on Greece? There is a deep-rooted conviction among the Communists that, after six years of bitter litigation with the main western allies over Cyprus, the Greek people's allegiance to the West has weakened. Cyprus is no longer an emotional issue in Greece; and most of the Greeks know precisely on which side of the fence their interests lie. But it cannot be denied that the dispute has left an acrid aftertaste on the popular palate. The communist campaign, largely aided by this subconscious bitterness, was originally designed to keep Greece out of the western chain of nuclear bases. Greece has, at present, decided not to accept the installation of bases; popular reactions, no doubt, were a major factor in this decision.

A sharp decline in Greek agricultural exports introduced something new for the Balkan Communists to exploit. The Greek public's reluctance to consume products from eastern Europe had been holding an expansion of trade with the communist countries in check. Greek farmers, however, who could not care less about the anatomy of economics, reacted sharply on being informed that their tobacco or their oranges, which were rotting away unsold, would be welcome in the markets of eastern Europe. The force of this argument prompted the government to seek more trade with the communist block during 1960; the ceiling of commercial exchanges with the Soviet Union rose by half to $24 million; Greek-Hungarian exchanges were increased by two-thirds to $10.2 million; and trade with Bulgaria was doubled to $4 million.

Greek farmers have again been the object of a communist manœuvre this month. A Bulgarian drive for a general reduction in the size of Balkan armies to save money for social projects was well-timed with a proposal by the pro-communist EDA, the major opposition party, that a scheme for old-age pensions to farmers should be financed from the excessive defence budget. The farmers, of course, were delighted. EDA's help to the communist campaign has been substantial. A large section of the anti-government electorate, left partyless by the downfall of the parliamentary Centre, is largely influenced by EDA's shrewd slogans. This influence has been so effective that all who aspire to gain the support of this large floating vote now feel compelled to advocate pacific, if not pacifist, ideas—and in particular, an active Greek approach to the relaxation of international tension.

While the international outlook remains uncertain, the Greek government is unlikely to be induced to make any experiments. The western powers are certainly unfavourable to any Greek initiatives in the Balkans which might deprive them of bargaining material at the summit. The Karamanlis government is not eager for a precipitate relaxation of tension, being still unprepared to cope with the internal communist problem with anything but police measures. Officially, the motto has been: "No Balkan *rapprochement* until Albania and Bulgaria settle their differences with Greece in bilateral negotiations with agendas fixed in advance." Bulgaria's harassing insistence on a *rapprochement* with Greece can hardly be reconciled with its clumsy temporising over the fulfilment of its peace treaty commitments. Greece has demanded a Bulgarian gesture of good will by the payment of one-eighth of the $45 million of war reparations. Surely just under $6 million should not be too exorbitant a price for peace. And how can Bulgaria's proposal for a reduction in the size of the armies be taken seriously, when it is known to maintain armed forces nearly four times the maximum size allowed it under the peace treaty?

These very real difficulties have not sufficiently impressed the Greek government's opponents. They accuse Mr Karamanlis and his ministers, not of pursuing the wrong policy, but of having no policy at all. They maintain that the international situation has changed radically, while a measure of mutual confidence is setting in. They argue, with ostensible concern, that unless policies are revised, the arrival of a new phase in world relations will inevitably cause the downfall of the Karamanlis government; that Mr Karamanlis does not possess sufficient flexibility to lead the nation in a period of international relaxation. The government, however, remains unmoved. All these arguments are rejected with a contemptuous wave of the hand. As one government supporter put it: "Eisenhower has not fallen; nor has Macmillan. If the summit meeting is a success, why could not Karamanlis accompany King Paul on a visit to Moscow?"

Referendum in Kerala

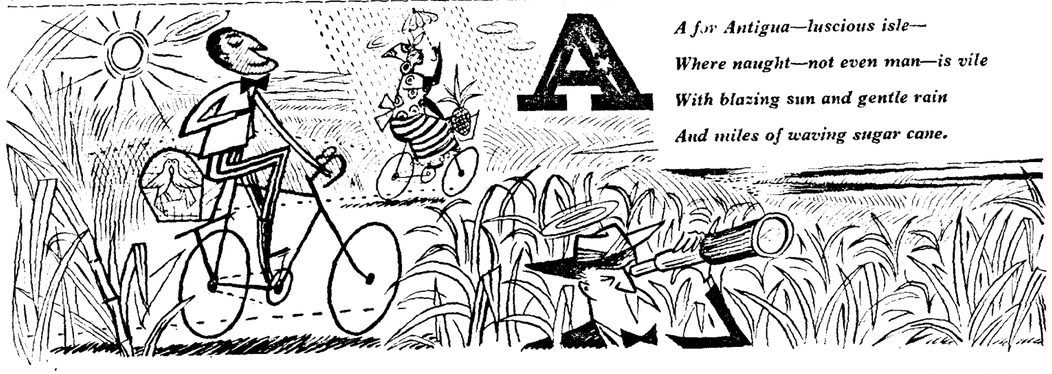
FROM OUR CORRESPONDENT IN INDIA

WHAT happened in Kerala on February 1st was not an election, but a referendum. The issue was communism, for or against. Party programmes did not matter, China did not come into it, and there were no floating voters. The true independents and the minor parties between them got 2.5 per cent of the vote; the one true independent who won is rejoining the Congress party.

The campaign was of an intensity unprecedented in India. The Communists had 400,000 campaign workers, the United Democratic Front at least as many. Perhaps £1 million was spent by each side. The turnout was correspondingly large; 84.5 per cent, against 67 per cent in 1957, voted; the shy Malayali women went to the polls in greater numbers than their men, queueing from dawn, babes in their arms, wearing their best mundas. In Ottapallam voting reached 98.5 per cent; the lowest percentage was 69.5, in backward Tirur.

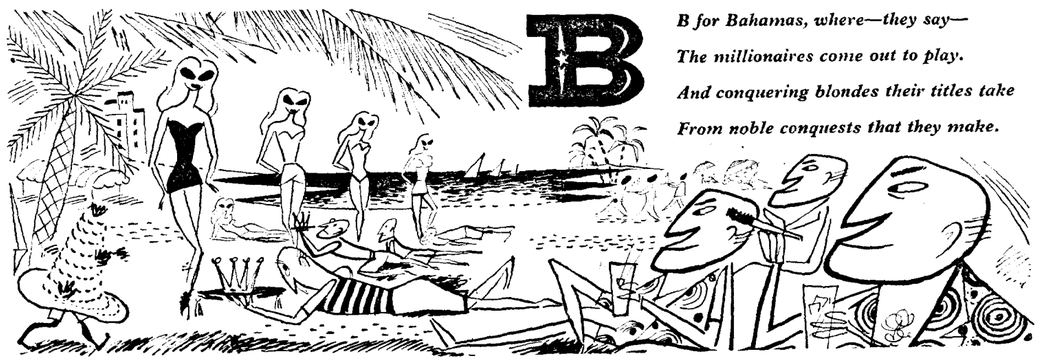
The Communists were well beaten; they lost 36 out of their 65 seats. But they got a million more votes than in 1957, a 2 per cent increase, against the anti-communist alliance's gain of only 0.2 per cent. They would have got more had the election not been delayed to permit the correction of the electoral rolls. Communist tampering had been so thorough that the election commission had to strike off half a million bogus voters' names and restore 116,000 wrongly deleted names. In one Calicut constituency alone, 22,000 names had to be struck off; in Devicolam 20,000 had to be restored.

Two years of communist rule brought about a non-communist unity that nothing else has been able to achieve, just as the threat of a communist victory did in Andhra in 1955. From last year's upheaval which forced presidential intervention, a young, active and sanguine Congress party has emerged. Men and women, students and housewives and workers have matched the comrades in tireless canvassing from door to door, so that in India today Kerala alone has a Congress party organisation reminiscent of the heroic days of the independence movement. Unfortunately, the leadership is not impressive and there are many misgivings about the continued unity of the democratic front, especially if the Congress is tempted, now that it has an absolute majority of two in the new state legislature, to try at some stage to govern alone. But so far it is being restrained by the knowledge that it owes many of its seats to Socialist and Muslim votes and that the Communists are still the largest single party in Kerala.



OF the other allies, the Muslim League, which is all-powerful in the Muslim areas of Malabar where it won 11 of the 12 seats it contested, may be content with the Speakership. The Praja Socialist party, which won 20 of the 33 seats it fought, has little hold apart from the towering personality of Mr Patton Thanu Pillai, a septuagenarian who has already been twice chief minister and is about as accommodating as General de Gaulle.

By seniority, ability and prestige, he is entitled to be chief minister, but Mr R. Sankar, the Congress party leader, also has ambitions. For the moment, however, the instinct of survival will keep the alliance united in a coalition. Memories of communist rule and of last year's agitation cannot be erased overnight; and there are 3,200,000 communist votes to remind the forgetful.



The polarisation between the Communists and the non-communists in Kerala is now complete; but it is more communal than economic. The Christians and the Muslims, who are rather more than a third of the population, are solidly anti-communist—the Catholic churches held masses at 4 a.m. on polling day to dedicate voters to the defeat of communism, and Mr Bafaki Thangal, the most important Muslim religious leader, invoked the Koran against it. The Ezhavas—the toddy tappers—and the untouchables, who are also rather more than a third of the population, are equally solidly communist. The balance is held by the Hindu Nairs, a fifth of the population, who range from big landlords to landless labourers and amongst whom there is some genuine class conflict. Hence the key role of the octogenarian Mannath Padmanabhan, whose years of selfless work in the Nair Service Society has given him a unique position in his community. He backed the Communists against the largely Christian Congress in 1957, but was stirred by the preference given to Ezhavas and untouchables during the communist regime into starting the agitation to bring it down. Most objectionable of all to him, as to the church and the Muslims, was a section of the Communists' education bill, which would have forced Ezhava and untouchable teachers on Christian, Muslim, and Nair schools. He is not a politician, but it was he, above all, who created the alliance, and he whose influence may yet be the best guarantee for future anti-communist unity.

Mr Nehru was right. There has been a mass upsurge in Kerala against the Communists. But so far it has been a mass upsurge only of the anti-communists, who have changed, in two and a half years, from benevolent apathy to ferocious opposition. Democracy will not be safe until they can provide a government good enough to win over some of the communist 43 per cent, and fair enough to make the Ezhavas and the untouchables feel that they too have a stake in the social order as it is.

The ABC of the D.C.O.—a guide to some of the towns and territories we serve.

A for Antigua—luscious isle—
Where naught—not even man—is vile
With blazing sun and gentle rain
And miles of waving sugar cane.

B for Bahamas, where—they say—
The millionaires come out to play.
And conquering blondes their titles take
From noble conquests that they make.

They grow throughout the Cameroons,
(Though plagued by ill-behaved baboons)
Bananas in delicious bunches
To amplify our children's lunches.

To business men:—We're staffed by lots
Of bright young men in many spots,
So we can get for you with ease
Reports on anything you please.

HEAD OFFICE: 54 LOMBARD STREET, LONDON, E.C.3

THE BUSINESS WORLD

Nuclear Power in the Sixties

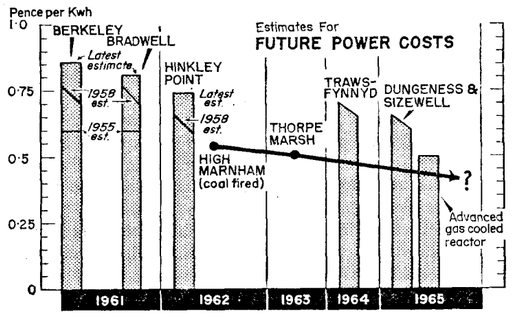
By the end of this year the Central Electricity Generating Board will begin commissioning its first nuclear power stations; but the role of atomic power in Britain during the nineteen sixties now seems likely to be a great deal smaller than that which the Government decided for it a few years ago. When the country's atomic power programme was revised in 1957, it was decided that 5,000 or 6,000 megawatts of nuclear generating plant should be commissioned by the end of 1965. The Generating Board will in fact commission no more than half the upper figure, 3,000 MW of nuclear plant, by 1965. (It may be said in passing that even this will be 50 per cent more than the figure of 2,000 MW of nuclear plant that was proposed in the first nuclear power programme drawn up in 1954.) The programme that called for 6,000 MW by 1965 has in practice been stretched out over a further five years rather than the two years officially admitted; it is not likely to be completed until 1970.

When that programme was first drafted, experts foresaw two possible threats to its fulfilment: that industry might not be able to tackle the vast building programme, and that world production of natural uranium might not be sufficient to meet the fuel needs of a nuclear power programme of this size. They did not foresee the two hidden reefs on which the programme eventually floundered, the swing from prospective shortage to actual surplus of coal and oil and the remarkable economies achieved in the cost of building conventional thermal power stations. As it happens, there is a glut of uranium and world market prices are falling by half as long-term contracts expire; moreover, industry's atomic design staffs and specialised nuclear building plant are under-employed. But the fall in the cost of electricity that will be able to be generated in the newest and most efficient thermal power stations is what counts: it has widened what was expected to be a small difference between nuclear and conventional generating costs into a gulf of 60 per cent which cannot be closed before the mid-1960s and may not be by the end of the decade.

When the Generating Board's Bradwell and Berkeley nuclear power stations come to be commissioned in 1960-61, their generating costs are expected to work out at 0.81 and 0.86 pence per kilowatt hour respectively. When the Hinckley Point power station comes to be commissoned the year after, its costs should show some improvement, falling to 0.74d. a unit. The next station, at Trawsfynnyd, might show costs as low as 0.65d. to 0.7d. a unit; and the last two stations in the current programme, those to be built at Dungeness and Sizewell, might be able to generate electricity for 0.60d. or, at the worst, 0.65d. a unit. But during the same period, the Generating Board will be commissioning new coal-fired thermal power stations that will be generating electricity in 1962 at 0.54d. a unit, against Hinkley Point's 0.74d.; by 1963 new thermal plants will be generating power at 0.51d. a unit and in the second half of the decade they might easily bring costs down towards 0.4d. (The comparisons, and not the over-precise figuring, are what matter here: and the comparisons depend on the assumption that ruling coal and oil prices rise no more than those entering into capital construction.) In these circumstances how, if ever, is nuclear power going to compete?

There are two ways in which it can do this: technical innovation and a judicious policy on nuclear fuels. It is futile for the atomic energy industry to sit back and hope that another fuel crisis will save its bacon. Whatever might happen in subsequent decades, any discussion of the place of atomic power in the nineteen-sixties must now begin over again from the assumption that a world surplus of conventional fuels, leading to tooth-and-claw competition between coal and oil, will prevent any rapid rise in the prices of either over the next few years.

Technical innovations in reactor design are the only means by which engineers can bring down the crippling cost of building nuclear power stations. Four years ago, when the revised programme was announced, the Minister of Power estimated that it would cost the Generating Board between £700 and £800 million more to build 6,000 megawatts of nuclear plant than to install the same amount of coal-burning plant. By halving the rate of nuclear building, the Generating Board may well have saved itself half this extra capital sum: it has at the least posponed much of the extra capital cost. The board has put the price of its first nuclear power stations at £145 a kilowatt (including some site work for which the power station contractor is not responsible, but leaving out any loss the contractor may incur if the stations cost more). The tender price of the first stations was between £125 and £130 a kilowatt. This figure has been brought down progressively to £104 at Trawsfynnyd; tenders for the Dungeness and Sizewell stations are expected to lie between £95 and £100 a kilowatt, although some engineers have talked of sums as low as £92 a kilowatt. Lower than this it seems impossible for the present type of station to go.



But if the present Calder Hall design of station is abandoned, and natural uranium fuel replaced by mildly enriched uranium, further reductions are possible. Calder Hall and the "Magnox" designs of commercial power station based upon it are the original gas-cooled reactors. From them has been evolved the advanced gas-cooled reactor now being built in prototype form at Windscale. The use of enriched fuel allows higher gas temperatures and pressures; this brings down the size of the reactor, required for a given output, which should reduce capital costs to somewhere in the region of £75 a kilowatt. This is still nearly twice as high as a modern coal-fired station; one on order, which should be commissioned in 1963, two years before the first commercial advanced gas-cooled reactor could be ready, has been fixed at £39 a kilowatt. This is formidable competition for any nuclear reactor, but if certain theoretical calculations about the behaviour of fuel in an advanced gas-cooled reactor stand up to test, a 300-megawatt nuclear power station built on this principle should be able to produce electricity at about 0.5 pence per unit, which should be roughly equal to the cost of electricity from a good coal-fired power station commissioned at the same time.

There are two points to note about these estimates. The first is that they contain a large element of theoretical assumption—about, in particular, fuel behaviour—which scientists have not had time to confirm experimentally. The second point is that the estimates are based upon very big power stations, with an electrical capacity of 300 megawatts. The economies of both coal-fired and nuclear stations depend primarily on size. Costs in the former have been brought down by increasing the size of new generator sets from a standard of 60 megawatts to sets progressively ranging from 250 to 550 megawatts. Low costs in nuclear power still depend on big reactors that are already of this order of size: there may not be much room for economies of even bigger scale in more advanced reactors. Moreover, even these promise to compete only on base load; and there are limits to the amount of base load—i.e. fairly continuous demand—that can be counted on in any practicable expansion of the electricity system, unless the electricity boards become much more successful in selling off-peak power, and encouraging development of equipment to use it, than they are so far.

THE arrival of the commercial advanced gas-cooled reactor in the second half of the nineteen sixties, and of its successor, the fast breeder reactor, moreover raises important questions of policy towards nuclear fuels. The Atomic Energy Authority is reasonably certain that it will learn enough from its prototype AGR at Windscale for industry to start building advanced gas-cooled reactors for the Generating Board some time in 1962 or 1963, for commissioning after 1965. But by about 1965, the nuclear stations will begin to have an appreciable output of plutonium as a by-product, working up steadily to an annual output of two to three tons a year. Until the latter part of the sixties, much of this output will be sold to the United States, but by the turn of the decade the Generating Board will need a plutonium-nuclear power station which can burn this plutonium economically.

The two types of reactor likely to be on the stocks for that date are commercial versions of the fast breeder reactor at Dounreay and of the high temperature gas-cooled reactor at Winfrith Heath (if the advanced gas-cooled reactor might be crudely described as a Mark II version of Calder Hall, this one could be called Mark III). There are doubts whether this type of gas-cooled reactor will burn plutonium successfully. The fast breeder, on the other hand, is only really happy when it is burning plutonium, and for this reason the Atomic Energy Authority is anxious to build a modified version of Dounreay on the scale of a small 60-megawatt power station. The Dounreay prototype will not provide enough data for designing such a 60 mw station before 1963, and the 60 mw station could hardly be finished until 1966 or 1967. Commercial versions might be ready in another four to five years, in time to catch up with accumulating supplies of plutonium. At a guess, and at this stage it can only be a guess, the capital cost of such a power station might be between £50 and £60 a kilowatt, and its generating costs somewhere between 0.4d. and 0.5d. a unit, low enough to keep pace—on base load—with falling generating costs in coal-fired stations which may come close to 0.4d. a unit by the latter part of the 1960s.

This is one aspect of nuclear fuel policy. The other concerns uranium fuel prices. The Government and the Atomic

Diagonal lines indicate range of costs

Energy Authority between them owe the electricity industry an apology for having saddled it with the world's highest uranium bill. Britain entered into long-term uranium contracts in the nineteen fifties in the belief that uranium would be scarce. High prices encouraged exploration, rising output led to glut; now, as contracts fall in, the free market price is tumbling from £11,000 per ton of uranium oxide towards £6,000 a ton. But Britain's contracts, being the longest of all, run until the middle 1960s. When they expire, and when the first nuclear power stations come to refuel (which happens only once every four years), their generating costs will automatically fall by 0.05d. a unit. If the Hinkley Point power station, for example, could buy its uranium on the open market, the station's costs would be reduced from 0.74d. to the more acceptable figure of 0.69d., which is not so far off the Generating Board's average, although it is well above the performance of a good new thermal station.

This mistake must not be repeated for the next generation—the advanced gas-cooled reactors. These will use enriched fuel which, because it needs large amounts of electricity for its enrichment, costs three times as much to produce in Britain as it does in the cheap electricity districts of the United States. Such a power station using fuel enriched in Britain might produce electricity at 0.5d. a unit, approaching parity with new thermal stations. But using American fuel, its costs would be lower, somewhere in the region of 0.46d. or 0.47d. This should allow it to keep pace with the coal or oil station costs of 0.4d.-0.5d. a unit which have been postulated above for the late sixties; moreover, if history is any guide, the new kind of power unit should have far more room for improvement with experience in design than the older ones. There is enough capacity for nuclear fuel enrichment in the United States to support a British nuclear power programme based on imported American fuel; nor is there any reason to think that the present price quoted by the US government is an artificial, subsidised one liable to arbitrary fluctuations. Since uranium is in any case an imported fuel, there can be no sensible objection to importing it in a semi-manufactured form from America, especially since only part of the nuclear power capacity would be based on the type of reactor that needs it.

It is important to remember that the choice which faces the Generating Board, when and if nuclear power becomes competitive, will always be between a form of power with extremely high capital costs and modest fuel costs, and one where capital requirements are modest, but fuel costs relatively high. This has an immediate consequence in the loading of the electricity system; none of the nuclear designs now in prospect could compete even at the average load factor on the system of, say, 45 per cent, and ordinarily they would have to be used much less continuously even than that as newer and more efficient plants, nuclear or conventional, supplant them on base load. But it also has broader implications in an economy where capital is scarce. To sweeten this pill, the nuclear power station needs to achieve real savings in total generating costs over the equivalent thermal station to make it worth while. By trial and error, nuclear engineers may reach this stage towards the end of the nineteen-sixties; but their competitive future does not rest entirely with them.

Export Prospects This Year

Exports could show a big increase—if prices and deliveries are right

NOT so much is heard nowadays about Britain pricing itself out of world markets, or about delayed deliveries, bad sales promotion and servicing. No one would claim that every British exporter is on his toes, but a lot of them are. Exporters last year sold a record £3,326 million of British goods, 4 per cent more in volume than in 1958, and sent 23 per cent more goods into the North American market. They cannot be called uncompetitive; but not all are as competitive and venturesome as one would like.

The unpalatable fact is that Britain's share of trade is still declining. In 1958 Britain's share of world exports of manufactures fell only slightly, from 18.1 to 17.9 per cent (the world total itself fell by 1½ per cent), but between the first nine months of 1958 and 1959 (when world trade was rapidly expanding) its share fell more sharply, from 18.2 to 17.6 per cent.

Given a belief in multilateral trade, the recognition of the need of Commonwealth and ex-colonial countries to widen their own export opportunities by accepting greater foreign supplies in their own markets, and the aspirations of under-developed countries eventually to become exporters of manufactures, it must follow that some decline in Britain's share of trade in traditional markets is acceptable. But one could hope that such losses could be offset by bigger trade with other countries, such as the United States and Germany. Britain has increased its share in both those markets, but has not gained enough ground there and elsewhere to maintain its share in world trade as a whole. It is not yet a case of having to make room for the manufactures of under-developed countries (save in textiles); the squeeze is coming from other industrialised countries, notably Germany, which are expanding their exports faster than we are.

Britain's share of sterling markets fell from 57½ to 50½ per cent between 1954 and 1958, while Germany's increased from 7½ to 12¼ per cent. In western European markets, where Germany enjoys advantages analogous to those of Britain in the sterling area, Germany's share went up from 25½ to over 29 per cent, while Britain's fell from about 16½ to just under 13 per cent. In the United States, where both countries compete on an equal footing, Britain's share rose sharply from 11 to 14½ per cent, while Germany, with a share of only 9½ per cent in 1954, was up to Britain's level by 1958.

Germany pushed Britain from second place among the world's exporters of manufactures in 1958, and increased its share of the trade from 17½ to 18½ per cent. Between the first nine months of 1958 and 1959 Germany drew further ahead, sending abroad $6,153 million worth of manufactures, nearly $400 million more than Britain, and increasing its share further to 18.8 per cent. Several other European countries, notably France, also obtained a larger share. Devaluation helped France to raise its share from 8.3 to 9 per cent between the first nine months of 1958 and 1959. Japan did best of all, its share rising from 5.9 to 6½ per cent, while the United States, the leading exporter, lost more ground than Britain did, with its share dropping from 23.6 to 22 per cent.

NOWADAYS Britain would have to run faster in the export markets merely to stay in the same place. Germany was never so dependent on exports of textiles as Britain; before the war textiles provided almost one-quarter of all British exports (with coal, not a "manufacture," providing another 8 per cent). The inevitable decline in textile exports has reduced their contribution to total British exports to under 9 per cent and exports of coal have almost disappeared. But Germany has largely surmounted losses of a different kind. Cut off from its eastern territories, which before the war provided roughly a third of all Germany's exports, the Federal

Republic has nevertheless raised its share of world trade to within four percentage points of Germany's prewar share of 22.7 per cent. Britain's has come down from 22 per cent to 17½ per cent.

The British switch from textiles to other goods, largely engineering products, has not been rapid enough to maintain its share of trade, but the effort is impressive all the same. By 1959 engineering products accounted for 44 per cent of total British exports, more than twice as much as the prewar share; the share of chemicals has risen by a third to nearly 9 per cent, while petroleum's share, though still small, has trebled to 3 per cent.

The engineering industries did well again last year: their exports increased by £84 millions, or 6 per cent, and contributed more than half of the total increase of £154 million in British exports. Some British industries had the edge on their competitors in Germany and elsewhere. Between the first half of 1958 and 1959, British manufacturers of non-electric machinery increased their exports by $56 million to $866 million, and increased their share of world trade in these goods by a percentage point to 20.3 per cent. Their two big rivals both lost ground. Germany's exports were unchanged at $914 million, but its share declined, while United States exports dropped by $64 million to $1,475 million, and its share dropped by two percentage points to 34½.

British motor manufacturers also increased their exports between the first half of 1958 and 1959, particularly of cars and chassis, but not quite enough to hold their share of this trade; exports from Germany and France rose faster than the world average. British exports of chemicals increased faster than the world average, but Germany's went up faster still. In electrical equipment, metals and manufactures of metal, Britain's share fell while Germany's rose, and Britain also suffered a further reverse in textiles, on this occasion at the hands of other European exporters rather than Japan.

WORLD prospects clearly offer scope for a bigger increase in British exports this year than last. Production in North America and western Europe should go on rising at roughly the same rate as in 1959, generating a further increase in demand for manufactures and primary products. The export earnings of the overseas sterling countries showed a marked recovery in the second quarter of 1959, rising faster than those of other primary producers, as they had fallen more steeply during the recession. By the third quarter their earnings were probably about 15 per cent higher than a year before, owing mainly to the increase in volume. Britain felt the benefit in the fourth quarter, when its exports to all sterling countries were about 5 per cent higher than in the fourth quarter of 1958. This year Britain should fare even better in the sterling area than the non-sterling world, in sharp contrast to 1959, when British exports to the sterling area fell by 4 per cent to £1,341 million, whereas exports to non-sterling countries rose by 12 per cent to £1,985 million.

Competition will determine how well Britain exploits its opportunities. British export prices held steady in the first half of the year while German and American prices fell slightly. Towards the end of the year British prices were creeping up. The trend will have to be watched, though the risk that British prices and deliveries will get out of line does not seem great. Industry in the United States and Germany is likely to be under much the same pressure as British industry this year.

Britain cannot hope to repeat last year's gain of 33 per cent in exports to the United States. As its exports get bigger, the rate of increase must fall—as in the fourth quarter, when shipments to the United States were 17 per cent higher than a year before. But a substantial increase is likely. Motor cars accounted for no more than a third of the total increase of £108 million to £567 million in exports to North America last year. So if sales of British (and other European) cars in that market suffer from the introduction of the new American compact cars, the effect on Britain's total earnings there should not be great. The new compact cars could also strengthen American competition in other markets, if Detroit decides to make a vigorous effort abroad.

It would also be prudent to assume some slackening in the rate of increase in British exports to western Europe, which in the fourth quarter were running 17 per cent above the level of a year ago. But over the whole year the increase could be close to last year's gain of 9 per cent. Britain will not suffer appreciably from the existing degree of tariff and quota discrimination in the Common Market, nor benefit appreciably from the Free Trade Association, which does not start until July 1st. Prodded by the Board of Trade, British exporters have proved by their efforts in Germany, as in the United States, that competitive economies offer great scope for exchanges of specialities. Germany is now Britain's sixth largest market, and the second largest (after the United States) outside the Commonwealth.

Putting all the pieces together, it seems reasonable to guess that British exports this year could rise in volume by about 8 per cent, or twice as much as in 1959. Exports will open to a flying start: in the fourth quarter they were running 10 per cent above the level of a year ago, and the recovery did not start until the second quarter of 1959. The rate of increase, comparing each quarter with that of a year ago, can be expected to slacken as 1960 runs on, but the average rate of increase would still be going up. A gain of more than 8 per cent for 1960 as a whole over 1959 is possible, if British prices and deliveries are right.

The Taj Mahal

Five minutes' walk

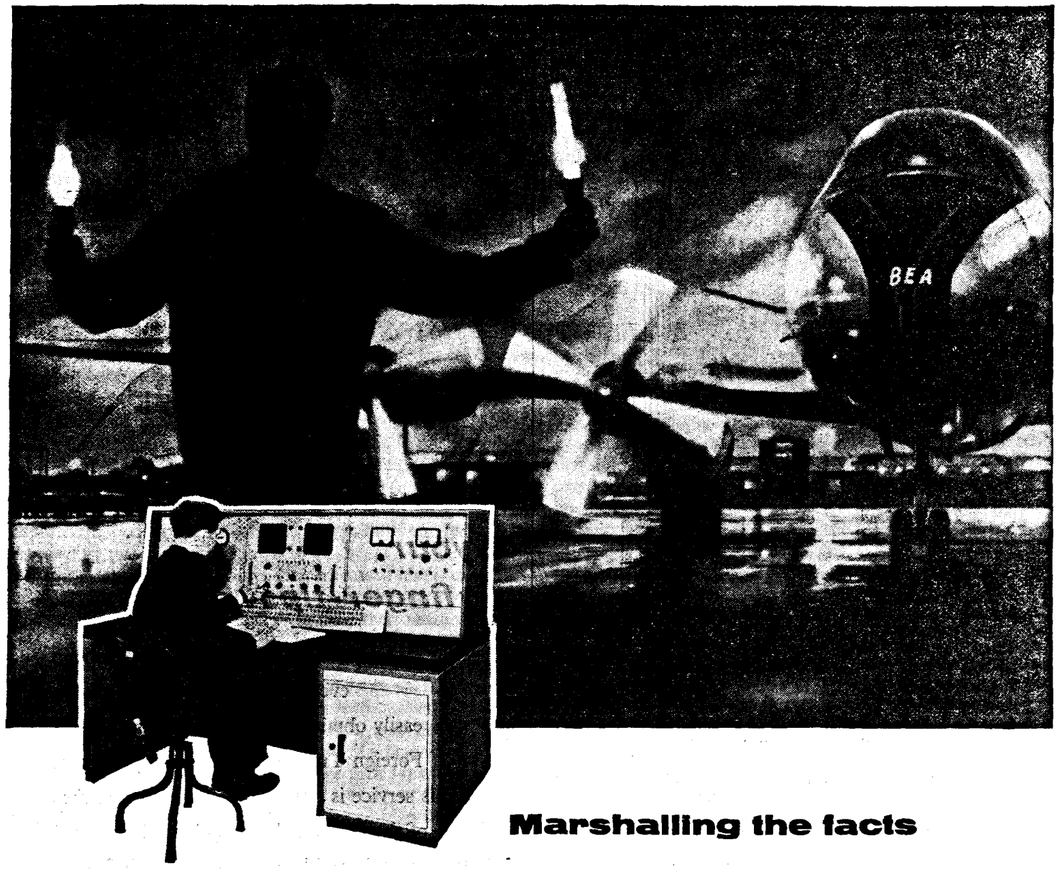
FROM THE MONUMENT

Five minutes' walk from the Monument of London could take you inside The Hongkong and Shanghai Banking Corporation . . . and, *for business purposes*, inside India. The same walk could take you inside the other territories where we are established. We can provide you with up-to-date credit information and advise you on many other aspects of business with the Far East. As the largest British bank established by the Far East for the Far East, with branches in 20 countries and a network of agencies in all other principal trading centres, we are in a unique position to help you.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG
LONDON OFFICE: 9 GRACECHURCH STREET EC3

Branches throughout the Far East; also in New York, Hamburg and Paris. Offices of our Subsidiary in San Francisco and Los Angeles.



The world at your finger-tips...

Information on business conditions in every part of the world is always easily obtained from the Midland Bank's Foreign Trade Information Department. This service is available through all branches of the Bank, and our staff will be pleased to help with problems connected with foreign markets, methods of payment and exchange control regulations. Through this specialised service you can, indeed, have the world at your finger-tips.

MIDLAND BANK LIMITED

HEAD OFFICE:
POULTRY · LONDON · E.C.2

Marshalling the facts

Another BEA plane taxies onto the apron, guided skilfully into place by the marshal's signals. Behind every arrival, every take-off, lies a mass of facts and figures – traffic statistics, passenger and cargo revenue, inter-airline accounting, and other vital information to be collated and analysed.

To speed the marshalling of the facts required for efficient airline management, BEA has ordered an EMIDEC 1100 computer, E.M.I.'s advanced electronic data processing system. This will ensure that vital information will be made available in a fraction of the normal time.

Thus BEA's ground organisation keeps pace with the ever-growing needs of the jet age.

E.M.I. Electronics Ltd. has unrivalled experience and resources in the electronics field. Its products now enable management to have fuller control than ever before.

EMIDEC computers have already been selected by many major organisations including the following:

AIR MINISTRY · BARCLAYS · BOOTS · RAOC
GLAXO · ICI (PLASTICS DIVISION) · KODAK
BMC · SAINSBURY'S · MINISTRY OF LABOUR
MINISTRY OF PENSIONS

We shall be pleased to send you illustrated literature on our EMIDEC 1100 and EMIDEC 2400 computers, and ancillary equipment.

BUSINESS NOTES

THE RAIL STRIKE

Industry Prepares

BRITISH industry has not previously experienced a rail strike in quite the same circumstances as may occur next week if the National Union of Railwaymen do come out. The last time there was a complete rail shut-down was in the twenties when road haulage was in its infancy. Today, four times as much freight of all kinds, measured by tonnage, goes by road as goes by rail, though for longer hauls and the bulkier and heavier goods rail is still the major or the only carrier. At the time of the last railway strike, in the summer of 1955, it was the union representing the majority of footplate men that came out. The NUR stayed at work, and the railways managed to carry about a third of the normal volume of freight in about a fifth of the normal number of trains. Since practically all signalmen are NUR members the stoppage now may be almost total. Army sappers, if the Government decided to call them in, would be of only marginal help, and "guards" would still have to be found for any trains that were run either normally so, say, at time intervals during daylight.

Industry emerged from the 17-day rail strike five years ago, which coincided with a longer stoppage at ports, with little real disorganisation. The loss of output in coal, steel and parts of heavy engineering was quite small. This time, too, most steel mills have two or more weeks' supply of their raw materials in stock, and those most dependent upon rail-borne supplies have more in hand. But difficulties in getting the heavier finished products to their customers might lead to a paring down of output quite early on.

If fewer or no trains ran this time, the coal industry could also meet trouble somewhat earlier. Many of the larger pits need a continual supply of wagons (some of which the industry owns and operates itself) to clear newly mined coal from the pit-head: the Coal Board is likely to find that a rail strike is one sure way of attaining its objective of getting output down. Coal stocks held by industry could last, in general, for two to three weeks: although undistributed stocks are very high, most coal (four-fifths of the total, or 3½ million tons a week) is normally moved to users by rail. Supplies of house coal would run out more quickly, particularly if a cold snap occurs. Merchants, on average, have about 1½ weeks' supply in stock: there are enormous coke supplies in the country, but just how much coke could be offered to householders depends upon what could be done to move it by road. Stocks of most refined petroleum products are said to be "at maximum," at least in areas that depend appreciably on rail-borne supplies.

Most of the rest of industry has already learnt what it can do, with convenience or by improvisation (if other unions are prepared to co-operate), to use road instead of rail. There is no doubt that road transport still has capacity to spare, particularly if "C" licensees are again allowed to take other firms' goods. Of the foodstuffs, fish and milk are the most vulnerable to a rail stoppage. For fish, the problem will be one of shifting supplies from the ports; difficulties in milk supplies are likely to occur mainly in the London area, where a third comes in by rail, but it is thought that improvisation can close the gap to about a ninth, 100,000 gallons a day, or even less. Perhaps the business activity that will be most sadly hit next week, aside possibly from some London offices, will be the British Toy Fair at Brighton: its trains will still be running, but few may be able to get there to see them.

IN THE MARKETS

Success Under a Shadow

WITH the railway strike casting its shadow across the stock market, the volume of trading this week has been light, fewer bargains being marked on Wednesday than on any other day since the election. Equity prices have followed the twists and turns in the negotiations, losing support at the moments when the strike appeared to be on and becoming firmer again when any prospect of a settlement emerged. The outcome of these shifts and changes is that *The Economist* indicator fell by 4.9 points to 364.6 in the week to last Wednesday. The trend in the industrial market still seems to be downwards and that in the fixed interest market gently upwards; in this market there has again been some buying of medium dated gilt-edged stocks, though not of the long dated issues.

The undertone in the fixed interest market, strike or not, has remained firm and three new stocks have been successfully launched. The attractive 6 per cent coupon on the £4½ million issue of unsecured loan stock, 1980-85 issued at par by Decca Record brought in applications exceeding £26 million and dealings began at a point premium. Australia's £12 million 5½ per cent stock, 1977-80, at 99 was judged to be fairly priced in comparison with existing issues but it was hardly one to excite the stags. But the demand from investors secured its over-subscription and applications for over £1,500 of stock were scaled down to about 68 per cent. Dealings began on Thursday at $\frac{1}{16}$ discount but the price quickly improved to $\frac{3}{16}$ premium. On that day the offer by Tate and Lyle of £5 million of a 5¼ per cent debenture stock, 1980-85, at 98½ was over-subscribed several times.

Wall Street Uneasy

A Correspondent on Wall Street writes:

SINCE the Dow Jones average touched its peak of 685 early in January, equity prices have fallen on Wall Street by almost 10 per cent. The Dow Jones average fell below 620 before the weekend and though prices have steadied a little since, dealers and investors are still worried. The last rites have not been formerly said over the bull market but a growing number of investors now believe that the peak will not be surpassed this year. Institutional investors are no longer committed to a policy of putting an increasing portion of their new funds into equities and are turning their attention to high yielding fixed income securities.

One reason for this uneasiness about equities is that there is a growing belief that business activity, though it will be at a high level, will be less buoyant than had been expected. Certainly, the economy did not this year get off to the flying start that had been anticipated. Even so, many members of Wall Street are not expecting a really prolonged fall in prices, arguing that the market is likely to steady itself, if and when the Dow Jones index falls below 600. Some stocks at their present prices are offering yields of 5 per cent and there are issues in the steel, airline, chemical and oil industries which are already described as being oversold.

FOREIGN EXCHANGES

Sterling and Strike Threats

STERLING has this week stood up to strike fears with remarkable equanimity. This has not been due to greater optimism in the foreign exchange market than elsewhere, but to the exceptionally strong technical position of sterling. Merchants and bankers on the Continent and in New York appear to be exceptionally short of sterling. The tightening of credit and the increase of interest rates in London is making it difficult for supplies of sterling to be replenished. As a result, sterling has been firm in the spot market against dollars and most Continental

currencies. Without any evidence of support from the Exchange Equalisation Account it has been held at about $2.8030.

The underlying strength of sterling has been particularly reflected in the forward market. Although the relative levels of short-term interest rates in London and New York should give the forward dollar a premium equivalent to a rate of about ¾ per cent per annum, the rates quoted this week represent a premium of only ¼ per cent. The only evidence of weakening of sterling has been in the market for security dollars where the premium has widened this week from 3¼ to 4¼ per cent.

The bullion market reports exceptionally active business in gold, some of it on Far Eastern and South American account, and the dollar equivalent gold price has remained firm at around $35.10. At this figure central banking appetite for gold, which has in recent months provided much of the demand for the metal, tends to be discouraged, since the price at which central banks can obtain gold from the US Treasury is $35.08¾. There are, however, still instances of central bank purchases in London at prices higher than this US parity. This is due to the fact that certain central banks still retain some diffidence about converting dollars into gold openly through official channels in the United States. They prefer the anonimity of the London market, even if it be slightly dearer.

DEVELOPMENT DISTRICTS

Pruning the List

THE Board of Trade's list of new "development districts," in which industrial and commercial projects may qualify for government assistance when the Local Employment Bill becomes law (which will probably be April 1st), looks a good deal more realistic than the "Datac" list of places that have been eligible for financial help since 1958. It is shorter and covers a little less of the country. The 1945 vintage development areas and the Datac (for Development Areas Treasury Advisory Committee) "development places," which will both be deprived of their old status by the Act, covered between them about 20 per cent of the total insured working population in Britain. Effectively the figure is now lower: nearer 14 per cent, since parts of the older development areas have been "administratively de-scheduled" as the need for government aid there has receded. The new list, in comparison, covers areas where about 12 per cent of the insured population live.

But ten of the forty-two new districts are located on Clydeside and Merseyside, and on the north-east coast about Tyneside (excluding Newcastle and Gateshead and, on the Tees, Middlesbrough and Stockton which were in the old north-east development area). These ten account for just over half of the total number of insured workers in the forty-two new districts. The other thirty-two districts are a mixed assortment of problem mining areas, like the Rhondda; places hit by defence economies, such as Sheerness; the least prosperous seaside towns with seasonal difficulties, such as Rhyl, Margate, and Blackpool; and the country's depopulated fringes, Cornwall (most of it), Anglesey, and the Scottish highlands and islands, which would probably be the cause of more trouble off the list than on it. The cotton belt, not surprisingly, many of the seaside resorts, and a dozen or so other towns that were put on the "Datac" list, do not appear on the new one; nor do the prosperous parts of the development areas. On the other hand ten new districts, mainly where coal mines are being closed down, have now been included.

Changes in the Rules

THIS reshuffling of the areas reckoned as deserving help follows, in the main, the differences in the criteria in the new and old legislation. To qualify a district must be suffering from a rate of unemployment that is both high and likely to persist (the measure of what is high, apparently, is now to be 4½ per cent instead of 4 per cent). An area may also now become eligible if such a degree of unemployment appears to the Board of Trade to be imminent, though Mr Maudling has revised the wording of the bill to read "is expected within such a period that it is expedient to exercise the . . . powers." Several other changes were made to the bill before it went to the House of Lords. The Board of Trade is now to be obliged to produce an annual report on its use of the powers under the bill, and the idea of having a co-ordinating committee between the board and the three management corporations that are to run the industrial estates in the old development areas (and any new ones built) has sensibly been dropped.

Two additional points have been written into the list of points the board must pay attention to in deciding where and how it may grant assistance. It has now to pay regard "to the proper diversification of industry" in a district, and "to the circumstances [not only] of the district generally [but also] of any particular description of persons" in it. The reference to "diversification" was as far as the Government was prepared to go to meet the opposition's pressure for the retention in the bill of some concept of a "proper distribution of industry" (which still has some theoretical relevance to the granting of industrial development certificates).

But the principal features of the bill passed the Commons intact. If the Government is successful in confining the list of development districts to roughly the present number and size, removing places from the list as often as it adds to it, then a policy of inducing industry to move to areas where it might reasonably do so might work out satisfactorily. Mr Maudling was wise to keep his list of districts to himself until the bill had left the solicitous hands of MPs.

BUSINESS BAROMETER

High Pressure

WITH its seventh inquiry, of which it published the results this week, the Federation of British Industries now completes its second year of sampling businessmen's confidence and current experience by the technique of asking them to answer "Up," "Same" or "Down" to a series of questions about factors in their operations. Their innovation (for this country) has provided one of the most generally welcomed additions to business indicators of recent years. It is refreshingly rapid in collection and publication (from sending out the questionnaire to announcement of results takes about three weeks); it seems still to be answered in many cases by people right at the top of the 700-750 companies co-operating; and, being obviously a matter of opinion and not too directly quantitative, it is not open to the anxious marginal comparisons or the disconcerting revisions that many other economic indicators are.

HOW BUSINESSMEN SAW IT

	Percentage majority reporting "Up" (+) or "Down" (−) in four months to			
	Feb., 1959	June, 1959	Oct., 1959	Feb., 1960
Hours worked	− 9	+14	+25	+18
Employment	− 9	+ 9	+25	+28
Output	+ 6	+34	+45	+45
New orders	+ 5	+37	+37	+46
Export orders	−13	+ 8	+ 9	+18
Export deliveries	−14	+ 8	+13	+15
Length of order book	−16	+12	+26	+31
Stocks:				
Materials	−18	− 4	+ 4	+15
In progress	+4	+17	+26	+29
Finished		+ 1	−12	− 4
Investment expected:				
Buildings	−22	−14	−11	+ 6
Plant	− 9	Nil	+10	+26
Per cent working to capacity	20	38	50	53

At the beginning of February, according to the latest inquiry, businessmen's confidence was verging on the jubilant. Some 97 per cent of them remained as optimistic about the general business situation as they had been in October: 48 per cent were even more so. Among their answers (set out in the table) there were few surprises, except perhaps that 45 per cent said they were still working below capacity. Rather larger majorities than in October of those reporting any change were reporting higher output, rates of ordering, order books, and —in particular—capital investment; and a new question shows that by now these more ambitious plans of investment are being translated into higher orders for capital equipment.

ANOTHER CITY MERGER

Lazards-de Stein

THE recent tendency towards concentration in the City's issuing and merchant banking business will be carried an important stage further in mid-April, when a "complete merger" will take place between the businesses of Lazard Brothers & Co. Ltd. and Edward de Stein & Co. Since both houses are private undertakings—de Stein is still a partnership—neither the details of the merger terms nor the amounts of resources involved are being disclosed. As, however, it has been stated that the capital of Lazard Bros. (last disclosed at rather over £2½ million, paid up) will not be altered by the operation, it can be presumed that the consideration for the transfer of the de Stein interests will be cash.

The immediate cause of the merger evidently was the desire of Sir Edward de Stein, founder and dominant partner of the smaller house, which dates from the early nineteen-twenties, to curtail his business activities; he is 74. But the wider justification for the fusion with Lazards lies in the largely complementary nature of the two businesses, and the personal associations that have subsisted between them. Lazard Bros. is one of the great international banking houses of the City; it dates from 1877, and was originally an offshoot of the Paris house, Lazard Freres & Cie, which in turn stemmed from New Orleans. During the period between the wars—and incidentally after the acquisition of a large controlling interest in it by S. Pearson & Son, the private company representing the first Lord Cowdray—new activities were added to the traditional international ones, especially in the spheres of investment banking and industrial issues. The de Stein business was developed in these same domestic spheres, with different but important industrial connections, and it has also specialised in investment trust and property trust management, a sphere that has not hitherto been entered by Lazards. Sir Edward de Stein and his six partners will now join the Lazards' board under the chairmanship of Lord Kindersley, and five of them will become fulltime managing directors, making fourteen such directors in all.

The other recent City mergers of importance were those of S. G. Warburg & Co. with Seligman Bros. in 1957 and of Philip Hill, Higginson with Erlangers last summer.

CHARITIES BILL

Common Investment

ON behalf of about 85,000 charities, the Official Trustees of Charitable Funds hold between £140 million and £145 million of securities (predominantly gilt-edged stocks). Professor Victor Morgan has recently estimated that other charities hold over £500 million in securities. The latter figure is very tentative and all that is certain is that only a small number of charities have large individual funds. Many of the trustees of other charities have little investment experience; most of the old ones are confined to gilt-edged stocks by the present Trustee Act; and almost all of them are too small to secure an effective spread of investments.

A new Trustee Act will eventually tackle the problem of freedom of choice in investments and the new Charities Bill grapples with the problem of size. This bill empowers the Charity Commissioners, on the application of any two or more charities, to establish a common investment fund for them in which the charities will have an aliquot share in the fund and its income and in which they can also put their moneys on deposit. The charities can either manage these funds themselves or ask the official custodian of charities, assisted by a panel of investment advisers, to do so for them. There is no suggestion in the bill that the charities coming together in a fund must have a common purpose; indeed, under its provisions, it would be just as easy for a county or a city to set up a fund for its many and diverse charities as it would be, say, for the National Association of Almshouses to do so. Common funds, however, only make sense where the charities have the same investment aims in view and, in practice, that would suggest a grouping of charities that have a common purpose. These common funds will themselves be charities, as obviously they must be for tax purposes, and a donor will be free either to make his gift to his favourite charity or to the fund.

The trend in recent legislation (as in the Universities and Colleges Act and the Church of Scotland Act), in legal decisions (as in the Royal Society case about five years ago) and in administrative acts has been to promote the pooling of investments by charities. How attractive the idea is to trustees can be seen in the response to the establishment of a common pool, run on unit trust lines, for charities designed to further the objects of the Church of England. A bill permitting the setting-up of this fund received the Royal Assent in the spring of 1958. Last November the fund held £8 million in securities and had £2¾ million deposited with it. The new Charities Bill now makes it possible for all charities to secure the advantages in investment already enjoyed by Church charities and a few others. The pooling of charitable funds plus a new Trustee Act should ensure much greater flexibility in their investment policies and it may promote much more of a professional spirit in the management of these funds.

ANGLO-JAPANESE TRADE

Just Horse-trading?

THE Anglo-Japanese trade talks that opened in London this week are given fresh point by the progressive removal of British controls on imports from all countries except Japan and the Communist world. This has effectively extended discrimination against Japanese goods, and though Japan can hardly hope to be placed on an equal footing with the rest of the free world, it will certainly press for more equal treatment. Japan does not discriminate much against British goods, but the relaxations it made recently have not significantly increased British opportunities in that market. Last year Britain's imports from Japan rose by £8 million to £43 million, partly because canned salmon, which accounts for half the total, was freed in September, 1958; while British exports recovered sharply by nearly £13 million to £32 million, largely reflecting the industrial recovery in Japan.

Britain restricts imports of a wide range of Japanese consumer goods, but of hardly any capital goods. The import quotas now under negotiation cover principally cotton and rayon fabrics, pottery, sewing machines, cameras, bicycles and radios and radio components including transistors. Japan will no doubt claim that the quota for cameras protects German rather than British manufacturers, and might also argue that the restrictions on toys, flashlights, sports goods and the like serve to protect Hongkong manufacturers as well as British. Pressed during the Gatt negotiations in Tokyo last autumn to relax its own protectionist import policy, Japan has taken a few steps along the path of virtue and intends to take more, but it reserves the right to withhold liberalisation from countries that discriminate against it.

Plainly there is some scope for horse-trading at the present talks, but must that be all? The occasion could also be used for taking a fresh look at the obstacles to a Treaty of Commerce and Navigation, negotiations for which have been going on intermittently for years. One day Britain—and other countries that have refused to extend full Gatt rights to Japan—must adopt a positive, instead of purely negative, policy. Britain recognises its duty to allow the under-developed countries to earn a living in world markets by the sale of manufactures. Japan is not an under-developed country, but because its exports are still cheap (though of better quality than before the war) it really stands at their head. If Britain refuses to open the door wider to Japanese goods, will the under-developed countries have much confidence in the promises made to them?

HIRE PURCHASE

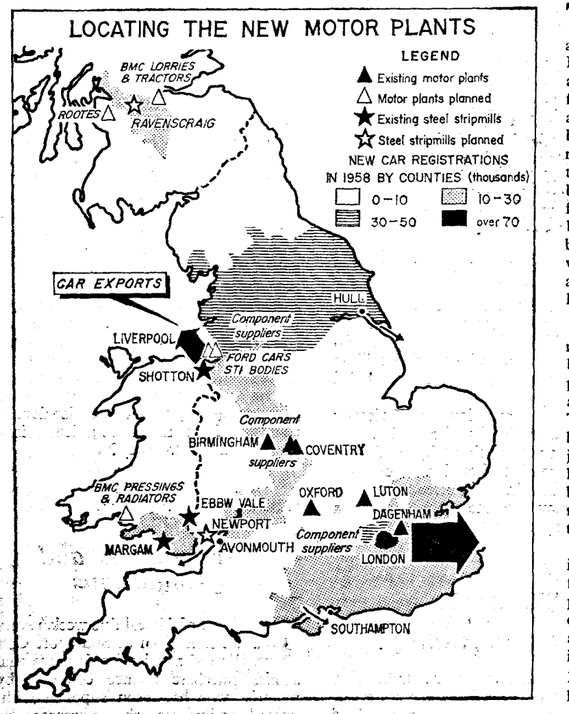
Warranties and Conditions

THE Court of Appeal this week, reversing a decision given at Southport County Court, allowed a claim for damages against a hire purchase finance company by a motorist who had been supplied with an unroadworthy car the purchase being

financed by a hire purchase agreement with the company. The condition of the car was not in dispute: Lombank Ltd., the company in question, relied on a clause in the printed conditions of the agreement by which the hirer acknowledged that he or she (the purchaser was in this case a Southport widow) had examined the goods and had found them "of good and merchantable quality," and "had not made known to the owners expressly or by implication the particular purpose for which the goods are required." It also contended that by a printed delivery receipt signed by the claimant she had acknowledged that she had read the conditions of the agreement and confirmed the acceptable condition of the goods.

What Mr Justice Diplock, in reading the decision of the Court of Appeal, called "this curiously drafted clause" in the agreement referred to a provision of the Hire Purchase Act of 1938 by which

> Where the hirer expressly or by implication makes known the particular purpose for which the goods are required there shall be an implied condition that the goods shall be reasonably fit for that purpose . . . the owner shall not be entitled to rely on any provision in the agreement excluding or modifying [that] condition . . . unless he proves that before the agreement was made the provision was brought to the notice of the hirer and made clear to him.



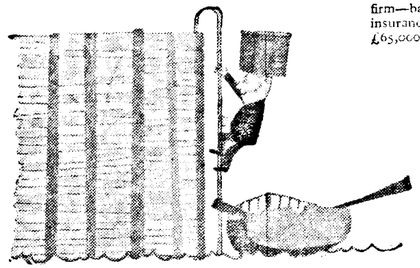
Their lordships held that the effect of the clause in the hire purchase agreement had not been made clear to the hirer: "nor . . . had it been made clear to their lordships, who concluded with reluctance that it was clearly an attempt, which only the size of the print in which it was set out prevented one from calling blatant, to evade the provisions of the Act." Nor did they consider that Lombank would reasonably have, or had in fact, signed the hire purchase agreement on the faith of the truth of the representation as to the condition of the goods contained in a printed delivery receipt, which was signed after the hire purchase agreement had in fact been concluded and the goods delivered.

STEEL COMPANIES

Development Finance

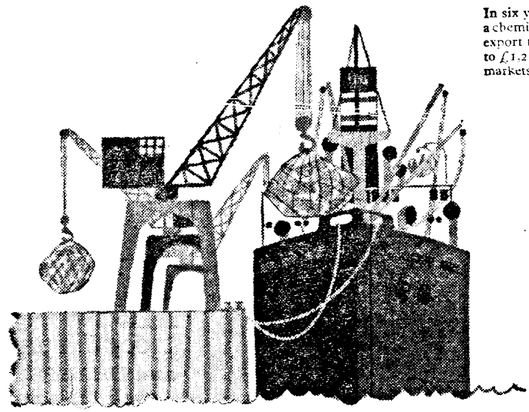
UNDERSTANDABLY, the spokesmen of the steel industry at the recent series of annual general meetings have drawn shareholders' attention to the problems of financing development. The new chairman of Richard Thomas and Baldwins, Mr G. C. R. Eley, made no mention of the possibility that the ordinary shares of this nationalised concern would be offered for sale to the public this year. But he did reveal that to supply the £110 million required for building the new strip mill RTB would borrow money from the Iron and Steel Holding and Realisation Agency over and above the maximum loan of £70 million from the Government. Such loans he described as being relatively temporary in character and he said that he believed RTB would be able to repay the Government loan by 1971, pay a proper return on its capital and provide the money for other developments without difficulty. This suggests that the stock market will not have to bear the weight of new money for the strip mill as well as the denationalisation issue and that this issue is likely to be confined to an offer of ordinary shares, since Ishra is still counted on as a supplier of further capital. The road is clear for this issue, especially as RTB's profits are likely, Mr Eley says, to make another substantial advance this year.

Carrots for Cars



THE carrot of financial aid, backed by the stick of refused industrial development certificates, is bringing about marked changes in the geographical distribution of Britain's motor industry. Merseyside, best situated of the areas of high unemployment, will become a new centre for the industry, with the £25 million Ford body-making and final assembly plant at Halewood now supplemented by Standard-Triumph International's plans for an £11 million body plant at Speke. This will be developed from the Hall Engineering press shop that S-TI recently bought; that plant will be extended by 250,000 square feet, and a new factory of 300,000 square feet will be built on an adjoining site of 104 acres that S-TI hopes to buy from Liverpool Corporation. It will employ 4,500; with 8,000 at the new Ford plant and 1,500 at the BMC appliance factory in Kirkby, high unemployment may no longer trouble Merseyside.

Scotland seems to the outsider a less promising area for motor production, and it has certainly been less favoured by the manufacturers. The BMC lorry and tractor plant at Bathgate, which can treble BMC's lorry output and initially double that for tractors, will employ 5,600. The car plant that Rootes intends to build at Linwood has been estimated—not by Rootes—to provide another 3,500 jobs. There will remain plenty of spare labour in Scotland, and also in South Wales, where the BMC plant for body pressings near Llanelly and the expansion of its radiator factory there will bring up BMC's employment to 4,200 jobs.



About £100 million of the £160 million that the industry is expected to spend has now been committed, and work for some 28,000 is to be created in areas of high unemployment. Much of the rest may go on re-equipping existing plants—BMC is spending £26 million on this, and S-TI £7 million—but Vauxhall has yet to announce its plans. The industry's capacity seems likely to reach 3 million vehicles by 1963, a 60 per cent increase on present production rates but nearly twice 1959 output.

SMALL EXPORTERS

From a £195 order, a small textile firm—backed by ECGD credit insurance—built up a flourishing £65,000 export trade within two years.

LARGE EXPORTERS

In six years of ECGD insurance, a chemical firm boosted its annual export turnover from £113,000 to £1,210,000, adding eleven new markets to its original eight.

Total shipments of ECGD policy-holders increased by over 20% during 1959 —at a time when uninsured exports rose by only 1%. Today, when winning fresh orders is largely dependent on whether you can grant competitive credit terms to new buyers, exporters need some guarantee of payment. ECGD credit insurance provides that guarantee; allows you to expand overseas free from major financial worries. *Have a talk with your ECGD man.*

EXPORT AND EXPAND THROUGH E·C·G·D

ECGD is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

"And what's your opinion, sir?"

"My opinion is that only the best is good enough for me."

"I suppose that's why you are flying SWISSAIR to South America, sir?"

"Naturally. They always treat me with proper respect."

"Are you looking forward to your flight, sir?"

"Of course. It's only an overnight journey on their famous 'Supersuisso'. In First class there are foam-soft sleeperseats and delicious à-la-carte meals—freshly prepared and cooked—at no extra cost. And they also have berths. Whether you fly First or Tourist to South America, you can't do better than a swift, smooth flight by—where are you going?"

"I'm off to see my Travel Agent to book my seat on the 'Supersuisso'. Cheerio!"

AIR ...
... COOL! PURE!
and HEALTHY!
...even in factories

Top-notch efficiency can only be reached under the best working conditions. And weather is a known "trouble-shooter" in any schedule. But where nature fails, air conditioning takes over... to circulate a constant flow of cool, purified air, and maintain a comfortable and healthy temperature. For your special needs,

CHRYSLER
AIRTEMP

Airtemp offers the "perfect" solution for your hot-weather problems. Installed in all countries, all climates... for small homes or giant industries.

CISA O.A. 1/4

CHRYSLER INTERNATIONAL S.A.
P. O. Box 281 Geneva - Switzerland

For the new strip mill at Ravenscraig, Colvilles will be relying on a loan of up to £50 million from the Government. But that loan will have to be repaid and Colvilles has other developments and expansions on hand. It is not therefore surprising that its chairman, Sir Andrew McCance, emphasised in his statement to shareholders that the parent company is actively reinforcing its reserves and that the greater part of the earnings of subsidiaries have been transferred by way of dividend to build up the cash reserves of the parent company. The two strip mills are the biggest of the industry's capital commitments, but there are other smaller developments that have to be financed as well. Mr A. G. Stewart, the chairman of Stewarts and Lloyds, revealed for instance that the group is committed to the spending of another £19 million. Much of that will be financed from retained profits. But the company's authorised share capital has been raised from £40 to £60 million, and though there is no present intention of appealing for new money in the market the directors say it will be their policy, as it was at the time of the rights issue of nearly £14 million last October, to ask at the appropriate times for the support of shareholders in the raising of additional money.

AIR TRANSPORT

Not the Whole Answer

No one who is prepared to make constructive suggestions about the future organisation of air transport should ever be discouraged from doing so: the industry has too many sacred cows and too few independent thinkers. For this reason the Bow Group* deserves congratulation for its sizeable, 50,000 word study of the state of British airlines, even if it has not come up with the whole answer. It contains much sensible analysis of airline operation, and a remarkably vehement defence of Sir Gerard d'Erlanger's term of office as chairman of BOAC during one of the corporation's blackest periods. The Government has already promised to reorganise the machinery for licensing air services along the lines suggested in the study—the bill embodying these changes should be presented to Parliament in a matter of days. But in its proposals for reducing friction between the independent airlines and the nationalised corporations, for example suggesting that the corporations and the independents should form joint companies to operate cut-price flights with "written down equipment," the Bow Group falls into the common error of believing that the old aeroplane is the cheapest aeroplane.

The Government is indeed likely to propose much closer working agreements between the corporations and the independent airlines. But the profitability of the half-price fares that the independent airlines are seeking permission to charge on certain routes depends not on the price paid for the aeroplane but on the cost of flying it. Many elderly aircraft types which would qualify for the description "written-down equipment" are more expensive to fly than newer ones designed specifically for cheap services such, for example, as the new and extremely expensive American jets.

Nor is it clear whether the group has worked out fully the implications of its suggestion that a sizeable military air transport fleet should be built up, to give the Army mobility and the aircraft industry work. Transport Command is actually acquiring an aircraft fleet that is likely to number 200 machines and will span the gamut of the industry's products from the smallest helicopter to the largest Rotodyne or jet transport. This must spell an end to the trooping contracts that have sustained the independent airlines during their leanest years and on account of which they have invested sizeable sums in modern long-range aircraft; the RAF will be hard put to find work for such a fleet in peacetime. What other work are the independents to find? If the new licensing Board gives them new commercial routes, this will be at the expense of the nationalised corporations, especially BOAC. Will the country tolerate subsidising BOAC's losses while other British airlines make profits at its expense? Conservative policy in the early nineteen-fifties deliberately encouraged the independents to think they would get a larger share of the cake; ministers have spent the subsequent nine years trying, with growing embarrassment, to find where to cut it from.

STEEL

Stockbuilding Has Begun

Though the total stocks of steel in the hands of British consumers at the end of December appear to have been no higher than at the end of September, it is clear that the building up of stocks upon which the industry is basing part of its optimism about demand this year had already begun. For the steel stocks held by the railways and the coal mines were still declining—these industries were running down their huge holdings. In private industry, many consumers were already building up their stocks against the likely continuance of the boom.

That boom continues to pull up steel output to record levels—471,400 ingot tons a week in January, no less than a third higher than a year before. But the recovery, though now general, is by no means even as between consuming industries (as the table shows) or between products. Deliveries of plate fell by nearly a half from the previous peak to the bottom of the recession (at the end of 1958): in the fourth quarter of last year it was still 18 per cent below that previous peak. Deliveries of heavy rolled products were nearly back to pre-recession levels, after a similar fall. But output of light sections, which fell about 20 per cent, was by the end of last year above the 1957 rate: and deliveries of sheet and tinplate, which never faltered during the recession for other steel products, were respectively no less than 22 per cent and 50 per cent above their level two years ago.

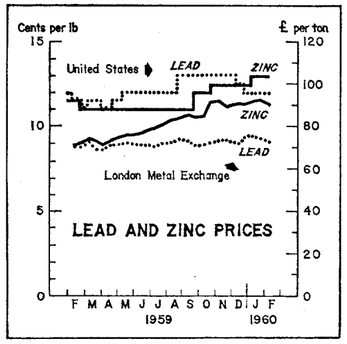
THE GOLD LEAGUE

Third Place

By far the largest holder of gold and foreign exchange is the United States, and second in the free world is Germany. Who comes third? Not Britain; not even Switzerland; but—Italy. The country with western Europe's largest underdeveloped area has in the past two years doubled its international reserves; they are now well over $3,000 million, sufficient to finance a year's imports (Britain's reserves even now cover only three months of its own imports

and six weeks of those of the whole sterling area on behalf of which the reserves are kept).



Italy's massive intake of reserves in the past few years is attributable mainly to a big rise in exports and (until recently) a decline in the value of imports; to its ever-increasing role as Europe's holiday playground; and to growing receipts of emigrants' remittances and foreign capital. The anomaly is that Italy does not use its huge external cushion to undertake a bigger programme of economic development. Industrial production, it is true, has been rising as fast as anywhere in Europe (up 10 per cent for two years in succession), but the economic contrasts between north and south grow bigger rather than smaller. Meanwhile Italy's surplus of foreign exchange is the measure of its own net saving, part of which could be invested in Italy independently of the resources that the World Bank and other institutions are bringing from outside.

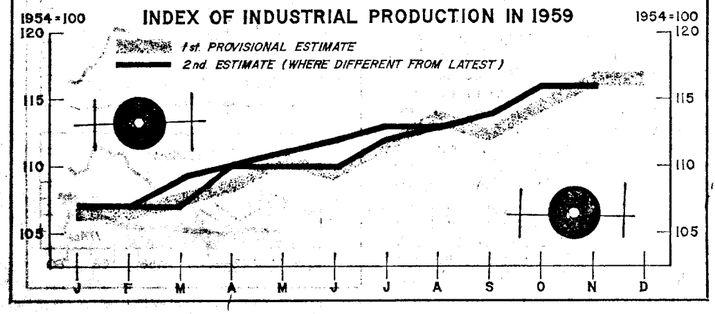
LEAD AND ZINC

Lead Still Lame

MEMBERS of the International Lead and Zinc Study Group arrived in Geneva last month with a pretty clear notion of what needed to be done, and so reached agreement speedily. Their statistical exercises confirmed that zinc no longer needs a crutch, but lead does. Following the restrictions on sales of both metals in the second half of 1959, zinc has forged ahead in the London market, but lead is only a little higher. In the American market, where these metals are sheltered by import quotas, lead long remained the dearer metal; but it has now dropped by a cent to 12 cents a lb, while zinc has risen by a cent to 13 cents a lb.

The study group's forecast, published after the meeting ended last week, suggests that free world production of zinc this year (plus estimated net imports from Communist countries), might fall short of

consumption by roughly 75,000 metric tons; though detailed figures have not been published, they no doubt showed that world consumption is expected to rise even more sharply than production. For lead, in contrast, the group was faced by an apparent surplus of about 100,000 tons, despite a further rise in consumption. This surplus, it was pointed out, was fortuitously large, as last year's was fortuitously small: because of strikes in the United States last year about 60,000 tons of lead metal in concentrates had to be left over for smelting this year. The group therefore concluded that supplies of lead, but not of zinc, should still be restricted. Producers agreed, and offered so to curtail supplies in the first nine months that the surplus would be cut to an annual rate of only about 50,000 tons, equivalent to 2½ per cent of the predicted rate of consumption. A standing committee has been appointed to keep an eye on developments before the group meets again early in September.



The apparent deficit in zinc can be met from stocks. As the group pointed out, American producers' stocks are high, and zinc will also be available from the British government. Britain announced that it considers the time has come to resume regular sales from its strategic stock. It has about 54,000 tons of zinc in all, largely high-grade, for sale over a period of up to four years, and perhaps about a third of the total might be offered for sale this year. Anticipating the surplus, lead prices in London have weakened, forward lead dropping by £2 10s. to £72 10s. a ton. Zinc has weakened too, mainly owing to arrivals of metal from Gulf ports; this has eliminated the premium for prompt metal, and the forward quotation has dropped by about £3 to £89 15s. a ton.

Assessing Output

ABOUT 800 individual series make up the final output index for any month. But the first provisional estimate, calculated at the end of the following month, is based on rather less than half the full information; it is four or five months before all the raw figures are collected.

Not surprisingly, therefore, the first estimate gives a choice of two figures. All the same, according to last year's record, it seems more likely than not that the final estimate will be neither of them. Moreover, there was a fairly consistent upward revision; the average for the first ten months is a point higher on the latest estimates than on the earliest ones.

Possibly there is a consistent bias in these first forecasts which can be corrected. The lesson is that as a reflection of month-to-month changes the provisional estimates have to be treated with a good deal of reserve.

SALTS (SALTAIRE)

Unresolved and Unsatisfactory

MINORITY shareholders in Salts (Saltaire) cannot have gained much satisfaction from last week's annual general meeting. Fifteen months ago, it will be recalled, Illingworth Morris made a partial bid of 7s. for up to 4 million ordinary shares of Salts (they already owned 3,850,000 shares) and secured control of 63 per cent. Lord Wilmot, the chairman, and two other directors of Illingworth Morris then went on the Salts board. The original partial bid was on a first come first served basis and more recent attempts by the directors to put the matter right have left them floundering in even deeper water.

As directors of Illingworth Morris, they made an offer of 8s. in cash for the remaining minority shares in Salts. That was 6d. below the price at the time of the offer. As directors of Salts they could hardly recommend that offer to shareholders for acceptance. At the general meeting Lord Wilmot, as chairman of Salts, therefore said that the directors were not recommending the offer or otherwise; they were simply putting it forward. The unsatisfactory situation has thus arisen that three directors, including the chairman, have an interest as bidders and a different responsibility towards the recipients of the second bid.

The intention seems to be to make Salts a wholly owned subsidiary. So far the directors of Salts on behalf of their own

US* makes steels

Our grammar is fine. So are our steels. US is United Steel, the group of companies which produce the widest range of steels and steel products in Britain.

Not just steel—but steels. Each with its specialised qualities and specified uses . . . steel for motor cars, watches or umbrellas. Mining machinery, saucepans or railway lines. Over one-eighth of this country's steel is produced by the 37,000 people employed in United Steel.

Companies in the United Steel group retain their individuality to a remarkable extent. They are specialists—geared to understand the manifold problems of modern industry. You will see their work in straightforward railway axles, or the complex structure of Jodrell Bank radio telescope.

The many special steels that nuclear reactors demand, the seaworthy and airworthy steels for *m.v. Oriana* or the newest *Comet IV*—US makes them all. And to specialisation, United Steel adds the benefits of large-scale co-operation in research and marketing. That's why it pays to know US.

This is US

THE UNITED STEEL COMPANIES LTD

*the united steel companies limited

U.S. 150

holdings and about 2,250 minority shareholders, owning about 3,300,000 shares, have accepted the bid of 8s. But holders of about 1,600,000 shares, representing about one-third of the minority, have not. The offer has not been made unconditional but it has been extended another three weeks.

Illingworth Morris has still some way to go before it is able to acquire any outstanding shares compulsorily, for to do so it must receive acceptances from not less than 75 per cent of the shareholders who own not less than 90 per cent of the shares for which the present offer of 8s. each is made. Lord Wilmot, who has championed the rights of shareholders in the past, might consider whether the interests of the shareholders of Salts, who because they are in a minority are effectively powerless, might not be better served by securing an independent valuation of the shares and making that the basis of a revised offer.

ELECTRONIC BANKING

Automation in Accounts

MARTINS is the first bank in Britain to take the plunge into mechanisation of its accounts by electronics, even if only on an experimental scale. Barclays ordered a computer last August, which will not be ready for another eighteen months, but Martins Bank will receive the Ferranti Pegasus II computer it recently ordered within a year. This computer, employing the services of only five people, will enable 30,000 accounts to be dealt with in five hours. Working with Ferranti's computer experts, the bank's research staff spent eight months preparing the programme and since January 1st one of its London branches has been run successfully on a modified Pegasus I computer. Martins regards this as only the first step in the automation of the bank's business; in time other aspects of the bank's work will be handled by the computer.

Martins has not decided finally where the computer is to be installed, but it seems probable that it will be in either London, Liverpool or Manchester; it will handle the accounts of about 15 branches. The data will be prepared in the branches in the form of punched paper tape by adding a paper tape punch to the normal accounting machine for the listing of vouchers and cheques. At first, messengers will take the tapes to the computer centre, but it is expected that before long they will be replaced by teleprinter connections. Details on the paper tape will be read into the computer and stored on magnetic tape; at the same time each entry will be checked. Accounts will be identified by numbers with each number including a check number, so that the system can be made self-checking. Any discrepancies will cause the entry to be rejected and "printed out" by the computer for investigation.

The entries will then be sorted out into orderly account numbers ready to be processed against the balance file (which will include the previous day's balances). The appropriate account balance will be adjusted and the closing balance of each account checked against the overdraft limits. The new balance file will then be incorporated (in the computer store) into the history file (containing all details necessary for the customer's statement). New entries from the balance file will be added in daily, while in addition the computer will select and print those statements which are due to be sent to the customer. A carbon copy of each statement will be kept by the branch, which will also receive a daily list of the balances printed out by the computer.

BUILDING SOCIETIES

A Record Year

MEMBERS of the Building Societies Association now have responsibility for £2,156 million of total assets; these represent about 75 per cent of the assets of all building societies in this country, which are put at £2,900 million. On the recent experience of the Halifax and the figures for the 196 members of the association, it can be estimated that mortgage advances by all societies last year easily exceeded £500 million and that by the end of the year they held about £460 million in cash and trustee investments. The societies held their own last year against the competition for savings from National Savings and from unit trusts and stock exchange investments.

BUILDING SOCIETIES ASSOCIATION

(£ million)

	1959 Jan. 1 to June 30	1959 July 1 to Dec. 31	1958	1959
Shares & deposits:				
Gross receipts	229·5	231·6	353·3	461·0
Gross withdrawals	123·4	143·0	233·5	266·4
Net receipts	106·1	88·6	119·8	194·6
Advances	162·5	219·9	259·7	382·4
Repayments	146·7	167·9	266·1	314·6
Funds†:				
Liquid assets	347·3	338·2	311·1	338·2
Total assets	2,047·3	2,156·0	1,957·0	2,156·0
Liquidity ratio (%)	*17·0*	*15·7*	*15·9*	*15·7*

† At end of period.

Since the recommended rate on shares was brought down to 3¼ per cent net, the flow of new receipts to societies which followed this recommendation has not been quite as strong. A fair number of the members of the association were so chary of the effects that a reduction in their rates might bring that while applauding the public-spiritedness of others they decided to leave their own rate on shares unchanged at 3½ per cent, net. If net receipts fall at all quickly this year, some of the societies which dutifully followed the association's recommendation might, too, begin to wonder how much of their own self-interest has to be sacrificed to the appearance of solidarity.

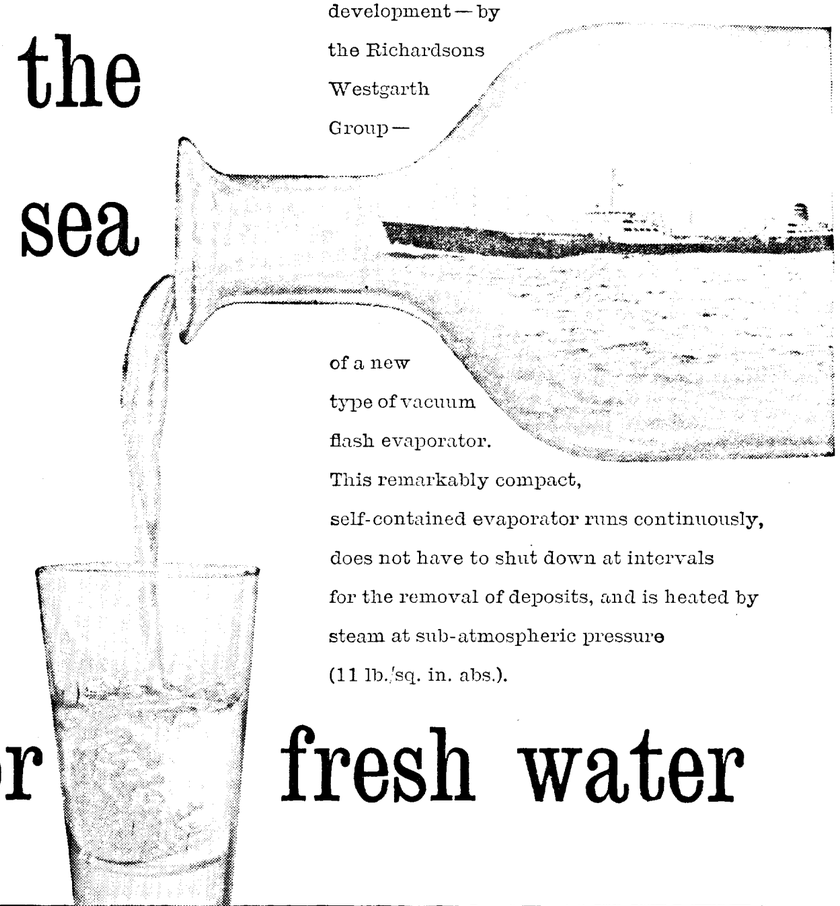
SELF-SERVICE

Boots on Either Foot

A MODIFIED form of self-service is the main feature of the Boots Pure Drug Company's programme to modernise and refit its 1,300 retail shops at an initial rate of 65 shops per financial year. The cost in the year beginning April 1, 1960, will be £2 million: this represents an increase of 30 per cent over expenditure of this kind in the current financial year. The target is to keep approximately the same number of shops, but to double the sales area over the next ten years: new techniques of lighting, display, colour, and store design will be combined with an increase in the size of the shops to bring this about.

At present about 200 Boots shops do some proportion of their business through what the company calls "self-selection." Toilet articles and branded goods are displayed on shelves, selected by the customers, and taken to cash desks for wrapping and payment. Merchandise requiring personal service and advice is still sold from behind counters. Some shops have trebled sales, with the same staff, following the introduction of the "self-selection." The combination of two selling methods gives Boots a foot in each of two different retail camps.

THE JASPER CASE



Further Evidence

IN further hearings on the charges against Mr Jasper, Mr Grunwald and Mr Murray in the City of London Court Mrs Edith Clarke, the assistant secretary of the State Building Society, gave evidence on Friday last week of arrangements to lend £3,255,500 on the security of Dolphin Square and Hyde Park North Estates (both owned by Lintang Investments). As the State Building Society did not lend more than £25,000 on any particular property the total sum was to be advanced in 161 mortgages, 85 relating to Dolphin Square. In all 32 cheques were prepared "at about £100,000 a time" although no written report on title or any formal request for cheques had been received. These cheques were signed at a board meeting on July 28th. If she had known that these cheques were to be used for the purchase of shares and not mortgages Mrs Clarke said that she would not have signed them. Questioned about the minutes of the society's board meeting on July 21st, Mrs Clarke said that the four pages in them referring to the advances to Lintang were dictated to her by Mr Murray, the managing director and secretary of the society, on September 21st.

On Monday Mr Leonard Tobin gave evidence about share dealings between Mr Grunwald and Mr Maxwell Joseph, for whom he had acted as solicitor. Mr Grunwald sounded Mr Joseph about buying Mr Joseph's holding of Lintang. Mr Joseph said that he and his fellow directors were not prepared to sell their holdings unless an

To the sea for fresh water

The idea of getting fresh water from the sea by evaporation is not new, but the ability to do so simply and economically dates from the development — by the Richardsons Westgarth Group — of a new type of vacuum flash evaporator.

This remarkably compact, self-contained evaporator runs continuously, does not have to shut down at intervals for the removal of deposits, and is heated by steam at sub-atmospheric pressure (11 lb./sq. in. abs.).

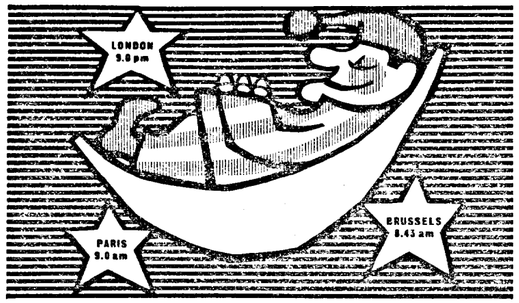
Leading Architect says . . .

We pick the locks a burglar can't

My partners and I have our offices in a largish block. Since a porter shuts the whole place up at night, we had never bothered much about possible burglaries.

As so often, the impossible went and happened: through some slight slip-up on the porter's part, a burglar got in. After picking our locks he lit a cigarette, had the safe open in seconds, and removed our cash.



Before he left—as easily as he had entered—our burglar dropped his cigarette end tidily into the drawing-office w.p.b. The plans that were burnt cost us, directly and indirectly, *twenty times* the value of the stolen cash.

So we did what we ought to have done ages ago. We went to Chubb. We chose a handsome set of locks that the burglar can't pick or saw open. Our safe is proof against most knavish tricks and fire-resisting into the bargain, while our precious drawings now lie in a thoroughly practical fire cabinet.

Naturally, all our new clients hear the name of Chubb when we discuss security arrangements. It is a good name to have in mind if you have any worries on that score.

The address is . . .

offer was made to all shareholders. After further discussions, Mr Grunwald made a bid of 23s. for the directors' shares and of 24s. for the others. On July 30th all the directors' shareholdings were transferred against bankers' drafts. These included 3,063,871 shares held by Lloyds Bank Nominees for Mr Joseph and in return a draft for the sum of £3,523,451 was received.

Late in August Mr Grunwald told Mr Tobin that he had run into difficulties in financing the acquisition of the Lintang shares, many more acceptances having been received than he had expected. A loan of £750,000 was made to him by Mr Joseph on the security of 1,100,000 Lintang shares and 500,000 shares in Reliable Properties. Mr Grunwald said that he would repay the loan by October 16th. By this time Mr Grunwald had also made a bid to acquire the shares of Ely Breweries for which he required £1,200,000. Mr Tobin estimated that Mr Grunwald's outstanding liabilities in connection with the two deals amounted to £3.3 million. Mr Grunwald then referred to part of his assets as being shares in various companies, which even at "a murderous price" would be worth over £4.5 million. It was agreed that Mr Joseph would make a further loan of £500,000 partly on the security of 848,592 Lintang shares and it was further agreed that Mr Tobin and Mr Joseph would take over the loan of £250,000 which Lloyds Bank had lent to Mr Grunwald in August 28th on the security of one million Lintang shares and on the guarantee of Mr Tobin. By the end of September Mr Tobin and Mr Joseph were owed £1.5 million by Mr Grunwald for which the main security was 3,365,285 shares in Lintang. It was at this time that Mr Grunwald first mentioned the State Building Society and Mr Murray to Mr Tobin, saying that normally he would have been able to approach that society for mortgages but at that particular time Mr Murray was on holiday in the South of France.

On September 11th Mr Tobin said that in a phone call Mr Grunwald thanked him for his trouble in trying to help over the Ely take over. Mr Grunwald then said that everything was all right and that he had arranged the necessary finance. Mr Tobin asked him how and Mr Grunwald answered: "I used my head. I got the money partly from Deacons and partly in another direction." Mr Tobin said that on September 16th he was called to the office of Harewood and Company (in which Mr Grunwald is a partner). Among those present were Mr Jasper and Mr Murray; Mr Kanter, Mr Grunwald's partner, then informed them that Mr Grunwald had left the country.

The proceedings continued on Thursday.

BUTTER & MARGARINE

Fight for the Market

BUTTER prices in Britain provide one of the few pure examples of the law of supply and demand. Consumption of butter has suffered from high prices and stocks are rising. Consumption is not only running below the supply currently available, but also below the average supply expected for this year. To increase consumption prices must be cut. This week wholesale prices of New Zealand and Australian butter were cut again, by 20s. to 350s. and 347s. a cwt respectively, and the Danes announced a reduction of 20s. to 352s. a cwt from next Monday. Commonwealth butter is now about 60s. cheaper than at the beginning of the year, and Danish will be about 82s. cheaper. Countries that sell butter here mainly for blending are likewise keen sellers, especially the Poles; recently Polish butter cost about 30s. less than Commonwealth butter, though the discount has now been halved.

As butter production depends on the weather prediction can easily go awry. But producers are expecting that supplies available to Britain will be bigger this year than last, thanks mainly to the recovery in European output, and they are not inclined to give hostages to fortune. In trying to attract customers from margarine, the producers cannot complain of a lack of support from the big retailers. With competition in the grocery trade so keen, butter is a popular loss leader, and reductions in the wholesale price are quickly passed on—and occasionally anticipated—in retail prices.

SHORTER NOTES

A number of changes have been made in the official membership of the 14-member Economic Planning Board of senior civil servants, trade unionists, and industrialists. Sir Frank Lee has become chairman in place of Sir Roger Makins, after succeeding him as joint permanent secretary to the Treasury on January 1st, when the latter replaced Lord Plowden as chairman of the Atomic Energy Authority. Lord Plowden now leaves the board after serving for the 12½ years since its inception. There are two new members: Sir Richard Powell, who succeeded Sir Frank Lee as permanent secretary to the Board of Trade; and Mr A. W. France, a third secretary at the Treasury, in place of Mr R. W. B. Clarke who has taken up other work in that department.

★

French import quotas for British goods have been increased by about 17 per cent to £7.5 million in 1960. Thus France has broadly fulfilled its undertaking to extend an increase of the same order as the increase of 20 per cent granted to members of the common market. The quota for British agricultural crawler tractors goes up by £36,000 to £395,000 a year, for commercial vehicles and buses by £89,000 to £355,000, and for mechanical handling equipment by £53,000 to £383,000. Small quotas have been raised by a third, from three to four per cent of national production of the item. Examples are television sets (£30,000 a year), and air conditioning equipment (£10.000). British liberalisation has gone farther than the French, and only two French items remain on quota, watch cases and hands.

★

The Economist dropped 6,600 million bricks last week. In a Business Note on page 553 of last week's issue it was stated that deliveries of bricks of all types rose during 1959 to 599.6 million. This was in fact the monthly average of deliveries: the year's total was 7,195 million.

Funds invested in unit trusts at end-January amounted to £207 million—an increase of £7 million over the month—according to the latest figures issued by the Association of Unit Trust Managers and the M & G group of unit trusts. The number of unit holders has risen from 517,000 to 591,000 and the average holding has declined from around £400 to £349.

★

The Commercial Union Assurance group is to reorganise its Australian business and a new company called the Commercial Union Assurance Company of Australia, is to be formed. The new company will acquire and operate the fire, accident and marine insurance business, hitherto performed by Commercial Union's Australian branches, and it will acquire control of a number of the group's subsidiaries in Australia. The Commercial Union Assurance Company will have a major holding in the Australian company.

★

Spillers has made an offer of 21s. 3d. in cash per share for the 5s. ordinary shares of Spratts Patent, the animal food manufacturers. This offer will be equivalent to 17s. per share after the proposed one for four scrip issue by Spratts.

COMPANY MEETINGS

THE BRITISH OXYGEN COMPANY LIMITED

BIG OVERSEAS CONTRIBUTION TO HIGHER PROFITS

ENGINEERING PROFITS: PROSPECTS FOR TONNAGE OXYGEN PLANTS

MR J. S. HUTCHISON ON INDUSTRY'S 'COMPETE OR DIE' CHOICE

Statement by Mr J. S. Hutchison, chairman, to shareholders at the Annual General Meeting of The British Oxygen Company Limited, to be held on March 4, 1960.

BOARD

The recent appointment of Sir Owen Wansbrough-Jones, KBE, CB, as a director meets our wish to have in our councils a man of eminence in the scientific world and we are happy and fortunate to welcome him to our board.

PROFITS

The group profit of £8,587,144 after depreciation of £4,339,723, compares with £7,224,500 in the preceding year when depreciation was £4,094,653. The profit increase of £1,362,644 came to the extent of over £1 million from a widespread expansion and improvement in operations overseas; major contracts undertaken at home and overseas by the Engineering Division also added materially to the total.

Taxation takes £4,065,754 against £3,890,438 and the net profit available for disposal is £3,935,579, against £2,876,208. £1 million from the year's profits has been placed to general reserve, subsidiary company profit retentions are £1,098,706 against £754,846, and after dividends paid and proposed there is a balance carried forward of £1,486,603 against £1,381,450.

CONSOLIDATED BALANCE SHEET

Net additions to fixed assets at £5.2 million are rather lower this year because of the timing of completion of major items and not through reduction in our intended spending. Indeed, new contracts for the supply of industrial gases in tonnage quantities to the steel industry have increased the previous total for three years from £24 million to £28 million. We expect to finance this new programme without needing to issue further share or loan capital: current assets include over £6 million of cash, treasury bills and similar items, and the net surplus of current assets is £15 million against £12.8 million last year.

RESERVES

Our continuing high rate of capital expenditure makes provision necessary from profits for the time when assets become aged and have to be renewed at a cost probably much beyond the original installation. This year we have transferred £1 million (£750,000) from profits to general reserve and also £650,000 returned from taxation provisions no longer required, to make a total allocation of £1,650,000.

The £650,000 arises as to £185,000 from over-provision in the last accounts for income tax at 8s. 6d. prior to the budget reduction to 7s. 9d. and otherwise from favourable settlement of old claims. So large an amount is unlikely to recur.

DIVIDENDS

The directors feel that the considerable improvement in overseas results and the further general development of the group warrant an increased dividend this year. An interim dividend of 4 per cent, less tax, was paid at the usual time in September, 1959, and the directors now recommend a final dividend of 10 per cent, less tax, making 14 per cent for the year, apart from the special interim dividend of 2 per cent which must be included in these accounts although paid along with the final dividend a year ago.

Provided there is no unexpected change in the situation, the directors intend in July, 1960, to declare an interim dividend at the increased rate of 6 per cent, less tax. This will be solely to provide a better balance between interim and final payments, and should not be taken as any indication of a greater total dividend payment for the current year.

UNITED KINGDOM GASES DIVISION

Lower demand for our products in the first half year was balanced by a general improvement in trading in the second half, which also witnessed peak sales of liquid oxygen for steel-making and other special purposes prior to new tonnage plants coming into operation. Over the year, compressed and liquid oxygen, acetylene and propane just reached the sales volumes and earnings of the previous year; the moderate addition to profits in this division came from continued growth in the use of nitrogen and argon, both now well established in industrial processes, and from a general improvement in other activities.

Our policy is to encourage greater use of our products by keen prices and first-class technical service, and prices have been held to the scale published in October, 1957. In the current year we have to meet an extra £250,000 for the wage award in October, 1959, and £240,000 additional depreciation on normal capital extensions. There may be other costs too of as much as a further £250,000. In the past the great expansion in liquid oxygen sales has helped us to absorb such costs, but this no longer applies with the transfer of the heavy bulk sales to tonnage oxygen. In the last four years liquid oxygen sales have not had any big increase and with the costs mentioned our profit return which is already much less than a few years ago, will not be maintained unless there is greater improvement in sales than we have seen so far this year.

The feature of the past year was the rapid growth in demand for oxygen and other industrial gases on a scale to be met only by very large production plants at the point of use. Our original tonnage plants established in the pioneering period have been in successful operation for some time and industry today is ready to take full advantage of this new method. The present tonnage plant capacity of our gases division of 900 tons per day is being increased to 2,200 tons per day under new long-term contracts for the requirements of the new steel works and steel works extensions throughout Britain. The additional plants required will all be built in our Edmonton workshops.

All this business has been obtained against very sharp competition and will certainly not yield any easy profits. The outcome is dependent on design, manufacture, and operation over a period of years, of plant units costing £500,000, £750,000, or more each, on the terms controlled by competition and by the customer's alternative of buying his own oxygen plant. Fortunately our long years of experience in the practical problems of plant building and operation and the breadth of our organisation enable us to give to customers the high standard of service and security required in these large scale applications.

The same competitive aspects apply in our liquid oxygen trading and emphasise the need to maintain our organisation at the highest pitch of efficiency. In fuel gases, acetylene growth has been slowed in recent years by an upsurge in the availability and use of propane which we and others market as a competitive alternative for many purposes.

Sales in the gases division have improved in the first quarter of the current year and we should be helped further by the increased production and use of steel now expected.

ENGINEERING DIVISION

The year was one of great activity in the construction and installation of tonnage oxygen and nitrogen plants as well as chemical plants of other types and ancillary equipment. Several important construction contracts were completed and all sections of chemical plant work contributed to a greatly improved profit result.

The British Oxygen Linde contracts for the tonnage oxygen plants required for the Durgapur and Rourkela steelworks in India are nearing completion. The first 100-ton per day plant at Rourkela has been brought into operation and the other two follow shortly. The Durgapur plants are due for completion within the next few weeks. Our workshops are presently completing the two 100-ton Tonnox plants for the Westfield coal gasification plant of the Scottish Gas Board.

The extensive installations at the Government rocket research station at Spadeadam are being completed by British Oxygen Wimpey Limited and brought into operation on schedule.

The chemical plant workshops at Edmonton will be very busy for the next two years in building eleven tonnage oxygen and nitrogen plants now on order, mostly for use by our own companies, and having a value of about £6 million. Profits next year from this section may however be less than the exceptional level reached last year.

Sales of user equipment increase steadily. Indeed, in the medical section, continual rise in demand, particularly for export, and the move to new works at Harlow brought us to a position of temporary shortage of some machines, now rapidly being overcome. The extensive range of jig and tool units in standard sizes and designs introduced last year by Woodside is being increasingly used as the advantages become appreciated of prompt delivery of such items from stock.

Sparklets Limited had lower sales especially in export markets but there is an improving position now with new models of 'Hostmaster' syphons and the development of complementary lines. The diecasting section has reached a position of full production and things look better for Sparklets this year.

ELECTRIC WELDING DIVISION

In automatic welding Quasi-Arc has fully maintained its position although orders have been scarcer. The introduction of new shipyard welding machines last year helped and, although improvement continues, it is too early to say that trading on the automatic side has fully recovered its earlier position.

New types of manual electrode introduced a year ago have gone ahead and, with further new items, have brought better sales.

New products coming forward from research and an extension of manufacturing facilities, should improve the earning position of Quasi-Arc this year.

CHEMICALS DIVISION

British Oxygen Chemicals Limited had a good year with trading improving as the year advanced. Earnings were almost comparable with the preceding year and manufacturing economies enabled reduction in selling prices to be made. This year sales have been above expectation and although competition in melamine is growing and world prices are being lowered in anticipation of Common Market re-arrangements, we expect to be able at least to hold our own.

Polyvinyl acetate has made good progress and our Vandike emulsions are well established in the paint industry. We now have a good place in this very competitive market and we expect this year to enhance our position.

Odda Smelteverk A/S in Norway had another favourable year aided by good hydro-electric power supplies from the heavy rainfall of 1958 and by continued improvement in technical efficiency. Unfortunately the drought in 1959 has reduced the supply of power now available and production will be lower this year.

At Londonderry, the extensive carbide works being built by British Oxygen Engineering Limited for our Chemicals Division is nearing completion. The manufacture of carbide and the supply of bulk acetylene to the adjacent Du Pont neoprene factory will commence in the next few weeks according to programme.

OVERSEAS INTERESTS

We welcomed here in the past year a number of directors from overseas and these visits are a great pleasure and assistance to us. Our group Managing Director, Mr T. E. Potts, visited Australia, New Zealand and Canada during the year and has just completed a tour of South Africa, the Rhodesias and East Africa. Free exchange of technical knowledge and experience is encouraged by frequent staff visits throughout the year and is of great advantage to management.

In Australia the improved trading position brought us increased sales and profits. A 100-ton per day oxygen plant, made in our Edmonton works, was installed last year by The Commonwealth Industrial Gases Limited at Port Kembla to serve the great steelworks there and is in satisfactory operation. The good trend in Australia is being maintained in the current year.

Sales and profits in India were commensurate with the quickened industrial expansion there. The new factories of Indian Oxygen Limited for the manufacture of welding electrodes and user equipment for industrial gases are in operation and are expected not only to make their contribution to local development but also to solve some of the problems of import of such goods in times of currency stringency. Expansion of all our activities in India continues.

African Oxygen Limited had more favourable experience last year and profits increased. We look forward to another favourable result this year.

In East Africa, Ceylon and Burma there was further improvement and Rhodesia and Malaya have recovered from the dullness of a year ago. Trading prospects are satisfactory in these countries despite unsettled political backgrounds.

New Zealand Industrial Gases Limited had a good year and is benefiting from the general improvement following relaxation of the import restrictions of a year ago.

We have developed further in Canada by the acquisition of two companies already operating profitably in Ottawa and in the North Bay area of Ontario, and by extending our activities in Montreal. These developments provide additional load for our Toronto plant and will help our improving position in the extremely competitive Canadian market.

In Hongkong an unexpected strength of demand for oxy-acetlyene for cutting scrap for export to Japan gave us an excellent year. Additional production plant is being installed, and there is every likelihood that good conditions will continue.

Pakistan Oxygen Limited makes progress despite the scarcity of imported materials which on several occasions brought sections of our operations to a complete standstill, and delayed urgently needed factory extensions. The new capacity is now coming into operation and should help greatly in the current year.

We are still without news of the probable outcome of our claim for compensation for our assets which were nationalised in Egypt and will not be returned to us.

RESEARCH AND DEVELOPMENT

During last year our operating divisions were given more responsibility for research and development work of direct concern to them. This is enabling an improved balance to be obtained between work on operational problems and research of a more fundamental character which continues in the central laboratories.

MANAGEMENT AND STAFF

Special recognition is due this year to the 10,000 employees overseas who have by their continuing effort brought so welcome an improvement in our affairs. They are at all time supported by the 13,000 of their fellows at home who not only serve us well in their daily jobs here but often assist in developing new methods which are later to be used overseas.

Direction in all this comes from the effort of our group Managing Director, Mr T. E. Potts, and his management colleagues in London, and the response of those in charge elsewhere. We are grateful to them all.

ARTICLES OF ASSOCIATION

A special resolution is submitted to enable certain amendments to be made to the Articles of Association.

The alteration proposed in borrowing powers is in line with current practice, and extends the permissible total from a present £19,547,166 (of which £12,813,354 is already used) to the total of issued capital and reserves of the group, which on the present Balance Sheet amount to £37,130,610. The wide expansion in the Company's affairs in recent years and the much larger transactions it is called upon to handle nowadays make the proposed extension reasonable and necessary.

The larger amount suggested for Directors' Fees is not to enable the fee paid to each Director to be increased, but simply to make provision so that the same fee can be paid to any additional Directors who may be appointed.

Another alteration is to enable us to take advantage of modern practice in the sealing of stock certificates, and there are a number of minor adjustments.

PROSPECTS

Compete or die, is industry's choice today. Price agreements are being abandoned, tariffs lowered, new processes introduced, amalgamations arranged, everywhere increasing competition. Competition is a welcome spur to endeavour but its conditions are hard; it leaves no room for easy profits or wages, restrictive practices or obstruction of new methods. British industry could have no greater boost than would come from real willingness by employers and labour to join forces to work wholeheartedly for greater efficiency and so earn a better income than can ever be there to divide from the proceeds of internal strife. Thus too can the new competition be met in advance, for if competition comes first its lesson may be learned too late and with painful cost.

Turning to our own affairs, in the first quarter of our financial year we have had a general increase in home sales. This may become greater as the year goes on with the increased activity now being experienced in the heavier sections of industry, but profit growth in the home gases division is likely again to be moderate. On the other hand, profits from chemicals, equipment and electric welding should show improvement. The profits in total of our overseas associated companies now represent almost half the total earnings of the group and with better trading conditions generally I expect another good year from that source.

Altogether I expect the current year to give us a favourable introduction to the nineteen-sixties and the opportunity that undoubtedly lies there for us.

STEWARTS AND LLOYDS LIMITED

MR A. G. STEWART ON A GREAT OPPORTUNITY

OVERALL FUTURE TRADING PROSPECTS REMAIN GOOD

NATIONALISATION—RUINOUS DOCTRINE REJECTED BY ELECTORATE

A NOTE OF WARNING ON POTENTIAL THREAT

FINANCING DEVELOPMENT PROJECTS BY PRIVATE ENTERPRISE

The Seventieth Annual General Meeting of Stewarts and Lloyds Limited, was held on February 10th, in the Merchants' Hall, 30 George Square, Glasgow.

The Chairman, Mr A. G. Stewart, presided and said:

Ladies and Gentlemen, it gives me much pleasure to address this, the Seventieth Annual General Meeting of the Company. As in previous years, I assume you will take the Notice of the Meeting as read, and I will, therefore, ask the Secretary to read the Auditors' Report.

After the Auditors' Report had been read the Chairman continued:

A copy of the Directors' Report was contained in the copy of the Accounts circulated to each shareholder on January 14th. My Statement was also included with the Accounts. I assume you will take these all as read (agreed).

I am now going, therefore, to propose the Resolution to adopt the Report and Accounts. If you have any questions arising out of the Accounts, would you ask these immediately after the Resolution has been proposed and seconded. When this Resolution has been dealt with, I shall continue with the other formal business of the meeting and after that, I propose to refer to the trading experience of the current year and to the subject of nationalisation, and one or two other matters. I suggest, therefore, that any questions you have on these subjects should be raised at that stage in the proceedings.

After the Report and Accounts had been adopted, the dividend recommendation approved, the retiring Directors re-elected and the remuneration of the Auditors approved, the Chairman continued:

CURRENT TRADING POSITION

The improvement in the home trade and in the general export trade to which I referred in my Statement issued with the Accounts, and which was prepared in December last, has been well maintained and future trading prospects remain good. These sections normally account for two thirds of Stewarts and Lloyds' steel tube production.

Our iron and steel plants are working to full capacity.

The improvement in Stanton's trade also continues.

The position so far as our trade with the Oil Companies is concerned is unfortunately not as satisfactory. My Statement with the Report and Accounts showed that despatches to the Oil Industry in the last financial year were 41 per cent lower than in 1957/58. I can say that other European tubemakers have had a similar experience in their exports for the Oil Industry.

As to the future, the present indications are that the tonnage which the Oil Industry will take from us during the current financial year will show a distinct improvement on the very low figures for 1959 but it will probably be some time before the demand which we previously anticipated, and for which we have provided specialised equipment, materialises.

NATIONALISATION

By a very clear majority the advocates of nationalisation were rejected by the electors in October last, and although their defeat was on a comprehensive programme, there seems to be general agreement that the advocacy of this unjustified and ruinous doctrine was one of the main causes of their defeat.

We have, during the last two years, made every effort to refute publicly the accusations levelled by the advocates of nationalisation—entirely false accusations of monopoly and inefficiency, of self-seeking at the nation's expense, of reckless pursuit of profits, of failure to exploit foreign markets and of excessively high prices to the home consumer—all aggravated the difficulties with which we were faced at a time of a marked fall in the demand for our products. Not only did they tend to affect our trading but also our recruitment and relations with our employees. The feeling of insecurity about the future made it increasingly difficult to raise the large sums of capital required for the development needed to keep the Company abreast or ahead of its competitors in this country and abroad.

There is no doubt that our efforts, and those of others, were successful in helping to raise this question of nationalisation from being a minor issue in politics to its proper place as a vitally important issue in the industrial and economic life of the nation, and I would like to take this opportunity of thanking the many people, not only shareholders and employees, but also other members of the public who have given their encouragement and support.

Since last October, the general opinion may be gaining ground that the threat of nationalisation has gone for good and all. I would, however, sound a note of warning. What, in fact, is the position today? It is quite clear that the advocates of nationalisation have not accepted the verdict of the electorate, and whether nationalisation of the Iron and Steel Industry, and indeed, of many other industries, shall remain part of the Socialist programme is undecided. It may be that no definite decision will be taken for two or three years, and even then the position may not be clarified.

I believe that private enterprise must continue to be watchful and I would express the hope that if the threat should arise again, private enterprise should react to it more quickly and more forcefully than it did to the recent threat.

FINANCE

The efficient financing of our development plans will depend on freedom from uncertainties on this question of nationalisation. As will have been seen from the published Accounts, our outstanding capital expenditure schemes at the end of the financial year amounted to nearly £19 million.

But we must continue to spend capital on many varied items of development, plant and machinery to keep ourselves up-to-date and to expand our production. As an indication of this, you will have seen reference in my Statement with the Accounts to the consideration that is being given to the further expansion of our capacity.

It will be our intention, as hitherto, to finance our capital expenditure substantially out of retained profits and we shall also continue to make use, from time to time, of the facilities offered to us by our Bankers. We intend, however, as previously, at appropriate times to ask for the support of our shareholders in the raising of additional money. There is no intention of any such approach at present, but we have thought it desirable to ask you to agree to an increase in our authorised capital from £40 million to £60 million at an Extraordinary General Meeting to be held after this meeting. At the present time, our issued capital is within £3 million of our authorised capital and I am sure you will agree that this is an insufficient margin for a company of our size.

Following the Rights Issue, the final instalment of which was received last month, it is estimated that we shall have about 27,000 shareholders on our register. This compares with 12,000 following denationalisation in June, 1954. It has not yet been possible to prepare an analysis of shareholdings but it is encouraging to note how the interest of the small investor in the Company is increasing. It may also interest shareholders to know that the Stewarts and Lloyds Group has at the present time over 40,000 employees in the United Kingdom.

CONCLUSION

In conclusion, may I say that a great opportunity is opening up before us. Let us hope that we are left alone to carry on our task of serving the country without interference or obstruction by the dogma of any political party.

The proceedings terminated with a vote of thanks to the Chairman and the Board for their efforts in withstanding nationalisation, and for their conduct of the Company's affairs during that time, and in a period of difficult trading conditions.

At the Extraordinary General Meeting which followed the Annual General Meeting a resolution was passed authorising an increase in the Authorised Capital from £40 million to £60 million by the creation of 20 million unclassified shares of £1 each.

F. W. WOOLWORTH AND CO., LIMITED

GOLDEN JUBILEE YEAR

The following are the salient features of the statement by Mr. R. J. Berridge (Chairman), circulated to Stockholders:

Last year I expressed the view that 1959 could well be an outstanding year for your Company.

Profits indeed advanced solidly—in fact, to a golden level—as a result of turnover climbing to a new record by a wide margin. The improvement in business was fairly uniform throughout the year.

Turnover stems from meeting customers' requirements. Some articles seen in the large town and city stores cannot be obtained in the small town and suburban stores, as the size of store must determine the range of goods on display.

Much is being heard about reducing prices in response to the Chancellor of the Exchequer's request. Your Company has always been in the forefront in reducing prices or offering better values at the same price. During 1959 more than 400 items have been reduced in price, not taking into account those which were lowered due to Purchase Tax reductions.

STORE EXPANSION

Considerable progress again was made in opening additional stores and modernising and enlarging existing stores.

It was decided to install fluorescent lighting in all stores. By the end of last year 200 stores—or under 20 per cent.—remained to be dealt with.

In the five years since building licences were finally abolished expenditure on Fixed Assets has amounted to the formidable figure of £35,000,000, all provided out of the Company's funds.

A further six Self Service stores were opened during the year, raising the total number to 62.

CONSOLIDATED PROFIT AND LOSS

Net Profit from all stores for the year before Taxation amounted to £28,283,712 compared with £25,597,085 for 1958, an increase of £2,686,627 or 10.50 per cent. The Trading Profit of £26,571,547 represents an average per store for the 1,035 stores of £25,673, which compares with £23,238.

Net Profit after Taxation is £14,003,746 against £12,035,245.

The proposed Appropriation to General Reserve is £2,000,000, continuing the practice of previous years.

The Final Dividend recommended on Ordinary Stock is 1s. 7d. per unit compared with 1s. 4d., and the total Dividend for 1959 is 2s. 3d. per unit against 2s. 0d. per unit.

The Company is distributing two-thirds of its net earnings after Taxation.

A special Golden Jubilee Cash Bonus of 4d. per unit of Ordinary Stock was paid last August.

The resulting Balance Carried Forward is £9,584,425 or £2,132,669 more than the comparable Balance a year ago.

CONSOLIDATED BALANCE SHEET

REVENUE RESERVES total £20,834,425 against £16,701,756.

CAPITAL RESERVE remains unchanged at £8,081,474.

FIXED ASSETS increased to £60,755,391 against £53,918,215.

SUBSIDIARY COMPANIES. The total investment in Subsidiary Companies appears on the balance sheet of the parent Company at £1,973,382 compared with £1,896,154 at the end of 1958.

NET CURRENT ASSETS at £14,997,108 compare with £16,697,225 at the end of 1958.

OUTLOOK FOR 1960

Unlike those businesses which have order books, any assessment in regard to your Company's prospects must be based solely on the support which we expect to receive from the shopping public.

I see no reason why we should not receive that support in full measure.

Our expansion and modernisation programme, which has been and is being carried out with the utmost vigour, will provide better facilities for the shopping public and will still further improve amenities for our staff.

Thanks to the efforts of all sections of our buying force, the merchandise in your Company's stores is ever improving in quality, variety and value for money.

In our organisation we have a team which is second to none in keenness and loyalty.

A material increase in expenses during the year (mainly in respect of wages) seems inevitable, but assuming nothing adverse happens, I believe you will not be dissatisfied with the Accounts for 1960.

The Annual General Meeting will be held on March 4, 1960, in London.

BORAX (HOLDINGS) LIMITED

LORD CLITHEROE'S REVIEW

The following are Extracts from the Review of the year to September 30, 1959, by the Chairman, the Right Honourable Lord Clitheroe, PC, to be presented at the Annual General Meeting on Wednesday, March 9, 1960:

THE ACCOUNTS

Group profits, before taxation, amounted to £3,359,298, against £1,465,566 in 1958 and £2,904,450 in 1957. These profits were arrived at after charging depreciation, depletion and amortisation of £1,991,756 in 1959, £1,536,098 in 1958 and £1,000,360 in 1957. The large new plants at Boron which were brought into use during the past two years were designed so that labour could be cut down to the minimum: the labour element in the cost of production is consequently greatly reduced and to some extent depreciation has taken its place.

A large part of the profits earned by the Group during the year has been retained by subsidiaries, so that Borax (Holdings) Limited has again paid dividends out of its own considerable accumulated reserves in accordance with the plan announced at the time of the reorganisation in 1956.

The retained profits in the accounts of subsidiaries amount to £3,880,748 at the end of the year, and a large part of this sum is in the hands of United States Borax & Chemical Corporation which, you will remember, discontinued the declaration of regular quarterly dividends on its Common Stock in November 1958 in order to strengthen its cash resources. Payment of dividends by United States Borax & Chemical Corporation has not yet been resumed.

DIVIDENDS

In view of the considerable improvement in profits after the difficult conditions of the previous year, your Board has pleasure in recommending a modest increase in the final dividend on the deferred ordinary stock. The final dividend proposed is 4¼d. per 5s. unit of stock, making with the interim dividend of 1¾d. already paid a total of 6d. per unit for the year, equivalent to 10 per cent, less tax, which compares with a total of 8¼ per cent in the previous year.

UNITED KINGDOM AND EXPORT MARKETS

Sales outside the USA reached record figures despite some fall in certain European markets. In the United Kingdom itself deliveries of our products were up on the previous year. Demand in the Far East was particularly buoyant.

UNITED STATES OF AMERICA

The new plants at Boron are operating with greatly improved efficiency as compared with 1958, when you will remember, there were initial heavy costs. Our management in the United States is now well equipped with the knowledge and experience which are required today in our highly technical industry. We are not only ready to expand our existing business, but we are also well prepared to develop new products to the production and marketing stages when such opportunities arise through our research and development programme.

TECHNICAL SALES SERVICE

We deem it important today to keep in touch, through our own technical staff, with the industrial background of our consumer industries throughout the world, so that we can understand the factors affecting the future of our products, and thereby plan accordingly. The rapidly expanding fibreglass industry is of major importance as an outlet for boron products; the well-established use of boron in the glass and enamel industries is continually finding new applications as the technology of those industries is improved.

RESEARCH

During this year steps have been taken to increase the research effort of the Group. This is directed towards studying and improving our main established chemical processes, increasing technical efficiency, reducing costs, and thus increasing profits. A new chemical engineering unit, based at Boron, was established and research is playing an important role in attacking our potash problems. At the same time work on new products continues, and I believe we have now a well-balanced programme of research expenditure.

OUTLOOK FOR THE FUTURE

Your Board and Management continue to be of the opinion that your business will grow over the years. We believe there will be a steady expansion of the industrial and agricultural uses and of the demand for our boron products. The large amount of research that has been and is going on throughout the world will hasten such expansion, as will also the rising standard of living in many countries.

It is more difficult to foresee when prosperity will return to our potash operations. Low potash selling prices will continue at least until June 30, 1960, but it is hoped that some improvement may be obtained thereafter, although any increase can have but little effect on the profits of our present financial year, since demand for potash in the months of July, August and September is always light.

BAY HALL TRUST LIMITED

Summary of Directors' Report for the year ended 31st December, 1959, and of the accompanying Statement by the Chairman, Sir Charles J. Hambro, K.B.E., M.C.

During 1959 the ordinary shares of £1 were divided into shares of 10s. each and a one-for-one share capitalisation issue was made. This was followed by the issue of 2,476,347 Ordinary shares of 10s. each at par, raising approximately £1,200,000 net which was used to enlarge and diversify the investment portfolio. To bring the issued capital to a more convenient figure, 6,245 Ordinary shares of 10s. each (being part of the 306,245 authorised but unissued Ordinary shares of 10s. placed at the disposal of the Directors) were issued on 18th December, 1959, to Union Corporation, Limited, at 20s. per share, so that the issued capital of the Company is now £3,350,000 in 6,700,000 Ordinary shares of 10s.

Gross revenue rose to £294,148, which is some £50,000 higher than last year. Not being available for investment until the second half of the year, the new money raised only partly contributed to this satisfactory increase. After providing for taxation (which includes a non-recurring charge of £3,750 in respect of Excess Profits Levy) Directors' Fees and Management and General Expenses, there was a net profit of £173,596, as compared with £138,961 in the previous year. Adding £68,161 brought forward from 1958, the total available for appropriation was £241,757. The interim dividend of 6 per cent, less tax, paid on 1,054,352 Ordinary shares of £1 absorbed £38,748. The Directors have appropriated £22,777 to Capitalisation and New Issue Expenses and placed £25,000 to General Reserve; they recommend a final dividend for the year of 5 per cent, less tax, which will absorb £102,594, leaving £52,638 to be carried forward. In 1958 there was no interim dividend, and the final dividend of 17 per cent, plus a bonus of 1 per cent, less tax, was paid on a capital of 1,054,352 shares of £1, absorbing £109,125.

DISTRIBUTION OF INVESTMENTS

(based on valuations at 31st December, 1959)

	%
EQUITIES:	
COMMERCIAL AND INDUSTRIAL—	
United Kingdom, excluding property	26·1
United Kingdom, property	15·8
Union of South Africa	6·5
Elsewhere	1·0
MINING FINANCE—	
Union of South Africa	39·4
Elsewhere overseas	2·8
COMMODITIES—	
Overseas Base Metals, Gold, Diamonds, Oil and Plantations	6·8
Total Equities	98·4
FIXED INTEREST	1·6
TOTAL	100·0

At market prices ruling on 31st December, 1959 (or where no market prices existed, at valuations by the Directors as at that date amounting to £356,948) the investments had an aggregate value of £7,462,348 as compared with the balance sheet value of £3,680,910. Net assets amounted to £7,459,000, compared with £3,850,000 at the end of 1958, prior to the raising of £1,200,000 in mid-1959. The net asset value at 31st December, 1959, was equivalent to 22s. 3d. per share. By reason of double taxation relief, the provisional net United Kingdom rate of tax payable by the Company is 3s. 1d. in the £.

With a full year's employment of the new money raised, and in the absence of any unforeseen setbacks, the Company can look forward to a further increase in investment income during 1960.

Copies of the full Report and Accounts are obtainable on application to the Company at Princes House, 95 Gresham Street, London, E.C.2.

SECOND BRITISH ASSETS TRUST LIMITED

UPWARD TREND OF INCOME

MR A. C. BLAIR'S REVIEW

The Eighty-first Annual General Meeting of Second British Assets Trust Limited will be held on March 3, 1960, at the Registered Office of the Company, 9 Charlotte Square, Edinburgh.

The following is the Review by the Chairman, Mr Alastair C. Blair, CVO, WS, which has been circulated with the Report and Accounts for the year ended December 31, 1959:

During the past year we have seen a revival in world trade and a substantial improvement in confidence in the British Economy. Some of the political and economic uncertainties that confronted us a year ago have been resolved and as a result of both increased confidence and the improvement in trade there has been a further sharp rise in the values of British ordinary shares. Indeed our year-end valuation of £10,697,000 shows an overall increase of 37 per cent on the figure a year ago and the proportionate rise of our sterling securities was much higher than this. The result of this substantial increase in our UK valuation has had the effect of reducing the proportion of our funds in North America from 40.3 per cent last year to 31.7 per cent at December 31, 1959. Such a rapid readjustment of values indicates that investors are expecting good business conditions for several years ahead and a favourable climate for economic growth.

As I anticipated last year, our income has resumed its upward trend. However, in spite of a satisfactory rise in income from our North American holdings the double tax relief claims on these dividends are somewhat lower than last year due to the reduction in the rate of UK income tax, and so we have not been able to show the full benefit of this increase. In the circumstances we are recommending a further increase in the dividend this year and we expect that our income will continue to rise during 1960.

You will find on page 11 of the Report a chart of the growth of the Company's income and market value of investments. This is similar to the chart we produced in the 1957 Report but has been brought up to date. You will see that the curve showing market value has now moved well ahead of the income curve in contrast to the position two years ago, but that the income growth itself is continuing in a relatively stable trend.

THE OUTLOOK

The outlook for the coming year seems favourable. In particular the British economy is better balanced than for some time past and our country should be more able to play its full part both at home and in the economic reorganisation of Europe, and also in the development of the more backward countries. In the United States and Canada conditions have been upset by the long American steel strike and at the present time both countries are suffering from difficulties in the bond market and rising interest rates. We continue however to have faith in the future of these expanding nations and look forward to a continuing growth of income from our investments there.

ORIENT STEAM NAVIGATION COMPANY LIMITED

SIR AUSTIN I. ANDERSON'S REVIEW

The Sixtieth Annual General Meeting of the Orient Steam Navigation Company Limited will be held on March 22nd in London.

The Chairman, Sir Austin I. Anderson, said in his Annual Review that the operating profit for the year after transferring £188,946 from Contingencies Reserve was £313,108. As expected, this was worse than last year's result and in spite of an apparent improvement in the passenger outlook he could not be more optimistic for 1960.

The results reflected the cost of the programme of improvement and re-equipment for the future. Besides having to withdraw "Orcades," "Oronsay" and "Orsova" in turn from a complete round voyage to Australia for modernisation and air conditioning, the tanker "Garonne" was only just starting to earn and "Oriana" would not do so until the end of the year.

Another example of expenditure undertaken in the expectation of a worthwhile return later was the promotional effort being made in North America to attract new traffic to the Orient & Pacific Lines service run in conjunction with P & O between North America, Australia and the Far East. To this end, an American corporation, "O & P Lines Agency Inc.," had been set up with offices in San Francisco and Los Angeles, and, shortly, in Vancouver. The new North America/Japan service would need some nursing, but the North America/Australia service was already established and the fact that load factors out of North America had improved showed that the advertising there was taking effect.

The continued presence in the UK/Australia trade of foreign ships chartered to take migrants from Europe meant that the homeward berth remained heavily over-tonnaged. The Company had the competitive advantage of possessing larger and faster ships, tailor-made for the trade and cheap "off-season" rates could be quoted, but the return was meagre and profits on the Suez route depended almost entirely on results on the outward leg of the voyage.

Sir Austin finally referred to the offer made by P & O, who, since 1919, had had a majority shareholding in the Orient Line, to acquire the remaining Ordinary Shares. In discussing the Orient Board's recommendation to Shareholders to accept, he said that the principal differences between the present-day and the pre-war period were that each company now owned larger and fewer passenger ships than previously and that as now no mail contracts existed to impose rigid regularity of sailings, these ships could be programmed to fulfil as far as possible the fluctuating seasonal demands of passenger traffic to and from the various countries served. Joint planning of voyages could easily mean that unless there was a community of financial interest the best overall plan might throw an unfair preponderance of unprofitable "off-season" voyages on to one company. Equally, Joint operation could provide a more consistent load on the shore organisation with ensuing greater economy. Any redundancies brought about by this reorganisation would naturally be treated fairly and sympathetically.

MICHAEL NAIRN & GREENWICH LIMITED

The thirty-eighth annual general meeting of this company was held on February 4th at Kirkcaldy, Sir M. George Nairn, Bart, chairman, presiding.

The following is an extract from his circulated statement for the year to September 27, 1959:

The net profit, after providing £601,124 to meet taxation, amounts to £527,922 and shows an increase of £33,235. The Board recommend a final dividend of 7½ per cent on the Ordinary Stock making a total distribution of 8½ per cent for the year. This increase of 1 per cent over last year's distribution is fully justified by the better trading results achieved.

There has been a considerable increase in the manufacturing and trading profit, but there was a fall in the gross income from trade investments. The improved trading results of your company reflect the better conditions experienced at home and, generally, overseas, with the exception of France.

The improved year's trading confirms the opinion I hazarded in my Statement last year, that the future prospects of the Company were encouraging. The reasons for that opinion apply with even greater force today with the more prosperous conditions developing in our markets.

Our programme of research and plant improvement is designed to keep us competitive, while our new products and fresh patterns should attract additional business. In the circumstances I feel it would not be unrealistic to forecast for our organisation another year of progress. The report and accounts were adopted.

BROOME RUBBER PLANTATIONS

The twenty-sixth annual general meeting of Broome Rubber Plantations Limited was held on February 3rd in London, Sir Lionel Smith-Gordon, Bart. (the chairman), presiding.

The following is an extract from his circulated statement: The working profit for the year under review amounted to £103,062, compared with £64,532 for the previous year, which I feel may be considered very satisfactory. Our average selling price was little more than one penny per lb higher than the average for the previous year. The rise in profits was, therefore, largely the result of harvesting a larger crop, without increasing estate expenditure. The Directors recommend a final dividend of 15 per cent, less tax, making 20 per cent in all.

The crop amounted to 3,740,740 lb, an increase of 273,840 lb, or nearly 8 per cent on the crop of the previous year. The average yield of the acreage in tapping was 633 lb per acre, compared with 583 lb the previous year, and this rate has been more than maintained during the first part of this year.

During this year we replanted 194 acres, and since then we have undertaken a further 273 acres. This will bring the proportion of our properties under pedigree rubber to approximately one-half.

The price of our commodity has risen considerably since our accounts were made up. The crop for the first half-year to December 31, 1959, was 2,045,650 lb, compared with 1,892,940 lb for the corresponding period last year. It is therefore not difficult to deduce that we are enjoying a period of enhanced profits.

The report was unanimously adopted.

ILLINGWORTH, MORRIS & COMPANY

(WORSTED SPINNERS AND MANUFACTURERS)

YEAR OF GROWTH AND INCREASING ACTIVITY

The fortieth annual general meeting of Illingworth, Morris & Company, Limited was held on February 4th at Bradford, The Right Honourable Lord Wilmot of Selmeston, PC, JP (the chairman), presiding.

The following is an extract from his circulated statement:

The year under review has been one of growth and of continual and increasing activity. In October, 1958, your Company increased its holding and thereby acquired over 60 per cent of the Ordinary Shares of the famous concern of Salts (Saltaire) Limited. You will observe from the Accounts the significant contribution which that Company's earnings have made to our results.

The net profit of the Group for the year, after taxation, is £508,576. A final dividend of 14 per cent, less income tax, is proposed (making a total distribution of 20 per cent).

The Group Current Assets now amount to £11,191,861, showing an excess of £6,181,349 over Current Liabilities and Dividend, and the Group Revenue Reserves are now shown at £696,392.

TRADING CONDITIONS

In considering our trading results it should be remembered that for the first three months of the Financial Year we were passing through the last stages of a recession, with a certain amount of short-time running. We did not begin working full-time at some of our branches and subsidiaries until early 1959. Prices continued to fall fairly steadily from September until the end of December and, bearing these facts in mind, our trading results are, I feel, very satisfactory.

A remarkable improvement occurred in the Worsted Industry in the early months of 1959. The fall in prices was checked, though they still remain, at the time of writing, at a level which appears to be relatively below the price level of most other commodities.

Business remains very good and the fact that prices have kept reasonably steady is healthy.

Our main difficulty is the acute shortage of labour (particularly of female labour) throughout the industry; while our customers are most urgently requiring delivery it is regrettable that there should be idle machines owing to a shortage of operatives.

It would seem that we are on the threshold of a new era in Worsted Spinning. Your directors and their technical staff are giving their closest attention to all the new techniques and developments which are becoming increasingly available. It could be that in these new techniques and method of working will be found the solution, or at any rate a partial solution, to the problem of labour shortage.

It is always difficult in this industry to forecast the future, but it is somewhat easier on this occasion than previously. We have already completed the first three months trading of the current financial year, and the results so far are considerably better than for the same period of last year. At most of our branches and

subsidiaries the order books are larger than at any time since the exceptional boom of 1950-51, with the great advantage that prices are now less than half what they were during the peak of that period. I do think, therefore, that we may look forward with some confidence and optimism to the current year's trading.

The report was adopted.

BARCLAYS BANK LIMITED

ANNUAL MEETING OF STOCKHOLDERS

The Annual General Meeting for the year 1960 of the Stockholders of Barclays Bank Limited was held on February 5th at the Head Office of the Bank, 54 Lombard Street, London, E.C.3.

Mr A. W. Tuke (the Chairman) presided.

The Secretary read the Notice convening the Meeting and the Report of the Auditors.

The Chairman moved:

"That the Report of the Directors of the Company now produced, together with the Accounts annexed as at December 31, 1959, duly audited, be received, approved and adopted, and that there be declared, payable on February 20, 1960, to the Stockholders registered in the books of the Company on January 12, 1960, the following final dividends less income tax at the standard rate:

(a) a dividend on the Ordinary stock of 5 per cent, equivalent to a rate of 6 per cent on that stock before the capitalisation issue of August 1959,

(b) a dividend of 10 per cent on the Staff stock, excluding the £50,000 Staff stock issued January 5, 1960."

Mr John Thomson, Deputy Chairman, seconded the motion which was carried.

Mr Simon Edward Bolitho, MC, the Right Honourable Lord Cornwallis, KBE, MC, Sir Frederick Cecil Ellerton, Sir John Donald Horsfall, Bart, Mr Roger Henry Parker, CBE, MC, and Mr Frederic Seebohm, retiring Directors, were re-elected Directors of the Company, and other ordinary business was transacted.

A Vote of Thanks to the Staff and a Vote of Thanks to the Chairman for presiding at the Meeting were unanimously accorded.

APPOINTMENTS

WRITER, versed in foreign affairs, wanted by large corporation in Cleveland, Ohio, U.S.A. Experience in newspaper or magazine leader writing. honours degree in Modern History or Economics desirable. Send résumé, samples of writing and photograph.

Box CHR.
THE ROBERT T. KENYON COMPANY,
527 Madison Avenue,
New York 22, N.Y.

UNIVERSITY OF DURHAM
KING'S COLLEGE, NEWCASTLE UPON TYNE, 1
DEPARTMENT OF SOCIAL STUDIES

The Council of King's College invite applications for the post of Lecturer in Social Studies. Candidates should be prepared to lecture in Social Economics and Social Administration.

The commencing salary will be determined at a suitable point on the scale £900 x £50 — £1,350 (Bar) x £75 — £1,650 in accordance with the qualifications and experience of the successful applicant. Family Allowance and F.S.S.U. benefits are also payable. The successful applicant will be expected to take up duty on October 1, 1960.

Twelve copies of application, together with the names and addresses of three persons to whom reference may be made, should be submitted not later than March 31, 1960, to the Registrar of King's College, from whom further particulars may be obtained.

SOLICITOR OR BARRISTER

required in Legal Department at the London Headquarters of a large Industrial Corporation. The post which offers good prospects would suit a recently qualified man (including a March finalist) of high ability and energy. The successful applicant will be engaged initially in work of a commercial nature, but will have opportunities of gaining wider experience in common law, parliamentary and other work. The initial salary will probably be between £900 and £1,000, but more would be paid if the applicant's experience justified it. There are good prospects of early promotion for the right man. The post is superannuable.

Write giving particulars of age, education, qualifications and experience to Box 1282. Closing date February 29, 1960.

MARKET RESEARCH. Young (25-30) Sociologist or Social Psychologist required to work on consumer research problems. Field experience essential.—Apply Research Manager, Young and Rubicam Limited, Berk House, 8 Baker Street, W.1.

EMI

ECONOMIST

E.M.I. Ltd. require an Economist to join the group Economics and Statistical Department. The work would involve the study of economic and market conditions throughout the world. Applicants should be preferably in their late twenties and hold a good honours degree in economics, and should have had at least two years' experience in industry. In addition the ability to write well is essential.

Please write, quoting Ref. GP 2/1, to:

PERSONNEL MANAGER,
E.M.I. LIMITED,
HAYES, MIDDLESEX.

MERSEYSIDE AND NORTH WALES ELECTRICITY BOARD

SUITABLY QUALIFIED ACCOUNTANTS are invited to apply for appointment as PRINCIPAL ASSISTANT in the Chief Accountant's Department, Area Board Headquarters, Love Lane, Liverpool 3. Salary in accordance with N.J.C. Grade 10 (£1,465-£1,585 per annum). The duties include in particular the organisation of accounting methods and systems throughout the Board's area of supply. There are prospects for further advancement.

Appointment subject to medical examination. Attractive schemes for pension, including family benefits, and sick pay.

APPLICATIONS, giving personal particulars and full details of education, training and experience, and endorsed "Principal Assistant," SHOULD REACH THE ESTABLISHMENTS OFFICER at the ABOVE ADDRESS NOT LATER than FEBRUARY 22, 1960.

ST. HUGH'S COLLEGE, OXFORD.—LECTURER in ECONOMICS. Applications are invited for the post of Lecturer in Economics from October 1, 1960. Particulars may be obtained from the Principal, to whom applications should be sent, not later than March 7, 1960.

CAMBRIDGE UNIVERSITY

Applications are invited for the position of ASSISTANT IN RESEARCH in the Department of Estate Management Applicants should be qualified to undertake research in economic, legal, or social problems related to the use, tenure, or development of land. Salary scale £650-£850. Further information may be obtained from the Secretary of the Board of Estate Management, 74 Trumpington Street, Cambridge. Closing date for applications: March 1, 1960.

UNIVERSITY OF BRISTOL

Applications are invited for the post of Lecturer (Grade II) in Economics with a special interest in Mathematical Economics. Salary scale £900 x £50 — £1,300: £1,350 x £75 — £1,650. Fuller particulars of the appointment may be obtained from the Registrar, The University, Bristol 8, to whom applications should be sent by February 29th.

QUEEN'S UNIVERSITY KINGSTON, CANADA

LECTURER—ASSISTANT PROFESSOR IN POLITICAL SCIENCE.

Duties to commence September, 1960.

Salary according to qualifications and experience, within the range of $4,800-$6,800 for a Lecturer and $6,300-$8,500 for Assistant Professor. Qualification in political theory preferred. Applications and names of reference to reach J. A. Corry, Queen's University, Kingston, before March 7, 1960.

THE UNIVERSITY OF LEEDS
DEPARTMENT OF ECONOMICS AND COMMERCE

Applications are invited for appointment as Assistant Lecturer or Lecturer in the Department of Economics and Commerce at a salary within the range £700 - £850 a year for an Assistant Lecturer, or £900 x £50 — £1,350 (efficiency bar) x £75 — £1,650 a year, for a Lecturer. Candidates should have a particular interest in economic theory and preferably some acquaintance with statistical method as used in economics. Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds 2 (from whom further particulars may be obtained), not later than March 31, 1960.

ECONOMICS GRADUATE (Woman), aged 21-25, required as assistant in Economic Intelligence Department, mainly for providing and collating information on current economic trends in overseas countries.—Apply: Finance Personnel Manager, Dunlop Rubber Company Ltd., 25 Ryder Street, S.W.1.

BROWN & POTSON require for their Finance and Administration Division, a young man, 23-28, with an Accountancy or Cost and Works Accounting Qualification. Experience in an industrial concern would be an advantage but applicants with solely commercial or auditing experience should not hesitate to apply. Experience within the Company will not be confined to its London headquarters but will include periods at the Manchester and Paisley Works. Salary, Profit Payment, Life Assurance and Pension Schemes are good and the Company is progressive in outlook and expanding. —Replies to Group Personnel Manager, Brown & Potson Ltd., 125-130, Strand, London, W.C.2.

STATISTICIANS. At least 4 pensionable posts for men or women at least 28 on 1.1.60, with wide statistical experience and (normally) first or second class honours degree in statistics or other appropriate main subject combined with statistics. Others with specially suitable statistical experience considered. Salary (men, London) £1,500 — £2,120. Starting pay may be above minimum. Promotion prospects. Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting S104/60. Closing date March 7, 1960.

ACTUARIAL ASSISTANT (MALE). R. Watson & Sons, Consulting Actuaries, of Ringley, Reigate Road, Reigate, Surrey, require additional qualified or partly qualified actuarial staff for interesting and important work with good starting salary and prospects.—Applicants, who should be under age 30 and have passed at least Part II of the Institute of Actuaries Examinations, should write, marking letters "Strictly Confidential," giving particulars of age, education, actuarial qualifications and experience.

MARKET RESEARCH

RUSTON AND HORNSBY LIMITED, manufacturers of diesel engines, gas turbines and locomotives wish to appoint a Deputy Market Research Officer to train under and work with their present Market Research Officer. The Market Research Section is well established and provides detailed information on the Company's sales activities over their complete range of products in all home and export markets.

Applicants should be not more than 30 years of age, preferably with a University Degree, not necessarily in engineering. An elementary knowledge of economics and simple statistical techniques is necessary for the work, but the latter could be acquired during training.

Salary according to age, qualifications and experience.

Post Pensionable.

Apply:—Staff Manager,
RUSTON & HORNSBY LTD.,
Lincoln.

THE HOUSE OF CITIZENSHIP

Stimulating post available for Woman History Graduate, 25-40, with personality, confidence and an interest in people and World Affairs. Varied work with scope for initiative. Good salary with pension; pleasant surroundings; long holidays.—Apply Miss Neville-Rolfe, Hartwell House, Aylesbury.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited from suitably qualified candidates for the following posts:—

LECTURER IN SOCIAL SCIENCE
LECTURER IN SOCIAL PSYCHOLOGY *OR* IN SOCIOLOGY
TWO LEVERHULME RESEARCH FELLOWSHIPS

Salary scales, according to age, qualifications and experience: *Lectureships* £900 x £50 to £1,350 x £75 to £1,650. *Fellowships* £900 to £1,200 per annum.

Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, to whom applications (6 copies) must be sent by March 5, 1960.

For further appointments and other classified advertisements see page 675

THE QUEEN'S UNIVERSITY OF BELFAST

The Senate of the Queen's University of Belfast invites applications for the two posts of: (a) Tutor; and (b) Assistant Tutor in Practical Work in the Department of Social Studies. For post (a) the date of commencement will be July 1, 1960, or such other date as may be arranged, and the salary scale will be £650 x £50 to £1,000, plus F.S.S.U. benefits. For post (b) the date of commencement will be October 1, 1960, or such later date as may be arranged, and the salary scale will be £600 x £25 to £775. For both posts candidates should possess a University degree, and a diploma in social studies or the equivalent. A specialist post-graduate qualification in social work or experience in a family case work agency is considered desirable for post (a) and an advantage for post (b). Applications should be submitted by March 4, 1960. Further particulars can be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

SOUTHLANDS COLLEGE

65 Wimbledon Parkside, London, S.W.19.

Applications are invited for the following post in September, 1960.

LECTURER (with later possibility of Senior Status) to commence and organise a new Department which is to provide teachers of Commercial and other subjects for the Secondary Schools. Applicants (men or women) should possess a degree in Economics or Commerce or Sociology and professional qualifications with teaching as well as industrial or commercial experience. A knowledge of shorthand and typewriting an asset.

Residence can be offered for a woman applicant. Salaries are in accordance with the Pelham Scale.

Application forms may be obtained from the Principal, to whom completed forms should be returned as soon as possible and not later than February 26th.

COMPANY AFFAIRS

Imperial Tobacco

TOBACCO shares, having been in the doldrums when other industrial equities were booming, have recently attracted considerable investment support. The attraction was not the increase in tobacco consumption (small and not likely, in this competitive market, to give a strong boost to profits) but the extra yield on these traditional income stocks above the general run of equities. In pushing the price of Imps up to 73s. 9d. (bringing the yield on the 1957-58 dividend of 21 per cent down to 5.7 per cent) the market was anticipating a slightly higher dividend for the year to October 31st last. The 22½ per cent dividend declared is rather better than had been expected and the shares, having been marked up to 77s. 6d., settled down at 75s. 3d., to offer for these days the high yield of 6 per cent on a dividend covered about 1¾ times.

The bigger dividend is made possible by a higher investment income (largely reflecting bigger dividends from British-American Tobacco) and the reduction in the standard rate of income tax. Consolidated trading profits have fallen from £24,293,066 to £21,685,143 and those of the parent company (reflecting the tobacco side of the business proper) from £21,107,120 to £18,572,393. The group's investment income has risen from £5,492,924 to £6,046,239 and the tax charge has fallen from £15,459,707 to £12,803,665 so that net profits have advanced slightly, from £14,326,283 to £14,927,717.

Movements of this kind were predicted by the chairman a year ago when he expressed the hope that the dividend would be maintained. Higher average prices for leaf tobacco and higher costs elsewhere (not least, it may perhaps be assumed, on the promotion of new and established brands of cigarettes) appear to be responsible for the fall in trading profits. But the decision to raise the dividend could hardly have been taken unless there was a fair chance that Imperial Tobacco can hold its share of the market and its present level of profits.

British Home Stores

FOR a year in which total retail sales rose by about 4 per cent British Home Stores, one of the smaller of the chain store groups, has reported the striking advance of 23 per cent in profits before tax, from £1.5 million to £1.9 million. Net earnings have risen from £718,465 to £965,701 and the ordinary dividend is set at 50 per cent on the capital as increased by the one-for-ten scrip issue last April; this compares with 41⅔ per cent paid on the original capital for 1958-59 and represents an effective increase in the dividend of 37.88 to 50 per cent. The revaluation of the group's properties has now been completed and the value of leaseholds and freeholds has been written up to £8,760,000, producing the enormous surplus over book values of £6,114,000. Rightly, therefore, the directors propose to recognise formally this revelation of the true worth of the group's assets by capitalising £6,750,328 from reserves to write up the nominal value of the ordinary shares from 1s. to 5s. Not surprisingly the market was delighted with these results and the 1s. shares were marked up 7½d. to 15s. 9d. to yield 3.2 per cent.

In 1958-59 the group's trading profits actually declined in the face of an increase in retail sales of about 3 per cent and it now seems clear that the programme designed to modernise the 80-odd stores is beginning to bear fruit. The 1959-60 figures also take in a full year's trading of two of the group's big new stores in Birmingham and Middlesbrough. The new dividend rate is covered 1.83 times by earnings. The directors say that the revaluation will raise the amortisation charge by £56,000, but this will reduce the present earnings cover only marginally, to 1.7 times.

Ilford

ANY disappointment shareholders may feel over the fall in Ilford's trading profits in the year ended October 31, 1959, from £1,612,499 to £1,518,305 may be mitigated to some extent by the increase in the ordinary dividend from 16 per cent to 17½ per cent. Thanks to a lower tax charge of £712,681 (against £860,183) net profits have risen from £752,316 to £805,624, so that the dividend is covered about twice. The directors say that the decline in the group's earnings is largely due to two special factors: heavy expenditure on research and development and the improved pension scheme introduced at the beginning of last year. The fact that the group's sales rose to a new record level suggests that the staple products—black and white film and X-ray film—did well.

The arrangements with ICI to pool research facilities, primarily on the development of colour films, could not be expected to produce any immediate financial returns but the long-term advantages of ICI's backing in this rapidly expanding and increasingly competitive market are obvious. More quickly maturing advantages to Ilford should come from the moves towards rationalisation such as the opening of the new factory at Basildon (housing the colour processing station) and the extension of the Mobberley plant where the paper processing, cutting and distribution departments have been put under one roof. The 5s. ordinary shares, of which ICI will eventually own 32 per cent, stand at 25s. 9d. x.d. to yield 3.4 per cent.

Power-Gas

TRADING profits of Power-Gas in the year to September 30, 1959, rose by 34 per cent, from £1,380,186 to £1,857,713. Net earnings advanced by no less than 47 per cent, from £534,601 to £784,927, and the ordinary dividend has been raised from 20 to 30 per cent. These results were better than the market had expected and the 10s. shares were marked up 3s. 9d. to 87s. 6d. The directors say that orders placed during 1958-59 fell from £9¼ million to £7¼ million, but since the end of the financial year they have returned to a satisfactory level. Last year Mr W. R. Brown, the chairman, said that profits in any one year derive largely from long-term contracts; clearly earnings in 1958-59 were buttressed by the steady working-through of a long order book and as a result Power-Gas has avoided the worst effects of the recession in the heavy engineering trades.

Merger talks are still taking place between Power-Gas and Davy-United (which reported last July a 55 per cent rise in trading profits, from £1,020,000 to £1,590,000) and the directors have promised a statement as soon as possible. With a satisfactory trading year behind them and a marked improvement in the order books reported by the two chairmen, both companies are negotiating from positions of strength. The 10s. shares of Power-Gas at 88s. 9d. yield 3.4 per cent on the 30 per cent dividend, covered three times by earnings.

Wagon Finance

WAGON FINANCE is one of the few hire purchase finance houses that is not associated with a joint stock bank. It has reported an increase of 13 per cent in profits before tax for 1959 from £533,948 to £602,758. This increase looks small compared with the advance of 29 per cent reported by Wagon Finance in 1958 and with the big increases in profits more recently reported by other hire purchase finance companies. Having already raised the interim dividend from 5 per cent to 6¼ per cent, the directors have stepped up the final dividend from 12½ per cent to 15 per cent, bringing the total for the year up from 17½ to 21¼ per cent. This dividend is covered almost twice by earnings.

In 1958 hirers' balances rose substantially from £4,187,000 to £5,886,000 and this together with the hire purchase boom had led the market to expect something better both in profits and in dividend from Wagon Finance. Since the results were announced the £1 shares have fallen by 12s. 6d. to

115s. to yield 3.7 per cent—well over a point more than the yields offered by some of the other leading finance houses.

F. W. Woolworth

In the past five years Woolworth has spent £35 million on its expansion and modernisation programme and the benefits stemming from this expenditure can be seen in the rise in the trading profits for 1959 from £23,586,872 to £26,571,547. The programme, which is being pressed ahead as rapidly as possible will entail the spending of another £25 million in the next four years, largely on existing stores of pre-war vintage. Even then, Mr Berridge, the chairman, points out, much will remain to be done. Woolworth should not have any difficulty in financing its developments for it holds £27.3 million in liquid assets and last year its cash flow (excluding the jubilee bonus) amounted to £6.3 million. Free reserves now stand at almost £29 million, compared with £33¾ million of ordinary shares in issue, and some shareholders will doubtless be disappointed—not for the first time—that the report contains no mention of a scrip issue. Mr Berridge is however moderately optimistic about trading prospects for the current year although he believes that an increase in expenses, particularly in wages, is inevitable. The shares have enjoyed a strong market recently and at 66s. 3d. they yield just under 3¾ per cent on the 45 per cent dividend.

Borax (Holdings)

The sharp rise in trading profits from £1.6 million to £3.5 million in the year ended September 30th reported by Borax (Holdings) and the 150 per cent rise in net earnings of its American subsidiary, United States Borax and Chemical, encouraged the directors to step up the ordinary dividend (paid out of the parent company's accumulated reserves) from 8¾ per cent to 10 per cent. United States Borax and Chemical has not yet resumed the payment of dividends (which was suspended to ease the strain on cash resources when the new plant at Boron was having teething troubles), but last year it paid back $2.5 million of its bank overdraft and $1 million to the group's American holding company Consolidated Borax Inc. Lord Clitheroe, the chairman of Borax, says in his statement accompanying the full accounts that the Boron plant is now working efficiently and that the reorganisation of the management has had a marked effect on output. In 1958-59 the record sum of $1.6 million was spent by US Borax and Chemical on research and new products have been developed. Hopes that boron fuels would be used in manned military aircraft have now been abandoned but the American Defence Department is continuing to support the development of boron fuel for missiles.

Lord Clitheroe is confident that the demand for boron products (which range from fibre-glass to weed-killer) will expand. But he is not so sanguine about the future of potash. He cannot see any possibility of a recovery in prices until after mid-1960 and even then it will be too late to benefit the group's profits. Sales of potash last year were a record but costs of mining are rising as reserves of ore fall. The 5s. deferred shares at 18s. 6d. now offer a yield of 2.6 per cent, which discounts a long way ahead the developing and selling of new boron products.

"Chartered"

The recovery in the price of copper and hence in royalties paid to the "Chartered" company was largely responsible for the rise in its total income from £7,971,197 to £11,439,026 in the year to September 30th. After a tax charge of £4,854,888 (against £3,607,980) its net income is £2,220,921 higher at £6,584,138. The dividend has been raised from 35 per cent (including a profits tax interim of 5 per cent) to 40 per cent. This was below some recent market estimates. The increased dividend is covered almost twice by earnings and it seems clear that it is the company's intention to continue its policy of recent years in building up its investment portfolio against the day in 1986 when it hands over its mineral rights to the Northern Rhodesian government. The 15s. shares at 110s. 3d. xd yield 5.4 per cent.

Showerings

A year ago the offer for sale of 2,400,000 shares at 16s. each on a forecast dividend of 20 per cent by Showerings, the makers of "Babycham" was a resounding success. Now the group has issued its first preliminary statement, showing the results for the year to October 31st which fulfil the forecasts made at the time of the offer. Profits before tax have risen from £2,029,632 to £2,107,259 and after a slightly higher tax charge net profits have gone up by 8 per cent, from £994,108 to £1,071,914. An interim dividend of 8 per cent has already been paid and the final dividend is to be 14½ per cent. This sets the total payment at 22½ per cent. In addition a one for four scrip issue is to be made. The present dividend is covered 3.8 times by earnings so that an increase next year on the scaled down equivalent dividend of 18 per cent could easily be justified. In December Showerings acquired for cash the shares of Jules Duval, wine and spirit merchants, and the 1959-1960 results should reflect the benefit of this acquisition. But Showerings is essentially a one product company and its immediate prosperity depends largely on the continued appeal of its widely advertised "Babycham." At 26s. the 5s. ordinary shares, of which 70 per cent are held by the Showering family, yield just over 4¼ per cent.

London Stock Exchange

FIRST DEALINGS:	Jan. 25	Feb. 8	Feb. 22
LAST DEALINGS	Feb. 5	Feb. 19	Mar. 4
ACCOUNT DAY:	Feb. 16	Mar. 1	Mar. 5

Until Wednesday, when a mild rally occurred on hopes of a railway settlement, equity prices have drifted lower. Gilt-edged stocks have remained firm. Business contracted steadily and on Wednesday the number of bargains marked at 12,437 was the lowest total since October 1, 1959 Gilt-edged stocks benefited from a good deal of small but persistent switching operations and these helped to offset the restraining influence of the threatened rail strike. Over the week to the close on Wednesday 3½ per cent War Loan improved ⅛ to 64⅛ and in short-dated stocks 4½ per cent Conversion 1964 put on 3/32 to 99 3/16. Medium-dated stocks attracted a fair amount of investment buying and 4½ per cent Electricity 1974-79 closed ⅜ better at 89⅜. Home Corporation loans improved in sympathy with the Funds and 5½ per cent LCC 1977-81 gained ⅜ to 103.

Industrial equities lost ground all round and even some of the small gains on Wednesday were not maintained at the close. On Monday the Chancellor's week-end speech on wages and dividends, the dullness of Wall Street and the rail pay dispute caused a fall of 4.4 points in the *Financial Times* ordinary share index and over the week *The Economist* indicator declined 4.9 points to 364.6. The biggest falls were suffered by those shares that had recently shown the most striking advances and these shares, in turn, showed the sharpest movements on Wednesday. Thus in steel shares Steel of Wales closed 3d. up on the week at 49s. 3d. after falling at one time to 48s. 3d., and John Summers were 2s. better at 72s. 9d. after falling to 71s. 6d. Hadfields lost ground on the results and closed 1s 6d. down at 26s. Heavy engineering shares lost most of their recent gains too, with Vickers 7½d. down at 34s. 9d., Guest Keen 1s. 6d. down at 87s. 9d. and C. A. Parsons 1s. 3d. down at 51s. 9d. William Doxford fell 2s. 6d. to 115s. 6d. but Reyrolle closed unchanged at 100s. American favourites also lost ground in line with the weakness on Wall Street and Philips Lamp closed 1s. 1½d. down at 152s. 7½d.; EMI lost 2s. 1½d. at 49s. 6d. and Fisons fell 3d. to 49s. 9d.

The strongest section of the industrial market was aircraft shares. Handley Page, the one remaining independent aircraft manufacturer, gained 2s. 9d. to 13s. 10½d., Fairey improved 3s. 6d. to 33s. and Hawker Siddeley put on 1½d. at 32s. Textiles were also relatively firm, the most notable rise being in English Sewing Cotton which put on 9d. at 50s. 3d. Tobacco shares were firmer after the dividend announcement of Imperial Tobacco and "Imps" improved 1s. to 75s. 3d. Gallaher put on 3d. to 39s. 3d. and Carreras "B" gained the same amount at 4s. 9d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended February 6, 1960, there was an "above-line" surplus (after allowing for sinking funds) of £168,316,000 compared with a surplus of £102,262,000 in the previous week, and a surplus of £165,756,000 in the corresponding period of last year. There was a net expenditure "below-line" of £44,889,000 leaving a total cumulative deficit to date of £467,586,000 compared with £364,866,000 in 1958–59.

THE MONEY MARKET

The discount houses again kept their bid at £98 17s. 3d. at last Friday's Treasury bill tender and the average rate of discount rose by 1½d. to £4 10s. 10.88d. Applications fell from £437 million to £410 million and the market's allotment at the basic price was a little higher at 28 per cent, compared with the all time low of 17 per cent the previous week. The Treasury again only allotted £230 million of the £250 million bills offered.

There has been another sharp drop in Treasury bill rates in the United States; the average rate for three months bills fell from 4.039 per cent to 3.563 per cent, almost one per cent below the equivalent rate in this country. The rate on six months bills fell from 4.501 per cent to 4.094 per cent.

After less difficult conditions at the week end credit has again been in keen demand and on Tuesday and Wednesday the authorities gave a large amount of special aid. One or two houses had to borrow a very small amount at Bank rate on each day this week. Rates for overnight loans have ranged up to 4⅝ per cent. In small bill business April maturities have changed hands at 4½ per cent and 4 3/32 per cent.

From all corners of the earth people come to

LA CHAUX-DE-FONDS

which has a beehive on its coat of arms, signifying the diligence and industry of its famous watchmaking citizens.
La Chaux-de-Fonds annually exports more than one half of the whole Swiss production of watches, and also millions of postage stamps printed there for foreign Governments. Naturally, like all other Branches, the La Chaux-de-Fonds Branch of the **Union Bank of Switzerland** has great experience in all matters concerning imports and exports. This experience is available to you.

Looking ahead to

CANADA · 1980

- **Mining and smelting industry output to increase 3½ times**
- **Secondary manufacturing to grow almost 3 times**

In studying the future of Canada's economic growth, the Royal Commission chose the year 1980 as a milestone. To achieve the growth predicted by that time the economy of the country will automatically undergo constant changes. And because we already have more than 530 branches spread across Canada we are in constant touch with those changes, year in year out. We will be happy to assist any manufacturer planning market expansion in Canada with such information as:

- **market statistics**
- **corporation procedure**
- **information on plant sites**
- **advice on customs problems**
- **data on market distribution**
- **incorporation procedure**

THREE OF THE MILLIONS WHO ARE WORTH MILLIONS

Three of the ordinary people who have added well over £500 million to the nation's net savings in twelve years through industrial life assurance. Ten million families save in this way, with the help of the Home Service Insurance Man. Together, they form a great thrift movement that helps people to help the nation by helping themselves.

Issued by The Industrial Life Offices Association.

In the City

The good professional man acts with a sense of responsibility illuminated by intelligence. His reputation and his business rise or fall on the shrewdness of his advice.

For investment he will often advise a good Building Society and he will count the Burnley among the very best. The Burnley offers the investor complete peace of mind. At the same time he enjoys a good rate of interest—3¼%, tax paid, and the knowledge that his savings are freely available when he needs them. *Deposits in the Society are Trustee Investments.*

APPOINTMENTS

ORGANISATION AND METHODS

COURTAULDS

Varied and Complex Investigations

COURTAULDS' Organisation and Methods department in Coventry has vacancies for men and women of real intellectual ability who possess a flair for solving complex problems. The work of the department is unusually varied and rewarding. There is an operational electronic computer which may help to solve some of the problems.

Candidates should have had previous experience of similar investigational work and be between 25 and 35.

Candidates should write for a detailed form of application to the Director of Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number C.22.

ORGANISATION AND METHODS ASSISTANT

Applications are invited for the above post in the Finance Department of the Co-operative Union Limited. Duties will consist of participation in the provision of an Organisation and Methods Advisory Service to retail Co-operative Societies. Applicants should have a sound knowledge of clerical methods, office machines and principles of accounting. Salary will be up to £1,000 per annum, dependent on qualifications and experience. Request for application form, marked Organisation and Methods, Ref. G, should be made to the Cashier and Accountant, Co-operative Union Limited, Holyoake House, Hanover Street, Manchester, 4. The closing date for applications will be March 15, 1960.

SALES MANAGER. A well-known Company in South Midlands, manufacturing and marketing a wide range of materials for the Building Industry, invites applications for this EXECUTIVE APPOINTMENT. Essential qualifications comprise a first-class education, preferably a University Degree, and sound industrial training and experience in all aspects of Sales Management and Administration. Knowledge of building materials and the industry is highly desirable. Responsibility will be directly to the Company's Sales Director. Initial salary dependent on experience but will be not less than £1,500 per annum with Life Assurance and Pension benefits. —Apply, in confidence, stating age and full details of qualifications and experience, including remuneration received, to Box 1273.

FISONS LIMITED

Economic Research

There is a vacancy for an Assistant in the Economic Research Department at the Head Office of the Company at Felixstowe, Suffolk.

The work consists in studying general economic trends in this country and overseas and, more particularly, the conditions and developments in those industries and commodities in which the Fison Group is interested. The work, which is of a confidential nature, is varied and involves some travelling. It consists of various assignments which would be interesting to a young man with an inquiring mind and a desire to increase his knowledge of industry.

Applicants should have a first or upper second class Honours Degree in Economics. Further relevant qualifications include special subjects (such as Economic Theory, Theory of International Trade or Industrial Development), post-graduate work and knowledge of foreign languages.

Applications should be addressed to the Group Personnel Officer (QV12), Fisons Limited, Harvest House, Felixstowe, Suffolk.

INVESTMENT ASSISTANT. An opening occurs, with excellent prospects for promotion, for a young man with personality and intelligence in an old-established and progressive Life Office in the City. No previous Investment experience necessary, but good educational qualifications and mathematical ability essential.—Write with full details to Box 1275.

UNIVERSITY OF ADELAIDE

SENIOR LECTURER OR LECTURER IN AGRICULTURAL ECONOMICS

Applications are invited for the above-mentioned appointment in the Faculty of Economics. An applicant may have taken his undergraduate course in either Agricultural Science or Economics but his post-graduate work must have included some specialisation in Agricultural Economics.

Salary scales: Senior Lecturer £A2,160 x £A90 — £A2,700; Lecturer £A1,560 x £A80 — £A2,040; with superannuation on the F.S.S.U. basis.

Copies of the general conditions of appointment of Senior Lecturers and Lecturers in the University may be had on application to the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1, or to the Registrar; the Calendar of the University may be seen in the Library of any University which is a member of the A.U.B.C.; housing help is available; and any further information desired will be supplied on request.

Applications, in duplicate and giving the information listed in the general conditions of appointment, should reach the Registrar, The University of Adelaide, Adelaide, South Australia, not later than March 21, 1960.

NIGERIAN COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY

Applications are invited for ACCOUNTANTS.

Candidates, not over 45, must have had good practical experience with a Local Authority, public company, practising Accountant or Government department, and should preferably be professionally qualified. Successful candidates must be prepared to serve at Zaria, Ibadan or Ilorin, and will be expected to control and extend the functions of the Accounts Department in the Branch to which they are attached, working under the direction of the Bursar.

Contract Salary Scales: £932 — £1,962 p.a. if professionally qualified; otherwise £854 — £1,443 p.a. Entry point according to experience. These salaries include inducement addition to overseas appointees, and an inducer addition to basic salary recently approved pending salary revision. Gratuity is at the rate of £25 or £37 10s. for each 3 months of resident service according to salary point in Scales.

Partly furnished houses at one-twelfth basic salary rental. Tours 15-24 months as the first instance. Free 1st class passages. Children's U.K. maintenance grant up to £150 p.a. and passages assistance.

Applications (8 copies), giving age, qualifications, experience and names of 3 referees should be sent to the Council for Overseas Colleges, 12, Lincoln's Inn Fields, London, W.C.2, by March 4, 1960.

INTERVIEWERS

Required for assignments in social and market research in Greater London area. Experience is essential in free depth or intensive interviewing. Applicants should give details of interviewing experience, educational background and availability.—APPLICATIONS TO REACH DR. W. A. BUSON, *LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE*, HOUGHTON STREET, W.C.2, WITHIN 10 DAYS OF THE APPEARANCE OF THIS ADVERTISEMENT.

MANAGEMENT CONSULTANCY

URWICK, ORR & PARTNERS LIMITED invite applications from men, aged about 30 to 37, for appointment to the

COMMERCIAL MANAGEMENT DIVISION

of their Consultant Staff. *Basic requirements* are qualification of one of the premier accounting Institutes, or an equivalent qualification, and five years' responsible experience in accounting or commercial management in industry.

The work involves (1) diagnosing problems of financial and cost control and administrative organisation; (2) devising solutions; (3) convincing the Boardroom, management and office staffs of the soundness of the solutions; and (4) implementing agreed proposals. *Special training for this work is given at the Company's Management Centre, and in operating conditions under guidance.*

Reasonable mobility within the British Isles for a few years is expected. Emoluments are high and are based on an attractive salary policy, with partnership profit-sharing and a Pensions Scheme. There are openings abroad for those who want them.

Applicants should send, in confidence, a short but comprehensive statement about their careers and background to the Company, at Urwick House, 14 Hobart Place, London, S.W.1, quoting reference C/1111/7 on the *envelope*.

For other appointments see page 664

THE REPUBLIC OF THE SUDAN

The Ministry of Education invites applications for appointment as masters in Secondary Schools in the Sudan, in particular for the teaching of ENGLISH up to "O" level or the equivalent. Vacancies also exist for masters to teach MATHEMATICS, SCIENCE, HISTORY and GEOGRAPHY up to a similar level.

QUALIFICATIONS AND AGE:
A University Degree in Arts or Science is essential. *Teaching experience, a Certificate in Education and willingness* to assist with games, Physical Training, and other school activities, will be an advantage. Age limits 23-45.

TERMS OF SERVICE:
Appointment will be on Short Term Contract (with bonus) up to five years. Salary ranges from £S1,075 to £S1,675 (£S1 = £1 0s. 9d.), with bonus payable at end of contract. Starting rate of pay will be determined according to age, qualifications and experience. A Cost of Living Allowance, reviewed every two months, is payable. An Outfit Allowance of £S50 is also payable *when the contract is signed*. Annual leave accrues at the rate of 7 days per month with free passages. Further particulars and forms of application may be obtained *from the Embassy of the Republic of the Sudan*, Appointments Section, Cleveland Row, St. James's, London, S.W.1, quoting reference 4/1003.

Accounting Assistant, aged 23-28, required by the U.K. subsidiary of E. I. du Pont de Nemours—a Company with world-wide chemical interests. There are excellent prospects in a newly-formed section for a *man with initiative who is keen on developing* Management Accounting techniques and reviewing existing systems. Salary up to £725 p.a. Applications, with full details of education and experience in writing only to:—

Personnel Manager (Room 600),
Du Pont Company (United Kingdom) Limited,
76 Jermyn Street,
London, S.W.1.

ESSEX

THURROCK TECHNICAL COLLEGE

WOODVIEW, GRAYS, ESSEX

Required May 1st, or as soon as possible *thereafter*: Assistant Lecturer, Grade "B," to teach Cost Accounting to Professional level, and to assist with general commercial courses. Candidates should hold degree or professional qualifications. Some industrial experience preferred.

Salary in accordance with Burnham Scale, 1960, viz. £700 to £1,150 p.a., *plus additions for qualifications and training* if in accordance with Burnham Salaries Report conditions.

Application forms, available from the Principal, to be returned within 14 days of appearance of this advertisement.

A cooling area of 3500 square feet and a weight of eight tons make the new giant KARBATE Brand Impervious Graphite Series 6850 Shell and Tube Heat Exchangers from UNION CARBIDE the largest in the world. Packed within the 45 inch shells of these KARBATE Heat Exchangers are 685 sixteen foot tubes, which, laid end to end, would measure out to over 2 miles of tubing. While these figures are impressive, you will find the unit's increased capacity and efficiency are even more so.

These KARBATE Heat Exchangers are in use as sulfur dioxide gas coolers in a process producing sulfuric acid from the petroleum industry's refinery sludge acid. The big exchangers operate in much the same manner as a dehumidifier or air conditioner. Moisture laden corrosive gases flow through the tubes of the vertically mounted units. Water passing through the unit's shell cools the gas and condenses out the unwanted moisture. The end result is a cooled, semi de-moisturized gas ready for further processing into a valuable product. And this is just one of the many uses of KARBATE Heat Exchangers in industry.

This reliable KARBATE Heat Exchanger series is available in lengths ranging from six to sixteen feet. This new series of KARBATE Heat Exchangers is nearly double the size of other models and gives five times more cooling area. And these gas coolers of KARBATE Impervious Graphite are more economical and last longer than coolers made of less corrosion resistant materials.

FREE, write for booklet IE-2 and learn more about how you can profit from KARBATE Impervious Graphite units which provide the required heat exchange with less than ⅓ the area required by carbon steel units. Write to **UNION CARBIDE INTERNATIONAL COMPANY**, Division of Union Carbide Corporation, 30 East 42nd Street, New York 17, N. Y., U.S.A., Cable Address: UNICARBIDE, New York.

SATCO
Automatic Air Traffic Control System
SATCO comprises the ground equipment to predict, co-ordinate, check and display the movement of air traffic control en-route and in terminal areas.
It provides an extremely rapid means for calculating flight paths, for detecting potential conflicts and for coordination of traffic control between controllers and between Area Control Centres. Special features are included for military/civil coordination and for controlling jet traffic.
The system has been ordered by the Netherlands' government and the first phase is now under operational test.

The surest tools to cut investment costs...
The surest tools to cut the investment costs of a new process plant are the tools of a design and engineering organisation. These tools can save thousands of extra hours of field labour and make a saving of thousands by reducing the quantities of materials required. The advantage of thorough engineering and design are always reflected in the operating record of a plant. Better engineering is the basis of the Kellogg organisation's world-wide reputation both as engineers and builders of complete process plants and as consultants on various special engineering projects. This better engineering is the result of good engineers working in an atmosphere where sound engineering is the measure of success for both the individual and the organisation. To Kellogg's clients, better engineering means plants built at the lowest capital investment consistent with reasonable operating and maintenance costs. Kellogg International Corporation welcomes the opportunity to demonstrate how better engineering can benefit companies contemplating new process plants.

For travel INSIDE the U.K., choose BEA

As a businessman you can appreciate both the complexity of the task and the value of the achievement. So, when you fly in Britain—FLY BEA.

Among the many services which BEA provides are regular scheduled air services within the United Kingdom. Today such services are an essential part of the nation's transport system. Commercial life needs them for the quick, effective conduct of business. They are indispensable, too, to millions of private travellers who have a right to the best and speediest transport available. And they are a social necessity for those who live in the remoter parts of this country — the Highlands of Scotland, the Western Isles and the Scilly Isles. It is BEA's policy to see that these air services are provided.

From the map on the left you can see how BEA's internal services have created a network over the whole country, linking all parts of the United Kingdom, making each easily and speedily accessible to the rest, providing essential services for all who need them. These are the veins through which much of the social and commercial life of the nation now flows.

And these internal services are efficient. That BEA has built up and now operates its national network without a subsidy — and at prices the average traveller can afford—is proof enough of that. Today it is a great deal cheaper than people realise to fly BEA within Britain.

THE PUBLIC APPROVES In 1949/50 BEA carried 407,137 passengers on its internal services. Ten years later the figure was 1,190,814. The reason for this increase? BEA's policy of expansion, and cheaper fares, which have enabled many thousands of people to become regular users of the BEA network within Britain.

BEA MEET THE DEMAND In 1949/50 the number of BEA flights within this country was 44,486. Ten years later the figure was 63,539. The increase in demand has been met by an increase in frequency of service. This has been achieved by the use of better and faster aircraft, and by the careful integration of internal and international services.

Four points to remember when you fly BEA in Britain

- ✳ It is BEA's policy to provide services on uneconomic routes as well as those which pay.
- ✳ BEA now provides quick, efficient travel not only for business people, but for thousands of private citizens as well.
- ✳ Some of BEA's internal services operate at a loss, yet are financed entirely from BEA's own resources, without a subsidy.
- ✳ With the development of new aircraft types including helicopters, BEA's internal services will expand to provide an even better service in Britain as in Europe.

The airline that's made big business of air travel in Europe

who is the fourth man ?

A V.I.P. certainly, not present in person but very much in spirit. A man whom the other three have probably never met and may not even know. A man who is mostly out of sight but never, never out of mind. **THEY** are the Acheson heads of Sales, Production and Research. **HE** is a customer—you, perhaps—and at this conference the man of the moment. He knows us well, otherwise he would not be present (spiritually). He knows us well, yet almost certainly not well enough. He may not realise how much more we are prepared to do to help him. He knows we were the first and are the foremost manufacturers of colloidal graphite and MoS_2. He knows of "Oildag" colloidal graphite in oil and "Aquadag" colloidal graphite in water. But does he know about the scores of other Acheson dispersions, of silver, lead and boron, for instance, or vermiculite, glass and mica? Does he know that we have tailor-made, to the most stringent specifications, special dispersions for the UKAEA, Government and Service departments, and many world-famous industrial concerns? If he *does* know these things we apologise for this reminder. If he doesn't, we'll leave one final point with him: there's more in the Acheson service than meets the (regular or potential) customer's eye. Naturally we would be delighted to tell him about it.

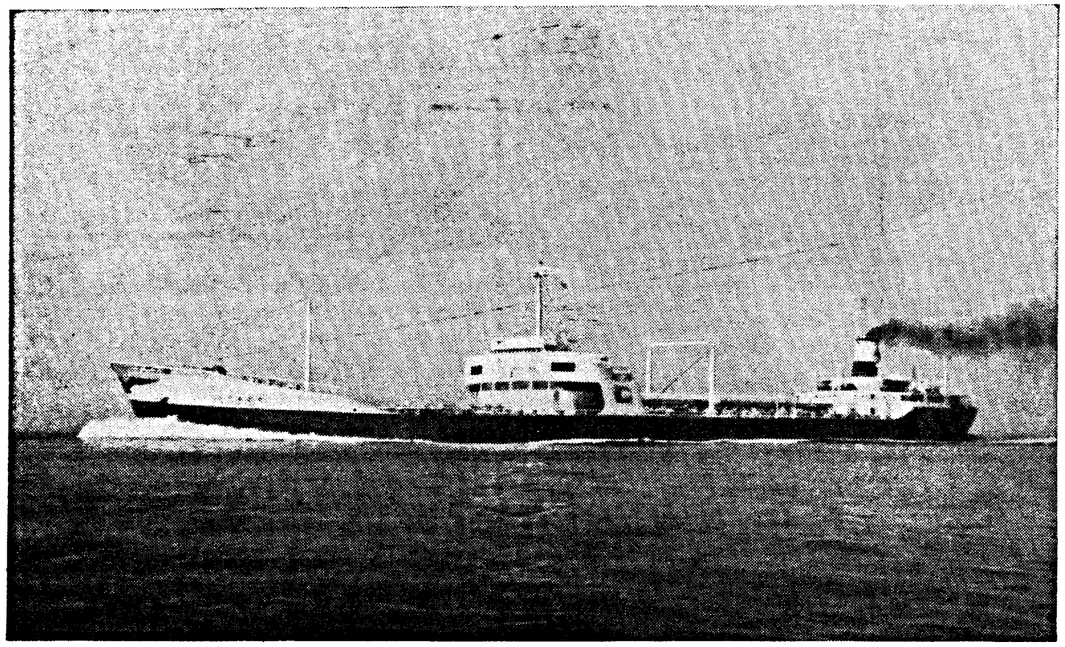
Twin after-burning engines give the USAF T-38 Talon high performance with safety.

TO TRAIN SPACE AGE AIRMEN IN SUPERSONIC DEFENSE–NORTHROP'S T-38 TALON

Northrop is now producing the T-38 Talon for the U.S. Air Force Air Training Command. Pilots who have flown the T-38 agree that this is the plane in which the new generation of airmen can safely master the art of supersonic flight.

The twin jet T-38 is a member of the same low-cost and simplified-design family as Northrop's N-156F Freedom Fighter. Both incorporate similar performance characteristics and are powered by General Electric's J85 engines. Both reflect lower production costs, require only half the fuel to operate, and are far easier to maintain than aircraft of comparable performance. Both the T-38 trainer and the N-156F fighter are flying and ready for the Free World today.



Northrop's Mach 2 Freedom Fighter–the N-156F–the modern, multi-purpose fighter.

The birds who run Unilever come in many shapes and sizes. To classify them by genus and species would defy the skills of ornithologists. They are, in fact, as diverse as Unilever itself (some 400 companies in 50 different countries). The one thing they all have in common is their work as managers.

What does being a manager mean? Well, let's put it this way. Some men are specialists—their talents lie in a particular field. A manager, on the other hand, must be able to employ his talents in many different fields. Trained in one, he must have the ability to command in many.

This breadth of outlook is one of the qualities we look for at our trainee selection boards. When a man has joined us, we develop this quality right from the beginning by giving him a variety of experience during his training.

As a man goes higher his responsibilities broaden. We are looking for people who, if they make senior level as managers, will be expected to take very wide responsibilities indeed. The Parent Board of Unilever itself and the Management of our 400 companies are peopled by men like this—men who have worked their way up through the business as managers, all of them.

And on their way up they are getting a variety of experience to fit them for the jobs at the top. For a marketing man, for example, a spell in a sales team in Yorkshire may lead to experience in an advertising agency in London. Later, from London, our man may go to Brazil—or Pakistan, or Australia, or to one of many such overseas stations. From abroad he will come back to greater responsibilities at home. Products, peoples, markets—these and many other facets of business life are constantly changing for Unilever. The Unilever manager must develop with them—or ahead of them.

So if you're a bird who likes a varied habitat—if you welcome the chance of a migration or two—above all, if you're feathered for flight into the higher realms, Unilever's atmosphere may be congenial to you. The booklet, Six Men on Business, will tell you more about us. Ask your University Appointments Officer for a copy, or write to us at:

"High Frequency Heating" by Roy Nockolds

Hot and Quick

Over the past ten years or so industry has become familiar with a process known as High Frequency Heating. Examples of its practical uses today include smelting, surface hardening, plastic welding, wood gluing and the cooking of biscuits and cakes —all of which it does with great speed and precision.

This 'high frequency heat', is generated in three ways — dielectrically, by induction, and by microwave irradiation. All these methods have two things in common—the heat is created by molecular friction (Roy Nockolds' picture represents the controlled movement of molecules *inside* a material) and all employ types of electronic valves in which Mullard specialise. In fact, High Frequency Heating owes much of its success to Mullard's long experience in the design and production of electronic power and transmitting valves.

Here, then, is yet another example of how Mullard research and development is serving Britain's designers of electronic equipment.

Technical Information Services. *Mullard Technical Information Services cover almost every field of electronics. If you have an applications problem, write to the address below.*

Fair Wages for Inflation?

THE railwaymen did, in the end, get their way by threatening to strike. The Government did, in the end, prefer to give way again. *The Economist* made the mistake last week of thinking better of a Government that was returned last autumn with a majority of 100 for a mandate to continue to keep prices stable and avoid inflation. The important thing now is to understand what the Government decided last week; it was, in effect, to put the present staffs of the railways, in their present numbers, on national assistance.

The promise to give the members of the National Union of Railwaymen a pay increase of 5 per cent to begin with is only the bit of the iceberg that shows so far above the surface. The real commitment, whether said yet or not, is to pay to all the members of all the three railway unions, in basic pay and in differential rates above that, at least what the Guillebaud report may suggest in a fortnight's time. The prospective cost is not just another £19 million a year but from £40 million to £50 million (not counting the cost of the new claims for shorter working hours). The alternative is still a national rail strike; the threat is not withdrawn but held back, to make the assurance sure.

The threat will almost certainly not be needed. Almost certainly it was not needed last week. The Government did only what it really wanted to do, for it now appears to have a wages policy after all. That policy is to see that all workers are paid wages comparable with the wages of other similar workers; it is to keep everybody up with their Joneses, whatever the cost. This is "fair" and it staves off strikes; it is also capable of becoming the most ingenious (or ingenuous?) built-in engine of inflation and protectionist distortion of the economy yet devised.

It is in fact a policy of "freeze." But what is to be frozen now is not the wages paid but the differences between them. Any disturbance of the pay of one group of workers will set all the others moving until the first group's gains are cancelled out, and the whole process has to start again. The incentive to shift from old declining jobs to new and growing ones will be chilled; what we now risk getting is not growth without inflation but inflation without growth.

For years the steam behind the regular rounds of wage claims was the ever-rising cost of living, and the steam behind the cost of living was the ever-rising wages. That was inflation then—with growth. Two years or so ago, at the cost of slackened work and output, prices were steadied and wage claims slackened too. Then, as activity grew again last year, pay and earnings went strikingly up. This was not mainly the result of higher industry rates in new union agreements, of which there were only few. It was the natural result of the pull upon workplace rates of a booming market; and workers outside the market (in, say, the public service) or in unprospering industries were not pulled up. This is the "inequity" that the device of fair wage-fixing by impartial committees doing sums is designed to remedy.

The Guillebaud report is only one of a flock of these comparative calculations. The Pilkington report this week, which is discussed in some detail on later pages, does it for doctors and dentists. The Coleraine committee has already done it for higher civil servants (and it has been done for officers and technicians in the services); the civil service pay unit is busy all the time seeing that the lower grades of government workers (including postmen and technicians, as well as white-collar workers) do no worse than those on equivalent work in

industry. And now, no doubt, the railway "settlement" itself is similarly regarded as simply fair do's for the unlucky railwaymen after the pay increases in engineering and building, which have benefited exceptionally (and unfairly?) from the boom.

What follows? The engineers will be able to argue next that what the bankrupt Transport Commission can give to its workers (with Government blessing and from public funds) the thriving engineering employers can give to them (from profits). Even before that the railway shopmen (who link the railwaymen with the engineers) and the London underground workers (who are the link between the railwaymen and the busmen and municipal transport generally) will surely want their own comparative lift. To hope that last week's decision, on the downtrodden railwaymen's behalf, can be prevented from becoming the precedent for a new Gadarene ascent, to the detriment of everybody in the end, is optimism indeed.

THE Guillebaud-Pilkington-Coleraine method of making pay comparisons has its very proper uses; what is perilous is its abuse, by those who have to make the decisions on the basis of the figures, either to set competitive wage-inflation going again in industry, or to push up public spending on the public services too precipitously. The basically right principle behind such comparisons was stated two weeks ago in *The Economist*: "Whenever it is impossible to recruit or retain a sufficient staff in a particular grade, that grade is underpaid." The best test is whether men of the kind required come in and stay or move away to other work. But, say, doctors and dentists, civil servants and skilled (though not unskilled) railwaymen have, broadly, only one employer; for them, and for the armed forces, statistical comparisons can usefully say what rates of pay will have to be paid to get and keep up the essential quality and strength of staff. They can also suggest, more tentatively, what these people would have to be paid to maintain their status or standard of life, according to some past or present yardstick. What they cannot say is that the money is there to do it.

The railways live in an unhappy half-world between commercial enterprise and public service. The Guillebaud report can usefully do two things. The first, and much the more valuable, is to specify what differential rates of pay will have to be paid to the railways' scarce craftsmen in order to keep the railways running at all. The second is to say what a decent wage for the rank and file would be—if it could be paid; nobody—least of all *The Economist*, which believes passionately in a steadily enrichening society, based upon ever-higher output and ever-higher earnings—would wish any worker, on the railways or anywhere else, to get less than this; but no statistics can possibly demonstrate that every member of the present staffs of the bankrupt and so largely unwanted railways can, or should, be paid this optimum rate out of public money for staying where he is. The only possible economic future for the railways of this country is to become much smaller in scale (and staff) and vastly more efficient in organisation and more specialised in operation; this is every whit as true whether the label on them is to be "commercial" or "public service"; to earn the better wages that they deserve, there should be many fewer railwaymen. The best use for more public money now might be to pay the railways to cut down and railwaymen to move away (as in cotton).

This is not the sort of harsh reckoning that attracts the new empirical and interventionist Tories who are just now, from the Prime Minister downwards, on top. The bill for Guillebaud has, in effect, already been accepted. To this policy of fair wages has now been added the doctrine of the ever-open public purse for shaping the economy's course: open to private aircraft and motor making, to private steel and to private shipping, as to the public railways. This is the counter-revolution of nineteenth-century Tory empiricism against the nineteenth-century liberalism, whose clothes the Tories felt they had to wear while Labour mattered: for liberalism and competition, now read liberality and direction. The first effects can be seen in the burgeoning estimates for this year's Budget; it is the patient Mr Amory—and the country—who will in the end have to carry the can, financially and economically.

Mr Watkinson's Defence

While the new Minister hesitates between Blue Streak and Polaris, the defence bill mounts. Is this the real choice he has to make?

MR WATKINSON'S first defence white paper attempts no flights into higher strategy. For the sake of appearances, it endorses Mr Sandys's five-year plan for defence, but points out that not everything laid down in 1957 is to be taken as scripture. "Adjustments in long-term plans," concludes Mr Watkinson sagely if prosaically, "cannot be avoided in a world in which the rate of progress of science and technology is always accelerating and the international scene is constantly changing." What this means is that Mr Watkinson is taking a long hard look at the predicament which Mr Sandys left with him. But there is in his white paper depressingly little indication of how he intends to deal with it.

That inescapable dilemma of British defence policy is exactly what it was in 1957 when Mr Sandys grappled with it: to reconcile the growing cost of an independent British nuclear deterrent with the growing cost of an adequate conventionally armed land-sea-air brushfire force. The cost of both is rising partly because soldiers and electronics alike cost more and more, but mainly because of the rapid progress in science and technology of which Mr Watkinson warns. So policy has been painfully shortsighted. The Russians' leap forward in nuclear rocketry has rendered the mounting and the maintaining of a nuclear deterrent in Britain an ever more difficult and expensive (and perhaps even indefensible?) undertaking. It was certainly not foreseen, when thousands of millions were being spent in building British atom bombs and V-bombers (the latter designed, be it remembered, back in 1946), that these might be required to get away from their bases on a four-minute alert, if they were not to be at the mercy of an atomic V-2. Nor was it supposed when Blue Streak was designed with its small aperture at ground level that the Russians would prove able to hit either the moon or sixpence—or that the five-minute missile warning system hastily announced this week would take three years to create.

Similar technological advances have pushed up the cost of equipping the conventional forces: especially because, as the stake in letting any war spread is now so horrifyingly high, such a force must be able to deal with a local outbreak in a matter of hours rather than weeks. This means a large park of miscellaneous (and probably too miscellaneous) Transport Command aircraft. Mr Watkinson's defence white paper comes back again and again to the need for both the non-nuclear and the nuclear deterrents to be highly mobile and always in a state of readiness—both near-war conditions which are notoriously expensive to sustain.

Thus it is not surprising that the defence budget has shown signs of spread. Of the additional £85 million for which Mr Watkinson has successfully bargained with the Chancellor, only £16 million represents the increased pay of the forces. A high proportion of the rest is certainly accounted for by research and development of the many types of atomic deterrent—both the warhead and the vehicle to carry it—to which this year's white paper refers briefly and not at all reassuringly. An increase of the order of 5½ per cent is not unreasonable in terms of the rising national income even after a period in which prices have been stable, if it buys real security. Defence, unlike much else, is not expendable. But the increase this year almost certainly represents no more than the cost of putting off the big decisions. The cost of continuing to play around with all the present plans for the deterrent will certainly become intolerable soon; the choice has to be made. The key sum is undoubtedly the cost of developing and mounting (in underground silos) Britain's static 2,500-mile IRBM, Blue Streak. This, intended to reinforce and later to replace the 200-odd V-bombers, would in any significant number cost at least £500 million, and probably much more.

The question which has been asked in the past year, as Mr Khrushchev has become more and more explicit about his missile armoury, is whether this article is worth its price-tag. Mr Watkinson was reputed to share these doubts; and when a minister hesitates about spending £500 million, the soundest principle for lay commentators is undoubtedly to seek to multiply his doubts. There is other evidence in the white paper of Mr Watkinson's havering, in the emphasis placed on the importance of examining the potentialities of a more mobile missile deterrent, whether discharged from submarines or from aircraft by new techniques. The quantity and the accuracy of Russian rockets and the initiative which their head start gives to Russian strategy requires that any retaliatory western deterrent cannot easily be destroyed on the ground.

The white paper, however, says that work on Blue Streak, as well as on more mobile systems, is to go on. Yet, quite clearly, we cannot afford both. So what this must mean is that Mr Watkinson would like something better than Blue Streak, but is far from sure that (for example) Polaris will provide it, by the time the V-bombers are obsolete. The military case for hanging on to Blue Streak rests on this: it is reasonably certain to work, it has the range, it will be hard, if by no means impossible, to hit, and it could be ready by 1965-67 when the V-bombers will be ageing physically as well as becoming too vulnerable to Russian ground-to-air missiles. This cannot be assumed of any mobile missile now at the starting-flag.

But this argument rests absolutely and entirely on the presumption that what we are after is still an *independent* British deterrent. If we could be satisfied with the security given by missiles based on the continent—at least during the interval before a Polaris fired from a submarine can be accurately fired fully 1,500 miles—then a weapon of shorter range would do, and being lighter could be made mobile. There is a good prospect of such solid-fuelled missiles by 1965 or so. The choice for Britain is not between Blue Streak and near-defencelessness in the later sixties; it is, still, between incurring a huge expenditure to create an independent British deterrent which even then may prove fallible, and basing our security on collaboration with, and on the physical geography of, the alliance. It is ironic that, just as General de Gaulle, too, has put his foot on the ladder towards an independent national deterrent, Russian technology faces Britain with the choice between making sense of interdependence or ending up with nothing at all.

IT is therefore of the greatest importance to discover what Mr Watkinson thinks of the alliance and of the prospects of interdependence. The answer is distinctly worrying. The white paper undertakes to keep the present British forces in Germany "for the time being." This unfortunate phrase covers the fact that the immediate plan is to provide accommodation for seven brigade groups (Mr Watkinson has not the hardihood to refer to the "three divisions" which this nominally represents). To this is added some soothing words about the alliance, but there is marked stress on the ancient argument (so useful to the French) that Britain has to take account of its commitments to Seato, Cento and elsewhere.

Further, in the shopping-list of weapons with which the white paper is hopefully sprinkled, there is little reference to the possibility of cost-sharing with the allies. The salient example given of Commonwealth co-operation—in the production of the anti-tank missile, Malkara—happens to be also a case of failure to standardise specifications with a similar weapon being developed by the French. It is, in fact, all too clear that in conventional weapons as in nuclear deterrents, Britain is still largely going it alone.

It must be said, once again, that this is a perilous policy which may result, in the end, in Britain not having enough of anything. Even last year's hopes that, on the encouraging recruiting figures, the strength of the regular army might reach 180,000 are not repeated—Mr Sandys's figure of 166,000 is projected for 1961. A higher figure is still possible, provided the falling off in recruiting is halted; but a doubt is beginning to creep in whether the brass-hats really want the extra men, who are so expensive to recruit, train, equip, deploy and finally pension off. Half the defence estimates are accounted for by pay and services, and another large slice by items which "cannot be curtailed at short notice." When men become so expensive, a fresh choice between men and

conventional arms and equipment begins to obtrude itself.

The moral of all this is very plain. Mr Watkinson has set out a great many projects (including 11 different missiles and 12 varieties of aircraft) which must be looked at as so many skittles for him to knock down. It might be unfair to expect him to knock down all that he should within four months of taking office. But knock them down he must—long before next year's white paper.

The 4th N-Power - and the Nth

The Sahara explosion ought to focus attention on the advent of a "near-nuclear club" of a dozen more nations

THE windows of the "nuclear club" rattled only faintly when the shock waves arrived from Reggane last Saturday. Mr Khrushchev's reaction was just a fraction more pained than those of his American and British fellow members, but even he hastened to follow up his expression of polite regret by adding that he was sure that General de Gaulle was seeking to relax international tension. Any discrepancy between this declaration of serene confidence and Moscow's broadcasts to Africa about "terrible danger" may be reasonably accounted for by the fact that the Soviet leader will be the French president's guest next month, while the Soviet radio has to give the customers what they want.

At Geneva, the representatives of the three older members of the club are now in the sixteenth month of their argument about prohibiting nuclear tests—an objective that implies the closing of the membership list. Their show of unflappability this week was not surprising, for the long-heralded Sahara explosion had been taken into their calculations and discounted long since. The one point on which there did seem to be a clear consensus among them was that they were in no hurry to ask France to sit down at the fourth side of their table. This was wise, for President de Gaulle has publicly stated that France has no intention of bowing to a prohibition of tests that would leave the Three free to build and stockpile their already developed weapons, while preventing the further development of French ones.

From one point of view, it might seem that France, by pursuing its determined course in this way, has exposed the fatuity of the Geneva negotiations on test suspension. The biggest question-mark over these Geneva talks has always been the improbability that the world's other ninety nations would be content with a "freezing" agreement that would freeze them all out and guarantee the nuclear oligopoly of the Three. This is doubtless the thought behind the repeated French assertions that France's progress in developing its own nuclear weapons would enable it to press more forcefully for general disarmament.

This argument is likely to be heard from other nations as they in turn approach the threshold across which President de Gaulle's long stride has now carried him. Indeed, the logic may now be refined. It may not be necessary for the fifth, sixth and seventh (and so on to the nth) nuclear power to carry out an expensive development programme as fully as the fourth, France, has done. With the French example on record, the fifth to nth powers ought to be able to exercise a fair amount of pressure on the original oligopolists economically and with relative ease—simply by showing that they have the means and the inclination to follow that example.

Three American scientists have just attempted an analysis of the various assets that a candidate for membership of the nuclear club must possess: scientific manpower, general industrial capacity, and capacity specifically in the fields of electric power, steel, chemicals, engineering and large-scale construction.* Very tentatively, they suggest that perhaps eleven more countries are already equipped to embark on nuclear arms programmes which could yield actual results in terms of weapons within about five years. These countries are Belgium, Canada, west Germany, India, Italy, Japan, Sweden, Switzerland and, in the communist world, China, Czechoslovakia and east Germany. Close behind them may be placed eight more: Australia, Austria, Denmark, Finland, the Netherlands, and Hungary, Poland and Jugoslavia. A third group, Argentina, Brazil, Mexico, Norway, Spain and South Africa, is regarded as unlikely to be able to manage the job in five years. The absence of Israel and the Arab states is perhaps the only reassuring thing about these lists.

IT would be rash to rely on any declarations made by the governments of these near-nuclear powers that they have no desire for nuclear arms; policies, and governments, change. The implications for the Geneva negotiations over tests are surely clear. The shaping up of the near-nuclear club ought to emphasise once again the importance of looking at the question of halting tests in the context of the broader problem of disarmament. While the Three at Geneva jockey for relative advantage over the terms on which a policed halting of their tests might be agreed, the clock ticks on, and the near-nuclear powers creep nearer. Among the Three there is already a growing awareness that present rivalry is bound to be increasingly overshadowed by the common peril that will confront a world in which nuclear arms are widely disseminated.

Hence, one may deduce, Mr Tsarapkin's rather obscure but apparently promising concessions on Tuesday; the Soviet government, while happy to extract propaganda value out of the present American reluctance to accept a less than watertight agreement, is anxious to keep the negotiations from breaking down, and prepared, to that end, to swallow yet another unpalatable little dose of international snooping behind its curtain. Hence, too, the force in the argument that the main value of an agreement on tests would be to make a start with the kind of international inspection that will be crucial to any general disarmament plan. A ban on tests will have little lasting value unless it is quickly followed by progress with general disarmament; but even a less than perfectly controlled ban on tests could greatly facilitate that progress.

The East Wind

The Chinese are openly opposing Mr Khrushchev's policy towards the United States

FROM Moscow and Peking this past week have come the expected strains acclaiming "the everlasting, indestructible and fraternal alliance" of Russia and China on its tenth anniversary. By all accounts, the official junketing has had its strains, too. This has not been altogether Mr Khrushchev's fault. True, he happened to be in India on the festive day, last Sunday. True, he is on a diplomatic passage designed to repair, as far as the Soviet Union is concerned, some of the broken bridges that Chinese policy has left behind it in south-east Asia in the last two years. True, the Peking home service thinks so little of this performance of his that it has kept all news of it from its listeners. Mr Khrushchev wired his greetings to Peking, of course. But that was not enough to persuade Chairman Mao or Mr Chou to put in an appearance at the Soviet Embassy's celebration, or their own. From where Mr Khrushchev stands, the east wind is blowing decidedly chilly these days.

The Chinese have set their faces against the Russo-American *détente*; and they have constantly said so in the past weeks. On January 21st the Chinese foreign minister, Marshal Chen Yi, condemned the United States for using the talk of peace simply as a cover for its policies of aggression. He did not dissent from Mr Khrushchev's disarmament proposals, but insisted that

> any international disarmament agreement which is arrived at without the formal participation of the Chinese People's Republic and the signature of its delegate cannot, of course, have any binding force on China.

The Peking *People's Daily*, on the same day, attacked President Eisenhower's state of the union and budget messages for employing the "vilest" cold war language. This denial of the spirit of Camp David was repeated in the remarks by Mr Kang Sheng, the Chinese observer at the Warsaw Pact conference in Moscow on February 4th, in which he openly dissented from Mr Khrushchev's estimate of American intentions. Mr. Kang's warning to his allies was immediately broadcast by Peking radio, although its influence could not be detected in the declaration that Mr Khrushchev dictated to his Warsaw Pact allies.

The debate has gone on through the treaty celebrations, which have, indeed, provided the Chinese with an exceptional opportunity to make themselves heard. In Sunday's *Pravda*, a three-column message for anniversary day from Mrs Soong Ching-ling, widow of Sun Yat-sen, set out the Peking objections before the Russian public. The contrast between Mrs Soong's strictures on President Eisenhower's "mask of an envoy of peace" and Mr Khrushchev's mildly favourable impression of the President will not be lost on *Pravda's* readers. In its anniversary issue, the Peking *People's Daily*, claiming that "the aggressive nature of United States imperialism has not changed at all," indulged in an outburst of righteous orthodoxy:

> The people of our country will resolutely struggle to the end against all attempts by the imperialist and international reactionary cliques to split the solidarity of the socialist camp and the solidarity of the international communist movement, as well as against modern revisionism—the main danger to the current international communist movement.

While Peking was revolving these thoughts, Mr Khrushchev was making encouraging remarks on Indian industrial progress under the shadow of the Bhilai steel plant, the "symbol of Soviet-Indian friendship." Mr Khrushchev is probably not a modern revisionist (within the ordinary meaning of that flexible term) and no one of his allies has dared to call him one: not yet. But to Peking it is a galling experience to see Soviet aid providing one of the economic showplaces of its chief Asian rival. Indian applause for Mr Khrushchev's assertion of the *panch shila* principles has a pointed ring. To the Chinese there is very little in his tour that can possibly go right for them. Even President Sukarno of Indonesia, playing happy host to Mr Khrushchev, has just arranged a visit to Jugoslavia.

AFTER ten years of diplomatic dependence on the Soviet Union the Chinese seem fully determined to show that they have a mind and will of their own. They do not share Russian sensitivity to the feelings of the uncommitted countries, not do they appreciate the subtleties of Mr Khrushchev's diplomacy. They are for the extremists everywhere: in the Caribbean, in Algeria, in black Africa. Inside the Soviet block they are for Herr Ulbricht and his kind (even to the *People's Daily* claiming that rocket weapons for east Germany are not only "fully justified but also necessary"), and it may be assumed that there are advocates of the hard line in more influential places than east Berlin who stand up, in turn, for the Chinese. To Peking the United States position in Europe is directly analogous to the United States position in Formosa and, despite the limitations put on American action by the revised security treaty, in Japan as well. Any distraction from this basic conflict with the West, even those distractions prompted by Mr Khrushchev's desire to avert mutual annihilation in a nuclear war, are severely distrusted in Peking—as they may be in certain circles in Moscow.

The Chinese consider that their own policy towards India is the one best designed to hasten what they believe to be the inevitable triumph of the east wind over the west wind. They have seen no cause to repent of their actions in Tibet (which the Soviet Union has found considerable difficulty in supporting) or along the Himalayan border with India. It is difficult to suppose that, whatever else they expect of Mr Khrushchev, they would have welcomed any open attempt to mediate between them and Mr Nehru. This knowledge, and the knowledge that south-east Asia was watching for any sign that he meant to over-rule Chinese policy, seems to have tied Mr Khrushchev's hands in India. He may have been able to encourage Mr Nehru to invite Mr Chou to Delhi (for which Mr Nehru has now been accused of weakness by his opponents), but for the rest he had to keep to the tightrope, and his performance did not unduly impress the Indians.

Even so, the dialogue between Moscow and Peking has

not been altogether without effect on either side. Mr Khrushchev's latest image of the western opponents of co-existence hoisting "the cold war ass" on to the roof of their house (meaning that it would fall through) may be considered a gesture to the anti-American critics. But it is very homely fun if it is. Fulfilling the letter of the Sino-Soviet alliance, the Soviet ambassador in Peking, Mr S. V. Chervonenko, has at last been able to get his tongue round the admission that the Chinese farm communes have "developed a momentous large-scale mass movement for increasing production." (Since the Chinese now claim to be engaging in socialist construction only, more open diplomatic recognition for the communes has become possible.) Mr Chervonenko did, however, go on to improve the shining hour on February 14th by reminding his hosts that

> the Chinese People's Republic, which conducts a peaceful foreign policy, is one of the active initiators and organisers of the Bandung conference.

Was it the spirit of Bandung, or the imminent arrival of Mr Khrushchev in person at Rangoon and Jakarta, that has just caused Peking to settle its chief differences with Burma and Indonesia? It is a nice point. Chairman Mao and Mr Chou, in their official message celebrating the treaty anniversary, sent to President Voroshilov and Mr Khrushchev on February 13th, seemed more conciliatory than their underlings. They had approving words for the Warsaw Pact declaration and believed that the cause of peace would score further successes —although still with the proviso that "the enemy of peace may work to obstruct and sabotage."

What is most significant about these rifts in the alliance is not that they exist, but that they should be made so apparent. China, for all its ambition and pretension, is not yet a great power. The pace of its economic development, even allowing for the frequent and judicious revision of statistics, is great, but still not great enough to let China stand by itself. The Chinese, on their own admission, have no more than 50,000 tractors in agricultural production; in the five chief industrial cities more than half the workers are still engaged in manual labour. The most heartfelt thanks by Peking in the past week have been for Russian economic aid, particularly in the 290 major projects that are "the core and sinew of China's industrial construction."

It is still unquestioned in Peking that Russia and China have to live together; there is meaning in the assertions that the alliance of 850 million is unbreakable and inseparable. But that is not to suppose that the Chinese do not mean to have an increasing say in deciding the diplomatic orientation of the alliance, or that they do not count on finding fresh support in Moscow if Mr Khrushchev returns empty-handed from the summit.

Peasants' Revolt?

The Kenya delegates agreed on a constitution this week—but broke on land rights

THE fair hope that the Kenya constitutional conference would end this week in agreement (the Briggs group dissenting) and a quite sensational triumph for Mr Ian Macleod was fading by Wednesday. Though everyone has initialed the draft of the new constitution, which concedes an African majority in the legislature but with representation of minority groups, it was discovered on Monday that the Europeans in Mr Blundell's group had only initialed on the condition that they agreed with the safeguards contained in the bill of rights. And at the last moment, aided and abetted by Group Captain Briggs and his colleagues, they tried to smuggle into the bill of rights a prohibition against compulsory acquisition of anybody's land, even with compensation, except for roads and pylons. The Africans, who have every intention of trying to buy out *some* European farmers in order to resettle *some* of their own allegedly landless people, when they come to power, naturally resisted this restrictive covenant. They have promised that nobody's property can be acquired without due compensation, by prescribed judicial processes, and this is as far as they say they will go.

The Europeans are surely being astonishingly short-sighted. Their precondition is precisely the sort of paper safeguard that exasperates without protecting; if they force it through, the first demand of every African candidate in the next Kenya election would be the deletion of this clause in the bill of rights. Indeed the Europeans have already made it pretty certain that Mr Mboya and his colleagues will be electioneering on the demand for a new constitution and perhaps independence in 1961; they may well have to, to get in. But, evidently, Mr Blundell and his friends in the New Kenya Group can see only that they will have little hope of winning their primaries (to secure adoption as candidates for the racial seats that are proposed under the new constitution to keep minority voices alive) unless they can show their peasant constituents that they have taken back with their right hand most of what their left hand gave away on the franchise. Even so, Group Captain Briggs will probably overbid them. Furthermore, the Europeans risk losing all the African concessions they have so far won—Mr Mboya's position is already weaker among his supporters. The Europeans will rue this week's work, if Mr Macleod lets them get away with it.

NOTES OF THE WEEK

PARLIAMENT

New Party Attitudes

SIR WILLIAM ROBSON-BROWN'S motion, signed by twelve Tory MPs, in favour of a twelve-month committee of enquiry into the future of the railways has had a dim reception inside the Tory party, and will get nowhere. The decided view of speakers at this week's session of the Tory transport committee was that there was quite enough knowledge about the railways in the Ministry; what was wanted was decisions. It is necessary to stress that there is no question of a "revolt" against Mr Heath's way of settling the threatened strike. Some escape of steam was inevitable against the principle of "buying trouble off" with public money; but there is general agreement that the price paid (or to be paid) for peace was worthwhile provided it fitted into the framework of the Gillebaud report (which, even before it is out, has scriptural authority).

Tory MPs are insisting, however, that the Government must not just drift on pretending that at some future date the railways, as at present financially and administratively organised, will break even. The discussion at the transport committee revealed two schools of thought. The majority seemed to feel that, if the historic costs of the railways were taken care of, the Transport Commission's irrelevant activities dispensed with and its structure decentralised, it would still be necessary to have a subsidy; this should be explicitly acknowledged and attached to specific non-economic services which the railways are expected to perform. The more radical minority hold that in fifteen years' time railways will have been superseded by motorways and Rotodynes; consequently a ruthlessly stripped down system should now be run without subsidy. There was general insistence that the present activities of the Transport Commission were more than any one man could cope with efficiently.

While the Government will doubtless take these ideas seriously, it is much more resolved to resist pressure from others of its supporters; there is likely, for instance, to be trouble over Cyprus, if the area of the bases is further whittled away. The uncertain factor in all this is the reaction of the large number of members who were not in the last Parliament. Their impact has already been felt in the party's home affairs committee, where an uncharacteristically moderate presentation of the birchers' point of view got a preponderantly negative reception. It looks as if Mr Butler, who is resolved to stand firm against corporal punishment, will not have after all to rely on the Labour party for his majority in a free vote.

Gaitskellite Counter Attack

MR GAITSKELL'S weekend speech at Nottingham was a brilliant riposte to his critics within the party, who now include practically all the political members of the National Executive except Mr James Callaghan. Whatever doubts there may be about the tactical soundness of Mr Gaitskell's original choice of the wording of the party constitution as the battleground (instead of its constitutional arrangements and the right relation between the conference and the party leadership), or of his decision to speak out at Blackpool without discussion in the Executive beforehand, one consequence is now certain.

The advice given to him by Mr Wilson, Mr Greenwood and others, to drop the whole thing as if the Blackpool speech had never happened, must be unsound. At Blackpool Mr Gaitskell deliberately and coldly put his prestige on the line. The party either can or cannot dispense with it and him; the fact that the timing happens to be wrong for various individuals to have the question of leadership made an issue is no reason for burking a decision.

The worst possible advice for getting the party out of its mess has come from that brilliant intellectual Mr Crossman, whose misuse of his talents so often drives his admirers to despair. Mr Crossman, whose career was so energetically advanced by Mr Gaitskell at the time of the election, now wants to substitute for "theological" debate on Clause Four and other clauses of the constitution a further repamphleteering of the party's policy. To do this three years before another election would be madness: by trying to map out in detail what form public ownership is to be taken in specific instances in 1964 would be simply to set up Aunt Sallies for the Institute of Directors to push over with a lazy cuff. As Mr Gaitskell had the grace to concede in his Nottingham speech, it was one of his mistakes before the last election to start policy-wrangling and policy-writing too soon.

It must be some encouragement to the beleaguered leader to receive a letter signed by sixteen of the most promising younger candidates and former candidates—all of them of the postwar Oxford and Cambridge generation—endorsing his leadership, even though rather noticeably they did not endorse his views on the party constitution. One of the signatories, Mr Colin Jackson, has just been selected for the precarious honour of defending Labour's majority of 47 at Brighouse and Spenborough. It is something that his open support for his leader did not wreck his chances with this particular association, which chose him in preference to another aspirant who had been invited to sign the letter but declined.

CENTRAL AFRICA

Monckton Gets To Work

MR MACMILLAN'S return from Africa was more muted than might have been expected, largely because he continued to repeat unexceptionable statements of British policy, which do not go to the head quite so easily in this climate as in Africa. The congratulations of Labour members quite failed to unsettle him. He has, however, good reasons for not rocking the boat. The Kenya settlement is not in the bag, and the Monckton commission is just starting its work, for which it needs a quiet atmosphere. It met this week for the first time in Livingstone, where men as different as Lord Shawcross and Mr Justice Bealby will be able to size each other up.

The commission's most notable recruit is Mr Wellington Chirwa, who has joined it on Mr Macmillan's invitation even though he makes no secret of his belief that federation must end. This is to Mr Macmillan's credit, but it may be questioned if Mr Chirwa's membership will immediately commend the commission more to the Nyasalanders. He is anathema to the Malawi Congress party because he did not (or was not allowed to) jump on Dr Banda's bandwagon and so remained out of prison. But Mr Chirwa will be a powerful reinforcement to Mr Katilungu in interpreting the African viewpoint—if it gets presented at all—and in weeding out any mere stooges who do offer testimony. Moreover Mr Chirwa may do doughty work in cross-questioning Sir Roy Welensky—just as he baited Sir Roy, to the latter's manifest fury, in the Federal parliament when he was a member. His aim, indeed, may be by these means to work his political passage home. But the big question mark that overhangs the Commission is—when will Dr Banda himself be released? Only Mr Macmillan and Mr Macleod can answer that when Lord Home returns from his sudden, secret mission to Salisbury.

ALGERIA

The Next Broadcast

EUROPEAN Algiers returned a dusty answer to the broadcast by M. Ferhat Abbas, prime minister of the Algerian "government-in-exile," from Tunis on Wednesday. This was to have been expected: it is hard to imagine what appeal M. Abbas could have made that would soften the hearts of the European community just now. Still, M. Abbas must be presumed to have had a serious purpose. The audience he was chiefly aiming at may have been in metropolitan France. In his next broadcast he is expected to give the really big news: the rebel movement's thoughts (or some clue to them) on technical talks to explore the conditions for both a ceasefire and eventual elections. And with this, the next round in Algeria will begin.

So far M. Abbas has not been boldly conciliatory towards General de Gaulle. On Wednesday he adopted the general's own words to assert that "papa's Algeria" had gone for good, but he did not follow through into the ways of compromise. The Gaullist idea of a federal solution, under which Algeria's four chief races would each preserve its own identity—and the Europeans, at least, could retain direct links with France—got no recognisable response. The rebel conception of Algeria still seems to be of a unitary and, above all, independent state. The most the European community can expect is to be treated as "genuine Algerians."

In his corner, General de Gaulle continued to dismiss his more unreliable seconds. The announcement that eight civilian prefects are to be appointed to Algeria, and that civil servants will be shuttled backwards and forwards across the Mediterranean with sufficient rapidity to prevent their contamination by the settlers, looks hopeful but it may not prove to be particularly important (or novel) in practice. The elected mayors of greater Algiers, who made their support for last month's insurrection all too plain, are to be replaced by appointed officials. Even more encouraging, the army has now condescended to hand over MM. Susini and Perez, two of the lesser leaders of the insurrection, to justice. M. Abbas's next words could test these precautions to the full.

THE ARAB WORLD

Discord

THE seeds of Arab unity were not sown by President Nasser but he has laid claim to the whole crop, even if much of it grows in other people's fields. In doing this he has needlessly angered some of his neighbours; and in the resulting quarrel, the harvest is never reaped. Between the Nasser concept of unity and the great mass of Arabs stand the Arab governments, whom his extravagant claims have made highly suspicious of his intentions. By design or accident, those intentions have never been made sufficiently clear.

While President Nasser was giving pep talks on Arab unity in northern Syria this week, the Arab foreign ministers at Cairo showed how far that unity is from realisation. Iraq and Tunisia refused to send delegates because the Arab League meeting was being held in Nasser's capital; those who came promptly fell out with each other over the status of Palestinians.

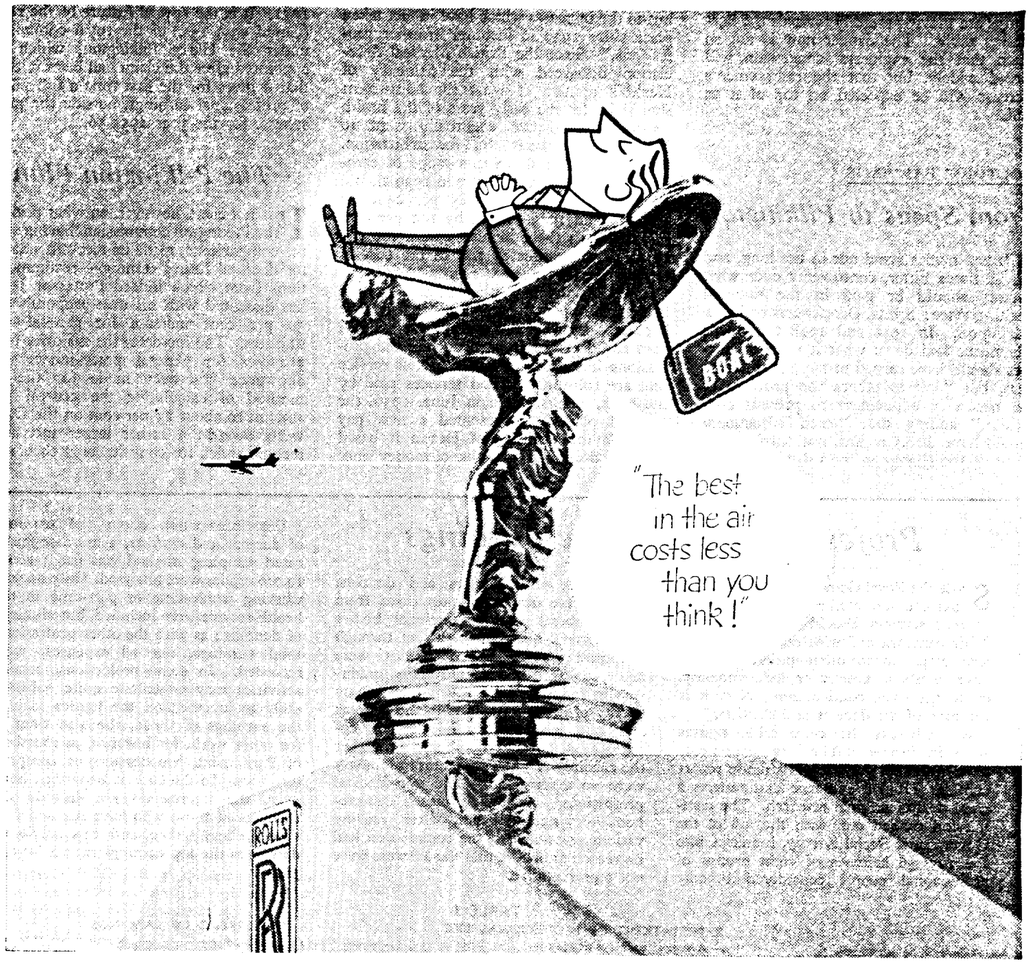
Whether stateless people, displaced persons, or dwellers under the cloudy sovereignty of Egypt (at Gaza) or Jordan (east of Jerusalem), the Palestinians appear to hold the key to supremacy over the entire Arab world. He who can capture the loyalty of these poor people will automatically become the saviour of the Arabs—or so it seems to be assumed by President Nasser, King Hussein and General Qasim alike. The Palestinians may deserve better of the Arab governments than they have received during the past 12 years, but they are in no position to help anyone win over other Arabs.

Egyptian efforts to gain control over all Arabs by attacking other Arab governments have failed. Is it possible that President Nasser might change course and begin a campaign of friendship towards his fellow rulers? If he and they could co-operate, Arab unity might acquire substance, and the "imperialist plotting" President Nasser complains of would lose it.

THE RAILWAYS

Post-Strike Tactics

AS a result of calling off its strike at the eleventh hour last week, the National Union of Railwaymen has won a decisive victory in the first round of bargaining over railway wages. The promise of a 5 per cent wage increase represents only a small part of its gain. Tactically, the case for spending Mr Guillebaud's money on basic rates has now been strengthened without loss to the NUR's strike funds; psychologically, the NUR has made the other two railway unions look as if they have been dragging their feet; politically, the British Transport Commission and the Government now have hardly a leg to stand on in the beginning that lies ahead. This is a pretty full quiver of achievements, the consequences of which will be felt in March when the Guillebaud report at last appears.



The NUR leadership is however far from unanimous on future policy. On the one hand, the moderate leadership of Mr Greene has clearly gone by the board; his whole position in the union must now be open to question. But a division between the left and right on the union's executive still exists. On the one hand there are those members—drawn particularly from the London and Manchester areas—who are already talking about "the fight ahead"; on the other, there are those who realise more clearly the limits to increases of basic pay and who indeed sided with Mr Greene's moderation until it became untenable. Last week's events will have strengthened the position of the militants, but they still face a major trial of strength. The right objective is still to raise differentials on the railways, both in high wage areas and in highly skilled jobs; both the Government and the Transport Commission know perfectly well that this is where the bulk of the Guillebaud award really ought to go. The shortage of train crews that led to the cancellation of this week's profit-making special cup tie trains in the Midlands should have rubbed this thorny point home.

WAGE CLAIMS

Forward March

WITH unusual alacrity, a four per cent increase in the pay of building workers was agreed this week. The builders, whose wages are geared to the cost of living index, normally receive their increases in two parts; one part comes from their sliding scale in February and the other from national bargaining in early summer. However, the cost of living over the past year has hardly changed and, for the first time since the war, there was no automatic increase under that head. Notwithstanding this, and because the industry is busy anyway, the employers agreed to the usual rise. Its form is interesting. Craftsmen are to be given proportionately more than labourers, a reversal of the recent trend of differentials in the building industry, but in line with that in the economy as a whole. Over the past three years, for example, skilled engineering workers have done proportionately better than unskilled, secretaries proportionately better than typists, senior civil servants proportionately better than junior ones and field-marshals proportionately better than privates. In building, this tendency towards greater differentials has been offset by inter-union competition for the favour of unskilled workers. But the skilled men, with the market on their side, have now made a comeback.

The other major settlement in the past ten days has been the two-hour reduction in the standard working week in engineering. This affects three million workers and should, unless the railwaymen's five per cent makes other unions more ambitious, set the pattern for the year's wage increases throughout industry. The shipbuilders have offered their workers a similar reduction in hours, though shortage of orders for ships may mean that employees really do stop work two hours earlier rather than work the same hours at higher rates of overtime. Meanwhile claims by the busmen, the miners and several other major

groups are moving steadily towards the bargaining table. The danger now is not so much that the engineers' concession will spread widely, but that the railwaymen's increase will be expected on top of it as well.

DOCTORS' EARNINGS

From Spens to Pilkington

THREE names stand out in the long, and at times bitter, controversy over what doctors should be paid in the national health service: Spens, Danckwerts and now Pilkington. In 1946 and 1948 the Spens committee laid down what it thought doctors should have earned in 1939 at different ages, but "left to others the problem of the necessary adjustment to present conditions," adding that "such adjustment should have direct regard, not only to estimates of the change in the value of money, but to the increases which have in fact taken place since 1939 in incomes in other professions." Since the British Medical Association disagreed with the Ministry of Health's opinion of what the adjustment should be for the early years of the health service, the dispute eventually went to Mr. Justice Danckwerts for arbitration. He decided that the Spens range of earnings for general practitioners in 1939 should have been increased by 85 per cent for 1948-49 and 1949-50 and by 100 per cent for 1950-51; these increases were roughly equal to the estimated rise in the cost of living since 1939.

The difficulty in implementing the other half of the Spens formula was that no one knew exactly what the average professional man could expect to earn outside the professions like teaching and the civil service that are full-time salaried services paid by the state. Thus, when in June, 1956, the medical profession presented a new pay claim to the Ministry of Health it based it on the decline in the value of money since 1951. It is the special feature of the report (Cmnd 939, 15s.) of the royal commission under Sir Harry Pilkington, which was appointed after the claim had been rejected, that it gives for the first time a full picture of professional earnings, outside the public sphere, for the year 1955-56.

The Pilkington Plan

IT is not clear, however, on what principle the Pilkington commission, having stated the comparisons, made its recommendations for doctors' future earnings—recommendations from which indeed Professor Jewkes has dissented with his own proposals for a 30 per cent increase for general practitioners. The increases the majority report proposes for general practitioners (after allowance has been made for the new method of calculating the central pool) amount to about 23 per cent on the Danckwerts award; a rather larger increase is recommended for consultants at their maximum and a much larger one for junior hospital staffs. (Dentists in general practice are thought to be earning more than was intended under their Spens report.) In 1956, the doctors asked for 24 per cent, though they said in evidence that they would have asked for 29 per cent in 1957.

But if it seems to have based its new scale of earnings on the rise in the cost of living at least as much as on comparative earnings, the royal commission has left no doubt about how it considers pay claims should be settled in the future. It refutes explicitly the BMA's view that the Government was bound by the Spens recommendations to make periodic increases in remuneration in exact compensation for falls in the value of money; the commission regards Spens as over and done with. Instead, it has fallen back on the device already adopted for the higher civil service: that an independent committee should make periodic recommendations having regard to rises in comparable groups of incomes, and that the Inland Revenue should make the necessary information available to this "review body." But if everybody is to be compared with one another, who is to be regarded as setting a normal standard? It is possible that this new principle of determining the pay for the public services will in the long run defeat its own ends. As Professor Jewkes says in his dissenting memorandum, "such expressions as 'fair comparison' or 'internal relativities' have little value as a guide to policy."

LATIN AMERICA

Unions on Paper

THE European example is proving contagious in Latin America, where two schemes of economic co-operation are coming to fruition simultaneously. The more important of the two aims at the creation of a free trade area, consisting—appropriately—of seven countries: Argentina, Brazil, Chile, Paraguay, Peru, Uruguay and Mexico. The other scheme, though its participants are economically of lighter weight, is even more ambitious; it aims at the economic integration—not merely in trade, but also in production—of El Salvador, Guatemala and Honduras.

The foreign ministers of the big seven have been meeting at Montevideo to work

Professional Pay—The Findings

SINCE the Royal Commission on the Civil Service suggested in 1955 that the pay of civil servants should be regulated by "fair comparison" with comparable outside employment, other public servants have climbed, directly or independently, on to the same band-wagon. Now it is the turn of the doctors and dentists.

But whereas the comparable figures used in former public pay settlements have been kept dark, the Pilkington report contains detailed evidence that reflects a good deal of original research. The commission carried out, with the aid of the Government Social Survey, inquiries into the 1955-56 incomes of eight groups of professional people considered broadly comparable with doctors and dentists. Names were drawn in most cases from the membership of professional bodies and personal questionnaires sent through the post; some 15,000 replies were analysed. In addition, university graduates in industry were covered by asking twenty of the largest firms in the country and one nationalised industry to co-operate; all but one did so and altogether the earnings of 7,466 graduates in industry were so determined. The non-medical professions were by no means comprehensively sampled but, after making various cross-checks, the commission had no reason to believe that the answers were not representative.

For information about the earnings of doctors and dentists, a more sophisticated sampling method was used; about 10,000 replies were analysed. Only doctors working whole-time or part-time in the health service were included, but all kinds of dentists; as with the other professions, total earnings, net of expenses, were recorded. In some professions, outside activities may contribute quite substantially to income and the figures include the earnings of those who also went in for other work, for instance, as members of Parliament, broadcasters or company directors. In the case of barristers, however, the figures do not include the earnings of those who have reached full-time judicial office and this obviously depresses the top earnings shown for this group.

The commission had to analyse both the spread of earnings within each profession as well as the variation between different professions; some of their findings for men are reproduced in Table I and in the chart. No single figure can satisfactorily reflect the remuneration in any occupation but probably the most helpful statistic is that of total career earnings (shown in the red column of the table). This roughly represents what a man in each profession who was 30 in 1955 might then have expected to earn if he worked full-time up to the age of 65.

Among the professions surveyed consultants do best over this span of thirty-five years, followed fairly closely by actuaries. In both these professions, apparently, total earnings are about twice those of architects or engineers who are at the bottom of this list. But in both architecture and engineering, there is a wide spread of earnings and a good chance of getting big money. Thus the final column of the table shows that, proportionately, as many engineers and architects were earning over £10,000 as were consultants. But all these three professions were well behind actuaries and barristers in the size of their top crust.

Halfway up the income ladder came the general practitioners and the dentists, both earning well in their early thirties compared with the non-medical professions, but comparatively few getting up into the top reaches. The average income of dentists falls off with age, but this is compensated by the very high incomes they can make at some time in their lives.

All these figures relate to 1955-56. In order to get some more up-to-date information, the commission obtained from thirteen of the same big firms who had responded to the initial inquiry the information summarised below.

TABLE II

PER CENT INCREASES IN SALARY SCALES: DECEMBER, 1955 to DECEMBER, 1959

	Range of increases among thirteen† firms	Average* increase
Graduates under age 30	10 –25	14
Graduates over 30 with salary at Dec., 1955 about:		
£1,500	7½–25	12
£2,000	7½–18	11½
£3,000	5 –23	10½
£4,000 or more	0 –25	8½

* Median increase; six firms gave smaller increases, and six firms larger increases. † Only twelve firms reported on salaries over £2,000.

What do all these findings boil down to in terms of the remuneration that doctors can expect to receive for health service work? Table III shows what general practitioners and the highest and lowest paid of full-time hospital staffs would get under the Pilkington commission's recommendations compared with their earnings after the Danckwerts award and with their current earnings, for they have had two interim increases since the appointment of the commission.

TABLE III

HEALTH SERVICE EARNINGS

	1955–56	Current	Recommended from 1960
	£	£	£
General practitioners (average on new basis)	1,975	2,165	2,425
House officers (salary scale)*	425–525	486–600	675–825
Consultants: full time (salary scale† starting at age 34)	2,100–3,100	2,293–3,385	2,550–3,900

* The commission recommends that peripheral hospitals should be empowered to pay an additional £100 a year to junior hospital staffs if they are unable to recruit them. † To which should be added distinction awards for certain consultants and fees for domiciliary visits.

In view of the lapse of time since the commission was appointed (three years ago) and asked to make recommendations about "current" levels of remuneration, the commission has felt bound to consider whether the interim increases have been sufficient to cover this intervening period. In the event it recommends that, although its new scales should not be applied retrospectively, a sum of £11 million should be distributed among general practitioners and £9 million for hospital doctors and dentists. How these sums are to be distributed should be negotiated between the health departments and the representatives of the professions. Professor Jewkes is opposed to these retrospective payments.

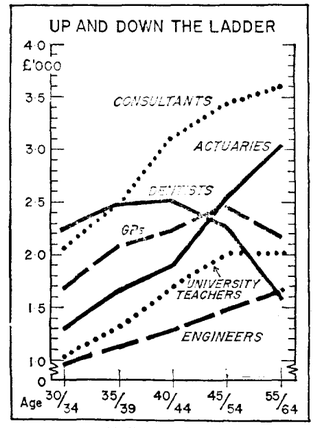

TABLE I

EXPECTATIONS OF PROFESSIONAL LIFE

	Average* earnings at age: 30–34	45–54	55–64	Total earnings age 30–65	THE SPREAD OF EARNINGS: At age 45–54, One-quarter earned less than income shown below	One-quarter earned more than income shown below	One-tenth earned more than income shown below	Number per thousand of all ages earning £6,000 or more	£10,000 or more

Graduates in industry	1,150	2,290	2,320	84	1,600	3,290	4,600	16	6

* Median or middle income, with as many people in the group earning more as earning less. † Taking into account chartered surveyors in central and local government service; these are not included elsewhere. n.a. = not available.

UP AND DOWN THE LADDER

Median earnings

out their free trade agreement. To begin with, the treaty provides for the removal in twelve years of customs duties between these seven. Hopes have been aired that the experiment might eventually lead on to the creation of a common market. Individually, apart from Argentina and Brazil, each of the seven is a small market. Together, they are far from negligible, even if purchasing power *per caput* is still low. The need to work towards a common market is indeed dictated by the probability that purchasing power would remain low if each of the seven "went it alone." Commodity earnings have been the basis of all Latin American economies; and although commodity prices have picked up from the nadir of 1958, they have settled at lower levels than those of earlier years. As populations continue to grow, it is logical that domestic production should increasingly replace imports; and a common market would accelerate the change. According to estimates by the United Nations economic commission for Latin America—which has been preaching free trade and common market doctrine for the past four years—Latin American consumption of steel is likely to reach 37.6 million tons in 1975. It stood at 6.6 million tons in 1955-56; the estimate reflects the pace of industrialisation.

The little three—El Salvador, Guatemala and Honduras—have less to offer each other than the big seven; but they plan to offer more of what they do have, by turning themselves into a single unit and industrialising as fast as they can attract capital. Much of the soil is virgin; but the building, by a British firm, of an important Pacific Ocean port at Acajutla—to give only one instance—shows that Central America also is beginning to stir.

ITALY

Post-mortem on a Journey

For western statesmen visiting Moscow, a public display of rudeness by Mr Khrushchev has become part of the established routine—provided, that is, they have given him a good, fair fight in private. (One wonders whether an exception will be made for Mr Eisenhower.) This, however, did not prevent President Gronchi's political enemies in Italy from making a great fuss when Mr Khrushchev, clearly angered by Signor Gronchi's firm rejection of Russian views on Germany and Berlin during their private talks, harangued him with scant courtesy at a reception at the Italian embassy in Moscow. The president's right-wing critics complained that the country's honour had been blotted and that Signor Gronchi had not answered the Russian back sufficiently firmly. It was hardly surprising that on his return to Rome the president went straight to the microphone and made a spirited defence of the usefulness of his visit. As *La Stampa* remarked, if Mr Macmillan did not find it necessary to cut short his visit when Mr Khrushchev was rude to him, why should President Gronchi?

In fact, Signor Gronchi's visit seems to have achieved all that was modestly expected of it. In particular, it has placed Italy on an equal footing with the other western powers whose leading statesmen either have had, or are going to have, pre-summit personal meetings with Mr Khrushchev. The MSI (neo-fascists) and the Monarchists, however, are pressing their disapproval, not only of the scene in the Italian embassy, but of all the arrangements for the visit, to the point of tabling highly critical questions in the Chamber. (According to one report their real object is to bring pressure on Signor Moro, the Christian Democrat party secretary, whose handling of the Sicilian political crisis they dislike.) At the same time, Signor Nenni, unabashed, apparently, by the rebuff with which Signor Moro recently answered his overtures, is assiduously wooing the Christian Democrats with proposals that they should throw over their right-wing allies and form a centre-left government. Signor Gronchi may find that his controversial Russian journey has helped to spark off the political crisis which for some time has seemed to be just below flash-point.

A Sicilian Eruption

The eventual fate of Signor Segni's government may well also be influenced by the latest turn of events in Palermo, where last Tuesday the rumbling political crisis erupted again. It was accompanied appropriately enough in the Sicilian context, by a first-class scandal of political corruption. On Monday, Signor Santalco, a member of the Christian Democrat opposition in Sicily, publicly alleged in the regional assembly that he had been offered 70 million lire (about £40,000) and a ministerial post if he would desert his party and join Signor Milazzo's hard-pressed government; he claimed that two other Christian Democrats had been similarly approached, and that Signor Corrao, a minister in the Sicilian government, had been closely involved. Next day, Signor Milazzo, the leader of a dissident group of Christian Democrats, whose government had been supported by the Communists, Socialists and the extreme Right, threw in his hand and resigned.

Scandal or no scandal, Signor Milazzo was in any case in serious trouble. Some two weeks ago three of his ministers resigned and went over to the opposition, thereby depriving him of his majority. A vote of no confidence has been cooking ever since, and a decision by the Socialists to withdraw their support made the outcome of the vote even more certain. Signor Milazzo last resigned in December. On that occasion he was back in power within ten days, his opponents having failed to agree on an alternative. This time, he may not fare so well. The Sicilian Communists, who have supported Signor Milazzo's government from outside, have been emerging more and more definitely as the power behind the throne. In Palermo, they have been blazing the parliamentary trail which Signor Togliatti is now so anxious to follow in Rome. Awareness of this helps to make the Christian Democrats more resolute this time in their efforts to put a new coalition in Signor Milazzo's place.

EUROPE

From Paris to Geneva

The Seven (the European Free Trade Association) have still to find a home for their headquarters. Their proposal last autumn that it should be Paris was not ill received by the French government, but since the meeting of the Dillon committee in January, when the Seven put up an unexpectedly brave show, the French have changed their mind. There was a practical reason why the Seven chose Paris; the smaller governments, short of men, would have been able to use their delegations to the Organisation for European Economic Co-operation for the new job as well. The French saw this, and chose to regard it as a hostile device for keeping alive the idea of a big free trade area for all OEEC.

Their refusal is a pity. What are the other possibilities? The ideal choice—even better than Paris—would be Brussels. That is the one place where a real co-operation between the two groups in Europe could evolve without fuss; the choice would be an olive-branch to the European community as such. But the Seven themselves do not seem prepared to take that plunge. Geneva is a more likely choice for them, and it does have some advantages. It is the home of the General Agreement on Tariffs and Trade as well as of the United Nations Economic Commission for Europe, to which the governments of eastern as well as western Europe belong.

The Soviet notes to all the governments of the Seven, demanding most-favoured-nation treatment when they cut their tariffs for each other, are a reminder that these countries cannot be entirely ignored. No doubt the gesture is a diplomatic ploy. The Six, in their time, have been dubbed a "militarist block." Now, for the Seven, Russia has dug up the most favoured nation clause. But though the ploy can be answered with a suitable volley of notes, a problem of substance does exist. Integration in western Europe, partial as it is, means a lavish exchange of trading concessions from which eastern Europe is left out; and to some of those countries, western European trade is important. In the postwar years the great economic obstacle to east-west trade has usually been the inadequate earnings of communist countries. That the small countries of eastern Europe should suffer from the wave of liberalisation in the west is hardly a desirable political development.

NATIONALISATION

The Co-ops Stake a Claim

THE "public ownership" debated by the Labour party is, both by contestants and onlookers, generally seen as national or municipal. Its type is the public corporation or the local government enterprise. A surprisingly mild, almost apologetic, dissentient plea has now been entered by the Co-operative party, in a small (and typically ill-laid-out) discussion pamphlet* on the value of co-operative techniques in the process of socialisation. It is a revealing little document; for its author's efforts are overwhelmingly directed to demonstrating that co-operation is not tarred with the private-enterprise brush. Thus, Co-operative enterprise does not make profits, does not employ highly-paid directors, does not offer high rates on capital. It has no large investors—its shares are not bought or sold, nor do they fluctuate in value; so they cannot be the subject of (ugh!) take-over bids or the source of (ugh!) capital gains. It does not make (ugh!) bonus issues. Co-operation, in fact, is negatively pure, morally uncontaminated; and that ought to be enough for any good socialist.

The question of its positive merits—whether co-operative enterprises generally give, or as at present managed are ever likely to give, as satisfactory a service as their private competitors (let alone a better one) does not appear to be worth discussing at all; still less, of course, is any discussion invited of the possible connection between the frowsty stagnation of the co-operative movement and its lofty moral refusal to pay a market price for managerial ability.

This is all the more a pity because, as experience in other countries has shown co-operative methods can be applied over a much wider field than that of retail trade. Scandinavian co-operation has broken monopolies, led prices downward, pioneered design, and afforded to small private enterprise (notably, of course, farming) the economies of scale which it needed in order to survive and prosper. But it has done all this not by harping on its moral impeccability but by applying the imagination, organisational skill, and market sense which characterise private enterprise at its best—and in which the British co-operative movement is now so notoriously deficient. If the Co-operative party showed any sign of recognising the need for such qualities its voice would be better worth listening to—whether inside or outside the Labour movement.

*Co-operation and Social Ownership. By Harold Campbell. The Co-operative Party, 54 Victoria Street, London, SW1. 14 pages. 3d.

SOVIET UNION

The Travelling Presidium

THE fashion of world travel set by Mr Khrushchev has been taken up by the Soviet leaders as a body. Earlier this month the party presidium, the country's ruling organ, could hardly scrape together a quorum, so many of its members were away. Marshal Voroshilov, Mr Kozlov and Mrs Furtseva were journeying across India, in advance of Mr Khrushchev himself. Mr Mukhitdinov, the only Moslem in the leadership, headed a delegation to Indonesia. Mr Suslov was returning from the congress of the Italian Communist party. Mr Polansky, a candidate member of the presidium and prime minister of the Russian republic, had taken a Russian party to the United States. Mr Mikoyan, last but not least, was paying a return visit to Latin America.

Last Saturday, Mr Mikoyan signed a trade agreement with Sr Fidel Castro, the Cuban prime minister. The Soviet Union is to buy 5 million tons of Cuban sugar within the next five years. (The likely effect of this transaction on the world market in sugar is discussed on page 751.) Russia has also extended credits worth $100 million, to be repaid within twelve years, at a rate of interest of only 2½ per cent. This looks like becoming Russia's standard aid offer for small countries; the same amount on the same terms was offered to Ethiopia in November. Whether the Cuban government will want to buy as much as this from the Soviet Union is another matter; it has however, had difficulty in getting arms, and some of the credit could be used for, say, Mig jet fighters.

The frequent journeys of Soviet leaders are in striking contrast with their sedentary habits in Stalin's time. Then they seldom went beyond Soviet frontiers, and then, as a rule, only to party congresses, preferably within the communist block. Now, they travel to all continents, visiting "capitalist" and neutral countries as often as communist ones. The change is not only an expression of Mr Khrushchev's faith in diplomacy by personal contact. It is a sign of Russia's growing awareness of the outside world, and of the scope that the world offers for Soviet activity.

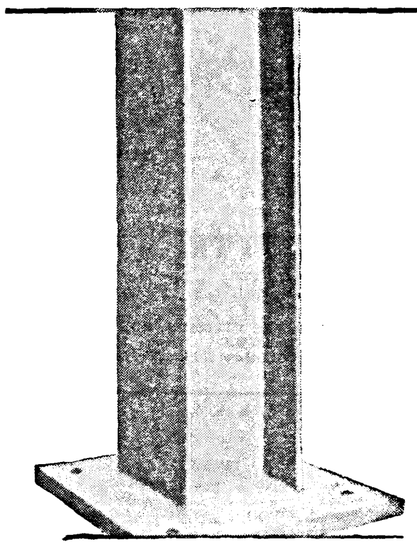
BRITISH HONDURAS

Burying the Skeleton

WITHOUT much ado, British Honduras has decided on its next constitutional steps. A delegation from the colony has agreed in London upon a new constitution that gives elected members a sizeable majority in the Legislative Assembly. The leader of the winning party will be first minister, and there will be four other ministers elected by the assembly. General elections, with universal suffrage, are to be held before the end of the year.

So far, so good. But the question that keeps recurring about British Honduras is its relations with Guatemala. Two parties, the People's United Party and the National Independence Party, this week signed a declaration denouncing Guatemala's "unfounded claims" to the colony. They stated that neither would countenance any change

The Economist



FEBRUARY 18, 1860

MR GLADSTONE'S BENEFITS

"There can be no doubt that, if we adopt this Budget, we must pay a high income tax for a considerable period. There will be much difference of opinion as to how high the tax will have to be; but a high tax there must be; and the real danger of this is not seen commonly in its true light. Direct taxation is so painful that, when it has continued at a high rate for some years, people will do anything to be rid of it; and, when our representatives legislate under a painful pressure of this kind, their judgment is not to be trusted. They may be driven to courses which we now little anticipate. In the first place, they might reduce the expenditure of the country in such a manner as ultimately to cause a great increase of expense. We do not profess to believe that there is no room for economy in our expenditure. We believe that the country might get all that it now obtains for very much less than it now pays. We showed, on a recent occasion, how we think that this in some measure arises, but we should not like to see a violent reduction in our public expenditure caused by the mere painfulness of taxation. We should be sure in our hurry to save in the wrong place, and to continue to spend in the wrong place. A few years afterwards there would be an outcry such as there has lately been as to the insufficiency of our national defences. We should have to incur again the great outlay we are now incurring, and we should be as uncertain as we are now how much good we are to expect from our vast expense. . . . We, therefore, think that we have to pay a most serious price for the benefits which Mr Gladstone offers to us. We think it is of the utmost importance that the country should plainly understand the price of the good which is now offered it. It will be a great strain on the moral fortitude of the country, and on that very account it should *from the first* be looked steadily and fully in the face. We know it will be said that much of the expense we have lately incurred is of a casual and temporary nature; but then we must consider that in the widely-ramified relations of a great country like this there will always be casualties. We may hope and wish for reductions of expenditure, but we should not *count* upon them. We should brace our minds to bear whatever income tax may be necessary to provide for Mr Gladstone's benefits. If we do this, they are safe; but if not, they are not safe.

LOWER COST OF STEELWORK · LESS STEEL · STRONGER

...no rivets?

There aren't so many rivets in to-day's steelwork, because Britain's steel industry is now rolling new beams and columns, so proportioned as to carry the load without needing riveted-on plates. Welding also reduces the amount of riveting, and results in a neat, compact construction.

CHEAPER

These advances mean that the finished structure is cheaper, because steel and labour are saved.

STRONGER A higher safe working stress is now recognized, again reducing the amount of steel needed for a given job.

FURTHER SAVINGS Fire-proof encasement, hitherto calculated as a burden on the steelwork, is now accepted as contributing to its strength: so that columns can be slimmer, saving steel and labour.

in the colony's political status without a referendum, nor, unless they specifically said so in their election manifesto, would they encourage integration with any of the neighbouring states—which covers the Caribbean Federation as well as Central America. The two parties hoped that this declaration would finally close the door on the incident two years ago when Mr George Price, the leader of the PUP, was found to be discussing the colony's future with the Guatemalan embassy in London. However, that door is not shut yet. Even before the conference ended, the Christian Democratic Party was alleging that some of the pro-Guatemala propaganda, received by all the delegates, came from a member of the PUP's own executive council.

The official members of the delegation are staying on for another week or so to continue the economic talks. Here again there is some disharmony. The starting point of the economic discussions was a Treasury report recommending that about 7,000 people a year should be brought into British Honduras. The delegates, while welcoming selected individuals, are openly uneasy about the notion of large-scale planned migration—particularly from the politically conscious West Indies. They look rather to the Far East: to Japan, Indonesia —and Hongkong. Certainly if it were practicable to shift some of the dead weight of Chinese refugees in Hongkong, a double cause would be served.

ARGENTINA

Snow on its Periscope

When a navy wants to add to its fighting strength, nothing does so much good as a foreign submarine lurking in territorial waters. But the Argentine navy's hunt in the Golfo Nuevo has aroused such world-wide interest that, unless the elusive quarry materialises (which now looks unlikely), the navy will risk losing not only face but some senior officers into the bargain. For three weeks a flotilla of destroyers, frigates and corvettes, assisted by bombers, fighters and helicopters, have fruitlessly hunted an unidentified submarine, or perhaps two, supposedly trapped in an indentation in Argentina's Atlantic coastline, 650 miles south of Buenos Aires, with a mouth ten miles wide.

The first submarine, detected on January 30th, was soon reported to have been damaged by depth charges; later on it was alleged that a second submarine was trying to draw Argentine fire while its crippled companion slipped through the net. Vice-Admiral Gaston Clement, complaining of his own outmoded equipment, obtained from the United States navy additional depth charges, electronic equipment, and 15 exponents of underwater warfare. A cache of stores on the lonely Patagonian coast has turned out to be nothing more than an old dump of sardine tins. The United States, Britain and Russia having denied that the submarine belongs to them, the Argentine government has appealed to other maritime powers to own up.

Argentina has seen unsolved submarine mysteries off its coast before; one in May, 1958, and one last October. Unkind tongues in Buenos Aires have been linking the present incident with the fact that naval estimates are just about due. Shortly after the first incident, Argentina bought the British aircraft carrier *Warrior*, now the *Independencia*. But it is not, after all, only in Argentina that ghost ships can come in useful. The publicity given three years ago to a Polish submarine in British waters may not have been wholly unwelcome to the Admiralty. This time the Argentinians may be thinking less about opinion at home than about the visit they are expecting from President Eisenhower on February 26th.

The Argentine armed services have escaped scot-free from President Frondizi's austerity programme. Competition between them, and between cliques within the services, has several times since General Perón's departure brought the country close to civil war. But Argentina has not fought a foreign battle for 80 years, and the navy's case for United States military aid against a communist threat would be far from simple to put.

OXFORD AND CAMBRIDGE

Standardising the Doorway

Nobody who read the reports of the two committees appointed by Oxford and Cambridge to study the entrance requirements for the two universities (published this week in one volume) will be under any misapprehensions about the difficulties of achieving what all headmasters are crying out for—a standard set of entrance qualifications for all universities. Though these two committees have studied each others' proposals, a working compromise for a completely common standard of matriculation between Oxford and Cambridge seems some way off.

The Oxford committee has most commendably come firmly down against compulsory Latin for those intending to do science, which, if accepted, is one big hurdle out of the way. Rightly, too, it expresses its concern about the inability to write English which so many otherwise qualified applicants for university entrance display, and want to do something about this. Its proposal, a new qualifying paper in English language, should in principle be welcomed, even though it will be a rod in pickle for scientists, who if they know their science angrily contend that it is a detail whether they can communicate it clearly in English (and plenty of science dons hold this "tough" view). The committee's desire to get a far higher standard in the modern languages that are required for qualification is also understandable. The Cambridge syndics, however, could not support the Oxford plan as it now stands, as they think it puts too much weight on linguistic ability, and clearly there will have to be some more talking. But the Cambridge committee hits the nail on the head when it points out that whatever the matriculation requirements, the *de facto* college requirements are now much higher, and it is these that the schools have to satisfy—and which impose the sixth-form curricula on the schools. Oxford and Cambridge have a long way to go before they can meet the criticism—strongly put in the Crowther report—that the battle to meet their standards, designed to exclude rather than qualify, is an evil influence on British education.

TECHNICAL EDUCATION

Staff College

The danger that industry will kill off its own supply of technicians by buying up the technical college teachers at a time of shortage has always been extremely great; and, of course, the best teachers are lost first. The Willis Jackson report pointed out that if industry absorbs the supply of potential teachers it will kill the goose which lays its most golden eggs. The remedy is co-operation between education and industry, and, of course, an increase in the total output of technologists. But to do this there must be more understanding between industry and technical education; and the Ministry of Education has now decided to run a series of three and four week courses to bring the top teachers from the colleges into touch with their opposite numbers in industry and commerce "to enlarge their personal qualities and ability."

It may be doubted if this, though no doubt good public relations, goes to the heart of the difficulty. What British technical education needs is not so much handshaking at the top as blood transfusions in the middle and lower reaches. But the supply must be large enough to make mobility possible; only if industrialists can get all the men they want will they (outside small numbers of enlightened firms) consider lending them to their understanding but understaffed colleagues in education. The main hope must be placed in the expansion of sixth forms, leading to larger university and technical college recruitment in the years ahead.

Storm Winds of Literature

Tolstoy or Dostoevsky: *An Essay in Contrast*

By George Steiner.
Faber. 369 pages. 30s.

"GREAT works of art pass through us like storm-winds, flinging open the doors of perception . . .", says Mr Steiner on the first page of his book; and to its last page the reader has the feeling that Tolstoy's and Dostoevsky's works have indeed passed like storm-winds through the author himself. This is Mr Steiner's first book of literary criticism; in the American edition (published by Alfred Knopf) he described it as "An Essay in the Old Criticism" in explicit opposition to the "New Criticism," which concentrates narrowly on the analysis of text and technique and ignores deeper layers of artistic sensibility, ideas, social background, and the ethos of the times. The "old criticism," as Mr Steiner defines it, "is philosophical in range and temper" and "thinks of literature as existing not in isolation but as central to the play of historical and political energies." He has his peculiar conception of the critic's role: "In distinction from both the reviewer and the literary historian, the critic should be concerned with masterpieces. His primary function is to distinguish not between the good and the bad, but between the good and the best." His job is "not to judge or to anatomise but to mediate" between the greatest of writers and their contemporaries or posterity.

Mr Steiner is well equipped for the task so ambitiously defined. His erudition is wide, and he feels at home in many languages and literatures; he has a gift for the bold association of ideas, analytical talent, an original insight into the many-sided interdependence of *Weltanschauung* and artistic expression, and a brilliantly imaginative language. Not surprisingly, Tolstoy and Dostoevsky appear to him as the peaks of modern artistic creation; and from their height he surveys the wide horizons of European and American literature. Tracing Tolstoy's spiritual genealogy back to Homer and Dostoevsky's to Shakespeare, he scrutinises these "two lines" of writing, the epic and the dramatic, and illuminates the mutual relationship of the two Russian giants.

Mr Steiner's essay, however, is in part a refutation of his own critical programme. Having declared that the critic's task is not to judge or to "anatomise" but to "mediate," he himself "mediates" most effectively between Tolstoy and Dostoevsky, and between both of them and their reader, precisely by "anatomising" their works and often also by judging them rather emphatically. His demonstration, for instance, of "the polarity of city and land" in Tolstoy's and Dostoevsky's outlook is little else than an exercise in the social anatomy of literature.

A somewhat dogmatic approach to artistic creation is often a good fault in a critic. But Mr Steiner has perhaps burdened himself with too many dogmas at the outset. His bias is in favour of monumental art and against the slighter, more impressionistic, more rationalistic, and more time-bound styles. The bias is commendable; but does it not go too far and is it not too haughty and too exclusive? Does it not impel the critic to dwell on unduly odious comparisons and to play down needlessly Balzac and Flaubert? Must Tolstoy really dwarf Chekhov? At times Mr Steiner appears to press novelists and poets too hard into one of the "two great lines," the Homeric and the Shakespearean. This shows itself in his treatment of Dostoevsky; although the force of the dramatic element in Dostoevsky's novels is obvious, the author of "The Idiot" does not fit quite so neatly into the Shakespearean line as Mr Steiner suggests he does.

Mr Steiner's master-dogma is his belief that literature is great only when it is inspired by a religious ideal; he explains the extraordinary impact of Tolstoy and Dostoevsky, the intensity of imagination and feeling in their works, and their superiority to the classics of the western novel by the fact that unlike the latter they sought to convey a religious message. Yet Mr Steiner himself says at one point that "God is strangely absent" from Tolstoy's vision of the world; and he is surely aware of a school of criticism that maintains, not without reason, that both Tolstoy and Dostoevsky were great as image-makers and social critics despite their religious mysticism, not because of it. If the intensity of their vision and social criticism was greater than anything found in the French novel of the nineteenth century, this may have been due to the fact that the Russian novel absorbed into itself the high moral tension characteristic of a pre-revolutionary society whereas the French reflected the relative stability of a post-revolutionary epoch.

It is to be hoped that Mr Steiner will not allow his thinking to become dogma-ridden, and that he will withstand the temptation to spin some dubious "critical myths" about literature such as he produces in his closing chapter. He should perhaps also try to discipline his style, which, for all its brilliance, is somewhat verbose and repetitive. These are the defects of Mr Steiner's virtues; there can be no doubt that this book announces the entry of a first rate, and potentially a great, critic.

The Years of Nonsense

Herbert Hoover and the Great Depression

By H. G. Warren.
Oxford University Press. 382 pages. 50s.

MR HOOVER'S reputation at the moment hangs in an uneasy balance. Longevity has brought him some of that respect which America, more even than Britain, accords to its elders. But loquacity, the restless itch to tell all and defend all, has led him to erect in the three volumes of the "Hoover Memoirs" a monument by which even his friends must be bored and embarrassed. Meanwhile the assessment of the four years of his Presidency has been left, hardly surprisingly, to New Deal historians, who use them to highlight the contrast with the Age of Roosevelt that succeeded them.

Mr Warren's book is welcome as the first serious attempt to describe the domestic side of the Hoover presidency, as the publishers claim, "in and for itself." In this he has had less than no assistance from Mr Hoover himself, whose reluctance to make available to scholars his personal papers is one of the continuing reasons for his poor historical press, and is in striking contrast to usual American practice. Despite this, and despite an obvious (but surely only human?) sympathy with the victims of the Hoover policies or lack of policy, Mr Warren has made a very successful attempt to do justice to a figure whose main fault was to have the wrong virtues for his moment in history.

Inevitably—and Mr Warren is aware of this—there is an artificiality about the four-year slice that constitutes the Hoover presidency. If he had had fuller data on the pre-presidential Hoover, Mr Warren would probably have been able to set his White House phase in better perspective. As it is, Mr Hoover is something of an enigma when he arrives and still something of an enigma when he leaves. Perhaps a further analysis of the 1928 campaign would have helped here; Mr Warren does not seem to have read his Lubell. Indeed it is on the social and economic side that Mr Warren shows most strength—fortunately for a historian of the Great Depression. There are good accounts of the power and tariff controversies, an excellent assessment of the record of Hoover's Reconstruction Finance Corporation, a graphic and balanced history of the bonus marchers—these are samples of Mr Warren at his best. He can wield a lively pen and has a sharp nose for the significant detail—for instance, his demonstration that the germ of Point Four may be found in *The Magazine of Wall Street* as early as 1930, or his reminder that in 1932 Roosevelt contended that "The Horseman of Destruction came from the false policy of lending money to backward and crippled countries."

For all his balance and judiciousness Mr Warren does not forget that he is an historian of an era of wonderful nonsense; in his generous array of tit-bits, the extracts from the congressional debates on prohibition repeal naturally take first place. In general Mr Warren does not essay profundities; his book sticks close to his file index cards and he is better in getting inside his topics than in organising them into any new or suggestive structure of interpretation. But within these self-appointed limits he has done a good and useful job.

In the Round?

Shakespeare's Wooden O

By Leslie Hotson.
Hart-Davis. 335 pages. 30s.

DR HOTSON'S argument is that the London theatres of Shakespeare's time were literally "in the round." The best seats, he says, were on the stage (with their backs to what we have long imagined to be the tiring-house) or in galleries immediately above; the tiring-house was underneath the stage, and the normal entrance was by means of four trap-doors; and, extending for the whole depth of the stage, there was on each side a medieval "mansion," which could be covered by curtains while entrances were being made through the trap-doors and then uncovered for "discoveries." This is indeed a revolutionary set of theses, and the author has adduced many passages from seventeenth-century writing which, he claims, provide definitive proof. The book is learned and fascinating; it is also, particularly in its highly-coloured opening chapter, singularly ill-written. Readers are likely either to swallow it whole or to prove totally stubborn. What will emerge over the years is an assessment of the degree of probability established for each separate thesis.

The argument is fairly persuasive that the spectators on-stage (whose existence we have long known of) were sitting at what we inevitably think of as the "back" of the stage. The argument is thin in the extreme that the tiring-house was under the stage and that the normal entrance was by trap-door. Dr Hotson has to admit that at least some entrances were made through a door from what he calls the "property dock"; when we read in Elizabethan stage-directions that a character goes in at one door and out at another, it is difficult to believe that trap-doors are being referred to; the De Witt drawing of the Swan Theatre marks the wall at the "back" of the stage as "mimorum aedes." The third argument, that the Elizabethan theatre had two long "mansions" extending down the sides of the stage, can be entertained only with reservation. It has long been recognised (especially in Professor G. F. Reynolds's "The Staging of Elizabethan Plays at the Red Bull," 1940) that "mansions" may have been employed on the Elizabethan stage, but here we are asked to believe that their curtains shut off any view of the stage, at least while an actor made his entrance, from a large section of the audience. Dr Hotson believes that the modern "Italianate" stage, with a back scenic-wall, is totally different from the stage Shakespeare used. But it does not look totally different in the De Witt sketch or in the frontispieces to *Roxana* (1632) and *Messalina* (1640). Indeed the use of a scenic wall seems to have been well established in popular drama in the seventeenth century. Side-mansions are likely enough, but they must surely have been sited only towards the "back" of the stage.

No future study of the Elizabethan stage will be able to neglect this book: in certain particulars its argument is powerful. Its placing of the tiring-house and its elongated mansions seem, however, to strain belief.

The Theory of Taxation

Readings in the Economics of Taxation

Edited by Richard A. Musgrave and Carl S. Shoup. American Economic Association.
Allen and Unwin. 590 pages. 36s.

THE latest of the American Economic Association's series of "Readings" follows the same standards of selection as its predecessors. The items included must, obviously, be of high quality; equally obviously, they must not overlap with previously published or forthcoming "readings" on kindred subjects—for instance, in this case, the "Readings in Fiscal Policy," published in 1956. But they must satisfy other criteria too. They must be, to a certain extent, basic texts; not necessarily the first, and very rarely the last, word on their topic, but constituting either a point of departure or reference, or a formulation underlying all subsequent treatment, or a unique or especially satisfying synthesis or comparative conspectus. Moreover, they must be comparatively inaccessible; the editors' aim is not to compile an anthology but to make available what students would otherwise find it hard to get their hands on. (Partly for this reason, nothing published later than 1952 has been included.)

The subject is treated, in most cases at a very high level of abstraction, under six main heads. Part I deals with equity and welfare; Part II with concepts and methodology, general analysis, taxes on income and profits, on products and sales, on land and property, and incentive effects. To indicate only a few of the plums made available, there is Chapman's heretical inquiry into "The Utility of Income and Progressive Taxation"—a paper of far wider significance than the merely fiscal; Professor Hotelling's famous essay of 1938—fundamental to everything that has since been written about "The Rule"—on "The General Welfare in Relation to Problems of Taxation and of Railway and Utility Rates"; Edwin Cannan's answers to the Royal Commission on Local Taxation of 1899; Edgeworth's formidable "Pure Theory of Taxation"; Einaudi's "Capitalisation and Amortisation of Taxes"; and Barone's "About Some Fundamental Theorems of the Mathematical Theory of Taxation."

Only English-language or previously-translated items are included; but the twenty-six-page classified bibliography of the periodical literature is supplemented by a five-page selection of books and articles in French, German, Italian, and the Scandinavian languages.

New York Surveyed

The Newcomers

By Oscar Handlin.
Harvard University Press. London: *Oxford University Press.* 184 pages. 32s.

AT the request of the Regional Plan Association the Graduate School in Public Administration at Harvard University is bringing out a nine volume study of the various social, economic and governmental forces and factors at work in the New York Metropolitan Region, an area covering 22 counties in parts of three states and including about 16 million people. This monumental and authoritative survey is bound to be of great interest to planners in other great built-up communities. Three of these volumes are now available in this country: the general introduction, another on the industries of New York (which was referred to in the article "Dressmaker to a Continent," in *The Economist* of January 16, 1960), and the third, Professor Handlin's, on the Negro and Puerto Rican invasion that is changing the face of the city and sharpening its social problems.

Professor Handlin is an expert on the immigrant, and he rightly treats the present wave as simply the most recent manifestation of the great movement of peoples—Irish, German, Italian, Jewish—to the new world and, in particular, to New York, the usual port of entry. But the Negroes and some of the Puerto Ricans suffer from one unique disability—their colour—and from certain other weaknesses, in leadership, for example, that make them particularly vulnerable to the dangers of metropolitan life. Moreover, they cannot be kept out; they are American citizens. In two decades their numbers are likely to rise from 2 million to over 3 million. New York, which has done a good deal to stamp out racial discrimination, will have to do a great deal more, particularly in the field of housing and education, if these newcomers are not to present the authorities with an almost unbearable problem as the years go on.

Italy's Prosperous Years

Cronache Economiche e Politiche di un Trentennio: *Vol. II, 1903-1909*

By Luigi Einaudi.
Giulio Einaudi Editore. 885 pages. 4,000 lire.

THE years covered in this volume of Sr. Einaudi's collected writings (the sixth in a series that promises to stretch to 20 or 25 volumes) were the most prosperous the united country had up to that point experienced. Politically they were dominated by Giovanni Giolitti, who was Prime Minis-

ter for all but a few months during these seven years. While the author acknowledges Giolitti's political ability he argues that the main credit for the progress made was due not to the action of any government but to external economic factors. With better government much more in fact could have been done to ease the burden of taxation and give the country a more efficient economic structure.

In these articles, written for the *Corriere della Sera,* he dissects the failings of the economic policy of the liberal regime: the absurdities of its treatment of the railways; the defective methods employed for the presentation of the state's annual budgets; the failure to remedy the glaring defects of its taxation system; and the chaotic attempts to arrive at new agreements with the country's shipping lines. He also points out that it was at this time that the government, by its creation of a virtual state monopoly for sulphur, began in a confused way to experiment with forms of direct economic intervention that were to be intensified, and erected into a dogma, under the Fascists.

Students of the period will regret that the author has not pursued some of these points further in his introduction, and also that these articles are republished in chronological order rather than grouped by subjects. They will be grateful, however, for having in this volume an invaluable and penetrating commentary on the economic history of Italy in the age of Giolitti.

Establishmentarianism

Church and Parliament

By Olive J. Brose.
Stanford University Press. London: *Oxford University Press.* 249 pages. 27s. 6d.

THE present relationship between Church and State in England dates from the prolonged struggle between Church and Parliament in the early decades of the nineteenth century, skilfully analysed by Dr Brose in this scholarly work. The outcome was surprising: the survival of the unfittest, the paradoxical continuance of a national church in a pluralist and largely indifferent nation.

The repeal of the Test and Corporation Acts in 1828, and Roman Catholic emancipation in 1829, marked the end of the union of church and state which, despite the Toleration Act of 1688, had been maintained throughout the eighteenth century. The Irish crisis and the first Reform Act rendered the problem acute, and the Tractarians rallied to the defence of the church, but their exalted views of the nature of the church gained no allegiance outside a small circle of clergy and an even smaller number of laity, and their intransigence inevitably led them to Rome. The decisive battle for the church, in Dr Brose's view, was fought between the radicals and utilitarians, who wished to disestablish and if possible demolish it altogether, and those within the church, utilitarian in method if not in doctrine, who in Archbishop Whately's words wished to "give it efficiency, to make it both appear and to be a useful institution."

Bishop Blomfield led the ecclesiastical Benthamites, and in Peel, as Dr Brose emphasises, he found an ideal lay co-operator. Battle was joined over the future of church property, which the radicals wished to confiscate and employ for the education of the country. On this issue Blomfield and Peel stood firm, but with an unerring instinct of knowing where to yield, which they displayed throughout the crisis, they agreed to a redistribution of property within the church. The Irish Temporalities Act of 1833 was the pilot model for the Ecclesiastical Commission, which was made permanent in 1836. As a result, what had been a system of patronage and private property was converted, in the Hammonds' words, into "a responsible semi-public corporation."

Theoretically, the Establishment is incompatible with spiritual independence and is an anachronism in a non-religious nation. Acquiescence is, however, almost universal, even if enthusiastic support is lacking, and the independence of the church has been assured by the revival of the whole self-governing apparatus represented by Convocation. The position maddens the logician, but the English, as has been noted, are not a logical nation.

LETTERS

The Debate on Growth

SIR—How does it help the practical developer faced with practical problems in one of the underdeveloped countries, to be told that England in the early 19th century and India at the present day fit the definition of a country in the "take-off" stage? Supposing an Englishman of those days met an Indian of these days and discussed their economic problems. The one takes off from London in a stage-coach, the other takes off in a Boeing 707 from New Delhi, and they reach Brighton—roughly speaking—at the same time. What common language of economic development can they talk, when they take off their coats and get down to it?

The dangerous weakness in Rostow's theory is that in order to put England one hundred and fifty years ago and India of today into the same category of "take-off," he has to rely on points of *similarity* between them. But the whole point about the practical problems of economic development today lies in the *differences,* not in the similarities.

In the last couple of years, western technical aid has done immense harm in the underdeveloped countries through building on the superficial points of similarities between their economies and ours, and by neglecting to poke through the surface and understand the differences which really matter. If Rostow's articles are a fair summary of his book—as I gather they are—they seem to me to represent a dangerous retreat from the hard facts of life.—Yours faithfully,

MICHAEL IONIDES
21, *Suffolk Street, SW1*

*

SIR—What, Soviet economic growth again? It is not painful, Sir, to me to read what I am always careful to state in lectures and in print: Tsarist industrial growth was at about 8 per cent per annum before the first war. Why should it be? Soviet industrial growth has in no peacetime year since 1928 been below that figure, and in several three times as high. Who then has put an empirical wildcat among whose pigeons? How dare you tell me I am the theoretician and Rostow the empiricist, when I quote the figures and he does not? Or I the pigeon and he the cat, when I have already digested him?

But seriously, you and all who believe in freedom must at length begin to look at the facts. The "superiority of communist growth" is of course not "self-evident": it emerges from hard-headed and sceptical research. It is not to be countered by the isolated example of the second smallest communist country (Mongolia), even if the example were right. But it is not in fact right. The final seizure of power in Mongolia must in fairness be dated 1928, not 1920, and industrial progress *did* immediately accelerate from that date, for what it is worth. May I ask you a personal question? Did you consult a single source on Mongolia before dredging it up, or was it merely empiricism à la Rostow?

It is of course most important to kill the myth that communist economic growth is only equal to our own; and that is my major objection to your very irresponsible article. May I, however, briefly touch on two other points?

Surely "Laos, Guinea and Iraq" (how you do love the smallest countries) are not much counterweight to Indonesia alone, let alone India and Burma. When one says underdeveloped countries have recently come to "prefer freedom with slower growth" one is making a generalisation that you in your soberer moments would surely accept?

Finally, I can find nothing in his articles to refute the unanimous complaint that Professor Rostow does not deal with the socio-economic classes that cause economic growth. But I accept, of course, that his exposition was truncated by the article form, and note that the book will indeed deal with this point at length: an assurance that the author gave, Sir, in reply to criticism of the original text. He might now be saying: *non tali auxilio.*—Your faithfully,

New College, P. J. D. WILES
Oxford

*

SIR—I deeply appreciate your review of my review (and others) of Rostow and would like to add a few comments.

While Mr Wiles and I disagree on the relative merits of Russian growth (it seems to me he is comparing different sectors of the growth curves), I am afraid I agree with him concerning Rostow that "there is no analysis of the *exact* kind of obstacle that traditional society opposes to growth." (I have shifted his italics.) It is true as said in my *Fortune* article that Rostow introduced various modifications and disclaimers. But these, I submit, are largely of a ritual character. Nor is the passage which you quote adequate to fill the gap. Compare the eight requirements of economic growth listed in my *Key to Modern Economics.*

Your second point about "no strings" on economic aid I find to be very confusing. The answer given is apparently that Rostow *is* requiring strings. One is left in doubt as to which horse is being ridden. Of course I am of opinion that the economic, the political and the cultural are deeply intertwined, and I am very much pleased that you agree with my basic point.

Finally, I do not think that "we desire only that each nation be free to make its own choices." I do not, for example, interfere with a neighbour who seems to be spending his money in what I consider to be disastrously silly ways. "It's a free country." But then my neighbour will not have previously asked me to pay his bills.—Yours faithfully,

DAVID MCCORD WRIGHT
McGill University,
Montreal

Air Transport Agreements

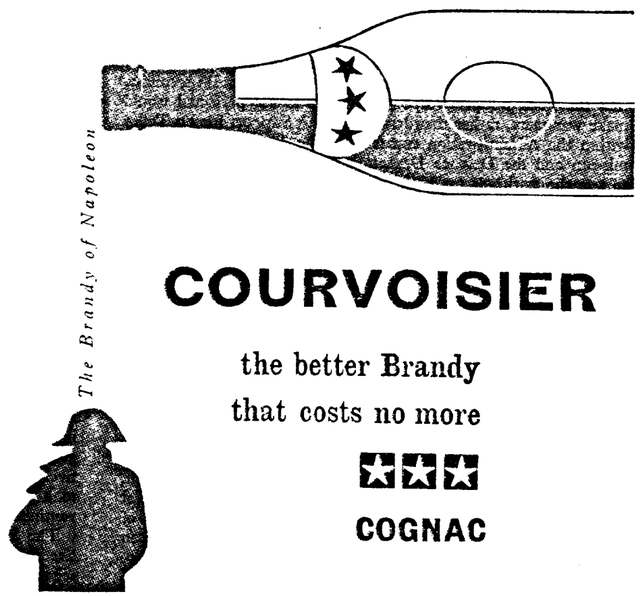
SIR—Your note on "The Spirit of Bermuda" underlines recent international civil aviation problems in keeping alive the basic thinking which has made the Bermuda Air Transport Agreement workable for so long, and in circumstances so different from those of air transport in 1946.

The underlying principle of the Bermuda agreement was that there should be "fair and equal opportunity" for the air carriers of the nations concerned to provide "capacity adequate for the traffic demands." Further, the specific idea was that there should be *no* pre-determined restriction on frequency or capacity of service; there should be *no* "roped-off seats" denied to an intending passenger because of artificial restrictions on capacity, and that the law of supply and demand should be permitted to find its economic level for the widest good.

Under the Bermuda agreement, airlines were thus made free to match the capacity they offered to the traffic requirements—with some elbow room for promotional services. Only if one operator piled on so much capacity that he swamped the route, so that the average load factors of all operators fell below an economic and reasonable level, was the provision for *ex post facto* review to be invoked. If the case was proved then the offending operator would be made to cut back his excess capacity. So far as I know such a remedy has never been required to be invoked.

Surely this liberal view on how traffic should be developed in healthy, but regulated competition, with the advantage flowing to the efficient and attractive operator, is a precept worthy of continuation and one which will provide, in the long run, the best possible services to the travelling public.—Yours faithfully,

London, W1 PETER G. MASEFIELD



Cut Price Books

SIR—The banning of price maintenance, it is claimed, would reduce British bookselling to the American standard. But the available evidence, like that mentioned by Mr Goldstein on "loss leaders," does not support the argument.

The alleged effects of price competition should be scrutinised. Canada had price maintenance and has abandoned it. The system flourishes in some American states, and is crumbling or forbidden in others. Examination of bookshops before and after the abandonment of price maintenance gives me the same impression as comparing regions with and without it: resale price maintenance has not made a significant contribution to the quantity or quality of North American book stores.

The alleged deficiencies should be closely examined. They are usually greatly exaggerated: I should say that Montreal is about as well served as Edinburgh and Seattle as Manchester, for *new* books. It is true that there are fewer interesting antiquarian and used book stores and departments. But this would be expected, considering the relatively small total stock of used and antiquarian books. The trade also suffers because printing costs are relatively high, so that readers turn to the many lending libraries and newspapers instead. Finally, it must be recognised that Americans read fewer books, magazines and (price-maintained) newspapers than Britons. Naturally, there are also fewer shops, a situation that maintaining prices has, in the past, been powerless to prevent.—Yours faithfully,

A. D. SCOTT
Cambridge

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Divided on Disarmament

WASHINGTON, DC

To the superficial observer, it might seem that the first important fruit of the seed Mr Khrushchev planted in America last September was a raspberry. In the last two weeks the United States has put forward a proposal to ban some—but not all—nuclear tests which was called unacceptable by the Russians even before it was advanced; President Eisenhower has hinted that he supports the faction within his Administration which wants to hand over nuclear weapons to America's allies; and the American official who will represent his country at next month's ten-nation disarmament talks in Geneva has had the embarrassing task of explaining to his four western colleagues that the United States has not yet decided what it wants to say when it gets there.

But it would be a mistake to conclude from this that the Administration has made up its mind that disarmament is a lost cause. On this question more than any other, "the Administration" is simply a polite fiction behind which rival groups can be seen tugging at the President's coat tails. The group that is most deeply sceptical about disarmament has just won a partial victory on nuclear testing. The wider issue, however, is still undecided: and even on the question of tests Mr Eisenhower has not yet committed himself unreservedly to the side of the sceptics.

Those who suspect that a suspension of atomic tests is not even desirable, let alone feasible, can easily be identified. Their intellectual leader is Dr Edward Teller, the physicist, whose attitude is based on two profound convictions: first, that the Russians can be trusted only as far as they can be seen (which, in the matter of testing, ends almost as soon as they go underground); secondly, that the small nuclear weapons he wants to see perfected would make war more, rather than less, humane. Support for Dr Teller within the Administration comes from the Atomic Energy Commission and the Defence Department. The Army, which wants to test the warheads for both its Zeus anti-missile missile and its small tactical weapons, is the most enthusiastic of the three services; but the Navy and the Air Force—thinking respectively of the Polaris and Minuteman missiles—would also be unhappy to be deprived of the chance of trying these out. The Army would almost certainly be able to test its small warheads under the new American proposals; these, while banning all explosions above ground and the bigger ones below it, would continue to permit underground tests yielding a seismographic reading of less than 4.75—the reading produced, on American calculations, by an explosion of nineteen kilo-tons. The other services would only be able to keep their bigger bangs under this level if they could be muffled in artificial caverns.

There is another body of opinion in the Administration, however, which is genuinely interested in negotiating a total ban on atomic tests. This group, which centres around the State Department, accepts the argument that a permanent ban should be limited at present to those tests for which there are reliable methods of detection. But it is likely to find two aspects of the latest American proposal increasingly difficult to live with. The first is the assumption that a seismographic reading of 4.75 equals an explosion of nineteen kilo-tons. The Russians continue to assert that an explosion of less than two kilo-tons would produce this reading: it is therefore at least theoretically possible that the Americans might accidentally violate their own limitation.

In the second place, it is not yet absolutely certain at what point it ceases to be possible to detect underground tests with any assurance. The Americans say that, even with the latest improvements in technique, the 180 control stations proposed in Geneva in 1958 could not be sure of distinguishing an explosion of less than ten kilo-tons from a natural earthquake. But the Russians maintain that there are errors in the calculations on which this opinion is based; and it is known that some of the Americans who took part in the technical talks at the end of last year feel that the Russian objections were not properly answered. Thus it can be argued that last week's American proposal was put forward before the chief point at issue had been fully discussed.

No one in Washington expects the Russians to abandon the current negotiations simply because they find the latest proposal unacceptable. There remains one point on which those who want a total ban may yet be able to detach Mr Eisenhower from the embrace of the sceptics. It is generally agreed that, even on the most optimistic assumptions, it will take some time to perfect a network of controls good enough to monitor small explosions of one kilo-ton or less. In the meantime, should the United States refrain from carrying out tests of this size and trust the Russians when they say they will do likewise?

It is known that the British have urged unsuccessfully that there should be a two-year moratorium on all underground tests. The Administration, while rejecting this, has apparently not yet decided whether or when to set off any more underground rumbles. The critical time will come in the late summer. It is then that the AEC and its friends think that tests must be resumed if the next generation of weapons is to be perfected on time; Mr Eisenhower will either yield to their urgings or take the side of those who say that a resumption might be dangerously unpopular abroad. The disapproval evoked by last Saturday's French explosion may provide the latter group with a powerful argument.

THE same division of opinion lies behind the silence that shrouds the broader problems of disarmament. The United States is the only nuclear power that by mid-week had not made public a general disarmament plan to lay before the ten-power talks which open in Geneva next month. It is in the extraordinary position of having invited its allies to Washington and then having kept them talking about peripheral matters such as the chairmanship and the tactics the Russians are likely to follow. The proposals which Mr Charles Coolidge's study group made to the President at the beginning of the year have been thrust under the cushion as hastily as an improper novel. It seems that Mr Coolidge drew most of his assistants from among the sceptics who think that general disarmament would be not only impracticable but positively dangerous. He appears therefore to have confined his report to a few suggestions for limiting conventional forces and preventing surprise attacks.

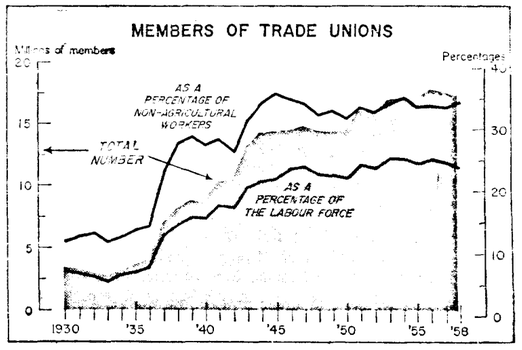
The State Department is trying to insist that the United States, like Britain and Russia, must produce at least the outline of a scheme of comprehensive disarmament. But any serious approach to nuclear disarmament meets the opposition of the AEC, which clings to its old belief that America's security depends on the preservation of its atomic armoury: and any proposal to cut still further the country's already skimpy conventional forces induces instant apoplexy in the Defence Department.

Nevertheless, there are a few bare bones which these contending forces may yet be persuaded to clothe with flesh. It seems to be generally agreed that it has become impossible to separate nuclear from conventional disarmament, now that so many weapons can carry either kind of warhead. Moreover, the State Department seems to have extricated itself from the dialectical corner in which it got trapped three years ago, when it argued that disarmament was impossible until the political problems dividing East and West had been solved. It has now returned to the classic western position that a treaty can be signed when—but only when—a satisfactory system of controls can be agreed upon. The problem is to make the soldiers and atomic warriors fall into line on this position; and then to devise the hideously complex controls that would be necessary.

It would be pointless to pretend that there is much optimism in Washington. But there is one proposition on which even the sourest sceptics agree with those, such as the British, who are working most enthusiastically for an agreement. This is that little progress is likely to be made until the two halves of the world feel more confidence in each other. The difference is that the British, supported by people in the State Department and on the President's staff, would be willing to trust the Russians—at least temporarily—to honour an agreed suspension of tests in the hope that the experience of a little control might tempt them to accept more later. To the sceptics such trust would be dangerously misplaced; the only consequence which they can foresee is the near certainty of Russian cheating. The two positions are far apart. At the moment Mr Eisenhower clearly stands closer to the sceptics. But so long as the talks at Geneva hold out any hope of progress the State Department is unlikely to advise him to slam the door completely by ordering underground tests to start again. Between now and the summer Mr Macmillan still has time to put his persuasive arts to work on the President.

Surplus Politics

PRESIDENT EISENHOWER'S latest—and probably last—message on agriculture is a confession that he himself, like the American taxpayer, has been overwhelmed by the superabundance of the country's farms; it is also an attempt to pin the blame, for all the voters to see, on the Democrats who control Congress. With a message which is for once conciliatory instead of crusading, he has in effect dumped the huge surpluses of farm commodities, and particularly that of wheat, the most crushing of all, into Congress's lap and told the legislators to find their own solution since they have refused to accept the solution which he has offered in the past.



One thing which the President does urge, and which many in Congress view sympathetically, is an extension of the conservation reserve programme, the soil bank, due to expire this year, and its gradual expansion to take out of cultivation up to 60 million acres of land, over twice as much as has been withdrawn under this scheme so far. To the extent that this land would have been used to grow wheat, this would help to reduce the surplus of a commodity which is responsible for a third of the $9 billion tied up in the government's price-supporting operations and which is costing the taxpayer $1.5 million a day. The President's own remedy for the wheat problem is to remove restrictions on the amount grown and to reduce the level at which prices are supported, but he promises to approve any "constructive" approach. In his view such an approach would have to relate price supports to effective controls on production in such a way as to prevent both excessive output and excessive prices and would have to avoid the direct subsidies which have long been favoured by certain Democrats. But if any legislation at all is approved this year it is likely to be on just these "unconstructive" lines; thus the President would be forced to veto the Bill and the farm surpluses would be loaded back on to the shoulders of his own Republican party.

What the Democrats want to do, of course, is to keep alive the present discontent among farmers, and their tendency to blame the Republicans for their falling incomes, until next November and then to make political hay out of it as was done in the presidential election of 1948 and in recent congressional elections. The moderate, co-operative tone of last week's farm message is said to have been the result of pressure on the President by Republican Senators from wheat-producing states—South Dakota, Kansas, Colorado, Idaho—who are afraid of losing their seats this year. The Vice President, Mr Nixon, also seems to have had something to do with it; the Administration's failure on the farms will be a deadweight dragging at his hopes of being the next President of the United States.

In Unions Disunity

WITH the Florida sun shining and a successful steel strike under their belts, the members of the executive council of the American Federation of Labour and Congress of Industrial Organisations, which has been meeting at Bal Harbour, could talk cheerfully of more equal, and therefore better, relations between management and labour—even though the militants want to use the money raised, but never spent, to help the steel workers as the basis of a big strike chest. But inside the federation the craft unions of the old AFL and the industry-wide ones of the CIO are still at odds. Mr Reuther of the automobile workers spoke the harshest words heard since the two groups decided to reunite five years ago when he accused his brothers in the building trades of "union-busting." They have been co-operating with their employers in a drive to take over the maintenance and repair work in plants which at present provides employment for many thousands of men who are members of industrial unions. Last autumn the AFL-CIO convention charged a committee with the task of working out a scheme of compulsory arbitration to settle all such disputes, but it is making little headway and the president, Mr Meany, is having to take a hand himself.

What ought to make both craft and industrial unions come to terms is the failure of the AFL-CIO to attract new members since it was created in 1955. During the recession of 1958 it actually lost about 400,000 in addition to the 1.6 million who are members

of trade unions which were expelled in that year on the ground that they were corrupt. The AFL-CIO now claims about 13.5 million of the 16.8 million workers who are organised. According to its own experts, its relative strength is actually falling off, since the number of workers who can be organised has increased by 2 million or so since 1955. Scandals, the slump, and inter-union quarrels did not help, but the biggest factor may well have been the shift which is under way from blue-collar to white-collar jobs; white-collar workers account for over half of the labour force, but for only 12 per cent of the membership of trade unions.

The Democrats in Congress who failed the trade unions last year could make amends in this pre-election session by increasing the minimum wage and extending the law to cover 7 million more people; more than half of these are white-collar workers in shops. So far the Administration has supported the idea of broadening the law, which now covers only 24 million workers, but has opposed any increase in the minimum of $1 an hour. The Secretary of Labour is trying to persuade Mr Eisenhower to accept a small increase. But even if he succeeds, the AFL-CIO is unlikely to be weaned from its Democratic allegiance in the coming election, though many individual trade unionists may vote Republican. The AFL-CIO stands officially with the liberal Democrats in condemning the "growth-stunting" policies of the Administration and it would retreat into neutrality only if the Democrats chose the most conservative candidate available—Senator Lyndon Johnson.

Rounding up Delegates

UNPOPULARITY with the trade unions is only one aspect of Senator Johnson's chief handicap, which is that he comes from the South. It is more than a century since a Southerner won the Democratic nomination for the Presidency. But Mr. Johnson is making a brave effort to overcome the suspicions of northern liberals and of the politically powerful Negro minorities in the North and West. As the majority leader in the Senate, he is trying, with the help of his fellow Texan and strong supporter in the House of Representatives, Mr Rayburn, to push through Congress a Bill guaranteeing the right of Negroes to vote.

Liberal Democrats were less impressed when Senator Johnson tried recently to pass himself off as a westerner at a meeting in Albuquerque. When he argued that Texas was really a western state Mr Ziffren, an influential Californian, implied that the majority leader was talking through the ten-gallon hat which he had assumed as part of his disguise. Senator Johnson will go to the Democratic convention in July with over 400 delegates in his pocket—more than half the 761 needed to win the nomination—but it looks as though they would all be southern or southwestern ones.

The two candidates who, unlike Senator Johnson and Senator Symington, are out fighting for delegates are the two liberals, Senator Humphrey of Minnesota and, nearer the centre, Senator Kennedy of Massachusetts. Senator Humphrey, who is full of zest although his chances are slim, made a great impression on the Democrats assembled at Albuquerque and at another important meeting at Fresno, California. But it looks as though the Kennedy bandwagon, powered by unlimited money, a smooth-running organisation and Mr Kennedy's own undoubted ability and charm, is drawing ahead. In New York last weekend about two-thirds of the county chairmen, who control that state's delegation to the Democratic convention, the largest of all, were said to be leaning in Senator Kennedy's direction after they had heard him speak.

They will not make up their minds, however, until they see how he fares in the primaries, the elections at which Democratic voters in some states can show which candidate they prefer. Senator Kennedy, whose only chance of carrying off the nomination lies in demonstrating his popular support, is making a great virtue of this necessity and taunting Senator Johnson and Senator Symington for standing aside. But of the nine primaries in which Senator Kennedy is entered, he is opposed, by Senator Humphrey, in only three so far: Wisconsin, West Virginia, and Oregon, where the intervention of Senator Morse may make the result meaningless. West Virginia, with its poverty and unemployment, is rather a special case and Senator Kennedy himself still seems prepared to stake everything on Wisconsin, even though the Humphrey forces there have succeeded in changing the method of counting votes so that it is more favourable to their man.

Fight for Life

When The Economist *went to press it was still not known whether Mr Chessman would succeed once more in escaping the death penalty. The background of the case is discussed below by a correspondent in San Francisco.*

TENSION grew throughout California this week as the date for execution of Mr Caryl Chessman, which has been postponed seven times already, drew near again. Because he has been able to fight off the death sentence for so long, by one legal stratagem after another, his case has dramatised the whole issue of capital punishment; only the execution of the Rosenbergs and the Sacco-Vanzetti trial, both of which raised burning political issues that are absent in this debate, have attracted more attention. Mr Chessman was tried and convicted, more than ten years ago, on seventeen counts of attempted rape, robbery, and kidnapping, a crime which carried the death penalty then. He had a record of numerous offences and at the time his conviction excited no particular interest. Since then, however, almost entirely through his own efforts, and without any organised outside support, Mr Chessman has managed to take his case to the Supreme Court of the United States fifteen times, always unsuccessfully. He has written two books while he has been in prison, one of them a best-seller, and he has become expert at arguing legal points.

By now Mr Chessman's original crimes and his trial have been almost lost to sight under the welter of constitutional and judicial issues which he has raised and which have kept him alive while so many of his fellows in the San Quentin death-house have been executed. As time went by, many Californians began to question the propriety of carrying out the death sentence on a man who had already spent many years in a condemned cell. Both the opponents and the advocates of capital punishment grew more and more heated. Mr Chessman himself contributed to the sense of tension and tragedy that cannot be separated from a state-imposed death sentence. His insistence on writing his own briefs and on acting frequently as his own counsel made him into an object of enormous public interest. His appearances in court became occasions for throngs of sightseers to press close to him with both awe and repugnance. An extremely gifted speaker, Mr Chessman attracted sympathy for his fight even though, in his complete obsession with himself, he was not a sympathetic personality.

Three Governors of California have had to wrestle with the

Chessman case : Mr Earl Warren, who is now Chief Justice of the United States, Mr Goodwin Knight and Governor Brown, the present incumbent, for whom the issue is the most difficult. Mr Brown has expressed publicly his opposition to capital punishment and his willingness to sign a Bill abolishing it if the State Legislature passes one. But it has not and the Governor feels that he must let death sentences stand except when he thinks that clemency is clearly indicated, as he has in a number of cases. The first time the Chessman case came before him he refused clemency and the carrying out of the sentence was averted only by another legal device. This week he refused it again.

In California the Governor's power to grant clemency is not unconditional. The State Constitution requires the approval of the State Supreme Court as well if clemency is to be allowed to criminals who have had two previous convictions for serious crimes. The court refused its consent on Wednesday by a vote of 4 to 3, and there remained only the possibility that it might change its mind at the eleventh hour or that the Governor might grant a temporary reprieve on his own authority, which is unlikely. The issue is complicated further by the prisoner's insistence that he is innocent and does not want clemency, which would mean imprisonment for life, but a full pardon so that he might go free. At the last moment, however, Mr Chessman did allow his lawyer to put forward a plea for clemency.

During recent weeks, Governor Brown has been deluged with advice and suggestions from all over the world. He has been receiving about a thousand letters a day, two-thirds of them in favour of leniency. Meanwhile Mr Chessman himself, adopting more and more consciously the posture of a martyr, began to issue statements at press conferences that he had come finally to the last door which would open for him.

Quota Questions

RATHER unhappily for the American textile industry its current drive for more protection against imports of both woollen and cotton fabrics coincides with a mounting prosperity that has pushed production, prices and profits higher than they have been for years in all branches of what was until recently a genuinely depressed industry. Admittedly certain companies in certain areas, particularly in New England, are still in a bad way, mainly for technological reasons, and admittedly imports have been going up proportionately as well as absolutely. But they still provide only a small part of total annual consumption in the United States and experience with quota restrictions on imports of wool fabrics hardly suggests that this method of protection is likely to prove effective, although it is the one advocated by most American manufacturers. Not only did imports of wool cloth rise to record heights in 1959 but there was also a rise in the percentage coming in after the so-called "remedial" duty had been applied.

This is the 45 per cent *ad valorem* rate, an increase of 20 per cent on the basic duty on woollen fabrics, which is applied afresh each year once imports have equalled 5 per cent of average domestic production in the last three years. This year, the "break point" of 13.5 million pounds is likely to be reached in the latter part of March. Imports, pouring in ever since the lower rate of duty was restored on January 1st, have been mainly of cheap Italian and Japanese fabrics which can be sold, as last year's figures show, for less than similar American products even after paying the higher duty. But on British luxury fabrics that duty is practically prohibitive ; moreover, these cloths are usually ordered specially for seasonal needs and cannot be rushed in at the beginning of the year. To eliminate this type of unfairness the Administration has agreed to renegotiate the tariff governing wool textiles later this year. In preparation for this the Tariff Commission has been holding hearings to decide at exactly what point the American industry would be in peril from imports ; the industry naturally maintains that this point arrived long ago.

Meanwhile the commission is also about to open hearings on whether a special fee should be charged on imports of cotton textiles to offset the subsidy of eight cents a pound, a part of the American programme for disposing of agricultural surpluses, which enables foreign manufacturers to buy raw American cotton more cheaply than can domestic manufacturers. Textile interests hope to turn this enquiry into a general review of imports of cotton textiles, whether as piece goods or made-up garments, with particular attention to the lower wages paid abroad. It is to strengthen its case against this kind of protectionist pressure that the Department of Commerce has been urging clothing makers in Hongkong themselves to impose adequate restrictions, similar to those agreed by Japanese manufacturers, on their exports of garments to the United States ; these have been going up in a sensational way recently.

Mergers on Trial

FROM A SPECIAL CORRESPONDENT

A SURPRISING aspect of the Eisenhower Administration, from the very beginning, has been its anti-trust policy. As the "party of big business" the Republicans were expected to deal gently with monopoly and anti-competitive practices. The disappointment of businessmen at the way things have turned out has been manifest. The Anti-trust Division of the Justice Department, the agency chiefly responsible for the enforcement of the anti-trust laws, has been tougher and more aggressive than its immediate predecessors under a Democratic Administration. Even the congressional Democrats most concerned with anti-trust matters have found little to criticise.

One reason for this unexpected development is that President Eisenhower's two Attorneys General, Mr Brownell and Mr Rogers, had no bias in favour of big business ; when they were appointed their views on monopoly were unformed and neutral. The political advantages of confounding the Democrats by vigorous anti-trust activity were obvious. Moreover, zealotry seeped upwards from the ranks of the staff, which was composed mainly of Democrats held over from past Administrations. Last, and probably most important, a young Republican who is a true believer in the anti-trust laws, Mr Bicks, has been influential in the Anti-trust Division and has been its acting chief since last April. The failure, so far, to give him the formal title to his job has been ascribed to his age (he is only 32), but the real reason is probably fear of protests from business interests.

Under Mr Bicks's prodding, the Anti-trust Division is devoting an increasing portion of its limited resources to resisting the economic concentration brought about by corporate mergers. Unlike the British Restrictive Practices Act of 1956, American anti-trust law is not limited to agreements between companies and their anti-competitive fruits—such practices as price-fixing and the division of markets. The Sherman Act of 1890 makes it illegal for a single firm to "monopolise" and Section 7 of the Clayton Act of 1914, which was stiffened in 1950, is aimed at the creation of monopolies ; it prohibits one company from acquiring the shares or assets of another when the effect of the merger "may be substantially to lessen competition or to tend to create a monopoly."

It is Section 7 which is now being emphasised by the Department of Justice. The signal for the campaign to begin was the department's great victory at the end of 1958 in a suit to block the merger of the Bethlehem and Youngstown steel companies. In 1959 ten lawsuits were brought under Section 7, more than in any other year since the passage of the Clayton Act. The depart-

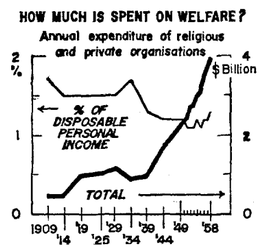
ment's investigations of mergers have trebled in the last three years.

The language of Section 7 is, of course, vague. The answers to the question of what sort of merger may be said to lessen competition substantially can only be inferred from the recent cases. A typical one involving a horizontal merger—one between manufacturers of the same product—was a suit against Anheuser-Busch Inc., a leading brewer whose product is distributed and advertised all over the country. Anheuser-Busch had purchased a brewery in Florida which made Regal beer, a brand sold only locally. It intended to stop production of Regal and to use the brewery to make its own beer, which had previously been shipped into Florida from outside the state. But that course, the Justice Department charged, would remove from the Florida beer market an important competitive factor—Regal. Last month, on the advice of its lawyers, Anheuser-Busch agreed, without having the case tried, to sell the Florida brewery, to refrain forever from buying a brewery in the state and from purchasing any brewery anywhere in the United States for the next five years except with court approval. The lesson of the case seems to be that, under Section 7, a large national firm which sells in a local market can expand in that market only by building its own new plants.

A vertical acquisition was the issue when the Brown Shoe Company, the fourth largest shoe manufacturer in the United States, took over a chain of retail shoe shops. Although Brown produced only 5 per cent of the country's shoes, and the chain sold less than 1 per cent of the total, a federal judge found that the merger would violate Section 7. He reasoned that the acquisition, although small, was part of a trend in the industry—on the part of Brown in particular—to grow by absorption. The Justice Department feels strongly that a history of past acquisitions justifies the stopping of the latest purchase, however tiny—that, as Mr Bicks puts it, "hundreds of small bites at the apple mean no apple just as effectively as one large bite."

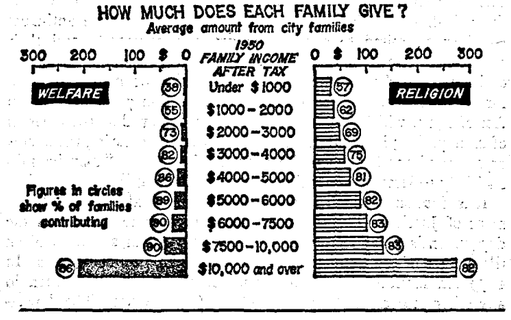
One case brought in 1959 illustrates several different economic justifications for action under Section 7. For some years the General Motors Corporation considered whether it should go into the manufacture of earth-moving machinery. In 1953 it decided, instead, to buy an existing firm in the field—one to which it had sold diesel engines. The Justice Department, appealing to the courts to make GM disgorge this subsidiary, saw three possible wrongs under Section 7. By acquiring a potential competitor instead of starting out afresh in the earth-moving business, GM had reduced potential horizontal competition in that field. By buying out a regular customer for its diesel engines, GM had lessened vertical competition. Finally, the department was prepared to argue that a company as powerful as GM should not be allowed to move into a new activity where its financial might and skill would endanger competition.

The reach of Section 7 was shown when Texaco Inc., a leading oil company—with producing, refining and marketing facilities—dropped its idea of acquiring the Superior Oil Company of California, a producer of crude petroleum only. The Justice Department feared that such absorption of independent domestic producers into large integrated firms would leave independent refiners with no domestic sources of crude oil—and with foreign sources strictly limited by restrictions on imports.

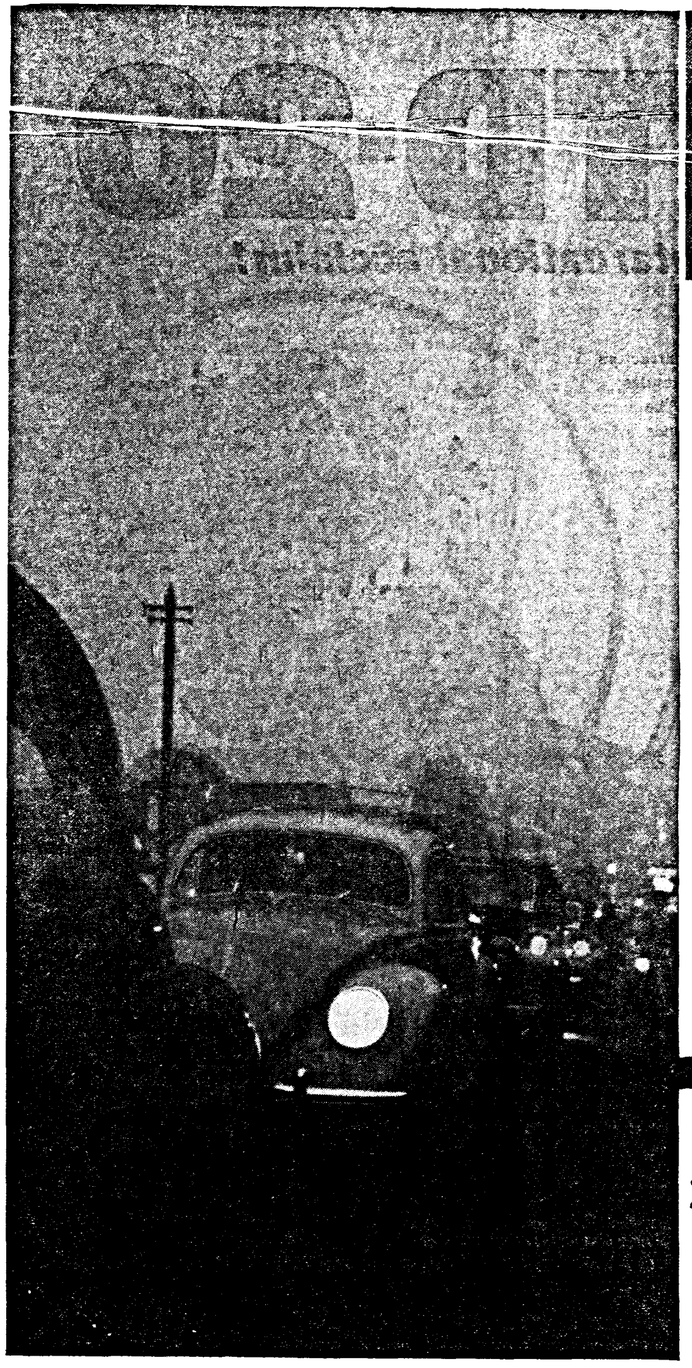


THERE are a number of reasons for the new emphasis on cases involving mergers. They present simpler economic issues to the courts than charges of monopoly and take much less time to try. Instead of having to consider every aspect of some huge industry, the judge can focus on one transaction, the merger, and its effects. And if a merger can be halted before it is complete, there is no need for the court to try to unscramble assets long combined. Merger cases are also more significant economically, particularly when they concern companies in growing industries, than run-of-the-mill anti-trust suits of the type which charge price-fixing by the makers of such vital products as bronze grave-markers, brassieres and frozen pizza. (All those are actual recent cases.) Price-fixing and other restrictive practices are not, however, being ignored. This week a grand jury indicted the five principal American manufacturers of heavy electrical equipment and eighteen of their officials on charges of collusive bidding on contracts with the government and private firms.

Mr Bicks believes that anti-trust laws can make their greatest contribution to a free and competitive economy by preventing further large-scale consolidations. One problem in applying this theory is that large sections of the American economy are subject to regulation by government agencies, which tend to protect their charges from the trust-busters. However, the Justice Department is not resigned to this. It has sued to upset a bank merger which the Federal Reserve Board approved, and to stop a combination of natural gas pipelines which the Federal Power Commission is prepared to countenance. Last month the Supreme Court decided that the first case, at least, should be tried on its merits—a victory for the department.



But even Mr Bicks concedes that the anti-merger policy is ineffective in those industries in which oligopoly is already a fact—especially automobiles and steel. Grand juries are combing through the records of General Motors and the big steel manufacturers, but no one is clear as yet how these long-standing targets of the trust-busters can be reached.



Giving to Charity

WHILE spending by religious and welfare organisations in the United States in 1958 was higher, as a percentage of disposable personal income, than it had been since 1939, it was still appreciably lower, on this basis, than in earlier years before government programmes and private employers took over responsibility for many needs which had previously been dealt with by charities.

In 1950 the Bureau of Labour Statistics found that in cities gifts to such organisations averaged $89 a family ($70 for religion, $19 for welfare) from the 75 per cent of families who contributed. As a percentage of income, families with under $1,000 a year gave most—3.3 per cent; then came those with over $10,000 a year, who gave 2.6 per cent. Families in smaller towns and those in the south tended to give more to churches and less to welfare than those in larger cities and in the north and west. Regionally the average also varied, from $73 a family in New England to $124 in Texas and its neighbouring states.

German Forebodings about Berlin

FROM OUR BONN CORRESPONDENT

FROM time to time the German problem seems to fray everybody's nerves with particular severity. The summit conference, brought into sight by Mr Khrushchev's Berlin move in November, 1958, has been far too long in the offing. Once again there is an epidemic of Berlin fidgets. Bluster, abuse, solicitation, protestation and recantation, by or about Germans, are the order of the day. However self-righteously they may present their cases, each of the principals is plagued for one reason or another by a nagging conscience—by contemplation of past blunders, lost opportunities, present hypocrisies, and resort to policies likely to lead sooner or later to grief.

Since November 27, 1958, the west German Bundeswehr has expanded by some 100,000 men to a total strength of 250,000. It is being armed with missiles that could carry nuclear fire far into the Soviet Union. Nor has the east German People's army of 110,000 (plus 120,000 reservists and considerable para-military organisations) been rusting. Herr Ulbricht, apparently speaking out of turn in the general excitement, has threatened to ask for rocket weapons for the east German forces unless west Germany renounces nuclear and rocket armaments. Silently an arm has reached out from somewhere to restrain him at least for the time being. He has had to content himself with a poor substitute, the setting up in east Berlin of a Defence Council, and with letting *Neues Deutschland* give its readers the shivers with ghoulish headlines about "atomic war between brothers." Doggedly, but by no means silently, Dr Adenauer and Mr Khrushchev have been digging in at their familiar forward positions. It was when they came to talk in Moscow the other day about Germany that Mr Khrushchev and President Gronchi lost their equanimity. In the House of Commons, Mr Selwyn Lloyd last week reproached Dr Adenauer's British critics with disloyalty to Nato; and Miss Jennie Lee, with disquieting myopia, declared that we are "now faced with the same arrogant *Herrenvolk* in charge of western Germany's destinies as in the days when Hitler was rising to power."

ALTHOUGH Mr Khrushchev is talking as excitably as everybody else, it is only he who gives an impression of knowing clearly what he is about. Unabashed by the west Berliners' rejection of his embraces (less than two per cent of them voted communist in the city elections on December 7, 1958), Mr Khrushchev continues to insist unrelentingly that his original proposal for Berlin shall be accepted. If it is not, he goes on plainly saying, the Soviet Union will sign a separate peace treaty with the German Democratic Republic and leave the western lifelines to Berlin in its hands. To give good measure, Mr Khrushchev has lately further defined his ideas about the working of an amputated, demilitarised free city in the heart of communist-run east Germany. Through his ambassador in Bonn and the Soviet embassy in east Berlin, Mr Khrushchev has newly put it about that, while a free city of west Berlin might continue "for the time being" to maintain economic links with west Germany, and to receive special financial support, it would have to sever its present political ties with Bonn. At the same time, the free city would be expected to develop economic relations with the eastern block. Whether its currency would be linked with the east or the west German mark is uncertain.

All in all, the majority of politically minded Germans have become persuaded that Mr Khrushchev will never agree at the summit to any compromise that would frustrate his long-term ambition to draw the whole of Berlin into the communist orbit. Their anxiety is great. To them the step seems short and inevitable from a free city—demilitarised and trading increasingly with the east—to incorporation perforce into the east German state. After an interval of diminishing western influence and intensifying communist subversion, the free city, they believe, could be taken in a day with a "spontaneous rising" arranged from east Berlin.

This dark prognostication overshadowed the Bundestag debate on foreign policy in Bonn on February 10th. It followed that the occasion was in the main an all-party demonstration on behalf of Berlin; the western allies were virtually implored to go to the brink of war—and, apparently, over the brink if necessary—to keep Berlin's present status inviolate. All the parties were agreed that any change in Berlin's status could only be for the worse, and that the city's future should be settled not by any separate interim solution but only within the framework of a general German settlement. On the eve of the debate, the Christian Democrats' parliamentary leader, Dr Krone, had caused a flutter in the diplomatic dovecots by claiming in the party's press service that Berlin was actually part of the Federal Republic; this is a doctrine that puts the legality of the now cherished four-power occupation in question. But in the debate Dr Adenauer took a rather less possessive line. Berlin, he pointed out, was under four-power occupation and must remain so until Germany was reunited. Berlin belonged not to Russia but to Germany (of which the Federal Republic claims to be the only legitimate trustee). "What," Dr Adenauer asked, "do we want for ourselves, for the Germans, also for the Germans in the (eastern) zone, and for the Germans in Berlin? We want no more than the right to determine our own fate—a right now conceded to all the African peoples." Simple and fair enough. There was warm applause. But the debate passed without any speaker dwelling on the awkward prospect of allied soldiers confronted—say at Helmstedt—by "unrecognised" east German frontier guards claiming the right to inspect.

Dr Adenauer stated that on his way to Tokyo next month he would call at Washington to press the west German point of view on President Eisenhower. Naturally, this point of view is also being pressed by the Germans in the pre-summit working group meetings that are now getting fully under way in Washington. All the same, the western allies in those talks are exploring all the possibilities of finding for Berlin some compromise arrangement that will both satisfy Mr Khrushchev and reassure the anxious west Germans and west Berliners. The going is hard.

No one is prepared to say with any clarity how such a thing is possible or what it would involve. By definition, it would involve some kind of weakening of the existing guarantees on which the safety of west Berlin rests; what new supports could be furnished in compensation? One possibility under study in Washington is, apparently, an auxiliary police force of armed west Berliners, to fill the gap that a reduction of the western occupying troops would leave. Another such subject is the securing of west Berlin's existing economic supports under the modified regime—since, unhappily, no possible arrangements can make the city economically inde-

pendent. The tough talk that comes from Bonn is a reflection of the fact that such subjects as these are being discussed, if only hypothetically, in Washington.

Brinkmanship in Cyprus

FROM OUR CORRESPONDENT IN NICOSIA

IF everything had gone according to plan, Cyprus would yesterday (February 19th) have been celebrating its independence. Instead, independence seems more of a mirage than ever, and despite a spate of extraordinarily optimistic forecasts by Archbishop Makarios last weekend, the Cypriots seem to be settling in for a prolonged period of transition, now popularly dubbed "the duration." Inevitably, there have been alarmist reports about renewed violence, and if matters drift the danger is all too obvious. On balance, however, the Cypriot reaction to the continued postponement has been remarkably passive and undemonstrative. This is an ominous sign of the lack of enthusiasm about the Zurich and London agreements. To many Greek Cypriots (this is not true of the Turks) the fact that the agreements are not being implemented today, or in three months' time, appears as a deliverance rather than a privation.

Paradoxically, the one man who wants to see the agreements safely enacted is Archbishop Makarios—the man who, on the Cypriot side, is holding matters up. The full story of the past few weeks is not yet clear. But already a picture of the archbishop's essay in brinkmanship is beginning to emerge. Twice he may be said to have gone over the brink, and each time he has climbed back to his hair-raising stance. His detractors cynically say that next time he goes over it will be for good; which, lamentably, may conceivably be true. At both the recent London conference and at the meeting with Mr Amery last week, the archbishop was plainly told that he must accept the British claim for 120 square miles—or else face the prospect of a breakdown of the settlement. Some thought this an ultimatum, but officialdom would not agree that such a thing should be called by such a name. However, like Felix, who kept on walking, the archbishop has just kept on talking—with the difference that at certain shrewdly calculated points he has got Dr Kutchuk to do the talking for him.

The danger now is that, as each side digs itself in on the question of the size of the bases, public opinion will become inflamed and arbitrary figures like 36 or 80 or 120 will become symbols of prestige. To intelligent opinion, in all the communities on the island, the actual figure ultimately selected is indifferent, but there are already disturbing signs that whatever solution, if any, is finally reached, there is bound to be an almighty row. At the moment, Archbishop Makarios could probably settle for a figure of 80 square miles, plus 40 square miles of special facilities, and ride the political storm; but every day he delays makes compromise more difficult—and allows the agitation of his opponents to gain momentum. The whole affair has degenerated into an oriental bargain and it may well be that in the end Mr Amery's Portobello Road tactics will win for his country both advantage and esteem. The sheikhs of the Persian Gulf, one is led to believe by military apologists, are watching the pettifogging controversy with sharp professional eyes, watchful lest Britain's benevolent sway in the Middle East should be further enfeebled by the abandonment of an area about one-sixth the size of the Isle of Man.

Archbishop Makarios's purely oriental approach to the deal is strongly reinforced by his desire to demonstrate conclusively to his more extreme followers, as well as to his opponents, that whatever "pusillanimous" concessions he may have made to the Turks over the past year (for which he has been repeatedly branded a traitor), when it comes to the old colonial enemy he is still a man of mettle. On the issue of the bases he has been almost compelled to make a tremendous show of resistance. Unfortunately, he appears to have overplayed his hand. His stubbornness also derives in part from the simple fact that he happens to believe that he is in the right and that what Britain is claiming is not legally in accordance with the London agreement—which is, indeed, regrettably vague and ambiguous in the relevant clauses.

However patient, "gentlemanly" and, indeed, generous Britain's conduct of the deal may have been, the unpleasant impression remains that its case is unimpressive. Most fair-minded people write off Archbishop Makarios's original offer of 36 square miles as too low and as a purely bargaining position. But so far no one here on the British side, either military or civil, has been able to explain why it is so impossible for Britain to do in 80 square miles of sovereignty plus 40 of special facilities (which Dr Kutchuk proposed) what it hopes to do in 120 miles of sovereignty. It might be cynically added that no one knows what Britain proposes to do at all. Recent arguments put out by military sources have too often been a jumble of muddle-headed irrelevancies based on all the pre-Suez shibboleths, which certainly bear upon the general issue of whether Cyprus is needed as a base, but which do not answer the key question of the hour, that is, whether "80 plus 40" might not be as effective as 120. There may well be sound reasons for rejecting the compromise proposal; if so, they need to be made clear.

Meanwhile the economic plight of Cyprus gets worse and the unemployment figures rise daily. Both Archbishop Makarios and Dr Kutchuk are shrewd enough to realise that the economic situation is only going to play into the hands of their left-wing opponents. While the Cypriots as a whole are behind the archbishop in his resistance to Britain's proposals on the bases, there is an undercurrent of feeling that the whole affair should be settled soon—simply so that there will be no more empty stomachs.

One hopeful thing, however, has emerged from this tangled affair. The Greeks and Turks—or, more precisely, their leaders—are working in closer co-operation than they have ever done in the past. Mr Amery's original off-hand rejection of Dr Kutchuk's mediation has done much to range the Turks solidly with the Greeks. The Turks' loyalty to Archbishop Makarios has been on the whole remarkable; but undoubtedly they want the whole wretched squabble ended so as to prevent the Zurich settlement from slipping through their fingers. Their attitude, which is perhaps the most reasonable of the three sides, is a factor that the archbishop needs to take into account.

France's Morning After

FROM OUR PARIS CORRESPONDENT

"HOURRA pour la France." The first commentaries on the French atomic explosion in the columns of the popular press were in keeping with the enthusiastic opening of General de Gaulle's message to the team supervising the explosion. Politicians, old and new style, added their word of praise, to underline that in this field there is continuity: the bomb exploded by the Fifth Republic was prepared by the Fourth. Frenchmen were told to rejoice over their country's accession to atomic greatness.

Sobering voices, however, could soon be heard in the chorus of national enthusiasm. The Communists were not the only ones to clamour that this first explosion should also be the last. The autonomous Socialist party (of which M. Mendès-France is now a member) was not alone in proclaiming that France should choose a different road to greatness. Picking up the concluding paragraph of the official statement—that France will now be in a stronger

(*Continued on page 727*)

Gallocentricity and Nationalism

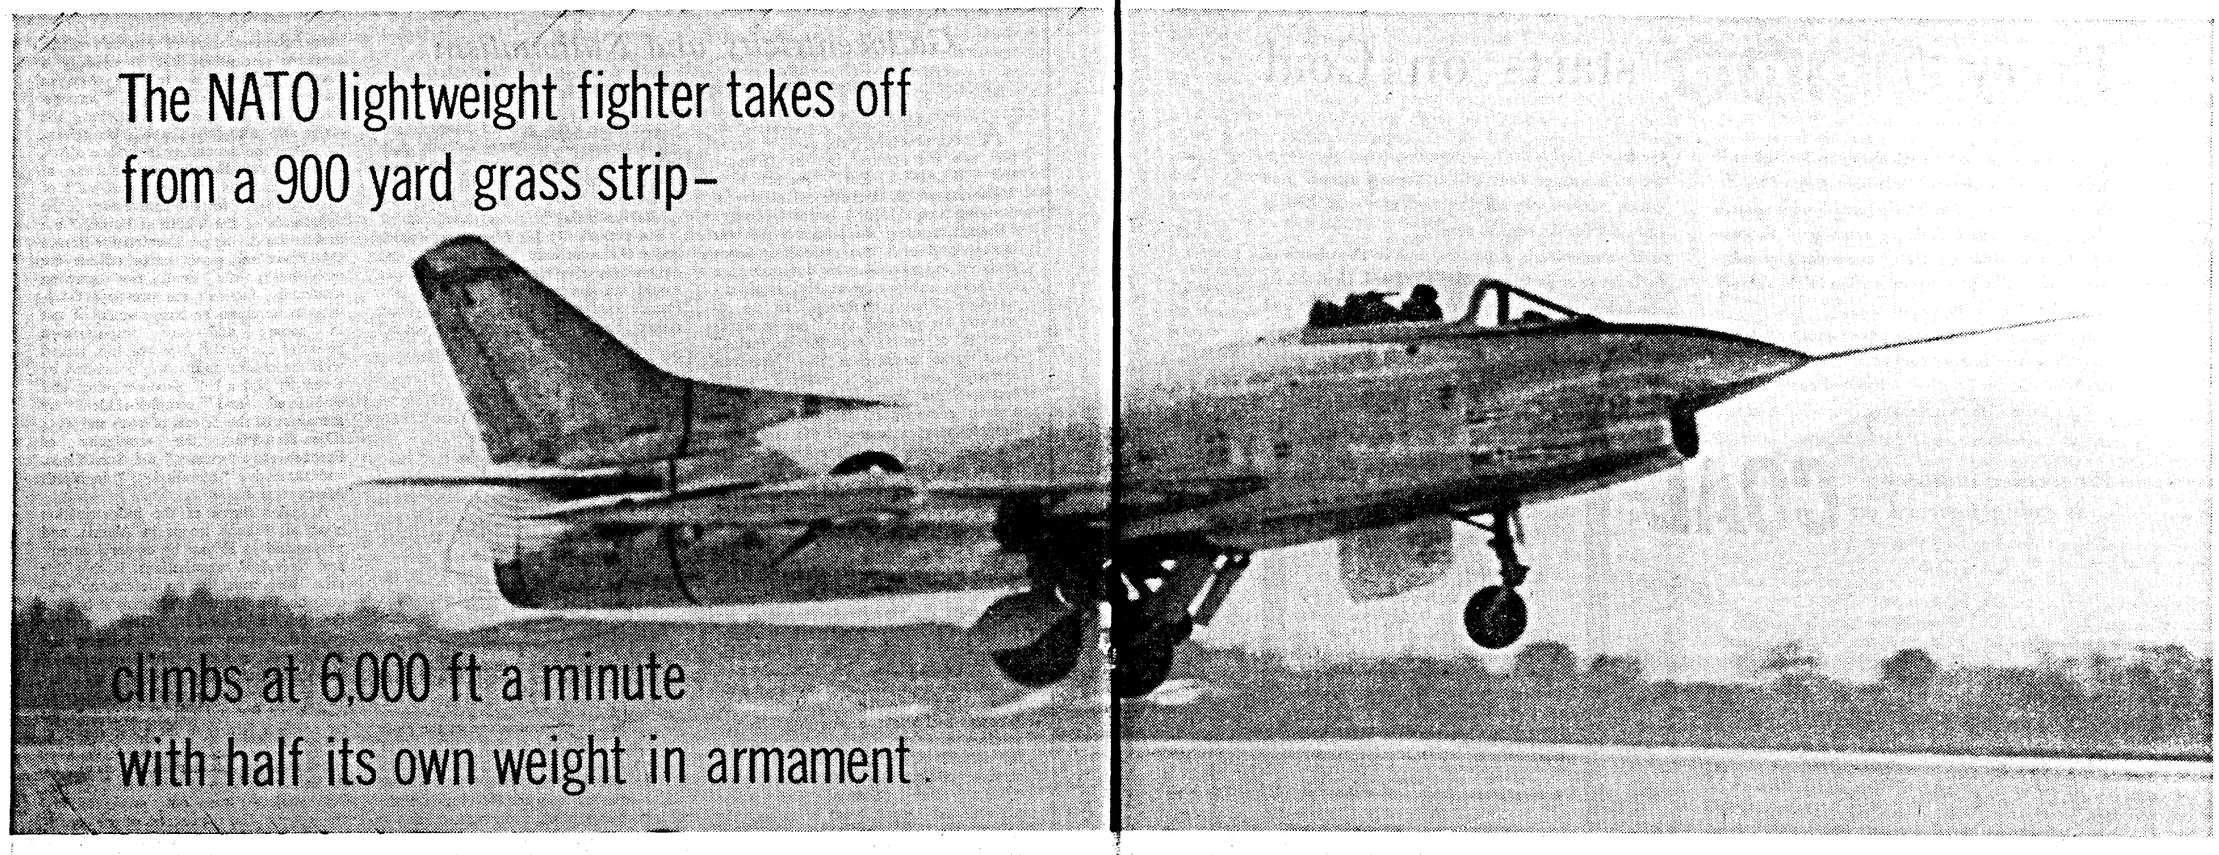
FROM A CORRESPONDENT IN SOUTH-WEST FRANCE

"AS everyone knows," *La Dépêche du Midi* observed, "the game of rugby first saw the light of day in Toulouse and Villeneuve-sur-Lot." An article in *L'Express* on an international display of camping equipment began briskly: "French camping equipment is the best in the world. . . ." A university professor prefaced and concluded his lantern-lecture on Indian architecture with slides of outstanding French buildings so as to reassure his audience that "our architecture is, of course, superior to theirs." Paris radio proclaimed that American compact cars were produced solely because "the Americans" were afraid of French competition. Headlines in the French press announced that the outstanding sensation of the last London motor show was the Citroën "*deux chevaux*."

Distinguished Frenchmen, from the President of the Republic down, have congratulated the French aircraft industry on the silence and "crushing superiority" of the Caravelle's (Rolls-Royce) engines. A majority of Frenchmen believe that the Salk polio vaccine was developed in the *Institut Pasteur*. In a small southern town recently a gathering of local notables quivered with pride when informed by an official that their post office would shortly possess "yet another achievement of French technical genius"—a stamp-vending machine. What other country, the official asked, could boast a postal service comparable with the PTT? "What other country," the prime minister, M. Debré, cried a few months ago, "permits opposition newspapers to appear as we do?"

This amiable Gallocentricity bumbles through French public life and journalism like some myopic Mr Magoo, rarely unpredictable yet always surprising. There breathes, assuredly, no British or American resident with soul so dead as to spoil the fun by murmuring, say, that stamp-machines and even pay-telephones (another daring innovation promised the provinces) were in use in his home town when he was an infant. He would not be believed, anyway. He will applaud, even more delightedly than his neighbours, the rural dignitary who, addressing an audience composed mainly of semi-literate *bouilleurs de cru*, congratulates himself and them, in an impassioned tirade, on belonging to the world's most intelligent, most enlightened nation. He will savour the astonishment of the retired diplomat that the backward British have not yet got round to arming their policemen or building "a safe double-track *métro*, as in Paris." Some foreign businessmen in France have even enlisted Magoo's aid. An American oil company recently published an advertisement showing a motorist, enraptured by its products, exclaiming: "*Ah! la science française—quelle merveille!*"

But periodically Mr Magoo runs amok and Gallocentricity degenerates into nationalism of a rabidity Colonel Nasser would not disown. (The idiom of the French nationalist press is Egyptian rather than contemporary European.)



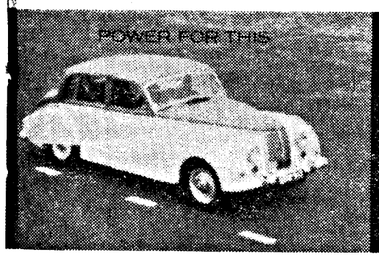
Mr Magoo, by courtesy of Columbia Pictures Corp.

Nationalism is, of course, one of the most venerable skeletons in the cupboard of French republicanism. The beneficiaries of the profoundly conservative society which emerged from the Revolution made of it both a *mystique* and a mystification—a nostrum to promote national unity and an opiate to help the lower orders forget their claim to a share in the fruits of the new regime. It has been exploited ever since to head off demands for reform and divert attention from scandals and governmental incompetence. (A fever-chart of governmental embarrassment in any crisis can be compiled by recording on a graph the number of times the words *France*, *français*, *Patrie*, and *Nation* occur in its leaders' declarations from day to day.) General de Gaulle's propagandists have kept the stops of nationalism pulled out in order to maintain the cohesion of his heterogeneous majority and win time in Algeria.

But, as Near-Eastern experience has shown, a regime whose mainspring is nationalism is apt to be unstable unless it limits press and political freedom: the moderate nationalist leader can too easily be outflanked by more extreme nationalists. French nationalism is all the more capricious for having to accommodate such diverse constituents as the Algerian lobby, contemptuous of France's representative institutions but in need of a French counterpoise to the Moslem masses; the outright fascists, "corporativists" and unrepentant Vichyites; the active and influential Catholic *intégristes*, for whom the nationality of Jeanne d'Arc, Bernadette of Lourdes and Thérèse of Lisieux, and the "*sursaut national*" of May 13, 1958, "fortieth anniversary of the appearance of the Virgin at Fatima," are proofs of a divine predilection for France (M. Pinay and many senior officers are *intégristes*); the small but growing monarchist faction: the pre-1958 Gaullists, monarchists by temperament if not in name; and—most important—a powerful current of *képi*-worship, tinged with the crudest militarism, nourished by a century and a half of conscription, and embittered and complex-ridden by memories of the defeats of 1940 and 1954 (Dien-Bien-Phu), the ambiguity of France's 1945 "victory," the Suez fiasco, and successive "humiliations" in North Africa.

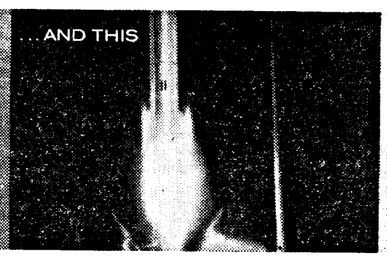
A major theme of the indoctrination given all French troops in Algeria, and propagated in France by ex-servicemen's and reservists' organisations, is that this time there must be no defeat, no sell-out, no ambiguity: the army's honour demands a clear-cut military and/or political victory that will impress the whole world as such. (The desperation of this desire stood out starkly in an order of the day issued to the French army in Algeria in the autumn of 1958: "You have won a victory of the most sweeping significance . . . ample proof of your versatility, courage and intelligence. . . . At last, in the eyes of the world . . ." etc. Its subject was not any military engagement, but the success of the constitutional referendum). First the Algerian rebels must ask for a ceasefire, or be crushed; then a referendum must confirm Algeria's attachment to France. Above all, the Anglo-Americans must be kept out.

Most of these nationalist tendencies interpenetrate one another. It was their fusion in May, 1958, that brought down the Fourth Republic. Their dissensions three weeks ago, and the personality of General de Gaulle, saved the Fifth. General de Gaulle's prestige should suffice to get France over the immediate rapids. Last Saturday's atomic explosion will help. But some substantial satisfaction in Algeria, a diplomatic *coup* or two and a major technological triumph on the H-bomb or sputnik level will still be necessary to soothe the complexes on which the plotters and demagogues thrive and restore to Gallocentricity its more genial characteristics. Until they are soothed the outlook for French democracy will remain obscure and the succession to General de Gaulle a hideous problem.



...AND BRISTOL SIDDELEY SUPPLY THE POWER

One of the largest manufacturers of motive power units in the world, Bristol Siddeley Engines Limited produce the Orpheus.



The Orpheus is the most advanced medium-thrust turbojet engine in service anywhere today and has been chosen for the NATO standard lightweight strike fighter—the Fiat G 91. Orpheus versions range from 4,050-lb thrust dry to 8,800-lb thrust with reheat and reach power/weight ratios of up to 6:1.

They are already in service in 6 different aircraft types, specified for 8 others and are flying or licensed for building in India, Finland, Jugoslavia, France, Japan, USA, Italy, Germany.

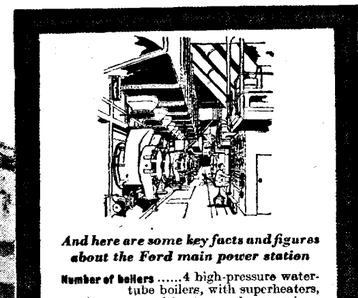
BRISTOL SIDDELEY ENGINES LIMITED

The Star Sapphire car is powered by a Bristol Siddeley 4-litre engine. Combining great power with exceptional quietness it seats five people in luxurious comfort, the Star Sapphire has a top speed of over 100 mph and an outstanding all-round performance.

The Bristol Siddeley Gamma rocket engine powers the Saunders-Roe Black Knight—Britain's highly successful space probe. Gamma sends Black Knight over 500 miles into space with unprecedented reliability, and all the launchings have gone according to plan.

The Bristol Siddeley Marine Proteus powers the "Brave" class Royal Navy patrol boats, built by Vosper Ltd. Three Proteus deliver a total of 10,500 hp—give these 96-ft boats a speed of over 50 knots. The marine Proteus is quick-starting, flexible and reliable.

Every FORD starts on Coal



FIVE STAR MOTORING—gleaming, colourful, swift and safe—begins at Dagenham, a giant factory that covers over 550 acres of a once desolate marsh. The judgment and business acumen of the men who have made Ford one of our great key industries is reflected in every operation in the factory, every decision in the boardroom.

In the impressive steam power plant that supplies the entire factory coal is the chosen fuel. Coal has been chosen because pulverised coal—fired in powder form—*gives accurately controlled heat with the lowest fuel bills.* Coal has the invaluable long-term advantage that it is a home-produced fuel which can supply all the fuel needs of British industry for decades to come.

If your voice is a deciding one in the choice of fuels for *your* factory, remember Ford. Beneath its smokeless chimneys is a wealth of knowledge and applied experience that is an invaluable example of hard thinking and wise decisions. Ford say *coal.* That's five-star wisdom.

***Progressive industry is going forward on* COAL**

ISSUED BY THE NATIONAL COAL BOARD

And here are some key facts and figures about the Ford main power station

Number of boilers .....4 high-pressure water-tube boilers, with superheaters, airheaters and economisers
Steam pressure.....1250 lbs. per sq. inch
Steam temperature .....940°F
Feed temperature.....380°F
Continuous max. rating 1,000,000 lbs. of steam per hr. (largest unit 400,000 lbs. per hr.)
Method of firing.....Pulverised fuel
Fuel.....Coal

position to press for nuclear disarmament—M. Edgar Faure argued that this was the only point to be made in favour of a test which in no way increases France's military power or political prestige.

M. Raymond Aron, in *Le Figaro,* acknowledged the technical achievement, but checked the enthusiasts with timely reminders of the number of other countries capable of reaching atomic status, and the period of years that must elapse between the first explosion and the creation of even a minimum deterrent. Questioning the government's intentions, he concluded with a warning:

> The explosion of an A-bomb does not bring France back to the bygone period when each country could alone provide the instrument of its own defence; on the contrary, it compels it to overcome the provincialism of "France alone".

Le Monde, for its part, urged General de Gaulle to use his prestige for disarmament rather than to involve France still further "in the absurd race towards the absolute weapon."

Another cold douche came from abroad. The only reactions of unqualified support came from west Germany, Spain, Greece and Israel—a rather queer mixture. The protests from Asia and the angry reactions in Africa—including the freezing of French assets in Ghana and the recall of the Moroccan ambassador—had been half expected. So were the pious regrets of the communist block. But the reaction of the allies was cooler than expected. Last, but not least, came the confirmation that the United States will not view this experiment as the qualification of "substantial progress" required by the Atomic Energy Act.

It is, therefore, logical to ask how long it will take, and how much it will cost, to go it alone (the figure of £90 million that has been quoted for the first bomb is rather arbitrary). Experts have been explaining the need to reduce the size of the bomb and to improve the detonator mechanism. They have also been reminding the public of the length of time taken by Britain to move from the atomic to the hydrogen stage. It is hoped in Paris that by 1965 France may have a few dozen A-bombs, and Mirage IV bombers to carry them. By that time, however, the manned bomber may be going out of use; and to develop and produce nuclear warheads and missiles without foreign aid will take longer.

Undaunted, the French government remains determined to go on unless and until an international agreement is reached on the abolition and destruction of nuclear weapons. There is talk of another test before June. M. Guillaumat, the minister responsible, has let it be known that the construction of an H-bomb is "being considered." M. Messmer, his successor as war minister, spoke of the task ahead in order to equip France with a nuclear striking force. His words were partly intended to suggest to French officers that there may be a "national mission" for them outside Algeria. But to many of them the prize will look too distant. Can France find a short cut? The threat implicit in M. Reynaud's plea—that the American allies should provide the secrets before Mr Khrushchev does it—is not taken seriously here. It is from Washington that some Frenchmen still expect to get the time-saving knowledge; they pin their hopes on the general's American trip in April.

Hussein's Grand Design

FROM OUR MIDDLE EAST CORRESPONDENT

MEETING in Cairo on February 8th, the Arab foreign ministers took up their old quarrel about the status of Palestinians; a week later they were still at it. It is not an argument of which the Arab leaders, particularly those who do a great deal of talking about Arab unity, can be proud. An "Arab Government of All Palestine" was proclaimed by the Egyptians at Gaza in 1948. Hajj Amin al-Husseini, who had been deposed as Grand Mufti of Jerusalem in 1937, was elected president and the Arab League States, except Jordan, recognised the new government within a month. King Abdullah of Jordan had other ideas for the future of Arab Palestine, ideas which he was in a position to carry out, because his troops occupied most of what was left of it. After two years of haggling with the Arab League, King Abdullah annexed what was left of Palestine in April, 1950. It was a practical move but it did not please the Egyptians who, even during the fighting in 1948, gave the impression that they would rather all Palestine fell to the Jews than that King Abdullah should get any of it.

Now Jordan's claim to rule all Palestine is becoming more explicit. Admittedly, the claim must remain academic so long as Israel stands in the way. But, as most Arab thinking is based on the assumption that one day Israel will disappear, the Jordanian government may argue that it is staking its claim against that day. In fact, it is not living wholly in cloud-cuckoo land, if at all. The grand design conceals the more modest aim of strengthening King Hussein against his Arab rivals.

The latest move in this campaign is the decision of the Jordanian government to extend Jordanian citizenship to all Palestinian Arabs wherever they may reside. Hitherto, the ministry of the interior has required proof of four years' residence in the country as a condition of recognising Jordanian nationality. The new legislation is an invitation to all Palestinian Arabs to range themselves forthwith behind King Hussein.

This particular writing on the wall appeared last summer, shortly after Hazza Majali took over the prime minister's office from Samir Rifai. King Hussein paid several visits to the west bank of the Jordan, showing himself to his people with results ranging from very good to fair. The decision was taken, and has since been implemented, to hold sessions of parliament in Jerusalem as well as Amman. The intention was to deepen the roots of the regime in Palestine, and it has succeeded to the extent that many Palestinians now regard the present situation as at least the best temporary settlement, if not the ultimate solution, of their status.

The picture emerged more clearly when General Qasim recently threw out a suggestion that an Arab government should be formed for Palestine. His object was presumably to embarrass all concerned, and he achieved it. Hajj Amin al-Husseini retorted by asserting, in the course of a long and rather difficult statement, the allegiance of all Palestinians to his Arab Higher Committee. Hazza Majali promptly took issue with both General Qasim and Hajj Amin. He denied the continued existence of the Arab Higher Committee. Jordan, he said, already included half the territory of Palestine and well over half its Arab population, which enjoyed full civil rights. He added that when the time came for the Palestinian Arabs to decide their future, the Palestinians in Jordan would enjoy the same freedom of decision as those elsewhere. The hope is that if the Jordanian Palestinians can be won over in the many years that must elapse before "the time comes," their votes would carry all Palestine into the Jordanian camp.

The Jordanians took their recent opportunity of acquainting King Mohammed of Morocco with their views. When the king visited the refugee camp at Aqabat Jabr, near Jericho, a spokesman for the refugees thanked him for a donation of £14,000, and asked him to impress on the other Arab states that "the refugees, who represent the overwhelming majority of the Arabs of Palestine" had pledged themselves before God to follow King Hussein and none other.

These trends do something to explain the curious episode of the UAR consul-general in Jerusalem, whose credentials were rejected out of hand by the Jordanian government on the grounds that they referred to the holy places and to "that part of Palestine occupied by the Jordanian armed forces." The most plausible explanation is that President Nasser intended to remind the Jordanian government that its claim to the west bank, let alone

to the whole of Palestine, was still in question. The ham-fisted method of conveying the reminder need not cause surprise.

The Jordanian territorial claim to Jewish Palestine is froth; and the Jordanian government knows it. The motives for advancing the claim now must be sought in the context of inter-Arab politics. Jordan is uncomfortably isolated between the open enmity of General Qasim and the sporadically veiled distrust of President Nasser. By extending Jordanian citizenship to Palestinians everywhere, and thereby inviting their allegiance, King Hussein is trying, in effect, to build up a sort of fifth column among his Arab neighbours. They have given him precedents enough, in all conscience; but it must remain in doubt whether his chances of success are good enough to outweigh the resultant dangers of deepening inter-Arab discord.

Ceylon's Confusing Drama

FROM OUR CORRESPONDENT
IN COLOMBO

Mr Dahanayake

ONCE again, Ceylon is waiting for its *coup d'état*. Nobody seems to know whether the waiting is in fact for Lefty, or for a Godot in uniform; but the theatrical confusion is not unnatural, for the drama of politics has developed an incredible, crazy logic of its own. What the play is about, few will venture to say. Equally hazardous is any attempt to identify the major roles. Who is the hero and who the villain? Mr Dahanayake, the caretaker prime minister, charges the Left with trying to create the conditions for a take-over in classic Marxist fashion. He accuses them of fearing a rout at the polls on March 19th and of attempting to sabotage the elections and subvert democracy.

But it is he himself who has provided the shocks and the present anxiety. Faithful to his early promise to "stun" the nation, he gave an exhilarating imitation of a daring old man on the flying trapeze. He sacked five of his ministers in one blow, broke with his own party and formed a new one, turned the government radio into a ventriloquist's dummy to sing his praises, and openly converted the premier's official residence into a party headquarters.

Meanwhile, several grotesque exaggerations and distortions of fact had enabled Mr Dahanayake to create an artificial atmosphere of tension. He interpreted an earthslip on the railway as an instance of political sabotage; the discovery of an illegal shop manufacturing fireworks, as evidence of the existence of explosives factories. On January 20th, under cover of these excuses, he formed a new ministry of internal security and transferred the police department to it. Worse was to follow. Mr Sidney de Zoysa, who had been "exposed" during the communal riots of 1958 as a "potential Ayub Khan" and had to retire from the police only three months ago under parliamentary pressure, was given the vital position of permanent secretary in the new ministry. It was as if the clown had unmasked and proclaimed himself as the arch villain. And when Mr de Zoysa's first official action was to call for the files of the Bandaranaike assassination inquiry, any puzzled spectator could scarcely resist the feeling that the pieces were finally falling into a pattern.

The national press immediately alerted the country of this new danger of a rightist coup. In a series of stirring editorials, the press even took the extreme step of exhorting public officials and the services to disobey "illegal" orders. Ceylon's leading English and Sinhalese dailies actually laid bare what they believed to be a cunningly planned conspiracy and predicted some contrived "disaster" like the Reichstag fire. These warnings had one salutary result. On January 25th, the political parties of both Right and Left issued a stern warning to the caretaker government.

Meanwhile, the election campaign goes on. There are 23 parties and nearly 900 candidates contesting 151 seats. The first month's campaign has reduced the real fight to one between four or five of these parties: the right-wing United National party, now led by the former prime minister, Mr Dudley Senanayake; the Trotskyist LSSP, led by Dr N. M. Perera; the People's United Front, led by the former food minister, Mr Philip Gunawardena; the remains of Mr Bandaranaike's Freedom party, led by his chief lieutenant, Mr C. P. de Silva; and the new Ceylon Democratic party, formed by Mr Dahanayake.
