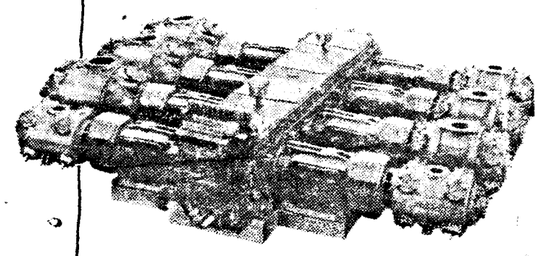
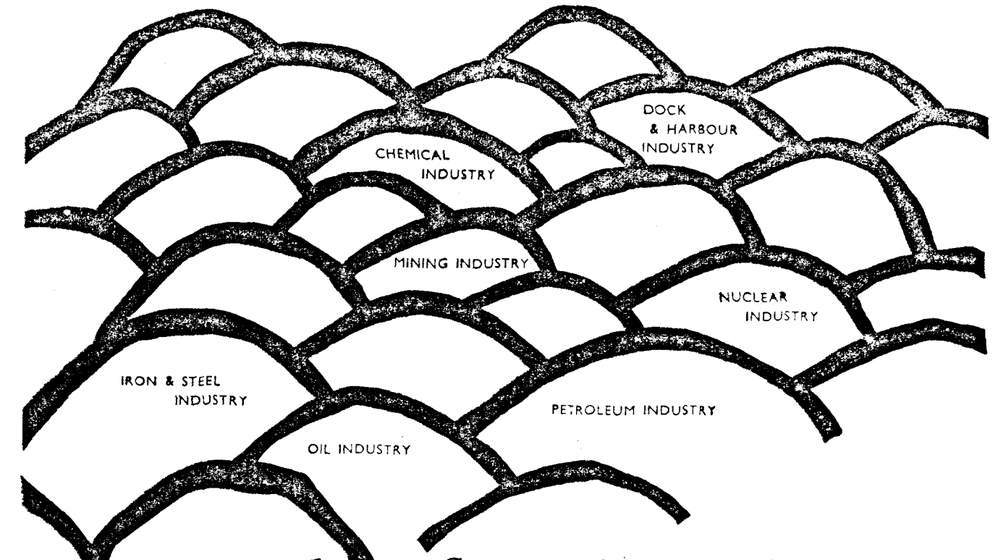
NOW...TWO GREAT NAMES



on one complete line of centrifugal and reciprocating compressors

This nameplate stands for teamwork between the U.K. and the U.S.A. It identifies each precision-made product in the complete line of Clark centrifugal and reciprocating compressors with motor and gas engine drives, manufactured in Glasgow by G. & J. Weir Ltd. These heavy-duty units, designed and engineered in the United States by Clark Bros. Co., are built with traditional British craftsmanship and are available for purchase in sterling. All parts of WEIR-CLARK compressors are identical and fully interchangeable with comparable Clark equipment built in the United States and under license in France and Italy. For complete performance and application data, write to:

CLARK BROS. CO. DIVISION, *Dresser (Great Britain) Ltd.*
197 KNIGHTSBRIDGE, LONDON S.W.7



WEIR-CLARK multi-stage, horizontally-split centrifugal compressors are extensively used in the refining and chemical process industries. These world-famed compressors are built in seven case sizes having from two to ten impellers each. Capacities of 2,000 to more than 150,000 cfm.

WEIR-CLARK motor-driven compressors are available in two, four, six and eight cylinder sizes. These units utilize the balanced/opposed design principle for vibrationless operation. They are widely used throughout the refining industry and as industrial air compressors in general industry.

APPLICATION TO MAIL *THE ECONOMIST* AT SECOND CLASS POSTAGE RATES IS PENDING AT NEW YORK 1, N.Y., U.S.A.

Rotary Compressors and Vacuum Pumps

The Hick Hargreaves Rotary Compressor is of the eccentric rotor type, with sliding steel blades which are prevented from making contact with the cylinder walls by restraining rings. High rotational speeds can thus be achieved without great frictional losses.
Hick Hargreaves Rotary Compressors have many other advantages—easy and cheap installation; retention of initial high performance; regular air flow and low noise level; easy maintenance due to the absence of moving valves, and the reduction of wear to a minimum by the use of roller bearings.
A comprehensive range of both single and two stage compressors and vacuum pumps is available with capacities up to 2,000 c.f.m.

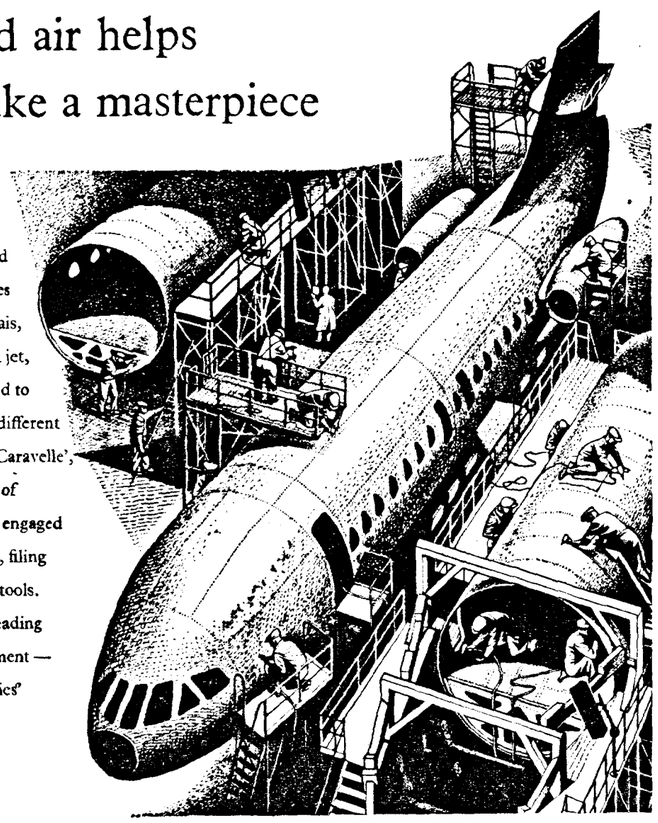
Since the days of the coracle . . .

men have been looking for . . .

the perfect boat-building material.

Now they've found it !



Boats built in Fibreglass Reinforced Plastics are exceptionally light, exceptionally strong, rotproof, and corrosion-free. Here's a case in point—the Healey Sports Boat by Healey Marine Ltd. For other examples of the miracles that F.R.P. can work, take a look around at the National Boat Show. A long and admiring look !

Compressed air helps to make a masterpiece

France's new airliner—the famous 'Caravelle'—is a triumph of modern aeronautical engineering. Designed and built by Sud-Aviation in their factories at Toulouse, Marignane and Bouguenais, the 'Caravelle' is a medium-range twin jet, in which special attention has been paid to safety factors. No fewer than 400,000 different components go to the making of the 'Caravelle', involving an extremely high standard of precision engineering. The craftsmen engaged on this work use Atlas Copco grinders, filing machines, drills and other pneumatic tools. Atlas Copco equipment has played a leading part in this particular French achievement — as it continues to do in aircraft industries throughout the world.

London buses run on air

Compressed air is versatile. Atlas Copco provides the means for all its many applications. London Transport have recently installed a number of Atlas Copco compressors for general garage use—supplying air for bus tyres, pressure greasing and powering small pneumatic tools.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Resolutions for the Chancellor

THIS is the open season for discussion of the prospects before the British economy; on pages 43-47 appears our own contribution to the usual New Year prognostications. Running through most analyses this year are likely to be two main themes, contrapuntal but not contradictory. One is a feeling of united satisfaction that Britain in 1959 got back on to the road of industrial expansion so rapidly and so smoothly. The other is a degree of frank disagreement about when the Chancellor is likely to have to take measures of restraint to prevent the present expansion from boiling over into an inflationary boom. What one would like to see added to the debate is discussion of a third point: whether the Chancellor should not be forging new weapons for use when and if an inflation does arrive.

Because no two periods of "boom threatening to topple into inflation" are ever precisely similar, they are unlikely to be appropriately dealt with by precisely the same weapons. It is therefore a mistake to suppose that all that should be needed is for Mr Amory to be more deft in his timing than some of his predecessors have been. Already one can begin to see two likely differences between the situation that may threaten the economy at any inflationary end of the 1959-60 boom and that which confronted it at other periods when measures of restraint became necessary. The first difference is that Britain may well run into overfull employment of resources in some parts of the country while there is still definite under-employment of resources in others.

Nobody in Britain since the war has yet worked out what to do in this situation. If Chancellors rely on general measures of disinflation, do they impose them when the signals of overstrain first begin to appear in the prosperous Midlands (in which case they are likely unnecessarily to increase unemployment in Scotland), or do they wait until labour is fully employed in the less prosperous areas also (by which time inflation in the Midlands and south is likely to be boiling over)? If they rely on specific controls, they are likely to find themselves in an even absurder plight. Specific controls usually mean that governments cut back production only in those industries for which demand is most buoyant and which therefore ought to be expanding most rapidly (e.g., by imposing stringent hire purchase restrictions against would-be buyers of motor-cars), while they dole out subsidies or other favours to industries for whose products demand is declining and which therefore ought to be dying out (e.g., special protection for jute). This is the reverse of intelligent planning; it is a recipe for standing the rules of economics (and of common sense) on their head.

So the purpose of the first new weapon which the Chancellor ought to want to forge can be fairly simply described. What the Chancellor is likely to need is some new direction of policy that will help to check overemployment in (say) Birmingham, while not increasing unemployment in (say) Scotland. But it would be absurd to effect this by measures that deliberately cut back the British consumer's opportunity to buy the goods he most wants; on the contrary, he should be given an opportunity to exercise a greater choice as between different makes of them.

The second distinguishing feature of the 1959-60 boom is that it looks as if the danger signals may begin to appear first in a threat to price stability at home rather than in a threat to the balance of payments abroad. This is not to assert that there will certainly not be pressure on sterling during 1960. There may be,

but if there is it should be rectifiable by an ordinary and relatively mild increase in Bank rate. If domestic demand ever needs to be cut really markedly in 1960, it is likely to be because of the fear of price inflation ; that is why the Chancellor has been indulging in his recent attempts to talk industrialists into a price-cutting campaign—exordia which at present do not seem likely to work. So the object of the second new weapon which Mr Amory ought to want to forge can also be readily described. What the Chancellor may need is some new instrument of policy that would help very directly in a campaign of price-cutting. The more successful he is in finding this, the less likely it is that he will be forced to impede the present roaringly heartening rate of industrial expansion.

ARE there any instruments that the Chancellor could use to help towards these objectives ? There are. They are not instruments which, up to a few years ago, anybody would have dreamed that a Conservative government might use. But the Tories have done some very liberal things in the last decade, and have astonished everybody (not least themselves) by the success of what they have done. There are now at least two more liberal steps that should be considered ; and they are of the sort that it would be much wiser to take near to the beginning of a Parliament than near to the end of it.

The first of them is a series of unilateral cuts in certain United Kingdom rates of tariff. At present Britain regards tariff rates as things that ought to be cut only as a bargaining counter, in return for tariff cuts made by foreigners to help British exports. Even for its own limited purpose this theory may now be unduly rigid ; on the eve of the possible establishment of an Atlantic Economic Council (see page 17) Britain has reached a stage where some striking and independent action on our part could be a more potent force in shaming other people—especially North Americans and Europeans—into accepting the sort of liberal trading world that we ought to want. Still more important, however, it is high time that we began to realise that the greatest benefit from cuts in some British tariff rates would accrue, not to foreigners, but to ourselves.

Some of the most obvious candidates for cuts seem to be the tariff rates on the products of the most booming British industries. At present, for example, foreign motor cars imported into Britain have to ride over a tariff rate of 30 per cent, as well as certain other restrictions. This compares with a tariff rate of 17 to 21 per cent on cars imported into Germany. Yet the domestic demand for cars in Britain is now so buoyant that it is threatening to create inflationary pressure in the car producing areas. Which would be the more sensible reaction to this excess of demand over local supply ? To cut back demand and industrial activity in the whole economy (causing unnecessary unemployment in less fortunate areas) ? To cut back demand for British cars themselves by swingeing hire purchase restrictions ? Or, so far as the balance of payments allows it, to increase supply by letting more foreign cars into the country at a competitive price ? There can be no reasonable doubt about the right answer.

But the products of prosperous industries should not be the only candidates for tariff cuts. One of the peculiarities of Birmingham and other engineering districts in Britain is that, cheek by jowl with motor car manufacture and other major growth industries, and competing with them for workers in a boiling local labour market, there are numbers of smaller engineering industries of dubious economic worth; nobody can say that all of them are already uneconomic for this country, but it would be sensible in 1960 to give the market more freedom to find out. What, for example, in this day and age, is Britain doing maintaining a 50 per cent tariff on refracting telescopes, a 33⅓ per cent rate on X-ray equipment and most sorts of clocks, a 30 per cent rate on some forms of machinery, on domestic fancy glassware, some forms of worked stone, buttons and bicycle pumps, a 25 per cent rate on hats, mouth organs and sporting guns, a 20 per cent rate on scissors, lead stoppers and enamelled jugs ? In nearly all these cases British tariff rates are far higher than those ruling in Germany or in most of the rest of developed Europe. This list is chosen almost at random, and it may well be that for some items on it there is a respectable protectionist case. But what one would like to see the Government do now is to go through the whole tariff list with a tooth comb, decide which items in it are produced almost wholly in areas where full employment seems assured for some time to come, and then choose these items for selective and unilateral tariff cuts.

A respectable argument against pushing this policy too far would be if it threatened to strain the balance of payments, but it seems unlikely that Britain could be made bankrupt by a surge of imports of enamelled jugs. A nonsensical argument against the reform would be to say that it would cause unemployment in the enamelled jug industry of Birmingham —for that would be a main object of the exercise. In a regionally inflationary situation something needs to be done to check overfull local employment ; the choice is between something that would benefit consumers, while also weeding out inefficient industries in areas where alternative work is available—and more restrictive courses that would bring no such benefits at all.

THE second major step that the Government should take before the 1959-60 boom topples over into inflation is to go back on one of its own decisions of 1956. Mr Thorneycroft's Restrictive Trade Practices Act of that year, while launching a welcome (and so far distinctly successful) attack on collective price maintenance by trade associations, actually made it more difficult for enterprising retailers to cut the prices they charge for individual firms' branded goods.

This strengthening of the law about individual resale price maintenance was demanded as a *quid pro quo* by some commercial interests at the time ; it was supported by the Trades Union Congress and reputedly by some consumer organisations. But all this happened before it had bitten home, as it should have done now, that a campaign of competitive price cutting could do more than anything else to enable the Government to allow industrial expansion to go ahead unimpeded—and before new retailing techniques had appeared at home and abroad which hold out strong hopes that, given freedom of manœuvre, such a campaign might effectively be started. The Government would be wise to introduce in 1960 a simple amending bill ; it should continue to allow a manufacturer to sue a retailer under the law of contract if he sells his goods at more than the recommended resale price, but not if he sells below it.

The Assembly Awakes

The French parliament has tried to assert itself—and learned how weak it really is

THE Fifth Republic supports a parliamentary body. The existence of the National Assembly is incontestable: the Palais Bourbon is there, the deputies are there, everything down to the parliamentary kitchens (with Algerian *couscous* on the menu) is there. This can be very confusing. Last week it confused the deputies themselves. The parliamentary reflexes jerked and twitched under the stimulus of the schools issue. The government's compromise on aid to church schools was rewritten by the Right and the amendment adopted by M. Debré was promptly declared unacceptable by the Left. The minister of education, M. Boulloche, resigned: the words of Jules Ferry were solemnly inscribed upon state school blackboards across France. The Assembly, and everyone else, began to talk of a crisis.

The confusion spread. It even reached the Elysée and its occupant. The political correspondents wrote, circumstantially, of a cabinet meeting, of presidential dissatisfaction and impatience. The Assembly, it appeared, had gone too far ; if it thought it wielded power it had to be disillusioned. So there were two choices: it could be dissolved, or the constitution itself could be changed. The penalty for evoking the spectre of the Fourth, or more properly the Third, Republic was to be extinction. A parliamentary session lasting a fortnight a year was one version that gained currency ; and to readers of General de Gaulle's third volume, *Le Salut*, it did not seem entirely improbable. These reports of displeasure duly reached the Palais Bourbon, and they had their effect. The mutterings on the right died away ; although the *laïcistes* of the Left made common cause, they were massively outvoted. The Senate has proved equally accommodating.

BUT by then the damage had been done. The validity of the gaullist constitution, even in the modest powers left to the legislative authority, had been put in question. The suggestions coming from the Elysée may not have been specific, but they were meant to overawe. The temper of the regime in an awkward spot had been made plain: it was to reach for the blunderbuss. As often as the Debré government finds itself in trouble with the Assembly, this looks like becoming the easy way out. General de Gaulle may be reluctant to alter the constitution he wrote for himself a year ago (and to start chopping and changing the Assembly's powers so soon would be a staggering admission). But, from now, the knowledge that he can act simply for executive convenience must be obvious to everybody. The prospect of the Assembly becoming a popular forum for the expression of political fears and feelings has been pushed back ; its effectiveness as a brake on anything has been diminished.

Had this been a major question of forcing an Algerian settlement through a *chambre introuvable*, the awful signs of presidential impatience would have been explicable and, indeed, essential. But it was not that. The Assembly has already had foreign affairs taken away from it, its budgetary powers are limited, and its formal pronouncements on Algeria have steadily come to possess as little authority as its recommendations on east-west relations. It is true that the church schools issue has an immense popular importance, and, it may be, even a revolutionary significance. Danton was right: "Next to bread, education is the first need of the people." But to the members of the Assembly it may well have seemed that schools and ex-servicemen's pensions were the only issues left for them to debate. Now, even on these, presidential suspicion has fallen over them.

Other damage is visible. The Debré government has been openly divided. Although M. Boulloche has been the only minister to resign, the schools measure did not have M. Pinay's support. Neither this nor the increasingly uneasy relationship between M. Debré and the gaullist majority in the Assembly need push the general into picking another prime minister. The name of M. Louis Joxe, lately bandied about, has fallen from favour (unless as M. Boulloche's successor at the ministry of education). If General de Gaulle wants to live with the Assembly at all he can hardly take the risk of giving the premiership to a civil servant ; M. Debré can crack the whip over the gaullist majority in a way that M. Joxe could not.

All the same, M. Debré's effectiveness has not been enhanced by the bargainings and compromises on the right in the past fortnight. And at the same time the remaining ties between the regime and the non-communist Left have been publicly broken. Communists and Socialists inevitably found themselves arm in arm on the schools question. The Socialist claim is that the new law is a direct contravention of Article II of the constitution: that "France is a republic, indivisible, lay, democratic and social." M. Mollet declared in the Assembly that a Socialist government would now have to nationalise the schools. The possibility of General de Gaulle trying to find an opening to the left in future has yet another obstacle in the way.

WHILE parliamentary energies have been centred on the schools question, other disruptive forces have come sluggishly and spasmodically to life. The vote on the budget on December 18th found the opposition at its strongest (172 votes) in this Assembly ; there was even a sizeable abstention within the UNR ranks. The Europeans among the Fourth Republican rump have now begun to express their distrust of gaullist foreign policy ; thus, M. Maurice Faure, in particular, has questioned the concept of a French nuclear striking force and voiced his doubts about the official line towards both Nato and the European community. Some of these doubts seem to be shared even in the gaullist ranks.

On the right there are fears over the unexpected swiftness with which the African members of the community are being allowed to flutter from the nest. Mali is moving into indepen-

dence ; its imitators are not far behind. Madagascar has already resolved to seat its own representatives at the United Nations. So far, General de Gaulle has not attempted to resist this trend, and M. Duchet is threatening to carry his friends into opposition. It is expected that the Assembly will, in fact, be summoned to a special session next month to pass the necessary constitutional changes for African evolution.

These parliamentary doubts and hesitations cannot be held a serious threat to anyone. Such opposition as there is has had to gather its main strength elsewhere. Even M. Bidault, currently opposed to the general over both Algeria and what he calls the " policy of the destruction of the Atlantic alliance," has observed that he feels no obligation to address an Assembly " reduced to uselessness." These are danger signs, not least if economic problems are also driven underground. The decline of the Assembly, and of the parliamentary way of life, is the natural legacy of the manner of General de Gaulle's return to power in June, 1958. The deputies (M. Mollet at the head of them) who voted for that return should not now be surprised that their power—over schools or anything else—can be so easily overridden. But, unquestionably, they are surprised. They seem to have been confused all along.

Mr Hammarskjöld, We Presume

It is time for the United Nations members to see where their secretary-general has got to on his lonely safari

CINDERELLA'S character never recovered, one supposes, from the disastrous intervention of her fairy godmother. Having once discovered how easily her problems could be solved by that wand, she no doubt stopped trying to solve them herself, and adopted the slogan " Leave it to Godmother."

Did she really live happily ever after ? The members of the United Nations might be unwise to count on perpetual happiness if they go much further along the road signposted " Leave it to Dag." The secretary-general's magic wand has lately been bestowing blessings so readily that the beneficiaries are in danger of taking their continuance for granted.

Since Mr Hammarskjöld succeeded Mr Trygve Lie in 1953, remarkable changes have occurred in the way his office is regarded—by the secretary-general himself as well as by others. Mr Lie had become too controversial a personality to do his job effectively ; it was against this background that Mr Hammarskjöld took office. He was accepted as a neutral personality from a neutral country: a technician rather than a politician, competent rather than dynamic, a man from whom more discretion than valour could be expected. His preference for words of diffuse caution seemed especially reassuring to those who had no wish to see the UN secretariat become an independent force in world politics.

How completely things have changed may be seen from his recent intervention in Laos. Before he went there in November, Russia gave official and public warning that his visit was unwanted and suspect, and specifically objected to any idea of his leaving behind a UN representative there. He went, just the same ; and while in Laos he called in Mr Tuomioja, the Finnish secretary of the UN Economic Commission for Europe. Mr Tuomioja is still in Laos, and other UN officials are digging in there to look after the long-term economic aid programmes and administrative improvements that he has recommended.

Mr Hammarskjöld has acted in Laos without any mandate from the Assembly or the Security Council. He has not formally installed there a UN " presence " of the type that he was authorised to install in Jordan in 1958, or an observer group such as he was authorised to deploy on the border between Lebanon and Syria earlier in that year. But it is rather more than coincidence that Laos's urgent need for economic and administrative aid and guidance should have been discovered just when the arrival of an international corps of officials and technicians, and the opening up of new prospects of reform and progress, can have a timely impact on morale in a scary little country, and simultaneously make it harder for its neighbours to indulge in covert intervention. The secretary-general shrewdly judged that, although Russia might feel a need to make a protest or two for the record (and for Peking's ears), it would, at bottom, share America's relief at being got off the Laotian hook. And, so far, he has got away with it. The Russians protested, and fell silent.

THIS is the most ambitious expression yet of the philosophy which Mr Hammarskjöld has quietly but firmly developed since his renewal in office two years ago. When, on September 26, 1957, he accepted a further term, he made his first placidly revolutionary statement. He frankly declared that it would be fully in accordance with the spirit of the UN Charter for him to act without a mandate from either Assembly or Council, if he judged it necessary

> to help fill any vacuum that may appear in the systems which the Charter and traditional diplomacy provide for the safeguarding of peace and security.

His claim went unchallenged. So, in July, 1958, he could cite it in support of his independent decision to enlarge the observer corps in Lebanon after the American landing there. Russia had already vetoed both an American proposal to enlarge the corps and a Japanese proposal that he should be given a free hand to do whatever was needed to make an American withdrawal possible. The Swedish government, moreover, publicly demanded that the UN corps be removed. Mr Hammarskjöld calmly enlarged it ; and there were no further objections.

Meanwhile he had also enlarged what one might call the Hammarskjöld Doctrine. On April 29, 1958, he told the Security Council that he welcomed the American proposal for an Arctic inspection system to discourage surprise attacks. He protected his flank by recalling that he had previously welcomed the Soviet announcement of a suspension of nuclear tests ; but that did not save him from a sharply critical Russian reaction. One may guess that Moscow was particularly annoyed because he now claimed a right to voice the desire of the peoples of the whole world, and thereby trespassed on Mr Khrushchev's pet monopoly. And since then, the secretary-general has progressively elaborated his claim to speak for common humanity, if need be in opposition to the views of all the major powers put together.

Just before the Geneva conference of four foreign ministers last year, he told a Copenhagen audience on May 2nd that he had the right to take up an independent position based on " United Nations opinion " about any particular conflict, and to " express what may be called the independent judgment of the organisation." By October 16th he was speaking, in a television interview, of the UN's role *vis à vis* the powers in regard to disarmament as " an element representing all the rest of the world."

He has become increasingly open about his new role. In the same interview, when asked on what he based his power to intervene in troublesome areas, he explained that the limitations of the Assembly and Council made it necessary " to create a new executive responsibility somewhere. . . ."

> My own view is that they have defined the outer limit, and everything which is, so to say, comprised within that limit is in line with the philosophy of the Charter. In fact it is on the basis of this interpretation that quite a few recent developments have taken place, also on my own initiative.

His initiatives have been of undoubted value. Whether despatching a personal emissary to look into the recent Siamese-Cambodian dispute, or smoothing the way for more British-Saudi discussion of Buraimi, or quietly nagging Cairo about the holding up of Israeli cargo in the Suez Canal, he has been using his unique office to do things that can hardly be done by anybody else. In so doing, he has built up a formidable body of precedent. Governments are beginning to realise this ; but it is difficult to catch him out.

MR HAMMARSKJÖLD can already claim a triple basis for his policy. Not only is he expressing the *vox populorum*, and filling " vacuums " where both the Charter and conventional diplomacy are inadequate ; he is now also able to point out that he is doing things of a kind that he has done, with general approval, or at least with tacit consent, before. Broadening down from precedent to precedent, his freedom of manœuvre has far surpassed the expectations of the governments that elected him. One may be sincerely grateful for the good use he has made of this enlarged role, and yet concerned about the implications.

His successor may show less judgment of what is wise and practicable (and Mr Hammarskjöld is not immortal, nor is he necessarily in office for life). His judgment may fail him ; the world already has to reckon with too many situations where too much depends on the health and good sense of one man. Moreover, if the UN members come to rely too heavily on his skill and his capacity for survival, they will neither give him adequate support nor overhaul their own practices so as to lessen his load.

At present Mr Hammarskjöld is on an extended safari through Africa, characteristically meeting trouble halfway by going out to look at the problems of its many emergent states, which will soon be flooding into their seats in the Assembly. His whole political pilgrimage in recent years has been as bold, as dedicated and as lonely as David Livingstone's plunge deep into an earlier Africa. But is anybody going to send a Stanley to make sure he is all right, or will the world go on comfortably " leaving it to Dag " ? There is much that could be done to support his ventures and relieve their loneliness ; and little sign—apart from a few shrewd but negative remarks by Mr Khrishna Menon—that anybody is bothering to think about it.

The Firm Without a Strike

Our special correspondent looks at a form of labour relations at Luton which deserves study elsewhere in industry.

THE motor firms made news last year—not only, unfortunately, because of their booming output, but also because they were the centre of some of the country's most persistent labour troubles. Scarcely a week passed without a report of an unofficial stoppage either in some part of the British Motor Corporation, or at Standard, or at Rootes, or at Ford's. The formidable tally of trouble affected all the major British motor manufacturers but one. The significant exception was Vauxhall.

The contrast between the labour relations at Vauxhall and the other motor firms must not be drawn too sharply. Vauxhall is fortunate that the wages it can pay are higher than most other employers can afford in the " overgrown country town " of Luton ; in Coventry and Birmingham motor works are not the only Meccas paying on average over £16 a week, and workers there feel that they can afford to be more militant. At one time the system of " consultation with the workers " was even more detailed at Standard than at Vauxhall ; but for various reasons—probably including certain accidents of personality on both the managerial and union sides—the system at Standard has largely broken down.

Moreover, the popular picture of perpetual labour trouble in the motor industry, as compared with other industries, has tended to be exaggerated by the fact that motor strikes occur in places which it is easy for daily journalists to visit. The mines suffer many more "wildcat" strikes than motors but,

since journalists dislike the idea of trekking down to South Wales, they attract less publicity.

Despite these reservations, Vauxhall's record is sufficiently remarkable to deserve study. The first factor that distinguishes its labour relations from those of other motor producers is the attention that they receive. Many firms—notably British Motor—give the impression that they concentrate on technology and leave their labour problems to string along. In Vauxhall, the deputy chairman regards labour relations as his main concern, and the personnel manager is (by British standards) well integrated into the decision-making process of the firm ; he has the backing of a policy on labour relations to which all the firm's executives subscribe.

Secondly, Vauxhall has managed to get into the position of recognising only two main trade unions, instead of twenty-two at Ford's and a similar number at the BMC. These two unions are the Amalgamated Engineering Union (which is much the larger) and the National Union of Vehicle Builders ; the latter, incidentally, is one of the militant unions that has told the TUC that it has no business inquiring into the causes of unofficial strikes. At Vauxhall, however, since only two unions operate, inter-union quarrelling is almost non-existent ; and the men themselves seem to be quite happy at having only two unions to choose from. As in the expanding BMC plants at Oxford and Birmingham, many of the newcomers have little or no union background ; any general union—and the AEU has proved the main choice—seems good enough for them.

THIRDLY, all work at Vauxhall is done on time rates. The firm decided in 1956 that payment by results was no longer an effective incentive in a mechanised industry where the machines and not the men were setting the pace. Bonus earnings were therefore consolidated, as they have often been in America, into a general time rate. At the time of the changeover there were considerable qualms from the NUVB, but the results are claimed to have been almost wholly to the good. Productivity does not appear to have fallen off at times of peak demand. The maintenance of time rates must tend to put up labour costs per unit of output during a recession ; but the reverse side of that medal is that the disparity between boom piecework and ordinary timework earnings, which has been at the root of much of the labour trouble elsewhere in the industry in the last two years, has not arisen at Vauxhall.

The fourth—and perhaps crucial—feature of Vauxhall's labour relations has been the treatment of shop stewards. In the BMC the communist-influenced joint shop stewards committee has been allowed to go its own disruptive way. At Vauxhall a deliberate attempt has been made to suffuse the stewards' inevitable power with the useful ingredient of some active responsibility. As well as the usual shop stewards' set up, Vauxhall has established an authoritative organ for joint consultation—the management advisory committee. Elections to this committee are held in the firm's time ; they are fiercely contested ; the vote is on average above 80 per cent ; and with a three-year term of office, the MAC man (who is usually also a shop steward) has a constituency within the works which he finds that he needs to nurse. His electorate could throw him out if he made himself ridiculous.

Anything more different from the normal apathetic union election, with a minimal turnout, is hard to imagine. This does not prevent some of the 21 workers' representatives on this 27-man committee from being militant and outspoken. So, it is said, are the six management representatives—all of whom are high enough executives (five being directors) to give answers which are likely to be endorsed by the board.

The committee discusses production matters, suggestions (of which, hearteningly, there are a lot), apprentice training, safety, pensions, profit sharing—all the normal staples of joint consultation, but at an abnormally high level. The reasons for which overtime has been cut or profits reduced are discussed as frankly as the reasons for a boom ; and, once the committee has agreed upon a decision, action generally follows. Only wage discussions are taboo. Negotiation on these are the prerogative of the local union officials. Vauxhall, which does not believe in a policy of "divide and rule," has never let this prerogative pass wholly to the stewards.

The sort of balance of power that results is well shown by the question of job appraisal. Vauxhall's management makes the initial classification and attempts to keep the gradings as few as possible. Any worker who feels aggrieved about his initial grading, or about any change in rating that follows a change in factory technique, can take up the matter with either his steward or his MAC representative. More specifically, he can go to a grading appeals committee, composed of established experts in the craft concerned, who in the last resort set a test of skill. This is a pass or fail affair. The workers thus have a say in their own grading. But the appeals committee, like the management advisory committee (and like a constitutional monarch), does only advise ; it has not taken on—as had the workers' groups at Standard's—any ultimate power. With rating and almost everything else, the management can say the final word, after listening to the wishes of the men.

HOW far is this elaborate machinery worthwhile ? It would be nice to be able to answer this question with neat and embracing statistics, which should not, of course, relate to labour disputes alone. The ultimate test of the value of any motor firm to the nation is not simply whether it manages to avoid strikes ; it is whether it manages to get the most popular cars (in the price range within which it competes) to the most people (abroad as well as at home) at the best available value for money, and with the maximum profitability to workers and firm alike. Unfortunately, in an industry where influences other than labour relations are so important and erratic, neat statistics do not get one very far, and one has to fall back in the end on a commonsense judgment.

There are some strike-ridden motor firms which can claim that occasionally they have beaten Vauxhall in their records of domestic and export growth, in their levels of profitability since 1956, and the material rewards going to their workers and workers' families. On the other hand, Vauxhall—despite one very bad year just after the 1956 slump—has in general been a profitable investment to General Motors which owns its ordinary capital, and it is not a firm that anyone could ever accuse of having turned into a social welfare organisation. Most visitors to the Luton works will agree that by a combination of persistence, astuteness and good luck, Vauxhall does seem to have managed to develop a form of labour relations all of whose features deserve study—and many of which might merit adoption—more widely throughout British industry.

The Hatreds of Philosophers

An examination of the curious explosion of antipathies between and towards philosophers which was released by the refusal of the periodical *Mind*, edited by Professor Gilbert Ryle, to review Mr Ernest Gellner's book *Words and Things* on the grounds that it was abusive to other scholars

BEFORE compiling a philosophers' glossary of who now hates whom, one had better define what the "linguistic philosophy" which it was Mr Gellner's purpose to attack is supposed to be. Gellner, who teaches philosophy to sociologists at the London School of Economics, supposed his target to be a sort of philosophy particularly common at Oxford and possessing three special characteristics. First, it confines itself to discussing, in minute detail, the meaning of expressions in ordinary language, the language of everyday untechnical speech. Secondly, it is ostentatiously neutralist, in all sorts of ways: it professedly tells us nothing substantive about the world, morality, or society, but confines itself to a supposedly objective examination of the language in which such questions must be discussed. Thirdly, it thinks that most, though not all, traditional philosophical problems are based on confusions about language ; by close attention to our ordinary speech philosophers, although not usefully answering these problems, can at least prevent us wanting to ask them.

The view of Gellner is that all the philosophical premises of this sort of philosophy are false. Since, in his view, no philosophy can in fact be neutralist, he accuses "linguistic philosophy," under a bogus guise of neutrality, of insinuating certain substantive opinions about the world and morality—in favour, roughly, of an uncritical common sense and thus a demure acceptance of the world as it seems. His book supplemented this depressing picture with an historical account of linguistic philosophy's supposed origins, and some brisk "sociological" matter on the linguistic philosophers themselves.

GELLNER'S critics have not been slow to retort that he vastly exaggerated the monolithic quality of what he calls "linguistic philosophy"; the philosophers whom he mentions as "linguistic philosophers" do not form a unanimous body of opinion. It is also important to note at this stage that there is a good deal of philosophy which is linguistic—in the sense that it discusses philosophical problems in terms of the meaning of expressions and so on, rather than in psychological terms—which Gellner himself was not concerned to attack.

One such philosophy is "logical positivism," the philosophy which was expressed in A. J. Ayer's famous book in the thirties, "Language, Truth and Logic." Positivism, though in a sense "linguistic," is exempted, because it certainly does not set out to defend our ordinary language or common sense. Few men on the Clapham omnibus will be found to share its radical central thesis that the only statements which are meaningful at all are statements of natural science, logic and mathematics. (It should be said that few philosophers will now be found to share it, including Professor Ayer himself.) Similarly, none of the writings of Bertrand Russell, though sometimes "linguistic" in tone, falls into the class Gellner was attacking. Russell indeed has never shown anything but contempt for uninstructed common sense, and is himself a strong champion of Gellner's book.

Who, then, are the linguistic philosophers subjected to assault, and where do they preach ? A striking fact about British philosophy in this century is that all its important developments, with one possible exception, started in Cambridge and ended up in Oxford. (The one possible exception is logical positivism, which started in Vienna ; but even that was influenced by the early work of Wittgenstein, who worked in Cambridge.) Cambridge produced the three great, though not equally great, innovators: Russell, G. E. Moore, and Wittgenstein. It does not itself tend to develop the work of its innovators, or to contain a school ; it is Oxford where that happens. (Of this there is a perfectly simple explanation: there are far more philosophers in Oxford, because philosophy is there joined to other subjects in the syllabus, so that far more undergraduates study it, and far more teachers teach it.)

It was Moore (1873-1958) and Wittgenstein (1889-1951) who mattered for "linguistic philosophy." They were utterly opposed in temperament. Wittgenstein—an extraordinary character, devoted, unworldly, almost prophetic—had the characteristically metaphysical gifts of great logical power, profound insight, and imaginativeness. He tended to express himself with a dark apothegmatic obscurity. His first work, the "Tractatus Logico-Philosophicus," was indeed a work of metaphysics: an ambitious attempt to describe the necessary structure of reality in purely general terms. In later years he came to think (what indeed is paradoxically suggested in the Tractatus itself) that such an enterprise was impossible: that there was no necessary structure of reality ; that all that philosophy could do was to get an insight into particular problems by examining the structure of various parts of our language as it is. His later works, published posthumously (most importantly, his "Philosophical Investigations"), are the strange, insightful, and often infuriating monument to this view.

G. E. Moore, on the other hand, was essentially a scholarly type of man. Fascinated in philosophy only by the strange assertions of other philosophers, he deployed great intellectual power and a precise, involved, literary style in the unfolding of the minutiæ of philosophical positions. Above all, he defended common sense, with an utterly individual kind of pedantic boldness. "Of course I know that the material world exists" was his reply to the traditional sceptics, Russell among them.

TRANSPLANTED to Oxford in more recent years, these two influences have grown in different ways. The influence of Moore joined there with an already existing concern for the niceties of meaning: it is not an accident that Moore, like most Oxford philosophers, came to philosophy from classical studies, while Russell and Wittgenstein came from mathematics. This has yielded an activity which perhaps most

closely approximates to Gellner's "linguistic philosophy." Mr J. L. Austin, the White's Professor of Moral Philosophy at Oxford, the leader of this school, devotes himself principally to the very careful examination of distinctions in ordinary speech, regarding this as at least a necessary propædeutic to the study of philosophical problems. A recent book by a Fellow of Magdalen College, Oxford, Mr G. J. Warnock, "English Philosophy since 1900," is sympathetic to this view, and expresses a notable admiration for Moore and for the virtues of commonsense.

Wittgenstein's influence has been very diverse. In part, it has been directly transmitted. Miss G. E. M. Anscombe, of Somerville College, Oxford, for instance, herself a pupil of Wittgenstein's and an editor of his writings, is an influential teacher, though her own work is more systematic and philosophically assertive than that of her master. Very differently, Professor Ryle himself has been influenced; his famous "Concept of Mind" bears the marks, though his own briskly realistic personality and an interest in Aristotelian categories have yielded a very individual product.

Other recent work is on quite different lines. Mr P. F. Strawson, of University College, Oxford, for instance, has attempted in a recent work the ambitious Kantian task, not sanctioned in "linguistic philosophy" as Gellner defines it, of justifying some of our normal categories by argument. The highly original "Thought and Action" by Mr Stuart Hampshire of All Souls is *not uninfluenced by French phenomenological* thought. And so on.

The closer one looks, the harder it is to see the Gellnerite unanimity in commonsensical complacency; and when one steps back again, one still cannot see it. One increasingly gets the impression that if there is complacency and pedantry, this is less the result of some philosophy than of the fact that any style of philosophy can be employed by some people in complacent and pedantic ways.

So why are modern philosophers hated—if they are? For the lay outsider, the clue might be found in this: that hardly any of them, despite their other diversity, would claim that, as philosophers, they can tell us what to do. When other direction posts are falling down, philosophers are assumed to be the people who ought to be giving us directions about life. But if they cannot, they cannot: and there are philosophical arguments for the belief that they cannot. If these arguments are valid, then the suggestion that they ought to give directions all the same is an invitation to disingenuousness.

Yet, even if there are not to be any directions, there might be something else. There might be some rather more imaginative and large-scale attempts to get to grips with our conceptual and ideological situation. We have not heard much like that; and (here Gellner has hit something) not *many* of the philosophers at this opening of the 1960s seem *very* concerned about it.

NOTES OF THE WEEK

THE SUMMIT

How Long?

THE summit meeting starts on May 16th. If it lasts ten days or so (as Mr Khrushchev is said to want) and if Mr Eisenhower goes to Moscow in June, the prospect of semi-continuous Russo-American talks is intriguing. Everything can come up a second time, if necessary; and the second time will find Mr Eisenhower and Mr Khrushchev alone. This may be what Mr Khrushchev is after; it does not seem to be what General de Gaulle intended to achieve by his earlier alarms and excursions. So Mr Eisenhower will enter a sustained negotiation at a time when the Republican party's political needs must be most obvious to everyone, particularly the Russians. If a peace platform is to be put together, it has to be put together between Paris and Moscow.

For the Paris summit, Mr Khrushchev seems to be hankering after a broad agenda. Disarmament is just now at the top of the Soviet pops: Moscow's commentators now call the Khrushchev plan "the focal point of all international life." If the ten-power talks get into gear at Geneva in March, it should be possible to submit a useful working draft to the Big Four in Paris. But Mr Khrushchev has also made it clear on several occasions that *he means business on Berlin*, and he is thought to have ideas on economic aid to underdeveloped countries, too. All this will take time to mull over, particularly if a western "package" on Germany and Berlin has to be untied in the process. There should be no need for Mr Khrushchev to dig his heels in over a formal agenda, provided he is assured of the elbow-room that a ten-day affair would provide.

M. Couve de Murville's policy speech to the French Assembly on Monday, in which he admitted the possibility of a limited agreement in Berlin, provided western rights there were not diminished, gives some reassurance that progress at the summit on this issue is still not ruled out.

NUCLEAR TESTS

Vain Puffball

PRESIDENT EISENHOWER'S announcement that the United States will not extend its voluntary suspension of nuclear tests is a wrong move. It is bound to cost his country the loss of some goodwill, and one can hardly see any counter-balancing advantage to be gained. Presumably the idea is to put pressure on the Russians to stop dragging their feet at the Geneva talks on test suspension, which have, admittedly, proved painfully slow; but, as a correspondent shows on page 38, it is not yet time to despair of reaching agreement there.

It is very doubtful whether the American announcement represents an effective form of pressure. The Russians know just how unpopular the first nuclear power to resume testing will make itself (they have indicated *pretty clearly that they will not allow* one or two minor French bangs to provoke them into resuming and thereby enabling the Americans to follow suit). They can scarcely believe that the United States will be imprudent enough actually to use the freedom it has now given itself. They are probably confident that, if it did, its political losses would be greater than its technical gains. So they are not likely to be much impressed by this week's puffball from Augusta.

The impatient men in the Pentagon and the US Atomic Energy Commission will not, for their part, be long mollified if theoretical freedom to get on with their fascinating experiments turns out, in practice, to mean that they are reined in just as firmly as before. And elsewhere in Washington—particularly in some sections of the State Department, and in Senator Humphrey's sub-committee on disarmament

—there must now be rueful reflections on the likelihood that the new move may make the Russians less, rather than more, willing to let an international inspectorate get a foot in their door—which is, after all, the main object of the Geneva talks that are due to resume on Tuesday week.

ATLANTIC ECONOMIC CONFERENCE

Danger and Opportunity

THE timetable for the series of western economic meetings due in the second week of January has now been filled out in detail. Early in the week there is to be a meeting of Ministers of the Seven. On Wednesday the 13th the economic conference of eleven European states plus America and Canada, which was announced at the end of the western summit meeting, is expected to meet. On Thursday the 14th there is to be a meeting of the council of the Organisation for European Economic Co-operation.

The danger is that the different governments will go into this economic-diplomatic dance with such wholly different objectives that nothing much will be achieved. The British Government still regards a resumption of talks between the Six and the Seven in Europe as the main purpose of the Atlantic meeting on the 13th. But the French do not share this view; neither does the European Commission. They regard the Atlantic approach as a substitute for European talks between the Six and Seven. And their attitude suits the Americans, principally interested just now in their own balance of payments.

If the conference spends its time raking over the old, and at present unsolvable, issues of Six and Seven nothing will get done. It will do better to concentrate on the issues which present an accepted common objective: aid to the undeveloped world, and a new attack on barriers to trade on a more than European scale. In London much is heard of the difficulties of cutting tariffs on an Atlantic or world-wide basis. They are real. But it would be a pity if the difficulties led Britain to adopt a timid or immobile attitude in this month's talks. No other country, after all, has so great an interest in discouraging an American retreat into protectionism.

The British might do worse than go into the Atlantic talks ready to take three initiatives: to slash some of the exorbitant British tariffs on cars and durable consumer goods without necessarily demanding a *quid pro quo* from the Americans; to discuss reciprocal reductions of the tariffs on chemicals and machinery which are mainly traded between North America and Europe; and to propose a common, if gradual, effort to reduce the trade barriers which the developed countries maintain against the relatively simple industrial products of the less developed countries.

MONCKTON COMMISSION

The Next Best Thing

THE last three members of the Monckton Commission have now been appointed —Lord Shawcross, Mr Aidan Crawley and Sir Charles Arden-Clarke. In default of Labour participation, these are as openly liberal men as the Prime Minister could get. Mr Macmillan only just beat Mr Butler to it in securing Lord Shawcross's services; but the very fact that the Home Secretary wanted him to preside over the commission which is to inquire into how the British people handle their own police forces should improve his *bona fides* in Africa. Both Lord Shawcross and Mr Aidan Crawley are former ministers of a Labour government, but now belong to no party; they may be assumed to have preserved their instinctive sympathy for the underdog, even if they have lost their faith in Labour's political methodology. Sir Charles Arden-Clarke has been one of the great nation-building colonial civil servants of our time; he was made governor of the Gold Coast by the Labour government, and can truthfully be called almost as much the architect of Ghanaian independence as Dr Nkrumah. While leading Ghana to independence, he had as his financial secretary and *subordinate* the present governor of Nyasaland, Sir Robert Armitage.

Is it too much to hope that the appointment of such men to the commission will make the nationalist African leaders think better of their intention to boycott it? Probably it is, although another gesture has been made to them by the release of Mr Kenneth Kaunda, the leading Northern Rhodesian opponent of federation: if the authorities are wise they will follow this promptly by the release of Dr Banda. It is unfortunate that Sir Roy Welensky has at this juncture taken care to fan African suspicion further by declaring he will not let the commission sit in judgment on federation, and by saying several other provocative things. But Sir Roy has not yet come up against Lord Monckton. The Africans will be playing into Sir Roy's hands if they make his remarks a further excuse for their boycott. It would be an act of very wise statesmanship if the African nationalist exiles in London would change their minds and put in their views to the commission (or failing that, to the chairman himself) before the British members leave London for Africa.

WAGE CLAIMS

The Engineers' Hours

NEXT week, the engineering unions are to meet the engineering employers, nominally to press their claim for a substantial wage increase and a reduction in their working week from 44 to 40 hours. In fact, however, the delegates will use as a starting point the employers' recent offer of a 1½ hour reduction in the working week (to 42½ hours) without any direct wage increase; if the employers will improve this offer by half an hour (granting a 42 hour week), it is generally supposed that most of the unions will accept. As average hours actually worked in engineering are now 47 a week, a reduction in the "official" week from 44 to 42 hours could simply mean that an average of five hours (instead of the present three) will be paid for at overtime rates; if so, the concession would theoretically have the same effect on wage costs per unit of output as would a direct wage increase of rather over 6 per cent. This is quite a lot.

Nevertheless, a new offer may well be made; the thought of a year without a direct wage increase sounds like a happy prospect to some of the less prosperous employers, especially those who are still not working overtime and who feel that they would not lose so very much production by sending their men home 25 minutes earlier each day. The general council of the Trades Union Congress has meanwhile weighed in with a formal statement which—although as usual marvellously obscure—was apparently meant to cheer on the view that a shorter working week should be given higher priority this year than a direct increase in wages; and some union spokesmen have proclaimed that their members are now more interested in getting more leisure than more money. In all probability, this is untrue. The TUC's sponsorship of shorter hours as the battle cry for this year started in a period when they wanted to spread work during the recession; the battle cry has lasted into the present period of boom because many union leaders think that it is politically wiser to press for a disguised wage claim this year than for a direct one. But the National Union of Railwaymen and Mr Cousins's London busmen both certainly want to get direct wage increases as well; even if settlement is reached on the engineering claim, there may still be struggles to come.

GERMANY

The Scapegoat

HERR VON PAPEN has been credited with the description of the Cabinet of the Third Reich as "a government of juvenile delinquents." The two young men who, on Christmas Eve, painted swastikas and the well-remembered slogan "*Juden raus*" on the walls of the rebuilt synagogue in Cologne, turn out already to have had police records; German history suggests, however, that this fact does not of itself make them entirely negligible. The professional anti-Germans in many countries, including Britain, have been encouraged and Germany's friends disturbed by the Christmas Eve incident and the similar, scattered incidents that have followed this week. Most alarmed and revolted of all have been the respectable majority in Germany, some of

This decade will bring considerable changes in the make-up of the British population and its standard of living. Figures and drawings in black give the picture today; those in red what we think it may be at the end of 1969. "Probably" should preface every statement about the future, but the degree of uncertainty varies. The numbers of people of working age, for instance, are very nearly determined over the next ten years, provided there is no great change in migration policy. But the spread of ownership of durable goods can be no more than an intelligent guess.

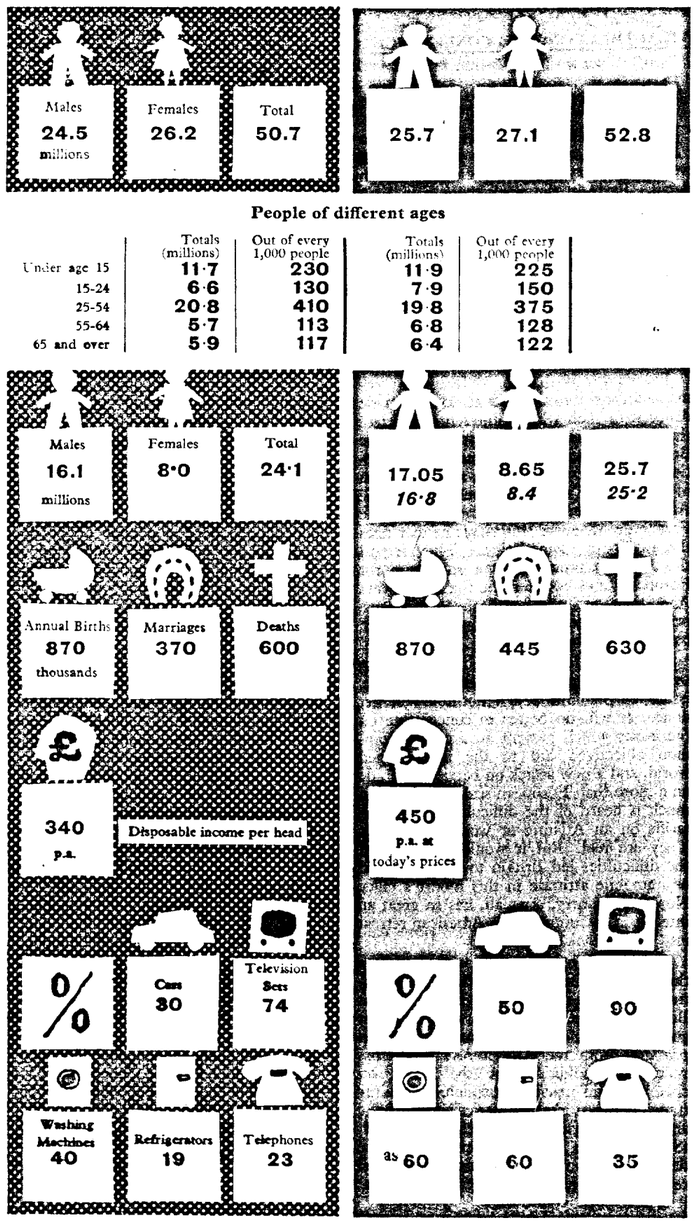
Population.

In the next ten years the **number of people** in Britain will rise by rather more than 2 million . . .

. . . and by the end of the decade there will be over 1½ million more people aged 15-24 than there are today and 1½ million more aged 55 and over. But there will be only a quarter of a million more children under 15 and there will be 1 million fewer middle-aged people.

As the "bulge" in the school population moves into the **labour force,** this will more than compensate in numbers for the decline in middle-aged people. Moreover, the number of married women going out to work is likely to rise still further. Even if the school-leaving age has been raised to 16 (figures in italics) there should be more people going out to work in ten years' time than there are now, provided the country still enjoys full employment.

The **growing population** is more a result of the earlier age of marriage and the high birth rate than of longer life. Eventually the birth rate will go up even more; but in this decade the rise in births to the larger number of 18-25 year olds will only balance the fall in births to middle-aged parents. Although death rates are falling, the numbers of deaths will rise because there will be more old people.



Income after tax.

How much better off shall we be in ten years' time? If we do as well as we have done in the last five years, the average standard of living will have risen by one-third by the end of the decade.

Proportion of Adults with Durable Equipment in their Homes.

Young married couples—and there will be an increasing number of them—want better houses. One out of every two families will probably own their house (or be buying it) at the end of the decade compared with two in every five today. They will also want better-run homes with more equipment in them. In America, nine out of ten families have refrigerators, washing machines, and television sets; three-quarters have a car and telephone. Even by the end of another decade we are unlikely to have reached present-day American standards in equipment, except in television.

Into the 1960s

whom have been in the habit of dismissing as fairy-tales suggestions of anti-semitism in west Germany, while others have been seriously worried for a year or two past.

Herr Meinberg, the chairman of the German Reich party to which the Christmas delinquents belonged—he has now expelled them and closed the Cologne branch down—has produced the most ingenious explanation of their action. They were, he says, *agents provocateurs* sent by the communists to worm their way into his party and disgrace it. Now it is true that Bonn's east German enemies are the obvious beneficiaries of this repulsive incident; any evidence to support their picture of the German Federal Republic as the torchbearer of Nazi reaction is grist to their mill. However, the explanation will not wash. The east German communists believe their picture of Bonn to be true; they would not think it necessary, nor would it be in their character, to waste agents on the work of making it come true. Further, that a virulent anti-semitism—of the kind that can lead to such an action—does survive in west Germany, here and there, does not admit of doubt; only its extent and its importance are open to dispute.

Obviously the behaviour of the two young men, and of a few others who think like them, has done much harm. Can it also do good? Possibly, if it encourages the west Germans to question the habit that grows among them of making anti-communism the sole criterion of political respectability; if it spurs them to look again at their educational system and at the history that is taught in their schools; if, in general, it causes self-questioning and is an antidote to political smugness. For it is smugness that is the real evil of west German politics of the present day, and that gives shelter to more noxious weeds. The British, for their part, have no cause to be smug either; imitators of the juvenile delinquents of Cologne have appeared in Notting Hill already.

LORD HALIFAX

What Might Have Been

A SIGNIFICANT part of world history in the twentieth century has been made by a very civilised breed of upper class Englishmen who all seem to have had exactly the same type of long, intellectual, dolichocephalic face. They have abounded in high places in our universities; they have filled the headmasters' houses of our greatest public and grammar schools; they have taken up many of the top offices in our civil service; they have served in a large number of (at least junior) ministerial offices in governments formed by all three parties. One mystery is why the same face does not frequently appear in prints of influential men in the nineteenth century; perhaps it does but is disguised because it was then always covered by beards.

The first Earl of Halifax, who died just before Christmas, was the most eminent of the modern breed. Like most others of his very intelligent type, his political impulses were admirably liberal. Like nearly all others of it, he thought that a prime duty of statesmen was to get on well with those whom he probably privately regarded as rather impossible people. This explains why he made such a favourable impression on Indian nationalists during his period as Viceroy, why he succeeded so well as Ambassador in Washington to President Roosevelt's administration during the war, and also why he has been so frequently condemned as favouring "appeasement" of Hitler and Goering. He performed any job that was allocated to him with great tact and friendly ability and skill, but he had the defect of his type's major virtue of equability: he was not likely to initiate or push any policy that was liable to cause great hurt to (or great awkwardness with) anybody whom he was likely to meet.

The specially interesting thing about Halifax is that both King George VI (certainly) and Neville Chamberlain (probably) wanted him to be Prime Minister in 1940, in preference to that "ornery" fellow Mr Churchill. If Halifax had had a little more of the wily ambition that is common to more vulgar men, he might have pushed himself at that moment of destiny into the seat of supreme power. It is fascinating to speculate what would then have occurred. Because his impressiveness in private was not matched by a capacity to make an impression in public, he would never have rallied the nation in the dark hours as the great orator did; quite certainly, he would not have been as ruthless as Churchill in sacking generals who fell down on their job; probably, his smooth diplomacy would not have been as effective as Churchill's bluff magnificence in forging the grand alliance with America that really won the war. On the other hand, if the nation had survived, he might well have felt more obligation than Churchill did to the *émigré* governments of East Europe, and the Yalta conference might not have taken precisely the form it did; as leader of the Conservative party in opposition after 1945, Halifax would not have impeded the Tories' swing to liberalism any more than Sir Winston eventually did. But perhaps all these speculations on what might have been founder from the start on the very character of the man; for wily ambition, in Halifax's high code of conduct, was one of the vices that it was just not done to have.

LABOUR AND LONDON

Breaking the Question Barrier

WHILE the Labour party is looking into the reputation of the local councils it controls, it could do worse than start with the largest. During the entire quarter century in which Labour has run the London County Council, Sir Isaac Hayward has been either Chief Whip or Leader. These two offices alone have the gift of all the committee chairmanships, the chairmanship of the council itself, and most of the appointments made to outside bodies by the LCC. Since Sir Isaac became Leader, Mrs Freda Corbett, a barrister, juvenile magistrate and MP, has been Chief Whip. Between them these two have operated a system whereby awkward questions are never publicly asked, even about straight administrative errors, by councillors belonging to the permanent Labour majority; the latter's main function as a watchdog has been to keep away the press. All questions from the Labour group are vetted by the Chief Whip before going to the clerks' table. Those that are vetoed as possibly embarrassing to the party are then humbly withdrawn.

This arrangement has now been subjected to challenge, partly because of increasing political irritation with the right-wing proclivities of Sir Isaac and of Mrs Corbett. Last month Councillor Mrs Ann Clarke, a left-winger who came in when the 1958 election produced a lop-sided Labour majority of 115 to 32, asked a question, despite being instructed to withdraw it, about possible LCC backing for the boycott of South African goods. The LCC's Labour leaders had reacted strongly against the idea of such a boycott; comically enough, a few days later Transport House endorsed it.

This incident is bound to increase the rebels' determination. Many of the 1958 crop of Labour councillors, aware that they were the beneficiaries of an extreme swing of the pendulum, realise that if the present tight little arrangement is not to outlast them they must get a move on with reform during the remainder of their present three-year term.

Adenauer Sir Ike

BECAUSE Sir Isaac Hayward was expected shortly to retire—he is 75—the main thrust of this insurrection within Labour ranks has hitherto been directed at Mrs Corbett. Many councillors have been determined to rebut in advance any presumption that she might be in the line of succession to "Sir Ike." Consequently she only narrowly scraped back as Chief Whip in 1958 and when the offices came up for annual election in 1959 she was challenged by the retiring chairman of the LCC, Mr Samuels. On this occasion Sir Isaac campaigned strongly on her side, partly on the ground that it was improper that a partisan office should be sought by a man whose role as chairman had been akin to that of the Speaker. But it is also understood that Sir Isaac told the Labour policy committee (the LCC's "Cabinet") that he was resolved to retire in March, 1960, and would like to serve his time out with Mrs Corbett, his old partner. On these and perhaps other grounds Mrs

Corbett was re-elected with a slightly larger majority than before.

From this time onwards, however, and before wider audiences, Sir Isaac's remarks about his future took on an increasingly tentative tone. The decisive moment came when shortly after the General Election Mr Fiske, the chairman of the Housing Committee, whom the rebels would like to see as the next Leader, presided over an unofficial meeting of a cross-section of the Labour group; it revived the idea of appointing a Deputy Leader to relieve some of Sir Isaac's burden. The Leader responded to this kindly thought in the bluntest way. He told the party that he would yield to the general desire for him to stand again in the new year, and that there would be no Deputy Leader. Mr Fiske is apparently preparing to challenge Mrs Corbett as Chief Whip should she seek to emulate "Sir Ike" in doing an Adenauer in 1960. In that case it will hardly be possible to preserve much longer the elaborate security precautions surrounding every move in Labour's London politics.

IRAQ

Overture to Politics

A WEEK before the date for the emergence of Iraq's political parties, General Qasim's alleged assailants are being brought to rough justice. The dock in the people's court has been enlarged for the occasion but is still a tight fit for the 57 accused, most of whom are very young and none of whom is a public figure. The 21 others who are being tried in their absence include several prominent Baath and Istiqlal politicians who had the foresight to slip away in good time, and such well-known exiles as the former Iraqi ambassador in Cairo, Mr Faiq el-Samerrai. In conducting the familiar vaudeville of pæan and insult, the court's president, Colonel Mahdawi, has prejudged the assassination attempt as a "hideous Baathist-Nasserist plot"; the defence lawyers have been overcome by the ugliness of their assignment and the queue of prosecution witnesses are more concerned to establish their loyalty than their special knowledge.

Whatever parties assemble their forces on twelfth night, the disgraced Baath is unlikely to be among them. Except for the disorganised remnants of the National Democratic party, the communists now have a remarkably clear field. The trial's sledgehammer method has done more than pulverise a party that had already lost the game; it has hammered out the theme of a beleaguered Iraq surrounded by hostile regimes in the United Arab Republic, Jordan and Persia. This call for national unity in the face of external threat could be the prelude to a much watered-down version of the promised political rebirth.

While Colonel Mahdawi drags his net wide, General Qasim, fresh from hospital, has displayed his Arabism by making a speech about Palestine. But the Iraqi leader wears Arab grievances with a difference; he has reiterated his demand for the establishment of a Palestine republic and army. This suggestion, outrageous to Amman, has the advantage of appearing positive while remaining entirely academic. It also enables General Qasim to lump Egypt and Jordan together with Israel as thieves of Palestine.

The rude things said in court about Teheran—someone has discovered that President Nasser himself is a Persian—are the straightforward consequence of the bubbling row over the Shatt al-Arab river which forms part of the boundary between Iraq and Persia. Each side is accusing the other of moving its troops to the frontier, but the Shah, at least, has shown his confidence in the quarrel remaining on ice by setting off on his postponed honeymoon on the Caspian shore.

UNITED ARAB REPUBLIC

The Baath in Decline

THE Baath party, not so long ago the heir-presumptive of Arab nationalism, has had a cruel year generally. In Syria the Baathists, officially dissolved at the time of the gunshot union with Egypt, have been steadily losing influence and made a wretched showing at the National Union elections in July. Any hopes they may have had for a come-back were scuppered in October when Field Marshal Amer, the Egyptian commander-in-chief, was given full authority over Syrian affairs. On Wednesday, President Nasser accepted the resignation of four Syrian ministers, all Baathists. They included Mr Akram Hourani, a vice-president of the UAR and the leading voice in the party, and Mr Salah el Bitar, the republic's minister of culture. There is now no Syrian vice-president of the republic, and only one Baathist left in the government in a junior post.

Field Marshal Amer's decision to go slow with agrarian reform in Syria was interpreted as a betrayal by the Baath socialists; the minister of land reform is one of those to lose his job. These specific differences apart, the sordid scene in Iraq, and General Qasim's laconic revival of the fertile crescent scheme for uniting Iraq, Syria and Jordan, are driving President Nasser to govern his Syrian region with an ever heavier hand.

UGANDA

Backing Nationalism

UGANDA stands paradoxically apart from the main stream of political development in "black" Africa. Tribal loyalties, particularly those of Buganda to its Kabaka, find well-organised political expression, while the forces of western-developed African nationalism are weak and dispersed. The result has been that the colonial administration, though anxious to emancipate the country, has found itself in conflict both with the feudal forces represented by the Kabaka and with the western-trained intellectuals (who have sniped and produced disturbances without creating any usable political counterpoise to tribalism).

A year ago the Government appointed a constitutional committee with a European chairman and a majority of African members; it turned in its report just in time for Mr Macleod to discuss when he visited Uganda last month. It has the merit of offering a simple solution for Uganda's imbroglio—a solution which has at once been accepted by the nationalists but indignantly rejected by the feudalists.

The report proposes that general elections shall be held throughout the country, not later than spring, 1961, for a Uganda legislature of 76 seats on a common roll, with a liberal franchise and no special provision for minority representation. From this legislature a responsible ministry should be formed, with the bare minimum of officials. The committee hopes that if such a plan were adopted, and responsible government loomed, responsible parties and political leaders would swiftly emerge, while the Kabaka and the other tribal rulers would be powerless to thwart the expression of the popular will. Only after the formation of this new ministry, they think, should a constitutional conference be held to discuss whether Uganda should be converted into a federal state and what place the rulers could hold in it.

It is a bold proposal. It might not work—political parties might not emerge, or might remain tribal and incapable of parliamentary organisation. But if a drastic dose of democracy does not clear Uganda's system of its tribal blockage, it is difficult to see what will. The Wild report contains the recommendations of Africans for dealing with their own feudalism, and should be accepted in principle by Mr Macleod.

PICCADILLY

Eye of the Beholder

THE Piccadilly inquiry has provided the liveliest (and most muddled) debate on town planning for some years, which is saying a lot. At least four questions are involved—all worth asking and all suffering from being confused together. First, would the proposed building on the Monico site spoil the "character" of Piccadilly? Could any individual new building be put up there which would not be accused by many people of doing so? The answer to this second question is "no." Architecturally speaking, Piccadilly Circus is a complete hodge-podge of the dignified (Swan and Edgar and the Regent Street end) and the undistinguished or vulgar; its "character," in fact, is more social than architectural.

In consequence, objectors to any new development there are bound to be of two opposite kinds: architects who want something grander and more distinctive (though quite what they are unlikely to agree), and *traditionalists* who really want to keep Piccadilly as close as possible to the familiar meeting-place which they know and like. Both groups are vocal; both ignore the facts that Piccadilly is bound to change, and that few people can really predict from the drawing-board the impact of new buildings in a place such as this.

Thirdly, is there not scope in London for much larger and bolder projects built to a closely unified design? Clearly there should be; London still has nothing that can hold a candle to Rockefeller Centre. But no plan imposed on several developers, building at different times, could achieve this result. The circus is bound to be rebuilt at different times. Piccadilly has an ample and friendly bosom and little liking for perfection. If the LCC were to redevelop the whole circus itself, there would certainly be even shriller protests from the public before and during the years of redevelopment than there is about the Cotton scheme now.

Fourthly, given that the LCC should not develop the circus itself, should it work hard to persuade private developers to comply broadly with some general design? It thought that it had done so. The proposed building fits in reasonably with the LCC's tentative design for the future of Piccadilly. Its actual shape has been determined largely by the problem of getting the permitted bulk on the site in a way which will allow for road improvements. It is a pity that the idea of a pedestrian podium has not been properly followed; probably, the allowance for more room for pedestrians and traffic is inadequate. If so, those who object must logically ask for and accept a smaller building. It is for its judgment on this last point that the report of the inquiry should be most eagerly awaited.

SOUTH AFRICA

University Apartheid

FROM January 1st, no non-white student may register at a white university in South Africa, though those in the middle of courses may complete them. Further, if a non-white wishes to take a course not offered in a black or coloured college, the Minister of Bantu Education, Mr Maree, may give special permission—but would, he promised reassuringly, be "miserly" about doing so. Most of the old staff at Fort Hare university, which catered for non-whites, have resigned or been dismissed for refusing to co-operate with the Minister, who has appointed a new and largely Afrikaans staff. The college may no longer take Indian or coloured students and is specifically for the Xoxa "nation"; other Bantu colleges will cater for other "nations." Appointments have also been made, and also mainly of Afrikaner academics, to the new coloured college in the Western Cape. Indians have now nowhere to go, unless they can get passports to study abroad.

Thus apartheid has been successfully applied to those institutions where liberal-minded men think skin pigmentation most completely irrelevant. The Union government has shown it can cock a snook at the massed disapproval of the world's academics. These have protested to the last, but in vain. There would now seem an excellent case for setting up a liberal university college, offering London degrees, in Basutoland. It would be unexceptionable for Britain to provide one for the natives of the three British high commission territories (who will be excluded from South Africa's institutions of segregated higher education), but it could open its doors to others in South Africa, and perhaps to the overflow from the multiracial university in Central Africa. There is somethig to build on (though it is denominational, being Roman Catholic). British academics should be ready to offer it their whole-hearted support, both in cash and service. This would be more constructive than refusing South African sherry in the common room. Mr Alport and Sir John Maud, the British High Commissioner for the territories, should look into it.

LIBYA

Oil to the Rescue

WHEN, on December 24, 1950, the British residents in Tripolitania and Cyrenaica and the French resident in the Fezzan transferred their remaining powers to the federal government, Libya became an independent kingdom. The monarchy was highly constitutional and the powers of the government divided among three provincial governments each as conscious of states' rights as any southern gentleman in the United States. There were few signs that the country would ever amount to anything. At best it might become another Jordan and live out a shabby political future on foreign subsidies; at worst it would fall apart and the pieces be left for the neighbours to squabble about. There was much shaking of heads among western colonial experts who were quite sure that the Libyans were not ready for independence and would not be able to cope with the problems that came with it.

For nine years the United Kingdom of Libya has been another Jordan. The subsidies have been paid by Britain and the United States in return for the use of military and air bases. Soon, however, the subsidies may not be necessary because the Libyans' dreams of oil have come true. No oil has been exported yet, but it has been discovered in great quantities and, since 1955, more than £80 million has been spent on exploration in Libyan deserts. Unlike some other Middle Eastern oil-bearing countries, Libya did not grant one great concession to one company. Instead, the country was divided into areas of varying geological attractiveness and parcelled out to a number of competing companies. So far, there are seventeen and the bargaining continues. Officially, the government is still willing to abide by the fifty-fifty profit-sharing arrangement established in the Middle East in 1950; but its most recent award—to Mr Mattei's ENI—was made on terms more advantageous to the government. Demand for crude oil may not be as brisk as it was a few years ago, but the geographical advantage of the Libyan oil—900 miles west of Suez—assures it a place in the markets of the future.

SOVIET UNION

Back to Agrotowns?

BESIDES being Mr Khrushchev's hobby, agriculture is the field in which the Soviet Union lags most behind the advanced western countries. Attention paid to this subject by the leadership is only natural. Last week, the party's central committee devoted yet another entire session to agriculture. As usual, there was a mixture of praise and blame. Output of meat and dairy produce has apparently risen considerably; it is claimed that Soviet output of butter per head has for the first time exceeded the American level. Grain production, on the other hand, fell short of the 1958 output, and grain deliveries were down by nearly a fifth. This was partly because of drought, partly because of delays in harvesting. Kazakhstan has been singled out for blame by Mr Khrushchev, who has publicly rebuked the Kazakh premier, Mr Kunayev, and first party secretary, Mr Belyayev.

The Soviet Union has to transform its agriculture radically and obtain a higher output with a greatly reduced labour force if it is not to be handicapped in the economic race. Mr Khrushchev has so far taken two ways to this goal. He has sought to stimulate production with incentives—cutting taxes, increasing the prices paid for food supplies, and transferring agricultural equipment from the state to the collective farms. At the same time, he has initiated some deeper structural changes. Reclamation of virgin lands has made it possible to extend the area of state, as opposed to collective farms; and the *kolkhozy* are progressively being amalgamated into still larger units.

It is these last changes that may well set the future tone. Collective farms in an area are now encouraged to pool their resources to buy equipment or set up common amenities. It is also intended gradually to change the system of remuneration so that, ultimately, there will be no difference of principle in the payment of state farmers, collective farmers, and industrial workers. Mr Khrushchev, who ten years ago pro-

posed to bridge the gap between town and country by creating agro-towns, has clearly not abandoned his old dream. But he will not try to realise it in a hurry. His agricultural policy is not doing so well that he can afford a rural upheaval.

REFUGEES

More Room at the Inn

At the halfway mark, it is clear that the idea of holding a world refugee year was a first-class publicity gimmick. Well-organised ballyhoo has made many people think and a few dip into their pockets. Within a year or so most of the "old" refugees, whose displacement was the backwash of the war and the Russian advance in eastern Europe, will have been moved out of their squalid camps into houses or flats that are still within their means. No solution has been conjured for the difficult cases—the disabled, petty criminals, drunks, prostitutes, or the awkward old—but more imagination is being brought to their individual problems than in the days when they were lumped together as the "hard core."

Some refugee problems simply require money: the outstanding example that concerns the British directly is the £2½ million needed to house the Chinese refugees in Hong Kong. But money is not always the whole story. The political disorders that uproot a refugee can follow him in exile. A few months ago the French government took a stand that made it doubtful whether any international money could be given to the Algerian refugees in Tunisia and Morocco. Sense has prevailed, and the Algerians will now have enough food to see them through the winter. The Palestinian refugees, on the other hand, have long been frozen in their wretched existence by the political stalemate between Arabs and Israelis. After a brave attempt by Americans and others at the United Nations to approach their problem realistically, this whole question has been shelved for yet another three years.

Possibly the most useful result of the publicity is the light it has thrown on illiberal immigration policies. This has helped Dr Lindt, the High Commissioner for Refugees, whose gentle persistence has gradually worn a little of the stone out of the hearts of immigration authorities. A few of the families which include a sick or otherwise disqualified member will now be able to make a new start without splitting up.

Another improvement is that some governments, notably the Australian, are beginning to see their way to accepting Jugoslav immigrants. At present a Jugoslav with ordinary economic reasons for wanting to migrate has first to get himself accepted in a country nearer home as a political refugee before he is considered acceptable by, say, Canada or the United States. The wasteful illogic of this process has gradually made an impression, and in future the streams of refugees and migrants may be less confused.

UNITED NATIONS

Priming the Aid Pump

A YEAR ago the UN Assembly approved the setting up of a special fund to finance "pre-investment" operations in under-developed countries — principally, surveys of resources and development possibilities, and research and training programmes. The purpose is to provide the data and the trained staff that large scale development work must start from. By thus making straight the way, they will also, it is hoped, help to attract capital, governmental or private, for the large-scale work. The special fund is essentially concerned with priming the pump.

Its 18-nation council has now put it properly in business by approving a list of 31 specific projects that will cost the fund $23.7 million. (A first short list of 13 other projects, costing $7.5 million, had been approved in May, but only now can the fund be considered fully operational.) In each case the cost is divided, in varying proportions, between the fund and the governments requesting its help. Most ambitious of the projects is a six-year plan, to which the fund will contribute $2.5 million and seventeen governments will contribute $1.3 million, to seek better means of checking the ravages of the desert locust; this plague has defied thirty years of attempts to control it, and in bad years about $30 million is now spent on defence against it, while the damage it does to crops between Morocco and India is almost past reckoning. Others include industrial training institutes in Poland, India and Jugoslavia; a fisheries institute in Ecuador; a soil survey of areas to be reclaimed from the desert along the Egyptian Nile; and help with problems of administration and development in Guinea.

Mr Paul Hoffman, as managing director (his deputy is Professor Arthur Lewis), already has 140 more requests for aid awaiting investigation; but only $32 million has been promised him for 1960, 40 per cent of it by the United States (Holland, Sweden and Canada have been other outstanding contributors). He must necessarily be highly selective. The fund's ability to say "No" diplomatically but firmly will be severely tested in 1960.

Correction.—The statement in *The Economist* last week on page 1227, that Major Macleod (brother of the Colonial Secretary) is a supporter of the Briggs group in Kenya is incorrect. He informs us that he is organiser-designate of the New Kenya party, led by Mr Michael Blundell. We are very sorry for any inconvenience caused to Major Macleod.

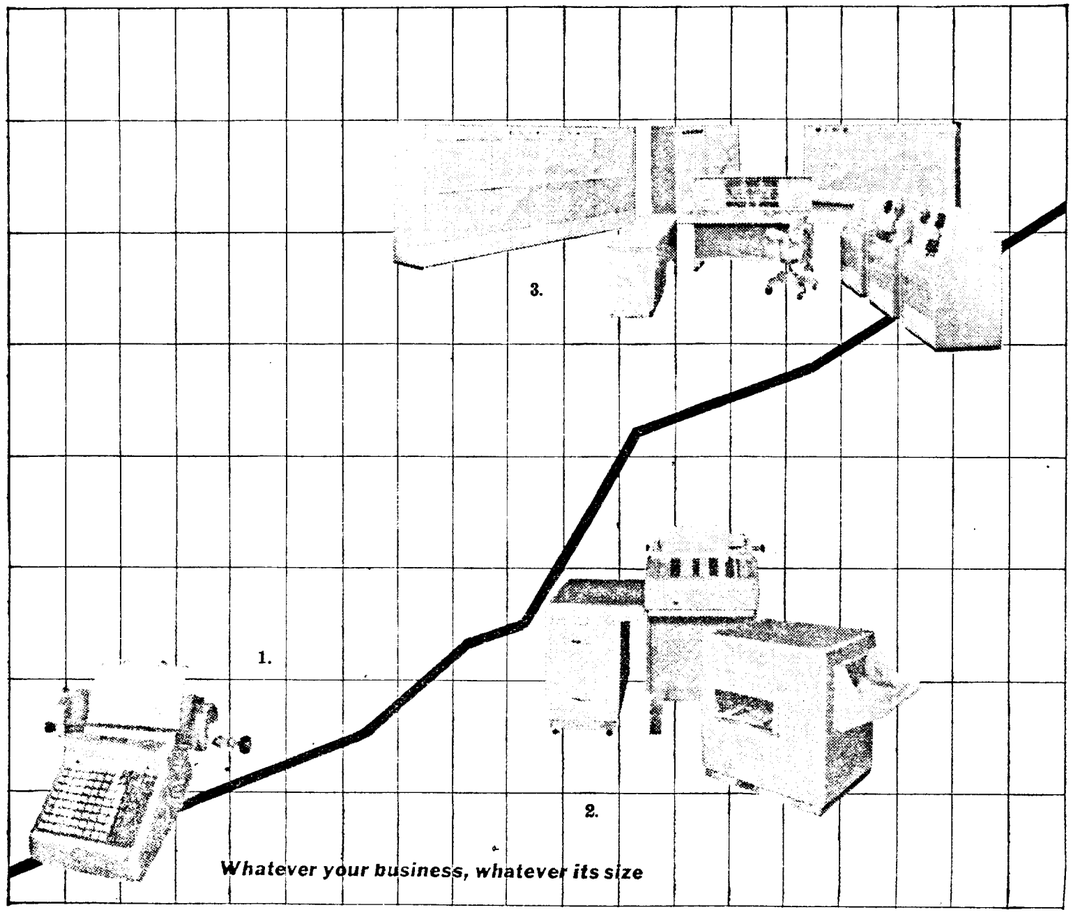
The Economist

DECEMBER 31, 1859

LORD MACAULAY

We little thought when two years ago we congratulated the country on the elevation of our greatest historian to the peerage, that we should have to record and lament his death before his voice had once, as far as we know, been heard in the House of Lords. Lord Macaulay died on Wednesday evening at eight o'clock, at his residence at Kensington, of a disease of the heart. . . . There are few living men who are likely to contribute so much to the enduring portion of English literature as the historian whom we have lost. Conspicuous as were his political claims to a peerage, . . . it is chiefly as an historian and an essayist that he will be remembered amongst us. As a politician, no doubt he exercised now and then a very remarkable influence. Some of his speeches in the House of Commons are said to have changed the fate of a measure, by entirely changing the result of a division. And we can well imagine that this was so. Lucid exposition was his forte. . . . He delighted in *exhaustive* exposition of every kind, whether in narrating or discussing,—and this it was which, while it eminently fitted him to carry the House of Commons on all occasions when that method was applicable, rather unfitted him for wielding the ordinary powers of a statesman. . . . He was a politician for great occasions,—when the *magnifying* character both of his intellect and his imagination could be brought into play with effect,—when he might safely be permitted to draw the attention of his hearers to a first principle, bid it expand before their eyes in every direction, and fill all their minds with homely and vivid illustrations of its worth. . . . There are scarcely any of Lord Macaulay's most splendid and effective speeches which do not owe their effective character to some form of this power. When religious Toleration had become so hacknied a word that it rather annoyed men of liberal minds even to be obliged to defend it, Lord Macaulay delighted in expounding its merits and recalling its full meaning till it had as new and curious an interest to the minds of his readers or his audience, as the commonest texture acquires when you see it beneath the glass of a microscope. He could write in favour of the civil privileges of the Jews with power and force when to every other mind the question was worked utterly dry. . . . In short, his greatest triumphs were gained by bringing to bear on hacknied, though only half-known, principles of popular right, the influence of his vivid and powerful imagination.

Up the wall?



Don't we all know it—there can be more headaches than bricks in a building project! Plans, costs, time schedules—now, where do we start?
Well, if you believe that walls are not for being driven up you will start *by contacting Costain*. And that applies to every conceivable sort of building project. For the sooner you make use of Costain's skills, experience and resources, the sooner you will learn how efficiently and economically a building operation can really be conducted.

For example, here are a few projects recently completed by Costain:
TRANSISTOR FACTORY SWINDON · THE KARIBA TOWNSHIP
BEA WEST LONDON TERMINAL · BP RESEARCH STATION
IBADAN TEACHING HOSPITAL · CIBA PROCESS BUILDING

It's never too soon to call in Richard COSTAIN Limited

There's a Burroughs Data Processing Machine designed specially for your needs

Burroughs make a full range of business equipment—that's why, whatever the size of your business, there's a Burroughs system exactly fitting your needs.

Burroughs forward-looking design and precision engineering ensure that each machine, in each class, has all the versatility and the advanced automatic features required by today's modern accounting methods.

Whether your business calls for an adding machine, an accounting machine or a large electronic computer, you can be sure that a Burroughs machine will give you the right answers—with more information—faster at management level.

Your local Burroughs man is available now to demonstrate how you can streamline your accounting with Burroughs data processing equipment. Or write to :

Burroughs Adding Machine Limited,
Avon House, 356-366 Oxford Street, London, W.1. Tel: HYDe Park 9861.

1. **New Burroughs Shuttle-Carriage Adding Machine**—for vertical and shuttle listing work on tape or wide forms—easy, speedy, flexible.
2. **New Burroughs Sensitronic with Automatic Reader**—electronic accounting machine providing ledger-keeping with visible record and magnetic storage. Trial balancing made completely automatic when linked to auto reader with individual form handling.
3. **New Burroughs 220 Electronic Computer System**—the most complete electronic data processing system in production today.

Burroughs

LETTERS

Power Prices in Italy

SIR—Mr de Biasi, in the letter which you published in *The Economist* of December 5th, tried to disprove your Rome correspondent's assertion that the high cost of electric power had delayed industrial investment in the south of Italy. Mr de Biasi, apart from being president of the National Association of Electric Power Producers and Distributors, is managing director of the Edison finance corporation and of the electrical and commercial Edisonvolta company, which provides electrical energy, in conditions of almost absolute monopoly, to the richest areas of northern Italy, a territory about the size, and having more than twice the population, of Switzerland. In addition, Edison's is a member of the syndicate that controls the Bastogi holding corporation, which in turn owns a large part of the electrical and manufacturing undertakings of southern Italy and of the islands. In practice, the state does not control the Edison group ; it is rather, Edison's that controls the state.

For many years, Italian ministers have promised to standardise electricity tariffs, but standardisation is still awaited. At present the maximum price of power for industrial users—above 30 kW—is double the minimum. For electric light, the discrepancy is even greater. Provision of power to new users is generally made at maximum prevailing prices. This greatly hinders the industrialisation of the south.

Mr de Biasi asserts that at present the supply of electrical energy, even in the south, is more than sufficient to meet the demand. However, the demand is conditioned by the price level: a drastic price reduction is essential if new enterprise is to be stimulated in the depressed areas.

Mr de Biasi also asserts that the maximum prices prevailing throughout Italy are, "by and large," lower than those of other countries belonging to the European common market. It is not possible to make an exact comparison, but it may be interesting to examine the changes in the price of electric power in various countries since before the war. The National Union of Business Consumers of Electric Power recently published a study based on UN and OEEC statistics showing that in seven countries, using 1938 as the base year, the index of prices of electrical energy in 1956 fell short of the general index of wholesale prices; by 46 per cent in the United Kingdom ; 50 per cent in France ; 40 per cent in the Netherlands ; 64 per cent in Sweden ; 40 per cent in Switzerland ; 25 per cent in Austria ; and 39 per cent in the United States. In Italy, the opposite happened, the electricity price index having actually outstripped the general price index.

For many years, Italy has had this unenviable distinction; whereas in other countries the reduction of production costs, thanks to the progress of electrical technology and to increased sales, has benefited users, in Italy it has served only to swell monopoly profits.—Yours faithfully,

Rome ERNESTO ROSSI

The Suicide Bombers

SIR—I am offended by the review of "The Divine Wind," which appeared in your columns on November 28th. We all have engraved on our minds the faults and crimes of the Japanese in the last war, and recall that some of our countrymen, who were prisoners, were subjected to foul treatment. But magnanimity requires that we speak with respect of deeds of sublime heroism, like those of the suicide bombers, even although they were performed by former enemies. It is not good enough to speak of "nightmarish Kafka-like unreality." Human beings actually did these things.

Your review speaks of "glutinous" sentimentality. Japanese civilisation is so far removed from ours as to be difficult to understand, and the linguistic barrier is almost unpenetrable. Those who know something of the Japanese are aware that the sentiments pertaining to their personal relations are of an infinite delicacy and tenderness. They will believe that the sentiments referred to in the book are more likely to have been gossamer than glutinous. And, if it is impossible to prove this either way, the benefit of the doubt should be given to any sentiments relating to deeds of imperishable glory.—Yours faithfully,

ROY HARROD

Christ Church, Oxford

The Failure of the "New Economics"

SIR—It is futile for an author to quarrel with the overall judgment of a reviewer ; but I hope I may be allowed to correct a misapprehension. The review of my book in your issue of October 24th declared, referring to me, that "he merely denies (on evidence drawn entirely from the post-Keynesian era) that the money illusion ever existed at all."

The only reference to this matter that I can find in my book is on page 18, where I write, referring to Keynes's contention that "labour" stipulates for a "money wage" rather than a "real wage": "So far as the United States is concerned (and, I suspect, so far as nearly every industrially advanced country is concerned), this contention is already obsolete." This statement is limited both geographically and in time. To point out that a contention is now obsolete is to imply that it may once have been applicable.

So far from denying that the money illusion ever existed, I have over many years written perhaps too insistently on its existence and effects. In my "Economics in One Lesson," for example, published in 1946, the whole chapter on "The Mirage of Inflation" is devoted to it. To quote from pages 185 and 186:

> Inflation throws a veil of illusion over every economic process. It confuses and deceives almost everyone, including even those who suffer by it. We are all accustomed to measuring our income and wealth in terms of money. The mental habit is so strong that even professional economists and statisticians cannot consistently break it.

—Yours faithfully, HENRY HAZLITT

New York City

Ireland and the United Nations

SIR—The Irish delegation's attitude is even more courageous than you suggest in your issue of December 19th, when you consider how much criticism Messrs Aiken and Boland face at home. They are accused of flouting the wishes of Ireland's traditional friends, America and France, on the questions of China and Algeria respectively. Moreover, their stand against apartheid is a reversal of the old pro-Boer attitude dating from 1900, and has antagonised many Irishmen living in South Africa.

It is, of course, an excellent thing to see Irish statesmen taking an objective view of world issues, instead of harping on old domestic quarrels over partition and the like.—Yours faithfully,

Dublin NEIL RENTON

Farewell to the Fifties

SIR—It would seem that the editorial staff of *The Economist* have fallen into the age-old trap of assuming that the present decade, known as the fifties, terminates on December 31, 1959, whereas in fact it surely terminates on December 31, 1960, a year ahead.

Otherwise the first decade of this century would have nine years and the last one eleven years. It was, therefore, with some surprise that I observed the front cover of your issue of December 26, 1959. All best wishes to all at 22 Ryder Street for the remaining year of our present decade.—Yours faithfully, REGULAR READER

By Vincent Massey.
Macmillan. 254 pages. 30s.

It is natural to suppose that the collected speeches of a governor-general will be unutterably dull. This volume of Mr Massey's speeches may turn out to be a sore trial to other governors-general, because it proves not only that they need not be dull but also that they can be positively exciting.

Towards the end of a memorable eight years as Governor-General of Canada Mr Massey once remarked that he had been pleasantly surprised to find how much he was able to say within the limitations of his office. The evidence is in this collection of 44 speeches selected from more than ten times the number delivered while he was in office. (This excludes the speeches written for him by his ministers ; they are the subject of a delightful commentary originally given in the privacy of a dinner of the Parliamentary Press Gallery, but now published "by permission.") The reader may share Mr Massey's pleasant surprise, but he has a far more delightful surprise denied to Mr Massey. This is to discover beneath the viceregal hat such an astonishingly well-stocked mind, such a wide range of knowledge, and a depth of perception unusual in philosophers and almost unheard of in governors-general. The exciting discovery is not that he could say so much but that he had so much to say.

The lucidity and balance of Mr Massey's style were already known. The range of his mind has never been so clearly demonstrated. His quotations (which are frequent without ever becoming tiresome) range from the memoirs of an unknown pilgrim in Europe in 1480 to Phyllis McGinley of the contemporary *New Yorker*, from Mother Goose to Sir Thomas Browne. They include the letters of Bishop Strachan of Toronto and the "Letters of a Self-made Merchant to his Son," extracts from Gilson, Saint-Exupéry and "Office Equipment News," Confucius and Herbert Butterfield, Plato and Toynbee, Voltaire and a man who wrote to *The Times* a century ago to call a contemporary statesman "a squirt of dirty water."

In the 1820s, Mr Massey told the University of Manitoba, the students of St Boniface were being introduced to the works of Cicero. "They were also, I find, being personally instructed in the use of the plough by the Bishop himself." Had Mr Massey been bishop at the time, he would undoubtedly have taught both Cicero and ploughing. He admires, and pays tribute to, Lady Aberdeen, who occupied Rideau Hall in Ottawa before the turn of the century and (he said) "there hatched a good many eggs." "Before such characters," he said, "men and women alike can only stand in admiration, or, occasionally, dismay."

If ever there were occasions when "governor-generalities" (as he loved to describe them) were called for, they would appear to be the three speeches that are given in sequence in this book and were delivered to the Richelieu Clubs of Quebec (in French), to the Canadian Jewish Congress, and the Montreal Council on Christian Social Order. Even so, to each of these audiences he made a speech of sincerity and substance. (In the last, for example, his quotations were from Milton, Thomas Browne, Dean Inge, Herbert Butterfield and T. S. Eliot.)

Whether he had been Governor-General or not, Mr Massey would not have been the man to propound glib solutions to great problems. His extraordinary achievement is to bring some new shaft of light to each of them. Gently and urbanely, he provokes the reader to fresh explorations. He neither indulges in controversy nor avoids it ; he carries it down to a deeper level. If the margins of viceregal propriety now are shown to be wider than one supposed, perhaps it is because they apply to a horizontal dimension, not to the vertical ; they impose no ban on depth. Education—broad, liberal education in the humanities—emerges as the greatest concern of the author and the most recurrent theme in these speeches. He slips in a quotation from Bishop Strachan's address to his pupils in 1807 that contains the kernel of his own conviction:

> It is to the want of a systematic education, to a confused method of thinking, early acquired and never thoroughly removed, that we must attribute those numerous inconsistencies and that confusion of ideas, which we find so general amongst those we converse with.

On another occasion he said:

> Criticism, if adverse, can be harsh ; if favourable, can be patronising. It will be neither if offered with humility . . . the peculiar Christian virtue, rare and precious . . . no negative virtue, but a positive grace achieved alone by those who stand in the light of a truth which illuminates them and which dedicates them to the love and service of their neighbours.

It might be better to forget that these were the speeches of a governor-general, and to read them as a distillation from the mind of an unusually wise, scholarly and humane man. But in fact they were the speeches of a governor-general. *O si sic omnes!*

Disillusioned American

Eisenhower: *Captive Hero*

By Marquis Childs.
Hammond, Hammond. 285 pages. 25s.

Mr Childs has not been lucky in the timing of his biography, but it is healthy to be reminded, as millions cheer the President, that only a year ago a most fair-minded observer could write of the fading Eisenhower image and the twilight of a great reputation. No one could foresee then how skilfully the President would bring Congress to its knees or could predict the great revival of his popularity and his own zest in the job. But even if Mr Childs were writing today, it is doubtful whether he would alter much in his book. It is hardly the "critical study" of the subtitle, being much more a chronological account of life of the General and President. But, though polite and scrupulously fair, it is basically hostile.

Mr Childs does not quite say so, but he obviously sees a frightening parallel between President Eisenhower and Buchanan, a weak President who was too ineffective to halt the drift to Civil War. He rightly criticises Mr Eisenhower for not having used his great authority to lead the South to accept the Supreme Court's decision declaring racial segregation in tax-supported schools to be unconstitutional. The half-hearted, faltering response to the Russian sputnik also deserves unfavourable comment. But the author is on less certain ground when he complains about the President's unwillingness to spend more on defence. Like many American liberals, Mr Childs is anxious to keep up with the Russians and if possible out-distance them and has little interest in balancing the Budget ; it can be argued that the President, for all his faults, has shown a sounder sense of proportion. If this reservation is borne in mind, British readers will find Mr Childs an illuminating and perceptive guide to the first six years of the Eisenhower Presidency.

The Civilisations of Africa

Old Africa Rediscovered

By Basil Davidson.
Gollancz. 287 pages. 25s.

The blurb on the front cover of this book announces that "here is an awe inspiring account of the discovery and rediscovery of a continent. . . ." It is nothing of the kind. It is a brilliant journalist's record of his own discovery of the extensive and intricate pattern of history behind the indigenous social and cultural panorama of Africa. So the story has two sides. One concerns the sources of what knowledge there is of the peoples and civilisations of Africa before the colonial era. The princes and statesmen, voyagers and captains, ethnologists and archæologists, whose writings and excavations make up these sources, are exhibited with the fervour of a collector and true believer. El Bekri, compiling his gazetteer of the kingdoms of the Sudan in Moorish Spain at the time of the Norman conquest, figures in the same chapter as the meticulous nineteenth-century traveller Barth. Mr Davidson's enthusiasm never flags, and many of his readers will be inspired to sample for themselves the exotic originals.

The second side of his story is the display of the panorama itself. It is unfolded for each of the main geographical regions of Africa in turn, beginning with the pre-Christian civilisations of the north-east, known in barest outline from archæological excavators, going on to the medieval kingdoms of the Sudan, the coastal trading states of East Africa, for which both written and archæological records exist, and finally to the controversial stone citadels of Zimbabwe and the other southern sites. It is a stirring tale. One minute we are in medieval Mali with Ibn Battuta and the next minute we are amidst the nineteenth-century vestiges of the trans-Saharan commerce, the warfare and the statecraft that created the old kingdoms of the Sudan. Mr Davidson seldom stops long enough to discuss a topic in scholarly detail. But that is not his aim. For he is not only an enthusiast ; he is also a crusader. He has set out to prove that Africans were not utterly steeped in primitive savagery and devoid of history until the white traders, missionaries and administrators fastened themselves on their countries. This is a laudable undertaking ; and Mr Davidson's eloquence will, it is to be hoped, attract wide attention to the labours of the scholars cited by him, who have unravelled parts of the story during the past thirty years.

Mr Davidson rightly attaches great importance to the spread of iron-working in Africa. But this lies back in such nebulous antiquity, as African cultural history goes—though it may not be more than a thousand years ago in some parts of the continent—that little specific can be said of it. More valuable, in the perspective of today, is his frequent reminder that the African civilisations encountered by the Portuguese and other European voyagers of the fifteenth and sixteenth centuries were in many respects fully on a par with those of contemporary Europe and the Arab world. One reason for this was that Africa was never wholly cut off from Mediterranean civilisation and from the Oriental world. Briefly though he does it, Mr Davidson conveys this with vivid effect. What, then, went wrong and brought catastrophe and decline on the civilisations of Africa? Mr Davidson's answer is that it was the rapacity of the better armed, better organised and more ruthless Portuguese and other European and Arab powers, avid for gold, ivory and above all slaves, that did it. The hasty reader might conclude that Mr Davidson believes Africa would have evolved civilisations yet more complex and rich if these depredations had not occurred. This would be unfair to him. But who can say that it is an unwarranted belief?

This is not a scholarly book in the strict sense, though there is ample evidence that Mr Davidson knows the literature and the terrain to a degree that would do credit to a specialist. Its appeal will be all the wider, and benefit will, in due course, be reaped by professional researchers into Africa's past. It would be easy to criticise Mr Davidson on the grounds that he takes too rosy a view of the ancient civilisations of Africa. But this may commend his book all the more to the new intelligentsia of Africa and stimulate them to take a more serious interest in their traditions and institutions.

One Government and Another

Modern Forms of Government

By Michael Stewart.
Allen and Unwin. 284 pages. 21s.

A good English textbook on comparative government is much to be desired, and Mr Michael Stewart MP has made a gallant if not altogether successful attempt to fill the gap. He has tried to give an account of a number of the principal governmental systems of the modern world, including those of the United Kingdom, the principal Commonwealth countries, the United States, and of several countries of Western Europe, as well as the Soviet Union. He has also produced some examples of the possible uses of the comparative method in chapters dealing with the general character of the Commonwealth governments, with federalism, and with the democratic and communist approaches to government respectively. He thus hopes both to provide the possibility of studying within the same framework very different forms of government, and of extracting the principal features by which Western democracy is to be distinguished from Soviet communism and its affiliated regimes.

The difficulty is that to cover so much ground one is obliged to compress the descriptive material to a point at which compression becomes possibly misleading. He has further limited the space available to him by using up several pages to describe the institutions of the French Fourth Republic and one of its electoral systems—he does not say that there were more than one—and only then going on to deal with the Fifth Republic, to which he seems disinclined to allow the title of democratic at all. Furthermore, although the descriptive chapters are fairly adequate in regard to the composition of legislatures, their relations with the executive branch of government, and the judicial systems of the various countries, there is far too little material on the nature and recruitment of the public services and hardly anything on the vital question of civil/military relations. The former omission leads him to obscure the substantial distinction between the American idea of what is appropriate in a higher civil service and the British and continental idea or, again, the difference between Great Britain and Western Germany on the relations between civil servants and political parties.

In addition to the effects of compression, there is a considerable number of straightforward errors of fact, particularly in the sections dealing with the United States and France : and there is the rather extraordinary statement that Soviet Russia has a "rigid" constitution. With five more years in Opposition Mr Stewart will have plenty of time to revise this work for a second edition which, despite the faults, will probably be called for.

A House Divided

The War for the Union: *The Improvised War 1861-1862*

By Allan Nevins.
Charles Scribner's Sons. 446 pages. 52s. 6d.

Bulging with facts and opinions, significant and insignificant, relevant and irrelevant, this is the first volume of four that Mr Nevins is devoting to the American Civil War and the fifth in his series of ten surveying the history of the United States from the Mexican war to the end of the reconstruction era. To judge a four-volumed history by the first offering is, perhaps, a little unfair. But the shape of Mr Nevins's pudding is already apparent and

HMSO

Commonwealth Trade with the United States 1948-1957

Many aspects of trade between Commonwealth countries and the United States are kept under review and this memorandum summarises the main features of that trade and examines the more significant trends and developments in the post-war period.
5s. (*post* 4d.)

Commodity Series

An annual series, prepared by the Commonwealth Economic Committee, giving, in summary form, statistical data of world production, consumption and trade for groups of allied commodities. Recent issues include :

Grain Crops 10s. (*post* 9d.)
Vegetable Oils and Oilseeds 10s. (*post* 10d.)

From the Government Bookshops
or through any bookseller

HMSO

so is his method of mixing. "Organisation," he writes, "is a key word and from one point of view the transformation of an unorganised land into an organised nation was the key process of the Civil War." And a few pages later; "War presents innumerable large-scale problems which demand experts supported by large-scale organisation. In time both the experts and the organisations were to appear—and with them a new nation." This would seem to be the broad theme, superimposed upon the narrower, personal theme of Lincoln's growth into greatness.

These could be great and indeed noble themes. One's fear is that Mr Nevins, in failing to organise his mass of raw material, will fail to make the most of them. He is too prone to chase the odd fact, devoting several indigestible pages to the Census of Manufacture in 1860 and too few to the battle of Bull Run. Some of his comments too are odd, occasionally displaying irritation that things were not better run or organised. The difficulties are partly of his own making, for having made his narrative so huge and so, he obviously hopes, comprehensive he has to stitch it together with his own running commentary. For example, he takes an unorthodox and condemnatory view of the activities of Lyon and Blair in Missouri. It is refreshing to come across a historian of the Civil War who sees that there is a contradiction to be resolved in the attitude of neutrality towards Kentucky and in the forward policy in Missouri, but Mr Nevins seems to adopt too sweeping an explanation in writing:

> It was certain that the Union forces could in time conquer the State. But it was also certain that their conquest would leave it seething with hatreds, a divided county by county, even farm by farm, by the bitterest antagonisms and racked with internecine war. Of all the Border States, we repeat, Missouri was destined to suffer most and that suffering was to a great extent the work of three men: the fire eating Claiborne Jackson, the fanatical Lyon and the ambitious Frank Blair.

The logic is surely that Missouri was not set house against house because of the impetuosity of Lyon and Blair but that they acted as they did because Missouri, like the States, was a house divided against itself. Indeed not many pages later, Mr Nevins recognises this, writing:

> Although Frémont and Frank Blair divide a large culpability the greater explanation of the sad situation lies in the factors already noted —the deep social divisions of the State, half slave and half free; its refractory geography, tying Union defences to long lines of river and rail; Washington's inexcusable neglect of the trans-Missouri region; and the readiness of men reared on the frontier to fly to violent measures.

There is a real need for a history to be written of the American Civil War, based on the far-ranging knowledge that Mr Nevins possesses, and which sets the military campaigns (on which too much loose stuff has been written) against the shifting political and economic background. However, if Mr Nevins's first volume is not fully up to expectations, that is better than that he should not have tried at all. If the next three volumes follow the pattern of the first, the student of the Civil War will have a ready work of reference: he will be able to see what Lincoln and Seward were thinking at that moment, what outside events were pressing upon their decisions and how they and the American nation reacted in this terrible war of cousin against cousin, brother against brother. For that reason alone we need to be grateful to Mr Nevins. And there is much pleasure to be gained from being shown round a dark and enormous godown by a garrulous and enthusiastic guide, who at each bale of goods rattles off the port of origin, the port of destination, the specifications and even the lading number to the fascinated if slightly dazed visitor.

Comings and Goings

The Great Maria

By Elizabeth Inglis-Jones.
Faber. 265 pages. 25s.

MARIA EDGEWORTH was one of the finest products of the age of reason in its latest flowering. There was every cause for her to be crotchety: she adored a father who was certainly a rationalist, but erred on the side of enthusiasm and crankiness; she was plain and abnormally small; her thrice-widowed father married a girl of her own age; her family suffered more than its share of illness, early death, madness, and—even worse in those days—debts. But she went on through it all, devoted to her stepmother and her innumerable half-brothers and sisters, the mainstay of her family, the best business head of them all, always an example of rational morality, always amusing, and turning out meanwhile a series of admired books, which are not so completely forgotten today as Miss Inglis-Jones would have us believe.

The author says that she does not attempt to discuss Maria Edgeworth as an author, but only to give a truthful purpose of her as a person. In fact she does less than that. No picture of such a woman can be truthful that says nothing about her books and hardly anything about her ideas. The picture given is that of a nice, well-bred and well-connected homebody, thoroughly capable in all practical affairs, who for reasons briefly mentioned but not discussed happened to have a European reputation. In fact this is a study based on Maria Edgeworth's letters, many of which have not been published before. The scope of the corespondence limits the scope of the book. Most of them are family letters saying where she has been and whom she has met—just the kind of thing which her relatives must have wanted a century and a half ago, but seldom enthralling today. For obvious reasons the material comes thickest when she is on her travels, which slightly distorts the picture of her life. She met all the right people, but only rarely rose above the level of the well-written and lively chat which her correspondents expected. There is little new about life at Edgeworthstown; here again the author does not stray far from her material and respects her subject's well-bred reserve. Her father, in particular, comes out of it better than usual.

This is not a heavyweight book; but it is pleasant reading, and a good introduction to all but the intellectual side of a strange life.

The Magistrate

In Some Authority

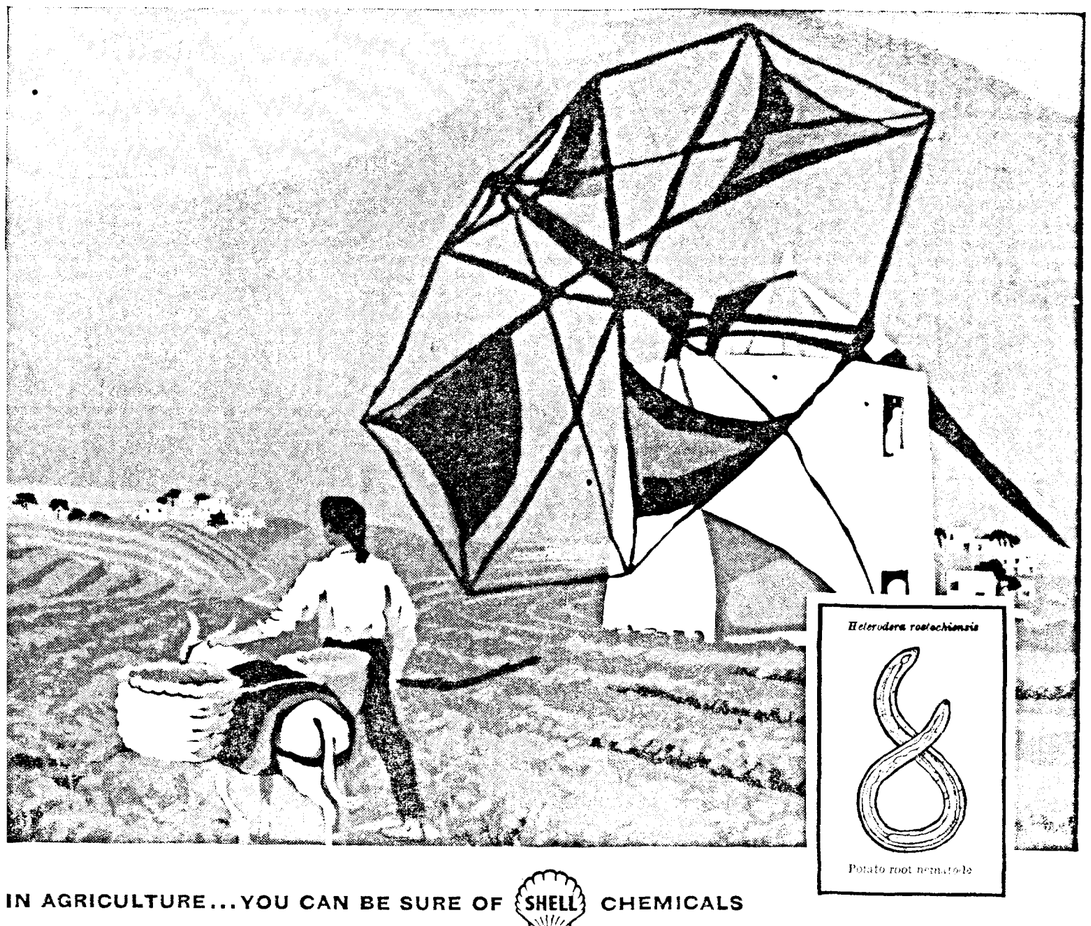
By Frank Milton.
Pall Mall Press. 168 pages. 16s. 6d.

THE only court which the average citizen is likely to appear before is a magistrate's court, and Mr Frank Milton, himself a metropolitan magistrate, has performed a valuable service to the general public by writing this witty, concise and comprehensible account of magistrates and their work. Today, there are 16,000 justices of the peace on the active list, unpaid, part-time, and the vast majority without legal qualifications. Assisting them in their work in London and some provincial cities are fifty stipendiaries, with similar jurisdiction, but who are full-time, paid and legally qualified. In 1958 more than a million people came before these magistrates on criminal charges, over half having been concerned in motoring offences.

The origin of JPs is disputed, but most scholars trace it to Edward III's statute in 1361, which charged in every English county "one lord and with him three or four of the most worthy in the county, with some learned in the law" to arrest and punish malefactors and to keep the peace. The king had found an ideal instrument to keep local order, and the later Plantagenets and Tudors made full use of it for both judicial and administrative purposes. The justices reached the peak of their power in the eighteenth century when they were the unchallenged rulers of the countryside, but nineteenth century reforms steadily stripped them of their administrative power, so that today this is confined mainly to licensing.

Mr Milton is content to avoid controversy and his criticism is of the mildest. On the whole, it must be admitted, the system works well, and has the inestimable advantage of being cheap. Many of the criticisms of the past, of appointment from a narrow social class, of tyrannical behaviour and of senility, are no longer true. Deafness continues to be a major handicap to ageing magistrates, and the story of the justice who, on being told by a conscientious objector that "God Almighty" was his witness, requested the defendant to "put him in the box" has its element of truth. A justiceship, however, is no longer regarded as "a poor man's knighthood," and advisory committees have been scrupulous in preserving a political balance in appointments. The enlightened work of justices in juvenile courts and in administering the probation system deserves high praise.

Potatoes à la Portugaise



Across the Tagus, not far from Lisbon, in the southernmost section of Estremadura, lies a rich agricultural area enjoying one of the finest climates in Europe. It is here, around the pretty white villages, that early potatoes are grown for the nearby Lisbon market. There was great concern when, mysteriously, the crop began to decline. Each year, in spite of intensive husbandry, the soil yielded less. The authorities were called in and, in a survey discovered that the losses were due to the fact that nearly a third of the area was under attack by the potato root nematode (*Heterodera rostochiensis*).

Immediately, trials were undertaken with the highly effective Shell soil fumigant, D-D, which was injected into the soil four weeks before planting. A wise move indeed for, on lifting the potatoes in the following summer, it was found that the yield had increased from an original 6,000 kgs. to 22,000 kgs. per hectare—an increase of *over six tons per acre*!

Neighbouring farmers were so impressed by these trials, which had been carried out under official auspices, that they began to apply the D-D treatment of their own accord. Today, many of them regularly fumigate their land, before planting, with D-D, especially where potatoes are grown year after year in the same soil. With D-D, the farmers are getting 'second helpings' . . . of potatoes *à la portugaise*.

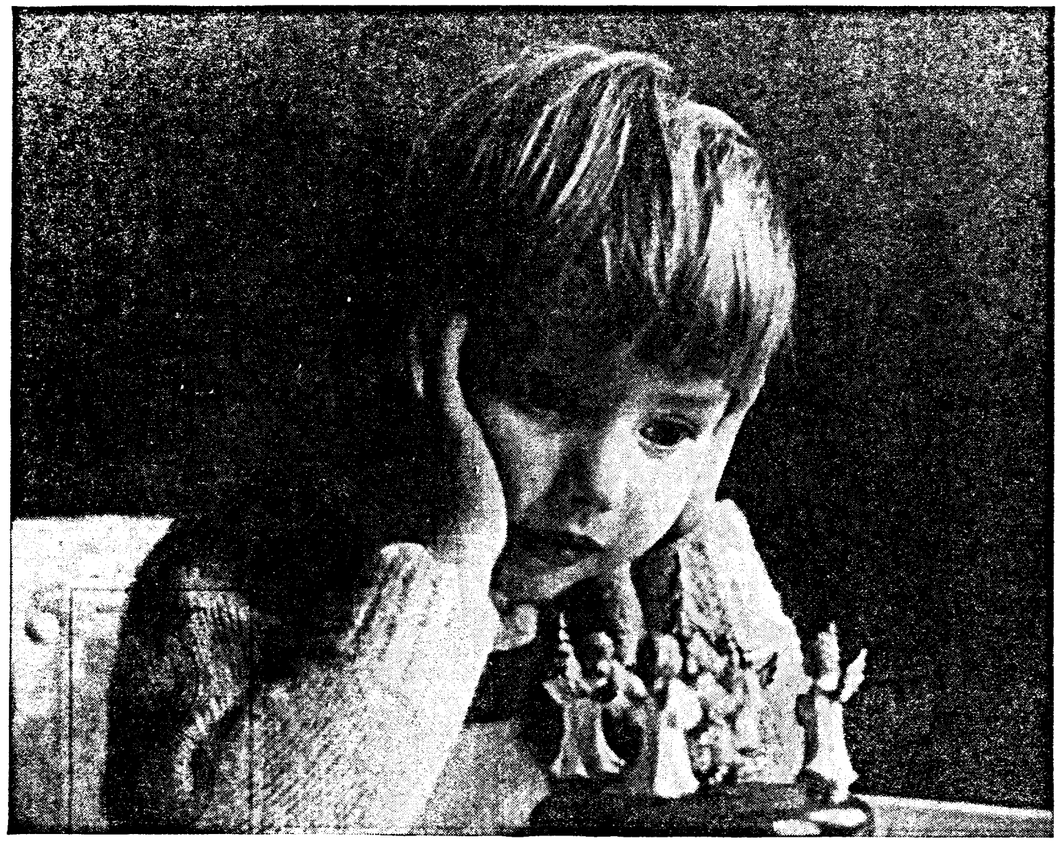
D-D

D-D is one of a series of Shell pesticides—aldrin, dieldrin, endrin, D-D, Nemagon and Phosdrin—that controls virtually every major world pest. If you have a pest problem, consult your Shell Company.

IN AGRICULTURE...YOU CAN BE SURE OF SHELL CHEMICALS

Issued by Shell International Chemical Company Limited and Koninklijke Internationale Chemie Mij. N.V. For further information consult your Shell Company (in the U.K., apply to Shell Chemical Company Limited).

World of wonder...



A simple toy to the grown-up, a world of wonder to the child. Fortunately, children are not yet made of plastics: increasingly, the toys they delight in are. And there's no cause for wonder at that. These clean, colourful toys are strong, safe and (almost) child-proof. To the manufacturer, they are easily made, quickly moulded . . . of Carinex polystyrene perhaps, produced by Shell: an ideal material for toys, and for a host of other articles as well.

The Carinex range includes basic polymers—general purpose, heat resistant, high molecular weight and easy-flow types—and toughened polymers offering medium, high and extra high impact qualities combined with other properties. The former are supplied as crystal clear moulding powders: or in a wide range of colours that include such special effects as pearlescents, tinsels and fluorescents. The latter are available in a variety of translucent and opaque colours. Further to this colour range, Shell will endeavour to match any colour sample submitted to them.

If the special qualities of polystyrenes do not exactly meet your requirements, turn to the other Shell plastics, rubbers and resins for the one you need. To Carina PVC. Epikote resins, Cariflex synthetic rubbers—and to Carlona high density polyethylenes made by the Ziegler process. In addition, chemicals —such as acetone and glycols, styrene, benzene and xylene—are supplied for the manufacture of other thermoplastic and thermosetting products. Truly—if your need is for plastics, or for anything that plastics can do—your need is for Shell.

Shell Plastics

And not only plastics . . . alcohols, detergents, base chemicals, additives, hydrocarbon solvents, synthetic glycerine . . . Shell chemical production serves every industry.

IN INDUSTRY . . . YOU CAN BE SURE OF SHELL CHEMICALS

Issued by Shell International Chemical Company Limited and Bataafse Internationale Chemie Mij, N.V. For further information consult your Shell Company (in the U.K., apply to Shell Chemical Company Limited).

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Nonchalance at the State Department

WASHINGTON, DC

IF the foreign offices of the western world offered a prize to the one among them making the most relaxed entry into 1960, it should certainly go to the State Department. There is little echo in Washington of the sounds coming over the Atlantic from Paris, London and Bonn—the claims and counter-claims about who gained the most during President Eisenhower's visit, and the expressions of dismay because the President failed to make the allies sing in chorus.

Two principal objectives can be discerned in the moves which the United States is preparing as the new year opens. One is to minimise the political and economic differences among its European allies, not merely for the sake of negotiating with Mr Khrushchev but also to enable the West to make a united approach to the second objective. This second objective involves what Sir Oliver Franks called recently in New York the "north-south problem"—the channelling of more aid from the industrial nations of the northern hemisphere to the poorer countries of Asia and Africa. The State Department recognises that the discussions in the closing weeks of 1959, during the President's tour and the trip to Europe of Mr Douglas Dillon, the State Department's economic head, made only limited progress towards both objectives. But it is showing that easy nonchalance which Americans normally associate with the diplomats of Europe; these things take time, the department seems to be saying, and solutions can be found if everyone will keep his head and not exaggerate the difficulties.

If any advance is to be made towards these two objectives, three specific problems have to be tackled in the next few months. The novelty of 1960 is that, for the first time in more than a decade, the gaze of the United States is fixed as anxiously on the under-developed world as on Europe. Thus one of the three problems—perhaps the most complex from Washington's point of view because it involves a dispute within the Administration—falls into the lap of Mr Joseph Dodge, the American banker who will join the British Sir Oliver Franks and the German Dr Herman Abs in India and Pakistan next month to see if a plan for combined foreign aid can be worked out. There is little doubt that the State Department would have preferred Mr John McCloy, the other candidate for the American place on the triumvirate, to go instead of Mr Dodge. The latter is warmly regarded by the Secretary of the Treasury, Mr Anderson, whose chief preoccupation just now is to limit the outflow of American dollars; he has been embroiled recently in a series of skirmishes with the State Department because of this. It is a fair guess that the President, whose opinion was sought by the World Bank before it decided to send Mr Dodge, came down in favour of the Treasury's choice in preference to the State Department's.

Two main points seem to be at issue. One is the extent to which, in addition to finding out what the Indians and Pakistanis require in aid, the triumvirate should seek to impress on them the limits of what they can expect to receive. For instance, the three men might try to persuade the Indians to reduce the amount of foreign currency required for their third five-year plan, perhaps by lopping off a steel mill; they might also make an attempt to label the items which, in their opinion, could most suitably be financed by private investments from the West rather than by public loans.

The other argument is about the best way of organising an expanded aid programme. At the moment the Americans seem to favour leaving things more or less as they are, with the addition of a co-ordinating committee—bred out of the Organisation for European Economic Co-operation—which would act as a clearing house for information about bilateral arrangements made between giving and receiving countries. Under this scheme the World Bank, together with the International Development Association when the latter is actually set up, would remain the chief channel for multilateral loans. The State Department is willing to support the creation of a tighter organisation, which might collect and distribute American and European funds for the developing countries, if there appears to be enough enthusiasm for it when Mr Dillon returns to Europe later this month. But obviously the department doubts whether there will be enough enthusiasm. Plainly a good deal depends on who among the triumvirate writes its report; if it is Sir Oliver Franks, the result is likely to be more liberal than if it is Mr Abs or even Mr Dodge. If the State Department looks relatively hopeful, it may be because of its trust in Sir Oliver's ability to hold on to the pen.

•

THE second problem, that of deciding what to say to Mr Khrushchev at the summit next May, brings attention back to Europe. To judge from the current smoothness of such brows as a journalist can see, the State Department finds the gap between the British and German positions over Berlin less abysmal than reports from Europe have suggested that it is. Outlines can now be detected of the ideas which the Americans will put to the working party charged with closing the gap. If Mr Khrushchev brings up his plan for signing separate peace treaties with the two German states, the western allies will insist on discussing their proposals for reunifying the country. Moreover, the Americans suggest that if (or rather when) talks on Germany as a whole break down the allies should decline to discuss an interim agreement for Berlin unless Mr Khrushchev clearly renounces any unilateral action—including the signing of a separate peace with the East Germans. If he does this, however, the Americans are willing to repeat the concessions which the West offered at the Foreign Ministers' talks last summer, for cutting down the size of the Berlin garrison and so on. Indeed the State Department's elasticity may go even further; for instance, the possibility of giving the United Nations a share in Berlin is still being kept in mind.

From Dr Adenauer's point of view these proposals would have the advantage of making the negotiations about Berlin subsidiary at least in form to the ritual discussion of Germany as a whole. By getting Mr Khrushchev to forswear unilateral action they would also limit the dangers of what might happen when the interim agreement for Berlin expired. But if the plan worked it would satisfy the basic British requirement that a new status be agreed for the city. The danger is that Mr Khrushchev might not find the concessions on Berlin appetising enough and might damn

the consequences and sign his peace treaty with the East Germans. The State Department sees this danger but thinks that, by making the concessions just large enough (*pace* Dr Adenauer) and by reminding Mr Khrushchev of the effect he would have on world opinion if he broke off negotiations, it can steer him into an agreement.

The third problem that has to be tackled in the new year is probably the most intractable of all. When Mr Dillon returns to Europe this month for discussions between the Six and the Seven—the Common Market and the European Free Trade Association—he will make it clear that the United States has no intention of taking on itself the responsibility for bringing the two groups together. He will only listen to their ideas for creating a bridge and say when these are inimical to American interests. Contrary to reports the State Department claims that, if the Seven were able to persuade the Six to agree to a general lowering of tariffs between the two groups, it would not oppose such a bridge even though the immediate effect would be to push some American exports out of Europe. It thinks, however, that the Common Market will not accept such a proposal. Therefore the department's eyes are turned chiefly towards the possibility of a series of bilateral arrangements between the Common Market and some or all of the outer group, which would probably damage American exports less. But this would mean in effect the dissolution of the Seven and other observers in Washington think that the State Department underestimates the ability of the Free Trade Association to hold together.

There is in short no sign of any reassessment of the basic reason why Americans support the Common Market. They are still convinced that its political benefits outweigh its economic disadvantages to them. The critic may suggest that recent events cast doubt on this premise ; if General de Gaulle is going to strike out in directions of his own the five countries attached to France through the Common Market may find themselves drawn along with him. The State Department's rather hopeful reply is that on the contrary they may serve as a tether to stop him from straying too far. Thus at least during the life of the present Administration the simple, perhaps over-simple, desire of the United States of America to see itself reflected, one day, in a United States of Europe will be the dominant factor in its approach to this problem. Those who suspect that the Common Market is not necessarily the best means to this end are likely to find themselves arguing *into deaf ears.*

Without Rockefeller

A good deal of the interest and excitement has gone out of next year's presidential campaign with Mr Rockefeller's surprising decision not to contest the Republican nomination ; this means that Mr Nixon, the Vice President, will inherit it without a struggle, and probably without having to make it clear where he stands on many issues. But for the Governor of New York himself it was a prudent withdrawal. In his hunting expeditions across the country Mr Rockefeller found hardly a Republican leader of any standing who was not committed to his rival and the public opinion polls held out little hope that the rank and file of the party would redress the balance. To neglect his duties in New York State, where he is backing a strenuous legislative programme, and then be beaten miserably into the bargain might jeopardise Mr Rockefeller's whole future career ; since he is only 51 this should be a long one.

As things are now, it has done him no harm to make himself known to party officials all over the country and his withdrawal gives him a claim on the party's gratitude in 1964 if Mr Nixon is defeated this year and in 1968 in any case. What Mr Nixon must find less gratifying is the implication in Mr Rockefeller's statement that he was frozen out by the hostility of the party officials. In it he does not even pledge his support directly to Mr Nixon, but only to the party's nominees. The cynical may deduce from this, and from the Governor's promise to continue to speak his mind on basic issues, that if the Republican convention next July is assailed by any last-minute doubts about its ready-made candidate Mr Rockefeller would be available for the presidential nomination. He refuses even to consider the vice-presidential place, though most Republicans feel that Mr Nixon and Mr Rockefeller would make an unbeatable team.

To be labelled as the choice of the party bosses is not agreeable, but there are many compensations for Mr Nixon. He will not have to use up time, money and energy fighting Mr Rockefeller or run the risk of bruising encounters. He can devote himself to his lofty duties until he is acclaimed at Chicago, appearing in the limelight only when he chooses. He need make no bargains with any faction and can name his own vice-presidential candidate. As for the Democrats, most of them have been quick to condole publicly with Mr Rockefeller and with the Republicans who are deprived of any presidential choice ; in private they are, for the most part, delighted. They can concentrate all their fire on Mr Nixon. Moreover, many of them feared that Mr Rockefeller, a fresh vigorous personality with a pronounced appeal for Democrats and independents in his own state, would prove impossible to beat. Some Democrats are even foolish enough to imagine that their party's popularity is so great that any Democrat can trounce Mr Nixon. If this view should prevail at the Democratic convention, the party may have great cause to regret it.

Time-table for Steel

No neatly wrapped up settlement of the long-standing steel dispute awaited President Eisenhower when he flew back to Washington last week. Talks have continued, as he demanded, but tempers have deteriorated and the special board of inquiry, which reconvened on Monday to draw up a statutory report for the President, held out no hopes of an early settlement. This report, to be submitted on January 6th, will outline the final positions of both sides. The companies are still clinging to their "final offer," made on November 17th, which they value at 30 cents an hour, in wages and other benefits, over three years. The union, which values the offer at only 22 cents an hour, is insisting on gains of about this magnitude in the next 20 months. And it still refuses to submit to arbitration the companies' demand for freedom to change working rules in the interests of greater efficiency.

No one now expects any real resumption of collective bargaining until after January 11-13th, when the workers vote, as they must under the Taft-Hartley Act, on the companies' last offer. Assuming that the votes will be counted by the 16th, this leaves about ten days to reach a settlement before the injunction which has been keeping the men at work is withdrawn and they are free to strike again. The average worker lost about $2,000 in pay during the summer and autumn, and the companies are hoping for a substantial vote of protest against any resumption of the strike. But past experience with such votes gives no grounds for such optimism ; a big expression of confidence in the union's leaders is much more probable. The union has more reason for hoping that it may be able to pick off the companies a few at a time. It has persuaded the industry, much against its will, to sanction company by company negotiations, and Mr McDonald, the union's president, is openly saying that, if the strike is resumed, it may be turned against only a few of the biggest firms. This would be a strong economic lever at a time when steel production is

expected to break all previous records ; confining the strike to a few companies would also make government intervention, which is being seriously considered, look unwarranted.

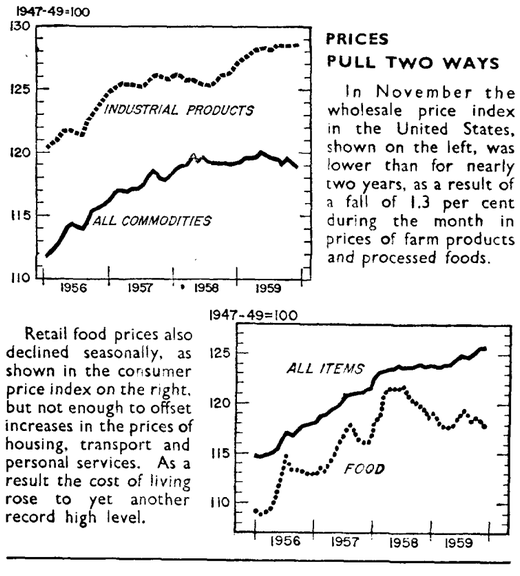
However, it may not come to this. Neither Congress, which returns to Washington on January 6th, nor the Administration wants to have the prickly issue of how to end the strike thrust into its hands at the beginning of an election year. Every pressure will be renewed behind the scenes—indeed Mr Nixon is already busy there—to bring about a " voluntary " agreement. This would also relieve the Administration of responsibility for the rise in prices which the steel companies are just beginning to talk about as inevitable. After its long fight for a non-inflationary settlement the industry cannot be eager to take the blame, but it is even less enthusiastic about the prospect of some government agency being empowered to fix wages and perhaps prices in steel.

Seeing 1960 In

Relying on the government to save them from a resumption of the steel strike, businessmen have no doubt that their new year will be a happy one. This optimism is in fact due partly to the steel strike itself, for it checked the boom last summer and thus, by stretching it out, ensured that it would probably last right through 1960. It also ensured that 1959 would end in a rush of industrial activity, particularly in the steel mills themselves, as factories made up for lost time and smoothed out the maladjustments arising from the strike.

Another reason for optimism is that the strike did not upset Christmas trade. Already in November personal incomes had recovered from the loss of wages caused by the steel stoppage and people have been spending even more freely than usual at this time of year, concentrating particularly on high quality goods. Preliminary reports from shops all over the country show that Christmas spending was well above last year's very good figures. Retail trade for the whole of 1959 is expected to be about 8 per cent higher than in 1958 and there is every indication that consumers at home will continue to be in a buying mood during 1960. So, it is hoped, will consumers abroad ; the Department of Commerce added to the Christmas cheer by reporting that the July-September quarter, which saw a significant upturn in exports, might mark the turning point of the deficit in the American balance of payments. The Treasury, however, has no intention of allowing the country to stop worrying about its international financial difficulties.

The only serious worry at home, apart from the continuing fall in farmers' incomes, is also a financial one. Inflation is regarded as a real danger in 1960, with retail prices already tending to go up and with increases in wages almost inevitable, whatever the steel settlement, in other important industries where labour contracts must be re-negotiated this year. There is, therefore, no prospect of any relaxation in the Administration's policy of checking inflation by keeping a tight rein on credit. The high cost of money has already prevented construction, especially of new houses, from joining the general upward trend and is as usual being blamed for the falling-off in the rate of the country's economic growth, particularly of course by liberal Democratic economists. They are not satisfied with the forecast that the gross national product will go above the half-trillion dollar mark early this year ; they argue that an annual rate of $525 billion could be achieved if the resources of the country, particularly its manpower, were fully employed. This long-standing criticism of the Administration has been given new significance recently by the expert comparisons which are being drawn with Russia's much faster rate of growth.



THE NEXT PRESIDENT ?—IV

Stuart Symington

Ex-President Truman, a fellow-Missourian, is the chief backer of Senator Symington's unacknowledged, but active, efforts to become the Democratic nominee for the Presidency in 1960. A correspondent in St Louis describes this borderline candidate who is already known as " the Second Missouri Compromise."

The capricious nature of politics has seldom been more aptly illustrated than by the case of Senator Symington of Missouri. In a year when the Democratic party's presidential nomination may be a prize of real value it may go to a man—Mr Symington—whose chief asset is that he appears to have fewer liabilities than any of his rivals. Mr Adlai Stevenson, who fought against hopeless odds in 1952 and 1956, has his record of defeat ; Senator Kennedy is handicapped by his youth and his Roman Catholic religion ; Senator Humphrey is too clearly liberal ; Senator Johnson is too involved with southern conservatism and with the oil industry. Therefore some Democratic fingers point, although not by any means inevitably, toward Senator Symington.

He has a voting record on civil rights for Negroes which the North can accept, yet he represents a border state and does not antagonise the South. He is a successful businessman with conservative support, yet he is approved by trade unionists and progressives—by some of them, at any rate. He has never risked his political neck by taking a strong stand on a controversial matter and he has no easily distinguishable political philosophy. His congressional voting record is clearly liberal, but there are few

issues on which his position is unequivocal, except for national defence; there he advocates an all-out effort to get ahead of the Russians and to stay ahead at almost any cost and at almost any risk. According to *Time* magazine:

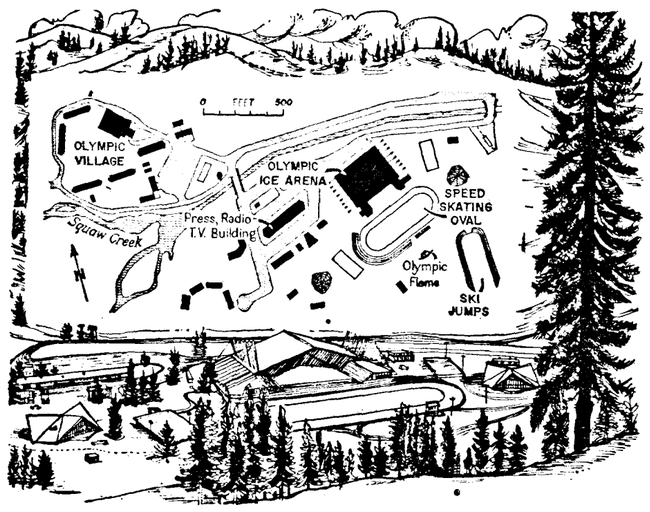
> This failure to pin an unmistakable ideological label on himself has damaged his standing with liberals and the Washington press corps, and brought upon him accusations that he is empty of genuine convictions, and a man with a grey flannel mind.

The Senator is sensitive to this criticism and has been hustling about the country trying to correct it and to make himself better known nationally. A tour of Africa and Israel is now under way; this will appeal to American Negroes and to Jews. In his current talks Mr Symington is departing from his standard and single-minded advocacy of stronger defences for America to deal with a variety of topics, such as farming, government finance and public development of electricity. But usually he attacks the Eisenhower Administration instead of presenting his own solution.

Mr Symington has certain advantages over and above his blandness. He is tall, lean, fair and handsome. He has an attractive family, including a son who plays the guitar at political rallies. He is ambitious, works hard and has an intense desire to win. He has served in high administrative posts and knows his way around the government. He is not a native Missourian, but his efforts to identify himself with the state have been unusually successful. He has cultivated party leaders, visited hundreds of cities and villages and given excellent service to his constituents, particularly to those in rural areas. His assiduous campaigning in 1952, his first political fight, won him a noteworthy triumph: he defeated an incumbent Republican Senator by more than 150,000 votes when General Eisenhower was winning Missouri's presidential vote.

Mr Symington's presidential ambitions appear to have been stirred in 1956, when the Missouri delegation at the Democratic national convention offered him as a "favourite son" candidate, a somewhat empty honour. Last year, when he had to run for a second six-year term in the Senate, the Republican party in the state had collapsed and he was sure of winning. Even so he campaigned at top speed, minimising his party connection to attract Republican and independent votes, knowing that the bigger his majority, the greater his claim on the 1960 presidential nomination; he won 66.4 per cent of the votes, the most one-sided victory ever achieved in a senatorial election in the state. Mr Symington is now attempting to repeat on a national scale what he has done so successfully in Missouri. Although he is trying to dispel the idea that he is a Senator with only one interest (defence), his main concern is to present himself to as many people as possible.

WHEN Mr Symington was born in 1901 his father was a professor of romance languages at Amherst College in Massachusetts. As a boy Mr Symington worked to supplement the family income; he read widely (and still does) but was not an outstanding student. After attending Yale University and serving briefly in the Army, he married Miss Evelyn Wadsworth, the daughter of a wealthy Republican Senator from New York; she was later a night club singer for a few years. Mr Symington went to work in an iron foundry owned by an uncle, starting as a chipper and moulder and studying engineering at night. With money borrowed from his uncles he organised a clay products company and then other successful businesses, until in 1938 he went to Missouri to take over the floundering Emerson Electric Manufacturing Company in St Louis. Here he came to national attention by solving the company's labour difficulties by co-operation with the trade union, and thus restoring the fortunes of the business.



Through his company's war work Mr Symington came to the attention of Mr Truman, who was then a Senator from Missouri: when he became President in 1945 he called Mr Symington to Washington to deal with the disposal of surplus government property. Later Mr Symington became Assistant Secretary of War for Air and, after the defence reorganisation of 1947, the first Secretary of the newly-independent Air Force. This gives his criticisms of the Eisenhower Administration's defence policies a validity which they would not otherwise enjoy. Mr Symington also served as head of the National Security Resources Board and the Reconstruction Finance Corporation until, in 1952, he was persuaded by a group of influential Missourians to seek the Senate seat which he now holds.

It is frustrating to attempt to appraise Mr Symington. Clues to his thinking seem to lead nowhere. Statements which sound strongly affirmative when heard turn out to be nebulous when studied in the transcripts of his remarks. He has a habit of making charges in the form of questions: his answers are often close to the point but not quite on it. During the sordid Army-McCarthy hearings he bungled chances to stand up against the demagogic extremism of the late Senator from Wisconsin; in 1957 he signed a Senate resolution praising Senator McCarthy, explaining that he did not want to "kick a guy in the teeth after he is dead."

Mr Symington's political dilemma is not a simple one. He can continue on his present course—seeking friends, avoiding controversy and hoping he will be the only alternative, the unavoidable second choice, when the stronger candidates knock themselves out. But will this really be enough when the critical moment arrives in Los Angeles next July?

Olympian Togetherness

FROM A CORRESPONDENT IN CALIFORNIA

AT Squaw Valley, 6,000 feet up in California's Sierra Nevada mountains, about 200 miles east of San Francisco, near to beautiful Lake Tahoe and to Reno (just across the border in Nevada) all is virtually ready for the 1960 Winter Olympic Games on February 18th. Even the essential snow has been guaranteed by the Piaute Indians who performed their ritual dance to break a three months' drought. Never before has a Winter Olympiad been staged at such colossal expense or with such glittering attractions—or with the help of Mr Walt Disney.

The kernel of the facilities is the Olympic Arena which won first prize in the Progressive Architecture competition of 1958. It seats about 8,500 people and will be the scene of the opening and closing ceremonies and of most of the ice hockey and figure skating competitions. Adjoining is the speed skating track; its surface is controlled by artificial refrigeration, which makes record breaking likely.

There are two nine-sided centres for spectators from which it will be possible to get a panoramic view of the various events including the competitive ski-ing on the slopes of Squaw Peak, KT-22, and Papoose Peak and the ski jumps specially constructed on Little Papoose Peak. Each centre contains a restaurant, first aid centre, bar, souvenir shop and rest rooms.

Reception of the results will be speeded up electronically by printing timers which will register events automatically and electronic eyes which will control the clock as the contestant crosses the finishing line. Each item will be fed into a computer which will keep the standing of competitors continuously up to date.

For the competitors themselves, 1,000 or more from 34 countries, the theme will be Togetherness. For the first time a special village has been built for the Winter Olympics. All contestants will be housed in four three-storey pink, blue and yellow dormitories, three for men and one for women, each with 300 rooms, sleeping four in bunk beds. The plumbing is of course excellent, but these conditions may still seem austere to those who come from the luxury of the Swiss winter circuit, even if not to the representatives of the Soviet Union (sending the largest contingent) and other iron curtain countries. Food will be served in an enormous cafeteria and the visitors will be entertained nightly by leading personalities from Hollywood. Both a Protestant and a Roman Catholic church are being built in the valley and there will be a corps of ski-ing padres.

Mr Disney is planning "massed bands"—fifty-two playing as a single unit—and "a chorus of thousands"—2,000 in fact—to sing the Olympic hymn. The arrival of the Olympic torch will be greeted with the release of 2,000 pigeons and flocks of balloons and with a display of fireworks. The entire site will be decorated with snow statues of typical contestants and the spectacle will be dominated by a Tower of Nations, 79 feet high, backed by a semi-circular snow wall behind which will fly the national flags.

All this costs money—about $20 million in all. The largest contribution, $7.9 million, comes from the California State Parks Department; the federal government is putting up $4.3 million, including the $3.5 million for the arena, and the State of Nevada $363,000. Private businesses have provided some $2 million in cash and equipment and gate receipts are expected to bring in about $3.5 million. The armed services have been helping to prepare the facilities, with the Signal Corps working on communications on the ski slopes, the Navy experimenting with compacting snow to make a hard-surfaced park for 12,000 cars, and Air Force helicopters hauling materials up the mountains for huts and snow fences.

Commercial interests have also invested heavily in the valley, already popular with ski enthusiasts. The private chalets on the hillsides and the Squaw Valley Lodge have recently been joined by a $300,000 luxury inn, a petrol station and a shopping centre. Such investments, both public and private, are being made in the hope that the publicity of the games will turn Squaw Valley into a permanent winter sports centre.

Judicial Injury

FROM A SPECIAL CORRESPONDENT

SPECTATORS on a recent Monday at the Supreme Court were astonished to hear Justice Douglas denounce as "smart-alecky" an opinion of Justice Whittaker, a mild man who is usually on the best of terms with all his colleagues. This extraordinary outburst came in a case that to the uninformed observer would probably seem utterly trivial. The issue was whether an injured railway worker could collect damages from his employer on the ground that his injury had resulted, at least in part, from the company's negligence. A jury thought that the railway had indeed been negligent in stationing the man where he could be knocked down by a drunken driver, and it awarded him $25,000. The lower courts had set the verdict aside as irrational.

Such cases, nevertheless, involve a deep and long-standing division among the Justices about their proper part in government. The differences between the "activists" and those who advocate judicial restraint are best known in the area of civil liberties. But they carry over, in a strange way, to the question of injury suits. Under federal law, seamen and railway workers seeking damages because they have been hurt at work are assured of trials by juries, which usually award higher sums than judges; $100,000 is not uncommon. But frequently appellate courts set the judgment aside and the plaintiffs then appeal to the Supreme Court. The Court can consider such a case or not, at its own discretion, but in recent years it has agreed to review a great number of them and in many it has restored the verdict of the jury. Chief Justice Warren and Justices Black, Douglas and Brennan have usually been joined by Justice Clark to form the necessary majority.

To the other members of the Court, and to most American lawyers and legal scholars, the injury cases are a gross example of judicial misbehaviour. They argue that the Supreme Court was given discretion over its own agenda on the theory that it has time to review only important cases. Collective judgments on the great and essentially political questions put to it "are especially dependent on ample time for private study and reflection" and discussion, as Justice Frankfurter has put it, and there is no time to waste on private damage claims. A second criticism is that the Court is distorting a negligence statute into one putting absolute liability on employers whether they are at fault or not—a change that should be made, if at all, by Congress, not by judges. A third is that hearing only some injury cases is unfair to the litigants in other such cases.

In this particular instance, Mr Clark left the four "activists" and made possible a 5 to 4 majority upholding the denial of the damages awarded by the jury. What provoked Mr Douglas's

outburst—and his insistence that the Supreme Court has a duty to enforce the guarantee of jury trial and to prevent the lower courts from setting too strict a standard of negligence—was Justice Whittaker's concurring opinion. In it he scoffed at the idea that the railway had been negligent and suggested that the only way that it could have prevented the accident was by putting its employee in an army tank.

Cities Ask for More

FROM A CORRESPONDENT IN COLORADO

WHEN the American Municipal Association met at Denver early this month the mayors of big cities talked a language that was almost reminiscent of the farmers' protest movements which set the prairies ablaze nearly a century ago. Urban areas now contain 66 per cent of the population and by 1980 are expected to have 80 per cent of it; they have absorbed 90 per cent of the postwar gain. As Mr Dilworth, the Mayor of Philadelphia, says: "the real frontiers of America today are inside the big cities." But this rapid growth has multiplied the cities' problems, and solutions are being held back partly because old laws and customs change slowly, but mainly because state legislatures are dominated by rural areas which are unsympathetic, if not actively hostile, to any metropolis. If the cities are to receive help in the near future it must come from the federal government, in spite of fears that this will sap local initiative and lead to bureaucratic control. Many municipal officials feel that the President's cabinet should contain a Secretary of Urban Affairs as well as a Secretary of Agriculture.

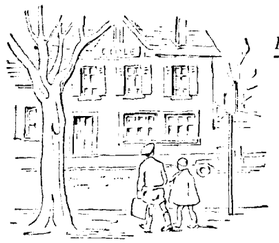
One of the most acute problems concerns transport and traffic. The private motor-car has made almost all the railways' suburban services unprofitable in the built-up regions in the east and many of the railways are threatening to shut down such services completely. Yet the cities cannot rely on private automobiles to move millions of people in and out every day. The municipal experts estimate that it would cost $35 billion to build enough roads to make this possible, while a tenth of that sum would enable the present rail system to do the job.

Big business has always opposed federal intervention in its affairs, but at Denver the cities forged an alliance with the railways, a big business which has fallen on hard times. The heads of big eastern railways who were present talked like New Dealers and succeeded in overcoming, to some extent, the objections of the profitable western systems to any form of federal aid. Mr Perlman, the head of the New York Central Railroad, insisted that the question was one of survival for the urban areas and Mr Symes, of the Pennsylvania Railroad, argued that fears of federal domination were "baloney"; the airlines had been subsidised for 35 years and had not been nationalised yet.

The resolution which the Municipal Association passed calls on the federal government to develop a national transport policy, linking railways, motorways, roads and urban transport into a unified whole; asks all levels of government to give tax relief to the railways, particularly on passenger services; urges the federal government to lend money to cities, at low rates of interest, to improve their transport facilities and, if necessary, build new ones; and, finally, requests Congress to consider making outright grants to cities, modelled on the present urban renewal programme, to help them to solve their transport problems. This would require the municipalities themselves to provide part of the money.

Many other resolutions were passed asking for more federal help in many other fields: civil defence; public housing and urban renewal; hospital construction; airports; and pollution, both of the air and streams. A mayor from Texas protested that sewage disposal is a local problem, but another speaker retorted: "Not when it comes down on your city from a thousand miles away!" The Eisenhower Administration has been trying to reduce the federal aid provided for this purpose, to lighten the burden of allegedly local problems upon the federal budget. But the meeting at Denver demanded, instead, that the authorisation be doubled, and that the present limit of $250,000 on federal aid for any single sewage project should be removed. This would mean that the federal government would pay a third of the cost of all projects and give effective help to large cities, as well as to small.

The delegates also protested vigorously against any move to economise at the expense of the cities. One such scheme is a proposal to make the federal funds for the interstate highway system go further by building the cheaper rural sections first; at Denver this seemed "unthinkable." So did the idea of depriving state and municipal bonds of their present tax-exempt status, which enables cities and states to pay much lower rates of interest on their borrowing than would be the case if the buyers had to pay federal tax on the income from such bonds.



The Moon and Many Pence

THE Administration's civilian space programme is expected to come under severe attack from Congress when it reconvenes on January 6th. Mr Lyndon Johnson, the leader of the Senate, fired some critical opening shots before Christmas and committees of both Houses are preparing for detailed enquiries into the whole field of America's efforts in outer space. The last of these efforts, the attempt to put a satellite in orbit round the moon on Thanksgiving Day, failed dismally and served to underline further the supremacy in rocket technology which the Russians had demonstrated earlier with their successful shots at the moon. Consequently the Democrats will want proof that the National Aeronautics and Space Administration—the civilian agency set up in 1958 to handle all space enterprises which are not specifically related to defence—is not a victim of budget-balancing fever.

The President is expected to ask Congress to grant it $800 million, considerably more than the $530 million he asked last year, which Congress cut by $30 million. But since then the NASA has been provisionally assigned Dr Wernher von Braun's costly Saturn project which, it is hoped, will provide a rocket twice as powerful as anything the Russians are thought to have at present. As this will cost about $150 million in the financial year which begins next July, not very much will be left for the space agency's own expanding programme. Space experts estimate that nearly $1 billion will be needed next year if the agency is to develop projects which will compete with the achievements of the Soviet Union. When Mr Johnson attacked the executive for failing to appreciate the political importance of the struggle for outer space, he added pointedly that "we cannot indulge in the luxury of budget clerks gambling with our destiny."

A serious technical deficiency in American space equipment is the lack of first stage rockets powerful enough to lift a load of several tons. The mighty Saturn will not be ready for several years, while the Vega project—the most advanced of the medium rockets—has just been dropped because technical difficulties made it advantageous to transfer the money to other schemes. Financial stringency is also responsible for the scarcity of the Atlas intercontinental missiles which are currently used for space shots. The latest proposals that the United States and certain other countries should co-operate in probing space will do nothing to relieve the shortage of rockets; but the effect of this internationalisation may be to lessen the emphasis upon a race for prestige between America and Russia—in which America seems doomed for a long time to a bad second place.

THE WORLD OVERSEAS

FRANCE AT SCHOOL—I

Puritanical Primaries

FROM A SPECIAL CORRESPONDENT

ONE of the first, and most popular, decrees of the Fifth Republic was that of January 6, 1959, raising the school-leaving age to sixteen and instituting a reform of the educational system. The reform is now in force in four pilot departments and will cover the whole country by 1965.

Under the Fourth Republic the minimum period of compulsory schooling was two years shorter than in Britain—from six to fourteen—but this insufficiency was to some extent made good by the state nursery schools (*écoles maternelles*), in which most infants learn to write and manipulate a paintbrush before starting primary school, and by the fact that most children remain at school beyond the statutory leaving age (family allowances are paid until children are eighteen if they continue their studies, and most pupils over eleven receive in addition an annual state scholarship grant).

The atmosphere in the average primary school, however modern the building, is still redolent of the Victorian, puritanical ethics of Jules Ferry and the other Protestant and secularist founders of the French educational system. Grim grey overalls are favoured, desks are rigidly aligned facing the teacher (there are few experiments in group activities), and even the most dissipated six-year-old is rapidly imbued with a quasi-religious respect for grammar, spelling and calligraphy. Allowance is rarely made for left-handers. Elementary arithmetic consumes less time than in non-metric countries, but there is little of the music, dancing, games, play-acting and miscellaneous messing around to which the average English primary school owes so much of its charm and inefficiency. School is a place of work; and the standard of work is often that of good English prep-schools, except that in only a few experimental classes is a foreign language taught.

While non-U nine-year-olds north of the Channel are still being pap-fed on Alfred-and-the-cakes ("history") and What-funny-hats-Africans-wear ("geography"), and grammar is the lady who buys them lollies, their French cousins are embarked upon orderly, well-graduated courses of basic history (from prehistoric times to 1945) and physical geography, and can define a demonstrative adjective without batting an eyelid. The ground to be covered in each subject, term by term, is detailed by the ministry of education, whose regional inspectors may at any time attend classes and examine exercise-books. Teachers in France rarely resent this "interference"—on the contrary, they consider the system as necessary as an inspectorate of weights and measures.

"We take a more cynical view," an inspector told your correspondent, "of the individual conscience than you do in Protestant countries. Even those of us who have left the Church still half-believe in original sin. So we expect the worst of everyone; we retain identity documents and bureaucratic controls you've long since done away with; and we assume, no doubt wrongly, that every public servant and teacher would go fishing on the first bright day of spring if there weren't an inspector lurking in the background.

"Also, most of our young teachers are less qualified than yours. Less than half graduate from teachers' training colleges (*écoles normales*). For economy reasons, we are obliged to recruit youngsters who have just passed their *baccalauréat* (in some areas, not even that) and put them straight into a classroom to learn their job by trial and error. Obviously, these *suppléants* need close supervision by an inspector. It is only after five years, during which they are paid a starvation wage and put out in the remotest villages, that, if their inspection reports are satisfactory, they are considered qualified. To stick it out, they must really be devoted, or desperate for a job, and many of them make excellent teachers, though their intellectual horizon tends to be narrow."

The *suppléants* are a source of cheap labour that is drying up as industrialisation spreads and more lucrative openings occur in private employment. Already, schools in the industrial departments of the north have to import their *suppléants* from the relatively underdeveloped south-west. Over the next twelve years the ministry of education expects to have to double the output of its *écoles normales* and, since most are already overcrowded, this will mean building many new ones. Even so, there is no serious criticism of the government's decision to give priority to an expansion programme that will undoubtedly aggravate the problem of staff recruiting and strain budgetary resources to the limit. As one ministry official put it: "Our problem is not whether we can afford to spend more on education. It is that we can't afford not to, even if we have to cut down on other things. The Russians, with four times our population, are producing seventeen times as many top-grade scientists and engineers—and they're only just getting into their stride. The timid, the conservative, the budget-minded, who can never see beyond next year's deficit, will always find some excuse—overcrowding here, staff shortages there—for recommending inaction. We must generate such a momentum in our drive for more and better education as to sweep them along. We must build the machine and then just shame our paymasters into providing fuel for it."

The educational reform the government has adopted aims at increasing France's university population by 50 per cent (it has already doubled since the war: 100,000 students in 1946, 210,000 in 1959-60). The reform hinges on the ten-plus selection process. Up to three years ago selection was by a one-day examination. Then, to obviate the injustice and wastage inseparable from any such hit-or-miss process, it was decided to exempt from the exam pupils whose marks for routine classwork had been consistently above 50 per cent during the previous year. But teachers in rural areas soon found that this exposed them to an embarrassing amount

of parental cajolery. Eleven-year-olds will now be transferred *en bloc* to a two-year *cycle d'orientation* where they will receive an initiation in secondary-level studies, including a foreign language. Their reactions will be observed in order to decide whether their subsequent education should be along "classical," "modern" or technical lines.

This reform constitutes one of the boldest attempts yet made to tackle a problem that has nowhere been resolved satisfactorily. Unfortunately, between the theory underlying it and the practical effect that is to be given it, grievous fissures have already appeared.

(To be concluded)

Muffled Bangs Among the Three

FROM A CORRESPONDENT IN GENEVA

THE Geneva talks on nuclear tests went into the Christmas recess without the hoped-for agreement; they will be resumed on January 12th. The Soviet willingness to discuss the Berkner panel report on underground tests has only resulted in a report which consolidates the differing points of view.

The Russian desire to conclude a comprehensive ban on all types of explosions—above the atmosphere, atmospheric, submarine and underground—seems genuine. But the Russians have so far failed to believe or understand the equally genuine desire of their negotiating partners to reach such an agreement. Since the summer, when the Americans produced their new scientific data on underground explosions, the Russians seem to have been plainly governed by suspicion of American motives. Even the Russian scientists, when they were finally allowed to return to the conference table in November to discuss the new data, used emotional rather than scientific arguments, and accused their American colleagues of obstruction instead of attempting to disprove the American claims scientifically.

Until this last hurdle, progress during the year was surprisingly steady and hopeful. By May, 17 out of 23 articles concerning the proposed central organisation had been agreed upon. The important points of disagreement were few, and the Russian package proposals of December 14th reduced these further. The Russians have now agreed that the composition of the teams in the control posts should be one-third Russian, one-third Anglo-Saxon, and one-third "neutral," though they wish the "neutrals" to be further divided into one-third western allies, one-third Soviet allies and one-third uncommitted neutrals.

Tied into the Russians' package is their suggestion for the composition of the control commission that is to look after the day-to-day affairs of the new organisation in Vienna. The West suggests that the seven members should be made up as follows: one American, one Briton, one western ally, two communists and two neutrals. The Russians oppose this 3-2-2 formula with their own 3-3-1 formula (three Russians, three westerners and one neutral). The Russians' proposal would enable them to avoid being overruled by a two-thirds vote and would thus give them a power of veto over budgetary and financial matters. They are clearly nervous about expenditure on what promises to be the most expensive international organisation yet created.

These difficulties do not, however, look big enough to make an early agreement impossible. The biggest obstacle is still the problem of underground tests, together with the number of veto-free inspections "on site." The western proposal to permit inspection of all explosions above five kilotons in strength (the equivalent of 5,000 tons of TNT) and 20 per cent of all explosions under five kilotons may lead to more journeying into Soviet territory than the Russians like.

The scientists' working group has left the conference where it stood in the summer. Both sides agreed on improved techniques and instrumentation for control, but disagreed in three separate annexes to their report on the interpretation of the American "Hardtack" tests. The Russians did not produce much new data but challenged that of the Americans. They would like to lay down hard and fast rules determining when on-site inspections are justified, while the Americans have evidence that the rules proposed by the Russians would allow explosions to be classified as earthquakes when, as the American experiments have shown, they could be of nuclear origin. There seems, however, to be agreement that seismology is still a young science and that the last word has not been spoken yet. As it will take two or three years to set up the organisation, even after agreement has been reached, the three governments will have the chance to compromise on an interim solution. During the Christmas holidays a political decision has to be made on how to continue the negotiations on January 12th.

Sir Michael Wright, Mr Wadsworth and Mr Tsarapkin have certainly made some headway. Mr Tsarapkin, in spite of occasional bouts of slanging oratory, has earned respect as a negotiator. The personal relationship that has grown up between the three—Tsarapkin and Wadsworth are known to be using each other's first names—has impressed close observers of the talks. The conference is thought to be the most friendly one of the postwar period, and this spirit may still augur well for its outcome.

A Mediterranean Industry

BY A CORRESPONDENT

SOONER or later most natural products have to face competition from synthetic substitutes. Cork is a case in point: but, as happened with rubber, the substitutes are being evolved not because they are cheaper or better, but because there is not enough of the natural product. People in the cork business are not particularly worried about plastic insulating materials and floor coverings, or fancy bottle-stoppers. They are confident that natural cork and things manufactured from it have unique qualities for which there will always be a demand. They are only sad that there is not enough cork in the world to enable them to satisfy an expanding market themselves.

Nor is it easy to increase the supply. Cork is the bark of a tree, an evergreen oak which is fussy and only grows happily in certain places. The total world production is little more than 300,000 tons, of which nearly half comes from Portugal and about a third from the three Spanish regions of Estremadura, Andalusia and Catalonia. Some also comes from the Mediterranean coast of North Africa and the south of France. Nine-tenths of all the cork produced in the world comes from this limited area. Alarmed by this excessive localisation the Russians have tried to grow cork oaks in the Caucasus, and the Americans in California.

As with most natural products there is more to cork than meets the eye. The tree itself, like the English oak, is the product of an acorn. But it is a much smaller tree and does not usually grow to more than twenty or thirty feet. Many years must pass before the bark is taken off; a provident landowner will probably wait for fifteen or twenty years before he strips his trees for the first time. If, as often happens on Mediterranean coasts, he is hard up, he may wait no more than ten. In either case the bark is too coarse and rough to be of much commercial value. Countrymen call this first fruit of the tree "virgin cork"; it is mainly used for making charcoal.

Nine or ten years later the tree will be stripped again. Cuts are made with axes round the trunk and the lower part of the main branches, and the bark is removed by skilled hands. The bark shows a series of distinct rings, one for each year of growth like a section of the trunk of any other tree. Nine years of growth sometimes amount to nearly two inches thickness of bark, but in trees grown in thin soil or at an altitude it is often no more than a quarter of this.

The second stripping, too, is little used in its natural state. It is still too coarse and much of it goes for floats and buoys. It is the third and subsequent strippings of bark, still made at intervals of eight to ten years, which are really valuable. Some people say the third crop is always best, but in general the quality of the bark remains consistent for another century or more.

Cork is always taken from the tree in the dry summer months when it peels off easily. Whole strips are stacked by the roadside and the small pieces collected in baskets. Once it starts raining stripping is stopped to avoid harming the vital inner bark. Travellers in Spain and North Africa in the summer will see the trees freshly shorn like poodles before a dog-show and looking just as forlorn, and almost as indecent.

Nowadays cork is little used in its natural state except for floats and to stop bottles. For bottling, and especially for bottling wine, only the best of the bark is used. Bark varies enormously in texture from place to place and even from tree to tree. The pieces suitable for bottle corks are carefully sought for and separated, as they fetch a price twenty or more times as great as the lower grades of bark used in manufactured products. Cork for champagne may cost as much as £300 a ton.

But, although cork is now mainly used in processed forms, it is still its natural qualities that determine the use and create the commercial value. The special quality of cork is that it is largely air. Over half the volume of a piece of cork is occupied by minute cells of gas and air. Seen through a microscope it looks like a honeycomb, and experts tell us that in a piece of cork an inch by an inch by an inch there are more than two hundred million cells. These not only give cork its especial lightness and buoyancy, but are the main factor in what has now become its most valuable purpose. The air in this honeycomb of cells make it a very poor conductor of heat and therefore a good insulator.

As schoolboys know and most adults have forgotten, heat flows to places where the temperature is lower. Any material can impede this natural process, but some do it better than others. Cork does it far better than brick or concrete. If you want to stop the heat getting into your cold storage plant, or out of your bedroom, one inch of cork does it as well as 18 inches of brick or 30 inches of ordinary concrete. Cork is also elastic, waterproof and very durable. Cork floors laid thirty years ago, even in hotel bedrooms, are still as good as new.

At a cork factory you will see strips and sacks of bark arriving at one end, usually in grossly overladen lorries, from the cork forests, and coming out the other as bathmats, bottle corks, engine gaskets, floor tiles and insulating board. Nowadays factories tend to specialise more and more, so the odds are that you will not see all these things coming out of one factory. Bottle corks, in particular, are a rather specialised business.

The more important factories, however, turn out both insulating board and what is known in the trade as composition cork. Although the material and the processes used are slightly different, both start off with the same thing. The cork is chopped up small enough to go through a mesh of about half an inch. The waste and the dust are separated and used as fuel for the next process. Magnets are even attached to the chutes to pick out things like hairpins and gun pellets which, mysteriously, have found their way into the bark. The granulated cork is then put into ovens and subjected to heat and pressure. When it is taken out of the ovens it is already firmly welded together and shaped. It is next cut into boards, strips, and squares by revolving saws, and then smoothed and polished.

Most cork factories are situated near the cork forests, but this is a fairly recent development. Cork used to be exported in a raw state, mainly to Britain, France and the United States, and processed there. But increased freight charges and the desire of the producing countries both to keep a greater share of the profits and to provide more local employment have changed things. The latter is particularly important; cork forests require little upkeep and only employ a small number of highly skilled strippers for a few months in the year. The factories, some of which were established and, for a time, owned by large Anglo-American concerns specialising in insulation, are now mainly privately owned by Spaniards and Portuguese.

This also applies to the cork forests. It takes a lot of land and a lot of trees to produce a ton of cork, ranging from 10 acres in the highly organised plantations in Portugal to 80 acres in the harsher conditions of Tunisia and Algeria.

With such a sparse yield and such extensive cultivation—not to mention the immense periods of waiting in which capital is tied up, and the social systems that prevail in most of the regions where cork happens to grow—it is not surprising that the production of cork is for the most part in the hands of big landowners. The Dukes of Medina Sidonia, one of whom commanded the Armada, own 100,000 acres of cork forest in Andalusia; even this huge property yields less than 2,500 tons a year. Other cork forests in Spain, largely as the result of a process of land nationalisation carried out by the short-lived Republic of the early thirties, are owned by municipalities and rural councils who lease out the right to strip the bark at a handsome profit. Cork factories buy these leases to secure their own supplies.

The Finnish Dilemma

FROM A CORRESPONDENT IN HELSINKI

FINLAND has had 45 cabinets in its 42 years of independence. The present Agrarian minority government, led by Professor V. J. Sukselainen, is the fifteenth since 1950. It used to be possible to compare the Finns with the French in these matters.

The Sukselainen cabinet has been in office since last January and is now confronted with growing financial difficulties, particularly in wrestling with the budget for 1960. There is a deficit of roughly £45 million—a huge sum for Finland—and the cabinet has said that equivalent loans are not available. A change of government is therefore expected reasonably soon, and the topic of the day is the method, and the possible result, of a change.

The coolness in Finnish-Soviet relations a year ago led to the resignation of a popular coalition government and the forming of the present one. The predominant opinion is that only a broadly based government can shoulder the country's financial troubles and internal controversies. However, the opposition has not shown a wholehearted interest in overthrowing the cabinet; nobody is ready to assume the responsibility at a time when reputations must be hurt if attempts to save what can be saved fail. But neither is a non-party cabinet wanted. So when the Agrarian government decides to leave the sinking ship, the change in government is expected to come through negotiations between two or more political groups, resulting in a cabinet reorganisation without an actual cabinet crisis. A coalition between the Agrarians and the Social Democrats is one, but not the only, possible solution.

Among the Agrarians there is a widely held opinion that their party is the only non-communist political group that has the full confidence of the Soviet authorities in handling Finland's foreign policy. The basis of Finland's post-war relations with the Soviet Union has been the so-called Paasikivi line, named after the late President J. K. Paasikivi, who outlined the Finnish version of co-existence. Before the presidential election in 1956, the Agrarians gave this policy the name of the Paasikivi-Kekkonen line, thereby connecting their candidate, Dr Urho Kekkonen, with the important work done by Paasikivi.

Now, remembering the fate of last year's coalition cabinet led by the Social Democrat, Dr K. A. Fagerholm, many leading Agrarians fear co-operation with the Social Democrats as long as Dr Väinö Tanner and Mr Väinö Leskinen continue to be in charge of Social Democrat policy. Both Dr Tanner and Mr Leskinen have come under severe Soviet disapproval. At the same time, the conservatives and the liberals fear that an Agrarian-Social Democrat coalition will lead to repeated political deals to secure the interests of both at the expense of the nation as a whole.

There are voices in favour of dissolving the Diet, but it is very doubtful if new elections would help to solve the difficulties. The 200 seats in the Diet are distributed among seven political groups. The communists, with 50 seats, form the biggest of these. One explanation of their strong representation is simply that they have not been in the cabinet since 1948. They have won large blocks of irresolute electors who seem unaware of the ends and means of national and international communism. It is now necessary for the democratic parties, particularly with the municipal elections in October, 1960, in mind, to co-ordinate their activity in one form or another to meet the communist danger.

Since the crisis with Russia a year ago, there is a more vivid realisation that in everything it decides, Finland must first consider whether the decision may hurt its eastern neighbour or not. Thus, certain groups have said that a reorganisation of the cabinet is a sensitive matter. The official standpoint on the Outer Seven is another example of this caution. Experienced and trusted politicians say that Finland's right of self-determination is limited today. The way out of this dilemma is difficult to see.

Arms and the Man in Australia

FROM OUR CORRESPONDENT IN CANBERRA

AUSTRALIA has decided to stop wasting money and manpower on training citizen soldiers who would not be ready to go to a war until a year or two after it broke out. Instead it will increase substantially the contribution that the regular army could make to a struggle not fought on Australian soil. The minister of defence, Mr Athol Townley, has told Parliament that there would be no more national servicemen after the middle of 1960. They cost the country £A9 million a year; they are not liable for overseas service, and they do part of their training with units of the Citizens' Military Force (corresponding to Britain's Territorial Army); and thereby make these units unfit for overseas service also since they would first have to be broken up and reformed with volunteers only. Shorn of its national servicemen, the CMF will consist of 20,000 men, and it is hoped that with better equipment this number can be increased to 30,000, all of whom would be volunteers for overseas service. They could then be sent abroad in the wake of the regular forces within six months after the outbreak of war. The regular army, for its part, assumes a greater importance than ever before. The savings resulting from the abolition of national service will make possible an increase in the mobile brigade group—the only field force apart from the battalion group in Malaya—from 4,000 to 5,500 men, as well as improved equipment and full logistic support.

For the Navy the programme will mean the end of the Fleet Air Arm by 1963. By that time the Venoms and Gannets now carried by HMAS *Melbourne* will be worn out. Modern carrier planes could not operate from *Melbourne's* deck, and a new carrier would be too expensive. The demise of the carrier would reduce the strength of the active fleet to some ten fighting ships. But it seems likely that a submarine service will be introduced, though a final decision on this awaits the report of a mission that is shortly to visit the United States and Britain.

For the air force the programme is inexplicit because a decision has yet to be made on a fighter to replace the Sabre. The news that the RAAF will have the Bloodhound surface-to-air guided weapon, in preference to the American Nike, will have rejoiced many hearts in London and Bristol. But for anti-submarine and maritime reconnaissance aircraft Australia will again turn to the United States to buy the P2V7.

Defence is an even more unpopular item of expenditure in Australia than it is in Britain, and the current vote of £A192 million has been substantially unchanged for the last 7 years, in spite of the steeply rising cost of modern equipment and the rise in costs generally. But at least Australia will now get better value for its money.

AIR SUBSCRIPTIONS TO *THE ECONOMIST* 22, RYDER STREET, LONDON, S.W.1.

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight		Airmail	Air Freight		Airmail	Air Freight

A Neutral in Doubt

FOR Switzerland as well as Britain the European community poses a political choice. Swiss neutrality is thought of as a permanent feature of the European scene, and non-involvement in European integration would appear to follow from it. Switzerland, like Sweden and Britain, staunchly supports the Seven. Its European policy since the war has combined friendly words for the efforts of other European countries to unite, and a jealous avoidance of any commitment that might touch Switzerland's own sovereignty. But the creation of the common market has spurred a significant minority to question this traditional caution. It has now been subjected to detailed critical scrutiny in a new book by Dr Henri Stranner.*

Armed neutrality as a Swiss policy goes back far beyond its recognition by the powers at the Congress of Vienna. Dr Stranner traces it to the defeat of Marignano, in 1515, which terminated the Swiss pre-eminence in the Italian wars. Like Britain, Switzerland has found that conflicts of interest between the major continental powers are not unwelcome and it has not been too happy when they have got together, as in the Holy Alliance. The post-war situation is, however, new. Since the historic rivalries of western Europe are now overshadowed by the Soviet-American rivalry he considers that within free Europe unity, not conflict, has become the Swiss interest. But, at the same time, the European community treads on Swiss toes by setting up a trading block from which the Swiss are excluded. Can Switzerland afford to remain outside, an island in the heart of the community?

Dr Stranner does not believe it can. He believes that the creation of the European community has removed the basic reason for Switzerland's neutrality—which was the need to keep out of conflicts that were bound to involve two of the three nations from which its people are drawn. He points out that two thirds of Switzerland's foreign trade is with western Europe; increases in a limited number of tariffs on goods from outside Europe in a European customs union would, he thinks, be a price worth paying for getting in.

Dr Stranner does not advocate that Switzerland should plunge into the community as seventh member. He would prefer an enlargement to include all western Europe, with Commonwealth countries and the United States perhaps associated. He believes too that the community will be more compatible with neutrality if it can keep clear of the cold war; and he would like the provision in the Rome treaty allowing members to opt out in the event of war to be strengthened. These are sensible qualifications; but it remains his underlying theme that Switzerland's future lies with, if not in, the common market.

*Neutralité Suisse et Solidarité Européenne, by Henri Stranner. Editions Vie, Lausanne.

Africa 1960

This year will be one of rapid and historic change in Africa. The following diary charts the way ahead only in respect of the actual fixtures and events that can roughly be foreseen. Many unpremeditated happenings are likely to occur.

January

Independence of *Cameroun* (former French Cameroons trust territory) (1st).
Prime Minister leaves for tour of *Ghana, Nigeria, Rhodesia, Nyasaland, South Africa* (5th).
Independence of *Mali*, probably. (Senegal and Soudan.)
Completion of elections in *Belgian Congo* for new African-controlled communal councils. Constitutional Conference on the Congo's future in Brussels.
Kenya Constitutional Conference in London (19th). Until it has been held the date of the Kenya General Election in 1960 will not be known.
General election on adult franchise in *Basutoland.*
All-African Peoples' Conference, Tunis (meeting of nationalist political parties and leaders from both independent and colonial states) (25th).
Conference in Tangier of UN Economic Commission for Africa (26th).
United Nations visiting mission to *Ruanda Urundi* to report on possible independence.

February

Independence of *Mauretania* (probably).
Elections in *British Somaliland* to new Legislative Council with African majority.
Meeting of the Senate of the French Community, followed (probably) by an extraordinary session of the French parliament to consider constitutional changes relative to the Community.

March

Independence of *Dahomey* (probably). Dahomey expected to join Mali.
Belgian Congo elections to provincial councils: formation of African controlled provincial administrations.
Sierra Leone Constitutional Conference (on last phase to independence and Commonwealth membership).

April

Independence of *Togoland* (former French Togoland under French trusteeship) (27th).
All-African Trade Union Conference meets in Morocco.

May

Commonwealth Prime Ministers meet in London (5th).
Constitutional Conference on *Tanganyika.*
Elections for African-controlled Legislature in *the Gambia.*

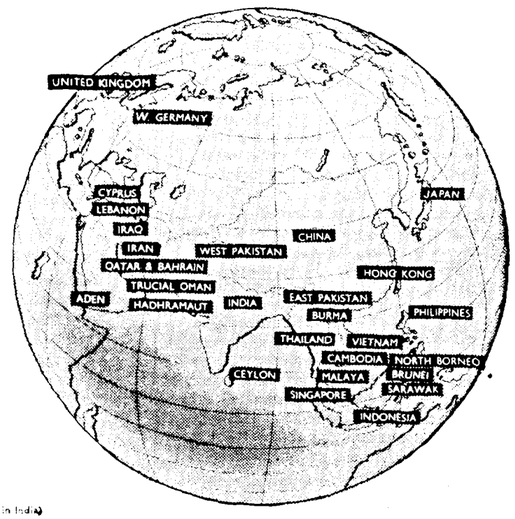
July

Independence of *Somalia* (1st). (Italian Somaliland, under Italian trusteeship.)
Elections for Legislative Council in *Zanzibar.*
Talks on setting up a popularly elected Legislature in *Bechuanaland* (may be later in year).

September

Inauguration of legislative and executive councils and an African-controlled central government in *Belgian Congo.*
Tanganyika general election for an African-controlled Legislative and Executive Council.

October



Independence of *Nigeria* (1st).
(*British Cameroons*, North and South, to decide their future by plebiscites to be held between October, 1960, and February, 1961.)

November

Federation of Rhodesia and Nyasaland Constitutional Conference on the future of the Federation, in London.
Independent African States Conference (Accra?).
Independent West African States Conference on closer union, Monrovia.

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK

(Incorporated by Royal Charter 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

Offices in the United Kingdom at Birmingham, Manchester and Liverpool.

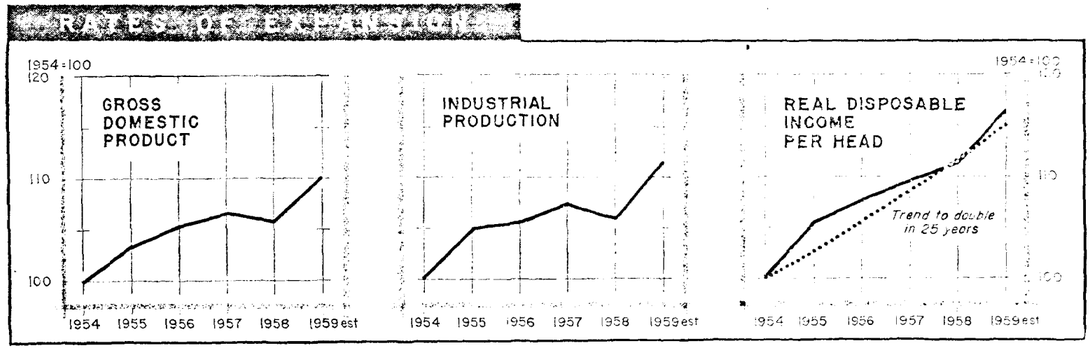
THE BUSINESS WORLD



Back on Trend?

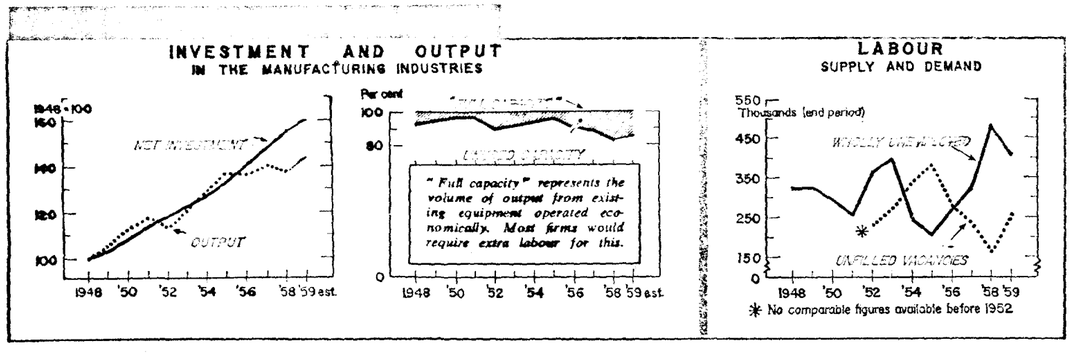
LAST year's recovery outran all the guesswork. A reflationary budget led the optimists to expect that industrial production by the end of the year might be 4-5 per cent higher than at the end of 1958; in fact, the figuring for October shows an 8 per cent increase and that would imply that the average for the whole year might come out over 111 (1954=100), which would be 5 per cent higher than in 1958 as a whole. Non-industrial output cannot have risen so fast as this; but the tokens are now implying a rise of 3 to 4 per cent in Britain's gross domestic product, and imports of goods and services appear to have risen by about 6 per cent. A rough tot of the extra wherewithal that the British economy disposed of last year could easily reach £1,000 million above the 1958 total of £24,000 million.

What is difficult, working from the arithmetic of national income, is to establish where all these resources can have gone. There is no full official figuring at the moment beyond the second quarter of last year; but the partial figures for the third quarter suggest a bigger discrepancy than usual between the two sides of the national income account—the one side measuring what appears to have been spent in the economy, as against the other side measuring what was produced and imported.

Consumers never had it so good; yet their expenditure over the first nine months of the year probably rose no more than 3 per cent, and their spending did not increase so fast in the third quarter as it had done in the second: generous assumptions about the fourth quarter still leave the arithmetic suggesting that consumer spending in 1959 rose in real terms by no more than £400 million. Public authorities appear to have spent a little more on current account. Exports of goods and services, little better than level in volume over the first nine months of 1959, rose significantly in the closing months. In real terms again, these two components of demand might together have increased by £100-£150 million. From the sketchy data so far available, fixed investment may have been nearly 3 per cent up for the first nine months, compared with January-September, 1958, and there is some evidence that it has recently picked up further and beyond the usual tendency for capital spending to bunch in the last quarter of the year. A rise of 3 per cent for fixed investment over the whole year would have required about £100 million of extra resources. Yet the total sum of all these elements of demand still comes to less than two-thirds of the extra goods and services that the British economy enjoyed last year.

The other destination where extra production and imports can go is into stock. Last year, with its steadily accelerating recovery and expansion in industry, was certainly one in which to expect a substantial rise in stockbuilding of raw materials and in work in progress all through the pipelines (though not, probably, in stocks of finished products). Yet such direct evidence as there is about physical changes in stocks—and it reaches only to the third quarter—does not reveal an increase anything like big enough to balance the national income equa-

tion between demand and supply. A boom in stockbuilding has been on the cards for months, and particularly since business confidence became flushed after the election result; some industries, such as steel, are expecting inventory buying to swell demand this winter. But on the evidence, a re-stocking boom still appears to be developing rather than to have developed.



BUT the ordinary citizen (leaving the final figuring of what happened in 1959 to the perplexed official statisticians), will measure its broad sweep of recovery against the perspective of the flatter, damped-down years behind it. It took three years of disinflationary policy (first half-hearted and then more convincing) to bring about even a mild recession in the British economy, and already by the autumn of 1958, the Government had been able to call the turn: by mid-1959, recovery was developing into a boom. Such a rapid expansion has confirmed the reckonings of the "expansionists" that a large amount of slack had developed in the British economy because output had remained fairly level for 2 to 3 years while new industrial investment had continued to build up capacity. But the "stabilisers" have been able to point to a big encouraging difference about this boom; so far, at least, it has been achieved with little rise in prices and probably with some actual reduction in home costs. Moreover, although imports have risen considerably in response to internal reflation, the latest estimates suggest that Britain will still manage an external surplus of £200 million in 1959.

Throughout deflation and recovery, moreover, one basic element in the economy has never ceased to expand: spending on personal consumption. Between the boom of 1955 and the recession of 1958, consumers' expenditure had risen between 3 and 4 per cent in real terms; by late 1959, it was 6 to 7 per cent higher than four years before. Just how one rates the period of pause from 1955 to late 1958 against the proclaimed hope of "a doubling of our standard of living in 25 years" depends on what is supposed to double. National income per head would hardly need to rise 100 per cent to allow a doubled standard of living, unless the individual stretched his notional enjoyments to include investment and defence. Industrial output, on the other hand, might need to rise even more than the required 2.8 per cent a year to double in 25 years, since output of other things increases more slowly than that of goods. If personal consumption and private saving most closely measure standards of living, the Chancellor was entitled to claim, as he did late last year, that "real net disposable income per head," after last year's tax reliefs, is marching well with Mr Butler's projection.

While it remains so uncertain which sectors of demand grew so much last year, this year's guesses about how demand may develop are even shakier than usual. It can be said with rather more confidence that the capacity that now exists and will come into being will satisfy a further substantial growth in demand. How much more? Crude comparisons of the net additions to industrial capacity from new investment against the course of output appear to fit fairly well with the results of empirical inquiries about capacity made by the National Institute of Economic and Social Research in the last two years. From these data, one can make a guess. Assuming that capacity generally must have been very close to full utilisation in 1951 and 1955, they suggest that it may have been underutilised by 15 to 20 per cent in July, 1958, and that production may be perhaps 10 to 15 per cent below capacity now.

These figures do not imply that output could rise by such percentages in 1960: the industrialists who said they were working 15 per cent below capacity reckoned they wanted 7 per cent more labour to reach full capacity—and that they certainly will not get. Some of them thought a 6 per cent increase possible with their present labour force, working rather longer hours: but even that would not be possible across manufacturing, and certainly not for the rest of the economy. Some capacity is spare now because demand has shifted away from it, and the shift may be permanent.

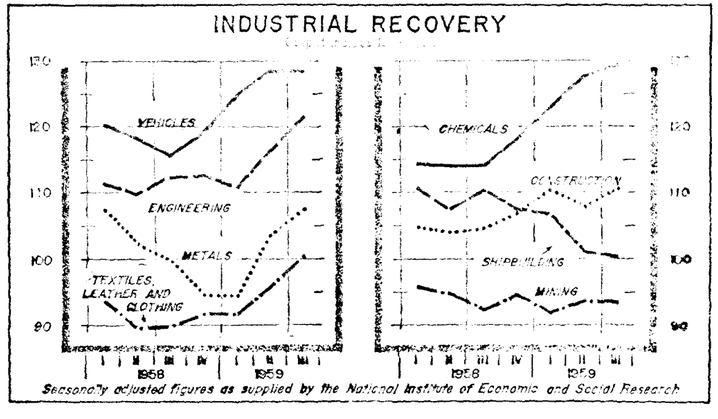
The counterpart to last year's rapid increase in production is a continued rise in personal incomes: the rate of increase in consumer debt is not so big as it was, but consumers have saved so much in recent months that they could if they choose increase their spending in the early months of this year as much as they did last year. There are various indications, too, that some industrialists, particularly in motors and steel, have been deciding to invest more heavily since the election. The full weight of this cannot be expected to tell until late in the year, but fixed investment under all headings should be swelled before then by increases in public sector investment that, after long last, are beginning to build up. One would expect a continued growth of inventories simply because the recovery in demand for many industrial products has been so sharp as to preclude any rebuilding of stocks until now. This promises

in turn a further growth in imports this year. General recovery in the industrialised countries should offer good opportunities for increased British exports, though the United States, where much of Britain's success was concentrated last year, may become a more difficult place to sell European cars. Higher incomes that primary producers are already reaping from selling larger volumes of raw materials at rather better prices may increase their readiness to buy British exports this year.

Production is now riding high, but a disconcertingly large part of its end-use, as the opening paragraphs show, cannot be identified. What, then, is the Chancellor to be expected to do when next he needs to act to keep the economy "about right"? There is one measure of restraint to which external events may eventually incline him—an upward move in interest rates. This could well have some effect internally in weeding out marginal projects if private investment begins to rise markedly in the second half of the year. But there is no sign at present that the authorities are scared of the way the boom is going or that they would be willing to jeopardise an emergent demand for new investment by a stringent use of interest rates. This year it may be hard to serve the needs of the British economy by using general measures of restraint or encouragement. Recovery and boom, so far, have been patchy, leaving some large sectors of industry in decline, and the Government has already shown a leaning towards selective treatment for some of them. The pattern of this boom seems likely to differ quite a little from the last: this one is still leaving room for healthy (and delayed) structural changes in the economy.

The Uneven Boom

The Booming Industries



WITH a rapid recovery in the past six months to record levels of output, *steel* operations have risen sharply from about 80 per cent of capacity to about 95 per cent. Output last year was about 20 million ingot tons. This year the steel makers hope to be able to sell 23½-24 million tons. They are not, indeed, expecting their customers to use 17½-20 per cent more steel in 1960 than in 1959. But they are assuming that they may rebuild their stocks by perhaps up to a million tons (in ingot equivalent) this year—or about two-thirds of what they reduced them by in the recession. Even if steel consumption were unchanged this year, such a shift in stocking policy would push up home sales by almost 1½ million tons compared with 1959. But the steel makers also reckon on a rise of 5-10 per cent in home consumption of steel and a similar increase in direct exports. Total steel capacity is unlikely to come under strain: but difficulty will remain in meeting all demands for sheet steel.

Getting enough sheet may not be the only problem for the *motor* industry in 1960. It is now reaping full benefits from expansion programmes embarked on in 1954. In that year production totalled 769,000 cars and 268,000 commercial vehicles; last year output reached about 1,175,000 and 350,000 respectively, but by the year-end vehicles were coming off at an annual rate of 1,800,000, close to what the industry was at one time expected to reach in 1965 and yet still some way short of what it could, if required, squeeze out in 1960. BMC, Ford and Vauxhall are stepping up their capacities further, for 1961 and later.

But will the industry find customers for all the vehicles it could turn out this year? If home sales of cars approach 690,000 in 1960, against 610,000 in 1959 and 570,000 in 1958, it will have done well. Hire purchase terms can hardly be made any easier and the industry would be lucky if the Chancellor were to cut purchase tax on vehicles. The modest revival in freight traffic may help the makers of the heavier types of trucks, and they are confident of bigger exports again. But car exports (half of them to North America) face new competition from the new American compact cars and have to recover much ground lost elsewhere.

Makers of *household goods* are already working as close to capacity as most of them can get. In the first six months of 1959 output of a range of these appliances was 40 per cent higher than in the first half of 1958, and the pace does not seem to have slackened since. Spending on durable household goods might rise as much this year as it did in 1959, but manufacturers are quite happy with business as it is.

Output of heavy *chemicals* achieved a measure of recovery last year; the chemical industry as a whole showed a sharp rise in production of perhaps 12½ per cent for the full year, but this reflects the rising output of petrochemicals (particularly plastics), of paints and solvents, synthetic fibres and dyestuffs, and detergents—all of them closely related to consumer spending. Exports of chemicals set a new record in 1959 and the industry is confident of surpassing it this year.

The Recovering Industries

THE volume of *building and construction* work rose in 1959 by about 6 per cent, with private housebuilding substantially higher, and public housing lower; other building by public authorities and private commercial building both rose, but private industrial building has yet to show a revival. Activity this year will benefit from the big rise in orders for new work placed last year—about £1,500 million, against £1,278 million in 1958. Public construction work covers nearly half of all building expenditure and is expected to increase again, as should new private housing and commercial building.

In the 6-7 per cent rise in *engineering* output last year, consumer durables played a bigger part than investment goods, but these have lately been showing signs of recovery. Public investment—in electricity and railways primarily—continued to grow, engineering exports appeared to be reviving, and order books for machine tools and general engineering products stopped falling about the middle of last year. Output of plant and machinery may thus be expected to rise, but private industry's investment plans for 1960 do not suggest any material increase in its outlays on new plant and machinery.

Output of *textiles* and *clothing* has risen sharply. Lancashire is booming just as it is about to cut its capacity. Re-stocking has been encouraged by the firmness of raw cotton prices and by fears of shortage from the closing of mills under the reorganisation scheme. The recovery in the wool textile industry, which took about as much raw wool last year as in the Korean boom year of 1950, and a sixth more than in 1958, is now levelling out.

Still in Decline

COAL output fell by nearly 5 per cent in 1959 to about 206 million tons. But consumption (exports and bunkers included), fell by 10 per cent to about 190 millions tons, and total stocks rose by 14 million tons to more than 50 million tons. The main problem of the industry, however, is to find a way of preventing output falling to a level that could cause severe trouble later on. The board had hoped to mine about 195 million tons in 1960, but 1959 ended with output already down to an annual rate of 197 million tons, and the run-down in miners shows no sign of halting. Consumption is likely to rise this year. The revival in steel is making itself felt, but much depends upon the weather in the remaining winter months, as upon a broader upturn in the economy.

Though 1959 came to an end with a spatter of orders for new ships, *shipbuilding* is not likely to experience a real improvement until the shipping slump is decisively ended and most of the older vessels now laid up are sent for scrap. But its order books of 4 million gross tons at the end of 1959 (concentrated in the larger yards and including orders "on ice") should keep the industry reasonably busy at its declining rate of output.

Leads for Investors

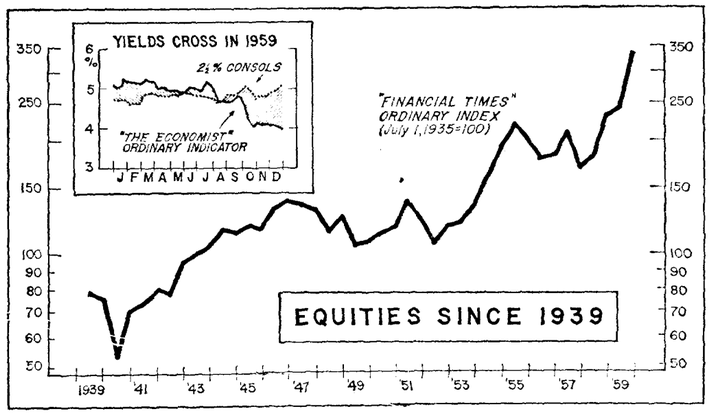
IN the last two years, leading ordinary shares in London have risen by 125 per cent. That is much the same rise as in Wall Street's boom in the two years up to October, 1929; and it is a shivering thought that the 35 per cent rise in London in the last five months far surpasses Wall Street's spurt before the crash. However good the reasons for this quite different boom in London equities, investors have to ask themselves at the new year whether the party is over. The discussion on the earlier pages of this article is distinctly encouraging about the prospects for the economy; but there is not one investor in ten who does not take all that and more for granted.

The first thoughts of serious investors must be to the traditional signals, sterling and gilt-edged. It was possible last year to go in for a big reflation without jeopardising either sterling or gilt-edged by the fact or the fear of inflation. Will sterling and gilt-edged continue unaffected in 1960, as the economy moves nearer to boom? Maybe not, but the question is too portentous. Sterling is now on a much firmer base. In return for a small fall in the central gold reserves last year, Britain has repaid short-term debt and increased its quota with the International Monetary Fund by 50 per cent; so the "second line" reserves have been improved by over $1,000 million, which gives some useful room for manœuvre. The authorities do not need to worry if higher interest rates abroad pull modest flows of foreign funds from London.

What happens to the current balance of payments and the domestic value of the pound will be of more consequence. The current surplus in 1959, which may have been around £200 million, was no better than fair, given Britain's responsibilities for long-term lending and for help to developing countries. There is no room at all for meeting a deterioration in the trade balance this year, and the authorities should certainly be ready to pounce (notably with Bank rate) if they detect signs of a boom in imported stocks of materials. They are also making much more determined noises about the need to keep prices stable. If the noises go along with appropriate policies, sterling should have little to fear.

If restrictive measures did become necessary, equities would be more badly knocked than gilt-edged. The fact that the economy is now expanding under its own steam and that the Chancellor of the Exchequer will presumably budget next April for an overall deficit very much smaller than £721 million will relieve the Exchequer's need for borrowing in 1960-61. Borrowing from the gilt-edged market, however, may be just as pressing as in the past year. The Exchequer ought to depend much less this year on expanding the floating debt; and the queue of local authorities hoping to fund their short-term borrowings grows every week. It would be only sensible to expect a move by the authorities sometime in 1960 to check the recent deliberate expansion of credit. That could not help gilt-edged, and the market may eventually have to absorb sales by trustees released by the projected reform.

Yet despite these pressures one need not necessarily expect prices of long-dated government securities to be lower at the end of the year than they are at the beginning. So long as there is confidence in the stability of the currency, gilt-edged at their present yields of 5-5½ per cent have a strong built-in resistance to further falls in price. The fashion may still be for growth; but it is gilt-edged that now provide attractive income and some investors have been acting on that fact.



WILL ordinary shares continue to ignore this competition? So far they have done so, ending the year as they had begun it, and booming even on Christmas Eve. It is an appropriate end to a decade which started with the shareholder put last, by government and directors alike, and finished with equity shares out on their own. Their prices are now three times what they were at the beginning of 1950 and more than four times as high as before the war. In this decade it became fashionable to think of equities as a hedge against inflation. In fact what was happening was that their prices were catching up with the rise in other prices that had occurred since the beginning of the war. At present levels they are discounting further economic expansion rather than future inflation. Essentially, equities are now level-pegging with the economy and what happens to them will depend on the growth of earnings over a much longer period than ordinary shareholders have been prepared to contemplate hitherto.

The average yield on leading blue chips is now as much as 1½ per cent below that on long-dated gilt-edged; on current favourites the margin is as much as 3 per cent. Those who are buying these shares are making highly favourable assumptions about the future rate of growth in the economy and its translation into earnings and dividends. There is no reason for pessimism on any of these points. The question is how far the investor should go in paying for them. It would be surprising if easier credit had not made ordinary shares dearer, just as it has made farm land dearer. And at these prices the investor must become aware of the counter attractions of high yields on fixed interest stocks. If the prospect is for progress without inflation, the greater these attractions must be.

Wall Street, as a correspondent points out on a later page, has had a check that has blown some of the froth away. Throgmorton Street, so far, has not. For twenty-two months the equity market here has been almost continuously booming and prices have more than doubled. The Conservative victory in October spurred on the boom at an even greater rate—and rightly so, for it is hardly conceivable that party politics can ever again impose such an arbitrary hold on the market as they did at various stages of this closed decade. The need now is for a new sensitivity in timing and choice. It is a question not simply whether certain stocks and certain sectors (such as hire purchase, electronics and store shares) have been over-bought but whether such a general pace of advance can possibly be maintained. It is hard to believe that it can be, just as it is equally hard to believe that equities could fall far into discredit (especially not with a new Act to give trustees a chance to invest in them).

The investor must also consider the possibility of a reaction in the market—it seems more and more likely each time the daily index is jerked three or four points forward and each time the reversed yield gap widens. So far, any temporary check to the advance has brought investors back into the market to buy at lower prices. Short-term speculative gains will surely be harder to come by, particularly if the banks became tougher in their lending policies.

Among the industrial groups which gained most ground last year were steel, motor, plastics, newspaper and store shares. Steel shares are the special case, for once the nationalisation threat had been removed, they had to be adjusted to levels comparable with other leading industrial shares and that has happened. But their earnings yields are high and though the industry faces a big re-financing task, further advance cannot be ruled out simply because last year's advance was phenomenally strong. For the other groups, much of this year's expected rate of expansion has been discounted. It is not surprising that attention is now turning towards those industries where re-expansion is getting under way, including textiles, general engineering, building and electrical manufacturing. In the last few weeks equities in these categories have been given distinct prominence; it is noticeable that last year these groups (and even chemicals) fared little better than the average and some other groups (including heavy electrical equipment, still over-shadowed by the earlier and over-optimistic atomic share boom) fared much worse than the average. In the bull market of the last two years, some shares, including oil, shipping, shipbuilding and aircraft, have been largely ignored; the merits of some individual stocks (in the shipping and oil list particularly) were sadly overlooked until recently. But this is no year to start with the crystal ball; it will only reflect the rosy hue over the whole market without telling much about individual prospects. Better equipment for the investor would be: first, a sustained belief in the equity principle; secondly, a hard look at earnings prospects, of whatever he thinks of buying; and thirdly a look at asset backing too, for the last has surely not been heard of mergers and take-overs.

This logarithmic scale measures rates of growth: it shows the same rise for a doubling from 50 to 100 as from 100 to 200.

BUSINESS NOTES

IN THE MARKETS

All Ye Faithful

INVESTORS celebrated the festive season by a new burst of buying that raised the indices of equity prices by about 5 per cent in the last ten days of the year; this is not far short of the rise in the week after the election. Then, a major change in politics amply justified a major adjustment in the investment markets. It is not quite so apparent what new element affecting the worth of ordinary shares took place on Christmas Eve. The timing could be an indication of speculative fever, of the dangerous sort of reasoning that makes investors scurry to buy today because prices are bound to be up tomorrow.

One reassuring sign showed itself on Tuesday: there was a recovery in gilt-edged, which had been hit by seasonal influences and by anticipation of the promised new laws for trustees. Gilt-edged improved further on Wednesday, providing a good background to the Government's straightforward conversion offer. A new 5 per cent Conversion Stock, 1971 (one of the few years ahead in which maturities already arranged are light), is offered to holders of the £448 million of 2 per cent Exchequer Stock, 1960, and the £200 million of 3 per cent stock maturing early this year; the exchange is at par but with a cash payment of £1 10s. for each £100 nominal of the maturing stocks.

The significant feature of the operation is that the authorities have added to neither the short end nor the long end of the market. The Government broker still has adequate supplies of 5 per cent Treasury 1986-89 for his funding sales (which have been precious few in recent weeks but which ought on past experience to pick up this month and next). The short bond market should be stimulated by the reduction in the supply of stock (though a big part of the maturities has in the usual way been bought into government portfolios already and few are left in the discount market). This influence may in coming weeks be some counter to the pressure on short bonds arising from the increase in the bill rate (which under pressure from the authorities is getting close to 3¼ per cent) and from fears of a rise in Bank rate. In August some £713 million of 3 per cent Savings, 1955-65, will come within the five-year range of short bonds. The new 1971 stock is designed to appeal to the banks if they should ever feel interested in gilt-edged again; but might they not prefer something shorter?

A Broad Advance

The rise in equity prices, which began to boil over on Wednesday afternoon and was patchy on New Year's Eve, covered most sections of the market. But it was especially marked in bank shares, in advance of the imminent declaration of dividends for what must have been a highly profitable year, and in previously neglected stocks, notably oil shares. Shell, under influence of American buying, has jumped by 12s. 9d. to 159s. 9d. since the beginning of the week.

The height of present equity prices has not inhibited the Alliance Trust group from raising the gearing of its two trusts by offers of debentures. Alliance Trust is to issue £4 million of 5¼ per cent stock, 1980-85, at 97, and Second Alliance is to issue £1 million on the same terms. The yield of just under 5½ per cent is only ¼ per cent above that obtainable on a government security of comparable life. It may be that the new trustee proposals will lead to a general narrowing of such differentials. But the Alliance group is clearly paying more at 5½ per cent than it could now earn in immediate income on new equity investments. Decca Record is to issue £4½ million of 6 per cent unsecured loan stock, 1980-85 at par. This is likely to be nearer the going rate for industrial debenture offers in the next few weeks.

BANK CREDIT

Advances Slowing Down

FURTHER evidence that the expansion of bank advances is slowing down emerges from the full statement of the London clearing banks for mid-December. The banks together show a rise in advances in the previous four weeks of £68 million; but more than half of this results from special influences. The increase in the number of cheques being cleared at this season has brought a rise of £25 million in items in transit included in the gross figure of advances; and the nationalised industries have temporarily increased their advances from the clearing banks by nearly £14 million, to £82 million. Thus the true increase in advances to other borrowers was only £29 million—the smallest since the upsurge of advances began in the autumn of 1958.

This is the first time that the banks have published a make-up for mid-December, and it happens that the strong expansion of cheque clearings and liquid assets always seen in the end-year balance sheets still appears in some degree in these mid-month statements. The increase of £111 million in liquid assets, representing for the most part increased borrowing by the government from the banking system, may also reflect in part the weakening of the gilt-edged market during this period. In the weeks after the election, the revival of demand for gilt-edged had a noticeable impact in slowing down the expansion of bank credit. Even now the banks' liquidity ratio, at an average of 34.2 per cent, does not provide an excessive cushion to withstand the new year drain of tax payments.

STEEL

Demand in 1960

THROUGHOUT the period of recession in steel demand, which began late in 1957, the steel industry was bringing in about a million ingot tons net of new capacity each year. In 1957, the steel makers had plant capable of producing 22¼ million tons and sold 21.7 million tons: last year their productive capacity, defined as the level at which they would prefer to operate, had risen to 24½ million tons but deliveries, which began to turn upward sharply in mid-1959, totalled only 20 million tons. By the year-end, however, output had reached the record annual rate of just over 23½ million tons. This year, with more new capacity due to come in, the industry could make, if called upon, as much as 25½ million tons.

The prospects for selling this much steel are examined in the January issue of *Steel Review*. The upturn in home steel demand in 1959 came initially from the boom in cars and household appliances, followed by a rise in construction, and by a slower general recovery in engineering. Vehicles and household goods should still do well in 1960. Public investment is likely to go on growing —though with a declining intensity in steel usage—and there should be an increase in the capital outlays of some private industries. Indirect steel exports by the metal goods industries should maintain their recent recovery. All told, home consumption this year might increase by 1-1½ million tons and, with the general recovery in world demand, there may also be a moderate increase of perhaps 5-10 per cent in direct steel exports.

But the biggest factor of uncertainty lies in the movement of consumers' and merchants' stocks. During the years of the steel boom from 1955 to 1957 these were built up by more than 1½ million tons (in ingot equivalent) only to be reduced in the following eighteen months or so of recession by almost the same amount, making the peaks and troughs in steel output even greater. The process of stock rebuilding appears to have begun towards the end of 1959 and could easily absorb up to an additional million tons of steel deliveries during 1960, suggesting a total demand this year of more than 24 million ingot tons. Imports—mainly sheet—are likely to fall during the course of the year. Thus, the mills may be called upon to deliver something approaching 24 million tons, between 90 and 94 per cent of their total capacity, with the biggest margin in heavy products used by the railways, coal and shipbuilding. Supplies of sheet steel, despite the prospect of an increase of 20 per cent in cold reduced sheet in 1960, are likely to remain tight, however, until the new strip mills at Newport and Ravenscraig start coming in in 1962.

Wall Street in the New Year

A Correspondent writes:

AS the old year drew to a close the mood on Wall Street, which only a few weeks ago was marked by doubt if not despair, became remarkably cheerful. The season itself had much to do with this change in heart, for this is the time for prophecy and most of the seers are decidedly optimistic about the prospects for business and the equity market in 1960. This is also the season for year-end dividends, and these will add up to a new record in payments despite the relapse in earnings caused by the long steel strike. And it is the period of reinvestment after sales made for tax purposes. Another contribution to the reaffirmation of faith in equities is the fact that 1960 will be an election year. Equity prices, the crystal-gazers say, should continue to rise early in the new year on the argument that the steel strike has proved to be a blessing in disguise, bringing about a pause in economic expansion and a tightening of credit at a time when it was needed most and assuring a new lease of life for the boom.

On similar reasoning, the drop in the Dow Jones average from its peak of 678 to a low of 615 can be considered a healthy development. In December that index came near its earlier peak. There is little expectation of an immediate stampede into equities that would produce a really sharp rise followed by a fall. The moderate extent of the recovery in equity prices recently has helped to strengthen this view and most stocks are still below their earlier peaks. Buying has become more selective, being concentrated upon such industries as chemicals, electrical equipment and capital goods which are likely to do well in 1960; upon consumer durables on which spending held up remarkably well during the steel strike; and upon banks and financial companies which are expected to profit from higher interest rates. American investors have not lost sight of reality in their buying of equities—though speculative fever is still evident in the demand for electronics issues. Just before Christmas, for instance, a new electronics stock was issued at $36 a share, around 30 times its estimated earnings in 1960. It was promptly bid up to $50, being bought at the equivalent of ten times its current turnover. This is hardly a conservative way of evaluating share prices.

WHEN equity prices are bid up to high levels, and dividend yields fall, American investors have to consider, just as their British counterparts do, the relative attractions of better yielding fixed interest bonds. Over the last few months, however, bigger earnings have permitted a rise in dividend payments, and this has pushed up yields on common stocks. These yields are still appreciably lower than those on fixed interest securities, but despite the rise in equity prices and the sagging of government bonds, the gap has not widened since October. The possibility that investors have to consider is whether dear money policies designed to put a brake on inflation will raise fixed interest yields to levels that are irresistible even to the most devout believers in the equity cult. Some institutional investors, especially pension funds and bank managed trust funds, have taken advantage of the recent rise in equity prices to cut down their holdings. Mutual funds, whose sales continue to be brisk, remain faithful to equities, but they are now more cautious than they were before the steel strike and have become very selective in their choice of stocks.

These have to be taken as signs that a change in mood is still possible. Investors are assuming that the steel strike will not be resumed, counting obviously on the chance of intervention by the government to force a compromise settlement. Nor do they seem to believe that there will be a rail strike, though both the unions and the managements are already stubbornly entrenching themselves. It may well be that these clouds will roll away; but investors are behaving as if they had already disappeared. And they may not as yet have faced the full implications of high interest rates.

TAKE-OVER BIDS

An Umbrella for Solartron

THE Solartron Electronic Group is a good example of the small company—it employed only 20 people in 1951—which grows on sheer technical merit to a certain size and then has to decide whether to remain so or to re-constitute itself to go ahead for greater things. They make their way in radio and electronics by patience and technical skill, not by large capital. In precision instruments, industrial controls and high-speed accessories for computers, Solartron reached an annual turnover of £2 million, employing 1,330 people. The company's reputation is built in part on its willingness to do awkward jobs that the rest of the electronics industry finds too complicated.

But a time comes when developments cannot be carried further without the injection of new capital. In the latest annual report the chairman says that the development of electronic reading machines (to give one example) has already cost the company £120,000, of which £82,000 has been spent in the past financial year, and a further £50,000 will have to be spent before the first machine is ready for delivery. The company's issued capital is £420,000 and its total assets are £2 million. It was decided to raise £1 million of new capital, and instead of going to the market, Solartron has arranged with

Firth Cleveland for the latter to subscribe for 300,000 new ordinary 10s. shares at £3 each and acquire 125,000 existing 10s. ordinary shares at the same price in cash or, alternatively, in exchange for two 4s. ordinary shares of Firth Cleveland. This company is offering to buy *half the shares* of existing Solartron shareholders now, and the remainder by July 31, 1961. This brings Solartron under the shelter of the umbrella of the industrial holding company, Firth Cleveland, which covers the largest television and household equipment retailing chain in the world and which has some experience of electronics. And it gives Firth Cleveland an indirect stake in the computer market because a large part of Solartron's business is in ancillary equipment for computers.

Seeking to Expand

HAVING conducted an agonising re-appraisal of its business in 1956, Metal Industries, under the chairmanship of Sir Charles Westlake, quickly regained its balance. In the summer of 1958, it sold off its last holdings in British Oxygen to its own shareholders, and with the money began to take other companies under its wing. In particular, it added to its interests in hydraulic and electrical equipment. Its electrical division now earns about 60 per cent of its total profits and a merger with such a comparatively small but prosperous electrical manufacturing concern as Lancashire Dynamo obviously made sense to the MI directors. A year ago they were negotiating with Lancashire Dynamo about a merger but they had no success.

On Christmas Eve they took the Lancashire Dynamo directors and the stock market completely by surprise by making a bid for all the preference and ordinary shares, requesting that the details of the offer should be passed on to shareholders. It was an odd time to make a bid and though their action can hardly be described as pacific the MI directors seem anxious to be amicable, speaking of a "merger" between the two companies and of an interchange of directors. The offer, judged even as a ranging shot, is not unattractive. For every £5 of 5½ per cent preference stock in Lancashire Dynamo, £6 of new 5 per cent preference stock in MI is offered and for every £5 of its ordinary stock £4 of new ordinary stock in MI plus 30s. in cash. With the MI shares standing at 72s. 6d. at the moment of the bid, this put a price of 64s. on the Lancashire Dynamo ordinary shares. They were then quoted in the market at 49s. and since the bid they have been marked up to 63s. 9d, while the MI ordinary units have risen to 74s.

TRADE WITH FRANCE

More Imports Freed

BRITISH exporters of motor cars, farm tractors and whisky no longer face quantitative restrictions in the French market. On Friday France abolished quotas on a further range of imports from OEEC countries, the United States and Canada, bringing liberalisation to 90 per cent of the trade on private account in 1957. Though the latest relaxation is substantial, the remaining quotas are still much more extensive than those left in Britain. On Friday also, France and other countries in the common market were due to make the second increase of 20 per cent in their ordinary quotas, and to increase small quotas from three to four per cent of national production of the affected items. These increases apply not only within the common market but to other OEEC countries as well. But the outsiders will negotiate their new quotas bilaterally; negotiations between Britain and France are expected to begin on January 19th. The principal items freed from control are:

> Motor cars, motor cycles and powered bicycles; farm tractors and other agricultural machinery; some mechanical handling equipment and contractors' plant; certain machine tools; whisky; knitwear except stockings and socks of synthetic fibres; printed piece goods of cotton and/or rayon; most batteries and accumulators and most household equipment, appliances and electric lamps; many steel products and chemicals; and earthenware.

France has greatly simplified the trader's task by introducing (as Britain has) a "negative" list of items still restricted. Apart from those already mentioned, the remaining quotas cover principally:

> Trucks and buses; crawler and other road tractors; coal and petroleum; certain chemicals and plastics; synthetic rubber; refrigerators; typewriters and computers; radio and television receivers; most cameras; certain scientific instruments and photographic equipment; watches and clocks; cutlery and furniture.

Britain should be able to sell more tractors and other machinery to France and, to judge by its popularity, more Scotch. British exports of whisky far exceeded the French quota, plus the special allowance for French hotels. The excess shipments apparently were attributable to an official practice of importing whisky and selling it at a stiff premium, and using the profit to help subsidise exports of certain French foodstuffs. This practice will presumably cease, to the benefit of British exporters and the pockets of Frenchmen who drink Scotch. But devaluation of the franc a year ago has made it more difficult to sell some British goods, such as family cars and cotton textiles. And though British exports to France in the first eleven months of 1959, at £70 million, were £5 million higher than in the same period of 1958, they were £12 million lower than in 1957.

SUEZ FINANCE COMPANY

Second SIM Sale

FOR reasons not altogether clear the British Government has retained its holding in the Suez Finance Company (which succeeded the Suez Canal Company) and like other shareholders it is receiving shares in the investment trust subsidiary, *Société d'Investissements Mobiliers*, and some cash as the United Arab Republic pays over compensation to the parent company. While the Government is retaining its shareholding in the parent company and its representation on its board, it seems willing to sell its shares in SIM, whose moneys are largely invested in French and other European securities. When it sold the first batch of SIM shares in June—70,760 of them at approximately £25 10s. each to the Locana Corporation—there was some comment that interested investors might have been invited to tender. In particular, it was asked why N. M. Rothschild, who originally lent the Government money to buy the Suez Canal shares, had been passed by.

It was more than sentiment that prompted this question and in December Sir Edward Boyle, the Financial Secretary to the Treasury, said that the Government would consider any favourable offer which might be made for the SIM shares; if they could not be sold by private tender, the Government would consider offering them for sale through the market. Tenders, including apparently one from Hambros Bank which acted for Locana in June, were made for the second batch of SIM shares and N. M. Rothschild was successful. The price at which the bank has bought the 35,380 shares has not been revealed, but evidently it could not be far away from the price of £27 15s. on the Paris Bourse. A few thousand of these shares are to be placed by Cazenove and Company through the London market at the equivalent price, allowing for arbitrage costs, of £27 10s. each.

ATOMIC ENERGY

Chapel Cross at Work

DURING Christmas the last of the four reactors at the Atomic Energy Authority's Chapel Cross nuclear power station began working, marking the completion of the AEA's massive building programme that began in 1946 with the decision to have a British-built deterrent. The commissioning of Chapel Cross, the country's second nuclear power station and its third plutonium factory, completes the task. The authority is never likely to build again on this scale. It may put up pilot-scale nuclear power stations costing £10 to £15 million as it is doing at Dounreay and Windscale to test new reactors before they are tackled by industry. It may modernise material treatment plants like the uranium smelting factory at Springfields and the spent fuel treatment plant at Windscale in order to provide a fuel service for civil nuclear power stations at home and abroad. But further expansion of plutonium production seems improbable.

The two Windscale plutonium-producing reactors, the four at Calder Hall and the four at Chapel Cross were built to provide a

nuclear deterrent of moderate size, together with the gaseous diffusion plant at Capenhurst which plays a key part in weapon production. In the middle of 1958, it was decided that their output would not be big enough to provide for tactical atomic weapons as well as the main deterrent and plans were made to adapt the civil nuclear power stations to produce weapon-grade plutonium. That decision was reversed in a matter of months and replaced by a complicated deal with the United States under which Britain exchanges plutonium with the United States against an equivalent weight of uranium 235. If Britain's weapon programme should in the future happen to outstrip the capacity of the existing plutonium factories, the balance will be made good from the United States.

COASTAL SHIPPING

Unfair Competition?

BRITISH RAILWAYS, which normally finds it difficult enough to compete with other forms of transport, has few formal restraints placed on its activities: it is, however, unique among the nationalised industries in possessing an independent regulatory body—the Transport Tribunal—which rules on any complaints about the railways' business dealings as well as fixing maximum charges. A petition has now been lodged with the Tribunal by the United Kingdom Chamber of Shipping on behalf of the coastal shipping industry, which in recent years has found itself almost as hard pressed as the railways to keep traffic. The complaint arises from the fact that after several months' consultation with the Transport Commission, the South Western Gas Board abruptly terminated contracts with coastal shipping companies to haul about 150,000 tons of coal a year from the northeast to waterside gas works in its area, and gave the business to the railways. It is questioned whether the rate offered by the railways is an economic one: but it appears that in fact the change from ships to rails was largely based on the Gas Board's need to change its source of coal, for technical reasons.

The interests of the coastal shipping industry are watched over by the Coastal Shipping Advisory Committee, which was set up by the Transport Act of 1947. This committee, composed of eight members named by the commission and eight named by the Minister of Transport to represent the industry, is charged with considering and reporting to the Minister on "all matters which may jointly affect the interests of the Commission and those of persons engaged in coastal shipping." The difficulties of getting such a committee to agree on anything of importance would seem obvious; while the present dispute was indeed discussed at a meeting last month, knowledge of the Chamber of Shipping's impending petition appears to have prevented it from taking any action of any kind. What is more serious, according to the shipowners, is that the matter was not referred to the committee before discussions were begun with the South Western Gas Board.

The coastal shipping industry now consists of liner, tanker and tramp vessels totalling about 1.2 million tons deadweight; the dry cargo vessels last year hauled about 29 million tons of cargo—about 90 per cent of it coal—between British ports. This tonnage has been falling sharply in recent years (dry cargo tonnage in 1957 was about 34 million tons) and the industry has previously expressed its concern about contracts for power station coal, which form the bulk of its business. It is often defended on other than economic grounds—potential service in time of war is an example—but has not previously been involved in a dispute of this kind with the railways. Provided the commission is not winning business by deliberately accepting unprofitable traffic, it is hard to see why its freedom to try and pay its way should be impaired; but it is also hard to see why the Advisory Committee, whose purpose is to prevent disputes of this kind, should be ignored, thus forcing the Tribunal to Act.

AIR FARES

Competition at Work

LAST year the world's airlines carried 95 million passengers but by no means all of these paid the fares prescribed by the International Air Transport Association. More important, perhaps, than the arrival of the jets and the carrying of eight million more passengers in 1959 was the beginning of a movement to cut fares by means that are outside IATA's powers of price fixing. One in every eight of the 1,650,000 passengers who crossed the North Atlantic in 1959 travelled in an aircraft chartered from one of the scheduled airlines and they paid roughly half of the price of a ticket bought across the counter. This type of chartering by the big airlines—not just by the small operators on the fringe of the business—more than doubled last year and it is snowballing impressively for 1960.

Since the airlines openly reduced their fares nearly two years ago, travel agents have been getting discounts of about 40 per cent on seats sold as part of a packaged holiday tour. Organised groups have always chartered aircraft, but it now looks as if the actual organising of 'organised' groups is becoming an important part of travel agents' business on the other side of the Atlantic. IATA's regulations forbid a group of people from coming together just to charter an aircraft but even IATA cannot stop them from coming together on the spur of the moment to form a club for some other purpose and then chartering their aeroplane. Probably because of currency restrictions in the past and a greater liking for the travel agent's inclusive tours, fewer British groups charter aircraft and most of the business comes from the other side of the Atlantic. The British Overseas Airways Corporation is making a good start in this business, employing surplus North Atlantic aircraft and is likely to emerge as a giant in chartering.

PLEASURE BOATING

On the Water Front

WHEN almost everyone has a television set and a third of Britain's families own motor cars the next item people will want will be boats—or so manufacturers of pleasure boats believe. Sales of week-end craft have risen sharply enough this year for such optimism to seem justified, but no one knows the size of this market. Small craft are not registered except in certain waters and if the Ship and Boat Builders' National Federation has measured the production of its member firms it is not publishing the figures. One estimate puts the market for outboard motors in 1959 at 50,000 units, which was an increase of 150 per cent over a similar estimate for 1949: another suggests that about 225,000 pleasure boats were in use last summer. Membership of the Royal Yachting Association rose by half last year, but racing enthusiasts do not provide a mass "family" market.

It is in this direction, however, that the greatest expansion seems possible. The ideal craft would seem to be a ready-made boat with a fairly powerful motor, easily manœuvred, costing under £150 including engine, and compact and light enough to be put on top of the car and driven to the water. Of the 300 firms exhibiting at the Boat Show at Earl's Court this week, about twenty offer something of this kind. A small dinghy and outboard motor can be had for as little as £70, and 21 exhibitors offer cheap "do-it-yourself" kits. Larger open motor boats of "moderate speed" sell at between £150 and £250, but a really fast, comfortable family launch costs up to £500. A small cabin cruiser can be bought for about the same amount. This makes the cost of week-end sailing somewhat less than the cost of a second car, but a lot more than the cost of a second television set.

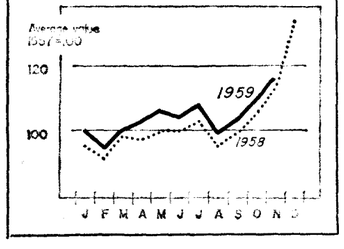
New materials and large-scale production may make the £150 weekend boat more common next year: 24 firms at Earl's Court offer boats made of glass fibre and another six offer aluminium craft (which are lighter but not cheaper). Wood is still the main material. So many firms have turned to making so many different kinds of boats so quickly that the industry will need to pause and catch its breath before it can plan a drive for an expansion of family sailing of the kind that has already taken place in the United States.

THE GOLD STANDARD

Was It Ever Automatic?

WAS the international gold standard, even in its heyday before 1914, ever as automatic as monetary literature has

widely represented it to have been? Some new researches put this question, and some related ones, to the test of analysis in the light of modern principles and practice of monetary policy. Professor Arthur Bloomfield, lately of the Federal Reserve Bank of New York, is engaged on a substantial study of the functioning of the international gold standard in the period 1880-1914, and he has now presented the first fruits of his investigations in a short monograph published by the bank in its well-known series, which hitherto has been mainly devoted to modern monetary practice.



In common with some other writers since the breakdown of the gold standard in 1931, Professor Bloomfield believes that the pre-1914 model as described in text-book literature was over-simplified and idealised, and that the success of the system in operation was due neither to any automacity nor to special wisdom on the part of the operators, but mainly to an "unusually favourable combination of historical circumstances." The overriding objective of the gold standard countries was to maintain the convertibility of their national currencies into gold (directly or indirectly) at the legal parity; and in this they were assisted by the high degree of sensitiveness of international flows of short term funds to changes in interest rates, by the large and unimpeded flows of long-term international investment, and by the fact that the disturbances to world payments seem to have been, in general, relatively more moderate in the years before 1914 than in later years.

Although the system may not have been crudely automatic, in the sense of rapid responsiveness of Bank rate action to changes in central banks' gold reserves. Professor Bloomfield still finds that in the principal central banks (six out of the eleven he examines) there was close inverse correlation between the movements of Bank rates and ratios of gold reserves, as measured by annual averages. The lack of correlation shown by the other banks may have been due, moreover, to the strength of the influence of the rate movements of the major central banks (notably, of course, the Bank of England, since the several bank rates tended to move in unison; this "sympathetic" effect may have been especially important in the Scandinavian banks. To the extent that there was deliberate "management" of the pre-1914 gold standard, there is little to suggest that this was dictated by international as distinct from national considerations.

According to Professor Bloomfield, the "rules of the game" supposedly required a central bank not only to allow a gold movement to exert its natural effect on the reserves of the commercial banks, but actually to exaggerate that effect. Not surprisingly, he is unable to find any evidence that the game was in fact played in this way, since the domestic and international assets of central banks more often moved in opposite directions than the same direction (as, of course, they also did in the interwar period). The "neutralisation" of gold movements in this sense was, however, generally only partial—so that the volume of domestic credit did respond to changes in the reserves. Although some sharp deflationary pressures were experienced in individual countries during the period, these seem to have been attributable to the impact of worldwide depressions rather than to the effects of any restrictive credit policies associated with the need to maintain convertibility. There is no sign that discount rate policy had harsh repercussions on employment.

Retail Sales

Retail trade was still doing as well in November as earlier months. Although expansion over last year had narrowed from 5 per cent in the second and third quarters to 2 or 3 per cent in October and November, this only reflects the higher trade in the corresponding months of 1958 following the lifting of hire purchase restrictions.

THE SMALL INVESTOR

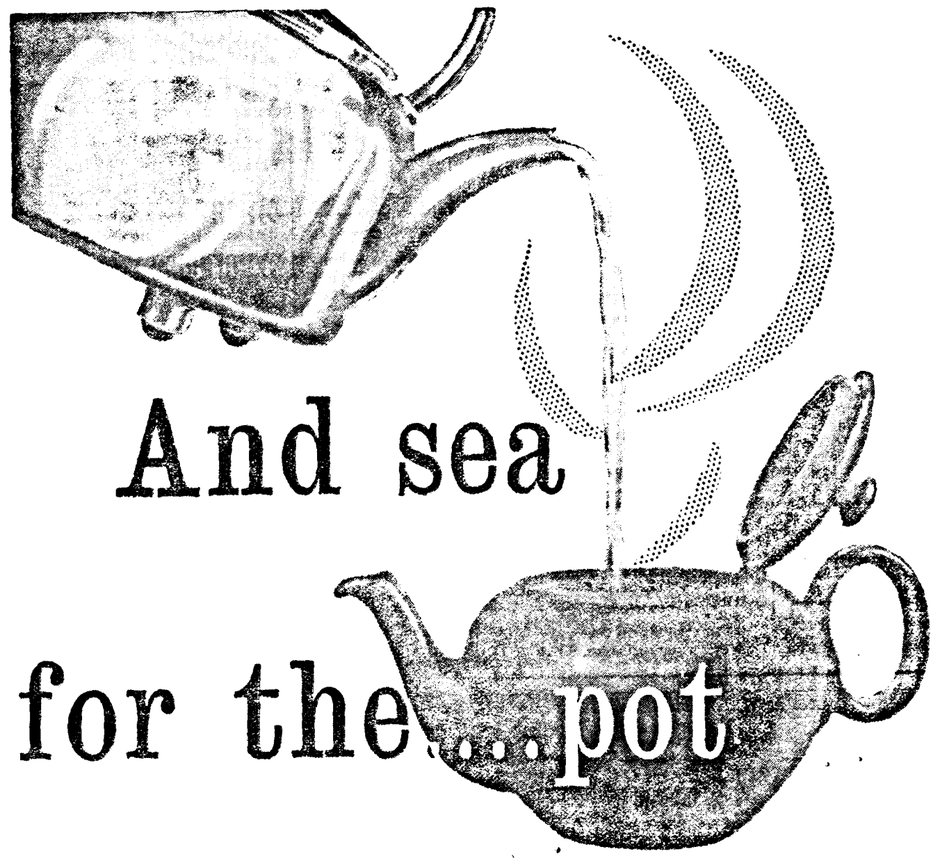
Who Is He?

THE financial world has concentrated much attention on the small investor in the past year or so. Who is he? Is it right that he should be wooed so assiduously by the unit trust movement but so often cold-shouldered by stockbrokers? The Acton Society Trust has been seeking the answers to these questions. Its findings* are, however, based on replies from only 1,600 small investors. The trust defined a small investor as one who had invested to date not more than £1,000, or alternatively one who had invested more but whose weekly income was below £50.

The report says that the small investor is typically a member of the lower middle class, who did not stay at school beyond 16. In nine cases out of ten he will be a married man, with one teenage child. His total weekly income will average £17 a week, compared with the national average of £13. Before making his first investment, he will almost certainly have opened a banking account; probably he will have taken out a life insurance policy and have money in the Post Office, Trustee Savings Bank or in National Savings, which he may well draw upon as his interest in the stock exchange grows. He will have kept a cash reserve of about £100.

What persuades him to invest in shares first of all? Usually private study and discussion with friends, but often he is influenced by newspapers. Advertisements obviously attract him to invest in unit trusts. Only 18 per cent of this sample sought advice from brokers and many small investors remain suspicious of the stock exchange. A charge hand, aged 40, put it like this:

> Brokers should be more accessible. The first time my knees were knocking. You have to move in a different circle to brave it, but I have always been a gambler and like a flutter, so carried on.



The survey stresses the high cost for stockbrokers of small investments. This and the complications of transfer (at present under review) deter the small investor. Two other obstacles are the 2 per cent stamp duty and the delay in receiving tax relief on dividends to which all investors paying less than the standard rate of tax are entitled. This is a useful pilot survey, but if the small investor is to become the infantryman of a property owning democracy it will have to be supplemented by a wider survey of what makes people save and invest.

*Wider Shareholding. Acton Society Trust. 8s. 6d.

ANTARCTIC WHALING

Freedom Restrained

FOR the first time for ten years the baleen whaling season in the Antarctic has opened without any binding restrictions on the catch. Though the International Whaling Convention, on paper, restricts the catch to 15,000 blue whales or the equivalent in oil, only three whaling countries—Britain, Japan and Russia—are still members of it. Norway and Holland withdrew last summer after the failure to agree on the allocation of the catch. But this season's hunting is not a complete free for all—because that would be in no one's interest. Norway, though not Holland, will observe the time limit, which this season is 102 days starting on December 28th; and the three western countries and Japan have voluntarily set limits to their catches. These limits, compared with the actual catch last season, are: Japan 5,040 whales (5,028). Norway 5,800 (5,781), Britain 2,500 (1,858), and Holland 1,200 (951). The intention had been that the four countries would share four-fifths of the permissible catch of 15,000 whales, with Russia getting the remaining fifth. If their voluntary quotas of 14,540 whales all told are now taken to be four-fifths of the full catch, Russia's quota would be 3,635 whales, making a total of 18,175 or 3,175 whales

And sea for the pot

In arid parts of the World this is by no means as absurd as it sounds; recent advances in the design of flash evaporators have made it economically possible to supply entire towns with fresh water from the sea. The cost may often be less than that of a long pipeline.

This type of evaporator, which was pioneered in Great Britain by Richardsons Westgarth, will run continuously with little or no attention and does not have to be shut down for clearing of any deposit that may form. Units of up to 300,000 gallons day are at present in operation or in production.

Since these units make use of steam at sub-atmospheric pressure they are particularly economical in connection with industries using low pressure steam or back-pressure turbines. As we are also builders of steam and gas turbo-alternators, water-tube and Economic boilers, we are particularly well able to design and carry through complete schemes, with any fuel, for the production of power and fresh water.

more than the convention allows. In fact the disparity is likely to be a good deal smaller. Though Russia is sending a new expedition this year, making two in all, it would be fortunate to catch more than about 3,000 whales, and Holland may not catch much more than it did before (the British quota looks more generous than it is because Hector Whaling, one of the British companies, had a poor catch last year). But clearly there is a risk of a larger catch reducing the whale population.

When international restriction was effective each expedition was forced into a race to catch as many whales as it could before the maximum number was reached—usually within sixty-nine days of the opening date. Costs were forced up, and allocation of the catch was proposed to make the game more profitable. This season each expedition can if necessary hunt for the full 102 days; thus it can employ fewer catching vessels and process its catch at a slower speed to give the maximum yield. This season twenty expeditions are again taking part, the extra Russian fleet being offset by one less from Norway. It is much too early to guess what price this season's whale oil will fetch; that depends not only on the size of the catch, but on prices of other oils and fats. Last season's whale oil sold for an average price of about £74 a ton, and little of it is still unsold.

THE WANKEL

NSU's Claims

It is easy to decry an innovation, but the almost universal doubts that engineers have expressed about the advantages of the recently announced NSU-Wankel engine as compared with the conventional reciprocating engine seem to have strong grounds. An official description of the new engine, in which Curtiss-Wright as well as NSU is interested, has lately been published. The gaseous fuel mixture enters the chamber through the right-hand port, and is exhausted through the left-hand port as each is uncovered in succession by the central, eccentrically spinning rotor. Combustion spaces are formed in the sides of the rotor, marked by the dotted lines. The rotor is mounted in the casing on eccentric bearings, which control its movement; an internally toothed gear is cut inside it, and transmits the drive to a central shaft running right through the chamber. The seals A, B and C maintain contact between the rotor and the chamber wall, allowing the compression, combustion, expansion and exhaust processes to go on in the spaces between the rotor and the outer chamber wall. Water circulates through the casing to cool the engine.

In Diagram 1 there is an overlap between exhaust and inlet in the space C-A, compression of the gas in A-B, and expansion following combustion in B-C. In the second drawing gas is being drawn into C-A, compression and expansion are continuing respectively in A-B and B-C. In the third, gas continues coming into C-A, combustion is commencing in A-B and exhaust has begun from B-C. In the fourth diagram the same cycle continues.

The diagrams emphasise the large area exposed to combustion, which means high heat losses. The overlap between inlet and exhaust means dilution of the inlet gas by exhaust gas; both factors will reduce efficiency. The high speed of rotation may help to offset this; NSU claim a specific consumption of about half a pound of fuel per bhp hour for a 125 cc version of an earlier type of this engine, and a peak speed of 17,000 rpm, but they have issued no figures for the current version of the engine as described here, which first ran in 1958. More general weaknesses that engineers have pointed out in the engine are the difficulty of sealing the points at which the shaft enters the chamber, and of compensating fully for the vibration produced by the eccentric movement of the rotor. NSU says that production cannot begin for at least a year, but Curtiss-Wright states that it is preparing to begin production now for boats and aircraft.

NATURAL RUBBER

Russia Catches On

The habit of disposing of strategic stocks appears to be spreading. The United States and British governments started to sell natural rubber last October; now Russia is said to have decided to dispose of about 50,000 tons of natural rubber in the first quarter of this year. An announcement from Moscow is expected shortly. Hints of this move from Russian trade officials in London have helped to depress prices (as they were doubtless intended to), especially in Singapore. Dealers in London responded more calmly—or more sceptically—and on Thursday rubber for April-June delivery closed here at 31¼d. a lb, showing a fall of ¼d. over the week. A Russian official stated that the price of natural rubber was considered to be too high in comparison with synthetic rubber, and the government intended to release rubber from its reserves to help consumers "just as the United States and British governments are selling rubber to help their own consumers." The delivery of 50,000 tons would not exhaust the reserve. The bulk is expected to be delivered to factories within Russia, but some may be delivered to other European Communist countries. At least one of these countries was still buying natural rubber this week.

After the United States Russia is the largest buyer of natural rubber, and its purchases have a big influence on the market. It would certainly be difficult for Russia to buy substantial quantities now without pushing prices sharply higher. It withdrew from the market before prices reached a peak in November, when rubber for three months' delivery in London touched 37d. a lb. Delivery from Russia's reserve of about 50,000 tons would be equivalent to roughly a fifth of its imports of natural rubber in 1959, which are estimated at about 230,000 tons, or about 20,000 tons more than in 1958. Total imports into Communist countries in 1959 are estimated at between 450,000 and 475,000 tons, compared with 430,000 in 1958. Russia has also been importing synthetic rubber, although it is itself a large producer. If living standards in Russia continue to rise its consumption of rubber must rise too, and hence the release of 50,000 tons in 1960 may not bring a corresponding fall in its imports of natural rubber.

RAW COCOA

Threat of Weakness

Raw cocoa continues to sag. In London cocoa for prompt delivery is now about 225s. a cwt, which is about 37s. lower than two months ago. Crop prospects are good, especially in Africa, and consumption is lagging behind. World production in 1959-60 is estimated by the United States Department of Agriculture at a record 926,000 long tons, which would be 5 per cent above last season's output and more than a fifth higher than in 1957-58. Last summer the head of the Brazilian marketing agency predicted that a smaller crop in Brazil would offset increased output in Africa, and that buyers would therefore

have to pay at least the minimum Brazilian export price of 32½ cents a lb fob, equivalent to about 277s. a cwt cif UK. That prediction has gone awry, and the Brazilian minimum has become ineffective. Though it is officially in force, the agency is known to have been selling cocoa beans well below its minimum, and selling cocoa butter cheaper still.

The size of the surplus of cocoa this season depends on how vigorously manufacturers take advantage of lower prices by trying to increase consumption, and how far they choose to build up their stocks. Manufacturers are buying cautiously, and the single selling agency in London of the Ghanaian and Nigerian marketing boards is fighting a rearguard action to hold the price. In contrast to Brazil, this agency has no minimum price and does not take big speculative risks by withholding supplies. Manufacturers are naturally reluctant to buy freely on a weak market, but some of them are probably wondering if they will have to pay for their caution later on. Should prices fall further and remain low, Ghana and Nigeria will be sorely tempted to support the price by some kind of stabilisation scheme—despite the discouraging experience of Brazil. Such a policy would not be to the manufacturers' liking, but the threat of it may draw uncomfortably close.

BUILDING

Report on Prefabrication

PREFABRICATED housebuilding in Britain enjoyed brief booms after both world wars without greatly enhancing its reputation with the householder. Though some of the types designed then have been developed for less sophisticated export markets, and some of the techniques are used widely in school and factory building, prefabrication still plays a limited part in the building of permanent houses today. Some progress has been made at the same time in making "traditional" building techniques more efficient, but it is often argued that further economies can only be gained by increasing use of prefabrication, and by transferring the production of increasingly larger "components" from the building site to the assembly line. Prefabrication—and its concomitant, standardisation—have been widely used in the United States, where the higher price of building labour presumably makes mechanisation more economic. The Building Research Station of the Department of Scientific and Industrial Research, in a recently published study* of prefabrication in British housebuilding, draws the cautious conclusion that the savings from mechanisation of housebuilding are neither as large nor as certain as some of its advocates have claimed.

A total of 412 houses, built by five contractors, was studied; 180 of these were built by traditional methods, and the rest used varying degrees of prefabrication, ranging from a factory-made spine wall and partitions up to building the whole interior of the house—wall linings, partitions and ceilings—in a joinery works. Admittedly the sample of prefabrication sounds to have been a rather unrepresentative one. The houses were built for local authorities to designs and specifications prepared by the Building Research Station, which called for varying degrees of fabrication: the station obtained tenders for the more important prefabricated components. The sample thus excluded building by organisations in which design and construction are closely connected, which perhaps might have achieved higher efficiency. To suit the demands of factory production, much of the difficult work was left to conventional methods; this can produce a discontinuity of work which slows the whole building process. It was found that little saving in labour cost was gained by transferring work from the site to the factory; that this saving was sometimes more than offset by higher factory overheads and profit; and that labour cost on the site was often increased. The report concludes that further evolution of traditional processes—such as the use of larger blocks for external walling—may hold greater promise of economy than the introduction of radically different principles of construction.

INTERNATIONAL INVESTMENT

A World Guide

INVESTMENT of money outside one's own country has always involved special risks and called for special knowledge of foreign law. Firms and individuals concerned with these responsibilities will be thankful for an impressive new reference book compiled by Professor Wolfgang Friedmann of Columbia University.* This is a careful study of company law and the special provisions affecting foreign investors in forty countries, each chapter being written by an authority on that country—for example Lord Chorley writes on Britain. There are also two valuable concluding chapters to draw the threads together. These, it is interesting to note, put no great hopes in the alluring and long-proposed idea of a world investment code: "By the time it was signed, it would in all probability be so burdened with qualifications, exceptions, and special cases . . . that it would be of little use to investors." Legislative provisions made by the capital importing country itself are more likely to be clear cut, and although these have only limited force in international law (such as it is), they may be the best practical means of creating more order and mutual confidence in this sphere.

GAS

Another Lurgi

BRITAIN'S second Lurgi gasification plant is to be erected by the West Midlands Gas Board—which has been ploughing its official way through to this decision since 1952. At first sight it appears as if the plant to be erected at a cost of nearly £9 million at Gorsey, Coleshill, will come nearer to the scale of production that makes such plants really worth while than the plant now being erected at Westfield, Fife. The Coleshill plant will use about 410,000 tons of low-grade coal a year, taking it from East and West Midland pits. The initial production of 40 million cubic feet of gas a day compares with the 30 million cubic feet expected at Westfield in its second stage of production—two years after that plant opens. The board expects to save £300,000 a year after paying for the Midlands plant and transmission mains as well as charges on works closed down. There may be room for other such plants in Britain, but the real test of their value could come only if it were found possible to build them much larger and to feed their production into a high-pressure national grid.

SHORTER NOTE

In a statement issued in advance of next week's extraordinary meeting, the board of E. V. Industrials forecast a dividend of 25 per cent for 1959 (an interim of 10 per cent has already been paid). For the year to December 31, 1960, profits before tax are estimated at £400,000, out of which the board would hope to pay a dividend of 30 per cent. These forecasts are subject to "a continuation of present market conditions and the ability to stabilise our financial arrangements." The net asset value of the 5s. ordinary shares is stated to be 9s. 6d. a share or 11s. 6d. if properties were written up to professional valuations. At 22s. (as compared with an earlier offer for the shares of 35s.) the shares yield 5¼ per cent on the forecast dividend.

COMPANY MEETINGS

TURNER & NEWALL LIMITED

MR R. G. SOOTHILL'S REVIEW

The Annual General Meeting of Turner & Newall Limited will be held on January 21, 1960, at the Chartered Accountants' Hall, Manchester, when it is expected that Mr R. G. Soothill, the Chairman of the Company, will preside.

Mr Soothill's Statement to the Stockholders has been circulated to them with the Report and Accounts and, after dealing with the Accounts of the Company, it contains a detailed review of the Company's operations during the year to September 30, 1959, both at home and abroad.

The following are extracts from the Statement:

I would like at the outset to refer with much sorrow to the very great loss sustained by the Company through the untimely death of our late Chairman, Sir Walker Shepherd, which occurred last February. His connection with Turner & Newall Limited dated from 1927 and nearly all his long and invaluable services were rendered in a series of increasingly senior capacities. Having been first appointed Secretary, he became a Director in 1931, Deputy Chairman in 1942, and Chairman in 1944. Sir Walker's natural gifts were of the highest order, and he took an outstanding part in the formation and execution of policies which have brought about the rapid and continued expansion of the Company throughout many years past. As Chairman, he gave clear-sighted and determined leadership, while working closely in a collaborative spirit with his colleagues on the Board—always attentive to their ideas and ready to discuss varying viewpoints. His loss is a serious one for our Company, and both to his immediate colleagues and to his many other friends, in our organisation and elsewhere, it has come as a very sad personal blow.

I will now briefly review the salient features of the Company's operations during the year.

MINING COMPANIES
AFRICA

A year ago reference was made to curtailed demand in the world market for raw asbestos, which had caused our mining organisation in Africa to reduce its rate of production. This lessened activity did, as was foreshadowed, have an adverse influence upon profits earned and the effect was accentuated by more particularly reduced sales of the higher grade fibres used in the textile section of the asbestos industry. With the exception of those fibres, the market for raw asbestos has now substantially recovered, and resumption of our normal rate of production took place on July 1, 1959. Nevertheless, increased competition suggests that the profit earning capacity of our African mines is likely, in the immediate future, to remain at a somewhat lower level than in recent years.

CANADA

In the case of our Canadian mining company, Bell Asbestos Mines Ltd., the restraining factors described in relation to our African mining activities have applied in a much smaller degree. Hence, this Company has experienced a very satisfactory year, operating at a high level of output. The lessened demand reported last year showed a significant recovery in the second half of the financial year now under review and, subject to a note of caution in relation to the textile grades of fibre, there is no reason why our mining operations in Canada should not continue at a high and profitable level.

MANUFACTURING COMPANIES LOCATED IN THE UNITED KINGDOM
TURNER BROTHERS ASBESTOS CO. LTD.

Production and sale of many items in the wide range of asbestos textiles and technical rubber products covered by Turner Brothers Asbestos Co. Ltd. reached high levels; in the case of some products improvement in sales, following the previous quieter period, was a little slow, but this improvement was becoming more general by the end of the period. In the home market, substantially increased contracts for fire-resisting conveyor belting have been obtained from the National Coal Board, but current requirements are on a reduced scale. Export turnover in total, although satisfactory, has fallen short of the record figure achieved in the previous year, which included exceptional Russian orders for power transmission belting.

Trading conditions have remained highly competitive throughout the Company's field of operations, but no effort has been spared to increase efficiency and reduce production costs. Significant fresh progress has been made in these directions, as more new plant has been brought into commission, and further advances will result from the development work now in hand.

FERODO LTD.

The demand for brake and clutch linings was very high throughout the year, sales in both home and export markets being records in the history of the Company. The increase in export turnover is particularly gratifying, since it was achieved in nearly all the important markets in the face of increasingly intensive competition.

Significant results have already been achieved as a result of the new research facilities, to which reference was made last year, both in manufacturing technique and in the development of improved products. Research continues on day-to-day problems and also on fundamental aspects of friction and friction materials. Some of this basic work is of a relatively long-term nature, but I have no doubt that it will contribute increasingly year by year to the prosperity of the Company.

Ferodo Ltd. started the current financial year with a well filled order book, and prospects for the immediate future are quite favourable, although it may be difficult to maintain existing profit margins.

TURNERS ASBESTOS CEMENT CO. LTD.

Turners Asbestos Cement Co. Ltd. supplies the building and civil engineering industries in the United Kingdom and in export markets with a wide range of asbestos-cement materials. The easing of credit was felt in these industries progressively and this Company has had a successful year, particularly in the home market, where the demand for its products was at a high level. As an exception, the demand for "Everite" asbestos-cement pressure pipes for water mains has been disappointing, but it is hoped that this market will expand again as the plans of local authorities for much-needed water schemes are sanctioned.

The Thermal Insulation (Industrial Buildings) Act, 1957, which came into force early in 1959, lays down standards for the insulation of new industrial buildings and, in keeping with its progressive policy, the Company has made available various types of double-skin insulated roofings which meet the provisions of the new Act. Among other new products, "Turnall" Asbestos Ships Board, a fire-resisting structural board, is in growing demand by the shipbuilding industry, and "Turnall" 'Colourglaze' finish, introduced to give a decorative protection to asbestos-cement roofing and walling sheets and rainwater goods, becomes increasingly popular.

New machinery is being installed so that the Company may, as in the past, be equipped to meet the demands of the future. Unremitting attention continues to be paid to the maintenance of that high quality which has made the products of Turners Asbestos Cement Co. Ltd. pre-eminent in their respective fields.

The programme of industrial and domestic building work, coupled with a healthy order book, suggests that the current financial year should show satisfactory results.

THE WASHINGTON CHEMICAL CO. LTD.

Production of magnesia and other chemicals at the factories of The Washington Chemical Co. Ltd. was at a very high level throughout most of the year, being appreciably in excess of last year's output, both in tonnage and in value. Demand for these products proved to be of a sustained character from abroad as well as at home.

NEWALLS INSULATION CO. LTD.

Newalls Insulation Co. Ltd. in its role as contractors experienced another busy year, the turnover being greater than that of the last twelve months, although the previous trend towards lower profit margins continued. A considerable number of large and interesting contracts was secured, including very substantial work at the nuclear power stations at present under construction in this country. In this connection, and elsewhere, Newalls' high reputation for workmanship and close technical collaboration with boiler manufacturers, engineers and shipbuilders becomes of increasing importance. An addition to the range of Newalls' materials in the form of its "Newtherm" calcium silicate insulation, a product of outstanding quality, has been very favourably received by both home and export trade buyers as well as by contract clients.

MANUFACTURING COMPANIES LOCATED ABROAD
UNITED STATES OF AMERICA

During the past year the American economy has moved out of recession and this has led to

an improvement in the demand for the products manufactured by Keasbey & Mattison Company.

The new asbestos cement pipe manufacturing unit at St Louis, Mo., came into full operation during the year and is having a beneficial effect upon the earnings of the Company.

The prospects for Keasbey & Mattison Company are good, but are, of course, dependent upon a satisfactory solution of the serious labour problems which face some of the major industries in the United States.

CANADA

Atlas Asbestos Co. Ltd. experienced another year of restricted business and the factory in Montreal was not operated to full capacity. Progress is being made in increasing the rate and efficiency of the production of asbestos-cement pressure pipes and gravity sewer pipes in the new pipe division, and it is expected that this division will become an increasingly important contributor to the Company's turnover.

INDIA

Once more, Asbestos Cement (Pvt.) Ltd., the member of the Group which manufactures asbestos-cement building products and asbestos-cement pipes in India, has had a very satisfactory year; demand continues to be heavy and the Company should prosper for so long as the Government of India can satisfactorily solve its current financial problems.

Production of asbestos textiles and jointings at Ghatkopar by Asbestos, Magnesia & Friction Materials Ltd. has made further progress and, with expanding sales, this Company has produced significantly improved results; in this case also, subject to reasonable stability in the economy of the country, the prospects are good.

FEDERATION OF RHODESIA AND NYASALAND

Trading conditions in the Federation during the past year have been somewhat difficult but, despite this, Turners Asbestos Products (Pvt.) Ltd., which manufactures asbestos-cement building products and pipes in the Federation, has produced very satisfactory results; with the passage of another year its manufacturing facilities and all branches of its management have been further consolidated so that it is in an excellent position to take advantage of any opportunities which may arise in the future.

UNION OF SOUTH AFRICA

Since last year the name of our subsidiary company which manufactures asbestos-cement pipes in the Union of South Africa has been changed from Springbok Pipe Co. (Pty.) Ltd. to Turners Asbestos Products (Pty.) Ltd., the intention being that the new name shall more clearly denote the connection of this Company with Turner & Newall Limited. It is now making a useful contribution to the Group and consolidating its position in the market in South Africa.

GENERAL

During the year Mr K. Neve was appointed as a Director of the Company. Mr Neve joined the Company as a trainee in 1932 and has been in the service of our organisation for over 27 years, the whole of this period having been spent in the asbestos-cement section operated by Turners Asbestos Cement Co. Ltd.; he has for some years been the Executive Director of Turners Asbestos Cement Co. Ltd., and will become Chairman of that Company on January 1, 1960.

It is with pleasure that, having regard to the satisfactory results for the year (which have been favourably affected by the reduced incidence of taxation), your Board recommends a final dividend of 15 per cent on the Ordinary Stock, making, with the interim dividend of 5 per cent already paid, a total distribution of 20 per cent for the year, which compares with 15 per cent last year.

The forecast given in the Chairman's Statement last year indicated that the Company could expect to remain prosperous during the year now under review, though at a somewhat lower level than in boom periods of the immediate past, and this forecast has proved substantially correct. In the past financial year, several different factors have operated adversely upon the Company's affairs. Among our home manufacturing organisations the credit squeeze continued for some time to have its effects, which diminished in varying degrees and speeds throughout the year. In the case of our overseas manufacturing companies, external influences differed considerably; in the USA and Canada recovery from the recessions in those countries proceeded steadily, at a rate faster in the USA than in Canada; in Southern Africa conditions remained less active than in the previous year, but they are now showing a tendency to recovery; in India both our manufacturing enterprises experienced very satisfactory trading conditions. On the mining side, in Canada and Southern Africa, the picture remains reasonably favourable, except for reduced earnings on certain grades of fibre.

As regards the financial year now current, it is fair to assume that the favourable tendencies appearing during the latter half of the previous year will be intensified, although it has to be borne in mind that, with the steady growth of world competition, advances in turnover are not necessarily paralleled by corresponding advances in profit. What is certain is that your Company remains progressive in all respects, and is alert to take every opportunity of utilising its available resources in appropriate developments, both in this country and overseas.

THE PLESSEY COMPANY LIMITED

(Manufacturers of components and equipment for the Radio, Electrical, Aircraft, Nucleonics and Precision Engineering Industries)

BROADENIN PRODUCT RANGE

SUCCESS OF RESEARCH AND DEVELOPMENT POLICY

MR A. G. CLARK REVIEWS A RECORD YEAR

The thirty-fifth annual general meeting of The Plessey Company Limited, was held on December 30th at the registered office, 1 Broad Street Place, London, E.C., Mr A. G. Clark, chairman and managing director, presiding.

The Secretary, Mr W. F. Cross, read the notice convening the meeting and the report of the auditors.

The following is the chairman's statement circulated with the report and accounts:

You will have seen from the accounts for the year to June 30, 1959, which we now submit to you, that at £2,236,119 the total profit before taxation is some £844,000 higher than the profit for the previous year. £2,236,119 constitutes a record in the Company's history, and I am the more pleased to be able to tell you of this step forward since the accounts now presented to you cover the completion of forty years since the business was established. They have been an interesting forty years, and many alterations and adjustments have been necessary in order to adapt ourselves as speedily as possible to changes in the world in which we must operate, but I am glad to say that we still retain our flexibility and energy, and I am confident that in the years ahead we shall continue to progress.

In large part our growth has been due to the enthusiasm and capacity for hard work of our staff, and I would like to place on record how much is due to the many members of that staff who are devoting their working lives to the care and extension of our business.

THREE REASONS FOR SUCCESS

Broadly, the satisfactory results for the year flow from three sources. In the first place we have, as a matter of policy, been concerned to widen the range of our products so that we were correspondingly less affected by seasonal influences and correspondingly less affected also by the ups and downs of any particular one of the many industries we serve. In the second place, our policy of ploughing a very large part of our income back into Research and Development is paying good dividends. I have told you before that many years often pass before the benefit is felt of money spent in this way. But spent it must be, if we are to hold the position we are determined to occupy, and profitable the spending can be if it is directed into those fields where, as we are convinced, great technical achievement lies before us.

We are now experiencing in increasing measure the benefits of the research and development work which has been carried out in the last ten or twelve years, and I have no doubt whatsoever that we shall continue so to benefit in the future.

BENEFIT OF ADDITIONAL CAPITAL

In the third place, we are now seeing results from the employment of the additional capital raised in 1956, for many of the developments made possible by the money so provided are only now coming to fruition.

It is because the new money raised in 1956 is now fully engaged that since the date to which the accounts go we have made a further issue. In September we increased our Ordinary capital by an additional 3,600,000 Ordinary shares allotted by way of "rights" at 23s. 6d. each, to provide over four million pounds, the employment of which will enable us to extend considerably the scale on which we operate. We have preferred to raise capital in advance of requirements, rather than to expand on borrowed money and fund our indebtedness afterwards, for we feel that this is the sounder course.

FEATURES OF A BUSY YEAR

Turning to consider the different aspects of our business during the year under consideration, we were satisfactorily busy in relation to Aircraft equipment, the newly developed appliances coming into production helping us to counter the effects of the recession in volume

which was fairly general throughout the industry. We have been fully occupied at our subsidiary in the Nuclear Power field, Plessey Nucleonics Limited. The Radio and Television Equipment side of our business, together with Radio, Television and other Components, experienced a particularly busy year, and it was something of a problem to produce the quantities for which our customers called and some quick re-planning was called for in order to deal with this demand. In regard to Communications equipment, production ran at a high level throughout the year, as was also the case in regard to general Electronic production. A material extension of our Swindon factories was effected during the year, and a general measure of progress took place in regard to the equipment and products we make there.

Since June 30th, and particularly since the election, we have been very busy, and the volume of our production is running at a higher level than was the case in the corresponding months of 1958. Subject, therefore, to any material change in world conditions or other factors beyond our own control, I think we may regard the future with reasoned confidence.

The report and accounts were unanimously adopted; the proposed final dividend of 7 per cent, less tax, making 25 per cent, less tax, for the year on the Ordinary shares, was approved; the retiring directors, Mr E. J. Earnshaw and Mr J. A. Clark, were re-elected, and the fee of the auditors, Messrs Deloitte, Plender, Griffiths & Company, was fixed.

ALLIED RETAIL TRADES (LONDON) LIMITED

RECORD PROFIT

The twelfth annual general meeting of this company was held on December 30th in London, Mr W. Harold Martin, chairman, presiding.

The following is an extract from his circulated statement for the year to September 27, 1959:

I have again to report another successful year. Both the turnover and the net profit shave shown increases.

Trading resulted in a net profit before tax of £117,061, our highest profit figure so far.

Sales amounted to £2,556,231 compared with £2,354,849, an increase of £201,382 or 8.5 per cent and the net profit before taxation has increased from £110,740 to £117,061 an increase of £6,321 or 5.7 per cent.

We opened new branches at Cranham, Basildon and Roehampton; purchased new businesses at Hillingdon and Thornton Heath and two at Tilbury in March and April respectively. All these seven businesses are doing well.

On November 6, 1959, we advised shareholders that we had made an offer for all the Ordinary Shares in Gosdens Limited, and had offered to purchase any 8 per cent Preference Shares which holders might wish to sell. All of the 80,000 Ordinary Shares have been purchased.

The Board recommend a final dividend of 12 per cent against 10 per cent a year ago, a total dividend of 18 per cent for the year.

Since the close of the past year, our trade has been well maintained in our "old" shops, whilst sales in the "new" branches have shown very satisfactory increases. With the addition of the Gosden group, we hope to show a satisfactory increase in profits.

The report and accounts were adopted.

ANGLO-ECUADORIAN OILFIELDS LIMITED

The Forty-first Annual General Meeting of Anglo-Ecuadorian Oilfields Ltd. was held on December 22, 1959, in London, Mr F. C. Bowring (Chairman) presiding.

The following are extracts from his circulated Statement for the year ended March 31, 1959:

My review of the company's operations for the financial year to March 31, 1959, covers a year in which the continued uneconomic selling prices for refined products in Ecuador obliged the company to curtail its operations, and enforce rigid economy in all its spheres of activity.

Because of continued heavy losses in refined products trading in the Ecuadorian market, combined with reduced exports and additional provision for Ecuadorian Social Legislation, the trading results were again seriously affected, and the consolidated net profit reduced to £101,689 as compared with £235,880 for the previous year. In view of the trading results of the year, your Board do not feel justified in declaring a dividend at the present time.

PRODUCTION AND DRILLING

Crude oil production for the year to March 31, 1959, was 2,361,624 barrels, a decline of just over 5 per cent compared with the total production of 2,490,849 barrels for 1957-58.

During the year the number of rigs operating was progressively reduced from a 5-rig drilling programme in April, 1958, to only two rigs in March, 1959. Under this reduced programme, development was confined to exploitation drilling, except for the completion of the disappointing exploratory directional well.

The centralisation and automation of production collecting facilities is in progress, together with the extension of gas lift installations.

REFINING AND MARKETING

No construction work was done on the new refinery, pending solution of the refined products price problem, but, as I advised you in my circular letter of July 23, 1959, immediately the price decree was issued arrangements were made for work to be resumed in order to complete the refinery as soon as possible, and the Company has given an undertaking to the Ecuadorian Government that the distillation unit will be completed within six months. Erection of the thermal cracking unit is estimated to take a further three months.

I was therefore very pleased to be able to advise you on July 23, 1959, that the Ecuadorian Government had issued a decree granting specific price increases for petroleum products sold in the domestic market, effective when the new distillation unit comes on stream.

ACCOUNTS

The consolidated profit for the year showed a further serious decline from £235,880 to £101,689. This was occasioned principally by the further provision of £157,993 charged against profits on account of the Company's contingent liability under Ecuadorian Social Legislation, and a provision of £117,195 for Stores and Materials Obsolescence following on changes in Field Operational methods.

The report and accounts were adopted.

J. GLIKSTEN & SON

FURTHER INCREASE IN PROFIT

The fifty-fourth annual general meeting of J. Gliksten & Son Limited, was held on December 30 in London, Mr S. G. Gliksten (chairman and managing director) presiding.

The following are extracts from his circulated address for the year ended June 30, 1959:

The Group Profits: It is with very great pleasure that I have to record a further increase in the Group's trading profit during the year, to achieve a figure in excess of £1 million for the second time in the history of the Group. This result has not been brought about by an increase in selling prices but by an increase in sales and productivity during the year.

After the deduction of the tax charge there remains a Net Profit of £508,294 compared with £297,002 last year, and your Directors are recommending a total dividend of 27½ per cent on the Ordinary Stock, now increased from £600,000 to £900,000 by reason of the capitalisation issue made at this time last year.

BUILDING AND PLANT PROGRAMME

With the commencement of the current financial year we have embarked on a fairly substantial programme of capital expenditure. I am confident that the developments can be financed from our resources without the necessity of increasing Bank or other facilities available to us.

Once again I am able to record an increase in total Group turnover, which showed an appreciable improvement on the previous year. It is our intention to increase our production of doors to enable us to satisfy the demand which arises as a result of the present activity in the building trade. To keep ourselves in the forefront we have developed two new doors which are creating a very great interest in building trade circles. These are the Silkstone door, which is a primed and filled door ready to be hung by the builder and requiring only one finishing coat, and the Mark 12 veneered door which has a beautiful West African Cedar or Oak surface and is an asset to any home. We are extending our storage sheds at Hull.

An important feature of our organisation is our sales and marketing divisions and I am pleased to record the progress which these divisions have made in the past few years. Considerable thought and effort have been put into improving our sales technique, and backed up by efficient distribution and servicing departments, there is no reason why they should not go on from strength to strength.

EXPORT SALES

In my address last year I referred to the formation of Gliksten Export Sales Limited, and it gives me very great pleasure to report the success of this company. It is a vital necessity for the producing units overseas to have a well balanced sales organisation understanding their problems in order that production can be allowed to achieve its target without any restriction on movement of the goods produced, and due to the success of the export sales company this objective has been achieved.

Export sales of the Group now amount to about 12 per cent of the total turnover and I know stockholders will be pleased to learn of the diversification of our business achieved.

During the period following the close of the Accounts turnover has again increased and the results continue to be satisfactory.

The report and accounts were adopted.

DEUTSCHE LUFTHANSA AG

(German Airlines) Cologne, Germany

PREPARATIONS FOR JET OPERATIONS

AIR UNION ESTABLISHED

The Annual General Meeting of DEUTSCHE LUFTHANSA AG was held in Cologne recently, and the following are details of the report presented by the Board of Directors:

PROGRESS

1958, the Company's third full year of operation, was a period of further expansion. LUFTHANSA was faced with the task of disposing of a considerably enlarged seat capacity in markets marked by falling demand and intensified international competition. Over the North Atlantic, two other airlines began using jet aircraft in the autumn of 1958, thus cutting travelling time by almost half. This jet traffic obviously proved a great attraction and thus, in this most important artery of international air traffic, affected the share of the market of all those companies which will only be able to put such up-to-date aircraft into service at a later date.

The increases achieved during the year were as follows:

	%
Production (in ton/km)	48.9
Passengers carried	44.8
Freight	68.5
Mail	36.5
Earnings	38.3
Costs	36.6

NETWORK

The Company's network at the end of the year extended over 87,402 flight km (1957: 60,815), covering 36 cities (1957: 31), including 21 in Europe, three in North America, six in South America, four in Asia and two in Africa. LUFTHANSA aircraft crossed the North Atlantic 1,425 times (1957: 848) during the year and made 274 crossings (1957: 203) of the South Atlantic during the same period. The average distance travelled per passenger amounted to 1,207 km (1957: 1,280).

The following breakdown shows details of the Company's traffic in 1958:

	1957	1958
Number of passengers	429,865	622,487
Freight (in metric tons)	3,357	5,656
Mail (in metric tons)	1,550	2,115
Passenger load factor	57%	53%
Overall load factor	53.2%	51%
Production (in million ton/km)	105.6	157.3

Results in Europe during 1958 were once again particularly satisfactory, as shown in the following table:

Number of passengers	339,962
Freight (in tons)	2,678
Mail (in tons)	863
Passenger load factor	52%
Overall load factor	46%
Production (in million ton/km)	32.8

Germany: Domestic routes in the Federal Republic once again provided mainly feeder services for the international network. There were also improvements in the services from Munich, Düsseldorf and Hamburg.

The LUFTHANSA network was further extended in 1958. Brussels with its Universal Exhibition, was linked by daily services with Düsseldorf, Frankfurt and London, and by twice-weekly services with New York. As a result of the increase in the Company's fleet of Convair Metropolitan aircraft from four to nine in 1957, and the delivery of the first two Vickers-Viscount 814s out of the nine on order, in the last quarter of 1958, the Company's capacity in European traffic rose by 62 per cent, compared with 1957. In view of this considerable increase, both the overall load factor and the passenger load factor (46 per cent and 52 per cent respectively) may be considered satisfactory.

Traffic on the well-established London and Paris routes was satisfactory, but services to Copenhagen and the new Munich-Zurich route did not come up to expectations.

North Atlantic: Although the recession in the North American economy also affected air transport to some extent, the Company succeeded in improving still further its position on the North Atlantic route. The passenger load factor in both directions amounted to 61.5 per cent and put LUFTHANSA in fourth place among companies flying between the United States and Europe.

The economy class services introduced on April 1, 1958, carried 32,073 passengers and came up to expectations. The opening of the "Senator" service in November, 1958, met the need of international business circles for non-stop luxury facilities between the Federal Republic and the United States.

South Atlantic: In the spring of 1958 the number of departures for South America was raised to three a week and the route to Buenos Aires was extended to Santiago de Chile on April 9, 1958. The overall load factor remained unchanged at 48 per cent, and although the number of passengers carried rose from 17,970 to 21,023, there was a drop in the passenger load factor from 56 per cent to 45 per cent.

Near East: The political events in that part of the world had comparatively little effect on the Company's services. In spite of all difficulties, the overall load factor on this route rose from 43 per cent to 50 per cent, and the passenger load factor from 44 per cent to 48 per cent. Cairo was included in the LUFTHANSA network as from November 1, 1958.

FREIGHT

The total of freight carried rose from 3,357 tons in 1957 to 5,656 tons during the year under review. LUFTHANSA also began to share in all-freight services to North America, preparing the ground for the time when the large freight capacity of the jet aircraft due to come into service in 1960, becomes available.

On May 19, 1958, a further all-freight service was started between the Federal Republic and London, which runs five times a week in pool with BEA.

FLEET

In January, 1958, the Company took delivery of the last two of four L 1649 A Super Star long-range aircraft ordered from Lockheed in 1956. These aircraft, with an additional range of 1,000 km, enabled non-stop services to be started between European airports and North America. The four aircraft concerned are to be replaced by four Boeing 707 Intercontinental jet aircraft in 1960. The L 1049 G Super Constellations released by the delivery of these new long-range airliners, were used on services to South America, the Near East and the Iberian peninsula. The first of the nine Viscount 814s ordered from Vickers was delivered on October 15, 1958, and the second on December 18, 1958. The Viscount fleet is to close the gap in LUFTHANSA's European and Near East services and to release part of its Convair aircraft for short-haul operations.

INTERNATIONAL CO-OPERATION

In 1958, for the first time, agreements with East European air transport organisations, including one with the Soviet organisation *Aeroflot*, were added to the many contracts which link LUFTHANSA with companies in other countries. By the end of 1958, interline agreements with 136 air transport companies had been concluded, compared with 121 in 1957. New general agency contracts were also signed with companies such as *Austrian Airlines, Ethiopian Airlines, Eagle Airways, Japan Airlines, Trans-Australia Airlines*, and *MALEV*. In June, 1958, *Alitalia* joined the pool agreement on the South Atlantic route between *Air France* and LUFTHANSA.

SALES AND GROUND ORGANISATIONS

The number of LUFTHANSA selling points inside and outside Germany rose from 49 in 1957 to 59 during the year under review. New offices were opened in the following cities during the year: Belgium, Brussels; Italy, Rome; Sweden, Stockholm; Switzerland, Geneva; Egypt, Cairo; Turkey, Istanbul; USA, Kansas City, Cincinnati, New Orleans.

In addition, a number of general agencies were opened during the year, as follows:

Europe: Italy, Rome; Austria, Vienna; Hungary, Budapest.

Near East: Jordan, Amman; Saudi-Arabia, Jeddah.

Central and South America: Brazil, Rio Grande, Novo Hamburgo, Florianopolis, Cancas, Cordoba, Caxias do Sul, Santos; Argentina, Rosario, Garibaldi; Ecuador, Guayaquil; Australia, Melbourne.

The number of LUFTHANSA's own offices inside and outside Germany rose from 31 in 1957 to 36 last year.

PERSONNEL

The staff employed by LUFTHANSA rose in step with the increase of the Company's fleet and the extension of its network, by 1,100 from 4,940 at the end of 1957 to 6,040 on December 31, 1958. This represented an increase of 22.3 per cent compared with 43.5 per cent in 1957 and reflected a better utilisation of personnel.

PROSPECTS

After detailed preliminary work and discussions which date back to 1957, a close form of co-operation between *Air France, Alitalia, Sabena* and *Lufthansa* was agreed at a meeting in Paris on May 20, 1959, which will come into effect under the name of "*Air Union*" in April 1960. *Air Union* aims at jointly operating the member companies' routes and at co-ordinating and rationalising their technical and commercial organisation. The Company believes that this represents the beginning of a new and broader concept of air transport. It is hoped that in the course of time further companies will join *Air Union*.

The delivery of the remaining Viscount 814s in the spring of 1959 enabled the Company to increase traffic density in its European network. Bremen was linked with Paris via Düsseldorf, and Milan began to be served from Munich, Hamburg and Frankfurt in April, 1959. A twice-weekly service to Athens started in May this year. At the same time, services began to Geneva and Nice, and Barcelona was also included in the Company's network. A daily service to Istanbul has been operated since May 10th, and on the North Atlantic route one of the New York services was once again routed via Manchester.

The number of North American flights was raised to 16 a week between the Federal Republic and New York during the peak period, in order to prepare for the increased capacity which will become available when the Boeing 707 jet aircraft ordered by the Company are delivered in 1960.

PROFIT AND LOSS ACCOUNT

The Company's figures for 1958 show expenditure totalling DM 213.4 million (1957: DM 155.9 million), as opposed to a revenue of DM 178.2 million (1957: DM 128.8 million). This result was in accordance with expectations, and the resulting deficit of DM 32.1 million (1957: DM 24.7 million) has been covered by a subsidy from the Federal Government.

The report and accounts were adopted.

SUPERVISORY BOARD

(Aufsichtsrat)

Dr Kurt Weigelt, Bad Homburg vdH, Chairman; Dr Ing. E.h. Kurt Knipfer, Bonn, Deputy Chairman; Dr Max Adenauer, Cologne; Richard Bertram, Bremen; Prof. Dr med. h.c. Dr Ing. E.h. Leo Brandt, Düsseldorf; Heinz Kallus, Bonn; Hans-Clausen Korff, Bonn; Prof. Dr Heinz Oeftering, Frankfurt/Main; Fritz Rudorf, Düsseldorf; Dr Hans Steinmetz, Bonn; *Employees' Representatives:* Oskar Dubral, Düsseldorf; Kurt Huebener, Hamburg; Alexander Laughans, Stuttgart; Dr Hans Münsterer, Hamburg; Gert Schabinger, Hamburg.

BOARD OF DIRECTORS

(Vorstand)

Hans M. Bongers; Dipl. Ing. Gerhard Höltje.

MITCHELLS AND BUTLERS LIMITED

MR ROBERT H. BUTLER'S STATEMENT

The Annual General Meeting of Mitchells and Butlers Limited will be held at The White Horse, Birmingham on January 21, 1960. The following is an extract from the circulated statement of the Chairman, Mr Robert H. Butler.

SUCCESSFUL YEAR'S TRADING

The result of the year's trading will, I feel sure, give satisfaction to Stockholders. Due mainly to considerably increased sales the upward trend in profits has continued, to produce yet another record. This has been achieved without taking into account the amount attributable to Atkinsons trading, which brought in £241,460 for just under half a year.

The higher profit has been attained in part by increased sales and the continued efforts on all sides to keep down costs. Another factor has also made an important contribution to our financial strength and that is the disposal of certain land and properties. The Board are fully alive to the potentialities of the Company's properties. In certain cases, of course, a property has a greater commercial than licensed value and although the number involved is quite small, during the year we have been able to dispose of several of such properties at favourable prices. We have also sold at satisfactory prices land and unlicensed properties surplus to our requirements, the cash for which has gone a considerable way towards financing expenditure on licensed houses. It has also enabled the Board to decide to make for the second time a tax-free distribution of 1½ per cent to Ordinary Stockholders.

The decrease in the Beer Duty effected in the Budget last April which, by enabling the price to be reduced 2d. per pint to the public, has played its part in stimulating sales, resulted in losses in respect of stocks on which Duty had been paid at the old rate. Your Board decided that the Retailer should not suffer on this account and took over the losses in the hands of our Tenants and Free Trade customers.

The Board are glad to be able again to make a special allocation, this year of £50,000 against an allocation last year of £25,000, to the Trustees of the Pension Funds. This sum, as in previous years, will be used for the augmentation of pensions, and particular attention is being paid this year to those older pensioners whose pensions, because they retired some time ago, have become out of line with the higher cost of living prevailing today.

ATKINSONS BREWERY LIMITED

It was a source of great satisfaction to the Board that 100 per cent of the Ordinary and "A" Ordinary Shareholders of Atkinsons Brewery Limited voluntarily accepted our offer to acquire their shares. All acceptances were received before September 30th.

This acquisition marked an historic step in the Company's progress and your Directors consider the result of the first five months trading very satisfactory. The merging of our interests has greatly increased your Company's holdings in Coventry, Wolverhampton and the Black Country, all of which are very fine trading areas. They have many fine houses, which make a valuable addition to the Company's properties and will contribute fully to its continued prosperity. The opportunities thus afforded for rationalising our joint trade will be used to the full and here again appropriate action will also be taken in respect of those houses which have a greater commercial than licensed value.

HIGHER SALES

In this year of progress it is encouraging to us to report that our draught beer sales are the highest for many years, and I am happy to add that a high level has been maintained since the end of the last financial year. The stimulus to sales of the price reduction for which the Trade has been long pressing and the wonderful summer are influences over which we have no control, but I would also claim that the Board's policy of purchasing the finest materials, and the care taken in the production of our beers, resulting in products of high quality, also make an all-important contribution to this end.

Bottled beers, too, maintain their place in this agreeable advance. Export, a firm favourite for years, going still further ahead and Sam Brown, a comparative newcomer in the field, recording a striking increase during the past twelve months.

BUILDING PROGRAMME

Since the relaxation of building restrictions in 1951 the Company has built and opened for trading 49 new fully-licensed houses and 53 new Beer, Wines and Spirits Off-Licences, making a total of 102 new licensed properties costing £1,350,000. Rebuilt houses and major alterations bring the total to £1,850,000.

During this time the number of licensed properties closed voluntarily or under compulsory acquisition, or whose licences have been used as Removals, or Surrenders following destruction through War Damage is 161.

The present building programme, covering premises in course of erection, provisional grants and joint ventures we have undertaken involves the expenditure of a sum of about £425,000.

This continuing programme of building and rebuilding and of alteration of licensed premises; and of Removal and Surrender of licences in order to meet the changing needs of the times is a familiar feature of the present-day pattern of licensing in those parts of the country where redevelopment is taking place. It is a costly procedure. Consideration of the facts I have summarised will demonstrate the need to conserve our resources so that our programme may go forward without interruption until the new areas of population are provided with the licensed facilities they need, and out-of-date houses are adapted to present-day requirements. We are already reaping the benefit of our policy and are convinced it is the right one.

Further instalments of our extensive building programme have been completed during the year, and these include the eight new fully-licensed premises to which I referred last year. A further twenty-eight major projects have also been completed and new work undertaken.

Following the formation of a joint company with Messrs Ansells Brewery (Associated Midland Brewers Limited) we hope shortly to be in

a position to go ahead with two houses in the Sheldon area.

In Coventry we have recently opened our first new jointly owned fully licensed house there, the City Arms. Also in Coventry we have undertaken a further joint venture, this time with Messrs Bass, by coming to an agreement in respect of a site where licensed premises are now in course of erection. The house is to be called the Open Arms.

W. BUTLER & CO. LIMITED

Stockholders will already be aware of the terms of our offer to W. Butler & Co. Limited, and at the time of going to print it is not possible to do more than re-state the facts concerning our approach to them. A further statement of the position will be made to stockholders at the Annual General Meeting on January 21st.

Your Company has had the most cordial relations with Butler's Brewery for many years and the majority of their houses have been known to the Executives over the years. It is an old-established business centred in Wolverhampton, owning 830 houses spread throughout the heavy industrial areas in the Midlands. Its interests in Wolverhampton and the Black Country, together with representation in areas such as Shrewsbury, Wellington, Stafford, Tamworth and Cannock, provide openings for trade where we are at present not strongly established.

Your Board have no hesitation in welcoming the merger between the two companies and we hope that our negotiations will come to a successful conclusion.

WOLVERHAMPTON DIE CASTING

LARGER TURNOVER

The twenty-second annual general meeting of The Wolverhampton Die Casting Company Limited, was held on December 30th at Wolverhampton, Mr W. C. Sproson, FCA, chairman, presiding.

The following is an extract from his circulated statement:

Following the increased turnover achieved during the year to June 30, 1958, I informed shareholders in December last that we had experienced a falling off in the demand from the passenger car industry. Notwithstanding this reduced demand the total turnover for the year ended June 30, 1959, exceeded that of the previous year.

The Trading Profit of the Group showed an increase over the preceding year of £22,000, amounting to £201,690 as compared with £179,545. The Net Profit, subject to Tax, is £178,569 as compared with £177,145 for the preceding year. The Directors recommend a Final Dividend of 20 per cent, less Income Tax, on the Ordinary Share Capital, making 30 per cent for the year, the same rate as last year.

The increase in demand experienced during the latter half of the year has been well maintained, and it is my view that the demand from the motor industry in particular will increase still further during 1960. To ensure higher levels of production in 1960, we have recently engaged the services of a well known firm of Industrial Consultants to make a complete survey of our present operations.

The report and accounts were adopted.

ARTHUR GUINNESS SON AND COMPANY LIMITED

STATEMENT BY THE EARL OF IVEAGH, KG, CB, CMG

The Annual General Meeting of Arthur Guinness Son and Company Limited, will be held on January 14, 1960, at Park Royal Brewery, London, N.W.10.

The following is an extract from the statement by the Chairman, The Earl of Iveagh, KG, CB, CMG, circulated with the Report and Accounts:

TRADING DIFFICULTIES AND PROFITS

Overall sales were adversely affected by the wonderful summer weather and accounted for part of the fall in gross profits, other factors being higher production, distribution, and selling costs. In addition, provision has been made for considerable losses on disposal of surplus stocks of timber resulting from the changeover to metal casks, and there was a substantial loss to the Company on beer in trade when the Chancellor of the Exchequer reduced the beer duty.

On the other hand, reduced income tax and more favourable profits tax increased the *net* profit over last year's figure and that, coupled with the strong financial position resulting from previous profit retentions, justifies the recommendation of a special Bicentenary bonus of 5 per cent while maintaining the Ordinary dividend at 28 per cent. A special Bicentenary bonus of a fortnight's pay or pension to Staff, Employees and Pensioners will be paid in addition to the one month's prosperity bonus to Staff and Employees.

BICENTENARY

The Bicentenary has been celebrated in various ways during 1959. The gesture of the Irish Government in issuing two commemorative postage stamps was very much appreciated and at the Bicentenary luncheon in Dublin, Mr Sean Lemass paid warm tribute to the Company. Special supplements have appeared in *The Times*, *The Irish Times*, and other newspapers, and new club and recreation buildings are being erected both in Dublin and at Park Royal for employees.

NEW DEVELOPMENTS

In Great Britain, canned Guinness is now on general sale, and abroad export sales have again been higher, the total value now exceeding £4 million net f.o.b. With exports of Guinness exceeding half the total volume of commercial beer exports from the British Isles, new problems are inevitable as large markets cannot be economically maintained by exports in bottle over thousands of miles. In Ireland, Phoenix Ale has attained a satisfactory position without exhausting its ultimate possibilities. Experiments are continuing with new brewing techniques developed from plant invented and tested at the Brewing Industry Research Foundation, the work being a joint venture between the Research Foundation, the APV Co., and ourselves. Beyond the immediate boundary of beer, research is being extended by the establishment, under Dr H. D. Kay, CBE, FRS, of Twyford Laboratories, Limited, to undertake fundamental research in fermentation and allied fields.

NON BREWING INTERESTS

A recent valuation made of the properties owned by the Park Royal Development Company (whose principal assets consist of factories in the vicinity of Park Royal Brewery) shows a present value approaching £1,500,000, whilst we have still a large holding in Slough Estates, notwithstanding that part has been sold during the year at a substantial profit. The possibility of expanding the Company's property interests is now under consideration. The confectionery group—William Nuttall, Limited—has continued to prosper but expanded sales have been offset by the increased cost of raw materials and there has been a small reduction in profits.

APPOINTMENT OF THE RIGHT HONOURABLE A. T. LENNOX-BOYD, MP

The problem of future management of our ever-growing business is always before me, for ultimate success, and indeed our existence, depends on good management. Over the years we have been fortunate in our choice and I was therefore very glad when my son-in-law, Mr Alan Lennox-Boyd, agreed to take over in due course, the management of the Company from Sir Hugh Beaver, with whom he is now acting as Joint Managing Director.

It is proposed to recommend payment of final dividends on January 15, 1960, of 3 per cent on the Preference Stock and 18 per cent, plus 5 per cent special Bicentenary bonus, on the Ordinary Stock, all less Income Tax.

Staff and Employees are receiving a bonus of one month's pay, plus a special Bicentenary bonus of one-half month's pay. Pensioners will receive a Bicentenary bonus of half a month's pension.

THE STRAND HOTEL LIMITED

The fifty-second annual general meeting of the Strand Hotel Limited was held on December 31st in London, Mr S. I. Salmon, the chairman, presiding.

The following are extracts from his statement which had been circulated with the report and accounts for the year ended September 30, 1959:

Our trading position has shown an appreciable improvement over that of last year. The trading balance has increased by £77,926, and the profit for the year, after taxation and the other items in the Profit and Loss Account, shows an increase of £40,183 to £128,519.

The Board recommends this year a dividend of 18 per cent on the Participating Preferred Ordinary shares, an increase of 2 per cent over that paid in the previous two years.

We are continuing, and indeed expanding our programme of re-equipment and special repairs, and this year we have increased the provision for repairs and renewals by £10,000 to £30,000.

Our subsidiary company, The Palace Hotel Limited, has completed a Building Agreement for a lease of 99 years for the erection of an hotel close to London Airport, and it is hoped that the hotel will be opened in about a year's time.

The Company has entered into an Agreement for a 99 year lease of an hotel to be built in Birmingham, subject to planning approval and the grant of a Justices' Licence.

The report and accounts were adopted.

COMPANY AFFAIRS

Turner and Newall

SINCE the publication of Turner and Newall's preliminary figures, which revealed a modest rise in trading profits from £11.7 million to £11.9 million and, to most people's surprise, an increase in the ordinary dividend from 15 per cent to 20 per cent, the £1 ordinary stock units have shot up from 88s. to 110s. 6d., bringing the yield down to 3.6 per cent. Investors are obviously confident that earnings in 1959-60 will benefit from the group's trade with the motor, building and textile industries. The chairman, Mr R. G. Soothill, is more cautious than those investors who look on T. & N.'s affairs from the outside. He says that the favourable conditions which appeared in the latter part of 1958-59 "will intensify, but with the steady growth of world competition, advances in turnover are not necessarily paralleled by corresponding advances in profit."

The market for raw asbestos has recovered from last year's recession and the group's mining companies in Africa are now producing at the "normal" rate. But increased competition from Russia (especially in textile grades of fibre) is expected to cut into profit margins. Competition from the Soviet Union has not apparently affected the earnings of the Canadian mining companies whose operations "continue at a high and profitable level." At home trading conditions remained highly competitive, while exports of asbestos products in 1958-59 did not reach the previous year's record level. Ferodo, the group's subsidiary which supplies the motor trade with brake and clutch linings, duly benefited from the boom, its sales both at home and abroad establishing new records. Here, too, Mr Soothill believes that although order books at the beginning of the year were full, it may become increasingly difficult to maintain profit margins. The ending of the credit squeeze which set off the revival in the building and civil engineering trades has in turn led to a high demand for asbestos cement and Turner's Asbestos Cement has had a "successful year." The prospect here must also be seen as bright but in general investors must ask themselves whether, after the recent rise in the stock market, there is sufficient justification for another big advance in the market price of this blue-chip.

British Bank of the Middle East

THE Hongkong and Shanghai Banking Corporation's bid for the shares of the British Bank of the Middle East has been declared unconditional. Holders of 82½ per cent of the shares have already accepted and the offer has been extended for another three weeks. It is of one HK $125 share in the Hongkong Bank for every 14 £1 shares of BBME or alternatively 77s. 6d. in cash per share.

Before the bid BBME shares were quoted at 58s. while Hongkong Bank shares were priced at £58 and at these prices the offer certainly seemed a generous one. In addition it ensures a higher income for BBME shareholders, for the directors of the Hongkong Bank intend to pay a final dividend of £1 17s. 6d. per share on the increased capital, thus maintaining the annual payment at £3 per share. Moreover, acceptors of the offer will hold shares in a bank with a wide spread of geographical interests, including the business of the Mercantile Bank which the Hongkong Bank acquired last February.

Nevertheless, the bid ran into some criticism. This centred on one of the conditions attached to the bid that there should be no disclosure of BBME's hidden reserves. This set some shareholders wondering whether the terms of the offer were quite as attractive as they appeared at first sight. But it is difficult to see what purpose would have been served if BBME's full reserves had been revealed unless the Hongkong Bank's reserves were disclosed as well. The whole question of secret reserves is one which the Jenkins Committee may have to consider. But shareholders (especially those who have not accepted the offer) should be reassured by the fact that these reserves were revealed to the auditors of both banks who considered the terms of the offer to be fair to both parties. The British Bank of the Middle East is to be kept as a separate entity and shareholders who choose to hold a minority interest will lose the advantages of both a higher income and a participation in a bank which seems set on expansion.

Associated Engineering

WHAT surprised the market about the preliminary figures from Associated Engineering was how much better they were than had seemed at all possible at the time of the chairman's interim report. Then a fall in trading profits in the first six months of the year from £1.3 million to £1.1 million was reported and the chairman warned shareholders that the full year's profits would not reach the record level achieved in 1957-58. Now shareholders are to receive an increased dividend of 17½ per cent (against the equivalent of 13¾ per cent), following a rise in consolidated trading profit in the year ended September 30th from £3,206,328 to £3,711,261. In his annual statement the chairman, Mr H. R. More, says that the marked recovery in earnings in the latter half of the financial year was due in part to the inclusion of eleven months' trading profits of the group's new South African subsidiaries, in part to bigger earnings from licensing agreements and overseas trade investments and, not least important, to the benefits stemming from the expansion in output made possible by a big outlay on capital developments over the last three years.

The group's principal customers are the motor manufacturers whose expansion has prompted the directors of Associated Engineering to step up their capital development programme. Over the next three years, says Mr More, the group will spend some £5 million over and above the replacement of worn-out machines and plant, and a scheme, which is expected to cost around £2,100,000, has already been approved by the directors. The cash flow of about £1,800,000 and liquid funds of around £2,250,000 have no doubt prompted Mr More's comment that no new capital will be necessary to finance the expansion programme. The 17½ per cent dividend is covered 2½ times by earnings and the 5s. shares at 22s. yield almost 4 per cent.

Lloyds and Scottish Finance

THIS holding company, owned 50-50 by Lloyds Bank and the National Commercial Bank of Scotland, has large interests in hire purchase through Olds Discount and Scottish Midland Guarantee Trust, and has recently branched out in the Commonwealth. Its first accounts are for the nine months to September 30, 1959, and no comparable figures for earlier periods are available. The group's "hire purchase and other debtors" at end-September totalled £69 million, though it is not clear whether this is net of unearned charges or not. Profits in the nine months were £2,275,836 before tax, and £1,022,482 after tax. More than two thirds of the net profit has been distributed to the two parent banks, which will receive about £344,000 each. This is a useful if modest contribution for Lloyds. For the National Commercial the nine months dividend comprises nearly 30 per cent of net profits in its full year to end-October, or nearly 40 per cent at an annual rate. This bank has recently made a big rights issue of £6½ million largely to provide for its share of a further increase in the capital of Lloyds and Scottish Finance. An investment in the National Commercial may soon be a stake more in hire purchase than banking.

Tate and Lyle

SHAREHOLDERS of Tate and Lyle who searched the chairman's annual report for some salient facts about Canada and Dominion Sugar—in which the group has acquired a controlling interest for £6.36 million—searched in vain, though Sir Ian Lyle did promise to "comment further" on the acquisition at the annual meeting, when he will presumably give some details about

Canada and Dominion's earnings and prospects. But what Sir Ian did make clear was that the directors do not intend to finance the deal by a new issue of ordinary shares. The acquisition of 56 per cent of the equity of Canada and Dominion Sugar has been financed by bank borrowings and arrangements are now in hand to fund these borrowings. What form this will take has not yet been revealed, but the market is plumping for a debenture issue. Tate and Lyle already has in issue about £3,400,000 in two debenture stocks and £1,144,000 in preference stock, but with an issued ordinary capital of £14 million the capital gearing is still fairly low.

Commenting on the year's trading, Sir Ian said that "substantial" savings in costs on all the group's refined products resulted in higher profits even though selling margins at home were reduced. In all, trading profits rose by 8½ per cent, from £6,195,253 to £6,720,469. The ordinary dividend of 12 per cent (against an equivalent 10$\frac{5}{16}$ per cent) is comfortably covered 2.2 times by earnings and the £1 ordinary shares at 61s. offer a yield of 3.9 per cent.

Mitchells and Butlers

An example of how rationalisation and reorganisation within a brewery group can directly benefit shareholders, even before earnings fully reflect the advantages of such measures, is given in the full report from Mitchells and Butlers. The chairman, Mr Robert H. Butler, says that the proceeds from the disposal of properties whose commercial values exceed licensed values have enabled the directors not only to finance improvements of other properties, but also to distribute to ordinary shareholders the tax free bonus of 1½ per cent. This they will receive for the year ended September 30th in addition to a bigger dividend from trading of 15 per cent (against 13½ per cent). The balance sheet shows that the net surplus on the disposal of land and properties now stands at £387,378, compared with £254,817 at end-September, 1958—and this after the tax-free distribution costing £71,042. Similar policies will be pursued in dealing with the properties of Atkinsons Brewery which the group took over last May. The inference made in the stock market was that the tax-free payment will be repeated, and perhaps increased; the £1 ordinary shares were marked up 2s. 6d. to 75s. 10½d., to yield nearly 4 per cent.

Since the end of the financial year Mitchells and Butlers has acquired another brewery, W. Butler and Company, which trades in Wolverhampton and the Black Country where the M and B public houses are not particularly thick on the ground. M and B is also adding to its interests in the Midlands by embarking on joint ventures with other breweries. The one with Ansells Brewery to build public houses in Birmingham has so far been hampered by protracted negotiations with the local authorities over the terms for the lease of the respective sites, but in Coventry the joint venture with Bass is making more satisfactory progress.

Ashdown Investment Trust

The issue of shares in Ashdown Investment Trust last June at a price above their break-up value was not a resounding success. Yet shareholders who purchased shares then must feel pleased with the results of the trust for the year to November 30th last. Gross revenue has risen from £202,474 to £254,683, even though the proceeds of the ordinary share issue amounting to some £850,000 were available for less than half the year while the £750,000 resulting from the issue of debentures in October was available for only the last few weeks of the period.

The directors are paying a final ordinary dividend of 7 per cent, against the 6½ per cent forecast at the time of the issue, and thus are raising the total for the year from the equivalent of 12 per cent to 13½ per cent. They have also announced their intention to pay an interim dividend of 4½ per cent on the capital to be increased by a 50 per cent scrip issue. This is the equivalent of 7½ per cent on the present capital and compares with 6½ per cent, the total of the two interims paid for 1958-59. It seems clear that the total payment in the current year will again be increased and this would certainly be in accordance with the board's declared policy of distributing a large proportion of earnings. Currently priced at 20s. 6d. to yield 3½ per cent, the shares have risen some 20 per cent above the price of 17s. at which the new shares were offered. This compares with an advance of over 40 per cent in *The Economist* indicator over the same period.

US Borax

Net earnings of United States Borax and Chemical, the American operating subsidiary of Borax (Holdings), in the year ended September 30th advanced by 150 per cent to just over $6 million. This is equivalent to $1.29 a share, compared with 49 cents a share in the previous year. The jump in earnings looks enormous when it is compared with the rise of 17 per cent in sales, from $53 million to $62 million, and it must be largely due to the fact that profits in 1957-58 were hit by the heavy running-in costs of the new plant at Boron, California. Even so, at a time when potash prices remained low—and sales of potash account for about one third of the group's total turnover—earnings of 29 cents a share in the last quarter were the highest in the company's history. The group clearly benefited from an increased demand for boron products from industry and agriculture. On this announcement the 5s. deferred shares of Borax (Holdings), which owns about 70 per cent of the equity of US Borax, rose 1s. 3d. to 22s. 3d.

FIRST DEALINGS:	Dec. 7	Dec. 28	Jan. 11
LAST DEALINGS:	Dec. 24	Jan. 8	Jan. 22
ACCOUNT DAY:	Jan. 5	Jan. 19	Feb. 2

Markets have been remarkably active for the time of the year, and on Wednesday the number of bargains marked was 24,862. Until Tuesday industrial equities advanced on a broad front with special interest shown in heavy engineering shares; but gilt-edged stocks were dull and drifted lower. On Wednesday, however, the Funds came in for a fair amount of buying from small investors and industrial equities lost ground on profit-taking. Wednesday's reversal of the week's general trend enabled all sections of the market to show net gains over the week and *The Economist* indicator rose 14.8 points to a new peak of 382.5.

Small selling orders of gilt-edged stocks tended to dry up on Tuesday, and on Wednesday the small trickle of selling which persisted was soon absorbed and most of the Funds improved. Among undated stocks 3½ per cent War Loan put on ¾ to 65 and in short-dated stocks 4½ per cent Conversion 1964 gained ⅛ to 99½. Longer-dated issues managed to maintain their pre-holiday levels; typically, 4 per cent Gas 1969-72 closed unchanged at 90½. Bank shares came in for heavy buying early in the week ahead of the dividend season, but profit-taking on Wednesday put most of them below their best levels. Barclays closed 2s. 7½d. better at 68s. 9d. and National Provincial gained 2s. to 94s.

Gains in the industrial equity market were by no means confined to blue-chips and were evenly spread over all sections of the market. Heavy engineering shares, including the shipbuilders, made good headway. William Doxford jumped 10s. 1½d. to 107s. 1½d., Swan Hunter put on 5s. 4½d. to 40s. 1½d. and Harland Wolf gained 3s. 6d. at 30s. In heavy engineering shares Davy-United closed 2s. 9d. up at 115s. 6d. and Power-Gas gained 6s. 3d. to 80s. 7½d. on hopes of an early statement on the proposed merger. Steel shares were erratic over the week but Steel Company of Wales closed 9d. better at 49s. 6d. while Lancashire Steel showed the best rise of 5s. 9d. to 51s. 6d. Textile shares continued their recent advance, if at a slower rate. Fine Spinners closed 1s. better at 34s. 9d., and English Sewing Cotton advanced 4½d. to 51s. 10½d. Shipping shares continued strong with Cunard 3s. 6d. better at 24s. 9d. and P & O deferred 3s. 3d. higher at 50s. 9d. Other equities to show good gains included Marks "A" which improved 1s. 9d. to 76s. 3d., and in motors ACV put on 5s. to 77s. while Fords gained 1s. 6d. to 107s. 9d. Oil shares advanced on the strength of Wall Street and substantial investment demand combined with an acute shortage of stock made for some substantial gains. Burmah jumped 6s. 6d. to 53s., Shell gained 1ss. 6d. to 158s. 6d. and BP closed 3s. 3d. better at 56s. 6d.

THE MONEY MARKET

Despite a momentary spell of ease on Wednesday, end-year pressures caused acute stringency on Thursday and, despite large special help, three or four houses had to borrow a fairly large amount at Bank rate. This followed penal borrowing for small amounts on Monday and Tuesday.

The continued pressure from the Bank of England in the money market caused a further rise in the London bill rate at last Thursday's Treasury bill tender, by almost $\frac{1}{32}$ per cent to £3 13s. 8.82d., the highest since October, 1958. It would be surprising if the rate went above £3 15s. while Bank rate remains at 4 per cent. The discount market lowered its bid by another 2d. to £99 1s. 7d. last week and its rate of allotment rose from 54 per cent to 66 per cent. At yesterday's tender the authorities offered only £280 million of three months' bills leaving a surplus of £50 million of maturing 63 day bills to help smooth the first flow of new year tax payments.

The rate on Treasury bills for three months bills in New York fell from the record level of 4.670 per cent to 4.516 per cent; the rate on six months bills was virtually unchanged at 4.942 per cent.

(a) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (b) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (c) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (d) Surveys made twice a year; annual figures relate to October survey. (e) Figures relate to April survey. (f) In general males under 21 and females under 18 years of age. (g) Certain changes have been made in the classification and coverage of the Board of Trade's index numbers in this section. (h) The series for "all items" and "other items" have been revised throughout; quotations for Middle East and Venezuelan crude oil now replace the previous quotation for gasoline. Owing to a change in the tea quotation used, some revisions have also been made in the series for "all items" and "food" from June 2, 1959. (i) Revised figures for October 27th: fibres, 80·7; others, 130·4.

APPOINTMENTS

METALS ICI DIVISION

TECHNO-COMMERCIAL DEPARTMENT

Applications are invited for a senior position in a department dealing commercial and economic investigation affecting long-term interests of the Metals Division of the Company. The successful candidate should be a member of a small team undertaking market surveys and special investigations.

Applicants, preferably between 28 and 35 years of age, should possess an honours degree, have industrial and commercial experience, and have the ability to draw the correct commercial inferences from technical information and to present the results clearly in a form acceptable to senior management.

Excellent conditions of employment include an attractive commencing salary with adequate scope for progressive remuneration, a contributory pension fund and a profit-sharing scheme.

The successful candidate will, if married, receive a grant of his reasonable removal including travel expenses and will also be paid a lodging allowance for a period up to six months whilst maintaining two homes. In addition he will be eligible for assistance with house purchase.

Write for an application form to the Assistant Divisional Personnel Manager (S.6/D), Imperial Chemical Industries Limited, Metals Division, P.O. Box 216, Church Works, Witton, Birmingham, 6, quoting IC.47/E.

NATIONAL Daily Newspaper requires bright young FEATURE WRITER to write on Financial, Economic and Industrial subjects. Applicants should be under 30 and preferably with an Honours Degree.—Please send details of age, education and experience, to Box 1257.

THE BRITISH COLUMBIA POWER COMMISSION

requires a thoroughly qualified economist with wide experience in hydro-electric power development studies and negotiations. Must be able to take major responsibilities in analysis and interpretation of conflicting proposals relating to intergovernmental and interagency agreements involving many hundreds of millions of dollars. Salary commensurate to qualifications. Only applications of outstanding ability and established reputation should apply.—Confidential communications giving full details should be addressed to B. M. Hoffmeister, Agent-General for British Columbia, British Columbia House, 1 and 3 Regent Street, London, S.W.1, England.

UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited for Lecturerships in Economic Statistics. Salary scale: £1,150 × £50—£1,450 × £75—£1,900 p.a. Entry point determined by qualifications and experience. Child allowance, £.S.S.U. Unfurnished accommodation at rent 5 per cent basic salary. Passages for up to 5 persons on appointment, normal termination and study leave once every three years).

Detailed applications 6 copies) naming 3 referees as soon as possible to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

THE PIG INDUSTRY DEVELOPMENT AUTHORITY

invites applications from graduates for a post as

A STATISTICIAN BIOMETRICIAN

Practical experience of statistical methods related to nutritional and genetic experiments with animals and experience with Punch Card Installation would be an advantage. The person appointed will in the first instance spend most of his time at Stotfold in Bedfordshire but will also visit the London office. Age limits 26 to 45 years. Commencing salary according to experience and qualifications but not less than £900 per annum. A contributory pension scheme is in operation.—Application forms (available from the Establishment Officer, Pida House, 15 Ridgmount Street, London, W.C.1) should be completed and returned by 12th January, 1960.

FOURAH BAY COLLEGE SIERRA LEONE
UNIVERSITY OF DURHAM

Applications are invited for two Lecturerships in ECONOMICS, one requiring a special interest in Economic Statistics and the other comparative Economic History. Salary scale: £965 × £50—£1,265, £1,200 × £50—£1,700 p.a., entry point according to qualifications and experience. F.S.S.U. Quinquennial appointment, annual leave and normal termination. Part-furnished accommodation at reasonable rent.

Detailed applications six copies) naming three referees by January 25, 1960, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

KENT COUNTY COUNCIL
PLANNING DEPARTMENT

Applications are invited for the following appointments:—

a) SENIOR PLANNING ASSISTANT in combined grades A.P.T. IV/V (£1,065-£1,375);

b) SENIOR ASSISTANTS in Special Grade (£785-£1,070) or if appropriate Grade A.P.T. IV £1,065-£1,220);

c) PLANNING ASSISTANTS in Grade A.P.T. I-II £630-£800) or A.P.T. I (£510-£705); and

d) CLERK DRAUGHTSMAN in Miscellaneous I-III £425-£590).

The commencing salaries will be fixed according to qualifications and experience and the posts are superannuable.

Candidates for post a) must be corporate members of the Town Planning Institute or alternatively possess an appropriate degree or diploma and have at least 5 years' experience in town and county planning. The post will be that of senior assistant to the Area Planning Officer.

Candidates for senior planning posts under b) must be corporate members of the Town Planning Institute and for other senior posts corporate membership of either the Royal Institute of British Architects or the Institute of Landscape Architects will be required.

Candidates for posts c) must have a University degree or diploma or a recognised intermediate professional examination related to any technical aspect of the work of a planning department.

As to b) and c) several new posts are available for work in connection with the preparation of Town Maps, for development control duties, and for officers with qualifications in architecture or landscape.

Candidates for post d) should have general clerical experience, preferably in a technical department and some experience in cartographical draughtsmanship.

The National Scheme of Conditions of Service applies and registered disabled persons will be considered. Five-day week.

Applications with names of two referees to County Planning Officer, County Hall, Maidstone, by February 8, 1960.

NATIONAL FOUNDATION FOR EDUCATIONAL RESEARCH IN ENGLAND AND WALES

SENIOR RESEARCH OFFICER
(Revised Advertisement)

Applications are invited from men or women for the above post. The Senior Research Officer will assist the Director in the conduct of the Foundation's research programme and have specific responsibility for the Statistical Service. Opportunity to play a full part in other aspects of the Foundation's work will be given.

Candidates should be honours graduates with considerable post-graduate research experience. They should either have a good academic qualification in Mathematical Statistics or have given evidence of high ability in the application of statistical methods to research in educational psychology. Qualifications and experience in Education and or Psychology are also looked for though this requirement might be partially waived for candidates with high qualifications in statistics. Varied teaching experience, experience as an educational psychologist, proven ability to write technical material intelligibly would be additional qualifications.

Salary on the scale £1,700 x £50—£2,000 with placement according to qualification.

Applications closing date January 14, 1960) in three copies and with the names of three referees should be sent to the Director, National Foundation for Educational Research, 79 Wimpole Street, London, W.1, from whom further details of the post can be obtained.

Those candidates who made an earlier application for a similar post and who wish their applications to stand need not apply again. They are asked to inform the Director of this by postcard.

CITY Investment Bankers require junior Economic Statistician for their Research Department. Duties involve writing general economic and stock market reports. Applicants should possess a good honours degree and some experience in investment analysis would be an advantage.—Please reply to Box A.340, c/o Walter Judd, Ltd., 47 Gresham Street, E.C.2.

INVESTMENT ANALYST

Merchant banking house requires analyst, preferably young but experienced graduate, to advise on clients' portfolios and participate in general research work of International Investment Department. — Write Box DE.74, c/o 95 Bishopsgate, E.C.2.

EAST AFRICA HIGH COMMISSION

STATISTICIANS, EAST AFRICAN STATISTICAL DEPARTMENT.

Candidates should have a good Honours degree preferably in Economics with Statistics as a main subject. The latter is not essential provided that Statistics has been included in the degree course and the candidate has a good knowledge of statistical methods and the handling of statistical data. Experience desirable of work in a government or commercial statistical organisation or post graduate research in economic analyses or statistical surveys. Age limit 30. Appointment may be pensionable or on contract terms, inclusive salary scale £930 — £1,850, point of entry determined by experience. Gratuity of 15 per cent. of salary if appointment is on contract. Income tax at local rates. Free passages on first appointment and on leave for officer and family. Liberal home leave on full salary. Government quarters, when available, at moderate rental.—Apply stating full name and using brief details of qualifications and experience to Director of Recruitment, Colonial Office, London, S.W.1, quoting BCD 59/58/02/AS.

THE UNIVERSITY OF MANCHESTER
SIMON FELLOWSHIPS

The University offers a number of Simon Fellowships for advanced study or research in the social sciences. This term is used in a wide sense to include not only Economics, Government, etc., but equally, fields such as Education, Jurisprudence and Social Medicine. Values within the range of £1,000—£1,900 per annum (Simon Research Fellowships) or within the range of £1,850 — £2,250 per annum (Simon Senior Research Fellowships), according to qualifications and experience. They are open to members of the public services as well as to persons with academic experience. Applications should be sent by January 15, 1960, to the Registrar, the University, Manchester 13, from whom further particulars may be obtained, and who will be pleased to answer any enquiries regarding the scope of the Fellowships.

IMPERIAL Chemical Industries Limited, Paints Division, have a vacancy for a Chartered Accountant who is not more than 27 years of age. Previous industrial experience is not essential. Good initial salary and excellent prospects. The company operates both a pension and a profit sharing scheme, and married men can be given assistance with housing and removal expenses. Apply in writing, stating full particulars to the Staff Officer, I.C.I. Limited, Paints Division, Wexham Road, Slough, Bucks.

CHARTERED ACCOUNTANT

Applications are invited from Chartered Accountants aged 28-35 to act as Assistant to the Chief Accountant in the supervision, from the London Head Office, of all the accounting procedures of a major division of Courtaulds providing a profit service. The position is pensionable and is situated centrally. Salary will be according to age and experience and will include assisted mortgage facilities.

The group constitutes an expanding and young organisation and offers excellent opportunities for rapid promotion. Applicants should be keen, energetic and capable of working on their own initiative. Write in confidence giving full details of age, qualifications, experience and salaries required to Box 1259.

UNIVERSITY OF SYDNEY
LECTURESHIP IN ECONOMIC STATISTICS

Applications are invited for the above-mentioned position. The salary for a Lecturer is within the range £A2,000-£A2,750 per annum, plus cost of living adjustment, and will be subject to deductions under the Social Services Contribution Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in operation at the University, Lecturers and Professors, in certain cases, may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on 5th February, 1960.

BUSINESS AND PERSONAL

FOUND new interest in Photography since Xmas. Leica or Rollei. Best quality Retina are available NOW from Wallace Heaton, Ltd., The Camera Specialists, 127 New Bond Street, Lond. on, W.1.

EDIBLE OIL PROCESSING PLANT in London's Dockland

From a process developed by our client. Loders & Nucoline of Silvertown, we designed and built a semi-commercial pilot plant in 1955-56. The success of the project resulted in Loders & Nucoline retaining our services for the design and construction of a full commercial scale plant which went on stream this summer. This is yet another example of our experience in the field of chemical engineering. Please call us and let us tell you how this experience can benefit you.

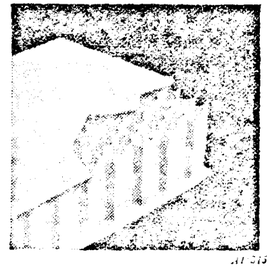
To Dover...

In 1909 Louis Blériot arrived at Dover, after crossing the Channel in a machine of his own manufacture. Handicapped by instability due to a poor power/weight ratio, he crash landed, fortunately without injury. Engine powers have since increased 1,000-fold, metal has replaced wood in airframe construction, but only recently have new materials been introduced to provide further important reductions in weight.

Each elevator of the Vickers Vanguard is an 'Aeroweb' honeycomb sandwich structure.

...and Sandwich



Aluminium honeycomb was pioneered by CIBA (A.R.L.) Limited, and is marketed under the name 'Aeroweb'. When bonded to facing sheets by the 'Redux' process, 'Aeroweb' honeycomb provides sandwich structures having remarkable strength/weight ratios, smooth aerodynamic surfaces, excellent stiffness, freedom from fatigue, and providing ease of production. Now 'Aeroweb' is ready to take its place in anything that must be light and strong, in railway rolling stock, lifts and motor vehicles as well as aircraft - in fact in about anything that moves. You may gain immeasurably by writing for full details.

German Fairs 1960

The six German fairs extend a cordial invitation to you. Here firms from all parts of the world show the latest of their production. The six fair cities, closely adjacent to eachother under the aspects of modern traffic and adjusted as to dates, form a big efficient trading center for your visit. Markedly individual in organization and character, the six fairs complement each other as to offer and circle of visitors. Here you find your suppliers, here you win new customers. Above all you have the pleasant opportunity for personal contact with business partners from many countries which you otherwise can only establish by extensive travel. An excellent service facilitates your work.

Finding the job that fits the man

Each year in The Guardian, a number of leading industrial and commercial companies take full pages to talk about themselves and the openings they offer to school-leavers and graduates. In this way they are able to attract the interest of the lively-minded student who reads The Guardian. They are able to tell him the sort of firm they are, the prospects they offer, and the qualifications and qualities they require.

These announcements have proved extremely useful and productive in the past, both to the companies seeking the right sort of recruit and the man (and woman) seeking a job with a future. The series commences on January 18th, and will continue each day for several weeks.

Lively minds like

VOLUME CXCIV . NUMBER 6072.

What to Say in Africa

SINCE he became prime minister on January 10, 1957, Mr Macmillan has started every calendar year with a reconnaissance into the world outside, each of them with a very pressing political motive. His Commonwealth tour in 1958 was dictated by the fact that he took over the prime ministership on the ruins of the Suez adventure; its purpose was to mend fences. His visit to Russia in 1959 was designed to open the way to a summit meeting; its main purpose was to build bridges, although it was also not without its influence on the subsequent British general election. Now, in 1960, he is in Africa: there it is a new world that has to be built, and the role that Britain plays in that building is going to have a big domestic political impact, too.

Of the quickening of the pace of events in Africa, and of quickening interest in it in Britain, there is evidence to spare. (As one sign of the times, *The Economist* has this week felt obliged to arrange its mass of current reports on and from that continent in a special, separate African section on later pages.) Mr Macmillan must know that the things he himself says about Africa are now watched more closely and with a more critical eye than the things that he says about any other subject whatever. This is not only because Africa represents modern Conservatism's crisis of conscience. It is because there is now an influential section of opinion in Britain which is profoundly concerned that this country shall not appear in a bad light in Africa; it insists, no doubt in a rather muddled and imprecise way, that the right and moral thing shall be done somehow, and that there shall be some term to shifts and evasions. This strain of opinion may sometimes be irresponsible, and even more often unrealistic—but what matters for Mr Macmillan is that it runs right through national sentiment from the left of Labour to the Tory Bow Group.

There is now a strong, liberal African lobby or crossbench which does not believe that there can indefinitely be one solution for West Africa and a totally different one for Kenya and Rhodesia. Some of its champions are now whipping up a rather surprising degree of support in Britain for a campaign to boycott South African goods. They are representatives of a mood which Mr Macmillan cannot miss in almost every British newspaper; he had an unpleasant time with it over the Devlin report. He knows that the general election gave him no mandate for old-fashioned Conservatism in Africa.

Now he is on the way to see for himself the forces that have caused these waters to rise: to test the challenge of Black Africa in Ghana and Nigeria, and the obduracy of White Africa in Salisbury and Capetown. Any initiatives he takes will be behind the scenes. But in public he will be expected to say something, too. Inevitably his public statements will take the form of cliches. The important thing is to choose the right ones. The particular cliches that he chose in his televised speech to the Russians last year did a world of quiet good; that was because he was speaking in a country where there has long been a sense that liberty is a dangerous doctrine. This year—whether in Lagos, Salisbury or Cape Town—he may well be reminded of something of this same atmosphere.

Now, therefore, is the time for helpful outsiders to help him choose the right cliches for his new journeyings. The notes that follow, offered as the substance for simple speeches about the British way of life, are put forward only partly as a joke. Needless to say they have not been pilfered from Mr Macmillan's desk, and were prepared only after he had already begun to talk to his Ghanaian

hosts. But they can perhaps illustrate that ordinarily unexceptionable phrases nowadays carry an odd ring in certain parts of the Commonwealth—and can prompt some interesting thoughts about the proper uses of flannel on top level tours.

Speech for Lagos

IT would be inappropriate for me to make any comment on your own affairs. I should like simply to try to tell you something of our way of life in Britain, of our struggles, of the ideals we have fought for and won. I broadcast from Moscow on the same theme last year, to the Russians, who have not had the same Commonwealth heritage as you and we. . . .

You may find it strange that I, as head of a government, should stress the importance we in Britain attach to the existence of a vigorous Opposition, whose constitutional duty is to oppose. But I am sure I shall give no offence if I say that the first thing that struck me, on arriving here from Ghana, was the flourishing freedom of your Opposition. . . . We have recently held a general election ; a good clean fight, leaving no aftertaste of bitterness. You will understand all this, for you too have recently held a general election here. . . .

We cherish, in our little island, the hard-won freedom of our press. (This, I understand, is a matter which your new government is tackling with striking vigour. . . .) We are proud of our claim that all are equal before our law, that our judiciary, independent and fearless, treats plain men and ministers alike. . . .

Being of northern stock myself, I can say without fear of contradiction (and both my Colonial and Commonwealth Relations Secretaries would undoubtedly agree) that we have solved our old problem of the relationship between North and South in the only possible way. . . . It is our custom not to jettison all that we find good in the past out of eagerness to experiment with the future. For example, while it is many centuries since we first began to curb the power of our feudal potentates, we still reserve for them an honoured place both in our constitution and in our social life ; we of the Government have sometimes had the duty and pleasure to draw their dynasties into the mainstream of our national life by marrying their daughters. . . .

Speech for Salisbury

IT would be inappropriate, etc. . . . I should like simply to, etc. . . . We are proud, in our little island, of our ancient rights and liberties. We live without fear of arbitrary arrest, without fear of the knock on the door in the chilly dawn ; we know it can only be the milkman. Habeas Corpus is our precious guarantee against any detention without trial. . . . The long established right of our Royal Commissions to sit in judgment on any of our affairs, and to call upon witnesses to give their testimony without fear of any painful consequences, is another bulwark of our freedom.

Yet our old country, with all its proud heritage from the past, is equally proud of its ability to revise its thinking to keep abreast of a fast changing world. We have learnt from our unique experience of Empire that ultimately government must rest on the consent of the governed. . . . To take an example that comes very near home, since we recognised the right of the Irish to secede we have enjoyed such cordial relations with them that there is now no contradiction between their national independence and their flocking in many thousands to swell our labour force in Britain. . . .

It is no mean thing to be the Commonwealth's Mother Country, the country where all the streams of the Commonwealth, in all its brilliant colourful variety, meet and merge, where all its citizens are welcome, where to be a British Protected Person is to secure a real protection, where all are free to take wives and employment, to move about our streets without encountering any demand for documents or passes. (With what joy did we burn our identity cards after the war. My own party's maxim, " Set the People Free." . . .)

True, it is our shame that a few among us cling to absurd delusions of racial superiority and express their base instincts in base ways. But these are only a small minority of our least intelligent citizens ; and our courts have dealt sternly with their offences. . . .

Speech for Cape Town

IT would be inappropriate, etc. . . I should like simply to, etc. . . . [delete reference to Russia] . . . We share with you the noble heritage of Christianity, its glorious concepts of the brotherhood of man and the fatherhood of a God in whose eyes all men are equal one with another. . . . This independent Union of South Africa, founded in 1910, is perhaps the greatest historical monument of the British Liberal party, but we Conservatives now take just about as much pride as our opponents in its achievements.

My own party's special pride at home is that our great Conservative Prime Minister, Lord Beaconsfield, gave our country timely warning of the perils of a society divided into " two nations." Under our present Conservative administration, we may claim without immodesty that we have brought about a decisive fusing into " one nation," with the happy consequence that our party is obtaining increasingly large majorities for our truly National policies from an electorate that earlier Conservative Governments had enlarged to the point of universal suffrage on a common roll. . . .

On the international plane we adopt the same universal view of mankind, and our foreign policy gives pride of place to the United Nations. . . .

We are proud of our record in war as in peace, for we played no small part in the last great war, in which the gloriously variegated peoples of the whole Commonwealth (with only a little local hesitation) defended our shared ideals against the pernicious ambitions of an arrogantly self-styled Herrenvolk. . . .

Your and our Royal family have set a shining example to the whole Commonwealth by their unwearying round of visits to all its peoples and their ability to mix with all on such unaffected and intimate terms. We have naturally been impressed by the recent selection of one of the most widely known of your political leaders to kiss your Queen's hands and represent her in these functions in the Union. . . .

MY country has, I know, been much criticised in many parts of the world for its record of what is perhaps too emotively described as colonialism. You will forgive me if I take this opportunity of pointing to recent evidence that quite a number of peoples who still, as is often said, " labour under our colonialist yoke," are showing themselves most reluctant to surrender the benefits which, in their own estimation, they derive from British protection. If I may take the example of most direct interest to you whom I am now addressing, I should like to cite the anxiety to hold on to their connections with Britain that has lately been expressed, in no uncertain terms, by the people of the

British Cameroons. **Nyasaland Protectorate.** **High Commission territories of Basutoland, Bechuanaland and Swaziland.**

Germany's Notting Hill

West German leaders have been quick to condemn anti-semitic incidents. But the nazi past still leaves its mark on German life

THE first reaction of many British people to the outbreak of swastikas and anti-Jewish slogans in western Germany is to believe the worst. For ten years the German federal republic has presented an almost disconcertingly decent face to the world as it has carefully picked its way back to a prosperous and respected place in the family of nations. Now the ugly desecrations and, still more, the flickering trail of evidence of neo-nazi sentiment among young men in their twenties, have made it plain that this well-to-do suburban citizen still has his skeleton in the cupboard after all. It is all too tempting to slip into the conclusion that the Germans have not learnt a thing.

That would not be the right conclusion. Most Germans are surprised, and many are deeply shocked, by the incidents that are discrediting their country. The German press has upheld the reputation for decency that it has earned for itself in the last ten years. In both the main political parties there are strong bodies of opinion to support the vigorous action the Berlin senate has taken against neo-nazi groups and to advocate a more downright line in the federal republic itself ; such people are not impressed by the bill at present before the Bundestag. The shattering effects of bombing and defeat, the revelation of some of the crimes committed in their name, the new facts of power in the world, have effectively driven most Germans away from any sorts of extremism to vote for soundness, the middle way and the quiet (and prosperous) life.

Yet no one who has watched the federal republic emerge so rapidly from the humiliation of defeat to its present place in world affairs can be altogether surprised by the nasty incidents of the past fortnight. Most countries have their juvenile delinquents and their petty rebels capable of such acts. Inevitably, when a society has become so completely impregnated and identified with a creed as Germany was with nazism, a residue remains to give them importance.

The west German state has never gone out of its way to take issue with these remnants. It has made a determined effort to present a new face to the future ; it gives its citizens democratic institutions and the security of the rule of law ; but, to the disquiet of those Germans who had hoped for a completely fresh start, a revolutionary purge of German society has had no place in Dr Adenauer's policy. The past has been brushed under the carpet in the endeavour to establish a firm national front against communism. And so the civil service, the judiciary, politics and industrial management contain many of the same men who served the Third Reich.

In general these men do not thirst for any sort of nazi restoration. Times have changed. But they also have no interest in turning over the soil of the past, rooting out its vestiges, or going out of their way to condemn the minority of extremists who do seek to resurrect it. To take an example, there has never been much feeling in favour of the re-examination of the teaching of German history in the schools that seems so much more necessary, to an outsider, than the banning or harrying of individual eccentric groups. A recent German bank bulletin made the striking comment that the most remarkable statistic in the federal republic was the number of taboos. It is in keeping with this state of mind that the attempt should have been made to blame the latest wave of anti-semitic incidents on—of all people—the communists.

In a sense the western allies bear a large responsibility for this. Their first rough and ready attempts at denazification and their attacks on militarism were quickly put on one side when they felt the need for German support against Russia. Anti-communism swiftly became the first test of political respectability. It has all been a remarkable vindication of Goebbels's prophecies, repeated every day in the last weeks of defeat in 1945, that east and west would soon fall out and Germany would be courted again. The necessity for binding Germany to the west was pressing enough. But it is easy to see how, in both east and west Germany, the cold war has helped to bring about a large-scale evasion of the issues of the German past.

Whether the Germans would have been more successful in coming to terms with their past if the allies had taken a different line is by no means certain. One of the main weaknesses of the allied attempts to re-educate and " denazify " Germany was that it came from outside. It was not an uprising of the German conscience. Inevitably it produced two reactions—one the desired one, the other a defensive resentment and scepticism about the charges that were made. In those first postwar years one encountered a shell-shocked refusal to face the realities of what Germany had done, with all it meant in terms of personal responsibility.

CONFIDENT, opulent west Germany ought not to have the same difficulty today. The last two years have perhaps seen a growing consciousness in the federal republic that the past cannot be pushed aside indefinitely. The disturbing thing is that they have also begun to reveal the fruits of neglect in earlier years—the proliferation of small neo-nazi youth organisations, the signs of ignorance amongst the young. The emergence of a vociferous nationalist minority is a disturbing contrast with the sanity and idealism one has come to expect from young Germans since the war.

Germany's allies will not help the cleansing process by relapsing into righteous condemnation of the German nation. They can do no more than try to set their own house in order and extend a helping hand to the liberal elements in Germany. The anti-semitic incidents that have spread like a rash across the western world may have had a common origin. One theory is that they have been planned by a fascist international organisation led by an ex-nazi in Cairo. It would be useful to find out. But the incidents also reflect the fact that all our societies contain violent and intolerant elements. British

society, though it has developed very powerful resistances to them over the years, is not free even today from violence of thought or action. To build up a powerful defensive mechanism of law and opinion in a society with so great a heritage of inward division as Germany is a vastly difficult task which will take a long time.

Germany's allies also perhaps have a contribution to make in the field of policy. If nationalism ever returns effectively to the field of German politics, the issue will be German unity, as it was in the nineteenth century. In the past ten years there has been a great deal of support from German opinion, particularly young opinion, for two legitimate aspirations: unity within western Europe, and German unity through an east-west settlement. Both hopes have suffered many setbacks, partly at the hand of allies. Today, both Britain and France still seem, in many German eyes, to be holding back the European movement for national reasons. And hardly anyone seems to take German unity seriously at all. If these aims—the one offering something larger than the nation, the other the fulfilment of a legitimate (and limited) national hope—remain unsatisfied, German nationalism may indeed once more become a dangerous force.

How to Rescue the Bar ?

A brief for reform of the English legal profession

THE English Bar, for long the country's premier profession, stands today as a magnificent nineteenth-century anachronism in the contemporary welfare world. Numerically the profession has always been tiny, but it is now contracting at an unprecedented rate. Fewer than 2,000 men (and only 80 women) are practising barristers, of whom a quarter are confined to the provinces. Nearly two-thirds of those called annually to the Bar (392 out of 626 called in 1957-58) are of overseas domicile, and most even of the rest never intend to take up advocacy as a profession. In all, only 91 barristers, of various years of call, started practice in 1957-58: the lowest new entry on record, and more than offset by the 112 members who left the Bar. On average, a quarter of those who start practice leave within the first five years, and are followed by another quarter in the following five. This high rate of wastage is steadily increasing.

The basic reason is financial. Even the long term prospects for advocacy are not dazzling. The average earnings of juniors, five to nineteen years after call, probably do not amount to much more than £800 a year; a junior has to be very successful to earn more than £3,000 a year. But much more acute is the earning problem in the first few years after call. Average earnings for the first three years are under £250 a year, and some beginners earn nothing at all. In the past, private means or parental support ensured survival for the lean years, but the number of people who can rely on these is diminishing. The problem has been exacerbated by earlier marriage.

Established barristers complacently explain the mass flight of young practitioners from the Bar as necessary for a competitive profession, but the weeding out is quite indiscriminate. It gives no guarantee that the right type of man will be retained. Sir Hartley Shawcross, for example, might well have given up early in his career if he had had to rely on brief fees; in his fourth year at the Bar, he earned only £130. Another QC, now earning over £10,000 per annum, made only £200 in his first five years.

What, then, can be done ? A hundred years ago Walter Bagehot recommended the fusion of the two branches of the profession, by allowing solicitors the right of audience in the higher courts and barristers the right of access to lay clients. It is still highly possible that he was right. A divided profession is certainly artificial, and outside the Commonwealth has no exact counterpart. There is something a little threadbare in most of the arguments for its continuance. It is said that fusion, to judge from North American experience, would not greatly reduce costs; that it might reduce the quality of court work and so increase congestion; and, more seriously, that it would deprive the litigant of the specialist counsel that the present system affords, whichever solicitor is first approached. But the fact had better be accepted that the idea of fusion is not pressed by many solicitors even today, and that it would be bitterly opposed by entrenched interests at the Bar; it is not practicable politics at the present time.

ADVOCATES of modern change should therefore concentrate on four other groups of reform, which could be carried out speedily and with a minimum of formality. The first of these is a system of easy interchange between the solicitors' and the barristers' branch of the profession. Such interchange presupposes another necessary reform, a common system of education for both types of lawyer. "Jurisprudence," said Burke, "is the pride of the human intellect," but one would never suspect this from the Bar exams, which are little better than memory tests; they call for no originality of mind or ability to grasp legal principles, and can be passed by any reasonably intelligent aspirant who spends a few months with a crammer. The elaborate system of lectures provided by the Council of Legal Education is little better than a sham, since the vast majority of those intending to practise do not attend them. No practical training is required, although recently a pledge to spend six months in chambers as a pupil has been exacted from candidates. Barristers receive no training in general legal principles, and are ignorant of even the elements of penology and criminology. The system encourages a flood of "paper" barristers, who never intend to practise and are merely seeking an additional *cachet* to impress future employers.

Paradoxically, the legal education provided by the Law Society for solicitors—nominally the "lower" branch of the profession—is immeasurably superior; it is based on intensive courses, practical training, and a year's compulsory attendance at a recognised law school. Failing an adoption in Britain of the United States system, which requires three years law school work for all lawyers, a joint scheme should be worked out by the Law Society and the Bar Council. It should provide for a common basic training, periods in a solicitor's office and barrister's chambers, and separate, optional finals for the two branches. If a student chose to take both finals, he should be free to transfer from one branch to the other at will. Such a system would materially benefit young barristers at the start of their practice; their abilities would have become apparent to their fellow students—the future solicitors—who would provide them with briefs. Given this revised educational scheme, there would be no reason to exclude solicitors rigidly from the Judges' Bench—Lord Blackburn and Lord Ormerod were both at one time solicitors—and the opportunity might be taken to extend judicial appointments to academic lawyers.

A second change that could be swiftly brought about is to allow barristers to form partnerships. This step is at present being considered by a committee, which promises a report in July. Partnership could not, of course, be made compulsory; the terms of individual partnerships should be arranged to suit the convenience of those taking part. Entry as a junior member of a partnership would guarantee to the young barrister at least a moderate income—probably payable out of the surtax of the more prominent members of chambers, on whom the weight of work would be reduced. It would provide a rational method of weeding out unsuitable barristers, since partners would be careful whom they admitted to their chambers.

Once allowed, partnership would probably spread of itself, and eventually drive out the present individualist system. But if any young barristers still wanted to plough individualist furrows, outside partnerships, they should be allowed to do so. Their lot ought to be eased by a rule of etiquette that all "devilling" delegated to them should be paid for at a rate of three quarters of the fee marked on the original brief, and by an insistence by managing clerks on prompter payment of brief fees from solicitors and their clients.

Another urgent need is to alleviate the strained relationship between the General Council of the Bar and the governing bodies of the Inns of Court; this strain is always politely denied, but everybody knows that it exists. It is a major anomaly that, while the General Council is the Bar's professional organisation, all disciplinary powers are exercised by individual Inns. On any matter of policy, the Bar Council is obliged to secure the agreement of all four Inns, a long, tedious and at times impossible task. The best solution would be a shearing of the powers of the Inns—derisively described by Bagehot as "clubs of court"; if this is ruled out as too awkward, a joint committee of the Inns and the Council should be set up, empowered to reach decisions on matters of common interest. The Inns and the Council should formulate a common policy for the disposition of scholarships, and possibly set up a common fund.

A final group of reforms should seek to protect the litigant, as distinct from the profession. First, the rule that a silk (i.e. a Queen's Counsel) can appear in court only if accompanied by a junior, briefed at two thirds of his leader's fee, should be abolished; to the outsider it seems to be a restrictive practice, designed to make the litigant pay for the honourable, traditional but quite unnecessary division of the profession into the outer and inner Bar. Secondly, the practice of charging special fees when a member of one circuit takes a case on another should go. Finally, the convention that barristers cannot be sued for negligence should be disposed of. (Its nominal justification is that barristers cannot sue for fees; but in practice they are always indemnified if a client defaults, either by the instructing solicitor or by the Law Society which keeps a special fund for the purpose.)

Some members of the Bar, and especially the Inns, will strongly oppose these suggestions. But before they relapse into a time-honoured apathy, they should consider the infinitely more drastic alternative, whose shadow the growth of legal aid already casts before: a status for the Bar similar to that now possessed by the medical profession. •

Economic Co-existence

The economic split between the eastern and western parts of Europe is more profound, and advancing more rapidly, than the division within free Europe

THE first world war left Europe with several thousand miles of new customs barriers. The second blew this ugly jigsaw puzzle to pieces, but split the economic organism of central Europe down the middle. Before 1939 the port of Hamburg was the gateway for the trade that flowed up the Elbe to industrial Saxony, Czechoslovakia and Silesia. Danube shipping linked Austria and Germany with the Balkans. Within Germany itself a large east-west commerce by rail and canal linked the Ruhr and Rhine with the Elbe and Oder basins. Today, each of the German states has been drawn into a separate economic world. Only a fifth of east Germany's trade is with the western world, including west Germany. A mere 6 or 7 per cent of west Germany's far larger trade is with the communist world. New north-south routes are developing in east as well as west Germany, while the old east-west trade routes become disused. And the eastern and western halves of Europe have each become more dependent on raw material supplies from outside suppliers in their own Atlantic and Eurasian worlds.

Slowly at first, but more rapidly in the last few years, each of the two parts of Europe has been embarking on a process of economic integration. This was slower, and is still more modest, in the east than in the west. Under Stalin the tendency was to copy the Russian model and build up each satellite economy on an autarkic basis with a heavy industry of its own. But since his death there has been a growing realisation that the international division of labour—between socialist countries at any rate—can contribute to industrial efficiency. That has meant that the plans of the communist countries have been increasingly drafted with each other in mind; and today Czechoslovakia and east Germany play a key part in supplying capital equipment and know-how to the Chinese, Rumanian and Hungarian seven-year plans in the course of normal trade. In the last three years the Council of Mutual Economic Aid has also made a start on more detailed integration.

Its first efforts at joint planning, in 1957, were modest bilateral arrangements by which Czechs and Poles, or Hungarians and Czechs, decided to avoid the uneconomic duplication of work on, say, certain types of machinery. Since then the first bilateral deals have broadened into wider multilateral arrangements. Car industries in the different countries are considering specialising in different sizes of model. Growing exchanges of electricity may lead in time to a joint power plan. By 1965, or earlier, an elaborate oil pipeline system will link eastern Europe with the Soviet Union. Just as there are men in Brussels pursuing with single-minded zeal the strength and unity of the Six, so in eastern Europe the planners are bent on building up the strength and tightening the unity of the "socialist" camp.

BUT the integration that is going on now in eastern Europe is, of course, very different in kind from the movement in the west. Foreign trade still plays a relatively small part in the communist philosophy. In each country the planners' first preoccupation is to build up a powerful industrial base; foreign trade tends to be residual, a by-product of home investment plans. In the western trading world goods are often bought abroad only for the excellent reason that they are made cheaper there; and consumer goods are bought because, cheaper or not, they will appeal to the consumers. These motives are only just beginning to play a part in the trade of communist countries; those countries still concentrate principally on buying raw materials, machinery and technical know-how which they do not have themselves. Thus today there is room for imports from the west of certain basic materials, of larger quantities of equipment for the chemical and metallurgical industries, and of some special machines, but little for imports of general machinery and consumer goods.

Measured in quantity, trade within the block falls far short of what the free play of private enterprise would achieve in similar circumstances: but since foreign trade is built into the plans of the east European countries, a relatively small amount of trade implies closer political dovetailing than the same volume would in the West. Finally, the different nature of the systems is itself a barrier to east-west trade. Both in import and export trade the communist countries prefer fixed prices and long-term contracts which can be fitted neatly into the planning system. The system is ill suited to adapt itself speedily to the changes in market conditions—in supply or demand—which are the stuff of the West's flexible market economy. Not merely the political gulf, but a difference in economic philosophy, separates the two worlds.

Yet, if the political schism in Europe is ever to be healed and the two parts of Germany brought closer together, the trend towards an increasing economic separation must somehow be reversed. In the past ten years the west Germans have had plenty of time to think about the economic marriage that would occur if their country were reunited one day. Some of them have suggested that a measure of public ownership might be kept in east Germany, which would continue to trade with other communist countries, even while it was brought into a single German currency region and the western price system. The trouble with the admirable conception of a German bridge between east and west is that it would imply a transformation of the political climate in Europe beyond anything that is conceivable today.

It would not be right to suggest that none of the "Europeans" in the West is aware of the existence of a wider Europe. There are people in the new communities interested in good relations, and even in association, with Poland and other east European countries—an idea attractive to many Czechs and Poles. In March, General de Gaulle, talking of German unity at a press conference, put forward the idea that the new state should be integrated in a "contractual organisation for all Europe" (east as well as west). Here, in contemporary form, is one of the thoughts which originally gave birth to the European idea—the idea that the only solution of the German question will in the end be a united Europe stretching east as well as west of Germany.

Such ideas are all very well. The trouble is that the dominant trend in each of the new communities is in precisely the opposite direction. Thus, some in the West believe that their work of integration is too precious to be risked in any sort of serious east-west talks; some want to build up their community as one of several means of bringing pressure on Russia for a deal in central Europe more favourable than seems possible today. In the east the planners bend all their energies to tying eastern Germany into the socialist camp. Both communities forget that they may possibly have to live in a period of *détente* and that they may even, one day, have to adapt themselves to that major interest of one of their members—a German settlement.

Radical changes in Germany do not seem imminent today. But it does seem worth asking whether there are steps which could be taken in the economic field to check the deepening of the east-west split in Europe, and perhaps to start things moving the opposite way. One obsolete relic on the western side is the discriminatory quotas which are still widely applied against communist countries. The Czechs, who by a historical accident are members of the General Agreement on Tariffs and Trade, complain that they are being cheated of their due under Gatt's most-favoured-nation clause.

The trouble here—and in the cases of other east European countries that wish to join Gatt—is that it is difficult to find criteria for judging whether the planned economies are behaving equally fairly in return. Who knows when communist trade corporations, which keep their own counsel and have a monopoly of foreign trade, are discriminating in their buying policies? Who can tell when they are "dumping" below cost abroad? They may not know themselves. Yet it should not be beyond the wit of man to devise ways round this difficulty. Communist countries, for example, might undertake to aim in their planning at a certain global total of imports from the west, and to consult with western countries if difficulties arise. Countries like Czechoslovakia and Poland have, after all, an interest in treating western traders well enough to win fair treatment for their own exports in return.

FROM the communist side the problem looks rather different anyway. The planners often say that they would like to give western deliveries a place in their plans but that western countries will give them none of the long-term guarantees on prices and deliveries which they need for planning. Plainly, any solution depends on trust and a working relationship, which have to be created. The British cut in the quota for Polish bacon is just the kind of move that can disrupt years of patient work. For business men trade with communist countries must contain risks. No formal arrangement will change the disconcerting communist conception that western industrial ideas are there to be copied. One answer was given by a west German exhibitor at the Brno trade fair:

> We know we will be copied. But within two years we will have something new to offer them. Our job is to create a market by working so closely with them and getting so close to their problems that we are ready with new technical solutions.

Within the communist block itself there are forces that are working, though slowly, in the right direction. The growing scale and diversity of their industrial civilisation is imposing a greater use of the price mechanism and a measure of decentralisation of management on the planners; this in turn may make it easier for them to trade more with the outside world. Even the growth of specialisation within the communist block may have some favourable bearing on westward trade. Thus the Czechs, among others, have realised that it is more economic to narrow the range of machinery they make and to exchange more of it internationally. They have expressed readiness to place bigger orders in Britain this year, provided the British reciprocate with concessions on import quotas. It would be a pity if the current hold-up in payments on two minor prewar debts, prompted by a Czech wish for re-negotiation, were to set this prospect back.

It would be foolish to under-estimate the inherent qualities in the communist economic system that tend to cut it off from the world outside; the forces of division in Europe are powerful. But it would be no less foolish to accept division passively, and to overlook the forces in the Soviet camp that are beginning to look outward.

NOTES OF THE WEEK

DISARMAMENT

The Man Who Launched the Sputnik

MR KHRUSHCHEV'S table talk loses none of its fascination. In the West, there is self-reproach that too much reliance on nuclear arms has allowed conventional forces to decay; while the champions of the nuclear deterrent argue that the Russian preponderance in conventional forces makes nuclear disarmament impossible to contemplate. Before any way has been found out of this argument, Mr Khrushchev threatens to make both schools look foolish. At a New Year's Eve reception in Moscow, he surmised sadly that his own, sweeping disarmament proposals might get lost in "a labyrinth of endless disputations," and added:

> Would it not be worth our while to think matters over on our own and unilaterally reduce our armed forces, and entrust the defence of our borders to rockets?

Most people would be happier to entrust the defence of their borders not to rockets, but to some human agency capable of being called back. But Mr Khrushchev is a rocket man, the man who launched the sputnik; he puts conventional disarmament a long way before nuclear disarmament. That being so, he has cogent reasons for wanting to cut down the still huge Soviet army.

He is personally deeply committed to the success of the current seven-year plan, and it is improbable that the plan can succeed unless he can divert manpower, metals, and money from defence to economic uses. He has identified himself with the attempt to cut down the army's political influence. To his own people, as to foreign peoples, he presents himself as the man of peace; a really showy piece of disarmament might strengthen his grip on popular affection. Equally, it would alarm some people in the Soviet government and might bring on another domestic political crisis; but with popular support he might hope to emerge from such a crisis more unshakable than ever.

On one theory, it can plausibly be argued in the Kremlin that most of the huge Soviet army has become redundant. The theory is that the western alliance has no military designs on Soviet-held territory. Although this happens to be true, it is, of course, a new and daring doctrine in Moscow; parts of the Soviet press appear at times to accept it, others do not. More may be heard of Mr Khrushchev's idea at the special session of the Supreme Soviet which opens on January 14th. It is bound to give food for thought to the Atlantic defence planners, who rely so much on the shadow of the Soviet army to hold their own armies together.

COMMUNIST POWERS AND ASIA

Mr K Raids the China Seas

PEKING'S latest diplomatic note to Delhi, and the cool Indian reaction to it, reveal no narrowing of the rift between the two governments; but the tempo of their dispute has clearly slackened off. Mr Nehru continues, for the time being, to reject Mr Chou's offer of a "summit" meeting, on the ground that progress must first be made at a lower level. Talk of "throwing the Chinese out" has died away in India as the impossibility of doing anything of the kind becomes clear to even the most zealous patriot. While the Indians overhaul their defences along the north-eastern border, the Chinese army quietly consolidates its positions in Kashmir.

Eventually there will have to be negotiations of some kind. By then, however, India hopes that it will have secured some pretty forceful Russian backing against China's pretensions. President Voroshilov, Mr Kozlov and Mrs Furtseva will be guests of honour in Delhi this month; and everything indicates that Mr Khrushchev himself will pause there in February en route for Indonesia. The Soviet visitors' words and attitudes will be carefully measured against those of Mr Eisenhower, and if they do not measure up Indian opinion will be disappointed and resentful. (If they do, on the other hand, the Indian Communist party will be branded as less mindful of India's interests than Moscow is.)

The Soviet leader's visit to Indonesia, another "uncommitted" country with which China is now at loggerheads, is seen in India as well as in Indonesia as a sign that he feels a need not merely to dissociate himself from Peking's actions but to show positive disapproval of them. Another such sign was the carefully planted comment by a Soviet spokesman in Geneva, a week before Christmas, that China's activity on the Indian border was "more than just untimely—it would be inopportune at any time." Mr Khrushchev's bold sally into the South China Sea indicates a firm grasp of two points in Professor W. W. Rostow's analysis of the growth of nations—the aggressively nationalistic aspect of most countries' struggles to modernise themselves, and the fact that the destiny of communism turns on the attitude that the emerging nations of Asia and Africa adopt towards it. He dare not let Chinese nationalism drive Asia's other nationalisms into hostility to communism as a whole.

TRADE UNIONS

Too Kind

WHEN are British trade union leaders going to act forcefully to stop the steady slide of their movement into disrepute? There have been two further bad failures this week. The first instance was during the meeting of 300 railway "delegates" at Euston, who decided to call a one-day unofficial strike on London railway and tube trains at the end of this month; "delegate meetings" in other parts of the country are liable to follow suit. This call is not only flatly contradictory to union rules, under which only the national executive of the National Union of Railwaymen has the power to order a strike. It is not only an open violation of the procedural agreement with British Railways, under which a substantial wage claim by the NUR is already going through the industry's arbitration machinery. It is also an obvious flouting of tactical commonsense. The Guillebaud commission's report on railway pay is at last near completion, and the railwaymen have only to wait until March in order to get some real negotiating material to bite on. A token strike now would forfeit much of the public sympathy that the railwaymen will need then; the mere threat of the strike is likely to cause more freight to be transferred from rail to road. The NUR's executive has said this. What it has not said is that wildcats who call an unofficial strike will damage railwaymen at least as much as would any blacklegs who refused to take part in an official one. Against blacklegs, the NUR would act swiftly and punitively; if he is to deal equally determinedly with his wildcats, Mr Greene, the NUR's likeable and moderate general secretary, must pack much more punch than he has so far into his pipe of peace.

The second example of pusillanimity has been the TUC's attitude towards the miners' fuel policy. However it may be dressed up, this policy is in essence an attempt to force the public to buy more coal than it wants; to the liberals in the TUC and elsewhere, therefore, it should make the same sort of nonsense as any other protectionist arguments put forward by aggrieved pressure groups. But, instead, it looks as if Mr Paynter may talk the TUC production committee into sponsoring some version of his plan. Mr Paynter's earlier militancy, during which he threatened "to make it difficult for the owners of cinemas, dance halls and other amenities in mining areas who may be considering conversion to oil," was doubtless suitably tempered when he spoke before the committee; but the policy was the same. If the TUC had politely but promptly refused to support it, the public—whose instinctive sympathies for once are not on the protectionists' side—would at last have been given a sign that it can sometimes speak up for the British people.

NUCLEAR DEMONSTRATIONS

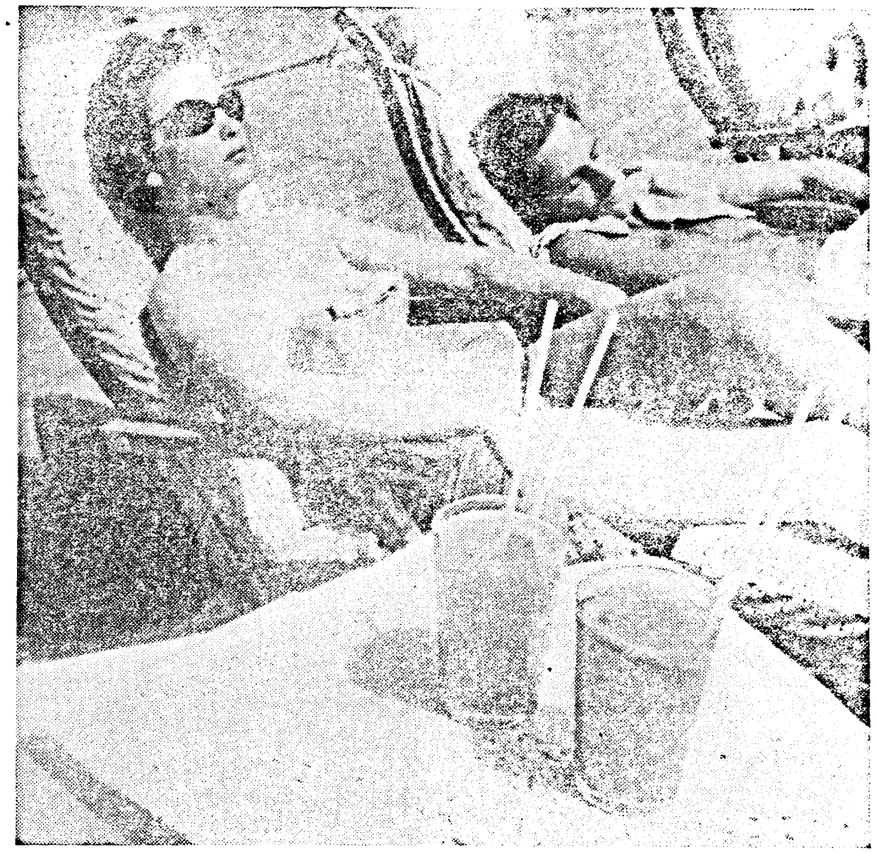
Willingly to Gaol

FOR the first time since the days of the militant suffragettes, a group of people in this country are actively seeking to be sent to prison as a means of political protest. This sets a most delicate challenge to British democracy's common sense. On the one hand, nobody will suggest that much good is done to the community by locking up in Leicester gaol the sort of people who demonstrated against nuclear armaments at Harrington aerodrome last week. On the other hand, everybody (including the demonstrators) will agree that, at some stage, those who deliberately, persistently and seriously obstruct vehicles at the entrance to RAF rocket bases have got to be removed. Before reaching this extreme there are various gradations of provocation to the police. The safest guiding rule is that arrests ought never to be allowed to become a matter of national dignity or face. The majority in this country believes that the demonstrators' policy (which would require Britain's abandonment of Nato) would make nuclear war more likely; but if the minority who disagree want to spend a Saturday afternoon sitting in the mud beside the rocket bases, technically in trespass but not really holding up essential work, the majority should not feel that it is its own dignity which is being impaired.

Of the 79 demonstrators in custody at the beginning of this week, six were imprisoned for two months just before Christmas because they refused to be bound over to keep the peace, after issuing a statement that appeared to incite their followers to damaging trespass on government property. The other 73 people arrested at Harrington were told, gently and politely, by the police that they must not pitch their tents on Air Ministry ground; so, of course, they promptly *did* so. Courteously as the authorities acted in both instances, this system of drawing a line that defines the limits of permissible action, and then almost daring demonstrators to cross it, seems to be a mistake. In handling industrial strikes the authorities rarely arrest union pickets before physical obstruction of the rights of free passage becomes very serious; more usually, indeed, they can be accused of acting excessively slowly. It would be a mistake to apply much more rigid rules to anti-nuclear demonstrators, just because to be arrested is what they want.

ITALY

Far from Moscow



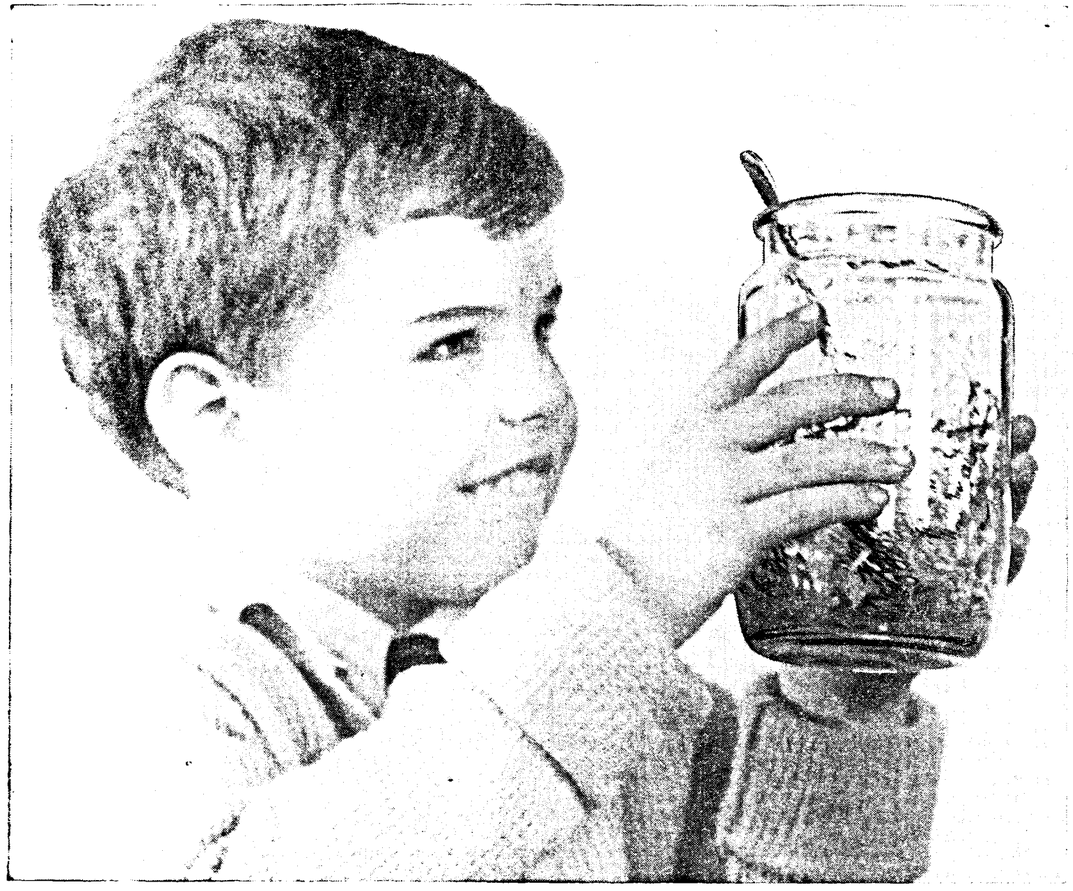
PRESIDENT GRONCHI has always argued that the West should make every effort to improve its relations with Soviet Russia through direct talks; it seemed, therefore, appropriate that he should be the first western head of state to visit Moscow since the war. When first mooted last October his visit (which should have begun yesterday, but has been postponed because of a cold) was discussed without enthusiasm by the Italian government and aroused considerable controversy in the Italian press. The Italian communists, it was widely feared, stood to gain far too much from such a visit; and if Mr Khrushchev insisted on paying a return visit to Italy, they stood to gain even more. The president, however, was determined to accept the Soviet invitation; it is said that he believed his reputation to be at stake and that he particularly wished to demonstrate that a Catholic country is not inhibited by its religious principles—or by ecclesiastical pressure—from making a gesture of good will. He no doubt also pointed out that a *tête-à-tête* between the Italian president and Mr Khrushchev in Moscow was bound to increase Italian prestige and influence in western counsels.

The president won his point and, with the matter settled, the controversy largely died away; Signor Segni and his government seemed to have made up their minds to accept whatever reflected glory came their way and any outward signs of success (such, perhaps, as a cultural agreement) that the visit might have produced. They even, it seems, brought themselves to abandon the forlorn hope that by sending only Signor Pella, the foreign minister, to accompany the president (while the prime minister stayed at home) they could avert an embarrassing return visit by the Soviet prime minister. But Signor Segni's government, having come round thus far, must have been rather disconcerted to be told at the last minute by the Russians that they wanted to discuss reparations during the president's visit. Under the 1947 peace treaty Italy was to pay reparations amounting to $100 million within seven years; in the Italian view the Russians have already been amply repaid out of Italian assets seized in Russia and eastern Europe. Mr Khrushchev can hardly expect to get any more out of Italy now; did he then, as the Italians were hoping just before the visit was put off, raise it only to declare the chapter ceremoniously closed?

CYPRUS

Race Against Time

WITH Cyprus's I-Day now only six weeks away, a determined effort is being made to complete the necessary preparations in time; nobody, least of all the British, wants to see the day postponed. In Nicosia the constitutional commission is pressing forward over the last rather tricky stretch, and the transitional government is gradually completing the political arrangements (although not to the satisfaction of Archbishop Makarios's opponents). Last week the controversial electoral law was finally promulgated and this week it has



Her boss was unlucky . . .
he had to race back!

Miss Holt is a much-travelling secretary to a much-travelling business tycoon. Her boss had to go to South Africa recently, and, business completed, was looking forward to a fortnight's well-earned relaxation with his feet up, in Union-Castle comfort all the way home. But London called him and said 'Sorry, you've got to race back, most immediate.' He was *not* in a good temper when Miss Holt saw him off. She took his heavy luggage with her by sea, the restful way, the right way, the Union-Castle way. Sunshine, smooth seas, wonderful food, first class service, swimming, dancing, cinema shows and good companionship. That young man in the next chair is extremely glad Miss Holt didn't have to race back. So is Miss Holt!

been announced that elections to the House of Representatives will be on February 7th, and to the two communal chambers on February 10th.

It is the problem of the British bases that most seriously threatens a postponement of Cypriot independence ; and clearly it is primarily to settle this problem that the British Government has suddenly decided to convene a ministerial conference on Cyprus in London next week. The trouble is that Archbishop Makarios and the military have quite different ideas about what is involved in the Cypriot undertaking to give Britain sovereign rights over its bases on the island. The archbishop has declared that no Cypriots must remain under British sovereignty, and, for political reasons, it is not easy for him to back down.

The military, on the other hand, maintain that however much they whittle away the area of their two bases at Episkopi and Dhekelia, they cannot leave all Cypriot citizens outside. They have indeed considerably scaled down their original demands, both for the bases and for the facilities they want elsewhere in the island. They would, in fact, much rather not be responsible for any Cypriot civilians at all. But they believe, with some justice, that the archbishop has a very imperfect idea of exactly how much space a modern base, with all its installations and equipment (to say nothing of its manpower), requires ; and they maintain that without sovereign powers, Britain can safeguard neither the security nor the efficiency of the bases.

But however the arguments over the exact role of the British bases and the status of the Cypriots left inside them is settled, all sorts of essential ancillaries—port facilities, training areas, the use of Nicosia airport for staging flights—will remain outside the bases. Like all foreign garrisons, but more than most of them, the British forces in Cyprus will be dependent on the goodwill and co-operation of the island government and population. It seems, therefore, unrealistic to adopt too rigid a position about the exact extent of the British sovereign areas.

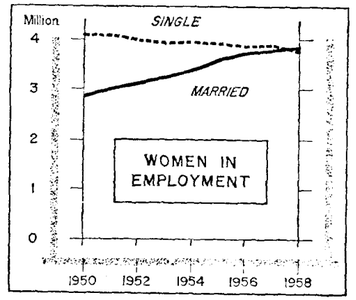
FRANCE

Odd Man Out?

Of all General de Gaulle's cabinet only the Fourth Republican figure of M. Pinay has retained a personality, and it may be a dignity, of its own. M. Pinay has his clientele among the smaller businessmen: he has made the "honest franc" (old and new) his particular policy. And he has, it is said in Paris, his ambitions: when General de Gaulle departs, as one day he must, who more suited than M. Pinay to succeed him? But now it is M. Pinay who seems likely to go first. Last week, deliberately revealing one of the major divisions within the government, M. Pinay announced that he stood by his financial policy against all advocates of *étatisme* and *dirigisme*, and that it was "out of the question" that anyone could prevail on him to put such socialist policies into practice. It emerged that he had been at odds with the minister for industry, M. Jeanneney, on a number of issues, and that behind M. Jeanneney stood the assembled expansionist and technocratic forces that have their own plans for the economy and see M. Pinay as their chief obstacle.

Rumours of M. Pinay's imminent departure have punctuated the life of the Debré government, mainly because M. Pinay's favourite method of getting his way has been to threaten to resign. More recently, as he has opposed M. Jeanneney's plans for a state corporation to take over the refining and distribution of Saharan oil (somewhat on the lines of Signor Mattei's ENI), there have been attempts to clip his wings. These have ranged from cabinet proposals to detach economic affairs from his portfolio to bringing M. Baumgartner, governor of the Bank of France, into the government.

It now seems that General de Gaulle may have to choose (as he did, long ago, between M. Pleven and M. Mendès-France) between two ministers and two financial policies. This choice must also affect France's relations with its Common Market partners, not least on the petroleum issue. M. Pinay has quarrelled with most of his colleagues in the past: over the schools question, the military budget and European policy. They may be happy to see him go. But does General de Gaulle feel the same way about his one independent adviser?



WOMEN AT WORK

Nationalise the Babysitters?

One British household in three is now partly supported by the wife's earnings. A million more wives are earning than in 1950 ; and a new survey* suggests that probably over half are in part-time jobs. Most of these jobs are semi-skilled or unskilled; outside teaching and nursing, skilled and professional openings are extremely scarce. Most married women take jobs for the sake of the extra money; the next most important motive, variously expressed, is the desire for a more balanced sort of existence than is possible to the wholly house-bound. More women would work if they could find suitable part-time jobs, but little is known about what makes jobs suitable or unsuitable for part-time organisation. Children are the biggest obstacle to outside employment ; social disapproval is dwindling, together with the traditional objections of husbands; militant feminist attitudes have virtually vanished.

These findings are perhaps hardly novel, though useful for perspective. How do working wives and mothers contrive to organise their double lives ? Only a small minority—7½ per cent of the respondents to the survey—left their children to their own devices outside school hours. Others worked only in school hours themselves ; or relied on shift-working husbands ; or made arrangements with relatives and neighbours (but this must become less and less possible as the proportion of available home-bodies falls) ; or took the baby to work with them ; or did their earning at home.

Nursery schools and crèches were a virtually negligible factor ; they are not even distinguished separately among the "other arrangements" cited by 5 per cent of the respondents. School dinners, on the other

hand, emerge as strategically invaluable. The general impression is one of widely varying expedients, ranging from the solidly satisfactory to the desparately ramshackle.

The moral is certainly not that married women's jobs should be subsidised by expensive communal services. It is both economic and social nonsense to spend two or three times a mother's earnings on keeping her children in a day nursery; far better, in cases of hardship, to adopt the French device of a special family allowance for the mother at home. But this report bears out the conclusion that policy in housing and town planning should try to respect the family and neighbourhood network which reduces the child's exclusive dependence on its mother. It points, too, to the strategic usefulness of such devices as play centres to fill the gap between school hours and the end of the normal adult's working day.

ECONOMIC POLICY

Putting the Left Right

Mr Nicholas Kaldor of Cambridge University is widely believed, especially by suspicious left wing members of the Labour party, to be Mr Gaitskell's favourite economist. A special interest therefore attaches to two wide-ranging lectures of his, reprinted in the two latest issues of *Economica*.

First, Mr Kaldor argues that investment will go forward at the rate needed to maintain full employment of resources only if investors can look forward to an annual growth of money incomes of between, say, 4 and 6 per cent per annum. The main task of government must be to get the economy in trim so that national productivity can increase at that rate ; otherwise we will either have to tolerate continuing price inflation in order to get absolutely full employment, or we must expect "the process of accumulation and growth [to be] periodically interrupted ; progress . . . by fits and starts."

A six per cent increase in annual productivity has been maintained throughout the fifties by Germany, Italy and France, and exceeded by Japan. From study of these once war-shattered economies Mr Kaldor suggests that

> the factors which determine the growth of productivity partly depend on the improvement of design of newly installed plant and equipment, and partly on the rate of disappearance of obsolete equipment.

One measure which he recommends for Britain is therefore "the revival of price-competition, tending to eliminate inefficient firms and inefficient plant." Another might be "special tax measures, complementing accelerated depreciation allowances at one end by obsolescence taxes at the other end—by some kind of negative depreciation allowance on the employment of over-age plant, if possible." Inflation could continue even in a rapidly expanding economy, because of the cost push exerted by trade unions. Here Mr Kaldor recommends longer periods between wage contracts:

> If wages were negotiated afresh after, say, the lapse of every two years, the biennial round of wage increases would be bound to be less than twice the annual round.

There can be controversy about some of these interesting propositions. But the last year has seen: (a) British industry expanding at more than 4-6 per cent per annum, and achieving price stability too ; (b) a move towards something like a two-year round of wage increases, in place of an annual one ; (c) a growing realisation that expansion can be maintained only if Britain is more ready to encourage price competition and to allow inefficient firms (and, temporarily, their workers) to be driven out of their present forms of employment. In welcoming movements (b) and (c) the Labour party has hitherto been slightly behind the Conservatives ; if only Mr Gaitskell could imitate Mr Kaldor by getting in front of them on these vital issues, Labour rethinking would have made a long stride forward.

LAOS

The Army Steps In

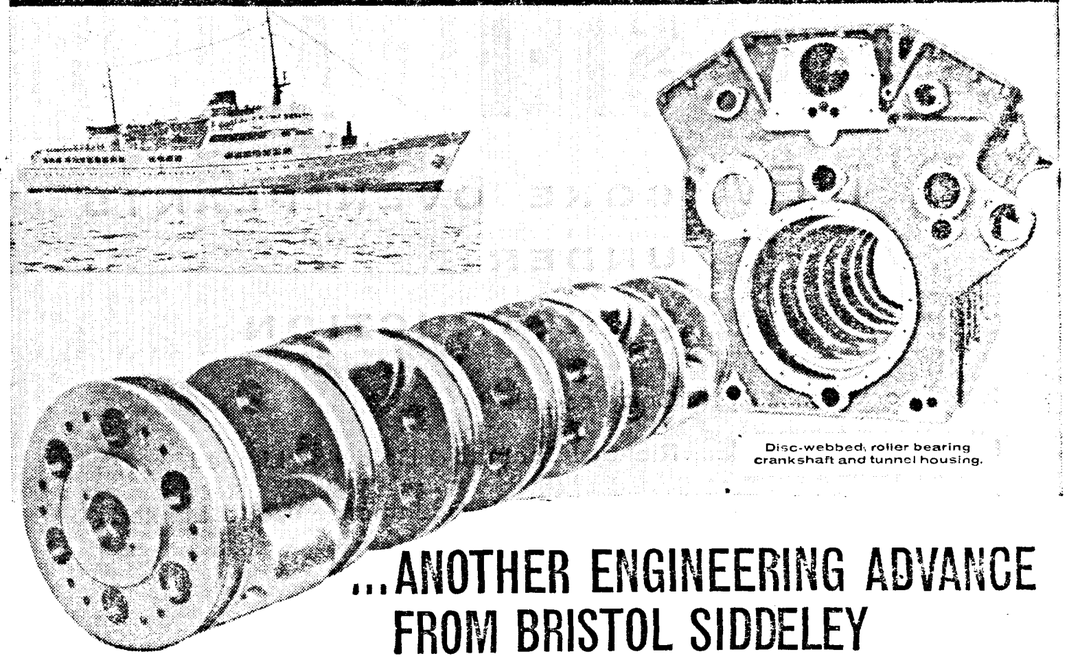
Nobody should be surprised that the army took over in Laos on New Year's Eve. The wonder is that it did not do so long ago. True, elections are promised for April, but the internal situation is so serious that it would be surprising if they were held. The calm that descended on the country in September and October, during the stay of the fact-finding mission sent by the United Nations Security Council, was deceptive—as is the ingenious argument, now advanced by the UN representatives whom Mr Hammarskjöld had sent there, that their presence in Laos is related only to economic problems.

The unpleasant reality of today is the growing power of the communist Neo Lao Haksat, which enjoys political guidance and military aid from North Vietnam. The communist battalion which escaped encirclement by government forces last spring has been building up supply dumps in the northern jungle and recruiting supporters for "self-defence" against the royal army. There are indications that fighting of some intensity has been resumed.

This was the background to the resignation of several impatient ministers from Mr Phoui's government a month ago. Although he patched together a new cabinet and the assembly favoured the extension of the special powers granted him a year ago, which were about to expire, the army leaders had evidently decided that the political situation was too serious to be entrusted to the politicians ; and the premier's position was quietly but firmly made an impossible one. The King accepted his resignation and asked the army to take over ; the fact that this week the army formally handed its new powers back to the King does not alter the real situation, for it is clear that any new cabinet will have to be approved by the army.

The resigning ministers were members of the Committee for the Defence of National Interests, a strongly anti-communist group which includes civil servants and army officers. In the absence of political parties in the western sense, this committee is now one of the only three effective political forces in the country ; the others are the army and the Neo Lao Haksat. This triangle does not provide a basis for general elections, and Laos now seems to be heading for a straight trial of strength between army and communists.

SMOKELESS FUELS



Price of Clean Air

Where local authorities have used their powers, the Clean Air Act of 1954 has led to a marked improvement in some industrial areas. But there is a long way to go before smoke control, let alone entirely smokeless areas, become universal. The act's provisions against particularly offensive smoke from industrial plants came into force in 1958, and the last of the periods of grace for which they allow expires in 1963. The domestic chimney is a tougher proposition. It takes a great many domestic hearths to equal the offensiveness of one untamed factory chimney ; but while the latter can, with proper design and management, be induced to burn even bituminous coal in a civilised manner, the domestic hearth cannot. A recent booklet from the Conservative Political Centre, "Wage War on Smog," draws the obvious moral: progress towards clean urban air demands the substitution, for raw bituminous coal, of smokeless fuels.

Smokeless fuels need the right sort of grate or stove ; but the provision of these—for which grants are available—is only the beginning. Having duly installed suitable appliances, the householder may consolingly calculate that the higher price of smokeless fuel will be nicely balanced by much greater efficiency ; but he is only too likely to find, at the first cold snap, that the cleanly and civilised product to which he is now irrevocably committed is simply not available. Once upon a time old-fashioned market forces would have brutally translated this shortage into deterrent prices ; they would at least have had the virtue of warning the consumer where he stood—and of ensuring that the worse the shortage the more glittering should be the prizes for those producers who buckled to and remedied it. But the disinterested administrative policy which should theoretically redeploy fuel-producing resources to meet changing current needs is manifestly not on top of the job.

The CPC booklet utters a sensible warning against a "preconceived national fuel plan," preferring an experimental adjustment to successful new methods as they emerge. Less sensibly, it proclaims that "the householder must be offered an alternative fuel which is no more expensive (measured by heat rather than by weight) than the coal he is not going to be allowed to use." The only genuine "must" is that the alternative fuel shall be physically available. There is a classical "welfare" case, recognisable by the hardest-headed economist, for subsidising, to that end, the production of smokeless fuels and the research which promises improved supplies. There is no case whatever for boosting the demand for such fuels while preserving a price structure that leaves the consumer to the hazards of the waiting list, the weather, and the delivery-man's susceptibility to a tip.

Maybach marine diesel engines—from 400 to 1,700 hp—can achieve 16,000 hours between major overhauls...

...ANOTHER ENGINEERING ADVANCE FROM BRISTOL SIDDELEY

Bristol Siddeley Engines Limited produce Maybach* marine diesel engines. Covering a range from 400 to 1,700 hp, they are amazingly reliable—have proved that they can achieve major overhaul lives of between 12,000 and 16,000 hours!

The *proven* basic design features of the whole range (straight 4 to 16-cylinder V) are the same, and each unit can be turbo-charged, or turbo-charged and intercooled. The range operates between 1,200 and 1,450 rpm and *combines the best qualities of high, medium and low-speed diesel engines:* light weight and compactness, excellent thermal efficiency and extremely long life.

Advanced design features

Pressure-oil cooling on the pistons gives very efficient heat dissipation and reduces liner and gas ring wear to a minimum. The roller bearing, disc-webbed crankshaft is very rigid and withdrawal is not normally necessary before 12,000 hours running. So low is big end bearing wear that in some cases the protective lead flash has been found intact after 15,000 hours running!

Since the majority of the components, in all models, are identical, spares stocks are considerably reduced. Furthermore, each unit is so light and compact that it can be repaired by replacement, and because great thought has been given to accessibility and component removal, much more semi-skilled labour can be used. Again, because of the small size of the engines, the naval architect has much wider design scope—especially with diesel/electric propulsion installations.

World-wide application

Bristol Siddeley Maybach marine diesel engines are suitable for all types of ships, from fishing vessels, large ferries and coastal vessels to ocean-going merchantmen. Maybach diesels are in service all over the world and have built up an unrivalled record for reliable and economic operation.

Bristol Siddeley Maybach diesel engines up to 3,000 hp for high-speed craft.

A range of engines for high-speed craft is also available. Rated at 400 to 3,000 hp and operating up to 1,800 rpm, these engines are specially designed for fast naval craft, police and customs launches and fast passenger boats.

For further information please write to: Maybach Sales Manager, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

ASPECTS OF AFRICA

So much material is available this week from our correspondents in Africa and from London that it is collected in this special section

Counsels of Moderation

FROM A CORRESPONDENT IN NAIROBI

THREE events have noticeably affected the policies of the various Kenya parties that will attend the Kenya Constitutional Conference at Lancaster House on January 19th. These are the constitutional changes in Tanganyika, which will transfer power in large measure into Mr Nyerere's hands by September ; the recommendations of the Wild committee that Uganda should have a legislature elected on a common roll ; and the Colonial Secretary's recent visit to east Africa.

To the African elected members, who will attend the conference as a single block, what is sauce for Uganda and Tanganyika is sauce for Kenya ; to them it is the preponderance of the African population that matters. They will certainly base their minimum claims on the Tanganyika pattern—and they will maintain that that is the least their own people will allow them to accept. Even this is a retreat from their earlier demand for independence in 1960, and has already caused them to be attacked (unjustly) as gullible dupes of Mr Macleod.

Mr Mboya has twice recently stated in public that he would accept reserved seats for minorities (European, Asian and Arab) within a common roll electorate as a transitional step to allay minority fears ; so far no Asian or European elected member has reacted in public to this modification of the African leaders' former demand for immediate independence. Mr Mboya's first statement was followed immediately by his visit to Dar es Salaam, where his talks with Mr Nyerere seem to have confirmed his belief that this would be the most politic line to take in London.

The majority of the Indian Congress in Kenya sympathises with the African line ; European discrimination against Indians over land rights gives the Indians an incentive to back African demands for equality which is only damped down by the fear of merely changing one dominant set of masters for another. But Mr Mboya's statements and the later developments in Tanganyika have reduced this fear and it may be that when they meet in the near future the Asian leaders will decide to back the Mboya line. Mr Mboya's proposal that the Kenya constitution should be similar to the Tanganyika one would give the Asians as many reserved seats as the Europeans ; the Asians have long and vainly sought this.

The Muslim position is different. The Muslim members have won their case for separate representation in local and central government, and their older members would be loth to surrender this right ; but the younger Muslims have recently become convinced that an African majority in the legislature is inevitable and the important thing, for Asians, is to make sure that it comes, as in Tanganyika, in a hopeful atmosphere. It is uncertain whether leaders like Mr Hassan will listen to this view ; much will depend on Mr Ibrahim Nathoo who though now a "specially elected" member commands a large following among his own people. But it seems likely that the Asians, both Indian and Muslim, and probably Arab also, will be behind the more moderate African demands.

The Europeans will probably put forward two differing sets of proposals. The United party, led by Group Captain Briggs, probably now commands the support of most of the white farming community, and its policy varies between "give a little and slowly" and a system of community self-government on a local or regional basis which for some time to come would leave the European to run his "own" areas under the control of a central government dominated by the Colonial Office or by a European majority.

The New Kenya party, led by Mr Michael Blundell, opposes this idea and puts forward instead a somewhat vague form of progressive non-racialism, which could be implemented only if all races accepted it and were able "to appreciate and discharge their civic responsibilities." Mr Blundell will be hampered by his failure to win support from any elected African or Asian member of the legislature, and by the distrust and even dislike which the African members feel for his group. He thus lacks any bridge for personal negotiation with the people with whom he must eventually compromise. His party is based on the support of the specially elected members, whose election the Africans boycotted ; but the support of the non-Europeans even in this group is now half-hearted as a result of the party's manœuvrings on education policy and a vagueness in its policy statements which is designed—so the Africans think—to prevent its European members from being embarrassed or committed too far. Outside the legislature its support among non-Europeans is limited—or so the African leaders declare.

Undoubtedly, if the African elected members were allowed to organise politically on a colony-wide basis they would repeat the success of TANU in Tanganyika and sweep the country, getting an overwhelming majority of the African population and a sizeable following of the Asians behind them. Mr Blundell's hands are tied by his need to retain his European support ; he cannot make proposals radical enough to gain the non-European support which is essential to any successful plan for Kenya. He and the other Europeans go to the conference heavily handicapped.

There may well be clashes of personality in the African group ; but the Africans will be united in their demand for a common roll. Unless that is granted, no compromise will be possible and the conference will fail. What would follow a failure is a matter for speculation, but the African members probably regard the conference as the last chance of gaining by constitutional methods their two objectives: recognition that Kenya is to become an independent country with universal suffrage, and the institution of a common roll as the first step to this end.

Democracy in Ghana

FROM A CORRESPONDENT

IN Ghana, where Mr Macmillan has made his first stop, nobody doubts that Dr Kwame Nkrumah's Convention People's Party is in power for the foreseeable future. The mystique of triumph and the glamour which attaches to the party and the leader who achieved independence is heightened by Dr Nkrumah's continuous preoccupation with the independence of other African states. Unity cannot be achieved by intellectual conviction alone ; everywhere in Africa it seems to demand an emotional commitment amounting almost to hero-worship ; and in Ghana, Dr Nkrumah's

personal appeal remains untarnished, except possibly among the intellectuals.

Thus, any opposition in Ghana today starts at a severe disadvantage. Its handicap is increased by the government's power to dispense status and wealth, much of which is done in an unashamedly partisan manner. And further, Dr Nkrumah has been busy building up what he calls "the Grand Alliance" of farmers, workers and the CPP. The trade union congress has been built up into an organisation which can be relied on to support the government; and the leadership of the United Ghana Farmers' Council is now solidly CPP. The Builders' Brigade has been reorganised under the leadership of Major-General John Tettegah, the youthful leader of the trade union movement. Originally founded to provide constructive employment for the unemployed, the brigade will in future take only school-leavers and train them in skilled and semi-skilled techniques. Military discipline is used, but the aims, it is stressed, are not military. Civil and political education will play a part in the training of brigaders, whose number is to rise within a few months from 10,000 to 25,000. Planned, but not yet started, are the Pioneer Youth Movement, which will help to "raise the political understanding" of school-goers, and the "Vanguard Activists," who will be chosen from the most politically educated of the party leadership and sent out as "educators of our illiterate comrades."

It is not surprising that the opposition feels itself to be fighting for survival. Two of its leading MPs are in prison, the leader of the opposition chose to leave the country, and a number of MPs have crossed the carpet since the present legislature was elected. In an assembly of 104 members, the opposition has only 19 seats. The government, for its part, points out that speech and the press are free, and maintains that since elections are free and secret, the failure of the opposition must be due to its lack of appeal to the electorate. It is true that generally speaking the opposition is free to say and print what it likes, and that its criticisms of the government are often couched in very strong language. As for free elections, in some areas they have been pretty turbulent, but there is no evidence that one side has been more responsible for this than the other. But several United Party supporters alleged to have led the violence in the last elections have been detained.

The government maintains further that having failed to achieve power through free elections, the opposition has resorted to unconstitutional methods to overthrow the government. None of the alleged plots has been proved in a court of law; but the Granville-Sharpe inquiry into the one that involved the two opposition MPs concluded that a plot of a revolutionary character was intended, and the majority finding was that it was a plan to assassinate the prime minister. (The United Party has now issued a detailed rebuttal, printed in Kumasi.) This undercurrent of violence provides the government with its chief justification for the Preventive Detention Act, under which fifty-nine people have been detained for periods of up to five years. Significantly, or perhaps simply ineptly, the opposition has never denounced even those whose case came before the Granville-Sharpe Commission. Whatever its other merits, the United Party is badly organised, politically often foolish, to say the least, and on the whole incoherently led. But it is hard for it to make any headway against the government's big battalions.

What is to be made of all this? It is true that in the British sense this is not a flourishing democracy. But equally it is not a dictatorship or anything like a police state. The nationalist struggle produced in Ghana (as indeed in many other African territories) a strong and fiercely coherent national party through which the struggle is seen, rightly or wrongly, to have been won. It was only through this national party that Dr Nkrumah was able to integrate this heterogenous society into a united country. Of course, there were unifying factors—in particular the forces of Ghanaian nationalism and a relatively centralised economy. But the Ashanti challenge in 1956, and the constant irritant of the Ewe people on both sides of the Ghana-Togoland border, are a measure of the potentially disintegrating forces within this tiny nation.

In those countries where a national party itself leads the first independent government (notably in Ghana and Guinea, but not in Nigeria or the French Cameroons), effective opposition tends to operate within the party structure rather than through a multi-party system. Thus both M. Sekou Touré and Dr Nkrumah have produced the concept of "centralised democracy" or "democratic centralism." Both leaders make somewhat heavy philosophical weather of the concept; but both are referring to the political fact that if democracy is to operate at all at this stage it can only operate within the "independence party."

"Centralised democracy" in Guinea implies that everyone should be involved through a single party in making major decisions and in electing those who execute them; but that once a majority decision is taken it shall be accepted by everyone. In Ghana, on the other hand, no one proposes to prohibit the organisation of opposition groups. But since the CPP is by far the dominant political party, most of the effective opposition takes place within it. Despite the organisation of the workers and the farmers into two apparently solid blocks of CPP supporters, they are by no means uncritical of government policy or of members of the government. Even within the cabinet, Dr Nkrumah is no dictator. Any display of favouritism evokes considerable opposition, so that he must take advice from everyone. He is at the same time the arch-conciliator and the final arbiter.

Thus as the United Party finds it increasingly difficult to rally support, so the CPP comes increasingly to contain the effective opposition as well as the government. But it would be rash to predict a one-party state for Ghana. The system of "majority rule and no argument" is attractive in the early stages of an independent society. But when the society becomes more complex and sophisticated, when economic interests become diversified, and when the glamour of having won independence begins to rub off the CPP, then it may become very much more difficult to contain opposition within the party and to maintain its unity. The present overwhelming strength of the CPP provides in itself no justification for the belief that Ghana is heading for dictatorship.

The Key Decision

THE decisive meeting will open in ten days' time: the Kenya constitutional conference, which will convene at Lancaster House on January 19th, is likely to be the crucial determinant of developments in British Africa during 1960. If the conference can hammer out a constitution for Kenya—giving an early prospect of a black majority government, no doubt only with all sorts of transitional safeguards for minorities, no doubt only after some concessions have been made by all the races and parties and if the majority of delegates can emerge from the conference with a sense of security as well as an acceptance of change—a new note in race relations will have been struck. It could make a great difference to the attitudes taken up by white and black in southern Africa. Even the problem of Nyasaland may seem much less intractable than it does now, if by the end of next month Mr Mboya is set on the paths of contentment and peace. But if the Kenya conference ends in bitterness and recrimination, and is perhaps followed by the sorts of disorders that have so often marred Africa before, the impact could be disastrous.

What is the prognosis? The Colonial Secretary will hardly have left the Prime Minister in any doubt that the odds are still against success, effective though his quiet friendliness seems to have been in its initial impact on most parties during his recent visit to Kenya. The longer the London conference goes on, the greater hope of its producing agreement; but ups and downs (and walk outs) must be expected at best. The contending parties are still staking their claims; and the Europeans (as several recent letters to *The Economist* have shown, including an important new one on page 102 from Mr Michael Blundell) still find criticism of their stand unfair. Yet that stand is crucial. As a matter of practical politics, the furthest that a Conservative Colonial Secretary is likely to feel immediately able to go is to a position somewhat to the left of the most left wing of Mr Blundell's supporters. The question is whether, in doing this, he will be able to reach a position that is also acceptable to the Africans. It is very much in the Europeans' interests that he should be able to do so, for the tide of opinion in this country is not for long going to sustain them. Even the Bow Group of young Tories now thinks that they should be offered only five more years of British protection, apart from paper safeguards. The question for Mr Blundell and his friends is whether their approach is simply to be that of Mr Micawber—hoping that African nationalism will dissolve as a bad dream; or whether they will now set out to find a way of making themselves indispensable partners in African aspirations, seeking their security not in timetables and the exact balance of racial seats in Legco, but in their continuing and growing economic value to a commercially expanding Kenya.

Congo: February Deadline?

KING BAUDOUIN'S almost foolhardy tour of the Congo had some awkward moments; but by the time he got back to Brussels on January 2nd it was clear that a good deal had been accomplished by it. The Belgian authorities now seem committed to hastening the independence process early this year. At the round-table talks between Belgian and African political leaders in Brussels this month the hard choice before the authorities is simply this: either to grant independence more or less on the Congolese terms, or see the situation, only relatively stable since the King's visit, degenerate into further chaos. The decisive talks are expected to begin on January 18th, although M. Kasavubu, the more moderate of the Abako party's leaders, told the King that he, for one, would be arriving in Brussels before then.

M. de Schryver, the minister for the Congo, may be readier to accede to the African demands if it seems at all likely that a relatively peaceful and orderly transfer can be accomplished. The Abako congress which ended on December 28th, the day King Baudouin entered Leopoldville to scattered shouts of "Independence" and "King Kasavubu," laid down a strict timetable. It was not the ultimatum—for outright independence on January 1st—that the extremists had sought. All the same, M. Kasavubu wants a Congo government, with full powers, in being by February, with the legislative elections due in March being brought forward. Until this government takes office the Abako will refuse to join any negotiations on future relations between the Congo and Belgium. Some measure of the strength of the Abako in the Leopoldville area was given by the local elections there last month; the boycott declared by the Abako was 67 per cent effective. No Belgian arrangement for the more gradual transfer of powers to African authority is likely to work without Abako co-operation.

The trouble is that the Abako party is tribal and separatist and entertains, at the same time, a vague ambition to recreate a greater Congo state by a link-up with French and Portuguese Congo. The Abako congress reaffirmed its belief in a federal framework with six parliaments, one for each of the six existing provinces. The federation would call itself the Union of the Republics of Central Africa. It seems likely that such a solution could only be temporary. The federation would be in danger from separatist tendencies and from expansionist ambitions at one and the same time. And the bad example thus set would be likely to prove infectious. It would be disastrous if African nationalism in 1960 were to proliferate unstable and incoherent regimes. The problems now confronting Kamerun and its neighbours would then seem as nothing beside the irrevocable collapse of the Congo federation. The prospects of chaos from Kamerun to Katanga is certainly one that the West African leaders, meeting later in January at the All African people's congress at Tunis, should take seriously. For it goes without saying that such a collapse would be seized on to try to apply the brakes on African advances elsewhere.

Kamerun: Corpses at the Feast

THE new state of Kamerun (as it has decided to spell its name) has been born in disorder. Rebels belonging to the extremist wing of the *Union des populations camerounaises* (UPC) set off disturbances at Douala, the chief commercial town, on December 30th; there were more than 30 dead. A raid on Douala airport was meant to impress delegations arriving for the independence ceremonies; a similar show of force had been put on for United Nations representatives in December, 1958. There had been more deaths at Yaoundé, the capital, by the time independence day dawned on January 1st. Five years of UPC terrorism were not to be ended by the transference of power from France to the government of M. Ahidjo. The UPC, in a declaration from Conakry, the capital of Guinea, refused to recognise the country's new condition as independence: the fight would go on. This, in turn, probably meant that the French troops employed against the rebels would have to remain in the country; it was one way the UPC had of making its point.

Even so, M. Ahidjo's ceremonies duly took place in the presence of massed dignitaries belonging to 60 delegations, notably M. Jacquinot (General de 'Gaulle's representative) and Messrs Hammarskjöld, Firyubin and Cabot Lodge, each in his way a guarantor of universal acceptance. The prime minister of the British Cameroons, Mr John Foncha, who won power on the advocacy of an all-Cameroons union, was interestingly there. But no representative of Guinea was present, and M. Sekou Touré's greetings were distant. Ghana (which had been invited) sent its excuses.

M. Ahidjo has thus not only to face the enmity of his marxist rebels, but the opposition (and apparently the chagrin) of his immediate predecessor on black Africa's path to independence. So long as M. Sekou Touré gives comfort and asylum to the UPC extremists, M. Moumié and M. M'Bida, it will be hard for Kamerun to settle down. M. Ahidjo has now offered an amnesty (or *paix des braves*) to his rebels, provided they give themselves up immediately. He has been able to retain the support of the UPC moderates, under M. Mayi Matip; the fact that the exiles in Conakry give the impression of refusing to admit the new status of their country simply because they are not themselves in power gives him an easy opportunity to ridicule their stand.

But they can cause administrative and economic dislocation. There are now thought to be some 2,000 active guerrillas, armed with Czech and Italian weapons and chiefly supported (not always willingly) by the Bamiléké people. Although M. Ahidjo has promised elections in April, it may not be possible to ensure that they are peaceable or valid in some regions. Kamerun has a better educated and more experienced backbone of administrators than other equatorial African states. It has profited more than other colonies from French investment since the war. It will need all this, and a full measure of international support, if it is to ride out the storms prevailing at its birth.

It's only natural, when you engage a new employee, or contract a new supplier, to want to know his 'references'. Is he giving satisfaction? And are the people he's working for qualified as judges? I.S.R. is supplying rubber to many of Britain's leading rubber users —leaders in some cases because of their great size, leaders in other cases because of their specialised rubber knowledge and needs. These firms, who are most exacting in their demand for high, consistent quality, and who have the technical background to make sure they're getting it, are now taking the greatest part of their SB Rubber supply from I.S.R.

Moreover, they are calling upon us for technical services, for recipes and tests and recommendations. They rely upon us, not only for the rubber itself, but for additional 'know-how' to combine with their own. Some, as we said, are large buyers, some are small, taking only a few tons of 'Intol' a year. They all receive, we think, the same first-class attention. They are our 'references'. We always welcome additions to the list. We'd like to have *you* on it. Like our present customers, you'll find that you can rely on I.S.R.

* * *

(What do our customers like about us? We're always interested to know, and you might be, too. We keep hearing about several good points. That we're *dependable*: in particular, that we maintain our grading rigidly, and that we keep our delivery promises. That our facilities are large and up to date. That we're *here* in Britain—not a matter of sentiment but of practical convenience. That we're *helpful*; but we can't expand on that one without blushing, because, you know, with it all, we're very modest, too).

Six types of 'Intol' are in production, covering the full range of SB Rubber uses. Write for details.

Liberia: Missing Links

In the cross-currents of West African politics, which are pointed up by these events in Kamerun, account should be taken of the influence of Liberia, where this week the inauguration of President Tubman's fourth term was convivially celebrated. M. Ahidjo certainly had nothing to complain of in the cordiality of his reception last month in Liberia. President Tubman, moreover, is an outspoken supporter of the counsels of moderation which M. Bourguiba and the Tunisian government constantly urge on the other independent West African states. In the formation of a West African union, President Tubman is now himself taking the lead in proposing a consultative framework which, if loose, shall at least be practical. In the teeth of statements by M. Sekou Touré and Dr Nkrumah that an African state was not independent if it had a defence treaty with a western power, President Tubman last year concluded such a treaty with the United States, thus creating a useful precedent when the time comes for Britain to negotiate on defence matters with an independent Nigeria and Sierra Leone. And though President Tubman holds office more on the South American than the North American pattern, he has liberalised the authoritarian American-Liberian regime that he inherited in 1944, in which the tribesmen dared not raise their heads. The harbouring in Sierra Leone of a Liberian equivalent of M. Moumié does not incommode him.

Yet, despite all this, Britain still fails to cultivate President Tubman's acquaintance. The president would like to visit Britain; but he demands a state visit, rather than an official visit such as was accorded M. Sekou Touré. He considers that Liberia's seniority as an independent West African state entitles him to this, if not its importance (though the country is being rapidly developed with almost everybody's capital but Britain's); and he also feels that such recognition would help him in the stand he is taking up in West Africa. This would, indeed, seem to be in Britain's own interest; but so far the thought of President Tubman spending a night in Buckingham Palace baffles not the palace, but the Foreign Office. Yet it would seem to fit exactly into Britain's policy in every part of Africa, to say no more; the only thing against it seems to be the distaste of British shipowners at seeing the Liberian flag, which they so detest on the high seas, flying in the Mall.

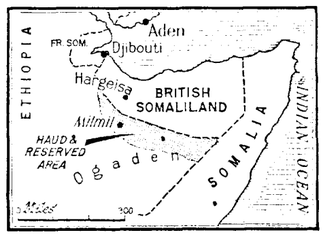
JANUARY 7, 1860



RELIGIOUS DISPUTES

Religious controversies are as a rule most studiously avoided by sober politicians and sensible journalists. To enter into them is commonly to involve oneself in a whirlwind of rage and abuse, out of which no good can come, and to be involved in irritation, misrepresentation, and annoyance incalculable, only to reap at last the gratifying conclusion that no result has been or could possibly have been achieved. Only when such subjects are brought inevitably into the political field; when religious disputes become questions of political significance; when the theologians of one school or another endeavour to force their views as a rule of political action upon the country, is it needful or desirable that statesmen or newspapers should take notice of topics which at ordinary times lie wholly apart from their proper sphere. And when such occasion occurs, it is well that the unpleasant task should be assumed boldly and decidedly; that no compromise or vacillation should be allowed to seem possible; and that the course which is politically right and wise should be asserted and defended in distinct defiance of the dogmas of those who denounce it as theologically wrong. It becomes those who are here on their own ground sternly and fearlessly to rebuke the passions of those who have brought their feuds and quarrels to be fought out on neutral territory; and while avoiding all irritating treatment, all unnecessary offence to those whose feelings are already in a state of extravagant soreness, to indicate unshrinkingly a determination to act without them, and if need be against them.

Somaliland: Unsafely Grazing

If, as has been predicted, 1960 is to be the year of eruption in the Horn of Africa, the latest conflict between Ethiopians and Somalis can be seen as a preliminary tremor. Although trouble is endemic in the Haud, it is usually about the theft of beasts or the exaction of blood money; this time it is about a still more dangerous subject, water. It all goes back to the 1897 agreement between London and Addis Ababa which handed over the Haud to Ethiopia, but reserved the right for protectorate herdsmen to graze their flocks on these traditional pastures. This has meant that about a quarter of a million Somali tribesmen, few of them without a weapon of some sort, cross each year into Ethiopian territory. Not surprisingly, there has always been a brawl going on somewhere; the Ethiopian frontier guards are only loosely controlled from Addis Ababa and the British liaison officers with the tribes have a busy time maintaining a tentative peace.

Just before Christmas there was a rumbling of graver trouble when, overnight, the Ethiopian authorities at Milmil denied the Somali herdsmen access to the only wells in the district. Each side was in an ugly mood; a few weeks earlier a raid by a Somali tribe, out for blood money, had led to savage reprisals by the Ethiopian frontier guards. The British liaison officers and the Ethiopian deputy minister of the interior, hastily despatched from Addis Ababa, managed to damp the explosion. The latest news is that the Somalis are again being allowed the water; it is possible that, under the urgency of negotiation, the Ethiopians were able to slip in some new conditions.

The function of the British has been to insist on the legal rights of the Somalis, but without exacerbating their relations with an Ethiopia that is still inclined to suspect Britain of plotting a Greater Somalia. A feeling that their interests have suffered from this ambivalence adds, in the minds of the Somalis, to the attractions of an early independence which will permit them to take matters into their own hands. But the departure of the British will not alter the basic fact that the Somalis are outnumbered and outgunned by their Ethiopian neighbour.

Nigerian Manoeuvres

Dr Azikiwe's decision to accept the presidency of the federal Senate in Lagos ends the first round of political manœuvre which followed the Nigerian elections, but opens the second. It is now clear that that first round was characterised by a fandango of political manœuvring, which revealed the instability of party alliances in Nigeria. When the leaders of the Action Group realised that their party's bid to become the dominant party in the federal house had failed, they urged upon their leader, Chief Awolowo, that he must have one principal objective: he must prevent the conservative Northern People's party from achieving

dominance in the new state, and to this end he must try to break up the Northerners' former working agreement with Dr Azikiwe's party, the National Council of Nigeria and the Cameroons. Chief Awolowo then began negotiations for a coalition of the two southern parties, the Action Group with 72 members and the NCNC with 89, to put the Northerners (who have 142 seats) into opposition. This scheme was adroitly torpedoed by the federal prime minister, Abubakar Tafawa Balewa, a northerner, who quickly confirmed his former NCNC ministers in their offices ; they thereupon advised Dr Azikiwe that to attempt to form a coalition with the Action Group would be to split the NCNC. As there is as yet no ministry of external affairs in Nigeria, it was then found that there was no place in the cabinet for Dr Azikiwe, who withdrew—probably only temporarily—to the Senate.

Thus the two most powerful southern leaders, Dr Azikiwe and Chief Awolowo, are out of the government ; but they have behind them a strong feeling throughout the southern intelligentsia (irrespective of tribe) that Northern domination on these terms is unacceptable. Chief Awolowo is now making the most formidable preparations to provide an opposition such as no African administration has ever faced in an African parliament ; at the same time, an Eastern region newspaper has significantly opened fire with a bitter criticism of the treatment of Dr Azikiwe by the NCNC ministers who have clung to office. But the North is certainly not letting grass grow under its feet either: Sir Ahmadu Bello, Sardauna of Sokoto, who is by far the ablest leader in the north, has now rescinded his intention to quit politics, and evidently intends to help conduct the fray. It would be unwise to guess who will become the first prime minister or foreign minister of independent Nigeria later this year—but at least the post of governor-generalship will become vacant for any disappointed leader who is at the same time too powerful not to appease. Nigerian unity may well depend on finding a plum of some sort for everybody.

LETTERS ON AFRICA

Kenya

SIR— I was disturbed to see some of the observations which you published in your issue of December 26th under the heading "Getting to know you" and I hope you will allow me to correct them. You write that Mr Blundell on behalf of the New Kenya Party is still negative. Is this really fair comment? As a party we have urged the lowering of the land barriers in Kenya and throughout the recent storm over this issue in European areas have continued to support the principle which we believe has now been accepted by the European community. It is significant that the Kenya National Farmers' Union has also endorsed the principle and set up a working party to examine how best to carry it out. We have urged Africans to accept the same ideas in their own areas especially as between tribe and tribe.

On the constitutional front we have urged that we should aim at the situation of a self-governing country within the Commonwealth based on a Parliamentary democracy. We have deliberately refrained from underlining detail in the belief that the constitutional conference which the Secretary of State has called in London will have a better chance of success if the various groups refrain from taking up "prepared positions" in advance. Recently at Makudara Hall in Nairobi before a large African audience I suggested that if the right atmosphere was created at that conference we might evolve a phased plan, leading from participation by African leaders in government to responsible government and thence to independence. In addition as a party we have pressed for the accelerated training and promotion of local citizens and especially Africans in the civil service and throughout the field of commerce and industry. Lord Portsmouth has undertaken to take Africans into partnership on farms on his estates near Kitale. I feel it is unfair to write off all these ideas and moves as negative.

Finally, Group Captain Briggs who, you allege, "has repudiated in advance any such constitution for Kenya as Tanganyika has got" has been away on holiday for the last four weeks and has made no public statements at all. Group Captain Briggs is not alone in rejecting the form of franchise on which the Tanganyika system is based.

Recently I have felt that your reporting from Nairobi was far from impartial. I would like to remind you that European initiative forced the removal of the colour bar in our main hotels and that with European support we were the first East African territory to have nominated Africans in our Legislative Council in 1948, an African minister in 1954 and elected African representatives in 1957. This does not show a sustained and negative attitude by the European people of Kenya in the past and I have no reason to think that their general views will change in the future.—Yours faithfully,

MICHAEL BLUNDELL

Nakuru, Kenya

Kamerun

SIR—Your correspondent has come out with a current story whose main purport is to prove that the *Union des Populations Camerounaises* is either without following in the Cameroons or is so much divided amongst itself that it is ineffective.

It is rather interesting that the main part of your article is concerned with the so-called "internal tribal" uprising in the Bamileke region ; the magnitude of which was such as to necessitate the deployment last October of about 10,000 troops from the French Community. Whilst one can understand the new role of M. Mayi Matip, it is rather undignified of your correspondent to imply that Ruben Um Nyobe, who himself fought to the bitter end against French imperialism, could have collaborated with the very instrument of oppression.

The great disappointment is that your correspondent is more at pains, like Ahidjo and the French Government, to prove the ineffectiveness of the UPC rather than the undemocratic processes through which they now assume control over 3½ million people of the Cameroons. The only test of popularity is the one provided by the ballot box, which Ahidjo dare not face before his phoney "independenee."

Finally, it was President Sekou Touré who stated at the United Nations that the policy of puppets must fail "because the peoples are more and more organised and determined to fight against all forms of domination, even that by the intermediary of African groups or powers."—Yours faithfully, ALOE AKA BASHORUN

Committee of African Organisations, London, NW1

Africa

SIR—Your recent article on Africa calls for a continued search through the ill-begotten Monckton Commission for any structure of federation in Central Africa, where partnership could become a reality. To this end the commissioners might examine afresh one of the earlier and now dust covered recommendations of the 1938-39 Bledisloe Commission, namely the amalgamation of Nyasaland and Northern Rhodesia.

The economic grounds for creating this near viable territory are clear, and could link the traditional Nyasa migrant labour with the industrial copper belt.

The ethnological and political grounds are equally strong, and with an inevitable future African majority in its territorial legislature, the conditions for starting a real partnership (if one is still permitted to use this discredited word), namely equality with Southern Rhodesia, would exist.

The success of this step would depend, as does any likely solution in Nyasaland and the Rhodesias, on African goodwill. Is there any reason why it should not be tested? —Yours faithfully,

DAVID J. RAYMONT

Farnborough, Kent

ALL ONE NEEDS FOR GROWTH ONE FINDS IN NORTHERN IRELAND

Labour and other specialised requirements amply met

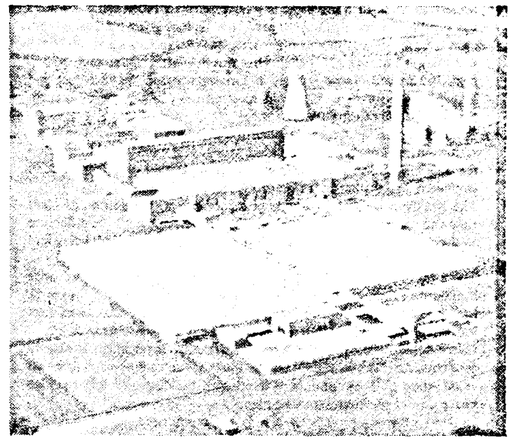
Courtaulds selected Northern Ireland for part of their post-war expansion programme. Sir John Hanbury-Williams, Chairman of Courtaulds Ltd., described this major project as follows:

"Before the end of the war we decided that, as soon as possible, we would build a new rayon plant which would undoubtedly involve us in the expenditure of several million pounds. This decision required the careful examination of several possible sites and as a result of our investigations we decided to go to Northern Ireland. We opened in Carrickfergus, near Belfast, in 1950. Here, our 1,200 employees are turning out well over 17,000,000 lb. of rayon yarn per annum and are also making the sulphuric acid and carbon disulphide used in the process.

Sir John Hanbury-Williams, C.V.O. Chairman of Courtaulds Ltd.

"Our experience since 1950 has shown us that all that one needs for growth one finds in Northern Ireland. We were right in assuming that labour, both men and women, was keen and plentiful and that we would have no difficulty in maintaining a three-shift system non-stop throughout the year. Thanks to Northern Ireland's sound manufacturing tradition, absenteeism and labour turnover are negligible, and we find that after training to our specialized requirements, labour is just as good as in any other of our factories in the United Kingdom. The products are very well received by the textile trade.

"The Government of Northern Ireland gave us every assistance. In particular they solved for us the formidable problem of providing many millions of gallons of water a week and disposing of the effluent, and were most helpful over questions of transport across the Irish Sea. Indeed, the varied and remarkably efficient freight services have provided a reliable service which enables us to move more than 110,000 tons of raw materials and finished products to and from our plant during each year.



"I believe that the advantages offered by Northern Ireland to the firm which intends to build a factory merit the closest consideration."

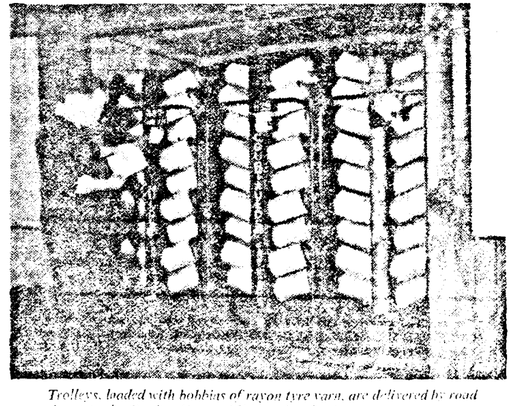
Courtaulds move 110,600 tons of raw materials and finished products to, from and within Northern Ireland

Except for deliveries of tyre yarn to Dunlop's factory in Londonderry, Courtaulds ship substantial quantities of yarn to England and import most of the materials used in production. It is essential therefore to have a good delivery service at a reasonable cost.

Coal is shipped from England to Belfast or Larne and consigned by rail to their private sidings.

Sulphur from the Gulf, and from Bayonne, France, is discharged at Belfast Docks into railway wagons and hauled to the chemicals manufacturing plant at Carrickfergus.

An aerial view of the Courtaulds rayon plant at Carrickfergus.



Charcoal is shipped from Belgium and Sweden to Belfast and thence by rail to the plant.

Liquid caustic is pumped direct from ship to tank in Carrickfergus harbour and then goes by road tanker to the nearby plant.

Wood pulp reaches Courtaulds from Scandinavia, U.S.A. and Canada via Belfast or Larne.

In the past ten years, Northern Ireland's transport facilities have been completely transformed in line with modern needs. Today it is possible to despatch goods to most parts of the Midlands and have them delivered to customers within 48 hours ; in other areas, the delivery may take one or two days longer according to distance.

Yarn supplied on bobbins is packed in cartons and, for safety, Courtaulds use containers on the Larne Preston ferry, thereby reducing handling to a minimum. Beams of yarn travel by trailer

Trolleys, loaded with bobbins of rayon tyre yarn, are delivered by road direct to the Dunlop Cotton Mills at Londonderry.

NORTHERN IRELAND MEANS BUSINESS

Within the past fourteen years 140 British and American firms, large and small – and including many who are recognised internationally as leaders in their respective fields – have selected Northern Ireland as the location for new plants to serve the United Kingdom, European, British Commonwealth and other overseas markets.

But there is nothing new or tentative about Northern Ireland's industrial background. There is here, in Government, in management and in workers, a long experience in meeting the exacting needs of progressive manufacturing businesses.

In Northern Ireland there is plentiful available labour of first class rating – men and women of the kind who have a world-wide reputation for the high quality of their products and their inherent skill in engineering and other manufacturing processes.

The Northern Ireland Government can offer a wide selection of plant sites and can provide individual facilities which make all the difference to the ease and speed and cost of bringing a new factory into being and into production.

There is, in Northern Ireland, a continuing programme of Advance Standard Factory building – some of these are ready to walk into now. Standard Factories built to order or Special Purpose Factories to meet individual structural requirements can readily be negotiated.

Over and above all this the Northern Ireland Government is able to ease considerably the initial burden of capital costs by paying as much as one-third (33⅓%) not only of the cost of building a factory but also of the cost of machinery for the plant.

In many other ways, which can only be summarised here (but details of which the Ministry of Commerce will very gladly supply) the Northern Ireland Government is able to make the path plain, the way simple and the result a success. And without red-tape!

THE ADVANTAGES IN A NUTSHELL

1 Plentiful trainable labour
2 Possibility of multiple shifts
3 Little absenteeism: low labour turnover
4 High output per man
5 33⅓% capital grants for plant, machinery and new buildings
6 Grants towards transfer of machinery to Northern Ireland
7 Government factories to meet your needs on rental or repayment
8 Grants for training and services
9 Concession rents
10 Industrial fuel rebate
11 Housing priorities
12 Active help by Government departments

Some of the 140 Companies with factories established in Northern Ireland since 1945

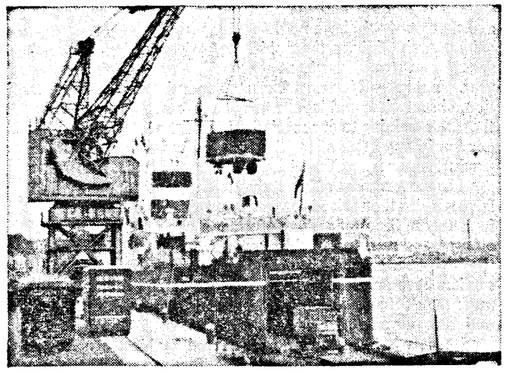
For details of how Northern Ireland's development plans can help you write to: NORTHERN IRELAND DEVELOPMENT COUNCIL (Chairman: The Viscount Chandos) · 13 LOWER REGENT STREET · LONDON · SW1 · (Tel: WHI 0651) or 99 PARK AVENUE, NEW YORK 16, N.Y. · (Tel: Murray Hill 2-6820) or, if you prefer, direct to THE MINISTRY OF COMMERCE · CHICHESTER STREET BELFAST · (Tel: Belfast 28271) All enquiries will be treated in the strictest confidence.



and are shipped by the same route. Trailers are also used for bulky machinery, as this saves crating and packing with the additional costs involved. Yarn supplied in other forms travels in wooden cases by a number of routes from Belfast to Preston, to Liverpool and Manchester, to London, to Heysham, to Bristol and Cardiff.

In addition to fast sea-freight services Northern Ireland is well served by passenger and freight air services to and from leading industrial centres of Great Britain.

In Northern Ireland, road and rail traffic is handled by the Ulster Transport Authority. The bulk of the movement is of tyre yarn on bobbins which, without any packaging, are loaded on stands, rolled straight into U.T.A. trucks and thence into the Dunlop Cotton Mills at Londonderry where the stands are rolled alongside their machines.

Since Courtaulds went to Northern Ireland in 1950, Chemstrand Ltd. have opened a £3½ million Acrilan fibre plant at Coleraine and I.C.I. have announced that they have purchased options on some 200 acres at Kilroot, County Antrim, for a future Terylene spinning plant. Northern Ireland is now becoming a yarn producing as well as a leading textile manufacturing area of the United Kingdom.

Specially built drive-on/drive-off transport ferry ships carry loaded lorries, low loaders, trailers and containers between Larne and Belfast and Preston. Lorries travel rapidly and securely from factories in Northern Ireland to destinations in Britain, and also to Europe, by similar services through Antwerp.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Second Chance for Congress

WASHINGTON, DC

IT is tempting to read the words of the burial service over the Eighty-sixth Congress, which opened its second session on Wednesday. Last year, the over-confident Democrats were cut down ruthlessly by President Eisenhower's use of his veto. This January their problems are compounded because the Democrats have set themselves the task of adjourning before their nominating convention starts in Los Angeles on July 11th. This would make the present session the shortest since 1952; by the beginning of July last year Congress had still to pass several major items of legislation and only six out of seventeen appropriation Bills had been dealt with finally. Since Mr Eisenhower is still waiting, as happy as a boy who has just discovered how to use an axe, to lop off the heads of measures he dislikes, the session's output seems fated to be small.

Some of the casualties can be foreseen. Although the agricultural problem grows worse day by day—the average price that farmers get for their produce has recently fallen to its lowest point in almost twenty years, and the surpluses are still piling up in the warehouses—the experts see little hope of persuading the quarrelling factions to agree on a way of solving it. The foreign aid appropriation, which is usually left to the last because it faces the toughest opposition, is certain to feel the knife deeply. Nor are the convention-minded members of Congress likely to spare much time for the President's reported desire to create a "First Secretary" in the Cabinet, or for the interesting suggestion—made by the National Committee for an Effective Congress—that they should create a single committee covering both foreign policy and defence to watch over the work of the National Security Council.

Nevertheless, there are two main fields which will be worth watching. The first is the resurgence of enthusiasm for an idea which dates back to the reformist days at the end of the last century, but has been relatively quiescent in the prosperous nineteen-fifties; this is the belief that Congress should intervene in the workings of private enterprise when it judges that they are hurting the public interest. On balance, the Democrats in Congress are probably glad that Vice President Nixon, by persuading the steel companies to accept a comparatively generous settlement, has relieved legislators of the unpleasant task of ordering the men back to the mills again if the strike had been renewed. With this embarrassing possibility out of the way, the chances have improved distinctly that Congress will take action to regulate the errant television industry. Not only is this a far less awkward chore (since the television business has fewer votes than the steel trade union) but it would also be dangerous to let the Administration seize and keep the initiative in another field.

The same conviction that free enterprise cannot always be allowed to follow its own laws inspires the opposition, which will be just as vehement in this session as it was in the last, to letting the government offer realistic rates of interest on new long-term government bonds. The Treasury's renewed request that the legal ceiling be raised will once again be contested by many liberal economists on the ground that higher interest rates impede economic growth; but much of the hostility in Congress springs from the rudimentary dislike of "letting the bankers make too much profit." This goes back directly to the sentiments of the populist movement in the late nineteenth century, when the bogeymen of simple folk in the American hinterland were the eastern bankers and railway tycoons. Now they are the bankers all over the country and the amoral lords of television.

THE second and main point of interest in 1960 will be the extent to which the Democrats can carry out the liberal intentions which Mr Eisenhower frustrated so successfully last year. In spite of the gloomy omens under which the new session opens, there are two reasons for thinking it will do better than the cynics expect. The first is the ambition of Senator Lyndon Johnson, the Democratic leader in the Senate, to become his party's candidate for the Presidency in November. Last year Senator Johnson laid his head on the block to receive Mr Eisenhower's vetoes with less of a struggle than most Democrats in the North would have liked; this year, if he is to have a chance of being nominated, he must fight more strenuously for progressive causes; he is already letting his support of one or two minor measures be known. The coverage of the minimum wage law will probably be extended to nearly ten million more workers, and the minimum may well be raised from $1 an hour to $1.25. Students who receive federal loans to help them through college are likely to be freed from the clause requiring them to swear that they do not belong to a subversive organisation.

The real test, however, will be what happens to last year's unfinished business. Of the six major domestic items in the 1959 session, three—the law regulating the trade unions, and those giving federal aid to housing and to the construction of airports—resulted in varying degrees of defeat for the liberals; the other three were shelved. The prospects this year for one of these, the measure providing the first substantial contribution of federal funds to America's schools, have now brightened noticeably as a result of Senator Johnson's support. The Bill which the Senate will consider at this session is less generous than the one which was proposed unsuccessfully in the House of Representatives last year and, unlike it, would merely help to build schools, not to pay teachers' salaries as well. But it would provide $500 million a year in federal grants for two years, which is substantially more than the Administration's last offer; this concentrates chiefly on helping local communities to pay off the loans which they float to build schools.

If Senator Johnson hopes to retain the confidence of northern Democrats, he will also have to make a serious attempt to pass another Civil Rights Bill to help the Negroes in the South. Under a gentleman's agreement reached at the end of the last session, the Senate will take up this bitterly controversial subject again in the middle of February. The result is unlikely to bring any great immediate relief to Negroes. But Mr Johnson may be able to push the South into accepting a law to preserve voting records (thus ensuring that federal examiners can check whether Negroes have been allowed to vote) and to discourage the bomb-planters on the lunatic fringe of the movement to preserve racial segregation. It is just possible that he will also support the Civil Rights Commission's proposal to send federal registrars into areas where local

ones are stopping Negroes from voting. But the Administration is unsympathetic to the idea, and Senator Johnson is unlikely to stick his neck out any further than the Administration's.

What Congress does with these two Bills, and with the third major item in last year's unfinished business—the measure to give federal help to chronically depressed areas—depends also on the House of Representatives. The House is almost always the more conservative of the two chambers, but the other development which has raised reformers' hopes this year is the creation of a body of northern liberals known as the Democratic Study Group. The group's ability to push the House's leaders into decisive action is limited ; its modestly academic title betrays its lack of confidence. But it can organise the liberal vote more tightly than it has been organised in the past. It may be able to win some votes of conservative Southerners by threatening to oppose Bills of local interest to the South ; and, above all, it may bring to the surface the latent liberalism in the breast of Mr Sam Rayburn, the elderly Speaker of the House of Representatives.

Mr Rayburn's loyalty to progressive ideas goes deeper than his somewhat lackadaisical way of running the House suggests. Perhaps he can be stimulated into reminding the Southerners that their party's chances of winning the presidential election in November depend on its ability to attract enough votes in northern states, and that this requires a liberal record from Congress this year. All these measures, of course, still face the prospect of sudden death at Mr Eisenhower's hand even if they pass both Houses. But Congress has an opportunity in 1960 to make good its failure last year to challenge the President resolutely and another chance to override some of his vetoes.

Steel Brought to Terms

For the Vice-President, with the help of Mr Mitchell, the ambitious Secretary of Labour, to have engineered a settlement of the obstinate dispute in steel and thus to have swept away the last obstacle to the most prosperous new year in history is a brilliant new feather in his cap. If, as the preliminary reports suggest, he has done so on terms which may postpone a general increase in the price of steel until after the election, this is a dazzling piece of juggling which should help to absolve him of the suspicion that he bought a settlement by selling Mr Eisenhower's anti-inflationary principles down the river. Yet he has also managed to strengthen his standing with the trade unions by giving the steel workers most of what they have been seeking.

The union's gains include an increase of 14 cents an hour in basic wages by the last year of the 30-month contract, more for higher paid workers, improvements in pensions, and the assumption by the employers of all insurance costs. The union's only concession is over cost of living adjustments, which amounted to 17 cents an hour during the three years of the old contract but which will be limited to a low figure in the new one. The steel companies, which might have had a cheaper settlement six months ago if they had not embarked on a crusade to win control over work rules from the union, have lost here as well ; these practices are to be considered by a committee representing both sides under a neutral chairman but the recommendations, to be presented in November, will not be binding.

No one imagines that a settlement worth about 40 cents an hour in the last year of the contract, and nearly 40 per cent more than the steel companies were offering, will be absorbed without an eventual increase in prices. The smaller firms, in particular, will be hard pressed. But if, when the official terms are announced, they confirm that the first increase in wages has been put off until December, it is hard to see how a rise in prices could be justified this year. It is true that some other increases in costs go into effect right away, but the companies expect a record year for production and profits as consumers rush to re-stock.

Over the long run Mr Blough, the chairman of the US Steel Corporation, puts the cost of the settlement to the industry at $1 billion, but he drew some comfort from the calculation that the average annual increase in employment costs will amount to only 3½-3¾ per cent, compared with an average of 8 per cent a year since 1945. What finally made the steel companies surrender was Mr Nixon's blunt warning that, if the strike were to be resumed, and a Democratic Congress stepped in to impose a settlement, it would hardly be an anti-union one in an election year. This was sound sense and the industry has the additional consolation that it has made a substantial contribution to Mr Nixon's election to the Presidency in November.

They Declare

With two days between them, carefully timed to avoid treading on each other's headlines or on the reporters' new year hangovers, Senators Humphrey and Kennedy have now declared formally what everyone had known for months—that they are candidates for the Democratic nomination in this year's presidential contest. Of the five leading Democratic possibilities they are the closest together, both on the left of the party—Mr Humphrey extremely so. Yet they may well be the only candidates to announce themselves officially unless Mr Kennedy succeeds in pushing Senators Johnson and Symington into the open with his insistence that no one deserves the nomination if he has not shown what he stands for and how he can fight by entering some of the primary elections in which voters choose between their party's potential nominees.

Mr Kennedy himself is entering the first primary, in New Hampshire on March 8th, and others which he will announce later. Mr Humphrey, from Minnesota, is wasting no money on New Hampshire, where Mr Kennedy, from neighbouring Massachusetts, is sure to win. Mr Humphrey will enter in Wisconsin, the second primary, on April 5th, and in South Dakota, both states where he has the advantage of being a local boy, in the District of Columbia, in Oregon—and perhaps in a few more places if he can find the cash. If Mr Kennedy enters in Wisconsin the contest will be a vital one which might drown one of the two altogether ; he cannot avoid entering in Oregon, because of the peculiar election law in that state, but here the contest between him and Mr Humphrey has been muddied by the intervention of Senator Wayne Morse, the eccentric local liberal.

No one really believes at this point that Senator Humphrey can be nominated—perhaps not even he himself—but Senator Kennedy, well ahead of all his rivals, hopes optimistically that a series of triumphs in primary elections may induce so many state delegations to catch hold of his coat tails that he will arrive in Los Angeles next July trailing the 761 votes needed to win the nomination. But numerous delegations will go to the convention pledged to other candidates, some of whom will not be serious contenders but will enter the race in order to use their supporters' votes for bargaining purposes. One of these is Governor Brown of California, the second largest state with 81 votes which he is determined to keep for himself—perhaps, although he denies it, in the hope of securing the vice-presidential nomination. Helped by his Roman Catholicism he may achieve this, for it is widely argued that, if the Democrats refuse the nomination to the Catholic Mr Kennedy, they would have to put someone of that religion in the subsidiary position to avoid alienating the Catholic vote. And Senator Kennedy has said, as forcefully as he can, that he will never co-operate in such a manœuvre by accepting the Vice-Presidency.

Ban in a Big Hole

The 14-month-old talks on banning atomic tests start up again next week in Geneva under notice that the United States is becoming impatient for an agreement on an adequate system of inspection. The President's announcement that the American moratorium on atomic tests would not be renewed for a definite period, but simply from day to day, and that the United States will feel free to give notice at any time that it is resuming its tests, strikes Senator Humphrey, the chairman of the Senate subcommittee on disarmament, as "nuclear brinkmanship" ; he would have preferred to extend the moratorium for six months or so. But many Americans suspect that the Soviet Union, simply by stalling, is achieving what it really wants—a *de facto* ban without any inspection at all. Senator Anderson, the influential Democrat who is chairman of the Joint Congressional Committee on Atomic Energy, thinks that the President should have been even brusquer and should have set a dead-line after which the tests for which the military are clamouring would be resumed. Mr Eisenhower is not yet prepared, however, to jeopardise the benefits of an agreement by fixing any such arbitrary "cut-off" date.

One understandable reason for the Administration's impatience is that the present session of Congress will be shorter than usual ; if any agreement is to have a chance of being approved by the Senate it must be submitted soon. Unfortunately it looks doubtful whether any ban which covers underground tests will be acceptable to Senators unless it is accompanied by safeguards far too searching to be acceptable to the Russians. The American doubts about the feasibility of detecting nuclear explosions underground have been strengthened by the ingenious American scientists who have shown that, in theory at least, nuclear blasts fifteen or more times as powerful as the Hiroshima bomb could be so muffled, by being exploded in prepared "big holes" underground, that they would be impossible to detect.

If the Russians continue to refuse, as they did last month, to take such calculations seriously, the Administration may fall back on Senator Gore's suggestion of a limited ban on tests in the atmosphere and under water, which it put forward last spring as a first stage toward total agreement. The Russians turned it down then but, if they could be persuaded to agree now, such a ban might be approved by Congress. One drawback is that it would not require the far-reaching system of international inspection which it was hoped to establish as a precedent for negotiations on disarmament. Another is that in itself the ban would not accomplish a great deal since, even if the nuclear powers resume their tests, most of these will take place underground in any case, to avoid the atomic fall-out which so frightens and angers people all over the world.

Rebuke for Radio

The Attorney General, Mr William Rogers, greeted the new year with an acid report to the President on "Deceptive Practices in Broadcasting Media." In his view "naked commercial selfishness" rather than a desire to serve the public has too often been the reason why programmes have been put on the air. This has been demonstrated by the evidence given before the House sub-committee which first revealed that corruption in television quiz shows embraced schoolteachers, infants and clergymen as well as the now notorious Mr Van Doren. The committee has since investigated "payola," the practice whereby employees of broadcasting stations accept undercover payments for promoting commercial products on the radio or television. Payola has proved as ubiquitous, if not quite as elusive, as the scarlet pimpernel ; everywhere disc jockeys are rumoured to feature songs, singers and shows either because they have a financial investment in them or because they are paid to do so by the music publishers and by the makers and the distributors of the records.

In rebuking both the responsible government agencies for their lax supervision, Mr Rogers was justifiably more severe on the Federal Communications Commission. This agency licenses individual broadcasting stations and is theoretically responsible for the standard of programmes. It has so far remained almost inert, claiming that it lacks statutory authority. Its companion, the Federal Trade Commission, has at least taken some action under its duty to stop deceptive trade practices. Mr Rogers's main point was that each already had ample powers to deal with most of the abuses which had been brought to light. However, he also proposed two immediate changes in the law which would reinforce those powers. One would make it a federal crime for an employee of a broadcasting station to accept bribes in return for surreptitious advertising. The other would empower the FCC to impose on an erring broadcaster some sanction milder than the present total revocation of licence, which is so stern and final a punishment that it has only served to deter the commission from administering it.

Since the scandals became public the FTC has charged several recording companies and distributors with attempting to bribe disc jockeys, and has also carried out intensive monitoring of advertisements. Furthermore, a little house-cleaning has been done by the major networks which feed many of the programmes to the 4,630 radio and 556 television stations that are licensed to broadcast. But Mr Rogers puts little trust in the power of more exposure to stop corruption ; he even suggests as a therapy that the networks themselves, which at present are not under the jurisdiction of the FCC, might be licensed and so be subject to stricter supervision. His forthright report to the President will almost certainly encourage Congress to match these suggestions with proposals of its own.

THE NEXT PRESIDENT?—V

Adlai E. Stevenson

The Democratic presidential candidate in 1952 and 1956 is firmly keeping out of the preliminary rounds this year, but he would not refuse to run if his party thrust the nomination upon him, as it may do at a dead-locked convention. A correspondent describes this moderate liberal who is by far the best known, especially abroad, of the Democratic possibilities and the only one who is not a Senator.

Although he has campaigned twice for the Presidency, to a large part of the public Mr Adlai Stevenson remains the most puzzling and remote of the Democratic party's leading candidates. At the same time he has the most devoted and influential following of any man in public life today. If the enlightened pick of the Democratic party, the publishers, the liberal businessmen, the college professors and, in addition, some of the highly placed office holders had their way, Mr Stevenson would unquestionably be nominated for a third time next July. But he does not command anything like such backing from the party's politicians nor from its rank-and-file. The contradiction between considerable apathy at the popular level and strong support at the intellectual one accounts for Mr Stevenson's unique position in this year's campaign.

The reasons for this contradiction may be found in his person-

ality, in his political style and, what is often overlooked, in the circumstances of his party. After twenty years in which Presidents Roosevelt and Truman were able to offset the massed opposition of the owners of the newspapers by exploiting the unrivalled opportunities which the Presidency provides for making headlines, Mr Stevenson was the first Democratic presidential candidate to run in this age of mass communications without the advantages of being already in office. The party was not well enough financed or managed to cope with this complex problem. It is still inadequate in this respect. But the elegance and high-mindedness of Mr Stevenson's speeches enabled the uninformed to make him the scapegoat for an alleged "failure to communicate" which was in fact the fault of his party organisation.

Nevertheless, Mr Stevenson is a mediocre campaigner. Although physically and psychologically durable, he does not have Roosevelt's zest for political combat. Mr Stevenson has a reflective cast of mind and finds the slogans and banalities of politics offensive. He is a great orator but seldom an effective speaker on the stump. He yields repeatedly to the temptation of restating the obvious in other than obvious terms and of avoiding the making of a simple point simply. His speeches are frequently brilliant expositions of the complexities and delicacies of a problem but they do not catch

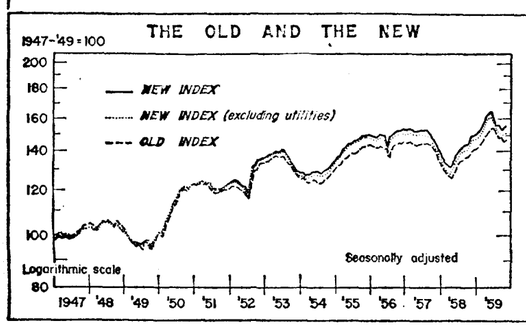
Output on a New Measure

According to the Federal Reserve Board's new index, industrial production at its peak last June, before the steel strike, was 66 per cent higher than the 1947-49 average, while the old figures showed a rise of only 55 per cent. For November, the new index is 156, the old 148. (All these figures take seasonal factors into account.) The growth in the postwar period now averages 4.1 per cent a year instead of the previously indicated 3.7 per cent. In short, America's total industrial output and output a man hour have been growing faster than had been thought, particularly since 1953 when the Eisenhower Administration took over. The Federal Reserve Board has given the Republicans a useful answer to the Democratic critics who accuse them—and it—of stunting the country's economic growth.

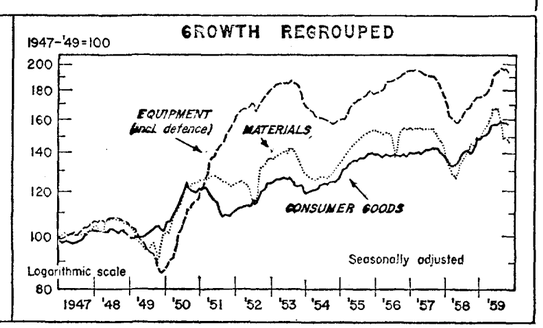
About one-third of this gain results from a widening of the scope of the index beyond manufacturing and mining to bring in utilities (electricity and natural gas), so making the index more comparable with the measures of other countries. The remaining two-thirds of the revision reflects improvements in individual series, the introduction of new series and, since January, 1953, the reweighting of the components of the index in accordance with the value of net output of individual industries in 1957 rather than in 1947. The new index is based on 1957, but for purposes of comparison is also expressed, as before, as a percentage of 1947-49; the choice of base year has no effect on the relative fluctuations.

This kind of revision of a measure of production is inevitable and highly necessary from time to time to take account of the shifting pattern of industrial activity and technological developments. No major changes had been made in the Federal Reserve's index since 1953 when, as now, the changes raised the figures to a higher level. This index has to rely heavily and precariously on alterations in man hours as indicators of trends in output. Unfortunately, the summary article on the new version in the December issue of the *Federal Reserve Bulletin*, full of the jargon of "benchmarks" and the like, does not isolate in detail the extent or the effects of the different revisions. It makes clear, however, that re-weighting (mistakenly the "aunt sally" for the critics of index numbers) has had only a minor effect, slightly reducing the rate of growth since 1953, although helping to accentuate the extent of the 1957-58 recession and subsequent recovery.

The old index evidently understated most the output of consumer goods, putting their rise since 1947 at an annual average of about 3 per cent; the new figures put the growth at 3.7 per cent. But there have been wide variations in the way individual products have done over these years. Production of air conditioners, television sets, clothes driers and boats has gone up by over 400 per cent, of electricity, gas and drugs and medicines by between 200 and 300 per cent, and of home freezers, fuel oil, motor cars and electric household goods by between 100 and 200 per cent, while since 1947 output of cooking stoves has gone down by 4 per cent, of men's suits and coats by 13 per cent and of home radios by 68 per cent.



The separation of consumer goods is a feature of a new grouping of production—much the most useful so far—which distinguishes also materials and equipment for business and defence uses. Of these three kinds of output, equipment has grown the fastest. Over the whole postwar period, final products have accounted for nearly one-half of industry's total output; but equipment has gained in importance at the expense of consumer goods.



RELATIVE IMPORTANCE IN INDUSTRIAL OUTPUT*

	1947–49	1957
Materials	52·48	53·25
Consumer goods	35·87	31·13
of which: *durables*	8·66	7·75
non-durables	27·21	23·38
Equipment	11·65	15·62
of which: *business*	10·38	12·16
defence	1·27	3·46
Total industrial output	**100·00**	**100·00**

* Assessed on a "value-added" basis; differences between the two periods reflect changes in both output and prices.

This new division of output provides a much more instructive picture of the three postwar recessions. It shows how much wider, in general, have been the swings in production of industrial materials than those in output of finished products and the stabilising effects of the consumer goods markets which have led the recovery each time. This new analysis is a challenge to the British statisticians to provide something equally useful.

CHEMICAL BANK NEW YORK TRUST COMPANY 1824

We are pleased to announce the opening of a branch at 25-31 Moorgate, London, E. C. 2

This branch has been established to serve our American and international customers doing business within the United Kingdom.

Chemical Bank New York Trust Company has resources of more than $4 billion. It maintains 103 branches in New York City and has more than 50,000 correspondent banks and branches throughout the world.

the hearer by the throat or leave him with a clear, unmistakable conclusion. He disdains to use the necessary broad, bold, strokes of a propagandist.

The character of his oratory is an integral part of his political style. He has passionate convictions and great moral earnestness but he masks them with wit, ironic detachment, and self-deprecatory banter. He wants to save the republic but is afraid of seeming a bore while doing it. This style, which captivates a cultivated minority, runs counter to the dominant American stereotype of the successful "he-man" which is exemplified by the cult of the self-made business executive and the television fashion for the inarticulate but two-fisted western cowboy. The contemporary American outlook leaves small room for irony. Mr Stevenson does not dissent basically from the national gospel of confidence, but his lurking sophistication impels him to take note of discrepancies and poke fun at pretensions.

This is a line which is hardly characteristic of a politician on the presidential level. When Mr Stevenson makes a witticism at his own expense, the ordinary citizen may laugh, but he may also be puzzled inwardly. The jokes are not over his head, but it does not seem right to him that a candidate for President should make them. The result is that when public opinion polls are taken "in depth" about attitudes toward leading men, they usually show that Mr Stevenson is rated highly as "intelligent, clever" and "good speaker," but lowly on "inspires confidence." The central problem of his candidacy is therefore whether the party wants to take a chance that this intellectually impressive, politically experienced, and eloquent but not easily electable man could, if pitted against a less formidable opponent than Mr Eisenhower, persuade a majority of the voters to entrust him with power.

THE outlines of a Stevenson Administration, if there should be one, are reasonably clear by now. His chief talents are those of a negotiator. He is a natural diplomat, patient, good-humoured, and urbane. He is canny and can be tough. More than any of his rivals, he would tend to be his own Secretary of State. His two guiding principles in foreign affairs are an urgent wish to narrow the widening gap between the developed and the under-developed countries and a willingness to seek ways of accommodation between the two camps in the cold war.

Mr Stevenson could be depended upon to keep the reins of the party leadership firmly in his own hands and to deal skilfully with the chieftains of Congress. He is an exceptionally astute, effective politician when he is in conference with other political leaders even though he is not when he is mingling with the crowd. His genius lies in knowing how to make the natural pressures of a situation work for him.

A lawyer by training and experience, he has no particular talent as a manager of large enterprises and would be a cautious, thrifty, conservative administrator rather than an innovator or a driving force. He is receptive to advice from all quarters, seeks and enjoys the company of intellectuals, and would make good use of experts. He is a serious and literate man. And yet, despite the appellation of "egghead," he is essentially a gregarious and active man of affairs, less bookish than Senator Kennedy. He draws ideas and inspiration nowadays principally from a steady flow of visitors who find their way to his home at Libertyville, Illinois, and would presumably come in even greater numbers to the White House.

One of the myths about Mr Stevenson is that he is indecisive, like Hamlet. This legend originated in the spring of 1952 when he was genuinely resisting the attempt to draft him for the presidential nomination. Mixed with his reluctance to break off the reform programme which he had undertaken when he was elected Governor of Illinois in 1948 was a typically shrewd awareness that if, in the end, he did have to run for national office, it would be far better to come forward as the chosen man of the whole Democratic convention than as the hand-picked heir of Mr Truman.

The only detailed evidence of indecisiveness offered by his critics is drawn from the way he managed the two presidential campaigns which he lost, but circumstances were so adverse and his own weaknesses as a campaigner so evident that these are not reliable indications of what he would do if he were secure in office. Certainly, observers familiar with his four years as Governor of Illinois did not find that he shilly-shallied or was unable to make decisions.

Mr Stevenson, 60 years old next month is what his younger and more conventional rivals do not seem to be, mature, three-dimensional, with weaknesses and idiosyncrasies but also with strength of character and firmness of purpose which have been tested. He has no demagogy or selfishness or cheapness of any kind. He is in the novelist's sense a fully-developed character. His integrity of personality suggests, that, whether or not he was a great President, his Administration would certainly be distinguished by an unusual personal style.

Borax Pioneers

FROM A CORRESPONDENT IN CALIFORNIA

NUMBERED among Britain's assets in the dollar area is a large hole in the ground at Boron, California, on the edge of the Mojave Desert, about 70 miles northeast of Los Angeles. It is the largest source of borax in the world, the only one mined by the opencast method and the property of the United States Borax and Chemical Corporation, which is owned by Borax (Holdings), Ltd., of London. Sodium borate is a versatile material that goes into products as various as household cleansers and missile fuels. Most of the world's supply comes from this one mine in the California desert.

Of the other deposits found in the American West in the last century the most famous was in Death Valley. Ore was hauled from it in wagons drawns by 20 mules—originating the "Twenty Mule Team" trademark of US Borax today; the company also sponsors a television programme called "Death Valley Days." The forerunner of the present firm was put together by a pioneer prospector, F. M. ("Borax") Smith, in 1890; in 1896, when there was a slump in American demand, he persuaded the chemical firm of Redwood and Sons, of London, to go into partnership with him. In 1914, Smith went bankrupt, and he was bought out by his British associates.

As the other sources were depleted or became uneconomic to operate, production came mainly to be centred in an underground mine at Boron. For many years, the ore was recovered by the traditional method of sinking shafts and driving galleries into the ore body, but this meant that about one-third of all the ore had to be left in the ground as pillars for the galleries. A few years ago, as the demand for borax grew, the company turned to opencast mining nearby. It took from early in 1956 until May, 1957, to strip away the earth to get at the ore body 137 feet below the surface. It was dynamited out and a refinery was ready to process it early in 1958.

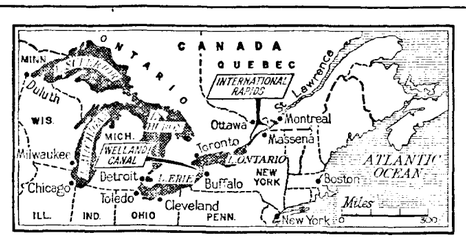
Strip mining is considerably less expensive than the traditional methods and many new automatic techniques were incorporated in the refinery to reduce costs. But there were unexpected hold-ups and technical problems, which delayed the start of the new operation and cost the company more than it had hoped. This affected adversely the results of the firm in the fiscal year which ended on September 30, 1958, when there was also a world-wide over-supply of potash, the company's other principal product.

But in the 1958-59 fiscal year, the company and its British parent began to reap the fruits of their pioneering venture. Sales reached a new peak of nearly $62.2 million, while net income rose by

over 150 per cent to about $6 million from about $2.37 million the year before. The principal cause of this recovery was the strong demand for borax products in both the domestic and foreign markets, even though its use in high-energy fuels for missiles does not promise to be as large as was once expected; nor apparently are these boron fuels to be used in manned aircraft. Last July the company was able to increase its price and out at Boron the open pit is producing at its rated capacity, unofficially estimated at around 3,000 tons of sodium borate ore a day. The refinery is operating round the clock.

Gamblers Play Safe

FROM A CORRESPONDENT IN LAS VEGAS



IN 1958, the largest relative increase in the purchase of mutual fund (investment trust) shares in the United States took place in the State of Nevada. Such interest in a conservative type of investment is rather surprising in a state whose two principal cities, Las Vegas and Reno, derive their income from gambling. However, while the local croupiers, bell boys, and waitresses do speculate in stocks, the businessmen take no risks. According to one securities dealer in Las Vegas, the operators of gambling casinos buy mutual funds, bank and insurance company shares and blue chip industrials, while the property owners go in for municipal bonds.

The pattern has its logic. Las Vegas is constantly abuzz with rumours and tips of all kinds (many deliberately planted) around the bars and gambling tables. Employees at the hotels and casinos, debarred by their jobs from the betting going on all around them, are fair game for such "hot" news, and speculate accordingly. But the operators of the hotels and casinos, used to sound accounting methods, are not disposed to risk the money obtained through the speculation of their patrons to gamble themselves. They put it into good income-producing securities, as insurance against a day when wagering may be ruled illegal in Nevada, or the Congress of the United States may slap a punitive tax on gambling profits. As for the property owners, they pay such high taxes on their vast profits that their favourite security is the municipal bond on which interest is tax-free. Actually, wealthy Las Vegans are big buyers of their own Clark County bonds, local issues invariably being over-subscribed.

For many years, speculation in property values occupied Las Vegans almost as fully as the roulette wheels or the slot machines and some fabulous profits were made. But recently, as most of the best sites have become occupied, the boom has evaporated and the bull market in shares has begun to attract attention. It is only 13 years since the first brokerage house opened its doors in Las Vegas but now there are several and in the past three years the volume of business done has increased sharply, but with the emphasis always on seasoned securities.

Nevertheless, probably one of the most popular buys in Las Vegas at present is one that might at first sight appear speculative, shares in one of the biggest casinos, the Golden Nugget. However, the record shows otherwise. In 1950 the original partners, who reportedly by then had got their 1946 investment of $1 million back with interest, sold both debentures and common shares to the public. The last of the debentures will be retired next summer and, meanwhile, the common shares once sold for $8 each are quoted at around $20 bid, with no one wanting to sell. The annual dividend yield is running at about 7 to 8 per cent. Thus, while gamblers speculate in Las Vegas, the casino operators put their money on a sure thing.

Seaway's First Season

THE first, and on the whole successful, season of the new St Lawrence Seaway ended at the beginning of December with the winter freeze-up. It had been hoped that the international rapids section between Montreal and Lake Ontario would carry 25 million tons of cargo during the seven months' season; but the lateness of the thaw last April, the American steel strike and the consequent fall in cargoes of iron ore from Labrador, a decline in sales of Canadian grain and the sluggishness of American exports kept the figure down to around 20 million tons.

Even so, this is some 70 per cent above the traffic in 1958 on the old canal, which was not deep enough for ocean-going ships. Bulk cargoes provided over 90 per cent of the total, a proportion higher than had been predicted, and a disappointing one since shipments of general cargo are more profitable to the seaway authorities; but general cargoes should pick up if American industrial exports show their expected improvement in 1960, and if the new waterway encourages direct foreign trade with Canada and the midwest. The American ports on the Great Lakes did well out of the seaway, but the country's shipping companies are not so happy. With their high operating costs they lose more than do foreign lines from the delays caused by bottlenecks; one of the few American ocean lines which has ventured into the new route showed a loss of $500,000 on the season.

So far the only ocean ports which seem to be feeling the pinch of competition from this new northern artery are those on the mid-Atlantic coast. Baltimore and Philadelphia lost some bulk trade in 1959 and part of this decline is almost certainly due to the seaway; and the inland port of Buffalo has been deprived of trans-shipment business because deep-draught vessels can now travel directly between the Lakes and foreign ports.

The railways have counter-attacked with reductions in freight rates and they are considering a seasonal scale of charges which will fall in summer and go up again in winter when the seaway is frozen. Middlewestern businessmen welcome the competitive pricing in transport which the seaway has brought, but they were less happy when the khapra beetle, a notorious destroyer of stored grain, sailed up to Cleveland aboard a foreign freighter.

The seaway authorities hope that receipts will begin to cover current interest payments in 1964, and that they will be able to start to pay off the capital costs once the seaway is in full operation in about ten years' time; it should then be carrying about 50 million tons of cargo a year. The margin is fine and there has been talk of increasing the tolls next year.

But it would probably be better to concentrate on improving the seaway; this means developing the facilities at the Lake ports still more, completing the deepening of the channels in the upper Lakes, and ultimately duplicating all eight locks on the Welland Canal—a Canadian section of the waterway which this season carried only 25 per cent more than last year and was responsible for much of the congestion. Then losses from accidents and delays will not offset the advantageous cargo rates and the seaway should attract the traffic it requires to make it profitable.

The New Yorker from New York

Now that magazine import licences are no longer required, it is possible to arrange for The New Yorker to be sent to you directly from New York (or to anyone in Britain, if you should wish to give a subscription as a gift). Ask your newsagent for details, or write to:

THE NEW YORKER

21 Grosvenor Street, London, W.1.

The New Yorker carries more advertising of British goods and services than any other magazine published in the United States.

LETTERS

Shares

SIR—Your otherwise excellent article "Leads to Investors" omits the biggest factor in the rise of equity share prices. The new unit trusts have taken off the market *permanently* too large a proportion of the floating stock, and this was too small already to meet boom conditions. The market is thereby made technically too narrow, and a small degree of buying puts up prices quite disproportionately. Owing to the existence of high taxation there is little inducement for jobbers to "take a view," and consequently there are very few jobbers today—except in the gilt edged market—who are more than mere shunters, and this again has helped to exaggerate the rise in industrial ordinary prices. The real question is: will prices fall in the same disproportionate rate if we get a higher Bank rate, and a curtailment of lending, since jobbers will be no more inclined to steady a falling market than they were to check a rising one?—Yours faithfully,

House of Commons CYRIL OSBORNE

The Suicide Bombers

SIR—Sir Roy Harrod takes offence at my review of "The Divine Wind," but he has not studied what I wrote very carefully and one may even wonder whether he has read the book. In the first place I wrote that "to Westerners the whole conception of such a form of warfare has a nightmarish Kafka-like unreality about it," and in quoting and criticising that statement he omits the operative first two words. I am quite confident that few, if any, people on our side who experienced the suicide bombing campaign at first hand will disagree with me. Secondly, it may safely be left to readers of the book to decide for themselves whether my description of the Kamikaze pilots' sentimentalities as "glutinous" is fair. Thirdly, I made no mention at all of Japanese callousness and brutalities: it is Sir Roy who brings them up, and appears to wish to excuse, or at any rate forget, them on the grounds of "the infinite delicacy and tenderness" of their "personal relations."

Lastly, the physical bravery of the suicide pilots is of course inherent in the purpose which they undertook; and it would have been insulting to your readers' intelligence to draw attention to it. But is it not an exaggeration to write about "sublime heroism" and "imperishable glory" when what they were doing was, so they believed, to bring them immortality? As Sir Roy implies, in precise confirmation of what I wrote, "probably to European minds it will remain unintelligible."—Yours faithfully,

YOUR REVIEWER

SIR—Sir Roy Harrod appears to me to be inferring that the Kamikaze bombers were a *corps d'élite*. Owing to a chronic shortage of aviation spirit, which in turn meant a grossly inadequate flying training programme, the Kamikaze were almost to a man inferior pilots. Their very formation sprang from this inferiority, for their hopes of hitting their targets by more orthodox means were negligible. Their bravery and superhuman patriotism are not in question, but let not the idea of a *corps d'élite* get around; remember that these men, unlike the Few or the Dam Busters, were at base motivated by feelings of inadequacy and inferiority.—Yours faithfully,

Wakefield JOHN W. SHARPE

Resolutions for the Chancellor

SIR—Surely the first job for Mr Heathcoat Amory is to increase the licence duties on motor vehicles? People do not realise the expense thrown on the public by motor transport. Here in Cambridge we have just spent a vast sum on the rebuilding of Silver St. Bridge, on a site without a natural foundation. And now the City Council plans to spend five millions on the Lion Yard scheme.

The Chancellor should make all cars pay a duty according to their horse-power, instead of a uniform charge of £12 10s., even if the owner is a millionaire. High-powered cycles should also pay a horse-power duty, as they are the most dangerous vehicles. Lorries and oil-tankers should pay a progressive duty, because the damage they do increases faster than the weight.—Yours faithfully, J. E. ALLEN

Cambridge.

SIR—With reference to your excellent article in your last issue, may I also add the suggestion that the question of duties on low strength wines imported in bottle should be given consideration?

The duty on N.E. 25° low strength wine, which covers table wines, imported in casks is 13s. per gallon, whereas if bottled in the country of origin the duty goes up to 27s. 6d. per gallon, which makes a very considerable difference to the cost of the wine when it reaches the consumer.

Only the fine wines are bottled in France or Germany, and they are bottled there for the particular reason that they might suffer if shipped in bulk; therefore the duty is really detrimental to the quality of the final product reaching the British consumer, and there seems no reason why there should be this differential in the import duty rates.

This higher rate of duty applies, for example, to fine German estate bottled wines, which just have to be bottled in Germany for reasonable results, and to the leading châteaux in Bordeaux.—Yours faithfully, H. B. PATEN

Paten & Co.,
Peterborough

Rouge et Noir

SIR—On page 18 last week, in the left-hand column there is an interesting account of the growth of the population over the next ten years. I should be interested to know why you feel it necessary to dress this up with extraordinary diagrams in red and black which savour to me of television and the strip cartoons of the evening press.

You recently conducted a readership survey to find out who were your readers. Is one of your discoveries that they cannot read?—Yours faithfully,

London, EC3 CHAS. W. ASTON

Sea Without Salt

SIR—Your item under this heading in your issue of December 26th reviews fairly the recent advances that have been made in the production of fresh water by freezing sea water. But you are in error when you refer to "expensive small scale experiments" in distillation processes being carried out in Guernsey and elsewhere.

This company will shortly commission the distillation plant in Guernsey and this plant will contribute half a million gallons of fresh water per day to the island's water supply. This plant was chosen as the best and most economic put forward in public tender and will cost rather less than one-third of the capital cost of a storage scheme, Furthermore, we point out that of the world's total estimated supply of fresh water by the distillation process we have provided plant producing over 10½ million gallons per day, or 80 per cent of the total. Among these plants is the world's largest installation, at Aruba, which has provided for some time 2¼ million gallons per day.

It is thus far from true that the distillation process is an "expensive small scale experiment".—Yours faithfully,

C. J. BRYAN

G. & J. Weir, Limited,
Glasgow

A Ruhr Merger

SIR—In the last paragraph the item headed "The Secret Life of WEU," on December 26, you state that the High Authority "has refused the latest merger proposal to come from the Ruhr"—that for a merger between the Thyssen and Phœnix-Rheinrohr steel concerns. In fact, the High Authority has not yet taken its decision on the request for authorisation of this merger.

Yours faithfully, D. N. PRAG

Luxemburg

THE WORLD OVERSEAS

Canada's Farm Problems

FROM OUR OTTAWA CORRESPONDENT

ONE, no doubt inevitable, effect of the Agricultural Stabilization programme (which was enacted just before the general election of 1958) is that the Canadian government has become a holder of stocks of farm produce on a scale that has become embarrassing. The government is at last looking for ways of mitigating its plight. But to serious observers the worst aspect of the whole business lies in the outlook behind it, which is equally manifest in other aspects of trade and tariff policy. This Conservative government's approach to tariff policy and to trade negotiations, as to farm policy, has settled down to that of the poorhouse; no principle is discernible save that of "fixing up" those groups which manage to make sufficient clamour. Whether in agriculture or in industry, the amount of "fixing up" shows a close relationship to the votes involved. Nearly everywhere in Canada the rural ridings are heavily over-represented; the urban constituencies are under-represented. This is one reason why farmers have a political power out of proportion to their numbers or their economic importance. In industry a similar freak of the voters' lists puts the textile industry in a commanding political position. It happens to be divided into relatively small units most of which are in quite small country towns; therefore the "textile vote" can be decisive in numerous parliamentary constituencies. Another big industry, like aircraft or electronics, may employ more people, but because these are concentrated in one or two big urban centres they cannot tip more than one or two seats.

THE desperate economic fact, however, is that all this consideration for politically-influential economic groups is shoring up some of the weakest parts of the economy. No similar effort has been made to open up opportunities for those Canadian industries which have some chance of becoming economically competitive—at least in the domestic market, perhaps eventually in export markets, too. The blind alley is becoming increasingly obvious as hopes fade for any more constructive policy. The trouble is that pampering uneconomic producers not only offers no hope of future returns; it actually militates against any chance of finding new opportunities for Canadian industries which have some natural advantages for the struggles of a competitive world. Thus, a new trade agreement with Australia is threatened because the Canadian government is determined to protect a handful of Canadian sheep-raisers, whose contribution to the economy is minuscule and whose costs are approximately double those of Australia and New Zealand. Tariff negotiations with the United States, already being considered in preparation for the next session of the General Agreement on Tariffs and Trade, are going to be clouded throughout not only by the government's reluctance to make any dent in its own protection, but by protective measures already employed (notably in agriculture and textiles) which shake confidence in its intentions.

Appetite grows with what it feeds on. The farm organizations now expect the government to pay them, not only for the man-made fluctuations of markets, but for the weather hazards which farmers have faced from the beginning of time. Since October, when early snowfalls in the prairies prevented the harvesting and threshing of crops, the government has been under strong pressure to "compensate" the farmers. Nowhere is it more vulnerable to such pressure than in the prairie provinces. Mr Diefenbaker is from Saskatchewan; his minister of agriculture, Mr Harkness, is from Alberta; his minister of trade and commerce, Mr Churchill, is from Manitoba. Prairie farmers already have special facilities for getting loans guaranteed by the government: they are covered by the Prairie Farm Assistance Act, which authorises certain payments to farmers whose crops fall below a certain standard. Moreover, no one knows at this time, or can know until the spring, how much of the crop now under snow is lost. Taking wheat as an example (and the most important of the crops), production in 1959 is estimated to have been about 11 per cent above that of 1958. But something over a quarter of it could not be threshed because of the early snow. To judge from previous experience a considerable proportion of this will be fit to be threshed in the spring, though it will suffer in grade. Much may turn out so tough and damp that it can only be used for feed: but no one knows what this proportion will be, or what price feed wheat may fetch.

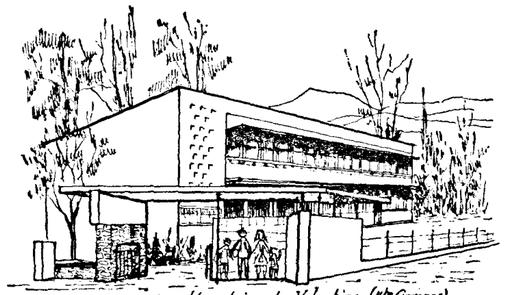
SO far no count has been made of the number of farmers who were able to harvest only half their crop, nor has it been ascertained how many of them still hold stocks of grain on the farm—the surplus from previous harvests which a few years ago was itself used to justify claims for government compensation. But estimates made by "crop districts" show that in Manitoba's 14 districts none had less than half of their wheat harvested and threshed, and only four had less than three-quarters; in Saskatchewan, five out of 20 districts had harvested less than half, but seven had garnered more than 90 per cent, and eleven more than 80 per cent. In Alberta four districts were below 50 per cent and the other four were above 80 per cent harvested. The government has now offered to go fifty-fifty with the provinces (who may not play) in paying $3 per acre to every farmer who has harvested no more than half his crop, with a limit of 200 acres. This 200 acre limit is a recognition that if any farmers are in real distress they will be the small farmers, not the big operators with economical holdings of several hundred thousand acres. So it is the same story of shoring up the uneconomic producers (it is now fully accepted, even by the government, that the future of wheat-growing lies in the huge farms which a few men can operate economically with modern machinery).

Exactly the same course is being pursued in the current attempt to mitigate the now glaring evils of price support. Having accumulated its 200 million lb of pork and million cases of eggs, the government is putting both these commodities under a deficiency-payment scheme. The government will pay the difference between its national average support price and the national average of market prices received: the same payment to each producer no matter what price he gets for himself on the market. These payments are to be made only on the first 4,000 dozen eggs from each producer and the first 100 hogs. Increases in output by large-scale commercial producers, which the scheme of government purchase naturally started, will thus be prevented. But by the same token it will encourage small-scale producers who are the least efficient and discourage efficient large-scale production. This is not a reassuring portent for Canadian food prices. But far more alarming for the future is the fact that it epitomises the "poor fund" economic policy into which the government has lapsed.

FRANCE AT SCHOOL—II

Problems of Reform

FROM A SPECIAL CORRESPONDENT



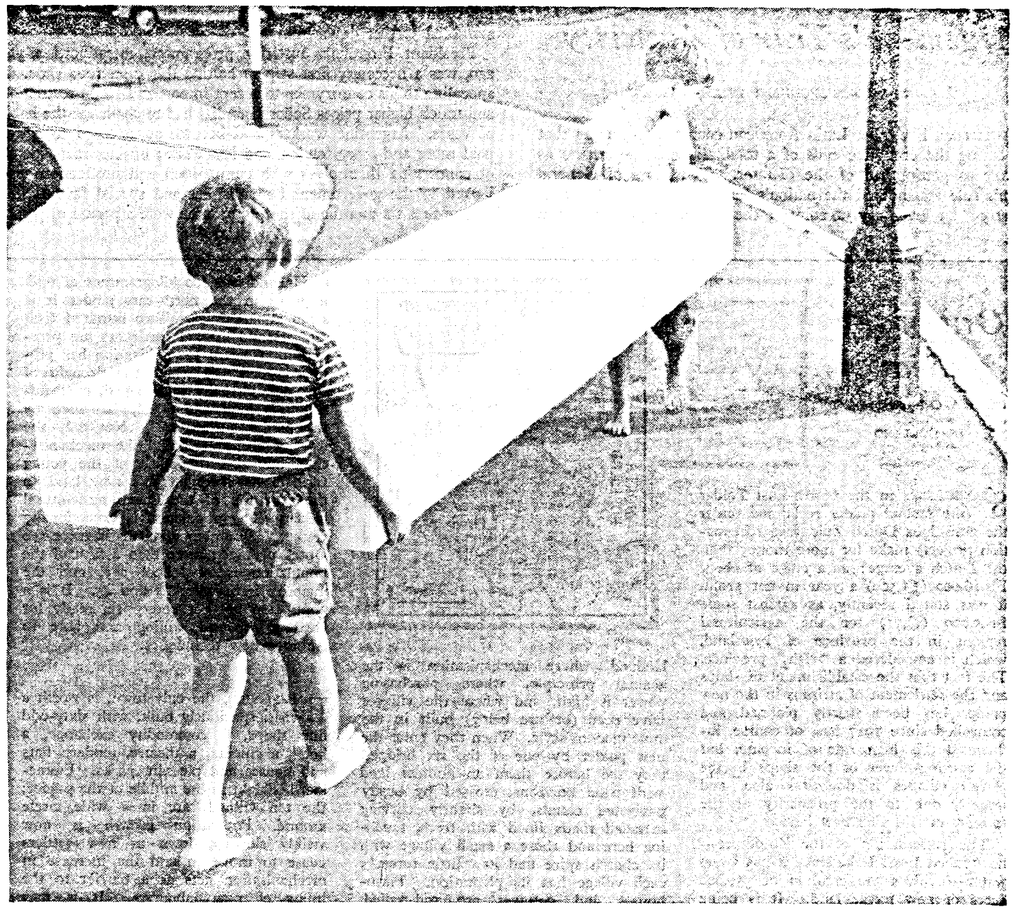
THE French ministry of education is rather weak in arithmetic. How many children, one enquires, are now at school in Algeria? 860,000, said General de Gaulle on November 10th. M. Boulloche, until lately the minister, worked the answer out at 723,000. "About 750,000," hazards one of his officials. Other educational statistics are similarly blurred; but by taking an average of the figures supplied by different sources one arrives at the conclusion that about six million children are now attending state primary schools (the primary "peak" of 6,600,000 will be attained this year), 400,000 are at state technical schools, and 700,000 at state lycées, while 210,000 students are receiving university or other higher education. Private schools—more popular in France than in Britain, chiefly for religious reasons, although the standard of their teaching is generally below that of the state schools—claim 1,090,000 primary pupils, 262,000 in their technical establishments and 440,000 at lycée or (nominally) equivalent level.

Ministerial planners aim to increase university and lycée attendance by 50 per cent before 1967 and to double the number of pupils in technical schools within twelve years. The reform decreed last January will also, they hope, help to democratise French higher education and stanch an intolerable wastage of intelligence and ability. At present only 3 per cent of university students are of working-class origin, whereas 45 per cent are the children of civil servants and members of the liberal professions (who make up only 8 per cent of the population); yet there is just as high a percentage of promising working-class as of middle-class eleven-year-olds, and a higher leaving age, together with improved selection techniques, should reduce the drag of anti-educational parental and economic influences.

For most of their pupils, the lycées are "grammar schools" in a rather narrow sense of the term, with more than half their teaching time devoted to Latin, French and one or two foreign languages. Even English is taught in terms of mechanistic (frequently artificial) grammatical rules and with a blithe disregard of word-frequencies: the aim is, by constant comparison, to improve the pupil's understanding of French grammar rather than acquaint him with Anglo-American language, life and literature. Even French literature is apt to be neglected in favour of grammar and the dissection of disconnected texts. Chemistry, physics and trigonometry are rarely tackled before the fourth year.

Included in the ministry's primary attendance figures are some 480,000 children aged between eleven and seventeen attending *cours complémentaires*. The "CCs," which have expanded threefold since 1946, are the secondary modern schools of France—with the difference that their programme is co-ordinated with that of the non-classical streams of the lycées, to which the brighter third of their pupils are transferred after four years. For this reason, their standing in parental esteem is high. But the fact that, administratively, they are classified as primary schools is eloquent. In

Cours Complémentaire de Valentine (Hte Garonne)



the eyes of many lycée teachers and lycée-trained officials they are cut-rate establishments whose motto is "*faute de mieux.*" Although CCs are generally in modern buildings, most of them lack scientific equipment, tools for handicrafts and even an adequate library. Their teachers, often more devoted and closer to their pupils than their lycée counterparts, earn considerably less and are not infrequently woefully unqualified, parochial and unintellectual. Few CC English teachers can actually converse in English or take the trouble to read Anglo-American periodicals: many are unaware that Americans speak English or that universal suffrage exists in Britain.

These shortcomings are, of course, only one facet of a system that inspires far more hope than despair. They are offset by the quality of much lycée biology, geography, history and philosophy teaching, the high standards many CCs attain in mathematics, and the excellence of the secular moral instruction given by both lycées and CCs. Their interest here is for the challenge they represent to France's educational reformers—and the response it is evoking. The *baccalauréat* and other examinations will from now on lay greater stress on science and oral proficiency in languages. One vigorous ministry team is already mining the barbican of the old-school language teachers and spreading the hitherto heretical direct-method gospel: many an apathetic CC teacher is in for a wholesome shock.* The new *cycle d'orientation* will direct more and more youngsters each year to non-classical and technical studies.

Unfortunately, for budgetary reasons, the first orientation classes are having to be attached to existing lycées and CCs and the mutual *mépris* of lycées and CCs is such in many areas that each establishment will be tempted to keep the most promising *orientés* and foist the remainder on the rival firm. The whole reform must therefore rest on an unsteady foundation until funds are available to build autonomous groups of orientation classes; and it will still be frustrated without more money to increase pay and raise professional standards, augment and improve teacher-training facilities, and provide the expanding lycées and CCs with the laboratories and workshops they need. The education budget has been increased by 12 per cent for the current year, but this will barely compensate for the devaluation of the franc in December, 1958. More substantial increases must depend on the government's ability to solve the Algerian problem and curb the army's spending spree. Yet the reformers are, surely, right to rush ahead, while the climate is favourable to educational expansion, with their plan to "build the machine and then just shame our paymasters into providing the fuel for it." Opportunity rarely knocks twice in a decade for education.

(Concluded)

*In English, the methods of E. V. Gatenby, Michael West and the BBC (*English by radio*) are now officially recommended.

Let's see if it floats!

It's so light, it *must* float . . . Come on, no-one's looking, let's push it in the water . . . Wonder what it's made of . . .

'What it's made of' is 'Styrocell', and the block in the picture weighs a mere sixteen pounds! 'Styrocell' is Shell Polystyrene, expanded into an astonishingly lightweight material, with high thermal insulating efficiency and remarkable buoyancy. The building and refrigeration industries, boat-builders and makers of marine gear, toymakers and producers of exhibition displays . . . all find 'Styrocell' invaluable in a variety of ways.

In packaging, especially, 'Styrocell' is a great problem solver. Delicate goods of all kinds – particularly pieces of scientific equipment which are none the less sensitive for being large – travel perfectly when nested in 'Styrocell', for it absorbs travel shocks far more effectively than does wood wool.

'Styrocell' is a material for which ingenious minds will continue to find new uses – but it is only one product in Shell's wide plastic range. If you are interested in 'Styrocell' in particular, or plastics in general, you should get in touch with Shell Chemicals.

Argentina's Year of Austerity

FROM A CORRESPONDENT IN ARGENTINA

ARGENTINA, like other Latin American countries, is finding that curing the economic evils of a totalitarian regime can be as difficult as getting rid of the dictator. Ten years of General Perón's rule squandered the nation's foreign reserves and left its industry "an inventory of ruins"; the military regime that ran the country from 1955 to 1958 marked time while the economy stumbled further down-hill.

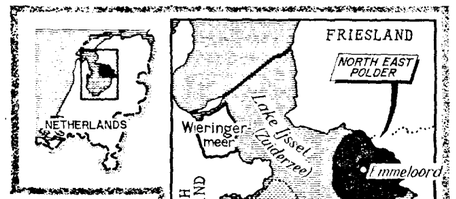
President Frondizi's austerity programme, introduced a year ago, was a necessary first step in halting this disastrous slide. In appealing to his countrymen to accept import and credit restrictions and much higher prices Señor Frondizi had to challenge the habits of years. Argentine workers had become accustomed to getting paid more and more for less and less work; businessmen, instead of concerning themselves with competition and production costs, looked to the government for subsidies and special favours.

The first six months of the programme were a period of painful adjustment to economic realities. A 300 per cent tariff on non-essential articles, such as textiles and cars, cut imports by nearly one-half, and prices, which had been held at absurdly low levels, rocketed to the sky. The price of petrol trebled overnight, bread, sugar and coffee nearly doubled, meat trebled and kept on climbing. The cost of living, which had already risen 50 per cent in 1958, went up by an average of 10 per cent a month during the first half of 1959, while the government firmly held down wage increases.

This drastic reduction in purchasing power made it easy for Peronist trade union leaders to stir up their men against President Frondizi's "programme of hunger." Strikes by railway workers, bank clerks, farm labourers, metal and textile workers followed each other fast, and were accompanied by smashed windows, riots, and an average of two terrorist bombings a day. President Frondizi's Radical Party (UCRI) was badly beaten in several provincial elections, and in June the president himself only survived a clash with his dissatisfied armed forces by bringing into the cabinet, as minister of economics and labour, the right-wing leader, Señor Alvaro Alsogaray.

With the coming of spring (which begins in September in the southern hemisphere) things began to look a little better. Prices, which had been pushed up by speculators early in the year, started to come down. With the establishment of free markets and free foreign exchange, agricultural production began to recover; soap, sugar, and cooking fats reappeared in the shops, and at lower prices. The peso, which had fallen from 38 to the dollar at the beginning of 1958 to 106 to the dollar in June, 1959, went up to 83 to the dollar, and has stayed there ever since. Argentina's credit abroad has improved dramatically; with the help of loans from the United States and half a dozen European countries, the central bank's reserves have risen from $100 to $260 million in six months.

There has also been a change in the country's emotional climate. The violence and racketeering of some labour leaders has thoroughly alienated public opinion; an official of the sugar workers' union has confessed to speculating with union funds, a vice-president of the metal workers' union has fled the country after a bomb he made exploded prematurely in a café, and the police have at last cracked down on window-smashing and terrorism. At the provincial elections at Jujuy in November, the government made an important comeback, with twice as many votes as the next two parties combined; blank ballots, not all of which can be credited to General Perón's outlawed party, accounted for only a quarter of the total.



Now that inflation is checked, and order at least temporarily restored, the government's next step is to expand production. The brightest outlook is in the oil industry. Persistent propaganda, including President Frondizi's own book on "Petroleum and Politics," had made the government oil monopoly, Yacimientos Petroliferos Fiscales (YPF), almost sacrosanct. But after half a century YPF was still able to supply only one-third of Argentina's needs; the rest had to be imported at an annual cost of $300 million; this accounted for all of Argentina's trade deficit last year. Defying the outraged protests from his own party, President Frondizi brought in foreign oil companies to help to develop and expand the fields. Already this complete reversal of traditional policy has begun to yield useful results. Crude oil production is 30 per cent higher than in 1958, and the pipeline from Campo Duran, on the Bolivian border, will reach Buenos Aires this month, six months ahead of schedule. If all goes well, Argentina should have an export surplus of oil by 1961; indeed, it has already begun to export small quantities to Uruguay.

Other aspects of the economy are less encouraging. Transport is the severest problem; the state-owned railways, like the airlines, have run up enormous deficits, and service has deteriorated steadily ever since the British companies were bought out by the government in 1947. Engines and rolling stock are antiquated, and in short supply; a passenger trip for any distance is an ordeal of discomfort, dirt, and delay. The telephone service, also a state monopoly, is equally bad. Newly qualified doctors complain that it may take ten years to get an office telephone, and the average time to put through a long distance call from Buenos Aires to one of the northern provinces is thirteeen hours—if the call gets through at all. Millions of man-hours are wasted by slow and cumbersome bank, post office and delivery procedures. Incompetence, bribery, and overstaffing are still common in government offices, and the drive to cut down the bureaucracy has not gone far. The armed forces have refused to trim their ranks by a single soldier or sailor. Although Argentina has no perceptible enemies, and has not fought a war in 80 years, the navy has bought a second-hand aircraft carrier and some submarines, the air force is planning to buy new jet fighters, and the army has 10,000 officers on active duty, three times as many as when General Perón came to power.

But, given political stability, Argentine resources are large enough to overcome all these handicaps. President Frondizi has so far achieved this stability by a delicate balance of forces. He has disposed of some state industries, but promised to retain others. He has won the support of businessmen by backing his minister of economics, Señor Alsogaray, but has also managed to keep in touch with the left-wing politicians of his own party. He has yielded when necessary to the demands of the armed forces, but confronted them, in the absence of a vice-president, with the spectre of institutional chaos if they force him to resign. An adroit politician, and a lonely, dedicated intellectual, he is fully conscious of the key role he is playing in his country's struggle to recover.

Out of the Sea

FROM A CORRESPONDENT IN HOLLAND

SHOPKEEPERS in the North-East Polder (the second polder reclaimed under the ambitious Dutch Zuiderzee reclamation project) make far more money than the Dutch average: an average of about Fls.16,000 (£1,500) a year in net profit, it was stated recently, as against some Fls.5,000 (£471) for the agricultural regions in the province of Friesland, which is considered a "rich" province. The fact that the establishment of shops and the settlement of artisans in the new polder has been strictly planned and controlled since 1947 has, of course, influenced this high rate of income, but the earning-power of the shops in the eleven villages is doubtless also, and largely, due to the prosperity of the farmers of this rich new land.

The reclamation of the Zuiderzee—now called Ijssel Lake since it has sweet water—involves the creation of 550,000 acres of new fertile land. It is being done in a number of stages. The first two were completed before the second world war; they were the construction of a dike nearly 20 miles long across the mouth between North Holland and Friesland, and the endikement, drainage, cultivation and colonisation of the first of five polders, the Wieringermeer (49,000 acres). The reclamation and cultivation of the big north-eastern section of the Ijssel Lake, the north-east polder (120,000 acres) was a still bigger task which was held up by the war. The polder was dry by 1942, but colonisation and cultivation could only start in 1947. Now, by the end of 1959, the north-east polder is almost fully settled with a hard-working and highly prosperous population of more than 28,000. Apart from a small stretch, it is now fully cultivated.

Many tourists visit this newest and most prosperous agricultural district of Holland, where mechanisation is the general principle, where purchasing power is high, and where the villages have been (or are being) built in the most modern style. When they enter the new polder by one of the six bridges, they see before them an endless land with wide horizons, crossed by busily navigated canals, by slightly curving metalled roads lined with trees, touching here and there a small village with its church spire and its "little forest"; each village has its plantation. Farmhouses and cottages are red-roofed. Hardly a factory chimney is to be seen yet.

The polder has been carefully subdivided in about 1,600 agricultural holdings. Of these, 30 per cent are farms of 30 and 45 acres, 40 per cent are of 60 acres, 10 per cent of 120 acres, and the balance are various (75, 90 and 105 acres). Out of 1,600 farmers, 60 per cent occupy themselves with purely arable farming, 24 per cent with mainly arable farming and 16 per cent with mainly dairy farming. The chief arable crops are wheat, barley, oats, peas, fibre flax, potatoes, and sugar beet. The yields per acre (especially of grains and potatoes) are generally higher than in Holland's other most fertile districts. Dairy farming, too, does well. Thus, the Dutch average of milch cows and cows in calf per 100 hectares is 115, but that for the north-east polder is no less than 241. The average production of a cow in Holland is 4,000 kilogrammes of milk a year; in the north-east polder it is 4,740 kilogrammes. Two hundred fruit growers and market gardeners are prospering. Careful pre-cultivation has produced good soil which the drought of 1959 left virtually undamaged, mechanisation is high and is supplemented by the polder authorities. Not only the fertility of the soil and the mechanisation, but also the spirit of the young farmers has brought this new land to the very top of the Dutch agricultural ladder. The population is exceptionally young: the number of births is twice the Dutch average; more than a fifth of the population is of school age, and the majority is between 25 and 45. It is a population apt for enterprise, ready for hard work, and willing and able to embrace new techniques.

EMMELOORD, the only town, is worth a visit: spaciously built, with sixty-odd fine shops, a commodity exchange, a hotel, a cinema, a theatre, modern flats and houses and pleasant parks. Emmeloord is right in the middle of the polder; the ten villages are in a wide circle around. Population growth is now visibly slowing down as new settlers cease to move in and the increase in mechanisation acts as a barrier to the influx of new labourers. It is now thought, therefore, that the creation of eleven villages was too ambitious; five would have been enough, and the third polder, now in the course of reclamation, Eastern Flevoland, is being planned differently.

The north-east polder does not yet belong to any province but is temporarily administered by the North-East Polder Public Authority, through a *Landdrost* (or governor). The intention is that this polder, together with eastern Flevoland and the two polders still to be reclaimed—south Flevoland and Markerwaard — will eventually form Holland's twelfth province with a capital, "Lelystad," still to be built. Lelystad will then honour the name of the man to whose vision the reclamation of the Zuiderzee is due: Dr C. Lely, sometime Minister of Transport and Waterways, who died in 1929, six years after the first reclamation works had started.

European Harmony in G

WHILE representatives of Atlantic countries discuss the broad issues of trade and aid in Paris in mid-January, experts from the common market countries will be preparing for talks of more detail, but not less importance, in Brussels. In their treaty the Six agreed to a common tariff, which was to be an average of the existing tariffs of France, Italy, west Germany and Benelux. But some key products, where national differences of interest were great, were placed on a special list, "List G," where rates were to be negotiated at a later date. Those negotiations started in the autumn. Enough items have now been settled to enable the Six to hope for agreement by the end of this month on everything but oil.

This progress is of notable political importance. The common tariff is, after all, a key political and economic provision of the common market. Until it is agreed, and in force, the community is no more, in effect, than a free trade area. Because the differences of interest are great—with the Dutch, for example, wanting duty-free imports of raw materials, while the French hope to protect their own producers—it seemed possible that full agreement might take some years. The progress the Six are making belies that fear. Indeed, it will make it easier for them to speed up the introduction of the common tariff, due to start at the end of 1961, should they wish to do so.

The signs now are that as a result of the "List G" negotiations, the complete common tariff as a whole will be somewhere below the average of the four main partners. On certain items (sulphur, for example, where the struggling Italian mines desired protection, the Six have taken the wise course of agreeing to get rid of duties, but to provide joint assistance to redevelop the mining areas. But some of the duties on agricultural products are on the high side. And aluminium, zinc and lead, key products where the French or Italians seek protection, have still to be agreed.

1·1·'60

Why this date will become a landmark in Britain's industrial development

On January 1st, 1960, Britain's largest electrical manufacturer completed a two-year task of re-organisation and reshaping to meet the needs of the future. The last five of AEI's twelve Product Divisions went into action—twelve specialised, non-overlapping manufacturing and trading units under the control of three management companies: AEI (Manchester), AEI (Rugby), and AEI (Woolwich). These three, as the names they bore until this year remind us, embody the traditions and skills of three of the most famous companies in British Industry—Metropolitan-Vickers, British Thomson-Houston and Siemens Edison Swan (with which is incorporated Henley's). Why has this been done? Who benefits?

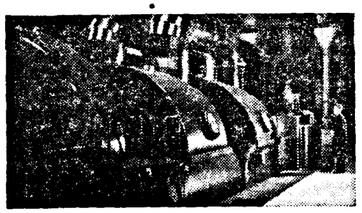
BENEFITS

The advantages of such a re-organisation are obvious—first and foremost, each product division offers its customers the benefits of specialisation in design, manufacture, sales and service. In every field, customers can draw on the experience and resources of the whole organisation, and they will still be dealing with the people they know. Secondly, the vast resources of AEI as a whole can be employed to the full in every field—research, development, design, manufacture, sales and service. Third, there will be considerable economies in the use of plant. Finally, rationalisation of selling arrangements means that customers will have at their service larger sales and technical teams behind each product, at more than 100 Sales Offices in the U.K. and a complete network in 91 overseas countries.

ASSET TO BRITAIN

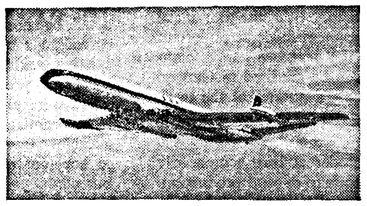
AEI is the largest electrical manufacturer in the Commonwealth—a resourceful servant of the community at home and a powerful ambassador for British Industry overseas. The full list of AEI's product divisions is given opposite. With more than 60 factories, over 100,000 employees, 92,000 stockholders, capital and reserves amounting, in 1958, to £121m and a turnover in the same year of £181m (£56m representing overseas sales), AEI can look back on the famous names of its forbears with pride and look forward to an intensely competitive future with confidence.

The Chairman: Lord Chandos



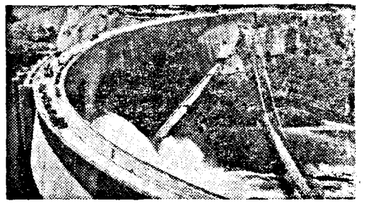
THE CHAIRMAN COMMENTS

On the Future: "This is a new structure to meet a new world."



On AEI people: "We realise that the change of name involves something of a wrench in terms of sentiment for scores of thousands of people, especially those who have already served a long period in the company's service. They have, of course, been informed fully of what is taking place . . .

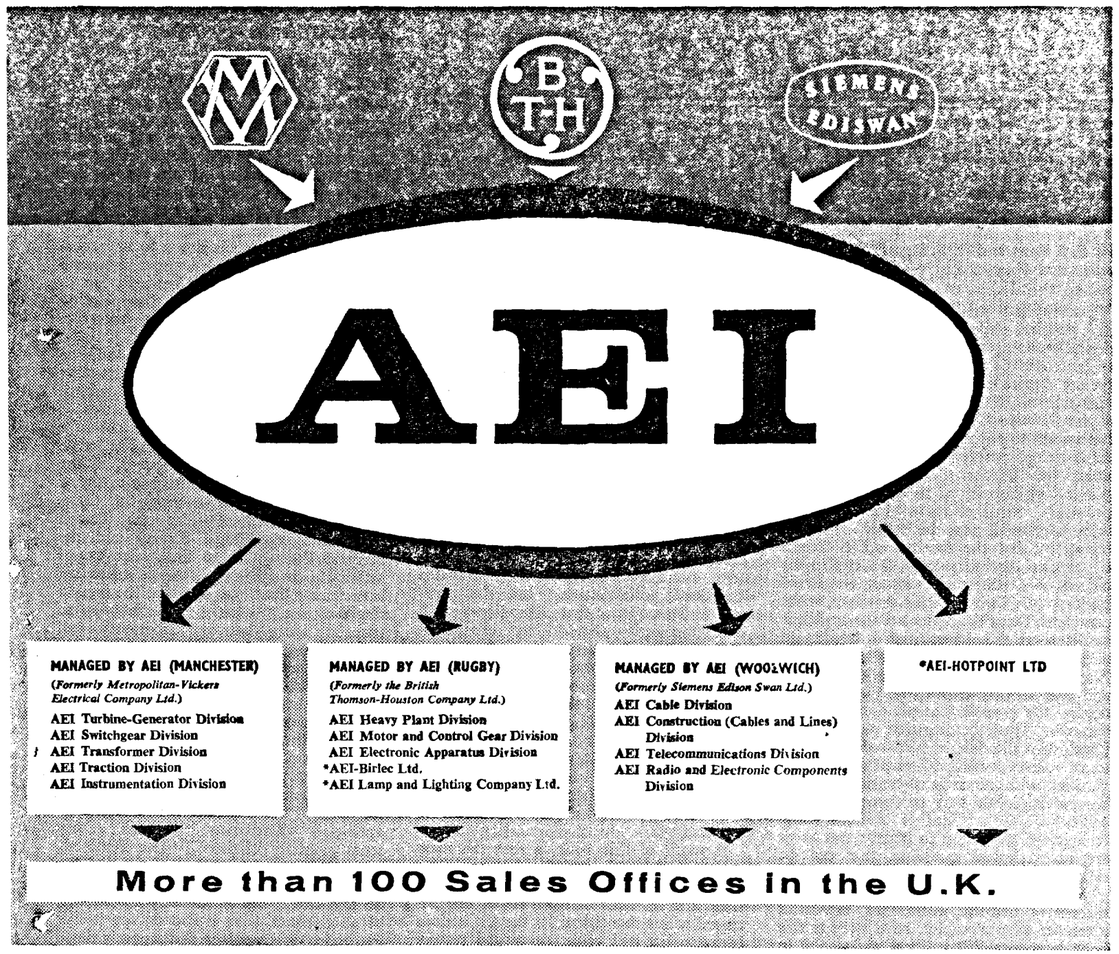
I think they realise that this kind of organisation is necessary to meet the intensely competitive conditions which face us . . ."



On the Divisions: "The whole organisation will be closely knit and will combine the advantages of specialisation in various products with the benefits of the best technical and financial control over all."

One of six AEI turbine-generators—the heart of Britain's largest and most efficient power station at Castle Donington.

AEI makes the complete electrical power system for the Comet.



Kariba Dam, the great hydro-electric scheme on the Zambesi, for which AEI are supplying the six generators, cable and switchgear together worth £4½m.

RESEARCH—THE NUCLEUS OF PROGRESS

Last year AEI spent £5½m on research and development. There are extensive laboratories attached to each of the main AEI Companies, and in addition AEI maintain a fundamental research laboratory in a 180-acre site at Aldermaston Court, Berkshire. Here they operate Merlin, Britain's first privately owned nuclear reactor, and are also making long-term investigations into the possibility of deriving usable energy from thermo-nuclear fusion in Sceptre, a smaller but similar installation to Zeta at Harwell (which was also built by AEI).

TRAINING BRITAIN'S ENGINEERS AND SCIENTISTS

There is no finer testimony to AEI's role in training for the future than the Company's past successes—men like Sir John Cockcroft, O.M., K.C.B., C.B.E., F.R.S., Sir Noel Ashbridge, Sir Josiah Eccles, C.B.E., and Sir Hamish MacLaren, K.B.E., C.B., all trained with AEI, as well as thirteen out of twenty-seven Professors of Electrical Engineering in British Universities and fourteen Directors within AEI.

Trading Companies: there are 13 others in the U.K.

PATTERN OF ACHIEVEMENT

The AEI Companies have an enviable record of technical achievement: they built the first jet engine, powered the first gas turbine ship, developed Britain's first electron microscope, and built the world's first water-cooled generator.

To-day AEI is engaged on some of Britain's largest electrical contracts overseas—turbine-generators, transformers and cable worth £4½m for India's new steel plant; switchgear, transformers and turbine-generators (worth £11m) for the Argentine, and £10m worth of electric locomotives and traction equipment for South Africa. These are important contracts, but a mere fraction of the AEI equipment that is generating, distributing, controlling and using electricity the world over.

PRINCIPAL PRODUCTS

Steam and gas turbine generators
Electric drives
Electric furnaces
Traction and railway signalling equipment
Transformers and switchgear
Power and telephone cables
Motors and their control gear
Electronic apparatus and radar equipment
Industrial controls, instruments and meters
Semi-conductor devices and power rectifiers
Private and public telephone exchanges and other telecommunication equipment
Radio components and cathode-ray tubes
Lamps and lighting fittings
Heating and welding equipment
Electro-medical apparatus
Particle accelerators, electron microscopes and mass spectrometers
Nuclear power station equipment
Domestic appliances

Associated Electrical Industries Limited

BOOKS

Political Philosophy Re-established

Social Principles and the Democratic State

By S. I. Benn and R. S. Peters.
Allen and Unwin. 403 pages. 32s.

FROM Plato until fairly recent times political philosophy has been in some degree a conceptual inquiry into the nature of government and authority, and to a much greater degree a moral inquiry into social and political ideals. The so-called "philosophical revolution" of our time, however, has set out to purge from philosophy everything except conceptual inquiry, and in so doing has advocated the removal from political philosophy of its most interesting problems. Some of these, the revolutionaries have said, may be solved by social scientists; but the fundamental problems of political morality must be settled by citizens and statesmen without benefit of philosophy. The revolution, however, is not complete. There are regions of the academic world where the old tradition is handed on as if there had been no revolution at all. Elsewhere, there are sociologists, historians and even literary critics who endeavour to occupy the ground that philosophers have vacated. Thus the situation remains confused, with the danger that students of the social sciences will pass through the universities with no serious consideration of how social ideals may be formulated and criticised. Generations of cautious social technicians may cease to believe that there are non-technical questions that can be rationally discussed.

Mr Benn and Dr Peters, the former a teacher of political institutions, the latter a teacher of philosophy, have written this book to re-establish political philosophy in a renovated but still recognisable form. Conceptual analysis plays a large part in it, but is subordinated to rational moral criticism. Morality, they hold, is essentially rational, and is concerned with the impartial application of practical rules which men have freely and critically accepted. Like Kant, they deduce from the very conception of morality the formal features of an ideal society, as one in which every member is respected by the others and in which the only discriminations are those based on morally relevant differences between them. They agree with Kant, too, in accepting the principle of autonomy, that is, the principle that the only moral rules of conduct are those accepted after rational scrutiny by the individual who subscribes to them. Unlike Kant, however, they are utilitarians, accepting the view that what in general justifies moral rules is the happiness they bring. Kant, of course, considered that the principle of autonomy was incompatible with utilitarianism, since utilitarianism is the very model of heteronomy, just because it regards moral rules as subordinated to the happiness which conformity to them is held to produce.

The authors of this book try to reconcile the principle of autonomy with utilitarianism in two ways. In the first place they argue that Mill was right when he said that happiness is not an end or result to be achieved by conformity to moral rules, but something to which moral activities belong as parts. But if this is so, then happiness would surely have as "parts," and not merely as causes, activities which in themselves are positively painful, and this is hardly compatible with utilitarianism. In the second place, they argue that utilitarianism is concerned with the relief of unhappiness rather than with the promotion of happiness. But it has been pointed out that this "negative utilitarianism" has the paradoxical consequence that unhappiness could and therefore should be eliminated altogether by the destruction of all conscious beings. If the objection to doing this is that it would prevent a great deal of happiness too, then negative utilitarianism has after all been subordinated to positive utilitarianism. However that may be, Mr Benn and Dr Peters, in their discussion of political ideals, apply both the Kantian and the utilitarian criteria, and may well claim the support of common sense for doing so.

A merit of this book is that the main topics of rights, justice, freedom, equality, authority, the state, associations within the state, and relations between states, are discussed with a due regard for the distinctions between fact and value, cause and reason, logic and experience, which contemporary philosophy has emphasised. Furthermore, both the analyses of political concepts and the political casuistry are illustrated by well chosen examples. The authors are well disposed towards the welfare state, which they regard as a contemporary working out of rational morality as they understand it. But although they make some interesting criticisms of Professor Oakeshott's neo-conservatism, they seem quite unaware of existentialist objections to egalitarianism. A Frenchman or a German, therefore, might find the book parochial. An American would consider that the political implications of commercial and industrial institutions receive too little attention. Trade unions are briefly considered, but nothing is said about joint stock companies. The more docile English will recognise in it a detailed formulation of the ideology of our most influential publicists and politicians.

Research to Prosper

Science in Industry

By C. F. Carter and B. R. Williams.
Oxford University Press. 196 pages. 21s.

THE interplay of science and modern industry is an epic subject crying out for a chronicler who can do for applied science what Sir Charles Snow has already done for the language and mores of scientists. There is so much dross to be refined away, so much jargon to be peeled off like layers of varnish without damaging the canvas beneath, that it is hardly fair to call Professor Carter's book disappointing just because he does not choose to tackle such an all-round Herculean task.

He writes instead for a special audience of "The Doubters," those who admire what they would call the achievements of science but who look on scientists themselves as potential troublemakers who, for the sake of industrial peace, must be caged in sterile laboratories away from the rest of the works. This is the third and last report of the 37 strong Science and Industry Committee formed jointly by the British Association, the Royal Society and the Nuffield Foundation to find what causes technical change in industry. Reading between the lines, one sees that the biggest single barrier to change is the inability to transmit ideas—between laboratory and management, between company and company, and industry and industry; a great deal of what Professor Carter has to say is concerned with this.

How much represents the joint authors' views on the place of research in British industry and how much those of the committee is for the reader to decide. Certainly the book contains some crashing platitudes for which the authors feel obliged to apologise: "The recommendations . . . may seem painfully obvious." The Doubters, however, need the comfort of the familiar phrase. They are immensely reassured to be told that "British industry should first of all think of what it can do for itself." Platitudes rightly chosen and properly timed are an important tool in communicating ideas, whatever they do to style or readability.

Professor Carter knows there is not much he can tell the giants of industry, the ICIs, the Shell Petroleums, about the place of research in the running of their businesses so that the greater part of his attention is concentrated on the small to medium-sized company anxious to respond to the call of the grass roots whispering that there will be no prosperity without progress, no progress without change, no change without research. The core of his advice, the most important non-platitude in the book, is that it requires a good deal of skill and judgment to see that a company gets its money's worth out of a research department. Both the planning of a research programme and its tailoring to a company's resources require considerable business acumen; in one tart chapter Professor Carter warns small businesses that if they persist in giving top jobs to their relations this is one thing that the company will not have.

The report was written before the creation of a Science Minister without a ministry—an arrangement that Professor Carter would probably condemn as a typical piece of "policy-making" that "tends to go no further than a statement of generalities." But has he himself drawn up anything that could be called a brief for a Science Minister? He has some sensible things to say about education, including a plea for more scientific bias to general education—not the same thing as training more scientists. He is rightly disturbed about the teaching of mathematics—both the shortage of teachers and the fact that something seems to be very wrong with their method of teaching. He believes in government responsibility for fundamental research, as distinct from applied research, which he considers the responsibility of industry. But when industry cannot or will not take on the job of applied research what does Professor Carter suggest? State development corporations and state loans for small businesses, in spite of the number of government institutions already charged with helping, encouraging, advising and lending money to anyone and everyone from the back-yard inventor upwards. Why? Just because the committee "thought that some of the institutions concerned with the supply of capital tended to be over-confident in their ability to make a valid technical assessment of projects placed before them, and it would not surprise us if some frustration of technical progress is caused by their mistakes"? To which the only printable answer is Oh Yeh?

The Facts About Welfare

Income and Economic Welfare

By S. G. Sturmey.
Longmans. 218 pages. 21s.

To call a book useful but undistinguished may be to give faint praise but assuredly should not be to damn. Mr Sturmey's book is very useful indeed. Clearly, comprehensively, and in sound logical order, it gives the institutional and statistical data most relevant to the assessment of economic welfare and to informed discussion about the means of increasing it. On population, production, employment or unemployment, the national income, price level changes, earnings differentials, trade union structure, the social services, taxation, the reader in search of facts and historical perspectives is excellently served; and while Mr Sturmey does not pretend to provide an introduction to economic theory (let alone the philosophical disquisition on Utility and All That which his title might suggest) the students for whom his book is primarily meant can be reasonably assumed to have one or more of the standard elementary textbooks at hand. Unlike so many newcomers to the overcrowded textbook field, "Income and Economic Welfare" meets an unmistakably felt want.

Having said so much, a reviewer may feel free to express disappointment amounting to exasperation at Mr Sturmey's neglect—deliberate or merely for want of seeing them—of his opportunities. Not the opportunity of weaving in some theoretical matter, though just a little here and there would have helped the student to key in what he learns here with what other sources provide, and saved the uninformed general reader from missing points or drawing fake conclusions; one must (unless one is an American associate professor with 800 pages to play with) draw the line somewhere. The opportunity is rather that of imparting some scintilla of the intellectual excitement proper to a region where ethics and politics, history and technology, the calculation of means and the judgment of ends, all have their rights. In Mr Sturmey's closing pages one or two "talking points" about the relationship between economic and general welfare are presented briefly and without emphasis, and in the last sentence of all there sounds a muted echo of Professor Galbraith's "Affluent Society." Otherwise, all is unexceptionable cliché, the lowest common denominator of Butskellite social philosophy—honestly enough identified, it should be said, as "one point of view . . . neither absolute nor final."

A textbook, of course, should not be a pamphlet for a confession of its writer's social faith; but it can—indeed on such a subject it should—convey something of the quality of clashing opinions and ideals and the ferment of unsettled questions, even if this is only done in the most detached reporting style. Nothing of this vivifying and stimulating quality is perceptible in "Income and Economic Welfare." It has solid qualities; it will save its readers from a number of nonsensical misapprehensions; it deserves, and will no doubt have, practical success. But it has the flavour rather of polytechnic than of university studies.

Technique of Persecution

Political Prisoner

By Paul Ignotus.
Routledge. 208 pages. 16s.

THE father of prison literature was Silvio Pellico with that unsurpassed masterpiece of his *Le mie prigioni*, which became a household word in Italy. But there is no doubt that Mr Ignotus has made a special contribution that is not so much theatrical as operatic. Think of *Fidelio* with love tapped through the prison wall. And, in the sequence of his story, the whole thing is completely credible as well as being true.

Wrestling with the awful similarity between Fascist or Nazi and Communist techniques, Mr Ignotus also provides an important answer to the question of whether there is any fundamental difference in their creeds and experience. "To believe in Communism was an error," he writes:

> no less detrimental perhaps to millions of people than belief in Fascism; but, unlike Fascism, it was a fruitful error. From former Fascists humanity has learned nothing except perhaps the art of dissimulating their pasts. From former Communists humanity has the art of being anti-Communist intelligently.

There is a difference in the techniques too. Mr Ignotus puts an end to the mystery of the confessions in Communist prisons; everyone confessed the most fantastic rubbish because there was really no alternative. Yet if Gramsci and Ossietzky were killed slowly but deliberately,—the alternative phrase applied in one period to Mr Ignotus was to "rot alive"—neither the Fascists nor the Nazis found it necessary to persecute them for what they were not; it was sufficient to persecute them for what they were. If Mr Ignotus makes several things clearer than they were before, he does not explain why Communism involves its secret police agents in the tortuous nonsense of confessions that have to be turned inside out every time the Communist wind shows a change of direction. Could it be partly because Communism was originally based upon a conception of human justice, while the other totalitarian creeds were proud to be unjust?

Trafalgar Told Again

England Expects

By Dudley Pope.
Weidenfeld and Nicolson. 368 pages. 25s.

THE claim made on the dustjacket of this book is so excessive as to be misleading. "Now Dudley Pope tells for the first time the complete story of the year 1805,

The Theory of the Growth of the Firm
By E. T. PENROSE
A Study of the questions: Is there an optimum size of firm? What limits, if any, are there to the growth or size of firms? Does the continued growth of the larger firms make increasing concentration of industry inevitable? 35s. net

Capital, Interest and Profits
By B. S. KEIRSTEAD
The author carries forward concepts developed in his Essay in the Theory of Profit and Income Distribution and reconsiders the Theory of Capital and distinguishes between profit, interest and returns to stock. 22s. 6d. net

Agricultural Marketing Policies
By G. R. ALLEN
Compares experience in the various countries and breaks new ground with an analytical framework which is badly needed for this subject. 42s. net

Co-operative Organisation in Tropical Countries
By SHEILA GORST
A study of the spread of the co-operative movement during the ten years following the last war in the twenty-eight non-self-governing territories for which the United Kingdom was responsible. 25s. net

BASIL BLACKWELL

ending with the victory at Trafalgar." One would have thought that there were few periods in our history that have been more comprehensively surveyed by historians. And as for the battle of Trafalgar, no naval action in the history of the world has been described so minutely or so often. Mr Pope, who devotes nearly half his book to the battle, has no revolutionary interpretation to offer and no reader will quarrel with him on that account. The story is so good that it will bear re-telling. Extravagant claims of originality do no service to a work such as this.

The book might indeed have been better if it had confined itself more rigidly to the Trafalgar campaign. From the start it is clear that this is where the author's heart is. And when we actually get to the battle he adopts a straightforward narrative method that is much better suited to his matter than the flashbacks, the digressions and the somewhat shallow generalisations which distend the earlier chapters. As a historian of the period Mr Pope leaves much to be desired; even granted the limitations of his knowledge he might have taken more care. On page 99 he makes nonsense by writing "Villeneuve" when he means "Gravina" and on page 270 he twice misspells the name of a French ship. As a writer he is at his best when he tells a plain tale plainly. But too often he writes in clichés, mixes his metaphors and mislays his grammar.

In spite of these faults, the book has its merits. There is much effective quotation from contemporary sources; the account of the battle is generally clear; and the author's knowledge of practical seamanship is everywhere put to good use. The plans and illustrations are abundant and informative, but the index, which consists of strings of page numbers, is not good enough in a book of this price.

Both Poles

The White Road: *A Survey of Polar Exploration*
By L. P. Kirwan.
Hollis and Carter. 384 pages. 30s.

THERE are a number of histories of polar exploration. What is the justification, beyond bringing the story up to date, for another? In this case (for this survey, as it is modestly called, will certainly be classified with the histories), there are two. The first, and less important, one is that both polar regions are included; the book has therefore a wide scope, causing problems of presentation which have been skilfully solved, but at the same time uniting two streams of human endeavour that obviously have much in common. The other, more important, justification is the attention paid to motives, to the relation between exploration and politics, for example. It takes three to make an expedition: the explorer himself, his sponsor and his expert adviser, for the explorer alone cannot succeed without financial support and the best technical aids of his time. Too often in histories of exploration all the emphasis is on the narrative of discovery, and the part of the sponsor is overlooked. Yet this is really the core of the matter. What are the reasons that have made men do these very remarkable things? Personal fulfilment is the answer generally given, but there is very much more to it than that.

Mr Kirwan is modest about his own lack of polar experience, but his position as Director of the Royal Geographical Society equips him admirably to write a book of this sort. Hugh Robert Mill, the Antarctic historian, used the same vantage point to good effect. The society has played a most important part, largely behind the scenes, in nineteenth and twentieth century exploration, and its archive has been effectively used in this study.

The most difficult part in writing a survey like this is clearly the problem of selection and balance. Here the author has been markedly successful. The familiar landmarks are all to be found, but both at their level and below some thoughtful changes have been made. On two small points only can issue be taken: the expedition of Captains Wood and Flawes in 1676 may have been "futile and farcical" in some respects, but Wood's description of permanently frozen soil is the first in the literature; and, secondly, two sentences are really too little for the Russian Great Northern Expedition, which lasted from 1733 to 1743 and employed 977 people. It is also going too far to say that in 1596 "there was no reason why the Dutch should not have anticipated by nearly 300 years the navigation of the north-east passage"; apparently favourable ice in the entrance to the Kara Sea does not allow any conclusion to be drawn about the ice for the remaining 90 per cent of the distance.

But for a book of this nature and size, faults are much less easy to find than might be expected. The book will endure, not only because it is a well-balanced historical outline, but also because it provides a new and interesting perspective.

Guide to the Underworld

The Books at the Wake: *A Study of Literary Allusions in James Joyce's "Finnegans Wake"*
By James S. Atherton.
Faber. 308 pages. 30s.

THE words and phrases in "Finnegans Wake" carry a vast load of literary allusions. It cannot be fully understood without an appreciation of those allusions, and the better they are understood the greater the fun of reading. But unlike Eliot in "The Waste Land" Joyce did not provide footnotes. He could not have done so had he wanted to, and he did not want to. These basic facts are now sufficiently widely understood for the question of how to cope with the allusions, culled from Joyce's enormous and miscellaneous reading, to be one of more than specialist interest. In fact the ultimate standing of "Finnegans Wake," as a standard classic or as a mere sport of literature, depends on whether the question can be solved.

There are three main approaches. For all of them a fairly wide acquaintance with English literature is essential. Otherwise the reader might as well not start. The first method is simply to read the book with concentration but without external apparatus, making the best of such allusions as are understood at first sight. (They are almost all comic in effect and a large proportion of them are comically brilliant.) There is plenty of fun to be had this way, but a large part of the book has to be left uncomprehended. The second method is to make use of dictionaries, original texts and all the existing published material on the allusions. This is scattered all over the place. But there are respectable concentrations of it in articles by Mr M. J. C. Hodgart of Cambridge, the book "A Census of Finnegans Wake" by Adaline Glasheen at Northwestern University in the United States, and now Mr Atherton's very useful work. The main trouble with this method is that, outside these main sources, it is very time-consuming, vast amounts of irrelevance having to be gone through to uncover a few grains of enlightenment.

A third method might be a co-operative effort by readers of "Finnegans Wake" to pool their knowledge and make it available in a sort of running dictionary. This would be businesslike but might destroy much of the fun of discovery.

Mr Atherton follows something between the first and the second approaches. His book includes an alphabetical list of literary allusions, arranged under authors' names, but most of it consists of chapters on the main source-books—Vico's "New Science," the works of Swift, Lewis Carroll and so on. It is all very workmanlike, admirably knowledgeable and valuable to specialists. For the general reader it is a matter of kill or cure. "Books at the Wake" will either frighten him away from "Finnegans Wake" for ever, or lead him on into the realms of delight.

OTHER BOOKS

THE EXPERT AND THE ADMINISTRATOR. By Jaleel Ahmad. *University of Pittsburgh Press.* 52 pages. $1.00.

An analysis of the respective functions of the specialist and the non-specialist in administration today.

THE SCHOLAR AND SOCIETY. Bulletin No. 13 of the Committee on Science and Freedom. 144 pages. Gratis.

This considers the basic principles of academic freedom, with reference to new or expanded universities in Africa and Asia.

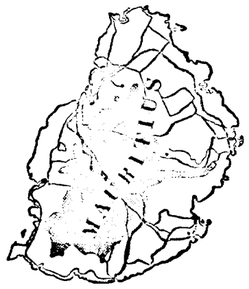
THE MAORI KING.
By John Gorst. *Oxford University Press.* 309 pages. 25s.

A new edition of the 1864 classic on the early history of New Zealand.

BRITISH FILMS FOR BRITISH AUDIENCES

ASSOCIATED-REDIFFUSION

the London weekday Independent Television Company has bought Independent Film Distributors Ltd. The assets which have been acquired include a considerable number of post-war British first-feature films. These films, which include such outstanding successes as 'African Queen', 'Richard III', 'Moulin Rouge' and 'A Kid for Two Farthings', will be available to British Television and continue to be available to British cinemas.



ARTISTS APPEARING IN THE FILMS INCLUDE:-

island OF sweetness & light

What is Hawker Siddeley doing here?

Sail south across the Indian Ocean and, 550 miles east of Madagascar, you'll come to the sweetest island in the world. Mauritius. An island where half a million people live and work and read—by sugar! □ Mauritius depends on this one main crop. Sugar supplies work, trade, light and heat. For Mauritius, without fuel or any source of power, solved its fuel problem by burning 'bagasse', the fibre that remains after sugar cane is crushed. □ 'Bagasse' is burnt to drive the turbines that supply power to sugar crushers, and the same turbines provide a 'bonus' of light and heat to the island. □ Turbines to provide power and light for Mauritius were made and installed by Hawker Siddeley Brush Turbines. Hawker Siddeley power, from a complete generating plant to a small engine, is at work all over the world. Wherever, whenever you have a problem concerned with power it will pay you to tap the resources of the Hawker Siddeley Group. There is a representative wherever you need him. **HAWKER SIDDELEY GROUP**

THE BUSINESS WORLD

Trustees and Investors

THE proposed reforms in the investment powers of trustees, summarised on page 1255 of our issue of December 26th, have far-reaching implications for three groups of people: trustees themselves, beneficiaries under the trusts, and all investors. The stock exchange was quick to anticipate in a big way the effect of switches from gilt-edged to ordinary shares that will become possible. Perhaps too quick, for how much switching will in fact take place? No one can know, but a study of the available information suggests something less cataclysmic than many people have assumed.

But the facts are painfully few. Moneyed men have in the past shown a great inclination to tie up, by a trust instrument, money they have given or bequeathed, whether to a public charity or privately to family or friends; for private trusts, the common law sets a limit to the length of time that the dead man's writ can run, to a life plus twenty-one years. The only information about private trusts comes from the Public Trustee. He now looks after about 15,000 trusts with an average value of £12,000. Thereafter all is guesswork. Of the big banks probably each one handles a larger number of trusts than the Public Trustee; and the majority of trusts, by number, are managed outside these institutions altogether. Those in the best position to know are prepared to hazard a guess that there might be up to 800,000 private trusts in Britain, with assets of the order of £5,000 million—but they emphasise that they are guessing, and the outsider might be forgiven for thinking that they have put the figure too high. Nor is there any comprehensive information about charities. In 1952 the Nathan committee stated that 110,000 charities, owning securities amounting to £200 million, were known to the Charity Commissioners; but the commissioners are the first to admit that their knowledge is far from complete. In 1957 a survey organised by Professor Victor Morgan estimated the assets held by charities at £1,600 million, with £700 million in gilt-edged and £200 million in equities.

Trustees have never been absolutely debarred from investing in equities. The instrument could always enable them to do so, though sometimes subject to a percentage limit; in other cases, trustees have been given full freedom to act as a "beneficial owner." In trusts set up in recent years it has become the rule rather than the exception to include equities. But most of the old trusts either specified that investments should follow the Trustee list, that is government securities and those of local authorities, or else made no investment stipulations at all (in which case trustees who invested outside the Trustee list were personally liable for every such venture that went wrong even if a hundred went right).

EVEN these older trusts could be invested in equities, either through agreement among all the life tenants and the remaindermen (difficult to secure in practice) or, since 1958, by obtaining the court's consent under the Variation of Trusts Act. Some of the larger trusts have taken advantage of this facility. The long queue of applicants will now be dispersed by the new legislation, which will enable the trust that is not otherwise instructed to invest in all categories of securities and up to 50 per cent in ordinary shares, unit trusts, preference shares, convertible debentures and shares in building societies together. Not many trustees, or local authorities for their pension funds, would seek greater powers. It should be emphasised that if a trustee wants to buy, say, some industrial preference shares to get more than the gilt-edged return, he will have to make do with a correspondingly smaller proportion of ordinary shares.

The Public Trustee, Mr R. P. Baulkwill, estimates that slightly more than a quarter of the funds (by number, but more by value) administered by his department are already free to invest in equities. In his office he is responsible not to the Treasury but to the Lord Chancellor, and he is not under any departmental influence in his investment policy. The equity holdings of funds under his care now have a market value of about £90 million. This compares with trustee investments of some £150 million market value (the Radcliffe committee showed the Public Trustee's nominal holdings of gilt-edged at £350 million, and those of the banks' trustee departments at £440 million). If the proportion of all private trust funds eligible for equity investment were also around a quarter, it would follow that the amount of gilt-edged investment to be freed for switching by the new Act may possibly be around three thousand million. It will also be clear, for reasons given below, that by no means the whole of this would be switched.

The principles of the proposed reform will command wide acceptance. The worth of the old Trustee list was killed by inflation and the new world of prosperity. Its protection was no longer for the beneficiary but for the ignorant or lazy trustee. Testators and trustees with the interest of beneficiaries in mind got as far away as they could from such outmoded forms. Now the revised rules can once again be an influential and helpful guide.

Yet, in studying the proposed rules, some thoughtful observers question whether there is need in modern circumstances for any statutory stipulations at all; in many American states, it is pointed out, the trustee's reponsibility to act as a "prudent man" stands on its own quite satisfactorily. This school fears in particular that if the law decrees that trustees shall invest only in quoted companies of a minimum size, trustees with particular local knowledge would be deterred from making investments which would prove highly profitable for the beneficiaries. But this is rather like arguing that because certain skilled drivers could travel safely at 50 miles an hour through built-up areas at midnight the speed limit is anomalous and harmful generally.

SOME statutory safety rules still seem desirable, though admittedly the principle of a wide investment choice makes it much more difficult to draw the limits of precaution. The regulations proposed in the white paper, which the Treasury regards as a basis for discussion, will benefit from amendment at a number of points. The most general comment is that they are rather lax. Thus investment is permitted in shares of any quoted company with a paid up nominal capital (a dubious concept) of more than £1 million, provided it has paid a dividend for the last five years. A better dividend criterion was suggested by the Nathan committee seven years ago, of not less than four per cent in the last ten years.

Under the proposed regulations, investment by trustees in any marketable securities (including gilt-edged) would be allowed only on written advice from "a competent professional financial adviser such as a stockbroker, accountant or bank manager." That cool definition has left few eyebrows unraised. Investment analysts, in London and Cambridge, are understandably aggrieved, not to speak of solicitors, while bank managers are repeating their old reminder that they do not give investment advice—even the banks' trustee departments rely largely on advice from stockbrokers for investment of the huge funds under their care. Then there is the vital question of whether written advice to a trustee involves legal responsibility for action taken on that advice.

These difficulties will not be easily solved. Some stipulation about professional advice is clearly desirable, simply because the widening of investment powers involves a fundamental change in the responsibilities of the trustee. Where traditionally he simply decided the appropriate length of his investments and chose from the gilt-edged list accordingly, now he really needs to understand the stock market and to keep abreast with all the changing influences affecting it. The day of the lay trustee on his own may be over, and the professional who gives him written advice might prefer the formal status of co-trustee.

It seems likely, therefore, that the institutions that act as trustees—that is, primarily, the banks and the Public Trustee—will attract a larger share of trust business. The banks might then consider whether they should not do more of their own investment analysis. And beneficiaries of small trusts would gain if the institutions were permitted by the new legislation to pool investments (made on behalf of small funds particularly) on common trust (or unit trust) lines. This is the course proposed by the Pearson committee for investment of Funds in Court (comprising the funds of widows, infants and lunatics). Individual trustees are also likely to be attracted to unit trusts; the M & G group is forming a special unit trust for charities, which will be able to pay its dividends gross.

WHAT, then, are the likely effects of freedom for trustees on the equity markets and on gilt-edged? Theoretically they could be very large. If, taking the value of "untied" private trusts in the region of £3,000 million (and that guess must surely be in the upper limit) one assumed that one-fifth of trustees were to decide to take immediate and full advantage of their new powers and switch 50 per cent of their funds into equities, this would involve, on this very tentative figuring, a switch out of gilt-edged of £350 million. But many trustees will shrink from any such move. In current conditions, it would mean an appreciable loss of income, perhaps averaging one-third. Where a widow now receives, say, £700 a year, many trustees would not feel justified in slashing her standard of living in the next few years on the chance, or even the well founded hope, that her children will eventually enjoy a much bigger capital fortune. Fixed interest debentures, on the other hand, will rank as an alternative to the old trustee securities, and a switch into them will increase rather than diminish present income.

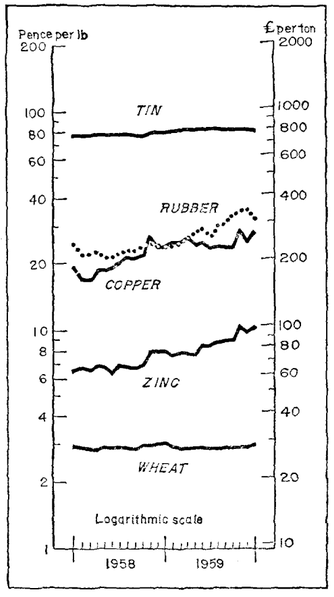
Trusts in which the life beneficiary is a surtax payer may prefer to look to the long-run future rather than the present, and so may some charities. Many of the big charities, however, already enjoy powers to invest in equities, while the great mass of charities (of the half-ton of coal for six deserving widows kind) are too small to do so; perhaps half of them have an annual income of £25 or less. Thus the second reason for taking a guarded view of the immediate impact of freedom is that those trustees most anxous to exercise freedom have already secured it.

If this reform had come ten years ago matters would have been very different. Even though the equity had then been less widely embraced, investment considerations were more fundamentally in their favour. Gilt-edged were not only depreciating in real value, but their yields were still low. Today, the combination of more stable prices and relatively high yields (which gives some protection for future capital value as well as income) has swung the balance perhaps further in their favour than the investing public, with its instincts formed as ever by past rather than present experience, has yet recognised. In these post-election months equities have been all the rage. But if, when the new trustee powers become law (perhaps by the end of the summer?), the market has behind it any substantial record of decline, cautious trustees (and trustees are bound to be cautious) may see more reasons for taking their new freedom slowly.

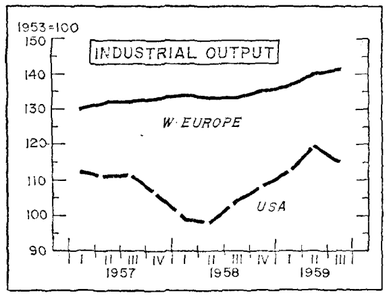
This remains a momentous landmark in investment history, setting the final seal of approval on the ordinary share as a medium for investment. But this seal of recognition has not changed the nature of the different investment media. Shares remain a direct stake in the risk as well as in the profit of enterprise, while fixed-interest remains fixed. Support for gilt-edged demands that the authorities maintain, and are expected to maintain, the value of money. But the fact that this brave reform has been undertaken has surely to be accepted as evidence of that determination. Henceforth, gilt-edged must be made to compete—and that is all to the good.

What Next in Commodities?

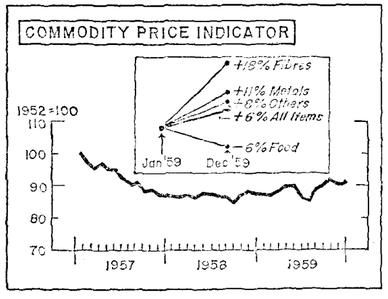
Primary producers will probably fare better this year—though not as well as they would like



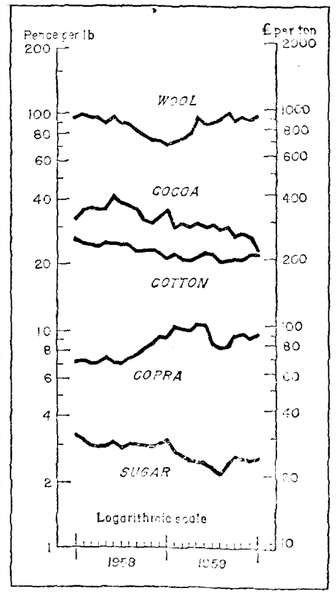
WESTERN prosperity did not bring great joy to primary producing countries last year. Other people never had it so good, but not they. Their export earnings generally increased, sometimes substantially; but this was the result more of a larger volume of sales than of a sharp rise in prices. The seventeen items which make up *The Economist* commodity price indicator rose on the average by six per cent in 1959, and are now nine per cent above October, 1958, when commodities touched a nine-year "low." Last year's advance was unsteady as well as modest; the indicator rose from 87¼ (1952 = 100) in January to 91 in May and relapsed to 85½ in July; then, after rallying to a peak of 92 at the end of October, it closed a little lower at 91¼.



Most primary producing countries must have hoped for some sharper recovery. Industrial production in the United States and Western Europe reached new peaks last year. By June, before the strikes in steel and copper, American industrial production had climbed 26 per cent above the trough of the recession, and apprehension of the strikes themselves prompted a large laying in of stocks beforehand; in Western Europe industrial output was already eight per cent above the 1958 trough by August. What, then, explains the limited recovery in commodities?



One explanation certainly is the weakness in foods; those in the indicator dropped by six per cent last year. Cocoa and coffee fell by 25 and 15 per cent respectively, pushed down by growing output; sugar recovered in the second half of the year, but was still cheaper at the end than at the beginning; wheat and coarse grains fell slightly over the year. Without the food items, the indicator would present a much more encouraging picture, with a rise of 13 per cent in 1959.



Fibres set the pace with a rise of 18 per cent; this was largely due to the recovery in wool, though cotton, jute and sisal all finished the year higher than they began. The metals rose by 11 per cent and the miscellaneous group, consisting of rubber, copra and crude petroleum, ended eight per cent up, with a sharp rise in rubber partly offset by declines in petroleum and copra. Even the industrial raw materials would not have fared as well as they did without help from special factors. World exports of tin were restricted to enable the International Tin Council to run down its stock. Copper prices were buoyed up first by heavy buying in the United States in anticipation of strikes in the summer, and then by the actual strikes, which lasted long enough to eliminate the surplus. The surpluses of zinc and lead were cut by restrictions introduced by the leading producers. These were evidently too effective in zinc, but lead was merely saved from a further fall. At the end of the year forward lead was £73 10s. a ton, barely higher than at the start, but zinc had advanced by over £17 to £90 a ton.

Rubber was first hindered, then helped, by adventitious

events. From January to August rubber rose by 6½d. to 31½d. a lb, and would have risen more but for the threat of selling from the big American strategic stock. Yet after sales from the American (and British) stocks began in October, the price obstinately rose to a new peak of 37d. a lb because traders, misjudging the impact of official sales, had great difficulty in covering their own sales to Russia and China.

The plain fact about last year is that consumers of commodities knew that immediate or prospective supplies were adequate for their needs. Strikes apart, they had no need to rush into restocking and the course of prices did not impel them to do so. One of the good things about recession is that it seems to have broken consumers of the bad habit, bred by inflation, of hoarding materials as well as labour. It seems less certain that this attitude will prevail in 1960. The background clearly is favourable. Now that the American steel industry has settled its differences, the United States is confidently expecting a year of record output; in Britain and other West European countries expansion seems certain to maintain a fairly brisk pace; and Communist countries, which are important buyers of some commodities, especially rubber and wool, should increase their consumption.

Hence industrial raw materials should have better expectations this year than last, even though the increase in producers' earnings once again seems likely to come more from a larger volume of sales than from markedly higher prices. Among the non-ferrous metals, including the newer metals like aluminium and nickel, existing capacity remains big enough to take care of prospective increases in consumption and rebuilding of stocks in 1960. The extent of any change in metal prices lies partly in the producers' own hands. When the United States copper mines and smelters get back into full production, prompt copper will gradually lose its high premium, and the forward price may weaken until producers bring output into closer balance with consumption. Restrictions on supplies of zinc should be eased fairly soon, though that will mean some increase in stocks of lead concentrates.

Only a small increase in production of natural rubber can be expected this year, though extra supplies will be available, at a rate related to market prices, from American and British stockpiles and, it now appears, from Russian stocks too. The bulk of the increase in world consumption of rubber will be met by synthetic rubber, so that the shortage of natural rubber should ease further; the average price, however, may not be very different from the 1959 average of 29d. a lb. Cotton and wool are not threatened, but the recovery in consumption and rebuilding of stocks must eventually taper off, perhaps sooner in the wool textile industry than in cotton.

Producers of certain foods, in contrast, may count themselves lucky if they fare no worse this year than last. Coffee growers in Latin America, faced by a massive surplus, are struggling to maintain prices by the short-term expedient of restricting exports. The African growers, for understandable reasons, are not co-operating fully in this scheme, and African robusta coffee has fallen steadily in recent months. Cocoa and sugar are in surplus, though sugar may not be under such heavy pressure as it was in 1959. Wheat and coarse grains are unlikely to move much either way—prevented from falling far by government action in the main exporting countries, and prevented from rising far by the surplus in the United States. Supplies of beef and butter (two items not included in the indicator) are expected to increase this year, though not enough to bring a sharp fall in the present high prices.

THE umbrella that western prosperity holds over commodities does not look so beneficial to producers as to consumers. Primary producers resent the wide swings that occur in their export earnings, even though these swings, especially in foodstuffs, owe more to changes in supply than in demand. They also resent, and justly, the high degree of protection that keeps Western farmers happy at their expense, and the discriminatorily high taxes that restrict their earnings on items that North America and Western Europe do not produce, of which coffee is by far the most important.

All primary producing countries, save those made rich by oil, are dismayed by the diminishing dependence of the West on their raw materials. This tendency for output to grow faster than the demand for raw materials has two explanations: the first is that the value added by manufacturing to a given volume of raw materials increases as technology becomes more complex; the second is the substitution of manufactured for natural materials, such as man-made rubber and fibres for the natural ones, and the replacement of jute bags by bulk handling equipment.

There is rather less clamour nowadays for international commodity schemes, partly perhaps because producing countries now have a better understanding of the technical difficulties, and partly because of the lack of Western support. But there is no less clamour for some means of sharing more fully in the prosperity of the advanced industrial countries—as almost any international conference makes abundantly plain. More countries may be tempted to introduce national schemes to siphon off high earnings into reserves that can be used for development when commodity prices fall, or to withhold supplies in times of surplus; Ghana and Nigeria may try this ploy in cocoa, despite the recently discouraging experience of Brazil.

Western countries have no adequate excuse for the present high level of agricultural protection, but even if the barriers are lowered it would not bring salvation for primary producers. The best, and perhaps the only, way to help remedy their real grievances is to lend more for investment in the underdeveloped countries—and there is every sign that this policy will attract more support this year and after.

BUSINESS NOTES

IN THE MARKETS

Sterling and Interest Rates

AS 1960 unfolds, more and more eyes will fasten each Thursday on the Bank rate board. The further outflow of funds from London indicated by the end-December fall in the gold and dollar reserves was much as expected and has not brought the prospect of an increase in Bank rate nearer: but this week's settlement of the steel strike in the United States may have done. The attitude of the London authorities to the withdrawals of balances that began in the autumn has been fairly clear, and unexceptionable. They are prepared to tolerate transfers of the present order without counter-action, which would be embarrassing both internationally, notably to the United States, and domestically, to the heavy industries still in the first stages of recovery. But plainly there is a limit to the pressure that Britain's reserves can take; and there is a limit to the margin by which interest rates in London can remain below rates in other leading centres.

The Treasury bill rate in London has risen in the past six weeks by about ⅜ per cent to nearly 3¾ per cent, which is about its limit under a 4 per cent Bank rate. But bill rates in New York have already risen

correspondingly; on the eve of the steel settlement, the rate on this week's issue of six months' bills rose to a peak of over 5 per cent. The ending of the steel strike, bringing the prospect of rapid business expansion and liquidation of corporation holdings of government paper, was bound to cause a further tightening in the New York money market. In addition, the Federal Reserve may now give a further twist to the credit screw if it regards the steel settlement as inflationary. In Germany, meanwhile, the Federal government has taken no chances on the reception of its second loan, marketing a fifteen-year issue of DM 500 million with a coupon of 6 per cent and a price of 98, giving a redemption yield of 6.36 per cent.

The rate of transfer of funds from London does not appear to have quickened. The reserves in December fell by £85 million, of which £66 million was attributable to end-year loan payments. The residual fall of £19 million, or $53 million, was almost exactly the same as in November, and again it is understood that transfers of funds were the main influence. This month, however, commercial influences should come strongly in sterling's favour.

The December fall brought Britain's reserves to £977 million or $2,736 million. The fall of $333 million in 1959 is accounted for almost twice over by special government payments which have a counterpart by improving the second-line reserves that would be available in case of need. Figures of sterling liabilities, on the other side of the balance sheet, are available only to end-September. In the first nine months of the year, balances held by the rest of the sterling area rose by £155 million, but non-sterling countries' balances fell by £74 million. Part of this fall resulted from a book-keeping switch of no market significance, but in the last quarter of the year Britain's liabilities to these countries was being reduced by their withdrawals of funds.

More Reasonable

ALL the signs were present in the irrational surge of prices in the Christmas season that the equity market was due for a shake-out. The buying before Christmas and in the first days of the New Year was by small investors impressed with expansive forecasts for the golden sixties and not discriminating much between the stocks they were choosing. That buying was not supported by the weight of institutional orders, but it was sufficient in quantity to push the *Financial Times* index up to a new peak of 342.9 on Monday. The first signs of a crack came when it was apparent that the attempt to bring oil shares into the boom had no real momentum behind it. If yields on oil shares looked attractive in comparison with those offered by many industrial stocks, the reason could have been that some of the latter stocks had been over-bought, not that this was the time to change views about the prospects for the oil industry.

A heavy settlement day had to be seen through on Tuesday. There were big paper profits to be taken. And there was the uneasy fear both in Throgmorton Street and Wall Street that as the settlement of the American steel strike was inflationary it might also lead to higher interest rates both in New York and London. British government securities were marked down on the news of the settlement but the market quickly steadied—in itself a pointer to the soundness of that market. It was equities and not gilt-edged that were most troubled this week by fears of higher interest rates.

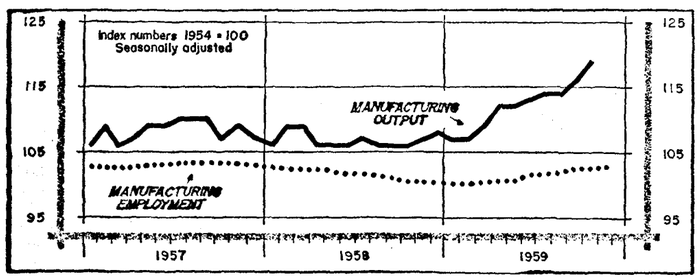
How far the edge has been taken off the boom by the fall in steel, engineering, shipping and tobacco shares (in the forefront of the recent advance) it is impossible to judge. But the fall of 11.3 points to 331.6 in the *Financial Times* index in two days was the sharpest setback recorded since the election. Whether Thursday's modest improvement in the *FT* index of 1.2 to 332.8 is significant is anybody's guess. But this week has done something to restore a little reason to a market which at times in its search for capital gains seemed to be prepared to ignore the big advantage in income now offered by gilt-edged securities. At the moment leading industrial shares are still yielding about 1.3 per cent less than Old Consols and the gap is wider when equities are compared with other fixed interest securities. The question now is: at what point will investors return to the industrial market to buy? Some commentators began to worry when prices continued to steam ahead after the index crossed the 300-mark; and it might be of more than academic interest to note that, on the basis of current dividends, the yield gap between industrials and on Old Consols would fall back to one per cent if the *Financial Times* index came down to approximately 305—or dividends increased moderately.

The New Leads and Lags

PRESSURE on sterling, apparent in the gold reserve figures for December, was again evident in the early days of this week, when the pull of dear money caused the rate on New York and most Continental centres to fall. On Tuesday the US dollar and Belgian franc were particularly firm. The tightness of money in New York and in most European capitals is not only causing some movements of short-term balances away from London but is leading to increased utilisation of London credit facilities by foreign banks and merchants. There has been a noticeable rise in the volume of foreign acceptances and cash credits. In addition subsidiaries of foreign firms in Britain have tended to remit profits more rapidly than usual in order to ease the stringency experienced by the parent companies in their domestic markets. Sterling is thus being subjected to the familiar

leads and lags, resulting not from speculation but from the relative ease with which credit facilities can be mobilised in London compared with New York, Frankfurt and Brussels. By mid-week this influence on sterling appeared to be losing some of its potency and the rate on New York, which had fallen to $2.79\frac{7}{8}$, recovered to parity.

Since January 1st, the Bank of England has ceased to quote official buying and selling rates for currencies other than the US dollar. This is in line with existing practice of most continental central banks and will have no effects on market rates. The limits hitherto quoted by the Bank since the coming into force of the European Monetary Agreement a year ago have, in cases other than the US dollar, been the product of the Bank's limits for the US dollar and the corresponding dollar margins quoted for the European countries concerned. In effect, this meant that the margin of permissible fluctuations for European currencies was around twice that for US dollars. The effective range of fluctuations will continue unchanged under the new ordinance by the play of arbitrage through the international exchange markets, which was previously the operative influence. Official buying and selling rates for US dollars continue unchanged at 2.78-2.82.



THE ECONOMY

Onward the Boom

An upward revision of the first estimate of industrial production for October, from 114-115 to 116 (1954=100), and a slightly higher figure of 116-117 set provisionally for November (judging from recent experience, this could also turn out conservative) suggest that industrial output towards the end of 1959 was running a good 9-10 per cent higher than at the beginning, with a reasonably steady advance all the way. Production in the latest two months was about 2½ per cent higher than in the third quarter, allowing for seasonal changes; there were broadly similar increases between the first and second quarters and between the second and the third. For 1959 as a whole, compared with 1958, the total gain in output may have been about 5-6 per cent.

So far the boom shows no sign of slackening. Most industries, apart from coal and shipbuilding, appear to be getting some share in it. Total manufacturing output last autumn was 11-12 per cent ahead of autumn 1958, just before the advance got under way, and 8 per cent higher than in the autumn of 1957, when activity turned downward. Output of chemicals, vehicles, timber and furniture, steel and non-ferrous metals, the electrical and engineering group and clothing did better than this; other industries, including drink and tobacco, bricks and cement, textiles and paper, did almost as well. Only food manufacturing, characteristically, showed a more moderate gain. Nearly all manufacturing industries were producing substantially more than in 1957.

Civil employment rose again in November, and more than seasonally as would be expected. More overtime was worked than in November, 1958, and there was much less short-time working. Unemployment in the three weeks to December 7th showed a drop of almost 10,000 to just under 421,000, or 1.9 per cent of the working population. But this increase in employment has not matched the increase in output. Employment in manufacturing industry was 2 per cent bigger at the end of November than in November, 1958: but average employment over the first eleven months of 1959, during which time manufacturing output gained nearly 6 per cent, hardly differed from that of the same months of 1958. These employment figures are likely to be revised next month, but the revision would have to be uncommonly big to alter the impression of a striking gain in productivity in manufacturing industry last year.

AIR TRAFFIC RIGHTS

Turning On the Heat

The Ministry of Aviation is putting pressure on foreign airlines in order to build up the British bargaining position when they meet the American negotiators at Barbados next month to discuss the revision of the fourteen-year-old Bermuda agreement that regulates air traffic between British and United States territories. They have decided, after considerable provocation, that horse-trading is the only way. The side effects on this country's reputation as a liberal trading nation and the gains, if any, that are brought home from Barbados have yet to be weighed.

The Bermuda agreement of 1946 merely defined what routes British and American airlines could use across each other's territories and refrained from regulating either the number of flights made or the seats provided on them. Until recently, British approval of American applications to use these routes had been automatic. But in the United States, air traffic is governed by the Civil Aeronautics Board which has heard British applications to fly to America but has not been bound to honour undertakings given to the British government by the State department. Agreement between the big British and American airlines not to obstruct each other has reduced this CAB procedure to an expensive formality; but more recently, smaller expanding American airlines have begun to object vigorously to the CAB about growing British competition; and the CAB's rubber-stamping of British applications is over—as both BOAC and small British-owned airlines in Bermuda and the Bahamas know to their cost. British government action now aims at making life unpleasant for foreign airlines in the hope that they will in future be more ready to come to terms about extensions of British services. The rough handling of Pan-American's new New York-Jamaica service before Christmas is one example; it is proper to point out, in correction of what was said here on December 26th, that this service was stopped by the Ministry without prior knowledge of BOAC. Applications for new services can get submerged in in-trays. Northwest Airlines in America was warned that this would happen to its application for flights to Hongkong if it persisted in raising difficulties for BOAC's round-the-world route through San Francisco last year.

The test of this rough policy is whether it will work—and about that even some British officials have their doubts. They do not expect that American officials will be able to make suggestions for speeding procedure at the American end—the Americans themselves will be offering a good many complaints about British treatment of their airlines. International relations in the air are deteriorating into bad manners and dog in the manger behaviour that would have been inconceivable a few years ago when expansion and something of the merchant venturing spirit still clung to air transport. Now the guiding ideas of governments and airlines are becoming daily more tied up in economic restriction and ridiculous national cat's cradles. It is time for a long hard look at the way in which traffic agreements and international control of fares lead more and more towards absurdity.

TELEVISION PROFITS

Wait Until 1964

The Independent Television Authority, even if it wished, could not implement the suggestion of the Public Accounts Committee that it should take from the television programme companies some of their £20 million annual profit by raising their rents or leasing new stations to the highest bidders. The ITA may be right in arguing that the highest bidder would not necessarily provide the best service; certainly it has no authority from Parliament to charge rents higher than those needed to build transmitters, run them and leave something in hand for new construction. When its franchise expires in 1964—and with it the leases of all the programme companies—the ITA will have covered all its costs and accumulated a reserve of £4 million.

The Public Accounts Committee's suggestions do not concern the ITA so much as the Act of Parliament that gave it this precise brief. The ITA foresaw the likelihood of vast television profits some years ago and it may sympathise with the view that the exchequer ought to be able to claim a larger share of them. But at this stage in the ITA's life, the right thing is to consider how best to amend the Television Act in 1964. If there is to be an auction for these programme monopolies, the ITA should be under duty to channel back a proportion of the higher rents to the exchequer. If not, an attempt should be made to get at the root of the profits themselves by replacing the monopolies by more competition in commercial television or sound broadcasting.

PRICE CUTS

Mixed Bag

Responses to the pleas for lower prices made by the Chancellor of the Exchequer have been scattered throughout the economy: at a rough count fifty items at least are now cheaper than they were in mid-1959. Price cuts have not been uniform or consistent, but they have not been negligible—and there have also been improvements in quality without changes of price. Among basic manufacturing industries the largest reductions are probably in petrochemicals: after lowering its prices for industrial solvents last month, Shell announced cuts last week ranging up to £10 a ton for polyethylene glycols and propylene oxide; Union Carbide made a similar reduction in polyethylene glycol. Imperial Chemical Industries reduced several items—including polythene, in which it is generally the price leader—in December, and last week there were reductions in a wide range of chlorine products and solvents. Competition in most sectors of the chemical industry has increased sharply in recent months; the need to employ new capacity as fully as possible has been important.

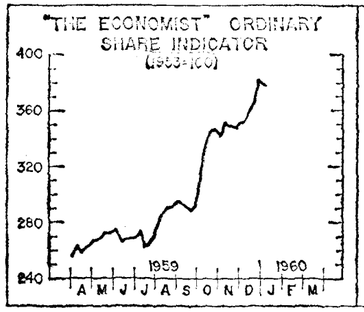
Competition has played its part in lower prices for a wide range of consumer goods—including vacuum cleaners, sewing machines, outboard motors, TV tubes and washing machines; but the ending of price agreements, the freeing of dollar imports, changes in models and increased productive capacity have been important here. Margarine, canned fruits and peas, frozen vegetables, instant coffee, salt and rice pudding, are among the manufactured foods which now cost less; some price cuts by food manufacturers—few of whom still insist on price maintenance—have been taken further by supermarkets. In at least two cases—electric lamps and frozen foods—changes made by the industry's price leader were immediately followed by the rest.

Retailers as a group have done the least open price cutting but their turn comes with the sales—which nowadays start smartly after Christmas; looking around a number of London department stores suggests that price cuts in their sales are slightly greater and apply to a wider range of goods, than a year ago. But the January sales are now an accepted part of the retail calendar and their stimulus presumably has an adverse effect on retail sales in February and March, and is no doubt regarded by some retailers as a convenient way of avoiding much direct price-cutting.

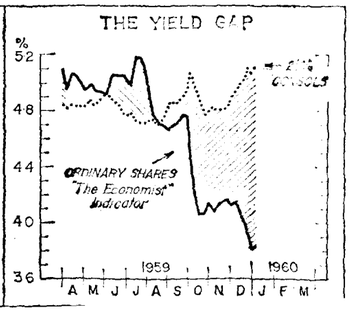
POOLING WORLD RESERVES

An American Advocate

One of the incidental benefits from America's new payments worries might be a modification of its traditional opposition to schemes for increasing world



The Economist *Indicator*



The Economist Ordinary Share *Indicator* aims at providing a weekly index of prices and yields of leading, currently active equities. Each year end, the constituent shares are re-examined and if necessary the list is revised—though the changes made since the indicator was introduced in October, 1956, have not been numerous. This time, three shares—Burmah Oil, Gallaher, and Joseph Lucas—have been replaced by Dorman Long, United Dominions Trust and Ind Coope. This reduces the weight of shares in the tobacco and oil industries in the indicator, adds to the weight of the steel shares and introduces for the first time brewing and hire purchase finance shares. A list of the ordinary shares now included in the indicator is printed below.

The opportunity has also been taken to revise and to extend the list of "London and New York Stocks" which appears weekly in the Company Affairs section—this week on pages 158 and 159. *The Economist* indicator, the *Financial Times* indices and *Standard and Poor's* indices are published regularly with these tables. In addition a selection of unit trust prices and extracts from the *Actuaries' Investment Index* appear monthly. In other weeks, charts relating to the British and American markets, as below, will appear.

Constituent Shares

AEI	British Petroleum	Furness Withy	Albert E. Reed
Assoc. Portland Cement	J. and P. Coats	General Electric	Rolls-Royce
Babcock and Wilcox	Courtaulds	GUS "A"	"Shell" Transport

		P & O Def.	Woolworth

liquidity by internationalising world reserves. Such a scheme was first put forward by Lord Keynes on behalf of the British delegation at the first wartime conference preparing postwar financial institutions; in the past few years the idea has been revived by Sir Oliver Franks and by *The Economist*; most recently it has received the qualified blessing of the Radcliffe committee and has been pressed strongly by Professor Robert Triffin of Yale University, in published articles and in evidence to the joint economic committee of Congress. Professor Triffin has delicately made the point to his countrymen that since Americans are now getting worried about the growth of their short-term liabilities, there could be something in it for them too.

America's foreign liabilities are still not as large as its huge gold reserves, and on British experience they could be doubled without much alarm. But if Americans themselves will not tolerate any further fall in the ratio, then some new means of raising international liquidity will be the more necessary. Under Professor Triffin's scheme —most concisely expressed in the current issue of *The Banker*—reserves held in foreign exchange and to some extent also in gold would be turned over to the International Monetary Fund in exchange for IMF deposits that would be fully convertible and carry an exchange rate guarantee. The IMF would then arrange that its net lending in a period of twelve months, together with current increases in the supply of gold, would increase total world reserves by say 3-5 per cent a year. Thus world liquidity would keep up automatically with world trade.

Any such scheme is bound to involve three major questions. The first involves the treatment of existing balances in dollars and sterling that will come into the hands of the Fund. Professor Triffin proposes an orderly liquidation of such balances, say by 5 per cent a year. But even this rate of repayment would be a serious additional burden for Britain, probably necessitating a curtailment of its contribution to overseas development. Secondly, how could the Fund itself secure a guarantee against risk of depreciation of the huge balances coming into its hands, for which it had already credited the original owners? Thirdly, a world financial system of this kind, certainly desirable, may in practice be workable only if member countries are prepared to pool much of their political sovereignty. For this reason, it might be more practicable in, say, the European Economic Community, where Professor Triffin, as a special consultant to EEC, has also been trying to arouse interest in his proposals, than in the world at large.

FRANCE

Nouveau Franc

THE new French currency, each unit equal to 100 of the old, made its bow to the French public this week. It has been known as the "heavy" franc in the foreign exchange market for the past year, but only in the guise of a unit of account. In that particular context there will be no change. On January 1st, however, the new currency to which the French authorities have at the last moment given the name of "le nouveau franc" was introduced to the general public as the unit in terms of which all prices, in wholesale and retail trade and in the security markets, are now expressed. The decision to change the name of the currency from the heavy to the new franc appears to have been based on the argument that the former would carry with it a pejorative implication for the "lightness" of the old currency which, for many years to come, will be circulating side by side with the new and will remain legal tender. The old franc aluminium piece becomes the centime under the new regime.

A fair start has been made in printing the new notes which are of identical size and colour with the corresponding issues expressed in old francs. A substantial supply of new coins has also been prepared. The new five-franc and two-franc coins are of silver .835 fine, and their high grade is intended as a symbol of the determination of the French authorities to maintain the integrity of the new currency; a relatively small depreciation in the exchange value of the franc would in fact make the silver content of the new coins worth more as bullion than their nominal exchange value. The French authorities are estimated to have bought 500 tons of silver during the past year, mainly through the London market (which has been much disturbed by the massive purchases). This will have cost approximately £5 million. A further 500 tons is expected to be bought in the coming year in accordance with the plans of the French Mint. The one-franc coin is made of nickel. The coins of smaller denomination are of 50, 25, 5 and 1 centime.

On the Bourse price fluctuations in new francs are now subject to a minimum of 5 centimes for securities up to 100 new francs and 10 centimes for issues of between 100 and 500 new francs. The fluctuations in the gold market are subject to a minimum of 5 new francs for standard bars and 10 centimes for most gold coins, including sovereigns and the 20-franc piece. The new currency has been launched in a mood of greater confidence than has obtained at any time since the Poincaré rehabilitation of 1926, which anchored the franc to a gold parity that was to survive by a few years the widespread devaluations of the early 1930's.

ROAD HAULAGE

Halt at 30 mph

NEGOTIATIONS on lorry drivers' wages to follow the raising of the legal speed limit for heavier goods vehicles from 20 mph to 30 mph have been a miserable story. For twenty years this clamant step in highway law reform was held up because hauliers and unions could not agree on new wage rates—despite the fact that drivers would have gone on strike if they had been forced to observe the 20-mile limit. The main trouble was that most lorry operators (British Road Services and private firms with "C" licence vehicles) are not governed by the statutory wages machinery of the haulage industry; and even though not all private hauliers, such as those operating over short distances or in built-up areas, would benefit from the change, the unions pressed for all drivers to be included in the wage award. But in May 1957 the Minister of Transport in a mood of commendable impatience raised the limit anyway; there were, he said, "signs of general agreement on some broad principles."

British Road Services, which had previously been content to wait for private hauliers to reach a formal agreement, got quickly off the mark by getting the unions to accept a 15 per cent increase in hourly wage rates and an hour less, making ten hours, in the maximum working day; in return BRS got a revision of duty schedules for the heavier trucks (on which both the old and the new speed limits applied) and improved working of the smaller ones. BRS was the smallest of the three main groups of lorry owners concerned but the one likely to reap most from the change, because long-distance work provides its main business, and, being a single organisation, because it can best spread the wage increases over its operations. But it took BRS and the unions more than two years to agree in detail on the schedule revisions, and when the new agreement came into effect last Monday about a seventh of its drivers immediately came out on an unofficial strike.

Generally speaking, the new agreement means that the drivers will get roughly the same pay for doing the same work in less time, though there may be exceptions. But drivers have become so accustomed to going much faster than 20 mph and getting spare time for stops out of the old schedules that some of them obviously resent the same thing being arranged for them. Formal discussions between the Road Haulage Association, representing the private hauliers, and the unions have petered out; many hauliers and most "C" licensees that stand to gain from the higher speed limit have made their own arrangements with the unions or directly with their own men, and on the whole without running into the trouble BRS has now encountered. But it is quite possible that once the unions have signed up enough private hauliers they will press for these agreements to be embodied in a new statutory wage award for all private hauliers. It is not a very savoury story.

BUDGET ACCOUNTS

A Book-keeping Improvement

IT now seems very likely that the surplus on the ordinary budget will be substantially greater, and the net deficit

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital **£544,000**
Assets exceed **£3,000,000**

Directors: J. B. Campbell, J. W. W. Huntrods
P. H. Russell Smith, A.C.A., P. J. Cannon, G. Keighley

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms:

Money at 1 month's call, 4½% per annum, maximum £5,000
Money at 3 months' call, 5½% per annum, maximum £25,000
Money at 6 months' call, 6% per annum, maximum £50,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC9 explaining our mode of operation.

THE TIMES

Starting MONDAY JANUARY 11

including capital items substantially smaller, than the Chancellor estimated in framing his budget last April. But as Mr Heathcoat Amory himself gave warning a couple of months ago, this book-keeping improvement cannot itself give promise of an easier budget this April. For the improvement is mainly a reflection of the fact that, with the help of his last reflationary budget, the re-expansion of the economy and the national income has proceeded faster than anyone expected; and correspondingly, there is less "slack" in the national economy this year to justify new tax remissions.

Ordinary budget expenditure seems to be running close to schedule; the end-December Exchequer returns show a rise of £106 million over the nine months to end-1958 compared with an expected rise in the full fiscal year of £121 million. The big deviation from expectations above-line is on the revenue side. Total ordinary revenue, expected to be cut by the tax reliefs to £155 million below the intake the previous year, has in the nine months actually increased by that amount. Stamp duties and death duties have received a substantial boost from the boom on the

BUDGET ESTIMATES AND NINE-MONTHS' OUT-TURN*

	April 1, to Dec. 31, 1959	Change on April 1, to Dec. 31, 1958	Budget estimate for full year 1959–60	Expected change on full year on 1958–59 out-turn

* In second and fourth columns (−) indicates increased deficit or reduced surplus. (+) indicates reduced deficit or increased surplus. † Comprises profits tax, excess profits tax and levy.

stock exchange; and income tax, expected to yield £175 million less in the full year, is so far up by £26 million. Together with marked improvements in customs and excise, this is a clear reflection of revenue buoyancy resulting from higher incomes and spending. But the main weight of the ninepenny cut in the standard rate will be felt in the current quarter, in which heavy income tax payments are concentrated. Thus the final improvement in the above-line out-turn over the original estimate may be smaller than the £325 million indicated so far, but the surplus will surely be very much bigger than the budgeted £102 million.

Below-line, too, the Exchequer accounts so far look better than the estimate. Net payments at £575 million are £132 million higher than a year ago, compared with an expected increase in the budget year of £264 million. Part of this is due to a temporary lag in capital borrowings by the nationalised industries other than the Coal Board, which is unlikely to last until the end of the fiscal year. But repayments of postwar credits, so far £58 million, may fall short of the full-year estimate of £89 million.

OIL

More Than Enough

WORLD production of crude oil expanded by 7.6 per cent to 977 million tons last year. This is a slightly faster rate of growth than over the past decade, but 1959 saw production in the Soviet bloc increase twice as fast as in the west. In the United States, production rose by only 5 per cent. In mid-1959 imports of oil into the United States were checked by quotas and higher tariffs; while this is having the desired effect of keeping prices within the United States above world prices, it is a sharp blow to Venezuela, which normally sells half its oil exports to America. Venezuelan production rose by six per cent last year to 147 million tons, but sales to the United States were crowded into the first half of the year. With the exception of a compensatory increase in the quota for imports of residual fuel oil, Venezuela will be even worse off in 1960: total import quotas are down on 1959 and oil will flow freely through the pipeline from Canada.

This pattern of increases in production accompanied by a national parcelling up of markets is becoming general in the rest of the world. Argentina hopes to be self-sufficient in oil by 1961; France is turning to Saharan oil and hopes the common market will give it preference; Canada is looking forward to self-sufficiency. At the same time Middle East production continues to increase sharply, while the Russians plan an increase of 11 per cent a year.

Two oil companies—Standard (New Jersey) and Standard of California—expect the west's increase in consumption to average between six and nine per cent in the next few years: between 1946 and 1959 the increase was 12 per cent. This presupposes that the rate of growth brought about by postwar reconstruction cannot be maintained. Furthermore, it is becoming increasingly difficult politically to make any further inroads upon coal and a falling off in the growth of demand for residual fuel oil can be expected—except in Russia, where the political decision has already been taken. In spite of this, it seems that 1960 itself will be a boom year and oil prices, except for specific products, can be expected to remain fairly stable.

In Western Europe, consumption in the seven main oil-using countries—Britain, Western Germany, France, Italy, Sweden, the Netherlands and Belgium—is estimated by *Petroleum Press Service* to have risen by 12.4 per cent last year, compared with an average of 11.3 per cent over the previous decade. Germany registered the largest increase (21 per cent), with Britain second at 15.5 per cent. Both countries consumed proportionately more fuel oil than before: Germany 30 per cent more than in 1958 and Britain 26.7 per cent. But Germany's 12.8 per cent increase in consumption of petrol was far greater than Britain's 7.3 per cent; and the disparity was more marked in gas and diesel oils of which Germany used a quarter more and Britain, only 7.7 per cent more in 1959 than 1958.

ATOMIC RADIATION

Food and Atoms

AN undercurrent of bewilderment runs through the latest report published by the Department of Scientific and Industrial Research about the results of experiments carried out on its behalf by the Atomic Energy Authority's laboratories to sterilise food by atomic radiation. Radiation is lethal not only to man, but also to smaller organisms including the bacteria that taint food. This fact, it has been argued, could revolutionise the distribution of perishable foods. There is no doubt that sterilisation is effective, but it can cause minor chemical changes in the food which make it taste or smell disagreeable. Massive doses of radiation to sterilise the food completely ruin its quality; mild doses provide effective sterilisation for a few weeks, provided the food is stored at temperatures just above freezing; but these sometimes leave a taint and sometimes leave it with a taste and flavour comparable to fresh killed meat.

No rhyme or reason is found in these results. Danish bacon kept its high quality after six months' storage; English bacon acquired a tainted flavour at much lower doses of radiation. One brand of pork sausages stayed fresh and appetising for three weeks, other brands were disappointing. Chickens kept for about 60 days, although the quality could no longer be compared to fresh chicken after the first 14 days. Beef seems to taste bad whatever the dose. A great deal more needs to be done to uncover the chemical changes that lead to deterioration in taste and smell.

Two other nasty difficulties encountered in these experiments are the likelihood that fat will go rancid (this can be countered by storing away from oxygen in vacuum or nitrogen packed tins) or that poisonous toxins may form (which can be countered only by storing at temperatures no higher than 5°C). Commercial uses of radiation sterilisation are limited at the moment to a £120,000 plant built by a carpet manufacturer in Australia with the AEA's advice to sterilise goat hair against anthrax, and a pilot plant now being completed by the AEA in this country to sterilise medical

bedding, dressings and instruments. It seems that canning and the deep freeze will be with us for some time yet.

AUSTRALIAN OIL

Something to Show

So far the story of oil and natural gas exploration in Australia has been one of failure—and in the volatile and occasionally reckless market in Australian oil shares one of badly burned fingers. But the companies still go on drilling and the punters still go on hoping, for they know that if oil or natural gas were to be found in commercial quantities there is a captive market waiting for it in Australia. The stock market may have been too exuberant in sending the price of Interstate Oil shares up from 5s. to around 16s. in early December after it had been announced that a strong gas flow had been obtained from a preliminary open-hole test conducted by Frome Broken Hill in the Port Campbell area of Western Victoria. But that price was held and when it was announced this week that gas was flowing from the company's Number 1 oil bore hole the Interstate shares went up to 20s. 9d.

That price, however, was not held and by Thursday it had fallen back to 16s. The gas flow of 4 million cubic feet a day, after all, may look big by Australian standards but the flow is tiny by other—say, Canadian—standards; and small quantities of water have been coming up with the gas. At greater depths, too, the drillers had found only gas-saturated water. That does not suggest oil; and the hope must be that the natural gas exists in sufficient quantities to be tapped and piped to Melbourne. But that is as yet no more than a hope and the directors of Frome Broken Hill have rightly been most cautious in the statements they have made. This company is owned in equal shares by Vacuum Oil, BP Exploration and Interstate Oil. The latter company is, in turn, controlled by Consolidated Zinc but a minority of its shares are available in the market and provide one of the few direct routes into this venturesome business of Australian oil exploration. The auspices are good; the auguries, with gas actually burning, are better than any before in Australia. But Interstate still remains a share for speculators who, going for the very long shot, do not mind if they lose their stake.

ISSUES BY TENDER

Deferred for Discussion

Provisionally, the Stock Exchange Council has turned down the suggestions that offers for sale by tender should be reintroduced immediately for industrial equities. These suggestions became current when the Dimplex issue was oversubscribed 80 times and when its sponsors, the Minster Trust, said that they would be giving serious thought to the question of making their next offer by way of tender. Issues by tender are still obligatory in the case of some water companies but, as the Council points out, they fell into disuse for other securities in the early years of this century. There would certainly be difficulties in reviving this method of introducing shares to the exchange: in particular, the small investor might feel himself to be put at a disadvantage with the professional. But these difficulties would not be insurmountable and they can be no worse than those involved in fixing a price on a new issue when the market has the bit between its teeth. This, presumably, is why the Stock Exchange Council has not rejected the suggestion out of hand. Having given "careful and sympathetic consideration" to the proposal, the members of the Council decided that it could not grant quotations to issues by this method "until they have fully discussed with other interested parties all safeguards which may be necessary in modern conditions."

FILMS AND TELEVISION

Down Fido

Associated Rediffusion is the second television programme company that has acquired a stock of films by buying a film company outright. In mid-1958, five trade associations in the cinema industry formed the Film Industry Defence Organisation in the hope of preventing old films from being sold to television companies; Fido was prepared, if necessary, to buy up the films to prevent this. A week or so later Associated British Picture bought Associated Talking Pictures and with it 95 feature films made by Ealing Studios. Associated British Picture's subsidiary, ABC Television, which operates in the midlands and northern regions at weekends, has been screening the Ealing films but not leasing them to other television companies; Associated British Picture was and is a member of Fido.

Now it is Associated Rediffusion's turn. This company has bought a controlling interest in Independent Film Distributors and so acquired a stock of 55 films made since 1948. Associated Rediffusion intends to keep Independent Film Distributors alive as a distributing company, if it can find independent film producers willing to make feature films for IDF to distribute. Although Fido threatens to boycott any producer who provides films for television, its bark may prove worse than its bite. Associated Rediffusion also hopes that there will be some independent cinema owners prepared to show films handled by Independent Film Distributors, even perhaps after they have had a television premiere. The company's full-page advertisements on Wednesday stated that the initial stock of films was to be made available to the television industry generally, including the BBC. If Associated Rediffusion's ideas about going into the film distributing business were to come to pass, this would present Fido with its most serious challenge. But that remains to be seen.

BUTTER AND MARGARINE

Shift in the Market

Producers of butter and margarine sell an edible fat, and that is about all they have in common. Britain is the freest world market for butter—which is usually to the consumers' advantage, since what is shipped here must be sold at a price that keeps supply and demand in balance. Margarine is marketed in the opposite way: price is fixed over a period, and manufacturers adjust production to what can be sold at that price. Consumers are slow to respond to changes in the difference between the two, and particularly so in the last year, which has been to butter's benefit. Cheap butter a couple of years ago has clearly left its mark on public taste. Last year butter became short and prices rose steeply. Producers are surprised not that consumption of butter has now declined, but that consumption remained so high for so long.

Consumer resistance, plus some timely arrivals of butter from North America, pushed prices off the peak. New Zealand and Australian butter have remained steady at 410s. a cwt wholesale, but Dutch butter has dropped from a speculatively high level by no less than 168s. to 437s. a cwt in the past two months, and Danish by 63s. to 435s. a cwt. Whether prices will have to be cut much more depends on production in Europe and Australasia, and this depends on the weather. Prediction is hazardous, but two points will be significant: one is that Europe would be unlucky to suffer another drought this summer; the second is that stocks in Britain last year were drawn down by nearly 21,000 tons to 11,200 tons, and that cannot happen twice.

Makers of margarine seem confident that at the prevailing price of butter a further switch in their favour is still to come, and one of them is encouraged by a sharp rise in sales of its "luxury" margarine: this sells for 2s. 6d. a lb retail, which is 10d. dearer than the medium grades, and 1s. 6d. below the cheapest grade of butter. The industry has always been plagued by the popular view of margarine as a cheap substitute, instead of a product in its own right. Manufacturers have sometimes tried to turn the public image of butter to their own advantage, by stressing in their advertising the "country angle" (equals purity and freshness), but more often they have stressed the spreadability and convenience of their product instead. If sales of this luxury margarine continue to grow, the manufacturer will no doubt feel within sight of a major breakthrough—establishing, in one section of the market at least, a branded commodity bought because it is preferred, not because it is cheap.

LIFE'S ON THE MARCH . . .

We're moving across unmapped territory with tremendous strides. Almost daily someone, somewhere, reports a breakthrough into regions of knowledge that have been secret since the world began. The atom has been harnessed, manned space flights are just around the corner, and every discovery brings others in its train, for new techniques need new materials. Nuclear power has brought demands for materials with combinations of properties never needed before, and only found in metals put aside by scientists in the past as awkward curiosities. The production of these new metals for the nuclear engineer has presented scientists with one of their greatest challenges—a challenge that could only be met by a many-sided organisation such as I.C.I. Its wrought zirconium plant is Europe's largest, its new plant for making wrought beryllium will be Europe's first, and already I.C.I. scientists and technologists have plans for producing the other rare metals that may one day be needed for nuclear power stations and even for space rockets. It needs brains and money to keep up with events in this age of great discoveries, and I.C.I., with a research staff of 4,500 and a research and development budget of £15 million a year, has both.

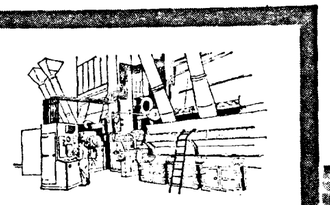
IMPERIAL CHEMICAL INDUSTRIES LIMITED, LONDON, S.W.1

ICI

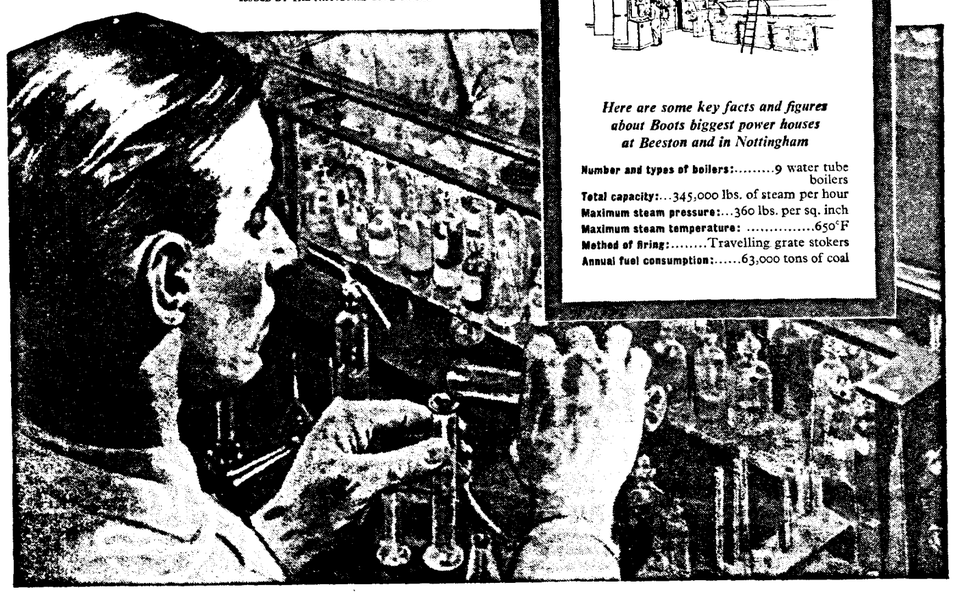
Boots

formula for power—Coal

THERE'S MORE TO BOOTS, the chemists, than a tradition of impeccable service and faultless efficiency. There's a great industry with giant factories to turn the best obtainable raw materials into the enormous variety of goods that Boots sell in their 1310 branches.



To produce the most effective results at the most economical cost, Boots begin with coal. At their powerhouses in Nottingham, Beeston, and at Airdrie in Scotland, coal is the fuel chosen for firing the boilers. Using the most modern methods of mechanical stoking and heat conversion, coal provides steam for works processes, for generating electric power and for office and factory heating.



Boots know that coal gives them maximum efficiency with minimum waste. They know that coal—mechanically stoked—burns smokelessly. They know that because coal is home-produced, supplies are assured, for Britain's coalfields can supply all the coal that British industry will need for generations to come.

When the question of fuel for your factory next comes under examination, remember Boots formula for power. It could mean a healthy improvement in your running costs.

Progressive industry is going forward on **COAL**

ISSUED BY THE NATIONAL COAL BOARD

Here are some key facts and figures about Boots biggest power houses at Beeston and in Nottingham

Number and types of boilers:.....9 water tube boilers
Total capacity:...345,000 lbs. of steam per hour
Maximum steam pressure:...360 lbs. per sq. inch
Maximum steam temperature: .....650°F
Method of firing:.....Travelling grate stokers
Annual fuel consumption:.....63,000 tons of coal

LIFE ASSURANCE

Buoyant New Business

LAST year the sums assured in new ordinary life business by the 61 offices whose figures have so far been published rose by 14 per cent, compared with 22 per cent for 1958 and 11 per cent for 1957. Figures for individual offices are shown at the foot of this page. Occupational pension and life assurance schemes have made a rather less spectacular contribution than in 1958 but there is no present sign that the extension of state pensions has materially affected this important part of the life offices' business; in 1958 it brought in annual premiums of £171 million and contributed 40 per cent of total premiums. On the other hand, none of the latest announcements specifically mentions Millard Tucker pensions for the self employed. Individual life assurance policies remain the backbone of the business and another new record in writing these policies was established last year.

Most offices now show new premiums as well as new sums assured. These premium figures are welcome, for nowadays a great deal of temporary cover of which only a small fraction results in the payment of the sum assured is bought very cheaply. New annual premiums from all sources, including annuities, appear to have run at the same level as they did in 1958 and total premiums must have passed £300 million for ordinary life assurance and £125 million for deferred annuities (mainly for insured pension schemes).

Ordinary life and annuity funds grew last year by nearly £350 million, while industrial life funds rose by nearly £70 million. Investment reserves must again have been reinforced (except for offices whose stake in equities is abnormally small—say well below the average holding of 19.1 per cent in ordinary shares shown by 43 leading offices at the end of 1958). On the average, the appreciation over end-1958 values must have been of the order of 10 per cent on total assets. Bumper bonuses now being declared on with-profits life policies stem from bigger dividends and high interest rates. The Scottish Widows, with 37.6 per cent of its funds in equities at the end of 1958, has for the second time since the war declared an additional bonus, again presumably being financed out of capital profits on the equity portfolio.

DISCOUNT HOUSES

Higher Profits

LIKE the banks, the discount houses had a profitable year in 1959. The biggest of them, the Union Discount, was due to announce its results after this issue had appeared, but National Discount and Alexanders, the two other houses that make up their accounts on December 31st, both show higher profits and are paying larger dividends. The National Discount, still second largest in Lombard Street, this year makes an outstanding showing. Its declared profits after providing for tax and transfers to inner reserves are up from £284,275 to £525,561—comfortably over their 1954 peak. The dividend on the "B" stock, as increased by the recent one for three rights issue, is raised from 12 per cent to 12½ per cent plus a bonus of 2½ per cent. The shares rose by 2s. to 58s. on the news, giving a yield of 4.3 per cent. Alexanders' achievement is rather less impressive this year: its declared net profits are up from £166,943 to £202,807, still one third below their 1954 peak. The dividend for the year has been raised from 7½ to 10 per cent, but is still not back to the rate of 12½ per cent paid in 1954. At 38s. 9d. the shares yield 5.1 per cent.

BULLION MARKET

More Gold from Russia

DURING the first eleven months of 1959 imports of gold into Britain from Russia amounted to 7,292,000 ounces, valued at about £91 million. This marks a substantial increase on the 6 million ounces estimated to have been imported during the whole of 1958. Detailed figures of gold imports and exports became obtainable in 1959 for the first time. Messrs Mocatta and Goldsmid in their annual circular point out that imports were very heavy in the first quarter of 1959. Sales dried up during the summer, but revived again in October. Much of the gold coming on to the London market passes to buyers in other western countries. But these imports are considerably larger than the amount of Russian gold dealt in on the London market. The explanation may be that some of this gold was sent direct to the Bank of England. Part of it may also have been disposed of through the Paris market where the Russian sellers appear to have the benefit of special advantages. The general trend of international gold dealings in 1959, however, was towards and not away from London, enabled by external convertibility of sterling, to compete on equal terms. The London market's facilities were further improved in March when the market received permission to do forward business in gold without previous reference to the Bank of England.

way system into roads overnight. Others, more moderate, argue merely that railway lines which are closed down by the Transport Commission offer an easy way of converting one right of way into a different one. Such an experiment is to be made in connection with the Heads of the Valley Road, a part of the Ross Spur motorway in South Wales: an order has been made for a few miles of disused railway line to be incorporated into the road. Now the Norfolk County Council has approved a second scheme, involving the purchase of six lengths, totalling 22¼ miles, of the Midland and Great Northern railway, closed by the Commission nearly two years ago.

The council believes that the Ministry of Transport, having approved—through the Commission—the advance purchase of this land, will give final approval for the conversion. On three of the six sections the

cost of using the railway right-of-way would be slightly greater than reconstruction of the existing road; it is felt that the additional cost would, however, be justified by an improved alignment. On the longest section, from Aylsham to Pŏtter Heigham, using the railway line would cost £764,000, against £1,073,000 for rebuilding the existing road. The saving on all six lengths is estimated at £262,000.

To a considerable extent the economics of railway conversion of this type depend on ease of access and tunnels or bridges; these should least affect the Midland and Great Northern, in flat country and crossed for the most part by level crossings. The M & GN track bed gives ample space for a road 24 ft. wide; certain main lines—and possibly some branch lines—might give even more.

HOLIDAYS ABROAD

Suntan on the Never-Never

TRAVEL agents have good reason to be dubious about hire-purchase holidays: refrigerators and motor cars can be reclaimed from defaulters but a trip abroad cannot be snatched back. Yet a number of finance companies have been formed in the past twelve months in the hope that the growing number of people taking the sun on Continental beaches will pay a deposit before they go, and cover the rest of the bill over a period extending to just before their next holiday. Most travel agents offer "never-never" holidays through the airlines, which deal through an old-established finance company. The cost of holiday accommodation can be included in air tickets and the whole account paid in instalments. One large agency has offered hire-purchase holidays for four years and claims that about 15 per cent of its business is done this way, with a very low loss experience.

The half-dozen new companies specialising in holiday credit were not much of a force in 1959 but they have more than 50 tour operators on their books for 1960: the tour operators sell their holidays through travel agents and offer "easy terms" which they arrange through the credit companies. A growing number of travel agents deal directly with these companies, to provide hire-purchase for all holidays. Some agreements require payments to be made before the holiday starts: the customer pays interest on the whole cost but the company does not loan the money—by paying the tour operator—until a week or two before it begins. Charges are apparently around eight per cent, but effective interest rates are twice as much for a 12-month loan and up to 33¼ per cent for shorter loans.

Most people, however, still pay for their vacations in advance. It is expected that 2½ million people will take holidays abroad this year, compared with 2¼ million last year. The sweeping away of currency restrictions, plus special occasions like the Oberammergau Passion Play, the Olympic Games in Rome and the "Visit America, 1960" campaign, are making their mark on the bookings now being taken. BEA reported a threefold increase in holiday bookings made in December over bookings in December, 1958. The corporation's reduced fares come into force on April 1st. Many holidays in France are cheaper this year and those who go away early will find the cost is less, wherever they go. Cooks offer a five per cent reduction for early holidays. In 1959 the average holiday cost around £50 for travel expenses and accommodation; the average length of a holiday was 12 to 14 days. The indications are that more people will go farther, stay longer, and spend more this year than last—and some may take longer paying for it.

FURNITURE

Looking at 1963

THE Furniture Development Council has bravely produced a forecast of the state of the industry four years from now. It suggests that production will have risen 7½ per cent above the 1958 level, employment will be about 2 per cent lower and the number of firms reduced by more than a fifth. Turnover per employee might rise about 12 per cent, and turnover per firm by about 67 per cent. These estimates are based on the continuation of the trends in 1954-58 and they reflect the tendency towards greater concentration that has been in progress for some time. But there were still 1,899 firms registered with the FDC in 1958; and 15 per cent. of these make over 80 per cent of the industry's output. The smaller firm is going out of cheap furniture in the face of intensifying competition from—and among—the larger manufacturers, but can do well in higher-quality work.

The forecast seems cautious when production in 1959 appears to have risen by 6-7 per cent; but the impetus of hire purchase may weaken and any re-imposition of restrictions on credit sales would hit the industry hard. Expenditure on furniture as a percentage of total consumer expenditure has risen little. If furniture is to share in the greater spending on consumer durables it will have to develop from largely supplying new homes to being more of a fashion product, with a higher rate of turnover in the home—Americans, it is said, keep furniture for 10-12 years, the British for 20-25. Lower prices combined with rising real incomes and growing home pride might make this possible; but a major technical advance may be needed to reduce production costs. One that has lately begun is the use of chipboard, which is considerably cheaper than ordinary wood; the Russians are reported to be moulding cabinets in one operation out of chipboard mixed with melamine. Some such a technique could revolutionise furniture making; and the industry has often been reminded that such an innovation might well come from a company at present outside the industry.

SHORTER NOTE

Trading profits of Associated British Picture Corporation in the half-year to September 30th fell by 45 per cent from £2,833,000 to £1,552,000 and net earnings were almost halved at £550,000. The interim dividend is to remain unchanged at 20 per cent. The directors say that the exceptional summer had "a serious effect on cinema attendances" and the profits of ABC Television have been affected by the increased costs of producing programmes and the group's expansion and reorganisation plan. The 5s. ordinary shares were immediately marked down from 50s. to 45s.

DORMAN, LONG & CO. LIMITED

SIR ELLIS HUNTER'S REVIEW

READY SALE OF UNIVERSAL BEAMS AT HOME AND ABROAD BUT FALL IN STRUCTURAL ENGINEERING ORDERS

The Seventieth Annual General Meeting of Dorman, Long & Co. Limited, will be held in London on Wednesday, February 3, 1960. The following statement by the Chairman, Sir Ellis Hunter, is circulated with the Report and Accounts.

TRADING RESULTS

After transferring £1 million to Fixed Assets Replacement Reserve of Dorman Long (Steel) Limited (last year £1,500,000) and charging depreciation based on historical cost and excluding items extraneous to the year, the group profits before taxation amount to £5,952,000. Deducting from this the profits of subsidiary companies applicable to outside shareholders at approximately £32,000 before taxation, there is left approximately £5,920,000 which arose broadly as follows:

	1959		1958	
	Amount £	%	Amount £	%
Bridge building, Engineering and Chemicals.....	2,668,000	45	2,915,000	48
Iron and Steel...	3,252,000	55	3,151,000	52
	£5,920,000	100	£6,066,000	100

The Bridge Building and Engineering results depend on contracts completed during each year and for this reason may be expected to fluctuate from year to year. The fall in 1959 is, however, mainly due to reduced demand and increased competition.

Despite reduced demand and the increased charge for depreciation, iron and steel profits exceeded those for last year.

Interest on loan capital has fallen owing to reductions in Bank Rate and the repayment during the year of £3,500,000 of the loan from Finance Corporation for Industry Limited. Since the end of the year a further £4 million has been repaid.

DORMAN LONG (STEEL) LIMITED

Demand for our steel products commenced to improve in August, 1959 and by October it was apparent that the revival was not temporary in character.

The improved trading conditions came too late to have much effect on outputs for the financial year. Ingot output at 1,473,451 tons compares with 1,927,005 tons in 1958 and rolled steel output was 1,268,433 tons against 1,454,163 tons in the previous year.

During the current financial year production has further improved and in the first week in November there was a record output of rolled steel.

BEAM MILL WORKING THREE SHIFTS

The Universal Beam Mill at Lackenby is now operating on a three shift basis, the third shift having been introduced in October. The mill has proved to be an efficient unit rolling a first class product. The last of the Lackenby units to come into service was the rod, bar and narrow strip mill which in respect of rod is now working on a commercial basis. Satisfactory trial rollings of bar and narrow strip have been carried out.

Large scale modernisation of the Wire Works in Middlesbrough has been completed and much higher outputs are now possible in a greater variety of qualities. A start has already been made on the drawing of the 8,000 tons of high tensile wire required for the Forth Road Suspension Bridge.

Universal beams and columns are rapidly becoming the recognised standard sections. Architects, consulting engineers, structural engineers and others have given clear proof of this by their ready acceptance of the new sections. Other important manufacturers of sectional material in this country propose to adapt their existing mills to enable them to roll part of the range of universal beams now produced at Lackenby.

We continue to find ready outlets for beams and columns in Canada and the United States and we have had orders from other overseas markets. The improved export demand is not restricted to beams and columns but applies to most of our products with the exception of rails.

A year ago I remarked "The great majority of the people in this country have no desire for any further extension of State ownership of industry. . . . If the general election . . . were to be fought on the question of re-nationalising steel it is certain the country would reject it." These observations were confirmed by the result of the election and there is no need for further comment.

STEEL STILL A GROWTH INDUSTRY

The steel industry is now free from political threats, at any rate for some years, and we can pursue our task of improving efficiency and raising production. The substantial progress made in both these directions over the past decade has not been automatic. It has been achieved by careful planning and energetic execution of soundly conceived projects. There is no disposition to regard the future of the industry with complacency. World steel capacity continues to expand and each year new plants come into production. While world consumption of steel also continues to grow the British share of export markets will be preserved and the growth we look for achieved, if we actively seek further advances in production methods and manufacturing techniques.

I am confident that with constantly improving techniques the inherent advantages of steel will continue to be recognised. Steel is a growth industry and, with its progressive outlook, backed by research and operational ingenuity, it is likely to remain so.

DORMAN LONG (BRIDGE & ENGINEERING) LIMITED

Last year's falling off in demand affected the volume of new business booked by the Middlesbrough and London fabricating shops and total output was slightly lower than in the previous year. Steelworks buildings, power stations and bridgework formed the bulk of the output. In the later months of the financial year a marked increase occurred in inquiries received and this trend has continued. With fabricators short of work competition continues keen and this is likely to be reflected in profit margins in the current year. Orders in hand are lower than for several years.

The Bridge Department is also having to meet keen price competition. A good deal of inquiry is circulating for bridges at home, chiefly in connection with the highway and railway modernisation programme. We secured the order for the supply and erection of the 10,500 tons steel superstructure of the Thelwall Viaduct.

REDPATH, BROWN & CO. LTD.

Trading conditions at home and overseas are highly competitive in both price and delivery, and other forms of construction are challenging steel for multi-storey buildings and medium size bridgework.

The output of each of the four branches for the financial year was adversely affected by reduced demand and keen competition. Some reduction in the number of employees was necessary.

TEES SIDE BRIDGE & ENGINEERING WORKS LTD.

A considerable variety of work passed through the shops although outputs were not so high as in previous years and profit margins were reduced. Factory buildings for the heavy electrical industry and the United Kingdom Atomic Energy Authority and tank work for the Admiralty, oil companies and the Central Electricity Generating Board contributed to the useful volume of work undertaken. Transmission line towers remain a regular feature of the Company's business. A lower output from the iron foundries was caused by the greatly reduced demand for railway castings.

OUTLOOK FOR 1960

The current scale of demand for our steel products permits most of our plants to operate on a satisfactory basis, but it is not yet possible to say how much of this demand is due to restocking and how much is passing directly into consumption.

The effects of the credit squeeze are still being felt by the structural engineering members of the Group, who depend largely on the level of capital investment. There are indications of improvement, but just as the prejudicial effects of the credit squeeze were delayed so also the benefits of expansion are slow to show themselves as work in the shops.

The Bridge Department has important contracts on hand while tenders for some major projects are in course of preparation. There are prospects of inquiries for further large bridges in 1960.

THE STEEL COMPANY OF WALES LIMITED

RECORD OUTPUT: GOOD PROSPECTS

MR HARALD PEAKE ANNOUNCES ANOTHER YEAR OF ACHIEVEMENT

The production of steel ingots during the past year, amounting to 2,324,000 tons compared with 2,178,000 in the previous year, was a record. If allowance is made for the interruption of steel making in November, 1958, when the original slabbing mill was dismantled and a new universal mill was installed in the remarkably short period of twelve and a half days, production would have exceeded the 2,400,000 tons for which the second development plan provided.

The production of tinplate amounting to 802,000 tons, compared with 670,000 tons in the previous year, was easily the best that has been achieved.

At Newport the Orb Works have been re-equipped to increase the production of a wide range of highly specialised electrical sheets.

Exports of tinplate and sheets, including special electrical sheets, were valued at £34,251,000 compared with £27,407,000 for the previous year.

Turnover was £125,534,000 compared with £113,330,000 a year ago.

By the end of the year all of the larger units comprising the third development plan were in operation but they had not by then made any appreciable contribution to output or profits.

Whilst the average rate of profit per ton sold is slightly lower owing mainly to increased competition in the export markets, the total amount of profit is higher than a year ago.

The past year has been one of excellent progress in all divisions and the Directors have no hesitation in recommending a modest increase in dividend from 1s. 9.6d. to 2s. a share. At the end of the year there were 34,367 shareholders on the register of the Company.

The Company has started the current financial year with an increased production capacity and with a full order book. It may be said, therefore, that the prospects are very good.

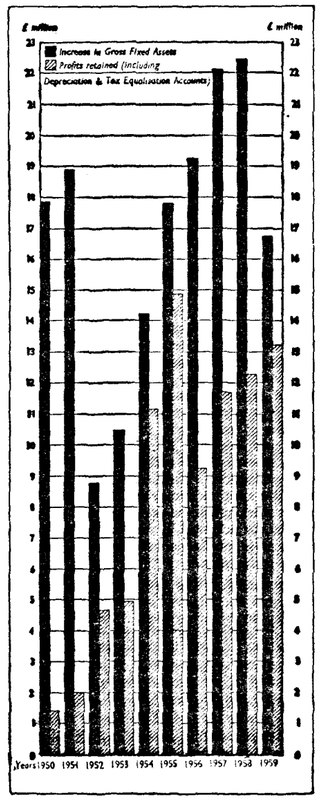
A fourth development plan awaits the consent of the Iron and Steel Board.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The form of this account has been changed to a small extent with a view to greater clarity. The Balance of Profit brought forward from previous years has been excluded and appears in the Balance Sheet only. As a result the account now refers exclusively to the past financial year.

In the Directors' report a year ago it was stated that the special interim dividend to be paid on February 4, 1959, would not be taken into account when consideration was given to the payment of further dividends for 1958-59. Accordingly, it has been excluded from the 1959 figures. The 1958 figures, given for comparison, have been adjusted to include it.

The Directors have also decided to show the amount of £2,650,000 transferred to Fixed Assets Replacement Reserve immediately below the provision for Depreciation of £6,646,515 as these two accounts are, in fact, very closely related.



Taxation on Profit for the year is £5 million compared with £6 million last year due to higher investment allowances, the lower standard rate of income tax and the reduction in profits tax. All are most helpful.

The Balance of Profit for the year after meeting all charges including Taxation and Interest on Debentures and Loans is £4,229,150 compared with £3,038,847 last year.

The ordinary interim dividend, less tax, paid on July 31, 1959, and the final dividend, less tax, recommended for payment on February 4, 1960, total 2s., less tax, per share, and amount to £2,450,000. This leaves £1,779,150 out of the taxed profit for the year to be retained in the business and placed to the credit of Revenue Reserve in the Balance Sheet.

BALANCE SHEET

In the Consolidated Balance Sheet, Total Fixed Assets after Depreciation are £164,449,796 compared with £153,969,859 last year. This increase reflects progress of the third development plan, as does also the very substantial reduction in "Expenditure to date on Plant not yet in operation." It is interesting to note that the cost of total fixed assets before Depreciation now exceeds £200 million for the first time.

There has been comparatively little change in Current Assets.

On the liabilities side the only change in the Issued Capital, Debentures and Loans figures is the increase in the loan from the Iron and Steel Holding and Realisation Agency from £16,500,000 to £23 million. This is due to further expenditure on capital account. This loan, which is limited to £40 million, is repayable not later than December 31, 1964. The Directors do not anticipate that the limit referred to above will be reached and they are confident that the loan will be repaid by the due date.

Reserve Accounts, both Capital and Revenue, have increased by the transfers from this year's Profit and Loss Account.

The alterations in Current Liabilities and provisions do not call for special comment.

In the Company's Balance sheet there are two matters to which I wish to draw your attention although the sums involved are not large.

During the year the remainder of the share capital of Margam Electro Finishes Limited has been acquired so that this company appears for the first time as a wholly owned subsidiary, and no longer an associated company.

A new company—Port Talbot Chemical Company Limited—has been registered during the year, for the purpose of refining benzole from our coke ovens into the highest quality benzole required by the chemical industry. This is a joint undertaking with the Lincolnshire Chemical Company Limited on an equal share holding basis and it appears for the first time as a trade investment.

THIRD DEVELOPMENT PLAN

By the end of the financial year, £45,700,000 had been spent against the estimated cost of £52,500,000. Five of the larger units have come into operation, leaving one to be completed early in 1960—a very high-pressure boiler heated by blast furnace gas and supplying steam to a large turbo-generator.

The universal mill which rolls the steel ingots into slabs for the continuous strip mill came into operation in November, 1958.

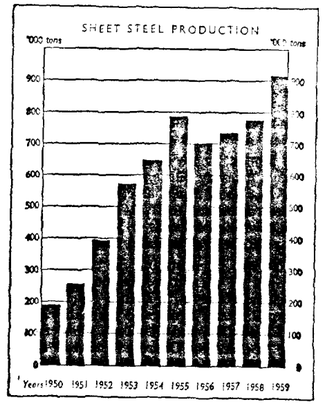
In May, 1959, the 56 inch Cold Reduction Mill, designed to increase the capacity to produce steel sheets, was started up. During the same month No. 5 Blast Furnace—one of the largest in the world—was lit. This enabled No. 4 Blast Furnace to be taken out of operation for relining. It was relit in September, 1959.

The Bessemer steelmaking plant started in July, 1959. This consists of three converters blown exclusively with steam and oxygen. It is not altogether surprising that certain technical problems arose in the early stages of operating this novel process. I am glad to be able to report that these have now been solved. Our technical staff and the crews manning the converters have had six difficult months of very hard development work for which they deserve our most sincere gratitude and congratulations.

During September, 1959, the new battery of eighty coke ovens was started up so that the production of coke could match the requirements of the five blast furnaces.

The past year has borne substantial charges for bringing into operation large new units of production. Designed capacity cannot be attained at the time of starting up. The works of the steel division are a complicated whole with many departments dependent on each other. Synchronisation and co-ordination take time.

Steel production is now increasing according to plan and it is expected that the annual rate of 3 million tons of ingots will be achieved by the end of 1960.



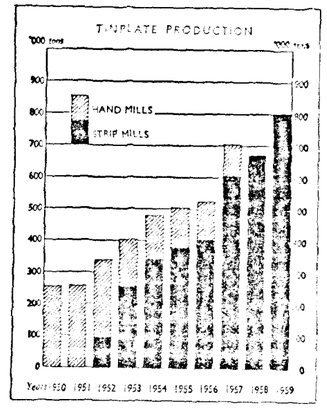
STEEL DIVISION

The order book has called for full time working throughout the year. Inevitably some production was lost as a result of the installation of the new universal mill.

The year has been a very arduous one due to the starting up of the larger production units of the third development plan. Under these circumstances the division has done well to increase production and to show a larger trading surplus.

The year has been one of exceptionally low rainfall, and anxiety existed regarding the supplies of water required at the works. A large water treatment and clarification plant had, however, been included in the third development plan and came into operation when supplies were at their lowest level. Consequently the same water could be used repeatedly after treatment and clarification so that supplies were adequate.

In recent years the traffic congestion in Port Talbot has involved loss of working time. A



new road to pass by Port Talbot is planned but will take time to construct. With a view to bringing temporary relief the Company has built, at a cost of £58,000, a new road and a bridge over a watercourse to enable employees residing in the large new Sandfields Estate to reach the works without going through Port Talbot.

TINPLATE DIVISION

Both at Trostre and at Velindre, record outputs have been achieved during the year and total production at 802,000 tons is 20 per cent higher than in the previous year.

Exports during the year totalled 351,000 tons, being 44 per cent of production compared with 36 per cent a year ago.

Owing to reductions of prices in the home market in December, 1958, and in June, 1959, as well as to more competitive conditions in the

export market, the margins of profit have been lower than a year ago. As a result the overall profit for the division is only 3½ per cent higher in spite of the increased turnover.

Experience has shown that the works at Trostre and Velindre are capable of production appreciably in excess of the rates for which they were designed.

NEWPORT DIVISION

Full time has been worked throughout the year, which has been a very strenuous one resulting from the reorganisation of the works and the installation of new plant designed to increase the production of Unisil sheet steel.

Owing to the continually increasing requirements of the electrical industries at home and abroad it has been decided to discontinue the production of galvanised steel sheets and to concentrate on the wide range of electrical sheets which include Unisil, Losil and Transil.

As a result of the period of transition the overall output and the profit have been slightly lower than for the previous year.

The value of exports for the year was £2,545,000.

A new canteen for staff and workpeople has now been opened. It includes a well equipped stage, dressing rooms and other welfare facilities.

MARKET CONDITIONS

The past year has seen an accelerating demand for all of the Company's products with the result that it has not been possible to satisfy in full the requirements of regular customers for steel sheets. Owing to the prolonged strike in the American steel industry urgent enquiries for supplies were received from our agents in the USA but no deliveries could be made to the USA other than normal quantities to regular customers for tinplate. It is interesting to record that tinplate from Wales is now competitive with American tinplate on the west coast of the USA.

In the early part of the year competition in the world markets for tinplate increased and it was necessary to accept lower prices on renewal of contracts. Subsequently there has been some improvement in export prices.

Since the end of the world war, successive Chancellors of the Exchequer have stressed the importance of exports to the national economy. The Company has made great efforts to implement this policy and the results are most encouraging.

The third development plan announced in March, 1956, was designed to meet our home customers' estimates of their requirements from 1960 to 1965 and to provide for the exports which were then anticipated. The increased production which is now resulting from the plan is most timely and will go some way towards meeting the requirements of customers, which are now running far in excess of their estimates.

Under present conditions there are tremendous opportunities to increase the sale of steel sheets and tinplate at home and for export. The difficulty is to produce them in sufficient quantities.

DIRECTORATE

The conferment on the Managing Director of a knighthood in the New Year's Honours List of 1959 bears witness to the leading part which Sir Julian Pode has taken in bringing the Company to its present state of efficiency and development. The Directors and members of the staff have on separate occasions accompanied their congratulations and good wishes to Sir Julian and Lady Pode by presents which will remind them of the respect and affection in which they are held by a very large number of people with whom they have worked in a great venture.

In October, 1959, the Directors decided that the time was appropriate to appoint Mr R. W. Evans, the Honourable Hugo Kindersley and Mr I. S. Scott-Maxwell to the Board.

Mr R. W. Evans is now Deputy General Manager of the steel division under Mr W. F. Cartwright.

The Honourable Hugo Kindersley is a Managing Director of Lazard Brothers & Co. Ltd., which is one of the firms of merchant bankers who have rendered valuable services to the Company since its inception.

Mr I. S. Scott-Maxwell has been designated to succeed Captain H. Leighton Davies as General Manager of the tinplate division when the latter retires, after passing the normal retiring age, in June, 1960.

These persons have brought added technical and financial experience to our deliberations and I commend them to the shareholders most strongly for re-election as Directors.

PERSONNEL

Once again the thanks of the shareholders are due to the staff and workpeople for their services in a year of great progress. At the end of the year they numbered 23,148 compared with 21,555 a year ago. In addition 2,835 were employed on development compared with 4,947 in September, 1958.

Benefits under the contributory pension and life assurance scheme for staff have been improved during the year. The Company's contributions to pension and life assurance schemes for staff and workpeople were £701,754.

It is sad to have to record that the Steel Division was brought to a standstill from February 21 to 24, 1959, owing to an unofficial strike related to the dismissal by the Company

of a clerk in the electrical communications department. The action by the Company was subsequently endorsed by the union concerned and it would appear that some misunderstanding on the part of the branch officials was the reason for this unfortunate occurrence. All concerned should see that this never happens again. Unofficial strikes discredit the Trades Union movement, involve loss of earnings to the workpeople, and cause irritation and unemployment to the customers whose supplies of raw material are interrupted.

The iron and steel industry has traditionally enjoyed good relations with employees. In the large sized production units of today it is necessary to adopt a system of decentralisation of responsibility in order to break down the sense of impersonal management and remoteness which so easily develops. It is a prerequisite of satisfied employment that each employee should appreciate how important he is, individually, to the enterprise as a whole. This can best be achieved by building up the sense of co-operation and personal participation in quite small units. Largely with this object in view, a policy has been introduced of organising "Open House" days for the families in individual departments.

During the year the Company has expanded its activities in assisting technical education by means of scholarships, courses, apprentice training and safety classes. In this connection the Company has made a further donation of £100,000 to be paid over ten years to University College, Swansea, in order to accelerate the building programme.

FOURTH DEVELOPMENT PLAN

A year ago shareholders were informed that it was intended to increase the production of tinplate at an estimated cost of £5 million. The work is now well under way and on completion it is expected that the output of tinplate will increase by 100,000 tons annually.

During the summer of 1959 a close study was made of the future productive capacity of all the works and a fourth development plan was prepared to expand the annual ingot production rate from 3 million to 3,650,000 tons. When, therefore, the Company was asked, early in October, 1959, by the Iron and Steel Board, to put forward proposals for increasing the production of steel sheets as quickly as possible, a carefully considered plan was readily available. It has a number of interesting and attractive features and its greatest merit is that it could start to produce steel sheets and tinplate by the end of 1961.

No further additions to coke ovens, blast furnaces, or steel making shops are envisaged. Certain modifications, however, would be carried out, in the light of experience already obtained, to give increased efficiency and performance to existing equipment.

A continuous casting plant would be installed for the production of steel slabs. This would be the first time for such a process, which has large advantages in production costs, to be introduced on a large scale in the United Kingdom.

Alongside the present 80 inch Hot Strip Mill would be erected a smaller 48 inch Hot Strip Mill. This practice of having wide and medium strip mills at the same works is in accordance with practice in the USA and provides greater flexibility as well as a measure of reserve capacity. Under the new arrangement it would be possible to roll on the wide mill additional quantities of sheets which are urgently required by the motor car industry and to utilise the narrower mill for the production of steel coil for tinplating as well as for other purposes.

Additional finishing equipment would also be provided for processing steel sheets and tinplate.

The estimated cost of the fourth development plan is £33 million. Part of this expenditure is designed to increase the all round efficiency of the works. It would not therefore be correct to relate the total cost of the plan to the specific increases in output provided in it.

The Directors are of the opinion that the cost of these further developments could be met from internal sources and temporary borrowing from the banks. No alteration of the existing arrangement for the repayment of the loan from the Iron and Steel Holding and Realisation Agency would be sought.

At the time of writing this statement the consent of the Iron and Steel Board to these developments is awaited.

PROSPECTS

In the last ten years the market at home and abroad for flat rolled steel products and for tinplate has continued to expand and there has been plenty of work for the companies which make them. Large development schemes have been completed and others are either under construction or in the planning stage. In spite of this great expansion there is today an acute shortage of these products.

Since October, 1959, trade has improved appreciably and there are signs that the world may be entering a period of peaceful expansion with a general improvement in the standard of living. If this comes about there is likely to be, at any rate for some years, a world shortage of steel sheets and tinplate.

The iron and steel industry has a great part to play in the further expansion of British industry at home and overseas. The Steel Company of Wales is making a very important contribution to this expansion and must continue to do so.

Much work remains to be done and the prospects are very good.

WEBSTERS PUBLICATIONS LIMITED

LIEUTENANT COLONEL W. D. GIBBS ON GOOD RESULTS

The annual general meeting of Websters Publications Limited was held on January 4th in London, Lieutenant Colonel W. D. Gibbs (the Chairman) presiding.

The following is his circulated statement:

The profits of the Group for the year under review amounted to £102,098 compared with £124,723 for the previous year.

The reduction is due in the main to the Printers' strike which lasted for a period of seven weeks during which your Company's publications were completely suspended.

Sales following the strike decreased, but I am glad to say there has been a gradual improvement.

The Board have decided to recommend a final dividend of 40 per cent which, together with the interim already paid of 20 per cent, makes a total of 60 per cent for the year.

The report and accounts were adopted.

BANK OF CEYLON

MR H. V. PERERA'S STATEMENT

The Annual General Meeting of the Bank of Ceylon was held on December 19th at Colombo.

The following is an extract from the statement of the Chairman, Mr H. V. Perera, QC, on the report and accounts for the year ended September 30, 1959:

The Assets of your bank as at September 30, 1959, amounted to Rs 689 million as against Rs 777 million at the end of the previous financial year. There has been a considerable fall in these figures, attributable entirely to the decrease in Government deposits and contra items. In this connection I would refer to my statement last year when I said that on account of the financial operations of Government during September, which is the closing month of the Government financial year, certain "hot deposits" are made by the Government with the commercial banks. This year, however, these "hot deposits" did not materialise. The contra items again largely relate to Government transactions and reflect the volume of import transactions, guarantees granted and items in process of collection, which by their nature are subject to considerable fluctuation.

The bank's advances totalled Rs 182 million, an increase of Rs 3 million over the figure at the end of the previous financial year.

DEPOSITS

The total deposits of all commercial banks amounted to Rs 945.3 million as at September 30, 1959, as against Rs 981.7 million as at September 30, 1958, a fall of 3.7 per cent. The volume of non-Government deposits in all banks, however, increased by 5.8 per cent, while the volume of non-Government deposits in your bank increased by 7.7 per cent.

Your bank was privileged as at September 30, 1959, to hold 42.1 per cent of the total deposits within the commercial banking system. Although Government deposits fell considerably, our share of the total non-Government deposits increased from 38.5 per cent in the previous year to 39.3 per cent.

Cash, Bullion, Loans at call, Money at Short Notice and Treasury Bills aggregated to Rs 103.9 million. Our total liquid assets including Bills Discounted amounted to Rs 147.9 million. The percentage of liquid assets to total deposits is 37; the percentage to demand deposits is 54.

Your Directors recommend the transfer of Rs 350,000 out of current net profits to "Other Free General Reserves." In the course of the year your Directors authorised the transfer of a sum of Rs 400,000, and these two transfers will result in "Other Free General Reserves" standing at Rs 7,500,000. The Capital and published free reserves of the Bank would then amount to Rs 18 million.

It has been the privilege of your bank during this year to receive representatives from several Commonwealth and foreign banking institutions, many of whom entrust their business with Ceylon to your bank. We greatly value these visits to our bank and we send to our Agents and Correspondents in all parts of the world our best wishes for peace and prosperity throughout the coming year.

TWENTIETH ANNIVERSARY: This year saw the completion of 20 years' service on the part of your bank which commenced business on August 1, 1939.

The report and accounts were adopted.

SOUTH DURHAM STEEL AND IRON COMPANY LIMITED

RECORD GROSS PROFIT DESPITE SOME DECREASE IN DEMAND

DEVELOPMENT PROGRAMME FULLY JUSTIFIED

MR B. CHETWYND TALBOT ON FACTORS IN THE OUTLOOK

The Sixty-first Annual General Meeting of the South Durham Steel and Iron Company Limited will be held on January 27th at Caxton Hall, Westminster, London, S.W.

The following is the statement of the Chairman and Managing Director, Mr B. Chetwynd Talbot, TD, circulated with the report and accounts for the year ended October 3, 1959:

The financial results for your Company's past year show the gross profit, including £15,462 income from investments, amounting to a total for the year of £7,862,556 which is a record, compared with £7,106,417 for the year 1957-58, equivalent to an increase of 11 per cent over the gross profits earned in the previous financial year. It will be noted that the net level of profit after deducting Directors' Fees, Pensions, Depreciation and Interest Charges amounted to £5,292,885, compared with £5,141,117 in 1957-58, comprising an increase of only 3 per cent over the previous year.

CAPITAL EXPENDITURE

In commenting on the Balance Sheet figures as at October 3, 1959, you will note the capital expenditure, including routine capital expenditure, incurred during the year amounted to £19,763,502. Of this total, approximately 32 per cent was secured from your Company's resources by way of sums set aside for depreciation and transfers to reserves. The capital commitments as at October 3, 1959, still to be expended on Stage Two Developments, largely at the North Works, at West Hartlepool, amounted to £472,524.

The balance of capital expenditure outstanding at October 3, 1959, as authorised by the Directors on the Stage Three Development for the completion of the South Works situated at Greatham amounts to £26,387,342, in addition to which there is, of course, the anticipated increase in working capital which will be required.

You will note that, compared with amounts at September 27, 1958, the value of stocks and work in progress has decreased by £630,928, whereas debtors have increased by £385,258. This increase in debtors is chiefly due to a restoration during recent weeks in the demands for the products of the Cargo Fleet Works.

As I forecast in my remarks last year capital expenditure progressed according to schedule, and the balance of the moneys secured from the issue of the £8 million 6 per cent Convertible Second Debenture Stock 1978-83 amounting to £1,489,447 and the cash at Bankers were absorbed in the early part of 1959. You will note from the loans details shown in the Balance Sheet the arrangements with Barclays Bank and Finance Corporation for Industry came into effect during the year, the combined loans at October 3, 1959, amounting to £6,500,000.

During the financial year under review, due to the heavy rate of capital expenditure the Investment Allowances Reserve has been increased by £1,200,000 to an amount of £2,830,000 and the Replacement of Fixed Assets Reserve by £300,000 to a sum of £1,550,000.

In addition to the appropriation to General Reserve of £1,200,000 you will note we have transferred to Contingencies Reserve the sum of £500,000 to give a pool for the expenses connected with the starting up of the South Works and for other medium term contingencies.

CAPITAL AND APPROPRIATIONS

You will observe out of an authorised capital of £18 million Ordinary Shares of £1 each and unclassified shares, the Ordinary Shares of £1 each now issued amount to £10 million, leaving a balance of unclassified shares amounting to £8 million. Under the terms of the Agreement of January 3, 1958, the Finance Corporation for Industry had the right to convert during the years 1959-1967, commencing on October 1, 1959, £2 million of loan into an equivalent number of Ordinary Shares at par. This option was exercised at the commencing date by FCI with a cash payment for the £2 million Ordinary Shares and the FCI total loan to your Company under the terms of the Agreement is accordingly reduced from £22,500,000 to £20,500,000. These £2 million Ordinary Shares rank *pari passu* with the original £8 million Ordinary Shares and will be entitled to receive the final dividend of 8 per cent payable on January 27th next.

From the Notes contained in the Reports and Accounts for the year it will be observed that after deducting Profits Tax amounting to £223,772 there was a credit as far as taxation liability is concerned amounting to £20,809.

It will be noted that during the year a sum amounting to £1,565,881 has been transferred to amounts set aside for equalisation of taxation for future years. This figure arises from the relief which your Company has secured from the sums attributable to Initial Allowances on capital expenditure. In addition, again due to the heavy rate of expenditure, a further relief in taxation liability has been received due to the reinstatement in April last by the Chancellor of the Exchequer of Investment Allowances. The benefit your Company received for the year amounted to £1,200,000 and this sum, which cannot be considered as an amount available in any way for distribution by way of dividend, has been deducted from the profit along with taxation, reducing the balance of profit after taxation to £2,692,885 compared with £2,641,117 for the previous financial year.

OUTLINE OF ACTIVITIES

I firstly intend to give you a general outline of the activities of your Company's steel manufacturing and fabricated steelwork products over the last financial year. As you doubtless know, the section of the Industry primarily engaged in the manufacture of heavy steel products covering a wide range of rolled steel has, for the last 18 months, encountered a recession of a considerable magnitude. This remark applies not only to the home demand but even to a greater extent to world export markets where in addition price competition, extended credit and barter terms have been encountered.

The monthly levels of ingot production published by the Iron and Steel Board cover the whole of the activities of the Steel Industry in the United Kingdom and, therefore, include the outputs of steel sheet and strip tonnage. These two sections of the Industry have continued to work at full capacity, thus rendering the actual production level of the heavy section of the Industry misleading.

At West Hartlepool, plate production has been maintained at approximately the previous year's record output, but this level of production is entirely due to the fact that the Steel Pipe Department at Stockton has continued to work at full capacity on orders for export secured in former years. The requirements of the shipbuilding industry during the year have, I regret to say, shown a steady decline and it may be some time before that condition is halted. There is no need for me to comment on the reasons of the curtailment of demand for steel from this important section of our National Economy since they are widely known.

The steel section and rail production at the Cargo Fleet Works experienced the full effect of the recession in the demand for their large range of steel products. This comment applies both to home demand and more particularly to world export markets where, as I have mentioned previously, competition has been severe. Compared with the previous financial year the level of output showed a continuous decline from the autumn of 1958, but I am pleased to be able to state that with the increased demand which has arisen since the end of the financial year this plant has returned to a reasonable level of output.

COMPLETION OF STAGE TWO DEVELOPMENT

You will observe from the Directors' Report that the sum of £2,550,000 has been spent during the year on Stage Two Development at your Company's plants at West Hartlepool, Cargo Fleet and Stockton. The expenditure at Stockton amounted to £265,274 and comprised the installation of a second 40 feet expanding machine which together with the original machine will considerably increase the capacity of this plant. The balance of Stage Two capital expenditure was divided as to £1,830,000 at West Hartlepool and £457,000 at Cargo Fleet. At the former works the two principal items comprised the installation of a modern boiler plant and electric generating station, together with the replacement of No. 2 Blast Furnace with a modern 25 feet 6 inches furnace. The electric generating station became productive by stages during the latter months of the financial year but very little direct benefit was reflected in the year's operations, while No. 2 Blast Furnace was not blown in until the end of October. I feel confident, therefore, these two modern and efficient units will play a considerable part in strengthening the Company's competitive position in the immediate future.

At Cargo Fleet the Stage Two Development expenditure was virtually completed during the year and substantial benefits have been secured from reductions in the costs of discharging and handling imported ores, electric power generation, and by increasing the percentage of prepared and sintered material used in pig iron production.

The steel pipe plants, the fabricating and constructional departments situated at Stockton have continued throughout the year to work at high levels of production. I refer later in my remarks to the future levels of activities of these departments. Your Company has continued in the execution of the important contracts entrusted to them some three years ago by the Iraq Petroleum Company and also completed the shipment of the order secured from Yacimientos Petroliferos Fiscales, amounting to 58,500 tons of 24 inch diameter steel pipes for the Argentine. Production will continue during the year on the Iraq Petroleum Company contracts and in addition, production has now commenced on the fabrication of an order amounting to 20,350 tons from Shell International Petroleum Company for Indonesia and also on a contract comprising 13,000 tons for the British Columbia Electric Company for Vancouver.

STAGE THREE DEVELOPMENT—SOUTH WORKS

As you will have observed from your Directors' Report the capital expenditure during the year on the South Works at Greatham amounted to a total of £17,200,000. Together with the amounts expended in the two previous financial years the capital expenditure on this great project amounted at October 3, 1959, to the sum of £22,270,000, out of the total expenditure as forecast in September, 1957, amounting to £48,660,000, thus leaving a balance which will be largely expended during the present financial year and the year ending at September 30, 1961, of £26,390,000.

PROGRESS UP TO EXPECTATIONS

I am glad to be able to inform you that the progress made has come up to our expectations. It is naturally a difficult task to single out individual firms who have contributed to this successful state of affairs. I think you should know that the speed of preparing and levelling the 530 acre site and laying 250,000 cubic yards of concrete foundation work by the two principal civil engineering firms—George Wimpey Limited and Tarslag Limited—in conjunction with our consultants, W. S. Atkins & Partners, has enabled this level of progress to be achieved.

Out of a total of 36,000 tons of constructional steelwork required for the South Works, by the end of last September 20,500 tons had been erected by the five constructional engineering firms, including our own Constructional Department, entrusted with this task.

I advised you twelve months ago that delivery of one of the main items of plant, namely the slabbing mill manufactured by United Engineering & Foundry Company of Pittsburgh, USA, had been executed in advance of the contract date. The erection of the slabbing mill has been completed as far as the shears, together with all the intricate electrical equipment. Delivery of the two plate mill housings and ancillary equipment from Davy & United of Sheffield has commenced and completion of the delivery of the second pair of housings will have been completed by the time these remarks are in your possession. The supply of the electrical equipment and the mill motors entrusted to The English Electric Company Limited will comply with the estimated completion dates.

PRODUCTION AT SOUTH WORKS

I feel confident, therefore, subject of course to no delays outside our control, both ingot production from the steel plant at the South Works and the rolling of plates up to 136 inches wide in the new plate mill should be commenced by November, 1960. It will take a period of some nine months thereafter for the South Works to be completed to its full potential capacity, securing from the combined Works a level of production of 1 million tons of plates per annum. I am certain your Company will then possess the most efficient and modern heavy and medium plate mills in the world and likewise a plant of considerable adaptability for further extensions in the rolling of flat steel products.

Before I leave this most important development of your Company's future ramifications I feel you would like to know the general layout of each individual department of this vast undertaking together with the final level of plate production to be secured has been planned and executed by our own officials. I am sure you would like me to express on your behalf the warmest congratulations on their achievements.

CAUSES OF CONTRACTION IN DEMAND

I will now explain in greater detail the causes both in home and export markets which have contributed to the contraction in demand for your Company's range of steel products during the year. Taking Cargo Fleet first, under normal operational conditions sectional material in general represents 70 per cent of production and rails 30 per cent. It is readily understandable that the economy in the budgetary amounts demanded of virtually the only two users of rails in the United Kingdom—that is the British Transport Commission and the National Coal Board—requirements have been curtailed. However, the Industry has been advised the track rail requirements for the British Transport Commission will show a slight improvement for 1960. With regard to export, the British Rail Makers are continuing to be faced with severe competition and constriction of demand. It is still the intended policy of the British members and the members of the European Steel Community to endeavour to control the wide fluctuations in rail prices which have occurred in the past two years, but the intervention of makers in Europe, Iron Curtain countries and Japan has rendered this task difficult up to date.

Structural engineers continue to encounter intense competition from reinforced concrete construction for building projects proceeding in London and throughout the country, and this factor has caused a restriction in demand for the large range of steel sectional material rolled by your Company.

POSITION OF SHIPBUILDING INDUSTRY

It is widely known that the present position of the shipbuilding industry is causing grave concern to the Government. Beyond the requirements of our steel pipe and fabricating departments, the shipbuilding and ship repairing industries on the North East Coast are your Company's largest consumers of steel plates. Taking the peak years (1954-58) of deliveries of steel plates as one hundred, deliveries during 1959 will approximate 83 per cent and the forecast requirements for 1960 may not exceed 75 per cent of the deliveries of the peak years. I do not consider this recession in this vital industry is likely to be of a permanent nature, but before there is a return to the demands of the last few years it is evident a national review is essential of the future position of the shipping industry, on the efficiency and size of which this country is entirely dependent.

The international oil companies forecast some five years ago that world demand for oil products would increase annually by 7½ per cent. Events have proved this forecast was over-optimistic and the increase in demand has declined to an annual level of approximately 3 per cent. Though your Company has a reasonable order book for the present financial year the dearth of enquiries at present circulating is giving your Directors concern. In making these remarks it must be borne in mind the national aspirations of the states in the Middle East to secure for themselves a larger measure of control in the extraction of oil and an increased share in the ultimate levels of profits are causing a restrictive effect for further investment and extensions in those states.

CANADIAN MARKET PROSPECTS

During last autumn Mr Baillie and myself made an intensive investigation of the Canadian market as regards future requirements for steel pipe and the level of competition which may arise from existing plants and a new plant under construction for the manufacture of large diameter steel pipes. In addition to a steel pipe plant, situated at Welland in Eastern Canada, similar in technique and capacity to your Stockton plant, a plant under the same ownership is in course of construction near Edmonton in Alberta and is due for completion during the early months of 1960. These two plants are faced with three problems. Firstly, Canadian rolling mills cannot produce a plate of the essential width for line pipe which is now accepted as the minimum economic diameter. Secondly, the Welland plant, though adjacent to the centres of Canadian and United States steel producing areas, is faced with a haul of some 1,700 miles to the gas gathering grounds in Alberta. Thirdly, the Edmonton plant will be faced with the problem of securing its plate requirements for the larger diameters of line pipe either from the United Kingdom, United States or other countries, and again the problem of haulage costs arises.

It is the intention of your Directors to make every endeavour to retain your Company's due share of the Canadian market and the foresight of their policy has enabled the earlier completions of both the Trans-Canada and Westcoast Transmission natural gas pipe lines to be achieved.

The major schemes under consideration in Canada require the approval of the Dominion Government for the export of natural gas and likewise the approval of the United States government for its importation. As far as can be foreseen it is improbable any substantial tonnages will be required during 1960. These factors are in your Company's favour and will enable full advantage to be taken of the availability of width of plate from the South Works which is essential for the diameter of the pipe lines to be constructed.

A THREAT REMOVED

The Industry has no longer hanging over its head the threat of immediate return in some form or other to Public Ownership. It is clearly evident both from the actual result of the General Election and from the views expressed since by leading members of the Labour Party the policy of nationalisation played a leading role in the Conservative victory.

I am convinced it is the duty of all those employed in the Industry in every capacity to see that this confidence is not lost in the years ahead. Your Company is still engaged on a scheme of major development which will, on completion, secure for South Durham the position of the largest producer of steel plates in the United Kingdom. Furthermore, the fact must not be overlooked that the Iron and Steel Board under the 1953 Iron and Steel Act is empowered to advise the Government in the national interests with regard to the levels of maximum prices of steel products in the home market. Should it appear the ratio as between distribution by way of dividends as compared with the levels of retained profits for the financing of existing schemes and further development to be excessive, corrective measures by the Iron and Steel Board could well be taken, but it is equally the responsibility of the Iron and Steel Board when reviewing the levels of steel prices to ensure adequate amounts are included, both for the financing of schemes which are not yet profit earning and for the future development of the Industry.

It is not my intention to shake in any way the confidence of existing or potential shareholders in the future of your Company, but I feel I should draw your attention to the fact that as in any industry engaged in direct manufacture of finished products the invested capital to achieve this object ranks in the Steel Industry as one of the highest in the world.

DIVIDEND DECISION

During the present financial year firstly a further increase in the depreciation charge on plant now in production will accrue. Secondly, the interest on the combined loans from Barclays Bank and Finance Corporation for Industry, the rate of interest being governed by the Bank Rate, will show a considerable increase due to the heavy rate of capital expenditure at the South Works. Thirdly, holders of the 6 per cent Convertible Second Debenture Stock are entitled to commence the conversion of 50 per cent of their holdings into Ordinary Shares at par on March 31, 1960, and the additional Ordinary Shares so created will receive the half-yearly interest up to March 31, 1960, and thereafter both the interim and final dividends on their converted shares.

After taking these factors into consideration together with the possible effect of the cloud which has not yet cleared over the level of production of the heavy section of the Steel Industry, your Directors feel it would not be prudent to recommend an increase in the final rate of dividend for the last financial year. In coming to this decision it must be borne in mind that the South Works will not be in production during the present financial year, but at the same time your Directors are convinced their judgment in commencing the construction of this great works two-and-a-half years ago and securing the essential finance for the successful completion of the full project will prove fully justified.

In concluding my remarks I would like to place on record my tribute and that of your Directors to the loyal services of our staff and workpeople during the year and I am confident we can look forward to their continued co-operation in the future.

BARCLAYS BANK DCO

ANNUAL GENERAL MEETING

The Thirty-fourth Ordinary General Meeting of Barclays Bank DCO was held on January 4th at 54 Lombard Street, London, E.C.

Mr Julian Stanley Crossley (the Chairman) presided.

The Secretary, Mr C. F. S. Pringle, read the Notice convening the Meeting and the Auditors' Report to the Stockholders.

With the concurrence of the Stockholders present, the Report and Accounts and Statement by the Chairman, which had been previously circulated, were taken as read.

The Chairman said: Since the close of our financial year three months ago the tendencies to which I made reference in my Statement have, on the whole, been maintained. Sterling has continued predominantly firm throughout the period thereby demonstrating its fundamental strength in the face of heavy special demands.

EXCHANGE CONTROL

In my Annual Statement to Stockholders I drew attention to the opportunity which I believe now exists for removing the remaining restrictions still adhering to the pound. These may appear in a more unfavourable light to an overseas banker than to one whose operations are confined to the United Kingdom.

It is my belief, however, that exchange control is something which fits ill with a World Financial Centre. This does not mean that it has served no useful purpose. It was clearly necessary during the period of "convalescence" following the war, in much the same way as bandages and plaster may be needed for an injured limb. But if it is ever to recover its full use the limb must one day be unbandaged. We should therefore not come to regard exchange control as a normal state of affairs, nor should we forget that Controllers (perfectly naturally) are prone to continue controlling for as long as ever they can.

A MATTER OF TIMING

The removal of exchange control (as of the bandages) therefore becomes a matter of timing. Certainly we want no rash experiments; certainly too there is no course of action that can be guaranteed as absolutely free of risk. Inaction, however, also entails risks. It would, for instance, in my view be highly dangerous, and especially for a country which depends so much on overseas trade, to rely overmuch on the shelter which exchange control may temporarily seem to offer.

This can never be a substitute for efficiency. It might, however, become a soporific leading to some relaxation in our competitive efforts. It is here that the real danger lies, for if we were to allow our prices to rise unduly we should be undermining the true foundation of our prosperity. The abolition of exchange control would of itself make us more sensitive to this danger and bring home to us, in realistic fashion, the need to keep prices down.

NEW OFFICE AT ACCRA

The Chairman then went on to say that he thought Stockholders would be interested to hear that the Bank's new Head Office building and principal branch in Accra had been formally opened on December 5th by the Prime Minister of Ghana. The Chairman was able to be present on that occasion and he felt confident that the excellent arrangements provided both for staff and customers—as well as the distinguished gathering which was present there to wish the Bank well on that occasion—would help to give fresh impetus to the Bank's rapidly expanding business in that country.

TWO NEW DIRECTORS

The Chairman then referred to the appointment of two new Directors during the year—Mr Donald Carter, now a Vice-Chairman, who was formerly General Manager (Staff), and Mr John Thomson, Deputy Chairman of Barclays Bank Limited. He said that he knew both appointments had been widely welcomed by the Staff.

The Chairman mentioned that the names of Mr L. C. Daldry, senior Director of the Bank's Nigeria and Cameroons Board, and Mr P. C. Eccles, the Bank's Representative in San Francisco, had been included in the New Year Honours list, Her Majesty having appointed each of them to be a Commander of the Order of the British Empire. He felt that it would be a matter of great satisfaction to the Stockholders to know that the public work of these two members of the DCO Staff had been so suitably recognised. Five of the Bank's serving Staff had now been honoured in this way.

TRIBUTE TO MR A. T. DUDLEY

In conclusion, the Chairman referred to the retirement from the Board of Mr A. T. Dudley, who had reached the age of 70 and did not seek re-election. On behalf of the Stockholders, the Chairman thanked Mr Dudley for all the good work he had done for the Bank, which he had served since 1919, becoming an Assistant General Manager in 1941, a General Manager in 1945 and, on retiring on pension in 1950, a member of the London Committee and the Board. The Chairman said Mr Dudley would be greatly missed, not only by his colleagues on the Board but also by his many friends on the Staff.

The Chairman then moved the adoption of the Report of the Directors and the Statement of Accounts and the payment of a Final Dividend of 5 per cent actual on £12,932,250 Ordinary Stock, making 9 per cent for the year, less Income Tax at the standard rate of 7s. 9d. in the £.

The motion was seconded by Sir Geoffrey Gibbs, KCMG, Deputy Chairman, and carried.

The retiring Directors, Mr Arthur Stephen Aiken, Mr Donald Carter, Mr Paul Vychan Emrys-Evans, Mr George Frederick Lewis, Sir Eric Gustav Machtig, GCMG, KCB, OBE, and Mr John Thomson, were re-elected.

On the motion of Lt. Col. K. E. Previté, OBE, seconded by Mr Harold Wakeford, the Auditors, Messrs Deloitte Plender, Griffiths & Company; Price Waterhouse & Company; Peat, Marwick, Mitchell & Company and Cooper Brothers & Company, were reappointed.

A vote of thanks to the Staff, proposed by Mr J. Thomson (a Director) and seconded by Mr G. J. W. Turner, MC, TD, was carried unanimously and was responded to by Mr B. F. Macdona (a General Manager).

A vote of thanks to the Chairman was proposed by Sir Frank Newson-Smith, Bart, and was unanimously accorded.

the united

Extracts from the Statement by the Chairman, Sir Walter Benton Jones, Bt., on the Accounts for the year ended 30th September 1959

Introduction

A company, by its constitution, has a board of directors appointed by the shareholders, and the directors appoint one of their number to be their chairman. The directors of our company have appointed me to be their chairman and I have had the honour to occupy this position for a number of years.

The statement I am making, it is true, is my own composition. Nevertheless, in effect, it is an elaboration of the Directors' Report, but I am allowed the privilege of putting in a few odds and ends which are *obiter dicta*, as indeed is this introduction.

In composing a statement which is in the nature of an annual review, it can cover many subjects, but it is open to doubt if long statements are read by many. On this occasion I shall try to be brief. This is not a discourtesy, it is because I want to point a highlight on a particular subject —the technical changes which are taking place in the making of iron and steel.

Nationalisation

For the present the overloaded nationalisation wagon has not had the Steel Industry added to its load. Is it an over-simplification to say that fundamentally private enterprise is personal whereas nationalisation is impersonal? The people of our country have resolved to retain personal enterprise and it is to be hoped that this resolution will become still stronger as time passes.

Our company is composed of a number of units each of which is a personal community. In general terms everybody knows everybody else. And all these communities over a long period of years have got to know one another so well and to help one another so willingly and intelligently that the whole company regards itself and conducts itself as a community of persons—a community of 35,000 operators and 35,000 proprietors. That ideal has been, and in the future will still be, the aim of the administration.

Subjects

The things I am going to talk about are:

1. How we have come through the recent recession.
2. In a purely technical story, the recent revolutionary processes of making iron and steel which have been and are still taking place, and what we have done and are doing about them.
3. Our near-future prospects.
4. Our present financial state.

How we have come through the recent recession

In November 1958 when my last statement was written, we had reached the end of a long period of striving to make production catch up with demand. We were uncertain whether this was a lull or the beginning of a slump. We all hoped it was a lull which might not last longer than the third quarter of the current year. This hope has been realised. I need not enumerate all our fears and hopes in the meantime and the many factors and markets on which our fortunes depended.

Although we do not make wide strip, for which the demand has not diminished, we have a substantial shareholding in John Summers & Sons who specialise in this product, and we ourselves are the largest makers of medium and narrow strip in the United Kingdom.

Excluding wide strip, we own 15.6% of the country's steelmaking capacity and we were successful this year in producing 17.2% of its output.

Steel Story

At Appleby-Frodingham works, where we make by the hot metal process 1,400,000 tons of steel in a year, we have invented a method of our own which we call the Ajax process. This has already been applied to two of the Appleby-Frodingham ten steel furnaces, and the result has been to increase their production by about 75 per cent. In the Ajax process also there is a reduction in fuel consumption of over 70 per cent. This year the process will be applied to a third furnace. We are engaged in building an oxygen-making plant to augment our supply to these furnaces.

Incidentally, our Ajax process equipment is patented and a firm of furnace builders has been licensed to manufacture it to our designs, for other steelmakers.

In the cold metal process, following careful and full examination we have reached the conclusion that future economy and efficiency indicate that the most forward-looking policy would be to discard the type of steel furnaces which are commonly used and which are known as open-hearth furnaces and to substitute for them electric furnaces. At Samuel Fox for some years we have been making special steel in increasing quantities in electric furnaces. But at Steel, Peech and Tozer, where we make by the cold metal process over 1,000,000 tons of steel a year in open-hearth furnaces, although these furnaces are comparatively modern, we intend over the next five years to replace them step by step with electric furnaces.

We believe there are no other steelworks in this country or in the world of comparable size in which up to now electric steel melting has been substituted for melting by the cold metal process in open-hearth furnaces.

Another development in which we are engaged is what is known as continuous casting.

There are many other things in our steel works which we have done and are doing and which are not only modernising processes; but also are extensions and elaborations of products. For example at Samuel Fox, where we made last year about 333,000 tons of special and alloy steels including 40,000 tons of stainless steel, the works have been very largely rebuilt in the last 10 years. But the developments through the stages of iron and steel making to which I have referred are new developments. They are far reaching and are the beginnings of what it seems may soon become common practice.

Our near-future prospects

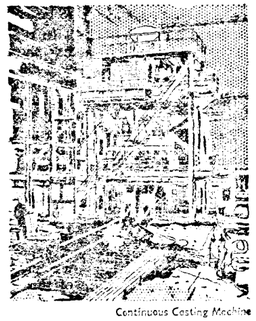
In general, the recession ended in the early spring of this year. Since that time there has been an increasing improvement in the demand for all our steel products except for those manufactured by certain specialised departments which in the main provide materials for the railways and the coal mining industry but in some cases we have been able to substitute other products.

The intense demand for consumer goods, the restocking programme by all consumers together with fair prospects in the export market lead to an encouraging picture.

It is true that the demand for some capital goods has not yet reached the previous high level, but we believe we shall continue to work to near full capacity and the prospects of the company for this current financial year are therefore bright.

Our present financial state

The Report and Accounts with their notes are so full and so clear that it would be only repetition for me to point to this or that in any part of the Balance Sheet or in the Profit and Loss Account.

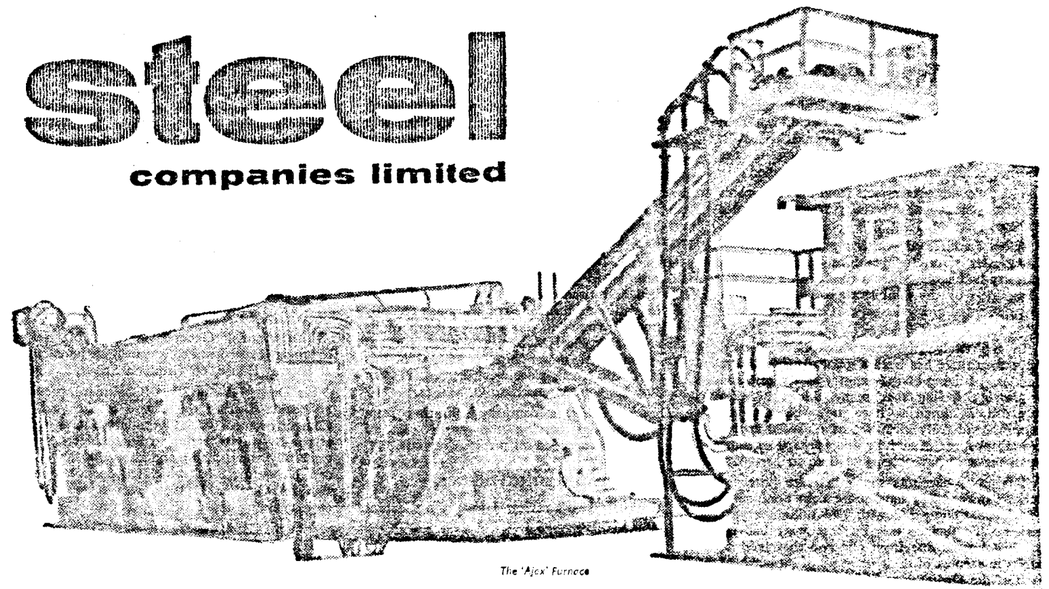


The charge for depreciation together with the transfers to fixed assets replacement reserve amount to £7,099,000 for the year and the provision for taxation to £7,091,000. Current assets less current liabilities at £26,619,000 are £2,942,000 greater than in the previous year. Quoted trade investments stand in our books at £1,339,000; at 30th September their market value was £4,314,000. Our cash and short term securities at about £7¼ million are little changed.

Perhaps the most interesting and easily appreciated records are the graphs at the end of the Accounts which show the actual rate of output and the net earnings in the years from 1951 up to the present time.

Outputs of the Company's principal basic products have been:

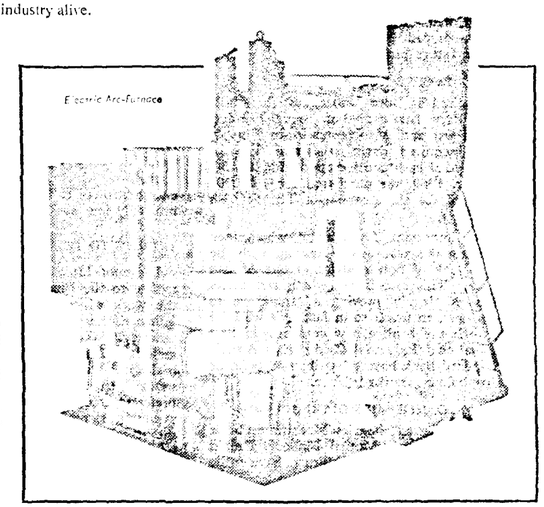
1951 (in '000s)	1957 (in '000s)	1958 (in '000s)	1959 (in '000s)
	STEEL INGOTS		
2,103,	2,855,	2,708,	2,597,
	PIG IRON		
1,091,	1,748,	1,690,	1,757,
	COKE		
1,188,	1,592,	1,528,	1,591,
	IRON ORE		
3,403,	4,868,	4,718,	5,207,



The financial statement of employment of capital shows the growth of the company's business. Fixed Assets and Trade Investments are approximately 2¼ times greater than they were in 1951 and the capital employed is more than three times greater.

Continuous Casting Machine

Copies of the full Statement are available from the Secretary, The United Steel Companies Limited, 17, Westbourne Road, Sheffield, 10



steel companies limited

The 'Ajax' Furnace

Iron and steel companies use a lot of capital in the installation of plant, but even when it has been installed it is inevitable that apart from maintenance, which in any case is very heavy, special expenditure is needed to keep in step with developments and improvements. Such expenditure in this peculiar industry can hardly be regarded as capital expenditure: it needs to be provided to keep the industry alive.

The activities that I have described in my story about steel will cost money, but they will be spread over a few years and we do not expect that they will unduly burden our financial resources. They are an example of what I mean when I say steel companies have to spend large sums of money to keep themselves alive.

Electric Arc-Furnace

MERCANTILE CREDIT COMPANY LIMITED

BUSINESS AND PROFITS DOUBLED

The twenty-sixth annual general meeting of Mercantile Credit Company Limited, was held on January 6th in London, Mr Richard B. Hurton, managing director, presiding in the absence of the chairman, Sir Mark Turner.

The following are extracts from the chairman's circulated statement for the year to September 30, 1959:

When I addressed you last year I referred to the greater stature which hire purchase as an industry had achieved, as a result of its eventual recognition by the joint stock banks and others as an essential and valuable part of the monetary system.

In the twelve months which have elapsed since then there has been a great upsurge in the standard of living of the country as a whole and a growing feeling that many things hitherto regarded as luxuries have now become the necessities of daily life. We have shared in this general upsurge of activity and perhaps in some small measure have contributed to it.

The group accounts show that hire purchase debtors outstanding have more than doubled at £54,800,000 compared with £26 million a year earlier. To finance this increase we called up the instalments due from our two shareholding banks in respect of their interests of 20 per cent each of the Ordinary capital of the company six months ahead of time, and in September, 1959, raised £2,500,000 by the issue of 2,500,000 6½ per cent Preference Shares of £1 each at par.

Profits have followed the same course as outstandings, being slightly more than twice the 1958 figure at £2,100,000.

Unearned finance charges at just under £5 million show a rather larger proportionate increase over the figure for 1958 of approximately £2,100,000. The chief reason for this is that the average new business underwritten has risen in length of term. It will, however, be recognised that these additional amounts set aside for unearned finance charges represent an increase in future profitability.

RECENT ACQUISITIONS

We acquired as from January 1st the whole of the ordinary share capital of Mutual Finance. Dunelm Trust and Manchester Auto Finance were also acquired during the past financial year for a total cash consideration of £263,350. In October, 1959, we purchased for £213,000 the whole of the share capital of The Scottish Transit Trust.

Another important development which took place during the year was a link up with the Standard Bank of South Africa in our African businesses. This association, which we greatly welcome, is already proving advantageous to both partners, so much so in fact that we have set up with the bank a new company in East Africa, National Industrial Credit (East Africa). The Standard Bank have subscribed 40 per cent of the capital and we the balance.

OTHER SUBSIDIARIES

Our remaining subsidiaries Mercantile Credit Company of Ireland, Mutual Finance, United Motor Finance and Dunelm Trust, have made substantial contributions to the group.

Ireland.—An increased volume of business has been handled here as elsewhere, and although competition has been greater than ever our company has achieved records both in turnover and profits.

Mutual Finance.—Considerable progress has been made and profits have risen in a higher proportion than the volume of business and the agreements outstanding, all three of which results are records for the company.

United Motor Finance has similarly broken all records in both the volume of business handled and profits. Unfortunately, as many of you will have read, the company has recently suffered a severe loss through the death of its chairman, Sir Noel Mobbs, a pioneer, perhaps the pioneer, of motor hire purchase in this country. Sir Noel's place as chairman has been filled by his son, Mr Richard O. Mobbs.

Dunelm Trust, a company operating from Darlington and serving the north east of England, has exceeded all previous records.

BAD DEBT EXPERIENCE

In my last year's review I gave two different methods of expressing our bad debt experience in the motor field over a ten-year period. Using one method of measurement, the average came out at 0.064 per cent of turnover, and by another and perhaps more accurate one, 0.108 per cent of turnover. The corresponding percentages for this year would be 0.063 per cent and 0.112 per cent respectively. I think you will agree that this is extremely satisfactory. But I must emphasise that it has only been achieved by resolutely refusing to lower our standards regarding the type of dealer we serve.

The demand for and greater production of cars, domestic appliances, television sets and so on, has brought many new entrants into the various retail trades concerned and few have found any difficulty in obtaining all the credit they wanted. As a result many have gone into business with little or no capital or experience and some, it would appear, without the best intentions.

We ourselves have been obliged from time to time to meet competition of a type which we regard as unsound, such as agreements running for 48 months following a down payment of small or even negligible proportions. Such terms are widely advertised and give direct encouragement to hire purchasers to enter lightheartedly into serious obligations.

TRIBUTE TO FINANCE HOUSES ASSOCIATION

I cannot leave this subject without paying tribute to the Finance Houses Association and the work which that Association is doing to enhance the reputation of the hire purchase industry. While the Association represents the majority of firms who operate on a national basis, it is to be regretted that there are still some which, though qualified to join, apparently prefer to enjoy the benefits of its work without assuming its responsibilities. It is essential that the principal organ of the finance houses should be so constituted as to be able to claim, when discussing matters of national importance with the authorities, that it speaks for all the national companies.

During the year we have elected to the board Mr Edward Norman-Butler, joint general manager of Martins Bank, and Sir Walter J. Worboys, a director of the Westminster Bank. Mr Percy Livsey, the Managing Director of Mutual Finance, and Mr Richard O. Mobbs, the new Chairman of United Motor Finance, have also joined the parent board.

Finally, I would like to pay a tribute to the company's staff, both in Mercantile Credit and the subsidiary companies. At all levels of the organisation, they have risen splendidly to their increased responsibilities, and on your behalf I would like to offer all of them your thanks.

The report and accounts were adopted.

NELSON FINANCIAL TRUST LIMITED

SIR DENYS LOWSON ON AUSTRALIAN EXPANSION

The Annual General Meeting of Nelson Financial Trust Limited was held on January 5th at Estates House, 66 Gresham Street, E.C.

Sir Denys Lowson, Bart (Chairman), presided and said: During the course of the year the Company issued 104,010 Ordinary Shares of 10s. at par by way of rights to Shareholders, which was fully subscribed; and the £300,000 4 per cent Debenture Stock which fell due for redemption on October 1, 1959, was replaced by a corresponding issue of 6 per cent Debenture Stock, 1982-1987.

The total gross Revenue of £123,578 for the year compares not unfavourably with that of the previous year of £116,778.

The Directors recommend the payment of a Dividend for the year of 7 per cent, less tax, on the Ordinary Share Capital (as increased by the Rights Issue); and if you approve this payment there will be the increased amount of £56,198 to carry forward.

The valuation of our investments at October 31st last shows an appreciation of £703,863, being 48.88 per cent over the Balance Sheet figures.

As most Shareholders are already aware we have some important investments overseas, both in North America and in Australia. The eastern states of this latter country are now showing some recovery from the severe drought conditions which had prevailed during the preceding year; and the outlook for the current year, barring any major world disturbances appears to be not unfavourable.

In the last ten years the Australian economy has shown a remarkable expansion. This is well illustrated by the growth of Population over this period by 25 per cent, Factory Production by 70 per cent, Rural Output by 30 per cent and Production of Electricity, Pig-iron and cement by no less than 120 per cent. In addition, during these ten years Motor vehicle registrations have increased by 100 per cent; so that there is now one vehicle for every four members of the population.

Overseas investment has played a vital part in this expansion. From 1948 to 1958 a total of approximately £A750 million from overseas was invested in Australia; all but 10 per cent of this amount coming from the UK and the USA.

The adoption of the Report and Accounts was seconded by Mr Guy Montague Nelson, OBE, JP, and carried unanimously. The proceedings terminated with a hearty vote of thanks to the Chairman, Directors and Staff.

RIM (MALACCA) RUBBER ESTATES

The 49th annual general meeting of Rim (Malacca) Rubber Estates Limited was held on December 30th in London, Mr H. A. Kinney, FCA (the chairman), presiding.

The following is an extract from his circulated review:

The improvement in selling price, coupled with the increase in crop have combined to produce a profit before taxation amounting to £63,953. The crop harvested for the year ended 30th June, 1959, was 2,558,100 lb as compared with 2,117,200 lb for the previous year and the estimated crop for the current year is 2,802,350 lb.

A final dividend of 17½ per cent is recommended, making a total of 22½ per cent as against 15 per cent last year.

At the moment the future is almost too good in so far as the price of the commodity is dangerously high. Our crop for the first four months is 904,000 lb as compared with 882,500 harvested in the corresponding period of last year. We confidently expect to exceed last year's crops but may not obtain estimates as the Manager at Mentri is having difficulties in maintaining his tapping force.

As to the release of stockpiles it appears most of this is not of No. 1 grade, and it is more than probable in 1960 demand for natural rubber will exceed supply and herein lies the danger of an artificially high price causing the loss of consumers. However, the fact remains that as yet for many uses there is no substitute for natural rubber and synthetic just will not do the job as well. The report was adopted.

I·C·T

From the Statement by Sir Cecil M. Weir, K.C.M.G., K.B.E., M.C., circulated with the Report and Accounts for the year ended 30th September, 1959.

On 30th January, 1959, the merger of The British Tabulating Machine Company Limited and Powers-Samas Accounting Machines Limited came into operation and the new name International Computers and Tabulators Limited, with its already well-known abbreviation, I.C.T., was adopted. The Accounts up to the 30th September, 1959, contain the results of the Powers element for nine months only. Next year you will have the results of a full twelve months' trading of I.C.T. as a whole. The Group profit for the period under review is £2,328,000 compared with £2,020,000—the combined profits of the two former Groups for their last full accounting years. The steady growth of demand for punched card equipment has continued. Our electronic calculators continue to attract favourable opinion. Over 1,000 are installed and we have substantial orders in hand. Over 100 of our larger electronic calculators and general purpose computers are in regular use and here again substantial orders are in hand. The effect of the merger has perhaps been most marked in the oversea field of operations which has developed within only twelve months into an organisation truly international in character, trading already in some fifty countries. We have every reason to feel that the steady growth exemplified in the history of both former elements of your Company will continue. We close the year with a good order book and ample prospects of new business.

J. H. FENNER & COMPANY (HOLDINGS) LIMITED

The twenty-third ordinary general meeting of J. H. Fenner and Company (Holdings) Limited and subsidiary companies was held on January 6, 1960, at the Queen's Hotel, Leeds. The following extracts are taken from a Joint Statement by Mr C. Bradshaw, FCA, the Chairman, and Mr S. B. Hainsworth, FTI, the Managing Director and Deputy Chairman.

Financial Position.—The Consolidated net profit of the Group, after making provision for deferred repairs and for research expenditure, and after charging taxation is £236,970, compared with £226,055 for the previous year.

After adding the balance brought forward from the last account of £557,623 and the amount of £16,476 being a reserve for taxation no longer required, the sum of £811,069 has been appropriated as follows:

	£
Transfer to Mortgage Debenture Sinking Fund	10,240
Amount Utilised for Bonus Issue	225,000
Dividend on Preference Shares ...	6,188
Dividend on Ordinary Shares ...	68,906
leaving a balance to carry forward of £500,735.	

J. H. Fenner and Company Limited.—The Company's business in mechanical power transmission equipment continues to expand.

In 1959-60 we plan to build a new Development Block and an extension to one Division at our Hull factory. Both are designed to further your interests, the former in developing new ideas to the pre-production stage, and the latter to make more of the established lines which are already selling so well. In accordance with Company practice, our forward budget for expenditure on development has been established for a considerable period ahead. Subject to considerations which arise as the scene unfolds, we know that, over the next few years, very substantial sums of capital will be required to finance the expansion and development of new sections which have been planned, and, in some cases, already begun.

As our products are used by all industries, everywhere, we can claim to be reasonably well-informed as to the general business climate. Since 1950 British business has come along well and we believe we have shared in this general progress in many ways.

Premium V-Belts.—These long-lasting V-Belts, with Terylene load-bearing cords, are no longer just being used for the more difficult drives. Industry generally has found it economic to use them on normal drives as they bring down replacement costs. In some plants, those of ICI for example, machine casings are marked to indicate that only Premium V-Belts are to be used for driving. This is one case at least of the shoemaker's child, in this case ICI, as the makers of Terylene, not being the worst shod.

The Taper-Lock Range.—The use of this method of securing the quickest and easiest fixing to shafts, which we manufacture under licence from the Dodge Manufacturing Corporation, still spreads. We find that we only have to persuade users to try it once and then its benefits are so self-evident that it is demanded as the standard fitting in pulleys, chain wheels and couplings.

Fenner Cockill Limited.—At our South Indian factory at Kochadai, substantial progress has been made, the V-Belt and Weaving Divisions are in good shape, and we are extending to take in the manufacture of oilseals and synthetic rubber textile accessories. Our partners in this organisation, Messrs Harvey Brothers, have continued to give us help and co-operation. From Indian Government sources at Delhi, we learn that favourable comments have been made on the initiative, enterprise and efficiency of our factory, and this naturally causes us much gratification.

Fenner Dodge (Australia) Pty. Limited.—The Australian venture is now under way, and whilst we do not expect to make any contribution to profits for some time, we do believe that we have entered the field at the right time. We are especially glad to be associated with Dodge, who have always been good partners and friends of ours, although this is the first time when there has been any joint contribution of capital.

GENERAL MATTERS

Looking at industry in this country, there are, inevitably, some favourable and some unfavourable conditions. Here we are not so highly mechanised and do not use so much power per man as American industry, nor do we have such a high percentage of economic units of production. We make our comparison with the United States because industrial efficiency there is, in our view, probably higher than in any other part of the world.

Again, because of the realism of the Germans and the French, we have been placed at a great disadvantage in not being allowed entry into the European Common Market; but this play against us had been planned for a long time and it is not the fault of our Government that it came off; rather it is the result of a basic feeling

in Western Europe that the ECM is essentially a political combination.

In our own country it is good to see the growing realisation that, for the general welfare, *strong efficient businesses which make profits* are essential. Of the profits your company makes, over 50 per cent goes back in direct taxation, and after the Government has taken its major share the larger part of the profits we make are retained for further investment.

The report and accounts were adopted.

H. & G. SIMONDS LTD.

YEAR OF FURTHER PROGRESS

HIGHER SALES AND PROFITS

The Annual General Meeting of H. & G. Simonds, Ltd., was held on January 4th at Reading. General Sir Miles Dempsey, the Chairman, presided, and the following are extracts from his circulated statement:

TRADE AGREEMENT

In July we entered into a trade agreement with Courage & Barclay Ltd. A press announcement was made at the time, and it was also stated that methods were being considered by which closer association between the two Companies might be achieved. The work involved is considerable, but talks are proceeding, and stockholders can be assured that they will be told as soon as any information is available.

FINANCE

The Profit and Loss Account shows that the year's working resulted in a balance from trading of £1,176,661, an increase of £63,405. This figure is arrived at after taking into account the loss—some £67,000—on beer stocks held at the date of the reduction in excise duty announced in the 1959 Budget. The profit before taxation of £897,494 is an increase of some £46,000, compared with the previous year. This improved result is mainly due to the larger volume of trade we have experienced, though I can also report that production economies and increased efficiency have played an important part. The provision for taxation on the year's profits is £418,921, and profits after taxation reached the very satisfactory figure of £478,573, compared with £384,818.

The Board now recommend that a final dividend of 10 per cent be paid on the ordinary stock, making 14 per cent for the year, compared with 12 per cent.

TRADE

Our sales of beer achieved a most welcome and satisfactory increase and passed by a wide margin the record achieved in 1957. It is never easy to find the exact reasons for increased sales, but the budget reduction of 2d. per pint; the exceptionally long hot summer, and the generally improved level of wages, together with price stability have all contributed. We also believe that the improved standard of our public houses and the excellent quality maintained by our brewing staff can claim a lot of credit.

Sales for the first few weeks of the new financial year have been maintained at a healthy level, and it is our reasonable hope that, so long as inflation is kept at bay, we may be able to show at least as good figures this year.

Our sales of wines and spirits have continued to expand in a most gratifying manner.

LICENSED PROPERTIES

Of the five new houses to which I referred in my last statement, four were opened towards, or just after, the end of the financial year, and the fifth will open early in 1960.

Improvement of our existing houses to meet modern requirements has continued, and the cost of repairing and decorating our properties showed a further increase.

PLANT

During the year we opened a new high-speed bottling line at Reading, which is in some respects the most efficient in this country. This has enabled us to concentrate more production at Reading, with consequent economy of operation.

We have also substantially completed the important new works at Devonport, which have given us at that brewery too, much greater economy and efficiency. In addition we are carrying out an important experiment in one of our new public houses, designed to establish the practicability of using a non-returnable container in place of the bottle.

HOTELS AND OFF-LICENCES

The turnover of our Hotels and Catering Department again showed improvement, and our retail organisation trading under the name of Arthur Cooper has been further expanded during the year.

The Report and Accounts were adopted, and the retiring Directors re-elected.

APPOINTMENTS

Expanding International Marketing Organisation with representatives in North America and sixteen W. European countries, requires for its headquarters in Zurich

(1) A MARKET RESEARCH AND MARKETING SPECIALIST

with a university degree (preferably in Commerce or Economics) and good knowledge of marketing conditions in at least three/four West European countries. Proficiency in English, French and German essential. Applicants should be aged not less than 30.

(2) A YOUNG MARKET RESEARCH ASSISTANT

aged about 25, with a good university degree, some experience in market research, and a good knowledge of English, French and German.

These positions offer scope for interesting work in a rapidly expanding field, pleasant working conditions in new, modern offices, five-day week and opportunities to travel abroad.

Applicants are invited to write, giving full particulars of qualifications and experience to—

General Manager,
CONTIMART AG.,
Lexhof,
Militarstrasse 76,
Zurich 4.

VICTORIA UNIVERSITY OF WELLINGTON
NEW ZEALAND

LECTURER IN POLITICAL SCIENCE

Applications are invited from suitably qualified persons for the above-mentioned post.

The salary will be £1,025 per annum, rising by annual increments of £50 to £1,275 per annum. The initial salary will be determined according to the qualifications and experience of the appointee. An allowance is made towards travelling expenses. (University salaries are at present under review).

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in New Zealand and London, on February 29, 1960.

For further appointments and other classified advertisements see pages 166 and 167

AUSTRALIA
THE UNIVERSITY OF NEW SOUTH WALES
VACANCY FOR PROFESSOR OF ECONOMICS

The University of New South Wales invites applications for appointment to a Chair of Economics in the School of Economics at Kensington.

Salary: £A3,774 per annum.

The present Head of the School of Economics is Professor D. C. Rowan who will be succeeded by Professor Murray Kemp in early 1961.

The School of Economics prepares undergraduates for the degree of Bachelor of Commerce in the following specialisations:

ACCOUNTANCY
STATISTICS
INDUSTRIAL RELATIONS
ECONOMICS
APPLIED PSYCHOLOGY
WOOL COMMERCE.

The School also supervises candidates for higher degrees. The present staff of the School numbers twenty economists and statisticians.

Subject to satisfactory medical examination, the successful applicant will be eligible to join the State Superannuation Fund which provides a pension of £A1,638 per annum.

Professors are eligible for six months' study leave on full salary after three years of service, or twelve months after six years of service.

Subject to the consent of the Council of the University professors may engage in a limited amount of higher consultative work.

First-class ship fare to Sydney of appointee and his family will be paid.

With the approval of the University and its bankers, married men may be assisted by loans to purchase a home.

The University reserves the right to fill the Chair by invitation.

Four copies of applications together with the names of three referees, and a recent photograph, should be lodged with the Agent General for New South Wales, 56-57 Strand, London, W.C.2, and a copy forwarded by airmail in an envelope marked "University Appointment" to the Bursar, The University of New South Wales, Box 1, Post Office, Kensington, New South Wales, Australia, before February 26, 1960.

AUSTRALIA
THE UNIVERSITY OF NEW SOUTH WALES
FOUNDATION CHAIR OF HISTORY

The University invites applications for appointment to a Foundation Chair of History within the Faculty of Arts which is being established.

Salary £A3,774 per annum.

The professor will be responsible for the organisation of research and teaching in his subject within the faculty, and as well for the supervision of the teaching of history to students of other faculties as part of a system of general education for all students that is traditional at this University.

Hitherto this general education has been provided by a School of Humanities and Social Sciences in which the subjects English, History, Philosophy, Government and Sociology have been represented. The present staff in History comprises one senior lecturer and six lecturers who will, upon the establishment of the new faculty, be transferred to a School of History of which the new professor will become the Head.

Subject to satisfactory medical examination, the successful applicant will be eligible to join the Superannuation Fund which provides a pension of £A1,638 per annum.

Professors are eligible for six months' study leave on full salary after three years of service, or twelve months after six years of service. Subject to the consent of the Council of the University, professors may engage in a limited amount of higher consultative work.

First-class ship fare to Sydney of appointee and his family will be paid.

The University reserves the right to fill the Chair by invitation.

With the approval of the University and its bankers, married men may be assisted by loans to purchase a home.

Four copies of application, together with the names of three referees and a recent photograph should be lodged with the Agent General for New South Wales, 56-57 Strand, London, W.C.2, and a copy forwarded by airmail in an envelope marked "University Appointment" to the Bursar, The University of New South Wales, Box 1, Post Office, Kensington, New South Wales, Australia, before February 26, 1960.

MANAGER FOR METALS DEPARTMENT required by London Merchants. A man is sought who has wide connections with suppliers of ferrous and non-ferrous metals, is well versed in all commercial aspects of specifications, pricing, etc., and has good negotiating ability. The successful applicant will have an interesting and progressive career, with attractive starting salary and pension scheme.—Apply in strict confidence to Box 1561.

APPLICATIONS are invited for the post of ASSISTANT LIBRARIAN or SENIOR ASSISTANT LIBRARIAN, according to qualifications, on Scale £650 to £1,425, with £60 London Allowance. F.S.S.U. and family allowance scheme. Candidates must be graduates, preferably in the Social Sciences; they should if possible have a knowledge of Russian; a higher degree or research experience will be an additional qualification; library experience or training is also desirable. Applications, with copies of two testimonials and the names of two referees, must reach the Librarian, London School of Economics, Houghton Street, Aldwych, London, W.C.2, by January 22nd.

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor: that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks or large sizes of black-faced type may be stippled or lined at the Editor's discretion.

COMPANY AFFAIRS

Banks' Bumper Year

THE banks have just completed the first full year of lending freedom they have enjoyed since before the war, and there seems no doubt that it has been the most profitable year in their history. The surge of competitive enterprise with which they celebrated their emancipation quickly proved to the world their eagerness to expand, and especially to lend. And, given the reflationary aims of the policy pursued by the monetary authorities, the banks' drive for expansion has resulted in a growth of bank advances at a pace without precedent in modern times, and has been associated with an accelerating rise in bank deposits to successive new peaks. The average level of deposits at the clearing banks was 4½ per cent higher in 1959 than in 1958. And the average amount of outstanding bank advances showed an expansion of fully 30 per cent. Moreover, as the reflation proceeded, the rate of turnover on bank accounts rose rapidly, bringing an increase in bank revenue from commission. The banks' participations in hire purchase companies also paid off.

The true improvement in bank earnings has certainly not been so spectacular, however, as these favourable influences alone might seem to imply, since there has been a major contrary influence in the trend of interest rates. Though rates did not, in general, fall further in 1959 (in the short market in recent weeks they have indeed risen significantly from the year's lowest points) their average level for the year was much below the abnormally high average experienced in 1958. Bank rate was on average about 1⅜ per cent lower, implying that the banks will have experienced a decline of roughly that order in the average rates earned on their advances and their money market assets (bills and short money). Since, even now, nearly three-fifths of all bank deposits are held on current account (on which no interest is paid) the loss of gross receipts through a decline in the average rates earned on assets is only partially offset by the parallel decline in the average rate paid on deposit accounts.

At the same time, the banks have encountered a further general rise in costs of administration. Most of them raised basic salaries by about 5 per cent as from the beginning of 1959 and in recent months the sheer pressure of work has compelled an intake of new staff, over and above the recruitment needed to man new branches (which also have been extending fast) and to replace retirements.

The results announced this week clearly show, however, that these cost-raising influences have been well overshadowed by the favourable ones. Published profits, being subject to inner reserve policy, are not in themselves a precise guide to the relative experience in different years, or of different banks, but one fact this year speaks for itself—the four of the "big five" banks whose figures are available have each announced an increase in profits exceeding 20 per cent, which is a much larger movement than has been witnessed for very many years. Two banks, moreover, have thought fit to improve upon the final dividend payments they had foreshadowed at the time of making their cash issues to shareholders on bonus terms: all the big banks have either made or announced such issues during the year, and several have made scrip allotments as well.

Most spectacular of the week's announcements came from the **Midland Bank**, which shows an increase in profits of no less than 30 per cent and is raising its final dividend by 2 per cent above its forecast amount, which had already represented an increase on the 1958 payment. The year's payment, on the capital as increased by the (relatively modest) rights issue and the one-for-three scrip issue, is 17 per cent, compared with a forecast of 15 per cent and with 13⅓ per cent for 1958. (This last rate, like all other rates for 1958 or earlier years given in this article and in the table below, is recalculated to allow for all subsequent scrip issues; but, unfortunately, it is impossible to make any satisfactory adjustment for the effects of the rights issues, so that the comparison understates the extent of the 1959 improvement.) A striking feature of the Midland's policy is that the increase in the net cost of the dividend absorbs all but £48,000 of the £892,000 increase in disclosed profit: evidently the Midland has been anxious to catch up on some of its rivals in the matter of the pace at which its dividend has been improved over the whole seven-year period since the first of the big five increases was made. The bank expects to repeat the 17 per cent payment, in two equal instalments, for 1960.

The other bank that improved on its forecast, but more modestly, was the **Westminster.** It had foreshadowed a final payment of 5 per cent on the capital as increased by the scrip issue of one-in-four and the rights issue also of one-in-four, but in fact is paying 5⅝ per cent, making 10⅝ per cent, compared with 10 per cent (computed as already explained). This bank likewise expects to maintain the increased payment in 1960, but the whole payment will be made on the larger capital.

Barclays and **National Provincial,** which reported profit increases of 24 per cent and 27 per cent respectively, are both paying final dividends at the foreshadowed rates. This means that Barclays' distribution for the full year, allowing for its one-in-five scrip issue, is effectively raised from 9 to 10 per cent. The National Provincial, by paying a final of 7 per cent following the 10 per cent paid before its rights issue (it made no scrip issue) appears in the table below to be making a smaller payment than in 1958: but this is the case in which the distortion due to the impossibility of allowing for the effects of the rights issue is at its most serious. In this instance the rights issue was one-for-one at par—that is, on exceptionally favourable terms. The final dividend of 7 per cent was thus payable on a doubled capital.

Martins Bank shows a profit increase of only 10½ per cent, but this bank showed a particularly large increase in 1958. Its final dividend is at the rate foreshadowed when the still impending rights issue was announced, and makes 16 per cent, as in 1958, for the full year. After the issue of one-for-two, the board expects to pay 13 per cent for 1960.

Signs of prosperity have also come from the Scottish banks. **The Royal Bank of Scotland,** which controls Williams Deacon's as well as Glyn Mills and Co., announces an increase of 17½ per cent in profits and is raising its dividend to 17 per cent—1 per cent more than was foreshadowed twelve months ago, when the rate was raised from 14 to 16 per cent. The bank also announces a substantial rights issue. Stockholders are being offered new stock in the proportion of one-for-four at the price of £3 for each £1 of stock (compared with a price of 99s. 6d. on the eve of the announcement). Including an issue to the staff trustees, this will bring in nearly £5 million of new money. The bank expects to maintain the 17 per cent dividend on the capital as thus increased.

Dorman, Long

PERHAPS the most significant point that emerged from the 1958-59 results of Dorman, Long was that in spite of a marked fall of 23½ per cent in ingot output the group's trading profit advanced by 6 per cent, from £10.4 million to just under £11 million. The chairman, Sir Ellis Hunter, says that demand began to pick up in August and "by October it was apparent that the revival was not temporary in character." Production in the current financial year has continued to improve and the universal beam mill at Lackenby is now working on a three-shift basis. Orders for universal beams at home and from overseas "have shown a progressive expansion"; so, too, have exports of all the group's products, except rails, to the United States and Canada.

In the shorter run, Sir Ellis makes three points which may curb excessive optimism about the prospects for the heavy end of the steel industry. First, it is not yet clear "how much of the increased demand is due to restocking and how much is passing directly into consumption." Secondly, the cut-back in orders for rails from the National Coal Board and British Railways continued to have its effect, while orders for plate from the shipbuilders still "leaves room for improvement." Thirdly, a company so heavily committed to structural engineering products as Dorman, Long is still not completely free from the delayed effects of the credit squeeze on capital investment, for "the benefits of expansion," says Sir Ellis, "are slow to show themselves as work in the shops."

In the autumn of 1958 Dorman, Long still owed about £13½ million to the Finance Corporation for Industry. Last year £3½ million of that loan was repaid. Another £4 million has been repaid since the end of the financial year; the balance of £6 million has to be repaid before the end of 1962. With a cash flow last year of £6.6 million the repayment of this loan can hardly throw much of a shadow across the directors' dividend policy, especially as following the completion of the third stage of the development programme (which cost £38 million) outstanding capital commitments are no more than £616,000. On the forecast ordinary dividend of 10 per cent on the capital as increased by the 50 per cent scrip issue the £1 ordinary shares at 82s. 6d. yield 3.6 per cent.

Steel Company of Wales

UNLIKE Dorman, Long, the Steel Company of Wales has not had to wait for a revival in demand for its products. On the contrary, Mr Harald Peake, the chairman, says in his annual report: "under present conditions there are tremendous opportunities to increase the sale of steel sheets and tinplate at home and for export. The difficulty is to produce them in sufficient quantities." Throughout the year demand for the company's products has been accelerating and it was not possible to meet demands fully. Production of steel ingots last year reached a record of 2,324,000 tons (against 2,178,000 tons); current production is running at 2,700,000 tons and by the end of 1960, when the full fruits of the £46 million third development plan will be reaped, production should be running at a rate of 3,000,000 tons a year.

Total capital expenditure by Steel of Wales in 1958-59 amounted to £17 million, of which about £10½ million was financed by retained earnings. The other £6½ million was borrowed from the Iron and Steel Holding and Realisation Agency, so that Steel of Wales now owes ISHRA £23 million. This must be repaid by December, 1964, and Mr Peake is confident that it will be. He is equally confident that the cost of the fourth development programme can be met from internal resources, though as the group has currently a cash flow of about £11 million, some increase in short-term borrowing seems inevitable. Indeed, Mr Peake does anticipate some temporary borrowing from the banks and it is clear that the directors' future dividend policy must be conditioned by the heavy demands that are likely to fall upon internal resources. On the 10 per cent dividend the £1 ordinary shares at 52s. 10½d. yield 3.8 per cent.

South Durham

CAUTIOUSLY the chairman of South Durham, Mr B. Chetwynd Talbot, has said that "the cloud . . . has not yet cleared over the level of production of the heavy section of the steel industry." In the last eighteen months the recession in demand for heavy steel products has been of "considerable magnitude" though to some extent South Durham has escaped from its worst effects because of its long order books. Production at South Durham's mill in West Hartlepool has been maintained at the record level of 1957-58 simply because orders for steel piping from the oil industry placed in earlier years still had to be completed. This has helped to offset the decline in demand for steel plate from the shipbuilders and ship-repairers, who last year took only 83 per cent of average deliveries in 1954-58. In 1960, Mr Talbot expects deliveries to the shipbuilders to decline to about 75 per cent of the levels reached in the peak years.

Production of steel sections and rails at the Cargo Fleet works "experienced the full effect of the recession," and competition in export markets for these products became more severe. Production of sectional material (used mainly in building) accounts for about 70 per cent of output from the Cargo Fleet plant and increasing competition from reinforced concrete has led to "a restriction in demand for a large range of sectional material rolled by the company." Demand for rails (which account for 30 per cent of Cargo Fleet's production) has been hit by the fall in orders from British Railways and the National Coal Board (virtually the only two rail users in the United Kingdom) and competition in export markets from Japan and some eastern European countries has intensified. Even so, Mr Talbot says that the Cargo Fleet plant "has now returned to a reasonable level of output." Order books for piping remain at "a reasonable level," but the dearth of inquiries is causing concern.

In 1958-59 the second stage of the development plan was completed and the third stage, which is expected to double ingot capacity to 2 million tons, is now well under way. Last year almost £20 million was spent on fixed assets, about a third of which came from retained earnings, and in the next two years another £27 million will be spent.

South Durham's ordinary dividend was left unchanged at 12 per cent even though trading profits rose by 10 per cent, from £7.1 million to £7.9 million, and net earnings covered the dividend 3½ times. Two factors suggest that a more generous dividend policy is not yet in sight. First, depreciation charges will rise as the development plan is completed and secondly, interest on the loans from FCI and Barclays Bank "will show a considerable increase." At the current price of 55s. the £1 ordinary shares yield 4.4 per cent.

United Steel

SIR WALTER BENTON JONES, chairman of United Steel, describes the prospects for the current financial year as "bright." He says that since the spring of this year there has been "an increasing improvement in the demand for all our products except for those manufactured by certain specialised departments." Sir Walter says that "the intense demand for consumer goods, the restocking programme by all consumers, together with fair prospects in export markets" all add up to "an encouraging picture." About heavier products made by the group Sir Walter says: "it is true that the demand for capital goods has not yet reached the previous high level, but we believe that we shall continue to work to near full capacity." United Steel still has a big capital programme to complete, but Sir Walter does not think that will "unduly burden financial resources." Making a very wide range of products, the group earned bigger trading profits last year. But that was not reflected in net earnings, owing to the bigger provisions made for depreciation and replacement. Nevertheless the ordinary dividend was raised from 12½ to 15 per cent. That dividend is covered about three times by earnings and the £1 shares at 85s. yield 3½ per cent.

International Computers and Tabulators

ON both sides of the Atlantic, equities in electronics firms have been popular. Perhaps too popular, for though the market for electronic and computer equipment is growing and will go on growing a large number of firms are trying to establish themselves in this market. Some of them—IBM and National Cash Register in the United States are two of them—are already firmly established. In this country, the merger between Powers-Samas and British Tabulating Machine can be seen as an attempt to answer the competitive challenge of size—by size. The directors and managers of these merged concerns are obviously anxious to establish the image of International Computers and Tabulators as a single, integrated business. And in the full accounts of this new company they can point to the figuring to show that is indeed the case. Gross profits after depreciation, made up of twelve months of BTM's earnings and nine months of Powers-Samas, totalled £2,328,000 last year and compare with £2,020,000 earned by the two companies separately in 1958; the ordinary dividend was set at 10 per cent, instead of the 8 per cent forecast at the time of the merger; and a rights issue of ordinary shares and a debenture issue, bringing in about £8 million to the group's coffers, was successfully completed in the summer.

These are tangible facts. So was the decision to modify and to abandon some of the developments that Powers-Samas had on hand at the time of the merger. These development costs and the costs of the merger have been written off against last year's profits. The contribution that Powers-Samas has really made to the ICT group is productive capacity. Integration in factory space and in staff between that company and BTM has, in the words of the chairman, Sir Cecil Weir, "proved practicable much more quickly than was originally expected" and, in particular, it has strengthened the sales and marketing side of the business overseas.

The merger, then, must be reckoned to be successfully accomplished. But where does ICT go from here? Primarily it is in a rental business, selling outright only about 30 per cent of the machines it produces. Out of sheer prudence, therefore, in an industry where the rate of technical development is fast and where it is almost impossible to estimate the rate of obsolescence, it must write down its assets quickly. It has done so, charging as much as £2,781,000 to depreciation last year. Renting and the pace of development also make ICT a big user of capital and its recent appeal for new capital will not be its last. It has to make a choice between pressing ahead with interesting but for the time being unremunerative technical developments and bringing laboratory tested machines into commercial production. Conscious always of its need for capital, ICT cannot afford to sacrifice too much in present profits for future possibilities. It therefore markets a range of small to medium priced computers, adding expensive and sophisticated machines to its list only occasionally. This year the new models it will introduce will again be in the cheap and medium priced range. A good profit can be earned from this bread and butter trade if the machines continue to offer the customers satisfactory service after the costs of making them have been written off by ICT. Growth stock may be an apt description of the ICT ordinary shares, which currently yield 2.6 per cent at 76s. 3d., so long as it is realised that the growth will take place over a long period of time.

London Stock Exchange

FIRST DEALINGS:	Dec. 28	Jan. 11	Jan. 25
LAST DEALINGS:	Jan. 8	Jan. 22	Feb. 5
ACCOUNT DAY:	Jan. 19	Feb. 2	Feb. 16

ON Monday industrial equities advanced on a broad front on the strength of Wall Street and the good industrial output figures and the *Financial Times* index reached a new peak of 342.9. But on Tuesday all sections of the market suffered a sharp setback. On Wednesday persistent selling by small investors and professional speculators, anxious to take their profits, and the absence of any substantial buyers share prices lost further ground.

Gilt-edged stocks recovered slightly last Friday but on Monday they weakened again and renewed fears of higher interest rates caused most of the Funds to show net losses over the week though the market steadied itself after the initial setback. Among undated stocks 3½ per cent War Loan lost 1/16 to 64⅛; in short-dated stocks 4½ per cent Conversion 1964 fell ¼ to 99¼. Medium-dated stocks were also weak with 3 per cent British Electric 1974-77 losing ⅛ to 75¼.

Over the week to the close on Wednesday *The Economist* indicator fell 4.7 points to 377.8. The biggest losses in industrial equities were suffered by those shares which had recently shown the most substantial rises. In heavy engineering Vickers dropped 1s. 3d. to 38s. 3d., Babcock and Wilcox lost 1s. 6d. to 47s. Shipping shares lost ground with Cunard 1s. 6d. lower at 23s. 3d.; exceptionally, Royal Mail Lines closed 2s. 3d. better at 29s. 6d, Steel shares came in for some heavy profit-taking but over the week most steel equities were still able to show fairly good gains. Steel of Wales improved 5s. to 54s. 6d. after touching 55s. 6d. at one time, Dorman Long advanced 4s. to 81s. 6d. Losers over the week included South Durham which fell 2s. 7½d. to 54s. 6d. and Colvilles which closed 6d. down at 77s. 6d. Aircraft shares also lost some of their recent buoyancy and Fairey fell 2s. to 21s. 3d. while de Havilland closed 7½d. lower at 27s. Textile shares were weaker with English Sewing Cotton sliding 6s. 4½d. to 45s. 6d. and Fine Spinners losing 4s. 3d. to 30s. 6d.

Bank shares lost ground. National Provincial closed 7s. down at 87s. and Lloyds lost 2s. 6d. to 69s. 3d. though Midland closed 6d. up on the week at 92s. after a rise of 4s. on Wednesday ahead of the dividend announcement.

Oil shares tended to be mixed with a certain amount of profit-taking offsetting recent gains induced by the strength of Wall Street. The leading oil shares were able to show net gains over the week, however, and B.P. closed 5s. up at 61s. 6d., Burmah gained 9d. to 53s. 9d. and Shell put on 3s. 6d. at 162s. The feature of the gold share market was the demand for Western Holdings which shot up 11s. 4½d. to 180s. 1½d.

THE MONEY MARKET

INTEREST rates in the United States have again been the focal point of attention this week. Six months bills in New York sold for the first time at an average rate of discount of more than 5 per cent. Three months bills were also higher at 4.602 per cent compared with 4.516 per cent.

At the first London tender of the new year the Treasury bill rate edged up further. The £280 million of bills on offer were sold at an average rate of £3.14s.6.24d. per cent, 9d. more than at the previous tender, and nearly ⅛ per cent higher than in November.

After the difficulties of the year-end, conditions in the money market became easier and while 3¾ per cent was paid for money on Friday in the early stages the rate drifted down to the basic minimum of 2⅜ per cent for clearing bank money and 2 per cent for outside money. On Saturday conditions were comfortable and money was soon forthcoming. Credit continued to be easy in the first three days of this week.

The Bank return shows a rise in discounts and advances from £16.8 million to £30.4 million, reflecting in part the discount market's penal borrowing at the year-end.

(1) Retained imports. (2) Owing to changes in classification 1959 figures are *not strictly* comparable with those for earlier years. (3) Average for *third quarter*. (4) Average for *fourth quarter*. (5) 1956 figures include re-exports of second-hand aircraft and exposed cinematograph film. (6) In 1959 indices for total imports and exports, but not for the classes, are *adjusted* to include trade with the Channel Islands. (7) Figures in *italics* are not strictly comparable with 1959 figures; the major difference is that they include trade with the Channel Islands, now excluded from the value figures.

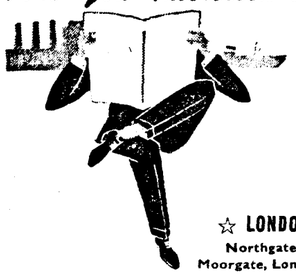
THE UNION BANK OF SWITZERLAND HAS CORRESPONDENTS ALL OVER THE WORLD

The heating elements of bakers' steam tube ovens are generally solid drawn steel tubes. The combination of over-heating and high pressure is likely to cause violent and dangerous explosions but, should the tube have hidden flaws, explosions may occur without over-heating. Such a disaster could be tragic, but must certainly entail loss of time, output and profits.

Vulcan know

Overheating is one of many factors to cause explosions in ovens. The expert who knows them all, and just where to look for potential faults and danger spots—and not only in ovens—is the Vulcan Engineer Surveyor.



Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection *and* protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

Vulcan are specialists

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17.

for 'Satan's Snuff boxes' but YORKSHIRE *for Insurance*

The snuff-coloured powdery contents of mature puff balls make it easy to understand why they are given this quaint name in Warwickshire. Although edible when young great care must be taken not to confuse them with poisonous fungi.

Great care is also necessary in the selection of your insurance company. The 'Yorkshire', recommended by many thousands of satisfied policy holders all over the world, can cover *all* your insurance needs.

An old established Company, progressing with new ideas, it provides all types of modern insurance* and a first class Trustee service. In your own interests consult our local branch manager without delay.

**Most people realise the need for Fire Insurance, but these days it is essential that your insurance is comprehensive and for the full value. The businessman must consider his loss of earnings as well as material damage, and the householder the furnishing as well as the provision of a new home.*

APPOINTMENTS

MSL *have been retained to advise on the appointment of a*

DEPUTY DIRECTOR
(ECONOMIC AND SOCIAL RESEARCH)

for Political and Economic Planning (P.E.P.). The deputy will be concerned with the supervision of study projects and with the production of publications and reports. He will be responsible for co-ordinating the work of research groups engaged on studies on a variety of subjects and for the publication of their subsequent reports. He will have general responsibility for the monthly broadsheet "Planning," including the selection of subjects. Initial salary £1,750-£2,500, dependent on experience and age.

Candidates should be over 35 and have a first or good second class honours degree, preferably in economics. They must have experience of collecting, analysing and interpreting information, the preparation of reports, and have directed others in this type of work.

Please send brief details in confidence, quoting reference S.2116, to P. J. H. Fryer. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, STRATTON STREET, LONDON, W.1.

MSL *have been retained to advise on the appointment of an*

INVESTMENT ANALYST-ECONOMIST

for a City finance house with international investments mainly in mining. He will be deputy head of the investment advisory department with the possibility of further promotion in due course.

Candidates should have experience in advising on the effects of economic factors on investments, and preferably should have had experience with a firm of stockbrokers, an insurance company or a City finance house. A good degree in economics, P.P.E. or commerce is desirable but not essential. Preferred age 35 to 45, though a younger man would be considered. Commencing salary will not be more than £2,500, unless experience is exceptional.

Please send brief details in confidence, quoting reference S.2122, to R. W. H. Lubbock. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, STRATTON STREET, LONDON, W.1.

MSL *have been retained to advise on the appointment of an*

ASSISTANT DIRECTOR

for an important organisation representing at home and in the international field one of the country's major industries. The Assistant Director will be required to collect, collate and analyse information about the industry, both home and overseas, to detect and report on economic trends as the basis for the formulation of policy, and be an experienced negotiator at ministry and board level. Initial salary £3,500-£4,000, plus car and top hat pension scheme.

Candidates should be between 40-45, with an honours degree in economics or law. They must have considerable administrative experience and have been responsible for the formulation of policy based on the accurate interpretation of economic trends, preferably in industry.

Please send brief details in confidence, quoting reference S.2096, to P. J. H. Fryer. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, STRATTON STREET, LONDON, W.1.

MARKET RESEARCH MANAGER required by the BEECHAM GROUP. Sound market research background (including consumer research) and understanding of statistical methods essential. Commercial experience desirable. Duties will include the collation and interpretation of market research data (including television data) and the preparation of reports and forecasts. Age 35 years or under. Appropriate salary will be paid. Profit Participation and non-contributory pension schemes are in operation. Application in writing only, giving details of age, qualifications and experience, and quoting reference MRM51, to be forwarded to the Personnel Controller, Beecham Group Limited, Beecham House, Great West Road, Brentford, Middlesex.

STATISTICAL OFFICER (HOLLERITH) required by the East Africa High Commission on probation for permanent and pensionable establishment. Commencing salary according to qualifications and experience in scale (including Inducement Pay) £1,056 rising to £1,341 a year. Outfit allowance £50. Free passages. Liberal leave on full salary after tour of 30-36 months. Candidates, under 35, must have good G.C.E. and sound knowledge of large scale punched card installations, and be able to plan new applications of punched cards to statistical problems. Initial posting to Nairobi. Write to the Crown Agents, 4 Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M3A/52744/EN.

APPRAISAL OF NEW PROJECTS

The National Coal Board's recently formed Process Development Department is responsible for the development of new processes for treating coal, particularly those for making smokeless fuels from small coal.

A vacancy arises for the Head of the Assessment Section who will be responsible for the economic and technical appraisal of projects. Besides examining new projects, he will keep development projects under critical review to determine the effects of changes in circumstances or design.

The successful candidate will have had comparable experience in industry and will possess a good degree in mathematics, including mathematical statistics, or in pure or applied science.

There are attractive conditions of service, including superannuation. The salary will fall between £1,900 and £2,550, and will be reviewed annually.

Applications should reach the Headquarters Staff Manager, N.C.B., Hobart House, London, S.W.1, not later than January 18, 1960, and should be marked (X.1529/3/D).

ATTRACTIVE OPPORTUNITY

offered to young man in middle to late twenties to understudy Senior Brand Manager with the idea of attaining similar status in a short time in

EXPANDING MARKETING DEPARTMENT

Ideal candidate could at present be a Brand Assistant with a manufacturer, or a marketing man in an agency. The emphasis in his background must be on marketing, or possibly market research, rather than exclusively on direct selling.

Good commencing salary, progressive salary grade, non-contributory pension scheme, generous life assurance and other fringe benefits, together with almost unlimited scope offered to man capable of taking full advantage of the opportunity which exists in our marketing organisation.

Those who believe themselves qualified for consideration are invited to write, giving details of educational background, relevant experience, and present salary, to Executive Administrator—Personnel, Nabisco Foods Limited (formerly The Shredded Wheat Company Limited), Welwyn Garden City, Herts.

THE Investment Company of Nigeria Limited wishes to engage a SENIOR ACCOUNTANT. He will be stationed in Lagos but it is expected that he will be required to tour extensively. His responsibilities will consist of the critical appraisal of schemes submitted by applicants for financial assistance; the inspection of statistical and accounting records of assisted businesses, where necessary the introduction of simple accounting procedure. The starting salary is £2,350 to £2,750 depending on experience. Free accommodation is provided, with main furnishings. He will have the use of a company's car and driver. Tours will be normally for 15 months in Nigeria with three months' leave (including travelling time). The position is one of responsibility and there are suitable prospects for advancement. Candidates should be Chartered Accountants under thirty-five and should have had several years' experience either with a commercial or industrial concern or with an investment house.

Applications, with details of qualifications and experience, should be addressed by airmail to the Secretary, P.M.B. 2357, Lagos.

Candidates will be interviewed either in London or Lagos, as convenient.

COMMERCIAL RESEARCH

Quaker Oats Ltd. wish to make a new appointment in the Commercial Research Department at their office in Southall, Middlesex.

Duties consist of planning, and analysing Consumer Investigations relating to existing and prospective products.

Applicants should be men up to the age of 35 with a background of statistical theory, preferably with a degree in the Social Sciences including statistics, or the Intermediate A.I.S. or R.S.S. Certificate. Two or more years in Market Research is essential.

This position offers considerable scope for developing the research methods used by the Company, and carries responsibility for critical assessment of research results.

Please apply in writing to:

Personnel Manager (CR 16),
QUAKER OATS LTD.,
Bridge Road,
Southall, Middx.

UNIVERSITY OF LONDON

Applications are invited from men graduates in Arts or Economics for the post of ASSISTANT SECRETARY to the University of London Appointments Board. Industrial experience an advantage. Salary on scale £900 x £50 to £1,150 (bar) x £50 to £1,350 p.a., plus £60 London Allowance. F.S.S.U. and children's allowance.—Further details available from the Secretary to the Senate, University of London, Senate House, London, W.C.1. Closing date for receipt of applications (three copies) is 29th January, 1960.

CANTERBURY AGRICULTURAL COLLEGE
(UNIVERSITY OF NEW ZEALAND)

SENIOR LECTURER IN AGRICULTURAL ECONOMICS

Applications are invited for the above-mentioned position. Preference will be given to applicants holding advanced degrees in Economics or Agricultural Economics. Previous teaching and/or research experience is desirable.

Commencing salary according to qualifications and experience up to a present maximum of £1,615 per annum.

Schedule of duties and conditions of appointment are obtainable from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in New Zealand and London, on February 29, 1960.

CITY Investment Bankers require junior Economist/Statistician for their Research Department. Duties involve writing general economic and stock market reports. Applicants should possess a good honours degree and some experience in investment analysis would be an advantage.—Please reply to Box A.340, c/o Walter Judd, Ltd., 47 Gresham Street, E.C.2.

AN international food manufacturing and distributing group requires an ASSISTANT in the Marketing Adviser's department of its Head Office in London. The person appointed will be required to help in the compilation and interpretation of statistical data. A Degree and a knowledge of languages would be an advantage. Salary will depend on age and qualifications; the prospects are good.

Applications to: The Secretary, Liebig's Extract of Meat Company, Limited, Thames House, Queen Street Place, London, E.C.4.

GOVERNMENT OF THE FEDERATION OF RHODESIA AND NYASALAND

VACANCY: DIRECTOR OF TOURIST DEVELOPMENT
MINISTRY OF HOME AFFAIRS

Applications are invited for the post of Director of Tourist Development.

The appointment will be on contract initially for three years at fixed salary of £3,000 p.a. Candidates under 45 years will be preferred, and applications should only be submitted by applicants with a thorough knowledge, and previous experience in the Tourist Industry, and allied fields of promotion.

Administrative and organising ability, drive and initiative are pre-requisites towards the promotion of travel, to and within the Federation, under the direction of the Federal Tourist Board. Duties will embrace planning and implementation of publicity programmes, encouragement and co-ordination of activity amongst interested public and business concerns, allied to the Tourist Industry (Travel, Hotels, Carriers, etc.).

Passages provided, excellent schools, university facilities, generous leave, medical aid, low income tax, etc. Application forms and further details from the Secretary (R.S.), Rhodesia House, 429 Strand, London, W.C.2. Closing date January 31, 1960.

NATIONAL trade association has vacancy at its headquarters in London for ASSISTANT TO SECRETARY. The post involves an interesting variety of duties, including particularly the production of the association's monthly journal. Applicants must have Arts degree or equivalent qualification, with some experience of trade association or similar work, and should preferably be between 27 and 33. Appointment is permanent and pensionable, with starting salary of up to £1,000 a year. Applications stating qualifications and experience should be forwarded through Box 1266.

CHARTERED ACCOUNTANT

recently qualified, age 27-29, wishing to enter industry; personality, good educational background and ability to work systematically are important; to assist Secretary of a Group of Companies, based on London. Starting salary up to £1,200 plus benefits. Opportunity for advancement is good and work varied.—Write full details of age, education and experience to Mr. L. P. Cleminson (Ref. S.A.4), Africa House, Kingsway, London, W.C.2.

UNIVERSITY OF EDINBURGH
DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for the post of LECTURER IN ECONOMICS in the Department of Political Economy. Salary scale £900 x £50 to £1,100; Bar: £1,150 x £50 to £1,350 x £75 to £1,650 per annum, with placement according to qualifications and experience, and with superannuation benefit and family allowance where applicable.

The successful candidate will be expected to take up duty on October 1, 1960.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving the names of two referees, should be lodged not later than February 8, 1960.

CHARLES H. STEWART,
Secretary to the University.

December, 1959.

O. & M. EDUCATION OFFICER

This is an important new appointment with the Friden IDP organisation, offering tremendous scope in the expanding field of Data Processing. The successful applicant will be responsible for Training Programmes, Methods Surveys, Lecture and Report Writing, etc. O. & M. experience essential; Punched Card experience an advantage. London appointment, early New Year. Specialist training will be given. Write in strictest confidence to the Technical Director, Bulmers Business Machines Ltd., 47-51 Worship Street, London, E.C.2.

L I L

COMMERCIAL INFORMATION

LAPORTE INDUSTRIES LIMITED

has a vacancy at its Head Office in London for a female graduate in economics or other commercial subjects, or alternatively a Fellow of the Library Association (including Part 30), to develop a commercial information service.

Duties will include the abstraction, classification, assessment and dissemination within the organisation of information from commercial journals and other sources and the maintenance of statistics on the chemical industry.

Applicants, who should be aged from 20 to 28, should have a reading knowledge of French and German.

Applications, giving full details of age, qualifications, experience and an indication of salary required, should be addressed to the Group Personnel Manager, LAPORTE INDUSTRIES LIMITED, Hanover House, 14 Hanover Square, London, W.1, quoting Ref. LIL/E1/72.

ASSOCIATE EDITOR for trade journal. Resourceful on themes and captions for articles and able to write with clarity on trading problems. Opportunity to grow with progressive (non-group) journal.—Write promptly to Box 1262.

Mullard

MULLARD LIMITED is carrying out interesting work in the staff development field among its head office commercial and administrative staff. Group training methods are being developed and an ASSISTANT is required to help both the Personnel and Training Officers in their work.

A background in social science or education would be an advantage but any candidate whose general qualifications are suitable is invited to write to the PERSONNEL OFFICER, MULLARD HOUSE, TORRINGTON PLACE, LONDON, W.C.1.

B.I.M. SENIOR EDITORIAL ASSISTANT required for management journal. Starting salary £900 p.a. Applicant must write good English, be methodical and meticulously accurate. Editorial experience essential. Degree in Sociology or Economics desirable. Pensions scheme.—Application to The Editor, "The Manager," 80 Fetter Lane, London, E.C.4.

CHARTERED ACCOUNTANT

Applications are invited from Chartered Accountants aged 26-33 to act as Assistant to the Chief Accountant in the supervision, from its London Head Office, of all the accounting procedures of a major group of Companies providing a public service. The essential requirements are a sound professional background and organising and managerial ability. The duties will include taxation negotiations.

The group continues to expand and would offer opportunities for advancement for an able and conscientious accountant. Contributory and non-contributory pension and life assurance schemes are in operation. Write in confidence, giving full details of age, education, experience and salaries earned, to Box 1259.

NUFFIELD COLLEGE, OXFORD

RESEARCH FELLOWSHIP

Applications are invited from men or women graduates who wish to undertake research in Economics; Statistics; Political Theory; Economic, Social or Political History; Industrial Relations; African Studies; Public Administration; Business Management; International and Public Law or other branches of the Social Studies. The Research Fellowship will normally be for two or three years, stipend according to age. Further particulars may be obtained from the Warden. Applications should reach him not later than February 2, 1960.

UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited for the following posts in the Department of Economics: (A) PROCESSOR OF PUBLIC ADMINISTRATION; (B) SENIOR LECTURER OR LECTURER IN PUBLIC ADMINISTRATION; (C) LECTURER IN POLITICAL THOUGHT.

Salary scales: Professor, £2,500 p.a.; Senior Lecturer, £1,500 x £75-£1,650 p.a.; Lecturer, £1,150 x £50-£1,450 x £75-£1,600 p.a. Point of entry to be determined by qualifications and experience. Child allowance, U.S.$.C. Unfurnished accommodation at 5 per cent of basic salary. Passages for up to 5 persons on appointment, normal termination and study leave once every three years).

The Professor of Public Administration will be concerned with teaching and research in the Department; the leadership and direction of post-graduate and short-term courses in Public and Business Administration. The duties of the Senior Lecturer or Lecturer will principally be to direct the short-term civil service courses under the Professor. The person appointed will be concerned also with teaching for the B.Sc.(Econ.) and post-graduate Diploma in Public and Business Administration. Both these appointments to be assumed by May 1, 1960, if possible. The Lecturer in Political Thought will be concerned with teaching for the B.A. (General), B.Sc.(Econ.) and for the Postgraduate and short-term courses in Public and Business Administration. Duties to be assumed by September 1, 1960.

Detailed applications (6 copies) naming 3 referees by February 13, 1960, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

BROWN & POLSON require for their Finance and Administration Division a young man, 25-28, with an Accountancy or Cost and Works Accounting Qualification. Experience in an industrial concern would be an advantage but applicants with solely commercial or auditing experience should not hesitate to apply. Experience within the Company will not be confined to its London headquarters but will include periods at the Manchester and Paisley Works. Salary, Profit Payment, Life Assurance and Pension Schemes are good and the Company is progressive in outlook and expanding.—Replies to Group Personnel Manager, Brown & Polson Ltd., 125/130, Strand, London, W.C.2.

THE BRITISH COLUMBIA POWER COMMISSION

requires a thoroughly qualified economist with wide experience in hydro-electric power development studies and negotiations. Must be able to take major responsibilities in analysis and interpretation of conflicting proposals relating to intergovernmental and interagency agreements involving many hundreds of millions of dollars. Salary proportionate to qualifications but only candidates of outstanding ability and established reputation should apply.—Confidential communications giving full details should be addressed to B. M. Hoffmeister, Agent-General for British Columbia, British Columbia House, 1 and 3 Regent Street, London, S.W.1, England.

O. & M. SPECIALISTS PLUS

Men experienced in O. & M. and capable of logical thinking, are required as TECHNICAL REPRESENTATIVES for Friden IDP equipment in London and main provincial centres. Splendid prospects for men accustomed to high-level consultation, to join a progressive company in the fast-developing field of Data Processing. Punched Card experience an advantage, but specialist training will be given. Appointment early New Year. Salary, Commission and Pension Scheme. Write, in strictest confidence, to The Technical Director, Bulmers Business Machines Ltd., 47-51 Worship Street, London, E.C.2.

ECONOMIC CONSULTANTS LIMITED

have a vacancy for a RESEARCH ASSISTANT on industrial economic research. The projects are varied and interesting, but entail the usual quota of spade-work in extracting facts and figures. Qualifications for basic intelligence and accuracy. A good degree in economics or related subject is also needed. Starting salary £800 to £1,000. Write, with short personal history, to: W. F. Turrell, Managing Director, Economic Consultants Ltd., 3 Clement's Inn, Strand, London, W.C.2.

CHARTERED ACCOUNTANT. A young man between the ages of 23 and 27 is required to initially join our headquarters at Hatfield to gain experience in the Company's accounting and commercial activities. Prospects are good, and this should prove an excellent opportunity for a young man wishing to enter industry.—Please write to the Personnel Manager (Ref. 162), De Havilland Propellers Limited, Hatfield, Herts.

For other appointments see page 154

AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA

RESEARCH SCHOOL OF PACIFIC STUDIES

READERSHIP IN ECONOMICS

Applications are invited for appointment to a Readership in the Department of Economics of the Research School of Pacific Studies.

The Department is a new one to be devoted to the study of under-developed areas; it will offer scope for theoretical work in the economics of development and emphasise the building up of systematic empirical knowledge of the Pacific and South East Asia. Studies in current problems of economic growth and of Australia's economic relations with the region are contemplated. A particular field of study of several Departments of the School is the development of New Guinea.

The salary range for Readers is £A2,763-3,213. A Reader is appointed to the permanent staff; retiring age is 65 years, with the option of retiring after the age of sixty. A Reader is entitled to one year's study leave on full pay, with a contribution of up to £A1,152 towards travel and other expenses, in every six years. Superannuation on the F.S.S.U. pattern is provided and reasonable removal expenses are paid.

Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close on March 4, 1960.

The University reserves the right to fill the vacancy by invitation.

FOURAH BAY COLLEGE—SIERRA LEONE

(UNIVERSITY OF DURHAM)

Applications are invited for the CHAIR OF ECONOMICS. Salary £2,584 p.a. U.S.S.C. Outfit and family allowances; gratuity £300. Passages on appointment, annual leave, retirement and final termination. Part-furnished accommodation at reasonable rent.

Detailed applications (8 copies) naming 3 referees by February 20, 1960, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited from Graduates for the post of LECTURER in APPLIED SOCIAL STUDIES in the Department of ECONOMICS AND SOCIAL SCIENCE. Candidates should have a University degree in Social Science and have pursued a professional course in Social Service and have pursued a professional course in Social Work. Experience of social work desirable. Applications (six sets), including names of three referees, should be sent not later than February 15th, 1960, to W. Registrar, University College, Cathays Park, Cardiff, from whom further particulars may be obtained.

APPOINTMENTS REQUIRED

EXECUTIVE, 31, seeks post as Assistant to Managing Director/General Manager, etc., with administrative experience covering Sales and production. Own transport necessary. Duties plus canvassing for objective analysis and original thinking wholly mobile and currently earning £1,500 plus.—Please write Box 1267.

OXFORD ECONOMIST (26), widely travelled, fluent French, German, experienced common market/overseas problems, first-class European contacts, dynamic, financial and all experience, seeks position of responsibility and initiative with international company.—Box 1242.

YOUNG (29) sales executive, widely experienced home and overseas sales, travelled extensively, knowledge languages, seeks appointment with long-term career as above.—Please write Box 1255.

BUSINESS AND PERSONAL

WANTED: One only Economist Diary for 1960. Will pay reasonable premium.—Box 1265.

TRANSLATIONS, translating, interpreting, all languages.—Write Box 1200, Tiptree, ESM 2202.

AN Industrial Group will consider acquisition of the whole of share capital of a Company actively engaged in the manufacture of cotton and allied clothing products and industrial. Those interested should be of medium size with earnings of £50,000 per annum and upwards and be able to show increased production and earnings over the past years. The terms of purchase, security and continuity of management will be considered. Particulars treated will be treated in utmost confidence.—Write Box 1262.

GOING TO IRELAND? Hire a first car, Scottish or chauffeur driven, from John Pursell Car Hire, 30 Lower O'Connell Street, Dublin.—Write for brochure and rates.

SAVILE ROW Suits or Overcoats from 10 gns. We have an excellent selection of Cancelled Export Orders, also in most sizes purchased direct from leading Savile Row tailors including Burtenshaw, Scotland, Lesley & Roberts, Kilgour, etc. Alterations carried out if necessary.—Mr. Isaacs Company, 14 Dover Street (1st floor), Piccadilly, W.1. HYD 1351. Open 9 a.m.-5 p.m. Sats. 1 p.m.

REMPLOY SPONSORSHIP SCHEME

Send for details which show an attractive proposition to manufacturers.

Write to the Managing Director, Remploy, Ltd., 25-28 Buckingham Gate, S.W.1, or telephone VICtoria 6621 (12 lines).

curtain WALLING is when A building stands behind it And KEEPS warm and DRY and looks pretty and...

New Office building in Finsbury Square, London for Finwil Properties Limited.
Architect: Reginald H. Gallannaugh, L.R.I.B.A., *Contractors:* Myton Limited.

"Is when a building stands behind it? Does the child mean a wall?"

"But of course he means a wall. A transparent wall, a translucent wall, or if you prefer it a wall of opaque panelling hung on concrete and steel."

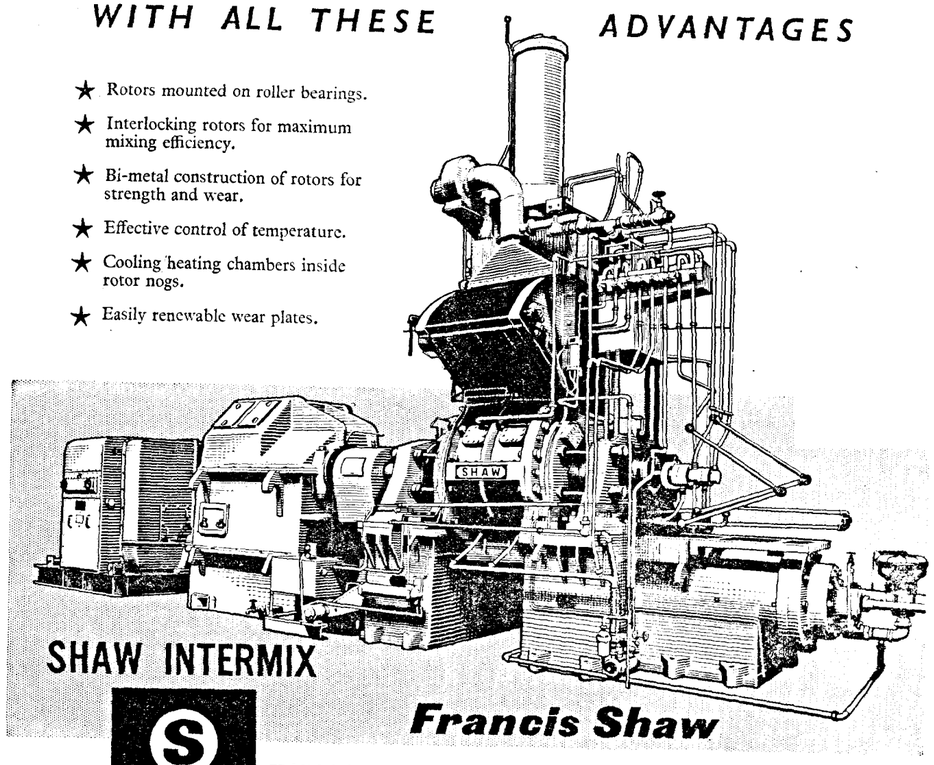
"The child means WALLSPAN*?"*

"That is undoubtedly what the child does mean—WALLSPAN—the name that Williams & Williams contributed to British Architecture—to World Architecture. The name for the glittering aluminium murals that form one or more sides of those soaring monolithic office-blocks, those airy garden-landscaped factories, those gay and utterly functional schools.

"With WALLSPAN the skeleton building is clad in days instead of weeks. WALLSPAN telescopes the time between the first glint in the architect's eye and moving-in day."

"Williams & Williams products make better buildings sooner?"

"Sooner—better—more beautiful even".



forward looking building products WILLIAMS & WILLIAMS

THE ONLY INTERNAL MIXER

The Shaw Intermix is the most versatile internal mixer of rubber, plastics, and allied materials. A high horse-powered drive with high pressure head, gives fast efficient mixing and permits high temperature reclamation of waste rubber.

WITH ALL THESE ADVANTAGES

- ★ Rotors mounted on roller bearings.
- ★ Interlocking rotors for maximum mixing efficiency.
- ★ Bi-metal construction of rotors for strength and wear.
- ★ Effective control of temperature.
- ★ Cooling heating chambers inside rotor nogs.
- ★ Easily renewable wear plates.

OVERSEAS AGENTS THROUGHOUT THE WORLD

R W G

Fresh water from the sea

Pioneered in Great Britain by Richardsons, Westgarth & Co. Ltd., a new type flash evaporator which works continuously, with little attention and practically no maintenance and which needs only low-grade, sub-atmospheric steam for heating, has made it economically possible for towns on arid coast lines to obtain their fresh water from the sea itself. Evaporators of this type are now relieving water shortages in the Middle East.

Evaporating plant supplied to Procon (Great Britain) Ltd., for service in South America.

This Evaporator is, naturally, most economical in conjunction with steam power generation, or wherever waste heat is available, and, as we are builders of all types of boilers, steam turbines and alternators, we are particularly well able to design and carry out fully integrated schemes.

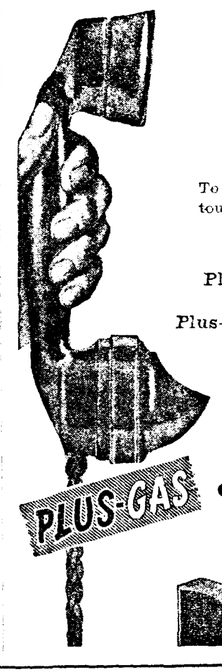
Invest in a holiday in *Ireland*

and all your interests will be assured



When you're tired of stocks and shares, bulls and bears, meetings and memos . . . take a holiday in Ireland. Whatever your interests, you'll be well catered for. Splendid roads make driving a pleasure. Relax at the wheel and see for yourself the beauty of the Irish countryside. Keen on fishing? Irish rivers and lakes are teeming with fish, both coarse and game. The golfer will find first-class courses set in some of the world's loveliest scenery; the horseman will find excellent hunting and superb racing. The gourmet can delight in Irish menus . . . specialities are tasty steaks, home-bred mutton and lamb, smoked salmon, Galway Bay oysters, Dublin Bay prawns. And have 'Irish Coffee' as a chaser!

Yes, Ireland is just the place for a spur-of-the-moment holiday. It's a holiday 'abroad' without any passport or currency formalities. And it's so near.

For information and a wide range of literature covering all aspects of Irish holidays write or call at the

International NU-SWIFT News

No. 1

HAVE YOU MET THESE PEOPLE? ***HAVE YOU BEEN TO THESE PLACES?***

1. The new 16-floor skyscraper in BASLE, Switzerland built, and occupied by GEIGY, the world-famous chemical concern, has been equipped with Nu-Swift extinguishers.

2. Old-fashioned chemical extinguishers in the SHELL-MEX Building, in the STRAND, LONDON, largest office building in the Commonwealth, have been superseded by reliable Nu-Swift equipment. Built in 1933, the 8,008,462 cubic feet of this giant edifice, which boasts 16 lifts, 6 oil-fired boilers and 22 miles of water pipes, are now protected by a total of 261 Nu-Swift extinguishers.

3. MONTEGO BAY AIRPORT on the North Coast of Jamaica, well-known to sun-hungry socialites in U.S.A. and Britain, is now safe-guarded by Nu-Swift. So is the exclusive TOWER ISLE HOTEL.

4. In gay VIENNA, 30 break-down vehicles belonging to the TOURING CLUB OF AUSTRIA (similar to the British A.A. service) have recently been equipped with Nu-Swift. Another 31 vehicles in GRAZ have been similarly protected.

5. In STOCKHOLM, beautiful capital of Sweden, a rush order for 1½ tons of extinguishers was recently executed by Nu-Swift sales concessionaires in 6 hours. The number of extinguishers required was 60. SKF, ASEA and STORA KOPPARBERGS BERGSLAGS A/B (the oldest industrial undertaking in the world), are among other industrial giants in fast moving Sweden, who have standardised on reliable Nu-Swift Dry Powder Extinguishers.

6. If overtaken by the LAKE POLICE while speeding on the 20-mile long LAKE ZURICH, you will find their patrol boats equipped with Elland-made Nu-Swift Dry Powder Extinguishers, Model 1604. Ashore, this also applies to the police cars and garages of the City and Kanton of busy and prosperous ZURICH.

7. Direct rail connections link COPENHAGEN with Rome, Paris, Vienna, Venice, etc. THE DANISH STATE RAILWAYS have now equipped all international coaches starting from the up-to-date capital of Denmark, with Nu-Swift.

8. MR. HUGH DALTON, M.P., Chancellor of the Exchequer in the post-war Labour Government (1945-47), is the latest prominent politician to equip his home with Nu-Swift.

9. After exhaustive tests, extending over several years, the AUSTRALIAN ARMY have satisfied themselves that Nu-Swift Dry Powder Extinguisher, Model 1604, meets their exacting requirements. The first orders have been placed.

10. More than 50% of all new NORWEGIAN vessels, mainly TANKERS, are protected by Nu-Swift.

11. Prince FAROUK, now a citizen of Monaco, but once King of EGYPT, one day when shooting in the desert near Cairo, saw his car ablaze. Fire was put out by a local Nu-Swift enthusiast. Result: The King had all his palaces and his yacht protected by Nu-Swift.

12. The underground aeroplane factories of SAAB (SVENSKA AEROPLANE A/B) Linköping, Sweden, are protected by Nu-Swift. So are the naval vessels in the ATOM-BOMB-PROOF UNDERGROUND HARBOUR near Stockholm, built into the mountain by the cautious Swedes.

13. In far-off FIJI, where cannibalism was rife within living memory, the recently constructed BROADCASTING STATION is protected against fire by Nu-Swift. So is the new AUTOMATIC TELEPHONE EXCHANGE.

14. An animated correspondence with G. BERNARD SHAW resulted in 1944 from an enquiry by the ever-alert but critical sage. Asked by Shaw why, in our letter of reply, no prices were quoted, a cheeky Nu-Swift clerk retorted that "We thought you wanted to protect your life, not your purse. Does price matter when your life is at stake?" G.B.S. rose to the bait by replying: "Please treat me as a prospective customer, not as a back-chat comedian."

15. SWISS FEDERAL RAILWAYS, one of the most efficient and modern railway systems in the world, have placed their first orders for Nu-Swift extinguishers.

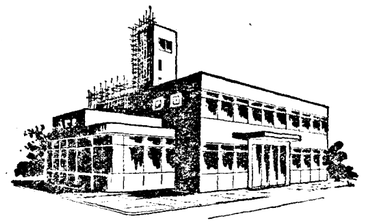
16. Mr. W. J. SCOTT, Q.C., FIRE MARSHAL OF THE PROVINCE OF ONTARIO, during a recent lightning trip to Europe, as Dominion Government NATO delegate, included Elland in his itinerary. On his return, having also called at London, Paris, Rome and Madrid, he stated that the visit to Nu-Swift Factory remained the highlight of his European tour, and caused orders to be placed for sample and demonstration extinguishers for the new Ontario Fire Service College at GRAVENHURST, 80 miles from TORONTO.

17. Since THE SUDAN gained her independence, the authorities have decided to standardise on Nu-Swift. The first orders have arrived from Khartoum.

18. In KUWAIT, fabulously wealthy Arabian oil-well state on the Persian Gulf, police and army cars are now all protected by Nu-Swift.

19. The SOUTH AFRICAN ELECTRICITY SUPPLY COMMISSION have decided to place Nu-Swift Dry Powder Extinguisher, Model 1604, on all their breakdown and service vehicles. The first orders have been placed.

20. In NIGERIA, Africa, which is shortly expected to achieve independence, TRAINS AND HOSPITALS are equipped with Nu-Swift. Climate is hot and humid.



21. BRITISH EXPORTS of fire extinguishers are the highest in the world. Total value of NU-SWIFT exports is increasing continuously. Last year they amounted to NEARLY ONE-THIRD OF THE BRITISH TOTAL.

DISASTROUS FIRES CRIPPLE INDUSTRY,

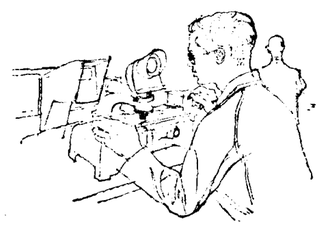
Finding the job that fits the man

Each year in The Guardian, a number of leading industrial and commercial companies take full pages to talk about themselves and the openings they offer to school-leavers and graduates. In this way they are able to attract the interest of the lively-minded student who reads The Guardian. They are able to tell him the sort of firm they are, the prospects they offer, and the qualifications and qualities they require.

These announcements have proved extremely useful and productive in the past, both to the companies seeking the right sort of recruit and the man (and woman) seeking a job with a future. The series commences on January 18th, and will continue each day for several weeks.



Lively minds like

THE GUARDIAN

The Undistributed Middle

IN many earnest discussion groups, and amid a porridge of mixed clichés, Labour's rethinking goes on. The New Year message from the new chairman of the Fabian Society, Mr H. D. Hughes, who is also the Principal of Ruskin, would not normally be a subject for much comment. But it deserves limelight this year because it is so drearily representative of so much that must give a sinking heart to anyone who hopes to have the option of a new government during the sixties. Mr Hughes's main preoccupation in accepting leadership of the Labour party's oldest intellectual generating plant is to find a "definition of socialist ends clearly distinct from those professed by Communists, the Bow Group and Mr Grimond."

To what purpose is this exercise? The reference to communism is presumably a rhetorical flourish for the sake of symmetry. But the Bow Group and the Liberal party are collections of people whose views, on a considerable range of issues, are often not clearly distinguishable from those of, for example, Mr Roy Jenkins and Mr Anthony Crosland. These movements are competitors with the Labour party for the allegiance of that minority of liberally minded, robustly idealistic and not strongly party-partisan voters who might be described as the undistributed middle of British politics.

Mr Hughes's ideas for conducting this competition, which are unfortunately shared by many otherwise perspicacious members of his party, are to raise an electric wire fence and a "keep out" sign to debar all who will not assume socialist stigmata, apparently chosen deliberately for their merit in frightening spiritual Liberals and Bow Groupers away. This might be a fine recipe for conducting a religious sect or an ethical reform campaign to change human nature during an age of mass opulence. But it is an extraordinary direction in which to point a political party that is seriously seeking to convert enough marginal voters to replace the present Government only four years from now. To be fair to Mr Hughes, he does grudgingly accept that economic conditions have changed a bit since 1918, with the coming of "a spuriously affluent society" (what is supposed to be spurious about it: the existence of the affluence or the values of the society? This looseness is typical of the shaky adverbs of the left). But from a Fabian intellectual the logic of what follows is hard to take.

The Fabian chairman agrees that it may be helpful to explain that common ownership is a means but not an end; but, apparently as the outcome of his search for something, anything, that will keep those pesky Bow Groupers and Liberals out, he insists that any new definition of the Labour party's aims must include "the tenet that both public ownership and control are essential means to the ends we seek." This, of course, makes absolute nonsense of the distinction between ends and means—which, in relation to a democratic society, is in any case a philosophically difficult one to sustain. Finally, Mr Hughes concedes that "alternative forms of public ownership, new techniques of public control, must be evolved," but not apparently because they would necessarily be any better in themselves than the old forms: instead, it is because the "bamboozling of affluent electors by hidden persuaders" makes it necessary to present the case in a different dress. If the only explanation for people voting Tory is that they have been bamboozled by hidden persuaders (whoever they may be—there was nothing hidden about the Tory poster campaign), why on earth should anybody suppose that a tactically different way of nationalising

more sections of the economy will de-bamboozle them?

One does not have to be a complete cynic to suggest that the purpose of political parties is not deliberately to invent new ways of excluding political support. At present that traditional stream of British thought and sentiment which is broadly progressive, radical and humanitarian is split three ways between the Bow Group (used here as a shorthand phrase for the Tory left), the Liberals and the Labour party. The Labour party's aim must be to unite as much of it as possible under its banner. This is not an impossible task. The reason why a person is a Bow Grouper rather than a Gaitskellite is not necessarily the result of a judgment on the substance of policy. It is because some forward-looking people judge that it is more practicable to influence the Tory party from within to behave in a progressive way (in, say, Africa) than to stir up the do-nothings and damp down the diehards inside the Labour party; while others have a temperamental preference for operating in the ambience and through the characteristic channels of Conservatism. Only those who are mainly influenced by the last factor need be abandoned as potential recruits to a refreshed Labour party.

The species of undistributed voter who will not on any account, Bow Group or no Bow Group, back the Tories, has to decide whether to go to Mr Grimond or Mr Gaitskell. His quandary is how the Left can best be reconstructed so as to offer a chance of replacing the Tories in the Government. He must calculate that, even if Mr Grimond should achieve his declared object of replacing the Labour party as the principal opposition, the process will take at least three or four elections, during which time presumably the Liberal party would be getting progressively bigger and the Labour party regressively smaller, thus unwinding the reel of Labour's rise. But this would inevitably mean being resigned to long periods of Tory power, even if the Labour party were to give a boost to the sequence by obligingly repeating the split between Asquith and Lloyd George. This does not by any means eliminate the arguments why a liberally minded Labour supporter might give encouragement to Mr Grimond. A few more demonstrations of Liberal strength might be a powerful incentive for Fabians and others to rethink the Fabian chairman's rethoughts. But this is a terribly roundabout way of accomplishing within the Labour party a spiritual emancipation which those of its members who are not Mr Michael Foot's kind of fundamentalist ought surely to be able to manage for themselves.

In a parliamentary system the normal channel for advancing progressive notions is the principal anti-Conservative party. It is understandable that clever Tories like Mr Enoch Powell should taunt the Labour party into committing hara-kiri by writing in an article (which some Labour men have been quoting ever since): "An opposition must have a categorical imperative: do this, and this alone, if you would be saved." But there is absolutely no reason why any self-respecting Fabian should fall for this sort of thing. Fabians should eagerly accept that it does not matter a jot that there may be no great differentiating principle separating the Labour party from the Liberals and the Bow Group. Labour's main remaining advantage is that it is still in possession as the biggest anti-Conservative party, and thus as the natural recipient of progressive political support. When, but only when, it learns to act up to this role, which in view of its past may not be as easy as it sounds, its renaissance will have begun.

The Cincinnatus of St Chamond

The removal of M. Pinay sets General de Gaulle more problems than it solves

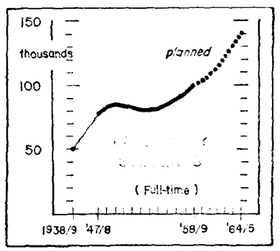
M. PINAY'S departure is a capital event in the affairs of the Fifth Republic. With it, in all appearance, French political life shifts into a new gear. The President, in the driving seat, is now more than ever alone: none of the remaining figures around him can be said to lead an independent existence. As for M. Pinay, he has not retired without reminding his countrymen that he remains at their disposal: the echo of an earlier departure, to Colombey-les-deux-Eglises in 1946, is not meant to be missed. The Debré government thus declines a stage further into an American-style (or perhaps a Portuguese-style) cabinet. The permanent secretaries are taking over. This certainly ensures executive cohesion, which never existed while M. Pinay sat there. But the concentration of authority in the Elysée brings France sensibly closer to government by decree and referendum. The gaullist edifice has had the scaffolding taken down; its base turns out to be narrow; it looks topheavy.

This is no reason why General de Gaulle should choose this moment to rewrite his constitution; on the contrary. If his object has been to put an end to the political game (and it is hard to think that he yet really wants this), the whistle has now been blown in both the cabinet and the Assembly. What is not yet clear is whether M. Pinay's departure will give the growing opposition in the Assembly a determination that it singularly failed to display in the schools debate last month. The reliable government vote is now reduced to the gaullist UNR. The Algerians have slipped away. The Socialists, who might have been expected to return under a less forbidding finance minister than M. Pinay, were alienated once more over the schools. Now the conservatives, called Independents, whom their parliamentary leader, M. Duchet, has been prodding for some time, can pack their bags and go over into opposition. It was to avoid this that the general tried to persuade M. Pinay to stay on as a minister of state. Technically, therefore, the regime could run into difficulties if it attempted a major operation in the Assembly in the coming months.

The budget is not a problem until the end of the year; but Africa may be. The government had meant to call a special parliamentary session next month to put through constitutional changes made necessary by the rapid evolution of the French community since the Saint-Louis meeting in December. It may be possible to delay these changes until the normal session in April, but they could still mean trouble, particularly as the Independents have been increasingly critical of General de Gaulle's African policy. The Independents would probably welcome recourse to a general election in which they could hope to pick up strength at the UNR's expense. The full political and economic consequences of the change may not be evident for a few months.

M. PINAY'S quarrel with MM. Debré and Jeanneney has been represented by him, and by them, as being over financial policy. This is true, but it has been by no means the whole truth. Policy differences there have been on such issues as state aid for necessitous industries, the creation of a state corporation to refine and distribute Saharan oil, and the revision of the commercial code (to include, among other changes, provision for the compulsory representation of employees on boards of management). But these could only be burning questions if ministerial pique and rivalry made them so; on all of them compromise was perfectly feasible. More significantly, there were differences between M. Pinay and M. Jeanneney on the general expansion of the economy, much as there had been between M. Pinay and M. Chalandon a year ago. These were undoubtedly harder to reconcile, and M. Pinay, in fact, seems to have been unwilling to give any ground to what he called *étatisme* and *dirigisme*. If he could not have his way, he may have preferred to go out altogether on an issue that his clientele could not fail to appreciate.

The two opposite images of financial policy thus presented have been reasonably clear during the length of the Debré government, and where M. Pinay thought they needed hardening he has done so by judicious use of the press in the past two weeks. He has said repeatedly that he stands by the austere, and in their way wholly successful, financial policies of December, 1958. His critics say that he has been preoccupied with the monetary reserves as the criterion of success. He has certainly shown a phlegmatic acceptance of patches of industrial stagnation and declining investment as the necessary price of financial stability.



This innate caution eventually caused him to quarrel with most of his cabinet colleagues and, more damagingly, with General de Gaulle himself. It has been one thing for M. Pinay to forbid M. Jeanneney to raise fuel prices in order to assist the resettlement of uneconomic miners. It has been quite another for him to refuse M. Guillaumat all that the army has demanded. But this M. Pinay did—and this, in fact, was his greatest service to the Fifth Republic.

The technocrats and expansionists have good reason to argue that France must keep up at least its Fourth Republican rate of economic development if it is to co-exist with the west Germans. They are prepared to take the plunge on wage concessions and social spending. But, simply because they do not possess M. Pinay's political influence, they are unlikely to speak up for austerity where it is still most needed: in the projects for a French nuclear armoury and independent striking force (closest to General de Gaulle's heart), and for the total military pacification of Algeria (closest to the army's). The intention behind M. Baumgartner's appointment to the ministry of finance is apparently to try to continue M. Pinay's policies without M. Pinay. The Bourse's reaction to the crisis seems to leave the government little alternative for the next few months. But only a politician with standing in the country can apply the brakes as M. Pinay did.

M. Pinay's opposition to General de Gaulle's policies towards Nato, and even Europe, has had more than a purely financial basis to it. This side of the dispute has not been so clearly delineated in public, but it may have been the clinching argument in the final break. M. Pinay has not yet associated himself with the most trenchant external critics of the general's foreign policy, including M. Duchet. But this is not to say what M. Pinay will do now he is at liberty, nor what his countrymen may expect to hear in future from the oracle of St Chamond.

Academic Go-Between

This first of a series of occasional articles into the problems of university expansion examines the role, past and future, of the University Grants Committee

SO successful has the University Grants Committee been in preserving British universities' academic freedom, while getting them both marching orders and housekeeping money from the state, that to criticise it is almost high treason. It has been copied by several countries, and academics in many more are constantly to be heard wishing that they were buffered from the whims and follies of their paymasters by such a go-between. But, when the whole system of higher education is entering a new era, it should be useful to weigh what is now required of such an institution against its past performance.

To suggest that higher education is entering a new era may annoy many dons, who feel that the floodgates of change were opened after the war with an expansion that has already changed the universities beyond recognition. The student population has been raised from 50,000 to over 100,000 in twenty years; and works are in train to raise the universities' capacity to 135,000 students or more in the next five. Yet the current expansion is only completing the process begun in the nineteenth century when the state began to promote university education by subsidies—on the premise that all young people able and eager to take a degree, as that term has been given meaning by the ancient universities, should be enabled to do so. The Crowther report showed how far this process has yet to go even at the present level of university

entrance, it pointed out, "there is a growing difference between the number of pupils 'qualified' to enter a university and those 'selected' to do so." If its recommendations for more secondary education are accepted, the numbers qualified to take degrees at the present standard and enabled to enter for them will rise further still. But what also lies ahead is the phase when the universities will have to accept and train more and more students whom they regard as being of below that degree standard.

The UGC's triumph is that it has preserved academic freedom and university initiative in a period when British universities have become financially almost entirely dependent on the state. (They now get barely ten per cent of their income from tuition fees, and only Oxford and Cambridge colleges possess the elbow room which private endowments confer.) Yet in so doing the committee has already become what it desired not to become: the instrument of state planning in higher education. Through its allocation of capital grants it now controls the universities—not merely in general terms, but in great detail. Its very success in repelling the claim—over ten years—by the Public Accounts Committee to investigate university finance as closely as any other form of major Government expenditure, and its skill in manœuvring the Government away from the device of earmarked grants, have turned it into far more of an executive body than a co-ordinating one. It enforces its own standard costing systems and its own building standards. As a semi-detached Treasury Committee with a predominantly academic membership, its policy has been to get the universities of their own free will to anticipate national needs. By prompting a sensitive response to government estimates of the requirements of technologists and specialists, it has enabled the universities, by being petitioners for more money, to seem to be setting the pace. But there is little or no coercion only because academic high commands in the postwar atmosphere are too sensible to delay action until rude things get said in public.

THE system works so well because the personnel of the UGC overlaps academic, political and high civil service circles. From the university senates through to the Treasury there prevails a similar mentality, a similar set of values and a common background. The result is an implicit compact between the parties: provided the universities carry out national policy, the UGC protects them from state (and of course local) intervention, and leaves them free to interpret national needs in accordance with their own standards. These standards are very much those of Oxford and Cambridge. Notwithstanding the growth of technological studies (which some Oxbridge dons distrust) postwar leadership in higher academic education has very largely come through the UGC from the ancient universities. These two universities have been substantial beneficiaries from the expansion, without losing the special advantages that they prize.

So far, the postwar expansion has not forced the universities to reconsider the nature of their functions or to vary very substantially their standards. The new students are—if sometimes dubiously—"academic material" in terms of 1939 or 1914. The greatly expanded staffs are still academic persons—chosen largely for their proved ability in research. Though the universities have laid on a great many courses which the UGC has explained that the government needed, these have, in the main, been kept to the level of academic disciplines: brewing is studied as virology, Asian languages as philology, and so on. Capital grants are readily accepted for providing them. But, as Sir Maurice Bowra once said, it is necessary "to distinguish between a thing we would like to do if we could afford it, and a thing we would not like to do at all." The universities dread the day when they will be asked to take money to do things which they do not think are properly academic—and which will perhaps be detrimental to academic life and purposes as they see them.

This, however, is the prospect that looms beyond the expansion that is already planned. Many dons think that even out of 135,000 students there will be a large number quite unfit for academic work (as that term has hitherto been defined) and they can point to a failure rate which is already about 11 per cent in the first year. By present standards, they are quite possibly right. The number of honours degree students is strictly limited and so even is the number of general degree students, as general degrees are now framed. Many university teachers who think that universities are spoiled by having too many undergraduates would like this failure rate to become a neatly self-regulating mechanism: as an increasing number of freshmen find they are not up to the work, the pressure on the university doors will lessen again.

The UGC, doubtless, is the interpreter of no such plan. But in what spirit will it meet the challenge for ever more "tertiary" education of ever more bizarre variety? Some of the plans to experiment with even the present relatively high grade of postwar student had to be forced through from outside—by Mr Dalton in the case of the University College of Staffordshire, and by Lord Chorley (with Sir Winston Churchill's backing) in the case of Imperial College. Today the UGC is all for new universities, new general or even pass degrees, even (it is whispered) for teaching management. But what is going to be required is a new approach not just to expanding facilities for the exercise of the universities' function as now understood, but a new approach to the function itself.

University expansion has virtually reached the uncharted frontier beyond which universities will have to go hand in hand with the Ministry of Education into the whole field of general post school education for the hoi polloi: a classicism that conveniently covers the intellectual orders who cannot get more than one pass at A level in GCE (an examination which dons already say is marked so easily that they must progressively raise the pass mark for university entry). The new era will demand the provision of more and more sub-academic courses suited to the hoi polloi's intelligence and the recruitment of academic unpersons to teach them. To let sweetness and light into their lives it will be necessary to forge new links between this academic underworld and the higher academic life—research, reading for honours—which must of course continue, undamaged, as before.

If the UGC sounds this advance, the universities, on form, will follow. But it is a very different brief from the one the UGC has had hitherto. The instincts of some people on the committee might be better served by a rearguard action, after the line has been drawn somewhere. Yet the UGC need be in no doubt that public pressure on the universities will grow. In the postwar decade and a half the educational controversy has raged round the secondary schools because the mass of parents, hitherto indifferent, now wants secondary education for its children. The very expansion that the UGC has stimulated in higher learning will help to ensure that in a few years this interest will move to the doors of the universities. There is nothing final about university development. Fortunately there still is time for the universities to decide how to shape it—and to ensure that the ark of scholarship shall still float on the floodwaters of mass education.

How the UGC Works

THE University Grants Committee consists of twenty part-time members appointed by the Chancellor of the Exchequer in consultation with the Minister of Education and the Secretary of State for Scotland. Most are people either currently or formerly engaged in academic life. The present chairman is Sir Keith Murray; the secretary, Sir Cecil Syers, comes from the Treasury. There is a secretariat of about 30 (including architects and accountants). The UGC meets every month, and makes a quinquennial visit, on which it reports, to each university.

The universities draw up in a prescribed way their accounts and requirements, which the UGC takes to the Treasury. Though money for the universities, both recurrent costs and capital grants, must be voted annually by Parliament, the universities are assured of their needs for five years ahead.

The UGC is in contact with the Association of University Teachers on staff conditions and salaries, and with the Committee of Vice-Chancellors and Principals on general policy. The greatest work is done by bilateral contact between the chairman of the UGC and individual universities' vice-chancellors.

Russia's Rural Half

agriculture abreast of modern Soviet industry; but then, he is only half modern himself

HALF-PEASANT, half-townsman, Mr Khrushchev is the living image of his country in its present state of development. This does not make him always the easiest guide to the Soviet economy. At Christmastide, for instance, he talked at length about the state of Soviet agriculture at a special session of the party's central committee. He paid a warm tribute to the record-breaking farmers of the Ryazan region; he mentioned by name dozens of individual performers elsewhere; he dwelt on all sorts of details. Blaming Mr Byelayev, party chief in Kazakhstan, for poor work in that region he revealed that this new granary of the Soviet Union fell short of expectation in a year when total grain output and supplies were hit by drought. He also boasted that Soviet output of butter per person—at 8.8 lb—exceeded the American level in 1959 for the first time; he added that meat output would be more than doubled in the next six years so as to catch up with American standards. But, though he spoke for hours, with the usual wealth of proverbs, in the end his listeners (and the readers of the subsequently published text) were left with a rather fragmentary picture.

Yet the key problems facing the Soviet leaders, though hard to resolve, are simple to state. They spring from the fact that, just like Mr Khrushchev, the Soviet population is still roughly half peasant. The economic consequence of this is that, even if Russia were to outstrip American food production in the new decade, it would use a vastly larger labour force to do it. As long as he has to carry on his back an unproductive farmer almost his own size, the Soviet industrial worker will be handicapped correspondingly compared with his American counterpart. The Soviet advantage in population is outweighed by low agricultural productivity. In social, and political, terms the problem is one of ownership. For the communists, collective farming is a transitional stage which will vanish together with the differences between workers in town and country. The collective farmer, with his peasant instinct and memories of private ownership, presents the communist planner and the communist politician alike with a poser.

The transformation of rural Russia was, possibly, the biggest of the tasks which Stalin bequeathed to his heirs. An interesting feature of the new regime was the relative frankness with which his successors immediately admitted the backwardness of Soviet agriculture and its distorting lag behind Russia's industrial progress. Their first idea was to increase food output by all available means. Mr Khrushchev launched the drive for "the conquest of virgin land," which has brought nearly 90 million acres under cultivation. The venture had its risks. The land reclaimed in Kazakhstan and Siberia lies in a zone where the weather is unreliable; not all the blame for the poor Kazakh harvest may lie with the reprimanded Mr Byelayev, and Mr Khrushchev's proposed remedy—to fly reinforcements in from the Ukraine—sounded fanciful. The fact remains that, taking bad years with good, the virgin lands brought in a substantial supplement of grain.

In the traditional agricultural areas more classical methods were used to raise production: supplies of machinery and fertilisers were stepped up. It was the emphasis on incentives that was new. Farmers saw their taxes reduced and their compulsory deliveries to the state replaced by purchase at more attractive prices; they were simultaneously spurred to sell by more plentiful supplies of industrial goods to the countryside. When this policy of incentives was crowned with the dismantling of the MTS (machine and tractor stations—the traditional outposts of communist control in the countryside) the question did arise whether Mr Khrushchev, whose only known original contribution in Stalin's time was the idea of grouping villagers into agro-towns, was not dropping his own convictions for the sake of practical results.

In fact, he was not. The one objective did not exclude the other; he has followed the two approaches, with varying emphasis, concurrently. The reclamation of new land enabled the leaders to set up state, as opposed to collective, farms. There are now 6,500 state farms. Their contribution to the disposable food supplies has risen in the last six years from 12 to 38 per cent for grain and from 17 to 23 per cent for meat

and milk. Thus, the authorities have strengthened their bargaining position considerably. Another vital change, which has passed almost unnoticed, is the reduced importance of supplies from the collective farmers' own plots, the last vestiges of private property, as a result of bigger sales by the farms themselves. The plots now provide only 17 per cent of the meat supplies and 8 per cent of the milk procurements, while not so long ago they contributed more than half.

COLLECTIVE farms also continue to change in size. Ten years ago, the 250,000 or so that existed were amalgamated into about 100,000 larger units. Unheralded, the process goes on: there are now only 55,000. Mr Matskevich, the minister of agriculture, outlined the future prospect to the central committee. Smaller farms will be amalgamated, while larger ones will be grouped together in the same region. Collective farms will specialise as much as state farms do, and the difference between the two will gradually disappear as a similar system of payments is evolved for both. Collective farmers, in other words, will become plain wage-earners.

Mr Khrushchev, in turn, revived the idea of towns for the countryside. He recalled conversations with farmers to whom he had suggested the construction of bigger houses with, say, four flats or even the building of big blocks of flats which could house a whole *kolkhoz*. But he added that the peasants showed no enthusiasm for such a transformation, and, as usual, he had a proverb for it:

> If you dig a well in the wrong place, you will not drink any water . . . we must take into account the collective farmers' wishes.

Thus only two rapid reforms are to be expected. Collective farms will combine for the joint construction and exploitation of common amenities. And the scale of payments for food produce is to be revised. This revision is dictated by various considerations. It must stimulate output in backward farms; the discrepancies in production between farms in the same area are still fantastic. It should bring about a cheapening of food prices, the benefits of which could be passed on to consumers. In the stage, theoretically transitional, of "dictatorship of the proletariat" it must prevent farmers from earning more than industrial workers. Record-breaking farms will, therefore, be compelled to put more into collective funds and distribute less. This, in turn, may prove a factor of social change. As for the general transformation of rural life, the hope is that it will keep pace with the growth of production.

Mr Khrushchev's fabian tactics may be explained by the desire to avoid unrest as the progress of production becomes increasingly difficult. Few virgin lands are left to be reclaimed (though Mr Khrushchev did advise the bringing under cultivation of some 15 million acres of marsh land). The emphasis must now be shifted from bread grains to fodder grains. Higher yields per acre and per head of cattle, more intensive stockbreeding—these are the tasks for to-morrow. In addition to managerial improvement, the results will depend on investment in equipment and fertilisers.

The party hierarchy has set next December as the date for a progress report. Spectacular changes or upheavals now seem unlikely. To modernise the archaic half of Soviet society is no small task. How long will it take? There is no precedent for guidance in a field where the communist planner has always, so far, been a fish out of water. An irreverent answer may be suggested: when Russia loses its half-peasant air, it will very likely have another ruler—a man who may bring to the political scene less colour than Mr Khrushchev, but more sophistication.

In Honour Bound

Some after thoughts on the latest New Year's Honours list

ALTHOUGH the Conservative party in this Parliament is not yet as beknighted as in the last, because of the large number of retirements and of new members who have yet to put in time for their spurs, there was no shortage of victory gongs on New Year's Day. The twice yearly quota of royal recognition for good party men is fixed between the Queen's private secretary and the Patronage Secretary to the Treasury, who is also, conveniently, the Government Chief Whip. Once the numbers are agreed it is, according to the system laid down in 1923 by the Royal Commission on Honours, the sole responsibility of the Prime Minister to see that those on his list of recommendations are suitable. However, following that unfortunate experience with Mr Lloyd George in the 1920s, the monarch must now be told if the Prime Minister is persisting in recommending politicians whom three Privy Councillors, forming the Political Honours Scrutiny Committee, have found to be manifestly unsuitable.

This committee, which at present consists of a member of each party, Lords Crookshank, Pethick-Lawrence and Thurso, receives confidential information about the exact nature of the "political and public services" which are getting their just reward, the name and address of the person who in each case made the recommendation in the first place, and a solemn statement from the Patronage Secretary that not a penny of money was put up for the party as a *quid pro quo*. The Royal Commission said "directly or indirectly" in the last connection, but doubtless the Patronage Secretary and the Crookshank committee interpret this requirement in the light of the commission's other delicately phrased words: "It is obviously no disqualification for one who has rendered party service to have contributed to party funds. As to service, some are able to help in one way, such as for instance speaking; some in another, such as organisation, and organisation cannot well be conducted without funds."

There are seven new titled MPs this year (not counting a new Labour member, who obtains the usual recognition for being Lord Provost of Glasgow). No fewer than four of them are to be baronets, an honour which seems to be coming back as a reward for exceptionally hard party work (as with Mr Kaberry, who spots and screens future Tory candidates) or as a consolation prize for an aborted junior ministerial career, as with Messrs Vaughan-Morgan and Nugent. From the very outset there has never been any nonsense about chivalry or merit or even the Middle Ages about the baronetage. It was invented by Julius Caesar (James I's Chancellor of the Exchequer) as a straight revenue-raising device. The Premier Baronet, Sir Edmund Bacon of Redgrave, is descended from one of the original purchasers. The qualification in 1611 was an income of £1,000 a year and the price was £1,095, a third cash down and the balance in instalments. The package originally included (but no longer does) the right of the eldest son to be knighted at twenty-one even if his father was still alive.

But it was as a reward for fathers rather than as a provision for sons that baronetcies first became popular among politicians. It was very smart in the last century for a rising MP to decline anything for himself but to ask for a hereditary gong for the old man. Mr Gladstone thus secured recognition for Sir John Gladstone twenty years after he had been unseated for corruption. But the order's popularity dwindled, until Lord Attlee, peerless midwife of peers though he was, had such conscientious objections to baronets that he limited the flow to one a year, the retiring Lord Mayor of London. Now, it seems that the failed Minister of State will present the order with a new and fruitful source of recruitment.

APART from MPs there are six new political knights and one political dame this year. Most are present or past Tory area chairmen, although interestingly enough they include the chairman of the Steel Federation's executive committee. But most zealous party workers have to be content with the "letters after the name"—there are eleven new political CBEs (including a number of constituency chairmen), seventeen OBEs (among whom there are some agents), and twenty-seven MBEs (mostly women). Understandably enough, in the euphoric afterglow of the election, Central Office's publicity department rates two gongs (a CBE for the top man and an OBE for his subordinate who deals, very pleasantly, with the press); but, with a nice sence of tact, only "political" (without the usual complement of "public") services are in these instances cited. In the geographical distribution of battle honours the choicest symbols of victory stand out—The Hartlepools, Nottingham, St Pancras, Plymouth. For reasons that are not so obvious from the election returns there is an exceptional concentration of prizes in Lancashire. The case of Mr W. T. Donovan, of Holborn and St Pancras South, gives an indication of how, at its worthiest, the system works. He fought two uphill battles as parliamentary candidate and led the Tory minority on the borough council through many rough fights in the "Red flag" days. Now the Tories possess seat and council. Others have reaped where Mr Donovan has sown; he gets the CBE. Most of the recommendations come to the Patronage Secretary from MPs, who would naturally like to get something for hard-working helpers and locally influential supporters, and the party chairman, to whom in turn they flow through the party's mysterious channels.

The senior Tory titleholder in last week's list is Sir Alfred Bossom, who as an architect once designed American steel-workers' houses in Pittsburgh, and who after twenty-eight years' faithful service in the Commons goes as a life peer to bring fresh blood to the Lords. He is paired off with Mr Hugh Dalton, whose appearance on the red bench alongside his old playmates Lords Attlee and Morrison should coincide with the publication of his last volume of memoirs. These two new life peers, together with Sir Evelyn Baring and Sir George Horatio Nelson, the new hereditary barons, will by now have heard from Garter King at Arms on the delicate matters of their titles, arms and territorial designation. This matter of the title to titles deserves a little further investigation.

Garter, Sir George Bellew, who alone among the heralds deals with peers, will have been officially asked by the Prime Minister's secretary for advice on titles—arms are his own business by right. His aim is to please the new peer, subject to certain fairly flexible rules of fitness and avoidance of ambiguity. These, however, sometimes cause trouble, especially among your modern type of peer who has a prejudice in favour of his own name and lacks that zest for being anchored to a part of the good earth which has traditionally gone along with a consciousness of rank. This new trend is by no means confined to Labour peers, though the Mr Crook of Lord Attlee's creation who chose to be known as Lord Crook displayed perhaps an extreme addiction to principle.

All peers require territorial designations which have to be cleared with the local authorities. Those who keep to their own names in their titles may still have two problems: some other peer may have the same name and they still need an anchor. They are usually induced to insert something else "before the comma," to indicate that it is to be included in their usual style—for example, Baron Fraser of Lonsdale, of Regent's Park. If you are celebrating a victory in foreign parts, you will need a stake at home—as with Viscount Montgomery of Alamein, of Hindhead. But if you run out of ideas, you can repeat yourself, as with Baron Geddes of Epsom, of Epsom.

Some peers, who have been "thinking territorial" most of their lives, can settle the whole thing in five minutes. Others take longer. Mr Herbert Morrison's first inspiration was Lord Herbert Morrison (which would have made him sound like the second son of a marquess); his second, plain old Lord Morrison (no good, because there is one already); his third Lord Morrison of London ("not fitting"). So Lord Morrison of Lambeth, of Lambeth, it had to be. Professor Lionel Robbins was even more difficult, being addicted to his name despite the awkward existence of Lord Robins, of Rhodesia and of Chelsea, and being opposed in principle to a territorial handle. After weeks of heart-searching he saved his name, even though a political correspondent had strengthened Garter's arm by attributing an extremely reactionary speech from Lord Robins to the professor—but at the price of tethering himself, albeit after the comma, to Clare Market, the ancient site of the London School of Economics.

A peerage can be expensive, but a peer does not have to be a gentleman. He can therefore dispense with a coat of arms—which costs £131 5s., with an extra £65 for supporters (or a cut rate of £43 for a lifer). Bluemantle Poursuivant's recent article saying that no one who is not prepared to take arms should accept a peerage has caused great umbrage in upper heraldic circles. Garter's policy for a long time has been that arms are optional. It can safely be assumed that Bluemantle has been on the carpet. The Parliament robe costs £160 with ermine, or £71 in the utility or rabbit-lined version for impecunious lifers. But nowadays Moss Bros. does a brisk lending trade.

NOTES OF THE WEEK

KENYA

Africa's Rubicon

THE members of the Kenya constitutional conference, which opens on Monday, have been assembling in London this week —ominously with the Europeans segregated in their hotel, the Africans in theirs and amid a general atmosphere of unfriendliness. Nobody is very hopeful of success. Yet the stakes, for Kenya and for Britain, are very great; and it will be best to be brutally specific about Mr Macleod's task.

If the African leaders go home after this conference without having been offered a settlement that they can sell to their people, then non-co-operation is bound to break out in Kenya, to put it at its lowest. Taxes will not be paid; industrial disputes will be driven to the point of strikes; violence will flare; Mr Mboya—merely to save his own skin in politics—and his friends are very likely to take action that will eventually lead them to prison. And, in the end, a settlement of Kenya's problems on worse terms for the Europeans will be inevitable. On the other hand, if the Africans achieve their bare minimum demands at this conference, the European farmers will fulminate and threaten to trek out of Kenya—but will acquiesce. And it may then become a good deal easier for Mr Macleod to move on to Nyasaland problems.

It is therefore very much in the Colonial Secretary's interest to achieve a settlement with the African leaders. Mr Mboya and his friends seem to be ready to make quite a few concessions: probably they will not be too inflexible about dates, safeguards, timetables or even possible gerrymandering of constituency boundaries. They would accept that the Governor should still hold considerable reserve powers against any black majority government that may now emerge. But on one point Mr Mboya is insistent. Elections in Kenya have got to be fought on a common roll irrespective of race—according to the principles of democracy.

The first crisis of the conference will therefore arise when Mr Macleod makes his opening speech on Monday. If Mr Macleod then states clearly and frankly (what is in truth his inner conviction) that Kenya has now to progress towards a democracy, in the British sense of that word, in which the will of the majority on a common roll will ultimately prevail, then the African delegates will almost certainly persevere in negotiation. If, however, he talks vaguely about appropriate "parliamentary institutions" and "the creation of a Kenyan nation," the Africans will smell South African or Southern Rhodesian "parliamentary institutions" and the fat will be in the fire at once.

If Mr Macleod surmounts this first hurdle, negotiations seem likely to drag on for two or three weeks—but then, in all probability, will reach a second moment of crisis. A gap between the Africans and the Europeans will almost certainly remain. The temptation for Mr Macleod will then be to say that he cannot "impose his own solution" on the Europeans. But the course of statesmanship may well be to do just that, even if it involves a grim refusal to listen to murmurs on the old boy network that "we cannot let our people down."

SOVIET UNION

Reductio ad Fortem

THE plan for unilateral disarmament announced in Mr Khrushchev's Supreme Soviet speech on Thursday was sensational in a different way from what had been expected. His New Year hints about unilaterally reducing conventional forces and relying for defence on nuclear rockets had been so phrased as to suggest that the Red Army and Red Fleet were practically to pass into oblivion. However, the programme he announced on Thursday would merely bring Soviet armed manpower, in two years' time, down to 2,423,000, a fraction less than the American level of today; and it was not immediately clear whether his figures included the internal security and frontier forces, usually estimated to be about 350,000 strong. He added that the creation of a new territorial army was also being considered.

More unexpected was his violation of the long established rule that Soviet strength is never revealed in absolute figures. He gave the present strength of the army, air force and navy as 3,623,000, and the 1955 strength as 5,760,000. If these are correct, the accepted western estimates in 1955 were well below the actual figure; and the latest western estimate of 3,900,000 is not far out. Marshal Malinovsky will not, even in 1962, be left with no troops to review, as he seemed to envisage at that boisterous New Year party. And Mr Khrushchev emphasised on Thursday that the Soviet forces, though smaller in numbers, would be stronger than ever in firepower. "Our armed forces have been largely switched to rocket-nuclear weapons. Today, the Red Army possesses firepower such as no other army has ever had."

He showed more concern, on this occasion, to reassure his audience that he was taking no risks with Russia's security than to appear as the man of peace. While insisting on his government's eagerness for total disarmament, and accusing others of hanging back, he put his emphasis on the fact that the conventional forces were less important now because of Russia's unrivalled strength in nuclear rockets.

> We are years ahead of other countries in the development and production by assembly line methods of intercontinental ballistic missiles of all types. . . . In the navy, the submarine fleet is increasingly important. . . . The Soviet Union has stockpiled the necessary quantities of atomic and hydrogen weapons. . . . The production of atomic and hydrogen weapons is still going on in the Soviet Union.

He claimed that the manpower reductions would save 16 or 17 billion roubles a year; the missing figure in an otherwise revealing statement was the cost of the apparently unchecked surge toward still vaster nuclear armament. And, presumably in case anybody might not have taken his point properly, he threw in a fine ominous claim that Russian scientists had developed many new weapons of even higher destructive power than any yet in the forces' hands.

Snakes and Ladders

WAS there a touch of "the punishment fits the crime" about the sudden downgrading of Mr Alexei Kirichenko, who had been one of Mr Khrushchev's foremost lieutenants since 1957? No immediate reason was given for the stripping off of his various exalted ranks and his relegation to a local party job in the Rostov district. But presumably a number of heads have got to roll after the revelations of harvesting failures in the Kazakhstan "virgin lands." Mr Kirichenko, with his responsibility for local party appointments and his particular concern with farm affairs, was a doubly apt scapegoat. As Rostov is a major producer of farm machinery, he may there be required to work his passage by stepping up output of the equipment the lack of which has been felt in Kazakhstan.

Yet Mr Khrushchev was hardly obliged to dispense with the services of a hand-picked assistant when so many other culprits might have been chosen instead. Evidently he was quite willing to see him go. At the time of writing, the real cause of Mr Kirichenko's fall from grace remains hidden in the familiar Byzantine tangle of personal rivalry and doctrinal dispute that still enshrouds the Soviet hierarchy. All that is clear is that the leader has lost none of his zest for shaking things up. The abolition of the central ministry of internal affairs (MVD), whose work is now to be done by the local ministries in the Soviet Union's component republics, is another instance of this. It is, however, a less striking event than it would have been a few years ago, when the initials MVD stood for the political police in every Russian's mind. The committee of state security (KGB), which now controls the political police, is not affected by the new change, which may amount to no more than one more round in Mr Khrushchev's continuing struggle against Parkinson's Law of the ever-expanding bureaucracy.

RAILWAY WAGES

Odious Comparisons?

THE intimation that the British Transport Commission is to give railwaymen a retrospective wage increase when the Guillebaud report appears in April does no more than recognise the facts in this hard-pressed industry. The railwaymen got a smaller (3 per cent) increase than other workers as long as eighteen months ago and, unlike workers in private industry, have not benefited from the plant bonus-payments that have accompanied the present labour shortage in much of the Midlands and the south. Key railway workers in high wage areas like Birmingham and London have begun to drift rapidly away to other jobs and, in order to keep the railways functioning, this clearly had to be stopped. Although the railways staff fell by some 30,000 last year, it is the loss of skilled signalmen and shunters that is causing the commission most concern.

The timing of the new award to coincide with the Guillebaud report is, however, little more than a piece of face saving. The report itself has always seemed something of a spoof. It has taken two years to compare railway wages with those in comparable industries elsewhere, and its figures will doubtless show that railwaymen are paid less than most other industrial workers with similar job amenities. But the market is the real test of this, as the migration of railwaymen in the Midlands but not in the less prosperous districts of the country shows. Moreover, since the rates paid to railwaymen are well documented, the bulk of the committee's work has been the interesting, but not particularly relevant, task of digging up facts about pay in other industries. On balance the existence of the committee may have held back new wage claims; but by presenting figures of pay differentials without taking into account the market value of the particular job, it may give too much weight to the case for raising all rates together. Some branches of the railway service are still very much over-staffed, and Mr Guillebaud's figures may disguise the fact that a drift of workers away from them is actually welcome, while obscuring the case for larger selective increases where labour shortage is acute.

Sir Brian Robertson's immediate aim when he promised the increase, however, was to provide comfort to Mr Greene, general secretary of the National Union of Railwaymen, whose more militant members in London have been threatening to go on a one-day unofficial strike at the end of the month. The commission hoped that Mr Greene's plea for patience and level headed bargaining would be strengthened as a result. The unofficial strike leaders, who refused to use Sir Brian's announcement as a reason for calling off their threat, retorted with a dusty answer. But nobody knows how much support they will actually get on February 1st; the former chairman of the meeting that called for a strike has wisely rejected his colleagues' views and resigned.

LIBERAL ORGANISATION

End of a Regency

TO say so may sound cruel to Mr Herbert Harris, who sacrificed a safe career to become General Director of the Liberal party in its doggiest days and worked exceptionally hard at it, but his enforced retirement could prove a gesture of Liberal strength rather than of weakness. His appointment was a desperate and misconceived expedient resorted to in the shadow of the 1955 election result. In the absence of effective leadership either in Parliament, where Mr Clement Davies was fast disappearing into the clouds, or in the organisation, because a chairman who could be at the office every day was impossible to find. Mr Harris was tempted away from Pitman's Shorthand School to become a paid public figure. It is almost always a mistake, as the Labour party has also been discovering with Mr Morgan Phillips, to combine the public face and the private servant. The difference is that the Liberals have mustered the necessary ruthlessness to acknowledge it.

Through no fault of his own, Mr Harris could never be a Lord Hailsham. Moreover he was felt to lack sympathy for some aspects of the party's swing to radicalism in recent years. But the real, hard truth behind the move is that new faces often are needed at the top of party organisations every four or five years. A party bureaucrat should not be put into the position in which politicians, knowing that it is time for a change, hesitate to make it for fear of depriving him of his livelihood, not many years perhaps before pensionable age. Only the Conservatives, with their greater resources and innate skill at finding knights' moves for square pegs, seem to have solved this problem satisfactorily. They have a General Director called Colonel Urton. Nobody, outside the party organisation, has ever heard of him. A former agent, he works, as a kind of permanent secretary, under several layers of political chiefs.

The Liberals are evidently going to try to work a similar system, taking advantage of Mr Byers's decision to return to politics and of his effective partnership with Mr Grimond in running the election. The national executive has abdicated some of its functions to a small, strong committee headed by Mr Byers and including such energetic personalities as Mr Thorpe and Mr Bonham Carter. Much will depend on the amount of time Mr Byers can devote to party work; on his continued harmony with Mr Grimond; the discovery of a first class executive secretary to head the staff; and the raising of enough money to put through the other reforms which are planned, such as the strengthening of the research department and the establishment of better links between headquarters and the constituencies.

SPACE DIPLOMACY

Calling the Shots

MR KHRUSHCHEV's arrival in Washington last September was heralded by a Russian rocket striking the dusty moon. His trip to Delhi and Jakarta next month will be preceded by Russian missiles plunging into the blue Pacific near the Marshall Islands: in its way, no less portentous a display of strength. Mr Khrushchev does not do all this simply to tease. Soviet rocketry has become as important a status symbol to him as the French bomb is to General de Gaulle. With what fireworks do they mean to greet each other on March 15th?

Ever since the first sputnik, the communist lead in missile technology has been hammered home to impress the underdeveloped nations. As part of this campaign, there are now grounds for belief that the Chinese intend to get a satellite into orbit with Russian help in about two years' time. But it remains to be seen whether the Asians and Africans would really rather see the great powers spending their resources on exploring the cosmos than on helping people like them to develop the backward parts of the earth. Mr Khrushchev could find the psychological advantage slipping from him.

In fact, the people most volubly impressed by the new Russian test plans were the Americans. Since the Tass announcement had been timed to follow whatever President Eisenhower might say about rocketry in his State of the Union message on January 8th, this was not surprising. The belief that the Russians were going to fire big missiles (possibly capable of carrying a human astronaut) and that they might be coming from the Caspian launching sites (nearly 8,000 miles away from the target

area) seemed to suggest that the Soviet Union was stepping up the pace of military and scientific competition.

Diplomatically, there was little the United States could do. Although Senator Mansfield angrily suggested going to the United Nations and having second thoughts on the summit, President Eisenhower kept a stiff upper lip. The Americans have been testing missiles over Atlantic and Pacific for some time. But talk of the Soviet space man gave point to American efforts to get the revised United Nations committee on the peaceful uses of outer space down to work this month.

NUCLEAR WEAPONS

No Timeless Test

In theory, all that is needed to solve the problems which the nuclear tests conference at Geneva took up again on Tuesday is time—enough time for the scientists to find new ways of detecting the secret tests which they keep finding new ways of concealing. In practice, time is limited. Not because of France's approaching Sahara tests ; Russia will hardly argue that those modest explosions set it free to resume testing, for that would in turn free the more impatient Americans. There is a more relevant time limit: the United States Senate will insist on lengthy hearings before it will ratify any treaty of this kind, and six months from now Congress will have dispersed to woo the electorate.

The President is, therefore, right to want to speed up the Geneva talks, though he is wrong in thinking that a hint of a possible resumption of tests will move the Russians in that direction. A better gambit would be a turn of speed on the western side. Admittedly, the Russians for nearly a year would not look at the " Hardtack " evidence of unexpected difficulties in identifying underground nuclear blasts, and when they did they obscured their justifiable criticisms of specific flaws in it with polemics and unscientifically sweeping pooh-poohs. But the western scientists who have had this data for a clear year are themselves still cautiously " reassessing."

Big talk about " big holes " in which underground blasts could be " cushioned " with air to prevent seismic detection is liable to mislead. To get results, the underground chamber would have to be huge, perfectly spherical, and flawless ; and by the time it had been furtively built, detection methods might even have caught up. Certainly, all such possibilities need examination ; but, perfection being unattainable at present, an initially imperfect system, plus joint research into improvements, would be far better than nothing at all.

Fourteen patient months of prodding have shifted Russia from its first absurd demand for self-inspection to the acceptance of a score of control posts on Soviet soil, with more than 300 non-communists on their staffs, and of at least a small annual ration of on-the-spot investigations of suspect phenomena. This means a toe in the door of the top-secret Soviet state ; and is it not its secretiveness that most perturbs other nations ? The western governments, whose secrets are usually open ones anyway, might even consider offering Russia fuller rights of inspection in their territories than they are granted in Soviet ones. Might this not ease the Russian door open a little further in the end ?

ANTI-SEMITISM

Religious Legislation?

Not all those who have joined in the condemnation of recent outbreaks of anti-Semitism will favour the private member's bill which Sir Leslie Plummer, the Labour Member for Deptford, has announced that he will introduce into the House of Commons next month under the ten minute rule. He wants to make it an offence for any person " to insult or conspire to insult a person or persons on the grounds of race or religion," and thinks that conviction should lead to a maximum penalty of six months' imprisonment. The basic question for British liberals is whether ample powers do not already exist at law for dealing with nasty anti-Semitic eccentrics.

At present, swastika daubers and others can be proceeded against for criminal libel. To publish a defamatory libel of a class of persons is a common law misdemeanour, punishable with a fine and up to one year's imprisonment. Freedom of the press is protected by an Act of 1888, which requires an order of a judge in chambers before a newspaper can be indicted. Alternatively, the ancient offence of seditious libel, now fallen into desuetude, could be revived. There is also the offence of causing a public mischief, defined in 1801 as " any acts or attempts that tend to the prejudice of the community," and confirmed by the Court of Criminal Appeal in 1933. (R *v* Manley.) In 1936, two men were in fact convicted of public mischief, for printing and publishing " scandalous statements relating to His Majesty's Jewish subjects." Defacing of any building is also an offence under numerous local acts, punishable with a small fine in the first instance, but with up to six months' imprisonment for a subsequent offence. If more than one person is involved, the law of criminal conspiracy is quite wide enough to secure a conviction. Finally, MPs who are worried about lunatic telephone calls should note that under the Post Office Act of 1953 (s. 66), it is an offence, punishable with a fine of £10 or up to one month's imprisonment, to send messages over the telephone which are " grossly offensive, or of an indecent, obscene, or menacing character."

Ample powers therefore exist to deal with the nuisance ; if the police do not choose to exercise them, either for reasons of policy or because of the difficulty of apprehending miscreants, why should their attitude by changed by the creation of a new statutory offence ? And it would be a major difficulty to limit any new legislation's scope so that it would not infringe the rights of the public and the press to engage in reasonable religious controversy. Under Sir Leslie's bill a curious situation would be created in Northern Ireland, for example, where epithets abusive of the Pope are a familiar adornment of many buildings.

SHELL SITE STRIKE

A Rare Mess

Seated somewhat incongruously below the arches and ecclesiastical portraits of a hall in Church House, the committee of investigation into the causes of the twelve-week-old strike of electricians at the Shell site on London's South Bank held its hearings this week. The hush of the hall was in the strongest contrast to the bustle on the site itself, where not only has the giant building already begun to tower above its two neighbours, County Hall and the Festival Hall, but also where some of the most varied labour troubles of recent years have been witnessed. There have been rows on the site between trade unions and employers, between trade union officials and stewards, between trotskyites and communists, between Catholics and Protestants, and even between various groups of employers. The reversal of all the usual patterns, with employers urging that certain men should be better paid and communists that the men should stay at work, have been the comic side of what has really been a deplorably bad piece of organisation.

The 130 strikers from the Electrical Trades Union this time do have something to complain about. Nearly all the other men on the site—and certainly all those employed by McAlpine, the main contractor—are paid bonuses above the agreed union rates for the building industry ; some of these raise wages by as much as £6 a week above basic rates. But one of the subcontracting firms, Wheeler's, refuses to pay any bonuses and is supported in this by its small and rather pedantic trade association, the National Federated Electrical Association. (The rightwing NFEA and the communist-dominated ETU, for obvious reasons, rarely see eye to eye.) Since October 21st, Wheeler's electricians have been on official strike. Their placards and indefatigable marches have not secured them any satisfaction from their employers, but they have still not gone back ; some, indeed, have obviously happily slipped away to other jobs in booming London.

The obvious moral is that Wheeler's case is untenable. They should pay what the labour market at the site demands. The argument that the firm will have to pay similar bonuses on all its sites as a result, irrespective of the local labour market, is unconvincing. But the ETU team, led by Mr Haxell, has not done well in the statistical judo that has taken up the bulk of the com-

Cariflex stays true to form . . . its quality is guaranteed—
consistent from shipment to shipment. **Cariflex** styrene-butadiene rubbers for industrial and mechanical goods are available in many different types. They include hot and cold polymers, oil masterbatches, carbon black masterbatches and hot and cold latices — all manufactured to standard specifications. **Cariflex** general purpose rubbers are made by Shell — a sure sign of quality in the world of man-made things.

mittee of inquiry's time. They are stuck with the fact that, as a union of craftsmen and as believers in the doctrine that wages are determined by union action (not by supply and demand), they must pay lip service at least to the centrally-bargained union rate. But market forces have been too strong for the theories of either side.

GERMANY

Berlin and the Swastika

West Berlin and west Germany have responded to the sporadic neo-nazi manifestations of the last three weeks in markedly different ways ; and the differences are not accidental. The federal government in Bonn has been hesitant in its reaction. In west Germany, it is clear, there is no question of any radical attempt to clean ex-nazis out of office. The date for a debate in the Bundestag has not yet been fixed ; it is expected towards the end of February, when the government's report on the incidents and their background has been completed. Attempts to prevent meetings of the right-wing Reich party have failed. In Berlin, by contrast, the government has struck hard, expelling neo-nazi students from the universities and schools, imposing severe penalties on neo-nazis who express their views in public. Student demonstrations have provided an impressive show of support for such measures.

One reason for west Berlin's very different line can be found in the fact that there are still some fields in which the allied, not the west German, writ still runs in the city. In economic and other pedestrian matters Berlin accepts west German legislation by an automatic procedure. But in matters of defence and political security allied rule prevails in theory. It has therefore been possible for the Berlin senate to invoke a law of the defunct Control Council which imposed unlimited penalties on the glorification of nazism, and to arrest youthful members of extreme right groups. This could not have been done in the federal republic—where, indeed, respectable arguments can be, and are, put forward against curbing the freedom of speech and association of even the most distasteful of political groups (provided they are non-communist). That west Berlin has no such inhibitions was shown as recently as last year when one of its courts even ordered the confiscation of a part of the Goering property.

The difference between Germany's western rump and its old capital has political as well as juridical sources. Herr Brandt, the governing burgomaster, is a social democrat with an active record in the Norwegian wartime resistance. Senator Lipschitz, who announced the measures against neo-nazi groups, is a Jew himself. Such men have been put in office not just by the powerful Social Democratic party in Berlin, but by a population whose political, and indeed spiritual, experience since the war has been very different from west Germany's. The long siege in the midst of the communist world has not merely given the Berliners a deep sense of solidarity with the western allies. It has given them an almost militant loyalty to liberty and democratic values ; to say that their countrymen further west know no such loyalty would not be right, but no one would call their attachment militant. If and when Germany is united, Berlin will have more to contribute to German national life than the provision of government offices and a mere centre of ceremonial.

GHANA

Confederate States of Africa?

Dr Nkrumah neatly made off with his illustrious guest's headlines in Ghana last week ; in fact, it was Mr Macmillan who provided a world sounding-board for Kwame Nkrumah, not the other way round. While the newspapermen were sharpening their pencils over the dinginess of the bunting, and before Mr Macmillan could get to a microphone, Dr Nkrumah revealed to a press conference his visionary scheme for a United States of Africa. Spicing this dish with an attack on the creation of tinpot black states as part of an imperialist plot to balkanise rather than emancipate, colonial Africa, he achieved world-wide press coverage. This was most convenient, for the All-Africa Peoples' congress is imminent at Tunis, and Dr Nkrumah has to have something to boost his stature as black Africa's champion at a time when new African leaders are lining up for their turn in the limelight.

Dr Nkrumah also let it be known that Ghana's new republican constitution will contain provision for the ceding of sovereignty to an African—or West African—federal state should a wider union become possible ; his object is to challenge other new African countries, notably Nigeria, to follow his (and Guinea's) example in offering more than lip-service to the Pan-African idea. It was natural that he should raise this with Mr Macmillan. The new constitution may make him chief of state as well as chief executive ; this would affect his standing at the Commonwealth prime ministers' meetings. A further question must have raised itself. Can a Commonwealth country enter a federal union with foreign countries and yet stay in the Commonwealth? Very likely ; but if it can, what becomes of the British Government's argument that the Commonwealth ties preclude Britain from joining an economic union in Europe?

However, there is a still more immediate issue to which Dr Nkrumah's announcements draw attention. The most "tinpot" of the new free black states is Togoland, the former French trust territory, Ghana's next door neighbour. Most Ghanaians think (not without reason) that it would be better off united to Ghana, and at one time it seemed likely that it would be ; but now the premier of Togoland, M. Olimpio, is full of doubts of the kind that the British Cameroons entertains toward Nigeria. He notes that there is no future for two leaders (especially if one is in opposition) in Ghana. West Africans watch the unfolding of this situation with grim amusement.

WAGES

Busmen's Bonus

The idea that London busmen should be paid a bonus depending on their results may sound rather quaint, but it should be welcomed. It is certainly almost a pioneer scheme in its industry. Whereas about a third of all workers in Britain were paid by results in 1958 (according to the last Ministry of Labour survey), only 4 per cent of those working in transport generally were so paid and the bulk even of these were in "storage" and air transport. Since 1958 the number of workers on piece rates has probably fallen slightly, so the bus scheme runs against the general trend.

The busman's job, however, is quite suitable for piece rates for two reasons. The first is that some at least of his receipts are due to his own efforts; the driver who deliberately stays close behind the bus in front, or who runs ahead of schedule to miss a busy patch, will now see this reflected in a lower wage packet. The second is that the London bus service has been generally rather demoralised since the men's long strike in the summer of 1958. The scheme should put some pep back into the job. In this respect, for small groups working more or less on their own, payment by results can be a most successful weapon.

The actual form of the busmen's proposed scheme seems sound enough. A small safety bonus is clearly in order, as is one depending on standards of fare collecting (which are already very high) and timekeeping. The important thing however will be to see that the third dimension of the bonus, that based directly on fare receipts, is much the largest. This would also be the time for London Transport to put in motion a long-needed fare change: to charge much more for certain expensive services, such as those late at night or at peak hours.

THE LAW'S DELAYS

Waiting in Prison

Year after year the prison commissioners complain in their report that too many people are committed to prison unnecessarily (that is, not under a prison sentence), and that the task of the staff of the local prison is made correspondingly more difficult. The first report of the Home

Office Research Unit (HMSO, 3s.) gives weight to this complaint and amplifies it with detailed statistics. The report is called "Time spent awaiting Trial," and a large part of it is devoted to an analysis, from a sample, of the time that elapses between committal and trial and disposal according to the type of court and the type of offence. In the higher courts, the process is speediest where they sit in almost continuous session, that is, the Old Bailey, London and Middlesex Sessions and the new Crown courts at Liverpool and Manchester ; in these the waiting time was three weeks to a month. The delay was longest at the large assizes, where the average time was 51 days—but 9 per cent of the sample waited sixteen weeks or longer.

The setting up of more Crown courts seems the obvious answer to these delays, and is being considered by the Streatfield committee on the business of the criminal courts. But what must exercise the consciences of liberals as well as of prison reformers is that for some people the waiting time is spent unnecessarily in prison. If the results of the sample are applied to the 1957 total of persons received for trial, it is estimated that about 300 were kept in custody and subsequently acquitted —of these nearly a half were in prison for a month or more—and that another 2,000, though convicted, were not given a prison sentence.

In addition, there are the people who are remanded in custody by magistrates' courts and whose cases are then finally disposed of by these courts. It is estimated that in 1958 about 13,300 persons were thus remanded, and about 8,900 of them were not subsequently detained. According to the report, the views of the police are an important factor in determining whether the magistrates allow bail or not. But 2,400 of the cases tried summarily were remanded in custody for medical reports. This Home Office report strongly underlines the need for remand centres where these medical assessments can be made. Such centres would also spare people, including many young people, an unnecessary contamination with prison life.

AFRICA

Codes of Law

A general welcome should be accorded to the results of this month's London conference on the future of African law, which was attended by delegates from a dozen African territories and legal representatives of British universities and government departments, and presided over by Lord Justice Denning. The main purpose of the meeting was to find some way of rationalising African private law, which at present is a confused jig-saw of English, Islamic and Roman Dutch law, imposed on a welter of local and constantly changing customs.

Trade in particular has been hindered by this diversity, and a useful decision of the delegates was to establish a uniform law of contract and tort, based in the main on English law. They rightly decided that the law of marriage, divorce, wills, and succession was too personal to allow of this approach, but written records of these are to be made for the first time, and a digest compiled. Unfortunately, there was one missed opportunity: while agreement was reached that criminal law should continue to be uniformly applied to all communities within individual territories, no attempt is to be made to emulate the work of Macaulay in India, and draft a criminal code, which might eventually become applicable to the whole African continent.

A committee is to continue the work of the conference and presumably will work in close consultation with the newly created British Institute of International and Comparative Law. The Judicial Committee of the Privy Council, the final court of appeal for dependent territories, will also have an important part to play. Its effectiveness would be greatly increased if it included African members, and heard at least some cases in Africa itself. If legal systems in Africa are to be brought up to date, more African law schools must be speedily established. At present the overwhelming majority of Africans pursue their studies at the Inns of Court, where much time is wasted in mastering for them unnecessary subjects, such as the English law of real property. The conference was clearly impressed by the urgency of this need, and the committee that it appointed should lose no time in working out some practical proposals.

SAUDI ARABIA

Quick Recovery

It is not often that a Middle Eastern government as broke as the Saudi government was less than two years ago survives to tell the tale. At that time the country's reserves of bullion and foreign cash amounted to barely 14 per cent of the paper currency in circulation and there were obligations to local banks exceeding the value of this thin cover. By using their ample oil revenues sensibly for the first time, the Saudis have managed a complete financial recovery in barely eighteen months. The gold, silver and hard currency reserves rose from $24 million in the summer of 1958 to $186 million in December, 1959, and the government has now taken steps to see that it does not get into such straits again.

The Saudi riyal has been devalued (from 3.75 to the dollar to 4.5), the government's share in the International Monetary Fund has been increased from $10 million to $55 million and its share in the World Bank from $10 million to $73.3 million. All controls on foreign exchange and imports, except on a few subsidised commodities such as grain, cattle, medicine, edible fats and dairy products, have been abolished. The Saudi Arabian Monetary Agency will put out a new issue of banknotes and call them what they are —thus putting to an end the fiction that the government's paper "pilgrim receipts" were not really money at all, but merely warehouse receipts. The agency will publish a fortnightly statement in

The Economist

JANUARY 14, 1860

OBSCENE PUBLICATION

While, under the authority of Lord Campbell's Act, the police are able to take measures for the repression of scandalous exhibitions in the windows of generally frequented thoroughfares, and do occasionally interfere to destroy unclean publications or obnoxious prints when thrust before the eyes of respectable men and women in their daily walks, a kind of outrage on public decency of another and not less serious kind has grown into most unpleasant prominence. We speak of those filthy stories which it is often the painful duty of our Courts of Law to bring to light and to investigate; and which, owing to the publicity which is an essential part of our judicial system, are not confined to the ears of those whose professional office it is to deal with them, and who may be thought case-hardened by habit to the polluting influence, but are related generally before a crowded audience, and too frequently published at full length for the edification of a very considerable proportion of the general public. The evil is undeniably a great one. . . . The application of the remedy in the case of his own family is in every man's hands. Let the cheap newspapers which are the great sinners in this respect—which publish in several columns what the *Times* or the *Daily News* compress into a few scarcely objectionable lines—be excluded from every decent household, as strictly as are publications avowedly immoral. If those among the penny papers which violate the canons of decency are treated on the same footing as those low *periodicals* of another kind which a gentleman would be ashamed to be detected in reading, and would on no *account* admit into his house, the requisite punishment will have been administered, and the necessary protection of domestic purity accomplished. More than this we need not desire. Those who care to seek out and *paddle* in the moral sewerage of society need not be hindered from their pastime; all we need wish to do is to prevent the filth from being thrust upon those who abhor it.

Umm al-Qura, the official Mecca newspaper, showing the amount of currency in circulation and how it is backed by the agency's current holdings.

The Saudi people have to pay well for the governmental services they get—maintenance of the royal family alone takes more than 17 per cent of the revenues—and the statement issued by the prime minister's office, calling for continued vigilance and a sincere effort on the part of the public to do away with squandering, is both unnecessary and needlessly hypocritical. It was squandering by the king and his family, including his brother the prime minister, that nearly wrecked the country. It is customary in Saudi Arabia to give the king credit for anything that smacks of progress or improvement and to blame foreigners if anything goes wrong. In this case foreign advisers, hired for the purpose, have guided the country out of its troubles. It would seem only decent to allow them to share the credit for its success.

WEST INDIES

Federation in Danger

SIR GRANTLEY ADAMS, the prime minister of the West Indian Federation, has strongly attacked Mr Manley, the Jamaican premier, for saying in London this week that Jamaica might opt out of the Federation if its demands were not met. This may have strengthened Mr Manley's prestige in Jamaica but has not necessarily improved the chances of the federation hanging together. Mr Manley has not, in fact, come to London to bring in the Colonial Office as *deus ex machina* in the constitutional deadlock which West Indians have to solve for themselves somehow. He would, in fact, be the first to repudiate such a return to Britannic apron-strings. His mission is different.

He has come to find out from officials and jurists what minimum form of West Indian political association would be regarded in international law and usage as a sovereign state speaking for the West Indian islands and their governments. Mr Manley is absolutely precluded by the violence of the anti-federation sentiment in Jamaica (now being impressed upon a visitor there, Mr Hugh Gaitskell) from accepting the form of federation which Sir Grantley thinks necessary—still less the even tighter bonds which Dr Williams, premier of Trinidad, desires. Indeed, he can no longer defend in his own island the degree of federation to which he originally agreed four years ago, but which he then thought he could sell to Jamaica in the course of a more gradual advance to full independence. His only way to save the federation (and he avows himself a Federationist) is to find a loose association in which the centre would perform all the diplomatic and external functions, but every facet of industrial and other development would return irrevocably to state or territorial control. Even so, Jamaica will not play unless it has the majority of seats in the federal assembly to which its population formally entitles it.

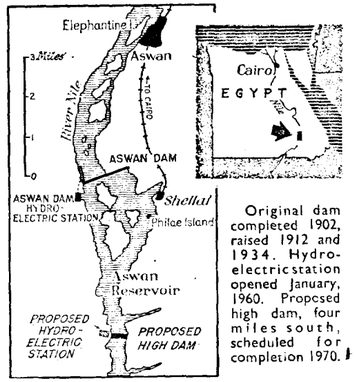
The alternative seems now to be frankly a break-up, with a Trinidadian federation at one end and a unitary Jamaica at the other end of the Caribbean. This, if not fatal, would be tragic—and very costly in the proliferation of ambassadorships. But the next step, now that Mr Manley has got his answer here, is to see if he can edge his own country's offer up a bit and then sell it to the West Indies as a whole. It was sensible to seek the facts.

INDONESIA

Dr Sukarno's Etat

PRESIDENT SUKARNO of Indonesia has now followed the precedents of Portugal and the United Arab Republic by forming a National Front. (Dr. Salazar and President Nasser preferred "National Union," but the difference is slight.) Since Dr Sukarno has called on every Indonesian to join his new organisation, he cannot intend it to be just another political party. It is therefore slightly puzzling that he should have refrained from abolishing the existing political parties. For the time being, he has contented himself with taking power to dissolve them if he considers it necessary.

The decree announcing the President's new powers makes it clear that they may be used against parties advocating a total change of the principles of the State, or which have conducted, supported, or not officially condemned rebellion. The first of these provisions could apply to the Communist party and the second to the moderate Islamic party Masjumi, some of whose leaders joined the rebel government in 1958. Indeed, the National party, which President Sukarno himself helped to found, may well be the only major party whose future is safe under the new order.



It may be unfair, even at this stage, to suppose that President Sukarno has completely abandoned the "concept" of a democracy which he was to guide, for he has announced that he is to be responsible to a new supreme state body to be called the People's Congress. But if the People's Congress ever sits, it will probably turn out to be docile to its creator.

UNITED ARAB REPUBLIC

Towards 1970

PRESIDENT NASSER began work on one great project last week, and put the finishing touches to another. On January 9th he set off ten tons of dynamite to start work on the High Dam site at Aswan. On the next day he opened the hydro-electric plant at the old dam, four miles downstream from the new one. Among the dignitaries attending the High Dam ceremonies were King Muhammad V of Morocco, now on an extended tour of the eastern Arab countries, and Mr Colin Crowe, the British chargé d'affaires in Cairo, now a fully-fledged member of the diplomatic corps.

In 1956, when the western offers of money for the Aswan High Dam were withdrawn, few believed that the plans would ever get this far. But they failed to reckon with the determination of President Nasser, or the readiness of the Soviet Union to find the money to help him out. At Aswan President Nasser spoke as if moving a few

Original dam completed 1902, raised 1912 and 1934. Hydro-electric station opened January, 1960. Proposed high dam, four miles south, scheduled for completion 1970.

tons of rock meant that the Egyptian people would begin to benefit from it at once. He did not mention that it would be another ten years before that could happen or, that there would be five million more Egyptian mouths to feed by then. His pride in the achievement made so far is justified but he will have to do a lot of explaining about the dam for a long time to come.

At the opening of the power station the president found it easy to explain why the project had taken so long to complete. Ever since he was a child, he said, he had heard of the electrification of Aswan and had often wondered why it was never finished but now he knew that the delay was caused by world politics and Egyptian political parties. These last he has dealt with by prohibiting them. It remains to be seen whether his adoption of "positive neutrality" has given him adequate protection from the currents of world politics.

What was formerly the French trust territory of Cameroun has not, as was erroneously stated in *The Economist* of January 9th, decided to call itself Kamerun. "Cameroun" is the spelling officially regarded as correct by the new government, though the English and German forms have not gone out of use.

LETTERS

East-West Trade

SIR—Your stimulating article on Economic Co-existence is a welcome and timely invitation to lift the discussion of East-West trade above day to day higgling and to view the position in a wider setting. Looking at it from the standpoint of our own struggles to maintain our position as a major exporting nation, there is no doubt that the great scale and accelerating pace of industrialisation in the Eastern block gives a potentially growing scope for us to trade. There are, broadly speaking, two branches of the international division of labour—natural differences, as in raw-material production, and economies of large scale following from specialisation. The provision of industrial equipment is pre-eminently the sphere for specialisation and one of which British industry is well adapted to take advantage. We have already begun to respond to the new demands that are opening up in a few cases, such as the provision of tubes for oil pipelines to USSR, chemical plant to Rumania, and a chemical plant to be sited at the end of the pipeline in east Germany. These are a small token of what the future may hold if British industry has not lost the power to respond to changing circumstances which has kept us alive up till now.

It is true, as you point out, that there are some mutual inconveniences in trade between countries with different economic systems. We do not like bilateralism; they do not like unstable markets. But it would be fatal to a trading nation to be stuffy about the customer's habits. New ways of trading must be found to suit new circumstances. Indeed, if we meet the others more than half-way and develop a system of trade on the basis of long-term overall balances, group contracts by firms with complementary products (as has already been found possible for instance by the consortia which are supplying a complete tyre factory and several synthetic fibre plants to the USSR) and interchange of know-how (a most valuable new item, both for export and for import, that has come into the market in recent times), it might well turn out not to be a sacrifice on our part of anything except our prejudices. New methods (once we are used to them) are likely to prove beneficial to us also, in helping to give both stability and flexibility to our own industries.

You have given a valuable lead in opening the question and I very much hope that it will be followed up, on both sides of the ex-iron curtain, in concrete, practical discussions of our mutual difficulties and the ways to overcome them.—Yours faithfully,

Cambridge JOAN ROBINSON

Cameroun

SIR—In your issue of December 26, 1959, your newspaper published an article on the "independence" of Cameroun. Our object is not to prevent your correspondent from thinking and writing as he wishes. We wish merely to bring certain details which, in our opinion, are necessary to enlighten public opinion in general and your readers in particular. We shall therefore not indulge in sterile prolixity: we prefer to schematise our ideas, in order to render them clear and more concise.

1. In general, the author of the article appears to be following certain slogans put out by certain countries with the object of hoisting M. Mayi Matip into power. An additional object is, by brandishing an invented spectre of anarchy, to prevent the unification of Cameroun which is the sincere desire of our people.

2. We agree with the author of the article when he asserts that at the moment there is no national political party in Cameroun. Why is that? Because France's blind policy has been to create a political vacuum by gagging the only organisations of the Cameroun people. This is therefore an additional reason for making the *Union des Populations Camerounaises* legal again.

3. Despite your correspondent's views, the leadership of the UPC has never been, is not, and will never be, divided since we pursue the same objectives. It is, however, useful to note that it has taken the death of Ruben Um Nyobe to allow this leader all the qualities which are being attributed to him today, and that despite all this "moderation," the French authorities thought it necessary to assassinate him. Is it not at that point that the counter-revolutionary role of Mayi Matip emerges?

4. When your correspondent asserts first that M. Dika Akwa is a leader of the UPC and second that he is an exiled leader of that party, this proves to what extent his article is interested. M. Dika Akwa is a former Camerounian student in France: not having been able to pass his examination, he threw himself into political adventure and claimed the UPC as his own. In reality, he has never been either an ordinary member of the UPC or, *a fortiori*, a leader. In addition we draw your attention to the fact that the leaders of the UPC were democratically elected at the congress of September, 1952, and consisted, before the death of Ruben Um Nyobe, of four people, namely, Ruben Um Nyobe (secretary-general), Félix-Roland Moumié (president), Ernest Ouandie and Kingu Abel (vice-presidents). As for Mayi Matip, he was never anything more than an ordinary official of the UPC, appointed by the above-mentioned leaders and therefore liable to dismissal at any moment.

That your correspondent, for the needs of his case, should wish to give the UPC other leaders, is his own business. But that he should believe himself qualified to impose leaders upon our militants is a grave error.

5. Your correspondent also asserts that the present terrorism has "no single or defined leadership, no specific aim in view." That is one more reason to affirm that he has no idea of the Camerounian reality, or else that he makes this assertion with the clear object of fulfilling other aims.

History alone shall judge between us. What has always embarrassed the West has been the tendency to appraise problems subjectively. And that is why, when Dien Bien Phus happen, the West always finds itself surprised. Here is the rendezvous that we are giving you: build up anything you wish, but don't suppose that this will influence our masses. Such is the truth.—Yours faithfully,

FÉLIX-ROLAND MOUMIÉ,
President of the UPC
ERNEST OUANDIE,
Vice-President of the UPC
Conakry, Guinea

Refugees in Hongkong

SIR—The statement in a note on January 2nd that "some refugee problems simply require money," is I fear very much of an over-simplification—particularly since you cite Hongkong as "the outstanding example" and suggest that only £2½ million is needed to house the Chinese refugees in this colony.

The £2½ million figure you quote is the amount the Government of Hongkong hopes to receive from all sources in aid of its published World Refugee Year to provide community centres in resettlement estates, schools, a tuberculosis infirmary, a rehabilitation centre for cripples, specialised training courses and similar projects. None of it will be used to provide housing—for which the Hongkong Government has assumed full financial responsibility. The housing programme has been limited, not so much by lack of funds, as by sheer inability for various reasons to speed up an already very high rate of building.

Hongkong has already rehoused 230,000 persons in more than 100 resettlement blocks, and has spent nearly £8 million in so doing. Very many more similar blocks will certainly be required before anything like a solution to Hongkong's housing problem is in sight. All this is over and above cottage housing provided through voluntary welfare agencies and non-profit-making housing societies and low rental flats financed from public funds. In these different ways some 350,000 people have now been rehoused.

Nobody knows exactly what the refugees are costing Hongkong since, apart from housing, they pose problems of medical

care and attention, education, and public services. Some economists have put the cost as high as one-third of Hongkong's total annual budget of £40 million a year. And this expenditure, which is shouldered in its entirety by the Hongkong taxpayer, takes no account of the valued contributions made by the voluntary agencies.

Helpful though it is and most grateful though we are for it, the sum of £2½ million which we hope will become available as a result of World Refugee Year represents only a fraction of the expenditure so far incurred and which must continue to be borne if Hongkong's refugee problem is to be solved.—Yours faithfully,

J. L. MURRAY
Government Information Services, Hongkong

Across the Channel

SIR—Your article supplemented by most instructive designs about the new car ferry must have been very impressive to your readers. Indeed, it seems to be one of the most important new inventions and I must really congratulate you on it. You have been the first paper to publish this innovation. Anyhow, some doubts about the practicability of this new car ferry should be further cleared up. If one presumes that each car produces 50 brake horse power and furthermore that it weighs just a ton whilst the weight of the ferry must also be several tons, it seems not easily explicable how 400 hp, i.e. the force of eight cars when the ferry is fully loaded, is going to lift the ferry. Moreover, the balloon (D) on the top of the ferry which helps to carry the ferry is inflated by exhaust gas which, as far as my knowledge goes, is heavier than air so that the lifting power cannot be very great. On the other hand, the "statute mile" scale in the upper left-hand corner is most enlightening!

May I add that already many years ago a similar machine was invented. An ingenious German had the plan to include a railway train, consisting of one steam locomotive, one luggage car, and two passenger cars, in an enormous swimming vertical drum. The train ran on an endless rail and kept the drum turning whilst the outer side was covered with enormous shovels, the whole thing looking like the wheel of a paddle-wheel steamer. You should find the plan of this machine in one of the still yearly appearing youth-book volumes of the "Neue Universum," 1907 or 1908, which still serve greatly to enliven the fantasy of German boys.

If this type of ship was never put into practice, it was certainly because of two reasons. First, no harbour at that time was deep enough to let enter such a ship and secondly, already then the High Command of the German as well as of the British Fleet was aware that such a ship would have been a too obvious target for the submarine warfare which loomed already then on the horizon of the international scene.—Yours faithfully,

WERNER BÄR
Zurich

Roads

SIR—The "vast sum" to which your correspondent Mr J. E. Allen of Cambridge refers as the cost of the work on Silver Street Bridge is £55,000, towards which the Government is granting £41,250. The Lion Yard scheme he mentions is a land redevelopment plan from which Cambridge city council expect to benefit financially.

Because of these works Mr Allen considers all motor vehicle licence duties should be increased. These duties will bring in £106 million during this year, when the Government will be spending £108 million on all the roads of the country. The revenue will also receive £308 million in fuel tax and £144 million purchase tax. Some £450 million will thus accrue to general revenue out of road user taxes.

Is it not time to realise that those who pay for road transport and the public at large are the same people? For example, the British Transport Commission as the country's largest operators of motor vehicles would hardly thank Mr Allen for proposing an increase in their financial burdens.—Yours faithfully,

C. D. MORGAN
British Road Federation

Ghana

SIR—In your correspondent's very fair report, "Democracy in Ghana" he rightly stresses the tendency of both the government and the opposition to be effectively organised only through the CPP. I believe it added force to his observation to point out the fact that what he calls "majority rule and no argument" is the traditional method by which the Akan chief governed his subjects. In this system policy is freely debated before the chief; but once the decision has been made as to what is to be done opposition becomes veritable treason. This may not square with the canons of Western liberal-democracy but there is a lot to be said for it in a newly independent country in which centrifugal forces are great.—Yours faithfully,

B. D. G. FOLSON
Keble College, Oxford

Refugees in Britain

SIR—Allow me to contradict your reviewer's assertion in your issue of December 19th that refugees never gave Britain works of art. What did Holbein and Epstein give you, if not works of art? And there are many others between the times of these two. Let me give you a few quite offhand and of recent times: Vicki and Topolski, Jankel Adler, Schwitters (the first Dadaist of Germany), sculptors like Charoux and Ehrlich, writers like Robert Neumann, who undertook the difficult task of changing over from German to English. And in music there is much more than the Hallé Orchestra; there is Glyndebourne, for instance; there are composers like Wellesz (who teaches also in Cambridge), there is Hans Gal, living in Edinburgh. In the cinema world, there are Alexander Korda, Paul Rotha and quite a long list of others, and actors like Walbrook and Lili Palmer. Joseph Conrad also comes into my mind.

Maybe it is a good symptom that your reviewer was not aware of the huge number of people like these: they are not regarded as foreigners and refugees; they have contributed too much to British culture and arts.—Yours faithfully,

JOSEF TOCH
Vienna

Chemical Sprays

SIR—Mr Ripper appears, from his letter in your issue of December 12th, to welcome systemic insecticides—insecticides which are absorbed *into the plant and then* are "translocated" all over it, thus rendering its roots, leaves, nectar, fruit, etc., poisonous to insects and often to animals and man. Such insecticides have three drawbacks when used on crops grown for human consumption: (1) being absorbed into the plant they can never be washed off by rain but instead they, or the substances into which they are decomposed within the plant, must remain in fruit, vegetables, grain until consumed by man; (2) the substances into which systemic insecticides may be decomposed can be far more toxic for man than the original insecticides, and far more *difficult for public health authorities* to recognise, measure and control; (3) they may indirectly poison man—thus plants sprayed *before* flowering may pass the insecticide when they do flower into their nectar, and then, via the bee, into honey in quantities large enough to be perturbing from the point of view of health.

The risk of man being insidiously harmed by repeatedly eating small amounts of agricultural chemicals is worrying, and no class of chemicals is more worrying than the systemic insecticides lauded by Mr Ripper.—Yours faithfully,

FRANKLIN BICKNELL
Wimpole St., W1

Objective-London

London is one of the richest markets in the world — a vital sales objective for manufacturers of consumer goods. It is a market that can be most effectively attacked through the powerful medium of television advertising. By advertising on Associated-Rediffusion you can reach an audience of over 7 million people — at a cost of only a few shillings per thousand.

MORE STEEL FOR BRITAIN

MR. HARALD PEAKE REPORTS ON ANOTHER YEAR OF ACHIEVEMENT FOR THE STEEL COMPANY OF WALES

The Chairman's Statement, already circulated to the Company's shareholders, highlighted the following points:

RECORD OUTPUT

The production of steel ingots during the past year amounted to a record 2,324,000 tons compared with 2,178,000 tons in 1958.

Tinplate output was also the best that has been achieved—802,000 tons against the previous year's 670,000 tons.

The value of exports of tinplate and sheets including special electrical sheets went up from £27,407,000 in 1958 to £34,251,000 this year.

Turnover was £125,534,000—an increase of £12,204,000 over last year.

The Balance of Profit for the year after meeting all charges including Taxation and Interest on Debentures and Loans is £4,229,150 compared with £3,038,847 in 1958.

The past year has been one of excellent progress in all divisions and the Directors have no hesitation in recommending a modest increase in dividend from 1s. 9·6d. to 2s. a share. The Company has started the current financial year with an increased production capacity and with a full order book.

FULL ORDER BOOKS

1959 has seen an accelerating demand for all of the Company's products with the result that it has not been possible to satisfy in full the requirements of regular customers for steel sheets.

Under present conditions there are tremendous opportunities to increase the sale of steel sheets and tinplate at home and for export. The difficulty is to produce them in sufficient quantities.

DEVELOPMENT PLANS

The Third Development Plan announced in March 1956 was designed in view of the expected increase in the demands of our home customers and to provide for the exports which were then anticipated. The increased production which is now resulting from the plan is most timely and will go some way towards meeting the requirements of customers, which are now running far in excess of their estimates.

During the summer of 1959 a close study was made of the future productive capacity of all the works and a Fourth Development Plan was prepared to expand the annual ingot production rate from 3,000,000 to 3,650,000 tons. When, therefore, the Company was asked, early in October 1959, by the Iron and Steel Board, to put forward proposals for increasing the production of steel sheets and tinplate as quickly as possible, a carefully considered plan was readily available. The estimated cost is £33,000,000 and it can start producing steel sheets and tinplate by the end of 1961.

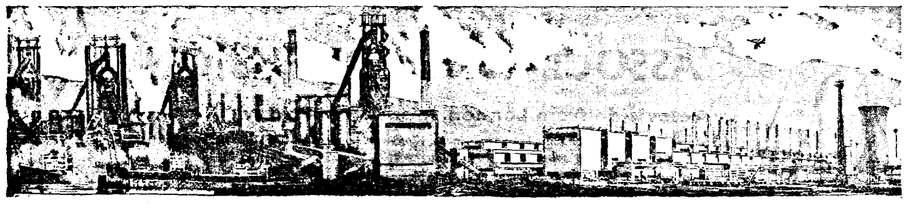
The consent of the Iron and Steel Board to these developments is awaited.

GOOD PROSPECTS

Since October 1959 trade has improved appreciably and there are signs that the world may be entering a period of peaceful expansion with a general improvement in the standard of living. If this comes about there is likely to be, at any rate for some years, a world shortage of steel sheets and tinplate.

The iron and steel industry has a great part to play in the further expansion of British industry at home and overseas. The Steel Company of Wales, with an increased production capacity and full order books, is making a very important contribution to this expansion and must continue to do so.

The prospects are very good.



FROM AN ORIGINAL PAINTING BY HAROLD FORSTER

In the City of Steel *the modern development of the Bessemer steel-making process using steam and oxygen was introduced in June 1959. Three converters, each with a capacity of 50 tons, are now in operation.*

BOOKS

Inquest on a Republic

La IVe République

By Jacques Fauvet.
Arthème Fayard. 379 pages. fr. 1,200.

FEW tears were spilt over the Fourth Republic when it was buried in May 1958. Since it is now fashionable to see both past and present through the prism of the Gaullist legend, it will soon be difficult to tell the life story of the late republic. Nobody was better qualified to put it on record, accurately and vividly, than M. Fauvet, whose daily analyses in *Le Monde* had been for years the best commentary on French political life. His book is certainly not an attempt to whitewash the fallen republic. It is an analytical chronicle of its life, from birth to death, that is to say from General de Gaulle's return in 1944 to his comeback in 1958.

The Fourth Republic was conceived amid the enthusiasm and the illusions of liberation. But, from the very first, there was a conflict between the returned leader of the Resistance and its left-wing elements. To control a revolutionary situation, at a time when communists and socialists had a temporary majority in the country, General de Gaulle insisted on the legal authority of the state. But he also felt compelled to revive, as a counter poise, the defeated political forces of the prewar regime. The new republic thus did not take long to resemble the image of its predecessor. Once the revolutionary danger was averted and the authority of the state restored, however, the general became dispensable. There is evidence in this book that when he offered his resignation (in January 1946), General de Gaulle was sure that he would be quickly recalled and granted the powers he had demanded. To his surprise, the machinery of government went on working without him.

The year 1947 proved crucial. The cold war consigned the communists to perpetual opposition; the regime was thus deprived of a left-wing alternative. General de Gaulle chose the same moment to attack the "system" from the other side, launching the Gaullist Rally against it. Squeezed by these two pressures, the "third force" proved its great capacity for survival. But its members—ranging from conservatives to socialists—were united only by the ties of self-defence. They were divided on most issues of home and colonial policy. The schools question and the problem of European integration were added to the long list of their disagreements. For the successive governments the choice was between inertia and instability. As a whole, they managed to combine both, with the Mendès-France interlude of 1954 providing the exception. That dynamic prime minister was first allowed to liquidate the bankruptcy of the Indo-China war, and then brought to a standstill by the disputes over the European Defence Community. He was brought down as soon as he turned to the Algerian question.

The Fourth Republic was a victim to its own inability to cope with the colonial problem. For years it was burdened with the "forgotten war" of Indo-China, and it had scarcely managed to extricate itself from the Tunisian and Moroccan conflicts than the Algerian war proved too much for its flagging authority. One unstable government after another allowed the army and the proconsuls to shape the country's colonial policy. M. Mollet's submission to Algerian rioters in 1956 was a symbolic illustration of this transfer of power. Two similar incidents—the kidnapping of Ben Bella and his companions and the bombing of the Tunisian village of Sakiet—showed the army that it could dictate its terms. The period of plots had begun—and culminated in May 1958 when the army was spared the necessity of actually striking. A campaign of "intoxication," of which General de Gaulle was "the author, the guardian and the beneficiary," proved enough to bring about M. Pflimlin's surrender.

In M. Fauvet's balance-sheet, the Fourth Republic can claim assets on the economic side only; it presided over the modernisation of French industry and agriculture. The rest of the record is bleak and not from any prejudice on the author's part. Only in one heading—"The Giant and the Dwarfs"—is M. Fauvet overcome by the Gaullist legend. Otherwise, he is indulgent towards individuals, even when they had been the gravediggers of the republic. He prefers to damn them with facts rather than with epithets and the cumulative effect of facts is most eloquent. Told at a fast pace, elegant, epigrammatic but based on a very solid documentation, this history of the Fourth Republic is a most valuable book. Even those who have followed French affairs very closely will learn a great deal from it and it is indispensable to those who want to understand the new French regime. Only one thing should be added in an English edition—an index.

Tracts for the Times

Common Sense About Russia.
By Robert Conquest

Common Sense About China.
By Guy Wint

Common Sense About Africa.
By Anthony Sampson

Common Sense About India.
By K. M. Panikkar

Gollancz. The Common Sense Series. 175, 176, 175 and 174 pages. 12s. 6d. each.

FOLLY arising from ignorance and fear has been the bane of the West in the postwar world. This new, most welcome, Gollancz series attempts to substitute informed common sense for these unpleasant qualities. All the books are written in good plain English for the ordinary misinformed intelligent citizen. All contain useful information and stimulating ideas. A paperback edition costing 6s. is issued simultaneously with the hard-cover printing. Further volumes are promised. In both its forms, the series deserves every encouragement.

Each part of the world presents different problems and different causes of misunderstanding to the West. It is therefore wholly right, as well as refreshing, that the uniformity of the series's titles should conceal a marked variety of plan and detail. Mr Conquest, for example, on Russia, is primarily concerned with describing a society which it is important that we should understand better, while Mr Wint, on China, concentrates on the history of the rise of the Communist party and its activities since achieving power, about which too little is generally known. If, after reading all four books, it seems that patience and good will are everywhere the most sensible virtues for the West to cultivate, well, that is no bad thing either. However diverse its parts, the world is one.

The only general weaknesses that might be censured are the lack of index and booklist in each volume, and the absence of a map from each except from "Common Sense About Africa." The interest roused by these authors could so easily be further stimulated by a select list of accessible works, and the absence of maps and index is an irritation throughout, as really might have been foreseen.

The books are not wholly equal in value. Mr Sampson's brilliant and economical description of Black Africa suffers somewhat from having been written before General de Gaulle's re-vamping of the French Community last month and before the new constitutional proposals for Tanganyika; but except for a slightly sketchy account of French Africa (no mention of Madagascar, even on the map) it is a most useful guide to a rapidly changing continent, particularly where the issues in debate in Central Africa are concerned. Mr Panikkar, regrettably, writes on India as an apologist for a regime, not, as do the other contributors to the series, as an informed, but detached, observer. Although it is hardly his fault, he sometimes appears to paint too bright a picture, and seems (for example in his discussion of India's prospects when Mr Nehru has gone) to gloss over problems

rather than to discuss them when to do so might be depressing. Nevertheless his resolute optimism about his country's future is enlightening, if not quite as the author meant it to be.

The two most *entirely* successful books are those on Russia and on China. It is astonishing how vividly Mr Conquest manages to evoke Russia in a short space, and how much ground he covers. Mr Wint is equally masterly in describing the causes of the various transformations that Chinese society has been undergoing since 1900. Taken together, the books provide a very convincing picture of the Communist world, what divides and what unites it. Mr Conquest damps down foolish optimism—Russia may even yet revert to Stalinism; Mr Wint refuses to be excessively pessimistic—even Communist China may mellow.

This series should appeal to everyone, but it may be especially commended to sixth forms. The publishers are to be congratulated and wished all success with their venture.

People's Democracies

A History of Greece to 322 BC

By N. G. L. Hammond.
Oxford University Press. 713 pages. 35s.

MR HAMMOND has written—one may be sure of it in advance—a standard work that will go through many editions and be used by generations of students. It is a political and military history of the Greek world up to the death of Alexander, with only so much included about cultural and economic development as is needed to illustrate the main theme. It is a very long book and pretty well every recorded battle is dealt with, the numbers of troops, triremes and so forth; were it not impossible, one would say that no known political intrigue had been omitted. The standard of writing is very high. The interrelations, always changing, of a large number of states make it impossible to combine clarity and continuity with anything like the truth; but few people have got so much lucidity out of it, without sacrifice of detail, as Mr Hammond.

The book meets the needs of the sixth-former and the undergraduate. A few passages (such as the author's brief history of practically all colonies) are too much like the Catalogue of Ships to be easy going, but for the most part one can, with due attention, read straight on: it is not just a work of reference. It is up to date; the prehistoric section, for example, could not have been written a few years ago. It is beautifully printed, so that it seems shorter than it is. The maps are adequate, but only just; and the references to them are clumsy. The index would gain in quality if it were twice the length. It is possible, but not easy, to find misprints and failures of reference. It is formally unnecessary for the reader to know Greek—but it helps.

Most people will only read this book in scraps; but the honest reviewer must go right through it at a smart pace, which is hardly natural for so inspissated a book, but which suits the general reader (if he can be persuaded to try anything so long) and brings an interesting reward. This is the history of the Greeks' great failure, and only occasional reminders of their brilliance in other fields come through the frightful story of treachery, corruption, intrigue and slaughter. The marks of the epoch are cruelty, selfishness and what seems in retrospect—and seemed to the wisest of them at the time—to be unbelievable myopia and inability to learn from experience. Yet were they so different from us? The more one reads, the more frightening the parallels become. The bricks are the same; one recognises every feature of modern statesmanship, with only formal slavery and the deliberate slaughter of prisoners to add to them; only the arrangement is different. How far does this similitude go? Shall we find our Alexander? Will he live long enough to leave his mark? And, if he does, will it be an improvement?

Acquisitive Servant

Strafford in Ireland, 1633-41

By Hugh F. Kearney.
Manchester University Press. 312 pages. 35s.

"The Prop and Ruine of the State;
The People's violent Love and Hate:
One in extreames lov'd and abhor'd.
Riddles lie here; or in a word,
Here lies Blood; and let it lie
Speechlesse still, and never crie."

SO Cleveland wrote after Strafford's execution. But Strafford's blood has not lain speechless, and the riddles of his personality have continued to tease us. He puzzled even the sober Gardiner, who, sympathetic to the parliamentary cause, could yet call Strafford "a revolutionary idealist." Miss Wedgwood has condemned the "insidious slander" accusing him of "exploiting the resources of Ireland for his own benefit," and has credited him with "an idealised view of human society" and with enforcing an efficient government in the interests of the many against the few. But a highly perceptive contemporary, Sir Thomas Roe, described Strafford simply as "a servant violently zealous in his master's ends and not negligent of his own." The wheel has now come full circle, for this is also Mr Kearney's conclusion, and one the more telling since his is the first book to use the Wentworth Woodhouse archives, denied to previous historians.

Mr Kearney sees Strafford's rule in Ireland as an essay in colonial administration. Power rested with a rapacious planter class, the beneficiaries of the Elizabethan conquests. The "Old English," heirs of earlier confiscations, were now Catholic, irritated at being debarred from public employment and fearful of further Crown encroachment. Lastly there were the native Irish, suffering from expropriation, their resentments sharpened by Counter-Reformation propaganda. It is rare to find administrative ability matched by political sense, and it was Strafford's tragedy that he provides no exception. Although apparently successful down to 1640, notably in the financial sphere, he had by then alienated all three political interests in Ireland. He refused to share power with the planters, and had pared their wealth both by driving many from office and by reclaiming land for the Anglican Church. He refused to conciliate the "Old English" by granting them firm titles to their lands, and frightened them by insisting on the plantation of Connaught. The rising of the Ulster Irish was not provoked by Strafford, but what made the rising so dangerous was the alliance between the rebels and the "Old English."

No one condemned more roundly than Strafford the corruption of the planters or made more play with his own integrity. But Mr Kearney's careful investigations reveal the scale of Strafford's acquisitiveness. His profits from the customs farm financed his extensive purchases of land; he borrowed from the Crown to set up his tobacco monopoly; and he aimed at profits from a linen monopoly. The frontage of his great house at Jigginstown exceeded that of Hatfield or Longleat. The hatred he aroused among those he accused of profiteering is easy to understand.

Mr Kearney gives us a far more intelligible analysis of Irish society than any hitherto available. And he argues effectively against the alleged novelty of Strafford's policies on land and trade. Given the wealth of the new information it is a pity that Mr Kearney should have written in so compressed and allusive a way: he presupposes a great deal of knowledge of events and of personalities. This is an important and a valuable book; but, it must be said with regret, primarily one for the specialist, for Mr Kearney is a worker in a laboratory rather than in a studio.

Marx
CAPITAL
Volume III
THE PROCESS OF CAPITALIST PRODUCTION AS A WHOLE

With this new translation of Volume III, which sets forth in detail the theory of Rent, Interest and Profit, *Capital* has become available in its entirety to English readers for the first time in many years. The various inaccuracies contained in the earlier translation of 1909 have been corrected.

LAWRENCE & WISHART

A Lesser Dictatorship

The Italian Fascist Party in Power

By Dante L. Germino.
Minnesota University Press. London: *Oxford University Press.* 191 pages. 36s.

THIS book has really nothing new to say and suffers from the deadening style of the research thesis. The author, believing that the time had come for the academic analysis of the Fascist system to succeed the contemporary analysis, has only succeeded in taking the flavour out of the period of Mussolini's dictatorship. The mere statement that "adulation, women, the headiness of power" did not concern the Duce introduces an air of unreality; in wealth, it is true, he showed little interest.

Professor Germino thinks that Fascism has been let off too lightly by comparison with National Socialism and Communism. But surely his very examination of the Fascist attempt to conquer the field of education shows how relatively ineffectual it was. The *Carta della Scuola* was not ready until 1939, nearly seventeen years after the March on Rome, and then, owing to the coming of the war, it was never really put into force. Hitler had wasted very little time before the *Ordensburgen* were established to educate those German boys who seemed the most promising Nazi pupils.

Professor Germino admits that there was no Italian equivalent of the German *Gauleiter*. He admits something far more fundamental: that the Nazis were more atrocious than the Fascists. But he seems to have no answer to the question of why Himmler could think out horrors that would never have crossed Bocchini's mind. Evidently he has no conception of the essential part of racialism in the Nazi creed; racialism was not just an excuse for bloody-mindedness, it was cardinal. Moreover, it led to the state of affairs in which, early in the Nazi period, a well-known British journalist (who was also a scholar) could report that Nazi Germany was daily becoming more like a stud farm. This could surely not have been written of Italy under Mussolini—or of Soviet Russia.

Perhaps Professor Germino has inadvertently laid his finger upon one reason that made Fascism less serious than the other totalitarian experiments. "Also, these single parties," he writes, "took the reins of government with an extensive political organisation and settled loyalties formed during relatively lengthy periods of preparation." But this is not true of Fascism. The meeting at San Sepolcro took place only three and a half years before Mussolini came to power. Before 1919 there was little enough—the Nationalists, the Futurists, D'Annunzio—to compare with the ancestors of Communism or with the long tradition of Pangermanism. The Communists and the Nazis descended directly from the events of 1848, which, *pace* Mr Mack Smith, cannot with accuracy be said of the Fascists.

Books About Europe

European Organisations
Political and Economic Planning
Allen and Unwin. 388 pages. 30s.

European Institutions
By A. H. Robertson.
Stevens. 372 pages. £2 2s.

Nato and the European Movement
By M. Margaret Ball.
Stevens. 491 pages. £2 2s.

The Uniting of Europe
By Ernst B. Haas.
Stevens. 560 pages. £2 10s.

IT is ironic that, at a time when a lasting estrangement between Britain and its continental European neighbours seems on the cards, a crop of serious studies on European organisations should have appeared. Stevens have now brought out three books for the Library of World Affairs, each covering a different aspect of the movement to unite Europe. PEP's new survey is the work of a research group, which met regularly from September, 1956, to December, 1958.

The PEP survey and the study by A. H. Robertson cover a good deal of the same ground. While the work of the communities of Six is not ignored, a good deal of space is devoted to the organisations of which Britain is a member—the Council of Europe, Organisation of European Economic Co-operation, Nato, West European Union. An official of the Council of Europe, Mr Robertson draws on his Strasbourg experience to give his study some of the colour of reality; he includes in his account, for example, a brief attempt to analyse why Britain has played so cautious a part in the whole European movement. He makes some suggestions for reforming and reorganising the European institutions, which have a typical Strasbourg flavour. The book has two especially useful features for the students: it gives a complete or partial text of several of the European treaties and conventions, and it devotes a good deal of space to many lesser unsung bodies, like the European Productivity Agency of OEEC, the Rhine Commission, and the European Conferences of Civil Aviation and Ministers of Transport. Its weakness is that one cannot avoid the feeling that the sensible suggestions, and the technical organisations that are discussed, are not at the heart of the European problem of today, but perhaps that is the weakness of Strasbourg itself.

PEP's study in a sense does not cover quite so much ground, but it does give a rather fuller analysis of the workings of the communities of Six. These are advantages; so is the price of the book. Indeed for the general reader and student who wants a background book this is perhaps the best of the four. Its weakness is the cautious committee language it uses. This book leans over so far backwards to be fair that it sometimes seems disconcertingly uncommitted in a matter where burning issues and strong feelings are involved. But it is an accurate and balanced account.

In a sense, however, the other two studies, both by Americans, have the greatest topical interest today, even though they were published earlier. It is difficult, after all, today to work up much enthusiasm for bodies whose future is as uncertain as that of OEEC and the Council of Europe. Miss Ball's "Nato and the European Movement" is in the main yet another account of the working of Nato and of the European organisations. Its interest today is that a good many people, aware that the movement to unite "big" Europe has been halted, at least for the moment, have begun to look again at the possibilities in the broader field of Nato.

Mr Haas's book, first published in 1958, may prove to have considerable enduring historical interest. It is written in turgid, excruciating jargon; it is 560 pages long. But it does delve beneath the surface of the institutions that have been set up in Europe, to try to discover what the Six, in particular, are trying to do. It examines the pressure groups at work within the communities of Six. It asks what "integration" means and how it changes the relationship between national societies. It is hard work mining in this fat tome, but some rewarding things can be dug out of it.

OTHER BOOKS

CO-OPERATIVE ORGANIZATION IN TROPICAL COUNTRIES. By Sheila Gorst. *Blackwell.* 358 pages. 25s.

Between 1945 and 1956 the value of the produce marketed by co-operative organisations in British colonies increased by some 3,000 per cent. This book surveys that period, first in detail by areas, secondly under some general headings. It concludes that the very real value of co-operatives makes it important for governments to correct existing defects and to continue to encourage development.

OXFORD PLASTIC RELIEF MAP. Series 2. Map 1. Great Britain and Northern Ireland. *Oxford University Press.*

This relief map, measuring approximately 38 inches by 26 inches, has built-up areas coloured pink, moors mauve, woods green and the sea light blue. Thus, although presumably intended for scholastic use, it is gay enough to hang on the walls of any home. The vertical scale ratio decreases from 16 times the horizontal scale up to 1,000 feet to 8 times above 1,000 feet, in order to emphasise relief in lower areas. The general impression given is how hilly England is and—still—how unbuilt up.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

State of Mr Eisenhower

WASHINGTON, DC

On Thursday last week President Eisenhower went to visit Congress like a victorious general going to view his prisoners of war. The spectators who watched the President read his message on the State of the Union over the cowed heads of the Democratic legislators saw a vivid illustration of two facts that will shape the final year of his Administration. The first is that what the United States does (and does not do) during the coming year depends almost entirely on Mr Eisenhower. Last January the conflict between a Republican in the White House and a vast Democratic majority in Congress turned the State of the Union address into a dramatic confrontation between two rival claimants for the leadership of the country. This year the drama has vanished; in the past twelve months the conflict has been settled in the President's favour, and it is plain that Congress can make only very minor alterations in his plans for the country's future. The second fact is that Mr Eisenhower, wielding this almost unchallenged power, is the victim of a kind of split political personality. The part of him which deals with foreign policy is showing itself to be imaginative, bold, even radical; the part which deals with domestic affairs has lost even the limited degree of open-minded inventiveness which he displayed last year.

Once again, President Eisenhower tried to present a grand and sweeping review of the world scene rather than a list of detailed proposals, such as Mr Truman preferred, and once again he was frustrated by his prose style; he trudged sturdily through the polysyllables and passive tenses like a man walking through wet clay. He drew rather more applause than he did last year, but it came almost wholly from the Republicans, moved by the same sense of relief as the quavering Israelites must have felt when David got Goliath straight between the eyes.

The Democrats, trapped by the Constitution in the impossible position of being simultaneously both the opposition and also part of the machinery of government, cheered practically nothing except the President's references to peace, freedom and the entry of Hawaii and Alaska into the Union. Mr Lyndon Johnson, the leader of the Democrats in the Senate, who last year yawned ostentatiously in the middle of the President's speech, spent most of the time this year glumly examining his fingers, no doubt thinking how easily things slipped through them. The disturbing thing is that the applause was not only one-sided; it also came rolling in from the Republican benches most enthusiastically at the wrong moments. The man the Republicans loved was clearly Mr Eisenhower the domestic conservative, frozen in his fiscal convictions like a mammoth in a glacier, rather than Mr Eisenhower the liberal internationalist.

Three main points emerge from what the President said. The first is that he gave pride of place to the problem which has exercised him more than any other since last summer: the problem, that is, of relaxing the wrestlers' grip in which America and Russia have been locked for the last twelve years, so that the United States can safely keep at least one hand free for helping the new countries of Asia and Africa. The things which Mr Eisenhower saw in Asia last month made their mark on his speech. A year ago he dismissed the subject of foreign aid in a few polite paragraphs; this year he devoted a long and sympathetic passage, which took precedence over both military and domestic matters, to the need for a programme of combined assistance from the western world. It is true that he was vague about the way this should be organised and that, when he mentioned the part to be played by private capital, his voice quickened with an enthusiasm unlikely to be shared by borrowers who would prefer government loans at lower rates of interest. But his obviously heart-felt assertion that this might be a "turning point of history" reinforces the belief that he wants to be remembered as a President who inspired a generous new flow of aid to Asia.

There was also a studied moderation about Mr Eisenhower's references to Russia. Instead of emphasising the menace of Soviet intentions, as he did last year, he chose to talk delicately about the possibility of "a somewhat less strained period" in east-west relations. He acknowledged the challenge of Soviet competition in terms not very different from those which the Democratic Mr Adlai Stevenson used a few years ago. This new-found moderation has been illustrated again this week; the Administration has refused to wax indignant about the Russian plan to shoot a missile into the Pacific, although normally sensible Democrats like Senator Mansfield have talked as furiously as if the United States had never set off a whole series of nuclear explosions in the same ocean. Unfortunately, these placatory passages in the President's speech, as well as the section on foreign aid, were received in near silence by his listeners. Mr Eisenhower does not yet seem to have arrayed either Congress or the country solidly behind his recent attempt to reshape American foreign policy.

The second point of note is that only on foreign policy did Mr Eisenhower show this broad-minded understanding. When he turned to defence he was naïve and, at times, almost deceptive. He told Congress about the unexpected accuracy and reliability of the Atlas intercontinental missile as if this were a cause for unrelieved joy. In fact, the Americans have so few Atlases at the moment that it makes little difference how accurate they are. The extra missiles which, according to reports, the Administration now plans to build will not be ready until 1961 or 1962. But if Soviet missiles have improved as much—and Russian guidance systems have generally been at least as good as American—the number of missiles needed to knock out the Americans' present retaliatory power at a single blow may have been cut from 300 to about 150; and the Russians will soon have that number.

Moreover, Mr Eisenhower told his audience that "some" submarines armed with Polaris missiles will go on active duty this year, although the experts expect only one to be in service; and he talked of the "always ready" divisions of the Army's strategic forces and of the Marines as if no one knew that only three out of the six were really ready for battle. No doubt the President's nonchalance about defence springs from his belief that he can come to an understanding with Mr Khrushchev. But even those who applaud his efforts in that direction might still wish that

he would prepare a little more carefully in case the attempt to negotiate fails.

Mr Eisenhower's third theme was the most dispiriting of all, and it darkened the impression left by his whole speech. His Republican listeners did not really come to life until he broke away from his prepared text to announce that he hoped to produce a budget surplus of $4.2 billion in the coming fiscal year and that the entire amount would be devoted to reducing the national debt. Few Democrats would have complained if part of the surplus had been used for this purpose, since the huge interest payments on the debt now account for nearly an eighth of the annual Budget. But it is astonishing that when there are so many good claims for more federal spending—on defence, slum clearance and education, to name only three—Mr Eisenhower should choose to keep expenditure almost stationary and to give none of the extra revenue produced by a booming economy to such deserving causes.

The impression grows stronger that, as Mr Eisenhower opens the mental eye which looks upon the outside world, he is closing his other eye on the things that need to be done at home. There was no mention in this year's speech of the committee to consider national goals, which he announced last January but which has not yet been set up. He dismissed the dislocations caused by the explosive expansion of America's cities with the curt comment that these were principally the business of states and local communities. It is discouraging that these sentiments should have been the ones which brought applause rippling in from the Republicans, without a single brave boo from a Democrat. It is not enough to say that the solution of America's problems must await the coming of a new President; obviously he will need to show the most stimulating brand of leadership if he is to guide the country into new directions at home as well as abroad.

Steeled to Dearer Money

NEW YORK

THE steel settlement has proved unsettling to Wall Street. The money market has reacted by a round of increases in interest rates—in commercial paper, bankers' acceptances, brokers' loans and Treasury bills—which carry the clear interpretation that the settlement is inflationary. On the other hand, yields on long-term Treasury obligations, which are considerably lower than those in the short-term sector, declined further, in response to the President's prediction of a budget surplus for this year and next. However, the gap between the two rates is somewhat artificial, since the Treasury cannot sell securities with a maturity of more than five years as long as Congress insists on retaining the 4¼ per cent ceiling on the interest which may be paid on them.

Rises in the Federal Reserve Banks' discount rate—the interest paid by member banks on the money they borrow—and in the commercial banks' prime rate—the interest which they charge their most credit-worthy borrowers—are widely expected soon. This is the time of year when demand for credit normally slumps. But the banks, particularly in New York, are already close to being "loaned up" and the end of the steel strike is bringing abnormal demands for credit from companies anxious to replenish their depleted stocks. Banks are already doing a great deal of discreet credit tightening by reducing the size of loans, by cutting down the number of corporate borrowers accorded the prime rate, and by requiring that they maintain larger balances; these measures serve to raise the effective interest rate. All that remains is to raise the prime rate, but the banks have been reluctant to move before the central bank acts.

Spokesmen for the Federal Reserve authorities have taken pains not to label the steel settlement as inflationary. On the contrary, they have noted with satisfaction that it reduces the emphasis on the escalator clause tying pay rises to the cost-of-living index and that its inflationary impact may be small if steel prices are not increased in the near future. All this suggests that the central bank would prefer to mark time; this would also benefit the Treasury which is in the middle of a series of refunding operations. Unless the general expectation of a higher discount rate and a rise in the prime rate force its hand, the Federal Reserve may decide, for the time being, to maintain the current degree of tightness in credit through open market operations instead of raising its rate.

This week the Treasury auctioned $1.5 billion worth of one-year bills at an average yield of 5.07 per cent. This yield was, in fact, somewhat lower than had been expected, partly because there had been no increase in the discount rate and partly because of the unusual interest of small individual investors who have never before sought short-term Treasury securities. The President has requested a lifting of the 4¼ per cent ceiling on interest on long-term issues but the chances of approval are deemed to be little better than they were last summer. Indeed, the savings banks and savings and loan associations, which provide much of the financing for the housing industry, are lobbying against any change on the ground that a lifting of the ceiling would encourage a further drain on their deposits which have been hard hit already by the enthusiasm of savers for the Treasury's short-term issues.

Warming Up for the Election

LAST weekend Vice President Nixon's cap, well feathered with his success in settling the steel strike, floated gently into the ring for the presidential contest. To emphasise that his high governmental responsibilities leave him no time for such unimportant matters as party politics, there was no formal ceremony announcing his candidacy for the Republican nomination. His press secretary merely admitted, while Mr Nixon sat at home eating his 47th birthday cake, that he had "willingly" allowed his name to be entered in New Hampshire, Ohio and Oregon for the primary elections in which Republicans in those states will show what they think of their party's potential Presidents.

In fact these Republicans will have no real choice this year, since there are unlikely to be any serious entries apart from Mr Nixon's, but they will be urged to go to the polls to give him a vote of confidence and to prove that the Democrats are wrong when they say that Mr Nixon is being foisted on an unwilling party by the diehards who control it. To prove that the rank and file do have some influence, and to make the Republican convention next July more interesting, the delegates to it will probably be left free to choose a vice-presidential candidate from a list approved by Mr Nixon. Since he comes from California his running mate must come from the east or middle-west. Many possibilities are being mentioned—Mr Halleck of Indiana, Republican leader in the House of Representatives, Senator Hugh Scott of Pennsylvania, Mr Henry Cabot Lodge of Massachusetts and the United Nations, the Attorney-General, Mr Rogers, a close friend of Mr Nixon, and the Secretary of Labour, Mr Mitchell of New Jersey, who ranks high in this context not only because he was Mr Nixon's confederate in the steel negotiations but also because he is a Roman Catholic.

The Catholic vote is likely to be important next November now that a Roman Catholic—Senator Kennedy—is the leading contender for the Democratic nomination. He has had one setback this week, in Louisiana where a known supporter of his was defeated in the gubernatorial contest by a man who is thought to prefer Senator Lyndon Johnson. It is presumed that the new Governor, Mr Davies, will be in control of the Louisiana delegation at the Democratic convention and therefore Mr Kennedy cannot count, as he might have been able to do, on these 26 votes. But this

SHERATON
A FAMILY OF 54 FAMOUS HOTELS

Wherever you travel across the United States, in Canada or Hawaii, you can be sure of finding high standards of quality whenever you stay at one of the 54 Sheraton Hotels. This is one of the most important reasons why Sheraton Hotels have become the first choice of International visitors, as well as Americans.

Here are other advantages offered by Sheraton Hotels: Reservations held if ships or planes are delayed • Bilingual departments • Sheraton's Family plan: *No room charge for children under 14 in room with adults* • Facilities for banquets, business meetings and conventions.

FOR RESERVATIONS at any Sheraton Hotel, see your travel agent or write: Albert de Leon, International Director, Sheraton Hotels, Sheraton-Atlantic Hotel, New York City, N. Y., U. S. A.

To receive free information about Sheraton Hotels, just fill out the handy coupon below.

THREE STAR CORDON BLEU

who

makes a car body in 20 seconds?

The Pressed Steel Company. Every working day they roll car bodies off the production line at the unprecedented rate of three a minute.

PS is for Pressed Steel, and the Pressed Steel Company is all for getting on with the job as quickly as possible. But don't be misled by the speed of delivery; months of design and planning, years of engineering experience go into every finished job.

setback is more than offset by the announcement from Governor DiSalle of Ohio that he will run in the Democratic primary there as a favourite son—probably unopposed and certainly hard to beat—pledged to Senator Kennedy. It had been suspected that Mr DiSalle favoured Senator Symington and the unexpected announcement guarantees Mr Kennedy his first sure foothold in the middle-west—a very solid one, for Ohio with 64 votes is the fifth largest block at the Democratic convention.

Red Metal, Red Miners?

FROM A CORRESPONDENT IN COLORADO

THE International Union of Mine, Mill and Smelter Workers is heir to nearly a hundred years of turbulent struggle. In the past the owners of metal mines, which are isolated in the mountains, resorted to brutal means to subdue their workers and in its turn the trade union, then the Western Federation of Miners, acquired such a name for lawlessness that in 1907 it changed its title. It has never fitted into the pattern of tamer unions which seek to obtain peaceably only a bigger cut of the pie, and its struggles are not over. Recently, while it was involved in a long and stubborn strike, seven of its present officials were convicted in Denver of violating the Taft-Hartley Act by swearing falsely that they were not Communists so that their union might enjoy the services of the National Labour Relations Board.

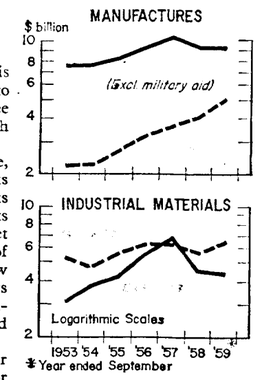
Eleven years ago the then president of the union, Mr Travis, resigned from the Communist party with, as he said, a "great sense of outrage" in order to be able to file the required affidavit. This did not save Mine-Mill, as it is known, from being expelled from the Congress of Industrial Organisations, and it has never been permitted to rejoin, though Mr Travis's successor, Mr Clark, a rather colourless but stubborn leader in his own right, has never been accused of Communist affiliations.

Although the government indicted 14 officials and organisers of the union (some of whom have since left it) in 1956, the trial did not begin until this autumn, when Mine-Mill was in the midst of a four-month strike against the five big copper companies ; about 31,000 members of the union were called out and thousands more miners were thrown out of work. Some trade union leaders had to stand trial all day and do their negotiating at night. Mr Clark was not personally involved in the case, but he denounced it fiercely as a "government-corporation conspiracy to break the union"—particularly as anti-communist affidavits were dispensed with by law last year.

Most of the defendants were convicted, but the strike is being slowly settled on terms fairly satisfactory to the union: gains of about 22.5 cents an hour in wages and benefits during a two-year contract. The men have stood solidly behind their leaders ; hardly a pound of copper was mined from the middle of August to the middle of December except by producers not involved in the strike. Indeed, after ten years of fighting for its life against other unions which thought it was ready to be broken up, Mine-Mill still has at least three-quarters of the 100,000 members it had in 1950.

One reason is that the members have heard the charges of "red domination" for so long that they have become meaningless. Another is that in most of the isolated districts where it is established the union is the chief social centre of the community. A third is that it has battled persistently for the rights of all its members, regardless of their race or colour, in a way that is true of hardly any other American trade union.

Trade in the Balance



THE sharp fall in the American trade surplus, which is weakening the balance of payments, is analysed in the December issue of the *Survey of Current Business*. Although exports began to recover in the third quarter of last year, the trade surplus shrank from $4.6 billion in 1956 (a year free of the distortions caused later by the Suez crisis and the recession) to $1.2 billion in the year which ended in September, 1959. This was about the size of the surplus in 1953.

The chief trouble is that exports of manufactured goods, long the backbone of America's trade, were slightly lower in the year which ended last September than they were in 1956, while imports of these goods have risen from $3.2 billion to $4.8 billion. Net exports of manufactures—exports less imports—are lower than they have been since 1950. The biggest factor was the rise in imports and fall in exports of motor vehicles ; this accounted for over half of the $1.7 billion decline in net export of manufactures. The United States has become a net importer of passenger cars, as it has of textiles and, at least temporarily, of steel. Salvation comes from exports of machinery, which now account for nearly three-quarters of the excess of exports of manufactures over imports, compared with less than half in 1953.

Net Exports (+) or Net Imports (−) ($ million)

	1953	1956	1958	Year to Sept., 1959
Manufactures, total	**+5,176**	**+6,076**	**+5,447**	**+4,411**
Cars and parts	+ 909	+1,212	+ 530	+ 341
Steel	+ 56	+ 69	+ 77	− 126
Textiles	+ 172	− 34	− 54	− 157
Petroleum products	+ 355	+ 337	+ 215	+ 218
Consumer goods*	+ 231	+ 159	+ 158	+ 14
Aircraft	+ 89	+ 122	+ 177	+ 88
Machinery	+2,481	+3,209	+3,174	+3,054
Paper and products	− 511	− 552	− 456	− 488
Industrial materials, total	**−2,242**	**− 802**	**−1,033**	**−1,910**
Iron and steel	+ 203	+ 481	+ 255	+ 125
Coal	+ 342	+ 741	+ 530	+ 417
Petroleum, crude	− 450	− 748	− 928	− 886
Fuel oil	− 93	− 209	− 381	− 418
Cotton	+ 480	+ 704	+ 632	+ 324
Industrial chemicals	+ 195	+ 380	+ 454	+ 503

* Excluding food, textiles, vehicles.

There was also a rise of over $1 billion in net outgoings for industrial materials and semi-manufactured goods in the year which ended last September, compared with 1956, not because of rising imports but because of falling exports ; of the five worst culprits shown in the table, only cotton is recovering.

Three-quarters of the shrinkage in the surplus of exports between 1956 and the year which ended in September, 1959, took place in trade with the reviving industrialised countries in western Europe and with Japan. Nevertheless, even in the miserable first half of 1959, the United States exported two-thirds more, in dollar value, than Great Britain, its nearest competitor, and about a quarter of the world total of exports of manufactures ; it is the major supplier of capital goods. This holds out hope for higher exports of machinery and steel as capital investment revives in Canada and Latin America ; the United States' lead in jet aircraft should also be reflected in the export figures. But the American share of world exports of passenger cars shows a long-term decline which will be reversed less easily.

who
can turn out a railway wagon every 13 minutes?

The Pressed Steel Company. What sort of a railway wagon? Just any sort for any climate for any gauge for anywhere in the world (though the complicated ones take a little longer).

PS means Pressed Steel, and the Pressed Steel Company mean business, expanding business. This year they open Europe's largest and most automated refrigerator factory at Jersey Marine, near Swansea.

Dressmaker to a Continent

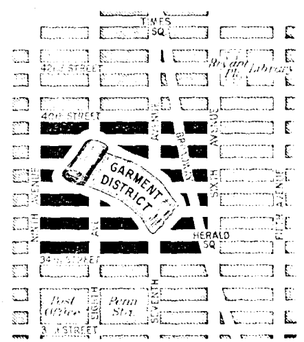
NEW YORK

WHEN six Russian economists came to the United States recently, an important item on their whirlwind tour was a visit to New York City's garment district. Here they saw for themselves that an industry composed of a large number of eagerly-competing small firms has persisted into the twentieth century without showing any signs of "monopoly capitalism." There are many more Marxes than Smiths in the garment trade, but its philosophy comes from Adam, not from Karl.

The firms which make women's and children's clothes number in all about 16,000, most of them specialising in one particular line of business: in "unit-priced" dresses or in the cheaper "dozen-priced" dresses — coats and suits—35 million a year—or in blouses—180 million a year; in sportswear, in underwear, or in knitwear. These small "shops" have on the average only 40 employees each and they survive partly because it takes relatively little capital to set up in business—anything from $15,000 upwards; partly because of the overwhelming importance in this industry of attractive new styles; and partly also because of the traditions of fierce individualism and mutual distrust established by the Jewish immigrants from eastern Europe who provided most of the original employers in the industry.

But even the garment trade is not altogether immune to the trend towards bigness. The total number of manufacturers has dropped sharply in the last decade—by 25 per cent, according to one estimate. And the larger firms, with annual sales, say, of $5 million or more, are increasing their share of the market. But in contrast to most American industries, the trade has as yet no giants. A few leading firms may each have annual sales approaching $40 million, but this still represents well under 1 per cent of the industry's total wholesale volume of about $6½ billion a year. Because manufacturers are legion, few of them can hope to make their names known to the public, and retail shops sew their own labels into the clothes they sell. Thus advertising on a national scale by the original producers tends to be confined to foundation garments, to "swimwear" (where four or five firms dominate the market) and to a handful of producers of high-quality clothes.

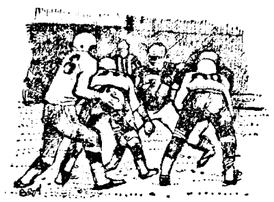
The great hazard to the garment manufacturer is fashion; a firm is made or ruined by the success or failure of its designer to catch the eye of those all-important figures—the buyers for retail shops who are flocking into New York this month to lay in their spring and summer stocks. Styles are set at the top and filter down through lower and lower price ranges. The total volume of sales of clothing in any season can usually be predicted with some accuracy, but no individual manufacturer can tell in advance how well he himself will do. He complains, moreover, that he is squeezed between the large suppliers of cloth, who insist that he must take up the yardage he has ordered, and the retail buyers—organised for the most part in [illegible]



With meagre resources behind him, the small manufacturer can withstand neither a run of bad luck nor a recession in business. The casualty rate is therefore high; one in every five firms may disappear in a single year. But failure involves little financial loss, and often leads to a subsequent reorganisation in a new attempt to win the big prizes. The women's garment manufacturer likes to point to his low profits—between 1 and 2 per cent of the value of sales. But in fact, with his own salary and expenses already allowed for, this rate of profit usually represents a return of 10 to 15 per cent on invested capital. In general, garment manufacturers tend either to do nicely or to go out of business altogether.

AS well as a diversity of manufacturers, there is also a high degree of vertical specialisation in the trade, with garments being moved backwards and forward between firms, pushed on mobile dress racks round the crowded streets near New York's Pennsylvania Station. Often a manufacturer will do no actual sewing himself. He will design the clothes, buy the cloth, cut out the pieces (a hundred or two hundred layers at a time), assemble the parts of the garment into bundles and dispatch them to outside contractors for stitching. The garments are then usually returned to him for finishing, pressing and distributing to retailers. The contracting system allows the manufacturer, uncertain from season to season of the volume of his trade, to keep his own overheads to a minimum. And in earlier days, before a vigorous union had got the matter under control, cut-throat competition between contractors kept costs conveniently low.

The garment trade has always relied upon the labour of recent immigrants; most American-born citizens insist on jobs with more prestige and stability. Originally the mass arrivals of Jews from eastern Europe provided manpower with a high degree of skill. The Italians came next, and today it is mainly Negroes and Puerto Ricans who are filling the 575,000 jobs in the industry. Not only has the ethnic composition of the labour force changed; women have largely replaced men and, unlike their forerunners, today's recruits are unskilled.



Dependence on immigrant labour usually makes for exploitation, and there was plenty of that in the old days of the "sweat shop." But the trade possesses, in the International Ladies Garment Workers' Union, one of the world's most successful, efficient and enlightened trade unions. Average earnings today, at about $1.50 an hour, are reasonable though by no means high by American standards, but the garment worker has no assurance about the number of hours she (or he) will be employed. While many people claim that in New York the union has the employers under its thumb, it is at the same time very aware of their problems. The two sides have shown an unusual ability to co-operate and until 1958 the garment trade had not had an industry-wide strike for 25 years.

been the home of garment manufacturing ever since the second half of the last century when American women started to abandon home-dressmaking for purchases off the peg. And while rival centres have grown up in other parts of the country, two out of every three manufacturers still have their headquarters in New York. But the tide continues to run against the city. Southern towns can offer employers lower wage rates and less unionisation. Sunny California is helped by the rising importance of sports clothes, for which the pavements of New York have no natural advantage. And high rents and traffic congestion are forcing many employers to consider less crowded locations outside the city. On the other hand, New York's position as the fashion capital of America has not been seriously challenged.

A case study of the garment industry may be found in "Made in New York," $6.75, one of the volumes in the New York Metropolitan Region Study being published by the Harvard University Press.

Football in a Bowl

THE end of the American college football season is marked by a galaxy of special matches between star teams from various leagues and regions and a rocketing of the pageantry and bally-hoo which accompany this particular sport. These "bowl games" —named after the huge stadiums where they take place —bring money to the colleges which are lucky enough to be represented and, in most cases, to the promoters of the contest, and visitors to the towns where they are held—many of them winter tourist centres. The annual classics are the Rose Bowl in Pasadena, California, the Sugar Bowl in New Orleans, Louisiana, the Orange Bowl in Miami, Florida, and the Cotton Bowl in Dallas, Texas, all on New Year's Day, a public holiday, and the Gator Bowl in Jacksonville, Florida, on the following day. This year President Eisenhower watched the games on television instead of playing golf —January 1st was chilly—and Vice President Nixon returned to his native heath in Pasadena to ride as Grand Marshal in the annual parade which precedes the Rose Bowl. Over 100,000 people accompanied him to this game and altogether the five big matches attracted nearly 380,000 spectators.

Another 100,000 or so went to various other smaller bowls, but the returns are not always satisfactory for those which are less well established. There is in fact a constantly changing list of these fixtures, with some promoters dropping out each year and others trying to get into the scrum. At one time the promotion of bowl games, whether as independent commercial ventures or by football leagues which shared the profits among their members, became such a popular sport that the National Collegiate Athletic Association, the regulating body for the colleges which participate, was forced to weed out the more dubious undertakings. Now anyone wanting to sponsor such a game must first get permission from this association. Then follows a hunt for a television contract to bring in revenue and also to provide welcome publicity both for the bowl game itself and for the colleges taking part. Finally the sponsor must line up two of the few teams which are outstanding enough to draw a crowd; here the older bowls get the pick, for they have both prestige and long-standing contracts with the major college football leagues.

Since 1951 the NCAA has ruled that colleges supplying the teams should share 75 per cent of the gate money and sales of tickets must therefore be high to meet fixed costs and the promoter's profit out of the remaining 25 per cent. Pennsylvania State University and Alabama University are said to have received nearly $100,000 each from this year's new Liberty Bowl game at Philadelphia, yet the promoters claim to have covered their expenses only barely. But these prizes are few and the football team which is not good enough for a bowl often costs its college more to run than is brought in by sales of seats at its matches.

Mr Rockefeller's State

IN his message to the New York State Legislature last week Mr Rockefeller proposed nothing as sensational as his plan, a year ago, when he had just been elected Governor, to increase taxes and put the state's finances on a pay-as-you-go basis. But with the help of forty or so committees and special task forces he is producing a host of new legislative proposals; some of these are controversial enough to keep him in the public eye and must make him thankful, at least at times, that he decided to withdraw from the contest for the Republican presidential nomination. The pro-Nixon forces in the Republican-controlled Legislature have been mollified and the Democrats cannot complain that the Governor is neglecting his duties.

Not until later in the session will it be clear whether Mr Rockefeller really proposes to make the building of atomic bomb shelters mandatory. But he has advanced an interim solution for the problem of financing the coming sharp rise in educational costs as the school population expands. The state makes substantial contributions to local authorities but these are dependent, for their own share, on the overloaded tax on property and new sources of revenue are needed. Mr Rockefeller proposes to authorise local school boards to levy about $100 million in new taxes, on the philosophic ground that those who spend the money should accept the responsibility for raising it. But an equally strong motive must be the Governor's reluctance to add substantially to the state's financial burdens just as he is proclaiming that taxes are not to be increased—indeed those on small business and heads of households are to be reduced slightly—and that the state will be able to pay all its bills out of income. The Democrats and some Republicans feel that, if only the Governor could bring himself to pay for capital improvements by borrowing money, the state would be able to shoulder much of the load.

Such fiscal austerity in Albany must leave President Eisenhower gasping. But in other directions Mr Rockefeller has left the Democrats shivering, for he has stolen their clothes. He is suggesting that the state ban on racial discrimination in public housing be extended to private housing, as it is in New York City. And he is proposing a series of progressive measures which are dear to the trade unions and which the Democrats thought that no Republican Governor would embrace, such as the first state-wide minimum wage law, to guarantee $1 an hour to workers not protected by the federal law; increases in welfare benefits; and unemployment insurance for workers displaced by automation while they are being trained for new jobs. Finally, Mr Rockefeller is to convene a conference on the effects of automation in industry —something which trade unionists have been urging on Mr Eisenhower, so far without success.

SHORTER NOTES

With the ratification by Brazil, Mexico and Costa Rica of the agreement setting up the Inter-American Development Bank, the necessary approval of countries providing 85 per cent of the capital was obtained just before the deadline of December 31st. Only three eligible countries—Venezuela, Cuba and Uruguay—have not yet approved the new institution which will have resources amounting to $1 billion. The governors are to hold their first meeting in February.

* * *

After a year in which it seemed quite possible that the wealthy state of Michigan might not be able to pay its employees and keep its schools and services going, the Republican-dominated Legislature and the Democratic Governor, Mr Williams, have finally agreed on a stop-gap tax plan. It pleases neither, but it should avert immediate financial chaos.

* * *

New York's Metropolitan Opera has no government subsidy but depends on gifts to cover its inevitable deficit on operations, which amounted to $528,873 in the 1958-59 seasons. For the first time since 1946-47 contributions were more than enough to cover the loss and the year ended with a surplus of $3,150.

THE WORLD OVERSEAS

Who Daubs the Swastikas?

FROM OUR BONN CORRESPONDENT

PROBABLY more than one German these days has been ruefully recalling Nietzsche's remark that "the consequences of our actions seize us by the forelock, quite indifferent to the fact that we have meanwhile 'reformed'." How much more comforting the sage's words would have been to the tender national conscience had he not put those sceptical quotation marks round the word "reformed."

It is evident that the Germans as a whole have not been in the least surprised by the world's excitement at the rash of swastikas and racial abuse that has broken out up and down their country. There is ample warrant, it is fully appreciated, for such an intense and anxious curiosity. Happily much of it is an echo of the baying of their own watchdogs. Some British newspapers, generalising as usual about "the Germans" in the manner in which the Nazis generalised about "the Jews," have outstripped all others in dire description and virtuous indignation. Yet, all in all, the stir abroad is taken as appropriate and salutary. Nor does anyone seem greatly surprised that the two major parties at home should be trying each in its own way to make political capital out of it all.

A serious recrudescence of anti-semitism is neither observed now, nor anticipated in the immediate future. There is no more active anti-semitism in Germany today than there is in any other country. This is not just because millions of former Nazis and Nazi sympathisers have either "reformed" or deem it prudent to hold their tongues. There is no organised anti-semitism for the simple reason that there are scarcely any Jews present to provoke the prejudice, jealousy, and hostility which they once aroused in Germany, and which the Nazis assiduously fostered. The 30,000 or so Jews living in Germany today are altogether inconspicuous, for the most part elderly, uninfluential, and not competing with anybody. Were many Germans finding it difficult to earn a living there might be some resentment at the demands of reparation to Israel and to individual Jews. But for pretty well everybody there is a job, and a higher standard of living than ever before.

The daubing of the Cologne synagogue on Christmas Eve and its desultory sequels have genuinely perplexed both the public and the authorities, as the multitude of confused and often conflicting comment testifies. The mystery is: who feels the need for that form of self-expression, and why? The most discussed clue at present is the perpetrators' common youthfulness. Most of those who have been caught are in their twenties; they were just about old enough to go to school when the Third Reich and its leaders fell apocalyptically about them. Have parents and teachers failed, then, to pass on the lessons of experience obtained at such cost? One of the consequences of such questioning has been hurried consultation of school history books; and, since education is not a federal responsibility, the discoveries have been as many and various as the eleven *Länder*. Some authors devote more space than others to Hitler and Hitlerism. But syllabus and printed page are by no means the sole guide to what goes on in the classroom. One teacher may be inspired by a single line to talk tellingly for an hour. Another, by reason of guilt or complacence, may pass cursorily over, or even avoid, the disgraces of the recent past. Any fifty-year-old German expounding the evils of Nazism runs the risk of being asked what he or she did at the time to counter them. For the majority of teachers and parents it is still an embarrassing predicament. Most of the twenty-year-olds whom your correspondent has asked about their instruction in contemporary history have replied that they have been told little at home but much at school.

Who are the teachers? Who appoints them? These are issues just as important as the precise number of lines chronicling the gas chambers, if not more important. A review of the teaching of history and the recruitment of teachers is being newly demanded from many quarters. It is too early yet to predict whether much will come of it. There are always those—and Dr Adenauer is one of them—who argue that the kind of impenitent Nazi who still exercises a more or less covert influence in the schools, lawcourts, and civil services, is small fry, can do little harm in the time left for him to do it, and is best ignored.

There are some who suppose that the louts who do the daubing —the kind of pugnacious misfits that look for mischief in every city in the world—are incited directly or indirectly by the "neo-Nazis." This is probable. It is possible to compile a horrid catalogue of crudely nationalist right-wing groups that have popped up in the German Federal Republic since 1949. All still in the category of the weird rather than the dangerous, they are the muddled spiritual homes of a small minority of surviving petty Nazis who will not admit error, and of young persons, many of them students, who find the undiluted waters of the old German nationalist spring more exhilarating than the internationalist mixtures of Paris, Brussels, Strasbourg, and Luxemburg. A few of these grotesque reversions seem to be congenitally anti-semitic, despite their protestations to the contrary.

It can be confidently said that none of these unsavoury groups or organisations, not even the sizeable German Reich Party, counts for much in present-day Germany. Important political movements can always be felt in a country's air. Aggressive nationalism, neo-nazism, and anti-semitism are not features determining the climate of the West German state. It is always possible that in adverse circumstances the old ghosts might occupy a dangerous number of living bodies. The rash that started at Cologne will have served a good purpose if it has reminded the community of such a possibility and of its duty to keep a watch on the political incorrigibles.

Wise Men for Trade and Aid

FROM OUR SPECIAL CORRESPONDENT

Paris, Thursday.

WHEN nations disagree on great issues like the European trading problem, one diplomatic means of keeping the peace is to talk about procedure. The western powers at their summit meeting last month could hardly be expected to reach agreement on their economic differences; instead they called the thirteen-nation Atlantic conference which met on Tuesday and Wednesday. That meeting has in its turn talked, not about the issues, but about how and when and if the issues should be studied later on.

The differences underlying this esoteric diplomatic game hardly

need emphasis. When Mr Dillon, the American under-secretary of state, toured Europe last month it became pretty plain that there were two camps, each with separate objectives and views on how to approach the trade problem. Since the talks on a free trade area in the Organisation for European Economic Co-operation broke down, the European Commission has been pushing the view that the issue between the Six and Seven could only be solved in a world-wide or Atlantic context. That view has been given an importance far beyond the expectations of its first exponents by America's balance of payments difficulties. The United States, once sponsor of the common market and an acquiescent spectator of the talks on a European free trade area, is now far more interested in the relations of the European groups with itself than with each other. And in the conference this week there has been not merely a close identity of views but a working partnership between the United States and the commission of the Six.

By contrast, the Swiss, Swedes and British have made it abundantly clear that they regard the world-wide or Atlantic approach as an evasion of the central problem of European trade. Europe, the Swedish delegate told the meeting, would hardly be able to find money to aid the underdeveloped world if it was waging a trade war within itself. The conference turned into a struggle between the "European" approach of the Seven and the "world-wide" philosophy of the United States and the Six.

The initiative lay inevitably with the Americans; they after all, had inspired the meeting. The Six were happy to let Mr Dillon put their case. In his opening speech, he went out of his way to soothe the worried Seven by talking of the dangers of the split in Europe, but his practical proposals remained more congenial to the Six. He suggested, first, that the main western creditor nations should form a group to co-ordinate their aid efforts; second, that a group of three independent experts be formed to make suggestions on the future of an altered OEEC with the United States and Canada included; and, third, that there should be another meeting of the thirteen-nation Atlantic group to discuss world trade problems. The terms of reference of such a meeting would cover the problem of the Six and Seven in only the loosest way. The Seven were particularly alarmed by Mr Dillon's phrase, "a successor to OEEC," apparently implying the death of that body.

MR DILLON'S position was not to go unchallenged. Indeed the remainder of the conference was largely concerned with an attempt by the Seven to get the European problem back into the centre of the stage, with the Swiss and Swedish terriers yapping loudly at the heels of the United States. It is a tribute to the tenacity of the Seven and to American patience and magnanimity that the Seven had a large measure of tactical success. Argument centred on two issues: first, the nature of the body that would discuss trade problems and its terms of reference; second, the mandate of the body to discuss the future of OEEC.

Only the United States proposal on aid aroused little controversy. In the discussion on the trade group the British succeeded, rather to their own surprise, in getting rid of the conference of thirteen and restoring responsibility to the twenty governments (eighteen European plus the United States and Canada) that are members or associates of OEEC; responsibility, however, was not formally given to OEEC as an organisation. In the trade discussions relations between the Six and Seven were to be "examined" with a high priority. The resolution on OEEC was adorned with tributes to that organisation. The experts (four, not three) who were to make suggestions on its future were not to be independent "wise men" who might produce dangerous new ideas, but safe officials who would report to the same twenty governments. What looked at first like a rearguard action by the Seven over the dying body of OEEC and the corpse of the free trade area was turned into an unexpected tactical success.

But the importance of the success should not be over-estimated. The difference over the European trade question remains as deep as ever. The recognition that trade problems must be "examined" can hardly be claimed to have restored even the tactical or procedural position that existed when the Maudling committee broke up in November 1958. There has been no mention of either a multilateral association or a free trade area in the resolutions of the conference. A commitment to examine problems is not a commitment to negotiate. Much will continue to depend on the attitude of the United States, whose massive presence has dwarfed the European combatants. And the Americans, though made more aware of the existence of the Seven by this week's meeting, remain at heart on the side of the community.

Big results cannot in any event be expected in the near future. The Americans themselves explain that the current talks can be no more than a preparation for a decision that will have to be taken after their own presidential election. The determination of the Seven to grind their European axe has meant, too, that any possibilities there were of a new attempt to grapple with trade problems on an Atlantic or world-wide basis have been pushed into the background.

Cyprus and the Grivas Question

FROM OUR ATHENS CORRESPONDENT

HOW much hinterland is required to render the use of British base areas and installations in Cyprus as "efficient" as the London agreements wanted them to be? The British Government initially claimed a large area with an indigenous population of 16,000, but whittled down its demand to 113 square miles which would include only about 1,100 Cypriots. At present the Cypriots are willing to surrender to British sovereignty only 42 uninhabited square miles. The Greek military experts, consulted by the Greek government, were inclined, with reservations, to favour the British view as reasonable on a purely military assessment. General Grivas, the former Eoka leader, whose opinion still seems to count, believes that the British demands are far in excess of military requirements proper. The Turks do not seem to care one way or the other.

The five-party conference on Cyprus which is meeting in London this weekend is expected to settle these differences in time for Cyprus to be proclaimed independent on February 19th. Significantly, the British ambassador to Greece, Sir Roger Allen, accompanied the invitation to Mr Averoff, the Greek foreign minister, with a warning that the British were not prepared to yield on the size of the two cantonments. The Greek government has adopted a rather detached attitude; the effectiveness and operational readiness of the British bases is just as much to the advantage of Greece as of Britain. The Greeks, however, are aware that Cypriot recalcitrance springs from fears that, small though the enclave may be—about 3 per cent of the area of Cyprus—a part of the island would be remaining a colony, with a separate civil administration and a non-military population of 1,100 "unredeemed" Cypriots. For reasons of national pride, more than anything else, Archbishop Makarios is unwilling to accept this.

The Greek foreign minister's efforts in London will, therefore, tend to placate the Greek Cypriots by giving them full support in their attempt to obtain a satisfactory legal status for the area of the bases. This might eventually involve British undertakings not to establish a civil authority in the enclaves and to allow Greek-Cypriot inhabitants there to take Cypriot nationality. Mr Averoff is going to London "with the determination to respect and fulfil our engagements," including, presumably, those assumed when the foreign ministers of Greece and Turkey met Mr Selwyn Lloyd just after the conclusion of the Zurich agreements.

Straight from the camel's mouth . . .

"Have you heard, O master, gone are the days
when we carried rich traders
and precious cargo between East and West,
nowadays they fly SWISSAIR."

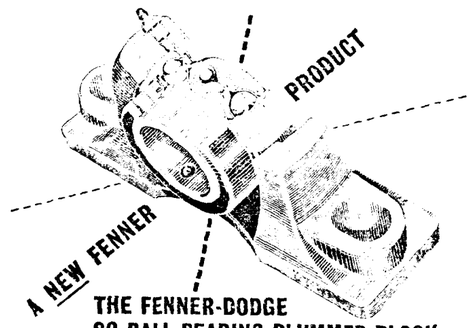
"Delighted to hear it.
That means they bring more tourists
and prosperity to our country.
You can't blame travellers for preferring a swift,
smooth flight from Europe
to a long ride on your shaggy hump."

"Is it true that Swissair treat every passenger
like a Caliph and charming air hostesses
serve delicious food and drink?"

"It is true, and it is whispered in the bazaars
that Swissair will operate
a daily Caravelle jet service
to the Middle East this summer."

"Master, I wish that I had wings!"

First and tourist class by Caravelle or DC-6B to:



ANKARA	CAIRO	ISTANBUL
BAGHDAD	DAMASCUS	TEHERAN
BEIRUT	DHAHRAN	TEL AVIV

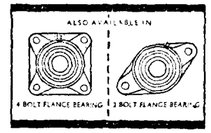
THE FENNER-DODGE SC BALL BEARING PLUMMER BLOCK



A sealed bearing with relubrication facilities giving longer life under arduous conditions.
Easy to fit housing designed to give adequate spanner room and elongated bolt holes allow lateral adjustment.
Separate collar provides bearing to shaft fixing without distortion of inner race.
Special seal designed for low frictional losses and keeps grease in and dirt out.
Deep groove ball bearing with long inner race distributes loads over greater shaft area, and is fully self-aligning.

LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

who

won two top awards?

The Pressed Steel Company. Because, although the Prestcold Packaway was designed as a useful refrigerator, its styling is, to put it mildly, elegant.

As a result, the Prestcold Packaway won its designer the first-ever Duke of Edinburgh's Prize for Elegant Design. And it was named a Design of the Year by the Council of Industrial Design.

PS means Pressed Steel, and the Pressed Steel Company mean business, big business. This spring they're opening the largest and most automated refrigerator factory in Europe, at Jersey Marine, near Swansea.

While the prospects of reaching a compromise at the London conference have greatly improved, it will be interesting to watch the reactions of General Grivas. Shortly after his return to Greece, Grivas sent Archbishop Makarios a map on which he had himself drawn boundaries for the British bases. Since then he has set out his views in a memorandum for the Greek government. General Grivas, ever seeking—like so many Greeks—an ulterior motive in all British actions, believes that the area demanded by the British is more than they need and would establish a state within a state.

It is assumed here that Grivas obtained from the archbishop in Rhodes in October some form of promise that no further concessions would be made on the issue of the British bases. The archbishop was presumably reminded of this pledge last week, when Mr Kranidiotis, Cyprus's ambassador-designate to Greece, after seeing Grivas, flew to Nicosia to confer with Archbishop Makarios and, later, accompany him to London. Nevertheless, the general has kept silent and has not attempted to reaffirm publicly his opposition to concessions. Although puzzled by this attitude, observers here venture to put forward two explanations: first, that the general—still in search of a sound platform for an incursion into Greek politics—may be hopefully waiting for the chance to seize on any concession the archbishop may make in London, in order to denounce the Cyprus accords as involving the partition of the island. Or he may have been induced to disengage from the Cyprus question altogether in order to gain the favour of men in authority in Greece, in the hope of being rewarded with their help in the fulfilment of his domestic political ambitions.

Mac's South African Tightrope

FROM OUR CORRESPONDENT IN SOUTH AFRICA

THE South African Nationalists, although traditionally the anti-British party in the Union, are now desperately anxious to remain friends with Britain—perhaps even to remain in the Commonwealth—and to get rid of the stigma that their government is unfriendly, friendless and isolationist. During his stay in South Africa, however, Mr Macmillan will hear more about the republic than about anything else. He will be told that republicanism is the "traditional" constitutional and governmental pattern of the Afrikaner (the fact that the Cape and Natal have an entirely different tradition based on British parliamentary institutions will be glossed over) and that concord between the white races will be achieved only when South Africa becomes a republic and English-speaking South Africans develop a single instead of a dual loyalty.

There are, in fact, positive and negative sides to the Afrikaner's republicanism: the positive side is his sentimental feeling for the old republics of the Free State and Transvaal which were conquered in 1902. The negative side is the desire to end once and for all the period of tutelage and subservience to Britain which began with the end of the Boer War, and to restore the form of government which existed before the infant states were conquered. The war of 1899-1902 is still very real to many Nationalists; some of them are even convinced that the last shot will have not been fired until South Africa becomes a republic. Until recently this implied a complete break with the Commonwealth, but for tactical, and even hard practical economic reasons, the transition to the final goal of "republican independence" will now probably be made in two stages: first, the declaration of a republic, and then the cutting of the painter so as to end all suggestion of "subservience." What Mr Macmillan may not hear from his official hosts is that the Nationalist party itself is sadly divided over the nature of the republic it wants, and even on the issue of whether it should be inside or outside the Commonwealth.

From republicanism Dr Verwoerd and his colleagues will almost certainly move on to two other major topics: apartheid and the future of the three High Commission territories. They will explain apartheid as "separate development" which provides self-expression for the Africans in their own areas, the Bantustans or tribal homelands of the black people; these are at present a number of reserved areas scattered all over South Africa, covering about 13 per cent of the country's surface and accommodating about half the total African population. Dr Verwoerd believes that his plans for the development of the Bantustans, leading in the indefinite future to self-government of sorts, are similar to the constitutional changes now taking place in Basutoland. Therefore he will probably seek to persuade Mr Macmillan that the Bantustans and the High Commission territories are heading for the same constitutional destination. Thus the Nationalists argue that the question of the incorporation of the three areas, once a matter of the greatest concern to them, has now become less urgent. If (so the argument goes) South Africa is to become a sort of Commonwealth with its own black "states" as "dominions," then the High Commission territories will fit naturally into the pattern and will in time almost incorporate themselves.

THE reasoning is plausible and very largely the product of the Nationalists' realisation that there is no chance of a British Government handing over control of the protectorates to South Africa as long as apartheid lasts. The situation is therefore rationalised by suggesting that the matter no longer calls for immediate decision. At the same time the Nationalists will emphasise the extent to which the High Commission territories are economically dependent on the Union, and they will insist that Britain must prevent these areas from being used as platforms from which to attack and embarrass South Africa politically.

Africans in the three protectorates will doubtless be delighted to see the Queen's first minister in their midst—unlike some of their compatriots elsewhere in Africa they feel a warm affection for Britain and are anxious to retain their close ties with it, if only because they refuse to exchange London for Pretoria. But the politically conscious black people in the Union regard Mr Macmillan's visit with mixed feelings. They, too, will be glad to see a prime minister of Britain, to whom they tend to look for friendship and help in their struggle for political and economic rights. But they are desperately anxious that Mr Macmillan should not show the slightest sympathy for apartheid or its protagonists. They are moreover pretty sure that the politically literate and articulate among them will not have a chance of talking to Mr Macmillan and telling him what Africans in the Union think of their white rulers and the laws they make.

Closely linked with these political issues are the questions of trade between the Union and Britain and the boycott now actively supported by Socialists and Liberals in Britain, and the outside world's "misunderstanding" and consequent abhorrence of South Africa and its racial policy. The Nationalists set considerable store by trade with Britain, but they are likely to stress the fact that British ill-will may prevent the Union from remaining one of Britain's best customers. In disowning the proposed trade boycott, Mr Macmillan will have to be careful not to offend non-white opinion in the Union and elsewhere in Africa. Similarly, when discussing the Union's standing in the outside world, he will have to avoid doing a "Montgomery" on apartheid. There is great good in South Africa, as the field marshal discovered, but there is also great evil, and Mr Macmillan will doubtless want to see and hear about this evil without speaking any himself.

Thus, the British prime minister will have to tread very warily in South Africa. Nowhere in Africa will his every word be analysed as carefully as in the southernmost tip of the continent where the race problem is more complicated and intractable than elsewhere.

Apartheid in Football

FROM OUR CORRESPONDENT IN NEW ZEALAND

SINCE the Maori wars in the middle of the last century, New Zealand has not considered itself to have a serious racial problem; although the Maori minority has been increasing rapidly during the present century it only numbers 152,000 out of a total population of some 2,275,000. But a vigorous controversy has blown up over the decision of the New Zealand Rugby Union to exclude Maori players from the New Zealand rugby union team which will tour South Africa this year. The football rivalry of the two countries has mounted with each successive tour since 1921. New Zealand, on its own ground, beat the Springboks soundly in the last test series in 1956, but it is under no illusions about the Springboks' determination to even matters this year. In these circumstances, a controversy which threatens the whole tour and the state of rugby relations between two of the sturdiest pillars of the rugby union temple, seems in both countries a good deal more important than talks about a summit conference. It may, indeed, require summit talks itself.

New Zealanders are accustomed to accept in a fairly unquestioning way a number of questionable premises. One of them proclaims the alleged proprietary interest of the Almighty in "God's Own"; another assumes the existence in "God's Own" of complete racial equality between Maori and *pakeha* (whites). Thus, although the informed expected it, the uninformed, who were the majority, were shocked when the NZRU announced some seven months ago that Maori players would not be considered for selection for the All Blacks (of all names) team to tour South Africa in 1960. The rugby union, for its part, although studiously careful not to upset the South Africans any more than necessary, made it plain that it had made its decision in what it considered to be the best interests of the Maori players themselves. If Maoris took the risk of going to South Africa as members of a touring team they could not, the union asserted, be protected from the possibility of insult and discrimination because of their colour. It was made clear that the South African rugby authorities themselves were quite ready to receive Maoris as part of a New Zealand representative team; but it was implied, even if it was not said, that it would be at New Zealand's and the Maoris' own risk.

The reactions to these pronouncements were sharp. A week before the decision was announced, spokesmen for eight different religious denominations all issued statements urging that if the South Africans could not guarantee equal treatment to Maori and *pakeha* players alike, the tour should be abandoned. The Anglican Primate of New Zealand, Archbishop R. Owen, dissented from these views on the grounds that it was not realistic to expect the South Africans to give any such assurance; but several of his bishops, including the Maori Bishop of Aotearoa, strongly disagreed with him.

AN association to fight for the inclusion of Maoris in the team, which had already come into being before the rugby union's announcement was made, sprang up fully fledged and many headed. Led by a prominent Roman Catholic layman, Mr Rolland O'Regan, who has proved himself a most competent controversialist, it expanded rapidly, formed branches and committees all over the country, sponsored protest marches and meetings, and issued statements. It now has twenty branches in various parts of the country, backed by a large number of supporting committees, and is circulating a petition that is to be presented to Parliament.

Protest marches and meetings of students were held in Wellington, Christchurch and Auckland. A mass deputation of students sought out the prime minister, Mr Nash, and gave him some uncomfortable moments; the influential trades union movement weighed in in support of the protest. The politicians have shown no disposition to handle this hot potato, but it may well be pushed into their unwilling hands later this year during the general election campaign. The issue will undoubtedly remain the subject of sharp controversy until the team either departs, all white and fit for presentation in South Africa, or else does not. The latter is unlikely, but it is a possibility since feeling is so high and widespread.

Among the Maoris themselves (a Maori is now a person with half Maori blood, or more) feeling is very strong indeed. Tribal leaders in all the Maori areas, former Maori All Blacks, who have almost the status of minor tribal deities, distinguished Maori soldiers and leaders in various walks of life, have all protested. This is, in itself, a significant departure from the old Maori tradition, which is to shrug the shoulders when an invitation is withheld.

Many white New Zealanders feel that New Zealand, which has long prided itself on its enlightened treatment of the Maoris—treatment which is not always as non-discriminatory in practice as it is in theory—should be prepared to strike a real blow for its principles by voluntarily foregoing one of its most cherished sporting indulgences. Supporters of rugby union policy, on the other hand, hold that the argument is primarily a sporting matter, that it is not for New Zealand to try to dictate to South Africa about its domestic policy and that, in any event, it is in the interests of the Maoris themselves not to expose them to the risk of insult and discrimination.

There is no doubt that the controversy is forcing a lot of New Zealanders to do some serious thinking about the socio-economic problems of assimilating a minority and unevenly distributed Maori population, of educating it, teaching it industrial skills and giving it a sense of social responsibility. In general, European-descended New Zealanders and Maoris live, work and play together happily and co-operatively enough. Whether they would continue to do so if the population ratios were reversed is another question.

Mr O'Regan's flourishing protest movement will do New Zealanders of all races a considerable service if it can establish itself on a wider and more permanent basis in order to try to remove the inevitable frictions which occur between Maori and *pakeha*—and encourage New Zealanders not to interest themselves in these matters only when a rugby tour of South Africa is in the offing.

East Germany's New Industrial Course

BY A CORRESPONDENT

MOST of the communist states have their industrial monuments, projects curtailed or abandoned through some sudden change of economic policy. East Germany's first five-year plan, ending in 1955, which set off along the then orthodox satellite line of heavy industry at all costs, is appropriately commemorated by the truncated Stalinstadt project. This must have one of the most remarkable locations ever selected for what was intended to be a fully integrated iron and steel plant.

To a lonely site in the forests of eastern Brandenburg coke has to be brought from Polish Silesia and ore comes by rail all the way from the Ukraine, while the pig iron produced must still travel on a hundred miles or so to the industrial centres of Saxony. Today the six blast furnaces of Stalinstadt rise high above the forests, but it is not altogether surprising that further construction was halted during the period of greater economic realism that followed the death of Stalin; weeds now cover the unfinished foundations of the steel plant. With its adjoining heavily Muscovite "first socialist town of Germany," the Stalinstadt works is a fitting monument

both to the economic and to the architectural policies of the dead master.

The second five-year plan (1956-60) very sensibly put the emphasis less on steel and more on the engineering and chemical industries, which had been going concerns in pre-communist days. It was realised that east Germany could never be more than a minor steel producer, but precision instruments from Jena and plastics and fertilisers from Leuna were in eager demand all over the communist world, and beyond. A great feature of this second plan was the development of the limited number of home raw materials, in order to save the need for imports. The most radical move in this direction was the announcement that the low-grade brown coal which was east Germany's sole important indigenous source of energy was in future to be used in principle as a raw material, not a fuel. Only when the scientists had milked it of all possible chemical raw materials would the residue of the brown coal reach the consumer in the form of gas, electricity or coke.

The front-page project on these lines was "Kombinat Schwarze Pumpe," an industrial complex based on the Lower Lusatian brown-coal field. With the aid of a novel process already in use at Lauchhammer nearby, brown coal was to be transformed into what was claimed to be metallurgical coke (*The Economist*, April 26, 1958). There were to be three parallel "production lines," each with a large power station, coal preparation plant, giant briquetting plant, and batteries of Lauchhammer-style ovens for turning the briquettes into coke. There was also provision for a complete gasification plant. At peak capacity Schwarze Pumpe would receive each day 100,000 tons of low-grade coal, which would leave the plant as gas, electricity and a mere 10,000 tons of coke and by-products ; the transport economies were clearly attractive.

By May 1st last year, the efforts of 16,000 workers had brought the first production line to the stage at which it could deliver ceremonial quantities of electricity and briquettes, before relapsing back into the arms of the construction gangs. Yet a visit to the site revealed the odd fact that although the production of coke had been the main object in planning Schwarze Pumpe, the construction of the necessary coking capacity had been deferred to a misty final building stage, some time after the rest of the giant complex had been completed. As had been understood from the start, the Lauchhammer coke was unsuitable for use in normal blast furnaces; and even in the special low-shaft plant at Calbe, on the Elbe, it made up at most 65 per cent of the coke charged. Complaints were even allowed to appear in the press that the uncertain quality of the Lauchhammer coke was menacing Calbe's precarious economics. Such reservations were not, however, allowed to darken the glossy accounts of the scheme still appearing in popular papers.

Indications have been mounting of the new course in east German industrial policy. It has for some time been clear, and was confirmed at the Prague meeting of Comecon in December, 1958, that the tide in the communist world has turned in favour of those old-fashioned economic virtues, international specialisation and exchange. In March last year the east German representative on Comecon, Herr Opitz, duly issued a broadside against autarky, which "will only limit development . . . for it means submission to irrational units of production, limited capacities, and lesser effectiveness of labour. . . ." Herr Ulbricht himself joined in to praise the international division of labour and to point the virtues of strict economy ; it might have been a nineteenth-century liberal economist speaking. With the Soviet Union able and willing to make substantial deliveries of industrial materials to the other communist countries, self-sufficiency was definitely out.

To mark the change, the second five-year plan has been allowed to fade into the background two years before its end, and has been replaced by an ambitious new seven-year plan (1959-65). An examination of the major projects under the plan clearly shows the new direction. The Stalinstadt plant is at last to be completed, so as to secure the advantages of integration, but this is the end ; there is to be no more high-cost iron capacity. Any additional pig iron that east German industry may require will come from the Soviet Union. The Stalinstadt rolling mills, originally planned for plates and heavy sections, will now turn out sheet steel, a change surely appropriate to east Germany's vehicle and consumer goods industries.

Greater still are to be the changes in the chemical industry, in which east Germany will follow west Germany in changing from home coal to imported oil as a basic raw material. The pipeline which is to be built from Russia across Poland will supply oil to a refinery to be built in stages at Schwedt, on the Oder north-east of Berlin. There may later be a petrochemical plant, and since Schwedt is also to receive a large paper mill under the plan, it seems as if it is being developed as quite an important new centre of industry. At the same time, the giant Leuna chemical works, hitherto based on brown coal, will be expanded by a third through the addition of a new plant, Leuna II, which will produce plastics from petroleum.

The prospects of substantial Soviet deliveries of oil and coke seem to have driven into the background the plans to use brown coal as a raw material. The key projects in the field of energy are for giant power stations, which will simply burn coal, not process it. About the growing complex of plants at Schwarze Pumpe, until recently front-page news, there is almost complete silence. Only incidentally does it appear that by the end of the plan period Schwarze Pumpe is to be producing electricity, gas and 6 million tons of briquettes a year ; this suggests that production of domestic coal briquettes is now being preferred to the production of brown-coal coke. Schwarze Pumpe has an important role to play, no doubt, and one well fitted to economic realities, but a distinct come-down from the original plans for a great coking complex. It seems likely that a truncated Schwarze Pumpe will be the industrial monument to the hopes of the second five-year plan, as Stalinstadt was to the first.

Yet if a pet project has had the axe, this is a sign of economic realism rather than economic weakness. There may have been a sudden, even a wasteful, change of plans, but such changes have happened before and have not checked the rise in industrial output. The official east German claim is that industrial output in 1958 was 166 per cent above that of the same area in 1936 ; certainly, over the last few years it has been rising more rapidly than in most western countries. No doubt the east Germans had more leeway to make up ; but there is no sign of a slackening. If the east Germans say that they are going to maintain an annual rate of increase of 9 to 10 per cent over the next seven years, there seems no reason why they should not do so.

Red Rivals in Iraq

Anyone who has applied for a visa to visit a newly independent eastern country can easily understand what it is going to be like to join a political party in Iraq. The same kind of detailed personal information is required for both undertakings. Last July, General Qasim promised the Iraqis that they would be free to engage in party political activities by January 6, 1960. On January 4th a law of associations was issued to make sure that party political freedom was not taken too seriously by anyone who might disagree with the policies of the general's government. According to the new law, some of the most obviously political groups in the country are not allowed to join parties at all. These include the armed forces, judges, higher civil servants and secondary school students. It is not surprising that there has been no great rush to register new parties.

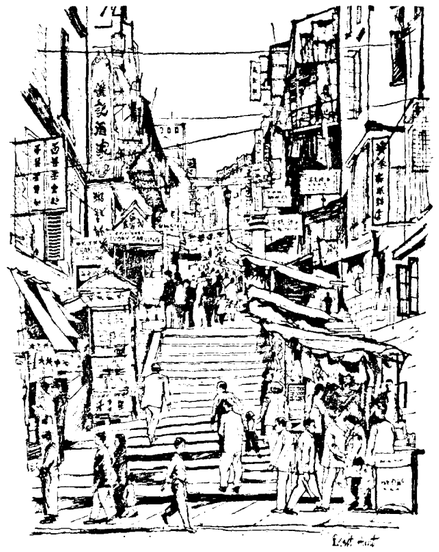
So far, three groups, all of them communist, have been able to convince the required 50 founding members that it is to their advantage to join a party. In Baghdad, the editors of two competing communist newspapers, Daoud al-Sayigh of *Al-Mabda* and Abdul Kader Ismail Bustani of *Ittihad al-Shaab*, have each submitted an application to form the Communist party of Iraq. Each editor says that his party has nothing to do with the other's; each claims the party line as his own. The third party is that of the Kurdish Democrats, who, because they already control the Kurdish press and Kurdish education, appear to have no rivals for the affection of their people.

The only pre-revolutionary group to be revived is the National Democratic party, led by Muhammad Hadid the minister of finance. Ibrahim Kubba, the Marxist minister of agrarian reform and acting minister of petroleum affairs, has not launched a new Socialist party. Colonel Mahdawi, next to General Qasim the best-known post-revolutionary Iraqi, was expected to be the standard-bearer for the communists, but apparently he prefers his present job at the People's Court. Party politics in republican Iraq are no more exciting than they were under the monarchy. Perhaps that is how General Qasim hopes to keep them.

The Year of the Rat

A group of Hongkong manufacturers has proposed that the colony should limit its cotton textile exports to the United States in order to disarm pressure by American textile interests on their government to impose textile import quotas. The proposal has been taken up by the colonial government but is bitterly opposed by other Hongkong manufacturers.

FROM OUR CORRESPONDENT IN HONGKONG



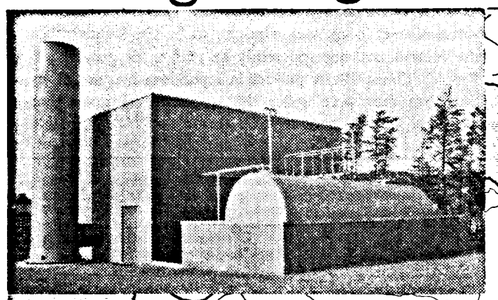
If there were any democratic nonsense in Hongkong, the government might well be out of office and a radical nationalist opposition, hoisted into heady power, could be on the verge of breaking off relations with the United States. As it is, old members of the Hongkong Club have been nervously examining the stability of the library ceiling as they read an editorial in one of the fair colony's English-language dailies denouncing the government for engaging "in a secret scheme, in intrigue with big business *taipans* and a representative body of the vested interest, to betray the common welfare of the community."

This, indeed, is unprecedented revolutionary talk, roughly equivalent in orderly Hongkong to bloody bodies on the barricades or booing from the members' pavilion at the Chater Road cricket ground. It was provoked by the government's offer of a modest self-imposed quota on textile garments for the restive American market. Local merchants had already been inflamed by a United States ban on Christmas exports of preserved ducks, cunningly attributed to western sanitation scruples. The American textile quota offer was a last bale of straw after the sullen textile ceiling concessions to what is regarded as Lancashire's laziness and inefficiency.

There is a vigour, enterprise and resilience about Hongkong which are altogether admirable. But the thinking of the colony's industrious producers and energetic exporters tends—and naturally enough—to reflect the general atmosphere of unreality which pervades this colonial survival. Free trade and free enterprise, to which the colony has always been dedicated, are shining policies. They have been the twin supports of Hongkong's existence down the changing years. But they can hardly be imposed by a colony on a cold and selfish world.

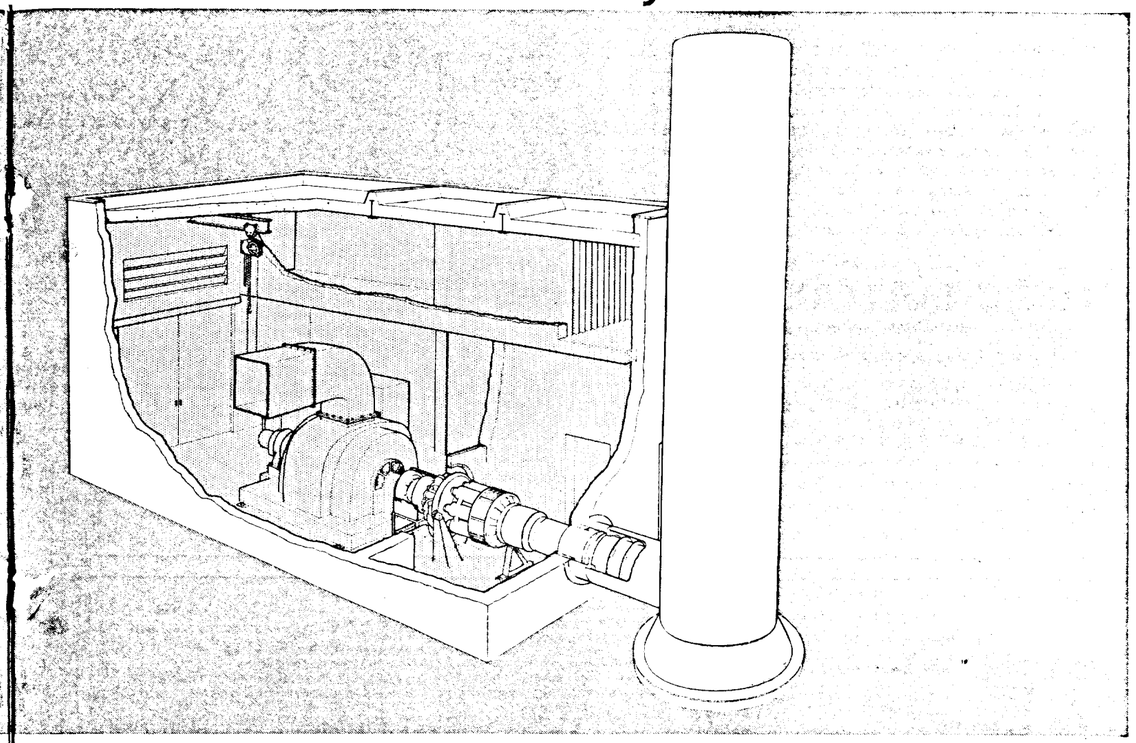
The exposed and vulnerable Hongkong establishment, with all its paradoxes, survives under the shadow of the unpredictable Red giant on the mainland by adhering to a governmental policy of discretion and adjustment — simply, of avoiding trouble, so far as that ideal is possible. This does not mean truckling ; it means that Hongkong's motto should be, "Defence, Not Defiance"—except, alas, that that first word is a most unfortunate one to use in Hongkong.

By making trouble, the rebellious textile garment manufacturers are accordingly breaking the unwritten Hongkong code. Deplorable the American restrictions may be ; but Hongkong can neither defy nor deny them. In fact the price of recalcitrance now may well be tighter restrictions later. (Japan appears to have learned this hard lesson from the Washington lobbies.)



The textile uproar, as it happens, coincides with a Hongkong New Year that is otherwise bright with promise and profit, and glittering with the reflection of the misfortunes of others. Hard conditions for Chinese residents in Indonesia and the Philippines, for example, have swollen the flow of capital investment from wealthy Chinese there. All records, also, have been broken on the stock exchange, where the volume of business transacted in 1959 reached a total of $HK350 million (nearly half the total banknote circulation of the colony). Exports and imports were well ahead of 1958 ; new industries doubled in value compared with 1954 and accounted for 45 per cent of Hongkong's exports.

In this general flow of good fortune, it seems ungenerous to add that tuberculosis also reached a record high level in Hongkong last year—more than 600 reported cases in one week ; that more than 100,000 people still live on the roofs of tenements ; that a worker's average family of five persons is short of about 2,000 calories a day ; that a working family can afford only a fifth of the government school fees for one child.

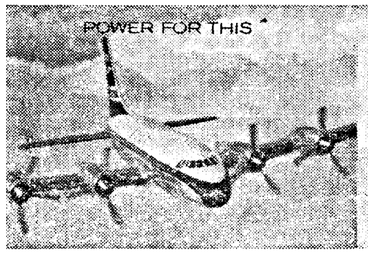


Anyway, 1960 is the Year of the Rat in China. The rat is a mischievous pest, and the soothsayers predict that, by tradition, more mischief may be anticipated in the colony during 1960 on the lines of that already provoked by the pestiferous American textile lobbies. But rats, it is also pointed out, remain only in houses where there is plenty to eat ; at a pinch, they are eatable themselves. Whatever the mischief of textile quotas, no one really expects that those who keep the cheese in the Hongkong pantries will be reduced to that last resort in the Year of the Rat.

New lightweight turbo-generator cuts costs delivers 3 million watts by remote control...

At exactly 12.07 hours, on Friday, 11th December, Mr C. R. King, the Chairman of The Electricity Council, pressed a button at Bristol. Two minutes later and a hundred miles away a completely new type of turbo-generator fed 3 million watts into Princetown.

This new pocket power station, driven by a Bristol Siddeley aero gas turbine engine, runs itself unmanned. It needs very little maintenance, and is so light and compact that it can be put just where electrical power is needed.

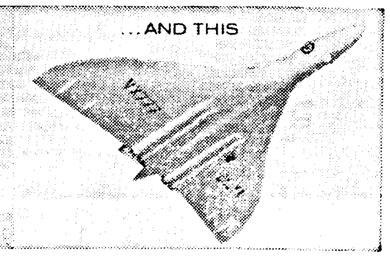


...AND BRISTOL SIDDELEY SUPPLY THE POWER

The new Proteus-powered generator supplied to the South Western Electricity Board represents an important engineering advance. Designed specifically for critical peak-lopping and emergency use, it is in effect an automatic, pocket-sized power station which can be operated by remote control.

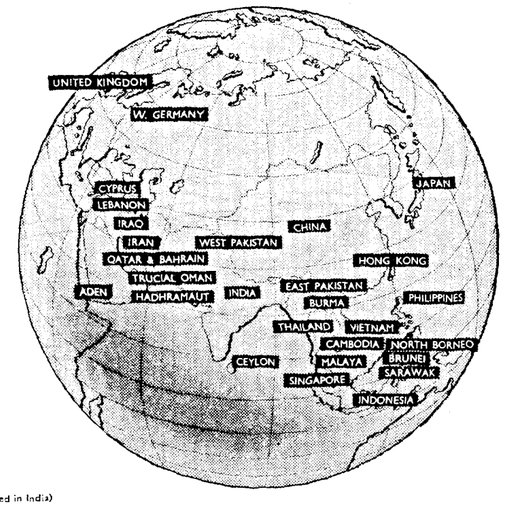
The secret lies in the use of the Bristol Siddeley Proteus gas turbine as motive power for the 3 megawatt alternator. One of the most compact powerplants in the world, the Proteus reaches its full power of 4,250 hp within 30 seconds of a cold start. And 3 megawatts are fed into the national grid within two minutes *at a capital cost which is actually lower than that of any other method.* Its reliability is already so well proven that its service life between overhauls, under peak-lopping conditions, is anticipated at 10 years.

The South Western Electricity Board are to be congratulated on the speed with which they have taken advantage of this new power source and the venture will be closely watched by engineers all over the world.



BRISTOL SIDDELEY ENGINES LIMITED

The Bristol Siddeley Proteus powers the Britannia airliner. Four Proteus give this 130-seat aeroplane a speed of over 400 mph—a range of over 5,000 miles. Britannias are in service with twelve airlines all over the world and with Royal Air Force Transport Command.



The Bristol Siddeley Marine Proteus powers the world's fastest naval vessels, the "Brave" class Royal Navy patrol boats built by Vosper Ltd. Three Proteus deliver a total of 10,500 hp—give these 96-ft boats a speed of over 50 knots. The Marine Proteus holds large reserves of power for acceleration.

The Bristol Siddeley Olympus high-thrust turbojet powers the Avro Vulcan V-bomber—gives this delta-winged deterrent carrier a performance unsurpassed by any aircraft in its class. Current Olympus versions deliver 17,000-lb thrust dry—24,000 lb with reheat. And later versions are rated at 33,000 lb.

British Banking in Asia

These are the territories served by **THE CHARTERED BANK** and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

THE BUSINESS WORLD

The Aircraft Mergers

HAVING addressed its mind to the job, the aircraft industry has smartly aligned itself into five sizeable groups: two making engines; two making aircraft and missiles, and one making helicopters. The Minister of Aviation has this week confirmed the promises made in private to the industry's separate companies—that those who merged could expect Government help in developing civil aircraft. What happens now?

The first point is that these mergers are the start, not the finish, of a long and probably painful reorganisation in an industry whose head has overgrown its body. The task of the new managements calls for sympathetic understanding; their success in carrying it out will decide whether Britain will still have an aircraft industry. One purpose of rationalisation among the score or so of companies in aircraft production was to shrink the industry without creating politically embarrassing pockets of unemployment. It still has nearly 240,000 workers and its prospects of steady work may employ perhaps less than 150,000. Other jobs have to be found for 90,000 aircraft workers and the factory space they occupy. The amalgamations in the industry to form large groups do not get rid of this need to reduce its size; the hope must be that these larger groups, with interests in other industries, may find it rather easier to absorb redundant aircraft workers.

The second object of amalgamation is to create large units, particularly design units, to compete on equal terms with the American industry. The fault of the British aircraft industry and the cause of its more obvious technical shortcomings has been that its effort in developing aircraft represents only a fraction of what the American aircraft industry has long been doing. If the mergers lead to fewer independent design teams, it should be possible to raise the intensity of development in any single project to approach the American level. Redundancy in the industry ought not to affect the design offices.

Do these mergers fit the aims? The new group with the greatest potential strength is the one now formed by Vickers-Armstrongs, English Electric and Bristol Aeroplane, with Hunting as a possible fourth partner. It has not been easy for the three to fix the proportions that they will contribute to the pool. Tuesday's announcement said merely that they had agreed to form a new company in which English Electric and Vickers-Armstrongs would each hold forty per cent of the shares and Bristol Aeroplane twenty per cent. It has to be assumed that the three companies would contribute in this ratio to the development costs of any new project that they undertake together; but it has been made clear that each company will continue to be financially responsible for any work that it already has in hand, and this is an important point since Vickers is spending heavily on civil aircraft.

This new, and still unnamed, company would have three wholly-owned subsidiaries consisting of the aircraft manufacturing divisions of the three founding partners. These have varying amounts of work in hand. (Lists of work throughout the industry and estimates of how long it might last were given in *The Economist* of September 5th and 12th last year.) At Vickers-Armstrongs the Viscount and the Scimitar fighter for the Navy come out of production this year, leaving two civil aircraft: the turbo-prop Vanguard, which has found no new buyers, and the VC 10 jet for BOAC. Military work at Vickers is limited to the important low level attack bomber, the TRS-2, for which Vickers is the prime contractor; English electric, however, has a big share in its design and construction and has been working with Vickers-

THE INDUSTRY'S FIVE GROUPS

AIRCRAFT		ENGINES		HELICOPTERS
English Electric	Hawker Siddeley	Rolls-Royce	Bristol Sid.	Westland
Vickers-Armstrongs	de Havilland		de Havilland	Saunders Roe
Bristol Aeroplane	Folland			Bristol
Hunting Aircraft?	Blackburn			

UNCOMMITTED

Short Bros. and Harland, Handley Page, Fairey Aviation, Auster, Scottish Aviation, Alvis.

Armstrongs during its development. Another link is their common ambition to build a medium range jet airliner. Vickers is actively trying to sell such a jet now, evolved from the VC-10. A great deal more is likely to be heard of this project—to the Minister's possible embarrassment, for de Havilland is in front on this kind of aircraft.

The link between English Electric and Bristol is in missiles. Bristol has a production contract for Bloodhound anti-aircraft missiles, used by the RAF; English Electric's similar Thunderbird is used by the Army. Both companies have sold missiles abroad and there should be room here for rationalising production and development. Bristol has the only high-speed research aircraft now under development; this could be important if the new group sought support for the design study of a supersonic airliner. English Electric's contribution is the ageing but still saleable Canberra bomber, the Lightning fighter, its part in the TRS-2 project and the new missile with

the poetic name of Blue Water, which is in fact a replacement for the Army's big guns. If Hunting joins this triumvirate, the group's interest will extend to the small-aircraft field; Hunting makes the RAF's basic jet trainers and has plans for a small jet-powered business aircraft, on which some work is being done by Handley Page.

THIS merger involves no new issue of share capital. The Hawker Siddeley, de Havilland, Blackburn, Folland amalgamations do. Hawker Siddeley sent its formal offer to shareholders of de Havilland and Blackburn this week and will hold an extraordinary general meeting on February 5th to get shareholders' approval for an increase in its ordinary capital of £12 million to cover the purchase of these two companies. Hawker Siddeley's aircraft interests extend from small civil transports to large V-bombers, but apart from two transport aircraft its contracts are running out fast. By buying Folland, it acquired the Gnat fighter and its trainer version, and the push of Hawker Siddeley could build up substantial foreign sales for the Gnat. By buying Blackburn, Hawker Siddeley acquired a small Navy bomber and large numbers of drawings for a massive military freighter which lost a recent design competition to Shorts of Belfast. By buying de Havilland, Hawker Siddeley acquires, first, a double foothold in the civil jet market through the Comet and the medium range dH-121; and secondly, a giant's stake in missiles which de Havilland is building at both ends of the scale. Its 2,500-mile Blue Streak has implications for space research and its small, airborne Firestreak is the standard weapon for all RAF fighters strong enough to carry it. Hawker Siddeley itself builds a Navy missile, but the ships for launching it have not yet been built.

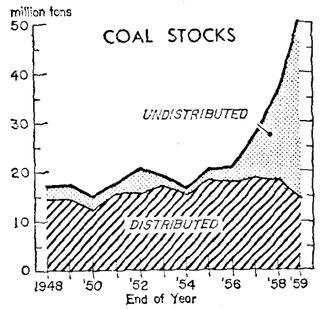
The formation of these two groups leaves Westland standing alone as the largest and probably, in the end, the only helicopter manufacturer in the country. Westland took over the helicopter side of Saunders Roe not long ago and is now taking over Bristol Aeroplane's helicopter interests; both are small fry compared to Westland's scale in helicopters. This leaves Fairey Aviation as the only other maker of helicopters; Fairey's main project, the Rotodyne, is still involved in a tug-of-war between the company and the Ministry of Aviation.

Aircraft engine manufacture was rationalised long ago. Rolls-Royce is already so big, and produces so large a proportion of the country's aero engines and rocket motors, that its further growth could be regarded as a matter of concern; indeed the Government's main object has been to keep alive at least one potential competitor. Rolls-Royce has recently been attempting to broaden the basis of its business by expanding into petrol, diesel and nuclear-powered engines. Two years ago, Bristol Aeroplane and Hawker Siddeley formed the jointly owned Bristol-Siddeley Engines, which is now one of the aircraft industry's five major groups; de Havilland engine factories will presumably be added to its strength.

There remains a handful of uncommitted companies, of which the most important are Shorts in Belfast, Handley Page and Fairey Aviation. Shorts has most work, with contracts for a new military freighter and a small Navy missile, the Sea Cat, which is a substitute for a gun and does not therefore require specially built missile ships (which Hawker Siddeley's Sea Slug lacks) and is likely to be ordered in much bigger quantities. But the Government is a majority shareholder in Shorts (Bristol Aeroplane has a small holding) and this, combined with Ulster politics, makes Shorts an awkward proposition in rationalisation. Neither Handley Page or Fairey have much work in hand and Handley Page is perhaps the more dependent on aircraft production for its livelihood. By the end of next week the Minister of Aviation hopes to have tidied these loose ends away, but the directors may still have to ask themselves whether amalgamation in the interest of tidiness would be in the best interest of their shareholders. If Handley Page chose to liquidate and divide its assets, shareholders might expect, as things stand at present, 14s. for each ordinary share now standing at 11s. and 50s. for each of the preference shares, now priced at 25s. But liquidation of this kind would create the kind of local unemployment that the Ministry is anxious to avoid and considerable Government pressure is likely to be brought to bear on some group to make an offer for Handley Page and Fairey and upon those companies to accept it.

MR SANDY'S lever in all this is the offer of Government aid for development; only this has brought such old competitors as de Havilland and Hawker Siddeley, or Vickers-Armstrongs and English Electric into partnership. But the Minister will have to move carefully if he is not to undo the good work he has done so far. The danger is that the industry may feel that it has done what was asked of it; that this is enough and no further effort is needed. But the truth is that these mergers achieve nothing of themselves beyond putting the industry in the right posture to rationalise and build up its strength. If the Government helps individual civil projects, the recipients must never be allowed to return to the old days of full government subsidy which they enjoyed in the early 1950s when Mr Sandys was Minister of Supply. He must convince the industry that he has changed his spots. During his period at the Ministry of Supply, Mr Aubrey Jones tried to lay down rules for joint investment by government and industry in new civil work, giving manufacturers a positive stake in success and positive penalty for failure. This is the only sensible rule; it must be firmly defined when Mr Sandys makes his statement of policy after Parliament reassembles.

The first candidates for Government aid will probably be the engine manufacturers, hard pressed for the £20 million that it costs them to develop a new engine for civil use. Rolls-Royce has found this burden particularly heavy. But on their heels in the queue are likely to be the two potential makers of medium-range civil jets, de Havilland-Hawker Siddeley and the Bristol-English Electric-Vickers group. Orders for between 500 and 700 jets of this size might be placed throughout the world; at present two groups are competing for an order for about 20 such aircraft from Trans-Canada Air Lines. If the order goes to Vickers, as it might, and not to de Havilland, the Minister will face the dilemma of being asked to support duplication of effort. It is just as well that this issue has to be faced at the outset, because if these groups are going to emerge large and powerful they are bound to begin by competing in every promising market.



Coal at the Bottom?

IN 1959 industrial production in Britain was probably 5 per cent higher than in 1958, but the year was also, on the average, more than two degrees warmer. There is only one business in which those two statistics have anything to do with one another: the fuel market. And there, in 1959, the one seems largely to have offset the other. For other things being equal, a rise in output of that order might have been expected to increase the total amount of fuel used in the country by 2½-3 per cent. One of the other things is weather, though for each degree higher in temperature, the Ministry of Power thinks, total fuel consumption is usually reduced by only about 0.7 per cent. In practice, the National Coal Board estimates last year's coal consumption at about 190.5 million tons, and the *Petroleum Press Service* has put oil consumption at 33.4 million tons, which on Ministry arithmetic would be equivalent to just on 57 million tons of coal. Throw in up to 2 million tons of "coal equivalent" for the output of hydro-electric and nuclear power stations, and one still arrives at less than 250 million tons of "coal equivalent" consumed in Britain in 1959, against 248.1 million tons in 1958. In terms of fuel, Britain seems to have had its recovery from recession to boom on the cheap—thanks largely to the sun.

One cannot expect the Coal Board to see it that way. For virtually no increase in the country's consumption of all fuels has meant a further sharp drop in coal consumption, and unsold stocks piling up another 16 million tons instead of the 3 million tons it had bargained for, to reach the huge and costly total of 35 million tons by the end of the year. Not until November, in spite of the rapid rise in industrial activity, did coal consumption in any month of last year fractionally exceed that twelve months before; not until the week after Christmas did the level of unsold coal stocks drop slightly, and that only because holidays cut output. This abnormal level of stocks measures the lag between the rapid fall in demand over the past three years and the board's efforts to cut back output. Consumption fell by 28 million tons a year, or nearly 13 per cent, between 1956 and 1959; by ending Saturday working, cutting opencast production, and closing 90 mines, the board reduced annual output by 18 million tons between 1957 and last year.

SOME of that fall in demand between 1956 and 1959 was due to "non-recurring or temporary factors": the board lists these as 6 million tons a year due to the Government's programme of converting power stations to oil, and roughly another 6 million tons through differences in temperature (1956 was not even as warm as 1958). This year could be warmer still; but no fuel industry could bank on this in its budgeting. It reckons that 6 million tons a year of the reduction in demand would have been "due to recession"; with industrial output last year probably 5 per cent higher than in 1956, that sounds rather odd, but the Coal Board explains that higher production by the heavy users of coal, who had built up big stocks (for example of coke) has taken some time to pull up coal consumption.

Oil consumption in the power stations has now about reached the peak rate agreed under the present, revised contracts; it is expected to remain at this level for some time and then to decline somewhat. But competition from oil in other parts of the market, which the board reckons to have displaced about 7½ million tons of coal a year between 1956 and 1959, and advances in consumers' fuel efficiency, which may have reduced demand by 2-3 million tons a year, are anything but non-recurrent; they are unceasing. And one inevitable result of the switch from shortage to surplus has been that consumers no longer bother to hold as much coal themselves; in addition to the cut in their actual consumption, they reduced their "distributed stocks" (and therefore coal sales) by a further 4 million tons over the three years. Surplus coal in Britain, moreover, is merely part of a world fuel glut; the board managed to export little more than 4 million tons last year, against the competition of fuel oil at a discount and of Polish coal offered at "a given margin below whatever British prices are slashed to, with a 30-day retrospection on the lower price."

Sir James Bowman, chairman of the National Coal Board, sees the industry's reduction of output since 1957 not as "chasing demand down," but as a steady retreat from marginal mines and faces to a more compact, concentrated, efficient sphere of operations. To the outsider this may seem a brave exercise in hindsight; but it is true that output per manshift rose more than 5 per cent last year, though the favourable effect of this on production costs, some 1s. 9d. a ton, was swamped by the heavy cost of putting coal into stock. Sir James would claim, too, that the industry has scored a notable success in closing 90 pits without leaving more than 1,300 of the 17,000 miners involved out of work at the end of last year. The board's manpower policy was assisted by the heavy "wastage" of men leaving the mines for other booming industries that had so often hamstrung the industry's attempts to raise output in earlier years but in 1959 helped it out.

BY now, the board believes "with a good deal of modesty but a great deal of confidence" that coal demand, for the present at least, has about reached the bottom. It hopes that this year, with some of those non-recurring factors no longer present, home consumption and exports should reach 196 million tons, slightly more than in 1959. But that does not mean it can stop cutting output; for in 1959 it still produced 16 million tons more than it sold. And this year, Sir James says it is determined that it will make no further net addition to stocks."

Plans are in hand, therefore, to cut output by another 12 million tons or so. Opencast production, the most profitable activity of the board, is to be cut from 11 million to 7 million tons, half the level it was in 1957; about 46 more collieries are to be closed, cutting another 4-5 million tons a year in all; and in other mines less economic faces and districts will be closed, or operated only on single-shift, bringing output down by another 2-3 million tons. Recruitment will be confined in most areas, as in 1959, to juveniles and craftsmen. And there will be another big net reduction in mining manpower over the year; during the first quarter all men aged 65 or over are to be retired.

In announcing these plans, which he hopes will finally bring production below demand, Sir James Bowman was this week entitled to claim some respect for the way that the coal industry has, somewhat grimly, adapted itself to circumstances. Until now the National Coal Board, unlike the miners, has set its face against asking further protection from imported fuels; but this week, rather oddly if he really believes that coal is passing the bottom of this recession, Sir James did offer some possible cheer to the National Union of Mineworkers. If, he said, the taxes on fuel oil already widely imposed in Europe "should mean an unloading of fuel oil normally sold in Europe into this country, that might lead the board to change its view." Certainly the board does not want to leave miners the impression that it is less staunch than the unions in "fighting for coal" (or, perhaps, less ready to lobby than foreign private coalowners are). But on his own "confident" analysis, would not the time for lobbying have passed?

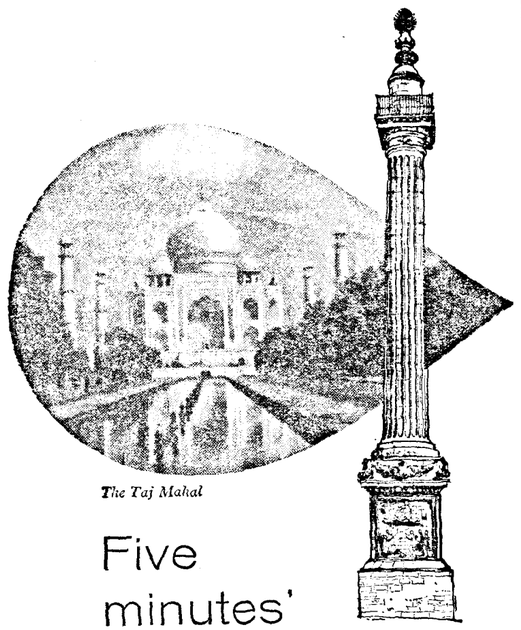
In one other pronouncement of policy, the board stuck to caution. Asked about research into the total gasification and other chemical processing of coals, Sir James referred reasonably enough to the independent committees now looking into these possibilities on behalf of the Ministry of Power. But he added that he would refuse to accept such research as "a single NCB responsibility" and suggested that if approved it ought to be "a national responsibility." In principle, that too is fair. But Sir James must be aware that so far from its being "a single NCB responsibility," the Coal Board so far has had little directly to do with this research; and that where "national" (i.e. Ministry) responsibility has reigned, neither the support given nor the speed of progress have appeared impressive. If new techniques of chemical processing offer significant extra chances to coal in this age of the fuels of convenience, as they well may, the board's energies, as well as its financial support, ought to be deployed in pressing development forward; it may well be a job for the fuel industries really concerned to tackle together.

BUSINESS NOTES

BANKERS AND BIDDERS

Mere Financiers

THE first of this year's annual reviews by the chairmen of the big banks are disappointing. Mr Anthony Tuke of Barclays does include a number of interesting observations on banking, whereas Sir Harold Bibby of Martins devotes far more space to ruminations about trade unions than to describing or commenting on the business that he is engaged in. But both bankers display an attitude towards take-over bids that makes one wonder whether the British Aluminium affair ever happened. It is remarkable that its lessons have still to be learned by such exalted spokesmen. "Bids and counter-bids leave the general public with the impression that someone is making far too much easy money. This is bad. . . ." Thus Sir Harold Bibby, leaving himself dangerously open to the interpretation that easy money is all right as long as the public doesn't know.



Mr Tuke discusses the take-over bid as a kind of disease. The City has recently been "suffering from an epidemic" of them, and some have brought criticism upon those concerned, "including on occasion, I am sorry to say, certain of the less important City houses." (The converse, that all the leading houses had escaped criticism in connection with take-overs, would not be acceptable.) The code of conduct suggested last autumn by the leading City associations (including, let it be remembered, representatives of the committee of London clearing bankers) is said to be acceptable in its way, but not to have gone far enough to check "the road hog." Industrial mergers, in Mr Tuke's view, are usually all right. It is a different matter when a bid comes from a "mere financier" (a phrase that sounds odd from a banker). Mr Tuke particularly dislikes bidding and counter-bidding that lever up the take-over price; certainly his own bank not so long ago showed its preference for paying less than the market price for 25 per cent of the attractive equity of United Dominions Trust. He draws the general moral that where "any unpleasant smell" surrounds any particular transaction, "no financial support of any kind should be given to it." On which the proper comment seems to be that while club rules of some kind are certainly needed to stop undesirable practice, there is nothing to be said for arbitrary blackballing.

Mr Tuke supplements all this with important new facts on Barclays' banking business. The bank now has "well over two million" current accounts. Many new customers have come in the past year, the great majority to deposit rather than to borrow money; some 15-20 per cent have been weekly wage earners or their wives. Mr Tuke sees little attraction in formal term loans, at a rate of interest higher than on the orthodox advance. He contests the statement of the Radcliffe committee that the banks used to feel able to commit 60 per cent of their deposits to advances; Barclays, he says, would eventually like to see the advances ratio fluctuating between 45 and 50 per cent, with investments, the "third line of defence," at about 20 per cent. And if the conventional minimum of 30 per cent in liquid assets is made mandatory, as the Radcliffe committee suggested, there would then in Mr Tuke's view be no need to observe the 8 per cent cash ratio which practical bankers and monetary theorists now regard as obsolete.

INDUSTRIAL MERGERS

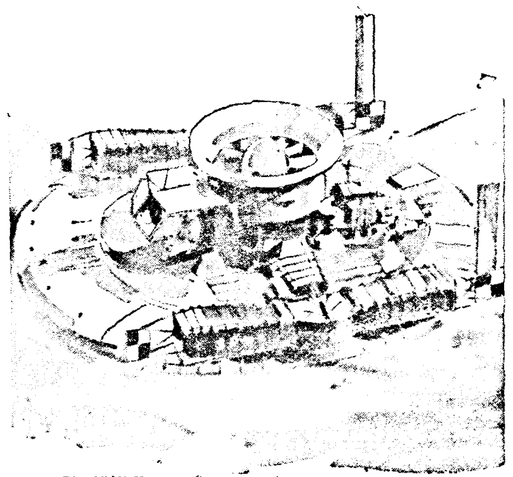
Cross Bidding

WHERE the ties between two companies are already strong, a merging of their interests is greatly eased because the two boards should have all the facts that lead to equitable terms between the two sets of shareholders. One such case is P and O's offer for the minority shareholding in Orient Line, as a step towards greater administrative and operating efficiency. The terms seem eminently fair. P and O owns about 54 per cent of the Orient Line equity and it has now offered to exchange £13 of deferred stock for every ten of the

The Taj Mahal

Five minutes' walk

FROM THE MONUMENT



Five minutes' walk from the Monument of London could take you inside The Hongkong and Shanghai Banking Corporation . . . and, *for business purposes*, inside India. The same walk could take you inside the other territories where we are established. We can provide you with up-to-date credit information and advise you on many other aspects of business with the Far East. As the largest British bank established by the Far East for the Far East, with branches in 20 countries and a network of agencies in all other principal trading centres, we are in a unique position to help you.

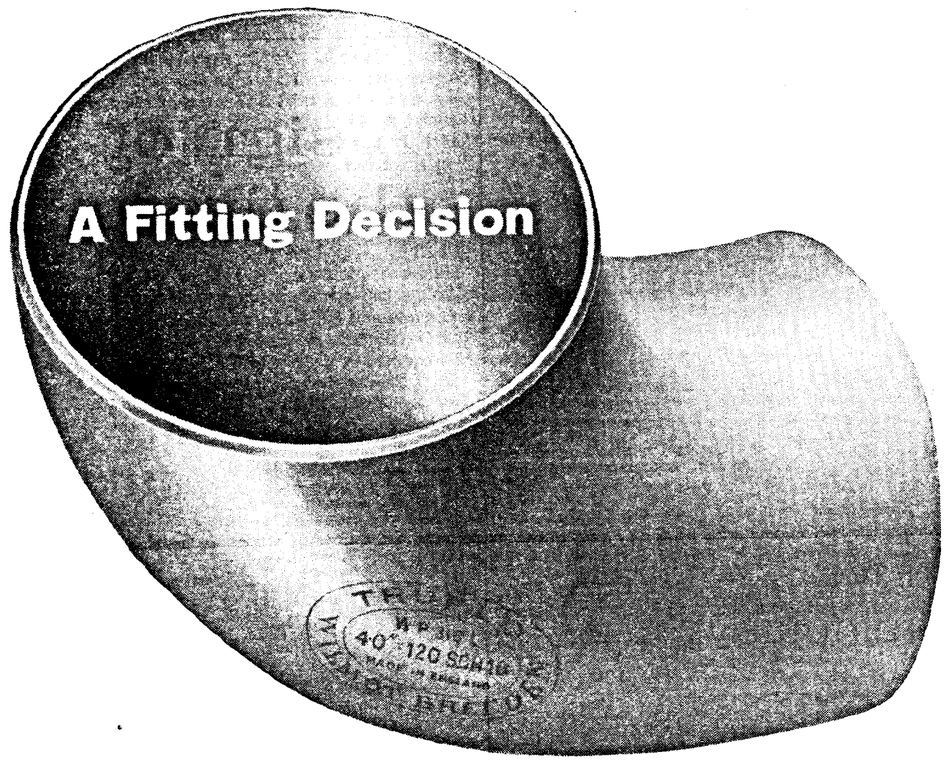
THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG
LONDON OFFICE: 9 GRACECHURCH STREET EC3

Branches throughout the Far East; also in New York, Hamburg and Paris. Offices of our Subsidiary in San Francisco and Los Angeles.

A sign of the times...

The SRN1 Hovercraft



It's a sign of the times, too, to have a share account with the Abbey National Building Society. Today, over 600,000 people all over the country have their savings safely invested in this great national institution. The return is good 3½% per annum with income tax paid by the Society. This represents £5.6.1 per cent when income tax is paid at the standard rate. Regular savers should enquire about Abbey National Build-Up Shares which yield an even better return. DEPOSITS IN THIS SOCIETY ARE TRUSTEE INVESTMENTS.

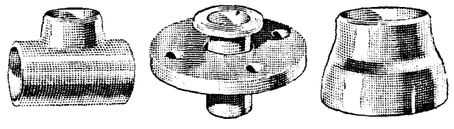
Member of The Building Societies Association



Light wall piping systems are now being specified for chemical, petro-chemical and process plants throughout the world and the demand for light wall elbows and fittings has increased accordingly.

As a result of Wilmot Breeden's recent decision to manufacture the TRUFLO range of extra low carbon stainless steel, nickel, Monel,* Inconel,* Corronel 210* and aluminium fittings in a variety of scheduled wall thicknesses, British construction engineers can, for the first time, be sure of a regular and convenient source of supply.

Many industries will have need of this service; the petroleum, chemical, nuclear and processing industries in particular, where stainless steel and nickel alloy fittings ensure the necessary safety factor.

Because TRUFLO fittings are mass-produced in the United Kingdom, their price is favourable and their availability assured.

TRUFLO fittings are manufactured to a very high quality standard of finish and conform to the dimensional requirements of American standards ASA.B36.19 and MSS.SP-43 for schedule 5s and 10s wall thicknesses and ASA.B16.9 for schedule 40s and greater. British standard BS.1640 also applies and in all cases, materials conform to ASTM.A312 and A.403 (stainless) and ASTM.B127 and B162 (nickel alloy).

TRUFLO By WILMOT BREEDEN

remaining 1,432,350 shares in Orient. With P and O at 49s. that puts a price of 63s. 9d. on Orient, compared with the pre-bid market price of 60s. Similarly, the directors of Reyrolle and C. A. Parsons should have little difficulty in deciding the terms for integrating the two concerns through a new holding company. There are already close ties between the managements; their products are complementary; both belong to the Nuclear Power Group; and Reyrolle owns 40 per cent of the Parsons equity.

Where companies are distinct, the possibility of competitive bidding arises. Why this should be denounced as something objectionable when it ensures that shareholders receive the top price is hard to understand by anyone with a respect for a free market; it is far preferable to the kind of cosy agreement that takes little note of shareholders' interests.

In the competition for Crosse and Blackwell the directors are in effect leaving the shareholders to decide which bid to accept. Nestlé first bid 72s. in cash; Fisons countered with 82s.; and now Nestlé has replied with 84s. The directors of Lancashire Dynamo said nothing about the surprise bid on Christmas Eve by Metal Industries of £4 of MI ordinary plus 30s. cash for every £5 They apparently kept quiet because they were already negotiating a merger with EMI; the terms, which Lancashire Dynamo directors recommend, are 150 EMI ordinary shares for every £100 of Lancashire Dynamo; with EMI ordinary at 52s. this puts a value of 78s. on Lancashire Dynamo, well above the 66s. offered by MI. EMI's offer for the preference shares is also slightly better than MI's.

Courtaulds, through its subsidiary, Group Developments, has made a number of successful bids for small concerns. Now it is making a big one of £2 of ordinary stock for every three 10s. shares in Pinchin Johnson, the biggest paint manufacturers in this country. With Courtaulds ordinary at 62s. that imputes 41s. 4½d. for Pinchin Johnson ordinary, which on the eve of the bid stood at 31s. 6d. This is not unattractive, especially as the decision to raise the Courtaulds ordinary dividend from 9⅓ to 12½ per cent will ensure an income to Pinchin Johnson shareholders at least equal to that which they have recently received. The attraction to Courtaulds, which already owns one paint company, Cellon, is that it will add production facilities to the group which can make full use of the technique and paint "formulations" of the American concern, Glidden International, secured by Courtaulds in an agreement signed at the end of last year.

Wrong Bidding

It is not against bids such as these that Mr Tuke and others like him should direct their criticisms. They might instead turn their attack on countermoves to bids which seem designed to limit the shareholder's opportunity. They might, for instance, take a look at Foster Clark. Mr Richard Scott and St Martins Preserving always seem to get a hostile reception to their bids. They did with Chivers and now again with Foster Clark. St. Martins made an offer of three ordinary shares for one in Foster Clark; with St. Martins now at 6s. 9d. this is worth 20s. 3d. for Foster Clark shares. The shareholders have now been advised by the directors to turn down this offer in favour of one much less attractive. This has been made by Scon Trust on behalf of clients (as yet unnamed) who offer 7s. in cash plus one 8 per cent cumulative second 10s. preference share in Foster Clark for every one of its ordinary shares. These preference shares are repayable at 12s. 6d. each. If this offer purports to match the market value of the St Martins bid, the preference shares carry an imputed value above their repayment price. It is an odd kind of bid that offers preference stock for ordinary stock in the same company. No ordinary shareholder should look at it at all without disclosure of the principals who are making it—and then they should look at it very hard.

RAILWAYS

Traffic on the Turn

The long-looked-for improvement in railway traffic, upon which the Transport Commission has struck its successive bargains with the Government for financing the railway modernisation programme, may well have begun towards the end of last year. If it has—the evidence for it as yet lies in the traffic returns of no more than a few months—then the turn-round has come not a moment too soon, for earlier last year the commission was still professing the hope that the railways might achieve a financial surplus by 1963.

The change seems to have come about the middle of the year with the general upsurge of industrial activity. Merchandise and mineral shipments from then on show considerable gains over 1958: before mid-year they were still below it. But the cutting of many freight charges in an effort to entice back some of the traffic lost to road haulage in the last decade meant inevitably that freight revenue would respond rather more sluggishly. By September, however, freight receipts had begun to catch up too. Before then they were down nearly £18 million on 1958—about 9 per cent: in the last four months of 1959 they were £2 million up. With another £2 million extra from passenger fares during the year, total rail revenue for 1959 finally came to only about £13¾ million less than in 1958.

This difference represented just about the year's total drop in earnings on coal traffic, which also fared more badly at the beginning than at the end of the year. The commission's other businesses, London Transport (which had a six-week bus strike in mid-1958), provincial and Scottish buses, shipping, canals, and British Road Services, earned an extra £9¼ million, so that the commission's income from all its traffic operations last year, at £649 million, fell only £4½ million.

Long Haul Ahead

Whether the commission's total deficit for 1959 exceeded the £89 million lost in 1958 by less than the £4½ million drop in revenue depends upon how well it managed to keep costs down. True there was no major wage award last year, prices were more steady, and more redundant services were lopped off. But interest charges on its greatly increased borrowings must have been heavier. No doubt the sign of some improvement in rail freights encouraged Sir Brian Robertson to make his unusual promise to back date an interim wage increase after the railway pay committee reports in April. If he did this in an attempt to stave off the foolish one-day unofficial rail strike in the London area on February 1st, he appears to have spoken in vain, though his promise may have had better men from the industry.

But the railways, and the commission, are still in the middle of trouble. BTC has now probably used up nearly three-quarters of the £400 million that it is allowed to draw upon to finance its deficits in the seven years 1956-62; and this by a time when, had it not been for the turn-down in industry and the rather more prolonged malaise in coal, it would originally have expected to be breaking even. Modernisation is proceeding apace, but the railways still have two big hurdles to surmount. The first is to manage to afford railwaymen a scale of pay comparable with other industries, without at the same time putting its finances into further disarray. The second is to increase freight traffic more than in line with the increase in production. For, so far, the recent gain in rail traffics has not been as big as the revival in road haulage.

STOCK MARKETS

Bank Rate Fears

Prices on the London stock exchange have continued to drift lower in the past week. Predictably, the cold light of the new year has picked out the difficulties as well as the promise of the economic prospect. Investors both in London and New York have become preoccupied with the likelihood of a rise in interest rates. On Wall Street these fears have proved a stronger influence than the ending of the steel dispute, which some market pundits had expected to form the basis of a major new advance. Wall Street prices fell sharply at the beginning of this week, and in the eight days to Wednesday the Dow Jones

average dropped from its peak by 29 points to 656. In London, individual investors continued to take profits, and few major buying orders came from the institutions. Shares of aircraft firms received some support after the Government had indicated that it was prepared to give more financial aid, but on balance *The Economist* indicator dropped by 5.4 points to 372.4 (1953=100) in the week to Wednesday. The relapse is still a modest one, and few serious observers doubt that it is salutary.

Gilt-edged have also, inevitably, been adversely affected by the expectations of a rise in Bank rate, though the longer dated securities have again held up well in the circumstances. Short bonds obviously have no great attraction at such a time, and it seems that almost the whole of the £412 million of maturing Exchequer stocks offered for conversion into the new 5 per cent 1971 stock represented holdings already bought into the official departments. Of the outstanding £236 million, £139 million falls due in mid-February and £97 million in early March. This stock is held mainly in the banks and industrial companies (the discount houses have little left) and it may be that some outside holders who refused conversion now may on if the prospect is then a little clearer.

OVERSEAS TRADE

Imports Up More than Exports

LAST year British exports increased at the respectable rate of five per cent, and imports—not surprisingly—by rather more. The value of exports was £3,326 million fob, which was £154½ million more than in 1958, and one per cent above the previous peak in 1957. Imports, swelled by industry's expanding needs, amounted to £3,993 million cif; this was £242½ million —or 6½ per cent—more than in 1958, but one per cent less than in 1957. Re-exports last year dropped by £11 million to £130 million, and were the same as in 1957. The volume of imports appears to have risen by rather more than 6½ per cent, whereas exports probably rose about as much in volume as in value.

UNITED KINGDOM TRADE
(Recorded values: £ million per month)

* Provisional.

As exports did not start to recover until the second quarter the rate of increase from April to December was more than five per cent. In December alone, not usually a good month, exports fell by only £1 million to £297 million fob; this brought the average value in the fourth quarter to £300 million, and the Board of Trade estimates that after eliminating normal seasonal variation, exports in that quarter were 5½ per cent higher than in the third quarter. But imports were also rising at a faster rate. Imports in December rose by £15 million to £372 million cif, bringing the average for the fourth quarter to £361⅓ million a month, and the seasonally adjusted average was 8½ per cent higher than in the third quarter. With re-exports last month £1 million higher at £10.7 million, the apparent trade deficit (now banished from the official announcement) was £15 million higher at £64 million.

COMPANY PROFITS

Shareholders Do Well

TRADING profits of companies reporting of some £11 million to £336 million; the full analysis of profits and balance sheets will be given in next week's issue. The increase of 3¼ per cent in trading profits follows increases of 4½ per cent, ¾ per cent and 2 per cent for the first three quarters of 1959. In the latest period, total profits have been swollen still further by an increase of nearly 60 per cent in non-recurring credits, primarily from taxation provisions released by the cut of 9d. in the standard rate. This is also reflected in the fall in tax payments, down by £8 million to £101 million. As a result, earnings for ordinary capital have risen by 16½ per cent, from £109 million to £127 million. This in turn has encouraged directors to distribute a larger portion of their profits. Net ordinary dividend payments, including some "profits tax" interims which effectively related to the previous year but which were a charge on the latest year's profits, have risen to £55 million.

As usual the profits of the last quarter are dominated by the results of the "motors, cycles and aircraft" group, which account for about one-quarter of total profits at this season. Profits of this group fell by £4 million, to £74 million, but the fall was due almost entirely to the poor results of the aircraft section, and in particular of Hawker Siddeley, which showed a fall of over £3 million in its gross trading profits. Investors who have bought shares at the recent high levels will welcome the more liberal dividend policy shown in these figures; they should also reflect that directors' dividend decisions were no doubt based partly on the expectation of higher profits in the current year. But on all the recent evidence about production, 1960 should be a good year for profits and dividends.

STEEL

Record Output, Higher Exports

EXCEPT over the Christmas holiday week, crude steel output in Britain in December was the highest ever recorded, 474,300 ingot tons a week, topping the November figure by 3.4 per cent. This record rate brought the year's output up to 20.2 million tons, rather more than had been estimated in the last weeks of the year; as compared with 1958, a 53-week year, this meant an increase of 5 per cent in output, though it did not regain the level of 1957 or even 1956. Output now is running at the rate of about 23½ million tons a year, and the Steel Board expects it to rise, giving perhaps 24 million tons for this year as a whole—though capacity by the end of 1960 will reach about 25½ million tons a year, so that if the demand is there production could be somewhat higher.

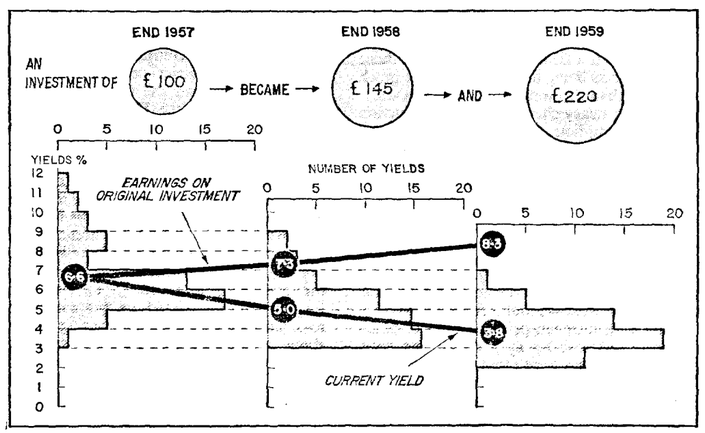
In the third quarter of last year demand from American steel consumers bereft of home supplies by the strike helped to boost Britain's steel exports; Britain's share of international trade in steel was in fact larger than that at any time since the beginning of 1957. The British Iron and Steel Federation has reckoned the level of steel exports by producers for the whole year as equivalent to about 3½ million ingot tons, more than in 1958 though less than in the post-war peak year of 1957; though the exceptional American demand cannot be expected to recur this year, the federation hopes that general improvements in world trade should enable exports this year to rise by another 5-10 per cent.

FILMS AND TELEVISION

A Call to Boycott

THE boycott that the Cinematograph Exhibitors' Association has recommended to its members against the showing of any films made by the two independent film producers that sold their older films to commercial television last week is likely to be more effective in practice than anything done so far by the Film Industry Defence Organisation. Both Rank and Associated British, the two big circuits, are prepared to apply the boycott and, in their present mood, most other exhibitors in CEA—comprising nearly every cinema in the country—appear ready to do so too. Without a guaranteed outlet for their films in this country, the two producers concerned will not be keen to embark upon any new production. One of them, Mr John Woolf's Romulus and Remus Films, has been making about 4-5 films a year over the last ten years. The 55 films that Associated-Rediffusion bought from the two producers, and which it has offered to rent to cinemas through the distributing company it acquired at the same time, are also included in the exhibitors' boycott.

Ironically it was because just this kind of sanction—an automatic ban by the cinema trade on any producer or distributor who sold films to television—was struck out of the Fido agreement last year that Mr Woolf removed his support from the organisation and resolved to go ahead with his deal with television. The sanctions were removed in order that the American companies in the agreement should not run foul of the United States anti-trust laws and, probably, also to avoid trouble under the Restrictive Trade Practices Act here. But the other producer involved, Daniel Angel Films, had always been opposed to Fido.



Even without this weakening, however, Fido has appeared almost to be positively inviting its flank to be turned. It has clearly not been prepared to spend much money on buying up old films, particularly those that the television companies are likely to want. It has merely been asking most producers not to sell them to television, yet, on the other hand, not to ask Fido to buy them either. Thus, in effect, it wants producers and distributors simply to sit on assets they could profitably make use of. Previously it has done little about the steady seepage of feature films to television—which, last year, showed the formidable number of more than 300. What has made the film industry particularly angry this time is that the latest batch to be sold are not all that old: 44 of the 55 were made since 1950. But it seems invidious, to say no more, that the full weight of opprobrium should descend on two independent producers; several bigger fry have been allowed to get away with it before.

Yields in the Bull Market

IN the past two years prices of leading ordinary shares have more than doubled. By the end of 1958 *The Economist* indicator had risen to 255.6 (average 1953=100), compared with 175.7 at the end of 1957. By the end of last year the indicator had advanced to 383.8, to show another increase of 50 per cent over the year.

The accompanying chart illustrates what would have happened in this bull market to the portfolio of an investor who at the end of 1957 invested his capital in equal amounts among the 50 shares used in calculating the indicator, and who at the end of 1958 revised his portfolio to give equal weighting to the slightly revised set of 50 shares. For every £100 invested at the end of 1957 the expected yield then was 6.6 per cent, with the individual yields on the 50 equities ranging between 3 and 12 per cent. By the end of 1958 the £100 would have appreciated in capital value to £145 and by the end of 1959 to £220. Dividends rose during this period and the annual income (not reinvested) would have risen in this portfolio to 7.3 per cent in 1958 and in 1959 to 8.3 per cent on the original £100. Share prices, anticipating future earnings and dividends, rose so rapidly that the current yield fell to 5 per cent at the end of 1958 and 3.8 per cent at the end of 1959. Over this period yields, which had ranged from 3 to 12 per cent at the end of 1957, ranged only between 2 and 7 per cent at the end of last year.

This is illustrated in the contraction in the depth of the shaded areas in the accompanying chart, showing the number of shares in each 1 per cent range of yields. Of the 50 shares at the end of 1957 only six had yields smaller than 5 per cent, but by the end of 1959 only six had yields more than 5 per cent. This contraction in the range of yields was to be expected in such a prolonged bull market. As the equity cult caught on, investors adjusted their ideas about the yields that looked acceptable on ordinary shares. The narrowing of the range of yields also means that they view the prospects for a bigger number of British industries in a more favourable light than they did at the beginning of the bull market. That is why they were buying shipping and cotton textile shares towards the end of last year as well as steels, stores and motor shares.

THE JASPER AFFAIR

The Charges

LAST Sunday evening, a few hours before Mr Friedrich Grunwald was due to appear on remand at the Mansion House, Mr Harry Jasper, head of the Jasper group of companies, and Mr Herbert Murray, secretary and managing director of the State Building Society, were both arrested. On Monday both were remanded on bail of £40,000 until February 1st, while Mr Grunwald, who was charged on remand with fraudulently converting £3,255,500, was allowed continuing bail, also of £40,000.

There were two charges against Mr Grunwald and Mr Jasper together, a further charge against Mr Jasper alone and two charges against Mr Murray. The first charge against Mr Grunwald and Mr Jasper was:

> That together on July 20, 1959, at Mount Street, W.1, by the reckless making of a statement and promise contained in a letter to the shareholders of Lintang Investments which were misleading, false or deceptive, to wit the statement: "On behalf of our clients, H. Jasper and Co., we offer to acquire all your shares of 5s. each in the above-mentioned company for 24s. per share" and the promise, "if the offer becomes unconditional our said clients will make payment to the accepting shareholders in accordance therewith on August 31, 1959," they induced another person to enter into an agreement for disposing of certain securities, to wit 2,750 shares of the said Lintang Investments.

The second joint charge against Mr Grunwald and Mr Jasper was:

> That together on August 4, 1959, at Mount Street, by reckless making of a statement and promise contained in the letter of offer to the Ordinary shareholders of the Ely Brewery Company which were misleading, false or deceptive, to wit the statement: "On behalf of our clients, H.

Jasper and Co., we offer to acquire all your fully paid ordinary stock units of 3s. 6d. each in the capital of the above-mentioned company at 5s. per unit and of your 6d. paid up units at 2s. per unit," and the promise, "If the offer becomes unconditional our clients will make payment to the accepting shareholders in accordance therewith on September 14, 1959," they induced another person named Arthur Isidore Freeman to offer to enter into an agreement for disposing of certain securities, to wit 7,000 shares of the said Ely Brewery.

Mr Jasper alone was charged:

That, on September 14, 1959, at Cardiff with intent to defraud, causing Lazarus Nidditch to execute a valuable security, namely, a share transfer deed, by falsely pretending that statements contained in a letter dated September 14, 1959, and then produced to the said Nidditch, were true.

The two charges against Mr Murray were:

That, in the City of London, he aided and abetted Friedrich Grunwald in the fraudulent conversion of £3,255,500 . . . That between September 21 and 22, 1959, at Upper Brook Street, W.1, being a director of a body corporate, to wit the State Building Society, with intent to defraud he falsified the minutes of a meeting of the directors of the said society held on July 21, 1959.

Sir David Cairns, QC, for Mr Grunwald, said that it was important that his client should be able to see as early as possible the report of Mr Neville Faulks, QC, on the affairs of H. Jasper and Co. (to which Mr Jasper has already had access). Mr M. Griffith Jones for the prosecution said that he was in some difficulty about giving such an assurance since the report was the property of the Board of Trade but he said that "so far as it is possible there will be no objection to Mr Grunwald seeing all he wants to see that is necessary for his defence."

ATOMIC INSURANCE

Reactors and the Law

The insurance companies and Lloyd's explained last week that changes would be made in new policies when the Act regulating the insurance of nuclear reactors comes into force on April 1st. Clarification was certainly needed, since the Act gives protection for damage and injuries caused by nuclear reactors and their fuel but does not cover risks from radioactive material as such or injuries caused by radiation-producing equipment like X-ray machines or particle accelerators. In fact the chances of serious accident with a lethal piece of cobalt 60 in a factory or hospital are probably greater than risks from a reactor.

From April 1st onwards, any policies concerned with damage to property or third party liability will specifically exclude damage and injuries from reactors and their fuels; but it will still be possible to insure against the hazards of other (peaceful) sources of radioactivity. This distinction is necessary because the new Act places liability for all third party damage squarely on the reactor owner and obliges him to insure against it for a sum of £5 million, regardless of the size and hazard of his reactor. This may seem to weigh hard on owners of small and relatively harmless reactors such as Associated Electrical Industries, the Hawker Siddeley Group (both of whom have research reactors now operating) and those universities that plan to build them. But in fact the premiums they are charged take the size of the reactor into account and do not compare with what the Central Electricity Generating Board is likely to be asked when it comes to insure its first nuclear power stations next year.

The insurance companies set great store on establishing the principle that the reactor owner is liable for third party damage, since otherwise they fear endless argument between the owner, the designer, the contractor who built the plant and conceivably the men who operated it. It is with relief that they have seen the insurance markets of Western Europe adopt the same principle, since British insurers expect to do considerable business with reactor operators abroad.

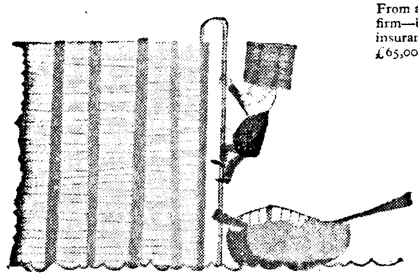
CHEMICALS

Optimistic Outlook

For Britain's chemical industry 1959 was a year of recovery, aided by record exports estimated at £285 million; all of the major sectors of the industry showed increases in turnover on 1958. Most manufacturers are confident that output will continue to increase this year, though some of them express reservations about increased competition in both domestic and export markets, which are reflected in the size and shape of their planned investment programmes for the year. A survey of manufacturers recently published in *Chemical Age* indicates that most investment in 1960 will consist of modernisation projects and extensions to existing works, and that those new projects being undertaken will be much smaller than those made in recent years.

Among heavy chemicals, both production and consumption of sulphuric acid rose by over five per cent during the first nine months of the year, compared with 1958; output of other industrial chemicals—the last to recover and slowest to rise—probably increased by at least as much. Production of fertilisers rose by about five per cent, despite delays in bringing Shell's new anhydrous ammonia plant at Shell Haven on stream; demand—which was heavy last year—should continue to rise, along with nitrogen prices. Sales of pharmaceuticals rose by 13 per cent last year, and similar rises were reported by dyestuffs, fine chemicals and coal tar products.

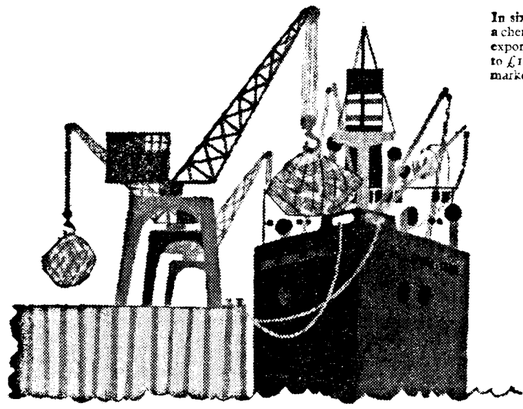
Petroleum chemicals continued to be the most rapidly advancing sector of the industry, increasing their share of total organic chemical output to 50 per cent. Total sales of plastics rose to over 500,000 tons for the first time in the industry's history, with the biggest increase being in production of polythene, perhaps slightly at the expense of another thermoplastic, polyvinyl chloride. The enormous increases in capacity that took place last year are not likely to be repeated this year, though ICI will add 15,000 tons of polythene plant; and olefine capacity is scheduled to rise to 172,000 tons a year by the end of 1961 owing to new plant coming on stream next year. It has been suggested that there may be a shortage of capacity to make polythene this year; output of this material rose by a third last year, to 90,000 tons. But capacity is now about 125,000 tons a year, which with ICI's new plant should be adequate even if a larger rise takes place this year. A large amount of new polythene plant will also be commissioned this year in other countries: not only in Europe and the United States, but in Commonwealth and other non-OEEC countries which have provided British plastics manufacturers with their best export markets in recent years.



EUROPEAN COAL

Belgium Steps Out

Steps taken by Belgium to isolate its coal market from the rest of the European Coal and Steel Community, with the reluctant approval of the high authority in Luxemburg, mean that the common market in coal has for the time being come to an end. Last May the council of ministers of the six countries rejected the authority's own proposals to deal with the mounting coal surplus by a planned reduction in output by all members, arguing that the problem was primarily a local one; that is, mainly a Belgian problem. The drastic fall in exports had hit that country badly, since high cost Belgian coal finds a ready market only at a time of world shortage. Both Belgium and west Germany went ahead on their own to restrict coal imports from other countries, and the Germans also put a tax on fuel oil: the French already had means of regulating imports, from community members as well as from other countries.



The latest Belgian move will cut coal traffic in both directions with other members heavily and involve the authority in a full system of import and export licensing and certificates of origin for community trade. Formally subject to review once a year by the authority, it is likely to last until Belgium has completed its programme of re-organisation, involving closing down about a fifth of its pits and spending heavily to modernise the rest—with substantial financial help from the authority. That programme is reckoned to take another three years.

SMALL EXPORTERS

From a £195 order, a small textile firm—backed by ECGD credit insurance—built up a flourishing £65,000 export trade within two years.

LARGE EXPORTERS

In six years of ECGD insurance, a chemical firm boosted its annual export turnover from £113,000 to £1,219,000, adding eleven new markets to its original eight.

The total shipments of ECGD policyholders increased ten per cent during the financial year 1958-59 at a time when uninsured exports dropped by six per cent. Today, when winning fresh orders is largely dependent on whether you can grant competitive credit terms to new buyers, exporters need some guarantee of payment. ECGD credit insurance provides that guarantee; allows you to expand overseas free from major financial worries. *Have a talk with your ECGD man.*

EXPORT AND EXPAND THROUGH E·C·G·D

ECGD is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

CR 37

In its U.K. depots and stores scattered throughout the world the Royal Army Ordnance Corps maintains some 600,000 different types of spares. Down to the smallest washer, these are vital to keep the modern Army's motor transport and armoured vehicles on the move.

Ensuring that the right part is in the right place at the right time is no easy task. Conventional stock control methods have been adequate in the past. But modern conditions call for modern methods, and now the Army is enlisting the aid of an EMIDEC 2400 high-speed electronic computer to help solve its clerical problems.

One of the largest and most advanced all-transistor data processing systems in the world, the EMIDEC 2400 has been specially designed by E.M.I. Electronics Ltd. to handle the clerical work of the largest organisations. Capable of performing about 1½ million calculations a minute, it will be able to provide up-to-the-minute data and statistics in a fraction of the time taken by conventional methods.

EMIDEC computers have been selected by many major organisations, including:

AIR MINISTRY · BARCLAYS BANK · BOOTS
SAINSBURY'S · MINISTRY OF LABOUR
GLAXO · KODAK · MINISTRY OF PENSIONS
I.C.I. (PLASTICS DIVISION)

Write to-day for illustrated literature on our EMIDEC systems.

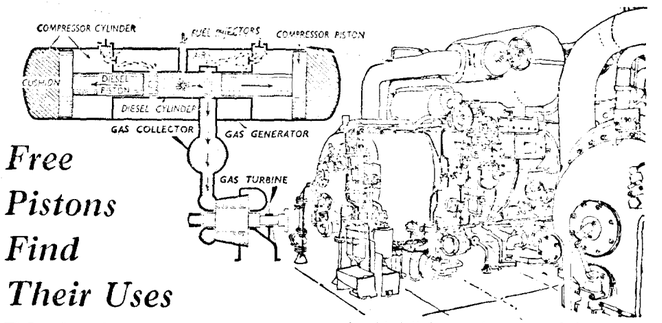
BANK DEPOSITS

Economy in Money

ALTHOUGH the average volume of bank credit outstanding in Britain in 1959 rose only moderately, by 4½ per cent, velocity of circulation rose sharply, and turnover of bank deposits rose more rapidly than for many years. The nearest approximation to any records of such turnover are the figures of cheques passing through the London Clearing House (which exclude clearings between different branches of the same bank and local clearings). The large Town clearing, which is strongly affected by stock exchange transactions, rose by 10 per cent, compared with 5 per cent in 1958. The more representative General clearing was also up nearly 10 per cent (compared with 3.5 per cent in 1958 and 6.3 per cent in 1957) and the much smaller provincial clearings together rose by over 7 per cent, the biggest increase for many years and comparing with a small decline in 1958. The active note issue also expanded faster than in 1958, but still at a modest rate compared with former years.



It is natural that in a year of rapid reflation the velocity of money should have risen following the check in 1958. An intensive survey of "Deposit Velocity and its Significance" by Mr George Garvy of the Federal Reserve Bank of New York (available from that bank at 60 cents) confirms that velocity tends to move fairly closely in step with business cycles. But it is also affected by long run technological changes which aid business corporations in their constant search for economy in the holding of idle balances. As an example, when the American Telephone and Telegraph Company pays its quarterly dividends it now deposits with the paying bank not the full amount payable on the due date but only such amounts, calculated on the basis of a mathematical probability model, as are expected to be presented on that day.

DOMESTIC HEATING

Warmth before Payment

THIS week Esso has joined Shell-Mex and BP in offering householders oil-fired central heating systems on five year

Free Pistons Find Their Uses

THE free piston engine, which uses the exhaust gases from a diesel-type combustion chamber to run a turbine, is no longer a technical novelty, but it is still a newcomer in commercial use. Only about 150 are in service in the world, though some 250 more are on order; its use as a marine engine has been hampered by the shipping slump, and its growth as a generator of electricity or as an industrial prime mover has been slow in the face of diesel competition, and the need to prove its reliability—which can only be established with time. Its technical merits are, however, gradually overcoming these difficulties. Twenty-one companies throughout the world have now taken manufacturing sub-licences for this kind of engine; the chief British manufacturers are Associated British Engineering, National Gas, and, for ships, Lithgows and Smith's Dock. So far all are making the 1,000 hp GS 34 model designed by a French licensee of the original inventor, the Marquis de Pateras Pescara. The 400 hp CS 75 engine, designed by the British licensees, Alan Muntz and Company, has only been made in limited numbers.

One advantage that a free piston installation has in fact proved to possess over the diesel is potentially greater dependability because several gasifiers can be connected to one turbine: failure of a turbine is rare, and if one gas generator should fail it can be stopped for repair while the others carry on. In fact it is normal to provide spare gas generators in a system where constant operation is needed, to allow for overhauls; this is much cheaper than keeping a complete standby set, as is necessary with a diesel installation. Maintenance is simple: one potentially big market that has begun to be tapped is for electricity generation in under-developed countries, where more power is needed than a diesel can supply but there is not the skilled labour needed to maintain steam turbines.

The cost of a free piston installation is higher than that of diesel for low powered units, but becomes comparable as the capacity is increased. It is simple to make, needing little special jigging and only normal lathes and boring machines for its production. General Motors, the American licensees, have not yet started production, because they have not found a sufficient market to justify the tooling costs that are needed for mass production.

One application that General Motors are developing which might provide such a market is the replacement of diesel engines in railway locomotives. Renault in France built a 1,000 hp locomotive several years ago, which has been in experimental use on French railways; this summer it finished the first of two 2,400 hp locomotives using two gas generators to run the turbine. These engines drive through a simple two-speed mechanical transmission, which is adequate with the turbine and saves the power loss of the electrical — or hydraulic — transmission needed for diesel engines.

The Muntz GS 34 engine developed in Britain is too wide to go through British railway tunnels; North British prepared a design based on eight British CS 75 gas generators, using the hydraulic transmission it employs on its diesel locomotives but no prototype has yet been built.

Ship propulsion is a use for which free pistons seem especially suitable; size and weight are both less than those of a diesel engine. On the ore carrier *Morar*, built by Lithgows, the first British ship with free piston power, the installation weighed 410 tons for 3,000 hp compared to about 630 tons for diesels. Space for cargo is increased because the gas generators can be arranged around the stern, with only the turbine mounted further forwards on the propeller shaft. The *Morar* has now been in service for a year, and has proved satisfactory apart from some early troubles; the second British ship so powered, the *Goodwood*, was converted from steam by Smith's Dock eight months ago, and has now completed just over 3,000 hours running with only three minor failures and the use of spares worth £180. A third ship of 4,000 hp is due to be launched later this month by Smith's Dock for the Bolton Steamship Co., which will have a reversible pitch propeller, which dispenses with a reverse turbine and raises overall efficiency by about 5 per cent.

For its latest 500 hours of running the *Goodwood* operated on residual fuel oil; the French have even run them on unrefined Sahara crude—suggesting the possibility of running oil pipeline pumping stations for oil pipelines on the oil they are pumping. If the smaller CS 75 engines can run on residual fuels they could be used as auxiliaries on ships, using the same fuel as the main engines.

credit terms. The latter had started its system, run in conjunction with Mercantile Credit, five months ago: at present it requires a 10 per cent deposit, while Esso, working with Lombard Banking, offers no-deposit terms. Both charge 6 per cent interest on the sum originally borrowed, but Esso's arrangement allows the borrower to claim income tax relief on the interest payments, and includes life insurance. The two systems operate similarly. Inquirers are passed on to a heating engineer or building contractor (one man is often both) who is the oil company's local representative; he will give an estimate, and pass it on to the finance company, which will then advance the money required for the heating engineer or builder to make the installation. Similar terms to those offered by Shell-Mex and BP are arranged by the Coal Utilisation Council, with Mercantile Credit, through the CUC's panel of approved builders' merchants, for the credit buying of solid-fuel fired heating systems. Another scheme, more like conventional hire purpurchase, is arranged by Building Industry Distributors, a trade organisation, with Olds Discount; loans are made for up to three years at 8-9 per cent interest, with a 20 per cent deposit for loans of over £150.

The initial cost of the oil heating installations appears in general to be about 20-30 per cent higher than that of similar systems using a solid fuel boiler, depending on the size of the installation and the efficiency of the solid fuel or oil boiler used. In the smallest installation likely to be considered, one able to heat the water supply and two or three small radiators, the oil boiler and its tank will cost around £100, and a solid fuel boiler £35-£40. The rest of the installation could cost around £200 for a small pipe system in an existing house, but actual costs vary immensely. For five or six radiators, to give general background heat in a three or four bedroomed house, the oil boiler would cost £110-£130, the solid fuel one £40-£75, and the rest of the installation perhaps £250-£300; while to give full heating in a similar house the oil boiler will cost £170-£200 and the solid fuel one £50-£125, with the rest of the installation costing £300-£350. Putting in central heating, householders should note, may mean a higher rating assessment.

Repayments under the oil companies' and the CUC's credit schemes are £26 a year for every £100 borrowed, so a "general background heating system" as above might cost £75 to £100 a year. Running costs of such an installation might be £60 a year on oil at 1s. 6d. a gallon, but consumption is even more difficult to estimate in advance than the cost of installation, and the wise buyer will allow a large margin above this for advertiser's optimism. Modern solid fuel heating is significantly cheaper, though the margin varies. But people choose oil for their own convenience without looking too closely at cost.

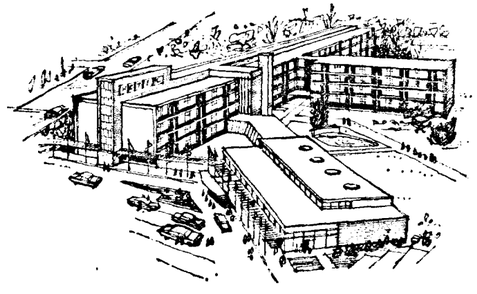
RAW COTTON

Record Consumption

OUTPUT of cotton textiles is recovering strongly throughout the world and prices of raw cotton have risen, particularly for the long staples. Consumption of cotton in the free world will hit a record this season: the International Cotton Advisory Committee expects it to reach, if not exceed, 30½ million bales, 1½ million bales higher than last season and one million bales above the 1956-57 peak. Free world production is also a record at about 31.7 million bales. Given some re-building of stocks in importing countries, and also that net exports to Communist countries keep up, production and consumption of raw cotton will be closely balanced. This is just as well, for output next season may rise further, while consumption is more likely to decline.

CHANGES IN CONSUMPTION
Raw cotton: million bales

	1956–1957	1957–1958	1958–1959	1959–1960*
Free world	29·6	28·5	29·1	30·5
Of which				
United States	8·6	8·0	8·7	9·0
West Europe	7·6	7·5	6·9	7·4
India & Japan	7·4	6·8	6·8	7·2

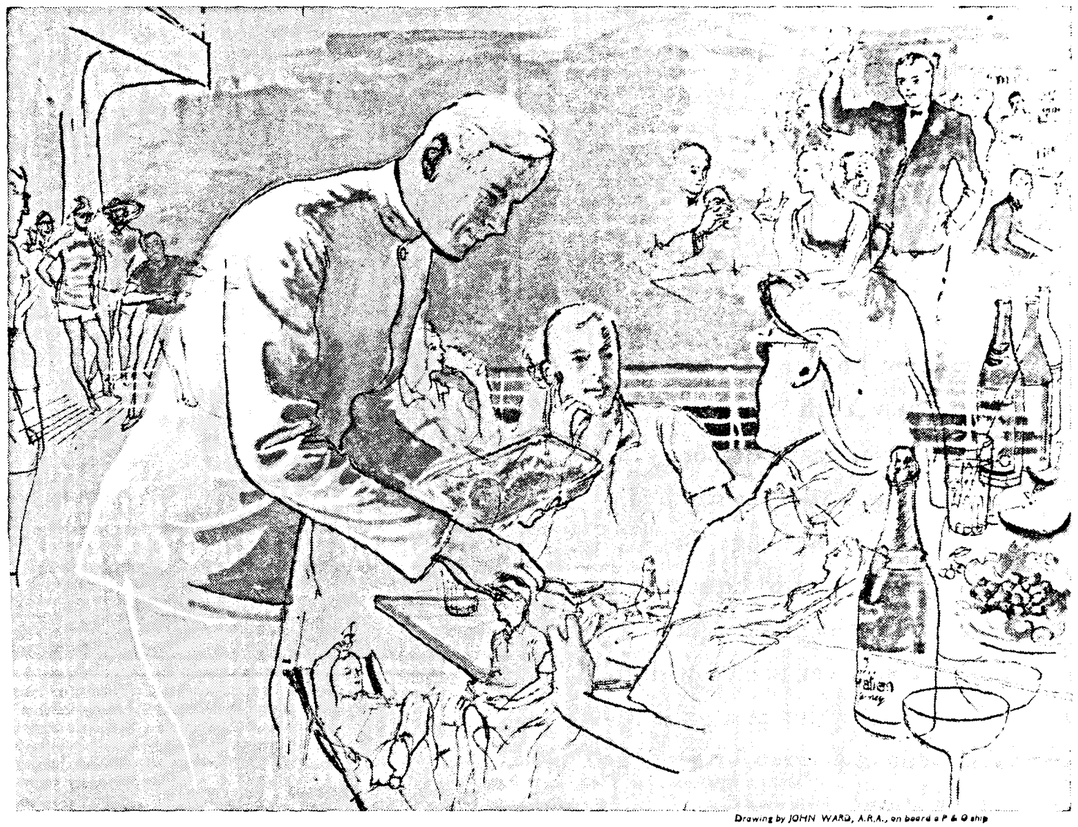


* Forecast. *Source:* International Cotton Advisory Committee.

The increase of nearly three million bales in world production this season reflects the bigger crop in the United States; output in other countries is expected to fall by about 400,000 bales to 17 million bales, and as stocks fell last season the available supply from these exporters is expected to drop by about one million bales. The increased demand can thus be met only by

HOTELS

Room at the Airport



OVER four million passengers are expected to pass through London Airport this year. An unknown but possibly substantial number of these will be arriving late at night and/or departing early in the morning; others will be delayed for varying amounts of time by fog. How many of them will want to spend the night in the vicinity of London Airport—sixteen miles from the West End of London—is even more of a guess; but one large first-class hotel has now been opened there this week, and another, still being built, will be open in a

year's time. The first of these is the Skyway Hotel, owned by Seaway Hotels Ltd. of Lake Shore, Toronto, Ontario; it was built —in just eight months— by the London contracting firm of Bernard Sunley, at a cost of £750,000. The Skyway now has 160 bedrooms, all of them usable as either single or double rooms; another wing of 100 rooms is to be added shortly. Though the hotel is only half a mile from the airport it is remarkably quiet, owing both to location and to considerable soundproofing precautions.

The company, which operates four airport hotels in Canada, one in Jamaica and the newly opened Idlewild Hotel in New York, has sensibly attempted to cater for those used to things transatlantic: the hotel boasts the longest upholstered bar in Britain, and the rooms, each with private bath and shower, are designed, furnished and decorated in an attractive if sometimes disconcerting example of Functional-type Florida Contemporary (there seem to be mirrors everywhere save on the ceiling). Free transport to and from the airport will be provided for guests, and meals will be available twenty-four hours a day. For all this (and piped music in the dining room too) the rates are £3 for a single room and £4 15s. for a double room, not including breakfast. (A similar single room at the Savoy or Dorchester hotels (also without breakfast) costs £5-6.

The company believes it will need an average occupancy rate of 65 per cent to break even, and expects to get it. It is thought that local industry—of which there is a fair amount—air crews, and fog-bound passengers will adequately supplement the summer rush of tourists. Whether there is enough potential demand to fill two hotels in the area is another question. The second hotel is, at any rate, well under way: it is a circular, 185-room building located one mile from the Skyway, being built for J. Lyons at a cost of £500,000. The building is being financed by Watney Mann, who own the site; when completed it will accommodate up to 300 guests. Besides these two, there have been only three new major hotels built in Britain since the war.

Drawing by JOHN WARD, A.R.A., on board a P & O ship

Why do more and more busy people travel to Australia by P & O?

Good food . . . good company . . . good health . . . *good business!* Time to work . . . time to prepare . . . time to think! These are the reasons why more and more busy people travel to Australia by P & O.

More and more busy people are realizing the tremendous value of the restored health, time for thought, and new business associations that only sea travel can give them.

Good Food Menus to astonish the gourmet . . . and cater for the ascetic. A quite impossible choice of magnificent food every mealtime. P & O make the trip to Australia a memorable culinary experience.

Good Company Military men . . . Stockbrokers . . . Scientists . . . Authors . . . Surgeons . . . you'll always meet someone interesting on a P & O ship. And there are so many pleasant places to talk: sunlit decks . . . quiet lounges . . . friendly bars.

Good Health Sunshine . . . sea air . . . complete relaxation. A voyage on P & O puts you right back on top again. You arrive fit, tanned, refreshed—ready for some really hard work.

Good Business It's rare that you don't meet *someone in* your own line of business . . . impossible *not* to meet someone who can give you valuable information . . . advice . . . contacts. At the end of the trip you'll realise what a rewarding holiday this has been. In fact a voyage on P & O is always a first-class business investment.

DON'T FORGET YOUR WIFE!
What's good for you is good for your wife and family too! They'll enjoy a P & O voyage—even if they follow you later. There are nurseries and trained children's hostesses on every ship. Incidentally more and more men are taking their wives with them on normal business trips.

Air-and-sea If you're in a hurry, you have the best of both worlds by flying part-way, sailing the rest. Or flying out, sailing home. Whatever combination of air and sea travel suits you best can easily be arranged with your Travel Agent.

Pacific Outlets P & O is not only a great Commonwealth lifeline, with all the traditions of the British Mercantile Marine, but a magnificent outlet to the Pacific too. In conjunction with Orient Line, under the name Orient & Pacific Lines, services extend from Australia to the Orient and the West Coast of North America.

P & O

P & O FIRST CLASS TO AUSTRALIA IS AN INVESTMENT

The New Yorker
from New York

Now that magazine import licences are no longer required, it is possible to arrange for The New Yorker to be sent to you directly from New York (or to anyone in Britain, if you should wish to give a subscription as a gift). Ask your newsagent for details, or write to:

THE NEW YORKER

21 Grosvenor Street, London, W.1.

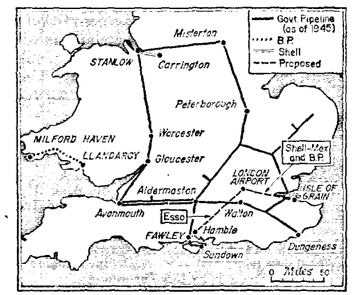
The New Yorker carries more advertising of British goods and services than any other magazine published in the United States.

who

is Europe's largest independent manufacturer of bodywork?

The Pressed Steel Company. If all the cars with Pressed Steel bodywork were put in one line, the line would stretch from here to Bangkok. And that's not even in Europe.

PS is for Pressed Steel, and the Pressed Steel Company are all for getting on with the job as fast as possible. It takes them just thirteen minutes to turn out one of their railway wagons.



the United States. Exports of US cotton in the first five months (August to December) of the season amounted to over two million bales, nearly 800,000 bales more than a year ago, and sales registered for export amounted to five million bales ; total United States exports this season will almost certainly reach, if they do not surpass, the official forecast of 5½ million bales, compared with only 2.8 million bales in 1958-59.

Thanks to the bigger demand, crops in Central America and the Middle East have been marketed more rapidly than usual, and prices of American-type cotton have moved closely into line with United States cotton. From August to December US cotton for three months' delivery in Liverpool rose by 2¼d. to 23.40d. a lb for middling inch, and Sudan Lambert, a long staple, rose by 3¾d. to 33d. a lb. Since then Sudan futures have risen sharply by another 2d. a lb, but American have weakened owing to some profit-taking and hedge selling—probably helped by a gloriously ambiguous statement of the United States Department of Agriculture, which said in effect that the export subsidy on raw cotton was not going to be reduced, but could be.

OIL PIPELINES

From Fawley to London

Oil pipelines have not grown rapidly in Britain because products can be moved from refineries to market areas by low-cost water transport. But the growth of demand in recent years has led to increased interest in pipelines, and the major oil companies say that they may be economical at least for serving the biggest centres of consumption. Shell-Mex and BP have already announced plans to build a pipeline for refined products from the Isle of Grain refineries in Kent to London Airport ; and now Esso have announced that they are seeking permission to lay a 75-mile line from Fawley to a new distribution depot of 20 million gallons capacity also to be located near London Airport. The project will cost £2½ million. Work should start on the 10 in. line later this year, and it should be completed early in 1963; its initial capacity should be 1½ million gallons a day.

Besides the Shell-Mex and Esso schemes there are at present three other commercially owned pipelines in Britain ; of these only the 23-mile line between Stanlow and Carrington carries refined products. British Petroleum owns two crude oil pipelines: one is 57 miles long, has a capacity of 3.1 million tons a year, and runs between Finnart, on Loch Long, and the company's Grangemouth refinery; the other, of 5 million tons a year capacity, completed but not to be opened until next year, runs 60 miles between an unloading terminal at Milford Haven and BP's Llandarcy refinery.

There is also a considerable network of product pipelines—shown on the map as it looked in 1945—owned by the Government. These lines were built during the war to transport products from terminals in the west to bomber bases in East Anglia and the South of England ; at one time they extended over 1,000 miles in length, and in 1944 they carried 4½ million tons of petroleum products. Their use, present and future, is blanketed by security ; it is known that they are used to some extent by the oil companies at present, and may be used more in future. In France and the United States, pipelines are common carriers ; but in Britain, the companies say, it would be difficult and more expensive to move fuel oil—the product for which demand has been growing most rapidly in Britain—by pipelines.

WOOL MARKET

Topmakers' Lament

There was little reason to expect much change in wool prices when the second half of the selling season started this week, and none has occurred. Prices at the Commonwealth auctions opened a shade below the December close, and then held steady. The London sales followed broadly the same pattern. Lacking a strong opening, business in tops in Bradford has slackened this week, and spinners have been able to get a small reduction in prices of some types. No doubt they hope to profit further by holding off, and meanwhile some are buying old tops that have been tendered on the London futures market, and which are several pence a lb cheaper than new tops. The stock of old tops helps to depress prices of the nearby delivery months in London, and thus gives spinners who can use them some extra bargaining power. Topmakers do not exactly relish this development, but they helped to bring it about. When it paid them to sell futures and ultimately to tender the tops, rather than sell direct to spinners, they were not noticeably reluctant to do so. The real cause of the weak selling they complain of is that there are more topmakers than spinners.

At the mid-point of the season few people expect wool to go much higher. The recovery in world consumption appears to be slowing down, and production this season is higher than ever before. The difference between the two may be small, but it seems more likely to be tipped on the side of surplus than shortage.

BUILDING SOCIETIES

A Year of Expansion

Last year was a record one for the building society movement. The demand for new mortgage advances remained high throughout the year and in the summer the societies were able to satisfy much of this demand because new savings had been flowing steadily and strongly into their coffers before the recommended rate on shares was reduced to 3½ per cent, income tax paid.

Better than Equities in 1959...

According to Pick's World Currency Report—

COLLECTORS' ITEMS, unlisted, with unregulated prices, a tax-saving device and above all, really depending on supply and demand in free and clean auction markets, were once more better than gold, platinum, diamonds, real estate and most of the world's blue chips. Leading the list was *18th century French style furniture.* Having risen 225 per cent in 1958, these items strengthened by another 150 per cent in 1959. Signed pieces created by such masters as Van Risen Burgh, J. Caffiery, J. Dubois, P. Garnier, P. Migeon, etc., were tops in the market. Following them were 13th to 15th century old *Latin gospels, early bibles, prayer books and Flemish manuscripts,* up about 125 per cent to 150 per cent. *Modern sculpture* of such masters as Sir Jacob Epstein, Henry Moore or Jacques Lifchitz rose about 100 per cent during the year. *Paintings,* in constantly broadening international markets, showed the works of the late American, Jackson Pollock, in the lead with a rise of about 100 per cent. Other *American Non-Objective Masters,* such as de Kooning, Rothko, A. Gottlieb, etc., rose about 80 per cent in value. The old favourites, the French Post Impressionists, having risen like meteors in recent years, continued their ascension at a somewhat slower speed. But excellent canvases of Renoir, Cezanne, Gauguin, Degas and Toulouse-Lautrec, still brought about 80 per cent more under the auction hammer than they did a year ago. Picassos rose only about 40 per cent to 50 per cent. New in the markets was a rebirth of popularity of top *Old Dutch Masters,* like P. P. Rubens up about 50 per cent for the year, as $777,000 was paid for one of his masterpieces at a London auction.

After that reduction the net inflow was less marked and that, together with the fact that many of the societies had to keep a careful eye on their reserve ratios, led to the introduction of more restrictive lending policies towards the end of the year. Expansion, however, was not achieved at the expense of liquidity and it seems likely that over the movement as a whole liquidity ratios were preserved.

Abbey National enjoyed a record breaking year on two counts: its total assets rose from £304 million to £347 million and its new mortgage advances rose by no less than 53.1 per cent to £62.8 million. The average advance remained under £2,000 and 98½ per cent of its loans were made to owner-occupiers. Receipts from investors also reached a record level, jumping from £57 million to £82 million, and the net inflow of funds over the full year was £41 million, compared with £25 million in 1958. The society's liquidity ratio went up from 15.6 per cent. to 15.9 per cent but its reserve ratio fell slightly from 3.79 per cent to 3.75 per cent.

As in previous years Woolwich Equitable has produced comparative figures for the year to December 31st although its own financial year ended three months earlier. In the calendar year its total assets rose by £18 million to £139 million. Mortgage advances of £32 million were no less than 75 per cent higher than in 1958. Mortgages to owner-occupiers account for over 99 per cent of total advances, which include just over £3 million advanced under the Government house purchase scheme. Receipts from investors had risen to £30.4 million by December 31st and the net inflow of funds over the full year amounted to £8.8 million, compared with only £500,000 in the previous year. The liquidity ratio fell from 14.5 to 13.5 per cent.

The total assets of the Alliance rose from £67.7 million to £73.1 million and its advances rose from £53.8 million to £59.8 million. New funds coming into the society totalled £14.5 million and withdrawals were £10.5 million, so that the net inflow of funds was £4.6 million. Its liquidity ratio fell from 17.6 per cent to 15.7 per cent and its reserve ratio from 3.2 per cent to 2.7 per cent.

The total assets of the Burnley rose by £5.9 million to £61 million and its shares, deposits and Exchequer loans at the end of the year amounted to £57.6 million—an increase of £5.6 million over the year. Reserves of £2.6 million represent about 4 per cent of the total assets, while the liquidity ratio stands at just under 16 per cent.

This has been a record year for the Temperance Permanent Building Society. Its total assets rose by £4.2 million to £44.4 million. Mortgage advances completed during the year more than doubled at £8.1 million. The society's liquidity ratio fell slightly from 18.7 to 18.1 per cent and its reserve ratio from 5.54 to 5.36 per cent.

Northern Counties also reports a record increase in total fixed assets, from £14.8 million to £17.1 million, and its liquid funds rose by £350,000 to £2.8 million, pushing up the liquidity ratio to 16.5 per cent. Reserves of £790,000 represent 4.62 per cent of the total assets. Mortgages advanced in the year totalled £3.4 million, compared with £2 million in 1958, and more than 97 per cent of these advances went to owner-occupiers.

TIN MARKET

A Little Higher

TIN has responded modestly to the settlement in the American steel industry. More tin is being traded in London and Malaya, but the forward price has risen in the past fortnight by only about £6 to £788 a ton. This reflects some improvement in demand in the United States and Europe, but also, it is believed, some official support. Late last week the manager of the international buffer stock appeared to be buying three months' tin and selling cash metal, reducing the premium for cash from £8 to about £2 a ton.

Most traders believe that the tin council should not have increased exports by as much as 6,000 tons to 36,000 tons in the first quarter. On the doubtful assumption that Bolivia and Indonesia can fulfil their quotas, this is equivalent to 144,000 tons a year. After taking what they consider to be a fairly optimistic view of world consumption this year, and the probable shipments from outside exporters, including Russia, they foresee an apparent surplus of roughly 15,000 tons. These predictions can easily go awry. Producers would not wish to curtail operations after only three months at the higher rate, but if a surplus does appear they would be foolish to resist a cut in exports in the second half of the year. Prices need not be in danger, for the council now has ample funds to support the market. But during the last eighteen months of the scheme it would surely be wiser to keep exports on a tight rein—if necessary—rather than add to the buffer stock.

JUTE AND DUNDEE

Protection Shaved Again

TO provide the under-developed countries with markets for their manufactures in industrialised countries is a pressing problem. Jute has been a difficult case for Britain but one that has been reasonably faced. The protection that Dundee enjoyed against imports of cheap hessian cloth was shaved in July 1957. The Jute Control, the sole importer, had until then sold this hessian at Dundee's prices which at the time meant charging about 40 per cent above the landed cost. That July the mark-up was cut to 30 per cent to help the old-established Indian industry and the new industry of Pakistan.

Now protection has been further trimmed by cutting the mark-up on imported hessians to 20 per cent. Dundee's output of these goods has declined in the last 2½ years, and they now account for less than a tenth of its total output. To some extent the loss in jute packing material has been offset by expanding output of backing material for the carpet industry, particularly the special wide fabrics used in tufted carpets. The chairman of Jute Industries Ltd., commenting on the Board of Trade's announcement, says he hopes that employment in the company will not fall, though its growth will be checked. The company had anticipated the further squeeze on prices of standard hessians by expanding its output of specialised products, and more machinery will be brought into operation at about the same time that output of standard hessians is expected to fall. (At the moment many companies have three to four months' orders in hand.) Not all firms can diversify in this way; private companies especially have difficulty in raising capital. But official encouragement of new industries is helping Dundee. In the last 2½ years the number of workers in government-built factories has gone up by over 1,800, and factories under construction or approved but not yet started are expected to provide work for a further 3,000.

SHORTER NOTE

The Council of the London Stock Exchange is considering a revision of the present rules governing advertising and circularising by members and registered agents. It is proposed that banks shall be allowed to advertise inside their own premises that they are prepared to do stock exchange business and to allow them to advertise investment management services in the press, though without naming the brokers to whom the investment enquiries are passed. It is also proposed to allow members and agents, with the permission of the Council, to circularise shareholders with offers to acquire their shares and similar bids.

FALCON TRUST

Certified as an Authorised Unit Trust by the Board of Trade.

Managers: UNICORN SECURITIES LIMITED, WATLING HOUSE, 12/16, WATLING STREET, LONDON, E.C.4.
(Members of the Association of Unit Trust Managers)
Directors: G. J. STEWART *(Chairman)*, EDWARD DU CANN, M.P. *(Managing Director)*, F. E. E. ALLEN, D.S.O., SIR WILLIAM CHARLES CROCKER, K.C., ADMIRAL OF THE FLEET LORD TOVEY, G.C.B., K.B.E., D.S.O., P. E. WALKER.
Secretary and Registered Office: A. W. FOWLER, Watling House, 12,16, Watling Street, London, E.C.4.
Trustee: Westminster Bank Limited
Solicitors: To the Managers: SIMMONS & SIMMONS. To the Trustee: TRAVERS SMITH, BRAITHWAITE & CO.
Auditors: To the Trust: DELOITTE, PLENDER, GRIFFITHS & CO. To the Managers: JOHN BAKER, SONS & BELL

The Managers have a proved successful investment record. In addition, they are able to call upon the services of leading British and international advisers. Falcon Trust is under the same management which has built up the assets of Unicorn Trust to over £7,000,000 in approximately two years. Original Unicorn shareholders have benefited from an increasing income return and capital appreciation of over 100%. While bearing in mind that the two-year record of Unicorn Trust is possibly exceptional, the Managers retain their faith in the long-term growth prospects of selected Ordinary shares in which the funds of Falcon Trust will be principally invested.

The investment policy of Falcon Trust will be designed to obtain for Shareholders in the long term :—
(*a*) a reasonable and increasing income return, and (*b*) capital appreciation.

Share prices can fall as well as rise but in the light of current economic experience and judgment the Managers believe that the eventual prospects for Shareholders of Falcon Trust should be good.

The estimated commencing gross yield of £4 2s. 6d. is provided to meet a demand for investors requiring an above average income return combined with the prospect of a future capital gain. To satisfy the greatest possible number of potential investors and to make easy the purchase of additional Shares in due course, the Managers have purposely created a low priced Share.

OFFER FOR SALE OF 5,000,000 Shares

at 5/- per Share

The above price includes all stamp duties, commissions and charges

Estimated gross yield £4 2s. 6d. per cent
(calculated in accordance with Board of Trade requirements)

The List of applications will OPEN MONDAY, 18th JANUARY, 1960 and will close at 12 noon, SATURDAY, 23rd JANUARY, 1960

Falcon Trust is constituted by a Trust Deed dated 11th January, 1960, with an initial term of 20 years. Copies may be inspected at the Head Office of the Managers or of the Trustee or purchased from the Managers for 5s.

Copies of the full Offer for Sale may be obtained from the Share Distributors of Falcon Trust, Dillon Walker and Company Ltd., Watling House, 12/16, Watling Street, London, E.C.4, or from any branch of Westminster Bank Limited.

APPLICATIONS FOR SHARES should be made on the attached form direct to Westminster Bank Limited or through any Banker, Stockbroker, Solicitor or Accountant to whom commission at the rate of 1d. per Share on all applications bearing their stamp will be paid by Dillon Walker and Co. Ltd. (Share Distributors of Falcon Trust, by whom this Offer for Sale is made). **All applications will be acknowledged on receipt. Share Certificates will be posted on or after 18th March, 1960.** *Dated:* 14*th January*, 1960.

APPLICATION FORM for SHARES

This form when completed must be sent to or lodged with Westminster Bank Limited, Registrar's and New Issues Department, 12 Angel Court, London, E.C.2 (or at any Branch of that Bank) together with a remittance made payable to Westminster Bank Limited.

To: DILLON WALKER and CO. LTD. (*Share Distributors of Falcon Trust*)

I/We hereby apply for [ ] *Shares of Falcon Trust at* 5*s. net per Share, in accordance with the Offer for Sale dated* 14*th January*, 1960 *and upon the terms of the Trust Deed.*

32

Cheque/postal draft/money order for £ : : is enclosed payable to Westminster Bank Limited.

I/We declare that I am/we are not resident outside the Scheduled Territories nor acquiring the Shares mentioned herein as the nominee(s) of any person(s) resident outside those Territories. (*See Note* 3.)

NOTES
1. Telephone Orders will be accepted by Dillon Walker and Co. Ltd. (City 7748 and City 7118) but not by Westminster Bank Limited.
2. Applications must be for multiples of 5 and a minimum of 50 Shares.
3. Applicants who are unable to make the Exchange Control declaration contained in the form must delete it and arrange for the form to be lodged through an Authorised Depositary. Authorised Depositaries are informed that permission has been given by the Bank of England for subscriptions to be made on behalf of non-residents, payment being effected in External Sterling or Blocked Sterling (Security Sterling).

BLOCK LETTERS PLEASE

In the case of Joint Holders all must sign.

Please write legibly: your Share Certificate will be prepared from the above particulars.

COMPANY MEETINGS

BARCLAYS BANK

MR ANTHONY TUKE ON NEW BUSINESS AND CUSTOMERS' NEEDS

COMMENTS ON THE RADCLIFFE REPORT

TANGIBLE BENEFITS OF ASSOCIATION WITH "UDT"

EPIDEMIC OF TAKE-OVER BIDS, GOOD AND BAD

The Annual General Meeting for the year 1960 of the Stockholders will be held at the Head Office of the Bank, 54 Lombard Street, London, E.C.3 on Friday, February 5, 1960.

The following is the address of the Chairman, Mr Anthony William Tuke, circulated to the Stockholders:

Before dealing with our accounts and the events of the past year, I wish to refer to the impending retirement from the Board of two of our more senior colleagues, Sir Ernest Murrant and Mr Algernon Denham. Sir Ernest has recently retired from the Chairmanship of Furness, Withy & Company, and he thinks it right now still further to curtail his business interests. As one of the acknowledged leaders of the shipping industry he has rendered us distinguished service for many years, and we have greatly valued his advice and his friendship. Mr Denham, although he is giving up his seat on our London Board, will, I am happy to say, remain one of our Local Directors at Leeds, and also Chairman of our Local Board in Sheffield. He started his business career in the West Riding as long ago as 1901, and so we look forward to the celebration next year of his diamond jubilee in banking. To him also we record our gratitude for his shrewd and friendly counsel and his constant activity in furthering the Bank's interests.

As Stockholders will have read in the Directors' report we have appointed Mr Simon Bolitho, a Local Director at Penzance, as an additional member of the Board during the year, and to him we offer a sincere welcome.

We have also appointed Mr H. E. Darvill as a General Manager to succeed Mr J. L. Northcott, who on reaching retiring age has given up that office and has taken up an appointment as a Local Director at Windsor.

ACCOUNTS

During the past year there have been considerable changes in our balance sheet. In May we made a rights offer of 5,561,914 new shares of £1 each to Stockholders on favourable terms which produced a similar sum by way of premium. Immediately on completion of this transaction we capitalised the share premium account, and used it, together with a balance of £1,112,383 from the Reserve Fund, to provide a free issue of one share for every £5 of the whole ordinary capital including the rights issue. As a result of these two transactions our capital was increased from £28,576,617 to £40,812,828 and our Reserve Fund was reduced temporarily from £21 million to £19,887,617. We have now transferred to Reserve £1,612,383 from the profit of the year with the final result that our Capital and Reserve Fund together at the end of the year stand at £62,312,828 compared with £49,526,617 at the end of last year. This is a large increase, but our fixed assets have also been increasing rapidly in recent years and we regard it as desirable that they should be covered, as far as possible, by Stockholders' money. As I explained at the time when the free issue was made, it was not intended to increase thereby the sum payable to Stockholders by way of final dividend, and accordingly the final dividend recommended is at the rate of 5 per cent per annum, which is the exact equivalent of the 6 per cent paid by way of interim dividend in August last. The sum, however, which we are proposing to distribute is considerably larger than a year ago, because all the shares issued during 1959 become entitled to the final dividend this year. Naturally not all our Stockholders were able to take up the whole of their rights to the cash issue, and these surplus rights were sold either by the Stockholders concerned or by the Bank on their behalf. As a result the number of separate holdings of our Ordinary stock has increased very considerably during the year and now stands at 61,000. We offer a hearty welcome to the new members of our proprietary family.

There has been a substantial increase during the year in the deposits of the Clearing Banks as a whole, our share being £96 million. All this increase has come in current accounts, which now form about 70 per cent of the total; no doubt this is a reflection of increased business activity. The outstanding change on the assets side of our balance sheet is the increase from £456 million to £649 million in the total of our advances which has been spread over every section of our business, but with some emphasis on our private customers whose borrowings were inevitably curtailed very severely during the period of credit restriction. The funds to provide for this welcome increase have come in the main from a reduction in our investments in British Government Securities, the proportion of which had become abnormally and unpleasantly high during the long period of credit restriction. The balance has been provided from the increase in our deposits without pressing unduly upon our liquidity ratio.

GROWTH OF BUSINESS

A feature of last year's business which has brought us particular satisfaction is the greatly increased rate of progress in the number of our current accounts, which now number well over two million. When the credit restrictions ended in July, 1958, we let it be known that we were very ready to receive proposals from customers, old and new, for personal advances, and, as I explained last year, we introduced a new form of borrowing by way of special loan on which the interest was to be charged in advance and principal and interest were to be repaid by equal monthly instalments over a period not exceeding two years. This scheme aroused some considerable interest and experience has proved that there was a gap to be filled; on the other hand we found that the majority of the applicants could be accommodated on orthodox banking lines which is more economical to the borrower, and the field which lies between orthodox banking and hire purchase finance does not after all seem to be a very large one. Somewhat to our surprise the great majority of the new customers to whom I have referred are not borrowers but lenders; in other words they are conducting credit accounts; and we have been much interested to find from a number of sample inquiries that some 15 per cent to 20 per cent of them appear to be weekly wage-earners or their wives. The question of how to make banking attractive to the weekly wage-earner is still exercising the minds of all of us, and the proposed legislation to amend the Truck Acts gives some urgency to the problem. It is not worth while, I am sure, to try to sell people goods or services that are of no real use to them, and the issue has been rather confused by its being expressed as the payment of wages by cheque. To give an employee once a week a single piece of paper, which he will immediately wish to convert into several other pieces of a different quality, would be of very little advantage to anybody. If payments were made by cheque once a month, or even once a fortnight, some would undoubtedly find a banking account useful, but the ideal arrangement would be that, with the full and free consent of the employee, his wages should be credited, in whole or in part, once a month by internal transfer to his banking account, from which he or perhaps his wife would draw cash as required for their living expenses, and from which he could make payments by cheque or by standing order to meet other outgoings, such as rent or mortgage interest or hire purchase instalments.

I feel that we should attack the problem at that end, as soon as the obstacles to the payment of wages by means other than cash have been removed. My belief is that the habit would spread slowly but surely, which would enable us to take the measure of the problem and give us time to make whatever provision may be necessary in the way of extra staff and premises to meet it. If it becomes the fashion for wives to draw the cash when they do their shopping, most of the work may well be spread over our normal hours of opening and the problem of catering for even a large influx of new business may prove to be less difficult than some people have anticipated.

STAFF MATTERS

Our much increased lendings have involved more work for our senior staff, who have for too long been frustrated by being obliged by Government directives to discourage prospective borrowers, and generally to curtail the activities normally associated with the posts which they occupy. I know that those concerned have enjoyed their unaccustomed freedom to do good business without external interference, but I also realise that there may have been occasions when some may have asked themselves whether it is not possible to have too much of a good thing. I am sure that the Stockholders will be very satisfied with the results which are portrayed in our accounts, and that they will readily understand that these results have only been achieved by a fine co-operative effort. Increased activity has not by any means been limited to our senior staff. The accession of new business, to which I have already referred with pleasure, and the increased turnover on trading accounts which flows from flourishing industry and commerce, have exercised considerable pressure at times on all ranks of the staff at our branches, and we have not always been able to relieve it as quickly as we should have wished, especially in the London Area. The Board are grateful to all those who have responded to this pressure with such equanimity and good humour. I am glad to say that we have been able to recruit considerable numbers of suitable staff in recent months, and after a short period of training and practical experience they should soon be pulling their full weight.

For some time past we have been paying increasing attention to the need to eliminate all unnecessary effort in the daily work of our staff, whether by the increased mechanisation of routine operations or by the improved organisation of the individual labours of the staff themselves. During the past year we have considerably strengthened the department of our Head Office which deals with these matters, and have appointed an Assistant General Manager to take charge of it. In pursuit of the same objective we have recently ordered an Emidec computer, by means of which we hope to carry out on one spot all the book-keeping operations of some 40,000 accounts maintained at a number of our branches in the West End of London. This computer is designed specially for office requirements, and we have confidence that it will do the work for which it is intended, but we realise that our venture is an act of faith. Whatever be the outcome we are making a contribution to research into the problem of applying the science of electronics to commercial book-keeping. This will become even more important if, as seems probable, the use of cash becomes gradually less fashionable in everyday transactions owing to the increasing numbers of people who find it convenient to make payments by cheque or by credit transfer within the banking system.

TRUSTEE AND INCOME TAX DEPARTMENTS

Our Trustee Department this year celebrates its jubilee, in that it was in 1910 that our Memorandum of Association was altered to give us power to undertake this ancillary service for our customers. In terms of funds administered and staff employed it has grown into an important business, and it is now managed through 40 branches; thus we apply to it the principle of decentralisation by which we conduct our administration on the banking side.

The Bank also provides for those who feel that their personal income tax affairs have become too complex to be conducted without skilled assistance. Advice is available to them at 24 branches of our Income Tax Department up and down the Country, and there is a steady increase in the number of customers who resort to it. This Department is also approaching its jubilee, having been started as a separate section in the London and South Western Bank in 1916.

PROFITS

Our greatly increased activity has, as we anticipated when I wrote to Stockholders in May last, led to a substantial increase in our net profits, and we are in fact able to bring out a figure higher by about £800,000 than that of the previous year. In considering this figure, however, it should be borne in mind that quite a large proportion of it is accounted for by the reduction of ninepence in the standard rate of income tax last April, and also that we have had the use of £11 million of newly subscribed capital, though the final payment was receivable by us only in July. The large increase in our Advances has counteracted, with something to spare, the reduction in the rate of interest charged upon them owing to the lower Bank rate. Increased dividends on certain of our investments in other banks and kindred businesses have also made a useful contribution, notably our recently acquired shareholding in United Dominions Trust. The conditions which made it permissible for us to launch out in this direction made it likely that companies dealing in hire purchase and other non-banking financial operations would share to the full in the subsequent expansion in the economy, particularly since this expansion found its outlet primarily in consumer goods. It is necessary, however, to get the value to us of this investment in its proper perspective, which numerous commentators have signally failed to do. First of all the appreciation in the market price of our holding is really of little significance. Unless and until we want to sell our shares, which we have no intention of doing, it serves merely to provide a comfortable cushion behind this particular item in our balance sheet. What is important is the increase, actual and prospective, in our dividend from our investment and the intangible benefit which we expect to flow to us, and from us to our partners in this association. The only item in this catalogue which can be precisely evaluated is the increased dividend already received. When we purchased our shares in United Dominions Trust the last distribution had been 18½ per cent: the most recent was 25 per cent, and in addition we have received a free issue of preference shares, the dividend on which could be expressed as an additional 1 per cent on our holding of ordinary shares. Such progress, in such a short time, is very satisfactory to us, but its impact on our business as a whole should not be overrated. In our profit and loss account the increase from a prospective dividend of £185,000 in May 1958 to an actual dividend of £260,000 for the year 1959, represents less than a quarter of one per cent on our own capital of £40 million, and an investment which has cost us £4 million, even if it were taken at its current market price, would not be very significant in a balance sheet total of nearly £1,800 million.

THE RADCLIFFE REPORT

The long awaited report of the Radcliffe Committee on the working of the monetary system made its appearance in August. By common consent the passages descriptive of the functions of the various elements in the system are accurate and lucid to a high degree, and this alone will make the report very valuable, and that not only to academic students. The Committee's comments and, when necessary, recommendations are perhaps not in every case equally clearly expressed, and it is not always easy to discover precisely what action the oracle advises in given circumstances. That the Committee produced a unanimous report was a considerable feat, and it may well have been necessary to sacrifice some precision, if not principle, to achieve this end. It would have been interesting if the Committee had been able to comment on the comparative effectiveness of the methods of control adopted immediately after the war and those followed by subsequent Administrations. The important question for future Governments is which to follow of two diametrically opposite courses, neither of which has produced wholly satisfactory results in the postwar period.

Happily there is little in the recommendations which affects the Clearing Banks in relation to the day to day conduct of their business. There is, as we expected, a desire for more and more statistical information about our affairs. We are always very ready to provide all the information that we can when it is required by the Authorities to enable them the better to make the important decisions of policy which fall to their lot, and since in that case there is no need for it to be published, the Banks are able to disclose figures which they would otherwise wish to keep private. When however their purpose is merely to satisfy the curiosity of the economists, which, like that of the elephant's child, is well known to be insatiable, their compilation is not exactly a labour of love, except in the sense that we are expected to do it free of charge.

The Committee seems obsessed with the idea that many debtors spend sleepless nights from apprehension lest the postman may bring them in the morning a letter from their bank exercising its right to require payment on demand of their debts; and it suggests that the banks should make more use of the technique of term loans whereby the repayment is spread over a period of years. This is, of course, what happens in practice in very many cases at present, but the arrangement is not formalised. We have in fact in recent years agreed to lend considerable sums with definite dates of repayment, mainly in connection with the export of capital goods, and we are quite ready to discuss a similar agreement with any customer for any purpose, but the rate of interest in these cases is somewhat higher than it would be for an orthodox advance, and not many customers have hitherto found it attractive to pay what is in effect a premium to insure against the risk that the Bank will treat them unreasonably and without consideration of their individual circumstances, if the time should come when it is obliged to restrict the volume of its total lendings.

There is one point of minor, but important, detail, in which the Committee seems to have fallen into error, and as this error has not been officially corrected and has in fact been repeated in the Press, I feel obliged to call attention to it. In paragraph 139 the Committee states that the banks used to reckon that 60 per cent of total deposits, or even more, could comfortably be used in advances to customers. In fact, so far as combined records go, the advances ratio of the Clearing Banks has never reached 60 per cent, though that of certain individual banks may have done so on occasion during the 1920-30 period. The views held by the banks on this subject in the past were clearly stated in their written evidence and this will be published in due course. In calling attention to this error I do not wish it to appear that we are in any way reluctant to make advances to our customers. This is indeed the most important and also the most interesting of our assets, and one in which we can exercise to the full our talents as bankers. We are very pleased that after lingering for many years below the 30 per cent level our own ratio has now reached nearly 40 per cent. We have still plenty of ammunition in hand, and the rate of increase has recently shown some signs of falling off but we must not

expend too much of it in term loans and other unorthodox lendings. Allowing for a liquidity ratio of about 30 per cent, and speaking in round figures we should like to see our advances eventually fluctuating, as our customers' needs rise and fall, between 45 per cent and 50 per cent, which would leave about 20 per cent for our investments, a figure which gives us ample scope at any given moment to provide for our needs in the field of liquidity for some years ahead. If, however, our advances ever stood at 60 per cent " or even more," we could have only 10 per cent, or even less, in investments, and as they are our third line of defence it seems to me that that would be quite inadequate. I have thought it right to deal at some length with an error which may be no more than a misprint, because an advances ratio of 60 per cent or even more is now operative in a number of banks in the United States, but for this purpose the term " advances " is, I believe, more comprehensive on the other side of the Atlantic than it is here.

Questions concerning these ratios naturally figure largely in the Radcliffe Report. In general the Committee seems to play down the importance of controlling the supply of money in favour of a theory based on a concept of general liquidity, which is to be controlled by engineering a rise or fall in the rate of interest on Government Securities, especially those of longer date, although elsewhere it recommends that our traditional 30 per cent liquidity ratio should be made obligatory, presumably as a minimum, which would on occasion be varied by agreement or if necessary by formal direction; and elsewhere again it envisages a direct control on the ratio of our advances themselves in case of emergency. All these expedients are possible and I would only say this about them. If a rigid minimum were imposed on our liquid assets, there would be no need to bother about imposing a cash ratio at 8 per cent or any other figure. Our loans to the money market, which form a substantial proportion of the 30 per cent, are convertible into cash at call or short notice, and the borrowers have an absolute right, in the last resort, to obtain the money to repay us from the Bank of England; we also have bills maturing every day. The maintenance of a cash ratio therefore presents no problem to us in practice so long as we have enough other liquid assets. In fact 8 per cent is more than we normally need in cash for our day-to-day transactions with our customers and with other banks, and we should often be able to make profitable use of some part of it, thus augmenting the overall yield on our liquid assets as a whole. Moreover it could be argued that there is no technical nor practical need for any cash to be held against our term deposits where we can exact seven days' notice, which is ample time to convert into cash the necessary amount of our loans against Bills. Furthermore, I would say that, if a maximum limit were to be imposed directly on our lendings, there would no longer be any need for the Authorities to pay any regard at all to our liquidity ratio, which could then be left entirely to our own judgment according to the needs of our own businesses. This may seem a rather surprising doctrine, but if the limitation were placed on our lendings, a certain residue would be left to be divided between our liquid assets and our investments. I see no reason why in that event the Authorities, in view of their constant anxiety to lengthen the maturity of the National Debt, should wish to limit our holdings of the latter in favour of the former, though we should naturally have our own views on the subject. All in all, therefore, I hope that the Authorities will not be tempted into chasing any Will-o'-the-wisp, and that our relations with them may be maintained on their present basis of mutual discussion and informal agreement, provided always that the status and authority of the Bank of England itself remains unimpaired.

The orthodox theory of the effects of reducing the supply of money has certainly not worked very well during the last decade. This was due, however, in my opinion, not to there being anything wrong with the theory, but to its operation being counteracted by the persistent refusal of successive governments so to moderate their expenditure that there should be less need to create credit to finance budgetary deficits. These deficits, combined with the constant maturity of loans representing to a large extent monies borrowed for the conduct of the war, made it inevitable, until improved savings came to the rescue, that credit should be expanded when conditions required that it should be contracted.

In these conditions neither increasing bank rate nor manipulating the long term rate of interest could have been expected to do much good.

TAKE-OVER BIDS

The country has recently been suffering from an epidemic of take-over bids and some of them have contained features which have brought criticism upon those concerned in them, including on occasion, I am sorry to say, certain of the less important City Houses. Apart from the impropriety of deviating from the highest traditions of the City of London, it is most regrettable that those who are so fond of shooting wildly at the capitalist system should be provided with a target, however insignificant, that they have some chance of hitting. From this point of view the *Notes on Amalgamations of British Businesses*, which were issued by a working party representative of the principal City Houses interested in the issue of capital, will be valuable, so far as they go, to those who desire guidance on the correct conduct of this class of business. They may also help to keep on the straight path some who might have been led into taking one or two tentative steps into the undergrowth to right or left. If one had to criticise them, one might say that they do not go far enough to prevent those who do not care for the proprieties from offending against them; in fact that what is wanted is not so much a bible to instruct the faithful, as a highway code to check the road hog. The Institute of Directors is also considering the subject and perhaps they or the new Committee on Company Law will be able to go a little further in this direction.

It is, of course, easy to generalise, but the question is: how does one distinguish a good take-over bid from a bad? First of all, as the *Notes* make clear, almost every amalgamation of the traditional kind is, in form, a take-over bid by the larger for the shares of the smaller of the two participants. There is nothing wrong in that. It is incidentally the way in which the countless local banks of the last century in this country have become concentrated into the present banking system as we know it. At the other extreme we get the case where someone, whom I will describe as a mere financier, goes over the heads of the board and offers to buy up a company, some of whose assets (perhaps their premises) are not in his opinion being employed to the best advantage. Having secured control, he can wind up the business, discharge the staff, and redevelop the properties for his own profit. It is not very difficult to conclude that there is something wrong there, perhaps several things. But it is all perfectly legal, and up to a point it finds defenders. The directors, it is sometimes said, have been asleep and must not complain if they are rudely awakened ; it is not in the national interest that any asset should be under-employed. This argument has some validity, especially if money is the only measure of national interest. I do not at all subscribe to one assumption which appears to underlie it, namely that it is the duty of directors to concern themselves first and foremost, and continuously, with procuring the highest possible market price for the company's shares. The processes necessary to achieve this objective must run contrary to the public interest as recently defined by the Chancellor of the Exchequer, namely, that businessmen should use any increases in profits primarily for the two purposes of investment and price reduction; yet it is often the most obvious and sometimes the only defence by a board of directors, however progressive and conscientious, against a take-over bid. Ideally, directors should be able to devote their undivided attention to the running of the business which has been entrusted to them and should not have to worry themselves every day about the market price of their shares nor the identity of their shareholders. There may be occasions where something more drastic than a gentle kiss on the brow from a Prince Charming is needed to awaken the sleeping beauties. It may even be necessary sometimes to tip them right out of bed. But it can seldom be wise to pull down the whole house or even to sell it as it stands to a stranger. If a group of Shareholders are dissatisfied with the way their business is being run, they can come to the annual meeting and make a fuss about it. In certain circumstances they can even requisition a special meeting. They may get voted down, but if their complaints are reasonable and not frivolous, the incident will make the directors think.

Bids may be of two kinds: an offer of shares or an offer of cash ; or a combination of the two. The cash offer has immediate attractions because its value can be exactly assessed and in some cases it wins the day for that reason, but it is not necessarily to the long-term advantage of the Shareholder that he should part with his investment for a payment in cash, however attractive in relation to the previous market price. He loses his holding in a company, and perhaps an industry, in which he had chosen to invest his money, and he is obliged to find a new investment which is as good as the old one at a price which is equally attractive. He is just as likely to go wrong as to go right in this choice. I wonder what sort of a bank Barclays Bank would be today if all our old private firms had been bought out for cash from 1896 onwards. The families of the old partners might be richer or poorer according to how they had invested the purchase money, but I think our present customers would notice a difference which would not greatly please them. Not to withhold credit where credit is due, it must be acknowledged that the merely financial operation which I have described has not figured so noticeably during the present epidemic of take-over bids as it did in an earlier and otherwise milder outbreak about six years ago. There have been, nevertheless, other undesirable features in some of the recent take-overs. I think it is going too far when bid is followed by counter-bid and revised bid, till the price eventually seems much higher than present facts and future prospects really warrant. Again I draw a distinction between the amalgamation of two or more identical or kindred businesses, and the grouping of two or more completely dissimilar businesses, which is

not necessarily wrong but requires closer investigation. It was the Walrus in his famous address to the Oysters who linked together shoes and ships and sealing wax and cabbages and kings. I have always regarded this as a piece of amiable nonsense, but, if I had only recognised it, the Walrus seems to have been an early apostle of the modern doctrine of diversification, which has many most respectable adherents nowadays.

I must not appear to deny the right of the investor to get the highest available price for his shares, if he wants to sell them. It should however be remembered that he derives considerable fiscal and other advantages by being enabled to employ his money in a company which operates on the principles of limited liability, and it is not unreasonable that he be asked to recognise that there may also be limits to his right to consider solely his own interests in the farming of his estate, if I may so describe it. It is only necessary to consider the contingency of a take-over bid for a bank or an insurance company to see the force of this argument. However attractive the price might be, the directors could not possibly recommend its acceptance, unless they were abundantly satisfied that the prior interests of the depositors or policyholders, as the case might be, were fully protected.

It is all very difficult and I do not think that any hard and fast rules can be laid down. Still less do I advocate, as some have done, that every take-over bid must be submitted for approval to the Board of Trade or other official body. I am sure that private enterprise must work out its own salvation. Where a transaction oversteps the mark it is usually, I believe, due basically to an excessive desire for profit blinding those concerned to the considerations of propriety by which they would normally be held in check. The Greeks had a word for it, or rather two words: ἀιδὼς ἀγαθή, which might be freely translated in this context: " don't be too greedy." So far as the City is concerned, I can only suggest that where any unpleasant smell, which in truth is usually recognisable, surrounds any particular transaction, no financial support of any kind should be given to it even though it means turning aside business which is both safe and profitable. In nine cases out of ten, that will kill it.

THE VIRTUE OF THRIFT

Lying behind this question is also the tendency, so prevalent in the modern outlook on life, to deride the Victorian virtue of thrift, the desire to provide for the possible rainy day. High taxation and inflation have combined to make it almost impossible for the individual to accumulate any substantial capital by savings during his lifetime and the Welfare State, while removing financial anxiety about illness and old age, has at the same time diminished in the ordinary man the sense of personal responsibility for his own future and that of his family. Translated into terms of business management we find the same tendency. In olden days it was considered wise and meritorious to write down your assets out of profits, in order to fortify the business against possible misfortune in the future. Nowadays, the result of a policy of this kind is to make the company vulnerable to an unwelcome take-over bid. Formerly extensions were often financed out of retained profits; nowadays we are told, on the contrary, that available profits should be distributed up to the hilt and that when new capital is required the shareholders or the public should be invited to supply it. Unless it can be guaranteed that business will boom for ever, if necessary by the reckless injection of inflationary demand, I cannot believe that the new doctrine is worthy of acceptance, and it certainly accords ill with Government pleas for restraint in dividends. I would much rather leave it to the directors of the company to hold the scales fairly between the present and the future, between current dividends and future expansion. Occasionally a board will err by tilting the balance too far in the one direction or the other, but as a general rule they are the best judges of the true interests of the company, which are also the interests of the long-term shareholders, if not always those of the short-term speculator, to whom the take-over bid provides a quick and often handsome profit.

In the last eighteen months, a number of influences have combined to put great pressure on the market for industrial ordinary shares, with the result that the prices of many of them have recently attained heights in relation to their dividend yield which would have been considered impossible a year ago and do not ring entirely true today. It is perhaps in some degree a moot point how much of this is due to optimism about the future of British Industry and how much to pessimism about the eventual return of inflation. Take-over bids, or the prospect of them, have made their contribution, which is not altogether healthy. On the other hand, there has been, so far as I know, very little carrying of stocks and shares on borrowed money, which has always been a feature of unhealthy Stock Exchange booms in the past. The fundamental cause seems to be that the demand for this class of investment from life insurance funds and pension funds, and now the increasingly popular unit trusts, all of which represent in the main the small savings of private citizens, greatly exceeds the supply, and investment from overseas has also made its contribution. On top of all this comes the Government's long expected proposal to include equities within the definition of trustee securities. In that it will add to the pressure this proposal could hardly have been more unfortunately timed, and many life tenants are likely to be sadly disillusioned when they find that, if advantage is to be taken of it, their immediate income will be drastically reduced. The pressure could perhaps be relieved in some degree by an increase in the supply of this class of investment. This is a wonderful opportunity for companies whose present capital resources fall short of their present or estimated future needs, to invite their shareholders or the public to provide them with some more. In their own interests they should make hay while the sun shines so brightly. The time may almost have arrived when the managers of funds where income is being accumulated should weigh in the balance the certainty of a yield of 5 per cent from a Government Security against the uncertainty of the prospect, however hopeful, in investing in equities at today's prices, which may produce an initial yield of as little as 3 per cent. This would apply particularly to funds which do not pay income tax; money accumulated at 5 per cent doubles itself and its income in less than 15 years provided that the income can be invested at that rate throughout the period; is it certain that an investment in equities today, with the income similarly accumulated in equities, will be yielding more than 10 per cent on the money in 1974?

THE OUTLOOK

Looking to the future we can, I think, take great encouragement from the course of events during the past year not only at home but also in the field of international politics. For my present purpose, I will confine myself to what I will describe as the possible economic by-products of a political understanding between East and West. We must not be too hasty in accepting at its face value any apparent change of heart, but at the same time we must not fail to come half-way to meet any friendly approach made in good faith. If we could reduce, even by a third, the appalling drain on our national income of defence expenditure, which last year amounted to nearly £1,500 million, what a transformation that would make in our financial picture! There would be no lack of competitors for the resources thereby released, but I hope that the Chancellor would place very high on his list the desirability of producing a proper budget. By that I mean a budget which is balanced overall, and not merely at a line drawn arbitrarily somewhere about half-way down the column and including above that line as if it were income the yield of estate duty, which, in the sense that it has to be replaced by new savings, should be regarded as a levy on the Nation's capital. Even without any major economy in defence expenditure, there should be room for some further relief to the taxpayer, and among the many contenders for this much needed benefit I would put first the claim of the hardworking, successful, salaried man, whose personal taxation is still at a level which can only be described as vindictive. I may be told that a balanced budget would have a deflationary effect on the economy. I would retort that the new savings which have been required to counteract the inflationary effect of recent budget deficits would then be available for profitable purposes, one of which would, I hope, be investment in under-developed countries overseas, especially those in the Commonwealth and Empire, where inevitably we have not done as much as we should have liked for some time past. There might even be a small surplus for the reduction of the National Debt, instead of the constant deficits which have been one of the basic causes of the decay in Government credit, in the post-war years. Business in this country today is soundly based, and if the load of unprofitable defence expenditure could be substantially diminished we might well expect to see another mighty surge forward to even greater heights of prosperity, but we must not allow this vision to tempt us to throw away our arms prematurely nor to go to sleep at our posts. The necessary provision for the safety of our Country must come first.

CHELTENHAM AND GLOUCESTER BUILDING SOCIETY

The Society's assets now amount to £34,296,000 (1958 £31,604,000), being an increase of £2,692,000 (£1,329,000) during the year.

The total amount invested by shareholders and depositors during the year amounted to £7,057,000 (£5,598,000), and after deducting withdrawals and allowing for interest added the total increase in savings in the Society amounted to £2,552,000 (£1,516,000).

A record sum of £6,100,000 (£3,129,000) was advanced on mortgage to 3,592 2,810) borrowers.

As a result of the year's working £150,000 (£110,000) has been transferred to reserve, and £45,000 (£40,000) carried forward.

MARTINS BANK LIMITED

COMMENTARY BY THE CHAIRMAN SIR A. HAROLD BIBBY, BART, DSO, DL, LLD

THE EXPANDING ECONOMY OF AN EVENTFUL YEAR OFFERS AN OUTLOOK THAT IS ENCOURAGING AND HOPEFUL: RIGHTS ISSUE—INCREASED PROFITS

The one hundred and twenty-ninth Annual General Meeting of members of Martins Bank Limited will be held at Head Office, Liverpool, on February 10, 1960. *In his statement circulated to members, the Chairman, Sir A. Harold Bibby, Bart, DSO, DL, LLD, writes:*

In November last the Board decided upon an increase in the Bank's Issued Capital and an announcement was, therefore, made to the Press at the earliest possible date on November 5th, of the proposed offer to shareholders of one new 5s. share for every two held at a price of 7s. per share.

Details of the proposed issue are set out in the Report of the Directors and the necessary renounceable provisional Letters of Allotment will be posted on January 15th to shareholders registered on January 1st.

In reaching their decision the Board have taken cognisance of the fact that, whilst the Bank's deposits have increased substantially over the past twenty years, the increase in the capital and published reserves has fallen behind relatively and, therefore, it was desired to improve the ratio of capital and published reserves to deposits and also to fixed assets. The latter include recent heavy investments in the purchase of Lewis's Bank Limited, a 20 per cent shareholding interest in Mercantile Credit Company Limited and also substantial sums spent since the war in building new branches and restoring and renewing old ones.

Our investments in both Lewis's Bank Limited and Mercantile Credit Company Limited have proved eminently satisfactory. The former has brought numerous new customers and enlarged our circle whilst the latter has enabled us to participate in the profitable business opened up in this present-day sphere of finance.

The net profit for the year ended December 31, 1959 (inclusive of a dividend of 10 per cent actual from Lewis's Bank Limited amounting to £61,250 net) is £1,161,411 which compares with £1,050,805 in 1958.

As forecast a final dividend of 8 per cent, less income tax, is recommended which, with the interim dividend of 8 per cent, makes 16 per cent, less income tax, for the year 1959 on the Issued Capital as at December 31st last.

After providing for the Dividend, appropriations from the published profits of £250,000 have been made to Reserve for contingencies and £250,000 to Premises Redemption.

Total assets stand at £397,462,912 (1958—£373,781,066) and current, deposit and other accounts at £362,904,359 (1958—£339,265,701); both these items constitute records.

Our total liquid resources as at December 31st were £124,993,130 (1958—£123,208,616) and the ratio of these resources to our deposits is 34.34 per cent compared with 36.15 per cent, which we regard as satisfactory.

The total of our Quoted Investments, which continue to be valued at under market price, has declined by approximately £22 million during the year due to the increase in our lending which has made it necessary for us to sell some of our British Government securities. Over 99 per cent of the total are British Government securities redeemable at fixed dates, the majority maturing within 4 years.

Total advances inclusive of those made under the Personal Loans Scheme now stand at £144,686,908 compared with £107,498,777 a year ago and may well continue to rise. The new advances are widely spread and include substantial increases to agriculture.

Our Personal Loans continue to be availed of by an ever rising number of customers. Some are old customers of the bank who find that this form of advance suits their requirements best, but many are new to us and new to the banking system itself.

BOARD CHANGES

It is with deep regret to us that Mr Myles N. Kenyon, CBE, DL, has felt it necessary not to offer himself for re-election to our General board and to resign from the Manchester board of which he was Chairman. During long and valued service he has endeared himself to his colleagues, our staff and customers alike.

In the place of Mr Kenyon on the General Board, we welcome Sir Cuthbert B. Clegg, TD, who needs no introduction and who has served with distinction as a member of our Manchester board for the past twelve years.

The Honourable Angus D. Campbell, CBE, who has served on the General Board for nine years, has been elected Chairman of the Manchester board of which he has been a member for nearly eighteen years.

During the year Sir John H. Grey resigned for reasons of health from our Manchester board and it is with deep regret that we learned of his death at the close of the year. His great experience and sound judgment were of immense service to your bank and we shall miss him in no small degree.

We welcome to the Manchester board Sir W. Hereward Clare Lees, Bart, whose assistance will be most valuable.

There have been several changes in the General Management of the bank; Mr J. A. Banks has been appointed a Joint General Manager and has been succeeded as Liverpool District General Manager by Mr N. N. Jobling, MC, TD; Mr D. C. Bardsley has succeeded Mr Jobling as Midland District General Manager.

Mr W. H. T. Laidlaw, formerly Assistant General Manager (Administration) retired in May after forty-eight years of distinguished service.

NEW SOUTH WESTERN DISTRICT OFFICE

We have continued our general policy of opening new branches where we have not previously been represented, and this has been useful to our customers, old and new alike.

In addition, we have done and are in process of doing a large amount of modernisation in our other branches and, while this takes considerable time and causes a certain amount of inconvenience while the alterations are taking place, we feel sure that, when completed, it will add to the general amenities and efficiency.

Following our settled policy of decentralisation, a South Western District will be formed early in the year, with its headquarters at Bristol. This will be administered by its own District board, District General Manager and staff. More local and specialised knowledge will then be made available in dealing with banking business in this important area.

Mechanisation is continuing to absorb a lot of thought and research and, while progress is bound to be slow, considerable headway has been made. We are pressing on with this as a high priority.

There has been a great increase in the pressure of work at many of our branches where the staffs have often had to work long hours, and it has been difficult to find extra trained staff to meet our needs. Steps have been taken which, it is hoped, will eliminate the shortages during the course of the coming year.

Once again I pay a most sincere tribute to the whole of our excellent staff for their loyalty, zeal and hard work during the year.

ENCOURAGING TRENDS

We have noted a pronounced increase in the number of new customers who have opened banking accounts with us.

This is a hopeful sign as it indicates that more and more people are becoming bank minded and many of the old inhibitions of starting a bank account are disappearing. We welcome this change.

The ideal of a property owning democracy is slowly becoming a reality. An expanding section of the community own their homes, own motor cars and investments, and enjoy all the other amenities of modern life.

The most encouraging feature of all, at a time of heavy spending by the nation, is the steep rise in national savings during the year, reflected mainly by increased deposits in the Trustee and Post Office Savings banks and in net investments in National savings.

The year has also witnessed a prodigious rise in stock exchange values. The pressure of savings is steadily increasing, both private and public, through such agencies as the life insurance companies, industrial and commercial pension funds and the like, and these funds together with large capital sums from overseas investors are seeking investment in our industrial field. In relation to these funds, new issues, which are often very heavily over-subscribed, may possibly be regarded as in short supply and such savings are forced into existing securities with the result that some are over-priced. This excess of demand over supply inevitably raised prices and quite rightly is causing some concern in many minds.

Take-over bids have acquired a great deal of notoriety largely because the phrase is used in far too wide a sense. Many amalgamations between firms in similar or allied businesses are wholly good and tend to greater efficiency and are carried out in an orderly and proper manner with the full approval of both contracting boards and shareholders. Others, unfortunately, do not come within this category and the bids and

counter-bids leave the general public with the impression that someone is making far too much easy money. This is bad; bad for business generally and for the City in particular.

It is hoped that the investigations now taking place will produce safeguards against the abuses which are now possible.

PRODUCTIVITY AND COST OF LIVING

The official statistics for the year show that productivity has increased slightly more than wages and this has enabled the cost of living to remain stable and with it the real value of the wage packet.

Here is positive and definite proof of an economic truth regarded by many as a mere theory which would never work out in practice.

This is a creditable performance but it must not be forgotten that much of this increase in productivity has only been made possible and brought about by the investment of large sums of money in modernising old and installing new equipment.

Both political parties are now in favour of amendments to the Truck Acts which are today quite outmoded and, if Parliament approves, it will become possible to credit wages directly to a banking account or pay them by cheque if the recipient approves and suitable arrangements are agreed with the banks.

A tremendous impetus would then be given to many to open a banking account and use this most convenient method for transacting their private business. In the United States of America and in Canada the system of payment of wages by cheque is commonplace and over 80 per cent of households use the banks whereas in Great Britain it is thought that the figure is only round the 30 per cent mark.

However, the process will be comparatively slow; there will not be an overnight change in old habits and practices, and the banks will be able to adjust themselves to the gradual evolution, guided by the pattern in which it develops and aided by automation and adjustments in methods.

The very carefully prepared and exhaustive Radcliffe report was published last August. It is a very full review of our whole monetary system by men fully qualified to deal with this complex subject. Generally, the findings are that the present procedure built up by years and years of experience works well and fits the requirements of our present economy. There are a number of suggestions and these are naturally receiving the most careful study.

EXPANSION OF TRADE THROUGH SLACKENING OF WORLD TENSION

Both at home and abroad 1959 has been an eventful year. There are at least hopeful signs that the temperature in the cold war is moderating and with it the fears of a third and annihilating war are receding.

There is now a prospect of less money being spent on non-productive armaments and, with less taxation being required as a corollary, larger funds should be available for industrial expansion and the developments of nuclear power for peaceful purposes.

Great Britain still leads the world in the more practical application of this new and far reaching science, the potentialities of which are staggering to contemplate. For all this we can be justifiably proud.

Slackening of world tension should expand and develop world trade and there are still hopes that the Common Market and the Outer Seven may be able to merge into a workable whole, giving to each the advantages of a wider field.

Among the younger nations there is a constant urge towards self-sufficiency regardless of economic considerations.

Globally, they should produce what their country, climate, natural resources and people are most fitted for, rather than endeavour to establish and maintain industries by means of import restrictions and other measures to do what can be done better and more cheaply elsewhere.

This tendency is perhaps most pronounced in transport, be it shipping or airlines. In both these important industries, every sort of pressure of flag discrimination, governmental or otherwise, is brought into play to buttress up an effort which has no economic justification and is merely an expensive expression of national pride and independence. This all runs counter to the expansion of world trade which these younger nations should make their first consideration and wherein lies their future progress.

The decided voice of our General Election has dispelled many doubts abroad as well as at home by the removal of all the uncertainties inherent in a possible change of policy.

The holders abroad of over £3,000 million sterling now know that the value of the pound sterling, in which over half the trade of the world is conducted, will be maintained and all fears of a weakening of measures to uphold it can be set aside.

Repayment of the American loan of the equivalent of £90 million is a convincing proof of our determination and ability to honour our obligations in any currency.

With the increased prospects of world peace and with a continuation of our ability to sell abroad, on which depends our full employment, and with the pegging of the cost of living, the outlook is encouraging and hopeful.

UNOFFICIAL STRIKES AND INDUSTRIAL RELATIONS

The biggest fly in the ointment is the spate of unofficial strikes. These are condemned equally by the Trade Union leaders and the employers.

There is existing machinery for settling all disputes and there is, therefore, neither rhyme nor reason in stoppages. Now that the Trades Union Congress have taken this matter seriously in hand there ought to be no doubt that a solution will be found particularly as so many of these unofficial stoppages occur from demarcation disputes between the different unions. Thousands of their fellow workers, who are in no way concerned in the dispute, are thrown idle and they, with the general public, suffer hardship. The time will surely come when these innocent sufferers will no longer stand aside inarticulate and inactive.

Unless the Trade Unions can guarantee that agreements, which they have freely negotiated, are enforceable on their rank and file there is little or no justification in reaching such agreements, nor if they fail in this essential is there justification for the Unions themselves either from their members' or the employers' point of view.

That road leads straight back to the jungle.

The chief sufferer from "wild-cat" strikes is the trade unionist mouse who through intimidation or apathy does not attend his branch meeting and so assert his undoubted authority.

If this defect in our industrial organisation can be rectified and Trade Union authority is reasserted, we can look ahead with added confidence.

WILLIAMS DEACON'S BANK LIMITED

VERY SATISFACTORY RESULTS

POLICY OF EXPANSION CONTINUED

STRENGTH OF STERLING OUTSTANDING FEATURE OF THE YEAR

SIR ERIC A. CARPENTER ON THE ECONOMIC POSITION

The Annual General Meeting of Williams Deacon's Bank Limited will be held on Thursday, February 11th, in Manchester.

The following is the statement by the Chairman, Sir Eric A. Carpenter, OBE, on the Report and Accounts for the year ended December 31, 1959:

The proceedings at the Annual General Meeting will be restricted to the transaction of formal business and I propose to continue what is now the normal practice of issuing a brief statement of the Bank's affairs in advance of the Meeting.

From the Report and Accounts you will see that our Deposits have risen during the year and now stand at £142,764,089, an increase of £3,905,863.

On the Assets side, the liquid items, namely Cash, Money at Call and Bills Discounted, amount in total to £44,910,835 or 31 per cent of our Deposits.

In order to provide for the heavier borrowings of our customers we have reduced our holding of British Government securities to £26,821,199. These we continue to value at market price or less.

Advances at £61,280,435 have continued to rise and are now £11,417,718 or 23 per cent more than they were a year ago. This is a large increase but in line with the experience of all the Clearing Banks who have been able during the year to meet the requirements of their customers much more fully following the ending of the credit squeeze in the previous year and the freeing of capital issues from control. It also includes, of course, those new loans to individuals under our personal loan scheme which has been continued with satisfaction both to the Bank and to its old and new customers during the year. We expect to see advances go on increasing in the future, though perhaps at a slower rate, as the schemes which some of our industrial customers have in mind come to fruition.

Our Net Profit, after making the usual provisions, which include contributions to Staff Pensions and Widows' and Orphans' Funds, and appropriations to Contingencies Account, is £541,017, an increase of £66,683 on the year.

With the balance brought forward of £136,764, a total of £677,781 remains to be dealt with. After transferring £150,000 to Pension Funds (additional to the usual contributions to these Funds) and having paid in July an interim dividend of 9 per cent on the Paid-Up Capital, we propose to pay a final dividend of 11 per cent and to carry forward £221,531. I feel sure you will agree that these results are very satisfactory.

As the size and strength of the position of the Three Banks Group may not be fully realised by all our friends we have decided to include with our Accounts, as a matter of interest, a condensed Consolidated Balance Sheet of the Group. We have always prided ourselves on the closeness of the personal relationships we have been able to maintain with our customers, which we are sure is a source of satisfaction to both parties, but the combined figures of the Group are also an indication that those who benefit from these personal relationships also obtain the advantages which flow from the availability of large resources.

I am glad to report that our associate hire purchase finance company, The British Wagon Company, has continued to expand and though competition in that field is now stronger we can, I think, safely expect further progress as time goes on. In the meantime, our association with them has strengthened during the year as experience has shown the extent to which their business is complementary to our own.

During the year our policy of expansion has continued and Branches of the Bank have been opened at Nottingham, Coventry, Romily, in the new town of Basildon and at Marsden Street (Market Branch), Wigan. At Fulwood, Preston, we have established our first Drive-In Branch, primarily designed for the benefit of motorists but giving also a normal full banking service. It is hoped that this Branch will be of service to those who wish to use their cars when visiting the Bank but find that traffic congestion makes this impossible in the main streets of the town. In addition to the Drive-In facilities the Branch has ample parking space.

The plans for the new Head Office of the Bank, to which I referred last year, are well advanced and it is expected that work will commence on the site in the near future.

In conjunction with The Royal Bank of Scotland and Glyn, Mills & Co., we have established a representative office in New York. We have for many years maintained the most friendly relationships with United States Banks who act as our agents but, while these will continue unimpaired, our growing interests have convinced us of the need to have our own representation in New York. We have therefore appointed Mr F. H. Blaxill, assisted by Mr M. G. Burnett, as our representative. The address of their office is 63 Wall Street. We hope that their services will be found to be of great benefit to our customers in all matters relating to the United States.

AN EVENTFUL YEAR

I now turn to events in a wider sphere. The past year has been an eventful one in many ways. Any period which included the launch of the Russian moon rockets, an invitation to a summit conference, and its acceptance, as well as the opening of the St. Lawrence Seaway, would leave its mark on the calendar of time. Internally, it has seen an election and the publication of the Radcliffe Report on monetary policy, which I refer to later.

There has been much coming and going among the leaders of the nations leading to the summit conference to be held in Paris in May with, it is hoped, further conferences to follow. Past experience does not encourage one to be very sanguine of the achievement of such conferences. Yet, if what I believe is the fervent desire of the masses of the people of all nations, an assurance of peace and the end of the arms race, activates the minds of all participating in the conferences, the result can be a resounding success bringing untold benefits to the whole of mankind.

The year which has just ended has been one of great material progress almost everywhere and the outlook seems set fair for the year ahead, yet such progress is as nothing to what could be achieved, for the under-developed nations especially, if only there were an assurance of peace and co-operation in the world.

THE RADCLIFFE REPORT

There has been no dearth of matters of particular interest to Bankers, the most important perhaps being the Radcliffe Committee's Report on the monetary system. The year began with the suspension of the operations of the Capital Issues Committee except for overseas issues and has ended with the Payment of Wages Bill and the White Paper on Trustee Investments. Of interest, also, are the arrangements to give trustee status to certain Building Societies.

The Report of the Radcliffe Committee is a model of lucidity and should be studied by all who would understand the workings of the British monetary system. The Committee are to be congratulated on an exposition which is at once easy to read and yet comprehensive of all aspects of a complicated matter.

Not everyone will agree with all the recommendations which they make and I find myself in agreement with the Chancellor in rejecting the suggestion that changes in Bank Rate should be made by him since that course would invest all such changes with a political flavour, which most of them would not warrant, and which might possibly be misconstrued abroad. The modification which has now been made whereby changes are announced as having been agreed with the Chancellor, thereby leaving the major part of the responsibility with the Governor of the Bank of England and his colleagues, seems an admirable one.

No one will disagree with the dictum that the fullest possible information should be available to the monetary authorities in their delicate task of deciding when and what action to take to keep the economy on an even keel and strike a balance between what can be conflicting criteria for the general good, and I am sure the banking industry will play its part in providing information. For some months now additional collective figures have been provided along with the monthly balance sheets of the Clearing Banks. I think, however, it is only right to say that only a small part, if any, of this information is of immediate use to the Banks in their daily work and the compilation of the figures means many hours of labour in the thousands of Bank Branches throughout the country.

The most important parts of the Committee's Report are, I think, those in which it draws attention to the fact that monetary measures are not and cannot be a policy in themselves and that money and money substitutes such as bank deposits are not the whole story. Monetary measures are only part of general economic policy which includes other factors such as physical controls and fiscal measures, and with money and money substitutes must be included all the liquid and near liquid assets of those who would spend and of all those who are willing to lend to them.

The economy is now running smoothly and it is generally acknowledged that this is partly due to the stern measures taken in 1957 in which the banks were called upon to play a leading part. As on many other occasions, they carried out the wishes of the authorities without demur and were glad to do so for the general good. This sort of arrangement has always worked well in the past and is to my mind more flexible than any statutory arrangement. I therefore find the Committee's recommendation that the present conventions, whereby the Clearing Banks maintain ratios of 8 per cent of deposits in cash or at the Bank of England and all told about 30 per cent in liquid assets, should be made explicit somewhat unnecessary and out of keeping with British banking traditions. There is nothing sacrosanct about these particular figures and the time may come when it may be desirable to change them—the Payment of Wages Bill may itself reduce the need for so much cash in the till—in the interests not only of the Banks but of the community at large. I hope therefore that this particular recommendation will not be proceeded with.

One of the suggestions of the Committee was that the public might find a use for an additional method of making money payments to supplement the use of notes, coin, postal orders and the bankers' cheque. The Clearing Banks have already announced that this question is receiving their close attention and I am sure that they will do all they can within the limits of their resources of man and machine power to fill any need that is found to exist. We shall, of course, take our full part in this.

STRENGTH OF STERLING

The outstanding feature of the year in the currency field has been the strength of sterling, flowing from the monthly surpluses, until October, in the balance of payments. This has made it possible to repay in advance of the due date the amount borrowed from the United States Export Import Bank and part of the amount obtained in 1956 from the International Monetary Fund, as well as to forgo the renewal of the Fund's standby credit and to pay the instalments due at the end of the year on the American and Canadian loans. The performance of sterling during the year is a matter for congratulation all round, particularly to those of our exporters who have been successful in selling so much in the dollar markets.

ESTABLISHMENT OF EUROPEAN FREE TRADE ASSOCIATION

A most important event in external economic affairs has been the formation of the European Free Trade Association, usually referred to as the "outer seven," following upon the breakdown of the negotiations with the six countries of the European Common Market a year ago. The principal difference between these two groups is that the outer seven are free to retain their individual tariffs against the outside world.

The negotiations with the six broke down because of the fundamental difference of outlook of the two groups of countries. The basic intention of the Common Market six is to use the removal of tariffs, quotas and other restrictions to bring about a complete integration of the countries, first economically and then perhaps politically, with the rules prepared beforehand. The outer seven, however, whilst agreeing to similar reductions of tariffs and quotas between themselves, have left their members free to fix their own tariffs with the outer world and have also left points of difference and difficulty to be dealt with as they arise.

Just as the Common Market is creating uncertainty for some British industries in their trade with the six countries because their competitors within the area will have the benefit of tariff reductions, so will a few industries have to face lowered tariffs here for products of the outer seven but, on the other hand, many industries will get the benefit of reduced tariffs on their exports to the other members of the outer seven.

The formation of the two groups was bound to cause some diversion of trade but larger areas of free trade must, in the long run, make for greater economic strength and the only disappointment is that there has to be this division of Western Europe into two areas. The hope is, however, that the establishment of the Free Trade Association will bring about the conditions in which the two bodies, the Seven and the Six, can come together and the machinery for discussion is available through OEEC whenever the climate is favourable.

The Free Trade Association, though in the first place a defensive measure, is to be welcomed since it enables this country to preserve its special links with the Commonwealth whilst becoming a partner with like-minded European nations in a scheme to reduce obstacles to trade, which is open to others to join.

Since the war many new countries have come into being and this country has been instrumental in helping a majority of them to birth. The immediate effect of independence has been that a highly competent and incorruptible civil service has been replaced by locally recruited talent.

Since the war, too, the United States has given aid, in other words outright gifts, to many countries on a munificent scale, if not without strings or conditions at any rate without really effective control over the degree of efficiency with which the funds were used.

SUGGESTED AID FROM WESTERN EUROPE

This aid, in spite of its scale, was given until recently without any adverse effect on the United States balance of payments and to that extent is a measure of the great strength of the American economy. Now that the external position of the United States is under a little strain—though because of its huge gold reserves this is insignificant in degree—and the currencies of Western Europe, especially Britain, are stronger, the suggestion has gone out that Western Europe should be the more ready to help with the development of the economically less developed parts of the world.

This is a matter which we should welcome but I should like to make some observations upon it. Some fifty or more years ago, when this country was pre-eminently the supplier of capital to overseas countries, both to governments and to commercial concerns in those countries, the practice was for the government or the railway, or whatever concern it might be, to come to the London Capital Market and make an issue of stock or shares. It should be remembered that those were the days before direct government to government dealing. There was, however, a sanction in that if interest and repayments were not met on the due dates, the reputation not only of the concern but also of the country suffered. Defaulters would get no more loans except on onerous terms and, naturally, the most favourable terms were almost entirely reserved for those lands and concerns under British control or influence. It was in this way that, for instance, the railways of India, Canada, Brazil, Argentina and, to some extent, even the United States came to be built. I think I would like to see some similar sort of arrangement brought into being again. It could not be done for the under-developed countries without some outside help but a partial government guarantee of the lending countries, if need be shared by a number of governments on a co-operative basis as was done with the Dawes and Young Loans to Germany in the 1920's, would be a good thing. The old system was not only free of political control but was seen to be so by the receiving countries. Nowadays, such organisations as the World Bank and the International Finance Corporation are working on these lines and giving help on a non-political basis where they consider the borrower creditworthy, and I should like to see an extension of this work. I am not unmindful of the excellent work of the Export Credits Guarantee Department, with the assistance of the banks, in helping exporters to grant long credit to overseas buyers but I feel that, in the long run, it would be better if the necessary finance was arranged as a separate transaction.

PAYMENT OF WAGES BILL

The Payment of Wages Bill should have a welcome from employers and employed alike since it is permissive in character. Obviously, since it presages a spread in the banking habit among new sections of the population, it is a development which will receive a particular welcome from the Banks. But payment of the whole of the wage, particularly a weekly wage, by a cheque promptly cashed at a Bank or by a shopkeeper creates problems for banks, shopkeepers and wage earners. Surely a more practical method would be for the employee to elect to receive a fixed sum each week in cash to cover his normal household and personal expenses and for the balance of his wage to be credited to a banking account on which he would draw cheques to cover all his other expenses. Such a course would avoid congestion at bank counters and also any embarrassment to shopkeepers in changing cheques.

GOVERNMENT'S PROPOSALS TO WIDEN INVESTMENT POWERS OF TRUSTEES

The end of the year brought the news of the Government's intention to pass legislation to widen the investment powers of trustees.

If the proposals become law, trustees will be enabled, amongst other things, to put half the trust funds into equities subject to certain conditions.

For some time the trustees of many charitable and other bodies have been applying to the Courts and in other ways obtaining wider powers of investment than those available to them under the existing Trustee Acts, and our Trustee Department have for many years advised testators to make provision for similar wide powers when drawing up wills and trusts. The new proposals will have the effect of allowing all trust funds the benefits which can come from wider powers of investment.

Since the war it has become painfully evident that the old rules do not protect trust funds

against inflation, indeed quite the reverse, and equally they prevent such funds from participating in the economic growth of the community by restricting them to fixed interest stocks.

We have had stable prices for over a year and, quite possibly, the risks of serious inflation have disappeared for the time being but since the hope is that the next decade will see great progress in economic affairs, it seems only right that trust funds should not be debarred from participation in that progress.

How great has been the deterioration in the position of trusts may be seen from the fact that retail prices are now two and three-quarter times what they were before the war and whilst the prices of government securities are less than they were ten years ago, ordinary shares in general have trebled in price. It may well be that at the present time, with ordinary shares showing such very low yields and gilt edged showing a return almost as high as it has ever been except in times of crisis, there is not much cause to make a change but at least a trustee should have the right to do so.

THE COTTON INDUSTRY

The year has brought the cotton industry both the stick and the carrot in the form of the adverse decision of the Restrictive Practices Court on the Yarn Spinners Agreement and later the Government's compensation scheme with the object of reducing the scale of the industry and helping the part left to re-equip. But the weather and other factors have also taken a hand so that a year which began with considerable hesitancy and severe falls in price after the verdict of the Court was known, saw the compensation scheme taken up on a scale that was hardly thought likely, though not more than is probably necessary, and a minor boom at the end as the sales, due in some measure to the fine summer, called for replacements. So far, no serious unemployment problems have arisen from the closings under the compensation scheme, in fact quite the reverse, and little difficulty seems likely to come as workers are taken up by the remaining mills and by other industries.

A DIFFICULT YEAR FOR SHIPPING

The shipping industry has had another very difficult year and though the portion of the merchant fleet which is laid up is less than that of other countries, particularly the flags of convenience, it is still depressingly large. However, at the end of the year there was a more encouraging turn in freight rates and generally the outlook seemed to have improved a little, but it is too early to say whether this improved situation will have any degree of permanence with so much new tonnage becoming available in the near future. Not unnaturally the shipbuilding industry, too, has experienced similar conditions, any new orders during most of the year being matched by cancellations and a consequent running down in the order books. Only in the last few weeks of the year did a comparatively large inflow of new orders bring some relief but the competition is very keen and the prices obtained unattractive. They do, however, indicate that, after their great efforts to modernise, British yards are still competitive under the most difficult conditions and so should be ready to take immediate advantage of any improvement when it comes.

CONFIDENCE IN FUTURE PROSPECTS REDOUBLED

Two years ago, in the midst of the economic crisis, I said our difficulties could be overcome by co-operation in the use of the available resources of both men and materials to the best advantage and last year I was able to indicate that with the removal of restrictions, especially those placed on the banks, I could take a confident view of the future, particularly if we could have stability. We have now had a year of stable prices and in other ways the economy is distinctly healthy, so that my confidence in the prospects of the economy in the immediate future is redoubled. The outlook seems bright with our trading position soundly based, and I see no reason at all why we should not make rapid progress in our economic affairs and so be able to look forward to ever-improving standards of living for our people.

The Bank's business continues to grow and this has been an active year for the Staff in the spread of new branches and in many other ways, and I would like to express on behalf of myself and all my colleagues on the Board to Mr Allman, the General Manager, to the Assistant General Managers and to all members of the Staff wherever they may be stationed, our best thanks for their devoted services throughout the year and our appreciation of their keenness and enthusiasm.

FLOWERS BREWERIES LIMITED

A RECORD YEAR

SIR FORDHAM FLOWER'S STATEMENT

The Sixty-second Annual General Meeting of Flowers Breweries Limited was held on January 11th in London, Sir Fordham Flower, Chairman, presiding.

The following are points from his statement:

It has been a record year. Group profits before tax have gone up from £765,000 to £1,045,000. The main cause is increased sales of Flower's Keg Bitter and Brewmaster.

Our reciprocal trading arrangements with Friary Meux and H. & G. Simonds are working well. Your Company has made a substantial investment in the ordinary shares of Ushers Wiltshire Brewery. In July we entered into an agreement with Whitbread & Co. whereby Mackeson Stout is stocked in our houses and we supply Flower's Keg Bitter to a considerable number of theirs. Mr W. H. Whitbread has accepted our invitation to join the Board.

The recent extensions to the Luton Brewery are working satisfactorily, and we are expanding the capacity of the Stratford-on-Avon Brewery.

IMPROVEMENTS TO PROPERTIES

Our properties are being revalued. Fifteen new houses are to be built during the next two years. There are still a number of houses which do not come up to modern standards. In view of our successful trading results we are accelerating our programme of improvements to these properties so that the work on them may be completed within the next three years.

The rights issue of Ordinary Shares was taken up enthusiastically. Your Board forecast a total dividend of 18 per cent on the ordinary capital prior to the rights issue. An interim dividend of 6 per cent has been paid and a final payment of 12 per cent is now recommended.

I am glad to say that since the beginning of this financial year our trade has increased substantially.

The report and accounts were adopted.

MITCHELL COTTS GROUP LIMITED

MR H. C. DRAYTON REVIEWS A DIFFICULT YEAR

The Fortieth Ordinary General Meeting of Mitchell Cotts Group Limited was held on January 8th in London.

Mr H. C. Drayton, the chairman, presided and, in the course of his speech, said:

Shareholders will have been expecting that our trading profits would be down as compared with the previous year, as it will no doubt be recalled that when we maintained the interim dividend at 10 per cent last July, we issued a circular to all members warning them that the adverse factors to which I referred in my speech last year were still continuing to affect sections of our Group's trading. In a business like ours we can always expect to have one "kicking horse"; business would be uninteresting if we hadn't, but this year we had four, shipping, interruption of trade in Iraq, recession in Canada and restriction on imports in the Sudan, which is a bit too much of a good thing.

In the circumstances, therefore, we have felt that to have been able to cover our total ordinary dividend of 25 per cent has not been too bad an achievement and we are recommending that we do maintain the total distribution for the year and shall be inviting you to approve our recommendation of a final dividend of 15 per cent making 25 per cent.

The final consolidated net profit after all adjustments and taxation, is down from £554,851 to £366,119. This enables us to pay the dividends I have just mentioned and still be able to add some £66,000 to the unappropriated balance carried forward.

After reviewing the Group's world-wide interests, the Chairman continued: The Textile industry continued in the doldrums during the year and, although we had got John Shields & Co., pretty well reorganised and in good shape, we were still losing quite a lot of money with it. We therefore felt that we were doing the right thing when, coincidentally with the Government Scheme to scrap surplus looms and spindles, we were approached by another Company with the idea that they should take over a good deal of our activities which happened to be complementary to their own. This we did and then closed down and scrapped the surplus machinery under the Government's Scheme. We cannot tell yet just how we shall come out financially on the closure of this business but we shall no doubt have some losses to absorb in the current year which I do not think will be too onerous.

CURRENT YEAR

In the Accounts you will see that the net profit before taxation last year was £599,027. This amount included all our revenue before charging tax, but was after all other expenses, though it did include adjustment to profits of previous years and capital profits which together amounted to £253,000.

Subject to two factors:—(a) The valuation to be put on our stocks at the end of the year ending 30th June next and, (b) Political upheavals in any part of the countries in which the Group operates, and you must not underestimate these two factors, I shall be disappointed if our true trading profits for the year do not show an appreciable increase on that figure. This forecast takes no account of any adjustments for previous years' or capital profits that we may be able to bring in, the amount of which is always impossible to foresee.

The report and accounts were adopted.

SECOND COVENT GARDEN PROPERTY

CONFIDENCE IN GROUP'S PROFIT-EARNING ABILITY

The twenty-sixth annual general meeting of Second Covent Garden Property Company Limited was held on January 13th in London, Sir Brian Mountain, Bart (the Chairman), presiding.

In his statement reviewing the accounts for the year to September 30, 1959, including those of Covent Garden Properties Co. Ltd., Sir Brian said that the Group revenue had again shown a satisfactory increase. The Group profit before taxation amounted to £635,566 compared with £604,569. The net profit after providing for taxation and minority interests was £227,933 compared with £175,133.

Referring to Covent Garden Market Sir Brian said: The Government has publicly stated its intention of acquiring your Company's entire interest in the market and the surrounding properties. Preliminary negotiations for the acquisition have already started, but it is at present too early to give any idea of the price which may be agreed or the length of time that might elapse before the transfer of ownership takes place.

Commenting on new projects, Sir Brian said that during the year the Company acquired a 50 per cent interest in Business Property Investments Limited, whose principal asset was Dean Bradley House, Westminster, recently let for a long term to Imperial Chemical Industries Limited.

The Company also acquired on October 1, 1959, the entire issued share capital of City and Town Buildings Ltd., which with its subsidiaries constituted a progressive group of property investment and development companies.

The Board had also been investigating the possibilities of property investment overseas. As a result, a substantial interest had been acquired in Realty Development and Mortgage Co. Ltd., which was a newly established property investment and development company in Australia. Negotiations were also in progress to set up a property investment company in Canada, in which the Company would have a major interest in partnership with other UK interests.

Sir Brian concluded: Shareholders will appreciate that a larger portion of the group assets than in the past will in future be employed in development projects and as much of the investment described earlier is of a long term character, that large rewards cannot be expected in the early stages. In addition, if the Government proceeds to acquire the Covent Garden Market under compulsory powers, there may well be considerable disturbance of the group revenue pending reinvestment. Nevertheless, your Directors have great confidence in the prospects of the Group and of its ability to show substantially increased earnings in the future, and have a number of interesting propositions under consideration.

The report was adopted and the total dividend of 15 per cent (against 12½ per cent) was approved.

ANSELLS BREWERY LIMITED

"THE BEST PINT AT THE PRICE FOR QUALITY AND STRENGTH"

The fifty-ninth annual general meeting of Ansells Brewery Limited, was held on January 14th at Birmingham, Mr A. E. Wiley (chairman and joint managing director) presiding.

The following are extracts from his circulated statement:

I am pleased once again to submit to you, on behalf of your Board, the statement of accounts for the trading year ended September 27, 1959. The year has been a difficult one, but after a very trying six months, the remainder of the period was successful owing to the wonderful summer, which I am told is the best recorded for over 150 years. In April last, you will recollect, the Chancellor of the Exchequer reduced the beer duty to the Brewers by 4s. 7d. per bulk barrel, but owing to the fact that he reduced the retail price to the public by 4s. per bulk barrel, your Company, together with all other Brewers, has been faced with an additional charge in respect thereof, of 4s. 5d. per barrel, which, thanks to the exceptional summer, was able to be partially mitigated by the increased trade. The Chancellor also adjusted the licence duty, but this does not operate until the current year, as such licence duty had already been paid prior to the Budget.

RISING COSTS

The period under review has again been one of rising costs of wages in the Brewery and Licensed Houses, materials and services of all kinds, particularly of local rates on our Breweries and Bottling Stores, which operated from April 1, 1959, owing to de-rating. It will also be noted that the Depreciation charge is higher by some £20,000. Further, in accordance with your Board's policy of maintaining its licensed premises, Brewery, and plant, in a full state of efficiency, the cost expended on this item has been £643,391, being £20,977 more than in the previous twelve months.

The Group trading profit for the year was £2,532,825, showing an increase over that of last year of £32,058. Owing to the impact of the Budget, your Board thought fit to transfer from the Stock Reserve Account £85,780, in order to deal with the substantial stock losses caused by the change in the Budget; also in addition a charge has been made in the accounts to include credit given to our tenants and free trade customers to compensate them for their stock losses, because of the express wish of the Chancellor to reduce immediately retail prices to the public.

The charge for taxation this year is lower owing to the change in the standard rate, but nevertheless it is still a penal charge, and I once again mention the fact of the unfair treatment of Companies such as yours by reason that no "depreciation of buildings" allowance is given against taxation in respect of hotels, licensed houses, and other retail establishments controlled by your Company. This is an injustice that should be righted forthwith, because large sums of money are necessary in order to maintain and modernise such premises.

PROPOSED SCRIP ISSUE

The net profit for the year of £1,233,274 is £150,516 more than last year. In addition there is an excess provision for taxation from the previous year of £105,057. Therefore, if you will turn to page 3 of the Directors' Report and Statement of Accounts, you will see the disposable balance is £1,823,463. I have for some years explained to Stockholders how necessary it has been to conserve the resources of the Company, taking into consideration the large amounts we have had to find to reconstruct our Brewery, Bottling Stores, Plant, Machinery and Boiler-houses. Your Directors now feel that the Stockholders should benefit in the way of an increased dividend out of the profits which are available, and, as you will see from the Directors' Report, it has been decided to recommend an increase of 3 per cent in the rate of the final dividend. It has also been thought appropriate to reflect in the amount of the ordinary capital some part of the profit reinvestment which has taken place in recent years.

It is therefore proposed to capitalise part of the reserves of the Company by making an issue of fully paid Ordinary Stock to the Ordinary Stockholders in the proportion of One £1 Ordinary Stock Unit for every Five £1 Ordinary Stock Units now in issue.

Continued progress has been made, and is still being made, on modernising our Breweries. We were particularly fortunate in having completely re-equipped our enlarged Bottling Stores in time for the greatly increased demands on output brought about by the fine summer.

EXPENDITURE ON MODERNISATION

Expenditure during the last ten years on this modernisation programme has amounted, so far, to well over £2 million—money well spent to uphold our new slogan "The Best Pint at the Price for Quality and Strength."

The good quality of the barley and hops this harvest should help us to maintain the high quality of our beers, especially as amongst our blends will be malt from the championship barleys grown this year on our doorstep in Shropshire.

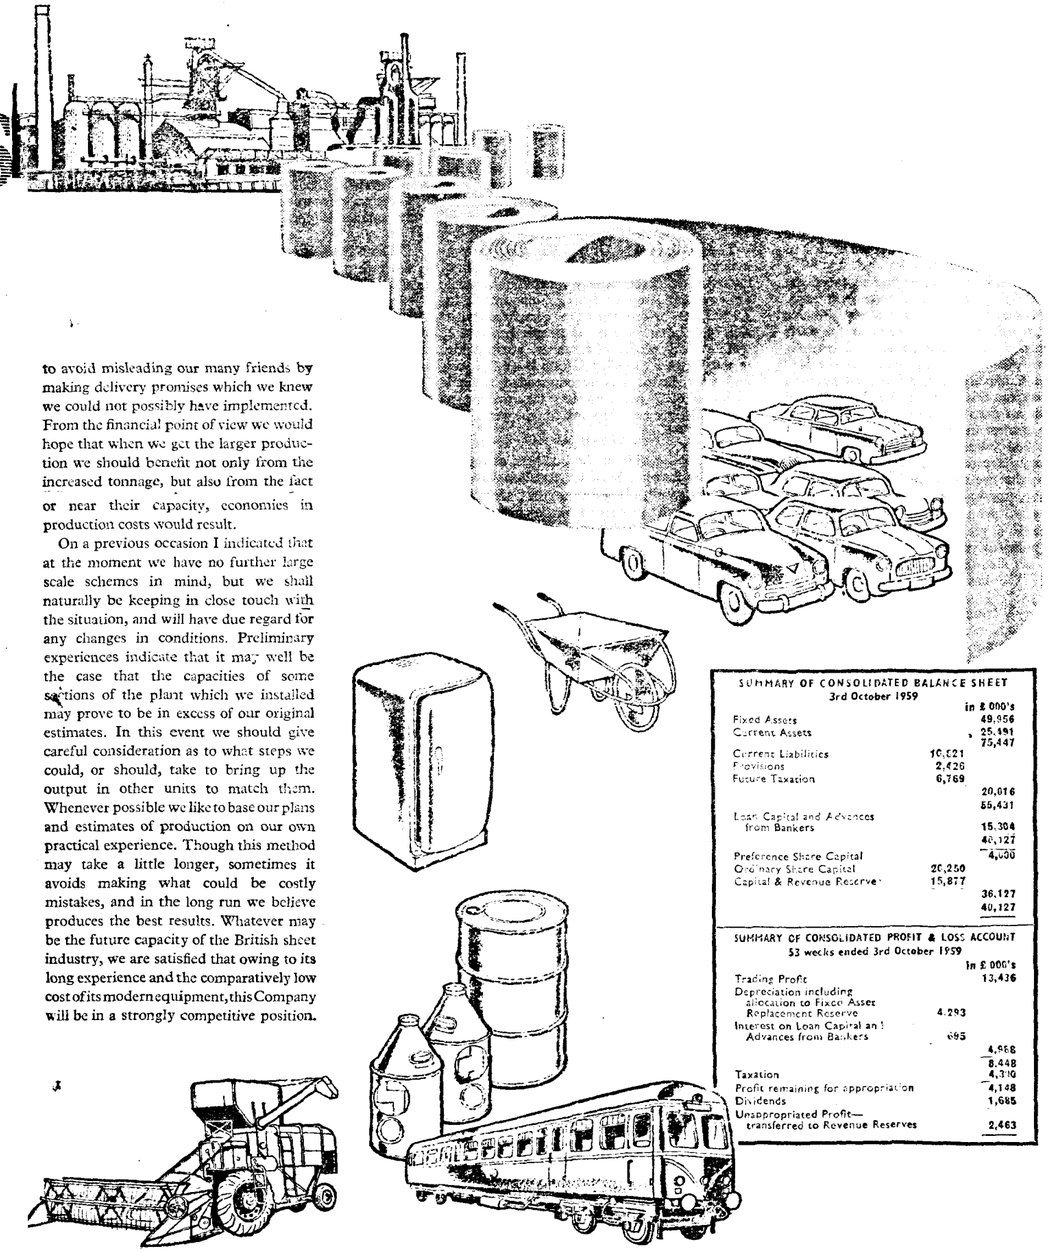
HOTELS AND NEW HOUSES

The "Victoria Hotel," Torquay, still remains very popular with the public, and your Directors are hopeful of another successful season.

It will interest Stockholders to know that we have opened ten new houses in various districts during the last financial year, all of which, your Directors feel, should prove to be profitable undertakings, thereby helping to replace barrelage lost in the re-development areas.

"Penns Hall Hotel," after extensive alterations, was reopened on November 17th.

We have also reopened the "Greswolde Arms Hotel," Knowle, after an extensive overhaul.



The mutual arrangements made between your Company and Messrs Mitchells & Butlers Limited are working very satisfactorily, and the first new licensed house, the "City Arms," Coventry (trading as Associated Midland Brewers Limited), was opened on December 15th last. Two other houses are in course of negotiation with the Local Authority concerned.

I think perhaps our Stockholders should know that all our Subsidiary Companies have played their part in contributing to the profits of the parent Company.

The report and accounts were adopted.

John Summers

AND SONS LIMITED

Extracts from the Statement by the Chairman **MR. RICHARD F. SUMMERS**

to be presented at the ***Annual General Meeting*** *on Thursday 4th February 1960*

BEFORE embarking on this statement I refreshed my memory with what I had said at this time last year. I found that under "Future Prospects" I forecast that there would not be any significant increase in our production and deliveries, but that demand would be such that it would enable us to dispose of everything we could make. I also predicted that the financial results would be somewhat similar. In the event it seems that my forecasts were reasonably accurate. If anything the financial results are somewhat better than had been expected. Deliveries of sheets were up by some 40,000 tons, and the demand was very heavy throughout the year.

DIVIDEND

I do not propose to go into details with regard to the Balance Sheet and Profit and Loss Account, as these, and any changes we have made in their presentation, are explained in the Directors' Report. You may recollect that in June when we capitalised some of our Reserves, giving Shareholders one new Ordinary Share for every two held, it was made clear that these new Shares would rank for the final Ordinary Dividend to be paid early in 1960, and that if the same total amount were paid as in the previous year the final dividend would be at the rate of 6¼% on the enlarged Capital. It was further indicated that we hoped that when the time came it might be possible to justify some modest increase on this rate. I am glad that we do in fact find ourselves in a position to fulfil this forecast and to recommend a final dividend of 8¼%. I have said on a number of previous occasions that our objective is to develop the Company and increase its efficiency whenever we can, and at the same time endeavour to give a fair return to our Shareholders. Taking everything into consideration I believe that our achievements last year can be said to have lived up to this aspiration.

PROGRESS OF DEVELOPMENT SCHEME

Unfortunately owing to a number of circumstances we have been delayed in the completion of our development scheme. We did however bring into operation the two new down coilers on the hot strip mill in April, and shortly after the end of the financial year we brought into commission the two-high reversing mill and the new re-heating furnaces. These were two steps in the overall plan for increasing production from the hot mill, and we have already felt the first benefits of their operation. At the time of writing this statement our Engineers are engaged on the last, and perhaps the most complicated, of the major changes on the hot mill—that is, installing at the end of the finishing train the two original roughing mills. The preparation of the foundations for these was very ingeniously carried out without interruption to production. This completes the main alterations to the hot strip mill, but we shall not be able to take full advantage of them until the modifications to the slabbing mill have been completed, and until the new finishing departments are ready. Progressively during the year further sections will be brought into production, and we are hopeful that towards the close of the current financial year all the major units will be in operation, with the exception of the new cold reduction mill, which was one of the additional items referred to in the Directors' Report, and which was only ordered some twelve months ago. So far as steel making capacity is concerned we have all that is required, and the output of ingots can be progressively stepped up as and when the mills are in a position to roll increased quantities.

Whilst it is regretted that we have not completed this scheme by our original target date, it has been by far the most complicated that we have ever embarked upon, as it entailed drastic modifications to existing units, and great ingenuity has been required to keep down to the minimum the interruption to the current production. Much credit is due to all those concerned for the way in which they tackled, and are tackling, this difficult and intricate manoeuvre.

COMPANY'S FUTURE PROSPECTS

I have already said that we hope 1960 will see the completion of our present expansion scheme. We do not expect to see much in the way of increased production during the first half of the year, as we shall be busily engaged in transferring and modifying much of our finishing equipment, but we would hope that in the latter half we should begin to reap the benefit of these changes and be able to increase our deliveries, and that by the end of the year the capacity at Shotton would be approaching its target. Our order book is full, and we are anxiously awaiting the time when with increased production we shall be able to meet more nearly the requirements of our customers. We appreciate that during the past year we have been unable to do this, but we tried to avoid misleading our many friends by making delivery promises which we knew we could not possibly have implemented. From the financial point of view we would hope that when we get the larger production we should benefit not only from the increased tonnage, but also from the fact or near their capacity, economies in production costs would result.

On a previous occasion I indicated that at the moment we have no further large scale schemes in mind, but we shall naturally be keeping in close touch with the situation, and will have due regard for any changes in conditions. Preliminary experiences indicate that it may well be the case that the capacities of some sections of the plant which we installed may prove to be in excess of our original estimates. In this event we should give careful consideration as to what steps we could, or should, take to bring up the output in other units to match them. Whenever possible we like to base our plans and estimates of production on our own practical experience. Though this method may take a little longer, sometimes it avoids making what could be costly mistakes, and in the long run we believe produces the best results. Whatever may be the future capacity of the British sheet industry, we are satisfied that owing to its long experience and the comparatively low cost of its modern equipment, this Company will be in a strongly competitive position.

SUMMARY OF CONSOLIDATED BALANCE SHEET
3rd October 1959

JOHN SUMMERS & SONS LIMITED · HAWARDEN BRIDGE · SHOTTON · CHESTER

HAWKER SIDDELEY GROUP ENJOYS A SATISFACTORY YEAR

SIR THOMAS SOPWITH REPORTS

This is the twenty-fourth Annual General Meeting of your company. Before I go on to talk about the year behind us, I want to say something about what lies ahead. I believe that we are now embarking on a phase of development for this Group which could be one of the most rewarding in our history.

You know that we are making offers to the de Havilland and Blackburn companies and we have already acquired Follands.

In doing this, we are trying to meet the declared policy of the Government and, although we were not particularly anxious to add to our aircraft interests in the UK, this merging of the companies will consolidate the position of the Hawker Siddeley Aviation Company as the foremost aviation enterprise on this side of the Atlantic and put it in an even stronger position to carry out any project in aviation, civil or military, or in allied industries, which the Government may have to offer. I can assure you, however, that we would not have gone ahead they were in the best interests of your company.

There is a great deal of common sense in the policy of rationalisation and concentration of the aircraft industry into large groups. We have taken the lead in this matter.

I sincerely hope that the Government will keep faith and place the contracts necessary for us to function as the strongest technical, scientific and production company in the business.

It has been our policy to spread the basis of our operations. Our efforts on the industrial side have by no means slackened—indeed they have been intensified and are now bringing their reward.

Overall, I can say that with nearly six months of the current year behind us, and despite the recession in Canada, the results of the Group should not disappoint you and will again provide ample cover for dividends at the same rate as last year.

The turnover of the Group last year was approximately £260 million.

The total profit, after taxation, attributable to Hawker Siddeley Group rose by more than £1 million to £6,250,957.

In Canada, the cancellation of the Avro "Arrow" and the Iroquois engine contracts was a severe blow; this, coupled with the effects of the Canadian recession, resulted in a sharp fall in trading profits this year from £6,617,000 to £3,911,000. The profits in Canada next year will be even lower, but after that the worst should be behind us.

FINANCE

In all engineering businesses scientific research and technical development is one of the first essentials—and it is costly. In aviation this is perhaps more so than in most other industries and is emphasised by the fact that, due to recent Government policy, we have been forced to design, develop and build aircraft for the civil market at our own expense. At the moment we have two such projects, the AW. "Freightercoach" and the Avro "748" turbo-prop medium range transport.

On the industrial side of our business similar activities are taking place. New research centres have been built, or are under construction, in connection with diesel engines, electrical engineering, steam and industrial gas turbines, nuclear power and electronics. Results stemming from this research will become apparent as time goes on.

The profit for the United Kingdom Group including adjustments of prior year profits, but after deducting nearly £3 million special development expenditure, amounts to £9,522,183 before taxes as compared with £8,174,447 last year on the same basis.

The total profit, after taxes, attributable to the Hawker Siddeley Group is £6,250.957 and your Board has recommended a final dividend of 7 per cent less tax, making a total of 10 per cent less tax for the year.

AVIATION

The aviation side of the business, as represented by Hawker Siddeley Aviation Ltd., is "*Argosy.*" Last January the "Argosy" freightercoach prototype made its maiden flight, and the first six aircraft have now flown. We have had many inquiries from air transport operators in various parts of the world.

The military version, the AW. "660," is in the development stage and the first aircraft should fly before the end of this year. Twenty have been ordered by our Government and we hope this is a forerunner of further orders. Much interest is also being shown by other governments.

Avro "748." World-wide interest has been created in this 36/40 seater turbo-prop transport which is constructed on the latest "fail-safe" principles, has a low first cost, and is cheap to operate. The prototype is expected to fly early this year.

We have been successful in negotiating a licence with the Government of India covering a period of ten years for the manufacture of Avro "748s" as a replacement of the DC-3 aircraft now operated by the Indian Air Force. At home, the Avro "748" has been ordered by two independent carriers.

INDUSTRIAL

Brush Electrical were successful in obtaining a contract from the British Transport Commission for the supply of 60 diesel electric locomotives. Forty-four were delivered during the financial year under review and a repeat order for 100 locomotives for delivery in 1960 has been received.

Manufacture of steam and industrial gas turbines and turbo-blowers is centralised at the new Hawker Siddeley Brush Turbine Company at Gloucester.

Fuller Electric had a successful year and established another record in the size and rating of equipment produced—shipping the three largest transformers ever manufactured by this company. The company is developing new design and manufacturing techniques for higher voltages and has extended its range of tapchanger equipment.

Mirrlees have opened up a wider field for their marine business by the introduction of the large "Monarch" class engines, a number of which have been ordered. Prospects for future sales are encouraging.

Nationals have introduced this year a new direct-reversing engine. Known as the "Sovereign," the first one has been installed in a trawler shortly to be commissioned.

Petters now undertake the manufacture of the smaller engines in our range.

CANADA

The Canadian economy has not maintained the rate of development of a few years ago and our companies there have all been affected in varying degrees.

The Dominion Steel & Coal Corporation, although affected by increasing competition on the international front, has been successful in extending its sales and increasing its volume of production. Facilities for the production of hot and cold rolled sheet and strip are being studied. Canadian Car Company have suffered due to lack of orders for re-equipment, the volume purchased by the Canadian Railway companies being the lowest in the post-war period. A major reality is our position will improve.

Already the aviation picture has brightened somewhat by the award to Orenda Engines of a contract to supply the jet engines to power the Canadian-built "F.104" fighters.

CONCLUSION

We are confident that if our offers to de Havilland and Blackburn shareholders are accepted, these two fine companies will greatly supplement the resources of our Group and together we will be in the predominant position in both the civil and military aircraft fields this side of the Atlantic.

While we in this Group continue to do our utmost in developing export trade, we are at a very serious disadvantage in the all-important field of long-term export credits. Foreign governments back their industries' efforts in world markets to an extent which is unknown in this country. Organisations such as America's Export-Import Bank, extend long-term credits against which we cannot compete. Foreign military, diplomatic and commercial representatives abroad often use every source of influence at their command on behalf of their national products.

I commend to our Government the urgent need to adopt a vigorous policy of backing British industry in its efforts overseas so that we may meet our competitors on more equal terms.

A further point concerns our aviation interests. Hawker Siddeley Aviation is a group of companies forming very largely the backbone of Britain's aircraft industry. In time of need they have done all that was expected of them—and more. In peace they contribute to the welfare and prosperity of this country.

The industry has been going through a period of difficulty, cutbacks and costly re-adjustment. To denude it of support now would imperil one of our greatest sources of industrial strength and indeed could threaten our very heritage.

Our good results are a tribute to the loyalty, devotion and skill of all our 100,000 employees, and I know you will join me in expressing our thanks to them.

CLYDESDALE & NORTH OF SCOTLAND BANK

A YEAR OF ALL-ROUND PROGRESS

SIR HAROLD E. YARROW ON MORE BUOYANT NATIONAL ECONOMY

The One Hundred and Twenty-second Annual General Meeting of Shareholders of Clydesdale & North of Scotland Bank Limited will be held on February 10th at the Head Office, St. Vincent Place, Glasgow.

The following are extracts from the circulated statement of the Chairman, Sir Harold E. Yarrow, Baronet, GBE, LLD:

The over-all picture, I think you will agree, is highly satisfactory, and in analysis it will be seen that progress has been made in every direction.

The Balance Sheet total of £224,853,469 shows an increase on the year of over £8 million and constitutes a new record in the history of the Bank. This expansion in our figures arises mainly from an increase of £7,264,609 in Deposits from the public, which now stand at £183,307,283. This increase, spread over our wide network of branches, reflects a general broadening of our connections.

The total of our Notes in Circulation at £25,068,182 shows little change from the previous year.

Acceptances, Confirmed Credits and Engagements have risen by £1,450,213 to a total of £9,963,354.

Referring now to the Assets side of the Balance Sheet you will see that the total of Cash, Balances with other Banks, Money at Call and Short Notice and Bills Discounted is £73.347,115 which, in relation to our Deposits and Notes in Circulation, gives a Liquidity Ratio of 35.2 per cent.

Our Investments in British Government Securities show a decrease of £1,713.868 as compared with last year's figure and now stand at a Book Value of £77,898,617. The Market Value of the Investments has improved since publication of our last Balance Sheet.

Advances increased by £7,686,687 on the year to reach a total of £56,189,981.

Turning now to the Profit and Loss Account you will notice that our Profit at £625,829 is up by £127,858, an increase of 25.7 per cent. The increase in Profit has enabled us to allocate £175,000, against £100.000, to Reserve for Contingencies, and £125,000, as compared with £100.000, to Staff Pension Fund. The appropriation of £32,500 to Staff Widows' Fund remains unchanged. We propose to recommend payment of a Dividend at the rate of 11 per cent actual, less Income Tax, for the half year ended December 31st, making 20 per cent for the year, an increase of 2 per cent. There remains a balance of £209,188 to be carried forward to 1960 compared with £214,881 brought in from the previous year.

NEW DEVELOPMENTS

Once again we have taken the lead in Scotland in the development of lending policy with the introduction last November of Term Loans for smaller businesses to help them to acquire or improve capital assets such as premises, plant, machinery and equipment. Bearing in mind both the short period during which this facility has been available and the nature of the need it has been designed to meet, I can say that the initial response has been most encouraging.

Another development to which I would like to refer is the installation of electronic book-keeping equipment in the Banking Department at Head Office. These machines, amongst the most up-to-date of their kind, will help us to maintain the speedy and accurate service which our customers have a right to expect and do receive from us.

An event which I can scarcely ignore is the publication of the Report of the Committee on the Working of the Monetary System (the Radcliffe Committee), in which it is pleasing to note an acknowledgment of the "care for wider public interests" displayed by Scottish banking. For the moment, I do not wish to add to the widespread discussion which the Report has evoked, and which seems likely to continue for some time.

In presenting a Report which, within its terms of reference, gives a coherent account of the monetary system and provides a sound basis for much better informed discussion in the future, the Committee has rendered the country a signal service.

THE NATIONAL ECONOMY

The publication of the Report offers a salutary reminder of how quickly world economic conditions can alter. When, in April 1957, the then Chancellor of the Exchequer intimated his intention to set up the Committee, the major problem facing this country was inflation. By the end of that year, however, the picture had changed.

We have emerged from a difficult period immeasurably stronger than we have been for a very long time. The price level has been relatively stable for a period of nearly two years, the position of our gold and convertible currency reserves, while not yet as satisfactory as we might wish, has been improved, and confidence in the Pound has been fully restored. However, while we may now hope that there will be a steady improvement in industrial output, we would do well to realise that inflation has been no more than contained, and even that has been achieved largely because external circumstances have been favourable. Markets are now more competitive than they have been at any time since the end of the war, and if we are to maintain, let alone increase, our share of world trade, we shall have to be constantly on our guard against a return of inflationary conditions with their inescapable consequences of steadily rising costs and prices.

SMITH'S DOCK COMPANY

Colonel Eustace Smith's Confidence in Future

The Sixty-first Ordinary Annual General Meeting of Smith's Dock Company Limited was held on January 12th at North Shields.

Colonel T. Eustace Smith, CBE, TD, DL (Chairman and Managing Director), in the course of his speech, said: Last year I warned you that the wave of prosperity which had lasted in the Industry since the war was ended and in fact we were facing a period of recession, if not depression. The situation has deteriorated during the year under review and, bearing this in mind, I consider the financial results must be considered satisfactory. I should like to mention two items of particular significance, first the welcome reduction in the burden of Income Tax and the hope for further reduction so necessary for the essential liquidity of the Company, and secondly the continued strengthening of the liquid assets position, which will be of great importance to us during the present recession and which should avoid any delay in the steady growth of your Company.

It is not only this country that is suffering, but throughout the world the situation in shipbuilding and shiprepairing has deteriorated throughout the year. We are fortunate that we have two years' work ahead, with all berths occupied. In the following year we may have a vacant berth, although we are still hopeful that it may be possible to fill this either with a provisional order becoming firm, or a new order. In pre-war years an order book of two years' work was considered satisfactory provided prospects were reasonably bright. At the moment, prospects even a year or two ahead are not too good.

Interest in the Pescara Free Piston engine is still growing and the satisfactory results obtained by the "Goodwood" conversion, and the completion of our first fully designed ship with free piston propulsion early in the Spring, should stimulate interest in this form of propulsion.

Our estimating staff have been working under great pressure and considerable travelling has been undertaken by them in order to keep our works as busy as they have been. Their success in obtaining work has been much appreciated and we have been able to secure work against competition from the whole of Europe as well as this country.

Even if the prospects are not particularly bright, we have faith in the future of our Company, and therefore we must look ahead and ensure that we have modern up-to-date facilities. Your board have therefore decided that we should lengthen and widen No. 4 Dock, thus providing a dock 600 ft. x 85 ft. beam, capable of taking up to 24.000 ton tankers. A new dock 300 ft. x 65 ft. beam will be built alongside No. 4 Dock. With these alterations we will have an admirable range of docks. The report was adopted.

WESTLAND EUROPE'S LARGEST HELICOPTER SPECIALISTS

ANNUAL REPORT BY THE CHAIRMAN

Following are extracts from the statement of Mr. Eric Mensforth, C.B.E., F.R.Ae.S., Chairman of Westland Aircraft Limited, circulated to shareholders with the Annual Report and Accounts for the year ended September 30, 1959:—

The Accounts now submitted cover the fifteen months from July 1, 1958, to September 30, 1959, except in the case of Saunders-Roe Limited and its Subsidiaries whose results are included in the Consolidated Profit and Loss Account only for the six months to September 30, 1959. The consolidated profit of the Group for these periods amounted to £2,088,909. For the previous twelve months the consolidated profit of the Group (excluding Saunders-Roe) was £1,404,001. These results, which your Directors regard as most satisfactory, are due principally to improved trading by the original Westland Group.

Because of the change in accounting period, only one year's tax has to be provided out of the profits for the fifteen months to September 30, 1959. This absorbs £809,317 as compared with approximately £1,018,000, which would be a normal charge against the profits shown. After deducting this provision, there remains a consolidated profit after taxation of £1,279,592.

Development expenditure, on which the Group's future prosperity depends, will continue to be heavy. In the past your Company's share of this expense has all been borne out of current earnings, and your Directors hope to be able to continue this policy. As I have, however, frequently emphasised, the aircraft industry is beset with uncertainties and profits may not always be sufficient to cover the whole cost of the Group's developments. Your Directors have therefore considered it prudent, to cover such eventualities, to allocate out of the profit of this period £1,000,000 to General Reserve, the total of which will then amount to £1,800,000.

Your Directors have decided to recommend that in respect of the fifteen months to September, 30, 1959, a dividend of 12 per cent, free of tax, be paid on the Capital of £2,700,000 in issue prior to the issue of £800.000 new Capital as part consideration for the acquisition of Saunders-Roe, which does not rank for this dividend. Such a dividend, which is equivalent to a rate of 9⅓ per cent per annum, will absorb £324,000, leaving, after the allocation of £1,000,000 to General Reserve mentioned above, £1,040,455 to be carried forward on Profit and Loss Account, about the same as the amount carried forward last year.

The Consolidated Balance Sheet shows an increase in the net assets of the Group, as compared with the previous period, of just under £3,000,000, of this, approximately £2,000,000 represents the value at which the Saunders-Roe Group has been brought into the books. Your Directors consider that the Group's liquid position is satisfactory.

In order to keep the Company's issued Share Capital reasonably in line with the considerably greater resources now employed in the business your Directors propose, after the recommended dividend has been approved by the Annual General Meeting, to recommend to Shareholders the capitalisation of £500,000. This would be applied to paying up in full 2,000,000 new Ordinary Shares of 5s. each. The new shares will be allotted to shareholders on the Company's register at the close of business on January 9, 1960, in the proportion of one new share for every seven then held.

After this proposed capitalisation the issued share capital of the Company will be £4,000,000 in Ordinary shares of 5s. each, all of which will rank for dividend in respect of the financial year which commenced on October 1, 1959. While it is too early to make an accurate forecast of the results of this current year, your Directors hope that, in the absence of unforeseen circumstances, they will in due course be able to recommend a dividend of not less than eight per cent free of tax for the twelve months to September 30, 1960.

Westland, already the leading helicopter company, has, in acquiring Saunders-Roe Limited, made a significant contribution to the Government's policy of making the aircraft industry more compact. Westland, incorporating Saunders-Roe, and aided by its association with Sikorsky, is believed to have experience and resources of equipment, men and money adequate to its task. The Group is the largest specialist helicopter organisation in Europe.

Your Company now has the following types of helicopter in production or under development, ranging from weights of 500 lb. to over 33,000 lb.; Rotorcycle, Skeeter, Widgeon, Wasp, under development as the P.531, Whirlwind, Whirlwind Gnome, Wessex Mk. 1, Westminster.

In addition, plans are well advanced for commencing development on the following types:—

Wessex Mk. 2.
A twin Gnome turbine version of the Wessex Mark 1 with increased performance at altitude and under hot temperature conditions. The prototype should fly in 1960. The civil version, carrying up to 14 passengers, will be suitable for opening up inter-city, island and other services.

Wiltshire.
A boat hulled helicopter, W.S.61, with twin Gazelle turbines (or later with three turbines) for both military and civil work and carrying up to 23 passengers. The first Wiltshire should be flying in 1960.

We have not so far succeeded in securing Government support for the Westminster, the largest helicopter in the western world. Its performance in recent exercises showed the great contribution which the large helicopter can make to the sort of military situation that may well arise in the future. We have decided to back our own judgment, not for the first time, as to the potential market and will now build a Westminster Mark 1—the first production helicopter, to be flying by mid-1961. In doing this we do not underestimate in any way the risk entailed, and the very considerable sums we have already spent, together with those which we shall now be committing, may result in no future return.

Manufacturing facilities have been further strengthened and the best overall utilisation of the Group's facilities at Yeovil, Eastleigh and Isle of Wight is being arranged.

During the year sales have been effected in Austria, Kuwait, Iran, and to British and Overseas Civil Operators. Negotiations are nearing completion for further important sales to Yugoslavia, coupled with local manufacture.

Normalair has again had a successful year, both at home and in foreign markets. Our equipment has been accepted for installation in the Vickers VC.10, A. V. Roe 748 and Armstrong-Whitworth freight liner. We are well advanced in the development of cooling equipment for motor car and 'bus air conditioning.

The Black Knight Missile, engineered and built by Saunders-Roe, has proved to be exceptionally reliable and effective as a space research vehicle. The first hovercraft, SR-N1, is proving to be a most interesting venture. We believe that it may have important uses, and we hope to obtain one of the contracts for the construction of the next generation of hovercraft.

The Group now has a number of important non-aviation interests. These include: Westland Engineers Ltd., which has had a successful year making a wide range of doors; Unique Balance Company Limited and its subsidiary. Normalair Industrial Breathing and Safety Equipment is in steadily increasing demand. Saunders-Roe Structures Limited has some interesting work in hand in a highly competitive field.

WESTLAND AIRCRAFT LIMITED : YEOVIL · SOMERSET *incorporating SAUNDERS-ROE Limited*

FIRST RE-INVESTMENT TRUST LIMITED

SIR DENYS LOWSON ON ECONOMIC OUTLOOK

The Annual General Meeting of the Company was held at Estates House, Gresham Street, London, E.C.2, on January 5th.

Sir Denys Lowson, Bart, Chairman of the Company, in the course of his remarks, said:

During the year under review, the issued Ordinary Capital of the Company was increased from £500,000 to £600,000 by the issue of 100,000 £1 Ordinary Shares which were offered by way of rights to Ordinary Stockholders at par and fully subscribed.

The total gross revenue amounted to £128,288, an increase of some £15,000. During 1960 we shall have the benefit of income from the new shares for a complete year and barring unforeseen circumstances, we anticipate our revenue will show a further increase.

The Directors recommend the payment of a final dividend of 8 per cent on all the Ordinary shares, making 13 per cent for the year. This will leave £12,148 to be added to the carry forward which will then stand at £101,866.

The priority percentage distributions are: Debenture stock 0-8.74; Preference stock 8.75-21.49; Ordinary stock 21.50-82.93 and the balance added to the carry forward 82.94-100.

At the date of the Balance Sheet the investments had a book value of £1,400,929 with a market valuation of £2,673,722, thus showing an appreciation of some 90 per cent.

Your Company's portfolio of investments is widely distributed over no less than 400 securities. As will be seen from the Directors' Report, based on the valuation of October 15, 1959, 97.28 per cent of the investments are in companies operating in Great Britain and the Commonwealth (Great Britain 61.44 per cent, Commonwealth 15.84 per cent), 19.03 per cent in the USA and Canada, 3.31 per cent in Central and South America and .38 per cent elsewhere.

EXPORTS A VITAL FACTOR

The start of our financial year coincided with the ending of Hire Purchase Controls in this country, since when the Hire Purchase Debt has increased from £490 million to £807 million last October—an increase of 65 per cent. The easing of Hire Purchase Controls naturally only brings forward home demand to an earlier date; and as individuals get more committed the effect of the stimulus dies down. With falling consumer expenditure in the third quarter of 1959, and the possible absence of another stimulus from Budget tax reductions in 1960, it is possible that Hire Purchase business may decline during the current year. If therefore we are to have lasting growth in production and thus enable utilisation of our industry's unused capacity, expansion must be based not only on internal home demand, but also on demand from overseas—in other words our Export Trade.

Unlike the United States of America, we in this Country are dependent to a great extent on countries overseas for our raw materials; it follows therefore that if we are to export more we must also import more. Furthermore it always takes time for the imported raw material to be manufactured into the product ready for export, and it is during this period that our Gold and Dollar reserves are likely to feel the strain. In fact seasonally adjusted figures for the three months to the end of November show that imports were increasing at a faster rate than exports. If this trend continues we can expect a reduction in our reserves matched by a rise in our stocks of raw material. In view of the economic pattern in this country no harm will arise from this temporary transfer of reserves into stocks, providing that there is a corresponding increase in our exports at a later date.

During 1959, from our long term Investment angle one of the outstanding features has been the strength of our exports to North America which in the first ten months of 1959 have shown an increase of 25 per cent over the same period in 1958. The gross annual national product of the USA is approximately £150.000 million, and it is estimated that this should double in 15 years. This coupled with the estimate of a 50 per cent increase in the population of the USA over the next 20 years gives an indication of the possible additional markets for our exports provided that these remain competitive.

OPPORTUNITIES IN OVERSEAS COMMONWEALTH

Half our trade is still conducted with the Overseas Commonwealth; and it is here that an opportunity may present itself in the coming year to increase our exports especially as some of these countries have in recent years developed further their own overseas markets with both the United States and with Western Europe; with the result that Western Europe has now become the largest customer of the primary producing countries, the United States second and the United Kingdom third. If one remembers

TATE & LYLE, LIMITED

AN ANALYSIS OF INCOME AND EXPENDITURE IN 1959

	£	£	*Proportion of each £1 of Income* s. d.
GOODS AND SERVICES PURCHASED FROM OUTSIDE :—			
Raw Materials (including £48.461 423 Duty, Levy, etc.)	112 453.832		16 1¾

		£139.579,252	£1 0 0

that the population of Western Europe and of the USA in each case is three times that of the United Kingdom, one can get some indication of the increase in the purchasing power of the Primary Producing countries which would occur as and when industrial expansion takes place in the USA or in Western Europe.

If we are to increase our trade with the Overseas Commonwealth, it will be necessary not only to produce our goods at competitive prices but also to maintain flexibility in production and in design; so that the necessary changes can be made as and when there is a falling off in the demand for our main products due to the countries in question meeting their requirements out of their own production.

The Resolution for the adoption of the Directors' Report and Statement of Accounts for the year ended October 15, 1959, was seconded by Mr N. C. Selway and carried unanimously; and the proceedings terminated with a warm vote of thanks to the Chairman, Directors and Staff.

APPOINTMENTS

UNIVERSITY OF SYDNEY

SENIOR STAFF TUTOR

Applications are invited for the position of Senior Staff Tutor, Department of Tutorial Classes, University of Sydney, at Newcastle, N.S.W. Applicants should possess an Honours degree in either Economics or Economic History; History; Literature; Psychology or Philosophy. The appointee will work under the direction of the Director of Tutorial Classes and will be required to conduct tutorial classes, discussion groups and other adult educational activities.

Salary will be within the range £A2,500 x £A80 — £A2,600 per annum, plus cost of living adjustment (at present £A33 p.a.) and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant. Reasonable travelling and removal expenses will be paid.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on 29th February, 1960.

GOVERNMENT OF THE FEDERATION OF RHODESIA AND NYASALAND

VACANCIES: STATISTICIANS
CENTRAL STATISTICAL OFFICE
MINISTRY OF ECONOMIC AFFAIRS

Applications are invited from persons expecting to qualify in June/July, 1960, for appointment as Statisticians on a three-year contract in the Central Statistical Office. Applicants should possess a university degree with First or Second Class Honours (or equivalent qualification) in Statistics, Economics or Mathematics.

Salary—Men: £1,155 p.a.; women: £903 p.a.

Candidates with a degree and statistical experience will be given full details of commencing salaries and conditions on application.

Passages provided; generous leave; pensions; medical aid; low income tax; admirable climate, facilities sport and recreation.

Application forms and further information may be obtained from the Secretary (RK), Rhodesia House, 429 Strand, London, W.C.2. Closing date JANUARY 31, 1960.

UNIVERSITY OF SYDNEY

LECTURESHIP/SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for the above-mentioned position. The salary for a Senior Lecturer is within the ranges £A2,200 x £A80 — £A2,600 per annum; for a Lecturer within the range £A1,500 x £A90 — £A2,100 per annum. In each case cost of living adjustment will be allowed. The salary is subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on FEBRUARY 15, 1960.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF MATHEMATICS

Applications are invited for appointment as Lecturer or Assistant Lecturer in STATISTICS at a salary on the scale £900 x £50 — £1,350 (efficiency bar) x £75 — £1,650 a year for a Lecturer, or within the range £700 — £850 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (four copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach The Registrar, The University, Leeds, 2 (from whom further particulars may be obtained) not later than February 8, 1960.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF MATHEMATICS

Applications are invited for appointment as Lecturer or Assistant Lecturer in Applied Mathematics at a salary on the scale £900 x £50 — £1,350 (efficiency bar) x £75 — £1,650 a year for a Lecturer, or within the range £700 — £850 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (three copies) stating date of birth, qualifications and experience, together with the names of two or three referees, should reach The Registrar, The University, Leeds, 2 (from whom further particulars may be obtained) not later than February 15, 1960.

BRITISH LIBRARY OF POLITICAL AND ECONOMIC SCIENCE

(London School of Economics, University of London.)

Applications are invited for the post of Assistant Librarian or Senior Assistant Librarian, according to qualifications, on the scale £650 to £1,425, with £60 London allowance. F.S.S.U. and family allowance scheme.

Candidates must be graduates, preferably in the social sciences; they should if possible have a knowledge of Russian; a higher degree or research experience will be an additional qualification; library experience or training is also desirable. Applications, with copies of two testimonials and the names of two referees, must reach the Librarian, London School of Economics, Houghton Street, Aldwych, London, W.C.2, by 22nd January.

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS AND RESEARCH GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships and Grants for research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology or Sociology, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The Studentships are normally of the value of £350 or £390. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University. Applications should be sent, not later than February 15, 1960, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

For further appointments and other classified advertisements see page 267

COMPANY SECRETARY Required for Ford Motor Dealership in the West Riding of Yorkshire. Ford experience essential. Applicants should give full details of their qualifications and experience to Box 1268.

THE UNIVERSITY OF MANCHESTER

Applications are invited for two posts at the grade of LECTURER or ASSISTANT LECTURER IN ECONOMICS in the Faculty of Economic and Social Studies. Candidates for one of the posts should have special interests in Banking and Monetary Institutions. Salary scales as follows:—Assistant Lecturer £700 x £50 to £850 per annum; Lecturer £900 — £1,650 per annum. Initial salary at the grade of Lecturer according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than February 20, 1960, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF MATHEMATICS

Applications are invited for appointment as Lecturer or Assistant Lecturer in Pure Mathematics at a salary on the scale £900 x £50 — £1,350 (efficiency bar) x £75 — £1,650 a year for a Lecturer, or within the range £700 — £850 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (three copies) stating date of birth, qualifications and experience, together with the names of two or three referees, should reach The Registrar, The University, Leeds, 2 (from whom further particulars may be obtained) not later than February 15, 1960.

AIR SUBSCRIPTIONS TO *THE ECONOMIST* 22, RYDER STREET, LONDON, S.W.1.

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

COMPANY AFFAIRS

Profits in Lombard Street

THE year 1959 was a good one for the discount market, but for most houses it appears that the advance on 1958, itself an unusually profitable year, was moderate rather than spectacular. In 1958 the market had enjoyed the once-for-all benefit of an abnormally rapid reduction in money rates, enabling it to reap exceptional margins of running profit from its portfolios—because the fall in interest rates earned by the market always lags behind that in the rates it pays. In this past year there has been no further benefit of this kind. Bank rate has remained at the 4 per cent level reached by November, 1958, so that there has been no further reduction in the market's basic money costs; on the contrary, the discount houses have this year felt the full effect of the decision of the clearing banks, taken during the phase of good margins in 1958, to keep their average charges for short loans somewhat closer to Bank rate. And although the Treasury bill rate in recent weeks has also been levered up closer to Bank rate (to nearly 3¾ per cent) it was well under 3½ per cent during most of 1959 and early in the year momentarily dipped below 3 per cent. Except at that point, the bills have still shown a reasonable margin over money costs, but a smaller one than was available in 1958.

In bonds, on the other hand, the effective margins earned—at all events by houses carrying substantial portfolios—have significantly widened, since annual average money costs have fallen by at least 1 per cent, whereas the yields from short bonds have remained relatively high. The high-coupon stocks that are especially attractive to Lombard Street are still showing yields well in excess of Bank rate, whereas average money costs, in spite of their recent rise, are still at least ¾ per cent below Bank rate. The relative weakness of the bond market has meant that the scope for jobbing profits has been narrower than in 1958 but some houses, at least, have felt justified in carrying larger bond portfolios. This second year of unusually favourable conditions has enabled houses that suffered acutely from the pressures of 1955-57 to consolidate their recovery—and some have continued to benefit from tax reclaims arising from losses experienced in that period of crisis. It can be taken for granted that all houses have strengthened their inner reserves; the more prudent are taking the opportunity provided by the past two years' prosperity to prepare for the strains that must be expected when interest rates turn upward again.

The three houses that make up their accounts at the end of the calendar year have all announced larger profits—those of the Union Discount Company and National Discount Company reach new peaks—and all have increased their distributions. The **Union Discount,** biggest house in the market, reports a profit of £660,000, compared with £551,000 in 1958, and is maintaining its dividend rate of 12½ per cent on the capital as increased by last year's one-for-five scrip issue (the 1958 rate, expressed on present capital, was thus equivalent to 10.4 per cent). The resultant reduction of published reserve and carry forward is now more than made good by a transfer of £1,250,000 from inner reserve; for a discount house to make such a switch is a very striking gesture of confidence. As briefly noted last week, the **National Discount,** whose profits had suffered severely after 1954, reported an increase from £284,275 to £325,561, which is well above the 1954 peak; the distribution on the "B" stock is likewise raised to a new high point, at 12½ per cent, plus a 2½ per cent bonus, compared with 12 per cent in 1958, in spite of the fact that the final payments are made on the capital as increased by the one-for-three cash issue. **Alexanders'** profits, likewise reported here last week, expanded less strikingly, from £166,943 to £202,807, and the stock market showed disappointment that the further increase in dividend, from 7½ to 10 per cent, still left it below the 1954 rate of 12½ per cent.

An interesting development in Lombard Street in this past fortnight has been the advent of a thirteenth member to the charmed circle of discount houses "proper"—those that enjoy borrowing and discount facilities at the Bank of England in its role of "lender at last resort." Gerrard and Reid Ltd., an old-established market house formerly operating as a running broker (i.e. as a pure agent) and latterly as a small discount house managing a portfolio of bills and bonds, has secured an additional £750,000 of capital resources, bringing its total to roughly £1¼ million and making it eligible for a discount account at the Bank. In this new capacity it is expected to join the London Discount Market Association and thus to participate in the market's cartel that regulates members' tenders for Treasury bills. Gerrard and Reid is a private company, whereas the other twelve members (soon to be reduced to eleven by the merger of Cater Brightwen and Ryders) are all now public companies.

More Bank Results

THE last of the 1959 profits statements and dividend announcements from the big banks have broadly conformed with the pattern set by last week's announcements.

Lloyds Bank reports an increase of 25.6 per cent in profits, which is roughly the same increase as that shown by the aggregate profits of the big five banks; this bank is paying a final dividend of 7 per cent, making 12 per cent, on the capital as increased by the one-for-four rights issue made last March. The corresponding rate for 1958, after allowing for the effects of the one-for-two scrip issue made in November of that year, was 10 per cent. The increase in the net cost of the distribution over the year (the cost has almost doubled since 1957) considerably exceeds the increase in disclosed profit, so that the year's allocation to general reserve has been scaled down from £1,250,000 to £1,000,000 and the draft on the carry forward (down by £134,000) has been slightly increased. The **District** and **Williams Deacon's** banks both show smaller increases in profits, proportionately, than the big five have done, but rather larger ones than that reported by the other northern institution, Martins Bank. The District's profit has risen by 17 per cent and the final dividend is 7 per cent, as foreshadowed at the time of the one-for-two rights issue. With the interim paid on the smaller capital, this brought the year's payment to 15½ per cent. This is only an apparent reduction from the 17 per cent paid for 1958; the net cost of the dividend is this year £75,000 larger than in 1958. Williams Deacon's profits rose by 14 per cent; this bank is raising its final dividend to 11 per cent, making 20 per cent for the year; allowing for the scrip issue made at the end of 1958, the payment for that year is equivalent to 17½ per cent on the present capital.

* Effective rate.

Unit Trusts

FIRST of a new series of monthly figures issued by the Association of Unit Trust Managers (with the co-operation of the Municipal and General group which remains outside the association) shows that the market value of holdings in unit trusts at the end of 1959 was £200 million compared with an estimated £100 million at the beginning of the year. *The Economist* indicator of ordinary share prices rose by just over 50 per cent in 1959, and one may guess that about half the increase in unit trust assets, or £50 million, represented new money, including that collected by the four new trusts launched during the year. The average holding is now just under £400; this bears out the movement's long-standing claim that unit trusts are designed mainly for small investors.

How long can this pace of expansion continue? With front-line equities at peak levels the low yields offered by the leading unit trusts may not have the same pull in 1960 as they did last year, when reasonably attractive yields coupled with the prospect of capital appreciation gave the unit trusts a record year. Next week Unicorn Securities is launching its new **Falcon Trust** with an initial offer of 5,000,000 units at 5s. each. But the yield of £4 2s. 6d. is about one per cent above that on many existing trusts. The portfolio of some eighty ordinary stocks in British and Commonwealth companies is heavily weighted by securities that have not been in the forefront of the post-election boom but which may have good scope for long-term capital appreciation; thus Harland and Wolff, R. A. Lister and Associated British Picture at their current prices all offer yields of over 5 per cent compared with the average yield on *The Economist* indicator of 3.8 per cent. Another feature of the new trust is the low price of the shares and the minimum initial investment—50 shares costing £12 10s.

The managers of the **Domestic Investment Trust Second Series** said this week that they propose to adopt a new deed, renaming the trust the Domestic Unit Fund and transforming it from an appropriation fund into a cash fund, while the managers of **Allied Investors Trust** have said they intend to make an offer of units in the Electrical and Industrial Development Trust.

John Summers

IN 1958-59 when demand for sheet steel broke all previous records John Summers, the biggest sheet steel producer in this country, was able to step up deliveries by only 40,000 tons. In his annual statement, Mr Richard F. Summers, the chairman, explains why the group was unable to meet "the heavy demand" which prevailed throughout the year: "Owing to a number of circumstances," he says, "we have been delayed in the completion of our development programme." This scheme, which has involved "drastic modifications" to existing units as well as the installation of new plant, is expected to be completed this year but the directors "do not expect to see much in the way of increased production during the first half of the current financial year." By the end of 1960 capacity at the Shotton works should be approaching its target of 2,000,000 ingot tons and with a full order book John Summers should then, the directors say, "be able to meet more nearly the requirements of our customers."

Mr Summers is confident that the demand over the next five years for flat rolled products "will continue in an upward direction." But he points out the growing use of certain substitutes for sheet steel; this has been particularly marked in the manufacture of some household utensils where plastics are tending to replace steel enamelled products like buckets and washing bowls. These developments do not unduly disturb Mr Summers who thinks they "should act as a spur to us as producers of steel sheets to improve our products and to keep costs as low as possible."

In the financial year 1958-59 John Summers spent some £7,840,000 on the development plan and total capital expenditure since 1945 has amounted to no less than £44 million. About £8,000,000 will be spent during the current financial year which, with a cash flow of about £6,000,000 together with "temporary borrowings for which arrangements have been made," should not unduly burden the group's financial resources. The directors have already forecast an interim dividend of 6 per cent (against the equivalent of 4 per cent). By the end of the year, when profits should begin to accrue from the expansion in output, it might not be too much to hope for that the 16 per cent dividend rate which prevailed before last May's scrip issue will be restored. Certainly the yield of 3.4 per cent offered by the £1 shares at 72s. 6d. on the 1958-59 dividend of 12½ per cent looks forward to something bigger.

Thomas Firth & John Brown

EXPANSION plans now being considered by the directors of Thomas Firth and John Brown, the Sheffield steel makers, centre on the special steel section of the business where the outlook is described by the chairman, Sir John Green, as "most promising." The plant at Beardmore, which makes hard steels for some consumer goods industries, is to be modernised and this should increase the output of the special alloy steels which are used in engine components. Sir John emphasises that the revival in demand for heavier steel products which got under way towards the end of the financial year may have been helped by the building up of stocks rather than any real increase in consumption. The shipbuilders are the group's main customers and Sir John says that in 1958-59 "demand for heavy forgings and castings has deteriorated still further . . . and outstanding orders are much smaller than they were a year ago." He adds that any improvement in demand in the current year does not appear likely and "such business as is available is subject to the most severe competition at home and abroad." At the same time, demand for heavy forgings from the heavy electrical industry is still poor and the tendency towards bigger generating units has resulted in a falling-off in the quantities of forgings and castings actually required.

The full accounts show that the group's liquid balances of £7,087,000 amply cover capital commitments of £1,865,000; the total capital cost of completing the group's modernisation programme is estimated at around £2,750,000. The £1 ordinary shares at 48s. 3d. yield 3.8 per cent on a dividend of 9.2 per cent, covered four times by earnings.

New Issues

HOLDERS of shares and loan stock in **Odhams Press** and its subsidiaries have been invited to subscribe for £3,500,000 of a 6 per cent unsecured loan stock at par. The issue comes as no surprise; in the past year Odhams has acquired Hulton Press (now Longacre Press), George Newnes and the Contract Journal. The financing of these acquisitions helped to add the strain on Odhams' liquid resources and the proceeds of the issue will be used to reduce a bank overdraft, which now amounts to £2,900,431, and to provide further working capital.

Odhams' profits for 1959 are estimated at £2.7 million; this includes nine months trading of the new acquisitions, but it has been adversely affected by last summer's printing strike. The directors also confirm their forecast at the time of the Newnes take-over of a dividend of 17½ per cent for 1959 on the increased capital. For 1960 profits are estimated at not less than £3.4 million, equal to the aggregate of Odhams' 1958 profits and of Hultons and Newnes for 1958-59.

The directors also reveal that a recent revaluation of freehold and leasehold properties shows a surplus of over £4 million, or almost double the book figure. On this basis the new and existing loan stocks are covered over three times by assets, while an annual average of gross profits over the last ten years covers loan interest over thirteen times.

A good deal of interest this week has been attracted by an issue of 2,254,000 shares of £1 each in **Dollar Land Holdings** at 28s. per share. The total issued ordinary capital of this new company is £3 million, one quarter of this being subscribed at the issue price by the directors and promoters of the company and by a vendor of property to it. The chairman is the Earl of Mansfield and Mansfield and the deputy chairman is Sir Ernest Lever. Dollar Land

Holdings is the parent company of a group formed to own commercial property investments in North America. The greater part of the proceeds of the issue will be used to subscribe (in "security" dollars) for 90 per cent of the loan stock and equity of the Dollar Land Company, a Canadian company that has recently acquired two new-style shopping centres. By far the larger of these is in Yonkers, 18 miles from New York, extending over 71 acres and used daily by over 30,000 shoppers. The smaller centre in British Columbia covers 2.3 acres.

The board, consisting of three British directors and three from the United States, estimates that profits for the year to December 31, 1960, will justify the payment of a dividend of 7½ per cent. On this estimate the £1 shares are being issued on a yield basis of 5½ per cent, which compares favourably with the return on shares in domestic property companies. Backed by assets of almost 27s. a share, this could provide an interesting entry into the North American commercial property market. Potential investors should note that the net UK tax rate for the company is estimated at 5s. 11d. in the £.

Scottish and Universal Investments

WHEN Scottish and Universal Investments was formed as a private company by Mr Hugh Fraser in 1948, its principal asset was 431,220 of 5s. ordinary stock units in House of Fraser, worth about £500,000. This investment has now grown to 3,941,662 5s. units (about 15 per cent of the issued ordinary stock of House of Fraser) and is valued at just over £9 million. Since 1950 the profits before tax of the company (derived almost solely from its investment in House of Fraser) have risen from £53,260 to £353,634.

About 25 per cent of the capital has now been made available to the public through the offer this week by Robert Benson, Lonsdale and Company of 3,600,000 5s. shares at 11s. 9d. each. This offer was oversubscribed. Of these shares 2,000,000 are newly issued by the company, while 1,600,000 have been sold by Mr Hugh Fraser (for about £900,000), who will thus retain a 74 per cent shareholding.

Besides its stake in House of Fraser, Scottish and Universal also holds investments in other leading equities. It also controls Nicol and Andrew, manufacturers of specialised equipment for fine tolerance grinding and honing of external and internal bearing and lining surfaces, and John Anderson, manufacturers of shirts.

The proceeds of the issue accruing to the company will be just over £1,100,000 and the directors say that they intend to diversify the business of the company by acquiring substantial or controlling interests in other manufacturing and trading companies.

For the year to March 31st they forecast profits before tax of not less than £440,000, of which £411,000 will come in dividends from the House of Fraser. A dividend of 10 per cent will be paid; on the basis of the profit estimate it will be covered about 1¼ times. At December 31st when House of Fraser shares stood at 47s. (compared with the current price of 46s. 3d.) net assets of Scottish and Universal were worth 16s. 5d. per share, which compares favourably with the issue price of 11s. 9d. The shares are being offered at a yield of 4¼ per cent—slightly less than the current yield on the House of Fraser shares. To buy them is to pin one's faith in Mr Hugh Fraser's skill and ability, not least in making a success of the Harrods purchase.

Borax (Holdings)

THE strong recovery in the profits of Borax (Holdings) in the year to September 30th came as no surprise, for they had been foreshadowed in the quarterly statements from the company and more recently in the 150 per cent increase in the net earnings announced by its subsidiary, United States Borax and Chemical, over the same financial year. What was not generally expected was the decision to raise the ordinary dividend from 8¼ per cent to 10 per cent. This dividend is largely paid by drawing upon the accumulated reserves of the parent company in this country.

The trading profits of the group over the full year have more than doubled, rising from £1,624,997 to £3,514,118, while net profits have almost trebled, rising from £573,976 to £1,609,850. As in 1958, trading profits in the last quarter of the financial year were below those earned in the preceding quarter and at £769,369 compare with £1,147,116 earned in the third quarter and £907,795 earned in the second quarter. After this announcement the 5s. units rose by 6d. to 21s. 3d., to yield 2.4 per cent.

New Day Furnishing

PROVISIONAL allotment letters sent out to shareholders of New Day Furnishing for the rights issue of 1,428,643 of 2s. ordinary shares at 14s. each were accompanied by a forecast that a total ordinary dividend of 50 per cent will be paid for the current year on the increased capital. The one-for-four rights issue will bring in about £970,000 and will raise the ordinary capital to £714,000. At the current price on the existing shares of 18s. 1½d. the rights are worth about 10½d. a share while the ex-rights yield of 5¼ per cent is one of the highest offered by an equity in the shops and stores group. The directors say that additional permanent capital is required because, while capital resources are fully employed in financing day-to-day business, continued expansion in turnover and profits will depend on the establishment of new branches and the acquisition of new businesses.

London Stock Exchange

FIRST DEALINGS:	Dec. 28	Jan. 11	Jan. 25
LAST DEALINGS:	Jan. 8	Jan. 22	Feb. 5
ACCOUNT DAY:	Jan. 19	Feb. 2	Feb. 15

THE break in equity prices last week has not been reversed; nearly all sections of the market have been more sensitive than at any time since the election. Fears that London interest rates cannot much longer remain unaffected by the continued rise in the United States have been the main influence. A steady trickle of small selling has so far not been offset by buyers; and in the week to Wednesday *The Economist* ordinary indicator fell by 5.4 points to 372.4.

Gilt edged stocks drifted lower and among undated stocks 3½ per cent War Loan fell 7/16 to 63 13/16; short-dated stocks were particularly weak, with 4½ per cent Conversion 1964 closing 3/16 down at 99 7/16. Medium dated stocks also lost ground; 3 per cent Electricity 1974-77 lost ⅛ to 75⅛. In contrast to the general trend of the funds Corporation loans were a little firmer despite some small selling; 5½ per cent LCC 1977-81, for instance, gained ¼ to 103. Bank shares lost some of their recent firmness following the end of the dividend season and Midland fell 2s. to 90s., Barclays 1s. to 61s. 9d., and Westminster 2s. 3d. to 58s. 3d. The main feature of the insurance share market was again the heavy demand for Northern on merger rumours, and the shares jumped 17s. 1½d. to 142s.

Industrial equities lost ground in all sections and some of the heaviest losses were seen in shares that had recently shown the biggest gains. Steel shares, for example, came back all along the line, with Steel of Wales down 3s. 9d. to 50s. 9d., United Steel 1s. 10½d. lower at 82s. 3d. and South Durham 2s. 6d. lower at 51s. 9d. Heavy engineering shares, which had been in the forefront of the recent advance, also weakened: Vickers dropped 5½d. to 37s. 10½d., Guest Keen 1s. to 88s. 9d., and Davy-United 3d. to 116s. 10½d. But there were some exceptions in this section of the market; thus William Doxford shot up 6s. 6d. to 112s. after touching 113s. at one time on take over rumours, which have since been denied by the directors. Aircraft shares have been active on the merger news and showed net gains on the week. Fleming Reid gained 2s. 3d. to 33s. following the bid from Patons and Baldwins, whose shares improved 5½d. to 79s. Other textile shares were fairly firm, with English Sewing up 3s. 3d. to 48s. 9d. and Fine Spinners 9d. to 31s. 3d.

Oil shares tended to follow the erratic mood of Wall Street and most of the leaders closed below their best. Burmah lost 1s. 3d. to 52s. 6d., BP 1s. 3d. to 59s. 9d., and Shell 4s. 6d. to 157s. 6d. In gold shares Western Holdings were again heavily bought from the Cape and closed 3s. better at 183s. 1½d.

THE MONEY MARKET

THE Treasury bill rate again rose at last Friday's tender, the £270 million of bills on offer being allotted at an average discount rate of one penny under £3 15s. per cent, about 5d. more than the previous week. The discount market cut its concerted bid by a further 1d. for the 91-day maturities to £99 1s. 3d. and secured an allotment of 50 per cent. For the 90 day bills (issued because of the incidence of Good Friday) the market bid £99 1s. 6d. and obtained a full allotment. Its average quota rose from 50 to 56 per cent.

In New York the rate on three months bills fell slightly from 4.602 per cent to 4.590 per cent. Interest has centred on the issue of $1,500 million one year bills, allotted at an average rate of 5.067 per cent.

Credit continued to be easy in the money market at the end of last week and on Friday the authorities sold back bills on a fairly large scale. This week conditions have become difficult and despite official help on Tuesday and Wednesday one or two houses on both days were forced to borrow a very small amount at Bank rate. Rates of 4 per cent have also been conceded for overnight loans from the market.

the **MIDLAND** now offer

10%

IMMEDIATE

transfer bonus

ON

EMPLOYERS' LIABILITY

INSURANCE

AN ENTIRELY NEW IDEA IN EMPLOYERS' LIABILITY UNDERWRITING

We were the first Company, specialising in Employers' Liability, to introduce ANNUAL BONUS REBATES on a sliding scale rising to as high as 25% for NO CLAIM on renewal.

NOW, we introduce a scheme offering an IMMEDIATE BONUS to Employers who transfer their Liability risk to the MIDLAND.

NO CLAIMS OVER THE PAST YEAR...

10% off our normal rates for the risk.

As normal MIDLAND rates are extremely competitive, this IMMEDIATE BONUS will mean a substantial saving to Employers who take advantage of this unique offer.

In addition, Policy holders will be entitled on renewal to the full benefits of the usual MIDLAND Bonus Scheme up to 25%.

MIDLAND Policies also provide such extra facilities as FREE LEGAL DEFENCE at Coroners' Inquests and Courts of Summary Jurisdiction, AUTOMATIC COVER under Indemnity clauses and FREE PREMISES SURVEY AND ACCIDENT PREVENTION SERVICE. Three Year Agreements, with a further discount, are available in approved cases.

MIDLAND EMPLOYERS' MUTUAL ASSURANCE LTD

In the City

The good professional man acts with a sense of responsibility illuminated by intelligence. His reputation and his business rise or fall on the shrewdness of his advice.

For investment he will often advise a good Building Society and he will count the Burnley among the very best. The Burnley offers the investor complete peace of mind. At the same time he enjoys a good rate of interest—3¼%, tax paid, and the knowledge that his savings are freely available when he needs them.
Deposits in the Society are Trustee Investments.

For full details please apply to:
12, Grimshaw Street, Burnley.

you can't live on gold watches

The 'small token of the Company's appreciation' days are passing. And rightly.

The simple humanity and *straightforward business sense* of Staff Pension and Life Assurance Schemes are becoming widely understood.

Both parties benefit, during employment and after. *The employee* is relieved of much anxiety for the future—particularly if he supports a family. Retirement won't mean scraping. And with Life Assurance, even early death would not leave his dependants unprovided for.

His employer gains from the engendered confidence. More application and stability in his staff. Good people, in fact, expect and look for such schemes today. These are very real benefits, proved time after time in all sorts and sizes of companies.

And the actual cost is slight; Taxation Authorities recognise payments as a business expense.

Legal & General have been handling such matters for years. They can plan to your precise requirements. An enquiry does not commit you in any way. So why not get in touch today?

LEGAL & GENERAL
ASSURANCE SOCIETY LIMITED

CHIEF ADMINISTRATION: 188 FLEET STREET, LONDON, E.C.4. TEL: CHANCERY 4444

APPOINTMENTS

MSL *have been retained to advise on the appointment of an*

ASSISTANT TO COMPANY SECRETARY

in the London head office of a public company employing 10,000 in commercial and manufacturing activities in U.K. and overseas. The assistant will understudy the Secretary on general duties and undertake specific administrative projects.

Commencing salary about £2,000 dependent on experience. Superannuation.

A young man, aged 28-33, is required who has a chartered accountant, chartered secretary, or legal qualification. Practical experience of company secretarial work in a commercial concern is essential, with particular emphasis on the applications of company law. The work offers opportunities of direct contact with the most senior officials of the company and calls for personal qualities of a high order. Previous experience as a personal assistant would be advantageous.

Please send brief details in confidence, quoting reference S2126, to W. F. Younger. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, STRATTON STREET, LONDON, W.1.

INTERNATIONAL INVESTMENT BANKING

One of the City of London's merchant banks with widespread international business is seeking additional staff for its Investment Department. This Department is concerned mainly with economic and political, industrial and company affairs in the British Commonwealth, American and European continents; and in the new economic climate is undergoing a further period of expansion. Accordingly the Department offers considerable interest and prospects.

Age (flexible) 20-32.

Qualifications (flexible): educational level around H.S.C. or degree standard with some knowledge of securities, economics and finance and possibly of languages.

Applicants should submit full details, which will be treated in complete confidence, to Box JA 21, c/o 95, Bishopsgate, E.C.2.

AN ACCOUNTANT-OFFICE MANAGER is required by an expanding British firm of fruit and vegetable canners for their subsidiary company in Northern Italy to take charge of office administration and be responsible for the preparation of costings, budgets and interim accounts. Applications are invited from recently qualified Chartered Accountants or Cost and Works Accountants up to the age of 27. Single persons are preferred.—Please send details of qualifications, experience and salary range expected, in confidence, to Chief Accountant, *Lockwoods Foods Limited, Long Sutton, Lincs.*

LOCKHEED HYDRAULIC BRAKE COMPANY
LIMITED AND ASSOCIATED COMPANIES.
Leamington Spa.

PERSONNEL DEPARTMENT

of a light engineering group of Companies with 6,000 employees has a vacancy for a

JOB EVALUATION OFFICER

to assist in the evaluation of works and staff jobs by means of modern techniques.

Wide experience of light engineering production methods and a sound knowledge of clerical and other office procedures is essential, together with knowledge of at least the rudiments of job evaluation techniques. Age is a secondary consideration to sound judgment and flexibility of outlook.

Written applications, giving full details of experience, qualifications and salary, should be addressed to the Personnel Officer.

UNIVERSITY OF SOUTHAMPTON. Department of ECONOMICS. Applications are invited for the post of Lecturer or Assistant Lecturer in Economics.

Salary Scales: Lecturer £900 x £50-£1,350 x £75-£1,650 with an efficiency bar at £1,300. Assistant Lecturer £700 x £50-£850. The initial salary will depend on qualifications and experience. Further particulars should be obtained from the Secretary and Registrar to whom applications (6 copies from United Kingdom applicants) should be sent not later than MARCH 1, 1960.

SHELL INTERNATIONAL PETROLEUM COMPANY LIMITED
has a vacancy in London for a senior research

STATISTICIAN

with a knowledge of Economics

to work on a variety of problems related to the world wide demand for, and supply of, oil and its derivatives.

The successful applicant will have opportunities to exercise a wide range of his statistical and economic training and will be expected to be capable of developing outside this specific field and of progressing later to responsible executive positions.

PLANNING DIVISION

Candidates, who should be under 30 years of age and have a good honours degree, should apply to:

RECRUITMENT DIVISION,
SHELL INTERNATIONAL PETROLEUM COMPANY LIMITED,
ST. HELEN'S COURT, LONDON, E.C.3.

MARKET RESEARCH MANAGER required by the BEECHAM GROUP. Sound market research background (including consumer research) and understanding of statistical methods essential. Commercial experience desirable. Duties will include [illegible] market research data (including television data) and the preparation of reports and forecasts. Age 35 years or under. Appropriate salary will be paid. Profit Participation and non-contributory pension schemes are in operation. Application in writing only, giving details of age, qualifications and experience, and quoting reference MRM/61, to be forwarded to the Personnel Controller, Beecham Group Limited, Beecham House, Great West Road, Brentford, Middlesex.

LOCKHEED HYDRAULIC BRAKE COMPANY
LIMITED AND ASSOCIATED COMPANIES.

PERSONNEL DEPARTMENT

WAGE AND SALARY INVESTIGATIONS AND SURVEYS

We wish to appoint a suitably qualified man to our Personnel Research Unit to undertake this work. He must have a good knowledge of the Engineering Industry,—preferably an apprenticeship or equivalent experience, and be conversant with the Industry's wage and salary structures and problems.

The duties of the job include the investigation of local and general wage and salary levels and trends relative to our Organisation, the compilation of statistics associated with these and the preparation of reports and recommendations.

We would like to appoint a man of 30 to 40 of good education, perhaps an engineering graduate, who has the required experience, but we would consider men outside this age range whose educational and industrial background makes them exceptionally well qualified for such a position.

Written applications, giving full details of experience, qualifications and salary, should be addressed to the Personnel Officer.

For other appointments see page 256

WILMOT BREEDEN FELLOWSHIP

Applications are invited for a FELLOWSHIP to be held in association with the College of Advanced Technology, Birmingham. The value of the Fellowship, which is for a two-year term, is £1,000 per annum.

A candidate for the Fellowship should normally have had two or three years' research or industrial experience. He should have an honours degree or equivalent qualification and be acceptable to the College of Advanced Technology as a research Fellow.

The Wilmot Breeden Fellow would engage in an enterprise of such a character as to require the facilities both of the College and the Company, his time being spent at both. This enterprise may have the character of Scientific Research, Design, Development, a combination of some or all of these, or in some other way to be appropriate to the activities of Wilmot Breeden. The Company is especially concerned with Mechanics, Electro-Chemistry, Metal Finishing, Metallurgy, Metal Formation, Hydraulics, Electronics.

Full details may be obtained on application to Mr. E. Sutcliffe, Secretary, Wilmot Breeden Fellowship Committee, Armstrong Road, Birmingham, 25.

Final applications must be received by the Secretary before May 1, 1960.

BUSINESS AND PERSONAL

FOR GRANDFATHERS ESPECIALLY: Give your children cine pictures of your grandchildren. It is easy to use the Bell & Howell Turret 3 lens camera with automatic exposure setting. £57 10s. 11d.—Wallace Heaton Ltd., The Cinema People, 127 New Bond Street, London, W.1.

SECOND-HAND BOOKS. The Economists' Bookshop, 11-12, Clement's Inn Passage, London, W.C.2, invites you to submit lists of [illegible] Sciences, you may [illegible] books on Economics, History and Social Sciences, you may books on Economics, History and Social Sciences, to sell (*periodicals excluded*).

SAILING HOLIDAYS with Tuition. Enquiries: Captain R. R. Caws, R.I.N. (rtd.), Ardent Sailing School, Bembridge, Isle of Wight. Tel. [illegible].

SHARE A FLAT LTD., 175 Piccadilly, Bembridge 55.

S[illegible] care, right person or right flat. [illegible]ty, HYD 2545, infinite

TRANSLATORS wanted. All languages. Business and commercial. Good rates paid.—Box 1266, [illegible]M. 2202.

REMPLOY SPONSORSHIP SCHEME

Send for details which show an attractive proposition to manufacturers.

Write to the Managing Director, Remploy, Ltd., 25-28 Buckingham Gate, S.W.1, or telephone VICtoria 6621 (12 lines).

AN Industrial Group will consider acquisition of part or whole of share capital of a Company actively engaged in the manufacture of cotton and nylon clothing—domestic and industrial. Those interested should be of medium size with earnings of £10,000 per annum and upwards, and be able to show increased production and earnings over the past years. The services of present Executives desiring continuity of management will be considered. Particulars supplied will be treated in strictest confidence.—Write Box 1262.

FINANCIAL NOTICES

ASHANTI GOLDFIELDS CORPORATION LIMITED

Notice is hereby given that the Board of Directors have today recommended a Final Dividend (No. 126) on the Issued Capital of the Corporation at the rate of 1s. per Share, less Income Tax at 7s. 9d. in the £. This Dividend which is in respect of the year ended September 30, 1959, is to be payable on and after March 31, 1960, to all Shareholders on the Register on February 5, 1960.

THE TRANSFER BOOKS WILL BE CLOSED from February 6, 1960 to February 15, 1960, both dates inclusive, for the preparation of Dividend Lists.

By Order of the Board.
E. W. MORGAN, Secretary.

Registered Address:
10 Old Jewry, London, E.C.2.
January 12, 1960.

BIBIANI (1927) LIMITED

Notice is hereby given that the Board of Directors have today recommended a Final Dividend (No. 42) on the Issued Capital of the Company at the Rate of 2.34d. per Share, less Income Tax at 7s. 9d. in the £. This Dividend which is in respect of the year ended September 30, 1959, is to be payable on and after March 31, 1960, to all Shareholders on the Register on February 5, 1960.

THE TRANSFER BOOKS WILL BE CLOSED from February 6, 1960, to February 15, 1960, both dates inclusive, for the preparation of Dividend Lists.

By Order of the Board.
E. W. MORGAN, Secretary.

10 Old Jewry, London, E.C.2.
January 12, 1960.

EDUCATION

SUCCESSFUL TUITION FOR THE B.SC.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.(Econ.). Three G.C.E. entrance is included at moderate fees. 1,149 Wolsey Hall students passed Lond. Univ. B.Sc.Econ. exams., 1950-58. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention exam.) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

SECRETARIAL TRAINING, especially for university graduates, and older students: six-month and nine-month 14-week courses.—Write Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4054.

B.SC.(ECON.) LONDON UNIVERSITY
UNIVERSITY CORRESPONDENCE COLLEGE
successfully prepares students for this Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts.—Prospectus giving details of U.C.C. Courses for other London Degrees, G.C.E., Law Exams, etc., from Registrar, 60 Burlington House, Cambridge.

EXPERT POSTAL TUITION
for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (C9/2), METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4.

LLOYD'S REGISTER OF SHIPPING
requires

GRADUATE STATISTICIAN ECONOMIST

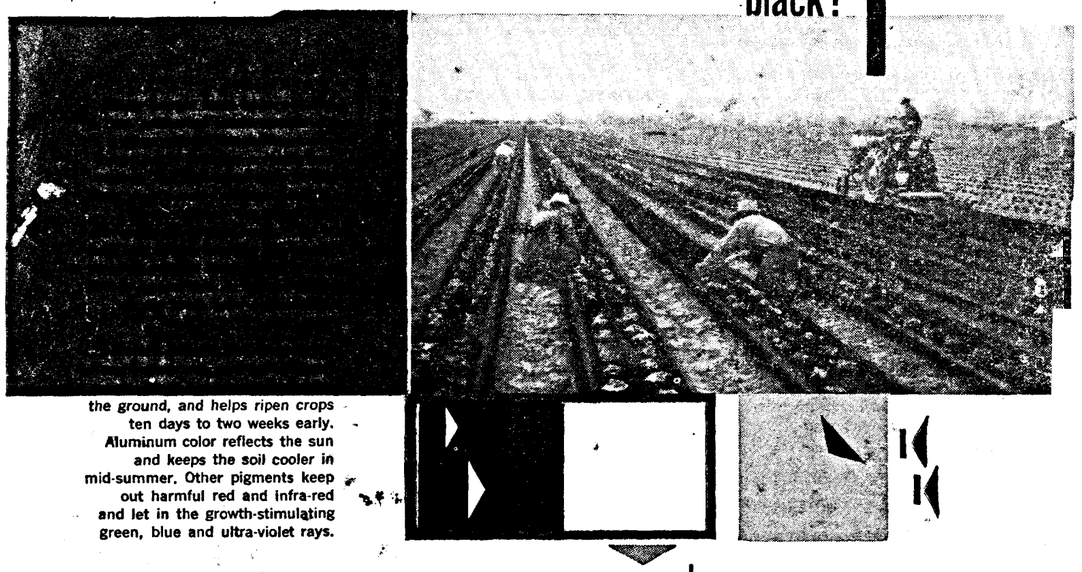
capable of investigating problems and producing data relevant to World Shipping, Ship Building and related subjects.

This appointment offers ample scope to the right man in the 35 age group and will attract salary commensurate with qualifications and experience.

Applications marked "Confidential," stating age, qualifications, present position and salary to The Secretary, Lloyd's Register of Shipping, 71 Fenchurch Street, E.C.3.

OXFORD UNIVERSITY INSTITUTE OF STATISTICS

Applications are invited for the post of full-time Librarian. The library is a fairly large one and specialises in economic and statistical works and periodicals. Applicants should state age, qualifications and experience, and give the names of two referees. The salary will be on the scale £535-£850, with F.S.S.U. membership and child allowances.



Applications should be sent to the Secretary, St. Cross Road, Oxford.

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited for the post of Assistant Lecturer in Economics, the appointment being tenable from October 1, 1960. Salary in the scale £700 x £50 — £850 p.a., with F.S.S.U. and children's allowances. Applications should reach the Registrar, The College, Keele, Staffs., from whom *application forms and further particulars* may be obtained. not later than March 5, 1960.

Why is the field clothed in black?

the ground, and helps ripen crops ten days to two weeks early. Aluminum color reflects the sun and keeps the soil cooler in mid-summer. Other pigments keep out harmful red and infra-red and let in the growth-stimulating green, blue and ultra-violet rays.

IN ANY COLOR, film made from UNION CARBIDE polyethylene resins keeps down weeds, holds moisture and fertility in the soil, helps combat many plant diseases and blights, keeps fruit clean, helps give a greater yield of higher quality. It also helps promote plant growth by keeping the soil loose and does not interfere with normal harvesting methods, for rubber tires will not harm it. Users report that polyethylene film returns its cost several times over the first year, with every indication that the same polyethylene film can be re-used for three to five years.

FREE BOOKLET IE-1 describing the many uses of film made from UNION CARBIDE polyethylene resins in agriculture, including mulching, silage protection, lining ponds, irrigation ditches, and green house construction will be sent you on request. This booklet also includes information on other UNION CARBIDE products which serve agriculture; CRAG Agricultural Chemicals and EVEREADY Garden Products. Write to UNION CARBIDE INTERNATIONAL COMPANY, Division of Union Carbide Corporation, 30 East 42nd Street, New York 17, N. Y., U. S. A., Cable Adress: UNICARBIDE, New York.

Since man first heated water...

he's been in hot water...

about keeping it hot...

This solves that problem!

Wherever boilers and hot pipes are used on a large scale, a major problem is how to avoid serious loss of heat. The practical and economic solution is insulate them with Fibreglass, the most effective and reliable way of keeping water, air or other fluids piping hot. Fibreglass cuts heat leakage down to almost nothing. It has great resilience, is flexible, easily handled and conforms to awkward shapes. Insulation presents many problems—Fibreglass can solve most of them. Write, stating your particular requirements, and we will advise you.

DEFENCE BONDS

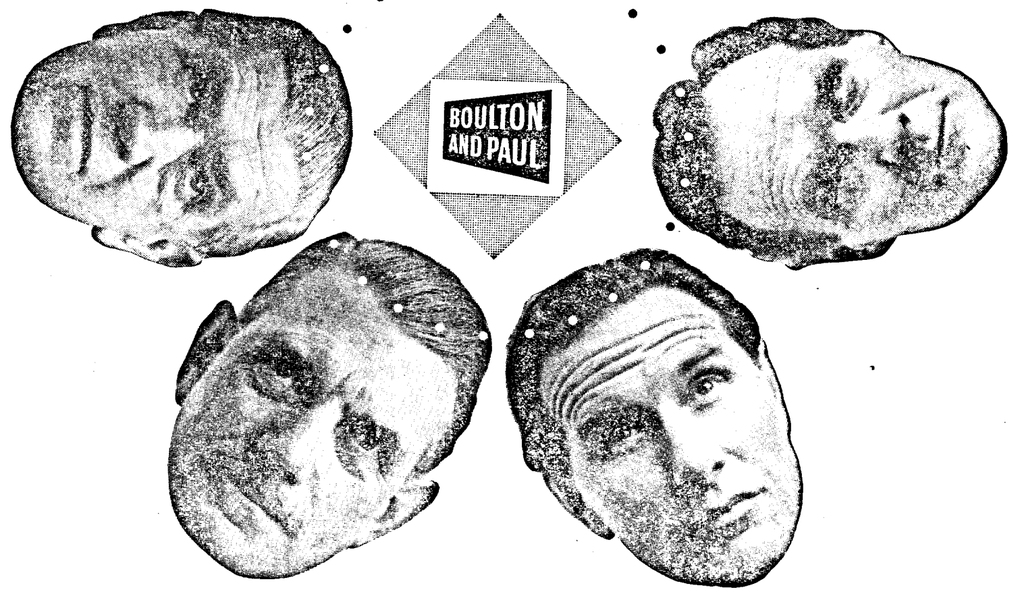
pay 5%

with 3% tax-free bonus after 7 years

Defence Bonds are a safe and extremely profitable way of saving. As well as the attractive interest of 5% per annum, the Bonds are repayable after 7 years at the rate of £103 for each £100 invested—and this 3% Bonus is U.K. income tax free. The bonds may, of course, be encashed before maturity. The interest, payable half yearly, is not exempt from tax, but tax is not deducted at source. You can have up to £2000 of these Bonds exclusive of holdings of earlier issues. Bonds inherited from a deceased holder or acquired by conversion of earlier issues can be held in addition. *On sale in £5 units. Buy all you can afford.*

IN SEVEN YEARS

5% Defence Bonds yield the equivalent of



£5.12.6

per cent (gross), per annum if you pay tax at the present standard rate of 7/9.

Full information on Defence Bonds from your stockbroker, banker or other professional adviser, and from your local Savings Committee, Savings Centre, Post Office or Trustee Savings Bank.

MORGANITE CARBON VANES MEAN CLEAN PAPER

Photograph by courtesy of Rotaprint Ltd.

The air supply for the paper feed of these Rotaprint offset litho machines at Unilever Ltd., is free from oil mist — and the rotary vacuum pumps require no maintenance, thanks to the use of MORGANITE CARBON VANES.

Light as aluminium, non-hygroscopic, readily machineable, highly resistant to wear and requiring no lubrication — these are some of the special properties of MORGANITE CARBON VANES. They are especially suitable for use in rotary pumps and compressors where non-contamination is essential.

MORGANITE CARBON VANES resist chemical atmospheres and corrosive conditions; withstand high temperature; immersion in liquids; are suitable for inaccessible positions and completely eliminate maintenance. They are solving the specific problems of many manufacturers — maybe they will solve yours. Please write or telephone for leaflet SD 69, or for one of our Technical Advisers to call.

German Fairs 1960

The six German fairs extend a cordial invitation to you. Here firms from all parts of the world show the latest of their production. The six fair cities, closely adjacent to eachother under the aspects of modern traffic and adjusted as to dates, form a big efficient trading center for your visit. Markedly individual in organization and character, the six fairs complement each other as to offer and circle of visitors. Here you find your suppliers, here you win new customers. Above all you have the pleasant opportunity for personal contact with business partners from many countries which you otherwise can only establish by extensive travel. An excellent service facilitates your work.

Kellogg's methods of plant design reduce over-all costs

One way in which Kellogg minimises clients' investments in new plants is by using scale models as design tools. Built by Kellogg's designers, these three-dimensional blueprints eliminate planning studies and piping key plans, improve designs, facilitate approval, promote faster construction and lower operating costs. Kellogg has used them in planning and erecting plants for many clients, including those in the petroleum, chemical and metal industries. Designing plants with models has replaced conventional drawings of general layout and piping. Photographs of the models are substituted for drawings. The models themselves are used on the job site to save time in explaining construction details to workers and for operator training. Kellogg International Corporation welcomes the opportunity to work with clients at any stage of development of a new plant from the time the process is first conceived through construction. Inquiries concerning the co-ordinated KIC services of engineering, procurement and construction are cordially invited.

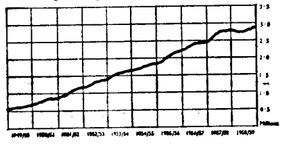
The reasons why you should buy your air travel on one of the world's most successful airlines



British European Airways is a national airline, responsible for its actions to Parliament, and thus to the people of Britain. In short, BEA is your airline, and its duty is to provide you with the efficient air service you need. This it strives to do.

Today, BEA is foremost among the airlines of Europe. It operates more services to more places than any other airline in Europe.

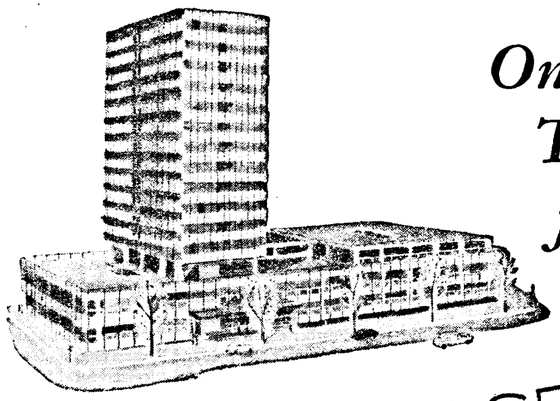
This policy of making air travel available on a large scale to large numbers of people and at the lowest possible fares has enabled BEA to win a leading place among the world's great airlines. Unlike most of those airlines, *BEA is entirely unsubsidised—and it makes a profit!* In 1958/9, after all charges had been met, the surplus available for carry-over was £250,000—a bonus to the nation.

3 MILLION PASSENGERS A YEAR

An airline cannot be popular unless it is efficient. Nowhere is BEA's efficiency more dramatically testified than in its leaping totals of passenger traffic.

Today, BEA carries more than 3,000,000 passengers in a year; on international routes, BEA carries more passengers than any other airline in the world, except one.

BEA serves 70 major cities in Europe, and on these routes carries 54% of all the air traffic to and from the United Kingdom; the remainder is shared by about 50 other air carriers.



4 short points to remember when you fly BEA

* BEA runs a scheduled airline, operating socially necessary as well as profitable routes, all the year round.
* By developing a huge tourist traffic, BEA has turned many of its less profitable services into profitable ones.
* BEA has made an overall profit for 5 successive years.
* BEA supports the British aircraft industry; the industry has sold BEA 220 British aircraft and BEA has spent £100 million with the industry since the war.

As a businessman you can appreciate both the complexity of the task and the value of the achievement. So, when you fly—FLY BEA.

BEA

THE AIRLINE THAT'S MADE BIG BUSINESS OF AIR TRAVEL IN EUROPE

Once again! TR Services for Castrol

THEY CHOSE TR SERVICES

Once again C. C. Wakefield & Co. Ltd. have chosen TR Services—this time for their new 15-storey headquarters in London. Here TR have installed a 400-line internal telephone system. C. C. Wakefield have been TR subscribers since 1917. 43 years' experience has *proved* to them that TR provide the most reliable and comprehensive rental service in business communication equipment. Telephone Rentals Ltd. are now providing TR Service at nine Castrol installations in the United Kingdom.

TR Services, which are used by over 30,000 organisations in all branches of industry and commerce, include Internal Telephones, Internal Broadcasting, Staff Location and Time Control, Production Control, Watchman Protection, Fire Alarms. Full details of how TR Services can help you will be sent on request.

STEEL—Report to the Nation

HOW MUCH STEEL IN 1960?

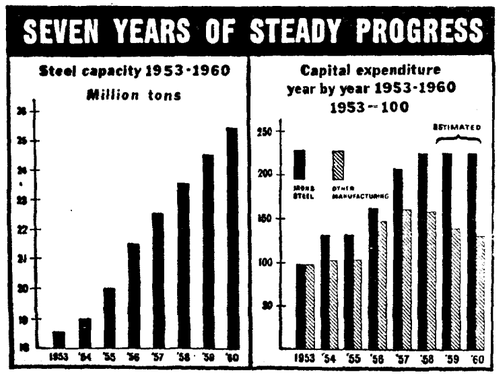
THE British steel industry may well produce about 24 million tons of steel in 1960 – compared with 20 million tons last year. Last year, and the year before, the steel industry spent some £100,000,000 on new plant and development – and raised its production capacity by about a *million* tons each year. This was done despite the fact that existing capacity, except in a few cases, was not being fully used.

Why this expansion, then? Is it an act of folly – or farsightedness? It is simply an expression of confidence in Britain's future.

Apart from the sharp setback around 1958, when the industry was working far below capacity, demand for steel has shown a steady upsurge since the war. Looking forwards, the industry has weighed forecasts made by its customers about their future demand.

As a result the industry believes that the trend of steel demand will continue to rise.

Planning ahead in Steel is a ticklish business. It means foreseeing future developments in the economic life of the nation, and the changing needs of steel consumers.



Among the thousands of steel-using firms the pattern of demand can change almost overnight. But planning, building and bringing into production a new steelworks inevitably takes years.

Unexpected

A plant making rails cannot change over to production of sheet for cars.

Hence in the past two years, although the steel industry as a whole has not been working at full capacity, there have sometimes been shortages of steel sheet.

Why? The causes were an unexpectedly swift boom in cars – which took even the motor industry itself by surprise; rising sales of household goods like cookers and washing machines, and of electrical machinery; and a shift in demand from one kind of steel sheet to another.

£760 million

Not even the wisest brains can predict, years ahead, every future shift in the pattern of demand. But Britain's steel industry has done remarkably well since the war in having the right plant ready at the right time.

Since the end of 1946, a sum of over £760,000,000 has been spent on development. The graphs show the crescendo of expansion in the last seven years; and also how the steel industry, far from lagging, has gone ahead faster than other manufacturing industries.

New Mills

In the critical field of cold reduced sheet, production in 1959 was 13% up on 1958, and will rise again by perhaps as much as 20% in 1960. Further expansion at existing strip mills and construction of two new mills at Newport and Ravenscraig, work on which is being accelerated, will meet the likely demand for sheet and tinplate.

What of the other sections of the industry? Although hit by the recession, they have pressed on with expansion. The new Universal Beam Mill at Lackenby, the best of its kind in the world, is in production – indeed, everywhere the nationwide programme of steel development is accelerating. At the lowest point (December, 1958) the industry was operating, on average, at about 70% of capacity. Now the rate is over 90% – of a greater capacity.

Up and Up

Prospects are that there will still be some margin of capacity in 1960 in certain heavy steel products, as a result of continued slackness of demand from railways, coal mines, and shipbuilders. But demand for other types of steel is expected to rise still further.

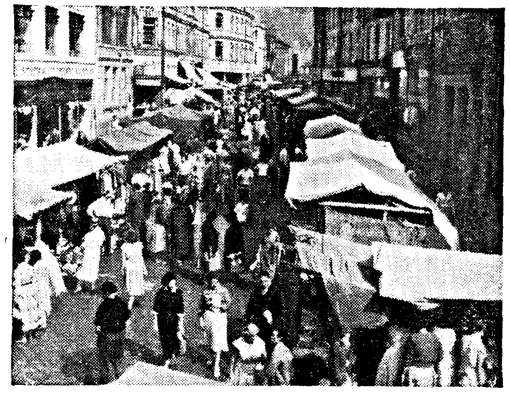
Steel production in 1960 may therefore be between three and four million tons more than in 1959.

Continued modernisation and expansion – at a cost of over £100 million a year – will provide an efficient steel capacity of over 30 million tons by 1965, a sound basis for competing in world markets.

NEW LIFE IN THE VALLEYS

By Trevor Evans

The "black years" of the 'twenties and 'thirties are not forgotten in South Wales. So it was with deep misgivings that I went back to the village where I grew up.



I was never so surprised in my life. There was Thomas Street with upwards of thirty motor cars parked along its kerbs. Thomas Street, which for hours on end in the old days held nothing but Sam Price's milk-float, and Harry Davies's coal wagon.

The houses were spruce with new paint. The house without its television aerial was an exception. Many had refrigerators, and some washing machines.

Peaceful Revolution

The most penetrating comment on changed times came from Mr. Tudur Watkins, the village schoolmaster. He happened to refer in a lesson to soup kitchens. The boys showed the glazed look of not understanding. His own son piped-up: 'Dad, what *are* soup kitchens, please?'

I do not claim that what has happened in Abertridwr is repeated in every other village in the Welsh coalfield.

Pontypridd, badly hit in the 'thirties now one of the most prosperous of South Wales towns.

But there has been a peaceful revolution in South Wales. It can be measured in a variety of ways. Take Pontypridd, one of the worst hit of South Wales centres – 76% of the working population unemployed during the depression. Today, it has 1.8% unemployed.

Barometer of Coal and Steel

There is another way of showing the transformation. For generations two industries, coal and steel, were synonymous with South Wales.

The concentration of coal mining on the most economical pits has produced contradictions, with surplus men in parts of West Wales and a shortage of miners in parts of the Rhondda.

Steel, too, has concentrated production on modern plants, but with a surprising and gratifying result.

A number of small works were closed, but at the same time the new Abbey, Trostre and Velindre works of The Steel Company of Wales were brought into commission.

Throughout South Wales and Monmouthshire the total number on the payroll of the steel companies was 52,500 in 1948. It was 55,300 last year.

In West Wales there were 27,900 employed in steel in October, 1947. Last July there were 28,000.

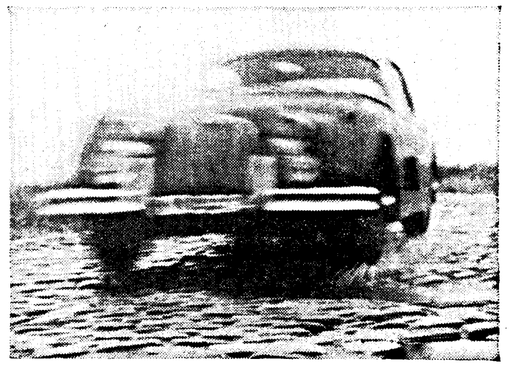
The Industry set up special funds to pay compensation to tinplate workers who lost their jobs when the small works were shut down. Valuable though these provisions are for older workers, an even greater social contribution has been the provision of work for more people.

Confidence in the future

In spite of the changing pattern of coal and steel, the two industries continue jointly to provide work for nearly one-third of all the men in jobs in South Wales.

What of the long-term prospects for South Wales? Here I am an optimist. The workers have proved their adaptability to new skills and new processes.

For years there has been a tussle in the minds of many men in South Wales between the experience of the recent past and the memories of the years between the wars. Inevitably, it was a conflict between generations.



I hope and believe the victory will go to the younger generation. The future belongs to them anyway.

SIXTY KINDS OF STEEL ON TRIAL – TRIAL BY ORDEAL!

They do brutal things to a car, down at Nuneaton, on the proving grounds of the Motor Industry Research Association. And every time they test a car, sixty different kinds of steel are on trial. That's how many there are in a modern car.

One of the tortures they have devised consists of a pavé track made of rough stone blocks, set at all angles, with plenty of potholes. They like to drive cars across it *fast*.

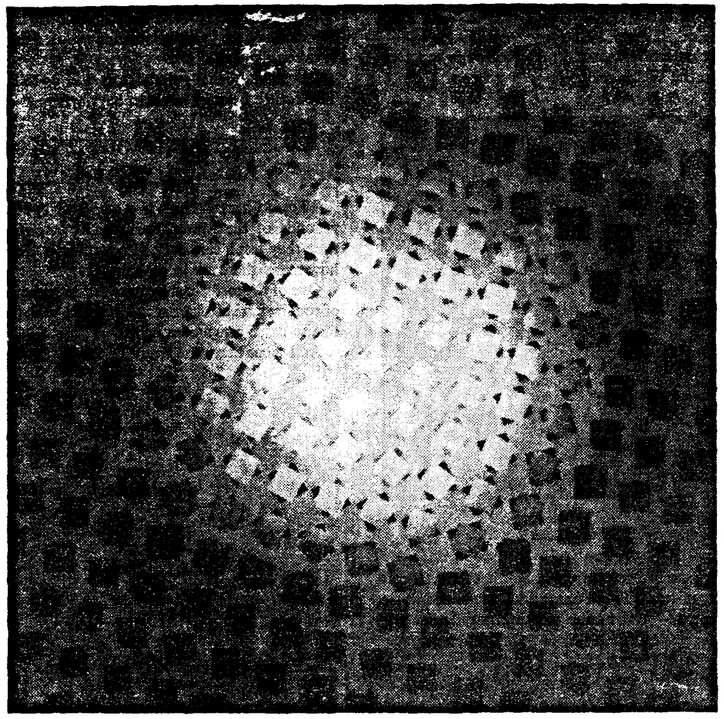
And what bears the brunt of this savage test?

Steel takes these shock tactics in its stride.

Steel. British steel. Not just any kind of British steel – but a variety of specially compounded steels.

These special steels come from one or other of the many steelworks in Britain that produce alloy steels.

They are made, fastidiously, in special furnaces, with exact quantities of alloying material added to the molten metal.



Nickel may go in, or Chromium, or Titanium, or Vanadium – or any of a score of other ingredients.

Scrupulous sampling and testing follow. Only when the melter is completely satisfied is the molten metal 'teemed'. The end-product is a component to which the car-driver hardly gives a thought – simply because it is so completely reliable. Whenever there's a really tough job to do in a car, there's a special British steel doing it.

There are over 300 steel firms in Britain, producing *thousands* of different steels. One firm alone may make steel to 500 specifications.

All Britain's industries rely on steel – none more than the Motor Industry, whose phenomenal production and export efforts have astonished the world.

Reports to the Nation on Steel will be issued regularly during 1960 by the British Iron and Steel Federation

"High Frequency Heating" by Roy Nockolds

Hot and Quick

Over the past ten years or so industry has become familiar with a process known as High Frequency Heating. Examples of its practical uses today include smelting, surface hardening, plastic welding, wood gluing and the cooking of biscuits and cakes —all of which it does with great speed and precision.

This 'high frequency heat', is generated in three ways — dielectrically, by induction, and by microwave irradiation. All these methods have two things in common—the heat is created by molecular friction (Roy Nockolds' picture represents the controlled movement of molecules *inside* a material) and all employ types of electronic valves in which Mullard specialise. In fact, High Frequency Heating owes much of its success to Mullard's long experience in the design and production of electronic power and transmitting valves.

Here, then, is yet another example of how Mullard research and development is serving Britain's designers of electronic equipment.

Technical Information Services. *Mullard Technical Information Services cover almost every field of electronics. If you have an applications problem, write to the address below.*

In Salisbury, Plain

ON three separate occasions Mr Macmillan has defined the Government's policy towards the Central African Federation—in the House of Commons on July 22nd last year, in Lagos last week, and in Salisbury this week. On the first occasion he dismayed the Labour party, who thereupon hardened their hearts against the Monckton commission; in Lagos he delighted the Labour party (and incidentally his African hosts), so that Mr Callaghan sent him an effusive telegram; and in Salisbury he apparently delighted 1,500 "tough" white settlers, though possibly not Sir Roy Welensky. Yet on all three occasions he was saying exactly the same thing.

It is perhaps part of Mr Macmillan's triumph that nobody believes this; for it leaves him with a free hand to do what he wants. The reason for the misunderstanding lies in the preconceived ideas of other people about what words mean, and what the constitution of the Federation of Rhodesia and Nyasaland really permits.

What appalled Labour in July was that Mr Macmillan said only that Britain would continue to act as protecting power over Nyasaland and Northern Rhodesia as long as their peoples desired it and until they were willing to enter an independent federation; he did not say that they could secede. In Lagos he also did not say that they could secede: what he said was that until these protectorates had, after achieving responsible elected government, decided that they wanted to join a "full and independent" federation, British protection would not be withdrawn. In Salisbury he pointed out that in Lagos (and in the House of Commons) he had not said that Nyasaland and Northern Rhodesia could secede, only that Britain would remain the protecting power until they did agree to join a full and independent federation.

The decisive points are these: (1) there is no provision for the protectorates to secede from the present *non-independent* Federation; (2) British protection remains until the governments of the protectorates, having been elected by their peoples (which they are not at present in any possible meaning of that term), ask to join an *independent* federation; (3) while Britain protects Nyasaland and Northern Rhodesia the Federation is not *full and independent*—that is, it is not and cannot be a sovereign state. By convention (not by right) the federal government is "independent in the federal sphere," which means that Britain does not upset Sir Roy's legislation provided it is not *ultra vires*, but this does not make the Federation independent as a state.

What this adds up to is exactly what Mr Macmillan says it adds up to: that no decision has been taken on giving Sir Roy either (a) sovereign independence as things stand or (b) any changes in the status of the protectorates. The task of the Monckton commission will be to suggest what changes could and should be made in the Federation's constitution. Broadly, the commission might say one of three things.

First, it might say that, given certain changes, the Federation should be able to fulfil its constitution's purposes and preamble, which demand partnership between the races. This is probably the best that Sir Roy can hope for. Even then, until an elected Nyasaland government and a more representative elected Northern Rhodesian government agree to it, a federation altered along the lines advised by Lord Monckton and agreed in London in 1960 or 1961 would still not become independent. The people of the protectorates are thus left with the

power of veto. Or, secondly, the Monckton commission might say that, although the people of the protectorates have no right of secession from the current non-independent federal constitution, that right could be put into a new one ; this could be done by amending the Rhodesia and Nyasaland (Federation) Act of 1953—with or without the agreement of Southern Rhodesia. Or, thirdly, it is still perfectly open (as Lord Shawcross has said) for the commission to say that there is now no way of making Federation work and fulfil its objectives.

Whatever hope Sir Roy Welensky might have cherished that the "expressed wish of the peoples" of the protectorates can be stated by the governors or by the British Government or by himself is thus simply knocked on the head ; that wish can be expressed only through the ballot-box. All that is inexplicit now is just how wide the franchise would have to be. The one point that is left for sensible liberals to argue and press for is that the eventual franchise, no doubt several years hence, ought to be very wide indeed.

Atlantic Exploration

The Dillon conference did not reconcile the Six and the Seven, but it may have started something new and important

BIG events have rarely been so obscured by diplomatic tactics as at last week's Atlantic economic conference in Paris. The conference played the familiar European numbers game, with the Six and Seven arguing about whether to meet again in groups of three or five, thirteen or nine, eighteen or twenty. But these procedural obbligatos were no more than an accompaniment to a major political and economic act—the entry of the United States into the drama of integration and free trade that has been played in Europe during the past four years. The process begun by the Six, and carried a stage further by the Seven, has brought an American response. Tentative as it is, that response could start a new era in Atlantic economic co-operation.

One reason for the caution of the American initiative is obvious. As the Americans themselves have been emphasising, no new arrangement for bringing them into a revised Organisation for European Economic Co-operation can be planned, signed and blessed by Congress until about eighteen months from now, when a new United States administration is settled in office. They have been at pains to point out that any new Atlantic body can have only consultative powers. But it is clear already that the United States is anxious to get down at once to two practical tasks: talks for reducing tariffs on a world-wide basis ; and a joint effort to increase aid to the undeveloped countries, with Europe contributing more.

The new group which eight industrial countries set up last week to co-ordinate their aid efforts is expected to meet soon in Washington. It has one major task that needs to be faced straight away: the means of raising finance for India's next five-year plan. And for its wider task it can turn at once to a number of excellent suggestions and comparative statistics on aid prepared by the OEEC secretariat, and characteristically pigeon-holed by governments.

In trade policy the United States, the European community and Britain (which has the highest tariffs of these three units) have now to give practical expression to the fine words they have been bandying about on the subject of freer trade on a world-wide scale. The present American administration has been given the power to cut up to 20 per cent off American tariffs in return for concessions from other countries. That power expires with the Trade Agreements Act, in June, 1962 ; if it has not been used by then to extract real concessions from Europe, it may not be renewed. That is when the danger of a protectionist reaction may really rear its head in the United States. Time, then, is limited. None should be wasted before sparking off, perhaps in one of the working groups of the new twenty-power trade group set up in Paris, talks between the main industrial powers on reductions in tariffs which can later be extended to all the members of the General Agreement on Tariffs and Trade.

The Atlantic conference last week also established a forum in which the issues of the division within western Europe can be discussed, after over a year in which contact between the two camps in Europe has been virtually confined to the ordinary diplomatic channels. This carries with it dangers as well as hope. The hope, to use a phrase of Dr Erhard, is that the two rails in Europe, that have been diverging

JANUARY 21, 1860

FREEING FRENCH TRADE

The Emperor of the French is at least a man who does not forget the brevity of human life. He loses no time. He gives us one week a programme of the future of Europe, the next another and different programme, the next a promise of a commercial treaty with ourselves, the last week an outline sketch of vast internal reforms. He evidently has a pride in showing himself superior to the bureaucratic system by means of which he rules. The history of the world has few documents that are more remarkable than the concise letters which he writes in his own person, which announce vast plans for the future, which are inconsistent with the maxims upon which his recognised Ministers have hitherto been acting,—which are generally vastly better than those maxims. In foreign policy, the Emperor of the French, who knows England, will not be surprised that Englishmen of business feel puzzled to follow his changes ; he knows their tenacious and cautious habits, and will not wonder if they are desirous of having something more fixed, more stable, and more consistent. But, as far as respects the Emperor's commercial policy, there is no ground for these perplexities. He has always been known to be a Free-trader. He has always acted upon his opinions on that subject as far as he could, and as far as the sinister interests of some and the ignorant prejudices of very many of his people will permit him. We may have very great confidence that he will carry out the principles of commercial freedom as completely as he can in the present circumstances of France. . . . . On matters of trade . . . the Emperor of the French is immeasurably wiser than the great majority of the French nation ; he knows, however, that they look to the Government for the initiative in all things. It is not, therefore, surprising that he wishes to make use of his vast influence for the development of his wisest ideas. We may regret the omnipresence of the executive administration in France ; but while it is omnipresent, we should rejoice that it is enforcing what is right.

rapidly, can at last begin to converge instead ; that something can be done to keep the detailed measures of the two groups, as they take shape, in line with one another, and that the new contact can gradually bring about an improvement in understanding that may one day lead to fresh negotiation.

The dangers are that concentration on the exhausted European dispute may divert attention from new world-wide tasks and that illusions on both sides may merely lead to a new clash. Some illusions are already about. The Six, on their side, lulled by the moderate tone of British talk in Paris, are already beginning to air the quite mistaken view that the British Government has given up the idea of a European free trade area altogether ; the Seven, exhilarated by their first public appearance as an *ensemble*, have begun to magnify last week's verbal successes in their own minds. The Chancellor of the Exchequer was right to warn the press on January 14th that what had been achieved was a purely procedural agreement. The clash of views in the Council of Europe on Wednesday showed how deep the differences are between the two European camps. The truth is, of course, that these can be resolved only by political decisions in Britain and France.

WHETHER those differences are resolved one day will depend in some measure on the attitude of the United States. Today the American balance of payments problem produces a strong American bias against any sort of European agreement which discriminates against American trade. But that does not mean that American mediation may not be possible in Europe later on. One strong impression that emerged from last week's conference was that the United States has not yet worked out a policy which is a real synthesis of its interests in Europe. Its own payments difficulties lead it to oppose any European agreement at present ; its commercial interests will no doubt make it a permanent advocate of low tariffs between Europe and the outside world. The United States, too, has from the outset supported the common market as a means to a strong, united, western Europe ; and this has created an opposition, or at best an indifference, to any looser arrangement which may tend to dissolve or water it down. But in Paris it was also made clear that the United States was aware of the danger of a split between the common market and the rest of free Europe. If the United States government is to play an active role in the new Atlantic partnership, it will have to reconcile these two attitudes.

One possible synthesis, which the Americans might logically support, is that there should after all be a grouping embracing all western Europe, but that this group should have a greater political commitment than anything the Seven at present envisage, and should have lower tariffs towards the outside world than do the western European states at present, either individually or collectively. The political decisions have yet to be taken. But any major cuts in European tariffs that can be negotiated in Atlantic or world-wide talks will provide the most favourable economic context for a European agreement of this kind later on.

Last week's Atlantic meeting was in a sense a tribute to Europe's economic and political recovery. That recovery has placed upon Europe new responsibilities for what happens in other important areas of the world. It has prompted the United States to seek a place in the new and (let it be hoped) contagious process of unification—and liberalisation—that the western European countries have set under way. But the old world still evidently needs the assistance of the new, not so much now in righting the economic balance—that task has been well done—as in removing the inherited political divisions and rivalries that still hamper and distort Europe's part in world affairs.

Solo in Two Keys

Mr Khrushchev's speech on Soviet armaments and disarmament was addressed to two audiences at once, and contained more than one message

MR KHRUSHCHEV may be puzzled by the echoes that the outside world has given back to his speech of January 14th before the Supreme Soviet. He had artlessly foreshadowed a message of peace ; it was greeted outside Russia as an exercise in sabre-rattling. He has himself to blame. He had called a special session of parliament to announce a reduction of troops which could have been carried out by a simple decree ; he had let it be known that spectacular measures would be proclaimed. Having thus seized the limelight and the microphone, he could not sing a tune in two keys and expect the false notes to pass unnoticed. But this is what he did. It was unconvincing to assure, at one and the same time, the foreign audience that the cut in military manpower was a great self-denying gesture, and the home critics that it left Soviet military power entirely unimpaired.

Second reading of the speech leaves no real doubt that Mr Khrushchev did want to present his move to the western public as an example of self-abnegation worthy to be followed, a step dictated by the longing for peace and not by any economic necessity. Everyone will take his word for it when he claims that, if the Soviet government considered that still greater resources were needed for defence, the necessary economic sacrifices would be made and the resources found. Russia proved this point when it was much weaker and poorer than it is now. Now that it produces 60 million tons of steel, 260 billion kWh of electricity and 130 million tons of oil, it could certainly do it again (though not without political strain). In the present case, however, military and economic common sense say the same thing: the extraordinary progress in nuclear weapons and rockets makes the huge accumulation of unproductive manpower in the Soviet armed forces unnecessary and absurd. The Soviet Union can thus release men for industry just when the wartime fall in the birthrate is beginning to affect the numbers of the labour force—and when, also, a drive is on to reduce the working week.

Western listeners, impressed already by the Soviet feats in rocketry, did not need to be told that the reduction of numbers in the forces implied no loss in striking power. Yet Mr

Khrushchev's speech was remarkable for the time and the emphasis he spent in explaining that he was not really letting his side down. Time and again he insisted that Soviet military power would be greater, not less, than it has been. The armed forces, he pointed out, had been re-geared to rocket and nuclear weapons; no surprise attack could knock Russia out; any spot in the United States could be accurately hit; the Soviet Union had a lead in rocket production, and intended to keep it. Indeed, in one and the same breath he claimed that the fire-power of the Soviet forces "will increase many times over in terms of quality" and urged the western powers "to follow our example." This cannot have been quite what he meant.

Such confusion comes of protesting too much. The hypothetical questions he was answering may in fact have been asked. Popular pressure can hardly have prompted these emphatic reassurances of Soviet military might. Having suffered more than any during the war, the Soviet people are also more attracted than most by the slogan of peace and plenty. They could be turned against a leader only if it were proved that by negligence he was inviting an invasion. Who, then, may have dared to level such charges against Mr Khrushchev? Military commanders might hint at something of the sort. The marshals are conservative by profession; the generals have a vested interest in big standing armies, not only for pay and prestige; it can also be a question of political power. It is highly probable that the problem of cutting the armed forces figured prominently in Mr Khrushchev's conflict with Zhukov.

Marshal Zhukov was dismissed from the ministry of defence and the party presidium in October, 1957. Party control over the armed forces has been tightened since then. But the commanders' dislike for the reduction of troops has probably not vanished, and they can now rely on the sympathy and support of thousands of officers who will soon be putting on the Soviet equivalent of the bowler hat. Marshal Malinovsky, the minister of defence, has put this figure as high as 250,000 officers—which implies a fantastic state of inflation in the Soviet military establishment. Officers in Russia have high pay and status. They cannot be enthusiastic about their prospect in civilian life. It is significant that Mr Khrushchev dwelt in length on this, promising that demobilisation could take up to two years and that special care would be taken to train officers for good civilian jobs.

There are some 15 professional soldiers in the party's central committee of 255 members and candidates. In a country ruled by the communist party, military men alone could not bother Mr Khrushchev much at this stage. But they are not alone. The natural allies of the military lobby are all the conservative elements in the whole communist establishment (including its Chinese members) who think that Mr Khrushchev is departing much too far from the Stalinist path and taking too many risks. His critics, defeated in the past, have probably not been silenced. It is most unlikely that, when the central committee met at the end of last year, it confined its discussions to agriculture. The sudden disgrace of Mr Kirichenko and Mr Byelayev, two well-known comrades of Mr Khrushchev, leaves a puzzling impression. There is not enough evidence to clear up this mystery. Another fact, however, suggests that there may be dissension within the party leadership. Mr Khrushchev's speech revived, after a long interval, the thesis that nuclear war would spell the doom of the capitalist half of the world only. He used this argument once before—during his struggle with Mr Malenkov. Then he dropped it quietly when the fight was over. That nuclear annihilation can distinguish between differing political and social systems is a notion that Mr Khrushchev appears to proclaim only when under pressure.

What light do his words and behaviour throw on the approaches to diplomatic talks at the summit? If the Soviet leader is really under pressure from his conservative colleagues at home, he cannot be expected to make real concessions abroad without serious counterparts. There should be no illusions, for instance, on the German question. Not only was Mr Krushchev particularly harsh on Dr Adenauer, but he said again that if there was no agreement on Germany, including a settlement of the West Berlin question, the Soviet Union would sign a peace treaty with the German Democratic Republic, "with all the attendant consequences." The Franco-German school in the western discussions of policy for a summit conference often seems to leave out of account Mr Khrushchev's ability to play this card if and when he chooses.

WHATEVER the motives and the manner of presentation, the Soviet government's decision to cut down its conventional forces should remove one of the obstacles to an agreement on disarmament. The reduction is less spectacular than was expected; the Soviet Union in two years' time will still have nearly as many troops as the United States has now. But Mr Khrushchev continues to hint that he has not said his last word; he has spoken of a future when the basis of the Soviet army would be a territorial militia. His announcement that Soviet scientists and designers have "a fantastic weapon" in development does not materially alter the "balance of terror." No doubt both prudence and precedent recommend that his word be taken for it.

It would be a mistake to be too preoccupied with Mr Khrushchev's boasts of Russian strength. They are aimed at a specific domestic audience; and confident talk of one's own power is not in any event an exclusively Soviet habit. Diplomatic initiative is now needed rather than aloofness based on suspicion. Mr Khrushchev complains that the western powers are delaying the meeting of the 10-power disarmament commission—now scheduled to meet on March 15th in Geneva. No effort should be spared in the pursuit of an agreed solution with his representatives there. The task is now more urgent for two reasons. Mr Eisenhower will not be president for long. If Mr Khrushchev returns empty-handed from Paris in May, he may be compelled to make more concessions to his home critics, whom he has now tried to silence by brandishing his secret weapon. The two leaders have very little time in which to come to terms.

Cut Price Competition?

The case against resale price maintenance

UNDER the present British law of contract a manufacturer can fix in advance the price at which retailers must sell his goods; that is why a packet of Players cigarettes always costs 3s. 11d., a bar of branded chocolate always costs 6d., and a copy of *The Economist* always costs 1s. 6d. in every shop in the country. The price which is thus fixed usually gives a sufficient margin to the retailer to keep in being the highest cost shop, which generally means the smallest one. Now the Government—heartened by what has happened recently in the grocery trade, in which the new supermarkets and other big distributors have successfully insisted on the right to set and cut their own selling prices—is considering a liberal change of policy. The President of the Board of Trade confirmed in a recent television interview that the Government has been considering whether the law's support for individual resale price maintenance should be withdrawn—with the intention, broadly, of helping the present wave of price-cutting to spread from groceries to other trades.

This would be a very bold decision, not at all the sort of thing that most people expected from a Conservative government with an increased majority. Manufacturers, small shopkeepers and probably the Trades Union Congress (influenced by the powerful shopworkers' union) would all oppose it; it would cause a major political row. The objectors would be able to point out that the Lloyd Jacob committee ten years ago declared that individual resale price maintenance was not necessarily against the public interest. Cautious political calculators will say that any action now would have only a minority of opinion behind it. The best way to make that minority a majority, and to urge the Government on, may be to dissect the arguments that supporters of resale price maintenance use.

Manufacturers usually put forward two such arguments. One of these, which particularly impressed the Lloyd Jacob committee but has seemed less impressive since, is their fear of the so-called "loss leader": the practice whereby retailers might select individual well-known proprietary articles for sale at dramatically cut prices, in the hope that customers attracted into their shop by these obvious bargains will buy other things too. If one retailer chooses an article for loss leader treatment in this way, it is said, neighbouring retailers will refuse to stock it, and the manufacturer will find that demand for his product from distributors has most unfairly gone down. These fears should have been cut down to size by recent experience in the grocery trade, where no leading product appears to have been victimised in this way. Retailers have learned that once the practice of selling at fixed prices has been breached on a wide front, "special bargains" on heavily price-cut loss leaders are no longer so obvious to the customer; they thus cease to be strategically effective as a weapon of competition, and low cost shops fall back instead on the desirable objective of even price cuts on a wider range of goods.

The second reason why manufacturers want to fix resale prices, however, is in order to save small and specialist shops from being driven out of existence. They have two main commercial motives. The less respectable is that the greater the number of outlets, the greater is the chance that the customer may be chivvied into impulse buying; the greater the number of bookstalls with this issue of *The Economist* that you pass on the way to work today, the more possible is it that you will eventually buy a copy. This is merely a system of advertising our wares in the most expensive way possible for the customer, and with the most pernicious possible waste of resources within the national economy. There is no reason why the law should help to enforce it.

A more respectable commercial argument is that, in some trades, high cost specialist shops ought to be kept alive because they provide a specialist service. Three examples are often quoted. First, it is said that without resale price maintenance in books, specialist bookshops in Britain would have to close and that nearly all books would then be bought from bookstalls or from general stores, as in America; intellectuals are afraid that such general stores would never stock classic books. This is a better special plea than most others, but it has lost some of its cogency since classical books in paperback covers began to tap a mass market. As a second common example, it is said that qualified chemists will not be able to make up prescriptions so cheaply if they are not allowed a large fixed profit margin on the proprietary medicines and toilet articles that they sell. The answer here is that these articles are already sold in some 200 thousand general stores as well as in Britain's 15 thousand qualified chemists' shops, and that price maintenance is beginning to break down in them anyway. The proper course is obviously to pay chemists the full economic price for their prescriptions service, not to take it out of the consumer by large fixed margins on soap.

The commonest argument for using price maintenance to keep specialist shops in being is that applied to expensive technical products which may require an after-sale maintenance service—like motor cars, refrigerators, television sets, vacuum cleaners and the like. This argument seems to be a simple misconception. It would be an excellent thing if manufacturers could pin an easily recognisable badge of approval on carefully vetted technical goods shops, indicating their assurance that the shop concerned will keep an adequate supply of spare parts, that it has passed stringent tests for its repairmen, and that it will never sell goods that have deteriorated while waiting on its shelves; it would be reasonable for manufacturers to say that their guarantees of six months' free after-sales service will operate only on goods sold through shops that have earned this badge. But the system of forcing all shops to sell at a

single fixed price does nothing to ensure that the only shops kept alive are those that are uniformly efficient in this way; anybody who has called in two or three different local shops to look at a broken television set must be aware of this.

So much for the arguments of manufacturers who believe in the value of resale price maintenance. An awkward feature of current business conditions is that many who do not believe in it may still feel obliged to conform to the customs of their trade. If some enterprising retailer starts selling a product at a cut margin, while still paying his supplier the agreed wholesale price, there may be no reason why the manufacturer should object; his sales might even rise in consequence. But other retailers, on whose display of his products a manufacturer depends, very probably would object; they might remark pointedly that the manufacturer concerned could take legal action against the cut-price shop. Even liberal newspapers, for example, could not say dogmatically how they would react if this situation of mass protest from most of their distributors ever arose; it would be nice if the Government were to wrest the legal blunderbuss of resale price maintenance from us.

The view that resale price maintenance benefits the community by keeping small shops in existence is naturally not propounded by manufacturers only; it is even more tenaciously held by small shopkeepers themselves. One of their arguments is that the foot-weary consumer would suffer from the demise of the "shop round the corner," because he would then have to walk to a cut-price supermarket a mile away. This exaggerates the slaughter that competition would cause. In these cases where a main shopping centre is inconveniently far away, the small shop will naturally and properly remain in existence, even if it does sell at slightly higher prices than its bigger competitors; this has been confirmed by experience during the current cut-price war in the grocery trade.

Some people say that the demise of small shops even in the middle of main shopping areas would be a social loss: shopkeeping is one of the few outlets left for one-man or family private enterprise, with little capital behind it. There is a great deal in this argument, but the proper solution would surely be to combine a measure that sets big shops free to cut prices (if they can) with a measure that sets one-man shops free to exploit their own main competitive advantage (if they wish): although trade unions have a perfect right to bargain for agreements (and even wage council regulations) insisting that employees in shops should not have to work at impossibly inconvenient hours, it is ridiculous that the Shop Hours Act should forbid one-man shops to open when the bigger shops are shut. If a freelance journalist writing a weekly article chooses to finish it at near to midnight in his private home, no law in any country could prevent him from planning his working day in this (as it happens) personally convenient way; it is intolerable that one-man shops, simply because they come into direct contact with the public, should alone be prevented from exercising similar freedom of choice.

Finally, some "representative" consumers have supported resale price maintenance, even though to oppose competitive price cutting seems a very odd thing for consumers to do. The housewives' organisations told the Lloyd Jacob committee "without exception that in their view branded articles should carry a fixed retail price," because "it was a convenience to know in advance what an item or group of items would cost and that it made it easier to plan and check household expenditure." This is the most depressing argument in favour of lazy and unskilled shopping one has heard of yet. In order to instil a new spirit of dynamism among our shops, as well as apparently among our women, the Government should be urged to press forward with a sensible reform.

The Army Speaks

General de Gaulle's plans for Algeria have again met army resistance. He is still avoiding a trial of strength

THE order that brought General Massu from Algiers to Paris on Tuesday night came from the Elysée: there is as little doubt of that as of the terms of the interview he gave to Herr Kempski, the highly reputed correspondent of the *Süddeutsche Zeitung*, last Saturday. General Massu has denied that he was summoned, just as he had earlier denied the interview. This is scarcely surprising. Yet not even he has denied that an Algerian political crisis exists again: in fact, the words in which he chose to associate himself on Wednesday with General Challe, the commander-in-chief in Algeria, made it all too plain that the army was once more restless and dissatisfied. For all his equivocally loyalist phrases, General Massu took as pointed a way as any of saying that General de Gaulle's reassessment of the Algerian situation on Friday ought not to go beyond what the army wants.

This is, of course, what the army has been saying on Algerian policy since the coup of May 13, 1958; but in a political system like the Fifth Republic the illusion is always liable to be harboured that things are not as they really are. Sometimes it is the National Assembly believing it is still a parliamentary body. Sometimes it is the President of the Republic believing that his writ runs unchallenged across the Mediterranean. They have to be disabused. After General Massu's soldierly appreciation, another misunderstanding has been cleared up.

The crisis is one that some observers of the scene, including M. Duchet, the Independent leader, and probably M. Pinay, too, expected to break some time. The precise course it takes in the coming weeks is, however, likely to remain outside their influence and calculations. All the same, it should be clear to General de Gaulle now that several people are thinking seriously about his succession. There is M. Pinay, holding himself since January 13th at his countrymen's disposal at St Chamond; and there is General Massu, chatting with a German reporter on the 16th about the mistakes of two years ago. All at once, the foundations of the Fifth Republic seem narrower than had been supposed.

The news that General de Gaulle intended to take a further step on Algerian policy after the official conference on Friday had been reasonably widely known in advance. A directive had been sent to General Challe and to M. Delouvrier, the chief civilian authority, in Algiers. M. Lecourt was able to hint at coming changes at an MRP party meeting last weekend. Although it was not clear exactly how far General de Gaulle meant to go, it was understood that a new referendum on Algerian policy, confined to the electorate in metropolitan France, was being mooted. It was, further, apparent that the MRP was making its support of the Debré government increasingly conditional on fresh progress towards an Algerian settlement. At such a time, it must be supposed that General Massu's interview (breaking a long silence and arranged with General Challe's assistance) was both intentional and purposeful.

What General Massu told Herr Kempski was not, in fact, at all different from what other, less exalted, officers in Algiers have been known to mutter for some time. There is a feeling in the army that General de Gaulle's self-determination offer on September 16th went too far, that Paris still does not know how to run the war, and that General de Gaulle does not understand Moslems and how to handle them. This military impatience seems to have been flicked into anger by the mounting criticisms voiced by settlers in the Algiers department, against whom the Algerian rebels have been concentrating their attacks in the past weeks.

These settlers have been complaining that the troops who used to be deployed to defend their farms have been taken away to mount General Challe's operations against the rebel strongholds in Kabylia and the Collo peninsula. The mayors of the Algiers district adopted a resolution on Tuesday affirming that the settlers would take up arms, if necessary, to ensure that Algeria remained French. The report of this resolution was censored in the Algiers evening paper on Tuesday. Although General de Gaulle has refused to allow the settlers to form armed units of self-defence against the rebels, the army authorities are thought to be ready to turn a blind eye to such a development.

Once again, the likelihood is that General de Gaulle will temporise and that his immediate plans for Algeria will not go beyond what the army is prepared to allow. It would indeed be tactically foolish for him to precipitate a breach that would leave him as openly helpless as M. Pflimlin two years ago. But time is not necessarily on General de Gaulle's side. As long as commanders-in-chief like General Challe go on saying with impunity that, whatever happens, the army will never leave Algeria, the prospect of successful peace talks with the rebels remains remote. (Even M. Delouvrier seems to have been bitten by the same bug that overcame such predecessors as MM. Naegelen and Soustelle.) The rebels themselves have been showing divisions inside their provisional (and exiled) government, particularly since General de Gaulle's offer in September. The reshuffle announced from Tunis on Tuesday suggests that while the extremists like the pro-Egyptian Dr Debaghine, Tewfik el Madani and Benyoussef Benkhedda (who led the last mission to Peking) have been dropped, M. Ferhat Abbas still has at his elbow a tough-minded group, headed by Belkacem Krim, that is in close touch with the rebel forces in the field. This element may be prepared to talk (and the three-man "committee of war" may be an instrument for negotiation) but it is not likely to accept much less than its own full terms for self-determination. General de Gaulle's broadcast to the nation on January 29th will be a critical moment in the life of the Fifth Republic.

NOTES OF THE WEEK

KENYA

Trouble at Take-Off

THE lame start of the Kenya constitutional conference has at least served one useful purpose: it has made grimly clear to the British public the deep suspicions that divide the political groups taking part, and the critical nature of the operation that needs to be performed on the Kenya body politic at a time when the wounds inflicted by Mau Mau are still only partly healed. It was therefore all the more important that Mr Macleod should strike the right note in his opening speech to the first plenary business meeting on Wednesday, even though the fourteen seats reserved for the 14 African elected members led by Mr Ngala and Mr Mboya remained empty in default of a compromise over Mr Koinange's presence as their adviser. For though they were not there, the speech was largely addressed (and was promptly delivered by hand) to them. Did Mr Macleod say the right things?

On the face of it, he did not. His exordium to the conference was couched in exactly the vague phraseology which, coming from Mr Blundell, most rouses the suspicions of the African nationalist leaders; if no other contacts existed they might well think that Mr Blundell's influence was behind the speech of the Colonial Secretary, as they think it is behind the exclusion of Mr Koinange. The critical issue came only at the end of Mr Macleod's speech—the question of the franchise and the common electoral role for voters of all races. Even here he spoke only of a "move" towards a common roll for many of the elected seats; although earlier he talked of "a very wide franchise," it was in the context of representing all races and groups. To talk like this puts Mr Macleod well to the left of Group Captain Briggs; but it is too equivocal to thrill the Africans. It suits Mr Blundell's New Kenya party pretty nicely, holding out hopes of yet more juggling with fancy franchises and racial or communal seats.

But it is pretty clear that this speech is only an opening challenge by Mr Macleod to get people to talk. Behind it he holds in reserve what is now widely believed to be a readiness to go a very long way to meet Mr Mboya's minimum terms. If this impression is correct—and it was gaining ground even among some Africans on Thursday despite all the flurry over Mr Koinange—there is still hope for the outcome. Certainly, there is good reason for negotiations to continue, even if they continue outside Lancaster House.

Mr Koinange's Role

IT is all too easy to assume that the wrongs are all on the other party's side in the Koinange affair, as both the Africans and the Europeans do. It is now clear that, once the governor had refused weeks ago to have Jomo Kenyatta as an adviser at Lancaster House, voices to the left of Mr Mboya were raised in a shrill and shrewd demand that Mr Koinange should stand in for "the father of Kenya nationalism." For some reason, the officials did not take this demand as a serious one; and they now contend that only a day or two before

the conference opened they were suddenly faced with it—to their horror. They presented the Blundell and Briggs group with it only just before the conference ; it was inevitable that both of these would refuse to sit down with Mr Koinange in the same room. For it is vital to understand that if Mr Blundell and Mr Waweru (one of the leaders of the "loyal Kikuyu" in Mr Blundell's group) did sit down with Mr Koinange, they would run into terrific trouble with their supporters on their return—meaning a sizeable number of steadfast Kikuyu as well as European settlers. But if Mr Mboya agreed to sit down now without him, he would equally be outbid by the even larger number of extremists on his own left on his return. The tragedy is that Mr Macleod's suggested compromise of a separate room for advisers, at first accepted by Mr Mboya, would not suit Mr Waweru.

In these circumstances the best plan is to carry on talking and leave both Lancaster House and Mr Koinange out of it. Mr Macleod is now frankly concentrating on the "advice" that he expects from the delegations, rather than the "agreement" to be hammered out across the table between them. But the goal, clearly, is an African majority in the Legislature, with Mr Mboya in the council of ministers. When that happens, Mr Koinange will get all the "official recognition" he wants in Kenya, and so—however repulsive this may sound—will Jomo Kenyatta. Whatever connection Mr Koinange did or did not have with the horrors of Mau Mau terrorism, the settlers and their African colleagues must face this.

CYPRUS

In the Balance

On Monday the delegates to the Cyprus conference in London agreed to disagree for the time being ; but everyone agreed to emphasise that a settlement was merely postponed, not abandoned. Independence Day has been put off a month, until March 19th, and in the meantime working parties will grapple with the outstanding issues and the drafting of the final treaty. Throughout the remainder of this week, Archbishop Makarios, Dr Kutchuk and Sir Hugh Foot, with encouragement from Mr. Selwyn Lloyd, have been trying to give the working parties a sufficiently vigorous shove to carry them forward to the end of their road.

Thus it would be ill-judged to take the present setback as irreparable. Among all the parties, there is still plenty of goodwill and plenty of determination not to torpedo the Zurich and London agreements ; and that is a great thing. But equally there is no room for the complacency which some British official circles appear to be enjoying. Working parties cannot decide matters which those at the top have failed to settle. The remaining difficulties, particularly those concerning the size and administration of the sovereign areas, can be overcome, but not without concessions on both sides which neither will find easy to make.

The military naturally want to be as self-contained as possible, to have plenty of elbow room for their installations and for housing and training their troops. But requirements which to the military mind are essential are in fact a convenience ; if bought at the price of local goodwill, they may lose their value completely. In any case, the bases are not going to be tight little self-contained sealed-off enclaves ; important facilities will remain outside, some British personnel will have to live outside, and Cypriot civilians will come daily to work inside.

The Cypriot Fears

The Greek Cypriots, for their part, are apparently alarmed that the British demand, although reduced, is still for about 123 square miles (as opposed to their offer of 38) which includes some valuable economic resources. They apparently believe that this area is to have its own separate civilian administration, and this makes them fear that the British may be trying to retain something more than bases in the island. This is, of course, wide of the mark. One way of demonstrating as much—and it has in fact been under active consideration for some months—would be an arrangement which handed over the civilian administration of the enclaves to the Cypriots.

Those taking part in the talks since the conference was suspended have sensibly concentrated on this problem of administration and on the question of British financial help to the new republic, in the hope that progress on these two issues will facilitate a compromise on the size of the bases. Presumably the British Government no longer assumes—as it appears to have done on Sunday—that it has only to dig in its toes to get everything it wants. As our correspondent in Nicosia emphasises on page 316, Archbishop Makarios is clearly forced to look over his shoulder in two directions—towards General Grivas in Athens and towards his nationalist opponents in Nicosia. It may be irritating to know that these political pressures are not entirely unwelcome to the archbishop. But the fact remains that to force him to accept a settlement that would weaken his position at home and give comfort to Grivas, would almost certainly wreck all the labours of the past year.

LABOUR LEADERSHIP

Open Challenge

While Mr Bevan battles for life, politics naturally goes on. In a sense all reference this week to the state of the Labour party is artificial without mention of him. But this is not the occasion for a discussion of his political rôle ; only for expressing sympathy and hope.

Mr Michael Foot's performance on the BBC programme *Panorama*, capping his recent articles in *Tribune*, amounts in fact, though not quite in words, to a personal declaration of war on Mr Gaitskell. He has stopped short of Mr Benn Levy's unpopular gloss on his own frantically acclaimed speech at Blackpool, but not far short. Where Mr Levy had questioned Mr Gaitskell's right to be in the Labour party, Mr Foot has confined himself to insisting that, if Mr Gaitskell has the views about the dumping of nationalisation that he appears to have, he should go right down the line in favour of them and resign the leadership if they are rejected.

The most remarkable feature of the internal debate since Blackpool is how few senior members of the party have actually committed themselves publicly about revising the constitution. They can almost be counted on one finger. This is not an impressive display of joy in the leader's wisdom. It might almost be taken by the unkind as a tacit endorsement by his colleagues of Sir Anthony Eden's judgment of Mr Gaitskell: "in all my years of political life I had never met anyone with his cast of mind and approach to problems." The silences of Mr Harold Wilson are becoming more noteworthy than his jokes.

Nevertheless, provided he comes back from the West Indies with a sharpening of his tactical touch which recently has seemed unsure, Mr Gaitskell starts from a very strong position. Apart from the fact that Mr Foot has not the standing to be his own candidate for the succession, his straightforward form of attack enters ground which Mr Gaitskell, probably rightly, considers to be his own. The party is not ready yet for the leadership to be at issue ; *Tribune*'s resolve that it should be is likely to rally most of the trade unionists to Mr Gaitskell's side.

Mr Foot's tactics, those of the retiarius

against the secutor, are evidently to lure Mr Gaitskell into making an unambiguous endorsement of the mixed economy an issue of confidence on which he will stake his political life. Mr Gaitskell will be looking for a muddy form of words, to which Messrs Wilson, Greenwood and others will agree but which the country will notice to be different from wholesale nationalisation. It is still the Labour party's greatest danger that he will accomplish the first objective at the expense of the second.

EGGS

The Egg Cycle?

After the pig cycle, the egg cycle. Four months ago the Egg Marketing Board was warning egg producers, in guarded terms, that a continued expansion of laying flocks would be dangerous. This warning, of course, did nothing to prevent the inexorable progress of already-hatched pullets towards full lay. They are now laying merrily; the large eggs which cost 6d. each retail in December can sell for only 3½d. each today, and the EMB's price to the producer has dropped by 10d. a dozen in a single fortnight. There is always, in the nature of things, a wide price swing between late-autumn peak and early-spring trough; but a slide of this steepness and depth, so early in the year, is a novelty. It is very nice for the housewife; but if it scares producers out of their normal programme of orders to the hatcheries she is likely to find the outrageous 6d. egg back again depressingly early in the autumn. The EMB suspects that this interruption of orders is already afoot ; its warnings of glut are being succeeded by warnings of a shortfall which would let in the foreign producer to the mitigation of the housewife's troubles but to the possibly permanent detriment of the EMB's constituents.

No doubt there are egg producers, just as there are pig producers, who make a large and thoroughly well deserved profit precisely by judging what most of their fellows are going to do and then doing the opposite. The question is whether the policy of the EMB, in timing the distribution through the year of the total subsidy at its disposition, is doing enough to encourage them. The present evidence suggests that it is not; indeed, at worst, that the board's policy may be an actual destabilising influence. Some drastic re-thinking of its methods seems to be needed.

FRANCE

When is a Bomb a Bomb?

General de Gaulle's mushroom cloud is now expected to rise over the Sahara some time in the first half of February. Airliners have already been given notice that they will be diverted from the area of the Reggane testing ground. However, British and American aircraft may be discreetly, and unofficially, on the wing to take their own scientific samples of the radiation the French bomb produces. More important, certain decisions will have to be taken in London and Washington soon on whether General de Gaulle's cumbersome device entitles him to acceptance into the nuclear club. Although the decision lies with the Americans, the general is coming to London in April before he goes to Washington, and may naturally be curious to discover whether any blackball awaits him. He is likely to be more interested in this than in the Channel tunnel.

The United States law, rewritten in 1958, allows the authorities to supply designs for nuclear weapons, and the fissionable material to make them, to an ally which has already made "substantial progress" in the development of such weapons. Is General de Gaulle's device a weapon ? Clearly not. But does it constitute "substantial progress"? Britain's experience (admittedly under the unamended Atomic Energy Act) might suggest that General de Gaulle ought to contrive a more sophisticated explosion before he earns friendly know-how and fissionable material. This seems to be the present official British view.

But there are two points to be considered. First, is it really worth while to have General de Gaulle going on with his costly experiments (for continue he will until he gets his way) if it means that France is less able to pursue the sort of financial and economic policy that its allies want it to ? Secondly, although the Russians may not take France seriously as an atomic power, is it wise to jeopardise whatever three-power agreement can be reached if the Russians can cancel their commitments at any time simply because the pretext exists that one Western power is still testing ? General de Gaulle is likely to make full use of his diplomatic nuisance value after next month.

GERMANY

Dr Adenauer and the Daubers

The natural reaction of many people to Dr Adenauer's broadcast on January 16th suggesting that individual Germans should thrash any swastika-daubing hooligans whom they happened to catch is one of dismay. It is no reassurance to Germany's allies to hear the Chancellor advocating violence in the streets. What has distressed Germany's friends abroad and provided grist for the mill of the chronic anti-Germans is less the swastika-painting symptoms than the feeling that these may express a deeper, unhealthy and as yet ill-charted current in German life. In the words of *Die Welt*, Germany's nazi problem is more one of education than of punishment. Dr Adenauer's advice to the German citizen may be no more than the *faux pas* of a man of the last century. To some people it seems to encourage some of the same unhealthy qualities the Chancellor sought to damn.

The task of German leaders trying to cope with the heritage of the past, while the rest of the world watches for the slightest slip, is not easy. If they take vigorous and hasty action against individuals or parties they are in danger of jeopardising elementary liberties and the rule of law. If they do nothing they are accused of sheltering nazism. The same people who were wont to criticise at one and the same time both German rearmament, and the "small size of Germany's defence burden compared to ours," are on the watch again.

It remains true that Dr Adenauer is evidently more concerned with the repercussions of the swastika rash on opinion abroad than with its origins at home. For one thing, a surge of anti-German feeling in western countries could plainly be damaging to the rearguard action he is waging over the Berlin issue. On January 11th he told the applauding city assembly of west Berlin that such compromise proposals for an interim agreement as appeared at the Geneva conference in the summer were now dead. This is not the British or the American view. Dr Adenauer's weekend speech will not have helped to win sympathisers for German views abroad.

DRINK AND DRIVING

To Copy Sweden?

In Scandinavia the laws against driving a car while one has any alcohol in one's bloodstream are so strict that any sensible person who is going to a cocktail party invariably leaves his car behind. A motorist there can be stopped and submitted to a blood test at any time. In Britain a motorist is likely to be stopped only if he looks obviously incapable or is driving obviously dangerously or has been in an accident which seemed possibly to be his fault ; even then the test of whether he is drunk will be a largely subjective one made by a police doctor, not a matter of scientific measurement of the alcohol that he has consumed. Should Britain go over to the Scandinavian system, as is proposed in a private member's bill which a Tory backbencher is shortly to bring before Parliament ?

In part, the opposition to this move will come from those who think that an infringement of personal liberty on the Swedish scale is not justified by the toll of accidents in Britain ; they have still not increased nearly proportionately to the increase in vehicles on the road. Others will be most concerned to press the argument that disqualification from driving is a more appropriate—and more enforceable—sanction than imprisonment for those who have not actually killed or injured anybody yet ; others that measures such as more rigid speed limits and more strictly defined lane discipline (making responsibility for

accidents much more a matter of fact and much less a matter of opinion) should be enforced first. But proponents and opponents of the bill are also likely to make free with the medical evidence about drink and driving, and it may therefore be a service to set this down straight in the following note.

The Damage Done

THERE is clear evidence that even small amounts of alcohol can impair a person's driving skill without making him obviously drunk. Two recent studies in this country are particularly convincing. About eighteen months ago, the *British Medical Journal* published an account of tests done on some Manchester bus drivers. As they took more whisky, they were prepared to drive their buses through narrower gaps (thus their judgment was affected), but they needed wider gaps before they could always succeed (thus their performance was impaired). Then, towards the end of last year, the Medical Research Council published a memorandum on the "Effect of Small Doses of Alcohol on a Skill Resembling Driving" (HMSO, 7s. 6d.). In this experiment, the subjects were tested on a driving-trainer, and it was found that "mean error increased significantly with increasing blood alcohol." It is perfectly true, as opponents of the new bill say, that the impairment does differ from person to person, but the pattern here was not what one might suppose. Extraverts as a group came off worse in the tests than the introverts, who appeared to be trying to compensate for the effects of the alcohol; it is the hearty types who think that "drink does not really affect them" who are the biggest menace of all.

Two more facts that emerged from these two studies are of particular interest to the present controversy. First, the Medical Research Council's investigators found the instrument called a "Breathalyser" an accurate method of estimating, from the breath, the amount of alcohol in the blood. In a report published this week, the council of the British Medical Association endorsed the use of this instrument as having practical advantages over the blood examinations which are used in Sweden. Secondly, neither body of investigators could find a level of alcohol above which it is dangerous to drive and below which it is safe. They found that even a small quantity of alcohol impaired judgment and performance; there is no safety threshold. If the principle of the new bill is accepted, the test level suggested in it—0.15 per cent of alcohol in the blood stream—may actually be too small. Indeed, the BMA report concluded that a concentration of 0.05 per cent is the highest consistent with the safety of other road users—a concentration that may be exceeded after 1½ pints of beer or three small whiskies.

LAOS

An Army's Self-Effacement

SIGHS of relief are audible that Laos has not, after all, been subjected to army rule; it has not even been exposed to a prolonged ministerial crisis. Either contingency had seemed equally possible at the beginning of the year, when the army and the anti-communist Committee for the Defence of National Interests had ousted the government of Mr Phoui Sananikone because it was not anti-communist enough for their liking.

Now, the new king, Savang Vatthana, quietly, firmly—and surprisingly—has caused a colourless government to be formed under the ageing Mr Kou Abhay. And the new government, announcing a policy of "peace and neutrality," has sent its ambassadors to the right foreign offices to explain that "peace and neutrality" mean what they appear to mean. In the Laotian context, this formula can, in fact, only mean reconciliation with the local communists (the Neo Lao Haksat) and non-alignment on the Indian model. A first move would presumably have to be the freeing of the communist leader, Prince Souphanna Vong—now awaiting trial on a treason charge. Other moves would be an invitation to the prince to rejoin the government and a fresh attempt to incorporate the local communist guerrilla forces into the national army.

If only for reasons of face, King Savang is unlikely to do any of these things with unseemly haste, although *Pravda*, while welcoming his new government, has urged him to make a start by freeing Prince Souphanna Vong. The trouble is that if he refrains from doing these things, the general elections due in April will be meaningless; and if he does them, the danger of a civil war may again become acute. For the time being, however, the king's initiative has pleased everybody outside Laos, including even the communist government of north Vietnam, which has sent a cable of greeting to the new premier.

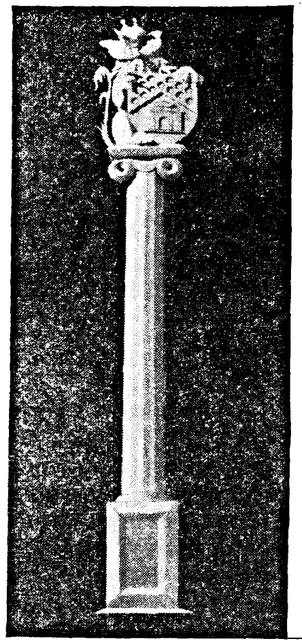
It is worth noting that when the king had already decided on his new and more moderate course, he received advice to the same effect from the ambassadors of the United States, Britain, France and Australia. If ever the Americans did toy with the idea of a militantly anti-communist Laos—as Moscow, Peking and Hanoi allege—they seem, happily, to have dropped it.

UNITED ARAB REPUBLIC

Moscow's Pyramid

A YEAR ago a west German consortium was brusquely warned off Russia's Aswan preserves. It was then hinted in Cairo that the West might get a second chance of joining in when the dam reached a later stage of construction. A number of western countries put out feelers, which have now had to be smartly retracted. On Monday, Cairo was able to announce that the Soviet government had agreed to provide the foreign currency for the second and final stage of construction on the same terms as it had for the first; since these include the right to choose the contractors, the West has every chance of being excluded again.

When the high dam project was divided into two stages, the main reason was that it could thus be made to appear financially less daunting. The first operation—which has just been begun—is to clear the dam site by diverting the water in a semi-circle round it; the second will be the building of the dam itself. But Russian engineers produced a set of blueprints six months ago that cut down the preliminary work and merged the two stages into one. With these modifications, and without the possible waste of time between stages, the dam is expected to be completed in seven years instead of the original estimate of ten (four for the first stage, six for the second). The cost of the scheme will now be in the region of £230 million, about half of which will be provided by the Soviet Union.



Having decided to put large sums of money in a project that collects only 2½ per cent interest, the Russians would be poor investors if they did not extract the fullest possible political returns. Western participation in the final and tangible stage of the dam would have seriously diluted the Russian achievement. Now if all goes well, Aswan will stand as a monument to Russian generosity as well as to Egyptian doggedness; moreover, for the next seven years or so Egypt will be obliged to accept a steady flow of Russian engineers and experts.

CHURCH OF ENGLAND

Part-Time Priests?

THE Church of England is suffering from a grave shortage of priests. Today 1,500 fewer clergy are on the active list than in 1948, to serve a population of England that has increased by more than 1½ million in the last decade. The last census in 1951 showed that fifty out of every hundred clergymen were then 55 years of age or over, and it is calculated that by next year half the present whole-time ministry will be over 65. What then is to be done? One suggestion first put forward rather grudgingly at the Lambeth Conference of 1930, and endorsed more enthusiastically at Lambeth last year, is to create a supplementary part-time ministry. The whole question is now illuminatingly discussed in a symposium,* edited by Mr Robin Denniston, one of the leading members of the younger generation of Anglican laymen. The Archbishop of York, four Bishops, and a number of clergy and lay-

THE LABOURS OF HERCULES

THE THIRD LABOUR

THE ARCADIAN STAG

Some dismiss the Hercules story as a myth. Others, more cautiously, think that the legends that surround his name have some basis in fact. It could have been the exploit of some early Greek hunter, for example, which gave rise to the story of Hercules' capture of the Arcadian Stag. It makes a lot of sense to trap a stag too swift to catch, by driving it into a net!

To-day the tradition is maintained. Hercules—a chemical company now—takes pride in doing things which make sense. It makes sense to re-plan many operations in chemical technology—to mention three, using Dresinol emulsified resins to improve leatherboard binding at lower cost; to enhance quality of rosin products by using Polypale polymerised rosin; to size paper with *fortified* Pexol Size. Suppose you are a paper man. If Hercules has not told you yet about Pexol Size you should be asking some pointed questions!

HERCULES POWDER COMPANY LIMITED

ONE GREAT CUMBERLAND PLACE · LONDON · W.1.

men, including one Roman Catholic, have contributed to the volume.

The Church of England already uses deacons and lay-readers in its work, but the proposal now put forward is to ordain men to the priesthood who would continue their normal secular occupations. They would be empowered to administer the sacraments and in some country districts might well replace the present whole-time incumbent altogether. The creation of this new ministry would certainly raise some perplexing problems. There would be a danger of conflict between secular and ecclesiastical duties, as the experience of the French worker priests, although not exactly parallel, has shown. Friction might well arise between the two branches of the ministry. Would the part-time priests be equally answerable with full-time priests to the citation of Bishop or Archdeacon? Part-time work might become a backdoor method of entry by underqualified candidates to the full-time professional ministry. The law, forbidding ordained men to engage in secular occupations, would have to be modified.

On the theoretical level the debate could continue indefinitely. The correct as well as the courageous course would seem to be to try the experiment and see how it works. This was the way in which religious orders for men and women re-established themselves in the Anglican Church. In doctrinal matters the Church of England has always allowed for different approaches, an attitude which could well be extended to pastoral affairs.

SOUTH AFRICA

Republic on Ice

DR VERWOERD has now bowed to the pressure of his Afrikaner fundamentalists to the extent of promising to create machinery for making South Africa a republic at the drop of a hat, though he has made no promise to set the machinery in motion. In contrast, Dr Nkrumah, at his end of Africa, is setting up almost identical machinery with the expressed intention of pressing the starting-button on July 1st. In each case, the plan is to hold a plebiscite, or referendum, to ask the electorate if they want a republic; in Ghana this will be the entire population over 21, and they most certainly will vote by a pretty large majority to discard the crown. In South Africa, only the whites (men and women over 18) are to decide. On voting, though not in seats, the division among the white people of South Africa is much more nicely balanced. Dr Verwoerd has ruled that a majority of one vote either way will decided the issue. If the former black and coloured votes, restricted as they were, had not been suppressed, there would have been a majority to keep the crown in South Africa for the foreseeable future.

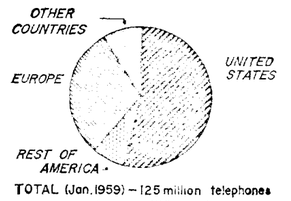
Dr Verwoerd did not quite say that by setting up the machinery for a referendum on the republic he was pointing a missile at the heart of Westminster. If that is his idea, no doubt, Mr Macmillan will be able to tell him that the nose-cone is a dud, and will cause no explosion. Nor can Mr Macmillan rise to the bait which Dr Verwoerd put out in the remark that if a British Labour government, with Mr Gaitskell's well-known African views, came into power, South Africa would leave the Commonwealth; though such an event would distress the Commonwealth Relations Office. Mr Macmillan will do well to tell Dr Verwoerd bluffly that if necessary the crown will go it alone in South Africa with the High Commission territories—tough as Dr Verwoerd could make it for them. Dr Verwoerd is not so strong as he sounds.

HUNGARY

Kadar Swaps Some Horses

ON January 16th the Kadar regime announced its most extensive cabinet reshuffle since it was put in power in November, 1956. The changes, which Mr Khrushchev may be taken to have approved when he was in Budapest for the party congress in December, are neither sensational nor surprising; they indicate that Mr Kadar remains, for the time being at least, firmly in the saddle. The most important change, which Mr Kadar did in fact announce when Mr Khrushchev was there, is the transfer of Mr Gyula Kallai from the party secretariat to the post of first deputy premier. This suggests that Mr Kallai, a close associate of Mr Kadar (both men spent some time in a Rakosi prison), is being groomed to take over the premiership from the elderly and sick Mr Münnich. Like Mr Kadar, the new deputy premier can be labelled a "moderate" by present Hungarian standards; but as the party's foremost ideologist he has spared no effort to bring the sullen writers and intellectuals to a more co-operative frame of mind. He told the party congress that peaceful coexistence was not a political compromise but that, on the contrary, it involved an intensified fight against all expressions of bourgeois ideology.

Another of Mr Kadar's principal associates, Mr György Marosan, has resigned his post as a minister of state in the cabinet and is to be elected to the presidential council. Technically, this could be interpreted as a demotion, but it is more probable that Mr Marosan, who has specialised in building up the demoralised party cadres, has made the change so that he can concentrate more effectively on his party work. Among the other changes, the most interesting and the most puzzling is the replacement of the minister of agriculture, Mr Dögei (who is being sent as ambassador to Peking) by Mr Pal Losonczi, a pioneer of collectivisation, whose own big collective is a showpiece for visiting VIPs. There has recently been a fresh spurt in the collectivisation drive, and the amount of arable land in the state and collective farms has risen to 57 per cent. The change at the ministry of agriculture may possibly reflect a disagreement about the intensity of this drive.



COLOMBO PLAN

Aid with Fewer Tears

INVENTED at a meeting of commonwealth foreign ministers ten years ago, the Colombo plan for co-operative economic development has turned out a singularly happy system for distributing money and technical assistance to a selection of the poorer Asian countries. The scheme quickly spread beyond the commonwealth; it now has 13 members on the receiving side and six, including America, Britain and Japan, on the supplying side. Aid is arranged directly between the two countries concerned, with the Colombo plan bureau in Ceylon taking an avuncular interest. So far, help worth more than £2,000 million has been handed over in the form of loans and grants, equipment, food and technical assistance. Training has been given to 18,000 students, and 10,000 experts have been sent into the region.

From the first, the scheme was designed to be two-way so that the countries receiving help should also give it. Although the lion's share of aid comes from outside, the self-help idea is not entirely a myth. India, for instance, which takes the largest chunk of aid, has given substantial help to Nepal

THE WORLD'S TELEPHONES

TOTAL (Jan. 1959) – 125 million telephones or 4·3 per 100 people

In proportion to population, America has nearly three times as many telephones as Britain. At the beginning of last year, Washington had 71 telephones per 100 people and New York 55, compared with 37 in London (City and County) and 26 in the whole of the Greater London area.

	Number per 100 people	Business telephones as per cent of total
United States	38·0	28
Sweden	34·0	28
Canada	29·6	29
Switzerland.....	28·3	58
New Zealand	27·6	38
Australia	20·1	72
United Kingdom	**14·5**	**59**
West Germany	9·3	n.a.
France	8·3	n.a.
Japan	4·7	90

Source: American Telephone and Telegraph Company

over irrigation and other projects. Burma has started to train Malayan students in rice *cultivation; Indonesia, in its turn,* has a dozen students from Burma and Ceylon. Most of these schemes are pretty small, but the reciprocal principle is one of the features of the Colombo plan that have kept it clear of the pitfalls that lie in wait for aid projects. When the members meet each year to summarise their national economic plans, there is remarkably little of the resentment that often plagues the relations between giver and taker.

At their last meeting at Jogjakarta in November, the delegates decided to give the plan another six years' span of life; so long as it does a useful job there is no idea of letting it lapse. The question ought rather to be whether it might not be expanded. Now that the problem of aid has been pushed to the forefront of international discussions, the plan is worth examining as a system that works smoothly and without much waste. Its organisers are *jealous of its particular quality;* but on the face of it, there seems no reason why other western countries, for instance west Germany, might not be drawn under the Colombo umbrella.

POPULATION

The Hydra

THE strident challenge facing members of the Colombo plan is the race between economic growth and the birth rate. A quarter of the world's population lives in south and south-east Asia, and the rate of increase is no lower than it is in any underdeveloped area. It is hard to see how economic development on any scale can fully succeed without a parallel movement to slow down birth rates. But any scheme of that sort comes up against fierce opposition. The Indian and Japanese governments, attempting the Herculean task of getting their population growth under control, have only had nervous and spasmodic help from outside; the World Health Organisation, for instance, has found itself unable even to consider the question.

Now the International Planned Parenthood Federation, the only international body that deals directly with the problem, is launching appeals for money in Britain and the United States. The federation, whose headquarters are in London, was started in Bombay by Mrs Margaret Sanger and has affiliated societies in 26 countries (less than half of which, however, have serious population problems of their own). The British member, the Family Planning Association, is trying to raise £250,000 from private subscribers for the support of field work in underdeveloped areas and of research into easier methods of contraception. Workers on these lines are a long way from making a substantial impact on the problem of Asian population; but what they are doing needs to be done.

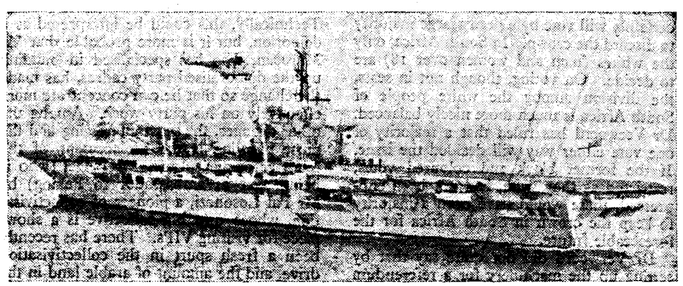
SWEDEN

Nuances of Neutrality

SWEDEN, like everyone else, has a defence policy dilemma on its hands. Although the soldiers have been talking about nuclear weapons for some years, the politicians have been veering further away from the atomic solution, and the new budget, presented to the Riksdag on January 12th, is a further setback for the brass-hats. In November the Social Democrats, under the prime minister, Hr Erlander, decided that there was no reason to take a stand on the question of developing a Swedish nuclear armoury at this time because the necessary plutonium would not be available for military purposes before 1965. The party declared that Sweden's neutrality prohibited it from buying atomic weapons abroad (even if they were available), and it believed that producing a native bomb might hinder the present efforts to secure general disarmament. The Liberal party has adopted a similar policy.

Hr Gunnar Sträng, the Swedish chancellor of the exchequer, called his proposals a "retrenchment budget." Although the economy is expected to continue to expand in 1960-61, government expenditure will not grow at a similar rate. One major project to receive the axe is Naval Plan 60, an expensive project drawn up for an "atomic age navy." Instead, the government favours a seven-year naval plan, costing about £40 million, which is to include new submarines and development of a new guided torpedo. Allocations for atomic development provide for "protective research" (protection against the effects of atomic warfare), but research on the actual production of atomic weapons is not supported.

These seem to be realistic decisions. Sweden is maintaining its defensive posture, including the purchase of British weapons (among them Centurion tanks and the Seaslug sea-to-air missile), but the diplomatic and financial cost of an effective nuclear armoury still seems prohibitive for any power with Sweden's position and resources.

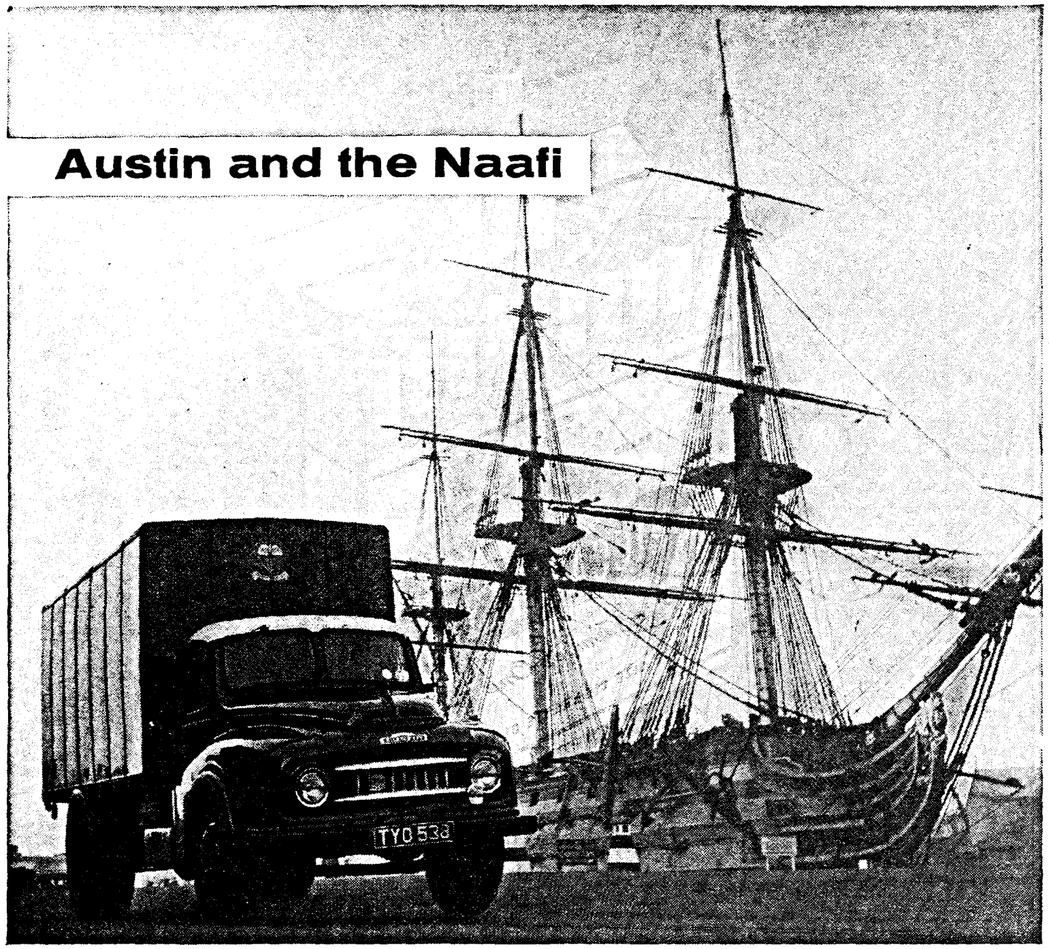


COMMANDO CARRIER

Gunboat's Sea Change

LAST week a fully air-conditioned ship and desert-coloured helicopters took part in a demonstration in six inches of snow. HMS *Bulwark,* with her sixteen helicopters, Land Rovers, anti-tank guns, and, surprisingly, 32 horse power Citroens, is the Royal Navy's latest remedy for the pinpricks of empire: the self-sufficient fire-extinguisher to be used in small conflagrations east of Suez and elsewhere. *Bulwark* was commissioned as Britain's first "commando carrier" this week; the Americans have several such ships in service already.

The basic principle, of putting men ashore from a large transport in smaller ones, is familiar enough. What is new is the permanency of this combined enterprise, and—thanks to the helicopters—its range. The six hundred marines whom *Bulwark* can carry are to be able to live on board for several weeks at a time; and it would be possible for this 27,000 ton ship to be an integral part of an operation with its focus as much as eighty or a hundred miles inland. Oman, Cyprus and Malaya have been instanced as theatres which would have been suitable for such operations.



Questions that arise concern dispersal and defence. For an operation, say, two miles away, with eight helicopters able to load and take off at a time, it should take about fifteen minutes to put a third of the battalion ashore. This seems adequate for a small operation. In a small operation, too, the vulnerability of the carrier to submarine and air attack would matter little. But for anything bigger than mere police actions, some extra support would certainly be needed to compensate for the carrier's lack of fighters: the helicopters are unarmed, and the ship's armament has not been increased above that carried in a normal aircraft carrier's role. *Bulwark,* it seems, will be mainly significant in limited circumstances, operating against technologically inferior opponents. This is, in fact, today's version—much more expensive, larger and airborne—of the gunboat our grandfathers knew.

Priced at 4/- for twenty—just a penny more than ordinary cigarettes

Austin and the Naafi

THE SHIP, as any small boy will know, is Nelson's *Victory*. 154 years ago she fought at Trafalgar. Now she lies peacefully in Portsmouth harbour beside today's naval giants.

Passing the famous ship is part of another fleet—the Austin fleet of Naafi. This diesel 5 tonner is distributing cakes and pastries to canteens aboard H.M. ships. A 100 per cent reliable vehicle is essential. For the driver must finish deliveries by 10 a.m. stand-easy or risk a riot!

Round the world

All round the world Naafi serves the troops—and where Naafi goes, Austins go. 3 and 5 tonners put in long hours and high mileages for Naafi warehouses. Others work for bakeries—and it's mostly nightwork here, with a midnight to 5 a.m. start and a 100-mile-plus journey ahead.

On most forces' stations where there are outlying units, Naafi's Austin mobile canteens are in action. Open fields, cart tracks, ice and mud never stop these vans.

Overseas, Naafi's mobile canteens serve troops in Cyprus, in Singapore, Hong Kong, Tripoli. Other Austins are at work for Naafi from Aden to Malaya.

An increasing stake

Naafi started using Austins 4 years ago. Today they have standardised on Austin 1 ton petrol-engined chassis for mobile canteens. Mr. J. P. Macdonald, Controller of Transport, says, "We have found the Austin chassis better suited for our mobile canteens than any other vehicle. Austins do a good hard job of work for us and are getting an increasing stake in our fleet."

A word about the Austin range

Austin offer a wider range than any other manufacturer in this country today. ½-2 ton vans, 2-7 ton trucks, prime movers for 15 ton gross train weights, chassis units for any type of bodywork. All with 12 months' warranty and backed by B.M.C. Service.

Austins for the Naafi home fleet are supplied by Maskells (Brixton) Ltd.

BOOKS

Snobs and Strivers

The Status Seekers

By Vance Packard.

Longmans. 384 pages. 21s.

A CERTAIN smugness is likely to creep over an English reader studying Mr Packard's picture of an America rapidly ossifying into a complex of stratified and vertical divisions with all the demerits, and none of the redeeming virtues, of traditional class society. America, like Britain, has its élite of Top People and "semi-uppers"; its "striving," limited-success class; its working class; and its submerged tenth. Between these classes, and notably between the three "supporting classes" and the élite, there was until recently a ladder, less strong and wide than Americans liked to believe, but serviceable enough to give some verisimilitude at least to the great American myth of unlimited opportunity, if not to the still greater myth of Whitmanesque brotherhood. Now, to the accompaniment of unprecedented prosperity, this ladder has weakened and broken.

The growth of giant business, says Mr Packard, has barred the upward route once offered by small independent ownership; trade union rules and automation between them have demolished a set of essential rungs by which the unskilled could once rise to skill and responsibility; dearer college education, and the growing insistence of employers on a degree as qualification for all but blind-alley jobs, combine to narrow a third path of advancement. Meanwhile, more and more importance attaches, in the determining of social acceptance or exclusion, to the earmarks of class: the right address, "background," church affiliation, clothes, car, furniture, style of entertaining; and, with greater geographical mobility, more and more people congregate into one-class, one-income-bracket communities where the non-conformer stands out like a sore thumb, his wife is snubbed by the local matrons, and his children's lives are made hellish at school. Division according to income and job-prestige is moreover complicated by division according to ethnic group and religion; by barriers between Gentile and Jew, Protestant and Catholic, and of course black and white. And the members of every sub-division above the lowest (which, so far from enjoying a Doolittle-like emancipation, suffers acutely from a sense of exclusion, failure and guilt) are obsessively engaged, egged on by the "hidden persuaders," in asserting their status by the competitive display of success-symbols.

In Britain the class system, pervasive enough in all conscience, is at least loosening up, not clamping down. The ladders of advancement, even if inadequate, are widening, not narrowing. And how much less actively objectionable is an established class hierarchy, in which each class has room within its boundaries for a wide variety of character, outlook, taste, mode of life, degree of material success, than the sequence of slippery gradients on which Mr Packard's classes conduct their battle. There is "striving"—of the competitive, face-trampling kind—in Britain too, but it is at least optional, not an imperative to be rejected only by self-confessed weaklings; Mr Braine's "Room at the Top" may be a disturbing social document, but it does not carry the depressing general applicability of Mr Marquand's "Sincerely, Willis Wayde." Thus the complacent first thoughts of the British reader, tempered only by a lurking suspicion that American sociologists are even more prone than their British fellows to discover status-symbols and status-assertion in every human activity, as Freudians discover sex.

Second thoughts are less comfortable. We are spared some difficulties—notably those of the melting-pot. We are not saddled with the psychological results of having pitched our democratic expectations—in terms both of human brotherhood and of the career open to talent—impossibly high. But we face the same awkward central fact about these expectations as America does: the fact that they clash forbiddingly between themselves. The career unconditionally open to talent means the career unconditionally closed to lack of talent. Social mobility means mobility to one's own level. And there is no presumption whatever that a society which had sorted itself occupationally (regardless of birth, accent and early training in the neat absorption of asparagus) according to gifts, and the will to use them, would be any less compartmented or more sympathetically united than that of today. On the contrary. Birds of a feather flock together, especially when the feathers are those of stronger or weaker flight; and having once flocked they are likely both to segregate themselves and to establish a pecking order all the more relentlessly enforced by reason of the competitive nature of the flocking process itself.

This was the core of truth in Mr Michael Young's egregiously question-begging, issue-dodging, wishful-thinking, but undeniably valuable "Rise of the Meritocracy," which Mr Packard could have studied to his advantage. Increasingly we share, if not the American myth, the dual American expectation. And it would take a considerable optimist to assert confidently that no similar book to Mr Packard's could be written, a generation or so hence, about our hopeful Opportunity State.

An Unknown Movement

Catholic Action and Politics

By Tom Truman.

Georgian House, Melbourne. 245 pages. 35s.

DURING the years from 1945 to 1955 a political movement developed in Australia which, if it had happened in France or Germany or the United States, would have been reported in every serious British newspaper and would have been the subject of half-a-dozen academic studies. This was the attempt by Catholic Action, under the leadership of a brilliant young Australian lawyer called Mr B. A. Santamaria, first to defeat Communism in the trade unions and then to control the Australian Labour party in the interests of the Roman Catholic Church. It was this movement which led to the split in the Australian Labour party in 1954, to the formation of the Democratic Labour Party in 1955, and to the final ruin of Dr Evatt's ambitions to lead a Labour government in Australia.

Because these events took place in a British dominion at the other side of the world, they were almost unreported at the time and are still virtually unknown to most serious students of contemporary politics. It has been left to a young lecturer at the University of Queensland to write the first serious study under the slightly misleading title "Catholic Action and Politics." Within its rather narrow limits—it deals only with Catholic Action in Australia—this is an important book.

It is not, however, an easy book for a beginner who has no knowledge of Australian politics or of the events that took place during those years. Mr Truman apparently hopes to write another book dealing directly with the political side of the story and it is to be hoped that he will do so. In this he has been content to dig deeply into Catholic sources to show the background of Mr Santamaria's "Movement" (as it is popularly known) and its relation to the general aims of Catholic Action and the Roman Catholic Church. It is his general contention that throughout Mr Santamaria acted not only with the full approval of the Australian hierarchy but also consistently with the aims and teaching of the Church. If Mr Truman is right, Mr Santamaria was not, as he seemed to many, a brilliant but slightly unorthodox commando leader operating behind the enemy lines and very often without any direct orders from his own commander-in-chief, but an orthodox regular soldier of the Church Militant, who simply carried out the operation orders laid down by the last two Popes as binding on all Roman Catholics everywhere.

Mr Truman makes out a convincing case and his quotations are always scrupulously fair, yet one doubts whether his final conclusion is correct. Mr Santamaria certainly had the support of the Catholic hierarchy in Australia at least until 1955, but there is considerable doubt whether the bishops

really knew what he was up to. He was certainly enthusiastically backed by the Apostolic Delegate, Archbishop Carboni, but one cannot help noticing that the Archbishop has since disappeared to Peru and that Cardinal Agagianian has been sent on a mission to Australia with the presumed intention of straightening things out. The truth is that since the Australian bishops got most of their information from Archbishop Carboni, it took a long time for the Church to discover what was going on. Mr Truman makes the mistake (which so many writers make about Russia and the Communists) of assuming that the Catholic Church is more consistent, farsighted and monolithic than it really is. The Pope may be infallible—but no one else is.

In spite of this defect "Catholic Action and Politics" is a valuable and, on the whole, alarming account of an extraordinary incident in democratic politics. It will certainly tend to increase sympathy for the much maligned Dr Evatt in what seems likely to be a judicial retirement.

Zionist Champion

Middle East Diary, 1917-1956

By R. Meinertzhagen.
The Cresset Press. 387 pages. 35s.

COLONEL MEINERTZHAGEN is one of the few surviving principals in the drama of the Balfour Declaration, and his diary of that period is a valuable document for historians. A seven-branch candlestick on the dust-cover, a foreign-sounding name and several decades of staunch championship of Zionism might lead anyone to suppose that he is a Jew. But he is not. Quite the other way: he is peculiarly English in many of his characteristics, and vintage English at that. He is decisive, and wholly honest (never mind if his diary contradicts itself; he has left his thoughts as they bubbled into his mind at the time). He is inspired by the courage of conviction ("I need hardly say I fully realised when I wrote that despatch that my presence in Egypt or Palestine became impossible," but he thought it more important to get the government of Palestine transferred from military into civilian hands than to keep his job). He is without self-consciousness ("I arrived [at Dr Weizmann's memorial service] without a hat, and was lent a small black felt contraption by an usher. It soon gave me a headache so I removed it, but was at once pounced on . . ."). Last but not least, he believes in the divine promise about the Holy Land, and thanks God he lived to see it fulfilled.

Armed with this battery of attributes and a wide acquaintance among the great, he knows how to make himself felt. However brusque he has been, he is always asked to stay to lunch, and his record is exceedingly interesting so long as he remains in the public service, or serves Zionism in a public capacity. He supplies some sharp vignettes of the bias (including his own) that coloured British administration of Palestine long before most Arabs saw much to fear in the Jew. His good works include several visits to Hitler in order to get him to unfreeze the flow of Jewish emigration. On one of them, Colonel Meinertzhagen took in his revolver, just to see if the deed could be done.

After 1939, the book becomes much less interesting. Its strictures on Bevin and Eden tend to leave out of account the many factors outside the Middle East that swayed their actions. For instance it always mentions oil as if they were mere profiteers; it would have been just to mention that they needed it in order to lubricate the Marshall Plan, which saved western Europe from ruin and communism. His theme is that they should have jettisoned the Arabs for the more reliable Israel, but he develops it too often by crying over spilt milk, and too seldom by adjusting his judgments to the world as it had become.

"I find that my diary is a great safety valve" he writes when on the verge of explosion over the West's ineptitude in missing the golden opportunity in the winter of 1956-57 to internationalise a strip of Sinai, secure a potential alternative to the Suez passage, and seal off Egypt from Israel. (*The Economist* pressed this point likewise). One snag to the book is that, just as with the Arabophiles whom it criticises, confirmed admirers of Israel tend to be wholly uncritical. Some Israelis will be embarrassed at the fulsomeness of his comment on their virtues. Certainly some of them are without blemish, but so are some men everywhere.

Thinking Tories

British Conservatism 1832-1914

By R. B. McDowell.
Faber. 191 pages. 21s.

IN this book Dr McDowell sets out "to show what political opinions a member of the English Conservative party might be committed to supporting in the years between the passing of the Great Reform Bill and the outbreak of the Great War." He has little trouble in showing that MPs of what their opponents are pleased to call "the stupid party" were in fact committed to a fair body of doctrine for most of the years he covers; and he shows it without touching on strict political theory at all. Members of any legislature who rack their brains about the separation of powers, or the nature of the state, are rare, and those who sat on the Conservatives' benches in the Victorian and Edwardian House of Commons prided themselves on being practical men of common sense; most of them despised theory of all kinds.

So little needs to be said of Coleridge, and the later English Hegelians are left out altogether. It is a pity that the earliest of them, who were active in the Oxford movement, do not get fuller treatment, for the Oxford movement tried to apply the principles of conservatism to the church, which the Tory party traditionally regarded as the first object of its political care. But the author's treatment of church questions is hesitant, and he does not give them the central place that they held, in the view of the most pious members of the party at least, in the eighteen-forties and fifties. Nor has he much to say of two other main motive forces for active Tories: a simple, Wellingtonian sense of duty, and a vaguer but still powerful sense of obligation towards less fortunate classes in a turbulent community.

Instead, he prefers to discuss attitudes to the more concrete problems of reform and protection. He has a thorough and exact knowledge of the course of current politics, so far as it has been revealed in print; he keeps this discreetly in the background, and adds to his analysis many useful touches from wide reading in print and in manuscript. Disraeli and Salisbury apart, he often has to hunt the by-ways of Victorian politics to find men whose views are worth considering; and much of his passage on the social question centres on the figure of Joseph Chamberlain, who was never strictly speaking a Conservative at all. The author's reading could well have extended to Disraeli's, and indeed to Gladstone's, papers; but no doubt he felt, in the mass of archives, that he must stop somewhere, or never conclude at all. As it is, his book provides a refreshing series of comments from the sidelines on the rules of the Great Game of politics in its greatest period.

Victorian Laureate

Critical Essays on the Poetry of Tennyson

Edited by John Killham.
Routledge. 271 pages. 28s.

IN spite of a hectoring entrance—"our taste and critical standards have, in the heat of enthusiasm, become too narrow and too severe" (how odd to think of this as an age of "enthusiasm")—Mr Killham has prefaced this collection of essays with a lively and informative review of the critical rehabilitation of Tennyson—a modified Tennyson, after the revolt begun by Bagehot, Hopkins and Swinburne in the 1860s and later intensified by Yeats and Lawrence. He readily admits that Tennyson is worth reading only in selections, and makes no attempt to defend sentimental moralising of the "Enoch Arden" type.

Most of the essays in his collection belong to the fifties and have been salvaged from various learned periodicals. Especially worth salvaging are those by E. J. Chiasson, Arthur J. Carr and G. Robert Strange. Mr Chiasson argues provocatively that Tennyson's Ulysses, far from being a self-portrait, is in fact the embodiment of that ideology which the poet considered potentially destructive of the whole social fabric. Mr Carr analyses the mannerisms of the early poetry—the themes of deprivation and recovery through dream, the mask of age, the unresolved dialectic of sense and conscience—and suggests that it was because Hallam's death gave new urgency to these already obsessive mannerisms that "In Memoriam" became the clearest apprehension of his own nature that Tennyson ever achieved. Mr Strange's study of "The Hesperides" is an illuminating exercise in symbolic interpretation. To him the poem is a statement of the situation of the artist in society, and he makes some particularly cogent remarks about the recurrent Tennysonian symbolism of "East" and "West." In his second essay he demonstrates how Tennyson, in "Demeter and Persephone," has reinterpreted mythology in order to make it express his own concern about the spiritual estrangement of his age.

H. M. McLuhan's attempt to locate Tennyson in the tradition of English landscape art from James Thomson to Joyce and Eliot, and his examination of the effects of developments in scientific and æsthetic theory on that tradition, is full of ideas. So, too, are John Killham's own discussion, hitherto unpublished, of the functions of imagery, especially imagery of animals, stones and flowers, in "Maud," and F. E. L. Priestley's interpretation of the "Idylls" in terms of stratified dramatic allegory.

Two already famous essays are included: Cleanth Brooks's brilliant dissection of "Tears, idle tears . . .", and T. S. Eliot's "In Memoriam." It is interesting to see how strident and ill-considered ("Tennyson is a great poet. . . . This is great poetry. . . .") the latter sounds when compared with the critical essays of the fifties.

Plant of Many Roots

The Road to Self-Rule

By W. M. Macmillan.
Faber. 35s.

The Years of Challenge

By Don Taylor.
Hale. 25s.

THERE is a tendency today to regard the Commonwealth as a potentially integral body, the confusions and contradictions in whose management are due to a failure to plan adequately at the centre. Professor Macmillan's thesis turns this view upside down; he argues that though certain concepts and intentions have been constant in British colonial development, attempts to impose centripetal schemes have usually sown the seeds of subsequent disorganisation. In his book the picture is no more dominated by acquisitive imperialists than it is by cool balancers-of-power, still less by idealistic disseminators of humanist culture; it is rather the strange mixture of motives behind colonial growth that is responsible for many of today's difficulties. Throughout, a potent leaven of moral self-consciousness has worked unpredictably among more practical sentiments; thus the successful attacks on the West Indian slave trade made by the "Exeter Hall" reformers of the 1830s are part of the basis of later nineteenth century complacency about Empire as a mission, and in Africa today racial divisions are no more the product of deliberate racial supremacy than of an original anxious evasion of a painful problem. One generation's device has hindered its successors: in Africa indirect rule together with a dependence on existing institutions, developed by Lugard (and justified by Malinowski), persisted into an era that saw the wide spread of education and consequently the development of a new élite of Africans with ability but without power.

Inexperience, says Professor Macmillan, created the colonial system, and has kept many of its problems alive; his book is a convincing appeal for the variety of experience to start teaching the need for a variety of approach in solving them.

Mr Taylor's account of the Commonwealth in the years 1945 to 1958, though more simply conceived, is in fact more confusing. Dealing mainly with the results of the complexities that Professor Macmillan analyses, he presents a world in which nationalism bubbles, dissension flares up, intrigue threatens, without apparent cause or logic. Coherent policy fails to radiate from the centre as it should because of the inadequacies of the Colonial Service and the importunities of local politicians everywhere. Mr Taylor's accounts of events are unexceptionable, but a failure to analyse the basic causes of the troubles he chronicles makes his book in the main less rewarding reading than Mr Macmillan's.

Racing in the Twenties

Parry Thomas

By Hugh Tours.
Batsford. 176 pages. 21s.

THIS painstaking account of the engineering career of John Godfrey Parry Thomas, written thirty-two years after he was killed at Pendine while attempting to break the world's land speed record, shows how the life of the racing driver has changed since those now far-away days.

Thomas's engineering activities, after he left the Leyland Motor Company, for which he had designed the advanced Leyland Eight luxury car, were concerned almost exclusively with racing and record-breaking. The postwar slump killed this car, which he had conceived to shake the foundations even of Rolls-Royce; but Thomas was reluctant to abandon the design and he went to live at Brooklands so that he could develop it for high-speed track work.

Whereas today the professional racing driver earns most of his living from starting money and prize awards, Parry Thomas had never heard of starting money in connection with racing and derived his income from the bonus fees paid by petrol, oil and tyre companies when he broke records for time and distance. Consequently, he was continually going out to smash records. This he could do at Brooklands or at Montlhéry track near Paris; which marks another notable difference between Thomas and a modern driver such as, for example, Stirling Moss. Whereas Mr Moss is seldom in one place for more than a few days and roams the world to meet his motor racing engagements, making an enormous use of air travel, Thomas might wander as far as Boulogne for a speed trial but was otherwise usually to be found, a big, reserved man in shabby flannels and a Fair Isle sweater, at his workshop at Brooklands, searching for new answers to problems which, when solved, would make his massive Leyland cars faster than before.

This book shows how effectively Parry Thomas followed his chosen career and throws a spotlight on the character of this likable Welsh engineer. The accident at Pendine Sands in 1927 that caused his death is examined in some detail. The conclusion seems to be that Thomas, never endowed with resources such as his rivals Segrave and Campbell had at their command, but reaching as all record-breakers of his era eventually hoped to do towards the fastest record of all, tried to go too fast on too slender a financial shoe-string.

Northernmost Life

The Arctic Year

By Peter Freuchen and Finn Salomonsen.
Cape. 440 pages. 28s.

THIS book is the joint production of two most knowledgeable and highly dissimilar Arctic enthusiasts: Peter Freuchen, one of the most colourful figures of his time, who lived and travelled beyond the Circle as much as any man, and has told the world about it in books packed with adventure; and Finn Salomonsen, a distinguished scientist who has specialised in the study of Greenland birds. Between them they have produced something which is quite new, in conception rather than content, and most welcome. "The Arctic Year" has a chapter for each month, and in it the doings of the wild life of the Arctic, man included, are narrated. Interest is well sustained, for the Arctic is a fascinating place, and there is not much of its natural history that one or other of the authors has not experienced at firsthand.

There is much information on the prolific bird life, which is such a prominent feature. In the September chapter, which covers migration, you will read how the Arctic tern flies from the Canadian north to western Europe, on to West Africa, South Africa, and finally Antarctica. In this way it secures more sunlight than any other living thing, but at the price of flying 13,000 miles twice a year. The food chain is, of course, a central feature of the story, and it has some remarkable links. You may ponder the fact that in March nothing is more palatable to the male polar bear than his own offspring; or that in April the inland Eskimo makes his salad from the undigested greenery in a caribou's stomach, and in July is happy to refresh himself with warble larvae from under the skin on its back. His coastal cousin is meanwhile feasting on clams found in hundreds in a walrus's stomach. There are plenty more facts of this sort.

It is natural that most of the examples quoted come from Greenland or the Canadian archipelago, because these are the areas

the authors know best. Siberia, as one might expect, gets the fewest references. But even that forbidden zone Freuchen visited twice. Most of its important birds and beasts are in fact found elsewhere as well, so the gap is not so serious in that respect. But the north Siberian tribesmen are not, and their absence from these pages, though unavoidable, is much to be regretted. The book is not free from factual errors. These are mostly small (icebreakers cannot navigate in the High Arctic at almost any time, grizzly bears do not live in Labrador), and not altogether surprising in view of the enormous number of hard facts the book contains. It is an interesting production and will delight many.

Cash and Capital Spending

Budgeting in Public Authorities

Published for the *Royal Institute of Public Administration* by *Allen and Unwin*. 299 pages. 28s.

THIS book attempts to describe the budgetary procedures of a number of public authorities in the United Kingdom, to show their administrative importance and to suggest how more effective use might yet be made of them. It cannot, unfortunately, be said to succeed.

The number and range of public authorities described, though limited, are too large for the compass of the work. Central government, hospital boards, local government, and all the nationalised industries except the British Transport Commission provide too vast and various a subject for the treatment to be more than superficial, while a certain amount of repetition is inevitable as each theme is taken up in turn. We are left with neither detailed case-studies of a few organisations nor a general essay on principles, illustrated by selected examples. After three general introductory chapters, the revenue budget of each of the chosen sectors of the public service is briefly described from four points of view, or perhaps at four stages: its preparation, its relation to policy making, its later modification and its comparison with the eventual outturn. This section, occupying nearly half the book, leaves a superficial impression: too much ground has been covered in too orthodox a way; near cliché rubs shoulders with questionable assertion. The next two chapters deal with the capital expenditure budget. They should be read with great caution, for they reveal at many points an inadequate understanding of the methods by which capital expenditure in these public services is controlled and the forward periods over which budgeting of one kind or another is in fact practised. For example, page 214 contains a misleading account of the loan sanctions procedure in local government, while, in spite of the administrative basis of the whole inquiry, no indication is given that the author or authors have any knowledge of the techniques that have been developed for getting the maximum value for money on investment projects. Finally, after a brief disquisition on the cash budget, there is a short chapter of conclusions in which several ideas are put forward for making better use of the budget in securing efficient administration. These range from the old suggestion that the central government accounts should be converted to an income-and-expenditure basis to a warning against treating the budget as more than a means to an end.

This all smells of the lamp, and is hardly likely to prove of any practical assistance to the reader. It is increasingly understood that our formal financial controls, elaborated over 300 years, are largely irrelevant to the question of getting value for money in the public service, but the book fails to contribute usefully to this discussion because its aim is not clear and its method too diffuse. Perhaps the Royal Institute of Public Administration should consider whether its "study group method of research" is well adapted to this kind of subject matter? Indeed, is the title of "research" fittingly applied to the collation of information, most of which is available in published form, while some is obtainable readily enough direct from the organisations concerned?

LETTERS

Labour's Future

SIR—An article like "The Undistributed Middle" would not normally deserve comment. But because it is so "drearily representative" of the intellectually arrogant attitude often adopted in your columns in admonishing the Left, perhaps a brief rejoinder may be permitted.

The issue between us is clear. I want an alternative government which is socialist in spirit, and therefore accepts the need both for an "ethical reform campaign" and for public ownership and control of economic power as a necessary condition of achieving this. You seek a "progressive" alternative, which looks for support to those who broadly accept the existing social system but recognise the need for some reform. It does not follow that either of us is "muddled," nor that we need descend to mutual abuse.

The meaning of "spurious affluence" will be patently clear to readers of Professor Galbraith; the Crowther Report, which I understood you approve, illustrates in its description of the inadequacies of our education system but one of the applications of the thesis to contemporary Britain. True, the Tory posters were not "hidden," but the sources which financed their campaign still remain so.

I agree with Enoch Powell that politics should be based on principle rather than expediency. I do not seek to cavil with *The Economist* for taking a different view.

Yours faithfully, H. D. HUGHES
Fabian Society,
London, SW1

Currency Reserves

SIR—I very much appreciate the perceptive comments you published recently concerning my proposals for a basic reform of the IMF and for the establishment of a European Reserve Fund. May I comment briefly on the three questions which you raise?

1. The IMF would merely have an "option" to liquidate at a "maximum" pace of 5 per cent a year the sterling and dollar balances initially absorbed by it, but should exercise it only "in so far as useful for the conduct of its own operations." The proposed expansion in the Fund's resources derived from its acceptance of reserve deposits from members would be so large as to rule out very probably, for a considerable time to come, any justification for any extensive use of this option. I would indeed expect the Fund to *accumulate* instead additional sterling and dollar balances in the initial years, so as to help smooth out the transition from the present system where international liquidity has come to depend increasingly on a continuous increase of such balances. This would, of course, be particularly useful at the moment in connection with dollar balances, in order to allow the United States to eschew swift, but undesirable, methods of readjusting its overall payments deficits. Secondly, regional arrangements patterned upon the present sterling area or transforming the EMA into a European Clearing House might reduce considerably the total amount of sterling balances to be turned over to the IMF. Finally, some reduction of bilateral US and UK contributions to overseas development, previously financed in part through the growth of sterling and dollar balances, might be expected from, but also be more than compensated by, multilateral IMF financing based on the proposed shift from dollar and sterling reserve balances to reserve deposits with the IMF.

2. The conversion of any existing currency balances into IMF deposits would involve the acceptance by the debtors of such balances of an exchange rate guarantee in favour of the Fund. Ample precedents for this have already been created by the similar guarantees granted in the past under the EPU, EMA and IMF agreements. This would undoubtedly prevent the debtor of the balances from writing down the value of its indebtedness as a by-product of a unilateral devaluation of its own currency. This, however, might be a minor price to pay for the consolidation of these huge and volatile foreign balances whose danger of sudden and untimely conversion into gold or other currencies in times of stress now constitutes a major threat for the maintenance of international convertibility.

3. I agree with you that agreement on such far-reaching reforms might be easier to negotiate and implement initially in a more restricted framework, such as that of the European Economic Community, or even of the OEEC itself if a bridge can still be built between the Six and the Seven. Yet, I would not despair of seeing part of these proposals, at least, agreed to in a world-wide context. I am very much encouraged in this respect by the general tone of the debate which followed my recent testimony before the Joint Economic Committee on Employment, Growth and Price Levels, and even more by the previous endorsement of IMF reserve deposits by the Radcliffe Committee.—Yours faithfully, ROBERT TRIFFIN

New Haven

The Bar

SIR—The Bar has always had its young men without means, who stayed the course because they were determined to succeed, recognising the price of success as an 84-hour week; but barristers profess to be the specialists of the legal profession. Who would consult a medical specialist aged 25? The problem is partly educational and partly financial.

I think the proposal by Lord Evershed and Sir Ian Yeaman made in 1957, for joint basic training of barristers and solicitors and easier interchange between the branches, is more realistic than yours. For example, there are under 200 sets of barristers' chambers in London and much less than 100 in the provinces. How could these accommodate the 700 Bar students plus 800 solicitor students per annum during training? Many of the chambers would not have vacancies at all. Under the 1957 scheme, a graduate apprentice in a solicitor's office could earn about £300 a year; and advertisements for newly qualified assistant solicitors at £1,000 a year have lately appeared. Lord Birkenhead said: "Some of the highest successes at the Bar have been grasped by men who have qualified in other professions first." Such a man, after a few years' earning and learning as a solicitor, could, after a year's pupillage, start at the Bar around 30 with some experience of law and life, some contacts among solicitors, some savings, and some knowledge of where his bent lay. On the other hand, he might decide his vocation was to remain a solicitor. In either case he would avoid the risk of the demoralisation of five wasted years.

Another proposal you mention is partnerships, mixed up with misconceived ideas about high surtax and strange ideas about devilling. The partnership idea is supported by some young men who have not yet realised that independence and security are alternative choices in this life, and a few older men who know better. A man earning £10,000, with three children over 11 and under 16, pays an effective rate of tax (including surtax) of 10s. in the £. If he pays £1,000 to a beginner called a "partner," he gives away a lot of the money that he could otherwise spend on insurances allowed in full for tax. Devilling, except for the simplest kind, calls for a practised hand. Some draft Opinions (often cast as theses) are completely valueless. On the other hand, if the work devilled is useful and dependable, the reward may be some non-cash advantages of greater value. To prescribe a tariff is ridiculous.

The idea that "the weight of work" of the busy members of chambers "would be reduced" by calling an inexperienced and untried entrant a junior partner would be more likely to lead to acrimony and disillusion and a waste of the senior's time than to any spread of the exotic idea of partnership in the most independent of professions. Like some other professions, and probably more acutely than any others, the Bar needs to have it recognised that the last two decades have eroded the value of the pound or guinea, and to get fees with some regard to the realities of 1960, including, one hopes, the early implementation of improved education and training for the Bar.—Yours faithfully, C.L.I.L.
Temple

SIR—I feel that your proposals for a reform will at best alleviate but not remedy the financial position of the English Bar. Writing as a Continental lawyer with English legal experience I submit that the real reason for the depressed state of the Bar is the fact that the cost of litigation is too high. One need not be a prophet in order to predict that the increase of the cost of litigation which has come into force on January 1st of this year will cause a further slump of litigation and will therefore make the depressed state of the Bar still worse. Continental lawyers practising in the courts can afford to manage on relatively low fees, since the amount of litigation work they handle is correspondingly greater. The most obvious remedy would be a fusion of the two branches of the legal profession, as you propose. I have no doubt that this would considerably lower the cost of litigation, as the litigant would have to pay for the services of one lawyer instead of two. If this proposal is not practicable, I venture to make a few alternative suggestions:

1. A decentralisation of the High Court by forming regional courts with a regional Bar attached to each of them. This would cut out a great deal of travelling expenses of barristers, solicitors and witnesses and would eliminate the expense for country solicitors of employing London agents.
2. The court business should be conducted on modern business lines, which includes the issuing of writs and summonses by way of correspondence, the drawing up of orders and judgments by registrars, and the payment of court fees by cheque. This would make it possible for solicitors to manage with a smaller number of outdoor staff.
3. Litigation should be concentrated in the hands of local solicitors who specialise in this type of business. It is obvious that the cost of litigation decreases in the same ratio as the number of law suits conducted by one firm of solicitors increases.
4. The cost of litigation should be assessed on the basis of scale charges, as is the practice on the continent. This would obviate the necessity of drawing up and taxing long-winded bills of costs and would entail a great reduction in staff.

Yours faithfully, A. M. KRAFT
New Barnet

Kenya

SIR—Mr Michael Blundell implies that the Kenya National Farmers' Union has accepted the principle that the land barriers in Kenya should be lowered. This is incorrect. The principle that has been accepted is that contained in the first paragraph of Government's Sessional Paper on Land, i.e., that the system of land tenure and management should be brought on to a common basis.

The KNFU is a strictly non-party body and numbers among its members those of widely differing political convictions. It has made it quite clear that whether or not land barriers should be removed is a political matter and one on which the union is unable to comment.

The working party at present in being to study the sessional paper has the duty of ensuring the preservation of certain principles on behalf of agriculturists of all races, in the event of Government carrying out this policy.

These are:

1. That the standards of good husbandry are everywhere maintained.
2. That the economy of Kenya is not impaired.
3. That a system of land tenure adequate to the needs of the country is evolved.

Yours faithfully, PETER MARRIAN
Kenya National Farmers' Union
Nairobi

Pensions

SIR—Unless there is fresh legislation between now and April, 1961, all firms are faced with a nightmare with the new graduated pension scheme, which is due to commence at that time. The Ministry of National Insurance wants to keep everybody stamping cards, and the new graduations will be collected under PAYE. (This means 18 columns on the payroll compared with 13 at present).

Why not collect the whole of all contributions through PAYE? This could be done quite easily by code numbers, and why could not employers pay their graduated contribution as a fixed percentage of the total payroll? Is it too late for the Government departments to simplify this administration? One hopes that a little common sense will prevail and sensible administrative arrangements made over the next year.—Yours faithfully, H. C. GREEN

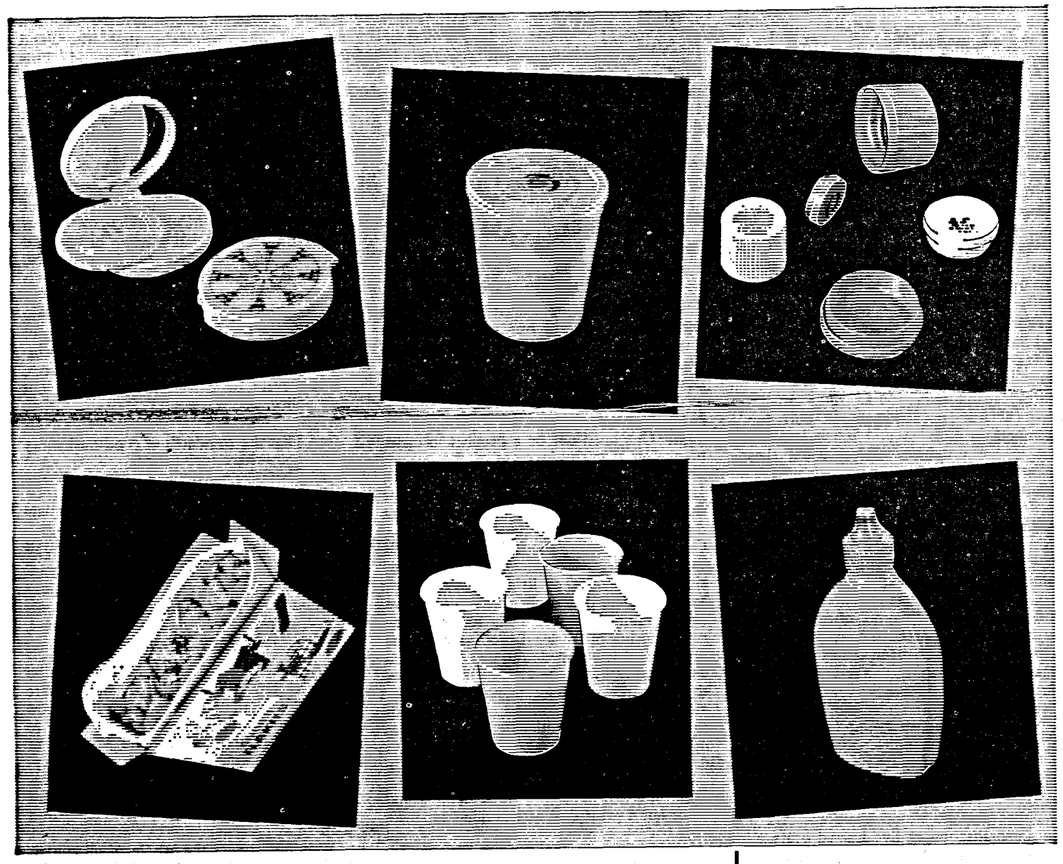
DOW PLASTICS *for packaging*



ADD THE VISUAL APPEAL THAT CREATES SALES

Today, it's the package that makes the sale! And from Dow come new packaging materials and ideas to meet the increasing demand for packages with more sales appeal and improved protective qualities.

Crystal clear and colourful rigid containers made of Styron* polystyrene create sales for hundreds of widely diversified products. Dow polyethylene gives squeeze bottles uniform high quality, better appearance. Dow coatings, too, increase the usefulness of many packaging materials. Saran* resins add protection and sales appeal to films, paper and polyethylene. And a coating of Dow latex on boxboard means improved printability, more attractive packages.

The Dow representative or Dow branch office near you can help you with salesmaking packaging ideas and materials . . . and will welcome your inquiry.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Too Sound to be Good?

WASHINGTON, DC

CONFRONTED with a big deficit in its balance of international payments and with a widespread belief, at home, in the inevitability of creeping inflation the Administration has made a rather heroic choice about what to do with the surplus, the first sizeable one it has ever hoped to have, which is forecast in the Budget for the coming fiscal year. Unless next November's election produces a big change of heart on financial matters in Washington, more drastic measures can be expected if they seem necessary. What has made the sleeping American giant begin to stir—perhaps to the peril of mere mortals—is its own sense of inadequacy. The country has just emerged, without lasting damage, from the longest steel strike it has ever known ; it has achieved a settlement without making any important change in the part played by the government in industrial disputes ; and, above all, it has got by far the most moderate settlement since the war. Yet Americans seem convinced that the outcome was a deplorable one.

In fact, wage inflation has received a major setback, though it has not been checked completely. The movement of various price factors in 1959, to say nothing of the condition of liquidity in the banks—both of them described, but not emphasised, in the President's Economic Report—supplied strong evidence that the present boom is unlikely to be accompanied by serious inflation, as the last one was. The stock market was amazingly calm in 1959 (prices rose only 9 per cent and yields did not fall at all), and it has been more sober still in 1960. Yet Americans continue to fret about inflation and inflationary psychology ; many of them have come to believe, openly or secretly, that the state of the economy demands drastic remedies. Equally worried, the Administration has produced a Budget which appears to treat all other problems as of only secondary importance.

The government has been assailed from all sides for its alleged failure to maintain adequate defences. It has been accused by many of not tackling seriously the decay of the cities and the urgent problems of educating adequately a rising population. It has been attacked by its own supporters for failing to reduce an allegedly excessive burden of taxation, a charge which goes home, for the Administration shares the view that present taxes are dangerously high. It has also persuaded itself, if not, as yet, the majority of Americans, that the future of the world depends on a rising flow of capital to the under-developed countries. Yet when it woke up about a month ago to the possibility that it would have a $4 billion excess of revenues over expenditures (if both Congress and the economy co-operate) the Administration decided to use not a penny of this prospective surplus for defence, domestic needs, tax reduction or foreign aid. It chose to use it, instead, for the old-fashioned purpose of reducing the public debt, which will stand at about $285 billion on June 30th. The odd thing is that the government is unlikely to suffer politically from its decision, in spite of the growing laments of the intellectuals that the country is devoting far too little of its total income to public purposes.

The Administration can count, moreover, on the backing of the theoretical economists. Most of them, whatever their political persuasion, believe—and there is considerable supporting evidence—that in the last decade far too much of the burden of suppressing demand was placed on monetary policy and far too little on fiscal policy. They argue that American interest rates are as high as they are partly because budget surpluses have been too small in times of prosperity and budget deficits too great in times of recession, at least in the most recent recession.

THE Administration has adopted this idea with a vengeance. It is not only proposing to devote its rather large surplus of $4 billion to reduction of the debt in the forthcoming fiscal year. It is also stating, at every opportunity, a new and fundamental policy: that the Budget should not merely be balanced over the business cycle, but that it should also show a substantial long-term surplus. The authorities at the central bank nod their approval of the decision, the money markets show a certain relaxation of tension and people who think in financial terms gain new hope. When the Director of the Budget Bureau says with his usual directness that he hopes there will be a reduction in the national debt "every year from now on," he expresses a view which is held far more fervently today than it was seven years ago when the present Administration came to power. In the past any big surplus would have been devoted, in all probability, to tax reduction, particularly in an election year. It is worth noting, moreover, that when all the government's transactions with the public are taken into account, in the so-called cash budget, the surplus is expected to reach nearly $6 billion.

The American giant has adopted something suspiciously like a deflationary policy at a time when its economy may be closer to soundness than at any period in the recent past and at a time when public needs are greater than ever. The deficit in the balance of payments is no doubt an over-riding reason for this. When a reporter asked Mr Anderson, the Secretary of the Treasury, at his sole annual press conference held in connection with the Budget, if the policies of the United States must be governed by what foreign bankers think, Mr Anderson was a little annoyed, but he did not deny it. The fact is that he believes that the United States should so govern its decisions. As the guardian of a currency in which other countries hold their reserves, he has reason to think as he does. And he is fortified in his stand for fiscal orthodoxy by the grave fears of intelligent conservatives that creeping inflation in the United States is bound not only to make the problem of the balance of payments worse, but also to produce a severe slump at some time in the future.

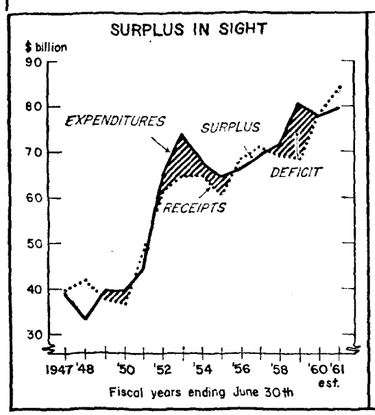
It is a marvellously orthodox performance, and only the future can say whether the time for practical—as distinct from verbal—orthodoxy was well chosen. The United States, with all its self-doubt, is acting strongly against an inflation which exists, at present, chiefly in men's minds. It is practising what it preaches to under-developed countries. And it is demonstrating how very conservative it really is.

Eisenhower's Wanderjahr

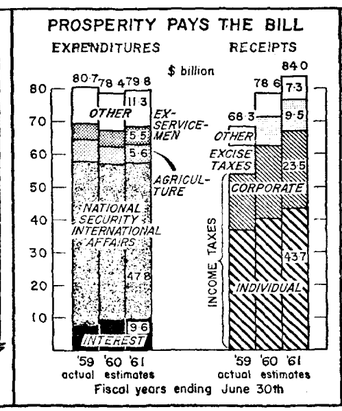
INSTEAD of starting his career with an educational tour of the world, Mr Eisenhower is ending with one. Inspired by the success of his travels last autumn, especially in India, he is spending the first half of this year, his last in office, wandering round the rest of the globe—leaving out only Africa—with flying returns to America to recuperate, to deal with Congress and to receive reciprocal visits. After going to the four South American countries which have capital cities at a low enough altitude to be suitable for a man with a weak heart—luckily these are also the most important and most peaceful countries in the area—Mr Eisenhower will entertain General de Gaulle in April, go to Paris for the summit meeting in May, to the Soviet Union in June, with or without grandchildren, and then on to Japan. There he will give a personal demonstration, as an answer to the Japanese government's critics, of the equal partnership which has been established between the United States and Japan by the treaty signed in Washington this week.

From Japan he will return home to the Republican convention in July, trailing clouds of peace to drape around the shoulders of his party's candidates in the coming election. The danger that these clouds might be prematurely dispersed by a breakdown of negotiations at the summit seems less than it did a few days ago, now that a definite date has been fixed for the President's Russian visit. If Mr Khrushchev attaches as much importance to this as he is said to do, for the sake of his own domestic propaganda, then he is unlikely to behave at the summit in a way that would make Mr Eisenhower refuse to come.

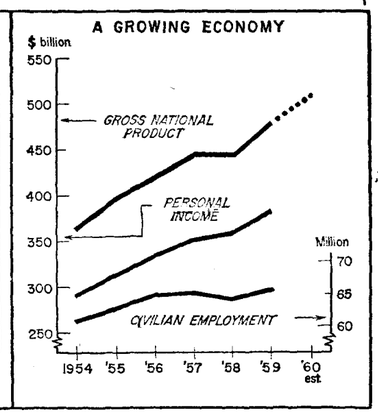
From an immediately practical point of view the ten-day visit, starting on February 23rd, to Brazil, Argentina, Chile and Uruguay, all with satisfactorily democratic governments, will probably be the most important of the President's goodwill journeys in 1960.



Budget in the Black



THE Budget for the fiscal year 1961, which begins on July 1st and ends on June 30, 1961, when President Eisenhower will have been out of office for over five months, shows a surplus of $4.2 billion, the largest since 1948. This is possible, at least on paper, because, although expenditures are expected to be higher than in any peace-time year except the recession one of 1959, receipts are estimated at $15.7 billion more than they were in 1959 and $5.4 billion more than in the present fiscal year. Most of the increase is to come from growing tax receipts, as the gross national product rises from about $480 billion in the calendar year 1959 to an estimated $510 billion in 1960. As the President points out in his Economic Report, national output was 3½ per cent higher in the fourth quarter of 1959 than it had been twelve months earlier; this rate of increase is slightly higher than the average over the past 14 years, and the economic advance is expected to continue in 1960.



One thing which may upset the President's Budget, however, is the inclusion, among receipts for fiscal 1961, of nearly $700 million from higher charges to the public, to cover, primarily, the $554 million deficit at the Post Office. In the past Congress has always refused to eliminate this deficit by raising postal rates. Moreover, the very prospect of a substantial budget surplus may tempt Congress to spend more, rather than to practise austerity in order to be able to cut taxes in 1962, as Mr Eisenhower suggests.

The estimated rise of $1.4 billion in spending is accounted for mainly by an increase of over $1 billion in relatively uncontrollable items such as the interest on the public debt, support of farm prices, benefits for ex-servicemen and grants to the states for public assistance. There is also a rise of $500 million because of commitments in the fields of housing, public works, and mutual security. Reductions elsewhere have made possible concessions to the President's critics who feel that too little is being spent on defence, space, and improvements at home, but these amount to only $477 million: $275 million to double, very nearly, expenditures for civilian exploration of space, about $50 million more for defence, and $152 million more for development of America's own natural resources. For the first time in three years, however, Mr Eisenhower lifted his ban on new projects to exploit water resources; 42 will be started, to cost $38 million in 1961 and nearly $500 million eventually. In 1959 Congress, for the first time, overrode an Eisenhower veto; it was of the public works Bill, which will be even dearer to politicians in an election year.

The President also proposes to spend slightly more—$3.45 billion as against $3.35 billion in the present year—on the far less popular mutual security programme, divided about equally between military and economic assistance. He is asking for spending authority of $4.2 billion, compared with $3.9 billion requested last year, the increase being accounted for by a rise to $2 billion for military assistance in order to provide modern arms for America's allies in Europe. But these take a long time to produce and deliver, and actual spending on military assistance in 1961, at $1.75 billion, will be a trifle less than is being spent this year.

Once he had been to India, the Middle East and North Africa, once he had stressed the importance of more economic aid for Asia and Africa, then it became essential once again to show America's touchy neighbours to the south that they were not forgotten. Mr Eisenhower, with his personal magnetism, should be able to do this effectively, especially since no President of the United States has ever been so far or so long in South America. But here, perhaps even more than elsewhere, there is the danger that the President, in his desire to be friendly, may arouse expectations which may not be fulfilled.

Religion in the Race

WHETHER or not religion is to be an issue in the coming presidential election, it has certainly become one, and threatens to be bitter, in the race for the Democratic nomination. Already it is complicating the choice of the chairman for the party's nominating convention next July: the favourite, Representative Boggs of Louisiana, is a Roman Catholic and it is feared that, if he presided, opponents might claim that the Democratic organisation was dominated by people of that faith and, if a Catholic were nominated for the Presidency, that this had been arranged by Mr Boggs. The one who might be nominated is Senator Kennedy, the first Roman Catholic to be a serious contender for the Presidency since 1928; no Catholic has ever been elected President.

Senator Kennedy brought the religious issue boldly on to the front of the Democratic stage—in effect daring his party to reject him—when he announced that, if he were denied the nomination simply because he is a Catholic, he would refuse to accept the vice-presidential nomination. He would regard such an offer as a transparent attempt to draw Catholic votes without risking the loss of non-Catholic ones. A party adopting such a device would not deserve to win, in Mr Kennedy's view. He believes that once a candidate has accepted the constitutional division of church and state, as he does, then the subject of religion is ended as far as an election is concerned.

By this move the Senator has made it almost impossible for the Democrats not to put a Catholic on their national ticket. For this reason several suitable Catholic leaders who will have substantial blocks of votes in their pockets at the Democratic convention—Mayor Wagner of New York, Governor Brown of California among them—are said to be negotiating with Mr Kennedy, offering to support him for the presidential nomination if he will support them, should he lose it, for the Vice Presidency. It is suspected that this may be the basis on which Governor DiSalle of Ohio has already promised that state's 64 convention votes to Mr Kennedy. But the importance of the Governor's declaration is that he is the first important Democratic Catholic, the first party leader from the industrial areas where both Democratic and Catholic votes are heavy, to come into the open for Senator Kennedy. So far the others have held back, notably Governor Lawrence of Pennsylvania, second only to New York in the number of its votes at the convention.

These Democratic "bosses" do not want to bring their religion into the political debate and, more important, they do not believe that a Catholic can win the Presidency—although their own careers prove that Catholics can win almost any other office. It is remarkable how many Catholics there now are among the Mayors and Governors. But the argument has been reinforced by the recent contest for the Governorship of Louisiana, in which the better man lost mainly, it appears, because he was a Roman Catholic. This state has more Catholic voters than any other in the South and, although traditionally Democratic, it went to the Republicans in the 1956 presidential election.

THE NEXT PRESIDENT?—VI

Richard M. Nixon

The only official candidate for the Republican presidential nomination, the only one there is expected to be, and the man who, according to the latest polls of public opinion, is most likely to be the next President of the United States is the present Vice President. Our Washington correspondent describes this 47-year-old lawyer from California who is more disliked than any other major politician in America.

VICE PRESIDENT NIXON is generally, and correctly, described as intelligent, ambitious, efficient and aggressive. But his intelligence, keen though it is, lacks the element of reflectiveness which might have saved him from some bitter quarrels in the past. He is undoubtedly aggressive, but beneath the ambition and the smooth efficiency there lurk signs of a distinct lack of self-confidence. Mr Nixon gives the impression that he is not quite sure of himself, and that many of his other qualities spring from this uncertainty. In his case, more than that of any other candidate, a question about what kind of President he would make concerns his character rather than his beliefs or policies.

It must be said that the hatred which many Democrats conceived for Mr Nixon in the turbulent early days of his public career and which some of them have never lost is rather more intense than the facts warrant. He got his reputation for being unscrupulous in the course of his election campaigns between 1946 and 1954, for the House of Representatives and Senate, as President Eisenhower s running-mate in 1952, and then in the 1954 congressional campaign; in these he implied—with varying degrees of subtlety but always incorrectly—that his opponents were either aligned with, or blind to, communism. What he said was often less objectionable than the way he said it. Mr Nixon has a habit of juxtaposing words or phrases in such a way that his sentences have two meanings and he can always claim that he intended the innocent one. But it is doubtful whether the Democrats would have reacted as ferociously as they did if they had not been feeling so nervously defensive in the early nineteen-fifties. They were sensitive about their failure to stop communist expansion after the war, frightened by the attacks on intellectual liberalism, and frustrated because President Eisenhower was too popular to criticise; consequently, it was upon Mr Nixon, the symbol of everything which made them angry, that their pent-up fury broke.

Since 1954, except in a couple of instances, Mr Nixon has followed a milder course, although not in an entirely convincing manner. This makes it seem possible that, under certain conditions, the old Adam might peep out again from under the new Nixon. The fear is not merely that, if he were in the White House, a renewal of this disruptive behaviour might split the country; it is also that the quality which makes such behaviour possible hardly recommends a man for the Presidency.

The virtues which Mr Nixon would bring to his office, if he were elected President, should not be underestimated. His strength lies in his intelligent thoroughness and the application of a first-class executive. He undoubtedly has the mental grasp required by the office; although he is not an intellectual, and reads

few books, he is a voracious devourer of the careful briefs provided by his staff. Officials who have worked with him in the Cabinet and the National Security Council during President Eisenhower's absences have been struck by the ease with which he has taken command of the discussion. Mr Nixon would bring to the White House more energy and a greater willingness to take the initiative and to exercise leadership than Mr Eisenhower has ever shown; and he would supplement this, as all the most effective Presidents have done, with an expert control over his party's political machine.

By the test of what the next President will have to do, Mr Nixon also has much to commend him. His eight years as Vice President have left him with a better first-hand knowledge of the world overseas (including an experience in bare-knuckle work with Mr Khrushchev) than most of his rivals can claim. He has been steadfastly liberal on questions involving foreign aid and the rights of Negroes even when it might have been easier to equivocate. He is on good terms with a number of university professors, some of them Democrats, and if he were President his personal entourage would not be confined to the extrovert businessmen who cluster around Mr Eisenhower. Among the intellectuals with whom Mr Nixon keeps in contact something like a consensus is emerging about the programme which the federal government ought to carry out in the next four years. Thus it is unlikely that an Administration which he headed would continue to wallow in the becalmed idleness to which Mr Eisenhower's has been reduced. Mr Nixon would undoubtedly speak out more feelingly and vigorously about the need to end racial segregation in the South. He would almost certainly listen more carefully than Mr Eisenhower does to those who argue that the federal government must spend more money on defence, education and America's disintegrating cities.

In view of all this, why do the doubts remain? They remain because of the suspicion that Mr Nixon's personal limitations may vitiate the other qualities which might make him a good national leader. The Vice President has risen so swiftly up each successive stage of the political ladder in the last fourteen years that he may not have had time to acquire the resilience and maturity needed to withstand the strains of the Presidency. This may account for the tenseness and lack of assurance which often show themselves in his public conduct. Under the spur of his enormously powerful ambition, he seems to be straining against the limits of his resources.

It is this which makes people suspect that in the long run, however purposefully Mr Nixon started out, his Administration might not be markedly different from Mr Eisenhower's. The conservative forces to which Mr Eisenhower has recently bent such a ready ear are still powerful in the Republican party, particularly among the professional politicians with whom the Vice President has close links. Mr Nixon may not have enough independence or self-confidence to ignore them when they start to put pressure on him. There is also some uncertainty about how he would react in a crisis of foreign policy. Despite the acclaim he received after his trips to Russia and Latin America, some people think that he did not show himself to be a match for Mr Khrushchev as a debater and that his courage in facing the mob in Caracas has to be balanced against his miscalculation in going to that city after the warnings he received. If, as President, he still felt a need to prove himself, his judgment might slip again.

There is a popular theory, but probably a mistaken one, that the inward pressures which have driven Mr Nixon in the past would vanish if he won the Presidency; a man does not lose his ambition when he steps through the door of the White House. Quite possibly the responsibility of office would reinforce his character. But on the evidence now available Mr Nixon seems to share a quality which can be detected in the United States as a whole at the moment: an inner uncertainty concealed beneath a bustle of energy and apparent decisiveness. This suggests that the course of his Presidency would not be easy to predict.

The five leading presidential possibilities in the Democratic party were described in the issues of December 12, 19, and 26, 1959, and of January 2 and 9, 1960.

Lynch Law

FROM A SPECIAL CORRESPONDENT

The dozen or so white men who dragged a young Negro from a prison cell in Poplarville, Mississippi, last April and murdered him can now relax in the expectation that their crime will go unpunished, barring unforeseen developments. Last November a state grand jury declined even to look into the case. Last week a federal grand jury, after hearing evidence for ten days, voted to bring no indictment under federal law. Its failure to act was hardly a surprise, but it was still a shock because the details of the brutal lynching had come out through the unofficial disclosure of a 378-page report on the affair by the Federal Bureau of Investigation. The Negro, Charles Mack Parker, was charged with raping a pregnant white woman. Local residents were bitter at the prospect of his Negro lawyer cross-examining her in open court about the sexual attack. Some thirty-five men planned the lynching, then drew straws to see who would carry it out. Those chosen wore masks. The gaol was unguarded and the keys nicely available. The mob drove Parker to the Pearl River, shot him and threw the body in.

The case is a sharp reminder that the United States remains a federated country, with a national government of limited powers. Its Attorney General, Mr Rogers, who condemned the failure of Mississippi officials to prosecute as a "travesty of justice," found himself powerless to overcome the combination of constitutional limitations and local sentiment. For one thing, the Constitution provides that no man may be tried for a felony in a federal court unless he has been indicted by a grand jury; Mr Rogers could not bring the charge on his own. The defendant is also guaranteed a trial by petit jury in the district where the crime was committed. Thus federal policy may be enforced through the criminal law only when local feeling permits it.

About local feeling on the Parker case there was no doubt. A Poplarville official told a visiting reporter: "You couldn't convict the guilty parties if you had a sound film of the lynching." The state judge who presided over the first grand jury said that the Supreme Court may have caused the lynching by stirring up southern feelings over racial segregation; he referred to the Court as "that board of sociology sitting in Washington, garbed in judicial robes." There were indications that the federal grand jury, which included one Negro as well as twenty white men, was somewhat more sympathetic to the idea of prosecuting the lynch mob. But the jurors were, after all, citizens of southern Mississippi and subject to local pressures.

It must also be remembered that there were serious legal difficulties about showing that the murder of Charles Mack Parker was a violation of federal law. Under the Constitution ordinary crimes such as murder are left to the states to handle. The federal government is without power to act unless there is some special element in the crime, such as transportation of the victim across a state line, or unless state officials, either singly or in concert with private individuals, have deprived a person of his civil rights. One problem in the Parker case may have been the difficulty of proving this necessary element of official participation, although the FBI report implicated a deputy sheriff.

An industrialist tells . . .

How I looked the place over with a burglar's eyes

Some months ago, my brother's house was burgled. Although he lost nothing, the thieves made a thorough mess of his wife's bedroom.

More recently still, a small fire broke out in the works. Nothing serious, but some work-tickets were burnt. And they caused more disruption than the fire itself.

That set us thinking. One's insurance takes care of stolen silver or burnt-out machinery, but it can't cover effects like these. Multiply them to a larger scale fire or burglary, and you're in trouble.

So we decided to take a bit of advice, and called in the Chubb Survey Service. And, my word, they showed us about twenty places where a burglar could enter blindfold. It was almost easier to open some of our safes illegally than with the keys!

Chubb also went over our fire precautions for documents and records, and they turned in a first-class report on the whole fire and burglary state of the firm.

Since they make special equipment in that line for almost any purpose you can think of, we're well protected now. But are you? A Chubb survey won't cost anything . . . but, believe me, it stands to save you a lot.

Write for a Chubb Survey to:

"YOU BUILD

SUCH HIDEOUS PLANTS"

wrote a lady shareholder to the Secretary of Simon-Carves. "Don't send me any more annual reports because I hate the pictures."
"Dear Madam," the Secretary could have replied, "*somebody* must build collieries and coal washeries and coke ovens and gas and chemical and fertiliser plants and power stations and what not, so that you can have your car and cutlery (or anything else with steel in it) and your radio and electric light (and anything else to do with power stations) and your gas cooker (if your kitchen isn't all-electric) and your food and clothes (which depend a good deal on fertilisers and chemicals) and a lot of other things that make up your standard of living, to which our hideous plants contribute in more ways than space allows us to mention."
"In short, Madam," the Secretary might have concluded, "we render many essential services to many essential industries, so pray accept your dividends in the certainty that if we did not build our hideous plants someone else would build them and perhaps not as well as we do."

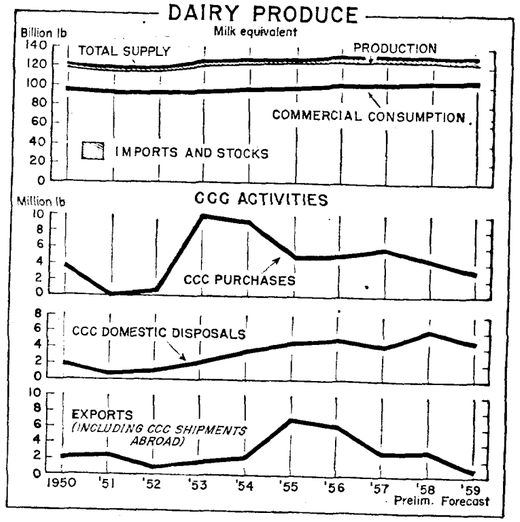
The outcome of the case has led to fresh demands in Congress for a stiff federal anti-lynching law, but the prospect for it is not bright. Happily, lynching is now an extremely rare occurrence in the South, and Congress also recognises that passing a law will not overcome the obstacle of juries drawn from a really inflamed community. Any new civil rights legislation which is passed in this session is likely to focus on the right of Negroes to vote. The Civil Rights Act of 1957 empowered the Attorney General to enforce that right through the courts and dispensed with juries in such cases. Last week the Justice Department won its first victory, and an important one, under the 1957 Act. A federal judge in Louisiana ordered the names of 1,377 Negroes be replaced on the voting rolls. They had been stricken off on complaints from the local White Citizens' Council that there were minor errors in spelling and other matters on the Negroes' registration cards. The judge said that most of the white voters made the same mistakes and that the council's real motive was racial discrimination. It helps, in these matters, to have decisions made by judges whose courage is fortified, if not assured, by lifetime appointments.

Sack for Jack?

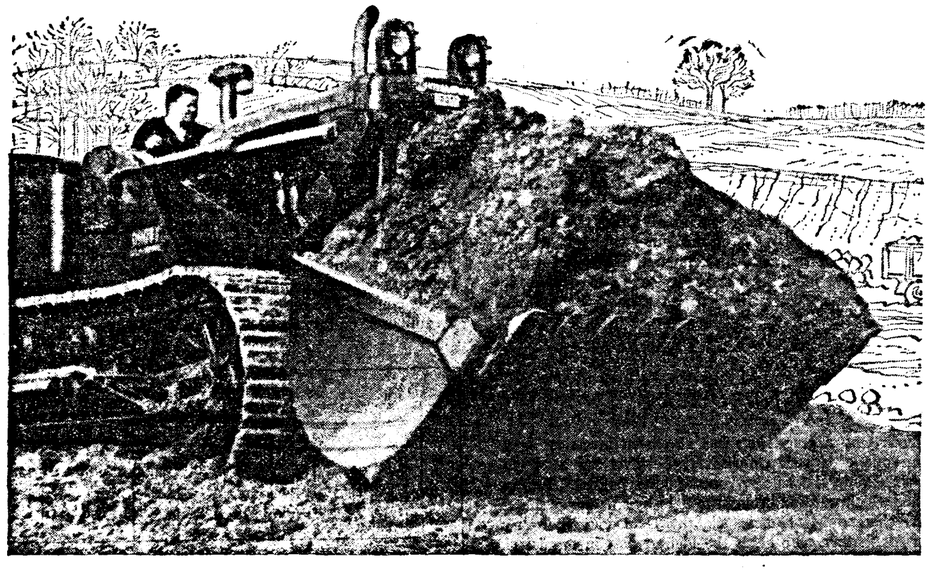


IN New York City a grand jury has also been investigating a case—but one of a very different type—involving a Negro and it has shaken up the kaleidoscope of local politics. Acting upon evidence which was first brought to light by a newspaperman, the jury has charged Mr Hulan Jack, the Democratic borough president of Manhattan, who holds the highest post in municipal government to which an American Negro has ever been elected, with violating the city charter's ban on the acceptance of gifts. It is alleged that a Mr Ungar, a property dealer who was seeking a contract to carry out slum clearance in the city, provided some $5,000 for the redecoration of the borough president's flat, and that the two men then conspired in an attempt to conceal this fact by pretending that Mrs Jack had paid for the work out of her weekly housekeeping money. Mr Jack now claims that the money was a loan, and has pointed out that in fact he voted against giving the contract to Mr Ungar.

The political repercussions of the affair affect the local Democratic party most immediately. Harlem, the Negro quarter of Manhattan, has rallied behind Mr Jack and so, for the moment, has his chief political rival there, Mr Adam Powell. In the city at large Mr Carmine De Sapio, whose long-standing control of the party machine has been disputed lately on the grounds that he is ineffective and illiberal, may be further weakened by his close association with Mr Jack. Nor can the Democratic Mayor of New York, Mr Robert Wagner, who is linked to both Mr De Sapio and Mr Jack, fail to be harmed by this suggestion of corruption within his administration, especially as it has recently been touched by several other scandals.

Mr Wagner is attempting to minimise the damage to his own political prestige and to his party by putting the final responsibility for Mr Jack's future on Mr Rockefeller, the Republican Governor of the state, who alone has power to dismiss Mr Jack from office. Mr Rockefeller, by inviting the Mayor to discuss the matter with him, is doing his best to see that the Democrats are involved in any decision he may make. The reason for these manœuvres is that the 300,000 Negro voters in Harlem could decide which way New York will go in next autumn's presidential election; they tend to look at Mr Jack's case in a purely racial light and may turn against anyone who condemns him. But by suspending himself voluntarily from office until the case is settled he may have made it possible for Governor Rockefeller to avoid taking action until the courts have reached a decision.

One Cupboard is Bare



ALTHOUGH the bins of the Commodity Credit Corporation are spilling over with record surpluses of many agricultural products, there is one corner of its cupboard which is virtually bare. The surplus of dairy products has vanished; for the moment there is no more dried milk for relief agencies to send abroad, striking steel workers scorned the free food distributed at home because it included no butter to spread on their bread, and even cheese has almost disappeared from government stocks. Last week, Mr Benson, the Secretary of Agriculture, announced that the government would continue to support the prices of dairy products at the same level as in 1959; he had no economic excuse for making a change and good political reasons for leaving well alone. Market prices are now above the official purchase prices because, after seven lean years of excessive production, demand and supply are approximately equal. The gap shown on the chart is accounted for largely by milk used on farms and by the armed forces.

The total supply of milk fell slightly in 1958 and 1959, partly because Mr Benson had succeeded in lowering the price supports in earlier years, but also because high prices for beef have been tempting farmers to sacrifice their dairy herds. On the other side of the ledger, a growing population means a greater total demand, even though consumption a head of most dairy products continues to fall. This is partly because people are eating less butter and cream, for reasons of health and beauty, partly because alternatives such as margarine are cheaper.

The disappearance of the surplus and the prospect of slightly higher prices means that it will be easier for the State Department to press for the relaxation of quotas on imports of dairy products. This will not wholly satisfy the foreign producers who complain that Washington demands the abolition of barriers against American goods without dismantling its own agricultural protection, but it will help. Looking further ahead, however, the Department of Agriculture is not convinced that dairy surpluses are gone for good; one which is valued in relief work—that of powdered skim milk—should reappear as soon as production begins its seasonal rise.

GET THE BIG SHOVEL!

The 3 cubic yard INTERNATIONAL DROTT B-20K-3 OF COURSE

IT WILL PAY YOU to have one of these big British shovels, especially where there's a tight schedule to be met. You'll be glad of it for two big reasons. First it incorporates all the proven Drott pioneered features which have established the name as number one in the loader industry. The new shovel also incorporates extra refinements such as, adjustable automatic kick-out and a pin-mounted loader frame.

Your second reason for being glad you've got this unit? This big Drott is teamed with the International BTD-20 with its six-speed full-reverse transmission that boosts production on any shuttle job. It's at work in seconds with real push-button starting, and the Rolls-Royce direct injection engine is a real fuel-miser!

Your International Construction Equipment Dealer will be glad to tell you more about this equipment. Why not call him? AND it's available with that very versatile International Drott 4-in-1 bucket... four big-capacity tools available at the flick of a lever: Bulldozer, Carry-Type Scraper, Shovel and Clamshell. There's another exclusive advantage with a 4-in-1, *controlled* bottom-dumping that lets you *place* the 3 cubic yard load more gently in light-duty trucks.

THE WORLD OVERSEAS

Mr Kishi Revisits Washington

FROM OUR CORRESPONDENT IN TOKYO

THE new American-Japanese Security Treaty that was signed in Washington on Tuesday is claimed by its sponsors to have ended the last vestiges of the occupation. Mr Fujiyama, the Japanese foreign minister, told the Japanese press that at one stage of the fifteen months' negotiations, the United States Defence Department was accusing the American ambassador in Tokyo, Mr Douglas MacArthur, of conceding too much, and was reproaching him with acting as if he were not the American but the Japanese ambassador. But, if the old 1951 security treaty has been revised in a way that has caused anguish in the Pentagon, the revisions appear to be just as distasteful to many Japanese. The left-wing Socialists allege that the aim is "to bring nuclear weapons into Japan and drag Japan into a war." The right-wing Socialists, as well as some influential conservative Japanese newspapers and politicians, while expressing themselves more moderately, have in effect said the same thing. This Japanese reaction suggests that, whatever the Defence Department in Washington may think, the State Department is quite right to hail the revised version as the best bargain now obtainable.

The treaty was signed not by Mr Fujiyama, who negotiated it, but by the prime minister, Mr Kishi, who before he left Japan explained that he had decided to sign it himself because it was both an important and a controversial document, and "I am the man responsible for it." Some leading members of Mr Kishi's party, less keen about accepting responsibility, hastily excused themselves from the Washington visit. The controversial points are not in the treaty itself, but in the "exchange of notes" accompanying it. These commit the United States to "prior consultation" with Japan before making any combat use of American forces and bases in Japan, and also before arming them with nuclear weapons. While it is this commitment, without an apparent *quid pro quo* by Japan in the way of extended military responsibilities, that seems to have made the Pentagon wince, it is also the one on which the Japanese critics have fastened, as ambiguous, vague, unsatisfactory, and deliberately devised to mislead. They say there would have been no need to exchange notes if the treaty itself had simply contained a straightforward Japanese veto on bringing American nuclear weapons into Japan, and on using American forces and bases for any purpose except the defence of Japan against a direct attack.

Mr Kishi last visited Washington in June, 1957. Since then there have been significant changes in American-Japanese relations, most of them a result of that visit. The number of American military in Japan has been cut in half, to 65,000. Military facilities, including headquarters, camps, ranges and radar sites, have been turned over by the hundred to the Japanese. The last four score of Japanese "war criminals" have been released. Japan's contribution to the cost of American forces has been progressively reduced (and the new treaty finally abolishes it). Mr Kishi himself has been praised by Mr Eisenhower as "one of the most dependable leaders of the free world."

While America has thus been acknowledging the importance it attaches to Japan's friendship, and hoping for Japan's voluntary acceptance of the responsibilities of an ally, both Russia and China have been working hard to inhibit the Japanese from responding with anything warmer than neutralism. Time and again Russia has given warnings of the awful consequences of missiles and hydrogen bombs to a country with a lot of people in a little area; while the Chinese have kept up an angry barrage about an American-Japanese plot to enslave south-east Asia. Mr Kishi and Mr Fujiyama have shrugged off these threats and charges with considerable sangfroid, but that they have not been without effect on Japanese public opinion is indicated by the nervous and suspicious greeting accorded an American-Japanese security treaty in which all the revisions are American concessions.

THE duration of the original treaty was indefinite, and the United States had to consent to its termination; Japan can end the new arrangement unilaterally if it wishes. Under the old treaty, the United States could use, and arm, its forces in Japan in any way it thought necessary for "peace in the Far East." Under the new, Mr Kishi says that "When we feel we should say 'No' we shall do so, and I am sure the United States will not go against our wishes." He is almost certainly right; for in practice, and whatever the treaty said, the Japanese could now, if they wished, make the American base position too uncomfortable to be worthwhile. Nevertheless, the American defence department had hoped, in return for according Japan what amounts to a power of veto, to have Japan's share of responsibility for peace in the Pacific extended, so that an attack on an American installation or ship in those waters would be sufficient to set the treaty machinery in motion. Japanese public opinion protested too loudly for this to be feasible: not even the prospect of being able, by such extension of responsibility, to stake a firmer claim to early restoration of Japanese administration over Okinawa could outweigh fears that Japan might sometime become involved in a war with China over Quemoy.

Mr Kishi declares that the new treaty has been negotiated on an equal footing and in a spirit of mutual trust. There is, however, very little sentiment, from the Japanese side, in the American-Japanese relationship. What in the meantime keeps Japan in the western or free world camp is rather enlightened self-interest. But this is not after all a bad basis for treaty relations. Mr Kishi has expressed the hope that the sentiment will come in time, and he may be right.

Mixed Feelings in Cyprus

FROM OUR CORRESPONDENT IN NICOSIA

PERHAPS the most noteworthy thing about the Cypriot reaction to the postponement of Independence Day is that so far it has been so unexplosive. The general mood has been, first, one of mild astonishment bordering on bewilderment that a relative storm in a teacup over the size of the bases has developed into a political hurricane; then a quiet, bitter, Cypriot cynicism born of years of tribulation which expresses itself, perhaps, in a shrug of the shoulders and an ironic comment such as "a month's delay—so what?" All of which disturbingly reflects the essential lack of enthusiasm, and sometimes the scepticism, about the Zurich and London settlement, especially amongst the Greek community.

In purely material terms, the effect of the four weeks' deferment will not be very great. In some respects it may be a blessing in disguise, for the amount of work still to be done, both by the London Committee and the constitutional commission, and in all sorts of administrative matters in the island, is still enormous. In recent weeks, despite official statements to the contrary, leading officials on each side have not concealed their scepticism about the chances of everything being ready by February 19th. Many will privately welcome the four weeks' grace; it will enable the Cypriots to get the feel of their new posts and in general facilitate a smoother hand-over of the administration. As far as possible, it is understood, those Britons who have already arranged their passages home, and who in many instances have entered into new commitments, will be allowed to go on or about February 19th. Nor is the Army likely to be greatly affected, since all but one of the home-going units have already left and it is expected that the one remaining regiment (the 12th Lancers) will stay until the end.

Psychologically, however, the effects of the delay will be in some degree harmful. The postponement represents the first breach in the Zürich and London agreements which were beginning to acquire an aura of the Laws of the Medes and Persians; and it is undoubtedly in the best interest of Cyprus if all parties get it into their heads that the agreements cannot be tampered with.

The temptation for the politicians to cause mischief will be increased by the delay. Ordinary people may be slightly bemused by the tortuous diplomatic manœuvres in London, but the political pundits—who in Cyprus amount to roughly one man in three—are acclaiming Archbishop Makarios's rejection of the British "ultimatum," and militantly urging him not to give ground, literally and metaphorically. His supporters praise his statesmanship and his patriotic resistance to "imperialism," while his opponents obliquely warn him in lurid terms that what Britain is demanding will mean permanent ignominy for the Cypriot people. Thus Mr Clerides, leader of the Democratic Union party, has declared that he can see no difference between self-governing colonial rule and what Britain is envisaging for Cyprus. And Mr Clerides speaks only for the more moderate opposition; there is also the Akel party, which has opposed the bases all along, and on the far right, General Grivas and his clique of supporters. Grivas broke his long silence on Cyprus affairs last Saturday to fire off a verbal salvo against the bases, and this intervention has undoubtedly made it more difficult for the archbishop to compromise, even though he is now safely elected president of the future republic.

The most lamentable feature of all is the way in which positions have now hardened and emotions been stirred up, so that neither side can now compromise without loss of face. There is also a depressing sense that whatever settlement is ultimately reached, the bases have got off to a bad start and will be for a long time a target for hostile propaganda, regardless of how much economic benefit they bestow indirectly on the island. Implicit in this reaction is criticism of the way in which the Foreign Office has handled the question and, in particular, the slender regard that seems to have been paid to Archbishop Makarios's "Middle Eastern mentality" in any matter of bargaining, and also to his political difficulties on the home front.

Despite this rather sombre picture there are, however, glimpses of sunlight through the clouds. On all sides there is a paradoxical fatalistic feeling that somehow the whole dispute will be settled, simply because no one now dare face the possibility of the London agreement breaking down, unpopular as that agreement is. The Cypriots have had a year free from "the troubles," and that is a big psychological factor. Another development which has surprised and encouraged the Cypriots is the reported co-operation between the Greek and Turkish Cypriots during the negotiations. Press reports on this point have been conflicting, but the impression of closer harmony that has emerged is more than people ever expected. This has even been represented in one Greek paper as the first flowering of a sense of Cypriot nationhood; and the notion should not be derided. The London conference will have had an unsuspected value if it does indeed help to cement relations between the two Cypriot communities—albeit in opposition to "British imperialism."

What is quite clear is that all people of good will want to see this protracted wrangle expeditiously settled. One month's delay does not mean irreparable harm. But a further delay might well provoke trouble and would lend wings and apparent substance to the inevitable canard that is already being whispered amongst the Greeks—that the real reason for the hold-up is that Britain does not want to hand the island over. Such is the Greek habit of mind; it needs to be taken into account in London.

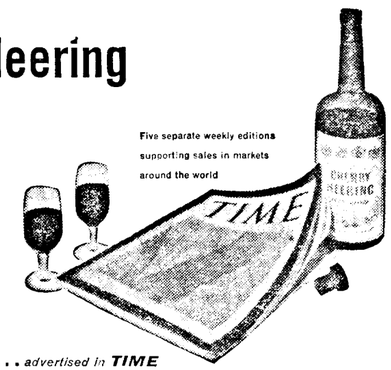
Digesting Sahara Oil

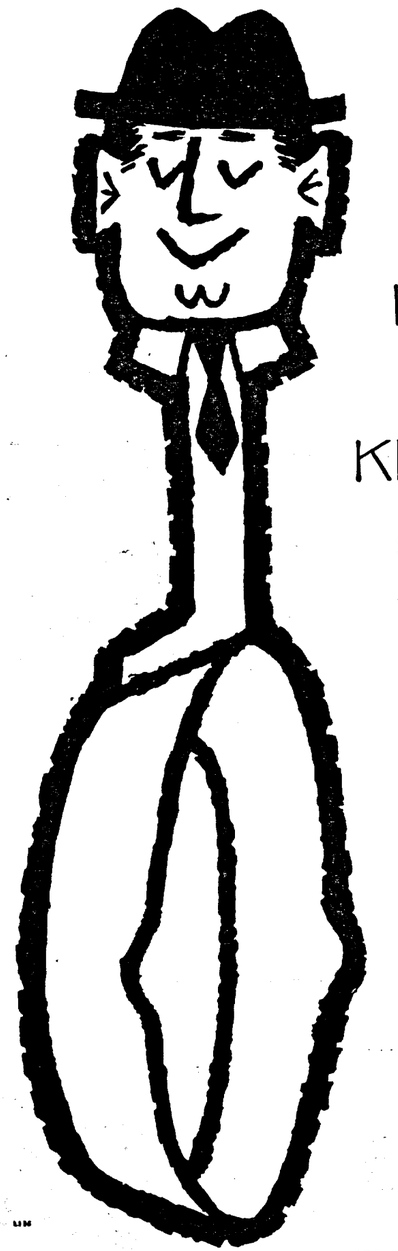
FROM OUR PARIS CORRESPONDENT

"WHILE the economic capacity of great nations depended mainly on coal, France had scarcely any. Then, oil dominated all, but France had none." General de Gaulle, in his memoirs, is thus repeating the lesson, inspired more by List, the economist of the Zollverein, than by Adam Smith, taught to generations of Frenchmen: that the relative economic decline of France was due to the shortage of fuel within its frontiers. All this is now to be changed by a miracle in the desert. The opening, last month, of the 24-inch pipeline linking the Hassi Messaoud oilfield with the port of Bougie marked the Sahara's real entry into the world oil market and has been hailed in France as the start of a new era. By 1965, according to the experts, 50 million tons of crude oil from the French Sahara will flow every year to the coast.

A galaxy of dignitaries came to Hassi Messaoud for the opening; uniformed gendarmes directed traffic in the desert, giving the pro-



Exports cheering for Cherry Heering



In the Heering office there is a world map showing the towns to which Cherry Heering is exported direct from Copenhagen. Europe, America, the Far East—all parts are thickly sprinkled with names. Distribution and sales have a truly international flavour.

Because of this, the firm's present owner, Mr. PETER HEERING, makes extensive use of *international* advertising. Through TIME, The Weekly Newsmagazine, he keeps his company's name on the tips of important tongues all over the world.

LORIVAL PLASTICS

UNITED EBONITE & LORIVAL LIMITED · LITTLE LEVER · BOLTON · LANCS

ceedings a somewhat surrealist air. When a dream comes true, it is pedestrian to get down to cost accounting. Naturally, the French insist on the fact that "franc" oil will be a great relief to their country's balance of payments. But there is little inclination to check prospective revenue against investment, to compare prices with alternative sources of supply or to include in the cost some allowance for the maintenance of troops in Algeria. Here is oil which—at least, so it is argued—cannot be cut off by a Nasser. France will soon be bursting with energy; within a few years, it will be a net exporter of oil. The appeal is emotional. The public is shown an exercise in national greatness rather than a business proposition.

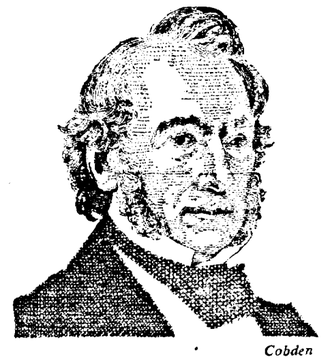
The dream has come true at a rather awkward moment. In the world market the supply of oil exceeds demand, at least temporarily, and the international companies have shown little enthusiasm for this new competitor, particularly since deals with the French over Sahara oil could get them into trouble with the governments of the Middle Eastern producing countries from which they get their main supplies. Secondly, French success was a stimulant to research in neighbouring countries. If further Libyan oil finds bear out the present indications, France will be faced with a cheaper competitor on Europe's doorstep. The deposits struck so far in Libya lie nearer the surface and nearer the sea (the Zelten field is about 100 miles from the coast; the pipeline from Hassi Messaoud to Bougie is 410 miles long). Lastly, there is the composition of the Saharan crude. There is general agreement that, with its unusually high ratio of light and middle fractions to heavy fuels, it is more suited to a market like the American than to the present pattern of French, or European, consumption. Foreign outlets must, therefore, be sought even before output matches French home demand.

Such imperfections in the Saharan dream have given rise to suggestions in the French press of an imminent head-on clash

Commercial Coup d'État

FROM OUR PARIS CORRESPONDENT

FRANCE has opted for free trade and the British connection. The French chief of state, using the treaty-making powers which he obtained through the *coup d'état*, achieved with one stroke of the pen what parliament would have blocked for years. The trade treaty with England was signed on January 23rd, but the event had been expected ever since the publication of a letter by the French ruler in *Le Moniteur* eight days previously. Manufacturers thereupon flocked to Paris to defend the threatened structure of restriction and protection; but to no avail.



The treaty is really the result of several months of negotiation. It was in the summer that a French liberal decided that the time was ripe for it. He urged the idea on a British friend, a prominent advocate of free trade, who put him in touch with the Chancellor of the Exchequer. The latter expressed himself as sympathetic. The negotiations in Paris, which followed, were held in secret to prevent obstruction by the French manufacturers' lobby, violently opposed to British competition. By the time the project became known, parliamentary opposition proved no match for the quasi-dictatorial powers of the French head of state. The opponents of the treaty now brand it as a commercial *coup d'état*. But whatever the method of its introduction, the treaty is bound to be imitated by other nations and to inaugurate a new, freer era in European trade.

Readers have no doubt by now realised that the foregoing sensational piece of news is a century old and refers to a triumph of Mr Cobden's, not Mr Maudling's. The Frenchman who originated the proceedings and played a key part throughout was M. Michel Chevalier, the former disciple of Saint-Simon. Cobden was at first reluctant to use a restrictive treaty of commerce as a vehicle for free trade, but he rapidly grasped the possibilities and replied with an enthusiastic statement of faith: "The people of the two nations must be brought into mutual dependence by supplying each other's wants. There is no other way of counteracting the antagonism of language and race. It is God's own method of producing an *entente cordiale*, and no other plan is worth a farthing."

Mr Gladstone, then chancellor of the exchequer in Palmerston's cabinet, took charge of the proposed new treaty. He knew that a reduction of duties on French wines and spirits could create difficulties, especially as this cut in revenue would be combined with an increase in income tax (from 9d. to 10d. in the pound). He was also aware of strong anti-French feelings in the country But he knew he could carry the Government with him.

Cobden then travelled to Paris to talk to the Emperor. It was in this interview that Napoleon III uttered the remark: "*Nous ne faisons pas de réformes en France; nous ne faisons que des révolutions.*" There were two reasons why the Emperor accepted this reform. His growing political difficulties on the Continent made the British alliance valuable to him. Economically, he hoped that the lowering of the protective wall would cheapen the cost of living and stimulate French industrial progress. The French finally agreed to abolish all prohibitions and, within two years, to let British goods in at duties not exceeding 30 per cent (25 per cent after five years).

Trouble did not end with the signature of the treaty. Gladstone had to defend it, and did so in a brilliant budget speech in February, 1860. French critics called it "cosmopolitan communism," but they had to bow to the Emperor's will. Because the treaty introduced the most-favoured-nation clause, the example proved contagious. Similar treaties were signed by most European countries. While the Continent did not follow the British precedent of free trade, for the next decade the system of prohibitions was replaced in European trade by one of only mild protection that allowed the industrial revolution to gather speed.

Cobden

Historical analogies should not be carried too far. Yet certain analogies cannot be avoided. In France the treaty coincided with the beginning of the liberal empire. Angry manufacturers who joined the Catholics in opposition had something to do with the change. The Duc de Gramont said that "the moment had come to lighten the Emperor's burden and to relieve him of the full weight of the discontent which his policy must inevitably produce." And the Comte de Morny offered this advice: give the opposition the right to advise, and let there be a strife of parties, and eventually the Emperor's role of mediator would win appreciation: while the blame for his mistakes, if he made any, would fall upon one or other of the parties, and not upon him alone. The century-old message has a contemporary ring.

(*See editorial comment on page* 286)

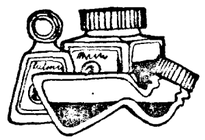
between the French state and the international oil companies. Some of this speculation has centred recently around three magic letters: SIP, standing for *Société Industrielle des Pétroles*, a body which is still at the blueprint stage in the ministry of industry in Paris. Much of the early prospecting in the Sahara was done at the taxpayer's expense. The pioneering state-owned companies, however, have no refining capacity and no system of distribution. The SIP was to provide them with this. In the original draft two-thirds of the shares were to be divided equally between the *Bureau de Recherches de Pétrole* (BRP), whose statute was to be changed, and the *Régie Autonome des Pétroles*, which indirectly controls the other major Sahara fields of Edjele, Zarzaitine and Tiguentourine. The *SN Repal*, which owns half of Hassi Messaoud, was to get 20 per cent of the shares. With the state-owned companies thus taking the bulk, little was left for private oil concerns.

The SIP does not yet exist, but its prospective deals are already the talk of the Paris oil world. The biggest bid was to be for Caltex, which has a refinery near Bordeaux, a share in the Strasbourg refining project, and service stations. These reported attempts to build an integrated national chain coincided with suggestions that French consumption should be altered so as to fit in with Saharan output. The manner in which the tax burden is distributed —heavy on petrol and light on fuel—needs to be changed if demand is to be gradually geared to Sahara crude. As all this was coupled with the well-known French pressure to obtain preferential treatment for Sahara oil within the common market, rumours were spread that France was going " to declare war on the international oil cartel "—meaning that the French state would use all its weapons, state control at home and, abroad, the threat to walk out of the common market, to impose its will.

In such theories the discrepancy was striking between cause and effect. Nearly 60 per cent of petroleum distribution in France is in the hands of subsidiaries of foreign firms. Another 30 per cent is controlled by the *Compagnie Française des Pétroles* and its associates. The French state has a 35 per cent share in the CFP, but the latter, through its participation in Iraq, is a member of the international club ; and the SIP operation was largely directed against it. This shows how difficult it is to disentangle public from private capital in the oil business. But it also shows how little scope there is for a national chain in France without a radical change of structure: a newcomer like SIP could bid for a tenth of the existing channels of distribution, at most. The French government has a weapon—a law of 1928—to compel the companies to take any crude it wants. It could also brandish the threat of nationalisation. Such international hostilities, however, would spell the doom of the present liberal economic policy. Nor does one go to war with firms just when one has to bargain about surpluses with them.

France may not have a surplus of oil as early as was expected. Revised unofficial estimates put Saharan supplies at about 7.5 million tons this year, 15 million tons next year and over 20 million tons in 1962. These figures may again be revised upwards.

In any case, with other French output soon reaching 4 million tons, and with the available production from Iraq increasing, potential supply should exceed demand by 1963-64. For the time being, the international companies are apparently fairly, though reluctantly, co-operative. Most of them have invested in the Sahara. Under a three-year agreement, drafted but not yet signed, they agree to take 80 per cent of that quantity of Saharan crude which is produced by French companies having no distributive outlets, at a price reported as high ($2.60 per barrel at Bougie). Difficulties will rise as supplies increase ; they will be over quantities and prices rather than principles.



The rumours of a head-on conflict between the French government and the international oil companies have not been based on imagination alone. In French oil circles there are several candidates for a position comparable to Signor Mattei's in Italy. There are also politicians who see an integrated national chain, with the national vested interests it would create, as a good means for keeping French troops eternally in Algeria. The oil malaise also reflects the inner contradictions of Gaullism. In opposition, Gaullism was extremely nationalist with strong anti-American undertones. In power, it has to reconcile these hankerings with the reality of French alliances. Nationalism in oil is thus not unconnected with the French attitude towards " integration " in Europe or in Nato. It is no accident that M. Pinay, a critic of Gaullist foreign policy, singled out the SIP for attack in his quarrel within the government.

The industrial structure of France is not to be swamped at once by a Saharan flood. France will merely follow the changing European trend in energy consumption. Efforts will be made to ease the transition from coal. According to recent estimates by M. Jeanneney, the minister for industry, coal consumption will be maintained at about the present level of just under 60 million tons a year until 1965, though the share of coal in the energy balance sheet will go down from 61 to 50 per cent. The share of petroleum products and natural gas will go up from a quarter to a third, the rest being provided by water power. The changeover may be speeded up after 1965 with the possible appearance of the Saharan natural gas on the French market.

The full impact of oil from the Sahara cannot yet be measured. The French may try to alter their tax structure so as to alter gradually the pattern of consumption. The SIP may finally see the light of day, though probably with more private capital than was at first intended, and be used to strengthen the French bargaining position. The French will certainly bargain hard to get a preference within the common market. It is this French tendency to insist that the expected increase of oil consumption of the Six should be met with Sahara crude exclusively that most perturbs the international oil companies. But there is a feeling in Paris that it may all end in a bargain, that the French government will not resort to extreme measures. The alarm bells, in short, have been too loud. As M. Raymond Aron has put it, oil has the properties of opium: it makes people dream and renders commentators delirious.

An Ink Dynasty

FROM OUR BONN CORRESPONDENT

GERMAN families that grow rich in industry have not acquired the habit of floating off their firms on to the stock market and retiring, with their capital gains, to live the life of country squires. On the contrary, the family property remains—far more often than not—in the form of plant, buildings, and industrial stock; and this fact dictates the family's pattern of life, its places of residence, hours of getting up and going to bed, its domestic habits and the people it mixes with. An example among very many is the old Hanover firm of Günther Wagner, whose ink, carbon paper, typewriter ribbons, adhesives and drawing blocks are omnipresent in the offices and schoolrooms of West Germany. Not quite a monopoly, it is not far short.

A curious characteristic is that this widely known and skilfully publicised business is at the same time highly secretive. At Hanover a team of sixty-odd publicists give their minds to the task of spreading the firm's fame. Yet no outsider—and for that matter only very few insiders—can learn the extent of the annual turnover and profits. The visiting stranger is shown certain machinery (that for filling ink bottles, for example) with the proud comment that it was both designed and mounted on the premises by staff engineers in order that its workings should not be copied. The firm's reserve on matters financial is possible because the business is the property of one family alone—the Beindorff's, now in their fourth generation of management. There are no other shareholders pressing importunately for news about the ups and downs of dividends.

The firm of Günther Wagner stems from a modest dye and ink plant, which one Carl Hornemann set up at Grosse-Munzel, near Hanover in 1832. Its business grew unspectacularly. On April 28, 1838, Hornemann came out with his first printed price list—the respectable occasion which Günther Wagner have designated their foundation day. But it was not until 1863, by which time the business had moved into Hanover city, that a go-ahead chemist called Günther Wagner joined the firm. Four years later he became sole owner of the business and gave it his name. He also hit on the happy idea of adopting the pelican in his family crest as the firm's registered trade mark. In 1881 another go-ahead, Fritz Beindorff, came into the business; so go-ahead that in due course he married the boss's daughter and inherited the whole concern when Günther Wagner died. It has been owned by the Beindorff family ever since.

The firm's head today is Kurt Beindorff. A trained engineer, Herr Kurt Beindorff prefers to work himself in the firm's second factory at Hanover, which specialises in making packing material and containers of many kinds. Kurt Beindorff's three factories—the *Pelikan* works in Hanover, and the two packing material factories in Hanover and Hamburg—employ altogether 4,800 persons. In fulfilment of contemporary obligations, one of every four of these is a refugee from the east. Is it a consequence of the family's studied reserve that the name Beindorff does not appear in *Wer ist wer?* (Germany's *Who's Who*). Except for carrying out the sinecure duties of honorary Greek consul in Hanover (a traditional family function) Herr Beindorff plays little part in public life. He lives unostentatiously in the suburbs. One of his quiet interests is the family collection of paintings and drawings that has come into being largely through the firm's association with the world of art in the role of supplier of artists' materials.

Kurt Beindorff leaves the management of his biggest factory, the *Pelikan* works, where 3,200 are employed, to his forty-year-old nephew Klaus Beindorff, another of those disciplined business executives who have done so much to set the German economy again on its feet. Klaus Beindorff lives apparently for two things—work and motor-boating. He, too, has a modest home, within ten minutes' walk of his office. And last summer, when a record number of Germans went abroad for their holidays, he spent the whole of his leave contentedly motor-boating on the Steinhuder lake, some fifteen miles from the centre of Hanover.

KLAUS BEINDORFF walks to work most mornings, and is at his desk at 7.15 without fail. (Hours of work are from 06.45 to 16.30 for factory workers, and from 07.15 to 17.30 for executives and office staff.) From 09.00 to 10.30 every morning he holds a conference with all his departmental heads simultaneously. Having reported at length on their activities, made their suggestions, and received any new instructions, the departmental heads return galvanised to offices where rationalisation is the order of the day. Nowhere in this factory is there any direct dictation to shorthand typists. Every office is equipped with at least one dictating machine. The recorded material is then sent along to a typing pool, where it is dealt with as required.

The two departments in which Klaus Beindorff takes the greatest interest are, not surprisingly, those for research and sales promotion. The firm attributes its unflagging success largely to the consistently good quality of its wares and to the attractiveness and convenience of their containers. But a team of twenty chemists are giving constant thought to finding ways and means of improving the quality of output. A new kind of carbon paper that is cleaner to handle and lasts longer than that generally in use today is, for example, to be put on the market before the year is out. Although it will cost rather more to buy, it will be cheaper to use in the long run. Carbon paper is Günther Wagner's principal source of income.

In addition to exploiting all the customary media of advertising, the sales promotion department makes a special point of writing directly to many potential customers. Any office anywhere in the world in which ten or more machines are being used may be approached in this way. Great care is taken in the translation of letters intended to proselytise abroad. Promotion letters addressed to firms in Latin America, for instance, are first sent to Spain for translation.

FINDING their former profitable markets in east Germany and eastern Europe still closed, Günther Wagner are intensifying their efforts to sell in the West. As much as 37 per cent of the firm's total production went abroad last year. Nearly a fifth of all exports were sold to Latin America. In Europe, Günther Wagner manufacture their own articles in Milan, Vienna, and Zurich; and these factories also take a certain amount of material made in Hanover. In Barcelona, a factory which used to belong to Günther Wagner continues to make *Pelikan* articles under licence. In Sweden, Holland and Britain the Hanover products are sold through agents who have the sole right to import.

In Latin America, Günther Wagner's far-flung interests are complicated here and there by setbacks received during the war. Only last year the firm brought back its confiscated factory at Buenos Aires. Here some 140 workers are employed chiefly in making ink and gum for sale in Argentina exclusively. The firm's small factory in Chile, compelled to close down during the war, has now ceased to exist. A sizeable factory at Rio de Janeiro was confiscated when Brazil came into the war. This factory is still using Günther Wagner's name, but recently was ordered to drop the *Pelikan* trade mark. There are plans for expanding exports to Latin America, particularly to Brazil, Colombia and Mexico. Asked whether the firm feels inhibited by the political uncertainties in that part of the world, Günther Wagner's spokesman replies with a wan smile: " Why pick on Latin America? We have lost factories also in Bucharest, Sofia, Zagreb and Warsaw."

The firm has a record of good relations with its workers, most of whom are women. It has never had a strike. A five-day week was introduced two years ago. Most of the production workers receive a small set wage, and the remainder of their pay is determined by piece rates. The average earnings come to DM 350 a month (about £7 a week). Most of the women concerned are either unmarried daughters living at home or wives supplementing their husbands' income. After ten years' service all workers qualify for the pension fund which was inaugurated in 1925. This enables women to retire at 60 and men at 65 on a pension almost equivalent to their former pay.

INDUSTRIAL BANKERS

Paid up Capital **£544,000**
Assets exceed **£3,000,000**

Directors: J. B. Campbell, J. W. W. Huntrods
P. H. Russell Smith, A.C.A., P. J. Cannon, G. Keighley

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms :

Money at 1 month's call, 4½% per annum, maximum £5,000
Money at 3 months' call, 5½% per annum, maximum £25,000
Money at 6 months' call, 6% per annum, maximum £50,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC10 explaining our mode of operation.

THE BUSINESS WORLD

Can Bank Rate Do It ?

THURSDAY'S rise in Bank rate from 4 to 5 per cent marks the first turn in official economic policy towards active restraint. Beginning with the first reductions in Bank rate from 7 per cent two years ago and culminating in last April's considerable budget reliefs, the authorities have successfully countered trade recession and encouraged most of Britain's industry into a rarely equalled pace of expansion. The very success of this policy made it certain that official guidance would have to change direction ; the rise in interest rates in other leading world centres made it probable that the turn in London would come sooner rather than later and that Bank rate would be the chosen instrument for it. But the fact that this change was expected does not minimise its significance.

In a real sense, Britain's economy and the way it is run are now on test. Through these last months, the authorities themselves and economists and investors outside have watched the gathering recovery with an inevitable apprehension at the back of their minds: can expansion go on smoothly, or must it be punctured by excessive boom and long drawn-out attempts to control it ? That happened five years ago, and for three years industrial output did not rise at all. Happily, there are important differences in the state of the British economy now compared with 1955. The boom is not so universally spread. Reserves of labour are probably larger. The pressure of wages, although it is becoming stronger, is still small by postwar standards, and so far more than matched by rising output per worker. Prices have enjoyed record postwar stability, and the foreign balance is not weak. Above all, perhaps, there is the very experience of the recent past. The authorities are determined not to repeat the error of too little too late made in 1954-55, and they have behind them their action of 1957 to demonstrate to opinion at home and abroad that monetary stability will be defended. These are the reasons why Bank rate has now been raised by 1 per cent and why on this occasion action may have been taken in time to steady the boom.

The increase has come rather earlier than most people expected, and probably earlier than the authorities themselves thought likely at the end of last year. The main reason for doing it sooner has been domestic, not external. Since the turn of the year it has become clear that industry has made quite exceptionally large upward revisions in its investment plans for 1960. The one element so long missing in the British boom has been supplied with astonishing speed.

These revisions of investment intentions alone now imply an increase of perhaps £250 million in total demand on Britain's resources this year, as against the fall of £40 million in their investment demand that these businessmen had forecast earlier ; and this increase would be only on the investment they control, roughly half of the country's total fixed capital formation. This figuring includes nothing for increases that may be expected in private housebuilding: moreover, public investment has recently been showing quite a significant rise, as a delayed result of the increases decided on in autumn, 1958. In fixed investment alone, these indications would suggest a resurgent boom capable of surpassing the investment boom of 1954-57—quite apart from the not wholly spent surge of consumer demand, the continued building up of stocks, and possible increases in Government expenditure.

LAST summer, when a sample of manufacturing companies was asked by the Board of Trade how much they expected to invest in 1960, they said they would spend about 5 per cent less than in 1959 ; and a small sample of companies in construction, transport, distribution, commerce and services, investment in which had been rising by 7-9 per cent each year since 1956, said they expected to invest if anything a little less than last year. But by the end of the year these manufacturers had utterly changed their minds. They now expected to spend 14 per cent more this year than last (17 per cent more on plant, machinery and vehicles and 8 per cent more on building) ; and a larger sample of companies in other industries and services had revised their expectations for 1960 up to a rise of 20 per cent (33⅓ per cent more building, 20 per cent more plant and machinery, but only the same expenditure on vehicles).

Much of the large upward revision in expectations about manufacturing investment this year has been accounted for by the iron and steel and the motor vehicle trades: both, the Board of Trade reports, say that they now intend to spend half as much again in 1960 as in 1959, after saying in the summer that they might spend about the same. The motor manufacturers, whose capital expenditure had come down very sharply in the past two years—by the middle of last year to little more than half of what they were spending in mid-1957, before allowing for price changes—did not delay long after the election and the Motor Show to announce their exuberant plans for further expansion, apparently involving expenditure of well over £100 million.

An upward revision of 50 per cent in the investment plans of the steel industry is more surprising: this is an industry in which capital expenditure is ordinarily " programmed " as a

whole farther in advance than in any other in private ownership. It does appear, however, that an exceptional volume of projects was approved by the Iron and Steel Board last year: there were new schemes for universal beam mills to compete with the one Dorman Long has completed, for section mills, for the conversion of existing steel-making plant to new processes, and for modification of existing rolling plant, in addition to the huge projects at Newport and Ravenscraig. It may be that in the early summer, before the recession ended, when companies were asked about their intentions, some were toying with the idea of postponement: equally, at the end of the year, others could have reckoned on more rapid progress with schemes still to be approved by the board than may in practice prove possible.

The rest of industry indicated a smaller but still significant change in intentions to invest: from 5 per cent lower to 4 per cent higher. Statistics of orders from the engineering industries have recently been delayed, and reach no farther ahead than last September-October, by which time total orderbooks appeared little fuller than in the summer. Since then, if these declarations of intent have been translated into action, one would expect a very substantial increase in new ordering to have occurred for machine tools and steelworks plant, and some smaller improvement in orders for other types of capital goods.

The rise of 1 per cent in Bank rate, which means a commensurate rise in overdraft rates to 5½ per cent for prime borrowers, is not expected to have any drastic effect on most investment plans. But it should help to discourage the more speculative ventures (which have so far been less in evidence than five years ago). A similar effect may be expected on stockbuilding: in some industries this is bound to go further, but the warning signal should not be without effect. The authorities are also hoping to impart some restraint upon consumer spending, since there will plainly be little room for much further increase this year side by side with the big increase in investment demand. In recent months the rise in consumption has slackened, though it remains very high, and the authorities are anxious that it should not receive any big stimulus from large wage increases. Here, too, the Bank rate warning will help. And the banks, whose advances are already slackening, will surely see added reason to tighten their scrutiny.

OBVIOUSLY no one knows yet whether the bid to restrain the boom in its early stages and by using the mechanism of interest rates is going to succeed. It may, in the end, become necessary to reach again for the old undesirable bludgeons such as hire purchase controls, and perhaps for new ones such as special deposits. All that can be said is that by acting early and firmly, the monetary authorities have given themselves the best chance. They have given a salutary check to the dangerous boom psychology that has recently affected the stock exchange and they should have scotched any wishful thinking about another give-away budget. This restraining action on business psychology, provided it is maintained as necessary in coming months, could be decisive in maintaining the momentum of the economy.

Before the event, most people thought that the main consideration determining the timing of a Bank rate increase was external, the loss of funds from London to New York and Continental centres where interest rates are higher and credit is more difficult to obtain. This does not seem to have been the case for Thursday's rise. Rates in London could not indefinitely remain far below the world level, but an outflow at the pace of £20 million a month experienced in November and December was not regarded as alarming with the reserves at their present level. Moreover, the authorities in London have been anxious to avoid any suggestion of leap-frogging in international money rates, and in particular to avoid embarrassing the United States. But now that the domestic conjuncture has called for a rise, they have seen no reason to hold back, especially as 1960's surplus in the current balance of payments is expected to be smaller than in 1959, and commitments for overseas aid and investment look like growing rather than easing. The United States and Germany seem likely to tighten credit further on their own domestic considerations. If that happened, the increased differential would have forced London's hand. New York has been on the brink of a rise for some weeks and London's action could possibly give it the final push. Even so, the transfer of funds from London, and the equally important shift of borrowing to it, should be checked by its higher Bank rate, and sterling should show some of its customary seasonal strength. After the announcement on Thursday, sterling rose from under par to $2.80^{3}/_{4}$.

IN the stock markets Thursday's reaction was mixed and uncertain. Some of the froth had already been blown off the equity boom, which may be attributed to intelligent anticipation of 5 per cent, to the (not particularly firm) warnings from bank chairmen, or to Mr Richard Dimbleby, according to fancy. The weightiest warning about the boom in share prices was in fact made by the Governor of the Bank of England in November, and the markets took scant notice

of that. Reappraisal in the new year followed predictably from the strange upsurge over Christmas; *The Economist* indicator, falling 16.1 points or 4¼ per cent from its peak three weeks ago, was still on Wednesday higher than in mid-December.

On Thursday equity prices were immediately marked down after the announcement; a small recovery was staged in the early afternoon but towards the close prices were falling again. Bank shares, hire purchase and steel shares were most affected; otherwise falls were moderate and the *Financial Times* ordinary index fell by 3.7 points to 321.5—much less than on Tuesday. The general view was that prices probably still have some way to fall, but that the year's dividend prospects are after all still good and that the institutions will step in with buying orders before the fall goes far—in many people's view with a limit of 10 per cent from its peak, which implies a level of something over 300 for the *Financial Times* index. This is in line with opinions earlier in the week; but the Bank rate change imparts a new uncertainty.

Uncertainty will surely draw still more attention to yields, and to the higher returns available on fixed-income stocks. Gilt-edged stocks were marked down sharply on Thursday, and falls ranged to one point on the undated stocks. Such falls are not in fact large on a day of a 1 per cent rise in Bank rate, and neither the authorities nor gilt-edged brokers were unduly concerned. The Bank of England, wisely, now attaches more importance to attainment of a steady market, in which the authorities can sell, than a rising one. If the market now falls quickly by a point or two the higher yields will add to the investment attractions of gilt-edged. Perhaps significantly, some buying of long-dated stocks was noticeable on Thursday afternoon. In their market tactics, too, the monetary authorities are creating the appropriate atmosphere for regulating, and therefore maintaining, economic expansion.

Banking for Profit

AT a time when banks are trying vigorously to widen their services through the community, bankers ought to be keen to secure the widest audience for their pronouncements. They have missed the chance to contribute much before the event to the discussion about Bank rate or give particular warnings about the level of ordinary shares; their conventional wisdom has been expressed in general comments about booming markets and over-optimism. If there is a field in which practising bankers are uniquely qualified to speak, it is surely on the questions of monetary management. It is strange that this year the report of the Radcliffe committee is given serious attention only by Lord Monckton (whose leadership of the Midland Bank is producing remarkable results) and to some extent by Mr Anthony Tuke of Barclays; Sir Oliver Franks of Lloyds, himself a member of the committee, reports next week. Big changes in the international capital market have followed the lifting of exchange and trade restrictions; but the bankers do not come to grips with them either.

For the investor in bank shares, however, there may be more profit in the bankers' speeches and accounts. In the eighteen months since the lifting of credit restrictions, the investment status of bank shares has been transformed. Increases in dividend distributions, often through scrip issues and big cash issues to shareholders at favourable prices, put bank shares in the forefront of the stock exchange boom: as the table overleaf shows, bank shares (adjusted for these changes) have fairly uniformly doubled since mid-1958. They have appealed especially to the small investor; personal shareholdings in the Midland make up threequarters of all holdings, and in these personal holdings women hold twice as many shares as men.

The record results declared for 1959—profits of the big seven banks rose by almost a quarter and dividend payments by over a third—caused no general rise in the market; they had been discounted. The large rights issues, to a total of over £45 million, themselves postulated an increase in rates of profit if dividend rates were to be maintained; the point here is that a deposit bank, with its very large "gearing" of deposit money to ordinary capital, obtains a much less than proportionate increase in immediate earning power from an increase in that capital.

In the past year the banks have increased their profits to meet their shareholders' heightened expectations—though the published profits of Lloyds have increased less than its dividends. The two big favourable elements have been the cut in income tax (the exact effect of which cannot be seen, since the banks show their profits only after provisions for tax and "contingencies") and the upsurge in advances, by an average of 30 per cent compared with 1958.

Adverse influences on profits have been present, too: interest rates have been lower, investment portfolios have been reduced, and costs of administration (including the more rapid expansion and modernising of bank offices) have risen sharply as increasing business has been working the banking machine almost to capacity. Last year's extraordinary increase in advances cannot go much further: indeed some banks are finding that they have stopped rising (and 5 per cent Bank rate will have its further effect). The spread of the banking habit has only just got under way; that is the growth on which bank shares are now counting. But in the short run it must surely involve significant additional costs (possibly including evening opening); neither quick results nor quick profits can be expected from it. Nor is there some miracle of mechanisation to cut costs and relieve the strain; tentative steps in electronics have been taken by individual banks in the past year, but the complexities of their general application to banking operations are not solved yet.

WHERE then can the banks find their source of extra earnings? In some measure they have already found it—in instalment lending. They entered this field eighteen months ago, all through participations in the capital of hire purchase companies, and some through new "personal" instalment loans of their own. Close study of the accounts gives striking

evidence of the profit already secured from these ventures; is there any reason why bank chairmen should be so curiously reticent about it? Mr Tuke, for instance, seems to belittle the relative contribution of the dividend on the 25 per cent interest in United Dominions Trust held by Barclays. It may be that this investment cost Barclays less than a quarter of one per cent of the bank's balance-sheet total. But it is surely more relevant that the investment has provided nearly 4 per cent of Barclays' published profits for 1959 and accounts for 17 per cent of the increase in them. It brings, too, a net yield of 4 per cent on Barclays' 1958 purchase, which is an attractive return that few others have recently been able to secure from a hire purchase investment. But the weight of hire purchase in banking profits has approached the notably higher figure of 10 per cent at Lloyds and the National Provincial, which have the biggest stake in hire purchase companies among the clearing banks. (Outside this circle, the National Commercial Bank of Scotland may already be earning as much from hire purchase as from banking.) More significantly, around one-half of the increase in the year's published profit at Lloyds and the National Provincial, and also at Martins, has come from hire purchase; without these contributions, the banks surely could not have been as generous in their dividends.

It was no accident that these two banks with the biggest commitment in hire purchase were the only ones that stayed aloof from personal loans. But enthusiasm in pressing personal loans has plainly varied considerably among the banks that offer them. Barclays normally tries to persuade its customers to take the more economical and more flexible overdraft; "the field which lies between orthodox banking and hire purchase finance," says Mr Tuke, "does not after all seem to be a very large one." A different emphasis is given by Lord Aldenham of the Westminster (who says that personal loans have proved "very attractive" and a "welcome source of new business") and by Lord Monckton, the only bank chairman to give any figures about new schemes. The number of loans current at the Midland is now well over three times as large as a year ago, and numbers about 160,000; the average loan is £150, so that the total granted is some £24 million. Even in these two banks, it seems, some branch managers are still lukewarm about this new "packaged" lending; it has happened quite frequently that a manager advised his customer to borrow on overdraft, at 5 or 5½ per cent (while Bank rate was 4 per cent), but the customer has insisted on taking instead a personal loan at an effective interest rate on the average sum outstanding of over 9 per cent, which the rate of 5 per cent on the initial balance involves. The fact is that to the ordinary man the true rate of interest is an abstraction, so long as he is working within his weekly or monthly budget.

It is far from being an abstraction for the bank. Suppose that the Midland's personal loans averaged £16 million through 1959; assume next that the bank earned 3 per cent net more on them than on personal overdrafts (after finding, say, one per cent against bad debts on personal loans); then the additional earnings from making the advances on personal loans instead of on overdraft would be close to half a million pounds. Allowing for tax, these additional earnings on the Midland's personal loans, which represent only 3 per cent of the bank's total advances, would have provided fully one-quarter of 1959's big increase in profits. The banks that are pushing these loans are on to a good thing.

All the banks have achieved big increases in new accounts in the past year. Barclays has stated that it now has "well over two million" current accounts: the other bankers give no figure (following their general practice of disclosing only those figures that cannot be bettered by their rivals). Lord Monckton makes the impressive but Soviet-style revelation that "the number of customers' accounts of all kinds has risen by 14 per cent over the past sixteen months, as compared with 5½ per cent over the preceding thirty-two months." Personal cheque accounts, which carry a low fixed charge but do not rank for any supplementary banking services, total "tens of thousands"; their main contribution has been to attract new customers into the bank (and into other banks too); once they are there many of them decide they want the full service of an ordinary current account.

The partial repeal of the Truck Acts now under way receives a cautious welcome from the bankers, who put due emphasis on the primacy of wage earners' social habits. Sir Harold Bibby, of Martins, says that "it is thought" (he does not say by whom) that 30 per cent of all households at present use the banks. Mr Tuke puts his finger on the crux of the matter when he points out that many of the potential problems of catering for the wage earner would be solved if wives were entrusted with the bank book. Many of the younger generation of working men would regard that as too high a price to pay for a banking account. None of the other bankers shows

Maybach rail traction diesel engines—
from 400 to 2,000 hp—
can achieve 16,000 hours between major overhauls...

...ANOTHER ENGINEERING ADVANCE FROM BRISTOL SIDDELEY

Bristol Siddeley Engines Limited produce Maybach* rail traction diesel engines. Covering a power range from 400 to 2,000 hp, these diesels are amazingly reliable and have shown that they can achieve major overhaul lives of 12,000 to 16,000 hours!

The *proven* basic design features of the whole range (straight 4 to 16-cylinder V) are the same, and each unit can be turbo-charged, or turbo-charged and intercooled. The range operates between 1,200 and 1,600 rpm and *combines the best performance and design qualities of high, medium and low-speed diesel engines:* light weight and compactness, excellent thermal efficiency and extremely long life.

Advanced design features. The pistons are pressure-oil cooled. This gives very efficient heat dissipation and reduces liner and gas ring wear to a minimum. The roller bearing, disc-webbed crankshaft is exceptionally rigid within its tunnel housing, and in practice withdrawal is not normally necessary before 12,000 hours running. So low is big end bearing wear that in some cases the protective lead flash has been found to be intact when examined after 15,000 hours running!

Since the cylinder bore and stroke, and the majority of components, are identical in all models, spares stocks are considerably reduced. Servicing also has been greatly simplified because much thought has been given to accessibility and the removal of components. And the engines are suitable for both hydraulic and electric transmission.

World-wide application. Maybach rail traction diesel engines are in service all over the world and have built up an unsurpassed record for reliable and economic operation. Bristol Siddeley Maybach engines power the new diesel hydraulic locomotives of British Railways Western Region and an additional order for a large number has just been placed.

For further information please write to: Maybach Sales Manager, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

BRISTOL SIDDELEY ENGINES LIMITED

US* makes steels

Our grammar is fine. So are our steels. US is United Steel, the group of companies which produce the widest range of steels and steel products in Britain.

Not just steel—but steels. Each with its specialised qualities and specified uses . . . steel for motor cars, watches or umbrellas. Mining machinery, saucepans or railway lines. Over one-eighth of this country's steel is produced by the 37,000 people employed in United Steel.

Companies in the United Steel group retain their individuality to a remarkable extent. They are specialists—geared to understand the manifold problems of modern industry. You will see their work in straightforward railway axles, or the complex structure of Jodrell Bank radio telescope.

The many special steels that nuclear reactors demand, the seaworthy and airworthy steels for *m.v. Oriana* or the newest *Comet IV*—US makes them all. And to specialisation, United Steel adds the benefits of large-scale co-operation in research and marketing. That's why it pays to know US.

any sign of following the Midland in offering personal cheque accounts or formal term loans to farmers and business men; in both contents, they stress the flexibility of existing arrangements. Mr D. J. Robarts, of the National Provincial, also repeats his warning that a bank cannot afford to lock up more than a modest proportion of its resources in medium-term or long-term credits.

The bankers give no overt signs of any early renewal of interest in gilt-edged. Most of them probably still favour advances as their staple earning asset, and would be prepared to reduce investment portfolios further in order to raise the advances ratio. Mr Tuke's intimation that he would like to see advances between 45 and 50 per cent of deposits, saying that this would leave 20 per cent for investments, seems to find general support. But these hopes are unlikely to be translated into practice in the near future. In the coming year, which on a pessimistic view could conceivably see the first calling of special deposits, bankers may pay special attention to their liquidity. In recent years they have achieved a significant shortening in the average life of their gilt-edged holdings—the majority of the Midland's investments now mature within five years and of Martins' within four—and for the time being this process is unlikely to be reversed.

Banks now have to live up to their classification by the stock market as "growth" businesses. Given the limitations that are bound to be imposed on their operations from time to time by official monetary policy, they cannot afford to neglect the opportunities they have recently established for increasing the profitability of their lending. And they can do this in the knowledge that in this instance more profit for them means better service or cheaper credit for the customer.

BUSINESS NOTES

MOTORS

BMC Goes Afield

BRITISH MOTOR CORPORATION was the first of the motor manufacturers to announce its share of the industry's latest round of expansion: it has also been the first to strike a bargain with the Government about where its expansion is to take place. The result of these negotiations, which BMC says were "tough to start with but considerably softened on both sides as they went on," was announced on Thursday; it can be fairly described as a package deal. About £26 million of the £46 million or so that the group plans to spend in Britain (plus £3 million overseas) to raise its annual output capacity from 750,000 vehicles (the present rate of output is 675,000) to a million by the beginning of 1962 will go into re-equipping existing plant in the traditional Birmingham and Oxford areas of Austin and Nuffield, and into adding five new factories or extensions there. The other £20 million will be spent on completely new factories in Scotland, Wales, and on Merseyside, at places which appear in the list of 37 "localities with high unemployment," that the Board of Trade brought with it into the negotiations.

In terms of extra labour rather than of capital expenditure, the bulk of BMC's expansion will go to these three areas of high unemployment. The plan now agreed with the Government—the second that BMC submitted—will involve, broadly, keeping production of cars and vans in the Midland and Oxford areas and shifting the entire production of Nuffield tractors and of BMC's heavier lorries to Scotland; providing for an extension to Fisher and Ludlow's output of household appliances and certain kinds of industrial equipment (at present made at Castle Bromwich) in a new factory at Kirkby, Liverpool; siting new press shop facilities for the production of motor bodies and of sub-assemblies near Llanelly in South Wales and extending BMC's existing radiator plant there. This will create nearly 8,000 new jobs in Scotland and Wales and on Merseyside: the £20 million outlay on facilities in these areas will be about equally divided between buildings—which the Board of Trade will build and which BMC will pay for over a period of fifteen years—and equipment. BMC had for some time been thinking of concentrating its tractor production, which is at present spread over four different plants in the Birmingham area. It says too that it always intended to site any extra press facilities near the strip mills where steel sheet is made.

—But Also Grows at Home

THESE moves for BMC tractors and press shops will free a certain, as yet unspecified, amount of existing factory space in the Birmingham area. The corporation proposes additionally to build three new factories or extensions in Birmingham itself, additional storage facilities for spare parts storage space in the Oxford area, and a new packing centre at Swynnerton in North Staffordshire for "completely knocked down" export shipments. Apart from Swynnerton, where BMC will employ nearly 1,000 men, these extensions, so BMC claims, will not mean taking on any more people in these areas than they already employ; nor will it mean that anyone now on their payroll will lose his job. These new factories and extensions in the Midlands will cost over £3 million; the remaining £23 million of the expansion expenditure will go into extensive re-equipment at the existing factories.

BMC has agreed in principle with unions in Wales and Scotland that it will pay the same "rates and earnings" as those ruling in the district; in the more traditional areas of car manufacturing, earnings are generally higher than in other kinds of engineering though rates may be the same nationally. The agreement will mean that in the new plants in Scotland and Wales labour costs, at least at the outset, may be slightly lower. But transport costs will be higher; the re-siting of tractor and commercial vehicle production in Scotland, including such components as diesel engines, gearboxes and axles, may prove an expensive operation.

BMC's Scottish site will be at Bathgate in West Lothian, subject to the results of test borings of the subsoil. But both this site and that in South Wales, which will finally be selected this weekend, have yet to be purchased and given planning approval, though BMC hardly expects any difficulty. As the corporation was obviously pleased to be able to announce this week, the 51-acre site that it owns at Cofton Hackett, near Longbridge in Birmingham's green belt, does not feature, and never has, in BMC's plans of expansion for the early sixties.

THE FRANC

After Pinay

THE withdrawal of M. Pinay from the French Ministry of Finance has so far had little perceptible effect on the franc in the foreign exchange market. One reason

for this is that his "unwilling" successor, M. Baumgartner, previously Governor of the Bank of France, is reassuring to foreign as well as to domestic opinion. He played an important part in securing the acceptance of the Rueff report and stands for continuity of the policy maintained so successfully during the past year by M. Pinay. Whether, as the non-political technician, he will have the power to resist erosion of that policy is a question to which more cynical than reassuring answers are to be heard in the foreign exchange market. But that is a question for the future. For the present there have been rumours that the authorities may be contemplating, as a gesture of confidence, further exchange relaxations, and notably a freeing of the gold market; at present, French residents are allowed to hold gold, and Paris is the most active domestic gold market in Europe, but imports and exports of gold are formally forbidden.

Another reason for the franc's resistance to political difficulties is that the current of international payments has been strongly in favour of France. For some weeks the Bank of France had been buying dollars heavily to prevent the dollar rate falling to its lower gold point of 4.90. The departure of M. Pinay caused this inflow of dollars into the French reserves to slow down, and with the troubles of the Massu interview, the inflow may have stopped completely. The dollar rate in Paris moved against the franc at the end of last week from 4.9060 to 4.9118; it has since swung back again to around 4.909.

Against sterling the rate moved at the end of last week from 13.73 to 13.74¼, but there has been a partial recovery to 13.73¾. Evidence of pressure against the franc has been apparent in the forward market, where the three months discount in terms of sterling quoted at 1¼–¼ centimes before the Pinay departure widened to 2-2½. Reports from Paris also speak of a perceptible increase in the public buying of gold in the Paris market. This, however, has been fully neutralised by official intervention and there has been no appreciable change in the prices quoted. The franc has ridden the Pinay storm with an impressive show of buoyancy.

PRICES

A Matter of Emphasis

TALK of any "head-on collision" between the Federation of British Industries and the Chancellor of the Exchequer about reducing prices, as the federation's president Mr MacFadzean declared this week, is nonsense: but there are real differences of emphasis between their two approaches, and the grand council of the federation saw no reason to conceal them in its response to Mr Heathcoat Amory's recent appeals. The very form of this response—a letter to the Chancellor released for publication and circulated to FBI members, rather than any direct appeal to members—illustrates the quandary that the FBI found itself in: formally, the prices that its members care to charge are none of the federation's business; and informally, the council thinks that by now exhortation does little but irritate industrialists.

The FBI's letter to the Chancellor puts the emphasis on stability, rather than reduction, of prices (Mr MacFadzean, as chairman of British Insulated Callender's Cables, has recently managed to achieve the one in part of the British market for cables, by bringing an end to the other). It points out that other sections of industry and commerce—nationalised industries, the distributive trades, and trade unions—share responsibility for this stability of prices. Manufactured goods, it adds, account for only part of the retail price index: manufacturers' costs are not wholly, or evenly, within their control: and whatever part is assigned to self-financing, some of the margin between costs and prices must be ploughed back into technical and marketing research and development. Competition "whether in price, quality or service" is, it says, in most cases the greatest single factor companies have to take into account: this is being intensified by the liberalisation of imports from Europe and the United States.

What is perhaps most significant in the federation's economic comments is the implicit rejection of the thesis first put forward by the Cohen Council, and broadly accepted by the Chancellor: that manufacturing industry has a special responsibility, and needs on balance to be reducing its prices, to keep the general level of prices stable. The argument was that labour productivity can be increased in manufacturing to an extent that inherently cannot be matched in other sectors of the economy such as distribution and services; that all sectors of the population were entitled to share in the benefits of that increased productivity; and that the benefits should therefore not be reserved to shareholders and workers in manufacturing, but to some extent passed on by the reduction of manufacturing prices; which reduction, offsetting the rises inevitable in trades where productivity could not be increased enough to match the rises in wages that unions in such trades were entitled to or anyway would obtain, could keep the general level of prices stable. There is much to be said for this, but it can hardly be expected to please representatives of the more dynamic sectors of the economy; it has not pleased the FBI. "The fruits of higher productivity can be shared when they are achieved and not before" comments the federation somewhat oracularly. "Some long term thinking is clearly necessary on the principles which should be applied to the process of sharing."

BIDS AND DEALS

Ins and Outs

NEWS about take-over bids has continued to pour in this week. Among the more important of the moves and counter moves are:

1. Fisons has withdrawn its bid of 82s. in cash for the ordinary shares of Crosse and Blackwell, leaving the field open to Nestlé which has received Treasury consent to make its bid of 84s. in cash. C and B shares have fallen back to 81s. 6d.
2. Having been informed that St. Martin Preserving has secured assents to its bid from owners of 25 per cent of Foster Clark ordinary, Seton Trust has withdrawn its bid on behalf of unnamed clients of cash and Foster Clark preference shares for Foster Clark ordinary.
3. The directors of Griffiths Hughes, makers of "Kruschen" salts and other proprietary products, have recommended shareholders to accept the bid of £6 in cash plus three ordinary shares in Aspro-Nicholas (now standing at 37s. 10½d.) for every £4 of Griffiths Hughes ordinary (now standing at 57s. 10½d.) or the alternative offer by S. G. Warburg and Company to those who do not wish to retain a holding in the merged concern of 60s. in cash for each Griffiths Hughes ordinary.
4. The Prestige Group, which manufactures kitchen utensils and which is controlled by Ekco Products of Chicago, has made a bid of 9s. in cash for every "A" ordinary and 2s. 3d. for every "B" ordinary in O-Cedar, manufacturers of mops, polishes and other domestic products.
5. City and Central Investments, whose chairman is Mr Charles Clore, has agreed to acquire all the issued capital of a group of property investment companies which owns over 200 shops and residential property through Metrovincial Properties which has a big interest in Hampstead Garden Suburb Estate. The final purchase price has not been fixed, but the acquisition will involve the issue of 525,000 shares in City and Central in part satisfaction.
6. Metal Industries has improved on its original bid for Lancashire Dynamo and countered the EMI bid by offering 120 5 per cent preference shares for every 100 of Lancashire Dynamo's 5½ per cent preference and for every Lancashire Dynamo ordinary either one MI ordinary plus 12s. in cash or 45s. cash plus a half MI ordinary share. With EMI at 51s. 6d. its bid of 150 of its ordinary for every 100 of Lancashire Dynamo ordinary is worth 72s. 3d. With MI ordinary at 67s. 3d. its bid is worth at best 79s. 3d. Lancashire Dynamo ordinary now stand at 75s.

AIRCRAFT INDUSTRY

What's for Investors?

DECEMBER found the aircraft market in a ferment following the merger of Hawker Siddeley and de Havilland. Aircraft shares have been busy since then and show some significant price increases. This week has seen some profit taking and the shares have fallen back in line with the rest of the market. Investors must now consider the prospects of the new groups and some light has been shed on this by statements from the chairman of Hawker Siddeley and Bristol Aeroplane.

Hawker Siddeley expect to pay "not less than" 10 per cent for the year to July 31st next on the capital as increased by the acquisitions of the de Havilland and Blackburn groups. Profits of de Havilland for the year to September 30th last are estimated at £2,199,000 (before tax) against £383,775 in 1957-58. Blackburn's profits are being maintained and although Hawker's profits from its Canadian group will be lower, trading profits of the British group

'TCA certainly brings home the value of Canadian markets'

It was only yesterday—wasn't it?—that rich Canadian markets seemed just a little distant. Funny how quickly geography dates: because these very same markets are now practically on your doorstep almost begging you to collect your share of new business. This situation is nicely helped along by TCA—Canada's own international airline. TCA's transatlantic services enable you, your executives, and technical men, to make flying visits to anywhere in Canada, *any day of the week.* And TCA Air Freight offers you a direct-delivery service that ties up the whole of Canada into a neat marketing proposition.

For the rest of the story, the people to get in touch with are your Travel Agent and Forwarding Agent.

ONLY TCA OFFERS YOU:

- Through flights to Toronto from the U.K.
- Through flights from London to Winnipeg and Vancouver
- Daily services with same-airline connections to *all* Canada
- To and beyond the Montreal 'gateway' to Ottawa, Toronto, Winnipeg, Edmonton, Vancouver, and to key U.S. cities

TO CANADA—ACROSS CANADA—AND TO KEY U.S. CITIES

Your Travel Agent is the man to see

at the end of this month, and to those who subscribed to the issue last March conversion would show a profit of about 1s. 6d. a share at the current price.

The outlook for the three members of the other big merger, English Electric, Vickers-Armstrongs and Bristol Aeroplane, is rather different, since these three have formed a holding company that is going to plough back a great deal of any profits it earns to finance future development. There is now a sharp divorce between the aircraft interests and the other interests of Vickers-Armstrongs and English Electric. Bristol Aeroplane, with its 50 per cent interest in Bristol Siddeley Engines and its 20 per cent interest in the new aircraft manufacturing merger, is now primarily a holding company, almost an aircraft industrial trust. The chairman, Sir Reginald Verdon Smith, told stockholders that they could reasonably expect "a good prospect of participating in a variety of successful ventures,"

Unemployment

The number out of work in Great Britain rose between December 7th and January 11th by 40,000 to 460,000 or 2.1 per cent of all employees. This increase, almost entirely among the wholly unemployed, is rather less than the normal seasonal change. Unfilled vacancies were practically unchanged between the two months.

but obviously only at one remove. There is some encouragement in the board's intention to keep its ordinary dividend at 10 per cent. Bristol has sold all the Britannias that it built out of its own funds.

The industry's two most interesting outsiders are Westland, fast acquiring a monopoly of helicopter production, and Rolls-Royce. There is no mass market for helicopters, but there is a small and steady demand. Whether Westland's shares can justify the present low yield remains to be seen. Rolls-Royce stands to benefit more perhaps than any other single company from the Government's undertaking to give some help to civil work (although before the industry cheers too loudly it might wait to find on what terms aid will be given). The company, unlike the rest of the industry, does not lack orders, but its rate of progress has been slowed down by the need to find £20 million to develop a new civil engine that its customers desire. Government aid, even in small amounts, will be gratefully received. For the rest of the industry, everything now depends on who gets Mr Sandys's help, and for what.

JENKINS COMMITTEE

Evidence Invited

THE Jenkins Committee on company law reform has a long and complex job before it. That is clear from the subjects on which it is inviting the views of individuals and organisations. These subjects range well beyond specific points of law to the less precise and often debatable principles that should govern the conduct of a company's affairs. On the law, for instance, the committee has invited evidence on the memoranda of association (including under that heading the "one man" company and no par value shares); partnerships; the classification of companies; the protection of minority interests; the powers to appoint inspectors; share transfers and registration; prospectuses; information to be given in company accounts; audit; company and business names; and the disclosure of ownership and control. It will also welcome views on such subjects as unit trusts which are outside the scope of the 1948 Companies Act.

That is a big net, but it is cast even wider by the request for views, *inter alia*, on the procedures that should govern take-over bids; the powers held by directors in conducting the affairs of a company (as, for instance, in disposing of its assets); the duties of directors to the company and to shareholders; the multiplicity of directorships; and non-voting shares. The committee will thus become a forum for a debate not merely on the adequacy or otherwise of the present law but also of business ethics. It will be a long and perhaps hard-fought debate. Many of the subjects overlap and the weight of the committee's opinions might be enhanced if it presented one comprehensive report.

But would the committee consider adopting the precedent set by the Royal Commission on Taxation by issuing interim reports on any matters that it regards as self-contained?

INSURANCE MERGER

Northern and Employers

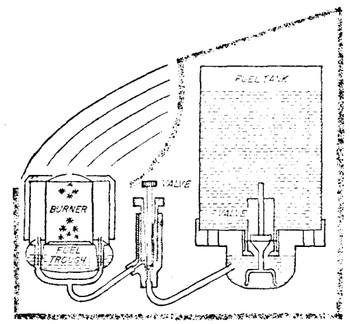
A SHARP adjustment was made on Thursday to the prices of Employers' Liability shares (up from 10¾ to 11½) and Northern Assurance (down from 6⅛ to 5½) following the terms of the projected merger between the two companies. The fact that these terms may disappoint some recent speculative buyers of Northern at up to 7 does not gainsay the strategic merits of a marriage between two such essentially complementary offices. Northern will have 59 per cent and Employers 41 per cent in the merger company's capital of £10,431,610, to be distributed share for share to Northern and 107 new N and E for every 50 Employers. Northern will be paying a total of 16 per cent (against 15 per cent) for 1959 and Employers 7s. a share (35 per cent) against 5s. 6d. After the merger, the projected dividend from Northern and Employers for 1960 will be 18½ per cent, which represents a much smaller increase for Northern shareholders than it does for Employers, whose dividend will have been effectively raised compared with 1958 from 27½ per cent to practically 40 per cent.

With this adjustment out of the way, shareholders of the two companies can give undivided attention to the long-term prospects of the scheme. Employers is strong in American casualty business; the Northern is more concerned with fire and accident underwriting in this country and the Commonwealth. The joint non-life business of the two brings in about £70 million in premiums. The Northern will continue its life business (which has shown remarkable expansion in recent years) but Employers will dispose of its holding of all the shares in Clerical, Medical and General Life Assurance so that the latter becomes a completely mutual society. A stronger grouping of two fairly specialised partners is the object of the exercise, and shareholders should have no doubt that its recommendation by the two boards is justified. A good deal lies beneath the surface of insurance accounts, but the comparative resources and net investment incomes of the two offices seem to align pretty closely with the 59:41 split.

DIAMONDS

"Don't Fight It—Join It"

AN alliance between the Soviet Union and the Diamond Corporation of South Africa may look surprising, but it



makes sense to both parties. By an exclusive agreement, the corporation will buy all the diamonds that Russia wishes to export to Western countries, and sell them through the Central Selling Organisation of the De Beers group. Details have not been revealed. Production of diamonds in Russia is growing. In the Yakutsk region of Siberia, where the deposits are stated to contain mainly industrial stones, it is planned to raise output fifteen times above the 1958 level by 1965. The discovery of a new deposit in the northern Urals was recently reported.

As Russia is believed to be short of industrial stones any export surplus may initially be of gem diamonds. Had it chosen to sell in competition with the corporation's monopoly the prices obtained by both would probably have suffered. By teaming up with the corporation Russia obtains the benefit of its world-wide selling facilities, and is assured of a stable price. The corporation, in turn, is spared a fight which might have damaged its monopoly in time.

OIL HEATERS

The Fire Risk

IT is said that a report on certain types of domestic oil heaters that is now being prepared by the Fire Research station of the Department of Scientific and Industrial Research is an alarming document. If so, it should be published at once, in order that householders will have guidance about which kinds of paraffin heaters are safe and which are not. Lord Hailsham, to whom the DSIR reports, should resist any pressure to have the report pigeon-holed while talks take place between his scientific departments and other ministries about the kind of safety regulations that ought to be introduced as a result of the DSIR's findings. Such talks take time; so do the discussions with manufacturers about the shaping of the

regulations. So long as they are in progress, some oil heaters that may be potential fire traps will continue to be used.

It is not the convector-type paraffin heaters that are in question, but the radiant type heaters. Both the oil companies and DSIR suspected at the time that the fire started by a radiant heater which killed five children at Ware before Christmas was no freak accident and DSIR had its own research programme already in hand when the tragedy happened. There is plenty of evidence now to show that in radiant heaters, where the wick is fed from an inverted fuel tank placed behind the burners, the fuel tank itself can get so hot that it volatilises some of the paraffin inside and raises the pressure within the tank, forcing fuel out of the tank at a higher rate than it can be burnt. Hot paraffin (which lights much more easily than cold) then seeps over the floor and ignites. Only in some makes of radiant heater is the tank properly protected from this hazard. Other types are rapidly being modified and regulations will deal adequately with a few makes that have not been, so far as future sales are concerned. But however quickly the manufacturers act, some twelve million paraffin heaters are already in household use and of these some will be radiant heaters prone to this dangerous over-heating unless they too are modified. The DSIR's report needs to be published to protect those who have already bought paraffin heaters even more than those who are thinking of buying them.

STOCK EXCHANGE

An Advertising Inquiry

LAST week's announcement that the Council of the London Stock Exchange is to look into the whole question of advertising by members and registered agents has sparked off a good deal of speculation about just how far relaxation will go. It has not gone far yet. The Council proposes to allow banks to display notices inside their premises informing their customers that they handle stock exchange business (but not naming the stockbrokers to whom the business is passed); and to agree that those banks that offer investment management services to the public (so far only the National Commercial Bank of Scotland) may advertise the service in the national press.

The first reaction that these proposals were "the thin end of the wedge" invites the question: what wedge? Obviously it will be a long time before brokers embark on American-type advertising campaigns to woo the swelling ranks of small investors. Banks and the broking community have received the news more soberly, and reactions seem to be mixed. With the spreading banking habit, the banks are bound to welcome any step that brings their services to the eye of the public: but their investment departments, like the brokers, are already working flat out to catch up on the backlog of business left over from the post-election boom. Brokers, too, generally welcome any measure that helps to channel small savings to the stock exchange via the banks and there is no general feeling that the banks' brokers (who are many, up and down the country) might gain some unfair advantage from the notice boards in the banks. Some of the more radical brokers declare that it is time to discard all restrictions on advertising by members, but the majority of brokers would adamantly oppose any major change. Their objection is twofold: that brokers provide a service and must follow a code of professional conduct at least as exacting as that of the law or accountancy; and (less convincing) that advertising would be "unfair" to small firms who could not afford it.

MOTOR SPIRIT

Price War in Germany

THOUGH the Preston petrol stations that have just begun a little price competition of their own are in fact selling major company brands, there has long existed a very small fringe of independent petrol supply in Britain, selling gasoline under local brand names or in some cases no brand name at all. The larger independents, such as Petrofina, obtain their supplies from the major companies, and broadly adhere to a similar pattern of prices; but in various parts of the country, mainly close to seaside places where small landing and storage installations exist, there are a number of distributors who bring in small "packets" of refined products and sell them under their own names and prices. Dealers selling the brands of the majors, largely under individual exclusive dealing agreements, are not bound to charge the prices recommended by the companies; and though the companies obviously try to persuade dealers to observe these prices, they would not cut off supplies to dealers who did not. The dealer's margin is about 5d. to 6½d. a gallon; the dealers in Preston have been cutting their prices by 3d. to 4d.

Major companies in Britain do not need to take this tiny flutter of price-cutting with anything like the seriousness of their associates in Western Germany, where the majors have themselves been forced to cut brand prices by the very effective competition from independent filling stations that have recently been handling 10-15 per cent of the petrol sold in Germany. There are about 2,500 of these independents, out of 28,000 stations in Germany; they have been selling motor spirit at 5 pfennigs a litre (5d. a gallon) less than the major brand prices. Some of their supplies come from the major companies with whom they are competing; the rest from Italy, Rumania, and other Continental countries with surplus oil and refinery surpluses of gasoline to get rid of due to the disproportionate growth of demand for black oils. M. Duttweiler, of "Migros," the price cutting organisation from Switzerland, is operating a number of stations near Frankfurt; and ENI, the state-owned Italian oil concern, plans to set up a chain of petrol stations in Bavaria—as its director Signor Mattei has indeed said that he would like to in Britain.

BULLION MARKET

Direct Gold Deals

THERE has been increasing evidence in recent weeks of direct non-official dealings in gold in South Africa. Since last September the South African Reserve Bank has been prepared to sell gold, in large consignments, to non-residents. Last week it was announced that nine tons of gold had been sold for a customer on the Continent of Europe through the firm of Mocatta and Goldsmid. This gold was flown out of South Africa and when the announcement was made it had reached its destination. It is believed that another twelve tons of gold, involving two shipments, had been bought direct through another firm of London bullion dealers. These transactions involve a total of about £8½ million. They are almost certain to have been made on behalf of a central bank, probably the Bank of France or the Deutsche Bundesbank.

South African gold has in the past been routed mainly through the London market, much of it going direct to the Bank of England. Direct deals by the Continental buyers have been stimulated mainly on grounds of cost. A minute reduction in the cost of shipping gold to a Continental centre direct, compared with a shipment to London and further transport to the ultimate desination of the metal, may justify a diversion in the customary pattern of the gold traffic. Some increase in direct dealing is likely to occur. This will not necessarily mean business lost to the London market, since London firms, acting as agents or more probably as principals, are likely to continue to handle the business. The extension of this business, however, will influence the pattern of operations through which the Bank of England exercises its combined control over the foreign exchange and bullion markets.

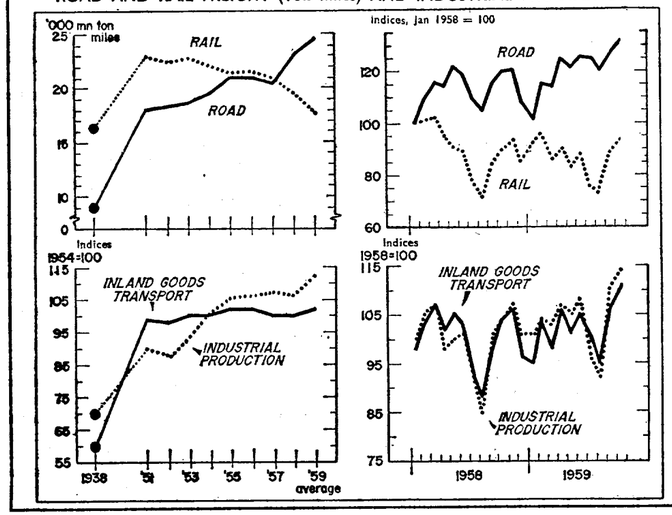
STOCK EXCHANGE MECHANISATION

Electronics in the House

THE high tide of automation is lapping the walls of the Stock Exchange. Punch card equipment, which insurance companies are already discarding (and banks are on the verge of discarding) in favour of electronic computers, makes its first appearance in the Stock Exchange settlement department early in the summer; one reason behind this week's increase in subscriptions is the cost of future, more extensive mechanisation. To give the Stock Exchange Council its due, the work of the settlement department hardly requires computer speeds; with ordinary mechanical equipment the work of the department will be completed sooner and the number of stocks on its list, now 160, could easily be doubled. What is more important at this stage is to see how members can re-arrange their office

Counting Freight

THERE are well over half a million road hauliers in Britain, if firms that run their own private fleets of lorries and vans are included in the count. The typical haulage business, too, is very small—fleets, on average, comprise only two to three vehicles—and most hauliers, understandably, are averse to paper work. So it is not surprising that road transport, unlike rail, has long been missing from the statistical picture of the economy.



Efforts to fill in this gap have however twice been made by means of sample surveys by statisticians at the Ministry of Transport, in September, 1952, and April, 1958: they were able to produce what is thought to be a reasonably accurate picture of road transport at those times. These surveys give some idea of the general pattern of road haulage operations, the kind of goods carried, the amount of work done, and the distances involved.

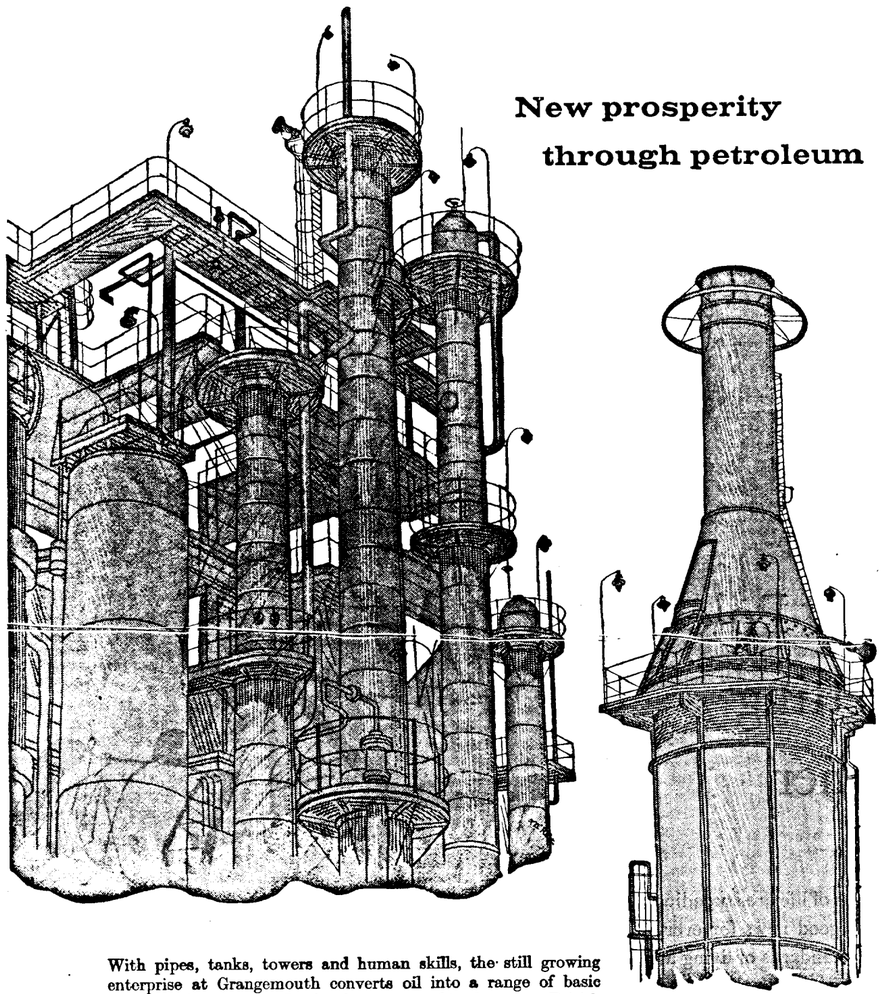
Moreover, the surveys made it possible for the first time to arrive at a reasonable estimate of the total volume of work done by road goods transport in terms of ton mileage. This unit of measurement may be less suited to road haulage than to other means of transport, since a larger proportion of road freight consists of light but bulky goods that fill the available space on a lorry more quickly than the carrying capacity in terms of weight. But ton mileages take into account both the total volume of freight and the distances hauled and are much the best way of comparing the activities of different forms of transport. Thus, road goods transport was reckoned in 1952 to be responsible for about 19,000 million ton miles of freight traffic against the 22,000 million ton miles recorded by the railways. By 1958, however, the positions had been reversed. The road total had risen to 23,000 million ton miles while the rail total had dropped to 18,000 million.

The same statisticians at the Ministry of Transport have now taken these calculations a stage further. The railways produce figures of their freight traffic, in ton miles regularly each month; the statisticians have attempted to do the same for road haulage by using the Ministry's censuses of road traffic. These traffic counts have been continuous since January, 1958, and were made less frequently before then; they enable estimates to be made of total mileages run by various types of vehicle. There are weaknesses in the traffic census figures that make it prudent to use estimates of road ton mileages derived from these with caution for the time being. But the earlier transport survey does provide a cross-check with estimates of ton mileage derived in this way by working back from the 1958 survey and the discrepancy—2.7 per cent—suggests that the new estimates are "broadly reliable."

It is now possible therefore to compare rail and road freight movement in this country and to relate the two together to industrial activity in general. Since total freight traffic appears to follow closely the pattern of industrial output in the "short run," and since this index of monthly freight traffic can be prepared more quickly than the index of production, this new series may provide another interesting economic indicator. But whereas between 1938 and 1951 there appears to have been a bigger increase in goods traffic than in industrial production the reverse seems to be true since 1951. Possibly since then transport has been used more efficiently than during and immediately after the war.

ROAD AND RAIL FREIGHT (Ton miles) AND INDUSTRIAL PRODUCTION

The North Pole is getting warmer



The comforts of life are spreading. And that is good news for everyone. Rising standards of living are finding their way into the back of beyond, bringing new benefits to people of quite modest means.

Playing a big part in this welcome development is Shell *kerosine*, a product from petroleum. Thanks to *kerosine*, hungry breadwinners in remote parts are sitting down to piping-hot dinners and toasting their toes before nice, warm stoves. Thanks to *kerosine*, people with slender purses can enjoy good light, good warmth and good cooking wherever they may live.

Kerosine, known as *paraffin* in some areas, is one of the cheapest, most convenient and accessible fuels of which the modern appliance manufacturer is taking full advantage. Well-designed cookers, stoves and heaters are being produced which are self-contained and ready for instant use anywhere. Even where other fuels are available, *kerosine* is a valuable supplement.

The population of the world increases rapidly. People must be fed, housed and kept warm. They must all be able to enjoy the good things of life. *Kerosine* is one of many Shell products which are helping the good work along.

YOU CAN BE SURE OF SHELL

New prosperity through petroleum

With pipes, tanks, towers and human skills, the still growing enterprise at Grangemouth converts oil into a range of basic materials for industry. In the short space of twelve years British Hydrocarbon Chemicals Ltd. has become a significant part of British economic life. Its plants produce varied and complex chemicals that are changing the face of industrial production, whether you turn to drugs or detergents, textiles or toys, plastics or paints, shoe soles or solvents. New prosperity for many . . . new products that can mean better living standards for millions . . . this is something of the achievement so far of British Hydrocarbon Chemicals Ltd.

British Hydrocarbon Chemicals Ltd Grangemouth · Stirlingshire

HEAD OFFICE: DEVONSHIRE HOUSE · MAYFAIR PLACE · LONDON W1 · TELEPHONE MAYFAIR 8867

routine to fit in with a standardised clerical procedure on which more extensive mechanisation would have to be based. An outline of the kind of changes likely to be made, including the introduction of codes for all stocks and the possibility of centralised accounting, was circulated to Stock Exchange members at the end of last month in a question-and-answer form prepared by consultants. This was intended to serve as a guide to highly mechanised brokers who would not want to install equipment that might later be made obsolete by any central plans that the Stock Exchange Council might adopt, and as a warning to smaller firms that have hardly mechanised at all.

It would be technically possible (and certainly useful) for the Stock Exchange to be able to clear accounts between brokers on a central computer ; this is probably the biggest single step towards automation that is within sight. But it founders, for the present, on one of the main obstacles to the wider use of computers in office routine: accounts would have to be cleared between 310 brokers and 108 jobbers with offices anything up to a mile away from the computer. How is information to be transferred between offices and computer? Either the Stock Exchange provides standing room for 400 messengers from the separate firms, each demanding their results before the banks close, or the Post Office installs 400 teletype links between the offices and the Stock Exchange building. The first solution is chaotic, the second expensive and probably prohibitive to small brokers. And the technical aspects of feeding so much separate information into a computer in a short space are formidable.

GROCERS

Wholesale Supermarkets

THE latest development in the current revolution in the distributive trades is the "cash-and-carry" wholesale food warehouses. Several have appeared in the past few years, but the first major increase in this kind of selling is most likely to come from the Weston Foods group, which opened a warehouse in Edinburgh a few weeks ago and is opening another at Reading early next month. Both warehouses have 20,000 square feet of floor space; one of them was formerly a Weston biscuit factory. They are designed primarily to deal with small family-run groceries that can afford neither to buy in bulk nor to cut prices. Some hotels, boarding houses and restaurants are also likely to become customers.

In these warehouses, goods are divided into small units, stacked on shelves, clearly priced, and labelled with large direction signs. Grocers serve themselves, pay cash, and carry the goods away in their own cars or vans. Some prices will be lower than those generally charged by wholesalers, but the main advantage will be that all prices will be adjusted to the economics of bulk buying and special-price offers made periodically by most manufacturers. At Edinburgh the prices per item are those normally charged for consignments of 2,000 cases, but buyers will be able to take as small quantities as they like. Many independent grocers are unable to take advantage of such terms on their own and the new scheme offers an alternative, or a supplement, to the voluntary buying chains that some have joined to combat the supermarkets.

The warehouses will save the cost of deliveries, travellers, some wages (half-a-dozen men can run a single self-service warehouse) and other selling costs. They hope that a quick turnover will justify their methods. The main disadvantage to the small man—that business will be for cash only—can be got around if he is willing to make frequent enough visits to the warehouse to re-stock. If the new warehouses are successful, Westons will open scores more throughout Britain. The idea is already working effectively in Canada.

SYNTHETIC FIBRES

Recovery at a Price

THE synthetic fibre industry pulled itself out of a slump last year but only at a price, of which the latest instalment was the cuts—ranging from 11 to 15 per cent—made last week by British Nylon Spinners in some of its biggest selling stocking yarns. The company says that these reductions, the first for several years, result from new capacity but it is possible to meet nylon knitters who found that until the cuts were made it had been cheaper for them to import 15 denier nylon stocking yarn from Italy than to buy it from BNS in England. Big cuts were also made three months ago in the price of some of the more exotic synthetics. Price changes in nylon, "Terylene" and the like are now important pointers to the state of the industry ; between them they probably account for a quarter of the 514 million pounds of synthetic yarn produced in 1959. Nearly half the total was viscose staple yarn, the cheapest textile fibre on the market, leaving a relatively small share for viscose filament yarns and acetate rayon.

A cynic looking at the industry's production record of 421.5 million pounds in the 1958 textile slump, and 495 million pounds in 1957, the last "normal" year, might even suggest that the 9 million pounds increase in output between 1957 and 1959 could be explained wholly in terms of the new synthetics and that rayon production was past its peak. The industry itself says that a big factor in maintaining sales has been the demand for viscose staple, mainly for carpets (which take about a sixth of production) and suitings. But this success has its dark side ; consumer organisations find, as the Board of Trade's committee may too now that it has asked for evidence from the public, that they receive more complaints about carpets than about any other single commodity.

INVESTMENT IN AUSTRALIA

Spreading the News

BRITAIN provides about sixty per cent of the overseas capital entering Australia, and about five hundred British manufacturers have subsidiaries there. Yet Sir Norman Kipping, director-general of the Federation of British Industries, found during his recent visit that Australians popularly believe that the United States is investing more in their country than Britain is, and that Britain is neglecting its opportunities. He found widespread ignorance, also, about British industrial and technical achievements, all pointing to a failure of public relations. Among the remedies now being considered by the federation is the staging of an exhibition in Sydney and Melbourne to show products of British design that are made in Britain and Australia.

The faults are not all on one side. An ambitious attempt to make British and other overseas investors more aware of local opportunities was launched by the state of Victoria this week. Backed by public and private funds, the Victoria Promotion Committee commissioned the Stanford Research Institute of California to prepare a report about Victoria in particular and the openings for new investment there. The report* points out that though Victoria is the smallest state, it has 28 per cent of the total population, and over 70 per cent of Australia's 10 million people live within 550 miles of Melbourne, the state capital. The Australian market is growing fast ; by 1975 the population is expected to rise by between 30 and 50 per cent. Hence the marginal industry of today, it is argued, will become profitable tomorrow, and investors should act before competition becomes entrenched. Among the openings suggested are central heating and air conditioning plant, floor coverings (other than carpets), motels, table poultry, components and parts for motor vehicles, the construction industry, and mutual investment funds and unit trusts.

* *Investment Opportunities in Victoria.* £4. Obtainable from the Victoria Promotion Committee (London), 47, Princes Gate, SW7.

THE STATE BUILDING SOCIETY

A New Board

ALL but one of the directors of the State Building Society have resigned to make way for a new board chosen at their request by Sir Cecil Crabbe, the Chief Registrar of Friendly Societies. The new board consists of Lord Reith (who is expected to be appointed chairman), Sir Dingwall Bateson, Sir Richard Yeabsley

A Taste of Honey

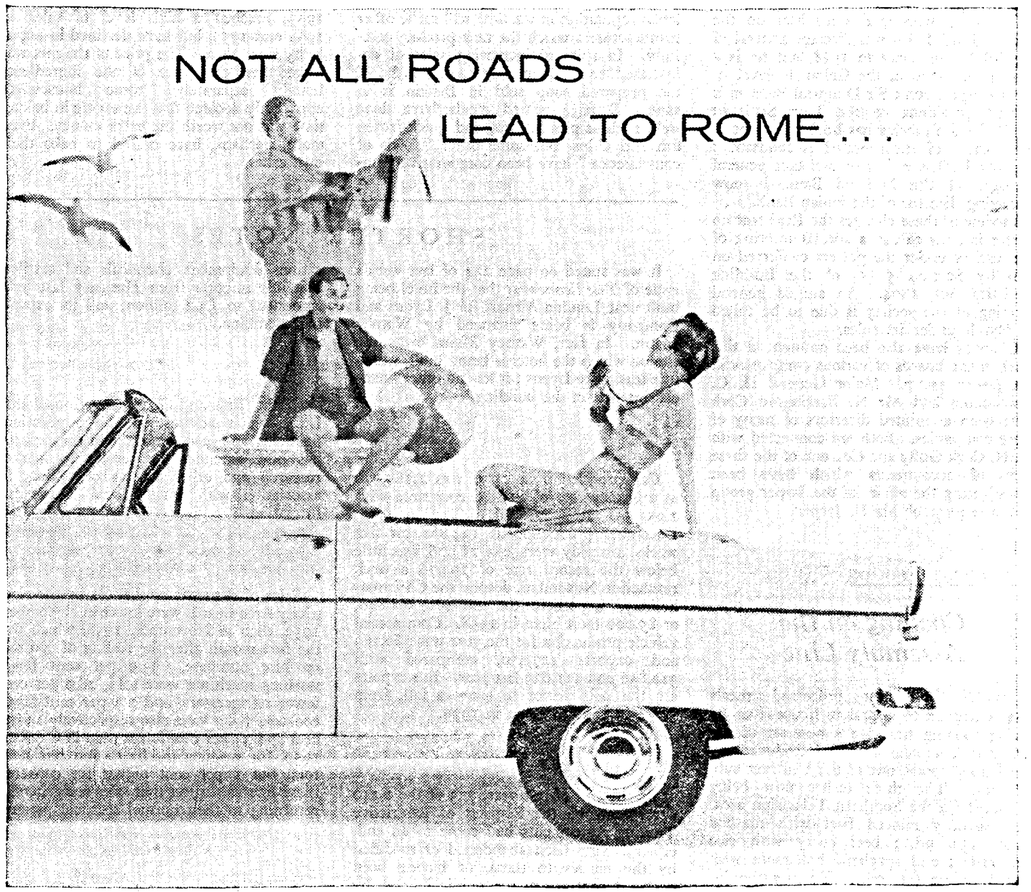
THE 481 companies whose accounts have been analysed in the September-December quarter ended their accounting years in most cases on June 30th or September 30th. These companies have thus had a full year's benefit of trading since the ending of the credit squeeze halfway through 1958. The detailed analysis appears on pages 364 and 365 and as reported last week, the combined trading profits of these companies rose by £10¼ million to £335.7 million (3½ per cent). This is in line with the trend throughout the year; the three earlier quarters showed increases in trading profits of 4½ per cent, just under 1 per cent and 2 per cent. Over the whole year, trading profits of the 2,315 companies analysed rose by just under 2 per cent.

Around one quarter of the profits reported in September-December came from 34 companies in the motors, cycles and aircraft group. This showed a drop of some £4.3 million, or 5½ per cent, the better profits from motor companies being more than offset by the fall of over £3 million in the gross profits of Hawker Siddeley and other aircraft companies. If these 34 companies are excluded, the remaining industrial groups show a rise of 6 per cent compared with a year ago; in the previous year, their profits were unchanged. The only other groups that showed falls in profits in the latest period were shipbuilding (7.9 per cent), shipping (7.6 per cent) and cotton (34 per cent). The most notable increases have been in those industries closely connected with the consumer, such as clothing and footwear (30.5 per cent) and food and confectionery (10.4 per cent). Other groups with higher profits were building (9.9 per cent), electrical manufacturing (6.9 per cent) and breweries (4.5 per cent). In the commodity groups wool (50.4 per cent) and rubber (36.8 per cent) showed striking increases.

Helped by the cut in taxation and also by non-recurring profits, net earnings have increased by 16½ per cent from £109 million to £127 million. Net ordinary dividends have risen by no less than 37½ per cent, from £40 million to £55 million, and represent over 43 per cent of available earnings, compared with under 37 per cent in the previous year. Part of this increase however reflects not only the change in the standard rate of tax but also a number of "profits tax" interim dividends relating to the previous year but paid out of this year's earnings. But there is no doubt that dividend policies are set on a liberal course.

THE gross value of the fixed assets of the 481 companies has risen only modestly by £155 million to £1,568 million. Some of this increase is due to revaluations, particularly in the breweries group, which shows a rise of £32 million in fixed assets. The other large rise in the value of fixed assets was of £36 million in the iron and steel group (consisting this quarter mainly of heavy engineering companies). A sign of quickening industrial expansion is the rise of £79 million in working capital. Some £10 million of this is in the aggregate value of stocks held and £69 million a rise in debtors (which includes substantial increase in hire purchase debts). The rise of £18 million in liquid resources is partially balanced by a growth of £9 million in bank overdrafts. The additional investment has been financed mainly by increases of £60 million in depreciation provisions, £95 million in capital and revenue reserves, £11 million in creditors and £18 million in other liabilities. New money raised during the quarter amounted to £62 million and was primarily in debenture issues, which totalled £39 million; £4 million was raised in issues of preference shares and £19 million in ordinary capital (excluding some £62 million in scrip issues).

Although there has been some small increase in assets and working capital this has been more than matched by the rate of equity return; net ordinary earnings as a proportion of net assets attributable to the ordinary capital have risen from 9 per cent to 9.6 per cent. This follows a similar rise in the third quarter, but in the latest quarter the rise has been general throughout most of the groups. By far the most impressive rise in the rate of return is shown by the clothing and footwear group, from 6.7 per cent to 10.6 per cent. Other groups to show substantial rises are electrical manufacturing, from 12.5 per cent to 14.2 per cent, and newspapers, from 11.2 per cent to 13 per cent. Most groups generally showed a rise of one point; food and confectionery showed a good increase in profits and its rate of return rose from 9.8 to 11.1 per cent. In shops and stores which had only shown a small increase in trading profits the rate of return still rose by one point from 6.7 per cent to 7.7 per cent. In breweries, where there had been a large addition to fixed assets, the rise in the rate of return was smaller from 8.8 to 9.2 per cent. Only two groups show a decline in the rate of return, iron and steel from 9.5 per cent to 9 per cent and chemicals from 11.3 per cent to 10.8 per cent.



The prophecies of the last two years are now being borne out. Industries have been able to bring their capacity more fully into employment and net equity earnings have risen, in some cases sharply. The shareholder is now beginning to receive the fruits of his investment and there seems little doubt that in 1960 reasonable hopes of higher dividends will be fulfilled.

and Mr A. G. Ridley, together with Mr E. H. Page who retains his seat on the board. Lord Reith was director general of the BBC from 1927 to 1938 and he is a former chairman of the Colonial Development Corporation; Sir Dingwall Bateson is a past president of the Law Society; Sir Richard Yeabsley has been president of the Society of Incorporated Accountants; and Mr Ridley, a former assistant general manager of the Midland Bank, is now managing director of the Ionian Bank.

In view of these changes the Registrar no longer intends to call a special meeting of the Society under the powers conferred on him by Section 5 (5) of the Building Societies Act, 1894. An annual general meeting of the society is due to be called in March under its rules.

Changes have also been announced this week in the boards of various companies in the Jasper group. Major General H. C. Goodfellow and Mr N. Barrington Cork have been appointed directors of many of these companies. Both are connected with W. H. Cork Gully and Co., one of the three firms of accountants which have been investigating the affairs of the Jasper group at the request of Mr H. Jasper.

DEHYDRATED FOODS

Cooking on the Assembly Line

AMONG the latest processed meals designed to appeal to housewives by saving cooking time are a new set of dehydrated complete meals, introduced by Batchelors Foods, one of the Unilever subsidiaries. The three dishes now being marketed (in the Southern Television area) are: savoury minced beef with mashed potato (3s. 9d.); beef curry with rice (3s. 11d.); and spaghetti bolognese with grated cheese (3s. 9d.). To buy the ingredients for each of these meals (a carton is designed to serve two) would probably cost less than 2s. 6d. The extra 1s. 3d. or 1s. 5d. is the cost of the "convenience" provided by the factory; offered in cartons, these meals are said to take no more than 15 minutes to prepare. Batchelors are also offering two other dehydrated products—which probably save more time and which are likely to be seen as a better buy—mixed vegetables (2s. 6d.) and sliced onions (2s.). Both are sold in transparent plastic small jam-jar sized containers and are equivalent to ¼ lb. of raw vegetables, peeled, cut, and sliced; they compare with a price of about 2s. 2d. for a similar quantity of frozen vegetables. These dried vegetables have the same vitamin value as the fresh product, except that most of their vitamin B_1 is destroyed by dehydration.

These are not the only "complete" meals, nor the only dehydrated foods, on the United Kingdom market, but the difficulty of guessing how housewives will react to foods processed in a way that had an unloved reputation in wartime will make other manufacturers watch the new product carefully. In spite of increasing sales of dehydrated soups in packages, four-fifths of the prepared soup sold in Britain is in cans. Some prepared meals have done well, such as pies in cans, and quick-frozen fish and chips, but some other "foods of convenience" have been comparatively unsuccessful. Cake mixes, introduced in 1953, reached a high level of sales in 1954 and 1955, but have declined in popularity since then. The price of the mix was more than the price of the ingredients bought separately; some housewives apparently decided that the saving in baking time was not worth the extra money. Even more, perhaps, have ceased to bake their own cakes.

SHORTER NOTES

It was stated on page 234 of last week's issue of *The Economist* that the hotel being built near London Airport for J. Lyons and Company is being financed by Watney Mann. In fact, Watney Mann owns the site on which the hotel is being built, which it is leasing to Lyons; it has no other financial interest in the building.

*

Car production in 1959 was 1,189,970 at a weekly rate of 22,884, compared with 1,051,551 at a rate of 19,841 in 1958. December production at 134,881 for five weeks, a weekly average of 26,976, was little below the record rate of 29,976 a week reached in November, despite the Christmas holiday. Exports for the year were 568,846, or 85,000 more than in 1958. Commercial vehicle production for the year was 360,169 and exports 127,450, compared with 312,856 and 111,629 last year. Bus exports are the only sector to show a fall, from 5,752 in 1958 to 4,832 in 1959.

*

By the end of last year, 773 of the 2,240 agreements on the Register of Restrictive Trading Agreements had come to an end, either having been abandoned or modified by the parties to them, or having been declared contrary to the public interest by the Restrictive Practices Court. Since August, 1959, the Court has heard only two cases; yet over 170 agreements have been abandoned or modified. About 120 cases—slightly fewer than five months ago—are now in various stages of preparation for trial; the first of these, concerning phenol, comes to trial next month.

*

A substantial increase in Anglo-Hungarian trade should follow from the new three-year agreement announced this week. Britain is to issue licences for the import of Hungarian goods in 1960 to the value of about £4½ million, mainly foods, textiles and chemicals. Imports of other items, such as seeds, tomato puree, vegetable oils and aluminium remain free. Hungary intends to buy nearly £5½ million worth of British goods, mainly machinery, motor vehicles, radio, television and telecommunications equipment, chemicals and textiles. Britain's imports from Hungary last year amounted to £3.2 million, and its exports to £4 million.

*

Credit (Risk and Guarantee) Consultants Ltd., which advises on the application, financing and insuring of credit for exports, has now extended its service to market research and other aspects of selling, in association with International Trade Information.

*

Sales of domestic appliances by the electricity Area Boards were lower in November, 1959, than in November, 1958, which was the first month after the ending of controls on hire purchase. 33.9 per cent fewer washing machines were sold, 28.9 per cent fewer refrigerators, and 2.3 per cent fewer cookers. Sales were also respectively 13 per cent and 34 per cent lower than in October, 1959, for washing machines and refrigerators, but 1 per cent higher for cookers; these figures suggest that sales are generally returning to their normal seasonal pattern.

*

Some of the remaining restrictions on imports of dollar goods are to be removed shortly, the President of the Board of Trade, Mr Maudling, said in New York this week.

COMPANY MEETINGS

STEWARTS AND LLOYDS LIMITED

REVIEW OF OPERATIONS AND DEVELOPMENTS AT HOME AND OVERSEAS

CONTINUED HIGH RATE OF CAPITAL EXPENDITURE

MR A. G. STEWART ON IMPROVED CURRENT TRADING

The 70th Annual General Meeting of Stewarts and Lloyds Limited will be held in the Merchants' Hall, 30, George Square, Glasgow, on Wednesday, February 10, 1960, at 12.15 p.m. The Accounts for the fifty-three weeks ended October 3, 1959, have been circulated with a Statement by Mr A. G. Stewart, the Chairman, which reads as follows:

The trading profit of the Stewarts and Lloyds Group for the year ended October 3, 1959, amounted to £11,077,000 before tax and before charging £1,500,000 for Fixed Assets Replacement Reserve. This is a fall of £3,188,000 in comparison with the previous year.

The table below sets out in a form similar to that adopted in past statements the proportions in which the decrease in the profits as compared with the previous year is accounted for between Stewarts and Lloyds Limited, as a manufacturing company, home subsidiaries, and the earnings from trade investments and overseas companies.

Shareholders will have been prepared for this decline in profits. It was anticipated at the time of the last Annual General Meeting in February, 1959, and was referred to at the time of the Interim Dividend Declaration in June, 1959. It was also mentioned in my letter dated October 28, 1959, circulated on the occasion of the recent "Rights" Issue. In that letter I stated that preliminary estimates indicated that the Group trading profit before tax would be in excess of £10 million. At the time that those estimates were prepared, the Accounts had, of course, not been audited and we were indeed awaiting the trading results for the last month of the financial year which were in the event considerably better than for previous months.

	Profit	Percentage of Total Profit	Decrease/Increase*	
	£		£	%
S. and L. Limited	5,728,000	52	2,782,000	33
Home Subsidiaries	2,517,000	23	713,000	22
Trade Investments and Overseas Companies	2,832,000	25	307,000*	12*
	£11,077,000	100	£3,188,000	

Owing to a reduction in the amounts required to be set aside for taxation and to an increase in comparison with the previous financial year in non-recurring income, the profit available for appropriation by Stewarts and Lloyds Limited, is only slightly lower than that of the previous year. As anticipated at the time of the Interim Dividend announcement, your Directors are proposing the same rate of Ordinary Dividend as last year.

ACCOUNTS AND FINANCE

No special comment appears to be necessary on the form of the Accounts, which follows that adopted in the past few years.

The further reduction in the liability for UK income tax has occurred, due to the fall in trading profit, the increased capital allowances and the considerable benefit derived from the reduction in the standard rate of income tax.

The increase in non-recurring income in comparison with the previous year, which has helped to maintain the Profit Available for Appropriation, is due to two main causes. Firstly, we received from an associated company a special dividend amounting to £1 million (net) in respect of profits accumulated over a number of years, and secondly, £450,000 Provision for Taxation is no longer required because of the reduction in the standard rate of income tax.

As I forecast in my Statement last year, increasing recourse had to be made to bank borrowings, and net UK overdrafts rose from £5,940,000 at the beginning of the year to £11,251,000 at the end of the year. This further recourse to bank borrowing was due to the continued high rate of capital expenditure. Considerable efforts were made to postpone some of the intended capital investments and as a result the figure of capital expenditure at home and overseas fell from the peak of £17 million in 1957/58 to £11,700,000 in the year under review. It is emphasised that this reduction in capital expenditure was achieved by postponement of schemes where this has been possible, and there is a considerable programme still to be met. The balance of schemes authorised by the Board at the end of September last amounted to £18,719,000.

Since the end of the financial year the removal of political uncertainties, at any rate for the time being, has at last made it possible for us to fund our indebtedness to the banks. As soon as the result of the Election was known, your Board decided to proceed immediately with a "Rights" Issue of Ordinary Shares. This met with an excellent response and 7 million shares were taken up on a "Rights" basis of seven new shares for every 20 existing shares held, at a price of 40s. per share. The final instalments due in respect of this issue will be received during this month and our need to rely on bank borrowings will temporarily disappear. It should, however, be pointed out that in spite of this money the capital programme ahead of us will mean that we shall for some time need the assistance of our bankers who have assured us of their support.

‡Tonnages despatched during the year were:—

	53 weeks ended 3rd October, 1959			52 weeks ended 27th September, 1958

TRADING POSITION

In my letter circulated at the time of the "Rights" Issue in October last, I stated that "apart from our business with Oil Companies which still gives no immediate indication of an overall revival, our trading operations have shown an improvement in recent months and, in the absence of unforeseen circumstances, it is expected that this improvement will continue during the financial year which has just commenced with a resultant increase in profits. If these anticipations are realised, your Directors would hope to be able to pay for the year to October 1, 1960, total dividends of not less than 11 per cent on the Ordinary Capital as increased by the new issue to £27 million."

There is nothing in our trading experience since that date which would lead us to change that opinion.

(a) Stewarts and Lloyds Limited

As will be seen, 833,000 tons of steel tubes were despatched in the year compared with 866,000 tons in the previous year.

The slight improvement in home trade demand for general purpose tubes in sizes up to 4 in. diameter referred to in my statement

last year, continued throughout the first half of the year under review, though not at as high a rate as we had hoped and it was not until the last quarter that there was a really marked upward trend. The year ended with demand for this category of tubes very firm.

Home trade demand for quality tubes throughout our range has also improved but not to the same extent as for general purpose tubes. In particular, there was an improvement in the last few months of the financial year in the demand for seamless tubes in the larger diameters, when the effects of the lifting of Government restrictions on public capital expenditure were beginning to be felt.

The good home trade order book for large diameter mains with which we began the year diminished gradually and backlogs were overtaken. One or two good contracts were in prospect at the end of the year including that for 13,000 tons for the Daer, Lanarkshire, Water Board which we have since obtained.

In the first year of marketing rectangular hollow sections, sales have fully come up to our expectations and much valuable experience has been gained.

As was announced in June and again in October, the financial year was a most disappointing one for our trade with the Oil Industry. The tonnage despatched was 151,000 tons which was 41 per cent less than in the previous year. Bookings for supply during the first quarter of the financial year were higher than in the previous quarter but the improved trend was not maintained. There was a marked drop in new bookings in the second quarter of the financial year and our despatches were lower than in any quarter of the previous financial year. Bookings increased again during the third quarter and towards the end of the financial year there was a considerable improvement in our order book. This improvement, however, was due not to any overall increase in demand from the Oil Companies but rather to a few large orders which we received for special pipe line projects. The most important of these orders was from the Burmah Oil Company covering 32,000 tons of 16 in diameter line pipe required for shipment between September, 1959, and March, 1960. This pipe line will connect oil fields in Upper Assam to a refinery which will be built near Gauhati. HM Government's action in providing finance to the Government of India was of considerable assistance to us in obtaining this order.

Despatches for export to customers other than the Oil Industry amounted to a total of 232,000 tons—an increase of 25 per cent over the preceding year. Of this tonnage, 165,000 tons were Gas List tubes—an all-time record for our exports of this category, though prices in some cases were considerably lower than those of the previous year. Other categories showed small improvements except in the case of poles and water well casing

Boiler tube exports have improved and in most markets Electric Resistance Weld tubes are being more readily accepted in place of seamless.

Some good orders for seamless tubes were obtained from Russia. These will be of considerable assistance to us in filling our cold drawn seamless capacity in the first six months of the current financial year.

Overall, the tube works operated during the year at 79 per cent of capacity—the same rate as in the previous year, but there was a reduction in operations at those works manufacturing material for the Oil Industry. This resulted in a substantially reduced rate of working in relation to capacity in the steel works primarily concerned.

We increased our efforts to sell steel in other forms both at home and abroad. Our efforts for export met with considerable success, despatches amounting to 75,000 tons compared with 11,000 tons in the previous year. To obtain this volume of export business meant naturally that very low prices had to be quoted.

The reasons for the decrease in the trading profits of Stewarts and Lloyds Limited, as a manufacturing company, can be summarised as being, firstly, lack of occupation at tube works supplying the Oil Industry and consequent lack of occupation at the steel works concerned, and, secondly, lower prices for a large part of our export business, particularly for our steel exports. In addition, Stewarts and Lloyds Limited, and its subsidiaries at home absorbed increases in wages, salaries, railway freights and local authority rates without compensating increases in prices of the Companies' products.

(b) The Stanton Ironworks Company Limited

Despatches of spun iron pipes and iron castings in the home and export markets were at levels very similar to those of the previous year. Trading conditions at home were difficult: but a marked improvement in spun iron pipes business was experienced in the latter months. In face of severe world competition Stanton again maintained its relative position in export markets.

The demand for general concrete products developed satisfactorily. Despatches of prestressed concrete pipe for water service increased by almost 20 per cent.

The home demand for foundry pig iron showed little change and the requirements of steelmakers for basic pig iron from merchant sources were further reduced. In order to maintain activity at the blast furnaces at a level similar to that of the previous year, it was necessary to seek outlets for pig iron in export markets. This endeavour was markedly successful and overall despatches of foundry pig iron were more than 30 per cent higher than in the previous year.

(c) Tubewrights Limited

Development work on the use of tube for structural and general engineering purposes has continued unabated. The great variety of work undertaken included a 220 ft span Transit Shed for the Port of London Authority, together with Level-Luffing Cranes of completely tubular construction; multi-track Gantries for British Railways electrification schemes; and the first all-tubular Transmission Line Towers in Great Britain for the South of Scotland Electricity Board.

(d) Stewarts and Lloyds Plastics Limited

The turnover of our Plastics Company increased during the year. This was achieved owing to the high quality of our product and in the face of severe competition from other plastic tube makers. This business is still primarily limited to agricultural cold water supplies.

TRADING PROSPECTS FOR THE CURRENT YEAR

Home trade prospects for 1960 for general purpose tubes are better than they have been for some time. The growth of industrial production and the higher level of investment in building are contributing to an expansion of the economy and a consequent increase in the demand for tubes.

The Company is taking active steps to meet the requirements of the newer industries, such as nuclear power. The production of alloy steel and alloy steel tubes is being further developed and increased. Reference has been made in the press to the decision taken by Imperial Chemical Industries and ourselves to form a small company to manufacture all kinds of extended surface steel tubing largely required for nuclear power development.

Export trade demand for general purpose tubes is likely to remain strong at least for some months ahead.

So far as the Oil Industry is concerned, however, there is still doubt about prospects in the near future.

Stanton experienced a notable quickening in the tempo of business in the latter months of the financial year. This particularly affected spun iron pipes and general concrete products. The improvement has been maintained in the current year and the indications are sufficiently encouraging to lead us to expect improved trading in these products in 1960. There are also clear signs of revival in the ironfounding industry which has already brought about an improvement in foundry pig iron business.

OPERATIONS AND DEVELOPMENTS

(a) Ironstone

There was an increase of 5 per cent in the production of the Group which arose to 4,400,000 tons. The requirements of the Corby blast furnaces increased but elsewhere the demands were relatively low.

There are indications that the requirements of ironstone are likely to increase substantially over the next 10 years and our exploration work for the proving of our reserves is proceeding as rapidly as possible.

The new large walking dragline, which we are installing in our Cowthick Quarry, is nearly complete. During the past year a five-mile long aerial ropeway has been constructed to bring ore to Corby from a newly developed quarry at Rothwell.

Preparations are being made for the development of a new ironstone quarry at Great Oakley near Corby. The capacity will be 450,000 tons a year and a large walking dragline will be installed to remove the overburden, which rises to 100 ft thick. The quarry will be in production in 1964.

Our exploration jointly with The United Steel Companies Limited of the unproved reserves of the Northampton Sand Ironstone Bed in Rutland and South Lincolnshire has continued throughout the year. We have put down approximately 300 boreholes representing over 40,000 ft of drilling. The boring programme is practically complete and the area explored is now being assessed. As previously stated this exploration is being carried out at the request of the Iron and Steel Board to whom a full report will be presented during 1960.

(b) Blast Furnaces

Pig iron production from the blast furnaces at Corby, Bilston and Wellingboro' rose some 8 per cent above the previous year's output. This was in line with the increased activity in the steelmaking plants and rolling mills.

At Corby, the four blast furnaces were in commission throughout the year except for a few weeks, while one furnace was being relined.

Operation of the new sinter plant, to which I referred last year, improved steadily throughout the year with important benefits to blast furnace production. Consideration is being given to the possible installation of a further sinter plant. Development of the Coke Oven Plant is proceeding and the new battery of ovens and ancillaries are due to come into operation in the middle of 1961.

At Bilston, iron output had increased to 80 per cent of full capacity by the end of the year. Only one of the two furnaces at Wellingboro', however, was in blast.

At Stanton, the new ore preparation plant was commissioned during the year. This enables closer control to be maintained over the qualities of irons produced.

(c) Steel Works and Rolling Mills

The ingot steel production from the Company's Bilston, Corby and Clydesdale Works was 1,414,000 tons—some 90,000 more than in the previous year. This compares with the record production of 1,545,000 tons in the 1957 financial year.

At Corby, the application of oxygen to our Bessemer steelmaking processes has been carried out during the year on a limited scale with augmented external oxygen supplies. It is expected that there will be a greatly increased application of oxygen to steelmaking during the present year. The contractors who are building our tonnage oxygen plant have expended much effort in overcoming some technical faults and the equipment has been tested up to normal oxygen production levels. Indications are that tonnage oxygen will be available as required early this year.

We are now proceeding with the modernisation and extension of the 32 in. mill and the 24 in. continuous mill which completes the second stage of the rolling mill programme I referred to last year.

At Bilston, further improvements to the open hearth plant have been effected. Four existing tilting furnaces have been converted to the fixed type, and with oil-firing have given greatly improved performance and outputs. The new all-basic fixed furnace referred to last year has operated well and has confirmed the efficiency of the new design. Contracts have been placed for two additional new all-basic furnaces which are programmed to be in production by the middle of 1960.

The new rolling mill plant referred to last year comprising a 40 in. blooming and 2-stand 32 in. reversing bar mill commenced operations in the summer.

It is expected that the operation of our steelmaking plants, heavy rolling mills and strip mills will continue at a high level during 1960.

Looking to the longer term future consideration is being given to the further expansion in progressive stages of our primary iron and steelmaking capacity.

(d) Tube Works

The new Extrusion Plant at our Prothero Works, Wednesbury, for the manufacture of small diameter seamless tubes was brought into operation last July. This will be a useful addition to our range of modern tubemaking processes.

Progress is being made with the installation of the Electric Resistance Weld Plant at Shotton, for the manufacture of steel tubes up to 16 in. diameter. In view of the continued low demand from the Oil Companies, we retarded the rate of spending on this plant, and the scheme is now scheduled for completion towards the end of this year.

The plant and equipment for the manufacture of Extreme Line Casing, Special Casing Joints, and Drill Pipe at Clydesdale Works, is well advanced and operations are planned to commence in a few months.

During the past year, we established a Pipework Engineering Division for the control and manufacture of all forms of high and low pressure pipework. This is an important trade and a separate organisation was considered essential to meet the demand and provide the necessary services associated with this class of work. I am confident that our customers for pipework will benefit from this step.

(e) Stanton Pipe Plant and Foundries

At Stanton, plant is now in operation which extends the size range of spun iron pipes to 48 in. diameter.

Development work for the manufacture of spun pipes and castings in ductile work is now well advanced.

OVERSEAS COMPANIES

South Africa and Central African Federation

The turnover of the Stewarts and Lloyds of South Africa Group during the year under review was £14.2 million as compared with £13.6 million in the previous year.

During the early part of the financial year the Vereeniging Tube Works was affected by the recession in general trade to which I referred last year. However, during the second half of the year the tube order book improved and production was higher during the year under review than in the previous year.

The tubular structures department at Vereeniging was likewise affected in the early part of the year but the position improved during the latter half and this department now has a healthy order book for the beginning of the current year.

There is no visible improvement in conditions in the Central African Federation. The trade recession which occurred there some eighteen months ago continued until the spring of this year when demand increased slightly but competition at the same time became very severe. Production at the Que Que Works of the South African Company's subsidiary has still been much curtailed with the result that this Works failed to make a profit.

Australia

The Tubemakers of Australia Limited Group of Companies had another successful year. Production, despatches and profits were all rather higher than in the previous year. Steel used in tubemaking amounted to 295,000 tons and despatches of finished products to £A37 million. Despatches for export expanded and represented 14 per cent of the total despatches.

In line with the increase in the price of wool, the general level of prosperity in Australia improved. The new financial year has made a promising start.

New Zealand

The New Zealand Company has had another year of profitable trading. An increased tonnage of steel products was handled. Owing to lower prices, however, turnover in terms of value was approximately the same as in the previous year. Some relaxation has been made on import licences for 1960 and this should result in freer trading. The demand for steel products is being well maintained.

India

The Indian Tube Company (1953) Limited

As expected, there was an increase in despatches of tubes made on the Continuous Weld Plant to a figure of 65,000 tons, an increase of 31 per cent over the previous year.

Following an improvement in the supply of hot rolled strip production of cold rolled strip and Electric Resistance Weld tubes improved considerably.

The Seamless Tube Plant and the Pole Plant went into production during the year.

Demand for the Company's products continues to increase.

Stewarts and Lloyds of India, Private Limited

This Company is entirely concerned with the fabrication and erection of pressure pipework and structures and total despatches showed a moderate increase over those of the previous year.

The order book is satisfactory, negotiations for several large pipework contracts are in hand and the demand for tubular structures continues to increase.

Canada

Our Canadian trading Companies have had another successful year. There has been increased competition in Canada from Japanese and other European makers which has resulted in slightly reduced prices. Nevertheless total sales have, in general, been maintained.

Ireland

The Irish Company had a good trading year with an increased turnover.

The Irish Government's efforts to encourage industrialisation in the Republic have led to an increased demand for fabricated products. An extension to our facilities for dealing with this trade is in hand.

THE BOARD

Mr N. C. Macdiarmid, who is Managing Director of The Stanton Ironworks Company, Limited, has been appointed to the Board.

EMPLOYEES

It becomes increasingly difficult to pay adequate tribute to the work of the Company's employees. Last year, unfortunately, I had to report that some employees had been laid off and that others were on short-time working. I am very happy to report, this year, that the order book position is providing fuller employment.

One hundred years have now elapsed since the original Stewarts business and Lloyds business started independently operating in Scotland and England. There are many men serving the Company today whose ancestors, four or five generations ago, were employed in those early days.

As a Company we pride ourselves very much on the long-service tradition of our employees, and much of our success has been due to the loyalty and skill of our people over these 100 years.

There is no evidence at all to suggest that this spirit is not still maintained in the very much enlarged group of which we are now composed; but, as I have always maintained,

this most important attribute would certainly wither under the cold hand of State-ownership. The Directors of the Company feel sure that they have the support of Shareholders in thanking all employees for the notable part which they have played through these years, and which they are continuing to play in the expansion of the Company in all its activities.

NATIONALISATION

The decision of the electorate on October 8 has removed the threat of nationalisation from the Steel Industry, at any rate for the time being. I propose to refer to this matter more fully in my address at the Annual General Meeting.

THE ROYAL BANK OF CANADA

RECENT EXPERIENCE CONTAINS LESSONS FOR COMBATING FUTURE BOOMS AND SLUMPS

DEFECTS IN MONETARY MECHANISM HAMPER CENTRAL BANK CREDIT CONTROL

AGGRESSIVE LEADERSHIP NEEDED TO MAINTAIN TRADE POSITION, SAYS MR JAMES MUIR

The Ninety-first Annual General Meeting of Shareholders of The Royal Bank of Canada was held on January 14th at the Head Office in Montreal. Mr James Muir, Chairman and President, reviewing Canadian economic and financial trends in the preceding twelve months, said that it is not commonly recognised that the chartered banks have given a demonstration of timely and effective support of the current anti-inflationary monetary policy in Canada.

LESSONS TO BE LEARNED

Reviewing the decisions and actions taken by monetary authorities during the recent credit "freeze and thaw" period in Canada, Mr Muir said: Before indulging unduly in self-congratulation, it may be well to reflect on some lessons which recent experience holds for the monetary authorities and for the chartered banks in combating future booms and slumps.

The first lesson is that there is need for improved communication between the Bank of Canada and the chartered banks. Of course, communication must be a two-way street. I have long deplored the passing of bank rate in Canada from the realm of communication in this sense to a mere shadow, floating ¼ per cent above the market rate for three month Treasury bills. However, we must respect the Bank of Canada's evident determination to avoid even the possibility of a modest departure from the collective judgment of the free market. Fortunately, the chartered banks are not yet reduced to the interpreting of obscure signs and portents of the reading of entrails to divine Bank of Canada policy; although a cynic might suggest that we have progressed very little beyond the plight of the noble savage watching as in olden times for the occasional smoke signal from the haughty Ottawas. However, in recent months, the Bank of Canada, through its Governor, has in a number of public statements offered some hopeful alternatives. We are assured, for example, that the money supply will probably rise "modestly" in recession, stay relatively constant in recovery and boom times, and rarely, if ever, fall. In our present situation, for example, this should mean that the current ease in chartered bank cash will not promote a "sucking-up" of the excess, since that would mean a significant reduction in the money supply.

Now for the second lesson. Regardless of the clarity of communication itself, there is still some ambiguity in the data communicated. I shall consider only the most important example: the money supply. Through its control of chartered bank cash reserves, the Bank of Canada controls the money supply, allowing of course for any lags in chartered bank adjustment. There are, I believe, two major ambiguities in our concept of the money supply.

AMBIGUITIES IN MONEY SUPPLY CONCEPT

The first ambiguity is that the money supply as generally defined omits credit created by other than the chartered banks. For example, it omits credit created by Finance Companies, Caisses Populaires in Quebec, Credit Unions and Provincial Savings Offices in other Provinces, Trust Companies doing a deposit business, and all varieties of department store charge accounts.

The implication of this ambiguity for policy is simply this, that monetary control is inhibited and may at times be ineffective, as well as inequitable, in controlling the money supply in this broader sense. Rather than extend the range of specific government regulation, it might be worth while to require that these lenders (who, in effect, do a banking business so far as the total supply of money and credit is concerned) should, like the chartered banks, be subject to appropriate cash, or other, reserve requirements.

The second ambiguity in our concept of the money supply concerns that well-known but elusive factor, the "velocity of circulation." Clearly the inflationary potential of any given money supply depends not only on the money supply as such but also on its activity; that is, its velocity of circulation. Our mechanism of monetary control is defective in that it ignores the velocity dimension, and this defect forces us to resort to rough-and-ready, trial-and-error expedients by way of correction. Monetary control would be greatly improved if we could devise a practical formula for reserves against deposits that would take account of changes in the velocity of circulation.

LENDING RATES SHOULD REFLECT MARKET RATE CHANGES

The third lesson of recent experience is that the course of monetary control would run much smoother if the chartered banks were enabled always to implement Bank of Canada policy by allowing their lending rates to reflect changes in market rates, or under the present rate-fixing system, changes in bank rate. Surely, the chartered banks should not be forced to remain "out of line" with the market and forced therefore to resort to the clumsy devices of credit rationing.

There would be no "tight money" if the price were right: instead, those willing to pay interest at current market rates would get the funds, those unwilling to pay these rates would postpone expansion until the price of funds became more favourable. Thus instead of rule-of-thumb rationing, banks would be enabled, like other lenders, to allocate funds in accordance with the priorities established by the price system in the market for credit.

CANADIAN TRADE POLICY

Referring to the forthcoming meeting of the member nations of the General Agreement on Tariffs and Trade (or Gatt) in September, Mr Muir said:

It is paradoxical, but nonetheless true, that the economic renaissance in Europe seems now to pose some kind of threat to our increasingly easy North American way of life. Meanwhile, prosperity and increased efficiency have made European nations more receptive to freer trade, including the reduction or removal of war and postwar exchange controls. European developments have also been directed inward, towards greater economic integration, as illustrated by the European Common Market or the "inner six," and the European Free Trade Area, or the "outer seven" of which Great Britain is a member.

In spite of, or better perhaps, because of Canada's obvious interest in the greatest possible degree of multilateralism, she cannot ignore the new "trading clubs," or the possibility that Nato may form the basis for further economic integration on a much broader scale. The present conciliatory attitude of the Europeans provides an opportunity for bold action to turn the new developments into means to freer trade on a broader basis for the benefit of all members of Gatt.

At the same time Canada in particular must pay attention to recent developments in Latin America. Current moves to form a Latin American common market and a regional trading group in Central America may pose additional problems: but they also create opportunities.

In general then the new "trading clubs" in Europe and Latin America should be accepted as a challenge and an opportunity to negotiate for the further expansion of world trade. Even the aggressive tactics of trading-block countries in Russia's orbit, and the fantastic growth of Japan as a foreign trader, have their brighter side in a growing market for our exports. It cannot be emphasised too strongly that the removal of trade and exchange-control curbs in Europe and the slow awakening of Russia and the Far East mean the creation of new and exciting opportunities to exploit entirely new postwar markets.

LOANS INCREASE DESPITE RESTRICTIONS

K. M. Sedgewick, General Manager, reported that due to heightened business activity, loans in all categories and sizes were in strong demand throughout the year and despite the necessity of adopting restrictive measures from time to time, a sizeable increase had taken place in this department of the bank's business. Referring to the Royal Bank's extensive system of branches in the Caribbean area and South America, Mr Sedgewick mentioned that seven new offices had been added to the bank's overseas system during the year. "Our Managers are fluent in the language and well versed with local conditions and customs," said Mr Sedgewick. "We are well equipped to assist exporters and invite those who have a real interest in new trading opportunities to come to us and enlist our aid."

DISTRICT BANK

LIMITED

ESTD. 1829

CHAIRMAN'S STATEMENT

The Chairman, Sir Thomas D. Barlow, GBE, has circulated, with the report and accounts, the following statement to the shareholders of District Bank Ltd., prior to the

130th Annual General Meeting

to be held on Friday, the 12th February, 1960, at the Head Office, Spring Gardens, Manchester :—

It is with regret that I have to record the death of Sir Walker Shepherd last February. He had been a Director since 1947 and we miss the benefit of his wide experience and practical advice.

During the year we have had pleasure in welcoming to the Board Mr R. G. Soothill who is well known in industrial and commercial circles. His intimate knowledge of business affairs will be of great value to the Bank.

Amongst changes in the Bank's principal executive officers I have to report the retirement on pension of Mr Frank Stott, a Joint General Manager. I should like to take this opportunity of wishing him much happiness in the future. Mr S. H. Coomer, previously an Assistant General Manager, has been appointed a Joint General Manager.

THE YEAR'S ACCOUNTS

On reference to the accompanying Balance Sheet it will be seen that we have considerably strengthened our Capital and Reserve structure. The combined figure amounts to £10,750,000 and does, I think, provide a substantial basis for the Bank's steadily growing activities.

Current, Deposit and other Accounts, which have been running at a high level throughout most of the year, now stand at £268 million and exceed last year's figure by £13 million. The upward movement, reflecting as it does the general trend of banking figures, is closely associated with the marked expansion in trade.

Not surprisingly the larger resources and the increased tempo of business have been responsible for important variations in the composition of our assets. Cash, Money at call and short notice, Treasury Bills and Bills of Exchange are higher in total and in proportion to our deposit liabilities than they were at the end of 1958.

On the other hand Investments are reduced by nearly £13 million. This decline has been brought about by the need to make provision for the increased accommodation required by customers. All our holdings of British Government Securities are repayable at fixed dates and appear in the Balance Sheet below their market value. In the course of the year we added to our substantial holding in the Astley Industrial Trust Ltd., when a rights issue was made to shareholders. We have been happy to play a part in helping the company to extend still further its activities.

Advances have continued to mount steadily throughout the year and, at £107 million, have reached the highest figure we have yet recorded. The greater part of the expansion is, of course, accounted for by the increased requirements of customers engaged in industry, commerce and agriculture. Private and professional customers have also been borrowing more during the year, and to the high level of their overdrafts have been added the less conventional unsecured "personal loans"—a type of lending which is proving helpful to many people and exceedingly popular.

AN EXTENDED RANGE OF SERVICES

That our resources are now more fully employed in providing both business and personal finance is most satisfactory. But no less pleasing is the steady growth in the number of our customers. Since this all-round expansion has taken place during the first full year in which the banks have had complete freedom from the financial controls that for two decades have proved so hampering to progress, it would seem that the public have been quick to recognise and take advantage of the extended range of our services. The fact that we have been making exceptional headway at a time when earned incomes have reached a level which permits greater scope for saving also appears to

impiy that the additional facilities we now offer are sufficiently attractive to induce more people in receipt of wages and salaries to acquire the banking habit.

One of the services which is being increasingly used by those who are earning more than hitherto is that provided by our Foreign Department for overseas travel. But apart from this aspect of their work, the Department have been progressively busier as the volume of overseas trade has mounted. Providing wider scope for their operations has been the greater freedom for international exchange dealings. No less welcome is the lightening of unremunerative work consequent upon the further relaxation of exchange control regulations.

It is again pleasing to report that our Trustee business continues to grow. The Department's specialised services are being fully utilised and more new Trusts have been undertaken during 1959 than in any previous year.

The responsibilities of any Trustee are often onerous, and not the least of his many problems is to maintain a well-balanced portfolio of investments carefully chosen to suit the particular needs of the Trust. His choice must be governed by the investment powers vested in him, and for many years it has been our policy to recommend Testators and Settlors to give to the Bank, as their Trustee, the widest possible powers to enable investment policy to keep in step with changing monetary conditions. If the Government's present proposals to widen the Statutory investment powers of Trustees are put into effect they may be of assistance to Trusts where the choice of investment has hitherto been severely restricted by the Trustee Act, 1925.

Whilst the expansion of our business primarily depends on the efficiency of our banking services, the extension of the area of our activities is also a vital factor. Last year we opened branches at Newport, Taunton, Cannock, Milford Haven, Portsmouth and Curzon Street, London, and plans are well advanced for other new offices, the first of which will be opened at Guildford within the next few weeks. As in previous years the increase in the figure for Bank Property is explained by the purchase of properties and by the re-building and extension of some of our existing premises.

Understandably the growth of the Bank and the additional services provided have necessitated some acceleration in the recruitment of staff. We have also extended our training facilities, so that the younger members may have every opportunity of fitting themselves for the managerial and other responsible posts which are likely to be available at a relatively early age to those with the necessary qualifications. The increasingly important part now being played by our women staff is reflected in the appointment, last year, of our first woman official.

PROFIT AND DIVIDENDS

Larger resources, a higher level of Advances and an increased activity in turnover have helped to swell earnings. On the other hand we have had to meet heavier expenses due to higher salaries and the growing cost of maintaining our properties. After the usual provisions have been made, Net Profit at £863,898 is £125,701 higher than that of the previous year and, with the amount brought forward, the disposable balance is £1,215,687. Of this sum we propose to transfer £217,189 to Reserve Fund. After allowing for this allocation and for a final dividend on the larger capital of 7 per cent which, as forecast, we are recommending, there remains £533,595 to be carried forward to the 1960 account.

The good results which have been achieved are an indication of the keenness and efficiency of those in our employ. Looking back on the past year of expansion and innovation, I realise anew what effort and co-operation have been required of both management and staff to provide the efficient and up-to-date service which it is our pride as a Bank to offer, and I should like to take this opportunity of thanking everyone most sincerely for all that they have done.

ASPECTS OF WORLD RECOVERY

The inevitable economic instability and political tension of the postwar years have at last given place to conditions which justify more confidence in the future. Progress during the past few months has been marked by a gratifying expansion in world trade, but no less encouraging is the increase in international liquidity. The substantial redistribution of gold and foreign exchange holdings which has occurred and the recently increased quotas of member countries to the International Monetary Fund have provided not only sufficient finance to support the recovery we have so far experienced but also a margin for an even higher level of international trade. Giving further strength to expansion is the greater financial stability which has been achieved in many countries. Adherence to sounder policies is already enabling the largest part of the world's commerce to be conducted in convertible currencies and as a consequence there are now fewer artificial barriers to trade and payments.

Of considerable significance is the freer movement of capital between countries. The increased flow has already helped to raise the over-all level of trade. From now on however, it seems likely that the employment of such funds for the betterment of less developed areas will, as much as anything else, determine the pace of world economic expansion. That being so, it is reassuring to see how energetically various powerful international institutions are providing needy countries with finance. To assume from this development, however, that all is now plain sailing would be to disregard a shift of responsibility which is taking place in the field of investment.

The United States, who so far has provided most of the help for an impoverished world, is now finding it necessary, because of her own economic problems, to review her foreign loan commitments. Although any limitation of her assistance would be bound to have its effect on the international capital market, there may be no occasion for immediate anxiety since economic and financial recovery has gone far enough to permit some of the other countries to pursue good creditor policies more vigorously than hitherto. Admittedly a reasonable degree of caution is to be expected. Unwillingness to lend, however, seems improbable because of the growing realisation amongst countries with available resources that overseas investment creates expanding markets for their products. These are early days to say whether the attempt to internationalise the flow of money from capital exporting countries will be successful, but it seems to me that a knowledge of what financial assistance can do for lenders as well as borrowers might reasonably encourage such co-operation.

In broad outline, therefore, conditions appear well suited to an uninterrupted increase in international trade. At the present time it can at least be said that recovery in Western Europe and in other parts of the world is solidly based. Looking further ahead, expansion seems likely to be limited to the leading manufacturing countries: still later, by reason of increased purchases of food and raw materials, the primary producing countries in their turn may give an additional impetus to trade.

Promising as this appears, there are, nevertheless, signs of inflationary pressures. With many industries working at full stretch and a growing scarcity of labour, some countries are threatened by wage increases which are not matched by higher productivity. In these circumstances the task of maintaining internal stability as well as a reasonable rate of economic progress might soon become exceedingly difficult.

EXPANSION WITH STABILITY AT HOME

The favourable conditions prevalent abroad last year have without doubt contributed to the speed and extent of recovery at home. Since early Autumn progress in this country has been impressive, especially as so far we have been able to combine expansion with stability. Underlying this resurgence of economic strength are rising production, buoyant exports, falling unemployment, steadiness of prices and wage rates, a highly satisfactory level of personal savings, and in National Savings a gratifying increase which is helping to bridge the gap between the Government's spending and its revenue.

Particularly reassuring indications of our economic strength are, I think, the facts that employment has not risen as much as the level of production and that productivity has outstripped increases in wages. It follows that not only has much of the additional production come from an increase in output per man but that labour costs per unit of output have fallen. Expansion has thus been kept well within the bounds of our productive capacity, and, since incomes and productivity have been brought nearer together, a higher standard of living is becoming an actuality. These achievements might to some extent have been expected having regard to the reserves of capacity which industrial investment has built up in recent years. Moreover the beneficial effects of these reserves are not exhausted, for we are left with a margin which permits further expansion and also ensures lower unit costs of production as output increases. From this it would seem that the country is now better prepared than

at any other time during the post-war years for a big step forward.

HOW MUCH MORE MOMENTUM?

What then are the prospects of making a further advance? One very important factor is that our gold and currency reserves have improved so much that expansion can proceed more freely. Their strength was partly derived from an encouraging recovery in exports, and partly from an unexpectedly slow rise in the cost and volume of imports due to the continuance of favourable terms of trade and industry's reluctance to increase stocks. The real growth in our reserves has, however, been disguised by substantial repayments of short and medium-term debts. Yet neither the strain of these transactions nor the gradual move towards convertibility has weakened the resilience of sterling. For an explanation of this resistance to pressures it is necessary to look further than Britain's gains to the improved position of the overseas sterling countries. The recovery in the demand for their commodities has played a significant part in that the increased foreign exchange earnings have helped to swell the central reserves.

Despite this expansion, however, reserves are still barely large enough to deal with severe runs on the pound in respect of current operations. Since they have been inflated by past speculative moves against the dollar, its restoration to favour may be expected to reverse the tide. Other adverse influences are the keener competition our exports will have to meet in overseas markets, and the burden of rising imports, possibly at higher prices as trade continues to improve. In addition to these strains are the heavy commitments which have to be faced this year for capital investment overseas.

Clearly, our position, though strong, is far from impregnable. But, if we rule out an unexpected downward swing of fortune, any serious deterioration would, it seems to me, only arise if we experienced all at the same time pressing demands for consumer goods, capital goods and exports.

Whether or not there could be such a confluence of activities can be but a matter of conjecture at this stage. On the one hand are signs which point to only moderate expansion. Output is certainly rising, but industry as a whole is still not working to capacity nor showing much inclination to build up stocks or hoard manpower. Although consumer spending is high, the rate of its growth appears to be slowing down and investment intentions do not as yet suggest an early upsurge of capital expenditure. There could therefore be an interval between some slackening in the activity of the consumer goods industries and the expected expansion in the capital goods industries. Exports have been encouraging, but so narrow is their basis that they would suffer a sharp reverse if North American markets were to deteriorate. European trade, too, may present us with difficulties owing to the formation of the Common Market.

On the other hand it is easy to find signs of vigorous expansion. Already some industries are working at full strength and there are indications of overloading, shortages and bottlenecks. Labour, too, is in short supply in certain areas. Although incomes are growing less fast than hitherto, their increase is going to add to an existing high level of consumer spending. And since this demand would be spurring on the output of consumer goods just when greater need for productive capacity was stimulating capital expenditure, the whole economy might become overexuberant. Nor should it be assumed that there will be an easing of the situation through a marked decline in exports. Even if less were taken by North American and Common Market countries, there is a reasonable chance that the Sterling Area will provide a better outlet than of late, to say nothing of the opportunities which may be presented by the newly formed European Free Trade Association.

THE TASK AHEAD

It would seem from these conflicting possibilities that, although there are still reserves of certain kinds of capacity, the economy has reached a point where it could develop the old familiar trouble of excess demand. It could be materially weakened by rising world interest rates, a widening of the trade gap or irresponsible wage agreements. Since such developments would leave economic policy with little margin of safety, bigger demands would be made on the skill of the policy makers. Fortunately their task would be eased by having available so informative a Report as that recently presented by the Radcliffe Committee on the working of our monetary system. By their comprehensive survey of the financial mechanism and clarification of much that was previously obscure, the Committee has performed an inestimable service. However, without wishing to underestimate what has been achieved, I do find it disconcerting that so many people can discover within the Report support for their widely differing theories on monetary matters. Also, whilst it is invaluable to have a critical assessment of the correctives used in the past and advice on how to put things right when they have gone wrong, it would have been helpful to have had more guidance on how to maintain our present steady progress without recreating inflation.

Although the outlook is so much brighter than it was twelve months ago, it would, in view of the spectacular post-war recovery and industrial development in such countries as Germany, France and Italy, be unwise to become complacent. Nor should we allow ourselves to be so preoccupied with the increasing output of motor cars, consumer durables and luxury goods that we disregard the less happy conditions prevailing in our coal, aircraft-construction and shipbuilding industries. Clearly, despite creditable progress, our economy requires more toning up. Indeed our pressing problem is still, as I said twelve months ago, the reconciliation of high investment and expansion with stable prices and freedom from inflation. From the headway made last year it is evident that success lies in flexible monetary and vigorous economic policies. Given a judicious application of these, I feel confident that we shall make our prosperity more secure.

RECOVERY IN TEXTILES

As always you will expect me to say something about textiles. For the cotton trade, last year was one of the most momentous in its history. Not only was a ceiling agreed with India and Pakistan regarding their exports for retention in our home market, but the Government introduced reorganisation schemes for the spinning, weaving and doubling sections of the industry with the object of cutting out most of the dead wood and opening up the way for extensive programmes of re-equipment. It was fortuitous that these developments took place at a time when the world-wide revival in textiles was, in itself, sufficient to cause substantial increases in prices and a lengthening of order books. Two other factors however contributed to the improvement in trading conditions here—the fine summer and the remarkable response to the redundancy schemes.

To the extent that a good deal of buying of all kinds of textiles has been for restocking, the upturn in demand can only be temporary: indeed there may yet be some reaction to such buying if it has been overdone. Meanwhile demand for both yarn and cloth has been taken up to so high a level as to warrant, in my opinion, a word of warning. On the other hand retail sales, so important to the fortunes of the trade, have been satisfactory and the favourable trend may well continue. The rising level of personal incomes implies still more purchasing power for the home market. That alone is a hopeful sign for textiles, but promise of something more might be gleaned from the public's growing tendency to switch spending from consumer durables to such things as clothing and household textiles. Soft furnishings should also benefit from a continuance of high activity in house building.

With so much to encourage them, it is to be hoped that the textile industries will seize the opportunities that are presented to strengthen their position. Profit margins have certainly been brought closer to an economic level but, having regard to growing world-wide competition in textiles, future earning capacity will increasingly depend upon the effective use of up-to-date equipment. To this end modernisation and improved techniques are making an important contribution, but, as I have repeatedly pointed out, so costly is new machinery that it cannot be profitably employed unless there is general acceptance of multi-shift working.

* * *

I should like to conclude on a personal note. As I have decided that the time has arrived when I should ask the Board to appoint my successor as Chairman, this is the last occasion on which I shall have the privilege of addressing an annual Statement to the shareholders. I therefore desire to take this opportunity of thanking you for the confidence and support you have consistently accorded to me during the thirteen years I have held that office. Since 1922, when I became a Director, I have watched the Bank go from strength to strength and can assure you that I shall follow its future progress with the greatest interest.

MIDLAND BANK LIMITED

Marked growth in range and volume of business

Viscount Monckton of Brenchley on the Radcliffe Report

The One Hundred and Twenty-fourth Annual General Meeting of Midland Bank Limited will be held on February 12th at the Head Office, Poultry, London, EC2.

The following are extracts from the statement by The Right Honourable The Viscount Monckton of Brenchley, PC, KCMG, KCVO, MC, QC, the chairman, on the report of the directors and accounts for the year to December 31, 1959:

It is good to be able to look back upon a year in which strong recovery took place from a prolonged hesitancy in the process of economic expansion. The opportunity presented by our success in overseas trade, a healthy balance of payments and an improvement of our international monetary position has been taken to move further towards liberation from controls imposed during the war and retained for the protection of our currency. In striking contrast to earlier postwar history, a year which has brought added strength to the pound sterling has witnessed also a weakening of the international position of the dollar. The whole world should welcome and draw confidence from the fact that the "dollar gap" has been closed and the dollar is no longer a "scarce currency." With international trading and monetary relations put on a more rational basis, the United States has become far more sensitive than for many years past to the influence of economic affairs and developments in other parts of the world. In day-to-day economic relations the western world is more closely interlocked than at any time since the early 'thirties; a higher degree of mutual sensitivity has been established.

REPORT OF THE RADCLIFFE COMMITTEE

The Radcliffe report is important for a number of reasons, not least for the up-to-date and well-documented description it contains of the financial system. It is important also for the practical proposals it puts forward: on some of these the Government has given its decision; on some, official judgment has been reserved; and on some, again, action has been taken by the institutions directly concerned. Many of its proposals do not lend themselves to public announcement, at any point of time, of formal decisions on constitutional or procedural matters. I have in mind, for instance, the broad principles of policy and operation suggested by the Committee which, if adopted, will become effective in day-to-day transactions undertaken by the authorities in the money market and the market for Government securities. Proposals of this kind, so far as they came to be absorbed into the continuous operation of the system, might prove to have far greater significance than the recommendations on which formal pronouncements were or are required.

MONEY SUPPLY AND LIQUIDITY

The replacement of money supply by the "whole liquidity position" as the guide to and vehicle of policy—as suggested by the Committee—is not a revolutionary change; in practice, monetary policy has been moving in that direction for some time past. What is new is the explicit formulation of the idea and the advocacy of its full acceptance, with all its implications, by the monetary authorities. Monetary authorities, particularly in this country, are not given to open acceptance of theoretical dogma; but adoption by the authorities of the Committee's proposals in policy and in day-to-day operation would carry with it acceptance also of the shift of emphasis.

By the post-war period, monetary policy had come to be directed to a series of purposes associated with newly-accepted responsibilities of Government. Accordingly it had become in itself much more complex and more wide-ranging in forms of action. It had to note and act upon factors additional to the money supply—factors like the flow of incomes after tax, the size of the overall budget deficit, the scale of private and public capital expenditure, and the demands likely to be made upon new savings and the supply of bank credit.

IMPLICATIONS OF SHIFT OF IDEAS

The concept of liquidity being itself far from simple, and the action it entails being more complex and more subtle than that which follows from a more readily measurable test, the task of expounding and explaining policy will be correspondingly more difficult. Certainly, if policy is to carry conviction and to win and retain general support, it will call for much wider understanding of monetary issues and processes than obtains today. We ought, I believe, to recognise that bankers can help in this process—and not only by striving to present, through their official channels, a clear and objective explanation of what they are doing and why. On a much broader front and in a variety of ways they can help the public to understand at least the basic elements of monetary policy and action. I am glad to think that the Institute of Bankers, which I have had the honour to serve as President for nearly two years past, has a part to play in this process.

THE MIDLAND BANK

Some readers of this Statement may have noticed in *The Times* of August 4th last an analysis of shareholdings in this Bank, based upon data extracted at the beginning of 1959. This showed that, out of about 64,700 separate holdings, 56,300 were registered in the names of individuals (divided in the proportion of nearly two to one between female and male) and 6,300 in joint private names. Well over nine-tenths of all these holdings were of 500 shares or less, that is to say £500 of nominal value or rather more than £2,000-worth at the then market price. Indeed, almost one-quarter of the holdings were of up to fifty shares only. In numbers, then, personal shareholders were overwhelmingly preponderant. The major element among corporate holders consisted of nominee companies. Personal shareholdings made up probably three-quarters of the number of shares issued and paid up, only one-quarter being accounted for by nominee companies, pension funds, insurance companies, unit trusts and all other corporate investors. Thus, despite the general trend in this country's company structure towards corporate investment, we are still, in terms of ownership, a company of comparatively small, personal investors. Incidentally, apart from the large proportion of them having addresses in the London area, the big concentrations of personal shareholders are to be found in the north of England. In recognition of the importance of the small shareholder we have decided to do away with the half-crown fee which, for longer than anyone can remember, has been payable upon each transfer of shares on our register.

GROWTH OF BANK'S BUSINESS

After sixteen months, the number of personal loans and the aggregate amount outstanding on them are continuing to rise steadily; indeed, the number of loans current is well over three times as large as a year ago. Personal cheque account facilities have brought tens of thousands of new customers to the Bank, with several millions of pounds to their credit. The number of customers' accounts of all kinds has risen by fourteen per cent over the past sixteen months, as compared with 5½ per cent over the preceding thirty-two months. The largest components of the recent increase have been personal loan accounts and ordinary current accounts.

Following upon study of proposals put forward by the Radcliffe Committee, two services adapted to special needs were introduced last autumn. First, many farmer-customers have long since learned to look to us for continuing finance; but to give added reassurance we announced that in approved cases and for capital purposes we would be prepared to grant loans, to be repaid by annual reductions over a term of years, which would be subject to recall on demand only if it were to become evident that the farmer's business itself was in jeopardy. The result of publicising our services has been seen in a remarkable increase in the number of farming accounts with us and in the volume of our lending to the industry, both under the new heading and within the category of conventional advances.

Secondly, in line with another Radcliffe suggestion, we decided to institute a system of "term loans"—that is loans of fixed amounts, repayable by regular instalments over periods of up to ten years—for the development of small businesses; and special facilities of this kind have now been made available. An encouraging number of loans has already been made, for sums ranging from £600 to £12,000, and from our study of the purposes in view we are satisfied that a real need is being met by the new facilities.

The rise in advances over the year by £149 m., or by nearly one-third, has been met chiefly by an increase of £118 m. in deposits. For the rest, room has been made for increased borrowing demands by a reduction in our holding of Government securities by £86 m. The cutting down of investments in order to meet a rising demand for advances is occasionally commented upon as if there were something abnormal and faintly reprehensible about the process. In fact, it is a long-established and well-recognised factor of elasticity in a modern banking system which has been authoritatively regarded—most recently by the Radcliffe Committee—as an ordinary and predictable accompaniment of a sharp increase in lending.

MECHANISATION IN BANKING

Recently the last hand-posting branch in our system was equipped with the standard machines for posting ledgers and preparing customers' current account statements. In order to lessen the manual task of machine operators, we are now experimenting with ledger-posting machines that substantially enlarge the scope of automatic operation. Then, too, a great deal of research work has been carried out on methods for the automatic sorting of cheques and other vouchers and on the possibilities of high-speed computers.

Having completed the first phase—the mechanisation of book-keeping along conventional lines—we have entered upon an intermediate stage, with further reliance upon machines, looking towards more or less completely automatic systems based on the latest electronic developments. For such tasks as cheque clearing, the automatic sorting and listing of items by electronic machines is likely to be of considerable advantage to the banking system, and indeed to the book-keeping of the country's business considered as a whole. In the work of a bank with a large number of branches greatly varying in size, further mechanisation in its developing forms will need to be adjusted to local requirements. In applying the range of methods we must have always in mind the need to ensure that the system chosen for a particular branch or job is economical and efficient and avoids inconvenience for customers or diminution in security.

There is every inducement to press on with these developments, since without them the growth of business would indeed be difficult to absorb. The expanding trend springs from two factors: first, the widening range of banking service as more and more people come to realise the value, in terms of security and convenience, of a bank account; and secondly, the extension of facilities in forms which tend to widen still further the range of banker-customer relations. We welcome this trend and are resolved to do everything we can to go along with it.

Nevertheless, no one with any experience of working under conditions of relentlessly expanding demand will be unaware of the pressure it exerts upon existing resources of manpower and equipment. In equipment our main concern is with premises, and, as I indicated a year ago, we are engaged on an active programme of branch extension and improvement. Manpower presents a human problem—one of a very different order from that of bricks and mortar, counterspace and proper amenities for customers and staff. We are well aware of the strain that has been put upon our managers and staff by the rate of growth of the business. Banking is a highly skilled occupation, and the easing of the strain calls for much more than the recruitment of additional "hands." It requires training at various levels and selection stage by stage, and this cannot be done in a hurry.

I want now to express my personal appreciation, and that of the Board and Management, of the splendid way in which managers and staff have responded to the demands made upon them. In recognition of this we have introduced a more formalized and greatly improved scale of payment for over-time work. But apart from this measure, I can assure the staff that everything possible is being done to provide assistance through enlargement of staff wherever the need is established, and particularly where it is most urgent. We are extremely fortunate in the quality and good will of our staff; we are determined to maintain that indispensable condition of the future growth and prosperity of the Bank.

WESTMINSTER BANK LIMITED

PERIOD OF STEADY EXPANSION AND DEVELOPMENT

SUBSTANTIAL AMOUNT OF NEW BUSINESS

SERVICES TO WAGE-EARNERS

NOTABLE STABILITY OF RETAIL PRICES

LORD ALDENHAM ON THE ENCOURAGING ECONOMIC OUTLOOK

The annual general meeting of Westminster Bank Limited will be held on February 10th at the Head Office, 41 Lothbury, London, E.C.

The following is the statement by the chairman, the Right Honourable Lord Aldenham, circulated with the report and accounts for the year ending December 31, 1959:

You will see from the formal Report of the Directors that our profit after tax for the year was £2,506,101, some £436,000 higher than in 1958. This increase reflects not only an improvement in trading experience but also the beneficial effect of the reduction in the rate of income tax which came into operation in 1959.

Against this background, we have felt able to pay a final dividend of 1s. 2d. per share on the "B" shares. That is to say 2d. per share more than forecast last June when we announced our proposals, subsequently approved by the Shareholders, concerning the increase in Capital outlined in the formal Report.

We have allocated £1 million to Published Reserve and after this allocation and the allowance for the increased distribution by way of dividend, our Profit and Loss carry forward is some £34,000 higher.

It is good to see the result of a period of steady expansion and development in an atmosphere of freedom from restrictions and some easement in the burden of taxation. We have, however, to bear in mind that expansion and greatly increased activity in general do not necessarily go hand in hand with comparably higher profits, owing to greater operating costs of which Staff expenses are by far the most important.

RECORD INCREASE IN NEW ACCOUNTS

During 1959 our Current, Deposit and Other Accounts have increased by £62 million to a new peak figure of £979 million. Contributing to this rise in our resources was a very substantial element of new business: the number of Current Accounts added to our books—even excluding those opened initially for the purpose of servicing Personal Instalment Loans—exceeded by a large margin the highest annual increase on our records. In these very competitive days to gain new accounts is not as easy as may be supposed and it is particularly pleasant to record that our Managers and others have achieved such excellent results in their efforts to show potential customers that the service of Westminster Bank is second to none.

We are looking forward to a continuous inflow of new account holders from all walks of life, stimulated we hope by the legislation now in prospect designed to permit payment of wages into a bank account or by encashable cheque. In this connection the problems of all concerned —not least, but not only, the banks—have been recognised by the Government and it is satisfactory to know that a period of time will elapse before this legislation can become effective, a period during which we can prepare and implement plans to place our services at the disposal of wage earners who desire payment by a means other than in cash, without inconvenience to them or to others of our customers, and without increasing the pressure on our Staff.

BENEFITS OF FREEDOM

Looking at the Assets side of our balance sheet, the most important feature is the rise of £97 million in our Advances, again to a new peak. We were aware from our experience in the latter part of 1958 that, given continuance of the freedom announced in July of that year, we should find our Loans and Overdrafts rising rapidly in 1959. Our expectation has been realised and the results are gratifying. This eminently satisfactory increase reflects the extent to which the restraints of earlier years have retarded the growth of our business.

The increase in the volume of our Advances has made a not inconsiderable contribution to higher earnings in 1959; but it must of course be borne in mind that against the resultant increase in income must be set, not only a decrease in income resulting from sales of investments, but also the effects of the lower interest rates prevailing during the past year—in 1958 Bank Rate averaged approximately 5.4 per cent whilst during 1959 it has remained unchanged at 4 per cent. With interest on Advances linked to Bank Rate, and money market rates appreciably lower than last year, it will be apparent that our average earnings per £100 lent are considerably lower.

RISE IN LENDINGS

Whilst it is characteristic of our own business that calls upon our resources from the personal and professional sector of the community, from farmers and from the building and retail trades, have been particularly great, both in number and amount, we have been pleased to satisfy the legitimate requirements of our customers in all occupations and the rise in our lendings shows a welcome and healthy spread. Westminster Bank has not advertised any specific medium or long term schemes for financing small businesses or farmers for the good reason that such advertisement would not import any fresh service. We have always treated such customers, whose problems are not new, as sympathetically as has been possible; it is true that in some cases rigid conditions of repayment might be advantageous but on the whole a flexible system has been preferred. The many letters of appreciation held in our files testify to the adequacy and success of our methods and to the goodwill which has thus been engendered.

In other specialist fields of lending, such as medium term finance for exports, we have continued to play our part but bearing always in mind our basic responsibility to depositors and shareholders. The form of lending known as Personal Instalment Loans has proved to be very attractive and a welcome source of new business and we are well satisfied with the results of our entry into this field.

MAINTENANCE OF LIQUIDITY RATIO

Against the background of rising Advances, liquidity considerations have been in the forefront throughout the year and the maintenance of an adequate ratio has meant a running down of our gilt-edged Investments. You will see from the Accounts that this item has been reduced by £60 million, the result of maturities as well as realisations, always with regard to the appropriate echelon of stocks within our portfolio. It is satisfactory that the surplus in terms of market value of our Government securities has been maintained despite the rather neglected appearance of the gilt-edged market in the last months of 1959.

Our Trade Investments now include the acquisition in 1958 of a 20 per cent interest in Mercantile Credit Company Limited, for which we made the final payment in August last. This has proved a very worth-while investment but I should remind you that we have not received a full dividend on our total investment as our shares were only paid up as and when required by the Company. We can thus look forward to a substantially greater income from this source in 1960.

Our Staff costs have risen materially during 1959, largely in consequence of our negotiating with our Staff Associations a general increase in our salary structures. As a result of the greater pressure of work at a number of our offices and branches during the year, we have awarded special recognition to many officers, some in the form of cash bonuses on a selective basis. In addition, with the expansion of business, our Staff costs have been increased as a result of a rise of over 750 in the number of our clerical Staff.

BRANCH POLICY

We have continued to pursue our programme of branch extension and we have very much in mind the need to expedite the opening of new branches in a number of areas where we are not at present well represented. Often such areas are in the centre, or on the fringe, of large manufacturing communities and it would be imprudent were we, in considering all the relevant factors, to ignore the possibilities to be derived from the legislation to which I have referred earlier. The number of new banking offices opened in 1959 was 13 and our total representation now stands at 1,208 branches.

Additionally, of course, we have refurbished many of our existing offices which in our view were not up to present-day standards; this process also will continue, to the advantage of customers and Staff.

NEW DEVELOPMENTS

You will have seen in the Press from time to time announcements concerning fresh developments in banking services and in these matters Westminster Bank has been well to the fore. In January last we were the first bank in the country to open an office incorporating drive-in facilities; this was established on an eminently suitable site at Princes Road Liverpool, and extensive use of it has been made during the course of the year. We recently introduced at our Bullion Office in London what is believed to be the largest coin-sorting and counting machine in the country and we are thus able better to satisfy our customers' wide-spread demands for silver sorted into all denominations.

Perhaps the most interesting and most important development, however, was our application in November of a closed circuit television technique to the needs of our customers in the Manchester area. We introduced a system of communication whereby customers of three of our branches in Manchester are able to view the statements of their accounts on a television screen at any one of these branches, the book-keeping itself being undertaken in one office. This innovation was itself of importance, but it is the possibility it carries of revolutionary developments in bank accountancy practices generally that is perhaps most significant, for the problem of communication has been, and remains, one of the principal questions to be resolved before centralised book-keeping—which may ultimately be introduced on a large scale—can come into being. To this end we have been conducting pilot schemes with a view to testing various means of communication and the general efficiency of a centralised book-keeping system; and we shall continue those efforts.

I take this opportunity, incidentally, of placing on record my thanks to those members of the Staff who have taken part in research and in the many schemes that we have already conducted. They have often been put to great inconvenience but they have without exception shown a cheerful enthusiasm for trying out new methods.

TRAVEL ABROAD

1959 has been a year of extensive travel abroad by members of our senior Staff. Europe, the Middle East and the Far East have been visited and the establishment of new, and the maintenance of old, contacts have played a considerable part in the further growth of our overseas business. Much credit, indeed, is due to all those officers who give up so much time to this end, and I should like on this occasion to mention particularly Mr Chilvers, who retired from the Management of our Overseas Branch last May and who was, during his service, especially diligent on our behalf in countries abroad.

I am pleased to say that the General Management has remained unchanged during the year and I am sure all our Shareholders would wish me to pay tribute to the efforts of Mr Chesterfield and his colleagues, efforts which are so clearly demonstrated in the results before you.

Westminster Foreign Bank has again made profits despite the many problems provided by the uncertainties with regard to the outcome of the trading blocks in Europe. The Ulster Bank, our affiliate in Ireland, has continued and accentuated the increase in its business and in its profits that has been noticeable over the past few years and as a result has paid a higher dividend, so contributing to the parent Bank's increased profits. I should like to take this opportunity of including the Management and Staff of those two Banks in the thanks I now extend to all our Staff for another excellent year's work.

The Report of the Radcliffe Committee has been received with very great interest, particularly as a source of most useful information. The Committee accepts the fact that the banks are doing a good job and it supports our view that sources of credit are indivisible, thus confirming the action of the many banks who have taken an interest in hire purchase. It was, however, refreshing to find that the Government decided not to adopt all the recommendations of the Committee.

EXPANSION WITH STABILITY

For the country as a whole the year has been one of steady expansion in production, stimulated by concessions in the Budget and by the increasing use made of bank loans and other forms of credit. The expansion has been sound since it has been based on fuller use of industrial capacity, with a corresponding rise in productivity. Costs have also been helped by a continuance of moderate prices for our imports. These factors have in turn ensured a notable stability of retail prices. For this one year the consumer, and we are all consumers, has not been penalised; but I hope that this movement will go further, and that we shall see that not only the shareholders and the labour force but also the consumer gets part of the benefit which any further increase in productivity may bring.

Personal savings, which have again been good, have also made their contribution to stable prices. The Budget concessions enabled the nation to increase the volume of personal consumption a little, and yet at the same time to increase savings.

UNEMPLOYMENT TRENDS

A year ago the trend of unemployment was causing concern. The figures for the country as a whole have since improved; but there are some trades, such as shipbuilding and coal mining, which are facing difficult times, and in consequence there are bad patches of local unemployment. There are notable black spots in the heavy industrial Northern area and in Scotland and Wales. The North-Western area, which includes the cotton districts of Lancashire, also has unemployment well above the national average. Thanks, however, to the Government's cotton scheme and to the buoyancy of the industry during this year's fine summer, Lancashire is now in better heart than for some time past. It is satisfactory to know that the whole problem of unemployment is very much in the mind of the Government, and in the Local Employment Bill it has indicated the further powers it proposes to take to deal with this difficult question.

Ulster has for a long time suffered a high rate of unemployment; and the Government there is taking energetic steps to remedy the position, particularly by attracting industries from England and abroad.

Agriculture has had a good year; crops have generally speaking been good and easy weather conditions prevailed for the harvest. As a nation we have a great interest in the current movement towards greater freedom in world trade; but the movement will probably mean that some of our farmers like some of our manufacturers, will have to meet increased competition.

STRENGTH OF STERLING

Following the big move, made in concert with the other countries of Western Europe in December, 1958, which established external convertibility for sterling on current transactions, a number of smaller but useful steps were taken in 1959. These included the virtual removal of restrictions on travel allowances and the re-introduction of credit facilities for the finance in London of trade between other countries, thus enabling the City to resume one of its many useful functions. The balance-of-payments position remains good, and in consequence sterling has continued to be strong in spite of, or perhaps it may be more true to say, because of, the steps taken towards fuller convertibility. In fact, sterling withstood both the expansion in this country and the uncertainty of a General Election year.

With sterling strong and with a continuing favourable balance of payments we have been able during the past year to repay ahead of time our indebtedness to the US Export-Import Bank, amounting to £89 million. We have also repaid £71 million borrowed from the IMF at the end of 1956; it has not been necessary for us to renew the line of credit given us by that institution at the same time. We have, moreover, during the year made a payment of £58 million to the IMF as the gold portion of our increased quota. This has the effect of increasing by very much more than this figure our second line of reserves of foreign exchange. After these actions, and after making the annual payment of £66 million on the North American loans, our gold and dollar reserves are only £119 million less than a year ago.

RISE IN EXPORTS

A notable feature of 1959 has been the way in which increased consumption at home has been accompanied by a rise in exports, those to North America having exceeded expectations, so that for the first time for many years we have had a favourable balance of trade with the United States.

For several years now the value of our exports has shown satisfactory increases, but these have been apt to hide the fact that our share of world trade has been decreasing; Germany and Japan have been increasing their shares at the expense of the United States and ourselves. It is good to note that so far the 1959 figures show a reversal of this trend, even though the improvement is only slight. It is to be hoped that with improved commodity prices in 1960 our exports to the Commonwealth countries will show an increase that will enable us still further to expand our share of world trade. The latest world shipbuilding figures show that we have recovered from West Germany the second place as shipbuilders, but alas we have ceded to her the second place in the export of manufactured goods.

DISTRIBUTION OF GOLD

There has been a good deal of loose talk about the weakness of the United States dollar, talk which has been brought about by the very con-

siderable loss of gold by the United States. It seems unrealistic to think of a weak currency in a country which still has such a large favourable balance of trade. Surely it is wholly to the good that some of the very big holding of gold by the United States should have been redistributed amongst the less wealthy nations; good from the latter's point of view, of course, but good from the American point of view also, since they have at least as great an interest in a healthy state of world trade as we have in this country. Forty years ago, soon after the end of the 1914 war, a very wise American said to me that if the United States continued to absorb the gold of the world at the rate she was then earning it by her exports, there would be chaos in Europe and another war there. How right he was. Conditions today are, of course, very different; but it is to be hoped that the drain on the still scanty gold reserves of the less wealthy nations in favour of the United States of America will not recur.

The redistribution of gold, has, however, been at a rather rapid pace in recent months and a good deal of America's loss can be attributed to capital exports in connection with both private investment and government aid. The US authorities have emphasised that abrupt cutting of foreign aid would not solve their balance-of-payments problem; but it is fair that Americans should expect this country, and other countries of Europe, to carry rather a greater share of the provision of capital for underdeveloped countries than at present.

We in this country have been doing a lot in this direction in the past few years, particularly in the Commonwealth countries to whom we have a special responsibility. The World Bank has continued to make a notable contribution to development in the poorer countries and no less than one-third of all its lending has been to Commonwealth countries, India in fact being its biggest single borrower. The raising in London last month of a ten million pound loan for the World Bank is a real indication that we wish to play our full part.

TWO EUROPEAN BLOCKS

During the year there have been rapid developments in the arrangements between the six Common Market countries and the emergence of the European Free Trade Association of the seven. It would be infinitely better if one block could have been formed instead of two. At the moment the prospect of forming a bridge between the two blocks is not good; but there is undoubtedly a desire, shared in the United States, for some form of accommodation to be reached. It may be that the great improvement in the French economy during 1959, which has been so welcome to them and to us, may make it easier for France to agree to increased co-operation. It is certainly in the interest of the free world that Europe should not continue "all at sixes and sevens."

In spite of this cloud on the European horizon, 1959 has proved itself a good year. As the New Year opens, the prospects for peace, thanks very largely to the diplomatic journeys of the Prime Minister and President Eisenhower, appear more hopeful than for some time past.

Economically the outlook is encouraging; so encouraging that during 1959 many ordinary shares rose to prices where the yield became much less than that on British Government securities: a most unusual position. It is worth remembering that when very many of us are reading our barometers as "Set Fair" it is time to watch your step.

MONTAGUE BURTON LIMITED

TRADING PROFIT AN ALL-TIME RECORD

SUBSTANTIAL INCREASE IN TURNOVER

MR L. JACOBSON'S STATEMENT

The thirtieth Ordinary General Meeting of Montague Burton Limited was held on January 20th at the Registered Office of the Company, Leeds.

Mr L. Jacobson (the Chairman) presided.

The Secretary (Mr H. V. Evans, ACA) read the notice convening the meeting and the report of the auditors.

The following is the statement by the Chairman circulated with the report and accounts:

It is my intention this year, as has been my practice in past years, to confine my remarks to the trading position of the Group and leave the accounts to speak for themselves, dealing only with those financial aspects which are of first importance.

TRADING POLICY JUSTIFIED

The trading policy of the Group has been completely justified by the results which it is now my pleasure to place before you. Trading profit is an all-time record at £2,852,005; £996,643 higher than last year and £332,898 higher than our previous record. If you approve the dividend we now recommend there would remain, out of this year's profits, after due provision for taxation, dividends and appropriation to capital reserves, an amount of £633,437 to be ploughed back into the business to provide for further expansion and modernisation. In these circumstances I have no hesitation in recommending this higher dividend, believing that Shareholders are entitled to a reasonable distribution when adequate profits are available.

The increased profit is a direct outcome of a substantial increase in turnover coupled with a reduction in the price of materials consumed. Shareholders will bear in mind, as I have stated before, that wool is a very important factor in our price structure and that variations in profit levels are inevitable when wool prices show such wide fluctuations over such comparatively short periods. The effects of these variations can only be minimised by intelligent and prudent buying, and those responsible for merchandising in such a large organisation have indeed a difficult task.

CREDIT FACILITIES

The credit facilities offered by the Group from November 1, 1958, have been well received by the public and have made available an additional pool of goodwill. It has never been the intention of your Directors to sell credit as such, but rather to offer this facility to customers who prefer to plan their purchasing in this way. Credit is not a large proportion of total turnover and the volume of cash business compares satisfactorily with the previous year. I am satisfied with the result of offering these facilities at as little as 5 per cent above what are very keen cash prices. The tremendous turnover of our Group enables us to offer a range of garments which for price and quality, compares favourably throughout the trade.

It will be noticed from the accounts that we have been able to finance the major portion of our own credit operations, needing little outside assistance above normal trade requirements. We are, however, indebted to our Bankers for the support which they stood ready to give had it been necessary.

THE DIRECTORS' INTEREST

There has been much conjecture, and, from time to time, some speculation in the shares of the parent company. The origin of rumour is frequently impossible to trace, and regardless of public denial by your Directors on several occasions, these rumours have persisted with the consequent unsettlement that it entails for members of the staff and executive who have served the company well and faithfully. It might be of assistance to Shareholders if I now repeat at this Annual General Meeting, that as a Board we have too great a confidence and pride in the organisation which we control, to seek to dispose of our interest in it. That interest represents over 60 per cent of the equity capital. We are aware of our responsibilities to Shareholders whose confidence we enjoy. The combined value of the "A" and Ordinary shares at the time of printing of this report stands around 90s. when in December, 1952, the equivalent value was under 15s. In these circumstances we feel we can reasonably claim that your confidence has been justified.

As you well know the parent company is very fully represented throughout the British Isles, and the associated companies have continued their plans for expansion, the results of which will not be fully apparent for some years, but which should in due course prove of substantial benefit to the Group as a whole.

PROMISING NEW SHOPS

The Jackson Group of companies last year opened shops in Cardiff, Belfast and Doncaster all of which show very early promise of success. The development of Peter Robinson in the ladies' fashion trade continues, and that company opened a store in the Strand, London, during the last twelve months. The Strand store is one in which Shareholders can take very real pride as it is one of the most modern of its kind in Europe. Our confidence in this project has been borne out by early results.

We have had a good year and, as I anticipated in my last speech, have enjoyed our full share of national prosperity. Trade figures since September 1, 1959, have been at a very satisfactory level and we have, therefore, reason for confidence.

As all companies in the Group have made their full contribution to the results of the year ended August 31, 1959, it is only left for me to express my very sincere thanks to all members of the staff of the manufacturing, retail and administrative divisions of the Group.

The report and accounts were unanimously adopted. The directors retiring in accordance with the Articles of Association were re-elected to the board. The auditors, Messrs Price, Waterhouse & Co. and Messrs Volans, Leach & Schofield, continue in office.

The meeting concluded with a vote of thanks to the Chairman.

NATIONAL PROVINCIAL BANK LIMITED

CONTINUING HIGH DEMAND FOR CREDIT

A GOOD YEAR FOR UK ECONOMY

MR D. J. ROBARTS ON PROBLEMS OF MONETARY PLANNING

The 127th annual general meeting of National Provincial Bank Limited will be held on February 11th at the head office, 15 Bishopsgate, London, EC2.

The following is the statement by the Chairman (David John Robarts, Esq.), which has been circulated with the report and accounts for the year ended December 31, 1959:

BOARD OF DIRECTORS

Since our last Annual General Meeting we have welcomed to the Board Sir Neville Archibald Gass, KBE, MC, Chairman of The British Petroleum Company Limited. His long experience and expert knowledge of trade and industry in general and of the oil industry in particular will be of great value to the Bank. We were also very pleased to announce the recent election of the Right Honourable Lord Plowden, KCB, KBE, to the Board. Lord Plowden has just completed his term of office as Chairman of the United Kingdom Atomic Energy Authority and we look forward to having the benefit of his wide experience of industrial and financial affairs.

We have to record with great regret the death of Sir Ronald W. Matthews, and also of Sir Ashley S. Ward, LLD, both of whom were Local Directors for Sheffield.

SUBSIDIARY COMPANIES

The Balance Sheet of Coutts & Company as at December 31st last and the Profit and Loss Account for the year ended December 31, 1959, accompany our own Report and Accounts. A Consolidated Statement of Assets and Liabilities of North Central Wagon & Finance Company Limited and its subsidiary companies as at September 30, 1959, is also included.

STATEMENT OF ACCOUNTS

The Balance Sheet and Accounts of the Bank together with the Directors' Report are before you.

Last April your Directors decided to raise further capital. 10,513,162 shares of £1 each were issued to shareholders at par in the proportion of one new share for each share held, thus increasing the issued capital of the Bank to £21,026,324 in shares of £1 each, fully paid. 96.4 per cent of the new shares was taken up by the shareholders; the rights to the balance which was not taken up were sold in the market and the proceeds distributed in cash pro rata to those shareholders who had not exercised their rights.

It will be seen that the liabilities of the Bank to its Current, Deposit and other Account holders at £920,568,979 exceed last year's figures by £58,073,418.

The total of our liquid assets—Cash, Money lent at Call and Short Notice, and Bills—represents 37.1 per cent of our deposit liabilities. This compares with 36.0 per cent twelve months ago.

Investments in securities of, or guaranteed by, the British Government continue to be shown at a figure which is below their market value. The Balance Sheet value of £168,846,414 gives a ratio of 18.3 per cent to Deposits as against 25.0 per cent last year. We hold no undated government securities and the majority of our holdings mature within ten years.

Our Advances stand at £351,875,767 which represents 38.2 per cent of our Deposits. The corresponding figures at December 31, 1958 were £284,411,586 and 33.0 per cent. The liberalisation of credit which began in the summer of 1958 continued during 1959 and has enabled the banks to resume and develop their traditional rôle of supplying credit to their customers for their legitimate needs. Consequently, we have been able to satisfy those of our customers who were formerly prevented by the "credit squeeze" from obtaining the credit which they needed for the development of their businesses and for all the many purposes for which bank loans are normally granted. This pent-up demand, coupled with a background of high business activity, particularly in the consumer field, has caused our loans and overdrafts to rise by £67,464,181 during the year and the demands upon us for credit continue at a high level.

PROFIT AND LOSS ACCOUNT

The account shows a net profit for the year of £2,840,971, compared with £2,236,426 for 1958.

It will be observed that the amount of profit retained by subsidiary companies has increased from £98,409, in 1958 to £710,963 in 1959. This is due, in the main, to the fact that the figure for 1958 covered only a period of approximately three weeks' operations of the North Central Wagon & Finance Company Limited whereas the figure for 1959 covers a full year.

Together with the amount brought in of £656,142 there is a balance for disposal of £3,497,113. An interim dividend of 10 per cent has been paid on the capital of £10,513,162 which existed prior to the issue of shares in April last. This absorbed £643,931, leaving available £2,853,182.

It is now proposed to deal with this balance as follows:

To pay a final dividend of 7 per cent on the increased capital of £21,026,324	£901,504
To appropriate to Reserve Funds	£1,000,000
This will leave to be carried forward	£951,678

BANK PREMISES

An important transaction during the past year was the purchase for £3,334,000 of the freehold of Gresham House. The property adjoins the Head Office premises of the Bank in Old Broad Street and occupies about 1¼ acres. This purchase will provide for the needs of the Bank for space on the Head Office site for many years to come. We have no present intention of embarking on a major rebuilding scheme and the tenants of Gresham House have been informed that, should the Bank's requirements later on render it necessary to embark on a scheme covering the whole or any part of the premises, very ample notice of such intention would be given.

The pressure on our Premises Department has been extremely heavy since building restrictions were eased. Over the past six years, in addition to numerous smaller schemes and the ordinary run of maintenance and decoration, no less than 157 major schemes of rebuilding or modernisation have been completed at a rate of one every fortnight. With the completion of the rebuilding of our branches at Portsmouth (illustrations of which appear elsewhere in this report) and in Cheapside, E.C.2, the only war-damaged office which remains to be dealt with is Exmouth, where the preliminary work has begun.

Much thought and attention is given to the design and construction of new premises and to the adaptation of older premises for modern needs. With over 1,500 offices under its care, the management and staff of Premises Department are very fully occupied, but we hope to proceed steadily with our programme of modernising our branches where necessary in order to provide the best possible conditions for customers and staff.

We have, of course, been very concerned about the number of robberies from which our Bank and others are at present suffering and we are taking all possible steps to safeguard the staff of the Bank and to strengthen our security arrangements.

MANAGEMENT AND STAFF

The freeing of credit, together with the relaxation of a number of other controls such as those governing foreign exchange transactions, has enabled our business to achieve a high and expanding level of activity throughout 1959. We all welcome this, but we realise that our management and staff have had a particularly strenuous year. It is not possible to increase the staff of the bank sufficiently rapidly to take care of such swift expansion of business as has occurred. The work of bank staffs is highly skilled and it takes time to acquire the necessary proficiency. We have, of course, had this whole question most prominently in our minds and we are doing our best to improve matters as rapidly as is practicable. At the beginning of the year our staff numbered 12,974: by the end of the year the figure was 13,700—an increase of 726.

I would like to take this opportunity of thank-

ing the General Managers, the Management and the staff of the Bank, both men and women, for their excellent work during a most strenuous and testing year. We are exceedingly fortunate in the fine quality of those who serve the National Provincial Bank at all levels of seniority, and it is their good work which has made possible the very satisfactory results which we are able to place before you in the past year's accounts.

NORTH CENTRAL WAGON & FINANCE COMPANY LIMITED

The freeing of controls upon, and the demand for, credit have enabled the North Central Wagon & Finance Company, too, to have a most active year of business. I will not comment in detail upon the accounts of North Central because the Company publishes its own set of accounts and the Chairman deals fully with them in his statement. I will confine myself to saying that we are very satisfied with our investment in the Ordinary Share Capital of the Company, and to thanking the Directors and Staff for their successful efforts and skilful management during the past year.

The field of hire purchase is an expanding one, and it seems that this expansion is likely to continue. The successful results of the well established firms have attracted many new entrants to the business and consequently competition is increasing. While competition in obtaining and serving customers is always to be welcomed, there is a danger that, in hire purchase, intense competition can take the form of lowering initial payments or abolishing them altogether and at the same time lengthening the periods of hire to such a point that unsound business is undertaken. It is to be hoped that the dangers of transacting hire purchase business on terms which are too fine for safety will be appreciated by the concerns operating in this field.

GOOD YEAR FOR UK ECONOMY

1959 was a good year for the economy of the United Kingdom. A favourable balance of payments was maintained during the first six months of the year and, while the second half of the year is always more testing than the first, there seems to be no reason to suppose that the figures for the whole year will, when published, reveal other than a satisfactory position.

The gold and currency reserves stood at an adequate level throughout the year and, except for some weakening in the sterling exchange rate during December, sterling has been a strong currency. Higher money rates overseas have tended during recent weeks to attract funds away from the United Kingdom but, provided that our exports remain competitive and our overall balance of payments position favourable, we have nothing to fear from temporary movements of this kind: rather can we look for a further improvement in our reserves position as our industrial output expands.

The Chancellor of the Exchequer was able to make welcome reductions in taxation, both direct and indirect, in his Budget. It is to be hoped that further reductions will be possible in this and subsequent years. Taxation at the present level in peace time is still a most serious handicap to the efforts of industry to accumulate the capital necessary for its modernisation and expansion.

The improvement in the position of sterling has enabled substantial relaxation in exchange control to be achieved and a welcome move has been the virtual freeing of exchange for travel purposes. It is sincerely to be hoped that it will soon be found possible to abolish the remaining foreign exchange controls and to allow sterling to stand upon its own merits.

The level of business throughout the year in many sections of industry has been high—particularly in the consumer goods industries and in the retail trades. There has, however, been a notable lag in the capital goods industries, but there are now some signs that demand is beginning to spread to them as hitherto unused manufacturing capacity is filled up and the need to expand industrial plant becomes apparent.

RADCLIFFE REPORT

A memorable event during the year was the publication of the Report of the Committee on the Working of the Monetary System. The Chairman and members of the Committee deserve our gratitude for their strenuous labours extending over approximately two years and for producing a report which provides a masterly and lucid explanation of the working of the monetary system and of the parts played by the various institutions which function within it. It is not practicable to comment in detail in this statement on all the recommendations of the Report covering, as they do, the whole field of finance in the United Kingdom.

Naturally, we were pleased to note that the Committee had little fault to find with the way the banks conduct their business. On the question of advances of a medium-term or long-term character, the Committee recognised what had already been done, notably in connection with the building of oil tankers and the finance of exports of capital goods, but suggested that a limited extension of this practice in such other special directions as agriculture and small businesses might be helpful. But, as I have stressed on previous occasions, a commercial bank, with its liability to repay current account balances on demand and deposit account balances at short notice, cannot afford to lock up any but a modest proportion of its resources in medium- or longer-term credits. So far as this Bank is concerned we do not consider that fixed-term loans at higher cost to the borrower are the best means of making medium- or longer-term facilities available for the special purposes mentioned. Instead, we are satisfied that our existing arrangements are sufficiently flexible to cover all the reasonable requirements of our customers at ordinary rates of interest and we have not so far thought is necessary to introduce any special schemes for particular purposes.

We welcome the view expressed by the Committee that discriminatory action against the banks, unaccompanied by general restrictions on all classes of lenders, is difficult to justify under normal conditions, and that in times of emergency restrictions on the lending operations of the banks should be combined with other restraints.

The Committee also drew attention to the possibility of improving the machinery of day-to-day settlements. With the great increase in volume of such settlements, the banks have for some time been giving active consideration to this problem, and as a first step it has been decided that the existing means of transfer known as the Traders' Credit system, which has been in operation since 1930, shall be extended and developed with a view to its being more widely used.

NEED FOR CLOSER CONSULTATION

Most of the recommendations of the Committee on the Bank of England and its relations with the Treasury have, for what appear to be very good reasons, not been accepted by HM Government. Indeed, the only recommendation which has won their wholehearted support is that relating to the collation and publication of financial statistics. It is certainly desirable that the statistical information available not only to the Government but to the public on financial developments should be as complete as practicable. It should be borne in mind, however, that statistics can provide only a picture of the past and the framers of monetary and economic policy must always be making the best guess they can about the future. It is easy to be wise after the event, but any review of monetary developments in the past—and even in the last few years—shows that too often the decision to move, whether towards restriction or towards expansion of credit, has been taken too slowly, with the result that much more vigorous measures have been needed than would have been required if the trend of economic activity could have been foreseen a few months earlier: and then again, the vigorous measures eventually adopted have too often been maintained longer than subsequent events have shown to have been advisable. The main problem of monetary planning is to foresee the probable course of events and to take the minimum corrective action at the earliest possible moment, long before any definite evidence of the need for such action may be reflected in statistics.

Unfortunately, we have not yet succeeded in developing a radar system for our financial pilots, which will probe into the future course of events and warn us of rocks or other dangers enveloped in the mists of the future. We have to trust our pilots to do their best to anticipate what is to come, remembering that, in the monetary field, there is always a time-lag before restrictive action can be fully effective and usually a longer time-lag still before there is much response to any expansion of credit. What the economy of the country needs is small, and if necessary, frequent adjustments rather than sudden and spectacular jolts of monetary policy. The banks are in more direct contact with the trend of business thinking than the central authorities, while those authorities are better informed on other aspects of the national and international situation than the banks, and the closer the consultation between them the better it will be.

For some time it has been increasingly apparent that fields of finance and investment, other than banking, should be surveyed in the light of modern conditions. Arrangements for this to be done have been announced, and by the time the various committees have completed their task there will be few sections of the country's financial machinery that will not have been carefully examined.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:
The Company Meetings Department,
The Economist,
22, Ryder Street, S.W.1.

WATNEY MANN LIMITED

AN EVENTFUL YEAR

The Annual General Meeting of Watney Mann Limited will be held on February 12th at the "Windsor Castle" Restaurant, Victoria, London, S.W.

The following are extracts from the Statement by the Chairman, Mr S. H. Combe, MC, circulated with the report and accounts for the year ended September 30, 1959:

This has been a year of tremendous importance in the expansion of your Company. It has seen the conclusion of one of the biggest single negotiations in the Company's history—the sale of a lease of the major part of the Stag Brewery site; the re-organisation resulting from this sale; the beginning of a major long term tidying up of the Capital structure of the Group; the beginning of a redeployment of the Company's properties, and at the same time their revaluation, and after these developments had been announced, the publication of a projected offer for the Company's Ordinary Stock.

STAG BREWERY SITE

Our expert advisers are of the opinion that the total price obtained for the Stag Brewery Site was an extremely advantageous one. The premium received will help to re-establish your Company's liquid resources which have been considerably drained by the heavy expense of modernising and expanding the capacity of the breweries at Mortlake and Whitechapel.

Your Company is now placed in a good position to expand its trade from four breweries, at Mortlake, Whitechapel, Alton and Brighton. All these will have been brought up to date in a matter of months.

PROFIT AND DIVIDEND

The combination of the reduction in beer duty and the good summer have greatly benefited our trade and the results of the year are well up to the forecast that I made to you in September.

After deducting taxation adjustments relating to previous years, and the interests of Outside Shareholders, the Group Profit available to the members of Watney Mann Limited, has increased by £745,144 to £2,042,772. The Board are recommending a final dividend of 11½ per cent on the Capital as increased by the bonus issue earlier in the year, making an effective distribution of 15 per cent for the year compared with the equivalent of 10½ per cent for 1958. This is in keeping with the forecast I made in September, and the fact that the profits are higher than could then be foreseen has improved the earnings cover for this dividend.

Although the relief given to brewers in the 1959 Budget was most welcome, it should be borne in mind that the industry had to bear two considerable burdens: firstly, on the reduction of duty and lowering of the price by 2d. a pint, the brewers and retailers stood to lose about 4s. per barrel: secondly, the brewers had to stand the loss of duty on beer already brewed and in stock, to which must be added the retailers' stock, for which full allowance was given by your Company. The duty loss, amounting to more than £190,000 has been charged against profits of the year.
