A strong general demand was in evidence during yesterday's export sale, offerings amounting to 72,000 packages. A strong feature of the sale was "tea for price" which rose impressively. Bright Dooars B.O.Ps were fully firm, and similar fannings were higher. Plain brokens were about firm. Medium brokens eased a little, but medium fannings recorded a small addition. Tippy teas were steady, but Darjeelings eased. Whole leaf grades were irregular but stylish kinds were well supported. Legg-cut Dooars also gave to an irregular trend, the price easing by 10 to 15 nP. Medium B.O.Ps were about firm, but the costlier ones eased by 20 to 30 nP. The bright liquoring teas were about firm. Prices for the autumnal C.T.Cs gained, while the plainer teas lost by 15 to 30 nP. The fibrous secondary C.T.Cs eased by 15 nP. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.90 to Rs. 6.40, clean black pekoe Rs. 5.20 to Rs. 5.50, best Assam C.T.C. B.P. Rs. 5.80 to Rs. 6.40, medium fannings Rs. 4.90 to Rs. 5.10, medium B.P. Rs. 4.70 to Rs. 4.90, plain B.P. Rs. 4.60 to Rs. 4.70, and plain fannings Rs. 4.70 to Rs. 4.90.

TIN SUPPLIES TIGHT

(From Our Own Correspondent)

CALCUTTA, 21st *February*

The shortage of tin came into the limelight more when during the week under review fresh arrivals failed to satisfy the pent-up demand. As a result, the feature of the week under review in the metal market was the steadiness in tin prices. The price was fully steady at Rs. 640 a cwt. The steadiness was in full accord with the strong advices received from the London Metal Exchange where tin rose to £794 a ton, as against the opening of £787. Recent trends in tin markets all the world over have indicated that in this year supplies would be tight. Supplies available in the free world have been estimated at 167,000 tons, as against estimated consumption of 172,000 tons. These estimates should enable New Delhi to plan India's import policy due to be announced by the end of next month. It is necessary that India builds up a stock as the present hand-to-mouth position has been found distressing and is causing considerable inconvenience not only to small-scale consumers but to the scheduled industries also. Production bottleneck in non-ferrous metal products manufacturing firms for want of zinc and tin, despite the availability of copper, has not been uncommon. It is to be hoped that the industry's point of view is driven home at the meeting of the Import Advisory Council scheduled to be held in New Delhi early next month.

Supplies of copper scrap were tight, and utensil scrap moved up to Rs. 224 a cwt. from Rs. 218.

Notices

JESSOP AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT IN compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an additional dividend for the year ending 31st October 1960 at the rate of Rs. 1.50 per share subject to deduction of Tax in accordance with the provisions of the Finance Act currently in force.

The Preference Share Transfer Books will be closed from 27th February to 2nd March 1961, both days inclusive. Dividends will be paid only to the Registered Shareholders or their mandatees.

By Order of the Board,
A. P. SARKAR,
Member, Board of Management.

63, NETAJI SUBHAS ROAD,
CALCUTTA-1, 18th *February* 1961.

J. K. STEEL LIMITED

THE BOARD OF DIRECTORS AT THEIR Meeting held today have decided to recommend to the forthcoming Annual General Meeting of the Company payment of Dividends in respect of the year ended 30th June, 1960, subject to deduction of tax, as under:—

On 7 per cent, Cumulative Redeemable Preference Shares, in accordance with the Preference Shares (Regulation of Dividends) Act, 1960, ... @ 9.1%
On Ordinary Shares, ... @ 20%

The Annual General Meeting will be held at the Registered Office on Thursday, the 30th March, 1961, at 4-30 p.m.

The Registers of Members and Transfer Books of the Company will be closed from 16th to 30th March, 1961, both days inclusive.

By Order of the Board,
J. K. INDUSTRIES PRIVATE LTD.,
Managing Agents,
H. S. SINGHANIA,
Director.

CALCUTTA, *the 21st February*, 1961.

The berry quality scrap was firm, though unchanged, at Rs. 238 a cwt. Active conditions were reported on the London Metal Exchange where copper, after opening at £223¾ a ton, rose to £224¾ but closed at £223¾. The price in New York also gained, though closing below the best level of the week. Electrolytic zinc in London closed higher at £83-7/8 a ton, as against opening of £83¾. At one time, the price was even higher at £84¼. Locally, the price was firm at Rs. 165.50 a cwt. Virgin lead was quiet at Rs. 63 a cwt., but in view of the good stock position this metal could attract only little business.

GOOD ENQUIRY FOR BLACK PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 23rd *February*

Malabar black pepper after making mixed show for some time during the earlier part of the fortnight ending 22nd February ruled steadier due to inquiries from New York both for Malabar and Lampong.

Despite comparatively smaller import, New York remained selective buyers. During the period, New York dealers bought from Singapore and India several parcels at prices ranging from $0.43 to $0.45. Spot at New York rose from $0.46 to $0.47½. Grinders having refused to follow the rise, the dealers were unwilling to entertain higher offers. The result was that Singapore on balance showed little change, black being listed at Str.$142½ and white at Str.$207½. There was comparatively more weakness in White at Singapore as local speculators and stockists at Sarawak were anxious to liquidate in view of the approaching new season. Weakness in rubber also proved a depressing factor. Malabar black too reversed its course as New York refused to follow. Exporters who sold to Russia and other East European Countries having been fully covered, ungarbled after touching the highest at Rs. 380 came down to Rs. 369 with buyers reserved.

Inland demand is also showing signs of tapering off in view of the approaching Holi Holidays. Poor inland demand together with the absence of foreign inquiries made growers easy sellers. March delivery on the Cochin Exchange after rallying to Rs. 416 came down to Rs. 395 as bulls preferred to await new incentive before committing afresh.

The future of the market depends upon the size of new crop of Sarawak and Lampong and also on the attitude of U.S.A. dealers and grinders. The present trend denotes that the New York dealers are likely to remain selective buyers throughout the year as they are sure of getting supply whenever required in view of the World's surplus production. The difference between white and black pepper being still big, there are more chances of white going down than black. But the fall in White will ultimately affect the price level of black. It is but natural that the grinders in all primary markets may resist lower prices as they have seen high prices during the last year. But, ultimately the arbiter of the prices in the producing countries will be the size and tempo of the demand from consuming countries like U.S.A., Europe and U.S.S.R.

In declining market, New York dealers always under-buy. As such, it is possible that there may be very often temporary flurry in New York which will have its reflection on all the primary markets.

Calicut is cheaper than Alleppey there being more arrivals in view of the harvesting season in the area. Calicut is quoting Rs. 365 for the ungarbled. Garbled at Cochin is quoted at Rs. 380 and ungarbled at Rs. 370.

Ready Pepper in Bombay is nominally quoted at Rs. 208 per 50 Kilos.

EFFECTS OF HIGH TAXATION

(*Concluded from page* 350)

developed suffer from two limitations; the number of countries in each group taken for comparison is too small and the rates studied should have been those applicable to unearned rather than earned income, since it is the former that is most relevant for investment. This latter criticism is anticipated and met by the plea of lack of available data.

5. As mentioned earlier, the National Council seems rather over-lenient towards the Government in the matter of the 45 per cent rate of taxation of corporate profits. It lends its support to the dubious practice of a concealed increase in the rate of taxation through a change in the system of company taxation.

6. The implications of the phenomenal new issue boom of 1960 are not examined, possibly because the data on which the study is based was collected somewhat earlier. It would have been a good idea if the Council had refuted the argument that taxation could not be considered excessive because people had so much investible funds that almost every new issue was heavily oversubscribed. This is a delusion that could be dangerous if it were to influence budget decisions for 1961-62. In any case, the craze has now passed. It is to be hoped that the tax proposals for the coming budget will be framed in the light of the present more or less normal conditions in the new issues market and not be influenced by the abnormal conditions of a few months ago.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

VOL. CII. No. 2604 BOMBAY, 4th MARCH 1961 PRICE Rs. 2

MR. MORARJI DESAI DISPLAYS GREAT SKILL IN RAISING NEW TAXES

BY and large, the size of the proposed third Plan, envisaging an outlay of Rs. 7,500 crores to Rs. 8,000 crores in the public sector and Rs. 4,000 crores in the private sector, has the support of the vast majority of informed public opinion in this country, though there are differences of opinion on many details and the exact share to be allotted to the two sectors. If an investment of this order is to be undertaken in the next five years, earnest and bold efforts have to be made from now onwards to find the necessary resources. And, when the Finance Minister makes a serious attempt in this direction, he deserves full support and encouragement. Surely, it would be illogical for the country to ask for a massive development plan and then demur at additional taxation without which the Plan cannot be put through. The budget for 1961-62 and the tax proposals accompanying it unmistakably show that Mr. Morarji Desai has not chosen to shirk his responsibility as most of the State Finance Ministers have done. On the contrary, he has made a courageous beginning and decided upon the ways and means of finding the resources for the first year of the third Plan.

It will be remembered that the Draft Outline of the Plan provides for Rs. 1,100 crores of additional taxation to be raised by the Centre. The new taxes proposed by him in the 1961-62 budget are expected to bring in Rs. 63.17 crores, of which Rs. 60.87 crores will be the share of the Centre. This means that he has prepared the ground for covering well over Rs. 300 crores of the sum of additional taxation scheduled for the five-year period. It is, of course, assumed here that the means chosen by him now can be sustained in the remaining four years as well. Broadly speaking, there should be no great difficulty in doing so, as the net has been cast far and wide. Further, as usual, the Finance Ministry must have been conservative in assessing the yield of new taxes, so that the aggregate yield over a period of five years need not be less than Rs. 300 crores, even if there were to be any downward adjustments in some of them to suit changes in market conditions. Some may be inclined to argue that the Finance Minister has planned for much heavier taxation in the first year of the Plan than is absolutely necessary. But others may contend that he should have sought to raise much more, at least a minimum of Rs. 75 crores, so that the burden of fresh taxation can be spread over the remaining four years in equal manner. The Finance Minister, however, seems to have followed the middle path. This implies that new taxation would have to be heavier still in the next and/or subsequent budgets, unless, of course, the buoyancy of tax revenue turns out to be stronger than has been assumed.

Mr. Morarji Desai has displayed considerable skill in spreading the new taxes over a large number of commodities. As many as 41 items in the customs schedule have been roped in for more taxation. Under Union excise duties, the rates on 14 commodities already in the list have been enhanced and 18 new commodities have been brought in. It is noteworthy that, after a long interval, the customs duties have been made to yield a substantial amount of new taxation. Of the sum of Rs. 60.17 crores sought to be raised by way of indirect taxation, customs duties are contributing nearly half—Rs. 29.27 crores to be precise. Mr. Morarji Desai has thus belied, albeit to some extent, the general assumption that one cannot count upon import duties as an important source of finance for the third Plan. We must, however, hasten to add that, as a general proposition, this statement is still true, for whatever scope there was for obtaining additional revenue from this source has been greatly narrowed down and a similar attempt for the second time will gravely imperil the competitive capacity of Indian industry.

It is not easy to impose indirect taxes on an economy suffering from scarcity of goods without enhancing the risk of inflation. But the Finance Minister has tried to minimise this risk, in that he has avoided loading the tax on those articles the prices of which influence the cost of living to a considerable extent. Undoubtedly, some essential consumer goods have been subjected to increased excise duties; these are higher medium counts cotton cloth, printed and processed cotton fabrics, superior grade kerosene, watches, *vanaspati* and paper. The worst sufferers in all these cases will be the middle class, especially lower middle class, in urban areas whose standard of living has already been badly hit. It will be pertinent to recall here that kerosene in particular has been the target of some State Governments, too, especially Maharashtra and Gujarat which have raised their sales tax on this poor man's fuel. The only consolation is the thought that the position could have easily been worse. It is very likely that, in the coming months, the effect of these increases may be more than neutralised by a possible fall in the price of foodgrains. At any rate, the authorities must not do anything that will prevent the increase in agricultural production from bringing down the prices of food and raw materials at least to levels that prevailed before a shortfall in production in the 1959-60 crop year engendered a rise in them.

The need for additional taxation has not been the only reason for raising some of the excise and import duties, judging from the observations of the Finance Minister. There are other grounds as well. There is, for instance, a need for restraining consumption, in order to ensure more savings and their utilisation in projects of higher priority in the third Plan, as well as to compel consumers (industrial and individuals alike) to be economical and efficient in the use of scarce resources. No impartial observer of the Indian scene can question this objective. Then, there is an excessive margin of profit in favour of distributors, and in some cases even manufacturers, of most of the goods affected by indirect taxation proposed in the budget for 1961-62. This fortuitous situation is the result of severe restrictions on imports, inadequate domestic production and the resultant sellers' market. There is, therefore, no reason why the Government should not take away a part of this excess profit in the form of indirect taxation. It is, of course, quite possible that sellers may succeed in passing on either the whole or a part of the increase in taxes to consumers, but there is bound to be consumer resistance at some point. A third justification is the necessity to obtain for the Exchequer a part of the large profits that are being made by some sections of power-driven decentralised sector. Quite a good number of articles now subjected to fresh taxation, including rayon, chemicals and dyes, come under one or more of these three non-revenue considerations. It will thus be seen that the argument that the additions to indirect taxation in the budget will aggravate the inflationary pressure can be easily exaggerated. The evil can be kept under check, if the authorities are vigilant and give appropriate relief when the supply of goods concerned increases due to growth in domestic production, requiring incentives for stimulating their offtake.

In fairness to Mr. Morarji Desai, it must be said that he has not tried to formulate tax proposals from the point of view of general elections next year. There are, of course, some traces of doctrinnaire socialism in the few changes that he has proposed in direct taxation concerning individuals and corporations. But they have no significance so far as the forthcoming elections are concerned. As against the virtual elimination of the small concession in favour of earned incomes above Re. 1 lakh, he has shown a gesture of goodwill towards the private sector by substantially reducing the tax on bonus shares. In addition, he had effected a modest reform in inter-corporate taxation in order to rectify a defect in the present system which encourages foreign investors to insist on a majority holding in companies established with their participation. But here, too, he has reduced the benefit of this reform by seeking to discourage the flotation of subsidiary companies by existing companies. His object in doing so is to curb concentration of economic power and to enlarge the opportunities for public participation in joint-stock companies. On paper, this objective is quite desirable and idealistic. But one has to be practical and pragmatic. In any case, as this objective is already being sought to be achieved through Company Law and Industries (Development and Regulation) Act, there is no need to apply the inflexible fiscal policy for this purpose.

The Finance Minister has been receptive to some of the suggestions designed to attract foreign private capital. The cut in the rate of taxation on royalties paid by Indian companies to foreign investors and the extension of concession to foreign technicians are typical examples. He is not unjust in wanting to check the expenditure of companies on entertainment, as there has been a tendency to misuse this business practice in this country also. Notable and welcome among the other features of tax proposals are the extension of the benefit of five-year tax holiday to hotel industry and encouragement to construction of houses for low-income group. But the same thing cannot be said of the reduction in the development rebate from 25 to 20 per cent. This step, coupled with the increase in the import duty on plant and machinery and components, is not in consonance with the policy of bringing about rapid industrialisation of the country. The Finance Minister has been rather hasty in watering down the benefit of development rebate. It would appear that he has been particularly careful to see that every concession shown to the private sector is

matched either by the withdrawal and/or a reduction of an existing concession or by the imposition of a fresh handicap. Actually, the reduction in the bonus tax is no concession at all. It is only a partial undoing of an injustice in the shape of multiple taxation. Indeed, he ought to have completely struck off this tax from the statute book. Once again, Mr. Morarji Desai has turned a deaf ear to all the pleas for a reform in tax policy which will avoid the many inequities that abound in it. Even the well-reasoned and modest suggestions made by the National Council of Applied Economic Research for encouraging savings in the private sector have not appealed to him. Instead of reducing the burden of direct taxes, he has only increased them, though only by Rs. 3 crores. This obstinacy is one more proof of the blind faith of the powers-that-be in doctrinaire socialism and their fanatical devotion to it.

THE STATE OF THE ECONOMY

THE last year of the second Plan has virtually come to a close and set in train some hopeful trends for the first year of the third Plan. Both in agriculture and in industry, 1960-61 seems to have taken the economy to the highest level of production ever attained. Provisional estimates of foodgrains production in the year have placed it at about 76 million tons which will be a little higher than the second Plan's tentative target of 75 million tons. As additional resources were not made available on a scale commensurate with that Plan's revised foodgrains production target of about 80 million tons, it may be broadly taken that actual achievement in the end-year of the Plan has not belied expectations. This is also true of some commercial crops which will have nearly reached or exceeded the targets originally set for them under the second Plan. The output of cotton in 1960-61 is now estimated at 5.3 million bales and that of sugarcane at 7.8 million tons in terms of *gur*. Only in respect of jute and oilseeds do the provisional estimates show that the targets will not be achieved. All in all, therefore, the level of agricultural production potential attained in 1960-61 may well be seen as the highest on record—a factor which will have largely, though partly, contributed to the expected increase of 6 per cent in the year's real national income as compared with 1959-60. That this agricultural performance is still not commensurate with the country's current requirements of foodgrains and raw materials cannot, however, be glossed over through a misleading comparison with 1949-50—a particularly bad year.

Performance in the industrial sector, too, in the end-year of the second Plan, it is estimated, will have attained a record level. Even according to the index of industrial production (base 1951=100) which does not cover a whole range of newer industries established since the base year, the increase in production in the first ten months of 1960 was 11.7 per cent over the level of the corresponding period of the previous year. The percentage increase may turn out to be even higher when the index in the Plan year 1960-61 is compared with the index of 1959-60. The fact that, over the second Plan period, industrial production, even without taking into account the output of newer industries, increased by as much as 37 per cent as compared with 1955 is an eloquent indicator of the buoyancy in the industrial economy. It is noteworthy that the group of "intermediate products and capital goods industries," with about the same weight in the index as the group of "consumer goods industries," has accounted for about two-thirds of the total increase in production. This relatively greater increase in the production of intermediate products and capital goods not only explains the buoyancy in the industrial economy but is indicative of its greater growth potential.

Thanks to the increase in agricultural and industrial production, national income at constant (1948-49) prices in 1960-61, it is anticipated, will be six per cent higher than the 1959-60 figure (Rs. 11,750 crores), that is, Rs. 12,455 crores. Real national income in the end-year of the second Plan will thus represent 19 per cent more than that in 1955-56—the year immediately preceding the Plan. In *per capita* terms, however, real national income in the current year will be only Rs. 289 (if the population is taken to be 431 million as estimated by the Central Statistical Organisation), representing an increase of 5.6 per cent over that in 1955-56. Though this is a relatively small increase, it does indicate broadly an improvement in real income over the second Plan period even after allowing for the higher rate of increase in population than in the first Plan period. This improvement, in its turn, is the result largely of a total investment of Rs. 6,750 crores (Rs. 3,650 crores in the public sector and Rs. 3,100 crores in the private sector) during the second Plan period, leading to an increase in the national output of goods and services. It is noteworthy in this context that the ratio of investment to national income has increased from about 8 per cent. at the end of the first Plan to around 11 per cent at the end of the second Plan. This latter ratio compares favourably with the target of 10.7 per cent.

In the current year alone, public investment is of the order of Rs. 800 crores, as compared with Rs. 570 crores in 1956-57. As for private investment in organised industry alone, in the first nine months of 1960, the capital raised by companies has come to Rs. 47.4 crores, as compared with Rs. 70 crores in the whole of 1959. This figure does not include bonus issues, which, however, were not many. Aggregate private investment in industries must have been still greater, if the available indices of new capital issues and of imports of capital goods, taken together with the increase in the domestic output of intermediate products and capital goods, are any guide. It is also significant that consents for capital issues of an aggregate value of Rs. 150 crores were given in 1960 to non-Government companies. This, in its turn, is indicative of a high level of investment intentions in the private industrial sector in the last year of the second Plan.

The *Economic Survey* for 1960-61, distributed along with the Budget papers, has referred to these and a few other brighter aspects of the economic situation. But the state of the economy, as described by the *Survey*, has its darker side too, particularly in the matter of employment, money supply, prices and balance of payments. This side, however, is not one of unrelieved gloom if the second Plan period as a whole is brought into focus. For instance, while the creation of new employment opportunities during the Plan period doubtless lagged behind the increases in labour force, such increases in employment as had taken place were still very

PROGRESS OF NEW TAXATION

(In crores of rupees)

Budget year	Indirect	Direct	Total
1956-57 ..	25.15	9.00	34.15
1957-58 ..	57.35	30.65	88.00
1958-59 ..	2.83	3.50	6.33
1959-60 ..	23.57	2.50	26.07
1960-61 ..	24.23	..	24.23
1961-62 ..	60.17	3.00	63.17

substantial as evidenced by two facts. First, at the end of 1959, the total numbers employed by the Central and State Governments (excluding the Railways), quasi-Government organisations, public sector projects and local bodies were about 5.0 million as compared with 3.5 million in March 1956. And, secondly, in selected industrial units covering about one-sixth of the total factory employment, there was in evidence an annual increase of 6 to 8 per cent in employment since 1956. These trends show that, in 1961-62 when investment in the public and private sectors, supplemented by local works, is going to be larger than in the current year, relatively more job opportunities will be created.

As for monetary trends, the *Economic Survey* attributes the larger expansion in money supply in 1960, as compared with 1959, to an increase (Rs. 236 crores) in private indebtedness to banks. But it is also admitted in the same breath that "expansion in credit was, to a large part, in response to the increasing requirements of trade and industry." Credit is taken for the fact that the increase in Government's indebtedness to the banking system in 1960 was only Rs. 26 crores, as compared with Rs. 247 crores in 1959. It would appear that, as far as the current year is concerned, there has been no deficit financing of any consequence by the Government to be blamed for such inflationary rise in prices as has taken place. As far as the entire second Plan period is concerned, the *Survey's* findings that "the expansionary impact of the increase of about Rs. 1,400 crores in Government's indebtedness to the banking system and of the increase of Rs. 643 crores in bank credit to the private sector was offset partly by a rise in time deposits of about Rs. 710 crores and a fall in foreign exchange assets of the Reserve Bank of India of about Rs. 636 crores" would appear to convey that monetary stability has not been unduly undermined in the process of development spending.

In fairness to the powers-that-be, it must be recognised that the non-monetary factors seem to have been largely responsible for the rise in prices since 1956. The index number of wholesale prices (base 1952-53=100) no doubt increased from 103 in 1956 to 123 in 1960. But the rise in the index from 103 in 1956 to 111 in 1958 was, in the main, due to the increase in foodgrain prices which rose by 14.5 per cent since 1956. In 1959, food articles other than foodgrains accounted for nearly two-thirds of the rise in the index from 111 in 1958 to 115.5. In 1960, there was a sharp rise, to the extent of 16 per cent, in the prices of agricultural raw materials like raw cotton, raw jute and oilseeds, the production of which had declined considerably in 1959-60; this price increase, in its turn, was responsible for the rise, to the extent of 10 per cent, in the prices of edible oils and of cotton and jute manufactures. The *Economic Survey* is, therefore, on sure ground when it says that, "if oilseeds, edible oils as well as raw cotton, raw jute, cotton and jute manufactures are excluded, the index of prices of other commodities would show a rise of 2.2 per cent in 1960, as compared to a rise of 4.9 per cent in 1959 and 5.0 per cent in 1958." It would thus appear that, over the entire second Plan period, the relatively poorer performance in the sector of agricultural production was chiefly responsible for the increase of about 25 per cent in wholesale prices. And it may also be taken that the monetary factor (in the sense of deficit financing and expansion of bank credit to the private sector) could not have been the major culprit, particularly because there was throughout in operation the counter-inflationary impact of the sale of P.L. 480 foodgrains to consumers.

The price increase, incidentally, in whatever manner it was caused, had partly accounted for the growth of Central and State revenues from Rs. 768 crores in 1955-56 to about Rs. 1,300 crores in 1960-61. Of course, the growth of industrial production, the imposition of some new taxes and the increases in the rates of older taxes also accounted for the growth of revenues. But the price factor was not of negligible importance in the context of the growth of public revenues. In a different way, the growth of tax revenues might also have been responsible for some rise in prices. Even so, the total of tax receipts to national income at current prices had risen only moderately from about 8 per cent in 1955-56 to about 9 per cent in 1960-61. That there are limits to the extent to which a growing proportion of the rising national income could be drawn into the public exchequer in a country with a preponderance of low incomes is happily admitted by the *Economic Survey* itself.

But the *Survey* says in the same breath that primary emphasis has to be placed on creating a surplus from domestic production, for the purpose of export, by restraining consumption. Where *per capita* money income is rising at a faster rate than the *per capita* money burden of taxation, it is debatable whether the higher incidence of excise duties by itself will have the effect of restraining commodity consumption to the extent of creating a larger surplus from domestic production for export. Even if more foreign exchange can be earned thereby, there will be need for spending even more foreign exchange, for the trend of imports, in absolute terms, as the *Survey* itself admits, cannot but be upward as the industrial structure gets diversified. The position will continue to be that the foreign exchange gap, caused by adverse trade balances, would have to be financed by external assistance. There will be a real chance of increasing exports to cover a part of that gap, only if industrial costs are reduced. But this can come about only if, at a time of rising production, no cost-wage inflation is allowed to be caused by an agricultural sector producing insufficient quantities of foodgrains and raw materials. In the ultimate analysis, the chances of price stability as well as of export promotion will depend on the success in the agricultural sector. This sector must, therefore, be more actively stimulated to move in step with the industrial sector. It is this crucial factor of agricultural production, especially of raw materials, rather than the doubtful possibility of a surplus from domestic production expected from the supposed tax restraint on consumption, that should have received greater emphasis in the *Economic Survey* as well in the budget speech of the Finance Minister.

MARKET GOSSIP

THE worst fears of share markets about the Central budget have not, happily, materialised. It is true that the markets were presenting a firm front for quite a few days before the budget, thereby suggesting that the majority of operators was not expecting any drastic changes in the burden of direct taxes. But there were rumours that corporate taxation might be enhanced by introducing a higher slab for bigger companies and that, in order to placate the have-nots, an attempt might be made to soak the rich further by raising the wealth tax and increasing the income-tax payable by individuals with incomes over Rs. 25,000 or Rs. 30 000 per annum. Mr. Morarji Desai has clearly demonstrated that the present Government of India is a more responsible and serious-minded administration than some of its critics are prepared to concede, that it does not believe in creating stunts in order to win elections, and that it realises that the best way to earn and sustain the affections and confidence of its masters—the people—is to push through the plans for rapid economic development and not continuously give blows to the haves. If the rightists were to say that the increase in income-tax on earned incomes over Rs. 1 lakh has been done with an eye on elections, the leftists could point to the reduction in the tax on bonus issues from 30 per cent (T.T.K.'s budget) to 12½ per cent (the level originally proposed by Mr. Deshmukh, the author of this nefarious tax) as a device to raise funds from the "money bags" for the Congress Party. But, by and large, it can be said that this is not an "election budget," though it might seem to be so a year or 15 months hence if the Finance Minister of the time were to repeat the tactics adopted by his predecessor in the last quarter of 1956 and in the first half of 1957. By his actions in all the three budgets Mr. Morarji Desai has had the privilege to present, he has provided enough ground for believing that he would do no such rash things if he were to be in charge of the first budget to be presented after the elections early next year.

This does not mean that he has given away anything substantial to the "money bags" or to the haves as a whole. In fact, he has conceded nothing of what the private sector has been asking in the sphere of taxation during the past one year. He has not reduced the heavy taxes on the top income group. He has given no encouragement to individual savings. He has done nothing to reduce the multiple taxes that a successful investor or manager has to pay. He has actually reduced one of the incentives to savings by the corporate sector, as witness the reduction in the development rebate. He has not accepted the argument that a sizable relief in direct taxation will stimulate savings and investment to such an extent that the Government and the people alike will get more and will be able to spend more.

It is, however, gratifying that the Finance Minister has not damaged the market sentiment. This by itself is an important contribution to the progress of the private sector, for, without an active and buoyant capital market, it will not be possible to attract savings into equities.

The increase in import duty on plant and machinery will inflate the capital cost of industrial projects based on foreign machinery. Quite a good number of new companies which have recently raised capital from the market and the shares of which are quoted at a high premium will be adversely affected by this measure. It will, however, be of some indirect assistance to machinery manufacturers in this country such as Texmaco, A.C.C. and Kirloskars.

The reduction in bonus tax will induce quite a number of companies with large reserves to capitalise a part of them. The need for increasing the capital base of companies is now conceded by the Finance Minister. It is, however, noteworthy that he has not yielded this concession in order to earn revenue for the Government. In fact, he says that the Controller of Capital Issues "will continue to ensure that bonus issues are not sanctioned except after a careful scrutiny of the proposals."

Some of the indirect taxes, such as the one on cotton textiles, may have to be borne in part by the manufacturers, but it must not be forgotten that the costs of their raw materials are substantially lower than they were a year ago. Cotton millowners, if they are wise, will do well to refrain from raising a scare about the impact of this levy on their profits and concentrate their attention on getting relief in the procedural difficulties raised by the excise on certain types of yarn.

Basically, the trend of share markets is buoyant, a trend that is quite likely to continue. Since there has been a substantial rise in prices during the past two or three weeks, there is bound to be a fair amount of profit-taking, but, after readjustment of technical position, it should be possible for the markets to present a steady to firm trend. Much of the decline from the immediate post-budget high levels is due to profit-taking by those who had bought earlier in anticipation of a not unfavourable budget.

There is good reason to feel that the Finance Minister will try hard to keep deficit financing to the barest minimum. His borrowing programme for 1961-62 may, however, fall short of his target of Rs. 235 crores by Rs. 40 to Rs. 50 crores, even assuming that the entire amount of maturing loans (about Rs. 126 crores) will be converted. This means that deficit financing will be Rs. 120 crores, instead of Rs. 65 crores as is provided in the budget. But his main worry will be the State Governments all of which have provided for heavy borrowings in their budgets. He will have to do something effective here, if his anxiety to avoid excessive deficit financing is to carry conviction to the public.

No Effect on Bullion

Trading in the bullion market during the budget session yesterday was a colourless affair, which was only to be expected considering that there was nothing in the budget proposals to affect bullion either way. Business put through was limited and values moved narrowly. The general tendency was downward. Gold was subjected to selling by some tired operators, *Phagun* (March) settlement declining from Rs. 121.70 to Rs. 121.50 and *Chaitra* (April) settlement from Rs. 121.95 to Rs. 121.75. In sympathy, silver drifted lower. The budget session closing rates were Rs. 206.50 for *Phagun* settlement, as against the previous close of Rs. 206.55, and Rs. 206.35 for *Chaitra* settlement, as against Rs. 206.40.

Commodity Markets

Just as the bullion market, the two principal commodity markets, namely, cotton and oilseeds, have also not been affected much, in view of the absence of any fresh taxation, measures that directly affect these items. By and large, however, groundnut, castorseed, linseed have tended to look up, while cotton has suffered a slight setback. The increase of Rs. 28 per ton in the rate of excise duty on vegetable products is not expected to have any significant effect on the offtake of groundnut oil by the *vanaspati* manufacturers. The non-ferrous metals market is ruling fully steady, notwithstanding the imposition of an excise duty of Rs. 300 per metric ton on copper and zinc sheets and circles and 10 per cent. *ad valorem* on pipes and tubes made of copper and zinc, accompanied by the levy of an excise duty on aluminium pipes and tubes. In fact, tin has registered some improvement. The following are the latest available quotations for a few commodities as compared with those prevailing before the presentation of the budget and at this time last year:

	Unit	Latest available	Before the budget (27-2-1961)	A year ago
Cotton		Rs.	Rs.	Rs.
I.C.C. April 1961 ..	Per 3 quintals	569.00	574.25	666.05
Jarilla 25/32"	,,	680.00	680.00	690.00
Oilseeds				
Groundnut (Nizam bold)	Per 50 kgms.	51.00	49.75	42.23
Castorseed (Madras) ..	,,	33.75	33.62	33.14
Linseed (bold)	,,	35.35	35.25	30.81
Metals				
Copper scrap	Per quintal	425.00	425.00	412.50
Brass scrap	,,	385.00	385.00	353.57
Lead	,,	140.00	140.00	149.20
Aluminium	,,	355.00	355.00	316.80
Tin	Per 10 kgms.	127.50	120.00	108.03

The commodities which have been affected most are cotton, rayon, wool and silk textiles. Cotton yarn and woollen yarn prices have risen following the imposition of excise duty. The proposed rate of duty is 15 nP per kg. on cotton twist yarn and thread of 35 counts or more, 10 nP per kg. on those of less than 35 counts, 10 per cent *ad valorem* on worsted yarn and 5 per cent *ad valorem* on other woollen yarns. Hitherto, these yarns were completely exempt from payment of excise levy. Similarly, silk fabrics are now made to bear a fresh excise duty of 30 nP per square metre. Consequent on the increase in excise duty at varying rates on indigenously produced rayon yarn and staple fibre yarn (from 45 nP to 75 nP per kg.), with countervailing import duties on foreign yarns, the prices of these yarns have gone up. Spot Cupressa Bemberg yarn (60 x 1) has risen by Rs. 25 to Rs. 2,530 per 100 kg. and 40 x 2 staple fibre yarn (April contract) by Rs. 16 to Rs. 848 per 90.72 kg. Cotton fabrics medium A greys and processed have also advanced proportionate to the increase in the rates of excise duties —from 7.2 nP to 9.0 nP per square metre on the former and by two-thirds of the existing rates on the latter. Likewise, the prices of woollen, silk and art silk fabrics have advanced to the extent to which the excise duties have been raised.

There are quite a number of other commodities the prices of which, too, have risen as a result of the latest budget proposals. They include coffee, tea, unmanufactured tobacco, cigars and cheroots, cigarettes, kerosene, diesel oil, vegetable products, paints and varnishes, matches, soda ash, caustic soda, certain chemicals and drugs, glass and glassware, radios, refrigerators, betelnuts, liquors, iron and steel manufactures, raw rubber, newsprint, paper and paperboard, high carbon steel strips, hardware and certain component parts of machinery, among others. It remains to be seen to what extent the increase that has now taken place in the prices of these goods will be sustained over a period of time or whether there will actually be a further rise, for it is too early to come to any definite conclusions about consumer resistance.

British Shipping

The United Kingdom Chamber of Shipping has lent the weight of its powerful support to the plea for more Government aid to shipping industry made of late by the interests concerned. In its annual report, published last week, the Chamber reiterates the difficulties faced by the industry pointed out by the General Council of British Shipping in a memorandum submitted to the Government in January last (*vide* page 95, *Commerce* dated 14th January 1961) and endorses the recommendations made by it to strengthen British shipping.

Like the Council, the Chamber, too, has viewed with concern the growth of flag discrimination and warns that, unless flag discrimination policies adopted by many foreign Governments are discarded or modified considerably, the world will inevitably see the disappearance of economic and efficient sea transport and that world trade, as a result, will be saddled with a wholly unnecessary addition to its transport cost. In recent years, according to the Chamber, as many as 40 Governments have resorted to flag discrimination and diverted cargoes to their national flag ships which would otherwise have gone to the most efficient ship operators, irrespective of flag. Discrimination, it points out, ranges from clauses in bilateral trade treaties, aimed at reserving the cargoes involved to ships of the two countries, down to prohibitive import duties on goods brought in by foreign ships and selling c.i.f. and buying f.o.b. by Government trading corporations.

The Chamber associates itself with the view of the Council that flag discrimination, subsidies and tax-free flags of convenience are growing threats to the British merchant fleet and that the position will grow worse, unless the Government is prepared to give more support to the industry. The methods of assistance suggested by it are similar to those recommended by the Council of British Shipping, namely, (1) renewed action to combat flag discrimination if necessary by counter-measures, (2) financial aid to the industry, and (3) tax relief. Calling for a review of the Government's fiscal policy towards the industry, the Chamber argues that, now that there are some signs that shipping may be climbing out of the long depression through which it has been passing, the need for a review of taxation of shipping is even more urgent, for, when conditions improve sufficiently for the shipping of the world once more to earn profits, the full force of competition from flags of convenience will again have to be met.

The Chamber feels that the investment allowance of 40 per cent at present given to the industry is too inadequate and that it should therefore be raised as an aid to forward planning. Even if this were done, according to the Chamber, it would only be of limited help to small shipowners who may possess only one or two ships which they are not likely to replace for many years. It is not known how the British Government will react to the industry's plea.

Ghana's Example: 30-year Tax Holiday

Whatever its sins of omission and commission in the past, Ghana, one of the youngest members of the British Commonwealth, appears to be earnest in its policy of attracting foreign private capital. One of the best ways of attracting fresh foreign investment to a country is to treat the foreign entrepreneurs already operating there well. Ghana would appear to be willing to learn this lesson. President Nkrumah had himself suggested, last October, when there was a nationalisation scare in that country, that foreign business concerns operating in Ghana should put forward proposals for safeguarding the legitimate interest of their shareholders and that his Government would give due consideration to them. In response to this suggestion, some foreign firms in Ghana are reported to have formulated proposals which will shortly be submitted to the Government.

That Ghana is prepared to go further to attract foreign capital is borne out by the agreement signed by President Nkrumah's Government with the Volta Aluminium Company (VALCO for short), an undertaking jointly owned by four foreign aluminium companies, mainly of U.S. origin, for the construction and operation of a £100 million aluminium smelter at Tema. Under the agreement, the Company is given a thirty-year tax holiday. It will consequently be exempted from all forms of duty, including import and export duties and taxes on dividends for 30 years.

The agreement also provides for the mining and processing of Ghanaian bauxite and allows VALCO to claim concessions of upto 40 square miles for prospecting. Further, it contains an incentive clause designed to induce the Company to make eventual use of local bauxite rather than imports.

Such generous concessions surely cannot fail to attract foreign private capital to that country. And Ghana, or any other free country for that matter, will not have reason to regret the concessions, for they are sure to be more than compensated by the benefits of new industries the country gets in return.

World Payments Problem

Much store is set by the proposed visit of Mr. Selwyn Lloyd, the British Chancellor of the Exchequer, to West Germany this month. The visit is a sequel to the two-day talks which Mr. Harold Macmillan, the British Prime Minister, had with Dr. Konrad Adenauer, the German Chancellor, in London last week. The main purpose of Mr. Lloyd's visit is to discuss with the W. German Government the methods of dealing with the current imbalance in the world payments structure and, of course, the large and continuing German balance of payments surplus which has put the pound sterling also under strain.

This approach is considered as evidence of the realisation on both sides that the long-term world payments problem can be solved only on a multilateral basis by mutual discussion and negotiation. The payments problem, it is also recognised, is only one aspect of the wider question of Western economic co-operation which also includes the issue of helping underdeveloped countries, which has now come to be widely regarded as a collective responsibility of the developed countries. There is also a growing appreciation, on the part of West Germany, of the justice of the argument by other Western nations, especially the U.S., that

SHARE MARKET FIRM

CUT IN TAX ON BONUS ISSUES WELCOMED

(From Our Own Correspondents)

BOMBAY, 1st *March*

IMMEDIATELY after the Union Finance Minister announced the budget proposals yesterday, equities forged ahead, though the closing rates of the post-budget session were well below the highest levels touched during the session, as a result of intermittent heavy profit-taking. The absence of any addition to the tax load on the corporate sector and the reduction in tax on bonus issues from 30 per cent to 12½ per cent led to excellent buying enquiries from investors. The reduction in income-tax on royalty was welcomed as a measure that would give an impetus to increased collaboration with foreign firms at a lower cost. Some dissatisfaction was, of course, expressed over the cut in the development rebate, as well as the upward revision in import duty on machinery and components, which, it was feared, would raise the production cost in industries. But the incidence of these measures was not considered to be very heavy. Operators noted the large fresh bout of indirect taxation (over Rs. 63 crores). Many, however, felt that the incidence of these additional levies could easily be passed on to the consumers, or borne by the middlemen, especially in the context of rising demand and bigger turnover. The consensus of opinion among market men seemed to be that larger and larger funds would seek investment in industrial securities. The bullish fervour of the market was also engendered by the inflation psychology which stemmed from the feeling that the Government might have to resort to a larger dose of deficit financing than the Rs. 64 crores anticipated by the Finance Minister, in view of the likelihood of receipts from public borrowing being less than the budget estimate of Rs. 235 crores.

Tata Steels began the week at Rs. 149.75, as against the previous close of Rs. 150 and, after fluctuating between Rs. 155 and Rs. 150 during budget session, improved to Rs. 154 today before finishing at Rs. 152.75. The net gain over the week was Rs. 2.75. Indian Irons advanced from Rs. 25.10 to Rs. 26 yesterday. The closing was slightly lower at Rs. 25.90. Mukand Irons rose by a rupee over the week, today's closing rate being Rs. 27.

Under the impetus of renewed buying enquiries, textiles scored handsome gains. The enhancement of the basic excise duty on medium (A) grey cloth and processed cloth failed to have much effect, because it was thought that there would be no difficulty in including the additional impost in the stamped prices for cloth. Standards registered a net gain of Rs. 88 over the week to close at Rs. 1,298, after touching a high of Rs. 1,350 earlier today. Similarly, Khataus spurted by Rs. 48.75 to Rs. 535. Centurys advanced by Rs. 23 to Rs. 522.50; at one time during the budget session yesterday, they had gone up to Rs. 545. Finlays hardened by Rs. 9 to Rs. 341, Simplex by Rs. 8 to Rs. 180, Podars by Rs. 5 to Rs. 145, Mysores by Rs. 4 to Rs. 67 and Swans by Rs. 2.50 to Rs. 502.50. Minervas, New Greats and Shree Niwas strengthened by Rs. 5 each to Rs. 74, Rs. 195 and Rs. 252, respectively. Bombay Dyeings were marked up from Rs. 64 to Rs. 67.20 today before finishing at Rs. 65.70, a net rise of Re. 1.70. Morarjees gathered a rupee to Rs. 356. Kohinoors rallied from Rs. 285.50 to Rs. 305 at one time during the budget session yesterday. After declining to Rs. 288 the same day, they moved up to Rs. 295 today but closed lower at Rs. 285.50.

Further additions to values were noted in the sugar section this week. Belapurs moved up from Rs. 278 to Rs. 290 before finishing at Rs. 284, a net rise of Rs. 6. Walchandnagars strengthened by Rs. 6.25 to Rs. 228.75. Phaltans improved by Rs. 5 to Rs. 145. Changdeos were maintained at the last week's level of Rs. 26 and Bhopals at Rs. 29. Maharashtra Sugars, however, encountered selling and declined by Rs. 7 to Rs. 196. Kesars dropped Rs. 5 to Rs. 225.

Cement shares tended to move up on good support. Associated Cements recorded a rise of Rs. 4.25 to Rs. 154. Orissas gained 32 nP to Rs. 13.88. Sone Valleys put on a like amount to Rs. 5.32. But Digvijays shed a rupee to Rs. 157.

Induced by sustained buying enquiries, automobiles continued to march upward. Premiers spurted by Rs. 3.50 to Rs. 172. Hindustan Motors advanced by Re. 1.28 to Rs. 22.20. Shipping shares lacked support, despite the exclusion of shipping industry from the proposed cut in the development rebate. Great Easterns were unchanged at Rs. 14.68. Scindias gained 4 nP to Rs. 15.

There was a further rise in the quotations for engineering shares. Telcos jumped up by Rs. 18 to Rs. 331, after being higher still at Rs. 335 today. Premier Constructions advanced by Rs. 11.50 to Rs. 208. Alcock Ashdowns increased by Rs. 9 to Rs. 287. Coopers rose by Rs. 5 to Rs. 194. New Standard Engineerings by Rs 4 to Rs. 190. Khandelwals by Rs. 3.50 to Rs. 95.50. Kamanis by Rs. 2.52 to Rs. 20, and Larsen and Toubros by Rs. 2.25 to Rs. 41.50. Texmacos gathered 40 nP to Rs. 24. Mahindras were maintained at Rs. 22; at one time today, they were done at Rs. 22.52.

Bombay Burmahs provided a bright spot in the miscellaneous section, thanks to the proposed cut in the export duty on tea. The quotation for the scrips forged ahead from Rs. 566.50 to Rs. 615 today, before finishing at Rs. 609.50. The net gain over the week was Rs. 43. Rayon mill shares were well fancied despite the increase in excise duty on rayon yarns and fabrics. National Rayons, which stood at Rs. 514 on Thursday last week, advanced stridently to touch a high of Rs. 560 during the budget session yesterday. Today, they were done at Rs. 537. The net improvement over the week was Rs. 23. South Indian Viscose rose by Re. 1 to Rs. 149. Baroda Rayons, Gwaliors and Indian Rayons gained 50 nP each to Rs. 40.50, Rs. 45 and Rs. 67, respectively. Dyes and chemicals were irregular. Dhrangadhras advanced by Rs. 10 to Rs. 136, Poly Chems by Rs. 8.75 to Rs. 136, Citrics by Rs. 8 to Rs. 68, Synthetics by Rs. 7 to Rs. 157, Adarsh Chemicals by Rs. 5.50 to Rs. 90 and India Dyestuffs by Rs. 5 to Rs. 472.50. Alembics, however, fell by Rs. 7.50 to Rs. 257.50. Colour Chems receded by Rs. 5 to Rs. 365. Dharamsis shed Re. 1.25 to Rs. 236.25, while new shares improved by Re. 1.25 to Rs. 225. Amar Dyes were unaltered at Rs. 385 and Anuh Pharmas at Rs. 5. Among other miscellaneous industrials, Standard Batteries hardened by Rs. 15 to Rs. 205 on sustained investment buying and scarcity of sellers. West Coasts rose by by Rs. 10.50 to Rs. 206, Asian Cables by Rs. 8.50 to Rs. 120. Voltas by Rs. 8 to Rs. 278.50, and Hind Cycles by Rs. 7.50 to Rs. 101.50.

Madras Stock Exchange

MADRAS, 28*th February*

The usual pre-budget caution was not in evidence on the Madras Stock Exchange during the week under review. In fact, both forward and cash scrips moved up on hopes of some concessions in Company taxation in the Central Budget. Textiles ruled firm on reports of better domestic offtake of piecegoods and improvement in the supply position of raw cotton. Teas were fully steady, following encouraging advices from auction centres. Coffees and rubbers hardened in sympathy. There were larger enquiries in sugars and prices tended to go up. Banks and electricals were well maintained. Among miscellaneous shares, chemicals, cements and engineerings ruled quite strong.

In the textile section, Premiers provided a feature, the quotation spurting by Rs. 17 to Rs. 242. South India Viscose came in for good professional attention and advanced by Rs. 14 to Rs. 164. Coimbatore Pioneers were marked up by Rs. 10 to Rs. 340. Coimbatore Spinnings rose by Rs. 4 to Rs. 55. Coimbatore Cottons improved by Rs. 2.50 to Rs. 172.50. Lakshmis rose from Rs. 155 to Rs. 157. Buckinghams were higher by a like amount at Rs. 195. Travancore Rayons gained Re. 1.40 to Rs. 36.50. Maduras put on 25 nP to Rs. 36.50. Bangalore Woollens were fully maintained at Rs. 196.50, Cannanores at Rs. 144, Dhanalakshmis at Rs. 216, Metturs at Rs. 367 and Vasantas at Rs. 242.

In the tea section, Kil Kotagiris advanced by 37 nP to Rs. 5.72, despite the announcement of a lower dividend. The Directors of the Company have declared a final dividend of 17 per cent, taxable, making a total of 25 per cent for the year ended October 1960 as against 35 per cent for the previous year. Periakaramalais gathered 18 nP to Rs. 3.88. Peermades increased by 5 nP to Rs. 22.60. Halleyburias were fully steady at Rs. 14.15, Nonsuchs at Rs. 26.75 and Parksides at Rs. 28.75. Blue Mountains, however, shed 2 nP to Rs. 3.88.

Among coffees, Consolidated Coffees hardened by 65 nP to Rs. 24.75. Coffee Lands improved by 12 nP to Rs. 21.37. Cowcoodys were fancied at Rs. 4.90. Anaparais were firm at Rs. 4.70. The Directors of the Company have declared a taxable dividend of 20 per cent for the year ended 30th June 1960, as against 25 per cent for the previous year. Ouchterlonys, however, encountered selling and fell from Rs. 4.65 to Rs. 4.45.

In the rubber group, Cochin Malabars firmed up by 19 nP to Rs. 7.68. Kallas improved by 5 nP to Rs. 5.10. Malankaras and Midlands were steady at Rs. 18 and Rs. 12, respectively. Vaikundams had buyers at Rs. 31.25, following the announcement of the final dividend of 15 per cent, taxable, making a total of 30 per cent for 1960, as compared with only 25 per cent for 1959. Mercaras were fancied at Rs. 8.80. The Company has announced the final dividend of 10 per cent, taxable, making a total of 20 per cent, taxable, for the year ended June 1960, same as last year.

In the sugar section, Cauverys scored a gain of Re. 1.25 to Rs. 135. Deccans fell initially from Rs. 14.30 to Rs. 14.20, but staged a smart recovery to Rs. 14.35. Indias changed hands at Rs. 12.75, Mysores at Rs. 58.25, United Breweries at Rs. 112 and Travancores at Rs. 10.75. East India Distilleries, however, shed 25 nP to Rs. 40.75, reflecting disappointment of operators over the dividend news. The Directors of the Company have announced a final dividend of 14-2/7 per cent, taxable, making a total so far of 21-3/7 per cent, for the year ended September 1960, which compares unfavourably with 28-4/7 per cent for the previous year.

Among banks, Punjab Nationals rose by 25 nP to Rs. 20.25. Indians fully paids ruled steady at Rs. 171 and partly paids at Rs. 143.50. Pandyans were quiet at Rs. 33 on account of the announcement of a lower dividend, that is, 10 per cent, taxable, for 1960, as against 14-2/7 per cent for 1959.

In the electricals group, West Coast met with good support and improved by 37 nP to Rs. 13.87. South Madras gathered 10 nP to Rs. 10.05. Cochins were unchanged at Rs. 10.20, Salem Erodes at Rs. 12.25 and Vellores at Rs. 13.10.

In the miscellaneous section, Mettur Chemicals spurted by 24 nP to Rs. 13.25. F.A.C.Ts gained 20 nP to Rs. 10.50. Travancore Chemicals put on 3 nP to Rs. 15. Mysore Fertilisers and Mysore Chemicals were steady, the former at Rs. 10.95 and the latter at Rs. 25.37. Among cements Indias rose by 14 nP to Rs. 6.24. Andhras and Dalmias were unaltered at Rs. 10 and Rs. 11.25, respectively. Among others, Tube Investments advanced by Rs. 3 to Rs. 294. Aluminium Industries rose by 73 nP to Rs. 23.70 and Ashok Leylands by 28 nP to Rs. 9.28. Parrys, however, dropped 5 nP to Rs. 5.15, notwithstanding the announcement of an interim dividend of 10 per cent, taxable, for the year ending 31st March 1961.

STATE BANK OF SAURASHTRA

The results of the State Bank of Saurashtra, now functioning as a subsidiary of the State Bank of India, for the eight months ended 31st December 1960, show a slight setback. The deposits of the Bank have registered a contraction of Rs. 3.13 crores from Rs. 16.52 crores in the previous years. In spite of this drop in deposits, the Bank, however, succeeded in stepping up its advances from Rs. 7.05 crores to Rs. 7.93 crores and its investment from Rs. 7.84 crores to Rs. 8.04 crores. Consequently, the advances ratio has moved up from 42.7 to 59.22 per cent and the investment ratio from 47.4 to 60 per cent. The Bank has been in a position to do this by reducing its cash holdings from Rs. 3.23 crores to Rs. 1.53 crores, and by large borrowings from other banks which at the end of the year stood at a sizable figure of Rs. 2.64 crores. If allowance were made for this fact, the investment ratio would be at a much lower level. The following comparative table shows at a glance the Bank's operation in the last four years:

(In lakhs of rupees)

	As on 31st December			
	1960	1959	1958	1957
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	81.50	78.65	66.89	65.06
Fixed deposits	6,03.79	7,21.86	7,45.43	N.A.
Savings and current deposits ..	7,36.14	9,30.56	8,99.64	N.A.
Total deposits	13,39.93	16,52.42	16,45.07	15,72.24
Advances	7,93.16	7,04.70	7,36.80	6,88.18
Investments	8,03.72	7,84.05	7,35.41	9,06.68
Cash	1,53.66	3,23.11	2,01.98	3,21.64
Balance-sheet total ..	18,66.97	19,25.29	19,08.79	20,00.48
Ratio to deposits of—	%	%	%	%
Advances	59.22	42.7	47.8	43.8
Investments	60.00	47.4	44.7	57.7
Cash	11.35	19.5	17.5	20.5

The Bank's earning capacity was adversely affected during the period under review by two factors: (1) Subsequent to the Bank becoming a subsidiary of he State Bank of India, it had to repay the large deposits maintained with it by the State Government to the Reserve Bank. (2) After 1st May 1960, the Bank became liable for payment of income-tax on its profits. The Bank's entire issued and paid-up capital of Rs. 1 crore is held by the State Bank of India. The fall in the size of the reserves as compared with the figure a year earlier is the result of determination by the Reserve Bank of this portfolio at the level of Rs. 50 lakhs. Apparently, there must have been an evaluation of the Bank's assets at the time it was made a subsidiary of the State Bank.

How the various items of income and expenditure have changed in the past four years can be seen from the following figures. The figures for 1960, however, are not strictly comparable with those for previous years, as they relate only to eight months. Even so, they show the setback received by the Bank in 1960:

(Rupees in lakhs)

	For eight months ended 31-12-60	For twelve months ended December		
		1959	1958	1957
Interest and discount ..	45.96	77.73	72.71	68.88
Commission and exchange ..	5.25	8.29	7.27	7.19
Interest paid	27.18	40.32	47.95	40.15
Expenses	15.61	21.74	19.47	17.89
Profit	9.76	17.83	16.29	22.83

After providing Rs. 4.75 lakhs for taxation out of the profit of Rs. 9.76 lakhs, the Directors have decided to set aside Rs. 1.50 lakhs to reserves. Staff bonus and pension contribution absorb Rs. 1.64 lakhs and Rs. 0.48 lakh, respectively, leaving Rs. 1.39 lakhs to be carried forward to the next year.

During 1960, the Bank set up only one additional office. It, however, intends to open six new offices and upgrade nine pay offices. Special efforts are being made by the management for giving more facilities to small-scale industries and the Bank's advances to them rose from Rs. 5.28 lakhs as on 31st April 1960 to Rs. 6.68 lakhs at the end of the year.

Notice

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
2, India Exchange Place, Calcutta-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 20th day of March to Wednesday, the 5th day of April, 1961, both days inclusive.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, the 2*nd March* 1961.

NEWS IN BRIEF

THE Tariff Commission held this week a public enquiry into the question of continuing protection to the electric motor industry after the current year ends.

The proposal to establish a petro-chemical factory, on private participation and management basis, submitted by the Stanvac Oil Company, is under the consideration of the Central Government.

Negotiations on the setting up of the small car manufacturing unit in the public sector in India are now in progress between the representatives of the Central Government and the West German Volkswagen Company at Bonn. This was disclosed by Dr. Hans Wilhelmi, West German Minister for Federal Property, at Calcutta last week.

The total value of electric fans exported abroad rose from Rs. 38.31 lakhs in 1959 to Rs. 88.59 lakhs in 1960. The United Arab Republic was the largest buyer, accounting for Rs. 15.34 lakhs, followed by Iraq and Burma, which bought fans worth Rs. 14.26 lakhs and Rs. 13.91 lakhs, respectively. The other major buyers were Ceylon, Kuwait, Malaya and Singapore.

Several proposals for the manufacture of alloy steels submitted by private parties are being considered by the Government of India. Disclosing this in the Rajya Sabha, Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, pointed out that licences had already been given to private parties for the production on a small scale of pig iron to the extent of 300,000 tons.

The West Bengal Government has set up a new body, called the Trade Union Verification Committee, which will be entrusted with the task of resolving disputes arising from the departmental verification of membership of trade unions in connection with their recognition. The Labour Commissioner is Chairman of the Committee, which consists of four other members representing four central Trade Union organisations.

Two major power projects, one at Sharavati in Mysore and the other at Korba in Madhya Pradesh, have been approved by the Hathi Committee, comprising the Ministries of Finance, Irrigation and Power as well as Planning Commission. The total cost of the two projects is estimated at Rs. 60 crores. While the first is designed to produce 180,000 kw. of hydro-power, the second will generate an almost equal quantity of thermal power.

The Central Government has decided to go ahead with the construction of the Farakka barrage during the current third Plan period. The revised estimate of the cost, at Rs. 56 crores, of the project is higher than the original estimates by Rs. 17 crores. The project envisages the construction of a barrage across the Ganga river at Farakka, a 26-mile feeder canal, with its outfall into the Hooghly and a barrage at Jangipur below the outfall of the feeder canal.

A new 200-ton plant for the manufacture of vat dyes and solubilised vats is to be established in Bombay shortly. A licence for the purpose has been granted to Mr. T. R. Sathe, the chief promoter of the project. No foreign collaboration is envisaged. The main raw materials will be imported against rupee payment until such time as they are available in the country.

The Government of India has rejected the Estimates Committee's suggestion to refer the cost structure of petroleum products for examination by the Tariff Commission or international experts, in view of the arrangements recently concluded with the oil companies for determining the price formula. It has also rejected the other suggestion for investing the Government with more powers in regard to the control over prices of petroleum products on the ground that necessary powers for adequate control already exist under the Essential Commodities Act.

The Government of India is reported to have decided to grant an industrial licence to Messrs. Parry & Co. of Madras for setting up a fertiliser plant at Visakhapatnam (Andhra Pradesh), with a capacity of 80,000 tons of fertilisers per annum in terms of nitrogen, in collaboration with a well-known American firm. Licences are also being given for two more units in the private sector, one of the same capacity at Hanumangarh in Rajasthan and the other of 50,000 tons N either at Kanti or Itarsi in Madhya Pradesh. The Rajasthan unit is expected to be established by the Jalans and the Madhya Pradesh unit by Khandelwal Bros. These two are understood to be still negotiating with foreign firms for collaborating with them.

Steps are being taken by the Government of Maharashtra to estimate the wastelands in forest areas which are not required for purposes of afforestation. These lands will be handed over to the Revenue Department for being distributed among the landless for cultivation. For this purpose, the Government has appointed district level committees consisting of the Collector, the District Forest Officer and the District Inspector of Land Records. The lands which are not leased on agro-silvi basis will also be considered for transfer to the Revenue Department. A similar procedure will be adopted for the disposal of forest lands which are being leased annually for cultivation either by the Forests Department or by the Revenue Department.

A provision of over Rs. 17 lakhs is expected to be made in the third Plan for development of regional grids by inter-linking State power systems in the country. A cell is also proposed to be set up in the Central Water and Power Commission to study planning of zonal supergrids in association with State Electricity Boards and public electricity supply undertakings and corporations. The ultimate objective in forming regional and zonal supergrids is to evolve an all-India grid system. The operation of inter-connected and integrated power systems will lead to maximum use of installed capacity in the States. Detailed studies for the formation of a Southern grid, comprising Andhra Pradesh, Madras, Mysore and Kerala have already been completed.

The Uppal Committee on the location and utilisation of wastelands in India has submitted reports in respect of the Punjab, West Bengal, Bihar, Mysore, Andhra Pradesh and Madhya Pradesh. The report in respect of Kerala has also been finalised. The Committee has already paid visits to Madras, Jammu and Kashmir, Uttar Pradesh and Gujarat and the reports on these States are under preparation. It proposes to visit Maharashtra shortly. The Committee has reported availability of 316,650 acres of land for reclamation in the Punjab, 201,625 acres in Madhya Pradesh, 137,710 acres in Andhra Pradesh, 113,640 acres in West Bengal, 72,196 acres in Bihar and 68,820 acres in Mysore. The recommendations of the Committee are under the examination by the State Governments concened. They will be implemented during the third Plan period.

Five Soviet experts will arrive in India shortly to present a preliminary project report for the heavy electrical plant to be set up in the public sector in collaboration with Russia. The experts will hold discussions with officials of the Government of India to decide the portion of the project to be completed and also the machinery to be supplied by each country. India proposes to undertake the civil engineering works of the project and also supply part of the machine tools required by the factory. The experts, in consultation with the Government of India, will also select a site for the plant which will be located in Northern India. States competing for it are Uttar Pradesh, Rajasthan and the Punjab. Meanwhile, discussions are going on with experts from Czechoslovakia about the heavy electrical plant to be set up in South India. The selection of the site for this plant has been delayed as the Czech experts have called for some more data.

The 24-inch medium section mill, the fourth unit of the rolling mill plant at the Durgapur Steelworks, was commissioned last week, well ahead of its scheduled date. This mill will roll a range of structural products consisting of certain sizes of joists, channels, angles, rails and fish-plates. It is fed by two bloom re-heat furnaces taking its stock from the blooming mills. It has been designed by a member-company of the ISCON, the British Consortium building the Durgapur Steelworks. It may be recalled that a few days earlier, a new furnace in the steel melting shop of the Durgapur Steelworks was also commissioned. This is the fourth open hearth furnace out of the eight to be constructed there. The first open hearth furnace was commissioned in April 1960. The capacity of seven furnaces will be 200 tons each, while the last one will have a capacity of 100 tons of special steel. The open hearth furnace will process pig iron from the blast furnaces into steel. Durgapur Steelworks is designed to produce one million tons of ingot steel when all the furnaces go into commission.

• • • •

From Abroad

The Dominican Republic Government proposes to impose restrictions on import of certain goods produced by the domestic industry, particularly the cheaper ranges of cotton textiles.

The Federation of British Industries has urged the U.K. Government to adopt decimal coinage—an essential step towards the use of the metric system of weights and measures.

The Trade Association of the Jute Industry at Munsteg in West Germany has called for "suitable protection measures appropriate to free enterprise" in respect of jute imports. It has accused Pakistan of abusing its "monopoly of raw materials" and India of "unilaterally exploiting its position as the dominating processor of jute."

The foreign-owned industries of West Java in Indonesia will be progressively nationalised over the next five years. The foreign industrialists have been advised to take in local capital or to appoint Indonesians into the management cadre now in order to "make these enterprises ripe for complete nationalisation" within the stipulated period of five years.

A Bill, seeking to establish a $300-million fund for the development of "depressed areas" in the U.S., has been submitted to the Congress by President Kennedy. Loans will be granted out of the proposed fund to assist local communities in the task of expanding established industries or attracting new ones.

The total consumption of tea in the U.K. rose by 8.5 million lbs. to 505 million lbs. in 1960, as compared with the previous year, according to the International Tea Committee. Among the non-tea-producing countries, the U.K. is the world's largest tea consumer. The U.S. ranked second, its total imports last year touching 118 million lbs., as against 107 million lbs. in 1959.

The Government of Ceylon has restricted import of certain items to 25 per cent of the average imports for the past three years. The items, which have been brought under licensing control, include coffee extracts, chocolate preparations, fruit juices, motor buses, motor vans, motor trucks, chinaware, radio receivers, radiograms, refrigerators and jewellery. The Government at the same time lifted curbs on the import of spare parts and accessories for all types of motor vehicles, bicycles, refrigerators and air-conditioning plants.

PERSONAL

MR. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation, is the Chairman of the reconstituted Advisory Committee on Capital Issues Control which will have a tenure of two years. The members of the Committee are Messrs. A. M. M. Murugappa Chettiar, K. R. P. Shroff, John Brown and M. R. Shervani, M.P.

Mr. D. R. Kohli, Under-Secretary in the Ministry of Transport and Communications, has been appointed Secretary of the Indian Airlines Corporation. He will also act as Secretary to the Advisory Board of the I.A.C.

Mr. Pratapsinh Mathuradas, Mr. M. A. Master, Mr. M. R. Ruia, Mr. Naval H. Tata and Mr. Ramnath A. Podar have been co-opted on the Committee of the Indian Merchants' Chamber for the year 1961.

Herr Hans Wilhelmi, the West German Minister for Federal Property, has arrived in India for a two-and-a-half week visit, mainly for holding discussions with the Union Finance Minister on questions relating to West German aid to India's third Plan.

Mr. N. Stenhouse, a Director of Messrs. Andrew Yule and Co. Ltd., and Mr. H. Mackay Tallack, Director of Macneill and Barry Ltd., have been elected President and Vice-President, respectively, of the Bengal Chamber of Commerce for 1961-62. The other members elected are: Sir John Brown (Jardine Henderson Ltd.), Mr. J. M. Lall (Imperial Chemical Industries (India) Private Ltd.), Mr. J. Luckham (Dunlop Rubber Company of India Ltd.), Sir Walter Michelmore (Bird and Co. (Private) Ltd.), Mr. A. I. Murison (James Finlay and Co. Ltd.), Mr. P. E. G. W. Parish (Gillanders Arbuthnot and Co. Ltd.), Mr S. M. Smith (Shaw Wallace and Co. Ltd.), Mr. I. G. Thomson (The Chartered Bank) and Mr. H. M. L. Williams (Guest, Keen, Williams Ltd.).

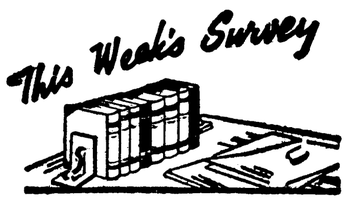
The aggregate output of crude oil in the Middle East rose to a record of 264 million metric tons in 1960, which represents an increase of 33 million tons or 14.4 per cent over 1959. Kuwait accounted for 81.86 million tons (as against 69.53 million tons in 1959), Saudi Arabia 60.86 million tons (53.96 million tons), Persia 52.06 million tons (45.63 million tons), Iraq 47.48 million tons (41.73 million tons), Qatar 8.21 million tons (7.99 million tons), Kuwait/S.A.N.Z. 7.27 million tons (6.20 million tons) and others 6.34 million tons (5.83 million tons).

The Soviet Union's overseas freight traffic in 1961 is expected to be higher by 30 per cent, as compared with 1960. More routes will be opened to include Ghana, Guinea, Morocco, the Sudan and Costa Rica and cargo shipments between the ports of the Soviet Union and those of Cuba will be sharply increased. Machines, machine tools, equipment and chemical products account for an increasingly larger proportion of Soviet exports. The Soviet export items include complete sets of equipment for factories, mines, ports and major hydro-engineering projects.

The British General Guarantee Corporation has made a take-over bid of £5.5 million for Ralli Brothers, the British firm of general merchants and merchant bankers with interests all over the world. The Ralli group trades in a wide variety of produce, including jute, sisal, cereals, raw cotton, cotton textiles, sugar and coffee. Subsidiary companies have wide trading connections with India and Pakistan and business is carried on in Kenya, Uganda, Sudan, South Africa, Hong Kong, Iraq, Canada, the U.S., Greece, and Japan. Shareholders will get 47*s.* 3*d.* for each ordinary share —4*s.* 3*d.* more than the figure mentioned in a preliminary announcement a week ago.

The Soviet Union will help Indonesia to build major industrial enterprises, including an aluminium plant, the Asahan hydro-electric power station in North Sumatra, and an iron and steel mill with an annual capacity of 250,000 tons of steel. Russia's participation in these and other projects is envisaged by the protocol signed on 24th February 1961 in accordance with the second general agreement on economic and technical co-operation entered into last year. The protocol also provides for the participation of Soviet specialists in geological surveying, especially in prospecting for coal and iron ore in South East Kalimantan. Soviet organisations will further help Indonesia with other research, supply equipment and other materials and help in training cadres for these enterprises.

A trade agreement between Russia and Italy was initialled at Moscow last week, under which the total value of mutual trade in 1961 is expected to be $240-250 million. An important feature of the agreement is the provision made for the supply of 4 million tons of Russian oil to Italy. The general pattern of trade will be the exchange of Soviet raw materials for Italian machinery and finished products. A small part of the trade will consist of actual consumer goods, as is the case with any recent Russian deal with the West. Apart from oil, Russia will export, among others, 100,000 tons of iron ore, 180,000 tons of pig iron, 40,000 tons of cellulose, 200,000 tons of wheat, 15,000 tons of cotton and 700,000 tons of edible oils. In exchange, Italy will deliver a 48,000-ton tanker, in addition to heavy machinery for steel industry, equipment for steel tubing, electric cable as well as oil refining and pumping installations. The agreement also provides for an annual increase in trade to the tune of 20 per cent during the period 1962-65.



COAL MOVEMENT

THE current coal shortage at the consuming ends, unlike the one experienced last year, is due more to transport bottlenecks than to under-production. Of course, the actual production in 1960 fell short of the targeted production in the public sector collieries to the tune of 5 to 6 million tons. But, in the current calendar year, as a whole, with the private collieries having achieved a monthly production capacity of four million tons and the public collieries having established a monthly capacity of one million tons, the aggregate production will not be less than 60 million tons, as against 52.5 million tons in the whole of 1960. It may even be that production in the current year will exceed 60 million tons if the collieries in the private sector extend their operations as enthusiastically as they are expected to do. There is thus the prospect of coal situation easing further on the production front. Currently and in the months ahead, however, it is the transport situation that will determine the adequacy or otherwise of coal supplies at the consuming ends. As things stand, while coal stocks are accumulating at many pitheads of public and private collieries at a faster rate than they are being moved out, the Railways are unable to make the required wagons available.

In this connection, the report that the Coal Controller recommended to the Railways for the month of January 1961, the bulk allotment of 169,489 wagons (that is, 5,467 wagons on a daily average) but that the latter actually allotted, during that month, only 150,579 wagons (that is, 4,857 wagons on a daily average) tells its own story. Even according to the Chairman of the Railway Board, the Railways will have the capacity to move coal at an annual rate of about 49 million tons only by the end of March 1961, that is, about four million tons, on an average, per month. Since, however, coal production at present is at a monthly rate of about five million tons, the haulage capacity of railways will represent only 80 per cent of production—a proportion which is much less than the figure of 95 per cent in 1959-60 when 44.6 million tons out of a total production of 47.0 million tons of coal were moved by rail. Even if the Railways are in a position to achieve a haulage capacity of 55 million tons in 1961-62—which is by no means certain—it will still represent only about 85 per cent of the expected production of that Plan year. As presumably all the coal that is expected to be produced (barring the 19 million tons or so of Railway coal, that is, coal intended for the use of the Railways themselves) will be required by the consuming industries, thermal power stations, etc., there will be a continuing crisis in movement and supplies, unless, of course plans are immediately devised to overcome it.

It is a welcome development that the Railway Ministry and the Ministry of Steel, Mines and Fuel seem now to be agreed on some measures to meet the situation. These measures, which are now under active consideration, are: (i) Increase, from July next onwards, of the overall wagon supply in the Bengal-Bihar region to 5,200 wagons per day for movement of coal; (ii) increased use of road transport in specified zones for moving coal over short distances; (iii) increased movement of coal by coastal shipping to the maritime States; (iv) supply of coal to western India from the Central India coalfields, such as the Pench Valley, instead of from Raniganj and Jharia Coalfields and to the southern region from the Singareni coalfields; (v) the stockpiling of coal in regional dumps which could be built up by loading block rakes of coal through bunkers in the main collieries; (vi) use, as far as possible, of furnace oil or crude oil by the Railways for their own purposes or by the industry as a substitute for coal in areas distant from the coalfields; and (vii) supplying important industrial consumers with their minimum requirements of coal in accordance with an order of priorities. It is expected that most of these measures will be instituted between now and July. Anything like full relief from the coal shortage can, therefore, be expected only after July next.

Some of the proposed measures call for comment. First, the possible use of road transport for moving coal over short distances may not be cheaper even in comparison with the increased coal freight proposed in the Railway Budget for 1961-62. Actually, there may not come about any substantial diversion of short-lead coal traffic to road, and in that case, it will have only increased the cost of coal to industries which are located in such areas as Asansol and Durgapur without relieving the pressure on the Railways. In any case, the proposal may turn out to be a difficult exercise in road-rail co-ordination. The proposal regarding the stockpiling of coal in regional dumps, especially in States like Maharashtra, Gujarat, Punjab, Uttar Pradesh, Madras and Kerala, has been welcomed by the industries in areas far away from the coalfields. But the Coal Controller's relevant scheme under which coal will be imported, from April next, directly by the district magistrates or certain nominees of the respective State Governments to certain central dumps from where the individual consumers will take their supplies, has been criticised by the Indian Coal Merchants' Association on the ground that it will have the effect of eliminating thousands of coal merchants. The Association's view is that executive authorities in the districts will not be able to cope with the tremendous task of coal distribution (which is now a wholetime job of a large number of men) and that, therefore, they will shift it to the Government 'nominees'—an ominous phrase which plainly means 'a few' favoured individuals in every State who will prosper as monopolists under State protection by throwing hundreds of coal merchants out of business. These arguments are not unreasonable and they deserve to be taken into account when the Coal Controller finalises the scheme for regional coal dumps and coal distribution. As for another proposal, namely, the use of furnace oil as a substitute for coal in areas distant from the coalfields, it is a matter for further investigation whether the comparative fuel costs will justify its use. The other measures proposed are self-explanatory and non-controversial, meriting early implementation.

EASTERN ECONOMIC ZONE

It was indeed an excellent treatise on the economic development of the Eastern Zone that Mr. H. M. L. Williams, the retiring President of the Bengal Chamber of Commerce and Industry, delivered at the Chamber's annual meeting in Calcutta on Friday last week. The Zone comprises the four States of West Bengal, Assam, Bihar and Orissa. Mr. Williams not merely pinpointed the series of disabilities and disadvantages from which this region has been suffering and warned against their continuance inhibiting progress, but also ventured to put forward some concrete suggestions for enabling the area to make immense and rapid growth in the next decade. Although his observations pertain largely to a particular region, they should not be dismissed as being of only regional importance for two reasons: (*a*) The region under reference is endowed with certain advantages favourable for the establishment of a large number of heavy and basic industries; by exploiting them to the fullest extent possible, the whole country stands to benefit; and (b) the basic validity of his observations hold good for the other regions as well.

Perhaps, lest he should be mistaken for having championed the interests of his own region, Mr. Williams himself declared: "There is need for all concerned to view the problems not only from the point of view of the particular State they live in but from that of the area as a whole and its integration in the Indian economy." For he emphasised that economic law recognised no political boundaries; it depended on natural resources as well as on the man's skill and enterprise in making the best use of them. He, therefore, commended the need for a co-ordinated policy on the part of the individual States on matters of economic interest.

Some of the specific suggestions of a general nature that Mr. Williams made in his speech may be summarised below:

1. Export costs should be reduced; this requires acceptance of rationalisation and modern methods of production.

2. There must be greater utilisation of coastal shipping for carrying heavy and bulky raw materials, particularly coal, through improvement and expansion of existing port facilities.

3. Modern heavy industry requires for its sustenance a host of raw materials, semi and basic items manufactured more efficiently by specialist producers. There is already a considerable number of such producers serving the needs of engineering in its many forms and the jute, tea, chemical and paper industries. The number must inevitably grow and develop around natural economic areas.

4. Secondary industries must develop at a rate fast enough to take full advantage of the recently enlarged foundation added to the basic industries.

5. There must be greater inflow of foreign investment by medium-scale and specialist manufacturers who produce goods acceptable to international specifications and are very conscious of the need for good management, use of modern machinery, good employee-employer relations, and high individual productivity based on sound selection and training methods.

6. Collaboration by industrialists in India with these manufacturers will be at its best, if it is based on equity participation of investment, sharing technical knowledge and modern managerial practice, and pooling of essential experience of local conditions and markets.

When Mr. Williams made these points, he did have at the back of his mind the rapidly growing economic zones other than the Eastern Zone which are eager to attract new enterprises. Drawing pointed attention to this tendency, he warned that, if conditions in the Eastern Zone did not prove satisfactory, enterprises which should have developed in the Zone might settle elsewhere. The implication of this statement of Mr. Williams is that both the powers-that-be and the business men in Eastern India must endeavour to create conditions congenial to the speedy development of the region as a whole. It was in this context that Mr. Williams laid emphasis on the urgency of ensuring sufficient electric power supply, improved communication facilities, and adequate trained and practical managerial cadres.

Mentioning, in particular, the disquieting problems confronting West Bengal, the Chamber of Commerce President urged the Central Government to give priority to the problems, which, he felt, were concentrated to a peculiar degree in the immediate environs of Calcutta, in the interests of the long-term development of the country as a whole. Significantly enough, he observed that "the circumstances are unusually propitious at the moment and powerful aid and allies are at hand." He accordingly called for "most rapid and energetic action" to improve drainage, sewage disposal and water-supplies throughout the urban belt (including Calcutta), to solve traffic problems and to set up satellite towns to reduce Calcutta's teeming population. It was a pleasant coincidence that, as Mr. Williams was making these points in his speech at Calcutta, we ourselves were stressing them in our second editorial last week.

Mr. Williams devoted a good part of his speech to the problems of the region's old industries, too. He wanted greater attention to be bestowed on growing more raw jute in order to ensure adequate supply of raw material to jute industry. He emphasised the need for encouraging exports of tea through reduction in export duties and State taxes, higher priority for rehabilitation of estates, and improved supplies of fertilisers. He advocated a ban on exports of any categories of steel scrap which could be charged into steel in this country itself. He suggested accelerating the use of unworked coal reserves. Considering that the problems facing the jute, tea, engineering and coal industries are the concern of more than one State, Mr. Williams has done well in highlighting them. There is considerable force in his observation that the extension of the system of artificial correctives would only result in an increase in the prices of basic raw materials which would only inflate production costs, to the disadvantage of the general consumer, and lead to wastage of resources.

CO-OPERATIVE MANAGEMENT

The Reserve Bank of India had accounted for less than one per cent of the total agricultural credit of Rs. 18.5 crores provided by co-operatives in 1947-48. But, at present, of the total rural co-operative credit of about Rs. 150 crores, its share is as much as 66 per cent. And it will continue to play a big role—though, relatively speaking, its contribution may become less than 66 per cent—in the third Plan period when the short-term and medium-term loans provided by co-operatives are expected to reach the level of Rs. 480 crores. This massive role of the Reserve Bank in the expansion of rural credit explains its active, and even anxious, interest in co-operative management and administration. The active interest will continue to take the form of sanctioning further credit limits, perfecting inspection procedures and training various categories of co-operative personnel. But all this active interest will be accompanied by not a little anxiety of the kind to which Mr. H. V. R. Iengar, Governor of the Reserve Bank, gave expression in his speech, over the week-end, at the Golden Jubilee celebrations of the Vidarbha Co-operative Bank at Nagpur. The anxiety is on the score of the quality of leadership at the higher political and administrative levels, which, in the opinion of Mr. Iengar, is not quite so effective as in the past in the sense of dedication to co-operative goals. His thesis, in short, is that there will be real chances of finding adequate leadership at the village level, if there is effective leadership at the higher levels. This anxiety is fully justified because the present leadership is not imbued with that sense of disinterested dedication which eminent co-operators in the past displayed.

Equally important in the present context of complex economic activities entrusted to co-operatives is sound management. A co-operative is as much an enterprise as any other, though it combines its business structure and business activities with an ethical content. Its sound functioning as an economic enterprise and its operational efficiency are indispensable not only for the successful fulfilment of its purposes as an association but also for the progress, on sound lines, of the co-operative movement, itself. No co-operative movement, as a recent I.L.O. Report on Co-operative Management and Administration has pertinently emphasised, can operate successfully without technical knowledge backed by clear thinking, good judgment and ability to take decisions and bear responsibilities. These are the attributes of sound management which, unfortunately, is not a distinctive feature of most co-operative societies in India at the present time. This is so because, as the I.L.O. Report has so pithily put it, "a democratic movement with an ethical content tends to bring good men to the top, but not necessarily able men, nor men with a flair for business."

It should be obvious, therefore, that the kind of leadership that is necessary for ensuring the efficiency of a co-operative as a business enterprise is no other than sound personnel for ensuring competent technical and financial management. How crucially important this is, may be seen from the following passage in the I.L.O. Report:

> "A credit policy devised, say, in the interests of increased food production may involve lending on a basis of want rather than of capacity to repay, and this may mean that co-operatives become agencies for the distribution of Government resources rather than solvent economic enterprises. Similarly, industries may be preserved or initiated primarily in order to give employment, and though their form may be co-operative, they will in fact be in the nature of relief works if the test of economic viability is not applied. Co-operatives for the joint use of land may be established on social, ideological or other grounds, but, if they do not in fact increase productivity, pay off investment and operational credits, and offer their members an economic return for their labour and capital, they may be interesting experiments but still not qualify as efficient business enterprises in their own rights."

Surely, it cannot be that the Agricultural Credit Department of the Reserve Bank of India is unaware of the risks involved in adopting the co-operative system as an instrument of State policy. But it is by no means clear that its advisory role can be performed so effectively as to ensure better and sounder co-operative management on business lines so long as the political leadership in the country suffers from the type of weakness to which Mr. Iengar referred in his Nagpur speech.

PAPER TRADERS' PLEA

Paper industry and trade have, of late, come in for a good deal of official controls. But all of them have not been helpful to the development of this vital industry. The rather arbitrary approach of the Tariff Commission in working out the cost structure of the industry and fixing so-called fair prices, without adequate regard for considerations of quality and expansion, has already adversely affected the growth prospects for this industry. The distributive trade, too, has been deprived of its legitimate share in the import trade in paper, albeit due to the policies of another authority. The State Trading Corporation, for instance, has taken upon itself the responsibility for importing paper, permitting only actual users to buy from abroad directly. Mr. J. P. Lalwani, President of the Federation of Paper Traders' Associations of India, in his address at the third annual session held at Madras last week, drew pointed attention to the need for revising the import policy in respect of paper. He felt that the intervention of the S.T.C. was detrimental to the very existence of the established trade. He urged the Government therefore to restore to private trade its rights to participate in imports. His plea, however, has gone in vain. For Mr. Nityanand Kanungo, Union Minister for Commerce and Industry, who inaugurated the aforesaid meeting, categorically declared that it would not be possible for the Government to channel imports through any agency other than the S.T.C.

Obviously, the Government seems to be bent upon eliminating the established traders from the field of import trade with the avowed purpose of protecting the interests of the consumer. There is no dispute regarding the objective. But the means adopted for achieving it, however, are of doubtful value. Although the S.T.C. imports paper, it has no control over the distribution end. Excepting bulk consumers, the others are completely at the mercy of traders through whom the S.T.C. distributes the paper imported by it. And it is the latter who need protection. Accordingly, unless the trade itself voluntarily submits to a code of fair conduct, there is bound to be profiteering at the retail end. If the Government has no confidence in the individual private trader's methods of distribution, there is no reason why a paper traders' body like the Federation should not be given the responsibility for imports and their fair distribution. Mr. Kanungo's excuse that the Federation is too young to take up such a job is not altogether convincing. Although the Federation was formed only three years back, several of its constituent associations have longstanding experience in their trade. Besides, the Federation can also boast of a wide regional representation. In any case, what experience has the S.T.C. in paper trade and how long has it been in this particular business?

The scope for profiteering that exists in the paper trade is largely the result of shortage of supply. What is needed, therefore, is the unrestricted development and expansion of domestic paper industry, which alone will ease the supply position. Production, no doubt, has been going up, but this has not kept pace with the rising demand. The total output of paper in the organised sector during January-August 1960 aggregated 228,000 tons, which compares with 183,000 tons during the corresponding period in 1959 and 294,000 tons in the whole year 1959. The scope for expansion of the industry is quite good, taking into account the availability of raw materials within the country. We are also told that the country will become self-sufficient in respect of paper machinery within a year. If, therefore, the Government sees to it that the industry is not subjected to any disincentives, there is a fair chance of the industry being able to rise to the occasion.

COTTON PROBLEMS

It is more by a stroke of luck in the form of favourable weather than by any conscious human effort that cotton production during the current (1960-61) season—the last year of the second Plan—is now substantially higher. The latest trade estimate puts the crop in the neighbourhood of 5.3 million bales, at which level it very nearly approximates the revised second Plan target of 5.4 million bales, though it is a long way off from the original Plan target of 6.5 million bales. The latter figure itself, it may be noted, was a revised target and this was revised further in a downward direction in view of the shortfall in actual production during the past two years and not because of any reduction in the country's raw cotton requirements both for clothing the people and earning foreign exchange. For the third Plan, the Indian Central Cotton Committee has recommended a target of 7.2 million bales per annum to be reached by the end of the Plan period. Although a crop of 5.30 million bales (commercial estimate) will be a record high for this country, it represents only a modest improvement as compared with 5.15 million bales (commercial estimate) harvested in 1957-58 and 5.29 million bales (actual crop, as estimated by the Central Cotton Committee) in 1954-55. In other words, the country has made little or no progress on the cotton front during the second Plan period.

An idea of the magnitude of the problem and the measures required for solving it was given by Mr. V. Shankar, I.C.S., the new President of the Indian Central Cotton Committee, at its eighty-third meeting held at Bombay on the 25th inst. Mr. Shankar has succeeded Dr. M. S. Randhawa who was the President of the Committee for five years. He can be expected to bring to bear on the problems of cotton production, with which the Committee is concerned and which were not solved during Dr. Randhawa's time, a fresh and vigorous mind. But whether he will succeed where others did not is a question for which time alone can provide the answer. In his speech delivered at the meeting, Mr. Shankar said that the third Plan target had to be achieved mainly by bringing more irrigated areas under cotton and by stepping up the supply of fertilisers to cultivators. He pointed out that, in the past, not more than 40 to 45 per cent of the fertiliser requirements of the cultivators could be met. The main reason for this was shortage of fertilisers. By stepping up indigenous production of fertilisers and more imports it was expected to meet at least 80 to 90 per cent of the demand during the third Plan period. This alone would, according to him, account for 25 per cent of the planned increase in production. Mr. Shankar conceded that this was not easy of achievement, because it was not merely a question of adequate resources but also one of matching them against the capacity of cultivators to repay and the ability and willingness of co-operative societies to step in and assist. Improved cultural practices, implements and seeds were other prerequisites for achieving the target.

Mr. Shankar said that estimates of fertiliser needs of cultivators were not based on any scientific assessment of the requirements of the soil in different regions under different conditions of rainfall and other climatic factors, not to mention the crop patterns. There were 23 soil testing laboratories in the country and one more was to be established shortly but, considering the vast size of the country and the differing climatic and soil conditions, they were grossly inadequate for soil testing. He disclosed that the Government was planning to establish a soil institute and organise soil testing surveys.

A point that was specially emphasised by the President of the Committee was the need for maximum co-ordination of the various agencies concerned with improving cotton production, quality-wise and quantity-wise alike, so that effort in no field was wasted. He suggested that the link between the industry, the grower, the scientist and the trade should be closer still, so that each was conscious of what the other required and what was expected of it. This is a fine exhortation, but there is nothing new in it. Not one of Mr. Shankar's predecessors had failed to stress this need. If Mr. Shankar, however, sees to it that what he has just preached is effectively and expeditiously translated into action, he will, indeed, be doing something more than what they have done.

The new President of the Cotton Committee did well to underline the importance of establishing suitable administrative machinery for schemes to be implemented before targets of production were set and expenditures sanctioned. For, once targets are fixed before the administrative machinery is finalised, it becomes more or less a matter of prestige and a lot of infructuous expenditure is incurred to reach the target. As Mr. Shankar pointed out, schemes which do not promise any success should be withdrawn at the earliest possible stage rather than they be allowed to continue at the expense of other more deserving ones.

STATES BUDGETS

So far, eight out of 15 States have presented their budgets. The budgets of the remaining States will be published in the next few days. As this is the opening year of the third Five-year Plan, the State budgets are of vital significance from the point of view of mobilising the financial resources required for the States' plan-programmes. What light do the budgets throw on the willingness and capacity of the States to raise adequate funds for financing their Plan schemes? It is well known that, at the time of fixing the States' outlays for the third Plan period, each State, in its anxiety to secure a larger slice from the Planning Commission, was vying with every other State in pitching its own Plan ceiling at as high a figure as possible. No national outlook was then in evidence. Every State wanted to grab for itself the largest share of Central assistance and the Chief Ministers of the various States did not take an overall view of the resources available to the whole country. When the Planning Commission began to apply the axe to the fantastically bloated State claims, some Chief Ministers, expressed their willing-

ness to raise additional resources, on condition that larger allocations than those originally visualised by the Planning Commission were permitted to their respective States.

In presenting the budgets for 1961-62, however, the various State Governments appear to have completely lost sight of their responsibilities for raising the resources. Actually, after the modifications made in the Draft Outline of the third Plan, the Planning Commission had stepped up the target of additional taxation to be raised by the States during the third Plan period from Rs. 550 crores to Rs. 610 crores. This was necessitated by the upward revision effected in the aggregate target of the third Plan for the public sector from Rs. 7,250 crores to Rs. 8,000 crores. In view of this, it was clearly the duty of the States to make a supreme effort to raise additional resources through fresh taxation beginning from the budget for 1961-62 onwards. But actual performance of the States shows that, of the eight States which have so far announced their budgets only three, Maharashtra, Gujarat and the Punjab, have chosen to levy new taxes, albeit on a small scale. Even of these three States, it is only Maharashtra that has tried to balance its revenue budget. The fresh taxation proposed by it is expected to bring in Rs. 100 lakhs against a deficit of merely Rs. 7 lakhs. The Punjab Finance Minister raised the rate of general sales tax from 4 per cent to 5 per cent and the entertainment duty by six naye paise. The two measures are expected to yield Rs. 120 lakhs and Rs. 11 lakhs respectively, leaving an uncovered nominal deficit of Rs. 2 lakhs. In a way, the Punjab, too, can claim that it has also very nearly balanced its budget. But both the States should have aimed at a surplus to contribute to their respective capital budgets. It will be recalled that Mr. Chavan, in particular, secured a bigger Plan sanctioned for Maharashtra on the ground that he would somehow get the additional resources required for the purpose. The Gujarat Government has proposed increases in the taxes on motor spirit, kerosene, groundnuts, entertainment, electricity and stamp duty yielding in all Rs. 80 lakhs. But, as the deficit is estimated at Rs. 387 lakhs, the new taxes would cover only a fraction of the budgetary gap. The rest of the five States have behaved even more badly, in that they have made no new proposals for raising additional resources, in spite of a wide gap between their revenue and expenditure. On the basis of budgetary estimates for 1960-61, the eight States which have so far presented their budgets—Maharashtra, Madras, Andhra, Bihar, West Bengal, Gujarat, Punjab and Jammu and Kashmir—account for Rs. 545.63 crores of total revenue, or more than 52 per cent of the aggregate revenue of Rs. 944.60 crores for all the constituent States of the Federation. The additional taxation proposed by the three States aggregates Rs. 3.11 crores and over the entire third Plan period, it will fetch about Rs. 15.55 crores. If it is remembered that, over the third Plan period, these States will have to raise a minimum additional taxation which will bring in Rs. 305 crores (half of the target of Rs. 610 crores), the magnitude of the shortfall can be easily gauged. Actually these eight States should have imposed in the budget for 1961-62 new taxes altogether yielding Rs. 20 crores (as against only Rs. 3.11 crores that have now been proposed) or Rs. 100 crores for the five-year period. It is, of course, assumed here that they would continue to impose fresh taxation of this order in each of the remaining four years of the third Plan. It is only then that these States would be in a position to fulfil their responsibility of raising Rs. 305 crores of additional revenue. In view of this massive indifference by more than half the State Governments to the question of raising additional taxation, the reported concern of the Planning Commission over the resources aspect of the third Plan is quite understandable. The Commission will, therefore, be justified if it insists that each one of these States and also those that may follow their example in the next few days should bring forward a supplementary budget at least in the monsoon session of their legislature. The relevant section of the Planning Commission and States Finance Ministers must get together soon, in order to determine the possible lines on which new taxes can be imposed.

One possible explanation of the reluctance of the States to introduce new taxes or raise the rates of existing taxes is that this is a pre-election budget. Of course this tendency on the part of the Congress Party to adapt the budgets to the needs of political exigencies is not in the best interests of the country. The Congress, as the most popular of all the political parties, should be prepared to take some electoral risk and convince the people of the need for their paying more for the cost of economic development. But the present tendency is also a reflection of the opportunistic tactics of other opposition parties, which, while being vociferous in demanding amenities for the people, are not sufficiently enlightened and honest enough to support new tax measures required for sustaining higher expenditure on economic development and social services.

Almost all the eight State budgets show marked deficits, as can be seen from the following figures:

Budgets 1961-62

(Rs. in crores)

	Total receipts	Total expenditure	Surplus (+) or deficit (—)	New taxes
Andhra	118.24	112.18	—3.94	..
Bihar	146.51	148.64	—2.13	..
Gujarat	70.69	74.56	—3.87	0.80
Jammu and Kashmir.	22.94	23.93	—0.99	..
Madras	105.60	108.45	—2.85	..
Maharashtra ..	157.50	157.57	—0.07	1.00
Punjab	82.84	84.17	—1.33	1.31
W. Bengal	131.90	140.81	—8.90	..

Notwithstanding the fact that the budgetary position of most States shows a marked imbalance between resources and needs, some of the States are vigorously pursuing progressive policies in the field of social services. For example, the Finance Minister of Madras, Mr. C. Subramaniam, announced that, in future, educational concessions could be on the basis of economic backwardness and that the Madras Government has decided to extend free education upto XI standard to all poor children irrespective of caste or creed. The position now is that free education is made available to all children upto V standard and to poor children upto VIII standard. Beyond VIII standard education is free only to children belonging to scheduled castes and other backward classes.

The Andhra Finance Minister's speech refers to many interesting schemes for which provision has been made in the budget including increased block grants to the three universities in Andhra, grants to local bodies for office buildings, larger provision for educational loans to deserving students of technical and professional colleges and grants of pension to destitute persons aged 70 and above.

The budget speeches of some of the State Finance Ministers contain reference to their grievances in the matter of Central assistance. Thus, one of the highlights of Dr. B. C. Roy's speech is his forceful plea for greater Central assistance to industrialised States. Dr. Roy was on strong grounds when he urged the Planning Commission to clarify the principles on which the assistance list had been drawn up. In the past, several prominent members of Parliament had also asked the Planning Minister to lay before the house the criteria on the basis of which Central assistance was given and the Plan ceilings of different States were determined. The whole question of distribution of Central assistance to States should be referred to the Third Finance Commission, so that some objective guiding principles could be spelt out and no State need be under the impression that the Centre has its favourites among the States.

Another complaint of the States to which the Finance Minister of Andhra drew pointed attention, pertains to the growing burden of debt charges, which are made more onerous by the fact that, in regard to projects such as the Nagarjunasagar, the service charges mount from year to year, while the return from the investment is quite far away. There is a clear need for adjusting the rate of interest and period of maturity of the loans granted by the Central Government to the States to the gestation period of the project for which it is intended. The States, however, must take particular care to keep down the capital cost of these projects both through efficiency and economy.

COCONUT PRODUCTION : A CORRECTION

In a note on coconut industry (vide page 140, *Commerce* dated 28th January 1961), the figures of output of coconuts at the end of the first Plan was given as 3,800 million nuts and the target for production in the second Plan as 8,700 million nuts. We regret to find that these figures are not correct. The correct position is as follows:

Actual production of coconuts at the end of the first Plan, according to final estimates, was 4,150 million nuts (as against the initial estimate of 3,800 million nuts). The production target set in the second Plan was 870 million *additional* nuts, making an aggregate of 5,020 million nuts. The actual output for 1960-61 is, however, estimated at only 350 million *additional* nuts, or a total of 4,500 million nuts. The shortfall in production, as compared with the target is 520 million nuts or about 12 per cent.

EXAMINATION FOR QUALIFYING AS COMPANY SECRETARIES

The Department of Company Law Administration has notified that the second preliminary and intermediate examination for Company Secretaries will be held in October 1961. Candidates intending to appear in the intermediate examination in October should register themselves with the department before 31st March in order to be eligible to sit for the examination. No registration is necessary for candidates who wish to take the preliminary examination. The last date for enrolment for the examinations will be announced later. Students already registered in the department are required to pay an annual fee of Rs. 10 before 1st April 1961.

ANNOUNCEMENT

THE STATE BANK OF INDIA

have pleasure to announce that,

in pursuance of their objective to promote savings and encourage rural deposits through the large number of branches opened in fulfilment of their Statutory obligation for Branch Expansion,

THE INTEREST RATES

on Savings Bank Accounts and Savings Bank Deposits in all their offices

HAS BEEN RAISED,
as from the 1st March 1961

as under:

ON THE ARENA

By The Archer

Direct Taxes, Indirect Taxes and Tortuous Levies

I AM writing this column before publication of the budget proposals, and although I usually attach no importance to the intelligent(?) anticipations of clever forecasters regarding the shape of things to come, I do agree with what most people have been saying that there is likely to be much more of indirect taxes than of direct ones, for the simple reason that according to the accepted technique of assailment, a kick on the rear is supposed to be less offensive and shocking than a frontal biff on the jaw. And I go a step further in forecasting that tortuous levies, mostly undiscovered by the general public, are likely to be very much on the increase. Let us take, for instance, the financial effects of one of the amendments to the Indian Companies Act, namely, of Section 271, which, in its original form, required every newly appointed director of every public limited company to furnish the concerned company with particulars of the qualification shares held by him, and, in its amended form, requires a declaration of such holdings to be forwarded (by all directors, present and future) to the Registrar of Companies, accompanied by a filing fee. The filing fee is related to the capital of each company, and is Rs. 25 for companies with a capital of Rs. 25 lakhs and above. As most public limited companies will fall in this category, we may assume that Government revenues will be augmented to the extent of Rs. 25 multiplied by the number of directors (except technical or ex-officio directors) of each public limited company multiplied by the number of such companies in the whole country. This should aggregate to a sizable amount of money. The collection will be made quietly, effectively and quickly, and from a body of persons who may not openly complain, although they might express themselves bitterly about the Company Law Administration and call it by rude names, but who cares? I cannot discover much serious purpose behind the amendment, except that it is in accordance with the general policy of "tightening up." Nor can the levy, as such, be defended unless a case is made out that the clerical and supervisory work involved in receiving, scrutinising and filing the declarations in their proper folders is estimated to cost as much as Rs. 25 per declaration. However, it is a sure source of revenue, and may point the way to a series of similar levies by various controlling departments of the Central or State Governments. Impose on people of a particular income group a series of statutory obligations, call upon them to submit forms, returns or declarations periodically, or every time they undertake or relinquish a responsibility, and collect a filing fee for each such form or return or declaration, and the result is easy accumulation of revenue. It all seems so very simple and so delightfully easy. I have no doubt there will be brighter and fresher ideas on the subject in course of time. There may be, for instance, another amendment requiring directors to file relinquishment forms on ceasing to be directors by rotation or otherwise (with filing fee of Rs. 25), confirmation of holdings on being reappointed as directors (with filing fee of Rs. 25), or even annual returns of directorships held (with filing fee of Rs. 25 for each company) and so on. At present directors state their ages or dates of birth but no supporting document is called for. By an amendment to the Act they may be called upon to produce certificates of birth issued by a Registrar of Births or Deaths, or two sworn affidavits before a Magistrate under his court seal, each attracting a court fee stamp, and there may be a filing fee of Rs. 25 for the final document. Again, at present, directors state the names of their fathers, but without proof of paternity. Sworn affidavits may be required in support of the statement and a filing fee of Rs. 25. If penalties are also laid down for non-submission, and the fines rigorously collected, the revenues will keep on accumulating, and there may be enough work even for an Accountant-General for Company Law Revenues, and a Commissioner for Tortuous Levies. Incidentally, postal revenues will also go up as most directors will send their declarations by registered post and their filing fees by money order. The saying goes that one man's meat may be another man's poison; but in public administration, one department's revenue increase is also another department's revenue augmentation, so that any Government can always look forward to a bright and prosperous time if it has, among its officers, a few lion-hearted persons who believe in the adage: "Sock them on the jaw, poke them in the ribs, and kick them on their behinds until they cough up the money": and, of course, provided Government is not chicken-hearted. I believe it was Cardinal Richelieu to whom was attributed the epigram: "The art of taxation consists in so plucking the goose as to obtain the largest possible amount of feathers with the smallest possible amount of hissing."

Houses for Workers

The Minister for Industries and Labour, Madras State (or, should I say Tamizh Nadu?), is reported to have declared at a function organised by an employees' association that if there was not sufficient response to the appeal of the Government to employers to provide houses for employees, Government would ultimately be compelled to bring in legislation for the purpose. There was even a suggestion, he said, that a provision should be included for building a certain number of houses in big industrial establishments *before granting licences* to new factories. He hoped that industrial housing schemes would be taken up on a voluntary basis with the help given by Government, but if the response was not sufficient, they would have ultimately to bring in legislation compelling the employers to build houses for their workers.

I have before me a report from the Legal Correspondent of a leading newspaper that a Full Bench of the Maharashtra High Court has negatived a petition from a workers' union of two sugar companies asking for provision of housing accommodation by their employers. Their Lordships referred to the decision of the Supreme Court in the Patna Electric Supply Company's case in which it was stated by the Supreme Court that the provision of housing accommodation was primarily the responsibility of the State, and that, in the present economic conditions of industries in the country, it was not expedient to impose this heavy burden upon the employers. Such an imposition might retard the progress of industrial development and production, and thereby prejudicially affect the national economy.

I suggest that the Minister for Industries and Labour in Madras should give some thought to the Supreme Court's judgment, which has been reiterated by the Maharashtra High Court, before he decides to implement his threats to industry. He might bear in mind the fact that the Central Government, in particular, has done precious little to relieve the enormous distress of its own employees in cities like Bombay and Calcutta in the matter of housing accommodation. The wise precept that one should practise what one preaches must be meticulously observed by a democratic government, because one can fool one person once, one can fool all people also once, but one cannot fool all people all times.

Ministers of State Governments who are solicitous of labour welfare will be well advised to temper their doctrinaire theories on the subject with some measure of economic thinking. It is a very elementary fact in cost accounting that heavy initial capital investment in land and buildings will result in a high figure of depreciation per unit of production, and correspondingly high cost of manufacture. Housing schemes and similar amenities are therefore deferred until the industrial enterprise has stabilised its cost of production at round a competitive norm and has got over all its teething troubles. To insist on provision for housing even while granting a licence is contrary to all canons of industrial economics, unless it be that the enterprise is located in a forest area or undeveloped desert. I can cite the case of a State-owned industrial enterprise which was started seven years ago in a place far removed from any village or township and found it necessary, consequently, to incur very heavy capital expenditure on housing and allied amenities. Its cost of production of each unit of the product has remained more than the fair average by about 31 per cent, its depreciation figure being about 34 per cent of its works cost as against the fair average of 9 per cent. Insistence on housing for labour, even at the cost of high investment may act as unction to the ideology of a labour minister, but it will result in continued emaciation of the enterprise and economic loss to the country. The problem calls for an integrated national policy and the earlier a decision is taken, the better.

I am unable to resist the temptation of retailing a story to illustrate the fallacy which I have referred to. A rich tycoon whose daughter wanted to marry a promising young man of moderate means insisted that the latter should purchase a motor car and a well-furnished house before he consented to the wedding. The young man pleaded that it would take him some years to save the money for the purchases and they could be deferred to a later date, not made immediately. The tycoon was firm and would not relent, so the investments were made, and the wedding went through. When the bride's party reached the house of the groom after the ceremony, there was every evidence of prosperity, car, house and furniture included, but nothing to eat. In the pantry there was only a sack of linseed flour and a bundle of square cut pieces of white cloth. Asked to explain what they were for, the bridegroom stated that linseed poultice was good for inflammation or pinching of the stomach, and he was going to suggest that his wife and himself should apply the poultice twice a day to allay their hunger, and carry on as long as possible, as all his money had been spent on appurtenances and there was nothing available to spend on food or provisions. The tycoon then realised the foolishness of his insistence and was forced to subsidise the newly-weds for several years after they had settled down to a married life.

Pricing Policy for Basic Raw Materials

The President of the Associated Chamber of Commerce is reported to be against fixing all-India prices for basic raw materials. He believes that "artificial correctives" will increase cost of production, affect exports, and result in wasteful use of resources. Referring to the resources of the Eastern Region which is rich in coal and minerals, he expressed the view that "where the investor had the foresight to plan his production in the most suitable area, he should be allowed to continue to enjoy the benefits of his foresight and initiative."

This view, expressed from Calcutta, will perhaps be supported by many industrialists in the "eastern region," but certainly not by those who are far removed from the steel and coal producing areas. It cuts across all ideas regarding zonal distribution of heavy industries and, if approved, will be a serious disincentive to industrial development in the western and southern regions. It is based on the theory of perpetuity of vested interests, a theory which was given up when the country obtained its independence, and is no longer tenable in the context of achieving a unified and integrated development of the whole country through plans. It was "foresight and initiative" which led to the establishment of certain enterprises in the former princely States where tax and other concessions were initially made available to the sponsors at the discretion of the former rulers, but they have all been withdrawn after the country attained independence. No one seems to indulge in arguing the equity of this any longer. What is called "the most suitable area" cannot claim to be allowed to enjoy exclusive privileges in regard to basic raw materials such as steel and coal in perpetuity in a manner which will shut out all possibilities of developing other areas. If nature's bounties are to be shared and shared alike, "artificial correctives" are inevitable, and the plea that they might result in increasing costs of production in the favoured areas should not be sustained in the face of the considerable reduction in costs which might result in other areas. As for the warning that there may be wasteful use of resources, the danger is there only if the artificial correctives are not supported and maintained by planned distribution, and the administrative machinery fails in carrying out its duties. But that can be no excuse to give up the idea altogether.—*All Rights Reserved.*

GROWTH OF LONDON'S INTERNATIONAL BANKING BUSINESS

MARKED INCREASE IN OUTSIDE DEPOSITS

By W. T. C. King

THE seasonal spate of financial information that comes from publication of the year-end balance-sheets of the big English banks and the annual pronouncements of their chairman has this year been notably swollen from an official source—by the appearance (in January) of the first issue of the Bank of England's new *Quarterly Bulletin* which, in pursuance of the recommendations of the Radcliffe Committee, is to supplement the Bank's recently enlarged and improved annual report.

These new documents from the Bank of England (which every serious student of international finance or of the British economy should take steps to see for himself) present, among other things, a chronological account and interpretation of Britain's financial and monetary policy and a now formidable array of statistics of British banking and finance—subject to a deliberate time-lag of three months or so.

The extended annual report, published in mid-1960, carried the story to the end of the first quarter of 1960; the first of the new quarterly bulletins brings it up to the end of September (plus some comment on the events of October); and each succeeding bulletin will deal with a further quarter. In this despatch, I propose to select a few of the more striking facts from this rather bewilderingly large mass of new data—dealing first with international finance and then with the credit scene within Britain.

"Euro-dollar" Transactions

In particular, some important new light has been shed on the growth of London's international banking business in these years since the move to formal "external" convertibility—and especially in this past year of heavy outflow of funds from New York. In these conditions, there has been further development of the so-called "Euro-dollar" transactions, with London banks playing a significant part by receiving overseas deposits at interest in dollars—notably European funds switched from accounts in New York—and then relending a substantial part of these funds, likewise in dollars, to other overseas borrowers.

Unfortunately, no statistics are available to show how this international activity has affected the major domestic banks, but some interesting evidence is afforded by the several new series of figures now published, in continuation of the statistics prepared for the Radcliffe Committee, relating to the "outside" banks operating in London—the British overseas banks, the American banks, other foreign banks, and the London accepting houses, each of which groups has its own representative organisation.

The accounts now made available for each of these groups are actually more detailed, in some important respects, than those of the clearing banks—notably in classifying deposits, advances and acceptances into those on behalf of United Kingdom residents, overseas banking offices, and other overseas residents. These figures, however, are available only for half-yearly intervals, the latest relating to 30th June last.

Every one of these groups has shown remarkable expansion in recent years, and in each instance the deposits held at mid-1960 appear to have been the highest ever. The most spectacular growth of all has occurred in the business of the American banks in London. Their deposits were more than doubled in the twelve months to 30th June last—and five-sixths of that astonishing movement occurred in the last six months. At mid-1958 the deposits total was £116,000,000, a reasonably representative figure, since the range in the recorded series from end-1951 was £96,000,000 to £144,000,000 (that peak having been touched at end-1954). By mid-1959, the total was £177,000,000, by end-1959 £206,000,000, by mid-1960 £374,000,000. Of the £258,000,000 growth over two years, £170,000,000 represented deposits of overseas banks and £58,000,000 those of other overseas residents. Nearly all these additional resources were employed in relending outside the United Kingdom: the aggregate advances of the American banks in London rose during the two years from £79,000,000 to £307,000,000, and, of this huge increase in lending, £197,000,000 went to overseas banking offices and £13,000,000 to other overseas borrowers.

A more moderate rate of growth was shown by the British overseas and other foreign banks in London, but even here the rate was high when judged by the standards of domestic banking. At mid-1958, the British overseas banks held £551,000,000 of deposits; two years later the figure had risen to £694,000,000, with £30,000,000 of the increase attributable to overseas banks and £82,000,000 to other overseas accounts. Roughly two-thirds of the new resources went into advances (up from £136,000,000 to £231,000,000), and rather more than two-thirds of these new loans went to overseas banks.

The other foreign banks in London increased their deposits during the two years from £148,000,000 to £221,000,000 (the greater part of the increase occurring in the first year). Only £20,000,000 of these additional deposits were held for United Kingdom residents; on the other hand, U.K. residents accounted for £17,000,000 of the £44,000,000 of additional advances made by this group of banks. Advances to overseas banking offices rose from £24,000,000 in mid-1953 (and only £10,000,000 in mid-1956) to £46,000,000.

Expanding Fast

The London accepting houses have also been expanding fast, but a larger proportion of their accretion has come from domestic customers. Their deposits at mid-1958 totalled £192,000,000, but this already reflected a substantial growth, since the recorded range in 1951-57 had been £121,000,000 to £167,000,000 (with the peaks for that period falling in 1954 and mid-1957). By mid-1959, the total had climbed to £250,000,000, and last June it reached £334,000,000. Since mid-1957, both total deposits and domestic deposits have been almost exactly doubled (the latter rising to £144,000,000), while overseas banks' deposits have risen from £35,000,000 to £100,000,000 and other overseas deposits from £59,000,000 to £90,000,000. Of the £168,000,000 of additional resources acquired during the three years, £93,000,000 went into advances (and £52,000,000 of this to U.K. residents). Nearly all the remainder went into liquid assets in London—balances with other London banks, call loans to the discount market, Treasury Bills and commercial paper. Liabilities on acceptances granted by these houses rose from £123,000,000 at mid-1957 (and under £100,000,000 at every recorded date before that) to £137,000,000, a recorded peak, at June last.

Deposits of "Outside" Banks in London
(In millions of pounds)

	Recorded peak 1951-57	*Mid-1958*	*Mid-1960*
British overseas banks ...	601	551	694
American banks ...	144	116	374
Other foreign banks ...	148	148	221
Accepting houses ...	167	192	334

During the first half of 1960, the aggregate "non-resident" deposits of these four groups of "outside" banks rose by £240,000,000.

These figures are not, of course, in themselves a measure of the extent of the flow of short-term funds to London, but they deserve to be considered side by side with the quarterly official estimates of overseas holdings of sterling. During the two years to mid-1960, the grand total of these rose from £3,905,000,000 to £4,275,000,000 and the holdings of sterling-area countries from £2,537,000,000 to £2,674,000,000. Balances held by non-sterling countries rose much more steeply, from £737,000,000 to £940,000,000. A large part of this accretion of foreign funds was, moreover, concentrated into the last six months of the period.

In the first half of 1960, while holdings by overseas sterling-area countries were being run down (from £2,704,000,000 to £2,674,000,000), other overseas holdings rose by £137,000,000. Then, in the third quarter, while sterling-area balances dropped by a further £97,000,000, the growth of foreign balances greatly accelerated—they rose by no less than £226,000,000, to the new peak of £1,166,000,000. Overseas central banks and other official bodies accounted for £80,000,000 of the quarter's increase and for £142,000,000 of the increase since end-1959.

These official figures, it should be emphasised, do not reflect all movements of short-term funds to or from London. After taking account of other movements that cannot be precisely measured, the Bank of England estimates that, in the third quarter of 1960, the net inflow of private overseas money (allowing for any reduction in U.K. short-term lending abroad) was of the order of £250,000,000. And one unofficial body, the National Institute of Economic and Social Research, has recently hazarded the guess that, during the year 1960 as a whole, the "abnormal" capital inflow may have reached £900,000,000—on the hypothesis that during the year Britain incurred a true current-account deficit of some £200,000,000 (the official estimate of the actual deficit is likely to be less than this), repaid sterling-area balances to the extent of another £200,000,000, repaid long-term debts or invested long-term to the extent of £300,000,000, and yet strengthened its reserves (partly by the large payments to the International Monetary Fund) by a further £300,000,000.

Enlightening New Figures

In the sphere of domestic monetary policy, by far the most enlightening of the new figures that have stemmed from the Radcliffe inquiry and are now continued in the Bank's new publications are those relating to public debt policy and Exchequer financing—showing, in particular, the true sales of securities by the public sector to the private sector. Previously, the picture had always been hopelessly blurred by the fact that nominal sales or new issues of securities included those to Governmental agencies—and, notably, the Issue Department of the Bank of England. For the first time, therefore, it is possible to trace with some degree of precision the effects of the "funding" aims of the monetary authorities upon the resources and liquidity of the domestic banks.

In 1960, the trend of domestic bank deposits was strikingly changed. True net deposits of clearing banks, which had risen in 1959 by no less than £378,000,000, or by roughly six per cent (the fastest credit expansion since the Daltonian phase), actually declined fractionally in the twelve months to mid-December last, to £6,901,000,000, in spite of the fact that their loans and advances rose by a further £430,000,000 (a much smaller rise, however, than occurred in 1959). The principal cause of this check to credit expansion can now be seen to have been the success of the monetary authorities, during this year of high interest rates, in selling marketable Government stock and Treasury Bills to holders other than the main deposit banks. During the first nine months of the year (figures for the fourth quarter will not be available until April), the domestic banking system sold no less than £370,000,000 of stock, yet the net intake of stock (by redemption or purchase) by the monetary authorities was no more than £112,000,000, in contrast to £355,000,000 during the preceding 15 months of heavy selling by the banks. And, in the latest six months, the authorities were net sellers to the extent of £233,000,000—thanks to net purchases by "non-bank" investors amounting to more than £400,000,000. In that period, these investors also absorbed £71,000,000 of Treasury Bills, in spite of a decline in the holdings by overseas monetary authorities (included in these figures of "non-bank" investors).

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia; these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 *with Limited Liability.*
HEAD OFFICE: 7 King William Street, London E.C. 4.

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT THE Transfer Book and Register of Holders of Convertible Notes of the Company will be finally closed with effect from the 16th March, 1961, for redemption of the outstanding Convertible Notes on the 31st March, 1961.

Interest for the half-year ending 31st March, 1961 will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1961, or in accordance with their instructions.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Registered Office:
12, MISSION ROW,
CALCUTTA, 1.
1st March, 1961.

RAMTIRTH (HINDI MONTHLY)

Editor: **Yogiraj Shri Umeshchandraji**

Published every month by Shri Ramtirth Yogashram—Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN
(First Part)

In Four Languages: **English, Hindi, Gujarati and Marathi**

(Author: **Shri Yogiraj Umeshchandraji**)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers are available for Ladies. Diseases are also remedied.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

SHRI RAMTIRTH YOGASHRAM

Dadar, Central Railway, Bombay-14
Telephone: **62899**

The following is a Statement of Ownership and other particulars about "Commerce," Bombay, as required under Rule 8 of the Registration of Newspapers (Central) Rules 1956.

FORM IV

1.	Place of Publication	"Brady House," Veer Nariman Road, Fort, Bombay
2.	Periodicity of Publication	Weekly
3.	Printer's Name	Mr. John Middleton
	Nationality	British
	Address	Brady's Flats, Block No. 6, Flat No. 6, Sohrab Bharucha Road, Fort, Bombay 1
4.	Publisher's Name	Mr. Jamshed Dinshawji Kapadia. For the Proprietors, "Commerce" (1935) Ltd.
	Nationality	Indian
	Address	57, New Marine Lines, Bombay
5.	Editor's Name	Mr. Subramanya Venkata Rayan
	Nationality	Indian
	Address	4, Narasingha Bhuvan, Brahmanwada Road, Matunga, Bombay 19

6. Names and addresses of shareholders holding more than one per cent. of the total capital:

Messrs. W. H. Brady & Co., Ltd., 12/14, Veer Nariman Road, Bombay.

Mr. A. H. Baker, Burleigh House, Charing, Kent, England.

Calcutta General Printing Co., Ltd., 3, Wellesley Place, Calcutta.

PROBLEMS OF PUBLIC ENTERPRISES

By Dr. V. K. R. V. Rao

THERE is a great deal of misunderstanding in the lay mind about the growth of the public sector in India. Thus, some people believe that the growth of the public sector is synonymous with the growth of the socialist pattern of society and therefore welcome it, while others denounce it on the basis of the same belief, namely, that the growth of public enterprise is of a socialist character and is, therefore, inimical to the growth of private enterprise in India. Both these views are wrong. The growth of public enterprise is not by itself a menace to the growth of private enterprise nor does it automatically bring about the objective of a socialist society, namely, maximisation of production and maximisation of equality. Very much depends upon what sort of public enterprises we have in mind and upon what policies are followed in respect of their pricing, administration and operation. It is best, therefore, to begin with a statement of the first principles regarding public enterprise.

Objectives

The case for public enterprise rests essentially on the thesis that it can bring about the achievement of a number of socially desired and accepted objectives in the economic field more efficiently than private enterprise can. These objectives in the case of India are:

(1) Maximising the rate of economic growth and achieving the take-off stage within a defined period;

(2) maximising the growth of national income and of consumption levels consistently with the first objective;

(3) maximising the reduction in inequalities of income and wealth and promoting equality of opportunity; and

(4) preventing the concentration of economic power in private hands.

This means that sectors of economic activity which involve either monopoly conditions or strategic economic power or possession of large resources in private hands should be publicly owned and operated as public enterprises. It also means that public enterprise should make itself responsible for the building of the economic overheads or the external economies like transport, power, fuel and basic capital goods without which increase in the production of consumption goods and services either on the required scale or the necessary economic basis will not be possible, irrespective of whether it is to be in the private or public sector. It also means that the extension of the public sector in economic enterprise will be followed by a substantial growth in the volume of national savings and investment as well of the funds available for governmental outlay on social services. Finally, it implies the acceptance and demonstration of the principle of efficiency, namely, maximisation of output with minimisation of costs consistent with quality of output, living standards for labour, and retention of funds needed for reinvestment and contribution to national welfare programmes. Without public enterprise, there can be no private enterprise; in fact, it is the former that enables the full growth of the latter. At the same time, merely having a given field of economic activity in the public sector does not necessarily mean either increase in efficiency or in savings or in equality of opportunity. Everything depends upon the manner in which the public enterprise is operated and the policy it follows in regard to the pricing of its products and the distribution of its profits between wages and salaries, savings, and contribution to the national exchequer. The overall test of the success of public enterprise in the economic field is the extent to which it brings about an increase in the national income and, more specially, in savings in both the private and the public sector; while, in the social field, the overall test is the extent to which it brings about a sense of identity of labour with the enterprise and promotes equality of opportunity. Now let us see what practical implications these first principles of public enterprise have in terms of pricing, operational, and administrative policy.

To begin with, all types of economic activity cannot be run by public enterprise even in a socialist society. In a country like India where the working population is so large and agriculture and small enterprise have to play such an important role in the national economy, the bulk of economic activity, which give people an occupation and means of livelihood, have to be outside the field of public enterprise. And a major task of public enterprise has to be the creation of conditions and facilities that will enable the desired increase in the number and efficiency of units of private economic activity, in terms of small enterprise. Hence the importance of economic overheads as a major field of public enterprise; hence also the need for confining public enterprise to large units. Thus, the first choice for public enterprise activity should be in fields where the nature of the commodity or service produced is such as to give rise to monopolistic conditions or the possession of strategic economic power over either small enterprise or the community at large or is a crucial determinant of growth, or is not likely to be produced in the private sector. The second choice should be in those fields of production, distribution or exchange, where the economic units are big and their operation involves the use of substantial economic resources and gives rise to large profits in absolute, though not necessarily in percentage, terms. The success of public enterprise thus depends to a large extent on the choice of units or sectors of economic activity for its application. From this angle, I must confess that the scope of public enterprise accepted so far in India is incomplete and needs to be extended.

Pricing Policy

Having selected the field for public enterprise, the next question for discussion is pricing policy. Here I would say that the policy should be such as to promote the growth of the national surplus and therefore the rate of economic growth. This involves in turn the abandonment of the popularly accepted principle of no-profit, no-loss as the supreme criterion for pricing of the products of public enterprise. Looked at from this angle, it is obvious that public enterprise must make profits and the larger the share of public enterprise in all enterprise, the greater is the need for their making profits. Profits constitute the surplus available for savings and investment, on the one hand, and contribution to national social welfare programmes on the other; and if public enterprises do not make profits, the national surplus available for stepping up the rate of investment and the increase of social welfare will suffer a corresponding reduction; and the larger the place of public enterprise in the national economy, the larger will be the reduction. Hence the need for giving up the irrational belief that public enterprise should, by definition, be run on a no-profit basis. At the same time, it is almost equally wrong to assert that public enterprises should always be run on a no-loss basis. In fact, the growth of the national economy may well require that, especially in the initial stages of economic growth, certain products of public enterprise should be sold deliberately at prices that involve a loss to the concern or concerns in question. It all depends upon what the commodity or service is, what part it plays in stimulating economic growth, to what extent it will not be taken up if it is not sold at a low price, and what the overall effect on national income and savings would be.

The cardinal difference between pricing policy in the private sector and in the public sector is that, whereas the former concerns itself only with the net value added on its private account, the latter should concern itself not only with the net value added on its private account but also with the net value added on the account of the rest of the national economy. In fact, the criterion for pricing policy in public enterprise should be the net value it adds to the national economy as a whole, both in terms of national income and in terms of national savings and the funds available to the national exchequer for social development programmes. Sometimes, this criterion may lead to the maximisation of the profits of the individual public enterprise; sometimes, it may lead to the deliberate building up of losses on the part of the individual public enterprise; it all depends upon the nature of the commodity, the stage of economic development, the extent to which social guidance is effective over private investment, and the degree of response of proceeds to growth in national income. It is, therefore, high time that we finally abandoned the hoary myth of the so-called principle of no-profit-no-loss for public enterprise, and substituted for it the more rational principle of maximisation of national income, national savings, and national funds available for social development programmes. What is necessary, however, is to see that public enterprises do not indulge in profiteering or use their power to follow a price policy based merely on the narrow criterion of maximisation of profits on the model of private enterprise. The cardinal point to be borne in mind on price policy for public enterprise is the sum total of its effects, both on the individual concern and on the rest of the economy; and it is profits or the surplus in this sense of the sum total of the two that needs to be maximised.

Efficiency

Price policy is not the only important field in which we need fresh thinking in the field of public enterprise. It is also important that somehow we can ensure the operation of the principle of efficiency. For private enterprise, there is the criterion of profit and there is the stimulus of competition. These criteria may not be equally available or even applicable in the case of public enterprise. At the same time, decision-making tends to get centralised and usually at Government headquarters in the case of public enterprise; mistakes are treated more as crimes than as lapses, the sense of individual responsibility gets diminished and replaced by a tendency to rely on guidance from above and conformity to a book of rules and consequent red-tape; and there is very little freedom given to the management to use the normal incentives of reward and punishment for increasing operational efficiency. This is a totally unhealthy state of affairs for the promotion of operational efficiency, even in a completely socialised economy like that of the Soviet Union; and it is much more so in the case of a mixed economy like that of India. The Soviet Union has had to go in for decentralisation, inter-unit competition and emulation programmes and the setting up of detailed physical norms of production and operation, and targets not only of planned increases in output but also of planned decreases in cost in order to promote the efficiency of their public enterprises.

Autonomy

We, in India, should learn from the experience of the Soviet Union in regard to the securing of efficiency in public enterprise. What is important is not so much changes in the form of administration of public enterprise. The form may be that of a company or a corporation or of a departmental undertaking; what matters most is the spirit behind the form and it is here that we need significant changes in the operation of public enterprise in India. Autonomy should be the rule rather than the exception; and administration in the business sense of the term should be an entirely internal affair. Parliamentary responsibility should be implemented not by detailed control by Government Departments but by periodical review of progress and the fullest possible data on the working of the units of public enterprise. In this connection, I would suggest the setting up of a semi-autonomous board of public enterprise, to which the individual units should report; and it should be the business of this board to make a detailed and analytical review of the working of public enterprises in the light of the first principle I have set out earlier; and sufficient time should be set aside by Parliament for the discussion of this report. In fact, I do not think that Parliament as a whole can do justice to this responsibility. It would be worthwhile thinking of setting up a joint Parliamentary committee on public enterprise and arm it with the powers and the facilities that joint committees of the United States Senate and Congress have. The annual reports of the Board on public enterprise should pass through this committee and be discussed by them in detail before it comes up before Parliament for a general discussion.

Labour

Finally, it is essential that labour in public enterprise should have a sense of identity with the management. In a public enterprise, there should be no conflict between capital and labour; and management should be treated more as a part of labour than of capital. For doing this, special steps are necessary on the part of the management. Education of labour in the economics and policy implications of the enterprise, worker participation in management, rewards for initiative and cost-reducing suggestions, production bonus and other economic incentives, establishment of an effective ladder which gives a brilliant worker a chance to rise to the top in the concern—all these are a part of the machinery that public enterprises should adopt to ensure good labour relations, promote efficiency and create a sense of identity with the concern on the part of the worker.

TEXTILE SUPPLIES COMFORTABLE

RE-APPRAISAL OF IMPORT POLICY URGED

From Our Special Correspondent

MANCHESTER, 21st February

IT has lately been suggested that those observers who base their assessments of the outlook on trade cycles are liable to become somewhat unimaginative in their approach to such matters. Yet it cannot be denied that the current situation as regards the balance of supplies in the cotton and rayon industries in Britain prompts the fear that a danger point is very near. The fluctuations in the quantity of goods surplus to the requirements of exporters have followed a fairly regular pattern since the war and the building up of stock has invariably been the prelude to a dwindling of demand and a sharp reversal of fortunes.

MANCHESTER LETTER

Now that the 1960 production figures are available, it is possible to draw up the following table, indicating the total supply situation affecting both cotton and man-made fibre cloth:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937 ..	4,122	75	4,197	2,001	2,196
1949 ..	2,592	400	2,992	1,078	1,914
1950 ..	2,840	342	3,182	1,017	2,165
1951 ..	2,960	476	3,436	1,105	2,331
1952 ..	2,192	210	2,402	871	1,531
1953 ..	2,632	143	2,775	895	1,880
1954 ..	2,775	335	3,110	812	2,298
1955 ..	2,479	365	2,844	688	2,156
1956 ..	2,214	380	2,594	595	2,099
1957 ..	2,287	490	2,777	567	2,210
1958 ..	2,030	434	2,464	468	1,996
1959 ..	1,927	575	2,502	411	2,091
1960 ..	1,911	786	2,697	383	2,314

Last year's production totals were, indeed, encouraging when the extent of the scrapping programme is recalled. The quantity of cloth woven was only 16 million yards below the 1959 level, although it remains the smallest quantity in the post-war years. The output of yarn was equally well maintained, being merely 7 million lbs. down on the previous year—a remarkable achievement in all the circumstances.

Labour Force

The labour force at the year-end was 184,790, the November gain of about 800 being lost during the final month of the year. Compared with the end of 1959, manpower had declined by about 7,500, but was practically 1,000 above the low point reached in early April on the completion of the redundancy scheme. Last year's phenomenal imports are, of course, the vital factor in the current supply situation. As a result of the big rise of more than 200 million yards in cloth obtained from overseas, coupled with the loss of another 30 million yards of export trade, the balance remaining for home distribution is over 220 million yards higher than at the end of 1959.

The last occasion on which the available total was on a similar basis was in 1951, just before the first post-war recession hit the industry extremely hard. A sharp cut-back in production followed, with wholesale unemployment in 1952, the circumstances being repeated on a smaller scale in 1954 and 1957. Order books now are probably longer than in these years of disturbance for the industry, but, without a speedy solution to the existing import complications, there could well be a case of history repeating itself in 1962.

Varying Margins

Although the market price of cotton now gives less worry to merchants than in the past, this has been more than replaced by variations in the margins obtainable by spinners and weavers. "Today they are high," said Mr. Thomas, at the annual meeting of the Manchester Chamber of Commerce, "but far be it from me to say they are too high, for a distributive system which can grind profits out of existence under one set of circumstances must not complain if they rise steeply when circumstances change." Companies, he went on, would not be prepared to invest great sums in re-equipment while still leaving the full employment of their assets to the free play of the horizontal system. The way in which the industry was organised had contributed greatly to the lack of stability encountered in Lancashire for so many years.

It is reasonable to suppose that practically every leader of any trade organisation when addressing its members this year will make lengthy reference to the impending negotiations between Lancashire's representatives and those of Eastern Commonwealth countries. Mr. Thomas put the matter in a nutshell by saying: "One must not under-estimate the task of renewing a voluntary arrangement which was negotiated originally only with extreme difficulty. On the other hand, one cannot imagine the Government failing to exert its influence in favour of renewal. To do otherwise would be the surest way to destroy the investment the Government has already made in the industry.

Preserving the Pattern

Other branches besides the weavers of grey cloth and finished goods are now increasingly showing interest in the tactics to be adopted at the forthcoming talks. Those concerned with the production of made-up cotton goods in the United Kingdom were not fully consulted when the arrangements were first made, according to Mr. Thomas. Any extension of the understandings would be regarded with little enthusiasm outside spinning and weaving circles, he said unless individual ceilings could be agreed for finished and made-up goods within the total figures. The spinners, so far denied any limitation on duty-free yarn imports, could urge with justice that a continuation of the same arrangement would be unfair and inconsistent with an effective reorganisation scheme.

In the meantime, the Cotton and Rayon Merchants' Association has been discussing the same fundamental problem. Concern has been expressed by the Council at the rapid increase in the quantity of made-up goods entering British ports at the expense of grey cloth. When the original agreement was made, the Association protested strongly about the lack of provision for the existing pattern of trade to be preserved. Although no change is likely this year, keen pressure will be exerted to secure a revision in the basis should any further pacts be negotiated.

Fresh Protection Call

Another call for protection for the cotton industry has been made in Manchester by Mr. Roger M. Lee, Chairman of the £30,000,000 Lancashire Cotton Corporation Ltd. "The time has certainly come for a re-appraisal of the import situation," he told the annual meeting. "As the United Kingdom is still one of the largest textile producing countries in the world, one would expect this industry should be entitled to similar measures of protection to those of other textile producing countries," he said and added: "In view of the re-equipment programme now under discussion, speed is essential in reaching a decision."

Undeveloped countries must be assisted to develop, Mr. Lee continued, but it was not in their own interests to concentrate their industrial development into too narrow a field of products. "We have sympathy with those who seek greater liberalisation of internation trade, but we believe that this must stop short of the point where it results in severe disruption in the industries of the receiving countries." The vast reorganisation schemes in the spinning and weaving sections of the cotton industry had now been completed, Mr. Lee added, and re-equipment was under way.

Hong Kong Shirts Protest

A British clothing trade union leader has sharply criticised bulk imports of Hong Kong shirts into the United Kingdom. Mr. John E. Newton, General Secretary of the National Union of Tailors and Garment Workers, declared in an official report to union members: "We do not complain about the principle of bulk buying, particularly if it leads to efficient marketing arrangements, but we do protest against the private bulk-buying and importation of clothing, which, by our own standards, is made under sweated conditions. And Hong Kong is notorious for that."

Protesting against what he terms a "bad and undemocratic commercial practice," Mr. Newton refers to an organisation trading under the title of Independent Distributors and Economic Associates Ltd., under which a number of wholesale organisations linked together for bulk buying purposes and were understood to be importing and marketing the "Envoy" shirt made in Hong Kong. Mr. Newton comments:

> I take the opportunity to warn all Trade Unionists, and particularly our own members, that it serves no purpose and certainly not the welfare of the garment workers of this country to buy imported shirts and other garments made by western standards, under sweated labour conditions in the Far East. Nor in the long run does it serve the interests of our fellow-workers there. Furthermore, the subject raises a question of ethics. Democracy is not served by persons, who disregard the source of their activities, in order to obtain a financial or trading advantage which, in the long run, cannot be of permanent benefit to themselves, and can only be injurious to the trade or community which they serve."

Members of the British public would be "horrified" if they knew they were buying imported goods made under sub-normal conditions, Mr. Newton adds: "The manufacturers in this country will wake up one day and realise the real value of the trade union label, a mark of distinction and of honourable trading. There is no place in an economy as vulnerable as the British economy for commercial practices based on the higgling of a Bagdad market place."—*All Rights Reserved.*

PROGRESS OF WORLD COTTON INDUSTRY

OUTPUT WILL RISE AS POPULATION INCREASES

By Norman S. Pearse

Ex-Secretary General, International Federation of Cotton and Allied Textile Industries

BEFORE the advent of Industrial Revolution in England, the world's textile industry was purely a home industry in every country. Indeed, from the dawn of history, we have records of hand spinning and weaving, particularly of flax, wool or silk as a "home industry" of the highest importance. As soon as the industry was mechanised by water or steam power, its products became so cheap and plentiful that the hand spinning and, to a lesser extent, handloom weaving could not compete with the machine-made cloth and in most countries almost died out. The new power spinning and weaving machines were produced in England and Europe and later in America by engineers who specialised in the manufacture of textile machinery and who, in the latter part of the nineteenth century, were able to sell almost the whole of their output in Europe and America.

As a direct result of the high profits made, in spite of the cheapness of the machine-produced cloth, the European and particularly the British industry expanded at a phenomenal pace. At the outbreak of the First World War, the British industry had over 55½ million spindles and 786,000 looms; a third of the world's total spindles and over a third of the world's looms. Exports of cotton cloth from Great Britain in 1913 were over 7,000 million yards, the average price of which was only 3.32 pence per yard. However, the industry was then working 55½ hours per week, but, after the war in 1919, the cotton trade unions demanded and were granted a 48-hour working week, without reduction in wages. This was the turning point in the progress of the Lancashire cotton industry.

A Natural Sequence

After food, clothing ranks next in importance as a vital factor in the maintenance of life. In the course of time, it followed as a natural sequence that the populous tropical countries of the world began to demand their own cheaper mechanically produced cotton yarn and cloth. In all these countries, a large proportion of the population still retained their inherited skill in hand spinning and weaving and in due course were soon able to adapt themselves quite naturally to spinning and weaving on power-driven machinery.

The difficulties of exporting goods during the First World War and the higher cost of production due to the shorter working week and high taxation in the major exporting country, namely, Great Britain, caused her customers to look elsewhere for supplies. Countries previously supplied by Britain began to establish their own modern cotton spinning and weaving industries. Furthermore, India, Japan and China, already with a well-established industry, tempted by the high profits brought about by the shortage during 1917-19, increased their equipment considerably. In this manner, 10 million spindles were added to the world's total between 1913 and 1920 and still another 10 million by 1930, in spite of the reduction in Great Britain from her peak in 1917 of 59,965,000 to 55,207,000. During the same period, Britain reduced the number of her looms from 786,205 to 692,899, a reduction of 93,306, whereas the total number of looms in the world increased from 2,720,307 to 3,180,680, an increase of 460,373.

Automatic Looms

It should be pointed out that, during this period, the country second to Britain as regards the number of spindles and looms, namely, the U.S.A., was also undergoing considerable production changes, although only 5 to 10 per cent of her production went into export. In the first instance, the industry was moving from the eastern sea-board in New England to the cotton growing States in the south where two and even three shifts were being worked (due to the abundance of labour); mule spindles were on their way out and the automatic loom was replacing the ordinary loom. India, Japan and China at this time were working two and three shifts, whilst the hours worked in Britain had declined to one shift of 48 hours per week. In addition, the heavy taxation levied to pay for the cost of the war helped to increase Lancashire's costs of production.

From 1930 to 1939, the number of spindles in the world had decreased from 164 million to 143.5 million, a reduction of 21 million. In spite of this formidable reduction in spindles, however, consumption of raw cotton increased over this period. In 1930, only 25 million bales were consumed, as against almost 30 million bales in 1939. This apparent anomaly was almost entirely due to the increase of double and treble-shift working and the fact that the more recently established spindles were working for coarser counts than those which had been scrapped in the older established industrial countries. Even countries where the cotton industry was in its infancy were working double and treble shifts as soon as sufficient labour had been trained.

Spindleage Contracts

The natural sequence of the outbreak of the Second World War was an acute shortage of labour, shipping and raw materials in the countries concerned. Consequently, the respective Governments of Britain and Japan, the two chief exporting nations, were obliged to close down large numbers of mills. The world's markets were again denuded of their cotton cloth supplies and, as a result, many countries not hitherto industrialised seized the opportunity to erect both cotton spinning and weaving mills. This trend is shown in the spindle and loom tables appearing on the opposite page. Nevertheless, the world total spindles decreased from 143.6 million in 1939 to 127.1 million in 1960. During this period, Europe lost 27.4 million (mostly in Britain and Germany, while the U.S.A. and Japan lost almost the whole of the remainder), while, in contrast, Asia gained 15 million. In spite of this reduction in total spindles, world cotton consumption increased from 27.9 million bales in 1939 to 44.6 million bales in 1959. Even though the consumption of chemical and man-made fibres is increasing, raw cotton consumption is also increasing from year to year and keeps closely in step with the steady rise in the world's population. From the following table, it will be seen that the world's average *per capita* consumption of cotton has remained fairly constant, the lowest being in 1920 and in 1950 at 5.8 lbs per head and the highest in 1959 at 7.6 lbs:

		1913	1920	1930	1939	1950	1959
Cotton consumption ..	(000 bales)	23,000	19,321	25,209	27,919	28,080	44,650
World's population ..	(millions)	1,623	1,646	1,850	2,161	2,497	2,920
Per capita consumption ..	(lbs.)	7.0	5.8	6.8	6.4	5.8	7.6

The reduction in the total spindles from the maximum figure of 164 million to 127 million and 3,180,680 looms to 2,630,184 apparently makes a very pessimistic picture for the future of the world's cotton industry. But, looked at in conjunction with the total consumption and the *per capita* consumption figures, the future for the industry, on the contrary, appears to be much more promising. With fewer spindles and looms producing the requisite amount of cotton yarn and cloth for the world's rapidly expanding population, it can be justifiably assumed that cotton yarn and cloth production will increase in quantity as the world's population increases.—*All Rights Reserved.*

PROGRESS OF CANE DEVELOPMENT SLOW

BLAME LIES WITH STATE GOVERNMENTS

THE Agricultural Sub-committee of the Indian Central Sugarcane Committee, which met at Coimbatore recently, expressed its "sense of utter frustration at the continuing inadequacy of financial aid" given by the Central Committee to the States for sugarcane research and development, resulting in a "severe setback" to the progress of cane development. In the course of a resolution passed at the meeting, the Sub-committee is reported to have said:

"The existing basis for the subsidy has been wholly insufficient for taking up works of urgent importance in the less developed States where considerable increase in financial aid is needed to make headway. For want of suitable personnel and equipment, urgent and important problems in research have remained untackled. While targets have been fixed for development programmes, no corresponding wherewithal have been provided. The Central Government should give liberal grants for strengthening research and study of problems such as the yield per acre."

While the dissatisfaction expressed by the Committee at the progress in cane development and its plea for increased financial outlay are quiet understandable, the Committee does not seem to be on solid ground in attributing the slow progress to the inadequacy of financial aid from the Central Sugarcane Committee. It is true that, as compared with the amount required for improving conditions in sugarcane economy, the aid rendered by the Centre is not much, the total allotments made under the second Plan being Rs. 8 crores. But even out of this sum, about a crore of rupees remains unspent. Further, the financial assistance rendered by the Central Sugarcane Committee is only meant for supplementing a part of the expenditure incurred by the State Governments on cane development work. After all, the latter Governments collect by way of cess on cane crushed by sugar mills crores of rupees every year. The amount actually thus raised by them since the first Plan began (April 1951) is estimated at as much as Rs. 79 crores and another sum of Rs. 60 crores is expected to be collected in the third Plan period. As against the total collection of Rs. 79 crores in the first and second Plan periods, not more than Rs. 20 crores have, in fact, been spent. Even of this amount, the major portion represents expenditure on irrigation and road development programmes which ought to be financed out of general revenues. Who, then, should be blamed—the State Governments or the Central Sugarcane Committee?

Compact Cane Farms

It is thus clearly apparent that the none-too-encouraging progress of cane development is due not to the lack of sufficient financial assistance by the Central Government but to the thoroughly unsatisfactory way in which State Governments have been implementing the programmes. Here is what Mr. L. G. Rajwade, President of the Central Sugarcane Committee, himself stated in his speech at the Committee's thirtieth meeting at Coimbatore on 21st February: "Inadequate irrigation facilities, insufficient supply of manure and good disease-resistant seed, and the marginal and sub-marginal lands on which cane is grown prevent the raising of sugarcane yield to a high level." Mr. Rajwade rightly urged that, as a means to bring down the cost of cane production, the standard of cultivation should be improved by restricting the area under cane. And he pertinently suggested that there should be compact holdings, though he qualified his suggestion by adding the parenthesis "*preferably* co-operative sugarcane farms" (Italics ours).

The advantages of compact holdings of cane lands are clearly evident from the farms attached to the Deccan Sugar Mills which enjoy certain economics of large-scale farming under modern management such as finance and expert agricultural management. The average per-acre yield of cane in these farms is substantially higher at 53-54 tons, as against the average of about 29 tons for the whole of Maharashtra State and the all-India average of 14-15 tons. Likewise, the average recovery per cent is higher at 11.75, as against 9.91 for the whole country. It is to be hoped that the Joint Committee of the Maharashtra Legislative Assembly to which the Land Ceilings Bill has been referred will bear this factor in mind and recommend the exclusion of joint-stock sugar mills' cane farms from the purview of the Bill.

The need for improving the productivity of land so as to secure a larger yield of cane and higher recovery of sugar from a given area was also forcefully stressed once again by Mr. S. K. Patil, Union Minister for Food and Agriculture, while inaugurating the Sugarcane Committee's meeting. The following is the relevant extract of his speech as reported in the daily Press:

"There is great disparity between the average yield in the country of 15 tons of sugarcane per acre, on the one hand, and 90 tons in North India and 150 tons in South India produced in the all-India competition of sugarcane production, on the other. This disparity shows that much improvement needs to be done in cane production. The producers should concentrate their efforts on preventing the deterioration of the newly-evolved varieties of cane, eliminating disease and pest, and ensuring that the varieties of canes suitable to local conditions are used... The benefits of research carried out in laboratories and farms must be passed on to cane growers."

One is tired of hearing such verbose exhortations. They, of course, show that the Minister is fully aware of the defects and the solutions for removing them. But that alone is not enough. What is required is vigorous action and that is not forthcoming even from Mr. Patil who is known for his dynamic actions. How can one expect the agriculturists to put in special efforts to step up the yields of cane with richer sucrose-content so long as they are assured a high price for a given quantity of cane, a price that takes no cognisance of the quantum of sugar the cane actually contains? Mr. Patil is not unaware of the defects in the present policy of fixing cane prices, but somehow he, too, like his predecessors, has failed to replace the system by a rational one which links prices to both quantity and quality.

Sugar Exports

In the course of his speech, Mr. Patil touched on the issue of sugar exports. His observations, as reported in the daily Press, are given below:

"Sugar production in the world at present is in abundance. As such, any idea of producing more sugar in the country with a view to selling it outside India is a foolish idea, unless we have an assured market and an assured price... The cost of sugar production in India is Rs. 700 per ton, while the world market price is Rs. 400. If I want to sell one ton of sugar outside it, I must give a subsidy of Rs. 300. At this rate, for half a million tons, it will mean Rs. 15 crores as subsidy from the Centre. The Centre has to give this amount from the general revenue or increase the price of sugar which is already high... India is trying to sell her sugar to the U.S. and a mission from the country is already in America in this connection. The U.S. is prepared to give India 50 to 60 per cent more than the world price. It will be something magical, if I succeed in selling sugar to America at our price. If they (mission) fail to persuade the U.S. Government to purchase sugar from India, I may run up to the President (of the U.S.) this time to sell something to the U.S., instead of getting something from them."

The above statement shows that Mr. Patil is not in favour of subsidising sugar exports at the cost of either the exchequer or the consumer. This is certainly a realistic approach. But there is the pressing problem of earning foreign exchange to meet the cost of imports necessary for economic development. Mr. Patil has, therefore, done well to concentrate attention on the sale of sugar to the U.S. at a special price. By buying Indian sugar at such a price, the U.S. will surely be helping India further, besides meeting the wide gap that exists between available supply and actual demand within the U.S. itself.

Controls

Mr. Patil also made a brief reference to the question of controls. He could not say whether controls would be removed immediately or not. He, however, reiterated that he was not enamoured of controls and assured the public that he would remove them systematically. At the same time, he made it clear that, as a Minister, he had to make sure that the interests of consumers, cane growers and sugar mill-owners were appropriately balanced and protected. On the very day Mr. Patil made this statement at Coimbatore, Prime Minister Nehru told the Lok Sabha that the question of liberalising the sale of sugar from factories was under consideration and that it was difficult to say much about it at that stage. Mr. Nehru intervened to make this statement when a number of members asked as to why there should be any control on the sale of sugar in view of the large surplus in the country.

The sugar supply position is at present very comfortable and bids fair to be so in future as well. Indeed, Mr. Patil declared that "there is so much production in the country that I do not know what to do with it." The total quantity of sugar available for distribution in the current season (1960-61) is expected to be of the order of 3.2 million tons (opening stock of 500,000 tons plus the estimated output of 2.7 million tons), as against the anticipated normal domestic consumption of 2.4 million tons. Even after excluding 100,000 tons released for export (50,000 tons in September 1960 and another 50,000 tons in January 1961) and assuming that the U.S. will buy about 500,000 tons, there will still be a surplus of 200,000 tons. The present time is certainly opportune for removing at least the controls on distribution of sugar.

GOVERNMENT ACCEPTS RECOMMENDATIONS OF SUGAR WAGE BOARD

The Government of India has announced its acceptance of the recommendations of the Central Wage Board for Sugar Industry subject to certain considerations. A resolution to this effect, published in the *Gazette of India*, was placed on the table of the Lok Sabha on 23rd February by the Union Deputy Minister for Labour, Mr. Abid Ali, in reply to a short notice question by a member. The resolution states:

"After careful consideration of the Board's report, Government has decided to accept the recommendations of the Board subject to the following:

"(a) *Workload studies*: Government has taken note of the Board's recommendations that workload studies be undertaken in the sugar industry and that such studies should be preceded by reasonably specific programme of implementation drawn up in consultation with the organisations of the interests concerned. Government propose to consider the matter further in consultation with the parties.

"(b) *Bonus*: Government commends the bonus formula for the north and central regions recommended by the Wage Board. If, however, the parties concerned in any of the States included in these regions agree to adopt any other formula for determination of bonus payable in respect of a particular period, they may be allowed to do so."

The Government has requested the employers, workers and State Governments to take immediate steps to implement the recommendations of Board. It expects the parties to show a spirit of accommodation in interpreting and implementing the recommendations and difficulties, if any, will be solved by mutual negotiations and agreement. Incidentally, he has expressed its appreciation of the great thoroughness and care with which the Board has dealt with the matters referred to it.

SUGAR EXPORTS TO THE U.S.

The two-member Indian sugar delegation now in the U.S. (Mr. D. D. Puri and Mr. M. N. Pittie, President and Vice-President, respectively, of the Indian Sugar Mills Association) met Mr. G. Lewis Jones, Assistant Secretary for Near Eastern and South Asian Affairs, on 25th February and requested that the U.S. grant India an import quota of 600,000 short tons of sugar to help avert "suffering to millions of Indian growers and a serious upset of the Indian economy." In a formal statement explaining their emergency visit to the U.S., the industry spokesmen said: "India has found that its neighbouring markets are being invaded by Cuban sugar purchased by Russia and mainland China from Cuba and being dumped by these nations into what otherwise would be Indian markets. China has recently sold 30,000 tons of sugar to Burma. Poland has announced the sale of 40,000 tons to Ceylon. Sugar from Communist countries is starting to encircle India and pre-empt India's market." The spokesmen stated that it was now no longer a question only of export earnings but a matter of survival of the industry and the health of the nation's entire economy, for India had 960,000 tons of sugar over and above domestic requirements and must find markets for at least the greater part of the surplus. Proceeding, they observed:

"Virtually every other sugar exporting country has a preferential market. The so-called preferential markets account for nearly two-thirds of the sugar export the world over. The balance one-third is dumped into the world market at throw-away prices. India has no preferential market and, therefore, seeks to sell its sugar in the U.S. Having regard to the size of the 'world free market' and the prices ruling therein, it would be virtually impossible to sell the Indian surplus in it. If forced to do so, it would result in untold suffering to millions of Indian growers and a serious upset of the Indian economy. From the standpoint of shipping alone, export of Indian sugar to the U.S. is desirable. It is noteworthy that presently wheat is being shipped to India under Public Law 480 (which permits sale of U.S. food reserves for foreign currencies) at an annual rate of more than three million tons—almost 1.25 shiploads a day. Most of these ships will return empty, because India's exports to the U.S. are so small as compared to the U.S. exports to India. Were the U.S. to grant the requested sugar quota, these vessels could be gainfully employed on their return voyage. Together with their dependents, about 20 million Indians derive their livelihood from sugarcane. In no other country do so many people depend on this single sugarcane crop."

Mr. Lewis Jones, we are told, was sympathetic to India's plea. Earlier, the Indian sugar industry spokesmen had discussed the matter with Mr. Harold D. Cooley, Chairman of the U.S. House of Representatives' Agricultural Committee, who assured them that India was free to present its case to the Committee when hearings began on the revision of the U.S. Sugar Act.

CHECKING UNDUE RISE IN JUTE PRICES

INDUSTRY ACCEPTS GOVERNMENT'S SUGGESTION FOR SELF-REGULATION

THE hopes that some tangible steps designed to arrest the persistently rising trend of raw jute and jute goods prices would emerge from the meeting of the Indian Jute Mills Association representatives and the Union Commerce and Industry Ministry officials, held at New Delhi on Friday last week, have been belied. For, at this meeting, the official spokesmen, it is reported, merely expressed the Government's wish that the jute industry itself should solve its problems through self-regulation. "The officials," to quote a news agency report, "are believed to have impressed on the representatives of the I.J.M.A. that, if the prices went up, export of jute goods was likely to be affected. Therefore, in their own interests, they should see that prices did not go up and the available supply of jute was properly distributed among the mills." On their part, the I.J.M.A. spokesmen, we are told, assured the Government that they would follow this policy to the best of their ability.

The prices of raw jute and jute goods have scaled dizzy heights in the past one year, notwithstanding the array of regulations on the jute market. Raw jute Assam bottom is currently quoted at as high as Rs. 65.00 per maund which represents a rise of Rs. 34.75 as compared with the quotation of Rs. 30.25 prevailing at this time last year. Among jute goods, B. twills are quoted at Rs. 208.00 per 100 bags, as against Rs. 111.45 a year before, and hessians 40" 10 oz., at Rs. 69.50 per 100 yards, as against Rs. 41.05. In view of the appreciable rise in prices, it is not surprising, therefore, that, in his inaugural speech at the conference of presidents and nominated directors of recognised associations held at Calcutta on 18th February 1961, Mr. Nityanand Kanungo, Union Minister for Commerce, dwelt at some length on the issue of jute prices.

F.M.C.'s Regulations

Tracing the developments since the resumption of forward trading in the jute market in March 1958, Mr. Kanungo referred in particular to the difficult conditions facing the jute economy since May 1960 and observed:

"'.....owing to shortage of fibre, speculators were quick to exploit the absence of any regulation of trading in these contracts. For instance, nobody had any idea of the volume of trading done through such contracts, nor was there any data as to how far these contracts conformed to the definition of specific delivery contracts.' In fact, all contracts were not settled by delivery or in the proper manner. Matters came to a head in October 1960 when a sudden and large rise in prices of raw jute forced the authorities to fix maximum prices for hedge contracts and, thereafter, the hedge market became moribund. This apparently acted as the signal for a bout of speculation in the t.s.d. contracts in jute and jute goods.

"Although the Chairman of the Forward Markets Commission had, as far back as August 1960, urged the authorities of the Exchange to regulate effectively the transferable specific delivery contracts, his advice was not heeded. As a matter of fact, even during the hectic days of October when the jute markets were—I am sorry to have to use the phrase—running amuck, the Board of the Exchange, which one would have thought would act promptly to control the situation, could not be persuaded to take effective action in time. The Central Government had, therefore, to intervene, early in November 1960, which it did with a number of notifications authorising the Board and the Commission to impose special margins, prescribe maximum and minimum prices, and limits to the number of transfers of delivery orders and to close out contracts where it was absolutely essential. The Forward Markets Commission thereupon imposed special margins on transferable specific delivery contracts which were, however, far less rigorous than the margins applied to hedge contracts."

Mr. Kanungo strongly deplored the efforts that were being made by a section of the jute trade to postpone the payment of margins by resorting to various tactics and the failure of jute trade to observe the F.M.C.'s orders both in letter and spirit. He claimed that, by and large, speculation from the unorganised sections of the trade had been brought under control, but had his own doubts about the extent to which unhealthy speculation on the part of the industry had been stamped out. He specially mentioned the reported defaulting on payment of margins as well as the move of many not even to register their contracts as required, and said: "Generally, there seems to be, I regret to say, an atmosphere of deliberate inaction which is not conducive to forward trading being conducted on healthy lines. I am pained to see this state of affairs in this trade and I might frankly say that this was one of the reasons for the Government going to Parliament asking for the additional powers which have now been conferred by the amended Act." Indeed, the Minister warned that, if the situation continued to deteriorate, the Government might be forced to consider the desirability of applying Section 18(3) of the Act to jute and jute goods to ensure that the evil of excessive speculation was eradicated from this vital export trade.

Jute Crop Smaller

It may be true that the marked increase in prices of raw jute and jute goods has largely been the result of excesses by speculators in both trade and industry. But there is no denying that, basically, the increase reflects the marked deterioration in supply of raw jute. The 1959-60 season, it will be recalled, witnessed a sharp fall in the jute and mesta crop, the aggregate production being 5,646,000 bales (the share of mesta being 1,098,000 bales), as against 6,646,000 bales harvested in 1958-59. In the current season (1960-61) the crops were lower still. Unfortunately, the official crop estimates are still not out. But, judged from the fall in acreage shown in the first estimate, there is no doubt that the crop is small for the second year in succession and quite inadequate to meet the industry's needs. In 1959-60, the aggregate consumption of raw jute was of the order of 6,760,000 bales; in 1958-59, it was 6,460,000 bales.

That the current season's jute crop has suffered a setback is evident from the unusually low rate of fibre arrivals into Calcutta and up-country jute baling centres. Our Calcutta correspondent says: "Fresh arrivals are meagre and are of indifferent quality." Consequently, raw jute prices have firmed up. In view of this and as a result of better overseas demand for jute goods, particularly from Australia, Argentina, Cuba, Egypt, and Indonesia, jute goods also have shown a distinctly hardening tendency. But the point is that an undue rise in prices is bound to have an adverse effect on the export trade in jute goods in the long run. Keen competition is emerging from Pakistan and there is increasing resort to bulk handling, and use of paper and plastics materials as packing materials. This vulnerable point must always be borne in mind, because jute goods, as readers are aware, constitute one of the staple earners of foreign exchange for India, accounting as they do for nearly one-fourth of the total earnings from exports of all commodities.

Losing Market in U.S.

It is in this context that the remarks which Mr. W. D. McLean, Chairman of the Burlap (Hessian) Business Relations Committee of the U.S. Textile Bag Manufacturers' Association, made at a Press conference in Calcutta the other day, are of great relevance. Jute, Mr. McLean declared, was losing its market in the U.S. because of its high cost. Paper, for instance, was making bigger and bigger inroads into the packaging material market; in the case of fertilisers, probably 60 per cent of the requirements was supplied by paper today and a large quantity of potatoes and feed also went into paper bags. Warning that, once burlap was replaced as packing material, it would be extremely difficult to regain the lost ground, he said:

"The burlap trade in the U.S.A. appreciates the reason for the current high prices, but consumers are naturally showing resistance and are buying from hand to mouth. This, in turn, prevents bag manufacturers and importers from buying forward, as it is risky to make forward purchases. If one is not sure whether bags can be sold. Even when prices begin to fall, there will still be no large-scale return to forward business until the market is stabilised. No buyer is prepared to commit himself very far ahead on a falling market.... The full impact of the current high prices will not be clear in the American market in another three or four months. Thereafter, there may be a sharp decline. Once burlap is replaced as packing material, it is extremely difficult to regain lost ground. Unless prices decline before the end of this year, some of the big consumers, such as feed

Don't throw away parts and money...

It sounds like an impossibility, we know, but it is none the less true. Many hard-to-replace parts costing valuable money are literally thrown away because they have been ruined due to faulty lubrication.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

MACHINE TOOLS IN PRIVATE SECTOR MAKE SLOW PROGRESS

MR. KIRLOSKAR'S PLEA FOR INCENTIVES

THE machine tool industry in India has still a long way to go before it can meet the indigenous requirements in full. Although, as of 1960, the combined output of graded machine tools in the private and public sectors is valued at an estimated total of Rs. 7 crores as compared with Rs. 4.2 crores in 1959, imports, too, are estimated to have exceeded those of the previous year. In 1959, imports were of the order of Rs. 16.3 crores, and domestic production accounted for only about 25 per cent of such imports. Although this proportion of indigenous production to imports may have gone up to 30 per cent or so in 1960, there is still a big gap between demand and domestic production. The gap will be further narrowed down, but not completely closed, by the end of the third Plan when the demand for machine tools will be of the order of Rs. 60 crores per annum, as against the targeted production of about Rs. 33 crores. It is, therefore, foreseen that imports of more than Rs. 25 crores will be needed even by the end of the third Plan. The following figures will show at a glance how the gap between demand and domestic production has been and will be progressively narrowed down:

Year	*Imports* Rs.	*Domestic production* Rs.	*Domestic production as per cent. of imports*
1955 ..	5.3	0.7	12.8
1956 ..	8.4	1.1	12.9
1957 ..	14.6	2.3	16.0
1958 ..	14.4	3.6	24.7
1959 ..	16.3	4.2	25.5
1960 ..	N.A.	7.0*	30.0*
1965-66 ..	27.0*	33.0†	122.0

*Estimate. † Target

The private sector has played and will continue to play a big role in this progress towards self-sufficiency in machine tools. At the beginning of the second Plan, there were 18 units with a capacity for producing about Rs. 3.9 crores of machine tools per annum: The number of units has now increased to 26, and it is expected that, in the private sector alone, covering both large-scale and small-scale units, there will be a total capacity of Rs. 7 crores in 1960-61. This capacity in the private sector will go up in 1961 or 1962 to about Rs. 10 crores per annum when the licensed schemes for substantial expansion are completed.

New Developments

It is noteworthy that a number of existing concerns in the private sector has made considerable progress on new development work, according to the latest annual report, that for 1959-60, of the Indian Machine Tool Manufacturers' Association. The Mysore Kirloskar Ltd. has developed three new types of lathes, the first batch of some of which is already under production. The Investa Machine Tools and Engineering Company Ltd. has begun producing the first batch of a heavier type of Pillar drill. The Cooper Engineering Ltd. has started producing heavy duty shapers with 32" stroke. The P.S.G. and Sons Charity Industrial Institute has just placed on the market Bench type precision lathes with metric dimensions. The Batala Engineering Company Ltd. has under development its Norton type lathe in metric dimensions. The New Standard Engineering Company Ltd. has assembled the first batch of 8 Massey pneumatic power hammers. Messrs. G. G. Dandekar Machine Works Ltd. has been preparing patterns, jigs and fixtures for its shaping machines, hacksaw machines, hydraulic jacks, etc. Messrs. Godrej and Boyce Manufacturing Company, Private Ltd. has under development three new models of Sheet Metal Working Machines. The Amar Electrical and Mechanical Engineering Works has introduced several new items like tool and cutter binder, turret attachment, etc. in their programme of manufacture. The Daulat Industrial Corporation Private Ltd. has begun serial production of a new lathe with improved features. And the Shree Ram Mills Ltd. has nearly completed the prototype of 10" dia. 3-jaw true chucks. It would appear from this brief review, by no means exhaustive, of new developments in the machine tool industry in the private sector that the manufacturers are keen on, and confident of, producing a wide range of modern and more advanced types of machine tools.

But the industry, in a relative sense, has not made sufficient progress. There is scope, according to Mr. S. L. Kirloskar, in his presidential speech at the fourteenth annual general meeting of the Indian Machine Tool Manufacturers' Association, for new *entrepreneurs* to come into this field. As a longstanding and experienced producer, he expressed the view that "this industry needs a large number of small plants for manufacturing the wide variety of machine tools needed as against one big plant manufacturing all types of machine tools." But new *entrepreneurs* will not be attracted to this industry so long as the margin of profit available in it is comparatively low, as evidenced by the amounts of income-tax received by the Government from its own machine tool factories. A new approach is, therefore, called for. Mr. Kirloskar's own suggestion, in this connection, is that a high power committee of the industry and Finance Ministries with representatives of the Association should be set up to devise suitable measures for stimulating a more rapid development of the industry.

Needs for Progress

Such a rapid development is necessary because several of the projects included in the third Plan, such as the heavy machine building project, the mining machinery project, the heavy structural plant, etc., will themselves require a large number of machine tools. Moreover, with larger quantities of steel expected to be available, the engineering industry, in general, will expand further during the third Plan period, and that will mean more demand for machine tools. All this expected demand can be met only if the industry is allotted adequate foreign exchange to enable it to obtain the necessary technical know-how, capital goods, balancing equipment and components from abroad. Two other requirements, namely, quality (foundry grade) pig iron and coke, will have to be met fully, if the tempo of production of machine tools is not to suffer. Above all, the most important raw material, namely, alloy and special steels, will have to be freely licensed for import, pending the establishment of the alloy steel plant in the country.

Further expansion of the industry on the scale required can take place more easily if some other measures suggested by Mr. Kirloskar are favourably considered for action. One of his suggestions is that the Government's policy of approving appointment of managing agents of machine tool manufacturing concerns for a period of not more than five years at a time should be modified, because, in this industry, it takes anything from five to ten years to implement a manufacturing programme successfully and the small amount of profit that can be made in this industry will be available to the managing agents only thereafter. Mr. Kirloskar's suggestion is, therefore, that the management should be allowed to continue for not less than ten years so as to provide it with the incentive to accumulate technical know-how. This seems to be a reasonable request.

Customs Duty

There is also need for some relief from the present heavy incidence of customs duty on imported items used in the manufacture of machine tools. At present, the duty on components and accessories is assessed, because of some ambiguity in the wording of the Government notification amending the Customs Tariff rate for machine tools, at varying rates of duty on the basis of the Customs Tariff, and the machine tool manufacturers are in fact deprived of the benefit of a lower rate of duty, namely, 5 per cent intended on such imported items for use in the manufacture of machine tools. The Government should, therefore, clarify that all the items that are not manufactured in the country but are being imported for the manufacture of machine tools will get the benefit of the lower rate of duty of 5 per cent. This relief in customs duty would need to be given uniformly on consignments of incomplete sets of machine tools as also components and accessories imported for assembling complete machine tools by indigenous manufacturers who have entered into collaboration agreements with foreign firms for the manufacture of such machines.

Thus far the Government's policy of encouragement to the industry has been confined mostly to liberalisation of the procedure for licensing under the Industries Act. Since last year, in pursuance of a recommendation of the Development Council for Machine Tools, a liberal policy has been followed in respect of licensing schemes for establishment of new units or for substantial expansion of existing units. Thus, decisions regarding the issue of fresh licences are now taken by the Ministry of Commerce and Industry on the basis of recommendations of the Development Wing without prior reference to the Licensing Committee. While the Government has also accepted the Council's recommendations that the farming out of components by machine tool manufacturers should not stand in the way of grading of their products and that new schemes involving the farming out of components to other workshops should be considered favourably, it is not known whether they have been actually implemented at the administrative level. It is not also certain whether the Development Council's recommendation that, for purposes of training in the centres run by the Government, only indigenously produced machines should be used, will be implemented. If even the Development Council's recommendations are delayed in their implementation by study and consideration at the administrative level, there is no knowing how long it will take for Mr. Kirloskar's suggestions to be accepted. A high-powered committee, as suggested by Mr. Kirloskar, seems to be necessary for taking into account all the requirements of the industry and devising ways and means of quick action. This is all the more necessary, because (*a*) the machine tools industry is a key industry and (*b*) there has to be large expansion in the next five years. At present, capital investment in this industry in the private sector is estimated at only Rs. 10 crores, and it will have to go up to Rs. 60 crores in the third Plan period, if production of machine tools in the private sector is to be stepped up to a value of Rs. 24 crores per annum as is now planned. Since the imported components in this industry are stated to be relatively small, being only 10 to 15 per cent, a more active and dynamic policy of encouragement to it will also be easier to implement.

U.S. NATURAL RESOURCES PROGRAMME

The United States, it is estimated, will have a population of 300 million by the year A.D. 2,000. To support this population, America's natural resources in water, land, forests and minerals will have to be safeguarded and developed on the basis of a perspective plan. President Kennedy has, therefore, placed a comprehensive programme before the U.S. Congress. The need for this programme is underlined in these words forming part of the Presidential message: "Wise investment in a resources programme today will return vast dividends tomorrow, and failures to act now may be opportunities lost for ever."

Special emphasis is given in the programme to the conversion of saline and brackish water into fresh water. The potential importance of the American saline conversion projects is brought out in the following paragraphs contained in the Presidential message:

"No water resources programme is of greater long-range importance—for relief not only of our shortages, but for arid nations the world over—than our efforts to find an effective and economical way to convert water from the world's greatest, cheapest natural resources—our oceans—into water fit for consumption in the home and by industry.

"Such a break-through would end bitter struggles between neighbours, states and nations, and bring new hope for millions who live out their lives in dire shortage of usable water and all its physical and economical blessings though living on the edge of a great body of water throughout that parched lifetime."

A panel of the President's Science Advisory Committee is now working with the Interior Department which is in charge of saline conversion projects. The Congress has also been urged to double funds for this research programme.

The overall resources programme, outlined by President Kennedy, covers river water resources, electric power, forests, public roads, ocean resources, and recreation. Under the head "water resources," the Congress is urged to authorise the establishment of planning commissions for all major river basins where such plans do not exist. The "electric power" part of the programme lays down that "the nation's power capacity should be tripled by 1980 for essential economic growth." It emphasises that "sustained heavy expansion by all power suppliers—public, co-operative and private—is needed." And it also holds out the promise of "economically competitive nuclear power before the end of this decade in areas where fossil fuel costs are high.' Under the head "forests," the Congress is urged to accelerate forest development on federal public lands both as a long-term investment measure and as an immediate method of unemployment relief. Under the head "public roads," it is proposed to accelerate an inventory and evaluation of the 770 million acres of public land owned by the Federal Government to serve as a foundation for improved resources management. As for "ocean resources," a national programme for oceanography is proposed. It is pointed out, in this connection, that the underdeveloped continental shelves bordering the U.S. contain roughly 20 per cent. of the country's reserves of crude oil and natural gas.

NEW PRODUCTS AND PROCESSES

Direct Drive Engine

A DIRECT drive petrol engine which operates a portable power saw without using a crankshaft is now available in the U.S. Intended for rough work in engineering construction and carpentry, it has an extension rod from the piston which passes through the cylinder head and drives the reciprocating saw directly. Sealing rings round the extension rod prevent loss of compression in the cylinder which is hung on guide pins to reduce transmission of vibration to the operator. A flexible rubber hose connects the vibrating cylinder to the carburettor fixed on the saw's frame. The weight is said to be only 19 lbs.

Latex Cement

A simple process for the manufacture of latex cement (adhesives for leather) from rubber latex has been developed at the Central Leather Research Institute, Madras. Indigenous production of such adhesives is meagre and imported products are expensive. In the process, natural rubber latex is mixed with solution of casein, in ammoniacal water and treated with formalin and a dye. Preparation of the adhesive has been tried extensively on pilot plant scale (5-gal. batches) and manufacturing conditions have been standardised. The Government Footwear Centre, and the Central Footwear Training Centre at Madras have found the adhesive satisfactory for manufacture of footwear. The raw materials required namely natural rubber latex, casein, ammonia, formalin and water-soluble dye, are readily available in the country. The process requires just a few vessel and an oven. A unit with a capacity of 30 gallons per day would involve a total capital outlay of about Rs. 25,000. With simplified equipment, a 10-gallon per day unit would need only Rs. 10,000 as capital outlay.

Castor Oil Surface Coatings

Investigations have been successfully completed at Regional Research Laboratory, Hyderabad, on the modification of rosin-castor oil condensates to obtain light-coloured varnishes with good drying characteristics. The process consists in heating castor oil with rosin till a desired acid value is obtained. Maleic anhydride is added to the condensate and heating continued for a further period. Glycerol is then added and the esterification is completed by continued heating at a fixed temperature. Any remaining hydroxyl groups in the product are dehydroxylated by heating with anhydrous sodium bisulphate. A notable feature of this process is that a set of reactions comprising esterification, adduct formation, dehydroxylation and inter and intra-polymerisation leading to extensive cross linking, all take place *in situ*. The stability of rosin esters, hardness, pale colour, colour retention and durability of maleic rosins, rapid drying characteristics of dehydrated castor oil and plasticising property of branched chain ricinoleic acid esters are all imparted to the product in a single process. The product is unaffected by basic pigments such as zinc oxide, lead sulphate and white lead.

Industrial Thermometer

Robust equipment is being developed at the British National Engineering Laboratory for measuring temperature under industrial conditions with an error of only a few milli-degrees Centigrade. A new type of resistance thermometer is used: it contains two elements, one with a high temperature coefficient of resistance and the other with a low coefficient. The former is a copper wire wound on an insulated copper cylinder and the latter is minalpha wire, wound on a cylinder of minalpha; in this way the effects of differential expansion are reduced. The temperature is determined from the ratio of the resistances of the two elements, which form two arms of a bridge (either A.C. or D.C.). Because of the use of the twin elements in the thermometer the bridge circuit can be arranged so that the effects of long leads are avoided. An A.C. bridge with transformer ratio arms is particularly suitable since these arms can readily be made of high accuracy and the ratios are not affected by vibration or by variations in air temperature. The existing equipment is intended for use in the range 0 to 100° C., but the method can also be applied to other temperature ranges.

Versatile Hand Labelling Machine

Purdy Machinery Company Ltd., London, has invented a hand labelling machine which is claimed to be versatile enough to label flat, square, oval and polygonal shapes as well as round, with a minimum of trouble where change over is concerned. With one pull of the handle, the machine called "Prestofix," actuates, through an ingeniously designed linkage, the full labelling cycle of gumming a static picker place, picking a label from the label magazine, transferring the label to the bottle or container and wiping it securely in position. It is completely portable, and easy to move and clean because all parts are readily accessible and the gum box situated beneath the picker plate, can be quickly removed for servicing. All labelling parts have been designed for speedy adjustment and quick change over. The "Prestofix" will label bottles or containers of from 2½" diameter up to 3¾" diameter, label sizes ranging from 1½" up to 3¾" deep by from 2" up to 4¼" wide. The maximum label width formula for round bottles is, half of circumference less ¼" and the maximum label height is 6" from the bottom of the bottle to the top of the label. Maximum container width, in the case of shapes other than round, is 5¼".

Valuable Protection

for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

DEVELOPMENT OF TOBACCO

NEED FOR IMPROVEMENT IN QUALITY

INDIA has the distinction of being the third largest producer of tobacco, after the U.S. and China, and in its economy tobacco plays an important role. Raw tobacco is one of the leading traditional export commodities, being the tenth important item in India's export trade. It accounts for foreign exchange earnings to the tune of Rs. 12 to Rs. 14 crores annually. Besides, it is the third largest excise-revenue-earning commodity—next only to cotton and sugar—with the annual proceeds from this source amounting to as much as Rs. 50 crores. It is estimated that there are about a million tobacco growers and 700,000 curers. Another half a million are engaged in the trade and manufacture of tobacco products. In several regions within the country, tobacco constitutes the most important cash crop and the mainstay of cultivators.

Tobacco grown in India is of two distinct botanical species, namely, *Nicotiana tabacum* and *Nicotiana rustica*. About 90 per cent of India's output comprises *Nicotiana tabacum*, which is grown all over the country. The *rustica* is confined to North India alone, and is used for *hookah*, chewing and snuff. In the *tabacum* group, the most important variety is Virginia. While the top grades of Virginia are mainly exported, lower grades are used in the country in the manufacture of cigarettes, cigars, *bidis*, etc. One of the disquieting features of tobacco cultivation is the predominance of low-grade varieties, while the top grades for which there is good overseas demand accounts for only a small proportion of the total output. The present pattern of output is such that 45 per cent of the total output is of low grades and 40 per cent medium grades, whereas the top grades account for only about 15 per cent. This faulty pattern of cultivation, resulting in sub-standard leaves, constitutes one of the important reasons for the periodic crises of mounting stocks and unremunerative prices.

Right Directions

There has, of late, been a growing realisation on the part of Central and State Governments and also representative bodies of industry and trade of the need for bringing about suitable changes in the variety of species produced as well as for improving quality. Admittedly, this cannot be accomplished all on a sudden. It is long-term solution and its success will depend on the speed with which the ideas are carried to the growers distributed all over the country and the requisite incentives are given for improving the pattern and methods of production as well as marketing. In this context, it will be no exaggeration to say that the Indian Central Tobacco Committee has sought to give right directions to all concerned. The Committee was set up by the Government of India in 1945, bringing together within its purview all interests connected with the industry, namely, the grower, the trader, the manufacturer, the co-operator, the consumer and the scientist.

The function of the Indian Central Tobacco Committee is to assist in various possible ways the improvement and development of production and marketing of different kinds of Indian tobacco and its products. To achieve this, the Committee undertakes and assists agricultural, industrial, technological and economic research. In order to do so effectively, the Committee maintains its own research stations and finances, as may be necessary.

The Committee has established a Central Tobacco Research Institute at Rajamundry in Andhra Pradesh, for fundamental research on all types of tobacco and applied research on cigarette tobacco and lanka tobacco grown in that area and regional experimental stations at Vedasandur (Madras) for cigar and cheroot tobacco, at Pusa (Bihar) for *hookah* and chewing tobacco, at Dinhata (West Bengal) for *hookah* and wrapper tobacco. A sub-station for flue-cured tobacco also serving as a regional station for *natu* tobacco is functioning at Guntur (Andhra Pradesh). A tobacco research station has been established at Hunsur in Mysore State for research on cigarette tobacco grown under local conditions. Besides, the Committee finances wholly or partly research work on bidi tobacco at Anand in Gujarat State and Nipani in Mysore State and on *hookah* tobacco at Ferozepore in the Punjab.

The Committee extends facilities for training of workers in the field of tobacco production and curing at its research stations. Pedigree seeds and seedlings are also distributed to cultivators. During the Plan periods, this scheme, it is said, is being intensified so as to cover the entire acreage under tobacco with improved and high quality tobacco. Marketing intelligence and other information concerning tobacco are disseminated from the Committee's secretariat at Madras. The Committee, we are told, is now making all out efforts to improve the quality of tobacco and increase yield per acre without increasing acreage so that Indian tobacco attains better and greater competitive assertiveness in international markets.

Tobacco Directory

The Committee has now brought out a new publication, *Tobacco Directory*, giving comprehensive information on the wholesalers, growers, exporters and their organisations all over the country. The *Directory*, priced at Rs. 15 (exclusive of Rs. 2 for postage), is available from the Secretary, Indian Central Tobacco Committee, Madras. The highlight of the *Directory* is an article on "Tobacco Cultivation and Industry in India" by Dr. M. S. Patel, Secretary of the Committee.

In the aforesaid article, Dr. Patel has pointed out that, though tobacco is grown in almost every part of India, its production is concentrated in a few regions. These areas, according to him, are:

1. The Guntur area consisting of the districts of Guntur, Krishna, East and West Godavari and the Telangana of Andhra Pradesh. Flue-cured Virginia is the most important type of tobacco grown in this area. The other types are sun-cured Virginia and sun-cured country or *natu* tobacco used in the manufacture of cigarettes, pipe and shag mixtures and cheroots. White burley used in cigarettes and lanka tobacco mostly used in cheroots.

2. The Charotar area in the Kaira District of Gujerat State. It is said that tobacco was first grown in Gujerat from where it spread to other parts of the country. This area grows varieties of bidi tobacco famous all over India.

3. The Nipani area covering Belgaum in Mysore State and Satara, Kolhapur, Sangli and Miraj in Maharashtra State is also an equally important bidi tobacco producing area in the country.

4. The North Bihar and Bengal area composed of the districts of Muzaffarpur, Darbhanga and Purnea in Bihar and Cooch-Behar, Jalpaiguri, Malda, Berhampur and Dinajpur in West Bengal grows tobacco used mostly for *hookah* and also for chewing and snuff. They are known locally as *Vilayati, Motihari* and *Jatt*.

5. The Uttar Pradesh and the Punjab area comprising the districts of Farrukhabad (in U.P.) and the districts of Jullundur and Ferozepore (in the Punjab) produces types of tobacco used mainly for *hookah* and chewing.

6. The South Madras area covering Madurai and Coimbatore districts of the Madras State grows chewing, snuff, filler and binder tobaccos mostly.

State-wise, Andhra Pradesh is the most important producer, with a share of 40-50 per cent of the total produce, followed by Gujerat, Mysore, Madras, Bihar, U.P., Maharashtra and West Bengal. About 95 per cent of Virginia tobacco produced in India is grown in Andhra Pradesh alone, and the rest in Mysore. The cultivation of *bidi* tobacco is confined to the Gujerat State and the Nipani area of Mysore and Maharashtra States.

Production

The following table shows the total production of tobacco in India during the period of the second Plan (1955-56 to 1960-61):

	Area ('000 acres)	Production (million lbs.)
1955-56	1,013	668
1956-57	1,029	659
1957-58	872	531
1958-59	896	589
1959-60	934	629
1960-61	N.A.	672†

† Estimated

The actual production in 1959-60, the latest season for which official estimates are available, aggregated 629 million lbs., which was lower, as compared with that in the beginning of the Plan. The provisional estimate for 1960-61 is 672 million lbs., showing a rise of just 4 million lbs. in the second Plan period. The slow increase in production was, however, not due to any failure of planned measures. It may be recalled that, in the second Plan, no increase in production as such was envisaged. What was aimed at was an improvement in quality of the crop. It is difficult to assess how far this objective has been achieved. Tobacco manufacturers, for instance, continue to complain about the quality of raw tobacco. It is said that Andhra, which produces flue-cured tobacco for cigarette manufacturers, experienced bad weather conditions in 1959 and 1960, particularly during January and February—two vital months for tobacco cultivation. Since unfavourable climatic conditions adversely affect the quality of tobacco, there must have been considerable damage to quality due to this factor.

During the third Plan, production is proposed to be stepped up from the estimated 672 million lbs. in 1960-61 to 728 million lbs., an increase of about 8 per cent. over the next five years. The increase in the quantity of production, however, is only of academic value. What is important is improvement of quality, which alone will help the farmer in getting larger earnings from the commodity. Admittedly, this is mainly a matter of providing the farmer with selected seeds and fertilisers, irrigation, warehousing arrangements and prompt credit facilities.

Cigarettes

Tobacco is consumed in various forms in India, such as cigarettes, cigars, cheroots, *hookah*, chewing and snuff. With the exception of cigarette manufacturing, which is done on a factory scale, all other tobacco products are produced on a cottage industry scale. There are at present 15 cigarette factories in the organised sector, with an annual turnover of about 32,000 million pieces of cigarettes. Six cigarette factories are located in Maharashtra, three each in Andhra Pradesh and W. Bengal, and one each in Mysore, Bihar and U.P. The further development of cigarette industry, which has good export potentialities, will be greatly handicapped, if the production of top-grade tobacco is not expanded adequately. The internal demand for cigarettes is met mostly from indigenous sources and imports are only very little, confined mainly to highly specialised types.

Only about 15 to 20 per cent. of tobacco produced in the country is now being exported. In contrast to this, the Federation of Rhodesia and Nyasaland exports about 83 per cent of its production, Greece and Turkey about 65 per cent and 53 per cent, respectively, and the U.S. about 24 per cent, after meeting its large domestic requirements. The principal buyer of Indian tobacco is the U.K., which accounts for over 40 per cent. The balance is shared by about 50 countries, the leading buyers being the West European countries, Aden, Russia, U.A.R. and Ceylon. India's shipments of manufactured tobacco products (*bidis*, cigarettes and cigars) are only about 5 per cent of the total tobacco exports. The following table shows the trend of exports, in terms of value, of both raw and manufactured tobacco during the last six years:

(Value in Rs. crores)

1955	13.4
1956	13.3
1957	12.8
1958	16.3
1959	13.9
1960 January-November	15.0

It will be seen that, in 1960 there was some improvement in exports. But this is very small. Despite medical opinion against, or puritanical aversion to, the use of tobacco, its consumption has been steadily going up the world over. If, therefore, India succeeds in raising the production of high grade tobacco, there is no reason why it should not be able to earn more foreign exchange through this weed. The compulsory grading of "Agmark" has already helped the revival of confidence of overseas buyers in India's tobacco.

NEW WATCH FACTORY

The first factory for the manufacture of watches in India in the private sector is being set up at Goregaon, a suburb of Bombay. The promoters of the project has secured collaboration of a French consortium of watch manufacturers, known as the S.E.D.I.M. A private limited company under the name Indo-French Time Industries Private Ltd. (with Mr. J. H. Parikh as its Managing Director) is being formed to run the venture. The unit is expected to be commissioned by the end of this year. It will have an initial capacity to produce 90,000 watches of standard type annually (on a single-shift basis) within the price range of Rs. 50 to Rs. 100. The annual capacity of the plant will be progressively stepped up to 310,000 by the fifth year of production.

The subscribed capital of the Company will be Rs. 40 lakhs. The French manufacturers will meet half of the capital, the rest being contributed by Indian promoters. In lieu of financial participation, the French collaborators will supply the complete plant, machinery, tools, dies and other equipments. Besides, they will make available to the Company complete technical know-how. It is noteworthy that no payment of royalty is involved in this project.

Manufacture of watches in all its stages, including jewels, watch cases and dials are expected

MR. AL FOIL
OBSERVES THE FORMALITIES

Foil's the name, Al Foil, alumnus of aluminium and many titles besides. But you can call me Al. Being a tidy sort of chap and very hygiene conscious, I like to wrap up things for you in shiny aluminium foil—in fact, been so 'wrapped up' in the 'wrapping business' that I haven't had the chance of meeting you wonderful people. .not for the last 57 years which is when I entered the 'foiling fray'. And that puts me in a reminiscing mood. A long time ..57 years at Kamarhati ..must have wrapped thousands of tons of tea for export, and now chocolates, biscuits and such toothsome confectionary. But that's only the 'sweet side' of my job...there's the bitter too, for the medicine men like to keep their pills fresh and efficacious by using 'foil protection'. Fact of the matter is that I have had to supply almost the entire requirement of foils for the confectionary, pharmaceutical, tea and cigarette industries in the country. Long and wide experience you'll agree....might even call me an expert. So whenever, in packaging, you have a 'foiling problem', remember I am here to serve you—no 'foiling problem' is difficult enough to foil Al Foil, alumnus of aluminium.

EXCELLENT PERFORMANCE OF VOLTAS

RESERVES RAISED—OUTLOOK PROMISING

ONE of the largest trading and manufacturing organisations of its kind in India, Voltas Ltd. (Managing Director: Mr. S. K. Handoo), has spread its activities in a short span of six years to a number of spheres. In addition to its role as one of the premier importing houses, the Company is producing, along with a number of well-known foreign associates, a wide assortment of goods needed for accelerating India's economic progress, such as agricultural implements, mining equipment, water-coolers, air-conditioning plants, electric switchboards, etc. It has also been participating in the establishment of pharmaceutical concerns. As Chairman of Voltas Ltd., Mr. J. D. Choksi observed last year that Voltas were *entrepreneurs* in the highest sense of the term and their motto was perpetual movement and progress. The Company's performance for the year ended 31st August 1960, as disclosed by the profit and loss account for the year 1959-60, is in keeping with this observation. The Company has been able to show a further improvement in its earnings, for the fifth time in succession. Thus, the gross profit has recorded a substantial increase from Rs. 100.48 lakhs to Rs. 120.23 lakhs. During the year under review, the Company's sustained efforts were concentrated on the supply of plant and machinery to industries and undertakings forming the core of the second Five-year Plan and the results of the expansion in its activities is clearly reflected in the enhanced earnings. In fact, its progress would have been still more remarkable had it not been for the continued shortage of foreign exchange, which compelled the Company to secure its imports from sources which were not always the most economical. The Company's income from sales and services have gone up from Rs. 17.12 crores to Rs. 19.86 crores and it has been able to recover the ground which it had lost in the previous year. The aggregate income for 1959-60 now compares favourably with that of Rs. 19.66 crores for 1957-58. Of the total turnover, import business accounted for Rs. 13.40 crores, showing a modest increase over the previous year, when it stood at Rs. 12.50 crores. The bulk of these imports comprised essential machinery required for the country's industrial expansion. The increase in sales of locally manufactured goods was quite considerable, such having gone up from Rs. 4.58 crores to Rs. 7.03 crores, a rise of over 50 per cent. Of these, Rs. 3.78 crores worth of goods, or more than 53 per cent, are stated to have been produced by the Company and its associates. In 1958-59, this item amounted to only Rs. 2.65 crores. The main contributors continued to be pharmaceuticals and vitamins produced by Messrs. Roche Products Private Ltd. and Messrs. Merck Sharp and Dohme of India Private Ltd. and the well-known air-conditioners, water coolers and electric switchboards manufactured in the Company's own workshops.

The item "other income" also shows a marked rise due to inclusion of Rs. 11.89 lakhs collected from insurers as compensation for the full value of goods destroyed in a fire in the Company's factory in October 1959.

The Directors have stepped up the provision for depreciation from Rs. 4.41 lakhs to Rs. 5.68 lakhs and that for taxation from Rs. 51.50 lakhs to Rs. 60.00 lakhs. After these essential provisions, the net profit works out to Rs. 54.55 lakhs, as against Rs. 44.57 lakhs for the previous year, an increase of more than 22 per cent. This sum is supplemented by Rs. 13.14 lakhs (being provisions of liabilities and contingencies, depreciation on fixed assets sold and development rebate reserve in respect of certain items, provided in 1958-59) written back. Together with the balance brought forward from the previous year, the total amount available for appropriations is of the order of Rs. 69.96 lakhs.

With a view to strengthening the reserves of the Company for maintaining stability and for financing expansions, the Directors have followed a judicious policy of appropriation. They have thus stepped up the provision for general reserves from Rs. 9 lakhs to Rs. 15 lakhs. The development reserve gets Rs. 5.59 lakhs, as against *nil* in 1958-59. Besides, the development rebate reserve also has been credited with Rs. 1.69 lakhs. In addition, the Directors have set aside Rs. 4.50 lakhs for contingencies (as against Rs. 4 lakhs a year ago) and Rs. 75,846 for doubtful debts (Rs. 1.03 lakhs [illegible]). They set apart a sum of Rs. 5 lakhs for retiring gratuity from the appropriation account in addition to Rs. 8.69 lakhs included under staff expenditure in the profit and loss account. It will thus be seen that the Directors have ploughed back in all Rs. 32.56 lakhs, as against Rs. 13.14 lakhs written back from previous years' allocations.

So far as shareholders are concerned, the Directors have, contrary to expectations in the share market, only repeated the same rate of return, namely, 13 per cent subject to tax. This represents 9.1 per cent net and absorbs Rs. 33.15 lakhs. An idea of the Company's progress since 1957-58 can be had from the following table:

(In lakhs of rupees)

	For the year ended 31st August			
	1960	1959	1958	1957
Sales and services	19,86.46	17,12.21	19,66.49	20,60.40

	(13%)*	(13%)*	(9%)	(9%)
Carry forward	4 25	2 27	1 00	1 39

* Subject to taxation.

During 1959-60, while the Company's role as one of the foremost importing houses was strengthened and consolidated, the Company is fast developing into an important industrial unit as well. Readers will have already noted that, in the year under review, the share of domestically made goods in the total turnover has substantially increased. The Directors' report and Chairman's statement show that more manufacturing activities are being planned for the Company. The mechanical division of the Company is studying the possibilities of fabrication and manufacture of specific components of mining machinery within the country. Arrangements have already been made for the manufacture of drills and diamond bits in the Chinchpokli factory. Collaboration agreements for the local manufacture of air compressors have also been completed.

The following extracts from the Chairman's statement will give a clear idea of the progress and the production programmes of the Company:

"The Brown-Boveri Engineering Division has completed installations at such large-scale electrification and irrigation projects as Tungabhadra, Machkund and Neriamangalam. The possibilities of local manufacture of some at present imported items are being explored.

"In the construction division, equipment such as heavy tractors, shovels, trucks were important items in the Company's sales and service programme during the year. The service facilities for construction equipment are being constantly enlarged and improved.

"Arrangements for making the world-famous Rueti Automatic looms have been completed with the National Machinery Manufacturers Ltd., for whose looms the Company will be the sole distributor and agent.

"In the air-conditioning field, an important development is the plan for the establishment of a manufacturing unit in India by the well-known Carrier Corporation, New York, U.S.A., in collaboration with Tata-Voltas and J. Stone and Company. . . . The manufacturing programme of this unit will result in a substantial expansion of the air-conditioning industry in the country as in reducing our dependence on imports in this field.

"Voltas has also turned its attention to the sale of consumer goods made by well-known Indian manufacturers. A beginning has been made in the distribution of canned foods and new lines are expected to be added in 1961."

In last year's report, the Directors had referred to their decision to set up a well-equipped manufacturing unit in the suburbs of Bombay, as the manufacturing facilities in the Chinchpokli factory were found to be inadequate. During the year under review, the Company acquired 85 acres of privately owned lands at Thana through the Government of Maharashtra. The latter has also agreed to grant an additional piece of 35 acres of adjoining Government land.

In addition to the plans for expansion of Company's own manufacturing activities, negotiations are also in progress for joint ventures with various principals, which, if successful, would also be located on the Company's land at Thana.

On the prospects for the Company, the Chairman states: "Our financial position is strong and our growth and diversification continues along healthy lines. We may look forward to the future, therefore, with confidence and optimism."

The balance-sheet as at 31st August 1960 shows that the Company's paid-up capital aggregates Rs. 2.55 crores. This is supplemented by reserves and surplus of Rs. 51.62 lakhs. The secured loans from bank amount to Rs. 2.50 crores and other current liabilities and provisions (including unsecured loan) Rs. 8.57 crores. The fixed assets of the value of Rs. 107.46 lakhs have been written down to Rs. 83.10 lakhs. Current assets (stores and stocks Rs. 6.64 crores, book debts Rs. 3.09 crores, loans and advances Rs. 3.14 crores, cash Rs. 36.26 lakhs) at Rs. 13.39 crores more than adequately cover the current liabilities (including borrowings from banks) and provisions.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 270 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 3.46 per cent per annum, free of income-tax.

INTERNATIONAL NICKEL COMPANY LTD.

With effect from 28th February 1961, the name of the Mond Nickel Company Limited has been changed to the International Nickel Company (Mond) Limited. Announcing the change of name, the Chairman, Mr. Ivon A. Bailey, said recently that no change in company organisation or activities would take place. The Board of the Mond Nickel Company Limited, in consultation with the International Nickel Company of Canada Limited, the parent company, took the view that the change of name would indicate the international nature of the Company's activities and identify it more closely with the Canadian Company and the United States affiliate, the International Nickel Company, Inc.

RALLIS' TURNOVER AND PROFIT EXPAND

PAYMENT OF EQUITY DIVIDEND RESUMED

THE performance of Rallis India Ltd. (Managing Director: Mr. M. P. A. Paspatti) in the year ended 31st August 1960, as disclosed by the accounts of the Company for that year, clearly shows a distinct improvement over the previous years. Thanks largely to the substantial increase in the turnover of the Company, which came partly from the marketing of the products of its industrial subsidies, the gross earnings of the Company have gone up from Rs. 29.55 lakhs in 1958-59 to Rs. 52.13 lakhs. This has enabled the Directors to resume, after an interval of nearly a decade, payment of dividend to equity shareholders albeit at a modest rate. The Directors have also succeeded in clearing the entire arrears of preference dividends, as will be seen presently.

The sale proceeds of the Company in 1959-60 show, as compared with those for 1958-59, a rise of more than 18 per cent having increased from Rs. 15.20 crores to Rs. 18.08 crores. The expenses, including raw materials consumed, on the other hand, went up by only 11 per cent from Rs. 15.11 crores to Rs. 17.83 crores. This has led the Company to improve its gross earnings by Rs. 22.58 lakhs to Rs. 52.13 lakhs. After making modest provision of Rs. 4.02 lakhs for depreciation (as against Rs. 3.25 lakhs in 1958-59) and Rs. 7.11 lakhs for taxation (Rs. 4.43 lakhs in the previous year), the net profit works out to Rs. 41.00 lakhs which compares very favourably with Rs. 21.87 lakhs made in 1958-59. This represents an increase of more than 86 per cent. The net profit is supplemented by the balance of Rs. 2.54 lakhs from the previous year, bringing the total sum available for allocations to Rs. 43.54 lakhs. With a view to making provision for future expansion, the Directors have, for the first time since the establishment of the Company, transferred a sum of Rs. 5 lakhs to the general reserve. In addition, a provision of Rs. 90,000 has been made for doubtful debts. They have further set aside Rs. 17,000 to the development rebate reserve, as against Rs. 25,000 in the previous year. This means that the aggregate resources ploughed back is Rs. 6.07 lakhs. Out of the remaining amount, the Directors have decided to clear all the outstanding payments of preference dividend (6 per cent taxable cumulative) aggregating Rs. 19.98 lakhs for the five years from 1954-55 to 1958-59 and also pay the preference dividend for 1959-60, requiring Rs. 3.99 lakhs. Thus, the preference dividend alone absorbs Rs. 23.98 lakhs. A dividend of 4 per cent., subject to tax, has been recommended on ordinary shares (of Rs. 100 each). This requires Rs. 9 lakhs, leaving a sum of Rs. 4.50 lakhs to be carried forward to the current year's accounts. The net dividend to the equity holder is only 2.8 per cent which is, indeed, very poor consolation to him especially when it is remembered that he has not obtained a single *naya paisa* on his investment for the past eight years. The only silver lining is that in the years to come he may get a better deal, because the organisation of the Company's business from predominantly trading to manufacturing lines has been successfully carried out. Since all the arrears of preference dividends have been cleared, the future liability on this score will be only about Rs. 4 lakhs per annum. Even assuming for argument's sake that the net profit for the current year will only be the same as that for 1959-60, it should be possible for the Company to pay at least a gross dividend of 12 per cent if not more.

The comparative table clearly shows the rapid progress made by the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st August			
	1960	1959	1958	1957
Sales proceeds	18,08.48	15,19.55	17,29.08	24,96.58
Other income	26.55	20.87	17.08	18.08
Closing stocks	1,78.84	1,53.94	2,11.36	2,62.10
Expenses (including raw materials consumed)	17,82.85	15,10.88	17,26.44	25,12.48
Gross profit	52.13	29.55	18.73	2.07
Provision for—				
Depreciation	4.02	3.25	5.18	19.95*
Taxation	7.11	4.43	1.75	1.41
Net profit (+) or loss (—)	+41.00	+21.87	+11.80	—19.29
Transfer from reserves	..	23.41	..	19.29
To reserves and provisions	5.90	1.00	..	..

To Dividends—				
6% taxable preference	23.98†	9.00‡	..	..
Ordinary	9.10§ (4%)	..	..	..
Carry forward	4.49	2.54	—32.48	—44.13

* Including arrears of Rs. 12.41 lakhs for two years.
† Gross dividend for the six years ended 31st August, 1960.
‡ Gross dividend for the two years 1958-59 and 1958-54.
§ Subject to tax.

It will be observed that, in four years, the Company's gross profit has gone up from a mere Rs. 2.07 lakhs to Rs. 52.13 lakhs though sale proceeds for the latest year at Rs. 18.08 crores are lower by Rs. 6.88 crores. This, as already mentioned, is the result of switching over from commodity trade, which is of a highly fluctuating nature, to manufacturing activities, which are assured of a steadily expanding market in this country, thanks to the development plans. In fine, the change in the Company's fortunes for the better is unmistakably clear.

In addition to its role as a trading company, Rallis India Ltd. has developed extensive interests in the industrial field, especially pharmaceuticals and chemicals, electric goods and tools, textiles, umbrella spare parts, etc., through partial and full ownership of shares in subsidiary companies handling these lines. The following extract from the Directors' report will give the reader some idea of the progress and prospects of the subsidiary companies of Rallis:

"Ralliwolf went into production in October 1959 and worked up to an economic level of output early in 1960. Plans for expansion are under active consideration.

"Rallifan's output was restricted by the space and machinery available while the new factory at Mulund was under construction. The new factory has been completed and occupied since the end of the financial year.

"The teething troubles of Ralli-Hoyland, which manufactures umbrella ribs, proved to be more serious than had been anticipated and production was stopped in July for a full reassessment and rebuilding of certain plant. This is almost complete and production is expected to be started again shortly. Meanwhile, the Company incurred a trading loss.

"Production, turnover and profits of Teddington Chemical Factory were all substantially above the levels achieved in the previous year.

"Boehringer-knoll, which is an associated company whose products are marketed by Rallis India Ltd., started to trade in November 1959. Results have been up to expectations.

"The working of Hemalatha Textiles was adversely affected by the poor 1959-60 cotton crop and its production costs were increased by a new wage award. Considering these circumstances, the results were not unsatisfactory.

"For Ralli Chemicals the period was one of preparation. The necessary import licences and exchange allotments having recently been received, construction of the plant and buildings has been started.

"Since the close of the financial year, the Company's subsidiary, Ralli Chemicals Private Ltd., has entered into contracts for the construction of buildings and the supply and installation of plant. This involves Rallis India Limited in an obligation to make funds available to Ralli Chemicals by subscribing to the equity capital or by making advances or by a combination of both to the extent of approximately Rs. 44½ lakhs."

Having regard to the difficulties through which the Company has passed in the past, its financial position as at 31st August 1960 must be regarded as satisfactory. The paid-up capital of Rs. 3 crores is supplemented by reserves and surplus of Rs. 10.59 lakhs. The borrowings are of the order of Rs. 51.57 lakhs, secured by hypothecation of stocks and on certain freehold properties of the Company, and other current liabilities and provisions aggregate Rs. 124.59 lakhs. Investments in and amounts due (net) from subsidiaries stand at Rs. 84.41 lakhs and other investments at Rs. 12.41 lakhs.

The current assets (stores and stock Rs. 1.86 crores, book debts Rs. 1.06 crores, cash Rs. 29.17 lakhs) at Rs. 3.21 crores more than cover the current liabilities (including borrowings from the banks) and provisions. The gross block of the value of Rs. 70.39 lakhs (including additions of Rs. 5.09 lakhs made during the year) has been written down to Rs. 36.41 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 143 cum-div. On an ex-div. basis, the yield on the shares works out to 2 per cent per annum, free of tax. This scrip has been popular with investors for well over a year and the low yield is a reflection of their robust confidence in the future of the Company.

PHALTAN SUGAR DISAPPOINTS

DIVIDEND REDUCED AGAIN

SHARES of sugar companies in the Maharashtra State are very much out of favour these days due to the provisions of the Land Ceiling Bill. In keeping with this general trend, the price of Phaltan Sugar also has dropped by about 20 per cent in the last two months. But the results of the Phaltan Sugar Works Limited (Managing Agents: Messrs. Mafatlal, Apte and Kantilal Private Ltd.) for the year ended 30th September 1960 are also very disappointing. Gross profit of the Company for that year has declined by over 20 per cent to Rs. 24.05 lakhs. The dividend to shareholders has been reduced from 27 per cent taxable to 24 per cent taxable. On tax-free basis, the dividend works out to only 14 per cent, as compared with 20 per cent for 1957-58 and 24 per cent for 1956-57. There has thus been a major cut in the dividend for a second time in the last four years.

The crushing season of the factory, which started on 23rd October 1959, lasted for 163 days. During the season, the quantity of sugarcane crushed was lower at 113,845 tons, as against 120,881 tons in the 1958-59 season and so also sugar manufactured at 143,155 bags, as against 144,671 bags in the previous year. The recovery of sugar, however, improved from 12.03 per cent to 12.67 per cent.

The fall in production, as explained by the Directors' report, was due to shortage of cane supply and lower yield by the Company's farms themselves on account of adverse weather conditions. Sale of sugar, as readers are aware, is controlled by the Government and deliveries are effected as per Government release orders. The stocks of sugar sold at contract rate and unsold at cost or market value, whichever is lower, as taken, valued and certified by the General Manager at the factory, were considerably higher at Rs. 37.06 lakhs as compared to Rs. 14.66 lakhs in the previous year on account of absence of adequate release orders. The Company has been obliged to carry forward unreleased stock equivalent to 22.8 per cent of the year's production, as against 2.9 per cent of the previous year. There was an increase of Rs. 2.03 lakhs in crop expenditure to Rs. 41.63 lakhs and this, too, contributed to lower profits. Another reason for the lower profit was the increase in export quota under the Government's scheme.

The comparative results of the Company's working since 1956-57 are given in the following table:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds of sugar	1,29.21	1,78.50	1,60.39	1,37.47
Other income	3.31	3.70	2.94	2.06
Closing stocks	37.06	14.66	36.88	45.94
Crop expenditure (net)	41.63	39.60	41.05	37.14
Excise duty	41.41	42.19	45.76	28.81
Other expenses	47.88	47.82	45.70	48.40
Gross profit	24.05	30.36	30.77	37.21
Managing Agents' commission	2.00	2.72	2.71	3.33

Net profit	10.75	14.84	10.26	13.58
Excess provisions written back	0.09	0.26	..	..
To reserves	0.23	1.46	0.23	1.00
Additional provision for taxation relating to previous years	..	1.00	..	..
Amount transferred from dividend equalisation reserve	1.00	..	..	..
Dividend	12.00 (24%)*	13.50 (27%)*	10.00 (20%)	12.00 (24%)
Carry forward	0.22	0.64	1.80	1.47

* Subject to deduction of tax.

The highlights disclosed by the aforesaid table are the sharp fall in sale proceeds, marked rise in stocks, and a slight rise in expenses. The net profit has gone down from Rs. 14.84 lakhs to Rs. 10.75 lakhs, a fall of 27 per cent.

The paid-up capital of the Company stands at Rs. 50 lakhs, comprising 100,000 ordinary shares of Rs. 50 each. Reserves and surplus total Rs. 58.88 lakhs. The net block has increased by Rs. 4.82 lakhs to Rs. 60.72 lakhs, the depreciation provided so far being Rs. 77.65 lakhs. An outstanding item in the latest balance-sheet is the secured loan of Rs. 25 lakhs, as against *nil* a year before. This borrowing must have been mainly due to higher stock-in-trade. The total current assets at Rs. 131.48 lakhs are well above the total current liabilities at Rs. 83.32 lakhs, indicating a healthy financial position.

The current market quotation of Rs. 50 paid-up ordinary share at Rs. 141 gives a gross yield of 8.5 per cent on a gross dividend of Rs. 12 per share and a net yield of 6.0 per cent on a net dividend of Rs. 8.40 per share.

BOARD SECRETARIAT DEPARTMENT 6 MAR 1961

RAPID PROGRESS BY K.C.P.

DIVERSIFICATION OF BUSINESS BEGINNING TO BEAR FRUIT

THE K.C.P. Ltd., which manufactures sugar, confectionery, denatured spirit and cement as well as machinery for sugar, cement and chemical industries, has made rapid progress in the last three or four years. The Company's production and turnover have vastly improved, due to diversification of its activities. Between 1955-56 and 1959-60, sale proceeds, for instance, have shot up from Rs. 198 lakhs to Rs. 379 lakhs, a rise of nearly 90 per cent. Similarly, the gross profit has jumped up from Rs. 32.41 lakhs to Rs. 57.30 lakhs, an increase of 76.8 per cent. The bulk of the improvement in profit has taken place in 1959-60.

The statement of the Company for the year ended 30th June 1960 reveals that, though the crushing season for the sugar factory was shorter by seven days at 124 and cane crushed was also lower by 661 tons at 231,397 tons, the quantity of sugar produced was better by 1,862 tons at 22,354 tons, thanks to better sucrose content in the cane; the recovery per cent. was 9.56 as against 8.88 in the previous year. Nevertheless, sale proceeds from sugar were lower by some Rs. 48.78 lakhs at Rs. 235.61 lakhs. A rise of Rs. 9.33 lakhs in the stocks only partially accounts for this drop in sales realisation. During this period, 231,397 tons of sugarcane were crushed as against 232,058 tons in the previous year and 22,354 tons of sugar were produced as against 20,492 tons in the previous year. Thus sugar production increased by 1,862 tons in spite of 661 tons lower of cane crushed. This explains the higher recovery of sugar for the season at 9.56 per cent as against 8.88 per cent in the previous season. Receipts from the sale of distillery spirits, confectionery, molasses, manures, etc., however, increased by Rs. 9.82 lakhs to Rs. 31.11 lakhs. Similarly, cement sales fetched Rs. 13.60 lakhs more at Rs. 66.47 lakhs. The biggest increase was in sales of machinery and materials which recorded nearly a fivefold rise to Rs. 44.29 lakhs. The production of cement at Macherla Factory, during the year, amounted to 68,458 tons as against 58,270 tons in the previous year. The directors in their report state that the second stage of the factory is expected to go into production in the later half of 1961.

The gross profit of the Company shows an impressive rise of Rs. 20.66 lakhs to Rs. 57.30 lakhs, but the net profit is lower by Rs. 7.75 lakhs at Rs. 13.19 lakhs on account of heavy provision for taxation of Rs. 24.75 lakhs, as against *nil* in the previous year and higher depreciation provision of Rs. 15.56 lakhs.

The dividend on ordinary shares has been maintained at 15 per cent taxable, or 10.5 per cent tax-free but on increased capital. The net amount of profit ploughed back this year is negligible at a few thousands, as compared with Rs. 14.80 lakhs added last year.

The following comparative table shows at a glance the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds (including machinery and materials consumed)	3,78.79	3,72.62	3,19.75	2,12.90
Other income	5.64	4.38	5.90	4.08
Closing stocks and work-in-progress	1,08.88	77.47	1,11.62	1,36.98

Carry forward	0.23	0.92	0.33	0.28

* Subject to tax.
† On 7½ per cent. tax-free equity shares.
‡ On equity shares (deferred).

An account of the reorganisation and expansion of the capital structure of the Company was given in these columns when analysing its accounts for 1958-59 (*vide* page 917 of *Commerce* dated 28th November 1960). Since then, there has been a further increase in both the ordinary and preference capital, the former by Rs. 19.62 lakhs (in shares of Rs. 10 each at par in the ratio of one for every two) and the latter by Rs. 40 lakhs (in shares of Rs. 100 each 6½ per cent tax-free cumulative redeemable in 1970-74). The total paid-up capital as at the end of June 1960 is Rs. 101.84 lakhs, of which equity capital is Rs. 58.57 lakhs. Since then, the Company has made a further fresh issue of equity capital of Rs. 10 lakhs to existing shareholders in the proportion of 17 shares for every 100 shares. The reserves and surplus stand at Rs. 97.32 lakhs. As the result of higher sugar stocks and of materials, stores and finished goods at workshops, the secured loans have substantially gone up from Rs. 209.76 lakhs to Rs. 244.35 lakhs. The figure for other current liabilities and provisions at Rs. 160.61 lakhs is also higher by over Rs. 40 lakhs, a part of which reflects the higher provision for taxation.

The fixed assets of the Company have expanded sizably in the last four years, from Rs. 227.37 lakhs on 30th June 1957 to Rs. 417.59 lakhs on 30th June 1960, an increase of Rs. 190.22 lakhs in three years. The net block stands at Rs. 339.05 lakhs, after Rs. 78.55 lakhs provided for depreciation. The total book value of investments is Rs. 24.99 lakhs of which Rs. 23.36 lakhs are in quoted investments. The market value of the general investments is as high as Rs. 31.01 lakhs. The total current assets at Rs. 201.74 lakhs are higher by Rs. 76.80 lakhs over the year due to higher inventory. On balance, current liabilities, excluding the I.F.C. loan of Rs. 69.60 lakhs, amount to Rs. 346.39 lakhs as against which current assets are of the order of only Rs. 276.11 lakhs including investments. This state of affairs reflects the heavy rate of expansion undertaken by the Company in recent years.

The Company's workshop at Tiruvottiyur made satisfactory progress during the year, in spite of delays in securing electric power and import licences. During the current year, the heavy machine shop and the steel foundry are expected to go into production. The Company has orders for the supply of sugar machinery of the value of Rs. 250 lakhs for co-operative sugar factories in addition to sugar machinery for a factory in the private sector. An order for a cement plant has also been allotted to the Company and negotiations are in progress with the party concerned.

During the current year, the Company's sugar factory is expected to have a record crush, the quantity of sugar being placed at 30,000 tons.

The current market quotation of Rs. 10 paid-up ordinary shares is Rs. 24.50 *cum-div.*, giving a net yield of 4.3 per cent per annum.

(*Concluded from next column*)

current liabilities, including secured loans from the State Bank of India, amount to about Rs. 50 lakhs, which are exceeded by current assets of the order of Rs. 77 lakhs. A sum of Rs. 16.80 lakhs had been paid as advance and provisional payments for taxation which appears a little excessive, considering the earnings of the Company in the last few years.

The net addition to the block during the year amounted to about Rs. 2.80 lakhs. Further, the Company has spent on machinery under erection a sum of Rs. 1.16 lakhs.

The Company's application for expansion of the crushing capacity of the factory from 750 tons to 1,250 tons per day has been approved by the Central Government. In the first phase of the expansion programme, the crushing capacity has been increased to 1,000 tons per day by adding new machinery worth about Rs. 7 lakhs. The machinery has already been installed and would be put to use during the current season. This is expected to result in efficient crushing and higher recovery. Although the paucity of rain in the latter part of the last monsoon has occasioned a slight setback to the cane crop, the Company expects to crush during the current season a larger quantity of cane and have a higher production of sugar. The implementation of the recommendations of the Wage Board is expected to result in an increase of about 75 nP per maund in the cost of sugar production.

The equity shares of the Company of Rs. 10 each fully paid up are presently quoted at Rs. 29, giving a tax-free yield of 5.43 per cent.

BHORAT SUGAR'S PROFIT SHADE LOWER

CURRENT YEAR MAY PROVE BETTER

FOR the third year in succession, the gross profit of the Bhopal Sugar Industries Ltd.—Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd.—has declined, albeit slightly. Thus, the Company's accounts for the year ended 30th September 1960 show the gross profit at Rs. 14.69 lakhs, as against Rs. 15.04 lakhs for 1958-59. The net profit, however remains practically unchanged at Rs. 6.94 lakhs, but the dividend to shareholders has been lowered from 25 per cent. taxable to 22½ per cent. taxable. The net dividend at 15.75 per cent is lower by nearly one-fifth as compared with that (20 per cent per annum) paid for 1957-58 and 1956-57. This somewhat unfavourable result on the financial side has occurred despite a larger output of sugar. And the reasons for it are (1) large unsold stocks of sugar following defective distribution controls and (2) a loss on the sugar sold for export.

During the year under review, the total cane crushed was higher by nearly 69,000 maunds, and the sugar production at 201,630 maunds also revealed an increase of about 4 per cent. The average sugar recovery was also a little better, 10.11 per cent during the year, as against 10.10 per cent in the previous year. The average yield of cane from the Company's farms was lower by about 2.40 tons per acre at 30.88 tons.

The comparative working of the Company in the last four years is shown in the following table:

(In lakhs of rupees)

	For the year ending 30th September			
	1960	1959	1958	1957

* Subject to taxation.

The proceeds from the sale of sugar came down by Rs. 29.67 lakhs during the year, revealing thereby a fall of about 32 per cent. The downward trend was evident even during 1958-59, when there was a fall of about 14 per cent as compared with the previous year. The year-end stocks were heavier at Rs. 33.58 lakhs, as against Rs. 12.02 lakhs a year earlier. Pursuant to the provisions of the Sugar Export Promotion Act, the factory was required by the Indian Sugar Mills' Association to sell its quota of 1,515 bags of sugar out of the season's output. The loss on this transaction amounts to Rs. 81,450 and this has been adjusted by reducing the stocks by a corresponding amount. The Company's factory and farm are situated in Madhya Pradesh. The ex-factory selling price for the Company's sugar is fixed by the State Government. For the year under review, the price fixed was higher than the price for sugar imported from U.P. and Bihar. Consequently, the Government nominees were not in a position to lift the Company's sugar and the Company had to sell at competitive prices. This must have brought about a reduction in the profit-margin.

The general reserves of the Company as at the end of September 1960 amounts to Rs. 14 lakhs (of which a sum of Rs. 1.50 lakhs relates to the appropriations from out of the year's profit). This compares well with the paid-up capital standing at Rs. 30 lakhs made up of preference shares (Rs. 12.50 lakhs) and equity capital (Rs. 17.50 lakhs). An overall picture of the financial position of the Company can be had from the following figures (those within brackets pertain to 30th September 1959):

(Rs. in lakhs)

Liabilities	Rs.	Assets	Rs.
Capital	30.00 (30.00)	Gross block	47.71 (44.94)
General reserve	14.00 (12.50)	Depreciation	29.36 (27.38)
Other reserves and surplus	3.61 (2.72)	Net block	18.35 (17.56)
Current liabilities	49.86 (38.45)	Under construction	1.17 (0.25)
		Current assets	77 30 (65.18)
		Investments	0.55 (0.55)

As will be seen from the above figures, the

SYNOPSES OF COMPANY REPORTS

Asian Cables Corporation Ltd.

The directors of the above Company (Chairman: Shri Girdharlal B. Kotak, Bombay) present the audited accounts of the Company for the period from 12th September 1959 to 31st December 1960.

Progress on Commissioning of the Plant: During the period under report the construction of the factory buildings has progressed satisfactorily and will be completed very shortly. A good portion of the machinery has already been received and most of the balance equipment is expected to be received by end of March 1961. The erection work for the plant and equipment has been started under the supervision of the expert Engineer who has been specially deputed by Messrs. Enfield Cables Ltd., the Company's technical Collaborators, for this purpose. The erection work will take about 3 to 4 months and it is expected that the plant will be ready for initial production by the middle of this year. Three of the Company's engineers have recently returned after receiving their full training in U.K. at the works of Messrs. Enfield Cables Ltd. The Company's senior engineer who is receiving a longer period of training, is expected to arrive in the beginning of March. The directors are glad that on the whole the work of setting up of the plant is progressing according to the schedule.

The Company has received an industrial licence for the manufacture of High Tension Paper Insulated Power Cables for which foreign financial and technical participation will be necessary. It is now decided to include in the programme the manufacture of Sugar Enamelled Copper Wires (Magnet Wires) for which the Company already holds the industrial licence and for which the demand during the third Plan period is expected to increase very rapidly. It is also proposed to put up a most up-to-date Rod Rolling Mill to manufacture superior quality rods for drawing of wires which, besides supplying the Company's requirements, will serve the needs of other cable factories in Western India.

The directors report that their negotiations for technical and financial collaboration for the above programme with Messrs. Phelps Dodge Copper Products International Corporation of U.S.A. and Messrs. Enfield Cables Ltd. have reached a successful conclusion. They have agreed to invest jointly a substantial amount in the equity share capital of the Company and to give technical collaboration for a period of 10 years. The foreign exchange requirements for the import of the necessary plant and equipment is expected to be met partly from the collaborators' investment and partly from a loan in foreign currency.

Accounts in brief are as under:—

Indian Rayon Corporation Ltd.

The directors of the above Company (Managing Agents: Veraval Rayon Industries Private Ltd., Bombay) present the third annual report and the audited accounts of the Company for the year ended 15th February 1960.

Subscription: During the year, the Company issued the Prospectus and offered for subscription shares of the total face value of rupees one crore to the public, as out of the total issued capital of rupees two crores, the Company's foreign collaborators, promoters, managing agents, directors and selling agents and their friends had already taken up shares of the face value of rupees one crore. As against the offer of 52,000 equity and 48,000 preference shares of the Company to the public, the number of shares applied for aggregated 1,38,993 enquity and 80,455 perference shares. Allotments were decided upon in consultation with the Stock Exchange, Bombay. The directors are pleased to record the confidence the investing public have put in the future of the Comapny which is evident from the fact that the issue of both equity and preference shares was over-subscribed. The shares of the Company are listed on the stock exchanges at Bombay, Calcutta and Ahmedabad.

Factory: The foundation-stone of the factory at Veraval was laid on 21st June 1959 by Hon'ble Shri Lal Bahadur Shastri, Minister for Commerce and Industry, Government of India. The contract for the construction of the factory buildings was entrusted to the well-known contractors Messrs. Shah Construction Company Limited, after the scrutiny of the tenders invited by the Company's Architects. Messrs. C. H. Gandhi & Company, who have built three rayon plants in India. The construction work has been undertaken since, on a very large area of land and substantial progress has been made. Shipments of machinery have also started to arrive.

Progress of Project: As per the terms of the contract entered into with Messrs. Von Kohorn International Corporation of New York, on 2nd October 1958, and later extended, the necessary arrangements for payment of the 10 per cent advance, providing the Bank guarantee for the deferred credits and for securing the approval of the Reserve Bank of India for the allotment of shares to Messrs. Von Kohorn International Corporation and to the Financial and Development Fund Inc., of New York, were completed during the year.

In November 1959, when Mr. Henry Von Kohorn, President of Messrs. Von Kohorn International Corporation (the Company's Collaborators) visited India, it was considered advisable by the directors in consultation with him that the designing and the engineering of the factory should be made for a productive capacity of 10 tons of rayon yarn, 25 tons of sulphuric acid and 10 tons of sodium sulphate per day as permitted by the industrial licences held by the Company instead of the 5 tons rayon yarn, as originally envisaged, in order to ensure greater economy in capital cost and higher efficiency and profitability in working. Accordingly, the Company submitted an application to the Government of India in December 1959 for the additional import licence required to cover the additional plant, machinery and equipment. In order to secure the additional finance required for this expanded capacity, the Chairman of the Company visited the U.S.A. and the U.K. again and carried on negotiations with leading Financial Institutions and with Messrs. Von Kohorn International Corporation.

Provisional agreements were arrived at with Messrs. Von Kohorn International Corporation and Messrs. Chase International Investment Corporation during the visit of the Chairman.

During the subsequent discussions with the Government of India, it was considered necessary that the Company should also install necessary plant for the manufacture of 15 tons per day of rayon grade pulp from cotton linters at the Company's factory. The necessary application was also made to the Government of India in this behalf.

The directors report that the Government have confirmed that the necessary import licences to cover all the requirements of plant and machinery for the additional rayon yarn manufacturing capacity as also for the manufacture of pulp will be granted, out of which two import licences for Rs. 37,50,000 and Rs. 44,85,000 have already been issued and a third import licence for Rs. 2,01,92,000 will be issued later.

Since the end of the financial year ending 15th February 1960, the material changes and commitments affecting the financial position of the company are as follows: The 2nd call was made on the shareholders on 20th June 1960 calling for the payment of the fourth instalment of Rs. 12.50 per share and an amount of Rs. 19,56,600 has been collected as upto 12th January 1961.

Additional Finance: For the purpose of expansion of the installed capacity of rayon yarn plant from 5 tons daily production capacity to 10 tons daily production capacity and also for installing machinery for the pulp plant having a capacity of producing 15 tons of pulp daily, the directors estimate that a sum of rupees two crores and eighty-four lakhs would be required for machinery to be imported from abroad. Apart from this sum of Rs. 2,84,00,000, there would be relative increase in the cost of buildings and requirement of indigenous machinery and equipment for the purpose. The total estimate comes to Rs. 4,20,00,000.

The directors have contacted financial institutions of America and Europe for loans amounting to Rs. 2,45,00,000 and the balance is sought by the issue of further capital.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Profit and loss account (deficit) ...	76,663
Rs.	99,44,829	Rs.	99,44,829

Loyal Textile Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Thiagaraja Chetty & Sons Private Ltd., Kovilpatti) present the audited accounts of the Company for the year ended 30th June 1960.

The year's working has resulted in a profit of Rs. 8,79,244. After providing normal and shift depreciation of Rs. 4,64,444, there is a balance profit of Rs. 4,14,800. The profit would have been more had it not been for a strike for 45 days from 20th April 1960 to 3rd March 1960 just at the time when yarn and cloth prices were high.

Out of the above net profit of Rs. 4,14,800 an interim dividend of Rs. 1,12,418 was declared on 26th September 1960 on cumulative preference shares for the 3 half-years ended 30th June 1959. The directors recommend payment of dividend on preference shares for the year ended 30th June 1960, absorbing Rs. 96,974. Deducting the above dividends, there is a balance of Rs. 2,05,408, which is adjusted against carried forward loss. Development rebate accrued since 1956-57 has not been adjusted for want of adequate profits.

The 'B' Mill is working with full complement of 12,180 spindles from July 1960, and with the increased production, the current year may yield a better profit in spite of restrictions placed on yarn and cloth prices by the Government and increase in wage bill due to implementation of Wage Board recommendations.

The National Industrial Development Corporation Ltd., have sanctioned a loan of Rs. 8.73 lakhs for the first stage of the rehabilitation scheme and have paid an interim loan of Rs. 1.08 lakhs. Out of the 10 ring frames erected under the above scheme, 8 frames has been commissioned during the current year. The Company has received an allotment of 76 automatic looms for expansion of the weaving section and orders for same will be placed soon.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,51,250	Gross block	1,02,78,199

		Cash ...	84,770
Rs.	1,19,99,413	Rs.	1,19,99,413

*Reserves are shown after deducting a sum of Rs. 3,23,367 being the debit balance in the profit and loss appropriation account.

Ahmadpur-Katwa Railway Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. McLeod & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The total capital outlay on final heads amounts to Rs. 21,26,124 as against Rs. 20,70,630 at the close of the previous year, the increase being mainly due to cost of additional rolling stock, equipment and buildings of K. F. Railway purchased from Government and adjusted provisionally pending receipt of Government's approval.

The gross earnings for the year, amounted to Rs. 6,09,135, while the working expenses totalled Rs. 7,99,198, as compared with Rs. 6,66,995 and Rs. 6,50,433, respectively for the previous year. The net loss of Rs. 1,90,063 (credit of Rs. 16,562) has been carried to net revenue account. Under this account after including share transfer fees and allowing interest payable on the loan from Government and other charges, there is a deficit of Rs. 2,00,785 (surplus of Rs. 5,825) which to make up the amount required for guaranteed interest at 3½ (3½) per cent per annum on share capital calls for a total subsidy of Rs. 2,61,125 (Rs. 54,515) in terms of the agreement with the Government of India. Thus, the net profit comes to Rs. 60,340 (Rs. 60,340), but after crediting Rs. 8,636 (*nil*) being provision for taxation of previous years no longer required and providing Rs. 27,153 (Rs. 35,575) for taxation on the current years profit, a balance of Rs. 41,823 (Rs. 24,765) only is available. The directors, therefore, recommend payment of a dividend at the rates of Rs. 1.90 (Rs. 2.25) per cent per annum, subject to deduction of tax, which will require Rs. 32,756 (Rs. 26,571) the surplus of Rs. 9,067 (deficit of Rs. 1,806 being met from the reserve) being transferred to reserve.

The total working expenses show a net increase of Rs. 1,48,765 which is mainly due to cost of replacement of sleepers and rolling stock (adjusted provisionally pending receipt of Government's approval) and cost of repairs and maintenance.

The receipts from coaching traffic amounted to Rs. 3,96,654 for the carriage of 9,19,668 passengers, as compared with Rs. 4,67,489 for 10,70,443 passengers in the previous year.

The earnings from goods accounted for Rs. 2,00,304 for 11,65,356 maunds of goods, as against Rs. 1,93,013 for 14,37,197 maunds for the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,24,000	Block ...	16,96,870
Reserves ...	12,205	Stores ...	585
Provision for taxation ...	62,707	Book debts ...	3,53,387
Liabilities ...	10,86,933	Investments	3,34,145
		Cash ...	71,804
		Miscellaneous expenditure	4,29,254
Rs.	28,85,845	Rs.	28,85,845

Calcutta Steam Navigation Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Hoare Miller & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th June 1960.

The accounts show a profit prior to taxation, of Rs. 2,33,378 (Rs. 7,71,966) to which has been added profit on sale of s.s. "Ambica" Rs. 13,870 (Rs. 3,400), and the balance brought forward from the previous year of 1,58,985 (Rs. 1,05,155), making a total of Rs. 4,06,233 (Rs. 8,83,385 including Rs. 2,864 being unclaimed dividends written off), which the directors recommend be dealt with as follows: To provision for taxation Rs. 96,000 (Rs. 4,20,000), to transfer to fleet reserve Rs. 13,870 (Rs. 3,400), to transfer to reserve fund Rs. 50,000 (*nil*), to transfer to development reserve Rs. 11,000 (Rs. 35,000) and to pay a dividend at Re. 1.00 (Re. 1.00) per share or 10 (10) per cent subject to deduction of tax, absorbing Rs. 1,26,000 (Rs. 1,26,000) leaving a balance to be carried forward of Rs. 1,09,363 (Rs. 1,58,985 after transferring Rs. 1,40,000 to contingency reserve).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,60,000	Gross block	77,67,661

COMPANY MEETINGS AND DIVIDENDS

K. C. P. LTD. Annual General Meeting, Madras, 6th March 1961. Dividend: 15 per cent or Re. 1.50 per ordinary share, subject to deduction of tax, payable on or after 8th March 1961. Transfer books remain closed from 27th February to 6th March 1961, both days inclusive.

ELGIN MILLS CO., LTD. Annual General Meeting, Kanpur, U.P., 7th March 1961. Dividend: Re. 1.15 per ordinary share, subject to deduction of tax. Transfer books remain closed from 15th February to 7th March 1961, both days inclusive.

PARSHURAM POTTERY WORKS CO., LTD. Annual General Meeting, Morvi, Gujarat, 20th March 1961. Dividend: Rs. 5.36 per ordinary share, subject to deduction of tax, payable on and after 30th April 1961. Transfer books will remain closed from 17th to 31st March 1961, both days inclusive.

RAZA BULAND SUGAR CO., LTD. Annual General Meeting, Rampur, U.P., 22nd March 1961. Dividend: 12½ per cent or Re. 1.25 per share, subject to deduction of tax. Transfer books remain closed from 1st to 24th March 1961.

SHREE CHANGDEO SUGAR MILLS LTD. Annual General Meeting, Bombay 23rd March 1961. Dividend: Rs. 2.50 per share (on shares of Rs. 12.50) paid-up), subject to deduction of tax, payable on or after 1st April 1961. Transfer books will remain closed from 10th to 23rd March 1961, both days inclusive.

SIRPUR PAPER MILLS LTD. Annual General Meeting, Somajiguda, Hyderabad, Andhra Pradesh, 24th March 1961. Dividend: Re. 0.65 per ordinary share, subject to deduction of tax, payable on or before 2nd May 1961. Transfer books will remain closed from 10th to 24th March 1961, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 27th March 1961. Dividend: 8 per cent or Re. 0.80 per ordinary share, subject to deduction of tax, payable on or after 17th April 1961. Transfer books will remain closed from 14th to 27th March 1961, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 27th March 1961. Dividend: Rs. 2.75 per ordinary share, subject to deduction of tax, payable on or after 17th April 1961. Transfer books will remain closed from 13th to 27th March 1961, both days inclusive.

PHOSPHATE CO., LTD. Annual General Meeting, Calcutta, 27th March 1961. Dividend: Rs. 35.00 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 27th March 1961, both days inclusive.

J. K. STEEL LTD. Annual General Meeting, Calcutta, 30th March 1961. Dividend: 20 per cent or Rs. 2.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 16th to 30th March 1961, both days inclusive.

HINDUSTAN LEVER LTD. Annual General Meeting, Bombay, 18th April 1961. Transfer books will remain closed from 22nd to 24th March 1961, both days inclusive.

DHANALAKSHMI MILLS LTD. Taxable dividend of 17½ per cent or Rs. 17.50 per share, for the year ended 31st December 1960. Tansfer books will remain closed from 15th to 29th March 1961, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Interim dividend of 90 nP per old ordinary share and 30 nP per new ordinary share, for the year ending 31st March 1961, both subject to deduction of tax. Transfer books will remain closed from 18th to 26th March 1961, both days inclusive.

UNITED NILGIRI TEA ESTATES CO., LTD. Taxable interim dividend of 10 per cent. or Re. 1.00 per share, for the year ending 31st March 1961. Transfer books will remain closed from 14th to 28th February 1961, both days inclusive.

OUCHTERLONY VALLEY ESTATES (1938) LTD. Taxable dividend of 13 per cent or Re. 0.26 per share, subject to deduction of tax, for the year ended 31st October 1960. Transfer books will remain closed from 11th to 29th April 1961, both days inclusive.

MYSORE SUGAR CO., LTD. Taxable dividend of 30 per cent or Rs. 3.00 per share, for the year ended 30th June 1960.

Americans have invested about $195 million in corporate stocks through the New York Stock Exchange's Monthly Investment Plan since it was first introduced seven years ago (January 1954). The exchange noted that, in 1960, the number of share purchases through the Plan aggregated a record 989,573, bringing the total so far to 4,663,454. The Plan "has helped damatise, for millions of individuals who have never invested directly, the fact that people of modest means can participate in the investment process in a practical way." Its impact has been felt outside the U.S. In Australia, two plans modelled on this Plan are in operation and similar programmes are under study in a number of other countries, or already in operation, as in Japan.

Two Indian *entrepreneurs*, namely, Jay Shree Tea and Industries Ltd. (a Birla concern) of Calcutta and Mr. Kantilal H. Parikh of Ahmedabad have sought the collaboration of U.S. firms for establishing new plants, the former for the manufacture of hardboards and the latter for photographic paper.

The Jay Shree Tea and Industries Ltd. is already owning two plywood factories and tea plantations in North India and Nilgiris and is presently engaged in establishing a superphosphate plant. It is making efforts to secure full American financial collaboration for setting up two hardboard factories, one in West Bengal and the other in Madhya Pradesh.

Mr. Parikh of Ahmedabad wishes to manufacture photographic paper and is willing to have collaboration arrangements with appropriate U.S. manufacturers in the form of equity capital and technical assistance on a joint venture basis for a plant with a monthly production capacity of five tons. It is estimated that the entire project will require one million dollars.

Notices

THE BANK OF INDIA LIMITED

Registered Office:
70/80, Mahatma Gandhi Road,
FORT, BOMBAY

NOTICE

THE FIFTY-FIFTH ANNUAL GENERAL Meeting of the Shareholders of The Bank of India Ltd. will be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Fort, Bombay, on Monday, the 27th day of March, 1961, at 4 o'clock in the afternoon, to transact the following business:—

1. To receive the report of the Directors and the audited Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1960.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. A. D. Shroff, who retires by rotation, is eligible and offers himself for re-election.
4. To elect a Director in the place of Mr. Ramniwas Ramnarain, who retires by rotation, is eligible and offers himself for re-election.
5. To elect a Director in the place of Mr. Bhagvandas C. Mehta, who retires by rotation, is eligible and offers himself for re-election.
6. To elect a Director in the place of Mr. K. M. D. Thackersey, who retires by rotation, is eligible and offers himself for re-election.
7. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

8. To consider and if thought fit to pass, with or without amendment, the following resolutions as ordinary resolutions:

I. RESOLVED that:

(*a*) The accounts for the year 1961 of the branches of the Company at Bombay (including any branches which may be opened hereafter) shall be audited by Messrs. A. F. Ferguson & Co. and Messrs. S. B. Billimoria & Co., Chartered Accountants, in such manner as may be arranged between themselves and that for the audit of the said branches the Auditors shall be paid such remuneration (over and above the remuneration they may receive as the Company's Auditors) as the Board of Directors may fix.

(*b*) The accounts for the year 1961 of the branches of the Company at Delhi, New Delhi and Jamshedpur (including any branches at the said places or any of them which may be opened hereafter) shall be audited by Messrs. A. F. Ferguson & Co. and that for the audit of the said branches the Auditors shall be paid such remuneration (over and above the remuneration they may receive as the Company's Auditors) as the Board of Directors may fix.

(*c*) The accounts for the year 1961 of the branches of the Company at Hyderabad (Deccan) and Indore (including any branches at the said places or any of them which may be opened hereafter) shall be audited by Messrs. S. B. Billimoria & Co. and that for the audit of the said branches the Auditors shall be paid such remuneration (over and above the remuneration they may receive as the Company's Auditors) as the Board of Directors may fix.

(*d*) The accounts for the year 1961 of the branches of the Company in India at places other than those specifically provided for above (including any branches at such places or any of them which may be opened hereafter) shall be audited by persons qualified for appointment as auditors of the Company under Section 226 of the Companies Act, 1956, and that the Board of Directors be and they are hereby authorised from time to time to appoint one or more qualified auditors for audit of the accounts of the said branches or any one or more of them as they deem fit, in consultation with the Company's Auditors, and to fix the respective terms and conditions of appointment and the remuneration of such auditors.

(*e*) The accounts for the year 1961 of the branches of the Company outside India (including any branches which may be opened hereafter) shall be audited by persons qualified to act as auditors of the accounts of each such branch in accordance with the respective laws of the country in which such branch is situate and that the Board of Directors be and they are hereby authorised from time to time to appoint one or more qualified persons for audit of the accounts of the said branches outside India or any one or more of them as they deem fit, in consultation with the Company's Auditors, and to fix the respective terms and conditions of appointment and the remuneration of such auditors.

(*f*) The Board of Directors be and they are hereby authorised to exercise all such powers and to do all such acts, deeds and things as may be deemed necessary by them for the purpose of giving effect to this resolution.

II. RESOLVED that the Company's Auditors shall be entitled at such times as may be agreed upon between themselves to visit for any one of them, at least once in every calendar year, every branch in India for test inspection and that a report on such test inspection shall be submitted to the General Manager of the Company and that for such work the Auditors shall be paid all out-of-pocket expenses that they may incur for travelling, board and lodging and otherwise and that such payment shall be in addition to the remuneration fixed for the said Auditors.

By Order of the Board of Directors,
T. D. KANSARA,
General Manager,
THE BANK OF INDIA LTD.

BOMBAY, 16*th February*, 1961.

A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member. (*c*) Dividend Warrants will be posted to Shareholders at their registered addresses. Early intimation should be given to the Company of any change of address.

(*d*) The Explanatory Statement required under Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS
(Railway Board)

TENDER No. S—12 OF 1961

Global Tender Enquiry for Steel Materials

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to purchase from established and reliable producers a quantity of about 40,000 metric tons of steel materials comprising mostly of thick plates.

The schedule of requirements has been despatched already to those who have quoted earlier for Board's Tender No. S-8. Any other prospective tenderers who may like to participate may obtain the schedule free of cost from any of the following offices during working hours,

1. Director, Railway Stores, Ministry of Railways (Railway Board), Room No. 337, Rail Bhavan, Raisina Road, New Delhi.

2. Director General, India Stores Department, Government Buildings, Bromyard Avenue, Acton, London W. 3.
3. Director, India Supply Mission, 2536, Massachusetts Avenue, N.W., Washington 8 D.C.

Tenders will be received by the undersigned upto 12.00 hours on the 10th March, 1961, and opened in the office of the Railway Board on the same day.

G. P. BHALLA,
Director, Railway Stores, Railway Board.

NEW DELHI, *20th February*, 1961.

THE SIRPUR PAPER MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FIRST ANNUAL GENERAL MEETING of THE SIRPUR PAPER MILLS LIMITED will be held on FRIDAY the 24th MARCH, 1961, at 4-00 p.m. at the Registered Office of the Company at 'ALI VILLA,' 6-3-655, Somajiguda, Hyderabad-A.P. to transact the following business:

1. To consider the Directors' Report and Audited Accounts of the Company for the year ended 30th June, 1960.
2. To declare dividends on Preference and Ordinary Shares.
3. To appoint Directors in place of Khan Bahadur C. B. Taraporvala and Shri Arvind Narottam Sheth, who retire under Article 122 of the Articles of Association of the Company and are eligible for re-appointment.
4. To appoint Auditors for the current year and fix their remuneration.

   The present Auditors, Messrs. S. B. Billimoria & Co., Chartered Accountants, Hyderabad, Auditors of the Company, retire and are eligible for re-appointment.

   AS SPECIAL BUSINESS.
5. To consider to appoint Shri K. Vijaya Bhaskara Reddy, as a Director of the Company.

   He was appointed as an additional Director of the Company by the Board of Directors and shall hold office under Section 260 of the Companies Act and Article No. 114 of the Articles of Association of the Company only upto the date of the Annual General Meeting. A Notice has been received from a member of the Company, signifying his intention to propose at the Annual General Meeting that Shri K. Vijaya Bhaskara Reddy be appointed a Director of the Company.

   It is considered advisable in the interest of the Company to appoint Shri K. Vijaya Bhaskara Reddy on the Board, to avail of his valuable advice.
6. To consider and if thought fit, to pass with or without modifications, the following Special Resolutions:—

   (i) RESOLVED that the Directors be and are hereby authorised on behalf of this Company to enter into and execute the contract with the Orient Paper Mills Ltd., an associate of the Managing Agents of this Company, for a further period of 5 years, with effect from the 30th July, 1961 for sale, purchase or supply of any goods, to or by the Company on the terms and conditions set forth in the relative draft contract produced at the meeting and initialled for identification by the Chairman and which is hereby approved.

   (ii) RESOLVED that subject to the approval of the Central Government, the Directors be and they are hereby authorised on behalf of this Company to enter into and execute a contract with the Orient Paper Mills Ltd., an associate of the Managing Agents of this Company, for a further period of 5 years, with effect from the 30th July, 1961, for supply or rendering of any services other than that of Managing Agents to or by the Company on the terms and conditions set forth in the relative draft contract produced at the meeting and initialled for identification by the Chairman and which is hereby approved. The Directors be and are hereby further authorised to enter into and execute the said contract on behalf of the Company, subject to any modifications thereof as may be agreed between the Directors and Orient Paper Mills Ltd., for the purpose of complying with any modifications required or conditions imposed by the Central Government in granting its consent as aforesaid.

The Share Registers of the Company will remain closed from 10th March, 1961 to 24th March, 1961, both days inclusive.

By Order of the Board,
For THE SIRPUR PAPER MILLS LIMITED,
P. L. BHANDARI,
Secretary.

Note.—1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

2. The Dividends when sanctioned, will be paid on or before 2nd May, 1961, to those shareholders whose names appear in the Register of Members of the Company on 24th day of March, 1961.

Explanatory statement as required under Section 173 of the Companies Act, 1956 has been posted to the Shareholders of the Company.

Registered Office:
'ALI VILLA',
6-3-655, SOMAJIGUDA,
HYDERABAD: A.P.
31st January, 1961.

BHARAT COLLIERIES LIMITED

NOTICE

THE SIXTEENTH ANNUAL GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Thursday, the 30th March, 1961 at 11-30 a.m., to transact the following business:—

Note: A Member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

In accordance with Section 172 of the Companies Act, 1956, as amended, the Explanatory Statement required by Section 173 of that Act has been forwarded to Members of the Company.

MONETARY STRINGENCY CONTINUES

(From Our Own Correspondent)

BOMBAY, *28th February*

An important development in the money market during the week under review was the Reserve Bank's removal of the ceiling of 2 per cent below the bank rate on deposits repayable on notice or on the expiry of 21 days. An announcement to this effect was made late on Wednesday, 22nd inst., after our last week's money market report had gone to press. With the inter-bank call money rate remaining at well over 5 per cent since January 1961, some argue that there was no point in the Reserve Bank insisting that the banks should not pay more than 2 per cent on call deposits taken from individuals, business houses and financial institutions. These deposits are described as "House money" in market parlance. This, of course, is not a right way of looking at the position. Nevertheless, some banks themselves are of the opinion that higher rates of interest on "House money" will enable them to attract more deposits of a very short-term nature and thereby relieve the acute stringency now being experienced by the market. The Reserve Bank's decision has so far had no impact on the quoted rates as banks are still discussing the extent to which the freedom given by the Reserve Bank should be used.

As in the past weeks, turnover of funds was restricted owing to scarcity of loanable funds. Call money rate among Exchange and larger Indian banks was firm at 5½ per cent. The Reserve Bank was the only supplier for any sizable amounts. There was no change in the short-term interest rates. House money at three to 21 days' notice was nominally quoted at 2 per cent. But it is said that the Executive Committee of the Indian Banks' Association in charge of the inter-bank agreement on maximum deposits is likely to raise this rate by ½ per cent from the current level. A decision is expected to be taken on Thursday, 2nd March, when the Committee is expected to meet and consider the various suggestions that member-banks have made in regard to the inter-bank agreement as a whole. Term money for periods over 31 days but up to and inclusive of 60 days was being offered 3½ per cent, for over 61 days but less than 12 months 3¾ per cent, and for 12 months and over 3¾ per cent.

A net decline of Rs. 1.50 crores in total deposits is disclosed by the Scheduled banks' statement for the week ended 17th February 1961. Since there was a fall of Rs. 9.93 crores in the deposits of the State Bank of India during that week, the deposits of the other Scheduled banks must have actually gone up by Rs. 8.43 crores. Inter-bank borrowings of demand variety have increased by Rs. 2.44 crores, whereas those of time variety have shrunk by Rs. 4.37 lakhs. Reflecting the general stringency in the money market, the total borrowings from the Reserve Bank have continued to swell, by Rs. 7.12 crores on top of a rise of Rs. 2.67 crores in the previous week. Of this rise, the borrowings against usance bills account for Rs. 2.64 crores. The borrowings from the State Bank recorded a modest rise—Rs. 22.62 lakhs of demand nature and Rs. 8 lakhs of time nature. Advances and bills (bank credit) have further increased by Rs. 5.72 crores, in addition to the rise of Rs. 16.28 crores witnessed in the previous week, taking their total to Rs. 1,260 crores. A year ago, they stood at Rs. 1.054 crores. Of the increase of Rs. 5.72 crores during the week under review, only Rs. 85 lakhs is accounted for by the State Bank of India. Investments, however, have dropped by Rs. 11.56 crores. But as the investment of the State Bank of India have declined by Rs. 10.14 crores, it is clear that the fall in the investments of other commercial banks is only Rs. 1.42 crores.

The gilt-edged market was firm, with good demand for short-dated central loans and short- and medium-dated State issues from special quarters, such as the Life Insurance Corporation, the Provident Funds and Sinking Funds of various Govt. ernments and local bodies. But the prices of most of the Central issues remained changed. Only 2½ per cent 1961 and 3½ per cent 1962 closed 10 nP higher at Rs. 99.35 and Rs. 99.75 respectively. 3 per cent 1963-65, 1966-68 and 1970-75 and 3½ per cent 1964 showed a smaller rise, namely, 5 nP each. Some of the other Central loans actually closed a shade lower, while the rest remained unchanged. In State loans, rises from 10 nP to 90 nP were noted. Thus 4 per cent Kerala 1969 moved up by 90 nP to Rs. 97.90. Similarly, 4½ per cent Madhya Pradesh 1970 recorded a rise of 60 nP to close at Rs. 101.50. In general, 4 per cent mediumdated showed increases ranging from 15 to 40 nP.

There has been a further weakening of sterling in the New York market. The latest available rates are (28th February 277.520-279.550 cents per £ for spot and 278.820-278.850 per £ for three months' forward. As compared with the rates as on 22nd February, there is a decline of 0.28 cent and 0.26 cent, respectively. Reflecting this trend, U.S. dollars have come to cost more in terms of rupees. The banks' buying and selling rates for ready T.T. on New York are: Rs. 479.00 and Rs. 475.50 per 100 dollars, respectively, as against Rs. 478.50 and Rs. 475.00 a week ago.

HIDES HARDEN

(From Our Own Correspondent)

MADRAS, *27th February*

Arrivals of tanned hides and calves were of moderate volume, and offtake by shippers was good. Export inquiries were brisk all round and even lower grades were in demand. Prices hardened steadily.

Tanned goat ruled firmer, due to better prices paid for medium and heavier weights by importers on the Continent—all grades. Lighter weights were not moving freely. Tanned sheep was firm for all classes.

In the tanned skins German auctions held last week, goat skins realised 3d. to 9d. over current c.i.f. levels and sheep at current c.i.f. prices. The quantities sold, however, were only 40 to 50 per cent of those catalogued for sale.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *28th February*

The bullion market presented a distinctly steady trend during the major part of the week under review. The steadiness was due to expectations of enlarged demand for both gold and silver after the *Holi* festival. Advices from Delhi and Calcutta were also quite encouraging. Values, as a consequence, tended to move up. Business actually put through was, however, restricted, as several traders preferred to await the emergence of a clear picture regarding the trend of offtake and the details of the Central Government budget for 1961-62. Prices would have registered a notable rise but for some tired liquidation in gold on rumours of contraband arrivals and scattered selling in silver.

The daily average offtake of both gold and silver during the week was lower at 3,000 tolas and 9 bars, as against 3,600 tolas and 11 bars, respectively, in the previous week. Daily arrivals were at an average of 4,500 tolas and 23 bars, as against 5,600 tolas and 21 bars. The floating stocks of gold are reported to be around 40,000 tolas and those of silver are estimated at 600 bars.

The feature of trading in the bullion market during the week was that the rate for transferring commitments from the *Fagun* (March) to *Chaitra* settlement in gold was against bulls throughout, the actual rate increasing from 10 nP on Thursday to 25 nP today. On Wednesday last week, both the settlements were quoted on par. In silver, however, the carry-forward rate was in favour of bulls; it was 15 nP today, as against 55 nP last week-end. The premium commanded by ready gold over the forward. (*Fagun*) increased from 15 nP last week to 30 nP on Saturday the 25th inst., but declined thereafter and stood at 5 nP today. Ready silver continued to be quoted at a discount under the forward, the actual discount in the course of the week rising from 15 nP to 25 nP.

Adjustment rates fixed today were Rs. 121.50 per 10 grams (0.85 tolas) for gold and Rs. 206.30 per kilogram (85.7 tolas) for silver. The corresponding rates for Wednesday last week were Rs. 121.55 and Rs. 206.05, respectively.

Gold and jewelleery weighing about 1,240.56 kilograms (106,353 tolas) and ten sovereigns valued at Rs. 133.38 lakhs approximately were seized by the customs authorities during 1960. Giving this information in the Lok Sabha on 22nd February, the Union Finance Minister claimed that the precautionary measures taken by the authorities were reasonably adequate. He, however, stated that suggestions had been made from time to time by subordinate customs officers regarding the legal or administrative powers they considered necessary; this would be one of the questions to be considered in connection with the proposed revision of the Sea Customs Act. Replying to another question, the Minister gave details of the seizure of gold at Bombay from the countrycraft *Dhan Prasad*. The countrycraft, he said, arrived in Bombay from Vengurla. The officers of the Bombay Customs Department, on a search of three members of this vessel, found that each of them had 100 bars of gold of ten tolas each, concealed in cotton jackets worn underneath their shirts. The countrycraft was then searched, when 2,626 bars of gold each weighing ten tolas were recovered from it. Thus a total quantity of 29,260 tolas of gold valued at about Rs. 39,50,000 was recovered from the vessel and the three crew members. Eleven members of the crew had so far been arrested. Further investigations were in progress.

The world price of gold in the London bullion market eased further during the week, from $35.12 to $35.00½ per fine ounce. Ready gold after declining from 251s. to 250s. 8d., recovered to stand at 251s. yesterday. A recent report from New York says that purchases of gold by foreign central banks have continued since the new Administration took its firm stand on the gold price, though the outflow has been at a sharply diminished rate. The total gold stocks of the U.S. as on the 16th inst. were $17,391 million. Ready silver was unchanged at 79½d., while the forward came in for selling and receded from 80¼d. to 79¾d. Silver in New York was unaltered at 91.375 cents.

The following table shows the trend of the market during the week:

	28-2-1961 (closing)	High	Low	22-2-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready .99 fine)	121.60	122.05	120.75	121.80

* 1st March settlement. † 2nd March settlement.
** April settlement. † † April settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *28th February*

During the week of the 1961-62 budget, the cotton futures market put on a cheerful appearance. This is not because of optimism regarding the budget (none, of course, expect any shocks) but because of a change in trading sentiment brought about mainly by the reported move of the Indian Cotton Mills' Federation to purchase and store cotton for subsequent distribution to mills. Operators are inclined to think that, if this move were put in practice, it will not only help to lift the crop as and when it comes to the market but would also obviate the need for Government action to stabilise cotton prices which has of late been demanded by a section of growers on the score of low prices and difficulty of marketing cotton. The upward trend of mills consumption of cotton and the possibility of many mills working third shifts indicates that demand for cotton would continue to be at a high level. Although the prospects for import of U.S. cotton continues to be bright (latest reports indicate that yet another agreement involving 300,000 bales of cotton will be signed shortly) it is feared that the raising of the support level for U.S. cotton to 82 per cent of parity would make U.S. cotton somewhat dearer. This consideration has also imparted strength to the market. Advices from the spot market continue to be bullish. These factors have influenced a considerable volume of buying both by local and upcountry interests. Investors also have come forward to support the market. Consequently, the Jarilla April 1961 contract has firmed up from Rs. 567.50 at the beginning of the week to Rs. 579.25 yesterday. The trend of the market is a shade easy today, thanks to budget uncertainties.

A noteworthy development of the week is the commencement of trading in the I.C.C. Jarilla August 1961 contract. It is significant that the contract opened at a premium of about Rs. 12 over the April contract, indicating the traders' assessment of the prospective trend of cotton prices. Although the contract tended to recede in to-day's trading, in sympathy with the April contract, it has maintained the spread between the two contracts.

The following table indicates the trend of prices of the contract during the week:

(In rupees per three quintals)

	28-2-61	*High*	*Low*	22-2-61
I.C.C. Jarilla April ...	576	579.25	560	566.50
I.C.C. Jarilla August	588	591	588	588*

*On 27th February 1961.

In the spot section, mill demand was brisk. Almost all new crop varieties evoked inquiries. Mills were active in CO2, L147, Khandesh, Vijay, Digvijay, Surti, etc. New crop Laxmi and Jaydhar also evoked the attention of mills.

Export inquiries are confined to *zoda* and yellow pickings. Traders expect a further quota of at least 25,000 bales of Bengal *Deshi*.

Interest in foreign cotton was subdued. Stray demand was noted for East African and selected Sudanese cotton. Other growths were neglected.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Khamgaon 865; CO2 1,150-1,250; Digvijay 985; L. 147 1,020; Kalyan 825; B.P. 52 1.320; B.P. (UNUG) 1,355.

As regards the foreign markets both the Karachi and Alexandria cotton futures markets ruled easy owing to selling pressure in the wake of larger arrival of new crop and slow export demand. But the Liverpool and New York cotton futures market, on the other hand, firmed up, thanks to the fixation of higher support rate for the 1961 U.S. cotton. Announcing this, Mr. Orville Freeman, the new U.S. Secretary of Agriculture, stated on the 22nd February that the support rate for 1961-62 cotton crop will be 82 per cent of parity and that the export subsidy rate for U.S. cotton will be raised from 6 to 8.5 cents per lb. This means that the farmers will get a minimum of 33.04 cents per lb. for middling one inch cotton. This compares with 28.38 cents proposed by Secretary Freeman's predecessor, Mr. Benson, in the last budget report of the Eisenhower Administration. The actual price of cotton is expected to be round 34 cents, about 10 per cent more than the present foreign price of U.S. cotton. This will, however, be nearly made up by the higher subsidy rate so that U.S. exporters will be able to sell cotton abroad at 25.5 cents per lb. as compared with the present price of 24 cents per lb.

Reflecting this higher support level the New York cotton futures market firmed up as soon as the news was published. Both spot and futures prices rallied and continues to rule firm to date.

Announcing the new support rate and the change in subsidy rate, the Department of Agriculture said that these two measures will be advantageous to foreign countries for two reasons:

(1) Textile mills abroad will be able to buy the same American cotton that U.S. mills use at 8.5 cents less per pound. This will give their finished cotton goods an advantage over the products of U.S. mills. (2) Cotton cultivation in other countries is likely to be stimulated since the U.S. cotton exported, notwithstanding the subsidy, will probably be still 1.5 cents higher than the prevailing world price of 24 cents a pound.

The immediate reaction of the Liverpool cotton market was a rise in price of the near deliveries of both the American and American type

contracts. But the trend of the market subsequently reflected the operators' confidence that the enhancement of the subsidy rate would cancel the effect of the rise in support level so that the world price would not be much affected. The rise in prices immediately following the announcement proved short-lived. In fact, values tended to decline soon after.

ART SILK YARNS RISE FURTHER

(From Our Own Correspondent)

BOMBAY, *28th February*

Art silk yarns continued to march upward during the week under review. The renewed firmness was engendered by reports that several weaving mills in Bombay and upcountry centres were trying to build up as much stocks as possible following apprehensions of possible increases in the rates of excise duty on indigenous yarn and import duty on foreign yarn. Fears of a cut in import quota during the ensuing half-year (April-September 1961) also imparted strength. In sympathy with art silk yarn and encouraged by good demand from consuming centres, staple fibre yarn also recorded an improvement. Cotton yarns were generally quiet. Finer counts met with good support at higher levels.

Cupressa Bemberg yarn (60 x 1) March delivery forged ahead from Rs. 2,440 to Rs. 2,500. February contract spurted by Rs. 30 to Rs. 2,450. Spot cupressa was quoted at Rs. 2.507. Among foreign art silk yarns, 120 Japan hardened by Rs. 13 to Rs. 1,446. 150 Japan picked up Rs. 14 to Rs. 1,667. But 120 Italy shed Rs. 7 to Rs. 1,378. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade improved by 20 nP to Rs. 12.21. 120 Bt. cones 1st grade was fully maintained at Rs. 13.64.

Staple fibre yarn (40 x 2) February delivery rallied from Rs. 836 to Rs. 850. April position was done at Rs. 832. as against Rs. 833. Spot Kohinoors increased by 15 nP to Rs. 10.12.

In the cotton yarn section, Moderns were dull at Rs. 18.75. 20 counts New Greats attracted special support and rose by 25 nP to Rs. 21.75. Thirty counts Simplex were firm at Rs. 26.75, while New Greats eased by 25 nP to Rs. 26.25. Forty counts Minaxis encountered selling and declined by 12 nP to Rs. 32. Maduras were quiet at Rs. 32. Sixty counts Gokaks firmed up by 50 nP to Rs. 50.50. Finlays changed hands at Rs. 65.65. Eighty counts Mahendras advanced by Rs.2.02 to Rs. 70.70. Finlays were fully maintained at Rs. 81.81.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those six days ago.

	28-2-1961	22-2-1961
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 kg.)		
February	2,450.00	2,420.00
April	2,500.00	2,440.00
60/1 Cupressa Bemberg spot	2,507.00	2,548.00
120 Japan (per 100 kg.)	1,446.00	1,433.00
150 Japan (per 100 kg.)	1,667.00	1,653.00
120 Italy (per 100 kg.)	1,378.00	1,385.00
Staple fibre yarn—		
40×2 February (per 90.72 kg.)	850.00	836.00
40×2 April (per 90.72 kg.)	832.00	833.00
40×2 Century (per kg.)	9.86	9.86
40×2 Kohinoor (per kg.)	10.12	9.97
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	18.75
20s New Great	21.75	21.50
30s New Great	26.25	26.50
40s Madura	32.00	32.00
60s Gokak	50.50	50.00
80s Mahendras	70.70	68.68

OILSEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, *28th February*

Barring cottonseeds and sesamum which moved up on special support, the oilseeds market remained subdued during the major part of the week under review. The sentiment of operators was adversely affected partly by larger arrivals from major production centres and partly by fears of a further increase in excise duty on vegetable oils and its extension to include other oils. Traders noted the increase in sales tax on groundnuts proposed by the Finance Minister of Gujarat in the State budget for 1960-61. Groundnuts which ruled firm last week drifted lower as the current week advanced, thanks to reduced offtake by *vanaspati* manufacturers and crushers in the wake of increased arrivals from upcountry centres. Export enquiries were also dull.

Nizam bold eased by 25 nP to Rs. 50.75. Coromandal improved from Rs. 51.75 to Rs. 52.37, but moved down to Rs. 51.62, with a net loss of 13 nP over the week. There was hardly any activity in groundnuts. May contract was nominally quoted at Rs. 220. Oil ex-mill declined by 20 nP to Rs. 21.05. Railway receipts fell from Rs. 21 to Rs. 20.85 before closing at Rs. 20.95.

Castorseed was subjected to stale liquidation and tended to lock down. Arrivals of new crop from the Hyderabad side were steadily increasing. Besides, prospects of castor oil exports remained somewhat bleak, in view of the pressure of Brazilian offerings at lower prices to the U.S. May 1961 contract, after rising from Rs. 172.87 to Rs. 173 earlier in the week, gave way subsequently to Rs. 170.25. Ready Madras dropped 13 nP to Rs. 33.62. Kanpur lost 15 nP to Rs. 32.50. Oil Commercial eased by 10 nP to Rs. 14.

In the linseed section, there were enlarged pressure of supplies, particularly from the South. Reports of substantial selling of Argentine linseed oil to France did not have any effect, in view of the domestic price being distinctly out of parity with world prices. Linseed May 1961 contract declined by 31 nP to Rs. 35.06. Bold ready lost a rupee to Rs. 35.25. Oil sagged from Rs. 16.40 to Rs. 16.20.

Cottonseeds, as stated above, were well maintained in sympathy with the firmness of raw cotton. May 1961 contract rose from Rs. 91.25 to Rs. 93.50, before closing at Rs. 92.75, the net gain being Re. 1.50. Whites put on 10 nP to Rs. 19.10. Both non-whites and Berars were fully steady at Rs. 19.

Sesame also ruled firm on good support from the South. Offerings from Warora and Chanda were limited. Sesame bold spurted by Rs. 5 to Rs. 335. Sesame oil hardened by 75 nP to Rs. 26.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	28-2-1961	22-2-1961	14-2-1961
	Rs.	Rs	Rs.
Groundnut			
February 1961	220.00	220.00	220.00
May 1961	220.00	220.00	218.50
Nizam bold	50.75	51.00	48.12
Coromandel ready	51.62	51.75	50.00
Khandesh quality	51.50	51.75	49.75
Oil ex-mill ready*	21.05	21.25	20.50
Railway receipts*	20.95	21.00	20.25
Castorseed			
May 1961	170.25	172.87	170.87
Ready Madras	33.62	33.75	33.44
Ready Kanpur	32.50	32.75	31.87
Oil B.S.S.†	15.00	15.15	14.50
Oil commercial†	14.00	14.10	13.65
Linseed			
May, 1961	35.06	35.37	34.59
Bold ready	35.25	36.25	34.62
Oil ready†	16.20	16.40	15.10
Cottonseed			
February 1961	—	93.00	90.00
May 1961	92.75	91.25	89.50
Niger seed	37.00	39.00	38.75
Kardi seed	27.00	26.50	26.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR DEMAND FOR TEA AT LOWER PRICES

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 21st February

A total of approximately 350,000 kilograms was offered in Sale No. 8 held today. Quality from all districts was generally a little preferable to last. There was good general demand but at lower rates. Low mediums and low grown descriptions met with fair selling where quality was markedly improved, but generally realising prices much below those ruling in the previous week. Black leaf brokens and fannings followed the downward trend of the market and were generally easier. Nilgiri whole leaf grades sold well but from other districts prices declined by 15-20 nP. C.T.C. and legg-cut types again sold at fully firm and sometimes dearer rates.

As the Holi *festival falls on Friday, 3rd March* 1961, *it has been necessary for us to go to press a day earlier than usual. Consequently, our review of markets had to be brief and prepared one day in advance. Our customary reports on wheat and sugar from Hapur were not received in time for inclusion in this issue.*—ED.

	1961	1960
	Rs.	Rs.
Low medium ...	4.70-4.85	4.41-4.52
Medium	4.85-5.15	4.63-4.96
Good medium ...	5.20-5.80	4.96-5.51
Quality	5.40-7.80	5.95-9.15

The average selling price realised in the sale was Rs. 5.21 per kilo, as against Rs. 5.22 a week earlier and Rs. 5.56 in the corresponding sale last year.

Dust Sale No. 8:—A quantity of 158,400 kilograms was on offer in Dust Sale No. 8 held on Thursday, 23rd February. There was good general demand but prices again followed a lower trend. Low mediums and mediums were taken up at prices which were 10-20 nP below last whilst good medium descriptions declined by 20 and sometimes 30 nP per kilo. Residual grades and milled dusts were the weakest feature of the market and sold at much lower levels. Highgrowns met with useful enquiry and sold at around last prices. C.T.C teas were considerably easier following low demand but legg-cut and C.T.C. types again sold well.

The average price realised in dust sale No. 8 was Rs. 4.94 per kilo as compared with Rs. 5.02 a week before and Rs. 4.65 in the corresponding sale last year.

Export Quota:—There are large sellers at ½ nP per kilo and buyers are rather scarce; only small business has been transacted at this rate.

Colombo:—Just under 6¾ million pounds were offered this week. There was strong general demand and prices for the best liquoring dimbulas were dearer following enquiry. Uvas and mediums came to a lower market and were easier by 5 to 10 cents following less activity from Australian buyers. Lowgrowns sold well at firm levels.

London—North Indian and other growths:—In Monday's auction there was strong demand and prices were fully firm to dearer especially for the lower kinds. Plain brokens pekoes is quoted at 3-8½d.

Ceylon and South Indians:—Offerings in Tuesday's sale amounted to 23,101 packages of which 6,913 packages originated from South India. Demand was good and prices were fully firm for all descriptions.

As we go to press. Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale No.* 9: 450,000 kilograms. Good general demand. Plain low medium and medium brokens 5 to 10 nP easier, but similar fannings steady. Good mediums 20 to 30 nP. Lower highgrowns neglected."

METALS MAKE HEADWAY

(From Our Own Correspondent)

CALCUTTA, *28th February*

Under the impact of advices of impressive gains in prices on the London Metal Exchange, and reinforced by acute shortage in supplies, further addition to prices of tin and electrolytic zinc was recorded in the metal market during the week under review. Electrolytic copper opened on the London Metal Exchange at £226 a ton and steadily rose to close at £230½. The main cause of the rise, despite a comfortable world supply position, was the increased demand from West Germany. The troubled situation in the Congo has not so far affected supplies, and according to present indications, supplies exceed demand. The higher trend in London was attributed also to the troubled labour situation in Chilean ports and apprehensions of disruption in the flow of supplies. Locally, berry quality scrap was quoted at Rs. 235 a cwt., as against Rs. 238 a week ago and utensil scrap at Rs. 223, as against Rs. 224.

After opening at Rs. 652 tin spurted to Rs. 665 to close steady at Rs. 662. The gain emphasised the existing shortage and anticipations of poor arrivals in the near future. In London, the price closed at £803¾ a ton, as against opening of £797. Advices from Singapore also disclosed a similar higher trend. The existing acute shortage would call for the provision of a higher quota in the next licensing period. At Rs. 166.50 electrolytic zinc gained Re. 1. The metal was in short supply. Lead was quiet at Rs. 63 a cwt.

RAW JUTE HARDENS

(From Our Own Correspondent)

CALCUTTA, *28th February*

The possibility of Governmental action to interfere with the trend of prices having receded, raw jute recorded a further addition to values and jute goods, though unchanged, were steady during the week. That genuine business in goods for export was paltry was evident from poor inquiries for freight. It had at first been rumoured that the Government, exercising the powers under the Essential Commodities Act, would fix maximum prices and requisition stocks. These rumours died out, but they gave place to reports that officialdom was influencing the industry to fix maximum prices and thus exercise voluntary control. In fact, the Union Commerce Ministry mooted this suggestion at a conference with the representatives of the industry. Following this, some move had been anticipated, though the wisdom of the desirability of any such step had been questioned by all those who had the knowledge of the experiences of the market trends when maximum prices were in force a few years ago. Mr. W. D. McLean, Chairman of the Burlap Business Relations Committee of the U.S. Textile Bag Manufacturers Association opposed in unmistakable terms any attempt for control on the jute trade and industry in India in a talk on Tuesday last and, with this, any lingering apprehension of control in any form whatsoever was laid to rest. For the views coming as they did from a representative of the industry which is a significant buyer of Calcutta hessian were thought to bring sufficient light to officials trying to solve the problems of the industry with fancied ideas and with no memory of past experience.

Mr. McLean warned that, unless prices declined, 1961 would see a further substantial decline in offtake and that such consumers as feed mills were likely to convert their packaging plants to paper and bulk. If this actually happened, there would be no return to burlap, Mr. McLean declared. He also said that feed, potatoes and fertilisers were progressively being packed in paper bags. It is to be hoped that the next jute crop would be satisfactory in relation to both quantity and quality. The folly of neglecting quality has been amply demonstrated in recent months. Market circles would, therefore, impress on the Government that, since the present high fibre prices would be an incentive for farmers to sow even on a greater area, State agriculture organisations should lose no time in making adequate arrangements to distribute better seeds and to ensure that farmers sowed those in preference to whatever they possessed now. The recent pre-monsoonish showers are enabling farmers to prepare the land, and no time should be lost in the distribution of good quality seeds by State agricultural farms.

Substantial covering business by local operators was a feature of trading in the goods market on Tuesday last. This led ready hessian 40" 10 oz. to rise from Rs. 67.50 to Rs. 68.25, while ready B. twills were unchanged but steady at Rs. 208.50. Interest shown by overseas buyers indicated that they were determined not to enter into commitments other than to meet needs of a hand-to-mouth nature. It is certainly a blessing in disguise that overseas buyers are not purchasing for replenishing their stocks, as in that event prices would jump. Present indications are that they would be content to proceed cautiously as at present hoping that, by April-May, the possibility of a higher crop would release more fibre and enable mills to increase production and reduce prices of goods. Covering business was again a feature on Wednesday to push B. twills to Rs. 209.25 and hessian 40" 10 oz. to Rs. 69.00. At this stage, there were reports of a fresh deal with Russia for 6 million hessian bags against March-April delivery, but, as these subsided later on Thursday, B. twills markedly fell to Rs. 208.50. At Rs. 68.50 hessian 40" 10 oz. was fractionally lower. On Friday, however, B. twills recovered to Rs. 207.50 and hessian 40" 10 oz. to Rs. 68.75. Although export business was small, a note of recovery was in evidence pushing up B. twills to Rs. 208 and hessian 40" 10 oz. to Rs. 69.50. With no support, conditions were easier yesterday with B. twills sagging to Rs. 202 and hessian 40" 10 oz. to Rs. 68.00.

Early in the week, a quota of 300,000 maunds were released to mills. Since buying by mills was scattered, prices were unchanged; however, as the week progressed rates in up-country markets gained and Calcutta rates were, thereafter, pushed up by Re. 1 per maund. Arrivals did not improve, and this continuing phenomenon only tended to confirm earlier views of a real shortage. Advices from Narayanganj markets showed that prices maintained at high levels but that overseas markets continued to resist the higher levels. Price fluctuations in the Calcutta market are reflected in the following table:

(Per maund ready delivery)

	Opened at Rs.	*Rose to* Rs.	*Closed at* Rs.	*Gain* Rs.
Assam bottoms	64.50	65.00	65.00	0.50
Northern bottoms	63.50	64.50	64.00	0.50
Daissee bottoms	66.50	67.50	67.00	0.50

TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, *28th February*

Fair attention was in evidence in yesterday's export sales, when prices were steadier or easier, depending on quality. A similar trend was also in evidence during the internal sale held here in the last week. The small increase of a little over 1.36 million lbs. to 144 million lbs. in the U.K. tea stocks in the week ended 17th February was noted. The strong conditions in last week's Mincing Lane sales when liquoring Assams gained 1d. to 2d. per lb. were attributed to London's need for more tea against replenishment of stocks before the season closed.

With the shipments of tea for direct participation in London sales being practically over, the tea that was shipped in the week was that which was auctioned in Calcutta. These shipments, it is expected, would be completed before the beginning of April.

The news that British consumption of tea in 1960 rose by 8¼ million lbs. from 496¾ million lbs. in 1959 has only emphasised the fact that while India might have earned more from exports as a result of increased prices, exports of Indian tea to the U.K. fell in quantity. Thus, the increased needs of the U.K. should have been met by other producing countries. This should serve as an adequate reminder that African production of tea is fast increasing and is by and large making itself felt in London auctions.

Against this background, the ardent plea put forward by Mr. K. Ghosh in his presidential address to last Friday's annual meeting of the Calcutta Tea Merchants' Association for a reduction in the export duty should serve as a reminder to authorities that continued silence to the industry's demand in this regard did not over-simplify the issue. He said that India's export duty only increased the competitive capacity of such countries as East Africa, Indonesia, Formosa and China which did not levy any such duty. He also criticised the sales tax, and said the manner of its realisation created difficulties for internal buyers.

It may be noted in this connection that despite an impressively higher output in South India in 1960—it reached an all-time record of 169 million lbs. as a result of more careful plucking and manufacture—the 5 per cent Kerala sales tax prevented satisfactory expansion of sales through Cochin auctions. For, in order to avoid the tax, sellers were more inclined to ship tea direct for London auctions.

The suspension of tea propaganda in India by the Tea Board also came in for criticism at the hands of Mr. Ghosh. He said that, although tea should be considered short at present, the propaganda activities of the Board should be resumed. The country planned to raise production to 900 million lbs. by the end of the third Plan, and with such a huge increase, according to Mr. Ghosh, increased internal consumption should be considered a buffer.

In the internal sales held during last week, dusts on offer aggregated 21,978 chests. A good general demand was in evidence. Medium C.T.Cs possessing a clean leaf appearance hardened, though irregularly, while fibrous teas of this type eased. Prices of good C.T.C. teas were pushed up, and the best teas of this category rose impressively. Orthodox teas eased, while bright legg-cut teas were steady. The quotations (in rupees) per 1 kg. inclusive of sales tax were: good Assam C.T.C. dust 6.20 to 6.60, medium Assam C.T.C. 5.60 to 5.90, legg-cut dust 5.05 to 5.40, medium Assam dust 4.80 to 5.20, and plain orthodox dust 4.70 to 4.90.

Leaf offerings amounting to 1,857 chests met with a good general demand.

Prices of quality teas recorded fair gains during yesterday's export auctions when offerings totalled 70,651 packages. Dooars D.O.Ps and all clean black B.Ps and P.Fs were firm while prices of the more ordinary types eased by 10 nP. Medium Assams possessing bright liquors met with keen support but the plainer teas were quiet and often eased. Good support was accorded for "teas for price." Prices of legg-cut teas were dearer. The best C.T.Cs possessing bright liquors sold well while teas having ordinary liquors eased by 20 nP. Keen competition was offered to secondary grades which were the strongest feature of the sale and recorded handsome additions. Leaf grades were steady, the poorer stalky teas being in greater demand than the better types. Darjeelings met with an eased market.

The quotations (in rupees) per 1 kg. inclusive of excise duty were: Best Assam C.T.C. fannings 5.90 to 6.40, best Assam C.T.C. B.P. 5.80 to 620, clean black pekoe 5.20 to 5.50, medium fannings 4.80 to 5.10, medium B.P. 4.70 to 4.90, plain fannings 4.70 to 4.90 and plain B.P. 4.60 to 4.70.

The Flying Sherpa

AIR-INDIA's own cargo service, The Flying Sherpa, between India and U.K. via the Middle East and Europe.

The Flying Sherpa is a specially designed Super Constellation freighter aircraft with a total capacity of 12 tons. It has double doors and reinforced flooring for the uplift of heavy and bulk cargo.

Pressurized and heated cabin for livestock, with trained attendants on board.

Ideal for imports of heavy machinery and spare parts at attractive charter rates, Please apply.

THOUSAND-CRORE BUDGET OF CENTRAL GOVERNMENT

REVENUE DEFICIT OF RS. 60.60 CRORES COVERED BY ADDITIONAL TAXATION

TO Mr. Morarji Desai goes the distinction of having presented, for the first time in the history of the Central Government, a thousand-crore budget. Both the gross revenue receipts and the gross revenue expenditure are expected to exceed the four-figure total of Rs. 1,000 crores in the ensuing financial year, that is, April 1961-March 1962, the first year of the third Plan. The revenue receipts are estimated at Rs. 1,023.79 crores (including Rs. 60.87 crores being the Centre's share of resources sought to be raised by additional taxation) and expenditure at Rs. 1,023.52 crores.

The estimated revenue receipts for 1961-62 on the existing basis of taxation is put at Rs. 962.92 crores which represents a rise of Rs. 39.20 crores, as compared with the revised estimate of Rs. 923.72 crores (budget estimate was Rs. 919.65 crores) for the current year. The rise has more than been neutralised by the marked increase of Rs. 66.14 crores in expenditure which for 1961-62 is estimated at Rs. 1,023.52 crores, as against the revised estimate of Rs. 957.38 crores for 1960-61 and the original budget estimate of Rs. 980.35 crores. The anticipated deficit on revenue account, as a consequence, has widened to Rs. 60.60 crores in 1961-62, while the same for 1960-61 has narrowed down from Rs. 60.70 crores (budget estimate) to Rs. 33.66 crores (revised estimate), in view of the reduction in expenditure from Rs. 980.35 crores (budget) to Rs. 957.38 crores (revised). The revenue deficit of Rs. 60.60 crores for 1961-62 is proposed to be converted into a surplus of Rs. 27 lakhs by recourse to additional taxation to the tune of Rs. 63.17 crores—Rs. 60.17 crores through indirect taxes (Rs. 29.27 crores from customs and Rs. 30.90 crores from excise duties) and Rs. 3.00 crores through direct taxes. The share of State Governments in the additional excise duties is Rs. 2.30 crores, so that the estimated net accrual to the Centre's revenue is Rs. 60.87 crores.

1960-61 (Revised Estimates)

Revenue from customs during 1960-61 will be Rs. 163 crores and Central excises (including additional excises) Rs. 394.98 crores, showing an increase of Rs. 15.37 crores over the original estimates, taxes on income (including corporation tax) are expected to increase by Rs. 25 crores. This is attributed mainly to the completion of a larger number of assessments pertaining to earlier years and better realisations than originally anticipated. As a result, the share of income-tax payable to States will go up by Rs. 34.92 crores. But this will be partially neutralised by a reduction of Rs. 7.43 crores in *ad hoc* grants to States in lieu of the loss in their share of income-tax following the changes in the company tax structure for which provision was made in the expenditure estimates. The surcharge on iron and steel, which is transferred to the equalisation fund is likely to yield Rs. 2.1 crores less, while the grants under the P.L. 480 programme will drop by Rs. 5.00 crores.

The revenue expenditure this year is now estimated at Rs. 957.38 crores, showing a saving of Rs. 22.97 crores. Of this, saving in defence expenditure accounts for Rs. 5.54 crores. The saving in civil expenditure is a cumulative effect of changes over several heads and the saving on defence services is mainly due to a lower expenditure on the purchase of stores and equipment than was originally anticipated. Grants to States for raising the emoluments of low-paid employees will increase by Rs. 2.41 crores

1961-62 (Budget Estimates)

In the coming year, customs will show an increase of Rs. 1 crore over this year's revised estimates. Union excises are likely to improve further by Rs. 11.26 crores, taxes on income and corporation tax together by Rs. 6.00 crores. The contribution from Railways is expected to increase by Rs. 16.23 crores. Further, the Railways will pay an additional annual contribution of Rs. 12.5 crores to the General Revenues in lieu of the tax on railway fares which will be distributed as grants among the States. The profits of the Reserve Bank show an increase of Rs. 2.5 crores over the current year's amount of Rs. 40 crores. The grant under P.L. 480 is estimated to go up by Rs. 5.00 crores. The share of income-tax payable to the States is expected to be lower by Rs. 6.19 crores, mainly on account of smaller payment of arrears in respect of earlier years. These improvements will, however, be partly counterbalanced by decreases under several heads, notably the further drop on the surcharge on iron and steel.

Civil expenditure will show an increase of Rs. 49.94 crores over the current revised estimates. The growing volume of internal and external borrowings account for an increase of Rs. 9.85 crores under DBT services. The variations in respect of the surcharge on iron and steel and the grant under P.L. 480 will also be reflected on the expenditure side. Excluding grants to States and transfer of the surcharge mentioned earlier, social and developmental services are expected to cost Rs. 32.88 crores more. The *ad hoc* grants to the States will go up by Rs. 2.76 crores. Excluding the grants payable as a result of the abolition of the tax on railway fares, grants to States will decrease by Rs. 18.35 crores, mainly on account of the discontinuance of the grants for raising the emoluments of low-paid employees which were payable only during the second Plan period.

The net expenditure on Defence service show an increase of Rs. 16.2 crores. The overall increase in Defence estimates is largely the result of additional commitments of Armed Forces, including expansion of certain establishments and provision of payments to Service officers on the basis of the recommendations of the Pay Commission.

Capital Budget

The current (1960-61) year's capital expenditure budget is now estimated at Rs. 416 crores, an increase of Rs. 45 crores over the original estimates. This would exclude the adjustment for the transfer of assistance from the U.S.A. to the Special Development Fund, which is technically classified as capital expenditure. On account of large imports, particularly wheat, the net expenditure on the purchase of foodgrains will increase by Rs. 30.48 crores. The requirements for the construction of border roads are likely to exceed the original estimate by Rs. 13.5 crores. An additional amount of Rs. 7.94 crores will be required for exploration of oil by the Oil and Natural Gas Commission, while Rs. 8.27 crores have to be paid to the World Bank under the Indus Waters Treaty. These increases would be partly counter-balanced by shortfalls under certain other items of capital expenditure.

The provision for capital outlay next year would be Rs. 454 crores. This increase reflects the additional requirements in the first year of the third Plan.

In addition to this direct capital outlay, the estimates provided for Rs. 356.07 crores this year and Rs. 409.22 crores next year for loans to States and Rs. 174.37 crores this year and Rs. 170.60 crores next year for loans to other parties, including Port Trusts, Government-owned Corporations and foreign Governments.

Plan Outlay

The total Plan outlay in the first year of the third Plan, for both the Centre and the States, will be of the order of Rs. 1,166 crores, the Centre's share being Rs. 966 crores. Of this amount, Rs. 181 crores will be on revenue account, Rs. 762 crores as capital outlay, including loans and Rs. 23 crores provided by the railways from their own resources. It is expected that the States will find Rs. 200 crores from their own funds, thus making up an outlay of Rs. 552 crores for the State Plans. The outlay on the Central portion of the Plan will be Rs. 614 crores.

On the basis of present assessment, the foreign assistance expected during the coming year is estimated at Rs. 421 crores. The net investment of P.L. 480 funds is likely to be of the order of Rs. 96 crores including the transfer of Rs. 36 crores from the moneys formerly deposited with the State Bank. In the budget for the coming year, credit has been taken for a gross market borrowing of Rs. 235 crores. Small savings (net) are put at Rs. 105 crores. The current year's budget had assumed credit for market loans at Rs. 250 crores, including Rs. 25 crores from Prize Bonds. During the year, two loans were floated for a total sum of Rs. 175 crores. The total amount subscribed was Rs. 180.70 crores, including Rs. 74.6 crores by conversion Prize Bonds were expected to yield Rs. 12.5 crores by the end of the year. For the first time, the year is likely to end with a net collection of Rs. 100 crores.

Taxation Proposals

We give below a synopsis of the taxation proposals:

DIRECT TAXATION

Income-tax and Super-tax

RATES OF TAX FOR FINANCIAL YEAR 1961-62

1. *Non-company assessees*: It is proposed that the rates of income-tax and super-tax in force for the financial year 1960-61 be continued for the financial year 1961-62 except that the rate of surcharge payable in respect of earned income exceeding Rs. 1 lakh be increased from 5 per cent to 10 per cent of the income-tax and super-tax.

2. *Companies—Income-tax*: No change is proposed to be made in the existing rates of income-tax, i.e., 20 per cent. *Super-tax*: The basic rate of 55 per cent subject to rebates, depending on certain circumstances relating to each company, will continue. The effective rates applicable to companies (which do not make bonus issues) will also remain the same as for the financial year 1960-61 except in respect of dividends and certain royalties. At present, on dividends received by a company (Indian or foreign) from an Indian subsidiary, super-tax is charged at 10 per cent. On dividends received from any Indian company (other than a subsidiary) formed and registered on or after 1st April 1959, super-tax is charged at 15 per cent on an Indian company in which the public are substantially interested and whose total income does not exceed Rs. 25,000; at 20 per cent on any other Indian company and at 33 per cent on a foreign company which does not declare dividends in India. On dividends received from an Indian company (other than a subsidiary) formed and registered before 1st April 1959, super-tax is payable at the rate applicable to the other income of the company, i.e., at the rate of 20 per cent, 25 per cent and 43 per cent respectively in the case of the three classes of companies mentioned above. For the financial year 1961-62, the super-tax rate for dividends received by any company (Indian or foreign) from any Indian company formed and registered before 1st April 1961 will remain the same as for the financial year 1960-61. It is now proposed (subject to a single exception) to fix a uniform rate of 20 per cent for super-tax on dividends received by all companies (Indian or foreign), from Indian companies (whether they be subsidiaries or not) formed and registered on or after 1st April 1961. The exceptional case is that of an Indian company in which the public are substantially interested and whose total income does not exceed Rs. 25,000. In the case of such a company, the super-tax on the dividends received from an Indian company formed and registered on or after 1st April 1961 is proposed to be fixed at the same rate of 15 per cent which was applicable to dividends received from companies formed and registered on or after 1st April 1959.

The effective rates of super-tax payable on dividends received by various companies are summarised in the table below:

Dividends received from	Rates applicable to companies which have made the prescribed arrangements for declaration and payment of dividends in India		Rates applicable to companies which have not made the said prescribed arrangements
	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000	Other companies	
A subsidiary Indian company formed and registered before 1-4-1961	10	10	10
An Indian company, other than a subsidiary, formed and registered on or after 1-4-1959 but before 1-4-1961	15	20	33
An Indian company other than a subsidiary, formed and registered before 1-4-1959	20	25	43
An Indian company formed and registered on or after 1-4-1961	15	20	20

The effective rate of super-tax on royalties received by a foreign company (which does not declare dividends in India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1st April 1961 and which has been approved by the Central Government, is proposed to be fixed at 30 per cent instead of the present rate of 43 per cent.

The effective rate at which super-tax is payable with reference to bonus shares is proposed to be reduced from 30 per cent to 12½ per cent.

RATES FOR DEDUCTION OF TAX AT SOURCE FROM INTEREST ON SECURITIES, ETC.

There is no change in the rates for deduction of tax at source during 1961-62 except that in the case dividends and certain royalties payable to such foreign companies as do not declare their dividends in India, changes have been made for this purpose corresponding to the changes made in the effective rates of tax applicable to such companies for assessment. The proposed rates for deduction of tax at source in the case of such foreign companies which do not declare dividends in India are summarised in the following statements:

	Proposed rates		
	I.T.	*S.T.*	*Total*
On interest on any security of the Central Government issued or declared to be income-tax free	..	43	43
On dividends from an Indian company referred to in Section 58A of the Income-tax Act	20	..	20
On dividends from a subsidiary Indian company formed and registered before 1-4-1961	20	10	30
On dividends from an Indian company, not being a subsidiary, formed and registered on or after 1-4-1950 but before 1-4-1961	20	33	53
On dividends from an Indian company, not being a subsidiary, formed and registered before 1-4-1959	20	43	63
On dividends from any Indian company formed and registered on or after 1-4-1961	20	20	40
On royalties received from an Indian concern in pursuance of an agreement made with it on or after 1-4-1961 which has been approved by the Central Government	20	30	50
On any other income	20	43	63

AMENDMENTS TO THE INDIAN INCOME-TAX ACT, 1922

1. *Sports associations, etc.*: It is proposed to exempt from payment of tax the income of an association or institution established in India solely for the purpose of controlling, supervising, regulating or encouraging in India the games of cricket, hockey, football, tennis and such other games and sports as may be specified by the Central Government from time to time in the official *Gazette*, provided the association or institution is approved by the Central Government for this purpose and satisfies certain specified conditions.

2. *Foreign technicians*: At present, a foreign technician whose contract of service has been approved by the Central Government before the commencement of his service in India is exempt from tax in respect of salaries received by him for the financial year of his arrival in India and the two subsequent financial years. Depending on the time of his arrival in India, the exemption can thus apply for a period of 24 to 36 months. It is proposed that the exemption be available for a period of 36 months from the date of arrival in all such cases and also that if for a further period not exceeding 24 months, the tax in respect of his salary is paid to the Central Government by his employer, such tax shall not be treated as a part of the technician's total income.

3. *New residential buildings*: In respect of new buildings constructed after the 31st March 1961 for being let out to tenants, it is proposed that the annual value of each residential unit comprised in the building should be reduced by the amount of the annual value or Rs. 600, whichever is less, for a period of three years from the completion of the building.

4. *Residential quarters built for low-paid employees*: It is proposed to allow an initial depreciation allowance of 20 per cent of the actual cost in respect of buildings erected by an employer after the 31st March 1961 solely for the residence of persons employed by him and receiving remuneration not exceeding Rs. 200 per month. This allowance will be admissible in respect of the previous year in which a building is erected. It will not be taken into account for determining the written down value though it will be taken into account for seeing that the aggregate of all depreciation allowances in respect of any building does not exceed the original cost of the building.

5. *Development rebate*: It is proposed that in respect of new plant or machinery installed on or after the 1st April 1961, the development rebate shall be admissible at the reduced rate of 20 per cent of the actual cost thereof. New ships acquired on or after the said date will, however, continue to get the development rebate at the same rate as heretofore, i.e., 40 per cent.

It is further proposed that where, subject to certain conditions, a company is amalgamated with another company or where a firm is converted into a private company and machinery or plant on which development rebate is admissible to the predecessor is transferred by the predecessor to the successor, the development rebate already allowed to the predecessor will not be withdrawn and any unutilised portion of the development rebate will be available to the successor. The rights, liabilities and obligations of the predecessor in respect of such development rebate have thus been transferred to the successor.

6. *Appropriations to reserves in the case of a financial corporation*: At present, any amount appropriated to a reserve account is not admissible as a deduction while computing the taxable profits. It is now proposed that in the case of an approved financial corporation engaged in providing long-term finance for financial development in India, an amount not exceeding 10 per cent of the total income may be allowed as a deduction if appropriated to a special reserve account. No such deduction will be allowed when the aggregate of the amounts carried to the reserve account from time to time equals the paid-up capital of the institution. For this purpose, amounts capitalised from reserves will be excluded from the paid-up capital.

7. *Entertainment expenses*: It is proposed to provide that no allowance on account of entertainment expenses will be made in the case of an assessee other than a company and that in the case of companies, the amount allowable in this account will be restricted to certain specified limits depending upon the amount of profits of the business. In effect, no company will be allowed a deduction of an amount exceeding Rs. 1,00,000 on this account.

8. *Tax holiday for new hotels*: It is proposed that the benefit of the five-year tax holiday at present enjoyed by new industrial undertakings under Section 15C of the Income-tax Act be extended to new hotels run by companies and which start functioning on or after the 1st April, 1961, and satisfy certain conditions. The exemption will be available for the previous year in which the hotel starts functioning and the following four previous years. Dividends paid out of such exempt profits will also be exempt in the hands of shareholders.

OTHER AMENDMENTS TO INCOME-TAX ACT

A few other amendments have also been proposed in the Income-tax Act. The purpose underlying these amendments is explained in the Notes on Clauses appended to the Finance Bill.

INDIRECT TAXATION

Customs

The proposals in the Bill include the raising of the rates of duty on 41 items and sub-items of the Tariff. Some changes have also been proposed consequential on the imposition of Central Excise duties on certain articles. A countervailing duty equal to the excise duty is being imposed on each of these articles, so that the indigenous producers may not be placed at a disadvantage in comparison with the importers.

The total additional revenue per annum as a result of all the increases in customs duty proposed in the Finance Bill (leaving out countervailing duties) is expected to be about Rs. 16.57 crores. This would be increased by about Rs. 2.38 crores as a result of the modification of the existing concessional rates of duty on newsprint and certain items of machinery and component parts. As against this should be set off a loss of about Rs. 2 crores per annum as a result of the reduction of export duty on tea. The additional revenue from countervailing duties (on existing as well as new excises) would be about Rs. 12.32 crores per annum. The net additional revenue taking all the proposals into account is expected to be about Rs. 29.27 crores per annum.

SUMMARY OF FINAL ESTIMATES

(In lakhs of rupees)

	Budget 1960-61	Revised 1960-61	Budget 1961-62

Surplus (+)			

* Effect of budget proposals.

The *ad-valorem* duty on the residuary item of "all other articles not otherwise specified" falling under entry 87 of the Tariff schedule is to be raised by 10 per cent. Additional yield expected is Rs. 2.43 crores.

Newsprint: The existing duty is to be raised to about 10 per cent *ad-valorem*. Estimated yield Rs. 38 lakhs.

Tea: Export duty is to be reduced by 9 nP per kilogram, i.e. about 17 per cent. Loss in revenue Rs. 2 crores.

Central Excises

Changes made in the existing rates of duty in respect of fourteen commodities. Duty imposed on eighteen new commodities.

Tea: Duty on loose tea increased by 3 nP per kilogram. The rate on package tea is being reduced by 6 nP per kilogram. Yield expected Rs. 1.98 crore.

Coffee: Rate of duty increased by about 33 per cent bringing in Rs. 38 lakhs.

Tobacco: In order to discourage lower rated tobacco being used as a substitute for tobacco bearing a higher rate, it is necessary to narrow the difference between the two rates. It is also necessary to step up the duty on stalks. The structure of duty on air and flue-cured tobacco and on cigarettes and on cigars and cheroots is being simplified. Tsese changes will yield an additional revenue of Rs. 2.58 crores.

Superior kerosene: Duty increased by about 46 per cent, raising the incidence of duty to Rs. 95.55 per kilo litre. This, with the existing additional duty of Rs. 4.45 will mean a total duty of Rs. 100 per kilo litre. Additional revenue Rs. 2.84 crores. Inferior kerosene is being exempt from this increase.

Diesel: Diesel oil not otherwise specified will have its duty increased by Rs. 28.15 per metric tonne. Expected revenue is Rs. 1.33 crore.

Rayon: The duty on all categories of yarn and on staple fibre is being stepped up by about two-thirds. Additional revenue expected is Rs. 1.69 crore.

Vegetable product: The duty is being increased by Rs. 2.80 per quintal, that is 100 kilograms. Additional revenue expected Rs. 80 lakhs.

Paints and varnishes: Duty raised by about 25 per cent.

Paper and Paper-boards: Duty raised by 36 to 59 per cent. No increase in the duty on printing and writing paper. Additional revenue from the above two items estimated at Rs. 2.67 crores.

Cotton fabrics: Basic duty on medium 'A' grey fabrics is to be raised by 25 per cent. The excise levy on processed cloth is also being increased by small amounts. Expected yield Rs. 4.72 crores.

The concession now given to small units has led to abuses and difficulties in administration. To remedy this, full exemption will be admissible only to such units which do not employ more than two looms in respect of cotton, rayon and silk fabrics and one loom in respect of woollen fabrics. The slab rates of compounded levy are also being suitably adjusted.

Matches: It is proposed to make certain changes in the pattern of duty on matches. The ceiling rate is to be revised from 57 nP per 1,000 sticks to 65 nP per 1,000 sticks. The rates of duty on standard boxes of 50 will be kept almost at the present level. The increased rate will affect matches packed in non-standard boxes only. At the same time, as a measure of encouragement to the cottage sector which uses bamboo for making splints, the concessional rates are being further liberalised. These proposals are not likely to result in any appreciable change in revenue.

Cycle rims: In order to help smaller units producing cycle rims, it is proposed to grant certain concessions. They will get a relief to the extent of Rs. 10 lakhs.

Chemicals: A small specific duty will be levied on soda ash, caustic soda and glycerine. A duty of 15 per cent *ad-valorem* will be levied on coal-tar dyes. 10 per cent on patent or proprietory medicines not containing alcohol and 25 per cent on certain articles of cosmetic and toilet preparations. All these items are expected to fetch Rs. 1.8 crores.

It is proposed to levy a duty of 20 per cent *ad-valorem* on cellophane and on plastic powders and other semi-finished plastic material. Revenue expected Rs. 50 lakhs.

Cotton and woollen yarn (mill-made): A small specific duty is to be levied. Part of the duty is expected to be absorbed in the cost of manufacture. Hosiery and certain other fabrics which do not now bear any duty will be brought within the excise duty net. Revenue yield Rs. 5.55 crores.

Glass, glassware, china, porcelainware, crockery: It is proposed to levy an *ad-valorem* duty from five to 15 per cent. There will be a lower rate of duty for laboratory glassware. Revenue estimated at Rs. 1.60 crores.

Copper and zinc: A duty of Rs. 300 per metric tonne on sheets and circles and 10 per cent *ad-valorem* on pipes and tubes will be levied. Aluminium pipes and tubes will be brought in line. Estimated yield Rs. 80 lakhs.

Wireless receiving sets, air-conditioning machinery and refrigerators: Twenty per cent duty proposed on air-conditioning machinery and refrigerators. A ceiling rate of 20 per cent *ad-valorem* is proposed for wireless receiving sets valued more than Rs. 300 each and concessional rates for cheaper sets. Those valued up to Rs. 150 each will be completely exempt. Revenue yield Rs. 83 lakhs.

Mill-made silk fabrics: An additional excise duty will be levied in lieu of sales tax levied by States. The States have agreed to this proposal.

Betel-nuts: The existing duty is increased by 80 nP per kilogram. Additional revenue estimated at Rs. 57 lakhs.

Unmanufactured tobacco: Existing duty stepped up by about 50 per cent. Likely yield Rs. 89 lakhs.

Certain textile manufactures: Existing *ad-valorem* duty raised to 100 per cent. Additional revenue expected is Rs. 68 lakhs.

Iron and steel manufactures: Existing *ad-valorem* duty increased to 50 per cent. Extra annual yield approximately Rs. 1 crore.

Machinery and components: Twofold proposal: (1) The statutory rate of *ad-valorem* duty raised by five per cent except in regard to items on which there is a commitment under the G.A.T.T. (2) The concessional rate of *ad-valorem* duty at present applicable to certain types of machinery exempted under executive notification to be raised by five per cent. Additional revenue estimated at Rs. 7.76 crores.

Spirits, wines and malt: Duty increased. *Hops*: Duty imposed. A revenue of Rs. 24 lakhs is expected from both the items.

Electrical and other instruments, apparatus and appliances (not otherwise specified): The existing *ad-valorem* duty is to be raised by an addition of ten per cent. *Railway material* (For permanent way and rolling stock and their components): The existing *ad-valorem* duty is to be raised by five per cent. Estimated yield from these two changes is Rs. 1.48 crores.

MARKET GOSSIP

(*Concluded from page 375*)

the burden of helping underdeveloped countries economically should be shared on a fair basis. Economic and political commentators in both Britain and Germany attach great significance to Mr. Lloyd's visit the outcome of which will be awaited with interest by other countries, especially India, as well.

In this context, the following despatch from Bonn on West Germany's foreign exchange reserves, which have aroused the envy of many countries in Europe and elsewhere, will be read with interest:

"The recent offer of the Government of the Federal Republic of Germany to provide over $1,000 million as short-term aid to help overcome the U.S. balance of payments difficulties has revived international discussion about W. Germany's foreign exchange 'wealth' and the better use that country could allegedly make of it. Comments by German officials and the German Press, however, indicate disappointment that there are still too many believing erroneously that the about DM 30,000 million German foreign exchange and gold reserves represent accumulated 'real wealth' at the free disposal of the German Government for any purpose and at any time.

"It is pointed out by West German commentators that the gold and foreign exchange holdings kept by the German Federal Bank have been bought in exchange for D-marks paid to those who earned the foreign money, in the first place German exporters. In other words, the reserves represent the 'counter value' of D-mark amounts paid out already sometime ago and now in circulation in the German economy. Those, who want to acquire foreign exchange from the Federal Bank —be it the Government or any other body or person—will have to pay for it in D-marks. This means that they first have to look for a source where the D-marks can come from—either by borrowing the money or by raising it from the taxpayer.

"In the case of the dollar-aid offer, the German Government would be required to raise DM 550 million annually over a period of six years in order to buy the dollars needed to carry out its suggested assistance programme. If the Federal Republic would export more capital and invest it abroad, the present foreign exchange holdings would decline quickly. The reason why Germany is not among the world's major capital exporters simply is that its domestic needs for capital are far from being covered.

"This explains why the largest part of the incoming foreign currency amounts are exchanged in D-marks which, in turn, are used for urgently needed domestic investments. In terms of capital outlays per worker, many enterprises in the Federal Republic are still way behind their important counterparts abroad. Average outlays in U.S. manufacturing, it is urged, are still about double the corresponding German figure. In other words, the German foreign exchange reserves are the expression of a high degree of liquidity in the foreign trade and payments field, but they do not represent real wealth. Other countries, like Britain and France, have smaller foreign exchange reserves but their real wealth is far greater than that of Germany, taking in consideration, for example, their huge assets abroad which do not become visible in the official gold and foreign exchange statistics."

COMMERCE AND INDUSTRY

(*Concluded from page 394*)

to be undertaken in the country itself in progressive stages. The proportion of the imported components will be about 50 per cent in the initial stages, but by the fifth year, this is expected to be reduced to just 10 per cent.

It may be recalled that the foundation-stone for the establishment of a watch factory in the public sector was laid only a month back at Bangalore. This unit, which is being set up as an adjunct to Hindustan Machine Tools, in collaboration with Japan, will have an annual installed capacity of 240,000 watches (on a single-shift basis). The watches manufactured here are expected to cost less than Rs. 100.

TRANSPORT SURVEY BY NEOGY COMMITTEE

The Neogy Committee on Transport Policy and Co-ordination has been collecting factual data regarding the type and volume of goods carried by road transport by conducting surveys on selected routes with the co-operation of the State Governments concerned. It has so far completed the surveys on Amritsar-Delhi, Delhi-Kanpur, Calcutta-Patna, Bombay-Bangalore, Madras-Bangalore, and Calcutta-Rajmahal routes.

In the survey on Bombay-Nagpur route, the work of collecting data commenced on 17th February 1961 and ended on 24th February 1961. Eight checkposts were set up for the pupose at Kasheli, Nasik, Dhulia (two checkposts), Jalgaon, Akola, Amravati and Nagpur in the State of Maharashtra. All the lorries including tractor-trailers were stopped at these checkposts, and the recorders collected data regarding the types and volume of goods carried, the places of origin and destination, and the types of permits under which the various lorries are operating.

JUTE

(*Concluded from page 390*)

mills, are likely to convert their packaging plants to paper or bulk. If this actually happens, there will be no return to burlap."

Mr. McLean has certainly not cried "wolf." He has just stated the facts which are of utmost significance, considering that exports of burlap from India to the U.S. have already suffered a setback. The quantity actually shipped in 1960 was 857 million yards, as against 897 million yards in 1959, a drop of 40 million yards. It may be noted here that the U.S. is the biggest market for Indian burlap; out of every 100 yards purchased by the U.S. from all countries, the share of Indian burlap comes to 82 yards. Since jute goods earn so much dollars, every effort must be made to maintain India's position in the U.S. market. A specific suggestion put forward by Mr. McLean was that normal forces of supply and demand must be allowed to operate in jute market. He considered artificial controls such as fixation of maximum prices to be "impracticable, totally unworkable and equally disastrous today." There is, of course, some truth in this statement, but, under the abnormal conditions currently obtaining in the jute economy as a result of poor crop position, the law of supply and demand cannot function satisfactorily. Some judicious controls, whether statutory or voluntary, preferably the latter, are inevitable. Only, they should be treated as an emergency measure and done away with immediately after conditions become normal. Meanwhile, no effort should be spared to achieve self-sufficiency in raw jute, especially superior varieties of jute, and introduction of modernisation and rationalisation in jute mills.

WORLD DEMAND FOR JUTE

In the next five or ten years, jute will be used more in industrialised countries, such as Britain, the U.S. and West European countries for making carpets and floor coverings generally than for making sacks and other packaging materials. But overall demand for jute is likely to remain at about the same level as now. These are among the conclusions of a study of trends in world demand for jute manufactures undertaken by the National Institute of Economic and Social Research, London, at the request of the U.N. Food and Agriculture Organisation. The study forecasts that jute requirements for floor coverings will have risen by about 50 to 55 per cent in the U.S. and 50 to 80 per cent in Western Europe by the end of this decade. The outstanding features in the development of world jute consumption since the War have been the reduced level of consumption in most of the economically advanced countries of North America and Western Europe, as compared with pre-war period, and the expansion in consumption in the rest of the world. Jute consumption in the Far East (excluding mainland China) has risen appreciably over the past decade. Almost the entire increase has been in India and Pakistan. There has been a remarkably rapid growth in jute production and consumption in mainland China since the early 1950s.

Notice

BOMBAY POTTERIES AND TILES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-seventh Annual General Meeting of the Company will be held at the Registered Office of the Company, United India Building, Sir Pherozshah Mehta Road, Fort, Bombay-1, on Monday the 3rd April 1961, at 4-00 p.m. (S.T.), to receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September 1960, declare Dividends on First and Second Preference Shares and Ordinary Shares, to elect Directors in place of those retiring by rotation as well as in place of Directors who cease to be Directors by reason of their having been co-opted as additional Directors, to appoint Auditors and as and when by way of special business to consider and if thought fit to pass the Ordinary Resolution with or without modification for the continuance of Sole Selling Agents of the Company's Products in various parts of the Country as per Notice dated 16th December 1960 which, together with the Explanatory Statement annexed thereto, the Report of the Directors and Auditors and the Audited Accounts, has been circulated to the members individually.

NOTICE is also hereby given that the Register of Members and the Share Transfer Books of the Company will remain closed from 13th March 1961 to 11th April 1961 (both days inclusive).

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

Dated at Bombay this 16th day of December 1960.

By Order of the Board,
H. RAMAKRISHNAN,
Secretary.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 1st March, 1961.

IMPORT AND EXPORT POLICIES

THE Import Advisory Council and the Export Promotion Advisory Council discussed matters of moment early this week at New Delhi against the background of two sombre facts—an adverse balance of trade of about Rs. 365 crores in 1960, the second highest on record, and a low level of sterling balances at Rs. 157 crores as on 17th February 1961. The background no doubt imparted a sense of urgency to the deliberations in either Council on the eve of the third Plan which will be even more exacting in its foreign exchange requirements than the second. But the discussions, unfortunately, conformed only to the familiar pattern of mutual twitting by Government spokesmen and representatives of industry—the former finding fault with industry on the export side and the latter taunting the Government on the import side. This routine performance, however, was not wholly barren of some results on this occasion. One of these was the emergence of a near-identity of approach to the crucial question of maintenance imports (that is, imports of industrial raw materials and components) on the part of both Government and industry, although it was by no means a heart-to-heart agreement. Another was the official announcement of a committee, under the chairmanship of Dr. A. Ramaswami Mudaliar, to review the working of the import and export control organisation and the system of priorities for imports in the context of the difficult foreign exchange position. This decision, however, meant in effect that there was no consensus of opinion in either Council on some outstanding policy issues. And the third outcome was the announcement of an official committee to deal with the problems of import and distribution of iron and steel.

The question of maintenance imports, while it brought the Government and the representatives of industry nearer each other, did, however, raise some ticklish issues. For instance, there was the issue whether expansion of existing units should take precedence over establishment of new units—an issue on which there was consensus of opinion among the representatives of industry but which provoked the Industry Minister, Mr. Manubhai Shah, to say that, in a vast country like India, new industries had to be set up, particularly in backward regions. Another issue was whether licences for importing raw materials could be based on current production or on anticipated production in the next six months, instead of on past production. Issues such as these were raised at the Import Advisory Council meeting to no effect, for the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, did not seem to favour any substantial reduction in development imports for the sake of a corresponding increase in maintenance imports. What, on the other hand, he favoured were the proposal to secure, in the form of 'untied' loans for financing maintenance imports, *a part* of the expected assistance from the 'Aid India Club' and the continuance of a *high* priority for such imports on normal trade account. The italicised words in the foregoing sentence would appear to convey that some improvement could be expected in the current year in the matter of maintenance imports required for a fuller utilisation of existing industrial capacities, even though it might not be as much as was expected by the spokesmen of industry.

At the same time, the Government's attachment to the idea that maintenance imports should be curtailed, as far as possible, through indigenous production of more intermediate goods and components meant, in effect, a relatively greater accent currently on development imports (that is, capital goods and machinery) for establishing their manufacture. Mr. Lal Bahadur Shastri's reference to the need for according priority to development imports for establishing units for producing rayon grade pulp and automobile and machinery parts was an instance in point. The Minister could have mentioned other cases—oil refining, fertilisers, intermediates for dyes and chemicals, petro-chemicals, etc.—where indigenous manufacture in the private sector is possible to a still greater extent with the active assistance of foreign capital. If, as Mr. Manubhai Shah said, there is no inherent conflict between maintenance imports and development imports, would it not be wiser to encourage private enterprise—foreign and domestic alike—to take care of such development imports for establishing refinery units, fertiliser factories and so on? Only in such cases would there be no conflict between maintenance imports and development imports for the simple reason that the latter would be financed through an inflow of foreign private capital, thereby reducing the strain on the country's foreign exchange resources secured in other ways. This, however, is an issue of higher policy—something that raises questions of inter-ministerial co-ordination such as, for instance, between the Industry Ministry and the Oil Ministry. The dog-in-the manger policy of the latter Ministry is one of the important reasons for the aggravation of the foreign exchange problem. It is surprising to find that none of the representatives of the private sector raised this point at the aforesaid meetings. Where both development imports and maintenance imports are expected to increase in the coming years, the extent to which the former are financed by foreign private capital, especially in lines where indigenous manufacture of intermediate goods and components is to be established, will not only enable maintenance imports for existing industries to be maintained, currently and in the near future, at the required level but also reduce, in the long run, the need for such maintenance imports themselves. If the whole question is approached more pragmatically without allowing ideological considerations to come into the picture, the resulting industrial policy is bound to attract more foreign private capital to those fields where the Government is trying to bite more than it can chew.

There is an equal need for eschewing ideological considerations in the sphere of export promotion too. The Government's idea, to which Mr. Lal Bahadur Shastri gave expression at the meeting of the Export Promotion Advisory Council, of assigning a more dominant role to the State Trading Corporation in the export trade seems to be based on the mistaken belief that a single agency can operate better than several private exporters. What is conveniently forgotten here is that this single agency has to

deal in a wide variety of export commodities and to deal with a large number of private parties producing for export and is, therefore, more unwieldy and cumbersome than, for instance, the export promotion organisations of individual industries. It is not unoften that large industrial enterprises operate efficiently their own export organisations. The threat of the S.T.C. ousting the private sector from foreign trade has itself been a discouraging factor. There is no reason to believe, as Mr. Shastri does, that private exporters have not made adequate efforts to export wherever they have found it rewarding to do so. Nor is the Minister's view that industries at present are not making adequate sacrifice for the sake of exports has any point in it, for the State Trading Corporation, too, could be in no position to make any sacrifice. If any sacrifice has to be made for the sake of exports, it can be done only by the country as a whole. That would mean, in the ultimate analysis, loss of some Government revenue and/or an increase in the prices paid by domestic consumers. It is all a question of what incentives are deemed necessary for export promotion. Mr. Lal Bahadur Shastri's impatience with the plea of the Federation of Indian Chambers of Commerce and Industry for export incentives only betrays a lack of clear understanding on his part of the real problem. Private enterprise, it must be borne in mind, has necessarily to operate on the basis of profits. Further, in making a comparison of the S.T.C's performance in recent years with that of the private sector, adequate allowance must be made for the special advantages it enjoys in the Soviet orbit and the virtual monopoly it has in regard to exports of ore.

It may be that the high-powered committee, which Mr. Shastri proposes to set up shortly, for taking quick decisions on export promotion matters would take a different view and give objective consideration to the practical steps outlined in a F.I.C.C.I. note on export promotion. Some of these suggestions are eminently reasonable too. There is, for instance, the suggested scheme (which is based on the schemes operated in countries like Japan and West Germany) for an income-tax rebate to the Indian exporter and the manufacturer-exporter. Under this scheme, if the export turnover of a firm is Rs. 50 lakhs with a gross profit of 5 per cent, a rebate at the rate of 10 per cent on the turnover will mean that Rs. 25,000 out of the gross profit of Rs. 2,50,000 will be tax-free. An alternative suggestion advanced by the F.I.C.C.I. is that profits made on exports be taxed at a lower rate than profits made on internal sales. The Government, thus, must be prepared to sacrifice some income-tax revenue for the sake of export promotion. Equally effective, in our opinion, will be lower rates of interest on export finance. Just as Japan does, the Reserve Bank of India can help exports by rediscounting export bills at, say, 3 or 4 per cent, instead of at 6 per cent. It could also sacrifice the export duty on tea, which makes Indian tea uncompetitive in foreign markets. If tea exports have come down from Rs. 137 crores in 1958 to Rs. 120 crores in 1960, the heavy incidence of the export duty, yielding as it does Rs. 12 crores, should also have been a contributory factor for the decline.

There are quite a number of other worthwhile suggestions in the F.I.C.C.I. note which has been drawn up with great care. But, perhaps, the outstanding emphasis in the note is on the need for stepping up the production of commercial crops like cotton, jute and oilseeds. This is all the more important, because the desired surplus for exports will not otherwise be created and any marginal declines in their production will cause distortions all round as they have done in the past two years. If incentives are provided for an increase in traditional exports, the results may well be immediately more substantial than in the case of newer export industries which are still in the transitional period of making their products known in overseas markets. While the non-traditional exports call for greater effort by way of commercial publicity and the like, what the traditional exports require is, by and large, a scheme of fiscal incentives. Even a general scheme of currency retention (such as in the case of exports of cotton textiles, for which facility is given for import of dyestuffs, chemicals, etc.) is not considered feasible by the F.I.C.C.I. The country will be in no position to achieve a miracle so long as exports are not effected at competitive prices which, in most cases, can only result from lower costs of production brought about by higher productivity and, in others, by lower tax incidence.

FRESH IMPOSTS ON COTTON TEXTILES

WHEN Mr. Lal Bahadur Shastri and his deputies continue to express concern over the high level of cotton textile prices, notwithstanding the voluntary regulation of prices and other steps taken by millowners to bring them down, the Union Finance Minister has heaped a fresh tax load on this essential item of consumption. The basic excise duty on medium 'A' grey mill piecegoods has been raised from 7.2 nP to 9.0 nP per square metre, the excise surcharge on all varieties of processed cloth has been stepped up by 66⅔ per cent, the rate of excise duty on cloth produced on automatic looms has been enhanced by 25 per cent, and an excise duty has been imposed for the first time on cotton yarn: at 10 nP per kilogram (4.55 nP per lb.) for counts below 35s and 15 nP (6.81 nP per lb.) for counts of 35s and above. These duties are applicable to yarns consumed by the composite mills as well as to yarns spun for sale, except yarn of 11s to 40s if issued in hanks—an exemption meant for helping handloom weavers. It is calculated that these measures, together with the levy of duties on the chemicals and dyes which are used in mills also, will raise the price of cloth by an average of 3 to 4 per cent. This is not an inconsiderable burden on the consumer and neutralises a part of the reduction in cloth and yarn prices secured through both persuasion and coercion of the mill industry by the Government.

The reason adduced by the Finance Minister for enhancing the excise duty on medium 'A' grey cloth is that it is intended to reduce the duty gap between 'fine' and 'medium A' with a view to correcting "the major shift" in production from the former to the latter. But this explanation is hardly convincing, as it is not borne out by facts. A study of the actual trend of mill cloth output last year (1960) will show that no such major shift was in evidence. The production of higher medium cloth in 1960 was no doubt higher at 2,075 million yards, as against 1,758 million yards in 1959, but the increase was not so much at the cost of fine varieties as is alleged. The extent of fall in the production of fine cloth was just 13 million yards, the figure for 1960 being 229 million yards. In fact, the production of fine and superfine categories together was more or less unchanged at 531 million yards. The notable rise in the production of higher medium cloth must be attributed partly to the abnormal increase in consumption of foreign cotton necessitated by shortage of Indian cotton and partly to the growing preference of consumers for higher-medium counts *vis-a-vis* course counts, in view of the improvement in the living standards of the masses. This trend is clearly reflected in the persistently downward movement of coarse cloth production from 1,164 million yards in 1957 to 970 million yards in 1958, 892 million yards in 1959 and 705 million yards in 1960.

It is thus obvious that the enhancement of the excise duty on medium 'A' grey cloth, as also that on processed fabrics, is a purely revenue measure. The Finance Minister has simply picked up the most popular among the varieties of cloth as a means of raising a little more money for the Plan. He would have surely carried conviction to the public and, perhaps, even its support, had he stated this plain fact. This higher levy may also have the incidental effect of inducing millowners to sell more for export than they are doing at present. Since in any case the demand for mill-made cloth is increasing faster than supply, a stiffer excise duty may curb the tendency among traders, and even producers to some extent, to squeeze a larger margin of profit from consumers.

But the imposition of an additional duty of 25 per cent on cloth manufactured on automatic looms is surely a retrograde measure. It is tantamount to penalising higher productivity. The millowners fear that, as the additional levy is far in excess of the saving in costs effected through the use of automatic looms, it will discourage modernisation. Further, it is pointed out that, if the same type of cloth produced in the same mills on automatic looms and plain looms is to bear duty at different rates, not only will there be difficulties in marketing the product but suspicions will be aroused in the minds of consumers. These fears are not baseless. The salvation of India's cotton mill industry lies in improving its capacity to produce more cloth at a lower cost. This will be possible only if at least the major portion of its machinery is replaced by automatic, high speed equipment within a very short period of a few years. Such replacement is long overdue and any further delay will only deter India's economic progress.

The principal countries with which Indian textile industry has to compete have completed their efforts at gearing their textile mills to a high degree of efficiency. Even the Lancashire cotton industry, which was very slow in modernising itself, has quickly got rid of redundancy and inefficient units and armed itself with highly efficient machines. In this effort, it has been greatly helped by the British Government which gave special subsidies. In distressing contrast to this development are the Government of India's tardiness in giving permission for the introduction of automatic looms and readiness to tax heavily the cloth produced on such looms. The distinction sought to be made between cloth made for export and that for domestic consumption is quite unrealistic in this case, as an export trade in cloth can be sustained only on a broad-based and strong domestic market. If the industry is first allowed to expand on modern lines and to establish itself firmly in the export markets, the Government will automatically get a much larger revenue from it without having to resort to taxes of a nature that will retard progress.

Another regrettable feature of the imposts on cotton textile industry is the levy of an excise duty even on yarn consumed within the mills to produce cloth. This, in conjunction with the excise on cloth, is a case of double taxation, covering both the raw material and the finished product. One of the factors that enabled the Indian cotton textile industry to overcome competition from Lancashire within the country even during the British regime and finally win sizable export markets is its vertical growth. The proposed levy on all yarn consumed by composite units will undermine that strong feature of the industry. It is an accepted canon of taxation that, generally speaking, raw materials of an industry should not be taxed. For a composite and integrated modern cotton mill, yarn is only a semi-processed material. A departure from this principle is permissible only where such semi-processed material offers a convenient stage at which tax aimed at a large decentralised sector can be collected.

It is common knowledge that the bulk of powerlooms are not bearing the tax burden they can, and ought to, carry. It is equally well known that hosiery, nets and other knitted fabrics are not paying their due to the Exchequer. That the handloom sector is being generously fed with subsidies with no commensurate results is also a well-known fact. It is not easy to collect excises directly from all these consumers of yarn, as witness the way in which even the powerlooms have been successfully managing to escape this levy. It would, therefore, be perfectly understandable, if the yarn sold by mills in the market, which is otherwise known as "free yarn," were to be subjected to excise duty at an appropriate rate. This principle is already being followed in regard to staple fibre and all rayon yarns. And when we commented on taxation proposals in our last issue, we were under the impression that the Government had proposed to tax only the "free yarn" and nothing more. If the Government's idea is to make the mill sector collect still more taxes from the public, as it undoubtedly is, the best thing to do will be to raise the excise duties further on all varieties of cloth. That would be an easier method of collecting the tax than the levy on yarn, the administration of which will cause, as the millowners have rightly pointed out, considerable dislocation in production arrangements of a modern mill and a lot of inconvenience and harassment to the managements of mills, as well as to excise officials. Surely, the reasoning that led the Government to choose this difficult and exasperating method of collecting tax when a simpler system is already in force is beyond our comprehension.

It must, however, be said that the Finance Minister's move to (a) lower the exemption limit for powerlooms for the purpose of excise levy from four to two, (b) reduce the number of slabs and (c) readjust the rates of compounded levy is well conceived. It will doubtless check the deliberate fragmentation of manufacturing units in order to avoid payment of excise duty. Only two weeks ago, we ourselves emphasised in these columns that suitable remedies must be found for overcoming the defects and deficiencies in the organisation and ownership of powerlooms.

MARKET GOSSIP

IT is now almost certain that, with effect from 15th March 1961, banks will pay a little more interest on deposits. It has been obvious for some time that it would be inevitable for banks to raise their deposit rates. In the first place, the gap between the banks' lending rates and the ceilings for the rates on deposits under the inter-bank agreement had widened so substantially as to give the impression of a perceptible imbalance in the structure of interest rates in the country. Secondly, with the introduction of the new system of Bank rate having three tiers and with the effective Bank rate remaining as high as 6 per cent, the prevailing rates appeared to be unrealistically low. Quite a good number of banks themselves began to feel that it was better to offer higher rates of interest in order to attract deposits than to borrow from the Reserve Bank at the high rate of 6 per cent. And, thirdly, the extremely poor rate of growth of deposits since the latter half of 1960 in particular compelled the banks to think afresh on the subject.

Of course, having enjoyed the benefits of protection offered by the inter-bank agreement, the majority of them were reluctant to consider higher interest rates as a solution to the problem. Even now there are some, especially among the big banks which have been the chief beneficiaries of the inter-bank agreement, who are of the view that it is unnecessary to step up the rates of interest as an inducement to depositors to keep more funds with banks. But the force of circumstances has compelled the majority of bankers to yield some ground. Reflecting their opinion, the Executive Committee of the Indian Banks' Association has recommended an increase of one per cent. for "house money" repayable on notice of three days and over but up to one month, ½ per cent for short-term deposits of one month and over but up to 60 months and of ½ per cent for 60 months and over. Besides, the rate of interest on savings bank accounts will be 3 per cent., instead of 2½ per cent. as at present. The revised ceiling rates for call and time deposits are as follows:

Usance	*Rate per cent per annum*
For notice money at a withdrawal notice of 3 days or more	3
For term deposits of:	
3 to 30 days	3
31 to 60 days	3½
61 to 90 days	3½
91 days to 12 months	3½
12 to 24 months	4
24 to 48 months	4½
48 to 60 months	4½
60 months and over	5

The confirmation of all the member-banks to the aforesaid rates is yet to be received, the deadline set for it by the Association being 10th March 1961.

It is not known what policy the State Bank of India, which is not a member of the inter-bank agreement, will follow. But it is significant that it has already raised (from 1st March 1961, to be precise) its rates of interest on savings bank account and savings bank deposits by a straight one per cent to 2½ and 2½ per cent, respectively.

As the proposed increases in the rates are only nominal, they will not be of much help to banks in attracting more deposits. The bankers have, once again, missed the opportunity of eliminating the system of call deposits which facilitates the conversion of large current account deposits into time deposits in order to take full advantage of the higher interest rate, without any inconvenience to the account holders. If at all there should be term deposits for a period less than one month, 15 days are quite ample.

Among the other reasons for the perceptible setback to the growth of bank deposits four stand out prominently: (1) failure of the Palai Central Bank and the adverse effect it has had on the psychology of depositors. This development has been responsible for the marked rise in the deposits of postal savings bank and the improvement in the sale of small savings certificates. (2) A sizable fall in deficit financing last year. (3) A sharp increase in India's adverse balance of trade. And (4) some expansion in the volume of black money during the last two years.

* * * *

W. Germany's "Volte Face"

The revaluation of the D-mark by 4.76 per cent has come as a painful surprise to India. With effect from Monday last, the dollar-mark parity has been 4 D-marks per $, as against 4.25 before. The explanation given by German authorities for taking recourse to this step, which is contrary to the assurances given by them even at the last annual meeting of the International Monetary Fund, is that they have found it absolutely essential for restraining the inflationary trends in their country. It is stated that all other monetary measures adopted by them have by themselves been insufficient to check the boom and that, if they were to raise the interest rates again, it would have aggravated the disequilibrium in international balance of payments, reviving the pressure on the U.S. dollar. A modest revaluation was the only thing they could do without upsetting the economies of other countries.

While it is true that Germany cannot be accused of not having tried other measures to deal with its problem of "embarrassing riches" and that it has wielded the weapon of currency revaluation only gently, it cannot be denied that even an increase of 5 per cent in the external value of its currency will mean a substantial hardship to its debtor countries such as India. This country will have to export more goods to repay its debts to Germany. Secondly, it will make the cost of imports from Germany dearer, unless, of course, the prices of German goods decline to a corresponding extent in the near future. This possibility appears to be very unlikely, as wages in Germany are continuously rising. Thirdly, although revaluation provides an incentive for larger imports into Germany, India may not be able to take full advantage of this situation, as the demand for goods that India can export to that country is not very elastic. Besides, they are affected by import quotas and heavy taxes on consumption. There is, however, likely to be a slight advantage to this country since the purchasing power of the D-mark in other countries is higher now and the German Government has agreed to make all its future aid available in "untied" credits. Nevertheless, revaluation is no substitute to large-scale aid to, and investment in, underdeveloped countries. It is, however, gratifying to hear from authoritative spokesmen of Germany that revaluation does not mean that their Government has decided to reduce the quantum of its aid to needy countries.

Life Insurance—A New Record

New business done by the Life Insurance Corporation of India scaled yet another peak in 1960. At Rs. 496 crores, the new business written during the year is the highest ever reached by life insurance in the country and represents an increase of as much as 90 per cent., as compared with 1955, the record year for life insurance under private management when new business stood at Rs. 261 crores. The Corporation's new business in 1960 missed the Rs. 500-crore mark by only a narrow margin of Rs. 4 crores. The actual performance thus fell short of the target of Rs. 525 crores set for the past year under the Corporation's own five-year plan (1959-63) by Rs. 29 crores. Nevertheless, the Corporation has nearly reached the half-way mark in its target of Rs. 1,000 crores of new business to be reached by 1963.

Of the Rs. 496 crores of new business, Rs. 484.47 crores represented business completed in India, Rs. 9.70 crores foreign business and Rs. 1.82 crore *Janata* business; in 1955, the business done in India was Rs. 240.51 crores, that outside India being Rs. 20.33 crores. It is noteworthy that new business done in India has more than doubled during the five-year period 1956-60. There has, however, been a sharp fall in foreign business, one disadvantage of nationalisation. The figures for 1960 are, however, better as compared with those for 1957 when foreign business was only Rs. 5.40 crores.

The gap between introduced business and completed business continued to be wide last year also. In fact, the percentage of completed business to introduced business declined from 88.2 in 1959 to 87.5 in 1960. This underlines the need for better salesmanship on the part of the agents of the Corporation and more effective closing, so that a larger percentage of the introduced business could be brought firmly to the books of the Corporation. The decision of the Corporation to enforce strictly, with effect from 1st January last, the practice of collecting the first premium in full along with the proposal should go some way towards narrowing the gap, but, if that could be supplemented by a more vigorous effort on the part of the field staff, the percentage of completed business could be increased substantially.

While the 1960 new business figures are quite encouraging, it is a pity that the Corporation has not been able to present its directors' report and statements of accounts for 1960. The annual report of the Corporation usually comes too late to be of any use except for record purposes. Surely, the Corporation should be able to publish its report much earlier than it does now. It is no answer to point out, as the L.I.C. authorities are prone to do in answer to criticism of its activities, that private insurers published their reports more than six months after the close of the accounting year. It is for the L.I.C., enjoying as it does the monopoly of life insurance business in the country and commanding vast resources and talent, to set the pattern for others to follow. Publication of the report within two months of the close of the accounting year is not, after all, so difficult for an institution like the L.I.C. It may be noted that life insurance companies in Canada publish their accounts within two months of the close of the accounting period as required under law. Even in India, the State Bank of India, a public sector enterprise with over 900 branches and total assets exceeding Rs. 600 crores, publishes its statement of accounts and annual report in the third week of February, that is, well within two months.

Equally unforgivable is the delay in the declaration of the second bonus. The first valuation report on the assets and liabilities of the Corporation, as at the end of December 1957, took eighteen months to be completed and was published as late as in May 1959. The delay was explained by pointing out that the valuation in respect of the assets and liabilities of the 245 insurers whose controlled business was taken over by the Corporation, presented many difficulties. No such excuse can be given in respect of the second valuation which should cover the years 1958 and 1959. The Chairman of the L.I.C., Mr. P. A. Gopalkrishnan, stated this week at a Press conference held at the Central Office that the second bonus will be declared in about two months from now, that is, by the end of May 1961. It is difficult to understand why the Corporation should take eighteen months for the second valuation also which, as compared with the first, must be simpler and easier. In its anxiety to show spectacular results in respect of new business, the Corporation seems to be treating lightly the need for promptness and efficiency in other spheres too which are necessary to command the confidence of the insuring public. Attractive bonuses can be used as additional and effective sales aids by agents to attract new business. As for the existing policyholders, they are more interested in their share of the profits of the Corporation, as indicated by the bonus, than in the new business the Corporation has canvassed. It is, however, encouraging to hear from Mr. Gopalkrishnan that the Corporation is in favour of using the surpluses to declare better bonuses rather than to a reduction in the premium rates and that the latter should be altered only over long intervals of eight to ten years, depending upon the results of mortality experience. This is undoubtedly a scientific approach to the utilisation of valuation surpluses.

A Stunt in Cotton?

An intriguing paragraph in the Press Note issued by the *Indian Cotton Mills' Federation* on Wednesday the 8th inst. has set the cotton trade speculating. It reads as follows:

"The Committee (of the Indian Cotton Mills' Federation) gave deep consideration to the problem of stabilising prices of Indian cotton in the interests of the agriculturists and authorised the Chairman to do the needful, including purchase of such quantities and qualities of cotton as he thinks fit in the light of circumstances."

The Committee's decision confirms earlier reports that the Federation is contemplating purchase of cotton for subsequent distribution to mills according to their quotas. In the absence of any elaboration as to how the Federation proposes to buy cotton, if the Chairman so decided, there is a lot of speculation about the ways in which the Federation would support cotton. Does the Federation really mean business? If so, how much cotton would it buy and what would be the quality and types of cotton that might attract its attention? At what price would the Federation buy, where will it buy and when? Questions like these are being asked by everybody in the cotton trade, but nobody seems to know the answer for certain.

The objective of the Federation's decision, obviously, is to prevent a slump in the market as a result of heavy arrivals of new crop. It is, therefore, complementary to the Textile Commissioner's policy of ensuring that the new crop is picked up soon by mills, so that prices do not fall unduly, lest it should adversely affect the cotton farmer and the next year's crop. It is significant that, by associating itself with this policy, the Federation has proved itself mindful of the interests of the farmers, too.

Another point which is implied in the decision of the Federation is that it regards the prevailing cotton prices as the minimum below which they should not be allowed to decline. The current prices, it may be noted, are nearer the ceilings than the floors which are far below the market quotations.

Some traders consider this move of the Federation as a surprising departure from its stand on the question of cotton prices so far and, for that very reason, refuse to take the above-quoted statement and its implication at their face value. Some others are even cynical enough to suggest that it is nothing more than a formal declaration to the effect that the Federation associates itself with and lends its moral support to the Government's policy. It may, perhaps, be due to this cynicism that the cotton market, both spot and futures, has remained unaffected by the Federation's statement. It is true that on Wednesday there was a spurt in the futures market. But it was due to support based on settlement considerations and reports (which proved to be false subsequently) that certain changes in the by-laws of the E.I.C.A., having bullish implications, were under contemplation. The trend of the market at the time of writing (Thursday evening) shows no evidence of any bullish reaction to the Federation's decision to purchase cotton, if need be. Both the April and August Contracts reveal only small gains, as compared with rates prevailing yesterday.

World Silver

Although the trends in the world silver economy do not have any direct effect on the silver market in India because of the continued restrictions on imports and exports and the low level of consumption for industrial uses, they are nevertheless of more than ordinary interest. For, in the first place, the developments abroad have a psychological impact on the silver markets in India. And, secondly, the fluctuations in the industrial demand for the white metal reflect the trends in the industrial uses of silver, a factor that does have a close bearing on India's economy. It is for these reasons that the annual reviews of the world silver market compiled by Messrs. Handy and Harman of the U.S. are always read with much interest. And the forty-fifth review just published is no exception.

The assessment of the outlook—both short-term and long-term—for silver as made by Messrs. Handy and Harman is, indeed, interesting, especially in view of the apprehension of an appreciable rise in prices in the near future. This apprehension is born of the probability of free market supplies falling short of demand, which is steadily expanding. Messrs. Handy and Harman, however, aver that there need not be any concern as to the availability of sufficient silver for industry's future requirements. This view is based on two grounds. One, there will be secondary sources of silver becoming available to the market at different price levels, as, for example, sale of demonetised Cuban silver coin a few years ago and U.S. Treasury silver. Two, the free silver stocks held by the U.S. Treasury are still large, in spite of substantial reductions, and the Kennedy Administration is not contemplating any change in silver policies. As for the long-range outlook, Messrs. Handy and Harman, of course, expect

EQUITIES FIRM AGAIN

VALUES RISE FURTHER

(From Our Own Correspondents)

BOMBAY, *9th March*

THE first post-budget week was a short one for the share market and consisted of only three working sessions, in view of its closure on Friday (*Holi*), Saturday (succeeding day of the Account period's end), Tuesday (passing away of Mr. G. B. Pant), and today (*Ramzan*). During this brief period, the market depicted a distinctly firm trend, with equities continuing to march forward. Induced by the absence of additional direct tax burden, the reduction in tax on bonus issues, and Mr. Lal Bahadur Shastri's assurance regarding maintenance imports at the Import Advisory Council meeting, investors were envincing much interest in buying the scrips of leading companies, while actual offerings were on a small scale. The shares of concerns having large reserves were particularly sought after.

Early in the week, the Stock Exchange authorities fixed special deposit making-up prices for five scrips, namely, Bombay Burmah, Century, Hindustan Motors, National Rayon and Telco, and it was said that the step had been taken "to check excessive speculation." This move was strongly criticised by a section of market circles as highly unwarranted, because the rise in prices of several shares after the budget was, in its opinion, only normal and was not due to excess speculation. The Stock Exchange authorities were reported to have pointed out that the step was taken at the instance of the Finance Ministry's Stock Exchange Directorate and that it would continue to operate so long as "emergency" conditions existed. They, however, assured the dissidents that, whenever such a contingency arose in future, they would give, before the opening of the market on the last day of the Account period, notice as to the possibility of fixing special making-up prices in the counters concerned and that the members of the Governing Body would be informally consulted with regard to the actual fixation of such rates.

In the steel section, Tata Steels improved by 75 nP to Rs. 153.50. Indian Irons rose by 60 nP to Rs. 26.50. Mukund Irons rose from Rs. 27 to Rs. 27.50 on Monday, but declined to Rs. 26.50 yesterday before finishing at Rs. 26.85.

Textiles scored handsome gains, with the exception of a few counters which encountered selling on fears that the fresh tax load on cotton yarn and fabrics (medium) as well as higher duties on dyes and chemicals might cut into the profit margin of mills. Standards advanced by Rs. 34 to Rs. 1,332. Centurys hardened by Rs. 15 to Rs. 537.50. Kohinoors and Finlays put on Rs. 14 each to Rs. 299.50 and Rs. 355, respectively. Gokaks increased by Rs. 7 to Rs. 174, New Greats by Rs. 6 to Rs. 201, Mysores by Rs. 3 to Rs. 70 and Tatas by Rs. 2.50 to Rs. 46.50. Osmans, Shree Niwas and Svadeshis hardened by Rs. 2 each to Rs. 54, Rs. 254 and Rs. 250.50, respectively. Bombay Dyeings, which had receded from Rs. 65.70 to Rs. 64.10 on Thursday the 2nd inst., recovered subsequently to Rs. 65.90 on Monday. After easing to Rs. 65 later, they finished higher at Rs. 65.50. Khataus, however, were subjected to selling and retreated from Rs. 535 to Rs. 515. B.R. Cottons declined by Rs. 3.50 to Rs. 35.50, Simplex by Rs. 3 to Rs. 177, Podars by Rs. 2 to Rs. 143 and Central Indias by Re. 1 to Rs. 108.

Sugar shares were well favoured. Belapurs moved up by Rs. 8 to Rs. 292. Kesars strengthened by Rs. 10 to Rs. 235. Phaltans put on Rs. 3.50 to Rs. 148.50. Maharashtra Sugars rose by Rs. 2 to Rs. 198. But Walchandnagars drifted downward, from Rs. 228.75 to Rs. 225.50, due to a cut in the dividend for 1959-60 from Rs. 20 per share taxable to Rs. 15 per share taxable.

Under the impetus of good buying enquiries, cement shares recorded further additions to values. Digvijays advanced by Rs. 10 to Rs. 187. Associated Cements were bid Rs. 2 higher at Rs. 156. Ashokas gained Re. 1.52 to Rs. 10.52, Jaipur Udyogs 84 nP to Rs. 12.48 and Dalmias 72 nP to Rs. 12.24. Sone Valleys gathered 28 nP to Rs. 5.60. Orissas improved by a like amount to Rs. 14.16.

Among automobiles, Premiers attracted support and spurted by Rs. 8.50 to Rs. 180.50, following the statement by the Chairman that the Company might have to finance a part of the Rs. 25-crore expansion scheme through raising fresh capital. Hindustan Motors, however, shed 12 nP to Rs. 22.08. Shipping shares were firm, Scindias rising by 74 nP to Rs. 15.32 *ex-div.* and Great Easterns by 32 nP to Rs. 15.

Engineering shares evoked renewed support. Alcocks hardened by Rs. 5 to Rs. 292. Telcos jumped up from Rs. 331 to Rs. 337 yesterday before closing at Rs. 335.50. Cooper Engineerings improved by Rs. 4.50 to Rs. 198.50. Premier Constructions strengthened by Rs. 3 to Rs. 211. Larsen and Toubros increased by Rs. 2.50 to Rs. 44. Texmacos gained 52 nP to Rs. 24.52, Mahindras 24 nP to Rs. 22.24 and Kamanis 12 nP to Rs. 20.12. In contrast, Khandelwals declined by Rs. 2.50 to Rs. 93 and New Standards by Re. 1 to Rs. 189.

There was a further sharp rise of Rs. 26 in the quotations for Bombay Burmahs which were done at Rs. 635.50 yesterday. On hopes of bonus issues, Wimcos firmed up by Rs. 28 to Rs. 303 and Shivrajpurs by Rs. 6 to Rs. 101. Voltas strengthened by Rs. 9 to Rs. 287.50. West Coast rallied from Rs. 206 to Rs. 225. Ceat Tyres spurted by Rs. 16.25 to Rs. 261.25, Indian Hume Pipes by Rs. 8 to Rs. 183 and Laxmi Starches by Rs. 7.50 to Rs. 200.50. Standard Batteries rose by Rs. 5 to Rs. 210. Tata Oils gathered Rs. 4 to Rs. 83.50, Hindustan Levers Rs. 4.25 to Rs. 52 and Greaves Cottons Rs. 5 to Rs. 170. Chemicals and dyes, however, drifted lower on fears of lower profits as a result of additional taxation. Colour Chems and Poly Chems fell by Rs. 10 each to Rs. 355 and Rs. 237.50, respectively. Citrics suffered a loss of Rs. 6 to Rs. 62. Dhrangadhras eased by a like amount to Rs. 130. Alembics shed Rs. 2.50 to Rs. 255. Synthetics declined by Rs. 2 to Rs. 155. Amar Dyes were neglected at Rs. 385, as also India Dyestuffs at Rs. 472.50. Rayon shares were irregular. National Rayons improved by Rs. 5 to Rs. 542 and Gwaliors by Re. 1.50 to Rs. 46.50, while Indian Rayons shed Re. 1.50 to Rs. 67.50 and Barodas 50 nP to Rs. 140.

• • • •

Madras Stock Exchange

MADRAS, *8th March*

Barring a few coffee and bank shares which came in for some selling, equities on the Madras Stock Exchange ruled distinctly steady during the week under review, reflecting the general satisfaction of operators over the Central Government budget for 1961-62. The reduction in the bonus tax from 30 to 12½ per cent was particularly welcomed. The gesture of the Finance Minister to lower the export duty on tea and excise duty on packed tea was appreciated, and there were hopes that the Minister would concede the request of the tea industry for reducing the heavy increase in excise duty on loose tea. The upward revision in the rates of import duty on plant and machinery was noted but it was not expected to have any pronounced effect on the cost structures of industries. Despite the increase in excise duty on mill textile industry, there was good demand for textile scrips. Rubbers moved up on reports that the Government of India had agreed to extend financial assistance to meet fully the expenditure on rubber cultivation on 4,000 acres, proposed to be undertaken by the Kerala Government and that the Reserve Bank would meet 75 per cent of loans given to small holders. Sugars and electricals were well supported. Miscellaneous industrials ruled firm on better investment buying. Bank shares, however, ruled quiet. Coffee shares, as noted at the outset, evoked selling. The increase in excise duty on coffee was considered unjustified and it was feared that it might tend to restrict offtake which was already lagging far behind supply both in India and abroad.

In the textile section, Dhanalakshmis spurted by Rs. 7 to Rs. 223. Coimbatore Spinnings picked up Rs. 4 to Rs. 59. Buckinghams rose by Rs. 2.50 to Rs. 197.50. Travancore Rayons rose from Rs. 36.50 to Rs. 37.50. Maduras scored a gain of 65 nP to Rs. 37.15. Kotharis put on 15 nP to Rs. 12.50. Lakshmis were full steady at Rs. 157, Bangalore Woollens at Rs. 196.50, Cannanores at Rs. 144, Coimbatore Cottons at Rs. 172.50 and Coimbatore Pioneers at Rs. 340. South Indias, however, fell by Rs. 11.50 to Rs. 152.50 owing to liquidation by some operators.

Among teas, Periakaramalais improved by 27 nP to Rs. 4.15, following the announcement of an interim dividend of 7.5 per cent, taxable, for the year ending 31st March 1961. Nonsuchs strengthened by 25 nP to Rs. 27. Peermades and Chembras gained 20 nP each, the former to Rs. 22.80 and the latter to Rs. 3.75. Haileyburias were higher by 10 nP at Rs. 14.25. Twyfords gathered a like amount to Rs. 12.15. Blue Mountains hardened by 4 nP to Rs. 3.92. The Directors of the Company have proposed to issue 1.05 million equity shares of Rs. 2 each at the rate of one share for three shares held (as on 5-4-1961) at a premium of 45 nP per share. Devasholas were unchanged at Rs. 31, as also Parksides at Rs. 28.37. But United Nilgiris declined by 37 nP to Rs. 23.75. Kil Kotagiris shed 17 nP to Rs. 5.55.

In the rubber section, Cochin Malabars rose by 22 nP to Rs. 7.90. Rajagiris moved up by 5 nP to Rs. 18.80. Kailas picked up a naya paisa to Rs. 5.11. Malankaras were firm at Rs. 18. Midlands at Rs. 12 and Travancores at Rs. 9.87.

Among coffees, Consolidated Coffees fell by 75 nP to Rs. 24. Coffee Lands eased by 37 nP to Rs. 21. Mysores were neglected at Rs. 5.45. Amalgamateds at Rs. 13.65 and Anaparais at Rs. 4.70. Ouchterlony Valleys, however, gathered 4 nP to Rs. 4.60 on special support.

East India Distilleries, in the sugar section, increased by 50 nP to Rs. 41.25. Cauverys rose by a like amount to Rs. 135.50. Indias and Mysore ruled firm at Rs. 12.75 and Rs. 58.25, respectively. United Breweries changed hands at Rs. 112. Andhras were fully steady at Rs. 28. The Directors of the Company have announced a dividend of 20 per cent, taxable, for the year ended September 1960, same as last year. Deccans, however, sagged from Rs. 14.35 to Rs. 14.08.

Chemicals and cements were in the forefront in the miscellaneous section. Among chemicals, F.A.C.Ts rose by 30 nP to Rs. 10.80. Mysore Fertilisers strengthened by 27 nP to Rs. 11.22 and Travancores by 25 nP to Rs. 15.25. Mysore Chemicals were fully steady at Rs. 25.37. Among cements, Dalmias spurted by 65 nP to Rs. 11.90. Andhras were higher by 10 nP at Rs. 10.10. Travancores were held firm at Rs. 8.80. Indias, however, shed 4 nP to Rs. 6.20. Among others, Textools were marked up by Rs. 2 to Rs. 175. Aluminium Industries advanced by 85 nP to Rs. 24.55. Ashok Leylands put on 7 nP to Rs. 9.35 and Parrys by 5 nP to Rs. 5.20. Sen-Raleighs were firm at Rs. 25. The Company has maintained the dividend for the year ended September 1960 at the previous year's level of 8 per cent taxable.

STERLING ON THE TURN?

(From Our Own Correspondent)

LONDON, *3rd March*

LONDON LETTER

WHILE the Minister of State has been busy in Paris trying to negotiate his way into the Common Market without negotiating his way out of Commonwealth agreement, the City has been preoccupied with the change in the fortunes of sterling. The dollar rate, which almost to the end of 1960 had enjoyed an unprecedented strength for twelve months, moved back and finally this last week it has actually dropped below the parity of $2.80.

This was before the announcement of the fall in the gold reserves of about £18 million, but there were many tipsters who had already forecast some fall, though no one seems to have anticipated that it would be quite so heavy. So everybody is asking what it means, especially as, in February, payments on trade account usually make sterling strong and bring gold in. What may be termed the "official" opinion is that, since the balance of trade is traditionally in Britain's favour, this time the weakness of sterling and loss of gold can only be due to a substantial outflow of American hot money. Some say: look at the American gold position. In February, the American reserves stopped going down, but, on the other hand, they have not yet moved up, so gold withdrawn from Britain is certainly not swelling the stocks of the Federal Reserve system. Instead, the gold has gone to Europe and there can be no doubt that, in spite of high London short-term rates, hot money has preferred to go to Europe.

Although the argument here is all about just how much hot money is going, and where it is going, and why it is going, one cannot ignore the other possibility that the balance of payments is really not as healthy as it should be. All the world knows that the rise in Britain's gold stocks last year was made against an adverse balance of payments.

In 1960, our sterling balances rose by £224 million. This figure conceals the significant fact that *non-sterling countries* actually increased their balances over the year by £600 million. That may be some measure of the inflow of hot money. On the other hand, the sterling countries, to cover their own external deficits, reduced their balances by about £220 million and the sterling held by international institutions dropped by £150 million as a result of repayments by the U.K. to the I.M.F. of its debts. These repayments were made possible only by the inflow of hot money. It is important in studying these sterling balance figures not to look at the total, but to look at its component parts which reveal the influences at work.

Turning to the last quarter's figures, we see this pattern generally repeated. The total of sterling balances increased by some £90 million. Non-sterling hot money or other short-term investment swelled them by £240 million. The sterling countries drew down their balances by nearly £100 million, and the balance with international organisations dropped by more than £50 million. Admittedly, the non-sterling figure is artificial, because it includes £130 million or so of sterling purchased by the American Ford to buy up the British Company, and in January that figure would have been cancelled out with the transfer of the money to British nationals. Excluding this, we are left with about £110 million inflow, of which North America accounts for only about £40 million. There was a small increase in the balances of the Latin American countries and the rest was hot money coming in via Europe. It is probably this last increase which is now being reversed.

To sum up, it is doubtful whether, taking the month of February as a whole, the outflow of hot money can really be responsible for the month's drop in the reserves. It may well have been the most important factor in the latter part of the month, but not over the month as a whole. The trade figures, when they are published, may reveal the truth—meanwhile the supposition must be that the commercial balance is a good deal more adverse than is generally supposed. Continued pressure by the Government to encourage exporters reveals the Treasury's appreciation of the weakness in the country's external trade position, in part a reflection of the strength of domestic production and trade. But the Treasury must by now be asking itself what short-term measures it will take, if the pressure against sterling continues and exports do not expand quite fast enough.

AMERICAN LETTER

RECESSION BEING EXAGGERATED

DR. CASTRO HAS BROUGHT ABOUT 50 PER CENT FALL IN NATIONAL INCOME

From Our Special Correspondent

NEW YORK, *27th February*

PRESIDENT Kennedy is moving fast. There are lots of pronouncements, but there has not been enough time for any real action. The domestic and international problems are real. On the scene in the United States, Mr. Kennedy has come out for bigger and better Government spending all around.

It is a familiar line. There is a continual talk of a recession which is being blamed on the previous Administration. Statements are made that about 100 regions of the U.S. are now "distress areas." This is nonsense, as I know from my own travels and experience.

Once one gets out of the large U.S. population centres, peoples have their own farms which provide their food and, even if they have lost their jobs, there is no real distress. But semantics of "distress" and so on always provide a politician with a *raison d'etre* and with an excuse for more spending which will help more people so that he may be re-elected at the end of his term.

Although the inaugural message of President Kennedy was well received in the United States, as mentioned in one of my earlier despatches, subsequent messages of the new President did not leave such a favourable impression. The "State of the Union" message to Congress was held to be entirely too pessimistic. The stress was on the bleak, rather than on the bright spots. Mr. Kennedy, it seemed, was trying to establish himself as the saviour of this country. He singled out slightly increasing unemployment as a great national menace without mentioning the fact that in the neighbourhood of 70 million people are gainfully employed.

Despite declarations that price rises would be held in check, there are strong inflationary implications in the other suggestions of the new Administration. These include higher hourly wage rates, lower short-term interest rates and an increase in the social security system which, at this point, is already in a precarious financial position.

It is unfair, perhaps, at this time, to predict what the new Administration is going to do in the ensuing four years of its constitutional existence—even for one year. There will always be evolutionary processes.

Striking examples are the change-over from propeller to jet planes and to missiles and from the battleship to the aircraft carrier. All this means changing industrial and financial requirements to which adjustments have to be made.

Cross-currents

Barring unforeseen circumstances, I cannot share Mr. Kennedy's gloomy predictions about the American economy. There will always be strong spots and soft spots. That is inevitable. One of the major soft spots still is steel. Without any sustained pick-up in automotive steel orders, an increase in output is unlikely. The industry now operates at about 55 per cent of its capacity.

There are several factors involved here. One is the creeping inventory of unsold cars which is due, in part, to the unwarranted pessimism of Mr. Kennedy. It results in uncertainty and deters the public from buying.

Layoffs have occurred among the automobile makers. Sales of durable goods, generally have been lower, including major appliances and construction projects. Beyond the official pessimism, there were below normal temperatures this winter and abnormally heavy snowfalls throughout most of the industrial areas of the U.S. which stymied transportation. At the height of the weather disturbance, cities, including New York, Detroit and Washington were virtually paralysed.

March is likely to see the low for steel shipments from this country, based on the level of current orders. Inventory liquidation has been proceeding and a build-up is inevitable. A recovery in steel industry is, therefore, in sight.

There are, however, many anomalies in the U.S. economy at the present time. While the gross national product, on an annual basis, has shown a slight decline, personal savings have been going up. This could be interpreted as a sign of caution on the part of the public regarding the future.

Government purchases of goods and services have risen sharply, providing a prop for employment in many industries. Retail sales are on a relatively even keel. Consumer credit, particularly on the hire-purchase arrangement, are still rising, but corporate profits after taxes are falling and new plant and equipment expenditures have decreased. Nevertheless, there are also some encouraging expectations, as expressed by industry. One is that commercial printing will see an increase this year to a new high. Photographic production and sales will be higher.

Machine tool shipments will increase. Scientific and process control instruments are anticipated to gain substantially. Lumber output should be higher. Even cotton goods expect an upward trend. Farm machinery, too, is looking forward to a boost and so is air-conditioning and refrigeration, despite the fact that the U.S. electric industry is in deep trouble—with several of its top officials in jail—for price fixing. It justifies the existence of the U.S. Attorney General and his staff, but it does not make too much sense in the light of current economic conditions.

In fine, while there has been much crying about a U.S. recession, as stated above, there has been improvement in several areas. Confidence in the future is widespread, particularly in the second half of this year.

The stock markets in the U.S. are running at an amazing trading volume. Most experts now say that the security markets are on the threshold of a substantial upturn.

A Unique Strike

The strike of Flight engineers on major U.S. airlines created havoc. About 12 million passengers were stranded and long-distance mail piled up at the post offices and at the airports. Now that the strike is over, it is being moved to the designated destinations.

The irony of the situation is and was that the engineers, actually, had no quarrel with the airlines, nor with anybody else. Under U.S. Government rules, any four-engined commercial airliner, either propeller driven or jet, must have a flight engineer. There is no such requirement for two-engined planes.

The pilots have taken the position that there is no requirement for flight engineers on any airplane and that the engineers should become pilots as well. This would place them on the junior list in the Pilots' Union and would have to make them forgo the benefits of their years of standing in the Engineers' Union. It is part of the development of the jet age where twice the number of passengers are being carried in one plane than 10 years ago.

This was the basic reason for the strike. The engineers were afraid to lose their jobs and to lose seniority. They and their families are apprehensive of losing their careers.

So far as can be seen now, the foreign trade and foreign policy line has not altered materially with the change of the Washington Administration. Mr. Kennedy called Premier Nikita Krushchev's bluff off in regard of the Congo affair. He also upheld Dag Hammerskjoeld as Secretary-General of the United Nations whom Mr. Krushchev wanted to resign. The Soviet Premier tried to frighten the new President of the United States, but he did not succeed. Outside of the Congo, there are other trouble spots, such as Arabia, Cuba and Latin America, generally.

All these have grave economic implications and the new President will have his problems, particularly with the balance of payments and the outflow of gold which is mentioned in every paper here.

Cuba

The trouble spot nearest the United States—only 90 miles—remains Cuba. Premier Fidel Castro's expropriations of foreign property cut Cuba's national income in half. Anti-U.S. policies cost each man, woman and child in Cuba more than $150 a year. That is about one half of the average income. The most crippling blow to the Cuban economy was the ending of sugar sales to the U.S. They constituted 53 per cent of all Cuban exports in 1959.

In reverse, it might be said that U.S. sugar producers expect a very good year. There are lagging supplies. In the opinion of most Americans, Dr. Castro is mentally sick and a psychoanalyst's dream. The people who are really suffering from his perversions are the Cuban people.

United Nations News

The Communistic-inspired demonstrations at the United Nations were disgusting. I was there. The New York City police have no jurisdiction in the U.N. area. The U.N. security force, outnumbered, was finally able to get the demonstrators out of the building and the Police Department of this city took over. The area is still heavily patrolled.

The Indian delegation was of particular help in the U.N. discussions of the African questions. Western diplomats paid a good deal of attention to what India had to say. This is not a statement to please readers in India, but, I think, an honest appraisal of the position of India in the U.N.

There is a good deal of discussion, too, about the economic planning of India. Mr. S. T. Sadasivan, General Manager of the United Commercial Bank, Ltd., Calcutta, has been quoted widely here on the results of economic planning for India. At the same time, there was a disquietude over inflation and the price situation.

Much discussion is also being held at the U.N. about the plans for over-all national development. In this respect, correspondents to the U.N. quote Mr. N. K. Karanjia, General Manager of the Central Bank of India, Ltd., Bombay. What is of particular interest here is that banks in India are being asked to pay attention to the requirement of small business.

As I said in previous despatches, the U.S. and the U.N. have become very much pre-occupied with India as one of the most stabilising forces in that part of the world. While U.S. developments are subject to many criticisms, India has been singled out here for the great strides its economy has been making and the advent of its third Five-year Plan.

Mr. S. P. Puri, Managing Director of the State Bank of India, Bombay, wrote a very interesting article which was published here. All such measures greatly help one country to understand another country.

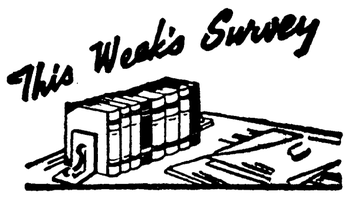
India's Resolution

The representative of India at the United Nations has introduced a resolution on the accelerated flow of capital and technical assistance to the developing countries. The resolution has the support of Afghanistan, Burma, Ceylon, Ghana, Indonesia, Iraq, Nigeria, the United Arab Republics, Yugoslavia, Chad, Nepal, Pakistan, Sudan and Yemen. It urges the urgency and importance of accelerating the economic and social development of the developing countries for the maintenance of world peace and security and the promotion of better understanding among peoples. It has been very well received.

The resolution suggests that all countries, as a matter of national policy, contribute about one per cent of their national income to aid the developing countries. This outflow of funds, according to the resolution, "could be through private or public channels, either bilaterally, or multilaterally, or through international organisations, such as the U.N." It suggests that the present contributions of fully industrialised countries is insufficient to quiet the nerves of the developing countries and to keep peace. It reiterates several times that the outflow of international assistance to the developing countries should be increased substantially to reach as soon as possible about one per cent of the combined national incomes of the economically advanced countries. (*Delayed in transit*).

STATE BUDGETS—A CORRECTION

On page 380 of our last issue, figures relating to the budgets of eight State Governments were presented in a tabulated form. The figures of total receipts and expenditure pertain to both capital and revenue accounts. In the case of Andhra, the total expenditure is Rs. 122.18 crores and not Rs. 112.18 crores as printed therein. As regards the deficits shown in the table, the deficits of Andhra, W. Bengal, Jammu and Kashmir and Bihar are overall deficits. In the case of other States, the exact resources on the capital account are not clear from the Press reports on which our analysis had been based.



ECONOMIC SURVEY OF ASIA

THE United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.), which is now holding its seventeenth session in New Delhi, has issued its usual economic survey of the region. The present survey covering 1960 highlights the significant uptrend in industrial production which registered an increase of 15 per cent in the first half of 1960 over the average level of 1959. As compared with the second half of 1959, this represented an increase of 11 per cent. What, however, detracts from the significance of this industrial performance in the region as a whole is that it was due mostly to two countries—Japan, accounting for more than half of the increase, and India, for about a quarter. The gains made by other countries were, therefore, relatively modest. Even such modest gains do not seem to have been secured by most of these countries in the sector of agricultural production, for the increase here in 1959-60 was only about one per cent as compared with 1958-59, when production had increased by 7 per cent over the previous year. It is, however, found that, in recent years, food production as such has risen a little faster than population. This finding is, however, accompanied by the statement that "the *per capita* levels of total food supply in the region are still far too low, and are inadequate to maintain the health and welfare of the population." The statement underlines the need for greater effort in producing more and better food from the nutritional point of view.

The E.C.A.F.E. survey this time is more notable for its special study covering public finance in the region in the post-war period. A major finding of this study is that State participation in economic development has increased significantly since 1950 under varying conditions of planning in the different countries. The share of the public sector in overall national expenditures, for instance, rose from 16 per cent in 1950 to 20 per cent in 1958 in Ceylon, from 16 to 33 per cent in Mainland China, from 25 to 31 per cent in Taiwan, from 8 to 14 per cent in India, from 16 to 19 per cent in Japan, from 10 to 10.5 per cent in the Philippines, and from 11 to 12 per cent in Thailand. There are some variations, albeit slight, in these figures when Government expenditure is presented as a percentage of gross national product as in the following table:

Country	1950 or the year within brackets	1958 or the year within brackets
Burma	15	28
Cambodia	12 (1951)	14 (1957)
Ceylon	19	26
China (Mainland) ..	16	33
Taiwan	25 (1951)	33
Malaya	9	19 (1957)
India	9	16
Indonesia	16 (1951)	20
Japan	24	26
Korea (South)	13	24
Pakistan	10	15
Philippines	11	11
Thailand	11	14

Noteworthy in the above figures is the fact that the share of the public sector in the gross national product in India is relatively less than in Japan which is a free enterprise economy although in either country this share has nearly doubled since 1950. It must, however, be noted here that the growth of public expenditure in Japan has been due to the high proportion (30 per cent) of expenditure on social services. India, on the other hand, has economised on social spending and devoted a higher proportion of public expenditure to transport, communications, irrigation, power and industrial undertakings. In the region as a whole, public investment in the 'infra structure' and expenditure on social services have increased considerably; only Mainland China and India have given priority to the development of heavy industries. In Burma, Taiwan and the Philippines, there has even been an opposite trend in recent years—a trend away from Government investment in favour of private enterprises.

While, by and large, Government expenditure in the E.C.A.F.E. countries has been on the increase, Government revenue, too, has increased in volume between 1951 and 1958. This latter increase is the greatest in the centrally-planned economy of Mainland China where Government revenue now accounts for a third of the country's national product. In Burma, Ceylon, Taiwan and the Federation of Malaya, Government revenue represents anything between one-sixth and one-quarter of national income, while, in the rest of the E.C.A.F.E. region, it is only between 11 per cent and 13 per cent of national income. The progress in revenue collection is, therefore, described as generally unimpressive. The E.C.A.F.E. study has the following to say in this context:

"Contrary to what has been generally believed, taxable limits—whatever they are—have not been reached in the newly developing countries which indeed possess a revenue potential sizably greater than what they have so far exploited. . . . The failure of Governments of the region to increase revenue in proportion to the increase in their expenditure resulted in most countries in the emergence or enlargement of their budget deficits. Under certain limited conditions budget deficits were in no way antithetical to the pursuit of the objectives of long-term economic growth; but, in many countries and over most of the post-war period under consideration, budget deficits were a contributory factor to inflationary conditions."

The conclusion of the E.C.A.F.E. study, so far as tax effort is concerned, is not applicable to India, which, it is acknowledged even by the authorities of the World Bank, has been taxing its people at a heavy rate.

The policy of financing budget deficits by money creation undoubtedly carries with it an element of risk—the risk of increases in the cost of living, wages and cost of production—unless, of course, the magnitude of such deficits is kept within reasonable limits and is adjusted periodically to take the changing economic climate into account. At the same time, the E.C.A.F.E. study has also warned against the fiscal objective of reducing inequalities of income and wealth through excessive taxation of the rich. Such taxation, it is conceded, has led to extremes in some cases and seems to have encouraged tax avoidance. The conclusion, it would appear, is that, if income taxes are pitched at a moderate level, there will be less tax evasion and tax avoidance and greater incentive for saving, investment and production, all leading to more revenue to Government.

WEST GERMAN AID TO INDIA

West Germany's offer of DM 400 million (Rs. 45.5 crores approximately) as aid to India during the first year of the third Plan is yet another evidence of that country's continuing interest in India's development efforts. Although W. Germany joined the ranks of nations giving assistance to India only lately, since 1958 to be precise, it has already become the fourth largest helping country, next only to the U.S., the U.S.S.R. and the U.K. Total assistance pledged by W. Germany to India so far, including the present one, aggregates Rs. 155.67 crores, mostly in the form of credits to facilitate payment for import of machinery and equipment from W. Germany.

A distinguishing feature of the present offer, the agreement relating to which is yet to be signed, will be that a part of it will be "untied" loans which could be utilised for purchases in any part of the world. Out of the DM 400 million, about DM 230 million would be for repayment of loans which India owes to certain W. German firms participating in the Rourkela steel project. India could pay back this loan to the W. German Government after eight years. Of the remaining DM 170 million, as much as DM 100 million would be made available immediately and would be repayable over a period of fifteen years. The balance of the credit would be made available in due course.

W. Germany is also reported to have promised to help India to obtain the necessary credit for the second stage of the expansion of the Rourkela steel plant which is estimated to require a foreign exchange expenditure of DM 450 million. It would appear that the green signal for going ahead with placing orders for machinery and equipment has already been given by W. German authorities.

Since India receives aid from various countries, there is an understandable temptation to compare the terms and conditions of aid received from one country with those obtained from another. Surely, one cannot measure the degree of friendship between the aid-giving and receiving countries in terms of the rate of interest charged on loans or the conditions of repayment, because these are determined by the capacity of the individual countries and the level of interest rates in them. But, as a debtor country, which intends to repay every cent it borrows, India has surely got to keep an eye on repayment obligations too. Looked at from this angle, W. German credits have been costlier than those given by others. West German credits to India have usually carried an interest rate of over 6 per cent, as compared with those charged even by the World Bank which have ranged from 3½ to 6 per cent. This is because of the high rates of interest prevailing in the German capital market. It must, however, be admitted that West German plant and machinery have been highly competitive in terms of price and quality, though a part of this advantage may now be lost by the revaluation of the D-mark by nearly 5 per cent early this week. Then, there is also the possibility of a decline in West German interest rates in future.

AUTOMOBILE INDUSTRY

In his speech at the sixteenth annual general meeting of the Premier Automobiles Ltd., Mr. Lalchand Hirachand, Chairman, touched on some problems pertaining to the automobile industry in general, besides dealing, at some length, with the progress, present and prospective, of his own company. While referring to the general problems of the industry, Mr. Hirachand welcomed the new automobile policy recently enunciated by Mr. Manubhai Shah, Minister for Industry, with particular reference to commercial vehicles. The chief elements of this policy, incidentally, are that the existing vehicle manufacturers who are not producing their own diesel engines at present will be allowed to manufacture them, that the licence of Automobile Products of India Ltd. for manufacturing Meadows diesel engine will be transferred to Premier Automobiles, while Simpson & Co., now manufacturing the Perkins diesel engine, will be given a manufacturing licence for commercial vehicles, that each of the five commercial vehicle manufacturers will have the freedom to expand its production and make any model it likes, and that the Government will provide enough foreign exchange for capital investment in regard to the expansion programme while restricting the foreign exchange requirement for importing parts and components and raw materials to the present level. Mr. Hirachand's welcome to this policy is also appropriate from the point of his own company, for it will be able to manufacture not only the Meadows engine but another engine of its own choice which will be more suitable for its vehicles. The new policy has also encouraged the company to decide in favour of expanding its present production capacity of 3,000 trucks per annum on single-shift basis to 15,000.

But the policy regarding car manufacture is not yet fully clarified and so Mr. Hirachand was unable to say definitely at the meeting whether the company would be allowed to produce 100 cars a day in two shifts so that it might be able to bring down substantially the price of the Fiat car. In this context, his plea "that the existing manufacturers should be afforded every opportunity to utilise the growing demand for an increased volume of production and consequent lowering of prices" was understandable. But it did not amount to a strong condemnation of the Government's project to produce a low-cost car in the public sector. Obviously, Mr. Hirachand thought that any further criticism of the small car project would be pointless, all the more so because the Government had categorically stated that the project would be implemented in the public sector. His own company, according to him, can look forward to a share of 20,000 cars a year in the estimated total production in the third Plan period, of 40,000 units of the present models.

That takes the subject from the general level of the automobile industry to the particular level of the Premier Automobiles. Mr. Hirachand's reference to the expansion project of his Company in respect of both trucks and cars shows that this project would involve a further capital expenditure to the tune of Rs. 25 crores. He said that it was rather too early to indicate the exact manner in which finances of this order would be found. He, however, thought that a part of the resources might be obtained from the U.S. Development Loan Fund and that the Company might increase its capital too. It is to be hoped that the Company will succeed in its endeavours to launch the expansion project for increasing its installed capacity fourfold in respect of cars and fivefold in respect of trucks. That the Company is in a favourable position now to attract fresh capital is indicated by its good financial performance in the past year and a half and the popularity which the Company's shares have been enjoying in recent months among investors.

ON THE ARENA

By The Archer

Consumer Co-operative Societies

THERE seems to be a great deal of confused thinking on the role of consumer co-operative societies in holding the price line for consumer goods, and acting as the only available corrective for the anti-social activities of dealers and retailers who take advantage of every convenient situation to charge unwarranted premiums on the prices of articles. During the course of his speech in Parliament on 20th April 1960, the Finance Minister is reported to have said: "As mentioned in my budget speech, the exemption (from income-tax) hitherto enjoyed by co-operative societies rested on the consideration that the societies were formed for the promotion of thrift and self-help among agriculturists, artisans and persons of limited means. However, of late, co-operative societies have widened their fields of activity and are carrying on business transactions on a large-scale with non-members." Arising from this view, the Finance Act of 1960 made consumer co-operative societies whose business profits were in excess of Rs. 15,000 per year, liable to income-tax. The theory that "business profits" should be taxed, whatever be the nature of the enterprise, is, I concede, an orthodox one in the field of public finance, but many such orthodox theories have undergone modification in the light of the modern concept of a Welfare State. The entire scheme of co-operative enterprise is based on the twin assumptions of self-help and service above self, and envisages the management of such enterprises by experienced honorary workers of proven integrity and competence, free from the profit motive. The increasing emphasis on encouragement of co-operative enterprises in every sector of national and economic activity in a Welfare State is directly traceable to the assumption that the baser motives arising from greed and avarice which lead to economic exploitation will not have free play in such enterprises. And, theoretically at any rate, it is possible to ensure this, provided the right type of people are found to undertake their management, and the spirit of co-operative endeavour is kept alive.

Viewed against this broad background, the levy of income-tax on the business profits of consumer co-operative societies is not unassailable, because (*a*) such societies are brought into existence only to carry on trading activities on as large a scale as is necessary to meet the needs of the area which they serve and each situation as it arises, and there can be no absolute or arbitrary standards for the size of their transactions, which should be purely relative to the effective achievement of social objectives; (*b*) as the societies will be working on the barest of profit margins, they should be allowed to retain them in entirety, limiting dividends to shareholders to a low percentage, and allowing accumulations of profits as reserves to mop up losses or provide subsidies, and (*c*) the management, which will consist of honorary workers, most probably of a mature age group should be free from having to undertake responsibility for submitting time-consuming tax returns, while the paid executives should concentrate on effective performance of routine duties relating to procurement, sale and distribution which can be extremely onerous during most of the year.

A second item of confused thinking is in regard to the scope of operation of these societies. The view appears to be that they should confine their sales only to their members and exclude outsiders. This view could, perhaps, be sustained on the basis that that is one effective way of increasing membership strength, but there are weightier considerations which should be taken into account for permitting unlimited scope for the operations of consumer co-operatives. I have already stated that they are the surest correctives to artificially inflated prices, provided their operations are properly conducted. Secondly, the best way to make them broad-based in membership is to widen their activities and scope, restricting a share of profits to members only. The larger their trading activities, the better will they be accepted by the community and the lesser will be their overhead charges per transaction. Further, in normal day-to-day working, it would be impossible to shut out most articles (except those that are rationed) from reaching non-members through purchases made in the names of members. In accordance with the wise principle that no rule should be promulgated, unless it can be effectively enforced, it would seem advisable to lift the embargo on consumer co-operatives effecting sales to non-members.

In pursuance of the policy of restricting operations to members, it would seem that, in some of the States of the Union, consumer co-operative societies are not allowed import licences for more than Rs. 20,000 per year and, within this limit, for not more than Rs. 2,000 per item. These small limits would appear to be based on the assumption that the societies serve only persons of slender means and need not, therefore, be enhanced. The fallacy in this assumption is that co-operative enterprises are looked upon as intended for the poor and indigent only, while, in a Welfare State aiming at a socialist pattern of society, they can, indeed, be used to set the pattern for a way of life which will be free from the wickednesses resulting from artificial manipulations in supply and prices of commodities. In this context, it would seem that the ceiling fixed at Rs. 20,000 is much too small, and, in any case, the condition that sales of imported commodities should not be effected to non-members is unsustainable. Subject to the need for conserving foreign exchange being observed, consumers in general feel that there is a good case for liberalising imports of essential articles to the larger consumer co-operative societies and allow them to play their part in holding the price line of commodities, and evenly distributing them. The "established trade channels" have, in most cases, forfeited the confidence of consumers to such an extent that all reference to "best years' imports" and such like to fix import quotas seem out of place under existing conditions.

Bankers to Meet

Leading bankers in the country have been invited to Delhi to meet the Finance Minister and discuss ways and means of strengthening the banking structure to meet the increased demand for credit during the present busy season. It is the view of the Governor of the Reserve Bank that one of the reasons why the money market was very tight was that deposits of commercial banks were not advancing as rapidly as they should. Government and the Reserve Bank are both anxious to have the banking industry so organised (reorganised?) as to instil sufficient confidence in the public to deposit their surplus moneys into banks. One of the schemes being considered in this context is to effect the amalgamation of small banks with large ones, and another is to have the capital of banks and their reserves to be so increased as to bear a better proportion than at present to their total deposits. I hope some fruitful discussion will take place at the conference and that representatives of banks who attend the meeting will give out their experiences, assessments and suggestions and not sit tongue-tied. Most of our bankers are strong and silent men—a little too silent even when they know that their cause will suffer by default of representation.

I have been keeping my ears and eyes open and find that there are two reasons for the depletion of deposits in the banking system. One is a general lowering of confidence in all but the top few banks as a result of the frequent public discussion of the "strengthening measures" which the Government and the Reserve Bank propose to undertake. No one who deals with any bank would like to face a moratorium. Everybody likes the feel of money and what gives most satisfaction to anyone is assurance of access to his savings without any impediment. The recent promulgation of moratoriums in the case of some banks, however justifiable they may be to suit the exigencies of the situations which necessitated them, has resulted in making many people take steps to avoid being caught unawares. These have been aggravated by persistent suggestions of more amalgamations being inevitable for purposes of rationalisation. Amalgamations may be one way of securing depositors' interests, but not the only way; and, in any case, moratoriums are available, if the preceding steps are taken secretly, cautiously and swiftly. Time was when thinking on the subject of small banks to serve the limited needs of small areas was very different from what it is now. And, even now, there is a very knowledgable section which believes that small banks can be very effectively administered, if restraint is observed on their expansion and scope of advances. Several of the considerations that apply for promoting small-scale industrial units apply to small-scale banks also. A doctrinaire approach to the question, influenced by recent happenings, is therefore not advisable. A second reason for depletion of bank deposits is the increasing practice of investors to offer time deposits to industrialists at rates much higher than what banks offer. On the one hand, industrial enterprises are unable to obtain their full requirements of finance from banks, and, on the other, rates for advances made by banks keep on increasing by half per cent every now and then, current rates ranging from six per cent to eight and a half per cent on acceptable security of raw materials, commodities or finished goods. A private depositor is easily content with a six per cent return for his money payable annually. The arrangement is mutually advantageous, the loser being the banker who is left with a shrinkage in deposits as well as in advances.

The question of deposit insurance is also expected to be discussed at the Delhi meeting. It would be a good thing, if an agreement is reached on the view that the scheme should effect the creation of an integrated organisation which would undertake periodical inspection, control interest rates, approve or disapprove proposals for branch expansion, consolidation or amalgamation, and generally take over all the regulatory and supervisory functions which are now vested in the Reserve Bank. Opinion appears to be divided on the question of charging premium rates according to the ability to pay, but there is no getting away from the fact that pragmatic considerations point to a system under which the larger banks will have to bear the brunt of subscribing to the insurance fund.

One matter which needs clarification relates to Section 45 of the amended Banking Companies Act which, briefly stated, empowers the Reserve Bank to prepare a scheme (in the national interest or in the interests of the country's banking system) for the amalgamation of one bank with another, make such modifications in it as it considers necessary in the light of suggestions and objections received from both banks, and, on the final sanction of the Central Government, the scheme shall be binding on both banks and on all the members and creditors thereof. There is nothing in this section to indicate that compulsion may not be used, and while one can reconcile oneself to compulsion as being inevitable in the case a bank in distress, one cannot view with equanimity the possibility of a contended and conservative bank being forced to enter into an alliance of one-sided convenience, even in the national interests or in the interests of the country's banking system. I feel that the Reserve Bank should be required to observe the normal proprieties of a good parson, and ask the question "Wilt thou, AB bank take this woman XY bank, to be thy lawful wife, etc.," and obtain a loud "Yes" as answer before pronouncing them as man and wife.

Barking Dogs Don't Bite!

Mr. Morarji Desai's assurance to the Finance Consultation Committee about certain excise duties reminds me of the well-known story of the dog owner that told the visitor who was frightened when his dog barked at him that barking dogs don't bite, and got the answer "You know the proverb, I know the proverb, but does the dog know the proverb?" The excise duty on superior kerosene was increased by 46 per cent, and the Finance Minister is reported to have given the assurance that the common type of oil used as cooking fuel in stoves will not be affected. And yet, we see that prices have gone up for all grades of oil, and the oil companies seem to be doing nothing about this. Dealers are collecting unauthorised excess profits of about seven per cent on the common grade of kerosene. The same is the case with all brands of cigarettes, coffee and tea, and the increases which have taken place seem to bear no relation to the increase in duty proposed in the budget. What is happening now is nothing new, and it will be much worse in the years to come when more and more articles are subjected to excise duties. The wise man of the future will be the one who stockpiles most of the excisable articles early in February each year so as to be able to carry on without fresh purchases during March. Intelligent anticipations will have their due reward.—*All Rights Reserved.*

IMPLICATIONS OF TAXATION PROPOSALS

INDIRECT TAXES INFLATIONARY—NEED FOR PROMOTING PERSONAL SAVINGS AND ENTREPRENEURSHIP IGNORED

By Professor Russi Jal Taraporevala

THIS article analyses the economic, legal and other implications of the changes in indirect and direct taxation proposed by the Finance Minister of the Government of India, Mr. Morarji Desai, in his Budget for the year 1961-62 and introduced in the Finance Bill, 1961.

According to the *Draft Outline of the Third Five-Year Plan,* the Central Government is expected to raise Rs. 1,100 crores through additional taxation during the coming five years. The Finance Minister has made a start in attempting this huge target of additional taxation by proposing in the Budget for 1961-62 new taxes which are expected to bring in additional revenue amounting to Rs. 63.87 crores during the coming year. Thus, the cumulative effect over the next five years of the new taxes imposed in the Budget will be to raise revenues of more than Rs. 300 crores during the third Plan period, if the yields from the new taxes in the coming years do not diminish from the estimated levels for 1961-62. Indeed, in the author's opinion, the revenues from the new taxes are likely to exceed the Budget estimates by a substantial margin.

Additional Indirect Taxation

The Finance Minister has proposed additional indirect taxation through the levy of customs duties and excise duties which are expected to yield additional revenue of Rs. 60.87 crores. Thus, most of the additional revenues sought to be raised during the coming year is through indirect taxation. The emphasis on indirect taxation during the third Plan has become inevitable, because the level of direct taxation has been raised to the point at which there is no scope and certainly hardly any revenue potential in the field of direct taxation left for exploitation during the coming years.

The Finance Minister has imposed indirect taxes on a large number of goods and commodities. His main goal has been to raise the revenues necessary for the third Plan. He has also attempted to tailor his indirect taxation measures to promote certain other goals of economic policy. Thus, in the case of certain commodities, he has attempted to restrain consumption by the imposition of indirect taxes in the hope presumably of introducing an element of forced personal savings thruogh this fiscal measure among the masses in the country. In the case of those commodities where a restraint on the consumption has been attempted, it is expected that the prices of these commodities will rise as a result of the levy of indirect taxes on them, so that new taxes will have a definite inflationary effect on the internal price levels. In the case of certain other commodities, where there is an acute scarcity and where the traders and manufacturers are supposed to be making excessive profits as a result of scarcity by charging the maximum prices which the market will bear, the Finance Minister has imposed duties in the hope that the burden of such indirect taxation will fall on the traders and manufacturers in so far as they will not be able to increase further the prices of such commodities. It is, however, rather doubtul if the Finance Minister's expectations in this respect are likely to be fulfilled. It is quite likely that some of the indirect taxes imposed with this end in view may, nevertheless, be passed on to consumers in the form of higher prices of such commodities. The Finance Minister has also realigned and adjusted certain other indirect taxes, in order to prevent certain arbitrary and undesirable economic effects which were occurring as a result of the existing structure of indirect taxes. Overall, the Finance Minister has spread his net wide and has tried to introduce indirect taxes which, he hopes, will cause the minimum economic hardships to the masses and yet raise the resources for the third Plan.

Customs Duties

The Finance Minister has raised the rates of customs duties on no less than 41 items. He has lowered the export duty on tea in order to stimulate the exports of this commodity, which earns substantial foreign exchange for the country. The additional revenue expected as a result of the increase in the rates of duty on various items is Rs. 31.27 crores. If the loss of Rs. 2 crores in revenue as a result of the reduction in the export duty on tea is taken into account, the net additional revenue, taking all the Budget proposals into account, is expected to be Rs. 29.27 crores. Table A shows the different goods and commodities on which customs duties have been increased together with the additional revenue expected during 1961-62 as a result of the Budget proposals. The table includes only such items as are expected to yield additional revenues in excess of Rs. 10 lakhs during the year. The various goods and commodities have been classified under three broad categories, namely, consumption goods, industrial raw materials and capital goods. The table includes items from which the total additional revenue expected comes to Rs. 27.57 crores, so that it excludes only a few miscellaneous items which are expected to yield less than Rs. 10 lakhs each in revenue and altogether around Rs. 3.70 crores in total revenue during the coming year.

Table A shows that the total additional burden of new customs duties on consumption goods amounts to Rs. 7.24 crores, on industrial raw materials to Rs. 10.14 crores and on capital goods to Rs. 10.19 crores. Thus, less than one-third of the total burden of the new customs duties will fall on consumption goods, so that the immediate inflationary impact of these duties will be minimised to that extent. However, two-thirds of the total burden of the additional customs duties will fall on industrial raw materials and on capital goods which will thus substantially inflate the cost structure of Indian industry. An inflation of the cost structure of Indian industry to the extent of over Rs. 20 crores per year in respect of industrial raw materials and capital goods is bound to exert a substantial upward pressure on domestic price levels and also hamper the export ability of Indian industry by raising its costs to excessively high levels in the long run.

Excise Duties

The Finance Minister has proposed increases in the excise duties on 14 commodities and has levied excise duties on 17 new commodities. The total additional revenues expected as a result of these changes during 1961-62 comes to Rs. 30.90 crores.

Table B shows the various goods and commodities on which the burden of new or additional excise duties will fall during 1961-62 as a result of the Budget proposals. The table classifies the various items under three broad categories, namely, consumption goods which are necessities, consumption goods which are luxuries and amenities, and industrial raw materials and capital goods. The table shows that the total additional burden of excise duties on consumption goods which are necessities of life comes to Rs. 11.20 crores or a little more than a third of the total burden of the new excise duties. The excise duties on necessities are bound to result in an increase in the prices of these goods and commodities and will have an inflationary impact on the economy. The table shows that the total burden of the new excise duties on consumption goods which are luxuries and amenities comes to Rs. 3.57 crores in the year. Therefore, the total burden of the new excise duties on all types of consumption goods comes to Rs. 14.77 crores, or approximately half of the total additional revenue sought to be raised through excise duties. The table shows that the additional burden of excise duties on industrial raw materials and capital goods amounts to Rs. 16.13 crores for the coming year. It will be seen that the list of items under this classification constitutes almost entirely industrial raw materials so that these levies will have an annual impact of pushing up the costs of Indian industry in excess of their existing levels. Such an upward movement in industrial costs is bound to lead to inflationary pressures in the economy and may also hamper exports.

The new indirect taxes proposed by the Finance Minister are bound to involve certain hardships and sacrifices for the masses in the country through their inflationary impact on domestic price levels. The Finance Minister has justified his new taxation proposals and the sacrifices which they may involve as being necessary to promote the economic development of the country and put through the third Five-year Plan. It must be admitted that he has chosen his indirect taxation measures skilfully, has spread his net very wide by covering a large number of goods and services so that incidence of indirect taxation on any particular product or commodity has been kept at the minimum. Thus, the burden of the new indirect taxes will be thinly spread over vast segments of the economy and will not penalise or hurt only one industry or commodity. To this extent, the Finance Minister must be congratulated for having produced indirect taxation proposals which are relatively moderate in their likely impact on various classes of the community.

Additional Direct Taxation

The Finance Minister has proposed certain changes in the direct taxation levied on individuals and corporations which are expected to bring in an additional revenue of Rs. 3 crores. Whilst the figure of Rs. 3 crores may, on cursory reading, appear small, especially in relation to the total burden of additional indirect taxes imposed in the Budget amounting to Rs. 60.87 crores, it must be stressed that the increase in direct taxation is being imposed on top of a structure of direct taxation of which the burden had already become so excessive that the reasonable limit of taxable capacity had been passed long ago. Indeed, even the official *Draft Outline of the Third Five-Year Plan* has recognised that the rates of direct taxation has reached an excessively high point at which further increases in revenue could not be attempted on any substantial scale by increasing the rates of tax. It thus states that "as regards income and corporation taxes, further increases in yields will have to be sought mainly through a tightening of tax administration, watch on the expenditure accounts of companies, and other measures to check tax evasion." Thus, when viewed in the context of the existing structure of direct taxation, the increase in the burden of direct taxation on individuals and companies amounting to Rs. 3 crores as proposed by the Finance Minister, will result in a substantial increase in the marginal burden of direct taxation. This could lead to important adverse economic effects on savings, investment and the growth of entrepreneurship in the country. The various detailed changes in direct taxation as proposed by the Finance Minister and contained in the Finance Bill, 1961, may now be examined.

Increase in Personal Income-tax

When the wealth and expenditure taxes were introduced in 1957, the rates of income-tax (including super-tax) payable by individuals were lowered by a token amount and differential rates were introduced in respect of earned and unearned incomes. Thus, the maximum rate of income-tax and super-tax payable on earned income of individuals was fixed at 77 per cent and the maximum rate in the case of unearned income was fixed at 84 per cent. The differential between the rates of tax on earned and unearned incomes was introduced by the levy of a surcharge and the then Finance Minister, Mr. T. T. Krishnamachari, had defended his Budget proposals for these rates by stating that "it is necessary to recognise that the basic rates should apply to the person who earns his income, that is, sweats and toils for it, and that others who derive their income from property and investments, that is, without making any direct effort, should be made to pay more by a surcharge." In the latest Budget, Mr. Morarji Desai has proposed an increase in the maximum rate of income-tax and super-tax on earned income above Rs. 1 lakh from the existing rate of 77 per cent, introduced in 1957, to a new rate of 80.5 per cent. In his Budget speech, he has tried to defend this increase in the burden of income-tax on individuals by stating that "the justification for a differential treatment in favour of earned income, however, diminishes as the income and with it the capacity to pay increase and I consider that earned incomes above Rs. 1 lakh should be subjected to tax at a rate nearer to that at which unearned income is taxed." This claim of the Finance Minister is, however, inapplicable in the context of the present structure of direct taxation levied on individuals in India, besides being in conflict with the claims of Mr. T. T. Krishnamachari in the Budget speech of 1957.

As a result of the introduction of various direct taxes on individuals, such as the Wealth Tax, the Expenditure Tax, the Capital Gains Tax and the gift tax, during the second Plan period, the total burden of these direct taxes has today reached a point at which it confiscates the entire annual income and in some cases even portions of the capital of persons in the upper slabs of income and wealth. Statistical computations, which I had published in various articles contributed to *Commerce* and other papers since 1957, clearly show that the maximum amount which an individual can retain out of his unearned income after paying only the income-tax and the wealth tax amounts to between Rs. 25,000 and Rs. 30,000 per year. These maxima are reached in the case of individuals owning between Rs. 10 and Rs. 15 lakhs net wealth. Persons having income and wealth in excess of these amounts retain out of their annual incomes progressively decreasing total amounts after paying only income-tax and wealth tax. Beyond a certain point, the income-tax and wealth tax not only confiscate the entire annual income but also portions of the capital of individuals in the upper slabs of income and wealth. Moreover, the levy of Expenditure Tax, the Capital Gains Tax, the Gift Tax and Estate Duty, in addition to this burden of direct taxes imposed on individuals, has created a situation in which the mere capacity to save, to invest and to take risks or undertake entrepreneurial activities of the upper classes has been extinguished. A further increase in income tax levied on earned incomes in the top slabs as now proposed by the Finance Minister is totally unjustified in the context of the prevailing taxation of individuals. It is bound to have further disincentive effects in relation to personal savings and investment in the economy.

Changes in Computation and Tax Treatment of Income

The Finance Minister has proposed a number of detailed changes in the computation and tax treatment of the income of individuals and companies for the purposes of the Indian Income-tax Act. The detailed implications of these various changes are outlined in the following paragraphs:

Tax Exemption for Foreign Technicians

The Finance Minister has proposed two changes which are aimed at encouraging the flow of technical know-how and personnel into the country, in order to stimulate its industrial development. Under the existing Income-tax Act, foreign technicians whose contracts of services had been approved by the Central Government before they commenced working in India were exempt from tax in respect of salaries received by them for the financial year of their arrival in India and two subsequent financial years. This exemption could apply for periods ranging from 24 to 36 months depending upon the arrival of the foreign technicians in India. The Finance Bill, 1961, proposes that the exemption from tax of salaries received by such foreign technicians be available for a period of three years from the date of their arrival in India. It is also provided that for a further period not exceeding 24 months, if the tax in respect of the salaries of such foreign technicians is paid to the Central Government by their employers, such tax will not be included in the technicians' total incomes for the purposes of the Indian Income-tax Act. These changes are welcomed as necessary, in order to ensure the flow of essential technical personnel needed for the industrialisation of the country.

It may, however, be pointed out that these exemptions have become all the more necessary, in view of the fact that the burden of direct taxation of personal incomes in India far exceeds that prevailing in most other countries of the world, so that it would probably be impossible for us to attract essential technical personnel into the country without such concessions. Perhaps, it would have been desirable to include within this exemption a limited number of essential management personnel and staff, especially at the present time, when we are keen to attract foreign capital and enterprises into the country. One of the important deterrents to the setting up of new manufacturing enterprises in India by foreign companies is their difficulty in attracting to India suitable managerial personnel and staff, in view of the excessive burden of direct taxation imposed within the country, especially as compared with the tax burdens prevailing in other countries of the world.

Reduced Tax on Foreign Royalties

The Finance Minister has proposed a small concession in respect of the income-tax and super-tax levied on royalties paid by Indian enterprises to foreign companies. The present rate of tax on such royalty payments is 63 per cent, which, as the Finance Minister has admitted in his Budget speech, "is higher than the rate in any other country." The Finance Minister stated that "the incidence of this high rate of tax is borne in the last analysis by our own industry, because the foreign interest concerned naturally asks for a rate of royalty which would give an adequate return to it after deduction of taxes. In order to enable Indian industry to secure technical collaboration on more favourable terms. I propose to reduce the tax on royalties payable on agreements approved by the Central Government after the 31st March 1961, to 50 per cent. This is a step in the right direction, though the quantum of the concession is not substantial.

The reduction in the rate of tax on foreign royalties to 50 per cent still leaves the rate at a level far in excess of that prevailing in most countries of the world. Thus, a report on *Taxation and Foreign Investment* of the National Council of Applied Economic Research shows that, out of 33 important countries, only two levy a rate of tax of 50 per cent or more on foreign patent royalties, excluding India. The National Council had, therefore, recommended that taxation of foreign patent royalties be reduced to around 30 per cent of such royalty payments. Whilst welcoming the reduction in the rate of tax on such payments as proposed by the Finance Minister, it is regretted that the rate has not been reduced to a point which would make it comparable with the rates of tax levied on such payments prevailing in other countries. It must be recognised that the levy of tax on foreign patent royalties at the high rate of 50 per cent will act as a very substantial obstacle in the country's efforts to attract essential technical "know-how" for industrialisation.

Sports Associations

The Finance Bill, 1961, provides for exemption from tax on incomes of associations or institutions established in India totally for controlling, supervising, regulating or encouraging the games of cricket, hockey, football, tennis and such other games or sports as may be specified by the Central Government from time to time in the official *Gazette.* This tax concession for the promotion of sports was overdue and the Finance Minister must be congratulated for having introduced it.

Gratuities of Defence Services

The Finance Bill, 1961, provides for the exemption from tax in respect of retiring gratuity received after 1st June 1953 by members of Defence services under the New Pension Code. This concession to members of our Defence services who risk their lives for the security and safety of the nation will be heartily welcomed. It is, however, regrettable that, in amending Section 7 of the Indian Income-tax Act to provide for this exemption, the Finance Minister has not yet remedied the very serious injustice under which employees in the private sector suffer from having to bear the full burden of tax levied under this section on their retirement gratuities. The present discrimination under the section as between Government employees who are not taxed on their gratuities and employees in the private sector who shoulder the full tax burden on such gratuities paid to them by their employers is totally unjustified. It imposes an inequitable burden of tax on many poor and middle class employees in the private sector on their retirement when they are in most need of money and should have been removed.

Housing

The Finance Minister has recognised the urgent need to stimulate the growth of housebuilding activity in the country. He has, therefore, provided that the annual value of each residential unit comprised in a building should be reduced by the amount of the annual value or Rs. 600 whichever is less for a period of three years from the time of completion of the building in the case of new buildings constructed after 31st March 1961 and let out to tenants. Since income from buildings is taxed on the basis of the annual value for the purposes of the Indian Income-tax Act, the new provision represents a small concession in the burden of income-tax on rentals received by landlords in respect of new buildings constructed after 31st March 1961. This concession is introduced through clause 5 in the Finance Bill, 1961. Unfortunately, the drafting of the clause is rather vague, in so far as the definition of the "residential unit" within a building is concerned. Presumably, the residential unit could refer either to different flats or even to different rooms in the same building which are let out to different tenants. Further, it is doubtful if this small concession is likely to stimulate the growth of building industry which has been retarded in recent years as a result of the tremendous rise in the land values, substantial increases in the cost of building materials, the fixation of rents at uneconomically low level in many of the urban areas, through various pieces of legislation like the Rent Acts and heavy taxation by the local authorities.

Houses for Low-Paid Employees

In a laudable effort to encourage business undertakings to provide residential accommodation for their low-paid employees, the Finance Minister has proposed the allowance of an initial depreciation at the rate of 20 per cent. of the actual cost of buildings constructed for providing accommodation to employees drawing not more than Rs. 200 per month. This allow-

ance will be given as a deduction for computing the taxable income or profits of business undertakings which construct such buildings after 31st March 1961. This fiscal measure for encouraging the private sector to build residential accommodation for its poorer employees deserves to be welcomed.

Tax Reform to Promote Building

Whilst welcoming the two concessions outlined above, introduced by the Finance Minister to stimulate the construction of new buildings for residential accommodation in the country, it must be pointed out that these *ad-hoc* concessions are likely to have only a limited impact. Since the necessity for promoting the rapid construction of new residential buildings, especially for the middle and poorer classes, is now recognised, it is essential that the entire taxation of property or buildings under the Indian Income-tax Act, be reconsidered and reformed. The present method of taxing income from buildings on the basis of the annual value should be abandoned. The income derived from buildings by landlords should be computed in a fashion similar to the computation of income or profits from a business. In order to stimulate the construction of new buildings, tax exemption of income derived from new buildings upto say, 6 per cent of their total cost per year may be allowed for the first five years after their construction as is done in the case of new industrial undertakings under Section 15C of the Indian Income-tax Act. Accelerated depreciation allowances can be given in respect of buildings in computing the taxable income of landlords. In short, if the growth of building construction in the country is to be stimulated, what is needed is not so much short-term and *ad-hoc* concessions as a complete reappraisal of the direct taxation of incomes and even wealth from the ownership of properties by individuals and companies. Construction of houses should be treated as an important industry and put on the same footing for tax purposes as other industries in the country.

Development Rebate

Under the existing Income-tax Act, a development rebate at the rate of 25 per cent of the cost of new plant and machinery installed after 31st March 1954 was allowed as a deduction for computing the taxable profits of a business. The rate of development rebate in the case of ships was fixed at 40 per cent of the cost of the ships. The Finance Minister has now proposed that the development rebate be allowed at a reduced rebate of 20 per cent of the actual cost of new plant and machinery installed after 1st April 1961. However, ships acquired after that date will continue to get a development rebate at the same rate as before, that is, 40 per cent. The Finance Minister has given no reason or justification for this arbitrary reduction in the development rebate allowed to businesses and industries. The development rebate was originally introduced in order to encourage the rapid expansion of industry and the setting up of new industrial units in order to accelerate development within the country. The reduction in the rate of development rebate as proposed by the Finance Minister will increase the burden of direct taxation on business profits by increasing the taxable profits as computed under the Indian Income-tax Act. Moreover, this step, combined with the increase in the duties levied on machinery under the indirect taxes proposed in the Budget, will hit industries simultaneously in an adverse fashion in two respects: Their capital costs of new plant and machinery will increase on account of the enhanced duties levied on machinery and, simultaneously, the tax burden will increase as a result of the reduction in development rebate. The reduction in the rate of development rebate can only be explained as a pure revenue measure and has no economic justification.

An improvement in the granting of development rebate in certain special cases has been proposed in the new budget. Under the existing Income-tax Act, the benefit of development rebate was lost if the assessee transferred the plant and machinery on which the rebate was allowed before expiry of ten years from the date when it was installed. Unfortunately, plant and machinery was deemed to have been transferred even where companies amalgamated and in cases where firms were converted into limited companies. Thus, the benefit of development rebate was lost merely on account of a reorganisation in the form of business enterprise in such cases. This was obviously inequitable and, under the 1961 Finance Bill, it is provided that, subject to certain conditions, where a company is amalgamated with another company or where a firm is converted into a private limited company, plant and machinery on which development rebate was admissible to the predecessor will now be allowed to be transferred by the predecessor to the successor. This means that the development rebate already allowed to a company will not be lost if it amalgamates with another company but will be transferred to the new company with which the amalgamation takes place. Similarly, where a firm is converted into a private limited company, the latter will get the benefit of any development rebate which would have been admissible in respect of the plant and machinery taken over from the original firm. The new Finance Bill thus removes a defect in the original provision of the sub-section granting development rebate. As amalgamations between companies and conversion of firms into private companies usually lead to adoption of better forms of organisation in order to improve the efficiency of businesses and industries, it is wrong to penalise such changes in organisation by withholding the benefit of development rebate as is done under the existing law. The new provisions of the Finance Bill are, therefore, to be welcomed as being in keeping with the ends for which the development rebate was introduced, namely, to promote the growth of industry, especially on efficient and modern lines.

There is, however, an odd omission in the new sub-section proposing this reform, in so far as it does not cover the cases of firms which are converted not into private limited companies but into public limited companies. It is necessary that the exemption for allowing transfer of the benefits of development rebate be extended also to cases where firms are converted into public limited companies. It is hoped that the Finance Minister will take note of the need to introduce such an amendment when the Finance Bill comes up for discussion.

Concessions for Financial Corporations

The Finance Minister has proposed that, in the case of approved financial corporations engaged in providing long-term finances for industrial development in India, an amount not exceeding 10 per cent. of the total income will be allowed as a deduction in computing their taxable income if such an amount is appropriated to a special reserve account. This concession will be available to the financial institutions only so long as their paid-up capital (excluding capitalised reserves) exceeds the amounts carried to the reserve account from time to time. This is a welcome step, in that it recognises the essential role played by various financial institutions and also the need for them to build up substantial reserves over a period of time. The need of these institutions for getting certain tax concessions was lucidly stated by Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India Limited, in his latest annual statement to shareholders, thus:

> "We have represented to the Government that the present tax system bears heavily on finance institutions of which there are about twenty at present, which do not benefit from the various tax incentives like development rebate and tax holiday made available to manufacturing concerns. It would, therefore, be equitable to extend to these institutions tax concessions as has been done in some countries. In view of the need to encourage the saving and investment habit in the country and in recognition of the catalytic impact of finance institutions on industrial development, I trust the Government will see its way to extending these reliefs to finance institutions."

Presumably, this concession will only apply to a few financial institutions like the Industrial Finance Corporation of India, the various State Finance Corporations and the Industrial Credit and Investment Corporation of India Limited. However, in order to encourage the growth of financial corporations for providing long-term capital to Indian industry, the Government should consider extending the concessions granted in this section even to companies like the Investment Corporation of India Limited and the Industrial Investment Trust Limited, which, in their role as investment companies, provide a substantial volume of funds for new industries through underwriting the shares of new companies and also subscribing to the shares of various new industrial companies in which a substantial waiting period is inherent before any returns can be expected. There is an urgent need in India today not only to encourage the growth of companies and institutions which provide investment funds for industries but also for the creation of newer forms of organisation like unit trusts for channelling the savings of the community, especially small savings, into investment in sound industrial enterprises. It is, therefore, to be hoped that the scope of this concession will be extended to investment companies in the private sector and also that new tax concessions will be announced which are necessary in order to promote the growth of unit trusts in India.

Entertainment Expenditure

In his Budget speech, the Finance Minister observed:

> "During recent years, there has been a growing tendency on the part of companies and their directors and executives to entertain on a lavish scale at the expense of companies. While a certain amount of entertainment is unavoidable and indeed necessary in the interest of the business of the company, such expenditure quite often is out of all proportion to the benefit to the company. This ostentation and extravagance have an unhealthy effect on the society and go ill with the need for economy and our ideal of social equality. This state of affairs is partly facilitated by the fact that such expenses are counted as business expenditure for the purpose of tax. In order to correct the situation, without penalising expenditure on a reasonable scale, I have proposed that entertainment expenses in the case of companies should be admissible within specified limits as expenditure for the purpose of tax."

In a poor country like India, it would be universally agreed that flagrant ostentation, extravagance and unnecessary entertainment expenses should be curtailed as far as possible. Nevertheless, it must be pointed out that, under Section 10 of the existing Income-tax Act, entertainment expenditure is allowed as a deduction in computing the taxable profits or gains of any business, profession or vocation only if it is proved by the assessee that such expenditure was "laid out or expended wholly and exclusively for the purposes of such business, profession or vocation." Thus, in cases where entertainment expenditure is out of all proportion to the benefit therefrom to the business, profession or vocation, as suggested by the Finance Minister, the tax officials have the power and indeed used it vigorously to disallow such entertainment expenses.

It is now proposed under the Finance Bill, 1961, to place severe limits on entertainment expenditure allowed as deduction for computing taxable profits or gains. The relevant clause in the Finance Bill, 1961, provides that "no expenditure in the nature of entertainment expenditure shall be allowed in the case of an assessee other than a company." This represents a totally unjustified discrimination in favour of companies against other forms of business organisations like sole proprietorships, partnerships and all other professions and vocations. As a result of the changes proposed by the Finance Minister, sole proprietorships, partnerships and professional persons will not be allowed to deduct entertainment expenses for computing their taxable incomes, even though the nature of their trade, business or profession may necessitate the incurring of such entertainment expenditure, whereas their rivals who have adopted a corporate form of organisation will enjoy a special advantage in this respect under the provisions of the Finance Bill, 1961.

Moreover, it must be borne in mind that, in a number of professions and in certain types of businesses, it is impossible to adopt a corporate form of organisation, because of certain professional or institutional restrictions. The new tax provisions discriminate heavily against all such cases in respect of the deduction of legitimate entertainment expenses. If entertainment expenditure is to be limited for the purposes of taxation, there is no reason or justification for restricting the benefit of allowing entertainment expenditure as a deduction for tax purposes only to companies. Such a deduction should be allowed to all businesses, professions and vocations.

Limits Too Low

The Finance Bill under reference lays down the maximum amounts of expenditure in the nature of entertainment expenses which will be allowed as deductions for computing the taxable incomes of companies. It is provided that, on the first Rs. 10 lakhs of the profits or gains of the business, entertainment expenditure at the rate of 1 per cent or Rs. 5,000 whichever is higher will be allowed. On the next Rs. 40 lakhs of profits and gains of the business, entertainment expenditure will be allowed at the rate of ½ per cent and on the next Rs. 1.20 crores of profits and gains of the business, entertainment expenditure at the rate of ¼ per cent will be allowed. Thus, the minimum allowance for companies is fixed at Rs. 5,000 in respect of entertainment expenditure. Companies making Rs. 10 lakhs profits will be allowed entertainment expenditure of only Rs. 10,000, companies making Rs. 50 lakhs profits will be allowed a maximum expenditure on entertainment of Rs. 40,000 and companies earning profits of as much as Rs. 1.70 crores or more will be allowed entertainment expenses amounting to a total of only Rs. 1 lakh per year. It is apparent that the maximum limits fixed for the allowance of entertainment expenditure in computing taxable profits are extremely low and indeed niggardly. They are totally inadequate, considering the normal expenditure which most companies would have to incur as the bare minimum necessary for the continuation and progress of their business. The application of the proposed limits of entertainment expenditure will merely mean an arbitrary increase in the taxable income of companies through the disallowance of entertainment expenditure which may be absolutely necessary for their business.

Again, the new provisions restrict the deduction of entertainment expenditure for computing taxable profits only to those companies which make profits or gains in the particular assessment year. Companies making losses will not be allowed to deduct entertainment expenditure for computing their tax losses to be carried forward to subsequent years. There are many businesses and industries in which a certain minimum level of entertainment expenditure is necessary annually whether they make a profit or a loss and where the nature of the business is such as to involve substantial fluctuations in profits over a period of time so that there may be substantial profits in some years and even losses in other years. It is obviously incorrect to link entertainment expenditure as a legitimate deduction for tax purposes to the profits of a particular year. Such a provision will severely and adversely affect many companies making losses in certain years, especially new companies which, in the first few years of their operation, can rarely show profits and yet which may need a high level of entertainment expenditure merely in order to get a foothold in their markets or in their respective industries.

It is, therefore, recommended that the sub-section restricting entertainment expenditure in the Finance Bill, 1961, be amended on the following lines:

Entertainment expenditure should be allowed as deduction for tax purposes not only to companies but also to other forms of business, professions and vocations. A minimum amount of entertainment expenditure should be allowed as a deduction irrespective of the accounts showing a profit or a loss in a particular year. The limits of entertainment expenditure should be revised upwards substantially in excess of the limits presently provided. Whilst they may be linked with profits and size of the business, as measured by the capital invested in it and/or the turnover, special provisions should also be made for giving allowances for entertainment expenditure in the case of certain types of businesses which may involve a higher level of entertainment expenditure as being necessary in view of either competitive conditions or acute selling problems or other special circumstances. Even though some steps may be initiated to curb ostentatious or excessive entertainment expenditure, the approach to the problem should not be rigid but should be flexible enough to take into account the legitimate and necessary needs of various businesses, professions or vocations for such expenditure.

Incentives for Building Hotels

The Finance Minister has extended the benefit of the five years' tax holiday under Section 15C of the Indian Income-tax Act which was available for new industrial undertakings to the hotel industry which has so far not been covered by the section. Hotels which start functioning after 1st April 1961 will be able to get the benefit of this tax concession, provided they satisfy certain conditions laid down in the Finance Bill, 1961. It may be pointed out that some of these conditions are rather onerous and unnecessary. Thus, to get the benefit of this tax exemption, a new hotel must be owned and run by a company registered in the taxable territories and with a paid-up capital of not less than Rs. 5 lakhs. This condition discriminates in favour of hotels run by companies and excludes from the scope of tax concession new hotels which may be set up by sole proprietorships or partnerships. There is no justification whatever for this discrimination. It has also been provided that, in order to qualify for the new tax exemption, a hotel must be run in premises owned by the company, must have such number of types of guest rooms and provide such amenities as may be prescribed, having regard to the population and the tourist importance of the place in which the hotel is located, and be for the time being approved for the purpose of the new sub-section by the Central Government. These provisions, therefore, give considerable scope for arbitrary application of the new tax exemption on the part of the Government.

The new tax concession to the hotel industry must be welcomed as it is expected to provide an incentive for the building of hotels which are intended to cater mainly to the tourist traffic earning foreign exchange. It is, however, recommended that some of the arbitrary and onerous provisions which have to be fulfilled by a hotel in order to get the benefit of the tax concession be amended so as to include within its scope all *bona fide* new hotels in the country.

Taxation of Dividends Covered by Section 15C

Under sub-section 4 of Section 15C of the Indian Income-tax Act, personal income-tax and super-tax were not payable by shareholders on dividends received by them from the industrial undertakings where such dividends were paid out of profits covered by Section 15C. The new Finance Bill has proposed the insertion of an explanation under the sub-section which now states that the amount of dividend in respect of which the tax is not payable under this sub-section shall be computed in accordance with such rules as may be made in this behalf by the Central Board of Revenue. The official notes on the clauses of the Finance Bill 1961 and the other budget papers do not give any reason why this explanation has been inserted. The original sub-section 4 of Section 15C of the Indian Income-tax Act was quite clear and it is hoped that, by the insertion of this extension, the Government will not assume discretionary powers which will deprive shareholders of the advantages of tax exemption available under this section, especially in the case of companies of which only a portion of the taxable income is covered by Section 15C.

Charities and Section 23A

The Finance Bill 1961 provides that, with effect from 1st April 1960, the provisions of Section 23A of the Indian Income-tax Act under which the private companies and closely controlled public companies are forced to distribute statutory percentages of that taxable profit annually, or in the case of a default, to pay a severe penalty super-tax, will not apply to companies of which at least 75 per cent of the share capital is held by an institution or fund established in the taxable territories for charitable purposes. Presumably, it has now been realised that where such companies as have hitherto been covered by Section 23A are controlled up to three-fourths of their capital by charitable institutions or funds, there is no point in applying the provisions of Section 23A to them, since these provisions were aimed at preventing evasion of personal income-tax which would not occur in the case of such companies. The exclusion from Section 23A of these companies is welcome.

Section 23A and Small Companies

It is regrettable that the Finance Minister has not amended the provisions of Section 23A of the Indian Income-tax Act in order to exclude from its scope small and medium-sized companies. The application of Section 23A retards the normal growth of many of these companies by forcing them to distribute large percentages of their annual profits. Moreover, it even places a virtual ceiling on the growth of such companies, because it provides that, in the case of companies where the accumulated reserves exceed the paid-up capital or the actual cost of the fixed assets whichever is greater, almost the entire annual profits have to be distributed by way of dividends. These companies find it extremely difficult, if not impossible in many cases, to raise fresh capital from the new issue market. Their borrowing powers are also limited. The main source of fund for the expansion of such companies is through ploughing back their profits into the business. To the extent Section 23A prevents them from freely ploughing back their profits into the business, it places them in a seriously disadvantageous position as compared with the large public companies which are free to plough back their profits unfettered by the provisions of Section 23A.

It is one of the accepted goals of Governmental and planning policy in India that small business should be encouraged to grow so as to check any undue concentration of economic power in the country. If this goal is to be pursued seriously, the Government must amend Section 23A of the Indian Income-tax Act so as to exclude from its scope at least small and medium-sized companies. It should be provided that the provisions of the section would not apply to companies having a paid-up capital of, say, less than Rs. 10 lakhs. This reform is urgently needed in the context of the third Five-year Plan in which the Government has announced its intention of creating conditions under which a large number of comparatively small and medium *entrepreneurs* will be able to avail themselves of the new business opportunities during the next five years.

Refractories Included Under Section 56A

The Finance Bill, 1961, has proposed a change under which refractories will be added to the list of industries covered by Section 56A of the Income-tax Act under which dividends received by companies from other companies are totally exempted from corporation tax, if the paying companies are included within the list of industries specified in the section. This amendment recognises the importance of refractory industry to the Indian economy and is to be welcomed as a measure which will encourage its future growth and progress.

Corporate Taxation

In the field of corporate taxation, the Finance Minister has introduced two important changes: the bonus tax on companies has been reduced and the super-tax on inter-corporate dividends from subsidiary companies has been increased.

Bonus Tax

The Finance Minister has proposed that the rate of tax payable by the companies on the value of bonus shares issued by them is to be reduced from 30 per cent to 12½ per cent. While this reduction in the rate of tax is welcome as it is a step in the right direction, it must be stressed that the continuation of bonus tax on the statute book is a grave injustice in company taxation. There is no justification whatever for the levy of the bonus tax on companies, except, perhaps, on grounds of revenue consideration and it is regretted that the Finance Minister has missed the opportunity of abolishing this tax.

The bonus tax was originally introduced in 1956 by Mr. C. D. Deshmukh, the then Finance Minister, who had justified it at that time on the ground that it was necessary in order to prevent companies from evading the excess dividend tax by increasing their paid-up capital through capitalisation of their reserves by issuing bonus shares. It was pointed out that even this official justification for the bonus tax was unsound, because the provisions of the excess dividend tax could have been so framed as to prevent the evasion of the tax during the issue of bonus shares. The excess dividend tax on companies was abolished last year, so that today the original official justification for the bonus tax has ceased to exist. Nevertheless, the Finance Minister has stubbornly refused to abolish the bonus tax, even though its inequity and its various adverse consequences have been repeatedly pointed out by many, including research bodies, economists, tax experts, etc. The bonus tax discourages the ploughing back of profits into the business and the building up of large reserves. Even the Finance Minister in his latest Budget speech has said that "capitalisation of reserves and of premium on shares is an important device to ensure that a company does not dissipate its reserves through higher dividends. The super-tax payable by companies on bonus issue has, it would appear from recent experience, discouraged this process." Even though the Finance Minister has thus admitted the adverse economic effects of the bonus tax and the need for encouraging companies to plough back their profits, he has only made a half-hearted attempt to remedy the existing unsatisfactory situation by reducing the tax on bonus shares from 30 per cent to 12½ per cent. The continuation of bonus tax even at the rate of 12½ per cent is totally unjustified and only revenue considerations continue to make the abolition of this tax unpalatable to the Government. It is to be hoped that the glaring injustice of the bonus tax will be soon fully recognised by the Government, so that it is swept away from the statute book.

Inter-corporate Taxation

The Finance Minister has proposed to abolish the existing difference in the rates of super-tax as between inter-corporate dividends received from subsidiary and non-subsidiary companies. In explaining the rationale of his new tax proposals in this respect, he said in the Budget speech:

> "Under the law as it stands, there is a concessional rate of super-tax on dividends received by a parent company from its subsidiary, while inter-corporate investment on a minority basis is taxed at a higher rate. I feel that we should not, through our tax laws, encourage the formation of subsidiaries. Consistently, with our broad social objectives, our tax laws should help to enlarge rather than restrict the scope for public participation in all joint-stock companies. I have one more consideration in mind. Because of the more favourable treatment given to income derived from subsidiaries, foreign investors in Indian companies are tempted to ask for a majority holding. The

tax on a minority share-holding by a foreign company is substantially higher than on an Indian company with a minority investment. The investment of foreign capital can make a major contribution to our programmes of industrial development. We do not, rightly, give any tax concessions to the foreign investor as such. At the same time, we should not impose a higher tax on inter-corporate investment from outside which comes in with Government's approval than on similar Indian investment. Having regard to all these considerations, I propose that the rate of super-tax on dividends paid on inter-corporate investment, whether Indian or foreign, and whether on a majority basis or a minority basis, should be fixed at 20 per cent. In order that this change does not affect investments already made under different assumptions, the new rate of taxation will apply to investment in companies formed after 1st April 1961."

The Finance Minister's step in abolishing the discriminatory rates of inter-corporate taxation as between dividends received from subsidiary companies and non-subsidiary companies is welcome, as there is no justification for the position that has been obtaining in this respect.

As a result of the abovementioned changes companies receiving dividends from other companies will continue to pay the normal 20 per cent non-refundable income-tax on them. But no super-tax will be payable on dividends received from companies covered by Section 56A of the Income-tax Act which exempts from super-tax dividends received from companies operating in certain specified industries. In all other cases, super-tax will have to be paid in respect of inter-corporate dividends. The effective rates of super-tax on dividends received by various companies are summarised thus:

Dividends received from	Rates applicable to companies which have made the prescribed arrangements for declaration and payment of dividends in India		Rates applicable to companies which have not made the said prescribed arrangements
	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000	Other companies	
1	2	3	4
1. A subsidiary Indian company formed and registered before 1-4-1961	10	10	10
2. An Indian company, other than a subsidiary, formed and registered on or after 1-4-1959 but before 1-4-1961	15	20	33
3. An Indian company, other than a subsidiary, formed and registered before 1-4-1959	20	25	43
4. Any Indian company formed and registered on or after 1-4-1961	15	20	20

Item 4 above states the change introduced in the Finance Bill, 1961.

It will be seen from the above table that there are different rates of super-tax on inter-corporate dividends and that far from simplifying the structure of inter-corporate taxation, the change proposed by the Finance Minister has merely added a new rate of tax to companies registered after 1st April 1961. As a result of the adoption of this new rate of super-tax of 20 per cent applicable to dividends received from any Indian companies formed and registered after 1st April 1961 (except companies where the public are interested and whose total income does not exceed Rs. 25,000 for which a lower rate of 15 per cent is fixed), the total burden of inter-corporate taxation will not be reduced to any extent. Indeed, the change is more in the nature of increasing the rate of super-tax paid on inter-corporate dividends from subsidiary companies to a higher level similar to the rate of tax paid on dividends from non-subsidiary companies.

There was an urgent need to simplify the structure of inter-corporate taxation and to substantially reduce the burden of tax on dividends received from inter-corporate investments. Even as a result of the change proposed in the Finance Bill, 1961, the structure of inter-corporate taxation will remain as complex as ever, with the continuation of a number of different rates of super-tax for various companies as shown above. What should have been done was abolition of all these different rates of super-tax and adoption of one rate of super-tax payable on all dividends from inter-corporate investments, applicable as from 1st April 1960.

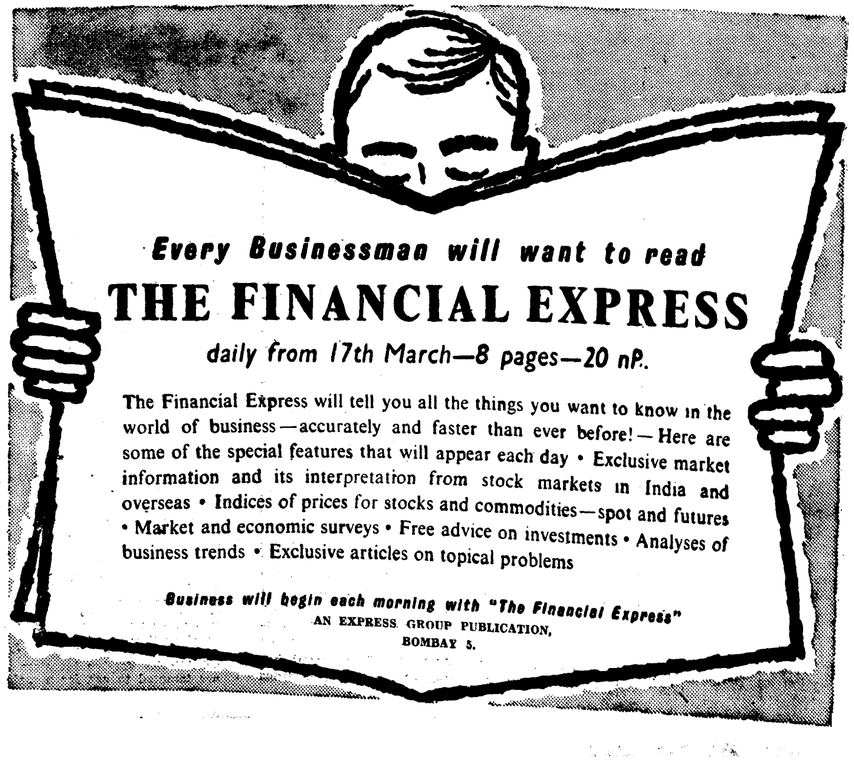
Tax on Inter-corporate Investment Excessive

The existing rates of tax on dividends received in respect of inter-corporate investment are excessive and strongly penalise the investment of surplus funds by companies in other companies. Even taking into consideration the new rate of super-tax on inter-corporate investment of 20 per cent, as fixed by the Finance Minister for companies formed on or after 1st April 1961, the total burden of tax, including the tax paid by the companies declaring their dividends and the tax paid on dividends by the receiving companies, comes to 67 per cent of the original gross profits of the companies declaring the dividend. The total tax burden of 67 per cent, and even more in some cases, is obviously of a magnitude which strongly discourages inter-corporate investments. There is a great need in the country today to encourage inter-corporate investments in various companies, and not necessarily in subsidiary companies, so as to stimulate the setting up and growth of new industrial units. Moreover, as a result of the recently adopted policy of the Government under which companies are not freely allowed to extend own fixed block assets in order to enter lines of manufacture different from their original field of activity, it is essential that inter-corporate investments should be encouraged, so that companies having surplus funds will invest the same in new industrial companies without being excessively penalised by the tax structure. It is, therefore, recommended that an overall rate of 10 per cent be adopted for the super-tax payable by companies on all dividends received by them in respect of their inter-corporate investments.

Most other countries of the world offer substantial tax concessions in respect of inter-corporate dividends, in order to stimulate the setting up of new industrial companies in their countries. Thus, the tax levied in the U.S.A. is only at 15 per cent on inter-corporate dividends. The United Kingdom and Canada have totally exempted inter-corporate dividends from tax in the case of receiving companies. In West Germany, inter-corporate dividends are totally exempted from tax if the investing companies own at least 25 per cent of the capital of the companies paying the dividends. Thus, whereas most countries of the world have explicitly recognised the need for giving tax concession to inter-corporate dividends, we continue to penalise this form of investment. This must act as an important factor retarding the growth of new industrial companies. A reform in the structure and burden of inter-corporate taxation is urgently required, in order to stimulate the growth of the private sector during the third Plan period.

Conclusion

An attempt has been made in this article to show that, while the Finance Minister has made a substantial effort to raise additional taxation to finance the third Plan, he has unfortunately missed the opportunity of introducing a number of reforms in the structure of taxation, especially in direct taxation, which are urgently required for stimulating a larger rate of personal savings and their investment in industries. It is to be hoped that such reforms will be introduced at the earliest possible opportunity. The article also shows that the provisions of the Finance Bill, 1961, require amendment in a number of respects, with a view to making the tax proposals reasonable and equitable. The Finance Minister will, therefore, be well advised to amend the Bill appropriately.



THE WORLD FACING A LIQUIDITY CRISIS?

AN AMERICAN ANALYSIS

[For sometime past, some eminent American economists have been asserting that, apart from the current balance of payment difficulties of the U.S., the world as a whole may soon be confronted with a liquidity crisis, which would hamper the growth of international trade. Even President Kennedy referred to these fears in his message to the Congress on balance of payments and gold on 6th February and disclosed that he had given instructions to the top-level officials of the U.S. Treasury to examine measures for improving the existing international financial institutions. In view of the crucial importance of the subject, we are reproducing on this page a comprehensive discussion of the problem from the latest Monthly Letter (March 1961) of the First National City Bank of New York. Besides analysing the relevant issues, the Monthly Letter subjects to a close scrutiny the views of Professor Robert Triffin and others, who are the main propounders of the "liquidity crisis" idea.—ED.]

ONE hears more and more discussion of the idea that the world is facing a liquidity crisis or, in plainer English, running short of money. President John F. Kennedy, in his 6th February message on balance-of-payments and gold, took note of these apprehensions and directed that the Secretary of the Treasury promptly initiate studies of measures to improve international monetary institutions:

> Increasing international monetary reserves will be required to support the ever-growing volume of trade, services and capital movements among the countries of the free world. Until now the free nations have relied upon increased gold production and continued growth in holdings of dollars and pounds sterling. In the future it may not always be desirable or appropriate to rely entirely on these sources.
>
> We must now, in co-operation with other lending countries, begin to consider ways in which international monetary institutions—especially the International Monetary Fund—can be strengthened and more effectively utilised, both in furnishing needed increases in reserves, and in providing the flexibility required to support a healthy and growing world economy.

At the same time, the President observed that the United States has never made use of its rights to draw on the International Monetary Fund (I.M.F.) to meet deficits in its balance of payments and stated that: "If and when appropriate, these rights should and will be exercised within the framework of Fund policies." These drawing rights provide a ready-made device for checking excess dollar accumulations by specific other countries. The United States could draw out of the Fund, in exchange for dollars, the currencies of such countries, for sale in the foreign exchange market. This would be a way of exploiting the new strength of European currencies and economising on gold reserves. The I.M.F., thus, would become the holder of the excess dollars for use when nations abroad run short again.

Foreign Governments and their central banks, in the aggregate, have gold and dollar reserves swollen beyond any previous experience—a result of the oversized U.S. balance-of-payments deficits. The recent worry has been that the United States itself would run short of reserves. But there is not yet any critical shortage here. As the President explained, the U.S. gold reserve is more than 1½ times foreign official dollar holdings, more than 90 per cent of all foreign dollar holdings, and some two-fifths of the gold stock of the entire free world. Beyond this, as he pointed out, we have the drawing rights on the I.M.F. of $4.1 billion, debts of strong European countries to the U.S. Government of $2.9 billion, and private short-term assets abroad estimated at $4.5 billion.

A Plentiful Supply

In short, the world has a plentiful supply of reserves. In time, of course, the shoe may pinch, particularly if the nations indulge inflation as a way of life. But in that eventuality something ought to pinch, to remind governments of their responsibilities to protect the value of money and to awaken business and trade-union leaders to the follies of wage-price spiraling.

Nevertheless, the idea has been bruited about for some years now that governments and central banks as a general matter lack sufficient reserves to tide them over temporary periods of adversity in their balances of payments. The I.M.F., as the responsible world organisation in this area, published a reassuring study of *International Reserves and Liquidity* in August 1958. Despite a subsequent 50 per cent increase in the Fund's resources, and enlarged deficits in the U.S. balance of payments leading to excess dollar accumulations in a number of countries abroad, people keep on saying that the world is headed for a liquidity crisis. To avert this, Professor Robert Triffin of Yale proposes that the 68 members of the I.F.M. should shift more of their gold and all of their exchange reserves into an expanded I.M.F. which would become a supercentral bank with powers to issue its own money to be held by member countries as official reserves.

News despatches report that the question is being discussed actively among Treasury officials and central bankers in Europe as well as in Washington. The Congressional Joint Economic Committee has displayed an eager interest. Heads of at least two leading British banks have expressed themselves favourably.

The International Chamber of Commerce, on the other hand, in a report adopted 22nd February, expressed confidence in the stability of the U.S. dollar and, while continuing study of the question, went on record against any "far-reaching" revisions in the present monetary system. The Managing Director of the I.M.F., Dr. Per Jacobsson, writing on 6th November 1959 to Senator Paul Douglas, Chairman of the Joint Economic Committee, stated that he could detect no overall problem as far as international liquidity is concerned, although some individual countries have still to achieve balance in their international accounts:

> Such balance cannot, in my opinion, be attained or even facilitated by the introduction of any new expedients, but only by the appropriate measures being taken by the countries concerned, together with such international assistance as may be needed in individual cases.

Referring to the super-central bank plan offered by Professor Triffin, Dr. Jacobsson confessed that he personally could not see any value in the scheme and expressed the opinion that it was "impractical" and might even be "positively harmful."

The Triffin Plan

Professor Triffin has a substantial reputation as a student of international finance and has served as financial advisor to a number of Latin American countries and also to the European Payments Union. He regards the Western world as facing an awkward dilemma: if the United States should fail to straighten out its balance of payments, confidence in the dollar would be shattered and a run on gold provoked; if we succeed in balancing our payments, the main source from which the rest of the world has been rebuilding its gold and dollar reserves would be dried up. If the world escapes the Scylla of an American liquidity crisis, it is bound to fall into the Charybdis of an international liquidity crisis.

Professor Triffin has testified before the Joint Economic Committee on two occasions and a year ago published a book fearfully entitled *Gold and the Dollar Crisis*. In testimony before the Joint Economic Committee in December, however, Professor Triffin expressed confidence that the U.S. balance-of-payments problem would be solved and switched emphasis to a coming liquidity crisis for the rest of the world. He would greatly enlarge the functions and the powers of the I.M.F. and make it more definitely a super-central bank.

The I.M.F. we already have was conceived during World War II to provide a flexible new machinery for accommodating international financial settlements. It actually serves as a supercentral bank, although it has the structure of a clearing union. Funds contributed by member countries are called "subscriptions" rather than "deposits." In borrowing, a nation puts in more of its own currency and takes out other currencies. The I.M.F. lacks formal power to create money but nevertheless has wide latitude to make funds available to its members.

Dr. Oscar Altman, of the I.M.F., who has written a scholarly critique has identified Triffin's proposed fund as "X.I.M.F." Its currency, for brevity, we might label X-dollars. These X-dollars would be held only by central banks and used among them in settling balances of international payments. The 68 member nations would be required to put reserve funds on deposit with X.I.M.F. For the United States this would mean turning over gold. For other nations it would mean turning over gold and convertible currencies, principally dollars. Thus short-term liabilities of the United States to foreign governments and central banks would become liabilities to X.I.M.F., subject to gradual repayment. The idea is that the dependence of the world monetary system on the dollar and sterling as reserve currencies would first be reduced and, with the passage of time, eliminated.

The X.I.M.F., thus launched, would proceed to create X-dollars to permit a controlled increase in total currency reserves, perhaps 3 to 5 per cent a year. The X.I.M.F.'s loans and investments would create income to permit payment of interest on deposits.

Ratios of Reserves to Imports

Professor Triffin rests his arguments that reserves are inadequate on an analysis of percentages of currency reserves to imports. He figures that the proportion of reserves to imports for countries outside the United States and the United Kingdom reached a hundred-year low of 25 per cent in 1957, having been declining "at a rather alarming pace" since the end of 1954. Including the U.S. and the U.K., Professor Triffin states that the ratio in 1957 was at its lowest point since the Twenties, and at only half the level of the late Thirties. Of course, as Triffin observes, the ratio in the Thirties was abnormally high, resulting from widespread devaluations and catastrophic decline in the value of world trade.

It should be noted in passing that one lesson of the Thirties is that higher reserves do not of necessity mean more trade. And one lesson out of the period before World War I is that the world of finance can function efficiently under low ratios of reserves to trade if resistance to inflation is sufficiently strong.

Triffin insists that radical changes which have taken place in the world economy in the past thirty years demand that the ratio of reserves to imports be higher than previously. The opposite conclusion would seem more appropriate. The history of these ratios does not have much real relevance to the present international monetary order. Gold has ceased to circulate as money. Governments and their central banks deal in gold but only the United States does so on a large scale and at firmly posted prices. The twentieth century world, in practical effect, is on a dollar standard much as the nineteenth century world was on a sterling standard.

Furthermore, the I.M.F., invented at the Bretton Woods conference in 1944, has been set up with huge resources to economise on gold and lend reserves to nations in need of funds to correct imbalances in their international payments.

The idea that world trade depends directly on some aggregate of monetary reserves is of dubious validity. It overlooks the essential fact that the great bulk of trade is financed by reverse trade and capital flows. More trade does not necessarily imply more instability and thus need for more reserves. On the contrary, post-war experience suggests that world trade, having grown by leaps and bounds, is much better balanced today than has been true for a generation. Trade and other current payments are much freer, more orderly, and more multilateral. Removals of exchange controls permit private capital—the reserves of the business community—to do more of a job. In fact, a creditworthy country can carry on balanced trade without any official reserves at all.

Potentials Under the Present I.M.F.

Nothing, of course, will spare nations the trouble of balancing up their international accounts over a period of years. But it is curious that critics of the I.M.F. should be so eager to supplant the institution without first evaluating its full potential for supporting further expansion of world trade. And, if the world is so illiquid, how is it that so small a part of the I.M.F.'s assets are being called into use?

The Fund's present resources are impressive. It holds over $10 billion in gold, dollars, and other externally convertible currencies. As the *London Times* comments: "There is much more liquidity available from the I.M.F. as it is now than has ever been utilised."

Granted a ready will of the nations to cooperate, and to keep their fiscal houses in order, the possibilities of accommodating trade growth through the I.M.F. are almost unbounded. The limits on world trade are limits imposed by protectionist measures, failures of competitive power, and localised indulgences of inflation. There is no escape in new international monetary machinery from facts of life.

The course of the I.M.F. is its complexity, its statutes with a jargon of "drawings" and "currency repurchases" replacing intelligible words like loans, repayments, and deposits. It is a pity that it was made a storehouse not only of key, internationally useful currencies like dollars but also of dozens of minor currencies rarely used for international settlements. The saving grace has been the flexibility of the statutes and the wisdom of the Managing Directors. The I.M.F. has in fact been operated as a super-central bank, primarily in U.S. dollars as the table on drawings in various currencies suggests.

Gross Drawings from the I.M.F., 1947-1960

(In millions of dollars)

U.S. dollars	$3,203
Pounds sterling	297
Deutsche mark	116
Guilders	23
French francs	18
Canadian dollars	15
Belgian francs	11
Danish kroner	1
Total	$3,684

Source: International Monetary Fund.

The dollar has been the only important currency convertible over this whole period. As other currencies are made convertible, the horizon widens for drawings of other currencies.

The dream at Bretton Woods was that all currencies would be made freely convertible into one another for current transactions. If this were ever achieved the I.M.F. could never run out of money; it could finance an infinite expansion of trade. This dream has never been realised, but there has been a dramatic broadening of convertibility just within the past two or three years. The I.M.F. can take in dollars, pay out marks, and still have the same total of convertible currency reserves as before.

Only last month, the major European currencies accepted obligations under the I.M.F.'s Article VIII, which precludes members subject to its provisions from imposing restrictions on current transactions, except with the prior approval of the Fund. These currencies, along with gold and dollars, may henceforth be used to repay drawings from the I.M.F.

Professor Triffin commends an X.I.M.F. to create money to lend for economic development purposes. The I.M.F. could do this but not without wrecking its solvency. At Bretton Woods the task of financing economic development was entrusted to the I.M.F.'s sister organisation, the International Bank for Reconstruction and Development, which has extended some $5 billion of loans since its beginning in 1947. Even greater sums for development have been put up by private capital, American and European.

It was and is the I.M.F.'s job, not to finance development, but to help nations tide themselves over periods of strain on their balances of payments and to advise them on domestic fiscal and monetary policies to sustain the relative values of

(*Continued on page* 454)

COTTON PRICE POLICY FOR 1961-62

IS UPWARD REVISION OF CEILINGS NECESSARY?

AT its eighty-third meeting held at Bombay on 25th February, the Indian Central Cotton Committee considered in detail the question of cotton price policy for the 1961-62 season, the first year of the third Plan. While decontrol of cotton was not considered desirable at the present juncture with carryover stocks at a low level, the Committee agreed that revision of prices upwards would provide an incentive to farmers and thereby help the country to achieve the target set for the third Plan. The raising of the floor and ceiling prices and narrowing down the differences between floors and ceilings was suggested as having a psychological effect on the cultivator, in that he will be assured of a fair minimum return. It was, however, finally agreed that the whole question should be considered on a broader basis and not from the point of view of cotton alone. It is doubtful whether the Committee is the proper body for consideration of the question in the larger context of the price policy for all other commodities. It can, however, examine the factors that should be taken into consideration in deciding upon a particular price policy for cotton and make the necessary recommendations to the Government.

If at all there was a time appropriate for the examination of the question of cotton priee policy, it is the present one, when the current season, 1960-61, the last year of the second Plan for cotton, is fast drawing to a close and the first year of the third Plan is about to start in six months' time. It is necessary, therefore, to reconsider the question of price in the light of developments that have taken place in the past, especially in the first and second Plans, and finalise a price policy which should hold good at least for the third Plan period. The demand for an upward revision of the floor and ceiling prices has been widespread and insistent in recent years. It has been urged in some quarters that cotton should be decontrolled. It has even been suggested, in certain other quarters, though by implication, that control on cotton prices had something to do with successive failure of cotton production to reach the target. One of the most cogent arguments for decontrol of cotton was presented by Mr. R. G. Saraiya, a member of the Indian Central Cotton Committee, in his speech at the eighty-first meeting of the Committee held in February 1960. He argued that there was no justification for controlling cotton prices when there was no control on the prices of *kapas* or of cloth or of competitive crops. Quoting figures, he pointed out that, in the past few years, raw cotton prices had not gone up in proportion to the rise in the price of other commodities. The railway freight rates had also gone up, so that the net ceiling price, after deduction of freight, was Rs. 10 per candy less than the statutory ceiling. He also questioned the utility of control on cotton prices as an anti-inflationary measure. His argument was that there were no controls on the price of *kapas*, cotton seed, cloth and yarn and that railway freight and transport cost were allowed to rise. Control on cotton alone, therefore, had little effect in checking the rise in the general level of prices.

After the aforesaid points were made, the Committee, though it did not endorse the suggestion for decontrol, decided to recommend that the floors and ceilings should be raised suitably for 1960-61. This recommendation was, however, not accepted by the Government which decided only to maintain, by and large, the *status quo* in respect of the floor and ceiling prices. A few weeks ago, however, the Government raised the ceiling prices for certain varieties of higher medium-long staple.

It is common knowledge that, almost throughout the 1960-61 season, prices of ready cotton were well above the ceilings and the farmers received good prices. This sharp rise in the price of raw cotton during the last season (the index number of raw cotton prices, which was 102 in September 1959, rose to 112 in September 1960, after having touched a peak of 115 in January 1960) made up, to some extent, for the lag in cotton prices, as compared with those of other commodities. But, as production comes back to normal and prices find lower levels as they have tended to do since the commencement of the present season, the case for ensuring higher prices for cotton has been brought to the fore. But, in considering the question, it is necessary to bear in mind that the ceiling is meant to protect the interests of consumers of cotton and that the floor is designed to safeguard the legitimate interests of growers. There is no point in raising the ceilings when production is well above the demand. As for the floors, the ruling prices are far above these levels. If, however, the farmer needs to be assured that, in case production goes up still higher in the next season, he would get a minimum price that would provide a better margin of profit than is afforded by the existing floor prices, it is a matter that could be examined. In that case, the real issue to be considered pertains to the floors and not to the ceilings.

It must also be borne in mind that, unlike in the 1960-61 season, the prices of cloth and yarn for domestic consumption are also subject to price controls, that the world prices of cotton have shown a tendency to decline and that Indian cotton textiles have to compete in the world markets.

The object of raising the price of cotton is to ensure to the cultivator a higher return per acre of cultivated area. But higher return need not necessarily be the result of higher prices alone. It can as well be achieved by a rise in the yield per acre and by improving the quality of the staple. Higher yield will benefit not only the farmer, who will no doubt get a higher return from the land, but also the consumers of cloth, in that it will bring down the price of cotton as well as of cloth. It will, indeed, be a short-sighted and, in the long run, a dangerous, policy which seeks to raise the farmers' income through an inflationary rise in the price of the crop. It is not denied that the price of cotton should be such as is consistent with the rise in the cost of cultivation and the price of other commodities and the goods and services which the farmer has to buy. But it should not be forgotten that a rise in price alone would not help the farmer to improve his economic position. This was amply proved by the experience of last year when the rise in price was neutralised by the decline in output, so that the net income per acre must have remained unchanged, if not actually declined. The Indian Central Cotton Committee should, therefore, bend its energies to enable the farmer to raise the yield per acre. If it succeeds in doing that, it will have ensured the farmer a higher return, more cotton for the industry and more cloth for internal consumption and exports without adding momentum to the inflationary trends in the economy.

COTTON SCHEMES

The Indian Central Cotton Committee approved, at its eighty-third meeting held at Bombay on 25th February, the following cotton schemes:

(1) A comprehensive, model agronomic scheme each for Mysore, Uttar Pradesh, Rajasthan, Orissa and Punjab to draw up manurial schedules for recommendation to cotton growers in the respective areas.

(2) Multiplication and distribution of Cocanadas-2, a coloured cotton grown in Andhra Pradesh.

(3) The organisation of cotton research in the State of Rajasthan and centralisation of work in Ganganagar area.

(4) Establishment of a national centre at Poona for screening the cotton strains for wilt resistance.

The Committee took note of the report of the delegation of cotton research workers sent to the U.S.S.R. and decided to publish it. The success of Russian cotton growing, according to the delegation, was due mainly to two factors: (1) climatic conditions under which the cotton crop was sown and (2) adoption of improved cultivation methods.

Two methods which particularly struck the delegation were (1) the very close spacing of plants which admitted of a population of 100,000 to 120,000 per hectare (about 2½ acres) and (2) the withholding of irrigation until the plants reached the flowering stage.

The Committee decided that regions in India which possess the same or nearly the same conditions as in the U.S.S.R. might be discovered and similar methods of cultivation adopted. It was also decided that seeds of Russian cotton varieties might be obtained for trial in the different cotton-growing States.

ASSISTANCE TO SMALL INDUSTRIES

Are you a small industrialist or wish to start a small scale industry ? Various agencies have been set up to assist you in this regard as indicated below:—

1. The National Small Industries Corporation, Rani Jhansi Road, New Delhi.

- Supply of machines on easy instalment payment basis (for full details, please contact the National Small Industries Corporation (Bombay) Private Ltd., Janmabhoomi Chambers, 5th floor, Fort Street, Bombay-1).
- Securing contracts from D.G.S. & D. and Railways (for full particulars please contact the Regional Liaison Office, National Small Industries Corporation Ltd., Janmabhoomi Chambers, 5th floor, Fort Street, Bombay).
- Marketing assistance.
- Training of Artisans at P.T.C., Rajkot.

2. Small Industries Service Institute, 40/40A, Cawasjee Patel Street, Fort, Bombay-1.

- Technical advice on matters pertaining to planning, production and selection of industry including model schemes thereof.

3. State Director of Industries

- Assistance in acquiring land or factory-building in the Industrial Estate, if any, securing raw material, power, import licences etc.
- Loans under the State Aid to Industries Act.

4. State Bank of India and State Finance Corporation

- Short, medium and long term loans.

SMALL SCALE INDUSTRIES FOR THE NATION'S PROSPERITY

LABOUR FORCE IN INDUSTRY SHRINKS

PROBLEM OF FINDING MEN TO KEEP EQUIPMENT WORKING TO FULL CAPACITY

From Our Special Correspondent

MANCHESTER, *28th February*

AMID the many complications of trading of cotton goods at the moment, probably the most universal headache affecting mill managements in Lancashire is the labour situation.

MANCHESTER LETTER

Considering the fears which were so widely expressed when the reorganisation scheme was launched about its effect on manpower, the whole position has been reversed. Far from a threat of unemployment, many more operatives could be given work if they were available.

Most of the big groups, as well as the smaller concerns, are in urgent need of workers; the Lancashire Cotton Corporation, for instance, has put its vacancy figure at more than 700 and other companies are searching far and wide for additional workpeople. Looking back on the manpower situation as it existed ten years ago, when the post-war boom was reaching its peak, very substantial changes have taken place in the numbers employed in the industry, as the following table shows:

	Total	Spinning	Waste spinning	Doubling	Weaving
1951					
November ..	320,680	124,630	7,330	32,240	156,680
December ..	317,750	123,820	7,320	31,650	154,960
1952					
June ..	266,050	101,400	6,610	24,360	132,680
December ..	272,230	106,070	6,970	24,490	134,700
1953					
June ..	277,970	108,310	6,990	25,800	137,370
December ..	288,180	113,190	7,250	26,780	140,960
1954					
June ..	288,580	113,120	7,100	26,470	141,890
December ..	286,460	113,410	7,150	25,210	140,690
1955					
June ..	267,350	103,820	7,050	23,080	133,400
December ..	256,080	100,130	7,070	22,250	126,630
1956					
June ..	247,900	97,640	7,250	21,580	121,480
December ..	243,330	97,780	7,300	20,900	117,350
1957					
June ..	243,460	98,590	7,580	20,980	116,380
December ..	241,160	98,750	7,630	20,560	114,380
1958					
June ..	224,380	91,810	7,320	17,600	107,580
December ..	207,990	85,920	7,420	16,270	98,380
1959					
March ..	208,540	88,320	7,200	16,070	96,450
June ..	201,520	83,280	7,060	16,370	94,860
September ..	198,780	80,490	7,050	16,770	94,490
December ..	192,220	75,510	7,280	16,730	92,710
1960					
March ..	188,890	72,890	7,310	16,710	87,480
June ..	184,450	71,870	7,220	16,780	89,100
September ..	184,410	71,210	7,270	16,460	89,470
December ..	184,790	71,580	7,250	16,080	89,880

Several points stand out in the sectional changes which have occurred since 1951. Perhaps the most interesting is the fact that, in waste spinning, the labour force has scarcely altered throughout the decade, once the 1952 setback was surmounted. On the other hand, the numbers employed in doubling have been roughly halved and current conditions in this particular branch do not indicate any early improvement. The fall of over 50,000 in the labour force available for spinning is roughly in line with the general trend throughout this period. Weaving mills have seen their manpower decline by nearer 70,000, but the original figure was comparatively larger. The manufacturing section, in fact, still represents almost half the total labour force, just as it did ten years ago.

Mill Output Up

In spite of a shrinking labour force, Lancashire spinning mills increased production appreciably last year. The Master Spinners' Federation, representing owners of about 400 spinning mills, said in its annual report that the mills had an average output of 15,390,000 lbs. of single yarn weekly at the end of the year, as compared with an average of 14,140,000 lbs. at the beginning of the year. Spinners' order books had lengthened at prices showing a fair margin of profit.

The Federation said that the improved output had been achieved, in spite of a reduction of about 7,000 in the number of spinning workers in the industry. Contrary to the fears expressed that contraction in the cotton industry would create considerable unemployment, the mills had found it difficult to attract enough labour to keep all spindles working to full capacity. The result was that, in some instances, firms wishing to introduce shift working had found it impossible. This was a problem which may be alleviated as the number of school-leavers increase when the "bulge" began to have effect.

The report stated that certain sections of the spinning industry had experienced difficulty in securing orders at remunerative prices, because of competition from duty-free imports of yarns from Asian Commonwealth countries, and imports from certain other countries whose exports attracted indirect or concealed subsidies. The Cotton Board, with the backing of the Federation and other trade organisations, was taking every possible action to safeguard the position.

Bigger and Bigger

No clearer warning could be given about the likely trend of imports in a year which seems destined to be overshadowed by this particular question than that offered by the January overseas trade returns. In a bound the figures for arrivals of cotton cloth into British ports jumped by practically 15 million square yards to a new monthly record of 82,936,000 square yards. On such a basis, a simple arithmetical calculation gives an annual inflow of over 1,000 million yards.

Yet the big rise in shipments from abroad is not the result of any marked expansion in the cargoes arriving from those Eastern producing areas within the Commonwealth with whose leaders talks are scheduled. Grey cloth imports during the month amounted to 65,677,000 square yards as against 43,216,000 square yards in January 1960, but the major increase came from the undesignated "other foreign countries" outside France, China and Japan, whose shipments of 20,131,000 square yards, as compared with below 6 million square yards in the same month last year. A minor point of interest was the higher figures from Japan, which aggregated 6,683,000 square yards, as against 2,907,000 square yards.

Arrivals of grey cloth from India showed a further expansion, reaching 21,801,000 yards during the month, as against 19,714,000 yards in January last year, but there was a sharp decline in takings from Pakistan, which fell from 4,949,000 yards to 1,820,000 yards. Shipments from Hong Kong were some 600,000 yards bigger at 7,256,000 yards. Other countries in the Commonwealth, however, stepped up their sales to Britain on a substantial scale, sending 2,014,000 yards of grey cloth, as against only 67,000 yards in January 1960.

Imports of finished fabric continued the broadening trend unmistakable throughout the market; they amounted to 17,259,000 yards, as against 9,931,000 yards in the same month last year. Arrivals of man-made fibre cloth were also higher at 6,780,000 yards, as against 4,259,000 yards. A similar movement took place in the quantities of cotton yarn supplied from abroad, the January 1961, total at 3,708,000 lbs., being practically 1,000,000 lbs. up on last year.

Against these figures, exports from the United Kingdom make a paltry showing. Although cotton cloth shipments, at 29,481,000 square yards, were the highest since April last year they are now completely overshadowed by the huge purchases from abroad. Cotton yarn exports barely exceeded 1,500,000 lbs. and at this level were less than half comparable arrivals.

The cost of all these imports soared by over £3,000,000 compared with January 1960, the current figure being £7,726,286. Earnings from exports, despite being the best monthly total since December 1959, could only muster £5,826,639.

Raw Cotton Pipelines

Like many other branches of the textile industry, the raw cotton pipelines had been allowed to fall to extremely low levels by the middle of 1959, so that the need for replenishing supplies of the raw material was paramount at the beginning of last season. As a result, substantial arrivals came into British ports in the first half of the 1959-60 season when the mills, working at full pressure, increased their consumption. Subsequently, there has not been the same necessity to build up stocks and spinners have continued to purchase as and when they require additional quantities of cotton. Incoming supplies during the first half of the current season have, therefore, been sharply reduced and imports over the whole season to the end of July are likely to be very much smaller than in the previous twelve months.

Man-made Fibre Production

The January production of man-made fibres fell by 2,190,000 lbs. to 48,610,000 lbs. as compared with the record monthly output achieved in January last year of 50,800,000 lbs., according to statistics issued by the British Man-Made Fibres Federation. The lower total is attributed to a fall in production of staple fibre which aggregated 25,260,000 lbs., as compared with 29,010,000 lbs. for January last year, reflecting an adjustment of production to conditions in sharp contrast to those prevailing a year ago, when there were elements of unhealthy overbuying and stock-building. Filament yarn production, however, in January was a record for the month at 23,350,000 lbs., comparing with 21,530,000 lbs. in December and 21,790,000 lbs. in January last year.—*All Rights Reserved.*

CAPITAL OUTLAY IN CENTRAL BUDGET

SEVERAL INDUSTRIAL DEVELOPMENT SCHEMES TO BE IMPLEMENTED

SIGNIFYING the increasingly dominant role played by the Central Government in the economic development of the country in recent years is the continuously expanding use of its budgetary resources to the creation, sustenance and development of capital assets. Over the second Five-year Plan period (1955-56 to 1960-61), the total net capital formation out of the budgetary resources rose by as much as Rs. 423.6 crores, from Rs. 448.5 crores in 1955-56 to Rs. 872.1 crores in 1960-61, according to the *Economic Survey*, 1960-61 published along with the budget papers this year. The extent of the rise was much more than what was recorded in the first Plan period, namely, Rs. 350.0 crores. The total net capital assets in 1950-51 (base year of the first Plan) amounted to no more than Rs. 98.5 crores. Thus, in the decade between 1950-51 and 1960-61, there has been a ninefold expansion in annual capital formation. While the pace of expansion is thus quite notable, one wonders whether it would not have been more substantial, if, instead of the marked incursion of the State into the economic activities, the private sector had been allowed more freedom and greater incentives than it has received so far.

The current financial year (1960-61) has witnessed a notable increase of Rs. 76.90 crores in net capital formation out of the Centre's budgetary resources. The major portion of the rise—Rs. 46.20 crores, to be precise—is accounted for by fixed assets directly created by the Government. The financial assistance for net capital formation given to the State Governments in the form of loans and grants showed a rise of Rs. 31.60 crores. The details of net capital assets created out of the Central Government's resources during the first and second Plan periods are given in the table at the bottom.

Public Expenditure

The rising trend of capital formation has followed the large expansion in public expenditure. The total expenditure of the Central and State Governments, which was just Rs. 998 crores in 1951-52, rose to Rs. 1,470 crores in 1955-56 and further to Rs. 2,587 crores in 1960-61. The larger part of this increase is accounted for by the rise in development expenditure, the proportion of which has gone up from 48 per cent in 1951-52 to 60 per cent in 1955-56 and 66 per cent in 1960-61, whereas the percentage of non-development expenditure has declined from 51.9 to 39.9 and 34.2, respectively.

The pace of increase in capital formation out of the Central Government budgetary resources is expected to be accelerated further in the ensuing financial year (1961-62), the first year of the third Plan, in view of the heavy capital expenditure estimated for the year, that is, Rs. 1,201.63 crores, as against Rs. 1,076.23 crores in 1960-61. This is made up of direct capital outlay by the Centre of Rs. 454.00 crores (Rs. 416 crores in 1960-61), loans to State Governments Rs. 409.22 crores (Rs. 356.07 crores), loans to other parties, including Port Trusts, Government-owned corporations and foreign Governments Rs. 170.60 crores (Rs. 174.37 crores), and debt repayment Rs. 167.81 crores (Rs. 129.79 crores). The capital expenditure of Rs. 1,202 crores is proposed to be met to the extent of Rs. 235 crores from public borrowings, Rs. 105 crores from small savings, Rs. 421 crores from foreign assistance, Rs. 176 crores from loan revenues, Rs. 96 crores from the investment of P.L. 480 funds and Rs. 104 crores from miscellaneous receipts, leaving a deficit of Rs. 64 crores on capital account which will be met by the expansion of Treasury Bills.

The direct capital outlay of Rs. 454.00 crores by the Centre in 1961-62 shows an increase of Rs. 38.00 crores over the revised estimate for the current year (1960-61). This increase is spread over a number of heads and reflects the additional requirements in the first year of the third Plan. The Railways will be spending Rs. 36.38 crores more for their capital outlay, while the net expenditure on purchase of foodgrains will go down by Rs. 26.00 crores. Of the other major increases, mention may be made of Rs. 7.7 crores under border roads, Rs. 8.46 crores for industrial development, Rs. 5.2 crores for the development of land acquired by the Delhi Administration and Rs. 2.83 crores for construction of food storage godowns.

The Central Government budget for 1961-62 includes a provision of Rs. 943 crores for implementing the third Plan—Rs. 181 crores on revenue account and Rs. 762 crores as capital outlay including loans. This total is exclusive of the spill-over from the second Plan. In addition, the Railways will provide Rs. 23 crores from their own resources. These estimates include a provision of Rs. 352 crores for assistance to States, Rs. 90 crores in the revenue budget and Rs. 262 crores in the capital budget. It is expected that the States will find Rs. 200 crores from their own funds, thus making up an outlay of Rs. 552 crores for the State plans. The outlay on the Central portion of the Plan will aggregate to Rs. 614 crores. In all, the total Plan outlay in the first year of the third Plan for both the Centre and the States will be of the order of Rs. 1,166 crores. A substantial portion of the provision during the coming year relates to the second Plan projects which will be carried forward to the third Plan and a relatively modest provision has been made for the new projects which require much preparatory work.

Important Programmes

A sizable portion of the capital expenditure in 1961-62 will be spent on the expansion of the Government's industrial programmes, the provision made being Rs. 107.15 crores, as against the revised estimate of Rs. 98.70 crores for 1960-61. The large investments—in crores of rupees—with figures in brackets indicating the revised estimate for 1960-61, include, among others, the following:

Neyveli Lignite Corporation 22.00 (20.80); Oil and Natural Gas Commission Rs. 21.50 (16.44); Heavy Engineering Corporation 20.00 (5.00); National Coal Development Corporation 9.00 (11.73); Department of Atomic Energy 5.24 (3.81); Indian Refineries Ltd. 4.00 (6.00); Council of Scientific and Industrial Research 3.10 (2.31); Western Shipping Corporation 2.50 (5.65); Eastern Shipping Corporation 2.00 (1.80); Air-India International 2.05 (1.71); Indian Airlines Corporation 1.87 (1.76); National Mineral Development Corporation 1.75 (1.40); Indian Oil Company Ltd. 1.50 (0.55); Oil India Ltd. 1.42 (2.00); Hindustan Shipyard 1.20 (0.28); Heavy Electricals Ltd. 1.00 (9.50); Hindustan Organic Chemicals 0.65 (0.40); Hindustan Photo Film Manufacturing Company 0.65 (0.15); Hindustan Machine Tools 0.70 (0.30); investment in British India Corporation 0.51 (*nil*); Hindustan Salt 0.55 (*nil*); Drugs Corporation 0.60 (*nil*); second shipyard 0.60 (0.20); Hindustan Teleprinters 0.50 (0.09).

Besides the provisions noted above, the Government has allocated large sums to be given as loans. The actual allocations—in crores of rupees—are:

Hindustan Steel 40.00 (88.00); Railway Development Fund 14.77 (3.58); foreign Governments 11.97 (16.85); Heavy Electricals 10.00 (*nil*); Industrial Finance Corporation 10.00 (9.00); Shipping Development Fund 7.00 (5.94); I.C.I.C.I. 3.00 (1.00); Refinance Corporation 5.00 (5.00); *Khadi* industries 2.25 (4.95); Ambar Charkha 2.12 (2.72); village industries 1.70 (1.70); National Industrial Development Corporation 2.50 (2.15); Port Trusts 3.00 (2.00); Delhi Municipal Corporation 8.02 (4.12); Coal Corporation 9.00 (4.31); India Refineries 5.00 (*nil*); and Fertilisers Corporation 7.85 (1.25).

Public Debt

A reference to the debt position of the Central Government may now be made. The total outstanding public debt is expected to amount to Rs. 4,970.85 crores at the end of the current month (31st March 1961) and Rs. 5,554.09 crores a year later; it was no more than Rs. 949.77 crores at the end of 1938-39. Out of the estimated total of Rs. 5,554.09 crores at the end of next year (31st March 1962), rupee loans will account for Rs. 4,348.80 crores, as against Rs. 4,124.63 crores towards the close of the current year, sterling loans for Rs. 141.40 crores, as against Rs. 143.15 crores, and "other loans" for Rs. 1,063.89 crores, as against Rs. 703.07 crores. The item "other loans" includes the following, figures in brackets representing the position at the end of March 1961.

(In crores of rupees)

U.S. 446.81 (316.36); U.S. Eximp Bank 83.33 (35.73); World Bank 167.76 (155.24); Canada 11.83 (14.07); U.S.S.R. 88.30 (61.53); West Germany 108.21 (108.17); Japan 25.62 (11.97); Czechoslovakia 1.03; Poland 4.00; Yugoslavia 4.00; Switzerland 3.00; loans to be negotiated 120.00.

Excluding the war contribution, the liability in respect of which remains suspended, the total outstanding debt will be Rs. 4,950 crores at the end of the current year and Rs. 5,533 crores at the end of 1961-62. At the end of the budget year, the outstanding debt would, as compared with the figure at the end of 1938-39, have risen by Rs. 4,604 crores.

In addition, the Government is liable to repay the investments of the deposits of the P.L. 480 counterpart funds, the balances in the various provident funds, the post office savings bank, the post office cash, national savings, national plan, national plan savings, and treasury savings deposit certificates, deposits under the cumulative time deposits scheme, the depreciation and reserve funds of the Railways, Post and Telegraphs, etc., and certain other deposits, mainly relating to deposits of income-tax, super-tax, etc. These balances are estimated to amount to Rs. 1,620 crores at the end of the current year and Rs. 1,869 crores at the end of 1961-62.

This outstanding debt may be analysed with reference to the purpose on which the money has been utilised or the assets by which it is covered. An analysis is given below:

(In round crores of rupees)

	As on 31st March 1961	1962
Railways	1,556	1,716
Posts and Telegraphs and other commercial departments (including Damodar Valley Corporation)	220	244
Investment in commercial concerns (Industrial Development)	621	728
Loans and advances to States and others	2,521	2,902
Amounts recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions	19	19
Subscription to the International Monetary Fund	282	282
Purchase of shares of the I.B.R.D.	37	37
Subscription to the International Development Association	4	8
Debt due from Pakistan	300	300
Cash and other investments	54	52
Total	5,614	6,288

Allowing for these, the uncovered debt will amount to Rs. 1,114 crores at the end of the budget year, as against the pre-war figure of Rs. 188 crores. The whole of this cannot, however, be called unproductive, since the large grants to State Governments for development in recent years which increase the productive capacity of the country as a whole are not entirely unremunerative. Similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the Delhi capital outlay and Defence capital outlay) is not without value. Besides, a considerable portion of the capital outlay has also been incurred on schemes of State trading such as foodgrains, fertilisers, iron and steel, etc., of which there are reserve stocks, particularly of foodgrains.

The aggregate interest-bearing obligations of the Government of India are expected to rise from Rs. 6,280.60 crores at the end of the current month to Rs. 7,110.13 crores as on 31st March 1962. As against the rise of Rs. 829.53 crores thus, the interest-yielding assets are expected to increase only by Rs. 636.31 crores, that is from Rs. 5,089.65 crores to Rs. 5,725.96 crores, so that the total of interest-bearing obligations not covered by assets at the end of the coming year will be higher at Rs. 1,311.30 crores, as against

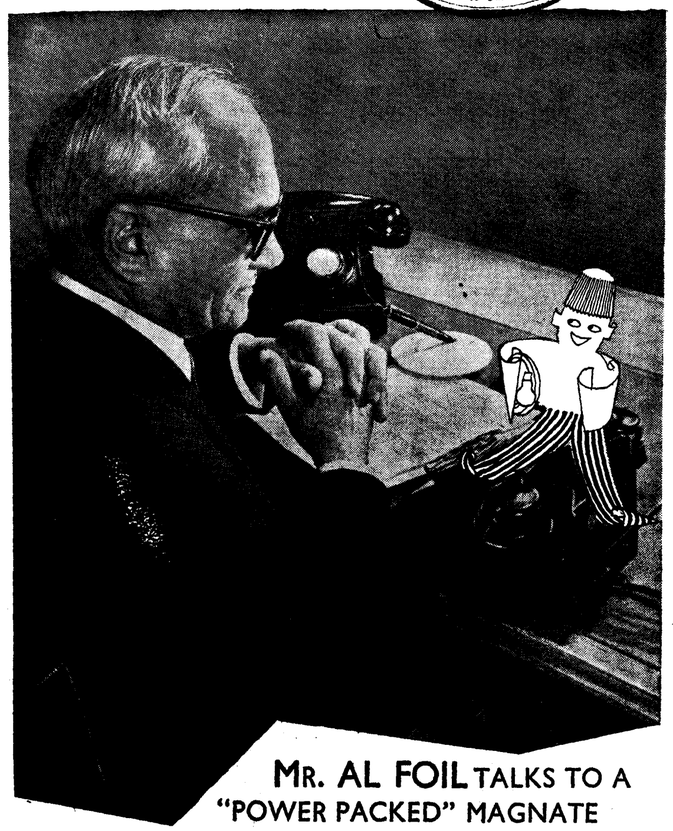
Branches at Bombay and all important commercial centres in South India.



MR. AL FOIL TALKS TO A "POWER PACKED" MAGNATE

'Profit', thundered the Magnate insulating himself against sales talk, "Profit's what I am interested in."
"And profit, sir", replied the unabashed Mr. Foil, "profit's what foil insulation ensures in the heavy electrical equipment industry. In transformers, cables or condensers, wherever you need effective insulation, and/or superior dielectric properties aluminium foil is the lightweight answer for a big job. We do a really first class job of 'wrapping up' electrical energy, allowing no leakage come rain or shine. Fact is, aluminium foil foils damp damage for long periods... and no helping hand required... and that's profit for you... low initial outlay, low maintenance and no leakage."

Don't be isolated by your insulation problem. No foiling problem is difficult enough to foil Al Foil.

VENESTA FOILS LTD.

VFC-8

Rs. 1,116.41 crores on the 31st of this month. The details of the assets are given below:

(In crores of rupees)

	At the end of		
	1938-39 (Pre-war year)	1960-61 (Revised)	1961-62 (Budget)
Capital advanced to Railways	725.24	1,555.90	1,715.90
Capital advanced to other commercial departments (including Damodar Valley Corporation)	27.42	219.69	243.76
Investment in commercial concerns (industrial development)	..	473.35	545.75
Capital advanced to States	123.28	1,905.69	2,179.39
Other interest-bearing loans	20.71	615.59	722.34
Amount recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions	..	19.43	18.82
Debt due from Pakistan	..	300.00	300.00
Total—Interest-yielding Assets	896.65	5,089.65	5,725.96
Cash and securities held on Treasury account	30.30	54.01	52.34
Balance of total interest-bearing obligations not covered by above assets	274.63	1,116.41	1,311.30

Although the balance of uncovered debt is fairly large amounting to Rs. 1,311.30 crores at the end of 1961-62, the whole of it cannot be regarded as unproductive debt. For the loans and grants made to State Governments go to increase productive capacity and the investments made in Central Government's property, the value of which is either not shown at all or treated as non-commercial item, are not without value.

Notices

THE BANK OF MAHARASHTRA LIMITED, POONA-2

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 26th Annual General Meeting of the shareholders of the Bank will be held at the Registered Office of the Bank, Maharashtra Bank Building, 1177 Budhwar Peth, Poona City, on Tuesday the 28th March, 1961, at 2-30 p.m. (I.S.T.), to transact the usual business such as adoption of Balance Sheet, Profit and Loss Account etc., declaration of Dividend, election of Directors in place of those retiring by rotation, appointment of Auditors and other special business, details of which will be circulated to the shareholders separately by a notice along with the Balance Sheet and the Profit and Loss Account and the Directors' Report for the year ended 31st December, 1960.

By Order of the Board,
C. V. JOAG,
General Manager.

POONA CITY,
21st February, 1961.

The Transfer Books of the Bank shall remain closed from 15th March, 1961 to 29th March, 1961, both days inclusive.

The Dividend, when declared, will be payable on and after Friday the 7th April, 1961 and the Dividend Warrants will be posted to the registered addresses of the shareholders.

Change of address, if any, should immediately be communicated to the Bank.

THE BRITISH INDIA CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Corporation will be closed from 27th March, 1961 to 26th April, 1961, both days inclusive.

By Order of the Board,
K. M. WILCOX,
Director/Secretary.

KANPUR, *6th March*, 1961.

New avenues of progress

The rapid development of India's road transport has opened up new avenues of progress. Diesel trucks, lorries and buses now link every part of the country...carry goods and people to once-remote areas. With the growth of road transport has grown demand for High Speed Diesel Oil. Today over 1 million tons are consumed. By the end of the Third Plan the country's needs will be 3 million tons—three times as much as they are today. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth, and Burmah-Shell believes that

for tomorrow's needs we must act today

ELECTRIC MOTOR INDUSTRY POISED FOR FURTHER PROGRESS

CONTINUANCE OF PROTECTION UNDER STUDY

THE present scheme of protection to electric motor industry, which has been enjoying protection since 1948, covers squirrel cage motors of ½ h.p. to 100 h.p., slip ring motors of 1 h.p. to 100 h.p., and their component parts excluding control gear. The rate of protective duty is 15 per cent on complete motors and 20 per cent on their component parts. This scheme of protection will expire on 31st December 1961, unless, of course, the Tariff Commission, which is now inquiring into the circumstances of the industry, recommends its continuance in an increased, or a decreased, or a modified form. The industry's own desire is that protection should be continued and extended to cover motors above 100 h.p. as they are already manufactured in the country.

The industry's plea for continuance of protection for a further period of not less than three to five years is sought to be justified on the following grounds:

(i) The industry has plans to expand and diversify production so as to meet the growing demand for motors of higher voltage as well as different categories in the years to come.

(ii) The cost of production of Indian motors is very high, and so the industry cannot compete with imported motors in the home market as well as in the export market.

(iii) In foreign countries, there is mass production of motors as against the limited size of market in this country, which also does not allow of better standardisation.

(iv) The costs of raw materials are comparatively high.

(v) Labour costs have been going up steadily, while the productivity of an Indian worker is also low.

Supply and Demand

The industry has made rapid progress since 1958, when there were 15 units in the large-scale sector with a total annual capacity of about 600,000 h.p. on single shift. There are at present 27 large-scale units with an annual installed capacity of 1,129,040 h.p. on single shift. Sanction has also been accorded now for installation of an additional capacity of 821,900 h.p. which will mean 25 new large-scale units. Actual production in the large-scale sector in the last three years was as follows:

	H.P.
1958	641,083
1959	592,049
1960*	750,000

* The figure for 1960 is an estimate based on the January-October actual of 612,171 h.p.

In the small-scale sector, there were 31 units in 1958, with a capacity of 130,000 h.p. per annum. In 1959, there were 74 units, with a production capacity of 266,204 h.p. Information for 1960, however, is not yet available. Actual production in the small-scale sector for the two years, 1958 and 1959, was as follows:

	H.P.
1958	51,533
1959	70,064

The bulk of production in both the sectors —large-scale and small-scale—continues to be in the range of 1 to 30 h.p. Production of higher horse-power motors has, however, been increasing. For instance, in 1959 and in 1960 (January-October), production of motors of 100 h.p. and above was 7,485 h.p. and 7,265 h.p., respectively, as against 2,410 h.p. in 1957. It would thus appear that some progress has been made in the production of motors of higher ratings. Some progress in the diversification of the patterns of production and production techniques is also said to have been made. Actual production in recent years does not also seem to have lagged behind the estimate of demand at 750,000 h.p. to 800,000 h.p., made by the Commission in 1958. Only in 1959 and in 1960 did imports account for 38,695 h.p. and 131,268 h.p. (for the January-October period), because of import liberalisation. In terms of value, imports of motors in the two years were Rs. 2.5 crores and Rs. 2.2 crores respectively. Since imports of squirrel cage three-phase motors are totally banned and those of other types of motors are much restricted, such imports as have been made in recent years have generally been only marginal. By and large, indigenous production seems to have nearly satisfied demand.

As for future demand, there are two different estimates—one by the Development Council for Heavy Electrical Industries and the other by the Indian Electrical Manufacturers' Association. The Development Council's estimate is based on the likely additions in power generation from year to year. It also makes full allowance for increased demand for the expanding machine tools and industrial machinery manufacturing industries. This estimate of the Development Council has been endorsed by two manufacturers, namely, the Hindustan Electric Company, Ltd., and Kirloskar Electric Company, Ltd. The two estimates of demand for motors upto 300 h.p. are as follows:

(Million h.p.)

Year	Development Council's estimate.	I. E. M. A.'s estimate
1961-62	1.6	1.0
1962-63	1.6	1.1
1963-64	2.0	1.5
1964-65	2.2	1.5
1965-66	2.5	1.8

Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, who presented the aforesaid facts and estimates while opening the Commission's recent public inquiry into the question of continuance of protection to the electric motor industry, outlined the industry's future prospects in these words:

"The industry is now on the threshold of further large-scale expansion and diversification of output. With much larger increases in the availability of power envisaged during the third Plan, the electric motor industry will be called upon to fulfil an important role in quickening the pace of industrialisation. It should be in a position to offer component motors to the manufacturers of industrial machinery so that complete dependence on imports for this purpose may be halted. . . . As the indigenous industry is getting firmly established, it will also be expected to enter foreign markets to earn precious foreign exchange for the country. Rarely is an infant industry faced with such favourable circumstances and opportunity."

Mr. Aiyangar impressed on the manufacturers the need to develop a more dynamic attitude in adopting the latest designs and techniques followed by their counterparts in foreign countries for improving the quality of their products and effecting all possible economies in costs of production, so that they could serve better the customers at home and abroad. To what extent economies in costs of production can be achieved is a moot question, for the raw material costs are stated to be high. Since the percentage of indigenous contents of raw materials and bought-out components used by manufacturers ranges from 85 per cent to 95 per cent, the question of raw material costs has not much to do with imports. The prices paid by manufacturers for raw materials are stated to be comparatively higher than the prices prevailing in other countries for such materials. One way of compensating for the higher cost of indigenous raw materials and components would be to switch over to a new range of motors based on class 'E' insulation resulting in considerable saving in raw material cost as more output is available from a given frame. It is also stated that adoption of modern practice to use aluminium cast rotors would result in economies of labour and material. But these developments, which have taken place in foreign countries, are yet to be adopted in this country.

Raw Material Availability

Apart from the question of costs of raw materials, there is the question of how easily they are obtained indigenously and to what extent they have to be imported, if at all. The principal raw materials required by the industry are electrical steel stampings, synthetic enamel wires, copper strips and cast rings, aluminium steel rods and bars, foundry grade pig iron, insulating materials and varnishes and paints. In addition, a number of parts and components like ball bearings, slip ring and brush holder assemblies, terminal boards and brushes are required, and these are generally procured by the industry from indigenous sources. As for the indigenous availability of different raw materials, the position is as under:

(1) **The bulk of the present requirements of electrical steel required for stampings is produced by the only indigenous producer, Tata Iron and Steel Company, Ltd., which has a present capacity of 18,000 tons. But its production of about 12,000 tons in 1959 and 13,000 tons in 1960 (January-October) has not been quite adequate. So, some quantity of electrical steel for motor stampings is also imported.**

(2) The bulk of the demand for stampings is now supplied by the Sankey Electrical Stampings Private Ltd., Bombay, which has three factories, with an aggregate capacity of 4,600 tons, located in Bombay, Calcutta and Bangalore. It has plans to increase this capacity to 6,000 tons by 1962. Messrs. Devdayal Stainless Steel Industries Private Ltd. has also been given an industrial licence for the manufacture of stampings to the extent of 6,000 tons; its production is likely to commence presently.

(3) Although the entire requirement of electrolytic copper is now imported, enamel wire is produced by several indigenous firms which are able to meet the requirements of the industry. Synthetic enamel base is also now available from Indian producers. Copper strips are also available indigenously.

(4) The industry has to depend mainly on imports for its requirements of class D steel for making shafts.

(5) Foundry-grade pig iron and insulating varnishes and paints are available from indigenous sources without difficulty.

(6) The bulk of the requirements of insulating material continues to be imported. But certain types of insulating material like empire cloth, empire tape and varnished cambric are being manufactured indigenously. Steps are now under way to establish the manufacture of paper-based insulating material like leatheroid, presphan and micanite sheets.

While thus the raw materials required are mostly available from indigenous sources, their quality is stated to be rather poor in relation to their prices. Manufacturers have attributed such defects or shortcomings in their motors as have been pointed out, to the poor quality of raw materials and components. Unless there is an improvement in the quality of Indian motors alongside of a reduction in their costs of production, there will be no early prospect of the industry making any appreciable progress in the matter of exports which are now practically negligible, in spite of concessions granted under the export promotion scheme. The expanding domestic market may not also permit any substantial export of electric motors.

FOUNDRY INDUSTRY'S PROBLEMS

The Indian foundry industry in the private sector has made rapid progress in the last decade. It is estimated that there are now nearly 2,000 iron and steel foundries, with an aggregate installed capacity of 1.4 million tons. The big casting projects coming up in the public sector are, however, causing some anxiety to the industry in the private sector. Even now, many of the existing foundries have idle capacities which they cannot utilise for want of orders or of materials. It is, therefore, expected of the industrial policy makers that they should allow the foundries in the private sector full scope to co-exist with the public sector units.

Mr. P. N. Ghosh, President of the Indian Foundry Association (Calcutta), expressed this view in his address at the ninth annual general meeting of the Association. He also dwelt at length on the difficulties of the industry. The first difficulty is that foundry grade pig iron is not available in adequate quantities, although there is no dearth of pig iron as such. This difficulty can be overcome only if and when the public sector steel projects take a wider and more realistic view of the national economy and start producing more graded pig iron. Otherwise efforts to produce castings of high quality would be of no avail. Another difficulty is the non-availability of adequate quantities of hard coke. This can be overcome only if the Government takes immediate steps to set up more coke ovens. There is also the acute problem of transport, which is reflected in the shortage of wagons both for moving the raw materials and for despatching the finished products, in the imposition of booking restrictions, without proper notice, on certain routes and in the pilferage of valuable raw materials by organised gangs of wagon-lifters. The railway authorities, it is to be expected, will be more considerate to the foundry industry which is passing through difficult days.

The foundry industry deserves to have a better deal for two other reasons, namely, that it is doing the work of a valuable recovery industry by utilising iron and steel scrap and that it has an export potential. Mr. Ghosh's pleas in this regard are simple and reasonable. First, his suggestions in the matter of scrap utilisation are that the Railway Ministry should arrange, for the benefit of the foundries, regular allotment of scrap directly to the foundaries or through their Association and that the Government should set up a project for processing the steel skull scrap which is now being almost entirely exported to other countries. Secondly, the undoubted export potential of the industry (as evidenced by the frequent inquiries received by some of the major industries from foreign traders in the neighbouring countries of Asia and Africa and also in highly industrialised countries like the United States) can be actually realised, if the cost of production of Indian foundry products is cut down through a reduction in the present high price of pig iron. At the same time, it will be necessary to supply graded pig iron to the foundries, so that they can produce goods of uniform standard quality inferior to none of the foreign goods. At least from the point of view of export promotion, the requirements of the foundry industry would need to be met without any further delay.

NEW PRODUCTS AND PROCESSES

Tin-copper Alloy Deposits

AS a result of investigations conducted at the Indian Institute of Science, Bangalore, tin-copper alloy deposits which are adherent, smooth and fire-grained have been prepared using the pyrophosphate bath. Aside from its non-poisonous character and stability, the electrolytic bath has special advantage as compared with the commercial stannate-cyanide bath. It operates at lower bath voltage and higher current density, the range of deposit-composition is wider (10-96 per cent copper), and cathode efficiency is up to 100 per cent, which is about twice that of stannate-cyanide bath.

New Fabric

A new British fabric developed by Courtauld's Ltd., London, is to be launched on the market early this spring. It is a blend of "Tricel" and "Durafil," and its main uses will be for children's wear and women's wear, especially skirts and slacks. "Durafil" is a new fibre which, when blended with "Tricel" in the correct deniers, produces a fabric requiring no resin finish. The makers claim results in a fabric that has a warm handle, is crease resistant, and can be permanently pleated. The new fabric will make its first major appearance in the field of children's wear. It is planned to introduce this new blend in the men's wear field in the near future.

Cleaning Barrels

Up to 400 metal beer barrels, with capacities ranging from 5 gallons to 18 gallons, can be cleaned and sterilised every hour, by a new machine developed by Dawson Brothers, of Dewsbury Road, Gomersal, near Leeds. The whole operation is automatic. It involves a preliminary internal and external wash detergent cleansing of the inside, a warm rinse inside and out, a hot water rinse or the inside, a cold water rinse of the inside, and a final inside steaming and draining, the barrels then being ready for re-use.

Spark Plug

A new low-tension spark plug suitable for use in internal combustion engines has been invented recently by a French concern. It is claimed to have a much longer working life than many other plugs of similar design. The plug contains two electrodes separated from each other by an insulator over which the sparks are said to "glide." One electrode, filled with glass or some other insulating material, fits tightly in the body of the plug; the other, the one carrying the current, consists essentially of a metal disc. This is flushly fitted against the outer face of the insulator.

Blending Flax with Man-made Fibres

A means has been found of producing bleached flax suitable for blending with acrylic man-made fibres intolerant to the processes used for bleaching linen yarns and cloth as a result of extensive research at the Linen Industry Research Institute at Lambeg, Northern Ireland. The new blend, which will be suitable for most light clothing purposes, from fine shirtings to dress fabrics, may well give Northern Ireland a new impetus in the manufacture of shirt fabrics, and open up important possibilities for the textile industry in Northern Ireland. This new textile development will be given its first public showing at an exhibition of yarns and fabrics based on Courtaulds fibres and yarns, which is to be held at Lambeg in May next.

Electronic Typewriter

A typewriter which prints words spoken into a microphone has been developed by a major American communications company. The spelling is only phonetic and the output is not good enough for letters. However, the printed record is reported to be accurate enough to give adequate information for such purposes as file memoranda. The first commercial use is expected to be as a voice-controlled adding machine for supermarket checkout clerks. The clerk would pronounce the price of each item into a microphone and the machine would automatically total the bill. The speech analysis of the machine records an "electronic picture" of the syllables, finds the corresponding syllables in its "memory" and sends the electrical impulses to the typewriter. It is stated that the output looks like this: "The ultimit object is too develup a tipwriter which tips in response too wurds spoken intoo a mikrophon."

Wood Screws

A machine for the production of wood screws, developed over a period of 20 years by a swiss engineer, Walter Trurnit, is now being manufactured in Britain. The British company, Crossley Brothers of Manchester has world manufacturing and sales rights. The machine saves 15 to 20 per cent of material and there is no swarf. The screws, it is claimed, are some 20 per cent stronger than those made by other processes because they are work-hardened during manufacture and they have a favourable grain flow. The screws are made by cold hammering. There are two parts to the process. The first is pointing. A cone is made on the tip of the cylindrical blank and a couple of threads cut. The hammering machine then takes over, picks up the tread and continues it by hammering. During the process the screw gets longer. There are considerable savings in labour and material.

Novel Plastics

Recent developments in both the U.S. and in Russia have seemed to indicate that an entirely new group of plastics may prove to be not only "winners" for plastics manufacturers and the big chemical manufacturing companies but also materials of considerable and growing importance for engineers in many different fields of industry. The new compounds, based on acetal resins, are not only expected to be exceptionally cheap in price but have a high melting point, an excellent dimensional resistance to friction and are rigid while not being brittle. At the same time, they are said to be tough and resilient and are expected to replace metal, in many applications, including aspects of automobile manufacture. They are also very resistant to chemical attack. The reason acetal resins are cheap is that acetone costs about 7d. a pound delivered by tanker, which enables a pound of the unfinished material to be produced by the maker at around 4s. or just over, and sold at less than 5s. Apart from the U.S., both Japan and the U.K. are known to be actively interested in the development of acetone-based plastics, or polyacetone.

Smoke and Smut-free Combustion

Smoke and smut-free combustion with any grade of liquid fuel—including the heaviest residual oils—has been achieved with the development of a completely new combustion chamber and firing system by one of Britain's leading oil burning specialists. The unit is the result of several years of research and six months intensive development on an aerodynamic toroidal system which gives high combustion intensity and completeness of mixing through a wide range of fuel/air and turn-down ratio variations. Complete burning of liquid fuels has been achieved with flexibility and full control and the firm claim that any size, shape and type of flame can be provided to suit any furnace or boiler. In tests, all grades of oil from 'Gas Oil' to '3,500 seconds' residual oil were used. With suitable air settings, Smoke Numbers down to 1 and below on the Shell/Baccarach Scale were readily obtained for oil rates from 20 per cent to 100 per cent of the full nominal rating of 35 million British Thermal Units per hour. These readings justify the description 'Zero Smoke,' and the results indicate a complete burning of even the heaviest residual oils. Independent tests, conducted by the B.P. Fuel Laboratory at Sunbury-on-Thames, verified the tests by the firm. These results have been achieved, basically, by a specially designed cylindrical refractory chamber which enables the bulk of the combustion air to enter in reverse flow to the fuel. A toroidal flow pattern is generated and sustained in the chamber. The atomised fuel and combustion air circulate in the toroid, thoroughly mixing and burning to completion within the combustion chamber. A considerable amount of pre-heating is achieved in this system; the high velocity reverse flow air draws partly burned products into the toroid and these are heated as they mix with the air; in addition, the air scrubs against the walls, is heated up, and keeps the refractory temperature down. As each particle of oil leaves the atomiser it is subjected to intense radiation from the flame. This results in virtually instantaneous vaporisation and cracking, and vapour-phase burning in the highly pre-heated air develops immediately, with consequent smoke-free combustion.

THE PREMIER AUTOMOBILES LIMITED

CHAIRMAN, MR. LALCHAND HIRACHAND ON RS. 25-CRORE EXPANSION PROGRAMME

CAPITAL MAY BE INCREASED AGAIN

A LARGE-SCALE expansion programme, involving a total capital expenditure of Rs. 25 crores, is proposed to be undertaken by the Premier Automobiles Limited. Some details of the programme were given by Mr. Lalchand Hirachand, Chairman of the Company, in his speech at the Sixteenth Annual General Meeting of the Company held at Bombay on Monday, 6th March 1961. The programme, Mr. Lalchand disclosed, envisages an increase in the capacity (on single shift) of the Company to 15,000 trucks and 15,000 cars per annum, as against the present capacity of 3,000 and 4,000 respectively. He did not indicate as to how the large capital outlay would be financed. He, however, said that a part of the scheme would be financed through loans obtained from the U.S. Development Loan Fund or through other organisations. He further anticipated that the Company might have to increase its capital too.

The following is the full text of Mr. Lalchand Hirachand's speech:

"GENTLEMEN,

"I am very happy to extend a warm welcome to you all today on the occasion of the sixteenth annual general meeting of the Company held here in this spacious Walchand Hirachand Hall.

"There has been a steady rise in the attendance of the shareholders at the general meetings since the last two years which is an indication of the increasing interest taken by them in the affairs of the Company. The recent issue of new shares has been responsible for swelling the number of shareholders on our register and anticipating a larger attendance at this year's meeting, your Directors decided to hold the meeting in this Walchand Hirachand Hall to provide accommodation for more persons.

"On an occasion like the annual general meetings, one is inclined to look back on the achievements of the past and review the prospects ahead. Further, you will also like to know the Company's progress during the year under report and its programme for future expansion.

"The Directors' report and the statement of accounts for the year ended 30th June 1960 have been in your hands for some time past and, with your permission I will take them as read.

Larger Turnover

"During the year under review the Company's turnover increased to Rs. 20.94 crores, as against Rs. 17.42 crores for the last year; 5,729 cars and 5,797 trucks were sold during the year.

"The working of the Company during the year under report resulted in a profit of Rs. 42,18,839 after providing Rs. 44,22,788 for depreciation, Rs. 34,00,000 for taxation and Rs. 22,50,000 for development rebate. Adding thereto the balance of Rs. 2,64,263 of the previous year's 'carry forward' (after adjusting the amount of dividend paid on forfeited shares now annulled) and the net surplus of excess provisions and claims received in respect of past years, namely, Rs. 9,65,360, the total comes to Rs. 54,48,462. Out of this, your Directors have made the following appropriations:

General reserve	Rs.	15,27,071
Dividend equalisation reserve ...	Rs.	5,00,000

"The Directors have recommended a dividend of Rs. 9 per share (subject to deduction of tax) which will absorb Rs. 30,97,469, leaving a balance of Rs. 3,23,922 which is proposed to be carried forward.

"While the larger turnover during the year under review has resulted in a higher profit, the overall margin of profit is not proportionate to the turnover. This can be primarily attributed to the increased wage bill which had a steep rise from Rs. 1,29,59,274 last year to Rs. 1,76,47,108 in the current year, on account of upward revision of grades and higher dearness allowance paid to the workers.

"Despite the higher profit this year, your Directors have decided to recommend the same dividend as last year, viz. Rs. 9 per share (subject to deduction of tax), as the dividend is payable on an increased capital and bearing in mind the necessity to conserve available resources for the anticipated expansion programme.

"I shall now deal with the progress made by the Company during the year under review.

"All the items of the Fiat engine which it is possible for the Company to produce are being made in the factory now. As for the Fiat transmission and axles, all the necessary machine tools have been received and are erected. As stated in the Directors' report, satisfactory progress is being made in the manufacture of components for transmission and axles under the supervision of Fiat technicians who have been good enough to help us in the early implementation of this project. The progress in regard to the manufacture of front and rear axles for trucks is also equally satisfactory. We are making all the important components, including differential gears, planatory gears, carriers, half shafts, cases, brake drums, and pinion, etc., of these axles.

"The heat treatment equipment and the generators which were installed last year are now in full operation. The Chrysler experts who had specially come down here have been satisfied with the performance of the same and the benefits which we are deriving from the use of the furnaces are really considerable. The quality of gears and other components which require various types of heat treatment has immensely improved. It will not be an exaggeration, if we say that this equipment which we have set up in the factory is probably of a unique type in India for this kind of work and, besides improving the quality of production to a great extent, it has also contributed to minimising the wastage in production that was being caused hitherto.

D.L.F. Loan

"As stated in the Directors' report, a complete study has been made in joint consultation with Chrysler Corporation and Fiat Corporation of matters in respect of equipment, dies, plant, structural work, foundation, layout, etc., required for the project of sheet metal components for Dodge trucks and Fiat cars and this has received Government's approval. We then represented to the Development Loan Fund of the Government of U.S.A. in the United States. Our application in the matter of foreign exchange for the above project was accepted by them. I am glad to state that the D.L.F. authorities, having been satisfied with the soundness of our scheme, have sanctioned a loan of $7,200,000 to the Company. The loan will be guaranteed by our bankers, the Bank of Baroda Ltd., and it will carry interest at the rate of 5¾ per cent. per annum. The loan will be repayable in rupees in twenty-seven six-monthly instalments, the first instalment to be paid within 18 months after the first interest payment is due. This is one of the biggest loans given directly in the private sector by the D.L.F. and we are, indeed, obliged to the Government of India for using their good offices and supporting our application for the loan. We are grateful to the Bank of Baroda Ltd. for agreeing to give guarantee for this loan.

"In view of the expanding activities, we approached our bankers for increasing the cash credit limit from Rs. 3.50 crores to Rs. 5.00 crores. The Bank of Baroda Ltd. and the Devkaran Nanjee Banking Company Ltd., have agreed to this and our thanks are due to them for this timely assistance.

Jha Committee

"The report of the *Ad Hoc* Committee on Automobile Industry, popularly known as the Jha Committee, has already been published. The report has emphasised that the restricted volume of production is the primary reason for the high cost of automobiles. The report has also recommended release of adequate foreign exchange to the existing manufacturers in order to enable them to complete their existing programmes and expansion plans. An increase of output will bring in its wake a reduction in the cost of production. The relation between quantity of output and cost of production is more pronounced in the case of the automobile industry than in a majority of other industries. When the question of cost of production of cars was examined by the *Ad Hoc* Committee, the automobile industry based their estimates at a volume of 10 to 15 thousand motor cars. If any unit of the industry were given the freedom to produce 50,000 cars or more, there would have been a substantial reduction in the estimated original price. In fact, this Company had offered a substantial reduction in the price of Fiat cars, if we were permitted an annual production of 25,000 cars. Based on this volume, we had offered to bring down the price ex-factory from Rs. 9,780 to Rs. 8,500. With the limited volume available at present, diversification of production and/or increasing the number of units of production centres will result in a reducing volume per product which in turn will make it difficult to bring down prices.

Low-cost Car

"As regards the proposal for manufacture of a low cost car in the public sector, it is regretted that, in spite of the qualified recommendations of the Jha Committee, the Government have come out with a decision that a low cost car should be produced in the public sector and have appointed a technical committee under the chairmanship of Shri G. Pande. The Tariff Commission in 1956 was not at all in favour of the introduction of a low cost car but the Jha Committee in their report have recognised that there is demand for the low cost car. While conceding the demand for the low cost car, the Jha Committee, however, laid down certain principles under which the production of the low cost car should be undertaken. Being aware of the acute foreign exchange position, the Committee recommended that the present vehicle manufacturers should first be given the facility to expand their production fully and, after that was done, the proposal for production of a low cost car may be considered. Since the demand for cars is increasing, it is but fair that the existing manufacturers should be afforded every opportunity to utilise the growing demand for increased volume of production and consequent lowering of prices.

"Efforts are being made by the Government as well as interests concerned to promote rapid development of a healthy automobile industry in the country. In this connection, it will not be out of place to mention that, for formulating the Co-operative Research Body for the Automobile Industry, the Council of Scientific and Industrial Research has recently appointed a committee consisting of automobile manufacturers and the representatives of the different Ministries and Development Wing under my chairmanship.

Third Plan Target

"The production of automobiles has been increasing at a rapid rate. Total production in 1959 was 36,903 and in 1960 it was 52,115, showing an increase of more than 46 per cent over the previous year and over 65 per cent when compared with the production in 1956. The increase in production has been possible with the allocation of the same foreign exchange as was allocated in 1959. In other words, the indigeneous content in the different vehicles under manufacture has gone up. In the programme chalked out by the Planning Commission and the Development Council for Automobiles, it is estimated that the car production should reach 30,000 to 40,000 of the present models per year. Besides the present models, there is a possibility of the light car being produced in the public sector. Assuming that the Planning Commission will allow a total production of 40,000 units of the present models, our share will be around 20,000 cars a year.

"The Planning Commission has emphasised that, to reach the targets of production of automobiles without excessive and continued strain on foreign exchange resources, it will be necessary to achieve at least 85 per cent indigenous content by 1965-66 and our endeavour will be to accomplish this objective. It is difficult to give any correct assessment of the local contents, because different formulas are being used by different persons. However, I am giving these percentages as quoted by Shri Manubhai Shah, Minister for Industry, at the recent annual meeting of the Ancillary Industries Association.

	Per cent
Ambassador	76.40
Fiat	64.00
Standard	50.70
Jeep	73.60
Dodge truck	80.00
Mercedes-Benz truck ...	76.80
Leyland Comet truck ...	65.70

"I may, however, mention here that the formula followed in working out the above figures does not reflect an accurate picture of the progress of manufacture. It would be more useful, if either the old formula followed by the Development Wing or that recommended by the Jha Committee is accepted by all concerned including the Defence Ministry.

New Automobile Policy

"At a conference held in New Delhi on 16th January 1961, the Minister for Industry, Shri Manubhai Shah, enunciated a new policy with regard to automobile manufacture, particularly in relation to the commercial vehicles.

"(a) It has been laid down that the existing vehicle manufacturers who have not got their own diesel engine and who have been buying their requirements of diesel engines from diesel engine manufacturers, will be allowed to manufacture the diesel engines themselves.

"(b) That of the two diesel engine manufacturers who have no vehicles manufacturing licence, the licence of Automobile Products of India for manufacturing Meadows engine, will be transferred to Premier Automobiles, while Simpson & Co., who are manufacturing the Perkins engine, will be given a manufacturing licence for commercial vehicles.

"(c) In this manner, there will be five commercial vehicle manufacturers. Each one of these will be given freedom to expand its production freely and each one will have freedom to produce any model it likes. In other words, the vehicle manufacturer can produce a heavy vehicle, a medium vehicle and/or a small wheel base vehicle as it likes.

"(d) The Government will endeavour to provide enough foreign exchange for the capital investment in regard to the expansion programme. However, foreign exchange requirement for importing parts and components and raw materials will be restricted to the present level only. Within this foreign exchange, each manufacturer will have to undertake the expansion of its production capacity.

"I am glad that the Government have broadened the automobile policy in the above manner.

"As a result of the above policy, your Company will have the right to manufacture the Meadows engine, which at present is being produced by Automobile Products of India. In addition to this, we will be permitted to manufacture another engine of our own choice which will be more suitable for the vehicles that we are producing or are likely to produce in future.

"The policy with regard to car manufacture is not yet fully clarified. We have, however, submitted an application to the Government to allow us to produce 100 cars a day in two shifts, which will enable us to meet the requirements of the market as also bring down substantially the price of the car. The matter is still under consideration and the Government's approval is awaited.

Expansion of Capacity

"To meet the increased demand for cars and trucks during the third Five-year Plan which is expected to exceed a figure of 1,00,000 vehicles, the Company has decided to step up production by increasing the present capacity of trucks from 3,000 to 15,000 per annum on single shift and that of cars from 4,000 to 15,000 per annum on single shift. It is estimated that this programme of expansion will involve considerable capital expenditure amounting to about Rs. 25 crores or more. It is yet too early to indicate as to how we shall obtain the resources for these projects. But it can be said roughly that part of the scheme will have to be financed through loans obtained from the D.L.F. of the American Government or through other organisations. We may have to increase our capital too. It will take some time before a clear and complete picture can be prepared.

"The present paid-up capital of the Company as on date is Rs. 5,55,01,300 which is almost equal to the authorised capital of the Company, namely, Rs. 6 crores. The Company has not issued any preference shares so far. It is proposed to amalgamate the preference shares into equity shares and increase the present authorised capital to Rs. 25 crores divided into 15,00,000 'A' ordinary shares of Rs. 100 each and 10,00,000 unclassified shares of Rs. 100 each as and when circumstances permit.

"I have now immense pleasure in referring to the two memorable functions held in our factory premises in the latter half of 1960. On 23rd September 1960, we paid our homage to that great visionary and a pioneer of Indian industry, *Bharat Ratna* Dr. M. Visvesvaraya, by unveiling his portrait on the occasion of his attaining the hundredth year. The portrait was unveiled by another illustrious industrialist, Lala Sir Shri Ram. The second memorable function marked a golden chapter in our history. The 9th of December 1960 was a red-letter day in our annals. On this day, the President of India, Dr. Rajendra Prasad, visited our factory and unveiled the bust of late Seth Walchand Hirachand, the founder of the Indian automobile industry, the founder of this Company and a pioneer *par excellence* of Indian enterprise and Indian industry. In his speech, the President while paying glowing tributes to Seth Walchand Hirachand, said:

'He was one of those great men of this country who had dreamt of an industrialised India and who established one by one, many undertakings not only in one field but in various fields of industrial development. I remember the day when in 1942, by the order of Mahatma Gandhi, I went to Vizagapatam to lay the foundation of Shipbuilding Yard. My acquaintance with Seth Walchand thereafter grew more intimate and I would like to say that I started taking great interest, although from a distance, in all the big projects he undertook. It was a great achievement at that time, but its importance is all the greater today when we realise that crores of rupees are spent merely because we have no ships of our own.

'Nor did Seth Walchand neglect agriculture. He not only started the sugar factory but, in order to get a better produce of sugarcane, he started the sugarcane farms wherever the factories were established. He not only started the Indian Hume Pipe Company and the Premier Automobiles, which we are seeing today, but also undertook large construction works all over the country. Besides, the industries started by him are rendering valuable help to all the national projects in the country.

'There is absolutely no need to be afraid or worried about the industrialisation. Though, on one side, the Government is establishing and will continue to establish large industries, the private enterprisers, on the other hand, are also getting equal opportunities.'

Latest Production Figures

"You will be interested to know the up-to-date figures of production in the factory. The production figures for the six months ended 31st December 1960 have already been released in the press and I may state that the Company produced 3,886 cars and 3,690 trucks and sold spare parts of the value of Rs. 92,09,606 during the seven months ended 31st January 1961, as against 3,050 cars and 3,210 trucks and spare parts of the value of Rs. 84,83,535 sold in the corresponding period for the preceding year.

"The business of the Premier Auto Electric Private Limited, subsidiary of this Company, for the year under report was satisfactory. With a view to expanding its business, this subsidiary has taken up the distributorship of certain indigenous products like batteries, spark plugs, wires, fanbelts and cables.

"I would refer to a statement made by one of the shareholders at the last annual general meeting that he had heard that this subsidiary company was selling goods imported by it at much less than the margin which was being obtained by others. I was to enquire into the matter.

"Accordingly I made enquiries with the assistance of our solicitors and auditors. The shareholder was also present and I am satisfied that the complaint was not justified. There had been also no infringement by Premier Auto Electric Private Ltd. of the conditions of its licence.

"The India Steering Gears Private Ltd., the other subsidiary of this Company, could not commence business during the period under review due to reasons mentioned in the Directors' report. The position continues to remain the same and, if there is no reasonable prospect of that Company starting business in the near future, your Directors may have to take steps for the closing down of this subsidiary company.

"As stated in the Directors' report, 1,52,564 debentures were converted into 'A' ordinary shares upto the end of the year under review out of 1,60,000 of Rs. 100 each convertible debentures issued by the Company in the year 1958. The debentures converted as at 28th February 1961 are 1,53,107.

"The issue of 1,84,600 new shares made early last year was fully subscribed.

Taxation

"As regards taxation the position is as follows:

"The income-tax assessments of the Company upto the end of the financial year 30th June 1954 are completed.

"The assessments of the Company as agents of Chrysler Corporation have also been completed upto 30th June 1959. In respect of the assessments for the years 1948 to 1956, the Company had filed appeals to the Income-tax Appellate Tribunal against the order of the Appellate Assistant Commissioner. The Tribunal partly allowed our appeals. The Company then filed an application to the Tribunal for reference of our case to the High Court and the Tribunal's decision is awaited. The Company has also filed appeals in respect of the assessments for the subsequent years, viz., for the years 1957 to 1959.

"The assessments of the Company as agents of Fiat Corporation have been completed upto the financial year 30th June 1958 and the Company has preferred appeals against these assessment orders also.

"Before concluding, I take this opportunity to express my thanks to the management, staff and the workers for their co-operation and the good work put in by them during the year under review:

"With these words, I beg to move:

'That the Directors' report and audited balance-sheet as at 30th June 1960 and profit and loss account for the year ended 30th June 1960 be and they are hereby approved and adopted.'"

N.B.—*This does not purport to be a report of the proceedings of the annual general meeting.*

Swiss Industries Fair Basle

15th April to 25th April 1961

An impressive parade of products spotlighting Swiss Manufacturers' Skill and Craftsmanship in Plastics, Electrical and Watch Industries, Mechanical Handling Equipment and Textile Machinery will be on display at the 45th Swiss Industries Fair.

FLY THERE BY

SWISSAIR

THE UNION BANK OF INDIA LIMITED

(REGISTERED 11TH NOVEMBER, 1919)

APOLLO STREET, FORT, BOMBAY 1

FORTY-FIRST REPORT

GENTLEMEN,

The Directors beg to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.

	Rs.	nP
The net profit for the year, including the sum of Rs. 97,246.82 nP. brought forward from last year's account, amounts to	28,13,188	57
The following amounts have been appropriated for the undermentioned purposes :—		
Amount transferred to Reserve Fund under Section 17 of the Banking Companies Act, 1949	6,50,000	00
Amount written off Premises Account	50,000	00
Amount set apart towards payment of Taxation	8,00,000	00
Amount provided for Bonus to Staff	5,36,484	96
	20,36,484	96
The balance of Rs. 7,76,703 61, the Directors propose to dispose of as follows :—		
To pay a dividend of 57 nP. per share, or 11.2/5 per cent. per annum subject to deduction of Tax on 12,00,000 shares	6,84,000	00
To carry forward to next year's account	92,703	61
	Rs. 28,13,188	57

The business of the Bank during the year under review continued to show satisfactory progress. The Bank opened one Local Branch in Greater Bombay and one each in Poona, Kolhapur, Gauhati, Bhiwandi and Delhi.

The Directors beg to report that the deposits which were Rs. 24,60,00,000 as at the end of December, 1958, rose to Rs. 32,17,00,000 at the end of December, 1959, and stood at Rs. 28,30,00,000 at the end of December, 1960. Advances increased from Rs. 15,78,00,000 as at the end of December, 1958, to Rs. 20,57,00,000 at the end of December, 1959, while at the end of December, 1960, the advances stood at Rs. 17,31,00,000. During the same years, viz., 1958, 1959 and 1960, the net profit of the Bank increased successively from Rs. 14,75,000 to Rs. 24,27,000 and to Rs. 27,15,000 respectively.

Under the provisions of Section 256 of the Companies Act, 1956, three of the Directors of the Company, Shri Jal Hormusji Mehta, Shri Devji Rattansey and Shri Ratilal Nathalal retire by rotation, but being eligible for re-election, offer themselves accordingly.

You will be required to appoint Auditors for the ensuing year and fix their remuneration.

By Order of the Board,

K. R. P. SHROFF,
Chairman.

BOMBAY, 14*th February*, 1961.

UNION BANK'S PROFIT RISES

RESERVES ENHANCED

NOTWITHSTANDING a sizable drop in aggregate deposits from Rs. 32.17 crores to Rs. 28.50 crores, the profit of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) has recorded a handsome rise of Rs. 2.88 lakhs to Rs. 27.16 lakhs for the year ended 31st December 1960. The business of the Bank during the year under review continued to show satisfactory progress and the Bank opened one local branch in Greater Bombay and one each in Poona, Kolhapur, Gauhati, Bhiwandi and Delhi. The entire improvement in profit is the result of banking business pure and simple and does not include any income of a capital nature, such as profit on sale of investments, revaluation of investments and income from non-banking assets.

The provision for taxation has been kept unchanged at Rs. 8 lakhs but the amount transferred to reserves and contingencies has been substantially stepped up from Rs. 4.0 lakhs to Rs. 6.50 lakhs and the amount set apart for bonus to staff is slightly higher at Rs. 5.36 lakhs, as against Rs. 5.11 lakhs in the previous year. The premises account absorbs Rs. 50,000 which is the same as in 1958 and 1959. The Directors have recommended a dividend at the rate of 11.4 per cent, subject to tax, which would give a tax-free return of 7.98 per cent per annum which is the same as that for 1959. For the years 1957 and 1958 however the shareholders of the Bank had received a tax-free dividend of 8.75 per cent. In other words, the Bank has not yet been able to restore the dividend to the level that was prevailing before the present corporate tax system became effective. The current dividend gives a yield of 6.5 per cent tax-free, at the prevailing market rate of Rs. 6.52 *cum-div.* for the Rs. 5 fully paid-up shares.

A *bird's-eye view* of the Bank's progress can be had from the comparative table in the next column.

It will be observed from this table that both the principal sources of revenue have yielded more income, the rise in commission and exchange earned being more marked. Thus, whereas the income by way of interest and discount has recorded a rise of Rs. 4.49 lakhs to Rs. 133.42 lakhs, commission and exchange earned has increased by as much as Rs. 9.72 lakhs to Rs. 41.03 lakhs. The drop in interest paid from Rs. 67.97 lakhs to Rs. 63.19 lakhs is primarily due to the fall in deposits noted earlier. It is also due, to some extent, to the inter-bank agreement on rates of interest which effectively prevented the rates from rising as a result of competition among banks for deposits. The expenses have risen sharply from Rs. 73.11 lakhs to Rs. 89.91 lakhs and, of this rise, salaries, and allowances alone account for Rs. 11.77 lakhs. Rent and taxes have gone up by Rs. 1.57 lakhs, stationery and printing by Rs. 0.50 lakh, and other expenditure by Rs. 1.47 lakhs. While a part of the rise in expenses may be attributed to the expansion of branch banking which takes time to yield a satisfactory return, the general cost inflation in the country appears to be the main cause of this rise.

A notable feature disclosed by the table is that, in a short period of two years, the profit has nearly doubled itself. The Bank's fixed deposits have dropped from Rs. 13.50 crores to Rs. 12.81 crores and the current deposits from Rs. 16.85 crores to Rs. 13.33 crores. Only the saving deposits have shown a sizable improvement from Rs. 1.83 crores to Rs. 2.37 crores. In consonance with the decline in total deposits, the advances have registered a fall from Rs. 20.58 crores to Rs. 17.32 crores. Investments, however, have slightly gone up by Rs. 11.27 lakhs to Rs. 7.48 crores and the ratio of investments to deposits has gone up from 22.9 per cent to 26.2 per cent. It will be noted from the table that the reserves have gone up from Rs. 47 lakhs to Rs. 53.50 lakhs, following the addition made out of the net profit for the year under review. In three years, the Bank has raised its reserves by Rs. 13.20 lakhs, or by nearly 34 per cent. The owned resources of the Bank, as disclosed in the balance-sheet, now amount to Rs. 113.50 lakhs. The total number of offices of the Bank now amounts to 53. Of these, 14 centres offer safe deposit facilities.

I.F.C. TO INVEST IN EQUITY SHARES

The Directors of the International Finance Corporation (I.F.C.) have submitted, for the approval of its Board of Governors, an amendment of the I.F.C.'s charter to enable this foremost international investment institution to make investments in equity capital. Under its charter, the I.F.C. is at present prohibited from investing in capital stocks or shares. The I.F.C.'s experience during the four and a half years of its existence (it was established in July 1956) has shown that this restriction is, in practice, a serious handicap both to the growth of its operations and the mobilisation of private capital for foreign investment, one of the main objectives of the I.F.C.

The proposed amendment, if approved by the Board of Governors, would enable the I.F.C. to: (1) strengthen, by its own investment, the capital structure of enterprises. (2) encourage private investors to join it in providing either equity or preference capital, (3) share in the risks and profits of an enterprise in traditional form, (4) negotiate investment terms on simpler and more acceptable lines, (5) make more effective use of options and convertible securities, and (6) co-operate with local institutions in the development of capital markets by underwriting issues of convertible securities and share capital for public subscription.

Announcing the submission of the amendment in Washington last week, Mr. Robert L. Garner, President of the I.F.C., observed that "the ability to do equity financing, where appropriate, would provide wide flexibility of financing, so as to meet the varying needs of private enterprise in the developing countries and to attract private investors to participate with I.F.C. It would substantially assist the I.F.C. in increasing the scale of its operations and thus increase its contribution to economic development." Mr. Garner, however, made it clear that the I.F.C. would not go into the business of selling shares to the public; that would be done by private bankers and brokers. It is emphasised by the authorities of the I.F.C. that its participation in equity capital would not be followed by exercise of control over, or participation in, the management of concerns in which it invests. For the I.F.C. is strongly against both. It has not so far participated in management or even named a director on the board of any enterprise to which it has provided financial assistance. It would not ordinarily seek to exercise the voting rights attached to the shares held by it. Its purpose would be served if it could invest in stocks without exercising voting rights, except when deemed necessary for the protection of its interest in the event of default or jeopardy. The sole purpose of the proposed amendment is said to be to enable the I.F.C. to meet more adequately the need of worthwhile private business in forms more acceptable to businessmen and investors.

Explaining the *raison d'etre* of the amendment, the management of the I.F.C. points out that, if the I.F.C. made loans only on fixed interest terms, as it does now, it would seldom be able to attract private investors and, by selling its investments to them, revolve its funds as is required under its Articles. Being prohibited from making normal equity investments, the I.F.C. has been forced into patterns of financing which sometimes appear complicated and unusual. Further, since its own capital is small, as compared with that of other international and national financial institutions, it has always been obvious that the I.F.C. could make an important impact, only if it could encourage private investment capital to participate in its investment. Such private capital is particularly needed for, and interested in, equity investment. But so long as I.F.C. takes a creditor position, it cannot encourage others to join with it in making equity investments, nor can it demonstrate the advantages of equity investment.

I.F.C. investment in equity capital, it is said, would not call for any increase in the capital subscription by member-countries. Total subscriptions at the end of January last aggregated $96.21 million (all paid in U.S. dollars) from 58 member-countries. Investment commitments have been made in 35 enterprises in 17 countries amounting to nearly $42 million, of which private participation aggregated $6 million. The I.F.C.'s net commitment, therefore, works out to about $36 million. Actual disbursements exceed $29 million.

THE UNION BANK OF INDIA LIMITED—*(Continued)*

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Union Bank of India, Ltd., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the unaudited Returns from all the Branches not visited by us for the purposes of this Report. The Central Government have, by an order dated the 3rd February, 1961, exempted all the Branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1960.

We report that:

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

DECCAN SUGAR AND ABKHARI COMPANY LTD.

MR. C. R. SRINIVASAN'S SPEECH AT ANNUAL MEETING

ADEQUATE RETURN AND REHABILITATION ALLOWANCE NEEDED

PRESIDING over the Sixty-fourth Annual General Meeting of The Deccan Sugar and Abkhari Company Limited, held at Madras on Monday, 27th February 1961, Mr. C. R. Srinivasan, Chairman of the Company, said that, although the net profit after taxation for the financial year ended 31st May 1960 was about Rs. 3 lakhs more than that of the previous year, the Directors had decided to maintain the dividend on the ordinary share capital at the same level as last year.

The following are extracts from Mr. C. R. Srinivasan's speech:

"The net profit after taxation was about Rs. 3 lakhs more, but the Board considered it expedient to take further sums to general reserve and to place a sizable sum to dividend equalisation reserve. In this connection, I would draw your attention to note 12 of the notes on the accounts headed 'contingent liability.' Unless and until we see the final shape in which the price linking formula emerges from the Tariff Commission's inquiry, the sugar industry cannot tell with exactitude what price it will have to pay for cane delivered from the 1958-59 season onwards. As we have stated in this note, a reasonable provision for this factor has been made in the accounts, but the possibility of a further contingent liability exists and, in all prudence, we must maintain a margin out of which, if it arises, it can be met. Another major factor which must be borne in mind is that, during the current year, owing to the all-India increase in production, sugar stocks at our factories are likely to build up, and we must husband our cash resources to help carry this additional load.

Preference Dividend

"The enactment of the Preference Shares (Regulation of Dividends) Act, 1960, behoves us to declare dividends totalling 9.1 per cent on the preference share capital of the Company. Unfortunately, this was enacted too late to enable us to pay the final dividend of 2.1 per cent subject to deduction of tax for the year ended 31st May 1960, together with the interim dividend for the current year. We have now made arrangements to pay it tomorrow.

Pugalur Factory Expansion

"In my speech at the last annual general meeting, I told you that we had applied to the Government of India for permission to expand the capacity of Pugalur factory from 1,000 tons to 1,250 tons cane per day. I am glad to say that permission has been received and orders placed for almost all the necessary equipment. The scheme is expected to cost between Rs. 25 and Rs. 30 lakhs and, if the required plant and machinery is delivered in time, the new capacity will be effective from the 1962-63 season. Against the background of rising sugar stocks, a doubt may be raised in the minds of some of our shareholders as to the wisdom of going ahead with this expansion. I believe that the law of supply and demand must operate, and the fact that we have more sugar than this country requires will mean that prices will come down, and it is only those factories who can manufacture cheaply who will be able to continue to make a profit. It is estimated that the expanded factory will produce sugar at approximately Rs. 17 per ton more cheaply than is currently possible. On a production of some 28,000 tons per annum, this Rs. 17 assumes considerable significance. Incidentally, in the last two years, we have been able to link the special and main seasons, thus eliminating the idle period between the two. In the current combined season, it is hoped to produce 22,400 tons of sugar, as against 18,429 tons in the previous combined season.

Tariff Commission's Report

"I will now deal with the general problems of the sugar industry as they present themselves to us in the South. The most important events in the interval of time since I addressed you last were, first, the publication in April 1960 of the Tariff Commission's report on the cost structure of sugar and, second, the reference in October 1960 by the Government of India to the Tariff Commission of the egregious price linking formula for sharing with the cane grower the price realised for sugar.

"The outcome of the report on the cost structure of sugar is that the country has been divided into four sugar regions, the Southern region comprising the States of Andhra Pradesh, Madras, Mysore and Kerala, with recommendations as to the basis on which fair ex-factory prices are to be fixed for each region. While we have no serious quarrel with the structure of the ex-factory price suggested for the Southern region, subject to certain obvious lacunæ being redressed, the main drawbacks of the recommendations are that (*a*) the Commission considers that a fair return to the industry is 12 per cent on employed capital within which to meet commitments under bonus and gratuity, interest on borrowed capital, dividend on preference shares, managing agents' commission and income-tax and 'finally leave a residue to a large majority of the units in all the regions to declare reasonable dividends' and (*b*) no rehabilitation allowance has been granted in the cost structure, in spite of the fact that the Supreme Court has freely conceded the necessity for it in industry when machinery prices have increased five to six times in the short space of a decade.

"The recommendations of the Commission have been accepted by Government, but I can only hope that, before fixing any ex-factory price in the South, where as yet there is only self-imposed control to sell at the same price as the average landed cost of North Indian sugar, Government will give due consideration to the representations made on the utter inadequacy of the 'fair' return and the need for a rehabilitation allowance.

Price Linking Formula

"This brings me to the question of the freight advantage accruing to the Southern factories by reason of the Southern region being still on the whole somewhat deficit in sugar. It is obvious that this advantage can last only so long as the need for importing North Indian sugar continues and our selling price is influenced by the landed cost of North Indian sugar. We in the South have for long voluntarily parted with the lion's share of the freight advantage to the growers in the shape of the S.I.S.M.A. formula or a negotiated settlement, keeping for ourselves only a little over one-third of the net ex-factory price realised for sugar. The price linking formula in the form in which it was placed on the statute book would upset this fine balance and reduce the factory's share to the point where profits would dwindle and the sugar industry would cease to attract the middle class investor who is still the backbone of the private sector. Perhaps a timely realisation of the ill-effects of the formula prompted the Government to refer it to the Tariff Commission. It is to be hoped that a solution will emerge from the findings of the Commission that will do justice to the industry, the cane grower and the worker in the factory. Proper representations have been made on behalf of the industry.

Sugar Production

"The overall sugar situation in the country is that there is a large surplus, part of which must be exported, albeit at a huge loss, if internal prices are to be maintained at economic levels. All-India production in the current season is likely to reach an all-time record of 27 lakh tons, the South contributing as a whole 30 per cent more than the production in the last season. We in the South are fast attaining not only self-sufficiency but, owing to the unrestricted expansion that seems to be on the anvil, reaching a state of affairs in which disposal of the substantial surplus after making due allowance for increased *per capita* consumption will present a problem that cannot be solved by exports which involve heavy loss all round, namely, to the industry, the exchequer and the grower. It behoves Government not to lose sight of the implications of over-expansion and its attendant evils, despite the exhortations of our planners and the pressure of the new vested interests.

"Planners should realise that the bulk of next year's sugar crop is already in the ground. This sugarcane must be milled and any intention Government may have of curbing the expansion of sugarcane production can only show any effect on the production of the 1962-63 season.

"Our relations with labour during the year under review have been satisfactory and I wish to record my appreciation and that of my fellow-Directors of the loyal work put in by them and the staff."

The report and accounts for the year ended 31st May 1960 were adopted, the retiring Directors, Mr. M. J. Edwards, Mr. G. N. Noel-Tod and Mr. P. Hadfield were re-elected and the retiring Auditors, Messrs. Lovelock and Lewes, were re-appointed on the same remuneration as for the previous year.

N.B.—*This does not purport to be a report of the proceedings of the annual general meeting.*

BLUE MOUNTAIN ESTATES LTD.

Within three months after the allotment of 525,000 equity shares as bonus shares (of Rs. 2 each) (in December 1960), the Blue Mountain Estates Ltd. has announced the decision to issue right shares of 1,050,000 equity shares of Rs. 2 each in the proportion of one share for every three held. A premium of 45 nP per share will be charged in accordance with the consent order of the Controller of Capital Issues. The price payable per share will thus be Rs. 2.45 and the shares are to be issued only to such shareholders as are on the book of the Company on 5th April 1961. The register of members and the transfer books of the Company will be closed for the purpose from 28th March to 5th April.

With the proposed right issue, the paid-up ordinary capital of the Company will increase from Rs. 63 lakhs to Rs. 84 lakhs.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1960.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and reflect (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray

THE STATE BANK OF INDIA

MR. P. C. BHATTACHARYYA'S SPEECH AT ANNUAL MEETING

BANKS URGED TO PLAY ACTIVE ROLE IN MOBILISING RESOURCES

A CALL to the banking system to play a continuously active role in the overall mobilisation of resources was made by Mr. P. C. Bhattacharyya, Chairman of the State Bank of India, when he addressed the Sixth Annual General Meeting of the shareholders of the Bank, held at Bombay on Monday, 6th March 1961. Mr. Bhattacharyya felt that there was considerable scope for securing more bank deposits from the rural and semi-urban areas. Stating that the possibilities should be explored with vigour, he stressed the necessity for employing new techniques from time to time. He referred to the view expressed by some that the low rate of interest on deposits had been an inhibiting factor and revealed that his Bank had raised the interest rates on savings bank accounts and deposits with effect from 1st March 1961.

The following is the full text of Mr. Bhattacharyya's speech:

"GENTLEMEN,

"I have much pleasure in welcoming you all to this sixth annual general meeting of the State Bank of India. The report of the Central Board of Directors for the year 1960, together with the Bank's balance-sheet as on 31st December 1960, and the profit and loss account for the year ended 31st December 1960, has already been circulated to you and has been taken as read.

"I am happy to say that, in marked contrast to the position in 1959, the Bank recorded good progress in its traditional business during the year under review. As a result, the Bank's net profit, after the usual and necessary provisions have been made, shows an increase from Rs. 1.87 crores to Rs. 2.18 crores. We have been able thereby not only to strengthen our reserve fund and other funds to a greater extent than last year but also to declare a dividend of Rs. 22.75 per share for the year, thus restoring practically the net dividend that was previously available to the shareholders.

Reasons for Higher Earnings

"There are two reasons for the increase in the Bank's net profit for the year: the increase in the level of the Bank's advances and the rise in the Bank's lending rates after 1st October 1960. The Bank's advances (including bills), which had stood at Rs. 156.5 crores in December 1959, increased sizably in the course of the busy season and reached a peak of Rs. 215.7 crores in July 1960. They continued to remain at a high level during the slack season and rose further after the commencement of the current busy season. On 17th February 1961, the Bank's advances stood at Rs. 259.2 crores. Secondly, consequent on the Reserve Bank's directive of 21st September 1960, asking all scheduled banks to charge a minimum rate of 5 per cent on advances and to raise their average lending rates by half a per cent, the State Bank of India advance rate was raised from 4½ per cent to 5 per cent with effect from 1st October 1960 and other lending rates of the Bank were also increased suitably. This has obviously added to the Bank's earnings during the year.

"The total deposits of the Bank declined during 1960 by Rs. 6.0 crores. This was solely due to the fact that no deposits of U.S. P.L. 480 funds accrued to the Bank after 12th May 1960 and a sum of Rs. 72.0 crores out of the amounts previously deposited was transferred to the Reserve Bank of India during the year. If the U.S. P.L. 480 deposits are kept out of account, the average deposits of the Bank increased by Rs. 27.9 crores in 1960, as compared to an increase of Rs. 122.0 crores in the total deposits of other scheduled banks. However, the growth of deposits of the State Bank of India as well as other scheduled banks slowed down in the latter half of 1960. This decline in the rate of growth of deposits is a matter of some concern, especially in the context of an increasing demand for bank credit. The slack season contraction in bank credit was also much smaller during the last two years. If, therefore, the demand for bank credit continues to rise and to remain high throughout the year, all efforts will have to be made by banks to increase deposits.

"One point deserves to be mentioned in this context. The banking system must continuously play an active role in the overall mobilisation of resources. For this purpose, it is necessary that new techniques be employed from time to time. Hitherto, banks have depended more on urban areas and industrial and commercial centres for collection of deposits. I feel that the possibilities of securing more deposits from rural and semi-urban areas should now be explored with vigour. Upto the end of 1960, we have opened 429 branches mostly in the rural and semi-urban areas of the country. The total deposits at these branches have increased from Rs. 29.32 crores in 1959 to Rs. 37.03 crores in 1960; and the average deposits per new branch have risen from Rs. 8.17 lakhs to Rs. 8.63 lakhs. I feel, however, that there is still considerable scope for increasing bank deposits in these areas. It has been said that the low rates of interest that we pay on deposits have been an inhibiting factor. In order to reduce the influence of this factor, we have raised, as a measure of experiment, the Bank's interest rate on savings bank accounts to 2½ per cent per annum and that on savings bank deposit accounts to 2¾ per cent with effect from the 1st of this month. I do hope that this experiment will produce the desired effect and that it will be possible to report better progress next year.

Developmental Activities

"I would now refer to the Bank's developmental activities. I am happy to say that, with the opening of the Bank's branch at Kairana in Uttar Pradesh on 1st June 1960, the Bank's statutory obligation to open 400 branches in five years was fulfilled before time. This is an achievement which has no parallel in the history of Indian banking. Twenty-nine more branches have been opened between 1st June and 31st December 1960.

"The Branch Expansion Programme has placed a heavy strain on our staff resources at all levels. The problem of manning new branches was particularly difficult. In addition to taking in many direct recruits, a large number of persons with limited experience had to be promoted; and all these persons had to be appointed to hold charge of branches and other supervisory posts as quickly as possible after giving them the minimum training necessary for the purpose. The programme has also put a heavy strain on the local head offices as well as the Central Office of the Bank. Your Directors, therefore, thought that the position should be reviewed comprehensively before deciding on the Bank's future branch expansion policy. A committee of the Central Board, under the chairmanship of Professor D. G. Karve, has been constituted for this purpose. I understand that the work of the Committee has been progressing well and that it will submit its report shortly.

"In regard to the other two developmental activities, viz., the financing of small-scale industries and provision of rural credit, the Bank has made further progress during the year. The credit limits granted by the Bank to small-scale industries and to co-operative institutions went up to Rs. 7.8 crores and Rs. 22.4 crores, respectively, during the year. There has been one development to which I may make a special reference. This is the introduction by the Government of India of a Credit Guarantee Scheme for small-scale industries. We have been taking full advantage of this scheme.

Subsidiary Banks

"I now come to the subsidiary banks. I am happy to say that the process of integration of the eight State-owned or State-associated banks with the State Bank of India, started on 1st October 1959 has been completed. The complicated and arduous task of determining the compensation payable to shareholders of the old banks has also been completed. It is gratifying that the shareholders of all the old banks have accepted the compensation determined by the State Bank of India as final, without any demur. The total compensation payable in the case of all the eight subsidiary banks amounts to Rs. 8.05 crores, out of which Rs. 6.86 crores have been paid upto 17th February 1961. I may also mention here that part of the compensation is payable in the form of shares of the new bank at the option of the shareholders of the old bank and, in the case of two subsidiary banks, as many as about 1,100 shareholders in each case have taken shares of the respective new bank.

"The annual reports of the subsidiary banks have been sent to you and these show that all the eight subsidiaries have shown improved working results in 1960. The State Bank of Hyderabad, the State Bank of Mysore and the State Bank of Travancore have declared dividends for the year at 6 per cent, 9 per cent and 5 per cent, respectively. In the case of two subsidiaries, no dividend was declared, as no compensation had been paid during the year. Regarding the rest, profits were not sufficiently large to justify declaration of dividends. In two of these cases, profits of the corresponding old banks were not subject to income-tax previously, whereas provision had to be made for taxation in 1960. This reduced considerably the profits available for distribution. I have every hope that the transitional difficulties in all these cases will soon be overcome and all the subsidiary banks will show better operational results in future.

Strike

"The annual report refers to a strike from 4th March to 25th March 1960 by the members of the clerical and subordinate staff of the Bank. The essential business of the Bank and Government was carried on during the period, with the assistance of supervising staff and non-striking members of the clerical and subordinate staff. I must commend the way in which they worked, under very trying conditions, and served the Bank during the strike. I extend to them my special thanks and I am sure, the shareholders and the Directors would also like me to convey their thanks to them. As you are aware, the dispute has been referred to and is pending before the Tribunal. The present position in this regard is that the Tribunal has given its award on the question of interim relief; it has not granted any of the demands put forward by the employees on this account. The hearing on the main demands is continuing.

"I have pleasure to acknowledge that, while the dispute is pending before the Tribunal, our relations with the employees have been generally good. I take this opportunity to record my appreciation of the work put in by all the grades of our staff during the year and convey to them my sincere thanks.

"I would like to mention here that our staff has recently been active in organising several sports activities and social gatherings, etc. We believe that these are very good activities for developing and promoting closer contacts among all the categories of staff. We have, therefore, been lending our support to these activities and I do hope that the number as well as the variety of these activities will increase at all the branches and offices of the Bank so as to lead to the promotion of congenial staff relations which are so necessary for every organisation.

"Before concluding, I would like to place on record my sincere thanks to Shri Mangaldas Pakvasa who rendered valuable service to the Bank as its Vice-Chairman between 25th February 1959 and 16th April 1960. I would also like to express my sincere thanks to Shri B. P. Patel for the good work that he did as a Managing Director of the Bank for over four crucial years between April 1956 and June 1960."

POSITION OF TRADE UNIONS IN RUSSIA

FINDINGS OF I.L.O. MISSION

WHILE the military might of the U.S.S.R. and its acknowledged lead in such spheres as rocketry and space research are fairly widely known, the actual working and living conditions in Soviet Russia, which are of more direct interest to the outside world, have been an enigma so far. A particular aspect of Soviet life, which has excited the curiosity of the outside world, is the trade union situation in the U.S.S.R. Do the workers in the Soviet Union enjoy freedom of association, in the sense the term is commonly understood in the free world? Are Soviet workers free to organise unions as they please or join the unions of their choice? Are the unions really independent? What is the position of trade unions *vis-a-vis* the Communist Party and the Government? Do the Soviet workers enjoy the right to strike? Have they any voice in industrial management? These and a host of other questions asked by a curious world have not so far received satisfactory answers.

The claim of Soviet spokesmen in various international forums, including the I.L.O., that the trade unions in the U.S.S.R. had more rights and greater freedom and opportunities than those in any other country in the free world, has failed to carry conviction. In fact, popular conceptions of Soviet trade unionism are as hazy as they are divergent. For instance, there is, on the one hand, the impression that trade union membership in the Soviet Union is compulsory and, on the other, that large categories of workers in the Soviet Union are prohibited from organising into unions. Again, the view is widely held that Soviet trade unions are not independent organisations set up by the free choice of workers themselves and having the forms they choose to give them. On the contrary, it is thought that the Soviet trade unions are, in effect, organs of the State and that their structure, policies and activities are fixed for them by the Government and the Communist Party. Another widely held belief is that the workers in the Soviet Union are not free to withhold their labour, if they are dissatisfied with the terms or conditions of work. Again, many people think that collective agreements between workers and management in the U.S.S.R. are fundamentally different in form and content from those arrived in the West and that they neither govern the wages and conditions of work nor are they arrived at by a free process of collective bargaining. This is only an illustrative list of the endless queries asked about Soviet trade unions; it is by no means exhaustive. There is, in fact, a vacuum in which almost anything could pass for truth. Viewed against this background, the report of a Mission sponsored by the International Labour Office, Geneva, just released, is a timely publication.* It goes some way to make available authentic information about certain aspects of the trade union situation in the U.S.S.R., though it does not fill the vacuum completely. The report is based on an on-the-spot survey of freedom of association in the Soviet Union undertaken by the Mission at the invitation of the Government of U.S.S.R. as part of a new effort by the I.L.O. to ascertain the facts relating to freedom of association in a continuing manner and on a world-wide basis. It is the second report in the series. The first related to the U.S.

Rapid Growth

The I.L.O. Mission, after its tour of the U.S.S.R., was left in no doubt about the existence of trade unions in the country. It received visible evidence of the extent of their organisation and functions. Trade unions in Soviet Russia, it points out, are not a creation of the post-Revolutionary period. They came into existence before the First World War as they did in other countries of Europe and for similar reasons. They grew rapidly after the revolution of 1905 and subsequently went through a period of depression. It was during the years before 1917 that they developed their relations with the political parties, linked their industrial action with political action and took on their revolutionary character. After 1917, having participated in the Revolution and having assisted in the overthrow of Tsarism and capitalism, they became essential to the defence and subsequent development of the Soviet regime. But they were not set up by the State, they had had existed already.

The fact that private ownership of the means of production in the Soviet Union was abolished after the Revolution is, according to the Mission, of cardinal importance for an understanding of the trade union situation and the problems of freedom of association. Although there are no private employers in the U.S.S.R., the factories and farms nevertheless need labour and workers need employment. Their work must be organised and supervised, their working conditions must be settled and arrangements for their remuneration must be devised. Various methods for dealing with this situation has been adopted in the Soviet Union. The net result has been that trade unions have come to occupy a prominent position in the Soviet State.

Because of the particular conditions prevailing at the time of the Russian Tsars, namely, delayed arrival of the industrial revolution, a predominantly agricultural population, illiteracy and administrative and police repression, the organisation of workers was intimately bound up with political activity. In fact, political and economic action were regarded as parts of the same process and the conviction had grown in strength that no solution to the economic problem could be found without the abolition of the Tsarist system. The struggle for economic betterment and social progress soon became identified with the struggle for political freedom. From the very outset, trade unions were political-minded and constituted the main rank and file of the revolutionary parties. Unity of purpose and action, and also, to some extent, identity of leadership between trade unions and revolutionary parties, were among the chief factors which accounted for the close link which was forged between the trade unions and the Communist Party. However, according to the Mission, to the Soviet mind, the nature of the relations between the Communist Party and the trade unions rules out any idea of subordination imposed from above. The Party exercises its influence on trade unions through members of the unions who are also members of the Party.

Legal Situation

The legal situation of trade unions has been a subject of much curiosity and speculation in the outside world. Article 126 of the Constitution of the U.S.S.R. guarantees all citizens the right to organise themselves into trade unions. Article 151 of the Labour Code stipulates that the Unions shall be entitled to appear before the various authorities as parties to collective agreements and to represent them in all matters relating to work and conditions of life.

To be able to style itself a trade union and claim the rights attached to that status, the organisation concerned must be registered with an inter-union body. The law does not actually stipulate which inter-union body trade unions must register with; it simply states that registration shall be effected in a manner prescribed by the U.S.S.R. Congress of Trade Unions, the supreme body of trade unions in Soviet Russia. The All-Union Central Council of Trade Unions, the central body of the Congress, is the highest inter-union body in the U.S.S.R. and registrations are to be effected with it. The principle had been laid down early that trade unions must be industrial in character (that is, organised vertically) and that there should not be more than one trade union organisation in any one undertaking. The rules adopted by the U.S.S.R. Congress of Trade Unions state that all persons employed in the same factory or office belong to the same union. Each trade union comprises the employees of one branch or several branches of the natural economy. This principle has to be accepted by all trade unions registered with the A.U.C.C.T.U. Hence there is no possibility of the simultaneous existence of more than one union in any undertaking.

Explaining the legal status of trade unions in the U.S.S.R., the I.L.O. Mission points out that, according to the Labour Code, trade unions are entitled to acquire and manage property and to conclude contracts, agreements, etc. This *implies* that trade unions and the inter-union bodies have a legal personality.

Participation in Management

Have trade unions representation in the administration of a concern? The Mission says that the Soviet trade unions exercise considerable influence on the administration of undertakings. It then goes on to add:

"Their participation in management has its roots in the traditions of the revolutionary and early post-revolutionary years, when some factories were taken over and run by the workers themselves. In recent years, this participation has been extended. The legal instrument that enables the unions to take an active and continued interest in the operation of an undertaking was put in their hands in 1958, when legislation on the factory, works and local trade union committees and the standing production conferences was passed. The latter—as emphasised by the Central Committee of the Party, at its plenary meeting held in December 1957—would make it possible to combine observance of the principle that management must remain in the hands of a single chief with effective supervision of management by the personnel. Bearing in mind that the enterprise is operated in the planned economy of a Socialist State, the responsibility and authority of the Soviet manager are very wide and his freedom to run the plant is a basis of the whole concept of Soviet management.... The exercise of the wide powers of the Soviet manager is somewhat mitigated by the tenet that he is a worker placed in the position of a trustee for the State and that thus, while his principal duty is to organise production and ensure the progress of his plant, he also has to take care of and bear responsibility for the welfare of his fellow workers. A conflict that arose between the director and the workers might, if carried to the extreme, result in the director's dismissal."

It may, however, be noted that the director of an undertaking is appointed by the regional economic council with the concurrence of the Minister concerned and all the supervisors in a factory are appointed by the director.

The right to strike is one of the fundamental rights enjoyed by workers in all democratic countries. It is interesting to examine whether this privilege exists in the U.S.S.R. According to the Mission, it is true that at no time has Soviet legislation prohibited recourse to strike but the exact legal situation, according to it, is not quite clear. The following observation of the Mission regarding strikes is relevant:

"One form of strike is political, for instance, a strike involving the government. In all countries strikes of this kind are frowned upon. In view of the way in which the Soviet system is organised and of the interlocking relationships between the trade unions, the Party and the Government, it is improbable that a situation would arise in which a trade union, much less the A.U.C.C.T.U., would call upon the workers to strike against the Government.

"Another form of strike is that which is directed against the management. Here again it is unlikely that a set of circumstances in which it would be necessary for a union to call a strike would be allowed to arise in the U.S.S.R. because of the place which the unions occupy in the economic organisation of the Soviet State. Provision is made for the unions to be associated with management in the running of the plants, in solving the problems of production and in ensuring that due attention is paid to the welfare of the workers. Provision is also made for the unions and the managements to be continually in touch with each other, to have every opportunity of discussing points of disagreement and to appeal, if necessary, to higher authorities.

"Strikes against the management may also, of course, be spontaneous outbreaks with which the union may or may not be in sympathy. It may be assumed that stoppages of work of this kind sometimes take place. Various means exist for the workers to obtain consideration of their grievances through their union or through the management; if strikes of this kind do take place, it must be expected that the necessary machinery for dealing with the problem is immediately set in motion."

The Mission observes that it did not hear of any specific instances of collective stoppages of work to defend the interests of workers and to obtain better working conditions. Those with whom the Mission discussed this matter simply stated that strikes were not prohibited by law in the Soviet Union and that, in any case, the workers did not have to resort to strike action and there was nobody for them to strike against since the means of production belonged to them.

Organisation

Trade Unions in the Soviet Union are organised vertically on two basic principles: (1) all persons employed in any one factory, State farm or other institution belong to the same union, and (2) each union comprises the employees of one segment of the national economy. There are 22 trade unions with a total membership of 53 million in the U.S.S.R. The supreme body of the trade union movement in the U.S.S.R. is the U.S.S.R. Congress of Trade Unions which elects the central body of the trade union organisation, namely, the All-Union Central Council of Trade Unions (A.U.C.C.T.U.). The permanent organ of the Council is a presidium of elected members. Trade union membership is not compulsory but membership brings with it a number of privileges which act as a powerful incentive. Trade union members have, in addition to their rights and privileges, certain precise and positive duties in regard to the promotion of production, observance of labour discipline, the development of the country's economy and safeguarding of people's property. The work of the trade unions has been developing with increasing membership participation and, with the raising of the educational level, there is a growing tendency to regard the individual member as a person whose co-operation is necessary.

The functions of trade unions range from legislative initiative and participation in national economic planning to negotiation of collective agreements and administration of cultural and recreation facilities. The subjects dealt with in collective agreements include the obligation of the management and the factory committee to fulfil production plans, conditions and methods of wage payment and the fixing of output standards, training, labour indiscipline, labour protection and safety technique, housing and welfare, catering arrangements and cultural facilities.

Freedom of Association

The I.L.O. Mission was, as mentioned earlier, specially interested in investigating the extent of freedom of association for workers in the Soviet Union. The relationship of the trade unions to the Communist Party and the Government is of fundamental importance to such an assessment. The facts of the situation, says the Mission, are clear enough; it is the interpretation that leads to differences of opinion. In its view, there is no doubt that, in accordance with their rules, the trade unions, like all other bodies in the Soviet Union, have to follow the leadership of the Communist Party in their policies and activities.

As far as relations with the Government are concerned, it is evident, says the Mission, that the Government has its own sphere of responsibility and the trade unions have theirs. The trade unions do not exercise any of the traditional functions of Government but they do carry out certain functions which are the concern of the Government in some other countries. While trade unions are distinct from the Government, they nevertheless play a prominent part in helping to run the country, especially in the sphere of industrial organisation and the social services. This dual position accounts for the considerable power and influence which the Soviet trade unions enjoy. While continuing to be organisations which represent and speak for the workers, the unions are participating, to an even greater extent, in running and strengthening the Soviet State. In their defence of the workers' interest and welfare, the unions continue to urge the workers to make the greatest possible contribution towards the strengthening of the economy and raising the general standard of living. By virtue of their role in regard to the planning and organisation of production and the protection and welfare of workers, the unions, concludes the Mission, remain one of the pillars of the Soviet system.

THE JAVA BENGAL LINE'S OFFICE AT CALCUTTA

LIGHTING BY PHILIPS

When one enters the recently renovated offices of the Java Bengal Line in Calcutta's premier business area, there is an almost breathless hush of amazement at the unusual elegance which presents itself. The reason is, at once, obvious. The evenly spread out and gentle lighting lends an atmosphere of dignity and efficiency.

And naturally, the lighting is by Philips.

The diffuse and even high level lighting, free from shadows and glare, has been achieved through recessed fluorescent lamp fittings. These Philips' exclusive fittings produce lighting that totally eliminates eye-strain and increases staff efficiency.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the evergrowing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

PHILIPS quality lighting for ultimate economy

Notices

BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Bengal Potteries Limited will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta-15, on Wednesday, the 22nd March 1961, at 11-00 a.m., to transact the following items of business:—

To consider and if thought fit to pass the following Resolutions which shall be proposed as Special Resolutions:—

1. "Resolved that this meeting consents under Section 314 of the Companies Act, 1956, to the reappointment of Messrs. Allied Distributors & Co., a Co-partnership Firm of which Bharat Ram Charat Ram Private Ltd., Shri S. K. Agarwal, Shri R. K. Agarwal, Gupta Collective Farms Private Ltd., Hindusthan Selling Agencies Private Ltd., and K. L. Poddar and Sons Private Ltd., are partners, as the Sole Selling Agents of the Company for a period of five years commencing from the 1st day of April, 1961 and on the terms and conditions mentioned in the draft Agreement expressed to be made between the Company of the one part and the said Messrs. Allied Distributors & Co. of the other part subscribed by the Chairman of the Board of Directors of the Company at its meeting held on the 23rd day of February 1961, and also subscribed by the Chairman of this meeting and otherwise holding an office of profit as such selling agents of the Company."

2. "Resolved that consent be and is hereby given for continuance of Messrs. Allied Distributors & Co., a co-partnership firm of which Bharat Ram Charat Ram Private Ltd., Shri S. K. Agarwal, Shri R. K. Agarwal, Gupta Collective Farms Private Ltd., Hindusthan Selling Agencies Private Ltd. and K. L. Poddar and Sons Private Ltd. are partners, in the office of profit in spite of the fact that any partner of the firm may be deemed to have become a relative of any Director of the Company by virtue of the Companies (Amendment) Act, 1960."

Explanatory Statement Under Section 173(2)

Re: Resolution No. 1:—Allied Distributors & Co., is a co-partnership firm and it appeared that Shri S. K. Agarwal and Shri R. K. Agarwal are sons of Lala Bishen Swarup, a Director of the Company, and are sons of a brother of the mother of Lala Shri Dhar, a Director of the Company.

As such they are the relatives of Lala Bishen Swarup and Lala Shri Dhar within the meaning of the Companies Act of 1956.

Save as aforesaid none of the other Directors of the Company or the Managing Agents has any concern or interest in the aforesaid Resolution.

Accordingly, previous consent of the Company accorded by a special resolution is required under Section 314 of the Companies Act, 1956, for reappointment of the said Messrs. Allied Distributors & Co. as the Sole Selling Agents of the Company.

Re: Resolution No. 2:—The Companies (Amendment) Act 1960, which came into force from 29th December 1960, has enlarged the definition of relatives in some respects with the result that Shri S. K. Agarwal and Shri R. K. Agarwal, partners in Allied Distributors & Co., are now deemed to be relatives of Lala Shri Dhar, which was not the case previously. The Company is advised that this does not affect the appointment of the firm under Section 314 of the Companies Act, 1956, but for abundant precaution, shareholders' consent is being sought by the Resolution.

Save as aforesaid none of the other Directors of the Company or the Managing Agents has any concern or interest in the aforesaid Resolution.

The draft Agreement referred to in the above Resolutions can be inspected by any member at the Registered Office of the Company, 45, Tangra Road, Calcutta, on any working day of the Company, during the hours of 2 p.m. to 4 p.m.

A MEMBER ENTITLED TO ATTEND AND VOTE AT A MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

(3) The explanatory statement under Section 173 of the Companies Act, 1956, in respect of item No. 5 above is being sent separately to the members.

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
2, India Exchange Place,
CALCUTTA-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE EIGHTEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 5th April, 1961, at 4 p.m., to transact the following business:

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1960 and Profit and Loss Account for the year ended 31st December 1960;
2. To declare a dividend;
3. To appoint four Directors in place of Mr. I. P. Goenka, Mr. Y. N. Mafatlal, Mr. R. L. Nopany and Mr. M. L. Tapuriah who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment.
4. To appoint Auditors for Bank and its branches for the current year and to fix their remuneration;
5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION:

"That the Articles of Association of the Company be altered in manner following:

(a) The first paragraph of Article 87 of the existing Articles shall be deleted and the following paragraph inserted in its place:

Each Director shall be paid out of the funds of the Company by way of remuneration for his services a sum not exceeding Rs. 100 for each Meeting of the Board or any Committee of the Board attended by him.

(b) At the end of the second paragraph of Article 87 the following sentence shall be added:

The Directors shall further be entitled to be reimbursed and/or paid all expenses that may be incurred or paid by them in connection with any business of the Company."

Note:—1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (a) The transfer books of the Bank will be closed from Monday, the 20th March, 1961 to Wednesday, the 5th April, 1961, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 6th April, 1961, to those Members whose names appear on the Company's Register on the 5th April, 1961.

(c) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

Explanatory Statement Required by Section 173 of the Companies Act, 1956

The item of Special Business to be transacted at the Annual General Meeting to be held on the 5th April, 1961, is to consider and pass a Special Resolution seeking to alter Article 87 of the Articles of Association of the Company.

By a special resolution passed on the 9th April, 1958 the remuneration of a Director was changed from a fee not exceeding Rs. 100 for each Meeting of the Directors or any Committee of the Directors attended by him to a fixed remuneration of Rs. 500 per month. By virtue of Section 309(2) of the Companies Act as amended by the Companies (Amendment) Act, 1960, monthly payments to Directors are prohibited. The proposed alteration is to bring the Article in conformity with the provisions of the Companies Act by reinstating the method of remuneration in force prior to the 9th April, 1958.

The second paragraph of Article 87 as it stands at present refers only to expenses incurred in connection with Meetings. It is proper that other expenses, e.g. charges for trunk telephone calls and cost of cables, which may be incurred by the Directors in connection with the business of the Company should be defrayed by the Company. The proposed addition at the end of the second paragraph is intended to enable this to be done.

All the Directors are interested in the proposed amendments to the extent that they relate to the payment of Directors' fees and expenses.

By virtue of Section 35(B)(1)(*a*) of the Banking Companies Act, 1949, the present amendments regarding the remuneration payable to the Directors require the approval of the Reserve Bank of India, which will be sought after the Company gives its consent to the Special Resolution.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, *1st March*, 1961.

ANGLO-INDIA JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have sanctioned payment of an additional dividend of 2.10 per cent to Preference Shareholders of the Company in pursuance of the Preference Shares (Regulation of Dividends) Act, 1960 in respect of the year ended 31st March, 1960.

The dividend will be paid on 27th March, 1961 to those Shareholders (or their mandataries) whose names appear in the Company's books on 25th March, 1961.

The Preference Share Transfer Books of the Company will be closed from 17th March to 25th March, 1961, both days inclusive.

By Order of the Board,
ANGLO-INDIA JUTE MILLS CO., LTD.,
DUNCAN BROTHERS & CO., LTD.,

VENKATARAYAPURAM,
TANUKU,
February 28, 1961.

BURRAKUR COAL EARNS SLIGHTLY MORE

DIVIDEND, HOWEVER, UNCHANGED

FOR the fifth year in succession, the financial results of the Burrakur Coal Company Ltd. (Managing Agents: Messrs. Bird & Co. Private Ltd., Calcutta) have shown an upward trend, the year under reference being the 12 months ended 30th June 1960. Production, despatches, sales, and profit have all gone up. The rate of growth, however, has only been small. Thus, as compared with the achievements in 1958-59, the Company's raisings of coal have increased from 1,170,123 tons to 1,285,954 tons and the despatches have improved substantially by 93,728 tons to 1,265,155 tons. This improvement in output and marketed supplies has enabled the Company to report better earnings. The sales proceeds from coal have registered a rise of 10.2 per cent, having jumped up from Rs. 295.12 lakhs to Rs. 324.95 lakhs. Sales of by-products and others have also risen from Rs. 46.43 lakhs to Rs. 52.78 lakhs. But, since expenses, too, have increased by about 8 per cent from Rs. 328.40 lakhs to Rs. 352.98 lakhs, the gross profit has recorded only a modest increase of Rs. 4.52 lakhs to Rs. 52.37 lakhs. Actually, the percentage of profit to total sales has come down a little, from 14 to 13.7, so that whatever improvement there has been in gross profit is the result of a larger turnover and not of a better profit margin. No wonder, then, that it has not been possible for the Directors to pay the shareholders anything more than they did last year.

After making a slightly higher provision of Rs. 12.19 lakhs for depreciation (as against Rs. 11.00 lakhs in 1958-59) and of Rs. 17.30 lakhs for taxation (nearly Rs. 2 lakhs more than in the previous year), the net profit works out to Rs. 18.37 lakhs and shows an increase of only Rs. 1.25 lakhs over the net profit for the preceding year. This is supplemented by Rs. 1.42 lakhs being the provision for payment against appellate award written back and by Rs. 1.11 lakhs being the balance from the previous years' profit, making available for distribution an amount of Rs. 20.90 lakhs.

The Directors have set aside Rs. 1 lakh to the general reserve and Rs. 1.50 lakhs to the reserve for bad and doubtful debts. Besides, the development rebate reserve gets Rs. 2.28 lakhs. Making allowance for the sum of Rs. 1.42 lakhs written back from the provision of previous years the net amount saved by the Company during the year under review amounts to Rs. 3.06 lakhs. In 1958-59, the net amount ploughed back aggregated Rs. 3.30 lakhs.

The Directors had already distributed Rs. 80,493 on first preference shares at 3½ per cent, Rs. 10,800 on second preference shares at 2.2/8 per cent and Rs. 4,54,624 on ordinary shares at 5 per cent as interim dividends. Now they have recommended a dividend at the rate of 5.60 per cent on first preference shares and 2.928 per cent on second preference shares and a final dividend on ordinary shares at the rate of 8 per cent, all requiring Rs. 8.69 lakhs. The total distributions during the year under review thus aggregate Rs. 14.63 lakhs. In effect, the dividend on ordinary shares remains unchanged at 13 per cent subject to tax, which corresponds to a tax-free return of 9.1 per cent and is only a shade higher than the tax-free dividend at the rate of 8¾ per cent per annum for 1957 and 1958.

It will thus be seen that, notwithstanding the increase in the selling price of coal permitted by the Government, the increase in the Company's profit has only been small and that it has not been possible for its Directors to reward the investors better. In other words, the results of the Burrakur Coal, which is one of the best colliery companies in this country, fully bear out the coal industry's contention that the Government's policy of fixing the selling price of coal has been niggardly and unremunerative, providing no room for financing even a part of the expansion in production targetted for in the third Plan.

The Directors' report indicates that the Company's raisings, excluding those from the Loyabad coke plant, during the year ended 30th June 1959, were 1,017,096 tons, as against 1,285,954 tons during 1959-60, representing an increase of over 26 per cent. The production of metallurgical coal from the Loyabad coke plant in 1959-60 was slightly lower than in the previous year, but despatches showed a rise of more than 12,000 tons. The transport position, however, was not very satisfactory.

As a result of representations made by the industry, the Government has now agreed to grant subsidies to those collieries specially handicapped by adverse factors such as depth, gas and the heavy incidence of pumping. This subsidy has been introduced as an incentive to increase coal production, with retrospective effect from 1st September 1960. The Burrakur Coal, its Directors say, will benefit by the payment of this subsidy, which should appear in its next year's accounts.

The Company's financial position is impressive. The paid-up capital of Rs. 118.42 lakhs is supplemented by reserves and surplus of Rs. 141.71 lakhs. The borrowings (including debenture loan of Rs. 20 lakhs) aggregate Rs. 49.88 lakhs and current liabilities and provisions Rs. 118.09 lakhs. The assets other than the fixed assets amounting to Rs. 219.29 lakhs (stores, spare parts, loose tools, stock-in-trade Rs. 145.73 lakhs, loans and advances to firms under the same management Rs. 39.70 lakhs, cash Rs. 3.70 lakhs, and investment Rs. 30.16 lakhs) far exceed the borrowings and current liabilities. The gross block of the value of Rs. 432.67 lakhs (including additions of Rs. 15.35 lakhs during the year) has been written down to Rs. 203.90 lakhs.

The Directors have stated that, in order to remove the qualification which the Auditors have been making on depreciation in view of the revaluation of assets made in 1948 and to bring the fixed assets of the Company back to their actual written down value, they have now authorised the writing down of assets by a sum of Rs. 40.69 lakhs by debiting the revaluation of fixed assets reserves in the year under review in the same proportion as the assets were written up in 1948. The figures pertaining to reserves and surplus and fixed assets quoted above are after this adjustment.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 20.31 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 4.69 per cent per annum, free of tax.

The comparative table below shows at a glance the results for the past four years.

(In lakhs of rupees)

	For the year ended 30th June

RAZA BULAND SUGAR FARES WELL

RESERVES REPLENISHED

THE performance of the Raza Buland Sugar Company, Ltd., Rampur (Uttar Pradesh) (Managing Agents: Messrs. Govan Bros. (Rampur) Private Ltd.) for the year ended 31st October 1960 is encouraging, showing as it does a marked recovery from the depressed conditions witnessed in the previous two years. Sale proceeds were a crore of rupees more at Rs. 3.48 crores. The gross profit at Rs. 36.79 lakhs is Rs. 25 lakhs over that for the previous year. The increased profit may be attributed to the record quantity of cane crushed during the period and better realisation. The net profit has nearly trebled to Rs. 12.03 lakhs, after providing for depreciation (Rs. 2.75 lakhs) and taxation (Rs. 18.92 lakhs), as against a mere Rs. 4.09 lakhs for the previous year. The Directors have recommended a slightly higher (taxable) dividend of 12½ per cent on its equity shares, as against 12 per cent for the previous year.

While reviewing the working of the Company for 1953-59 we had commented on the reduced crop and diversion of cane to *gur* and *khandsari* production, thereby adversely affecting the output as well as the profit of the Company for that period. In view of inadequacy of profits, the Company had to withdraw last year a sum of Rs. 7.63 lakhs from the reserves even to pay a dividend of 12 per cent taxable on its ordinary shares. In refreshing contrast to this depletion of reserves, the Company has been able not only to pay a dividend (absorbing Rs. 8.12 lakhs) which is fully covered, but also to appropriate Rs. 5.76 lakhs to the general reserve. A part of the amount withdrawn from the reserves last year has thus been made good.

The Company's progress in the last four years is detailed in the following table:

(In lakhs of rupees)

	For the year ending 31st October			
	1960	1959	1958	1957
Sale proceeds	348.75	245.29	310.64	363.95

Dividends declared	8.13*	7.63*	7.95	0.54
	(12½%)	(12%)	(12½%)	(15%)
Carry forward	0.66	3.01	0.07	0.80
(Raza and Buland Factories)				
Total cane crushed (in '000 maunds)	11,552	6,103	8,592	10,173
Quantity of sugar made (in '000 maunds)	1,098	600	884	1,027
Recovery (%)	9.67	9.69	10.29	10.10

* Dividends for 1958-59 and 1959-60 subject to deduction of tax. Other years tax-free.

The overall supply position of sugarcane during the year was comparatively higher than last year. For the season 1959-60, the price of cane was fixed by the Government of India at Re. 1.62 per maund as compared to Re. 1.44 per maund in the last year. This was done to induce the cane growers to supply large quantities of cane to sugar factories and to check diversion of such cane to *gur* and *khandsari*. The cane price linking formula meant for enabling cane growers to share the excess profits of the industry, was also kept in force. During the period under review, a total quantity of about 114 lakh maunds of sugarcane was crushed in both the Raza and Buland factories of the Company. This is a record crushing for the last few years and reveals an increase of about 84 per cent over the previous year. The average recovery in the Buland factory was lower at 9.64 per cent against 9.79 per cent in the previous year. In the Raza factory, however, the recovery was higher at 9.70 per cent (as against 9.60 per cent in 1958-59). Apart from the fact that the sugarcane crop in West U.P. in the year under review was a bumper one, the Company was also greatly benefited by the incentive schemes for higher production announced by the Central Government as also by the rebate in cess given by the Uttar Pradesh Government.

The realisation from sales of sugar and molasses produced by the Company was encouraging. The previous year had witnessed a fall of about Rs. 75 lakhs in sales. But the sale proceeds for 1959-60 showed a marked increase of over a crore of rupees to reach Rs. 348.75 lakhs. Besides, the closing stocks also were five times higher. The controlled sale price of sugar was correspondingly increased by the Government of India with the increase in the minimum price of sugarcane. In addition to delivering the basic quota quantity fixed for the two factories to the Indian Sugar Mills' Association, the Company delivered a further quantity of 33,763 bags of 100 kg. each for export at the controlled rates fixed by the Government of India for internal sales. The sugar manufactured by the Company appears to be in good demand in foreign countries.

The Company propose to reappoint for another five years Messrs. Beopar Sahabak Private Ltd., the sole selling agents for the Company since 1950, and whose term of office will expire by the end of March 1961.

The paid-up capital of the Company at Rs. 65 lakhs is supplemented by reserves and surplus of the order of Rs. 28.04 lakhs. The borrowings of the Company in the form of cash credit account with the State Bank of India, Rampur, were to the tune of Rs. 1.4 crores in the season 1959-60, as against a sanctioned limit of Rs. 1.5 crores. It is proposed to increase the borrowing limit to Rs. 3 crores to cover the increased financial requirements of the Company. At the end of October last, the outstanding amount of secured loans was only Rs. 36.70 lakhs. All current liabilities, including secured loans, were Rs. 89 lakhs, for which there was ample coverage in the form of current assets of the order of Rs. 121.93 lakhs, besides investments in shares and securities valued at Rs. 13.55 lakhs. Gross block is shown at Rs. 85.30 lakhs, as against which depreciation provided is Rs. 39.46 lakhs.

The appeals of the Raza Sugar Company Ltd. and Buland Sugar Cane Ltd. (since their amalgamation late in 1955 into the present Raza Buland Sugar Company, Ltd.) against income-tax assessment in certain years have now been decided by the authorities. The main relief granted pertain to the additional income-tax levy and also in the matter of calculation of depreciation, etc. The reliefs mentioned have not been included in the accounts for the year under review as the orders were received only recently and will be given effect to in the next year. No indication of the extent of relief is, however, given in the Directors' report.

Important among the contingent liabilities not provided for is the extra price payable to canegrowers for the 1958-59 and 1959-60 seasons when the formula is finalised by the Government.

The Rs. 10 fully paid shares are now commanding a premium of only Rs. 3.75 and give a yield of 6.4 per cent. per annum.

(Concluded from next column)

Rs. 135.29 lakhs. This may be the cumulative result of lower interest rates on deposits and smaller borrowings from other banks. As at the end of the year, this item shows a substantial decline, from Rs. 127.64 lakhs to Rs. 10.82 lakhs.

The rising trend of deposits, witnessed during the preceding four years, was maintained in the year under review, but the rate of growth of deposits was smaller. Thus, whereas the average annual rise in deposits in the three-year period ended 31st December 1959 works out to Rs. 472 lakhs, the rise in 1960 is of the order of only Rs. 182 lakhs. Of this rise, the increase in fixed deposits accounts for Rs. 36.98 lakhs, savings bank deposits for Rs. 68.71 lakhs and demand deposits for Rs. 76.65 lakhs. Advances, too, have maintained their upward trend between 1959 and 1960; this portfolio has jumped up from Rs. 28.36 crores to Rs. 31.93 crores. Consequently, the advances ratio (to deposits) shows a rise from 56.6 per cent to 61.4 per cent. The increase in advances in 1959, it may be noted, was slightly lower at Rs. 3.31 crores. Investments, on the contrary, have gone down from Rs. 14.63 crores to Rs. 12.59 crores and cash, too, is lower by Rs. 95 lakhs at Rs. 9.09 crores.

There has been no change in the owned resources of the Bank, capital remaining unchanged at Rs. 45.50 lakhs and reserves at Rs. 106 lakhs. The undistributed surplus, however, has gone up from Rs. 3.86 lakhs to Rs. 5.03 lakhs. The Bank has opened two new branches, one at Bangalore and the other at Hyderabad, taking the total number of branches to 73. In addition, the Bank operates 11 pay offices at important trading centres in the North.

The Rs. 100 fully paid-up shares of the Bank are being currently quoted at Rs. 347 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to no more than 3.7 per cent, per annum, free of tax.

I.F.C. INVESTS IN K.S.B. PUMPS

The International Finance Corporation has announced a commitment to invest U.S.$210,000 in K.S.B. Pumps Private Ltd. of Bombay, to help finance the construction and operation of a plant at Pimpri near Poona for the manufacture of special-purpose pumps. The investment is in unsecured dollar notes bearing 7 per cent interest payable in dollars and maturing between 1966 and 1971. The I.F.C. will also be entitled to receive additional interest in rupees related to profits.

The principal shareholder is Klein, Schanzlin & Becker A.G. (K.S.B.) of Frankenthal, Germany. This firm was formed in 1871 and is today a leading manufacturer of a wide range of pumps, compressors, and valves. The other shareholders are the Industrial and Prudential Investment Company, Ltd., of Bombay, the New India Development Corporation (Private) Ltd., and a private investor. The K.S.B. will be responsible for construction of the plant and for the Indian company's management and technical direction.

Production is planned at about 800 pumps annually and is expected to begin in 1962. Total cost of the project is estimated at $630,000 in U.S. dollars and dollar equivalent.

ALLAHABAD BANK'S PROFIT IMPROVES SLIGHTLY

MARKED RISE IN ADVANCES

THE results of the Allahabad Bank Ltd. (General Manager: Mr. M. J. Maclaren, Calcutta) for the year ended 31st December 1960 reveal a distinctly encouraging picture. Thus, the gross income of the Bank has gone up from Rs. 275.95 lakhs to Rs. 293.84 lakhs, on top of a rise of Rs. 25.47 lakhs experienced in 1959. Its deposits have also maintained their rising trend, albeit at a slower rate, having increased from Rs. 50.13 crores to Rs. 51.95 crores over the year. But, as expenses have increased by a sizable magnitude, thanks mainly to the high cost of staff, the net profit, after providing for depreciation (at Rs. 2.65 lakhs as against Rs. 2.55 lakhs for 1959) and taxation, has recorded a rise of only Rs. 1.08 lakhs to Rs. 17.35 lakhs.

As in the previous four years, the Bank has not been able to set aside any part of its profits to strengthen the reserves further. The chief explanation for this is that payments to staff, such as provision for pension fund and staff bonus, have been absorbing a large slice of the Bank's earnings. In the year under review, for example, these two outlets have taken up Rs. 9.30 lakhs, an amount which is equal to 54 per cent of the net profit. Consequently, the Directors have only succeeded in maintaining the dividend to the equity shareholders unchanged at 18 per cent, subject to tax, composed of a dividend of 12 per cent and a bonus of 6 per cent, requiring Rs. 5.49 lakhs in all. On a net basis, the return to equity holders works out to 12.6 per cent. The dividend on preference shares is being paid in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960. Thus, in addition to the interim dividend (already paid) at 6 per cent per annum for the six months ended 30th June 1960, the preference shareholders will be paid at the enhanced rate of 7.8 per cent for the remaining six months of 1960 and also additional dividends at 1.8 per cent per annum representing arrears for the half-years ended 30th June 1959, 31st December 1959 and 30th June 1960. Altogether, the preference dividend absorbs a sum of Rs. 1.44 lakhs out of the distributable profit for 1960 and, after deducting the tax, the preference shareholders get a yield of 5.46 per cent. Before the new system of corporate taxation came into force, they were getting a clear yield of 6 per cent.

The following comparative table shows at a glance the progress of the Bank since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

* After taxation, the provision for which is not shown separately.
† Subject to deduction of tax.
‡ Taking into account only the unencumbered investments.

It will be seen from the table that expenses have gone up from Rs. 121.75 lakhs for 1959 to Rs. 138.55 lakhs. Of the rise of Rs. 16.80 lakhs, salaries, allowances and provident fund account for as much as Rs. 8.84 lakhs, and rent, taxes, insurance and lighting for Rs. 6.20 lakhs. Stationery and printing, and other expenditure have increased only fractionally, by Rs. 0.52 lakh and Rs. 0.87 lakh respectively. One notable feature of the expenses side is the absence of increase in "interest paid." Actually, it has gone down a little, from Rs. 135.38 lakhs to

(Continued in previous column)

COMPANY MEETINGS AND DIVIDENDS

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, 17th March 1961. Dividend: Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 7th to 17th March 1961, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 22nd March 1961. Dividend: 12 per cent or Re. 1.20 per ordinary share, subject to deduction of tax, payable on or before 30th March 1961. Transfer books will remain closed from 18th to 22nd March 1961, both days inclusive.

INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 24th March 1961. Dividend: Rs. 8.50 per ordinary share, subject to deduction of tax, payable on and after 27th March 1961. Transfer books remain closed from 8th to 24th March 1961, both days inclusive.

BANK OF INDIA LTD. Annual General Meeting, Bombay, 27th March 1961. Dividend: Rs. 20.00 per share, subject to deduction of tax (includes interim dividend of Rs. 7.50 per share), on ordinary shares and Rs. 10.00 per share, subject to deduction of tax (includes interim dividend of Rs. 3.75 per share), on 'A' ordinary shares, payable on and from 28th March 1961. Transfer books remain closed from 6th to 27th March 1961, both days inclusive.

WEST COAST PAPER MILLS LTD. Annual General Meeting, Bombay, 28th March 1961. Dividend: Rs. 6.00 per ordinary share, subject to deduction of tax, payable on and after 1st April 1960. Transfer books will remain closed from 13th to 28th March 1961, both days inclusive.

CENTRAL BANK OF INDIA LTD. Annual General Meeting, Bombay, 28th March 1961. Dividend: Rs. 3.00 per share, final (includes Jubilee bonus of Re. 0.50 per share), subject to deduction of tax. Transfer books remain closed from 4th to 28th March 1961, both days inclusive.

KAYCEE INDUSTRIES LTD. Annual General Meeting, Bombay, 29th March 1961. Transfer books will remain closed from 16th to 29th March 1961, both days inclusive.

INDOCO REMEDIES LTD. Annual General Meeting, Bombay, 29th March 1961. Transfer books will remain closed from 13th to 29th March 1961, both days inclusive.

COIMBATORE COTTON MILLS LTD. Annual General Meeting, Singanallur, Coimbatore District, 30th March 1961. Dividend: 12 per cent or Rs. 12.00 per share, subject to deduction of tax. Transfer books will remain closed from 16th to 30th March 1961, both days inclusive.

MYSORE SUGAR CO., LTD. Annual General Meeting, Bangalore City, 30th March 1961. Dividend: 30 per cent or Rs. 3.00 per share, subject to deduction of tax, payable on and after 8th April 1961. Transfer books will remain closed from 16th to 30th March 1961, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Taxable final dividend of 21 per cent or Rs. 2.10 per ordinary share (making a total of 3.6 per cent or Rs. 3.60 per ordinary share) for the year ended 30th June 1960.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Taxable final dividend of 14-2/7 per cent (making a total of 21-3/7 per cent), for the year ended 30th September 1960. Transfer books will remain closed from 15th to 29th March 1961, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Taxable final dividend of 17 per cent or Re. 0.34 per ordinary share (making a total of 25 per cent or Re. 0.50 per ordinary share), for the year ended 31st October 1960. Transfer books will remain closed from 18th March to 7th April 1961, both days inclusive.

MERCARA RUBBERS LTD. Taxable dividend of 20 per cent or Re. 1.00 per ordinary share, for the year ended 30th June 1960. Transfer books will remain closed from 23rd to 31st March 1961, both days inclusive.

PANDYAN BANK LTD. Taxable dividend of 10 per cent or Rs. 2.50 per share, for the year ended 31st December 1960. Transfer books will remain closed from 12th to 25th March 1961, both days inclusive.

BIRDS INVESTMENTS LTD. Taxable dividend of 9¼ per cent or Re. 0.95 per share, for the year ended 30th September 1960.

SEN-RALEIGH INDUSTRIES OF INDIA LTD. Taxable dividend of 8 per cent or Re. 0.80 per ordinary share, for the year ended 30th September 1960.

ANDHRA SUGARS LTD. Taxable dividend of 20 per cent or Rs. 2.00 per ordinary share, for the year ended 30th September 1960.

NATIONAL AND GRINDLAYS BANK LTD. Second interim dividend of 7 per cent for the year ended 31st December 1960, less income-tax at 7s. 9d. in the pound. The dividend is payable on 5th April 1961.

PARRYS CONFECTIONERY LTD. Taxable interim dividend of 10 per cent or 10 nP per share, for the year ending 31st March 1961. Transfer books will remain closed from 25th March to 6th April 1961, both days inclusive.

UNION CARBIDE INDIA LTD. Final dividend of Re. 1.05 per share (making a total of Re. 1.80 per share), subject to deduction of tax, for the year ended 25th December 1960.

SYNOPSES OF COMPANY REPORTS

Coonoor Tea Estates Co., Ltd.

THE directors of the above Company (Secretaries and Treasurers: Messrs. Matheson, Bosanquet & Co., Private Ltd., Belmont, Coonoor) present the audited accounts of the Company for the year ended 30th September 1960.

Working Results: The Company has completed the year with a record crop of 4,04,655 lbs. made tea. The average sale price though lower than for the previous season was more than compensated by the increase in crop and as a result the season has produced very satisfactory working results. The net profit for the year after making provision for taxation and depreciation is Rs. 1,47,124 (Rs. 1,14,067). To this is added the balance brought forward from the previous season of Rs. 29,120 (Rs. 22,060) and excess provision for bonus made in 1956/57 not required of Rs. 743 (*nil*) making a total available surplus of Rs. 1,76,987 (Rs. 1,36,127). The directors have transferred to dividend equalisation reserve Rs. 15,000 (*nil*) and to development rebate reserve Rs. 20.975 (*nil*) leaving a balance of Rs. 1,41,012 (Rs. 1,13,684 after transferring Rs. 22,443 to general reserve). The dividend on preference shares at 6 per cent absorbed Rs. 9,000 (Rs. 9,000). The interim dividend on ordinary shares at 10 (10) per cent paid subject to deduction of tax on 1st October 1960 absorbed Rs. 56,642 (Rs. 37,782). The directors proposed payment of a final dividend on ordinary shares at 7½ (10) per cent, subject to deduction of tax, which will absorb Rs. 42,482 (Rs. 37,782) leaving a balance to be carried forward to next year of Rs. 32,888 (Rs. 29,120). The total ordinary dividend for the year comes to 17½ per cent subject to tax compared with 20 per cent subject to tax paid for the previous year. The recommended dividend, therefore, is lower by 2½ per cent than that paid last year but due to the increase in capital arising from the issue of additional ordinary shares at par during the season 1958-59, the amount appropriated as dividend has actually increased by Rs. 23,560.

Acreage: Total area of the Estate is 441.25 acres distributed as follows: Tea in full bearing 384.50 acres, tea in partial bearing 7.50 acres, fuel clearings 15.75 acres and buildings, roads and waste land 33.50 acres. The small reduction in acreage shown this year follows the exchange of an isolated plot of 7.72 acres of fuel clearing situated some distance from the estate for an area of 4.93 acres belonging to the Blue Mountain Estates Ltd. plus suitable cash compensation for the difference in acreage. This new area which adjoins Kodamalai Division, is suitable for planting in tea.

Crop: As stated earlier a record crop of 4,04,655 (3,52,549) lbs. of made tea was secured as against an estimate of 3,50,000 lbs. The Estate cost of production for the year was Re. 1.55 per lb. against the estimate of Re. 1.49 per lb. Bonus paid to labourers amounting to Rs. 15,926 is not included in the estimates and is equivalent to 4 nP per lb. The net average selling price for the season was 261.28 (277.61) nP per pound.

Estimates for the season 1960-61 have been approved by the Board of directors and provide for 3,60,000 lbs. of made tea to cost 154.60 nP per lb. including 18.81 nP per lb. for manuring.

Phosphate Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Bangur Brothers Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th June, 1960.

The profit for the year is Rs. 16,42,591 (Rs. 16,47,366) to which is added the amount brought forward from the previous year of Rs. 1,02,494 (Rs. 86,712) making a total of Rs. 17,45,085 (Rs. 17,34,078). Out of this amount depreciation absorbs Rs. 1,12,941 (Rs. 1,09,474), provision for taxation Rs. 6,90,000 (Rs. 8,30,000) and development rebate Rs. 49,428 (Rs. 42,110) leaving an available balance for appropriation of Rs. 8,92,716 (Rs. 7,52,494). This amount the directors recommend should be appropriated as under: To general reserve Rs. 2,00,000 (Rs. 2,00,000), to reserve for bad and doubtful debts Rs. 50,000 (*nil*) and in payment of dividends as follows: On 10,000 fully paid up shares at Rs. 35 (Rs. 45) per share, subject to deduction of tax, absorbing Rs. 3,50,000 (Rs. 4,50,000) and on 5,000 partly paid up shares at Rs. 17.50 (*nil*) per share, subject to deduction of tax, absorbing Rs. 87,500 (*nil*) leaving a credit balance to be carried forward to next year of Rs. 2,05,216 (Rs. 1,02,494).

Licence has been received from the Central Government for installation of an additional Sulphuric Acid Plant which will increase the production of Sulphuric Acid from 8,250 tons to 24,750 tons per annum. It is expected that the plant will be put into commission by the end of 1961. This will make the Company self-sufficient in Sulphuric Acid.

The directors attribute the sales results to the improved economic conditions prevailing during the period and to the intensified sales efforts. In spite of the reduction in price of the Super Phosphate by the Government the Company's total turnover remained unaffected owing to increased demand. The "Lakshmi" Brand Fertilisers of the Company have become very popular and are well received in the market as the same have proved much superior resulting in better yield per acre.

During the later half of 1960 the offtake of Super Phosphate was not satisfactory but this position remained only for a short period and the sales are going up gradually.

The scheme for renovation and modernisation of the Super Phosphate Plant has already been taken in hand and it is expected that the production of Super Phosphate will increase.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	12,50,000	Gross block	32,78,588

Thirumbadi Rubber Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Peirce Leslie and Co., Ltd., Calicut) submitted the audited accounts of the Company for the year ended 30th September 1960.

After providing for depreciation and all charges except taxation the accounts show a profit of Rs. 2,23,023 (Rs. 3,03.752) to which is added the balance brought forward from last season of Rs. 7,572 (Rs. 30,075) making a total of Rs. 2,30,595 (Rs. 3,33,827). After deducting provision for taxation of Rs. 1,21,695 (Rs. 1.64,753) and transfer to general reserve of Rs. 30,000 (Rs. 25,000) leaving an available sum of Rs. 78,900 (Rs. 71,643 after transferring Rs. 50,000 to debenture redemption reserve). The directors recommend payment of a dividend of 7 (7) per cent subject to tax on the ordinary stock of Rs. 9,15,300, absorbing Rs. 64,071 (Rs. 64,071) leaving a balance to be carried forward to next year of Rs. 14,829 (Rs. 7,572).

Provision for Taxation.—The Supreme Court of India recently held that upkeep charges on immature areas are an allowable expenditure under the Kerala Agricultural Income-tax Act. But the Governor of Kerala has promulgated an Ordinance amending the Act with retrospective effect from 1st April 1951 and as a result of this, upkeep charges on immature areas will no longer be an allowable expenditure for the purpose of computation of the agricultural income. In view of this, provision for taxation for this year has been made on the same basis as for the previous year.

Rubber Crops and Costs:—The comparative figures are as follows:—

Season	*Crop kg.*	*Estate cost of Production per kg.*	*Average Price realised per kg.*
			Rs.
1957-58 ...	3,22,002	2.54	4.05
1958-59 ...	3,28,991	2.59	3.95
1959-60 ...	3,23,807	2.83	4.06

The Crop for 1960-61 is estimated at 3,52,000 kg. to be produced at an all-in-cost of Rs. 2.98 per kg. The reports of the visiting agent indicate that the Estates are in good order and that the new clearings are developing well.

The Board has under consideration the sale of Calicut Estate and if a sale materialises, it is expected that the financial position and future prospects of the Company will be considerably improved.

DIRECTORS' REPORT

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts, duly audited, showing the position of the Bank's affairs as on the 31st day of December, 1960, together with their report.

The result of the working for twelve months, including the balance from former Account, and after making allowance for taxation and depreciation, is a profit of .. .. Rs. 21,26,568 72

Out of this there has been paid Dividend and Bonus on the Ordinary Shares and Dividend on Preference Shares at the rates of 18 per cent. and 6 per cent. per annum respectively (both subject to deduction of tax in accordance with the provisions of the Finance Act, 1960) for the six months ended 30th June, 1960, absorbing .. .. Rs. 3,19,500 00

Transferred to Staff Pension Fund .. .. 1,00,000 00 — 4,19,500 00

Leaving an available balance of 17,07,068 72

which your Directors recommend should be disposed of as follows:

In payment of Dividends (subject to deduction of tax in accordance with the provisions of the Finance Act, 1960) on the Preference Shares for the six months ended 31st December, 1960, at the rates of 7.80 per cent. per annum and 1.80 per cent. per annum representing arrears for the half-years ended 30th June, 1959, 31st December, 1959, and 30th June, 1960 .. .. 99,000 00

Note: The increase in the rate of dividend on the Preference Shares from 6 per cent. per annum to 7.80 per cent. per annum and arrears of dividend at the rate of 1.80 per cent. per annum for the three half-years to 30th June, 1960, are in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Finance Act, 1960) on the Ordinary Shares for the six months ending 31st December, 1960, at the rate of 12 per cent. per annum 1,83,000 00

In payment of a Bonus (subject to deduction of tax in accordance with the provisions of the Finance Act, 1960) on the Ordinary Shares at the rate of 6 per cent. per annum for the six months ending 31st December, 1960 .. .. 91,500 00

Provision for bonus to Staff .. .. 8,80,000 00 — 12,03,500 00

Carry forward to next account 5,03,568 72

Of the four offices expected to be opened during 1960, two were established for the first time in South India at Hyderabad, the capital of Andhra Pradesh and at Bangalore, the capital of Mysore State, on the 6th and the 28th October, 1960, under the charge of Sarvashri Jagat Narain Sharma and Ram Saran Das Narang respectively, two of the Bank's most able and experienced officers. The opening of another office has been postponed owing to building delays and the other project was abandoned for reasons outwith the Bank's control. Negotiations are in progress for the opening of further offices.

The continued improvement in working results has been due mainly to a higher level of advances, although increasing overheads have again narrowed the profit margin. As hitherto, investments are shown in the Balance Sheet at less than the actual market value.

Under Article 115, Maharajadhiraja Bahadur Sir Uday Chand Mahtab, K.C.I.E., B.A., of Burdwan, retires from office by rotation but is eligible for re-election. Sir Iqbal Ahmad also retires from office by rotation but is not offering himself for re-election.

Mr. I. G. Thomson and Mr. G. D. Longhurst were appointed Directors to fill the vacancies caused by the resignations of Mr. W. F. MacDonald and Mr. J. W. Anson.

Mr. W. Smith was appointed a Director to fill the vacancy caused by the resignation of Mr. M. J. Maclaren, *consequent on his departure to the United Kingdom on furlough. On return from furlough* Mr. M. J. Maclaren was re-appointed to fill the vacancy caused by the resignation of Mr. W. Smith.

Auditors will have to be appointed for the year ending 31st December, 1961.

By Order of the Board,

I. G. THOMPSON,
Chairman.

M. J. MACLAREN,
General Manager.

CALCUTTA, *the 24th February*, 1961.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank, for the year ended upon that date, in which are incorporated the audited returns of Calcutta and Bombay Branches and the unaudited returns of all other branches which have not been visited by us. Permission for exempting those branches not visited by us from audit as required by the Companies Amendment Act, 1960, has been obtained by the Bank from the Central Government.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Hyderabad (Sind),	

(*b*) To consider and, if thought fit, to pass with or without modifications the following Resolution for applying for exemption from audit of the accounts of the Company's Branch Offices other than those resolved to be audited by the Company's Auditors and by other persons qualified to act as Auditors.

"RESOLVED that the Board of Directors be and is hereby authorised to apply to the Central Government under the Companies (Branch Audit Exemption) Rules, 1961, for exemption from audit of the accounts for the year ending 31st December, 1961, of all Branch Offices, now existing and which may be opened hereafter during the said year ending 31st December, 1961, other than those resolved to be audited by the Company's Auditors and by other persons qualified to act as Auditors, from the provisions of Section 228 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, and to agree to such terms and conditions as the Central Government may prescribe in this behalf, and in the event of such exemption being not granted in respect of any of such Branch Offices, then and in such event the Board of Directors be and is hereby authorised to appoint such persons qualified to act as Auditors of the Company in consultation with the Company's Auditors and on such terms and conditions as the Board of Directors may decide upon from time to time for audit of the accounts of such Branch Offices."

8. To consider and, if thought fit, to pass the following Resolution required by Section 293 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, an Explanatory Statement in respect of which is annexed hereto as prescribed by Section 173 of the said Act.

"RESOLVED that the consent of the Company under the provisions of Section 293 (1) (*d*) of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, be and is hereby accorded to the borrowings by the Board of Directors of the Company from time to time of all moneys deemed by it to be requisite or proper for the purpose of carrying on the business of the Company but not exceeding Rupees 40 Crores notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans, if any, obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

9. To consider and, if thought fit, to pass the following Resolution with or without modifications as a Special Resolution.

"RESOLVED that pursuant to Section 314 of the Companies Act, 1956, consent of the Company be and is hereby accorded to the appointment of Messrs. A. F. Ferguson & Co., a Partnership firm, one of whose Partners, viz. Mr. Naval Rustomji Mody, is a relative of Sir Homi Mody, a Director and Chairman of the Company, as Auditors of the Company for the period commencing from the conclusion of this Annual General Meeting held in 1961 to the conclusion of the next Annual General Meeting, and for attending to such other work as may be entrusted to the said firm of Messrs. A. F. Ferguson & Co. during the period of their appointment by the Board of Directors of the Company, on remuneration higher than that paid to them at the time when the Special Resolution for their appointment was passed at the Forty-fifth Annual General Meeting of the Company held on the 29th day of March, 1956, according the Company's consent to the said firm of Messrs. A. F. Ferguson & Co. continuing to act as Auditors of the Company and holding an office of profit under the Company as aforesaid in spite of the said relationship."

By Order of the Board,

N. K. KARANJIA,
General Manager.

BOMBAY, *2nd March*, 1961.

(*b*) Dividend Warrants for the half-year ended 31st December, 1960, will be posted to the Shareholders at their registered address on and after the 29th day of March, 1961. Shareholders are requested to intimate to the Company their change of address, if any, immediately.

(*c*) The Explanatory Statement required under Section 173 of the Companies Act 1956, has been forwarded to the members of the Company.

DEPOSIT RATES TO GO UP

(*From Our Own Correspondent*)

BOMBAY, *8th March*

There have been no significant changes in the short-term money market. The stringency which has been a persistent feature of the market for quite some time has continued unabated. In fact, it has become even more stringent, with the demand for bank accommodation pressing hard against a severely limited supply. With the movement of crops in full swing and with industrial production continuously rising there appears to be no immediate possibility of any relief. With their cash reserves strained to the limit, banks are reported to be relying more and more on the Reserve Bank for accommodation.

The short-term interest rates have continued to rule firm at the ceiling rates under the inter-bank agreement. We give them below for ready reference:

Inter-bank call money: Exchange and larger Indian banks: 5½ per cent borrowers. Smaller Indian banks: 5¾ per cent borrowers.

House Money: (i) Notice of 3 days upto and including 21 days: 2 per cent nominal (ii) Notice of more than 21 days: 3 per cent.

Term Money: (i) 31 days and over but and inclusive of 60 days: 3½ per cent. (ii) 61 days and over but less than 12 months: 3¾ per cent. (iii) 12 months: 3¾ per cent.

It is reported that the sub-committee of the Indian Banks' Association in charge of the inter-bank agreement on interest rates has recommended an upward revision in the present ceilings and that the increased rates would be given effect to shortly. Details of the proposed changes are given on page 411.

The results of the sale of 91-days Treasury Bills through weekly tenders showed that, as against an invitation for Rs. 2 crores, the total amount offered and accepted was the same. The average rate of accepted tenders remained unchanged at Rs. 2.750. Two weeks before, it was 2.650 per cent. During the period 1st March to 4th March, there were no sales of 91-days intermediate treasury bills. But their sales are being continued.

The statement of the Reserve Bank of India for the week ended 3rd March 1961 shows, as compared with that for the previous week, an expansion of Rs. 21.82 crores in notes in circulation bringing their total to Rs. 1,947.16 crores. The notes held in the Banking Department have dropped by Rs. 23.63 crores and, consequently, the total notes issued have fallen by Rs. 1.80 crores. The foreign securities held by the Issue Department are still unchanged at Rs. 128 crores, but, as balances held abroad have come down by Rs. 2.20 crores the aggregate foreign assets have shrunk by that amount to Rs. 157.30 crores. The deposits of banks with the Reserve Bank have contracted by Rs. 5.12 crores to stand at Rs. 71.86 crores. The other loans and advances given by the Reserve Bank which include accommodation to the Scheduled banks also have risen by Rs. 7.89 crores. Of this rise, Rs. 1.40 crores represents advances against usance bills which now aggregate Rs. 27.55 crores. A year ago they were of the order of Rs. 6.76 crores only.

The Scheduled Banks' statement for the week ended 24th February 1961 discloses a net increase of Rs. 2.94 crores in total deposits. Borrowings from banks of demand and time variety have gone up by Rs. 1.97 crores and Rs. 37.92 lakhs respectively, whereas their borrowings from the Reserve Bank have come down by Rs. 2.13 crores. They have also borrowed Rs. 1.17 crores less from the State Bank of India. Of this decline, borrowings of demand nature account for Rs. 1.12 crores. Advances and bills (bank credit) have registered a rise of Rs. 3.59 crores, on top of an increase of Rs. 5.72 crores in the preceding week, taking their total to Rs. 1,263.47 crores. A year ago, this portfolio stood at Rs. 1,060.93 crores. Of the rise during the week under review, the share of the State Bank of India was only Rs. 1.79 crores. The investments of the Scheduled banks have continued to decline, the drop during the week under review being Rs. 1.15 crores, on top of a decline of Rs. 11.58 crores in the preceding week. As the investments of the State Bank of India have slightly gone up, by Rs. 27 lakhs to be precise, the drop in this portfolio of the commercial banks in the private sector is actually of the order of Rs. 1.42 crores. The cash balances of Scheduled banks have as a whole jumped up by Rs. 4.54 crores. This is due solely to the State Bank, the cash balances of which have risen by Rs. 5.08 crores.

Some activity was noticeable in the Gilt-edged market. Short-dated loans, both Central and State Governments were in demand. As part of its plans for facilitating repayment of loans the maturity of which is near, the Reserve Bank stepped up its buying rates by 10 nP for 2½ per cent 1961, 2¾ per cent 1962 and 3¼ per cent 1962. In the Central loans section, 3 per cent non-terminable recorded the highest gain of 75 nP and closed at Rs. 72. Other Central issues showed a relatively modest improvement. Thus, 2¾ per cent 1962, 3 per cent 1970-75 First Development Loan, moved up by 15 nP. 3 per cent 1963-65, 3½ per cent 1963 and 1964 have risen by only 5 nP each. 3¼ per cent 1965 and 3¼ per cent 1962 closed 10 nP higher.

In the State loans section, 4 per cent issues registered further improvement on buying by the L.I.C., sinking funds in the public sector and provident funds. The turnover, however, was limited due to scarcity of sellers. 4 per cent 1967 and 1971 Maharashtra issues went up by 10 and 20 nP respectively. Some of the 4 per cent medium-dated loans of Madras, Andhra, Uttar Pradesh and Mysore also showed advances ranging between 5 and 25 nP.

In the foreign exchange section the major event of the week was the upward revaluation of the German Mark by about 4.75 per cent. With effect from Monday the 6th inst., the par value of D. Mark has been reduced from 4.20 to 4.00 Marks per U.S. dollar. This has been brought forth a corresponding adjustment in the value of rupee in terms of D. Mark. Prior to revaluation, the banks' selling rate for T.T. on Frankfurt was 86.90 Marks for 100 rupees. The latest available rate is 82.60 Marks for 100 rupees. Similarly, the banks' buying rate has been brought down from 87.90 D.M. per Rs. 100 to 84.10 D.M. per Rs. 100.

Following the revaluation of German Marks, Holland, too, has raised the par value of its currency. Consequently, the value of rupee in terms of Dutch guilders has come down. The banks' selling rate for T.T. is now 75.50 guilders per Rs. 100, as against 79.20 a week ago their buying rate being 77.00, as against 80.10 per Rs. 100.

In the New York market the sterling has weakened still further. The latest available rates are 279.260-279.290 cents per £ for spot and 278.460-278.490 per £ for three months forward. As compared with the rates a week ago, there is a decline of 0.26 cent and 0.36 cent, respectively. The banks' buying and selling rates for ready T.T. on New York show a slight weakening of the rupee. The latest available rates are Rs. 479.25 and Rs. 476.00 per 100 dollars for buying and selling respectively, as against Rs. 479.00 and Rs. 475.50 a week ago.

GOLD SCALES FRESH PEAK

(*From Our Own Correspondent*)

BOMBAY, *8th March*

Both gold and silver made a strident advance during the week under review. Ready gold scaled the all-time peak of Rs. 124.40 per 10 grams (0.85 tola) early on Monday the 6th inst., a rise of Rs. 2.80 as compared with the closing rate of Rs. 121.60 on Tuesday last week. Ready silver also forged ahead from Rs. 206.30 to Rs. 208.20 per kilogram (85.7 tolas) on the same day; this quotation was below the previous peak of Rs. 209.30 touched on 10th February by Re. 1.10. The spurt in prices followed expectations of larger offtake during the marriage season. It was reported that some interests in South India as well as at Delhi and Calcutta were already trying to absorb all the readily available stocks. The seizure of some contraband gold from a ship in Bombay also imparted strength.

The daily average offtake of gold and silver during the week, however, was the same as that last week, being 3,000 tolas and 9 bars, respectively. Daily arrivals were at an average of 6,700 tolas and 22 bars, as against 4,500 tolas and 23 bars. The floating stocks of gold are estimated at 40,000 tolas and those of silver are reported to be around 600 bars.

Adjustment rates fixed today were Rs. 123.90 per 10 grams for gold and Rs. 207.75 per kilogram for silver. The corresponding rates for Tuesday last week were Rs. 121.50 and Rs. 206.30, respectively.

The *Chaitra* (April) settlement in gold met with good support and rallied from Rs. 121.70 on the 1st inst. to Rs. 124.50 on Monday. At this level, profit-taking set in and the settlement declined to Rs. 123.75. It, however, rose again to Rs. 124.40 today before finishing at Rs. 124.20. The net gain over the week was Rs. 2.50. *Fagun* settlement went off the board at Rs. 121.35 on the 1st inst., as against the previous close of Rs. 121.75. The rate for transferring commitments from *Fagun* to *Chaitra* settlement was against bulls to the extent of 35 nP.

In silver, *Fagun* settlement, which stood at Rs. 206.55 on Tuesday last week, improved to Rs. 206.75 on the 1st inst. and ran out at Rs. 206.15 on the following day. *Chaitra* settlement climbed up from Rs. 206.40 to Rs. 208.45 on Monday the 6th inst. After easing to Rs. 207.65 today, it recovered to close at Rs. 208. The carry-forward rate was in favour of bulls—the actual rate was 45 nP on the 2nd inst.—whereas it was against them to the tune of 15 nP last week-end.

Ready gold commanded a premium of 20 nP over the *Chaitra* settlement on Saturday the 4th inst. The premium, however, yielded place to a discount of 25 nP on Monday and the rate of discount increased to 85 nP today. In silver, spot was quoted at a discount under the forward (*Chaitra*) throughout the week, except on the 4th inst. when it commanded a premium of 10 nP. The actual discount today was 5 nP; it was higher at 35 nP on the 2nd inst.

The world price of gold in the London bullion market eased further during the week from $35.08¾ to $35.07½. This rate is 1.25 cent below the price of $35.08¾ at which the U.S. Treasury sells gold to central banks. Ready gold declined from 251*s.* on 27th February to 250*s.* 11*d.* on the 1st and 2nd inst., but recovered to 251*s.* 2*d.* yesterday. Ready and forward silver were unaltered, the former at 79¼*d.* and the latter at 80¾*d.* Silver in New York was also unchanged at 91.375 cents.

The following table shows the trend of the market during the week:

	3-3-1961 (closing)	High	Low	28-2-1961 (closing)
GOLD				
Ready .99 fine)	Rs. 124.15	Rs. 124.40	Rs. 121.40	Rs. 121.60
Forward:

* 3rd April settlement. † 4th April settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram(85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RALLY AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, *8th March*

Under the impact of the Central Budget, which contained, *inter alia*, proposals for raising the excise duty on medium (A) grey cloth as also on cotton yarn, cotton futures market ruled easy during most part of the week under review. In fact, the market's reaction to the rise in duty was evident in the post-Budget session held on 28th February wherein both the Jarilla April and the newly-started August contract declined, the former by Rs. 1.25 and the latter by Rs. 1.50, as compared with their opening quotations. Subsequent sessions witnessed an acceleration of the downward trend. It is feared that the enhancement of excise duties would affect mill demand for cotton. The steady trend of new crop arrivals and deterioration in the quality of certain varieties also imparted weakness to the market.

Pressure of selling by both local and upcountry operators resulted in a break in values. Both the Jarilla April and August contracts declined steadily, till yesterday. Today, however, there was a complete reversal of the trend, thanks to reports that certain amendments to the by-laws of the E.I.C.A., which will have bullish implications, are under the consideration of the Board. Heavy bull support lifted both the contracts. Not only have the earlier losses been completely wiped out but the contracts closed Rs. 6 higher than the last week-end quotations.

The following table indicates the trend of prices of the contracts during the week:

(In rupees per three quintals)

	3-3-61	*High*	*Low*	28-2-61
I.C.C. Jarilla April 1961 ...	582	583.25	565.75	576
I.C.C. Jarilla August 1961 ...	594	595.00	581.50	588

Demand for ready cotton, too, is dull. This is due partly to the fact that several mills have exhausted their quota and partly to the dampening effect of the increased excise levies on yarn and cloth. However, popular varieties such as L.147, CO2, Khandesh, Vijay and Digvijay, Laxmi, etc., are receiving moderate attention.

Obviously not satisfied with the rate of purchase of new crop by mills, the Textile Commissioner has informed the Indian Cotton Mills' Federation that the fourth instalment of Indian cotton quota would be issued to mill only after the quotas so far issued have been fully absorbed. The Federation has, accordingly, advised its member mills to speed up purchases as further quotas of Indian cotton would be available only to those mills who have fully utilised their quotas. Quotas equal to 75 per cent of last year's consumption of 4.4 million bales (Indian cotton) has so far been issued to mills in three instalments.

Interest in foreign cotton has revived since mills have received their import entitlements against their export performance in the last quarter of 1960. East African and Sudan varieties evoked the attention of spinners.

The likelihood of the trade being given a chance to participate in the import of 300,000 bales of U.S. cotton under P.L. 480 has come as a pleasant surprise to the trade. The Textile Commissioner is understood to have consulted leading importers about the trade's participation in the aforesaid imports.

Export interest was confined to Zoda and yellow pickings. Hopes of a fresh export quota are receding fast. Efforts are being currently made by some shippers to obtain the permission of the Joint Chief Controller of Exports to complete the shipments against the left out portion of the shipping bills submitted for shipment against the first and second export quotas.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri: Berar Jarilla 25/32" 870-880; Khamgaon 910-920; Kalyan 820-830; Vijay 28/32" 970; B.P. 52 1.310-1,315; B.P. (U.N.U.G.) 1,345; Sudan XG3S 1.900; G2L 1,590-1,592.

The Karachi cotton futures market depicted a divergent trend during the week under review. While the maturing March contract receded on selling based on settlement consideration, the May contract ruled steady, thanks to speculative buying. The former declined from Rs. 69.15 last week-end to Rs. 68.95 while the latter was unchanged at Rs. 69.05. Karachi cotton traders have viewed with concern the raising of the subsidy rate on U.S. cotton from 6 cents per lb. to 8½ cents per lb. announced last week. It is feared that the subsidy, which works out to 25 per cent of the present foreign price of U.S. cotton, will affect other cotton exporting countries.

The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties prevailing at Karachi:

Sind *Deshi* 104; Punjab Deshi 103; 4F Punjab Roller 88.15; L.S.S. Punjab Roller 88.15; N.T. Roller 90.15.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Since domestic interest was subdued and export demand sluggish, prices have tended to show a declining trend. The raising of the U.S. subsidy rate also gave rise to fears that competition from U.S. cotton would be more. Spot prices also tended to ease, thanks to pressure of new crop. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end quotations:

Karnak: March 69.02 (69.74); May 70.14 (70.74); July 70.90 (71.35).

Ashmouni: April 59.50 (59.62); June 60.25 (59.62); August 60.60 (—).

The firmness noted in the Liverpool cotton futures market last week, after the announcement of the U.S. support level, gathered momentum during the week under review. Anticipation of

higher prices for U.S. cotton following the enhancement of the support level brought forth support for both the American and American types contracts which rallied. Sudan contracts were quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March 24.10; May 24.70.

Sudan: March, May, July 34.00.

New York cotton futures market continued to be firm during the week under review also. Commission House buying and the firm advices from the spot market pushed values higher. The influencing factor was, as during the last week, the higher support level (82 per cent of parity, as compared with 70 per cent for the present season) for the 1961-62 U.S. crop announced by the Secretary of Agriculture on 22nd February. It is estimated that the new parity figure on middling cotton would give most producers an increase of 0.62 cent a pound, or about $3 a bale more than what they get at present.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	7-3-61	28-2-61	21-2-61
Spot	33.20	33.00	32.55
March	32.83	32.57	32.32
May	33.25	33.03	32.83
July	33.77	33.52	33.33

POOR DEMAND FOR PEPPER

(Messrs. Parekh and Co.)

BOMBAY, *8th March*

Malabar black pepper scored some gain in the earlier part of the fortnight under review, in view of steadier advices from Singapore and small selective purchases by New York at prices ranging from $0.43 to $0.44. In the later part, however, the gain was erased as Singapore exporters lowered their selling price and sold some parcels at $0.42½ to $0.43¾. The news that the Kerala Government would collect purchase tax on the closing stock of pepper, ginger, turmeric, lemongrass oil, etc., with traders as on 31st March 1961 brought forth rather aggressive selling and had a depressing effect. Ungarbled Malabar pepper came down from Rs. 379 to Rs. 370 and garbled from Rs. 391 to Rs. 384. March delivery receded from Rs. 401 to Rs. 394. Calicut fell from Rs. 375 to Rs. 365.

At the time of writing, however, small improvement was noticed in sympathy with New York where spot improved from $0.46½ to $0.49. As a consequence, New York dealers were reported bidding at $0.43. Despite poor foreign enquiries, Singapore was reported steady but quiet, as holders there were resisting lower prices. Most of the traders there are closely watching the attitude of the semi-Government agency of Indonesia at Singapore which is expecting to receive from Sumatra about 2,000 tons of Lampong black as consignments.

In view of the surplus production of pepper in the world, the pattern of the trade in both supplying and consuming markets seemed to have undergone changes. In India, pepper has become a trading market with narrow fluctuations for want of any aggressive foreign buying. New York is selective buyer, while Russia and the East European countries being price-conscious, buy after haggling. They make purchases without exciting the sellers as they are confined to a few selected parties.

In Singapore, the same is the tale to tell. Most of the traders are bearishly inclined. They switch their bear sales from month to month. In New York, most of the grinders buy their requirements on the New York Exchange in future delivery, as prices for futures are always at a discount. They buy spot only to cover their immediate requirements. As such, fluctuations are narrow. Dealers who sell spot buy early shipment for replacement only. Outside and, speculative interest is at a low ebb for want of incentives.

The noteworthy feature of the season is that most of the stock of Malabar pepper is carried by growers and not by dealers as was the case last year, as hedging facilities on the Cochin Exchange are restricted since last year's debacle. Turnover on the Exchange has fallen very much to the detriment of growers. A second ring in Bombay is, therefore, an urgent necessity in the interest of both the growers and the export trade.

Demand in ready pepper in Bombay is poor, in view of holidays. The currently prevailing rate is Rs. 205 per 50 kilos.

YARNS AND THE BUDGET

(From Our Own Correspondent)

BOMBAY, *8th March*

In our last week's review of the yarn market prepared just before the Union Finance Minister presented the budget for 1961-62, it was stated that there were apprehensions of possible increases in the rates of excise duty on indigenous art silk yarn and import duty on foreign yarn. These apprehensions were fully justified. For the budget contained proposals for enhanced tax imposts not merely on art silk yarn and staple fibre but also on cotton and rayon fabrics and imposition of an excise duty on cotton yarn. The following are the changes effected:

(In rupees per kilo)

	Excise Duty		Customs Duty	
	Revised	Old	Revised	Old
Rayon Yarn				
Below 75 deniers	3.00	1.80	8.10	5.10
75-100 deniers	2.25	1.35	5.85	3.70
Above 100 deniers	1.50	0.90	4.60	3.10
Staple Fibre	0.75	0.45	25% ad valorem plus 0.75 nP. per kilo	25% ad valorem plus 0.45 nP. per kilo

Cotton yarn: The proposed rate of duty is 15 nP per kg. on cotton twist yarn and thread of 35 counts or more and 10 nP per kg. on those of less than 35 counts. Hitherto, cotton yarn was completely exempted from payment of excise levy. In order to give relief to the Common varieties of fabrics produced on handlooms, cotton yarns of counts 11 to 40, if issued in hanks, are exempted.

Immediately after the above proposals were announced prices in the yarn market staged a sharp rally. The rise was particularly marked in the case of art silk yarn. Compelled by such a rise, the Yarn Merchants' Association and Exchange Ltd., declared a special interim clearing on Saturday the 4th inst., the rates fixed being Rs. 2,550 (per case of 100 kg.) for 60/1 Cupressa Bemberg yarn and Rs. 2,890 for 40 JPs. The Association also fixed the ceiling prices for these at Rs. 2,600 and Rs. 2,950, respectively, with a view to arresting a further increase in prices.

Yarn traders are somewhat intrigued at the move of the customs authorities to levy countervailing import duty equivalent to the full excise duty on indigenous yarn as it stands today, without taking into consideration the fact that import duty has been raised from stage to stage to keep pace with the increase in the excise duty on indigenous yarn. This method is considered to be erroneous. In the course of a communication addressed to the Union Finance Minister, the Board of the Bombay Yarn Merchants' Association and Exchange Ltd. gives the following illustration in support of its contention:

In 1959, the import duty below 75 deniers of rayon yarn was raised from Rs. 2 to Rs. 2.30 per lb. Similarly, there was increase in the countervailing excise duty and, as such, the excise duty below 75 deniers was raised from 50 nP to 80 nP per lb. The intention of the Government then was to *add the increased duty and not the whole amount of duty*. In the present case, the import duty on yarns below 75 deniers has been raised from Rs. 5.10 to Rs. 8.10 per kilo, of course, as per the interpretation of the Customs authorities at Bombay, adding the full amount of excise duty of Rs. 3 per kilo, whereas, *in fact, the increased duty of Rs. 1.20 ought to have been added*. The same position remains with regard to rayon yarns above 75 deniers to 100 deniers and also above 100 deniers. If the interpretation of the customs authorities is taken as true, there will be an increase of Rs. 300 per case of rayon yarns below 75 deniers which, it is said, cannot be the intention of the Government, as it is exhorbitantly high.

The Association emphasises that only the increased rate of excise duty should be added to the existing import duty on rayon yarn and not the full amount of excise duty.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing prior to the Budget:

	8-3-1961	28-2-1961
	Rs.	Rs.
***Art silk yarn*—**		
60/1Cupressa Bemberg (100 kg.) April	2,550.00	2,500.00
60/1 Cupressa Bemberg spot	2,585.00	2,507.00
120 Japan (per 100 kg.)	1,501.00	1,446.00
150 Japan (per 100 kg.)	1,722.00	1,667.00
120 Italy (per 100 kg.)	1,459.00	1,378.00
***Staple fibre yarn*—**		
40×2 April (per 90.72 kg.)	868.00	832.00
40×2 Century (per kg.)	10.32	9.86
40×2 Kohinoor (per kg.)	10.25	10.75
***Cotton yarn* (per bundle of 10 lbs.)—**		
10s Modern	18.75	18.70
20s New Great	21.75	21.75
30s New Great	27.00	26.25
40s Madura	32.25	32.00
60s Finlay	67.00	65.65
80s Mahendras	68.68	70.70

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, *8th March*

The Forward Markets Commission is reported to be considering the question of regulating business in non-transferable specific delivery contracts in groundnut and groundnut oil through imposition of restrictions designed to curb unhealthy speculation. The move of the Commission is a sequel to complaints that a section of traders continues to indulge in large-scale illegal business in non-transferable contracts, particularly after the virtual cessation of trading in groundnut forward contract, which has touched the ceiling level of Rs. 220. Even the official warnings against such business have not been of much avail, as is evident from the fact that the premium commanded by spot groundnut over the forward (May contract) is as high as Rs. 40.

The oilseeds market ruled buoyant during the week under review under the leadership of groundnuts. The absence of any fresh imposts in the Central Budget on oilseeds and oils came as pleasant surprise to the trade. Spot groundnuts touched new high levels today, thanks to reduced arrivals and reluctance of upcountry interests to part with whatever stocks they had. The co-operative societies were said to be helping producers to hold back supplies. The stock position itself was considered to be tight. Keen buying by *vanaspati* manufacturers and crushers who feared a further increase in prices also fanned the bullish fervour of the market. Groundnut oil attracted good attention presumably in view of the marriage season. Nizam bold spurted by Rs. 2 to Rs. 52.75. Khandesh quality rose by Re. 1.75 to Rs. 53.25. Oil ex-mill hardened by Re. 1.30 to Rs. 22.25. Railway receipts were higher by 95 nP to Rs. 21.90. Groundnut May 1961 contract was quoted at Rs. 220, that is ceiling rate. February 1961 went off the board on 28th February last month.

Distinctly firm conditions prevailed in the castorseed section as well, in contrast to the trend noted last week. There were, no doubt, some arrivals of new crop, but they were readily absorbed. Reports that the current season's castor crop in Gujarat would be much less than the earlier estimate initially, imparted considerable strength. Fresh enquiries for castor oil from the U.K. and some Communist countries, particularly East Germany, also imparted strength. There were, however, no enquiries for oil from the U.S. on account of pressure of Brazilian supplies. Castorseed May 1961 contract made headway from Rs. 170.25 to Rs. 174.12. Madras small gathered 63 nP to Rs. 34.25 Oil Commercial put on 20 nP to Rs. 14.20 and B.S.S. 15 nP to Rs. 15.15.

In sympathy with groundnuts and castors, linseeds moved up. May 1961 contract closed higher at Rs. 35.81 today, as against Rs. 35.06 last week-end. Bold ready was maintained at Rs. 35.25. Linseed oil improved by 20 nP to Rs. 16.40.

Cottonseeds, too, firmed up particularly towards the close of the week, on better advices from the raw cotton market. February 1961 contract rose by Rs. 2 to Rs. 94.75. February contract expired last week-end. Whites put on 60 nP to Rs. 19.10. Both Berars and Non-whites gathered 25 nP to Rs. 19.25.

The sesame section ruled buoyant. Arrivals were meagre. There was good demand, especially from the South. Bold variety was marked up by Rs. 20 to Rs. 355. Sesame oil spurted by Re. 1.25 to Rs. 27.25

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	8-3-1961	28-2-1961	22-2-1961
	Rs.	Rs.	Rs
Groundnut			
May 1961	220.00	220.00	220.00
Nizam bold	52.75	50.75	51.00
Coromandel ready	53.50	51.62	51.75
Khandesh quality	53.25	51.50	51.75
Oil ex-mill ready*	22.25	21.05	21.25
Railway receipts*	21.90	20.95	21.00
Castorseed			
May 1961	174.12	170.25	172.87
Ready Madras	34.25	33.62	33.75
Ready Kanpur	32.87	32.50	32.75
Oil B.S.S.†	15.15	15.00	15.15
Oil commercial†	14.20	14.00	14.10
Linseed			
May, 1961	35.81	35.06	35.87
Bold ready	35.25	35.25	36.25
Oil ready†	16.40	16.20	16.40
Cottonseed			
May 1961	94.75	92.75	91.25
Niger seed	39.50	37.00	39.00
Kardi seed	27.25	27.00	26.50

* Rates include excise duty, but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *7th March*

Strong demand for tea was in evidence in the export sale held here yesterday. This was the last big export sale to be held, and with a sale each in the coming two weeks, when offerings are expected to be much smaller, the season's export sales will come to an end. Inquiries for liner space declined and, after the forthcoming two or three weeks, tea bookings would be insignificant. Bookings for direct participation in the U.K. auctions are now over.

Trade circles have welcomed the reduction of 9 nP per kg. or about 10 per cent. in the tea export duty. This reduction is a belated recognition by the Government of the tea industry's just claim for consideration in this regard. It is now a few years since the industry and trade with one voice have been demanding the total abolition of the duty. The better-placed producing countries such as Africa, China and Indonesia, where the cost of production is lower than in India, are levying no export duty, and it is common knowledge that Indian tea is finding it difficult to compete in world markets despite the claim by Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry, that India is not losing its export markets, that all exportable surplus is being exported, and that the problem for the industry is one of increasing production. It is to be hoped that the reduction in the duty is a step towards its complete abolition.

The reduction of 6 nP per kg. in the excise duty (from 46 nP to 40 nP) on package duty has also been welcomed. It is thought that the increase in the excise duty on loose tea by 3 nP per kg. (from 5 nP to 8 nP) is of no consequence. Inasmuch as loose tea constitutes 60 per cent of internal consumption, the increased duty is expected to compensate the loss in revenue as a result of the concession for package tea. Other excise duties which have been increased are as follows:

(per 1 kg.)

Zone	*Existing* nP	*Proposed* nP
I	4.5	10
II	9	15
III-A	18	25
III-B	27	35

Offerings in the internal sale held last week, amounting to 22,980 packages of dust, met with good general demand, and the strongest feature of the sale was the bright C.T.C. tea which met with keen competition. The poor and medium sorts, however, eased by 15 nP. The best C.T.Cs were irregular in line with quality, while the brighter teas recorded a modest gain in prices. Orthodox teas eased by 10 nP. Legg-cut teas also eased, while the few flavoury Darjeelings elicited good support. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.20 to Rs. 6.60; medium Assam C.T.C. dust Rs. 5.50 to Rs. 5.90; legg-cut dust Rs. 5.00 to Rs. 5.40; medium Assam dust Rs. 4.75 to Rs. 5.15; and plain orthodox dust Rs. 4.65 to Rs. 4.90.

Leaf offerings amounting to 1,028 packages evoked good general demand.

Most of the offerings during yesterday's export sales amounting to 70,359 packages consisted of

end-of-the-season teas. There was strong general demand at irregular rates. A strong feature of the sale was the good support accorded to stylish whole leaf grades. The rest of this category were irregular. Darjeelings were fully steady, as were tippy teas. Another strong feature was the best C.T.C. teas possessing bright liquors, prices of which recorded modest gains. On the other hand, the plainer liquoring teas eased. The second C.T.C. grades were unchanged. Good support was accorded to medium Assams with bright liquors, the B.O.Ps and O.Fs receiving special attention. Dooars B.O.Ps attracted good support, while similar O.Fs declined. Plain B.Ps and teas for price recorded some addition to prices, while plain fannings shed 10 nP. Legg-cut teas eased irregularly. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.90 to Rs. 6.40; clean black pekoe Rs. 5.20 to Rs. 5.50; medium fannings Rs. 4.80 to Rs. 5.10; medium B.P. Rs. 4.70 to Rs. 4.90; plain fannings Rs. 4.60 to Rs. 4.80; and plain B.P. Rs. 4.60 to Rs. 4.70.

TEA EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *1st March*

Offerings in Sale No. 9 held on 28th February amounted to 450,000 kilograms. Quality was well maintained and in some cases showed slight improvement. There was good general demand but prices were irregularly easier for most of the descriptions. Plain, low medium and medium brokens, although meeting useful enquiry, declined up to 10 nP. Similar fannings, however, met better support and were steady and occasionally easier. There was less demand for good mediums and these were easier by 20 to 30 nP. Highgrowns again met a restricted enquiry and sold at considerably lower rates than last. There were some withdrawals under this category. There was useful support for C.T.C. and legg-cut types which sold at slightly easier rates than last. Well-made whole leaf grades were firm whilst others tended easier.

	1961 Rs.	*1960* Rs.
Low medium	4.70-4.80	4.41-4.52
Medium	4.85-5.15	4.52-4.85
Good medium	5.20-5.60	5.07-5.62
Quality	5.40-8.40	6.39-9.80

The average price realised in *Sale No. 9* was Rs. 5.18 per kilo, as against Rs. 5.21 last week and Rs. 5.71 in the corresponding sale last year.

Dust Sale No. 9: 218,000 kilograms were offered in Dust Sale No. 9 which was held on 2nd inst. The market opened to fair general demand at lower rates and prices weakened considerably as the sale progressed. Low mediums and mediums declined by 20 nP and in some cases up to 30 nP. Residuals were again in less demand and were the weakest feature of the sale. Highgrowns met with useful support but tended lower. C.T.C. and legg-cut types sold well although these were slightly easier.

The average price realised in Dust *Sale No. 9* was Rs. 4.75 per kilo, as compared with Rs. 4.94 in the previous week, and Rs. 4.61 in the corresponding sale last year.

Export Quota: The market remains rather quiet and at the time of writing there are large sellers at ½ nP per kilo with no buyers.

Colombo: Approximately seven million pounds were offered this week. The market met with rather less demand. Broken grades from the Dimbula and Dickoya districts were generally easier. Mediums were lower by 5 to 10 cents. Low grown teas met with less enquiry and were often easier. There was good support for liquoring fannings which were the strongest feature of the sale.

London: *North Indian and other growths*: In Monday's auction there was strong general demand and prices were a penny to 3d. dearer for all kinds.

Ceylon and South Indians: 24,483 packages were offered in Tuesday's sale and of this quantity 7,488 packages were from South India. The market met with strong demand and prices were often dearer by a penny to 2d.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale* 10: 385,000 kilograms. Good general demand. Plain and low medium fully firm. Medium demand. Plain and low medium fully firm. Highgrowns very and good medium barely steady. Highgrowns very irregular."

MEASURES TO CHECK RISE IN JUTE PRICES

(From Our Own Correspondent)

CALCUTTA, *7th March*

The decision by the Government of India to fix maximum prices for raw jute, to be enforced by the Indian Jute Mills Association as a voluntary effort, was an important development in the jute world during the week. Following this, both fibre and goods eased. With the decline, buyers of jute goods did not rush to the market, but continued to buy on a hand-to-mouth basis only. That was what stabilised the prices at each stage of the decline. Offerings of gunnies in export liners were insignificant. The maximum prices for raw jute based on Rs. 62 per maund for Assam bottoms with other grades and qualities in proportion, as announced by the I.J.M.A., became effective as from Tuesday last. The maximum price of Rs. 62 per maund compares with the Rs. 65 that existed on the day prior to the announcement. That offers were forthcoming at maximum prices was a good indication, but, at the same time, it should be noted that the maximum prices are in practice the minimum prices now. The latter development had been foreseen by mills, and is the weakest aspect of any system of ceilings, whether voluntary or statutory. Other difficulties are not ruled out. A dangerous situation may arise, if mills which are not members of the I.J.M.A. purchase at above are maximum prices of the I.J.M.A. Possibly, foreseeing such a development, the Government of India is stated likely to fix statutory maximum prices for raw jute and jute goods under the Essential Commodities Act.

It is, however, felt that action on the part of the Government would depend upon the I.J.M.A. scheme now in operation proving a success or otherwise. If the severity of the fibre crisis deepens rather than mitigates, the Government would not only fix statutory maximum prices but inaugurate a scheme for the licensing of raw jute dealers. The I.J.M.A.'s scheme, now in operation, provides for compulsory registration of all contracts for raw jute with the I.J.M.A. Inasmuch as these contracts are already being registered with the East India Jute and Hessian Exchange Ltd., registration of the contracts once again with the I.J.M.A. would only increase work without serving any useful purpose. Moreover, such registrations alone may not be able to detect if any buyers pay more than the maximum prices. Virtually the fixation of maximum prices not only becomes minimum prices but gives rise to occasions for payment of even higher prices (black market to use a war-economy jargon) thereby raising the cost of goods output. Another feature of the scheme is that, as and when necessary, the Jute Commissioner would requisition raw jute stocks from sellers and, if necessary, from mills also. As and when the Government finds the issuance of regulations under the Essential Commodities Act is necessary, a scheme for the licensing of raw jute dealers would also be introduced. In an attempt to increase the availability of fibre supplies, the Union Commerce Ministry, at its recent meeting with the representatives of the industry, offered to license freely imports of jute from Pakistan for delivery in July and August. This is aimed to take advantage of the earlier crop in Pakistan.

Jute goods have been given an entirely different treatment. For no voluntary maximum price has been fixed but it is understood that the I.J.M.A. would impose limits on the amount of unsold ready goods. Goods in excess of this limit can be requestioned by the Jute Commissioner who will also intervene if mills do not abide by the voluntary agreement. As already stated, the voluntary controls now imposed apply only to members of the I.J.M.A. Since the mills outside the I.J.M.A. are outside the system, it is necessary that they also fall in line. Otherwise, there is the danger of defeating the very purpose of the present scheme. The I.J.M.A. representatives when they met the Union Commerce Ministry officials pointed to this aspect, and they were assured that the matter would receive prompt and effective attention. The only way by which non-member mills can be brought within the scheme lies in the fixation of statutory maximum prices. How far such a course would assist the industry to solve the problem of acute shortage of fibre and high prices was difficult to be said in the market. Prices of fibre have declined to the maximum levels and opinion in market circles is that some more time should be afforded to assess the trend before Government takes any further measure. There is, however, no gainsaying that the coming three months will be crucial for the jute industry and it is strongly felt that, in view of the gulf between maximum prices here and prices in Pakistan, preventive measures against smuggling across the border to Pakistan should be strengthened.

Against the background of the fears of smuggling, it must be noted that, during the week fully steady conditions were in evidence in the Narayanganj markets and, with imports in the baling centres being conspicuous by their absence, sellers were reserved and were in no mood to make offers. European consumers of Pakistan jute were reported as lacking behind their purchases and, unless jute is available at reasonable prices, they may reduce production in the months ahead. Cuttings were quoted as high as Rs. 285 per bale and export firsts at Rs. 435 per bale. The small arrivals in the Narayanganj markets suggested that the marketing of the crop was almost complete.

With the free licensing of imports of Pakistan jute in July and August and the possibility of an early crop in India, it may be possible for mills to restore the cut in working hours as from June. The Union Commerce Minister, Mr. Kanungo, in a statement in Parliament also shared this view. As he pointed out, the lasting solution to the problems being faced by the industry was increased fibre output. It is to be hoped that his Ministry's determined efforts to increase jute and mesta output in 1961-62, to which he referred, would include measures for improving quality of the fibre.

The announcement of the decision by the I.J.M.A. to introduce voluntary control of fibre prices caused a decline in prices of both fibre and goods on Tuesday last. Assam bottoms fell to Rs. 64 per maund from Rs. 65 on the previous day and, in line with this decline, easier conditions were in evidence in the goods market. Ready hessian 40" 10 oz. fractionally eased to Rs. 67.75 from Rs. 68, while B. twills, after recording an easing trend, picked up to Rs. 202.50 from Rs. 202 following some amount of covering business. On the following day, quiet conditions were in evidence, as there were more sellers in goods, and this led to a fall in B. twills to Rs. 200 and 40" 10 oz. hessian to Rs. 66.60. However, actual business passing was small. In fibre, there were more sellers. However, mills were reserved and were waiting for more details of the I.J.M.A. price control scheme. This contributed to the fall in the price of Assam bottoms to Rs. 62.50. The market was closed on Thursday on account of *Holi*. On Friday, fibre prices eased further and touched the maximum price levels as fixed by the I.J.M.A. Assam bottoms thus moved down to Rs. 62, northern bottoms to Rs. 61 and daissee bottoms to Rs. 64. In goods, little business was passing, and the resulting quietness took down 40" 10 oz. hessian to Rs. 66.50 and B. twills to Rs. 199. Over the week-end, fibre prices were maintained. B. twills at Rs. 198.50 and hessian 40" 10 oz. at Rs. 66 marked further declines.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *6th March*

There was no change in the kip market during the week under review. Export trading was quite good. Inland demand for lower grade kips was brisk. Cow hides, cow calf, buff hides, and buff calf remained firm. Importers in the U.S.A. were interested in heavier averages of buff calf.

Tanned goat and sheep were steady. The tanners' efforts to obtain higher prices slowed down export sales.

The next tanned skins London auctions take place on the 13th inst. when 120,000 skins each of goat and sheep will be offered for sale.

Shipments during the month of February were: 1,114 bales tanned cow hides, 81 cow calf, 36 buffs, 239 buff calf, 107 goat and 140 sheep to the U.K.; 6 cow hides, 71 cow calf, 61 buff calf, 464 goat, 203 sheep, 94 buffs, 185 buff calf, 144 goat and 6 sheep to the U.S.A.; 7 goat and 214 sheep to Japan.

It will be noticed that the quantity of cow hides, goat and sheep skins exported to the U.K. last month were very small.

NEW EXCISES ON METALS

(From Our Own Correspondent)

CALCUTTA, *7th March*

The levy of excise duty on copper and zinc products at Rs. 300 per metric tonne in the case of sheets and circles, and 10 per cent *ad valorem* in the case of pipes and tubes was the main talking point in the metal market during the week under review. As the budget proposals were available, there was much confusion as to whether the levy was on all copper alloys and if alloys denoted those having 50 per cent or more copper content. However, it was soon known that the levy was only on zinc sheets, copper and brass pipes, and copper strips and flats. Since all hollows of copper and brass are subjected to duty, it has been interpreted that gunmetal bush castings of a hollow nature, despite their insignificant length, are liable for duty. Considered against the present development of the non-ferrous metals industry as a whole, the rates of the duty are thought to be too high. This industry is in an infant stage, and it will take several years before it can be compared with other industries such as chemicals, toilet preparations, cotton textile industry, vegetable products, paints and varnishes, tobacco and tobacco manufactures, etc. The consensus of opinion in the market is that the industry should be spared from excises at least for some time more to come. If duties should be levied they are to be at a much lower rate. Excise duties once introduced would only be revised to higher and higher rates from time to time. Market circles point out that the best that can be done now is for Parliament to seek for smaller rates, if not dropping the proposal altogether.

A steady trend was in evidence in the metal market during the week under review. Copper scrap continued to be in short supply. Electrolytic zinc and tin were firmer. Lead continued to be quiet and unchanged. The fall in the price of electrolytic copper to £225½ per ton from £227 on the London Metal Exchange was noted. Tin in London was irregular, as, after the fall to £800½ per ton from £801 the price rose to close at £802½.

FOODGRAINS DECLINE

(From Our Own Correspondent)

HAPUR, *6th March*

A downward trend in prices was witnessed in the foodgrains market during the week, thanks to prospects of bumper *rabi* crop and heavy stocks with the Government. The last *Sawani* crop was also fairly heavy. Wheat here eased by about 50 nP a maund to be quoted on Monday at Rs. 16.25 a maund for average quality, while superior farm produce was quoted at Rs. 17.50 a maund. The wheat imported from the Punjab was also quoted at Rs. 17.50 and that sold by the U.P. Government, being of inferior quality, was being lifted at Rs. 16 a maund. Daily arrivals of wheat in the market were poor at an average of 50 to 75 maunds, but demand was being met from Government-sponsored ration shops. Crop prospects were very bright as a result of favourable weather conditions and harvesting of wheat was expected to begin after one month.

Superior quality rice improved fractionally during the week, but inferior quality was almost stagnant. New rice was still reaching the markets of the producing areas of east U.P. The week-end prevailing prices here were: rice *sela* Rs. 28 to Rs. 30; *basmati kutcha* Rs. 33; *ramajwayan* Rs. 24; *raimunia* Rs. 25.50 and *gainda* Rs. 20 a maund.

Gram eased by 37 nP a maund during the week to Rs. 15.75 to Punjab variety, although local stocks left were poor at 2,000 maunds, but poor demand in face of good crop prospects was the main influencing factors. Barley and *bejhar* were nominally quoted at Rs. 12.50 and Rs. 12.87 to Rs. 13 per maund, as stocks left at fag-end of season were meagre. Maize stocks were poor at 2,000 mds., but prices eased fractionally to Rs. 13.25 to Rs. 14 a maund. *Bajra* continued unchanged at Rs. 14.87 to Rs. 15.12 a maund, with poor stocks left with trade. *Jowar* white was quoted at Rs. 12.87 and brown at Rs. 12.37 a maund and *guwar* continued to be quoted at Rs. 13.25 a maund.

Pulses were featureless during the week in the absence of any developments. Stocks of peas and

arhar were poor. Demand, too, was almost dormant. Crop prospects, however, were very bright and harvesting of early peas would begin by the week-end and new grain would reach the market by mid-March. Latest prevailing prices in the local market (in rupees per maund) were: peas *dara* 12.87; farm 13.12; peas *dal* 14.12; *arhar* 13.25; *arhar dal* 16.50 to 17; *urd* 19.87; *urd dal* 23; *moong* 21; *moong dal* 24; *massor* 13; *massor dal* 14.25.

SUGAR DEPRESSED

(*From Our Own Correspondent*)

HAPUR, *6th March*

Sugar was quietly depressed during the week, as, contrary to earlier expectations, the budget proposals did not cover any increase in excise duty. Despite Government's efforts, sugar export prospects were not very clear. Production of sugar was continuing in almost all the factories and was expected to touch new heights this year. Week-end prevailing prices here were: Rs. 111.25 per bag and retail Rs. 1.09 per *seer* in open market.

After an early rise on revival of hopes of exports to the U.S., coupled with rumours of an increase in excise duty, sugar declined by Rs. 1.50 to Rs. 2 per bag in the Muzaffarnagar market towards the week-end. The absence of any increase in sugar excise in the Union budget was the main influencing factor for the fall in sugar which was quoted at Rs. 108 to Rs. 109 per bag, very near to the controlled price. Old damaged moist sugar sold by State Government's order was quoted low at Rs. 103 to Rs. 105 per bag.

Following brisk demand from Rajasthan on rumours of an increase in sugar excise duty, *khandsari* improved by Re. 1 to Rs. 2 per maund but eased by about 50 nP after the announcement of budget proposals. Daily arrivals of *khandsari* in the Muzaffarnagar market were about 4,000 to 5,000 maunds and the stock was put at 70,000 maunds. Production is still being continued and week-end prevailing prices were: inferior Rs. 25 to Rs. 30; superior Rs. 31 to Rs. 34.25; crystal Rs. 33 to Rs. 36; *Boora* Rs. 33 to Rs. 36; *galawat* Rs. 17 to Rs. 21; old stuff Rs. 23 to Rs. 26 a maund.

Ready *gur* ruled quiet during the week. Arrivals which were small in the earlier part of the session due to *Holi* festival, increased and were now about 2,000 to 2,500 mds. daily. Demand was reported to be poor and, apart from Sunday which was being recorded as free loading day, loading on all other days was completely restricted. Offtake on Sunday was twelve wagonloads. Local stock mounted to 60,000 mds. the corresponding figure last year being 35,000 mds. Total arrivals here during the current season were however small at 4.45 lakh maunds, as against 5.45 lakhs maunds in the corresponding period of last year and 5.25 lakh maunds in 1959. Latest prevailing prices were: *pansera* Rs. 13.25 to Rs. 13.50 and *shakker* Rs. 15 a maund. *Pansera* was quoted at Rs. 16.50 on the corresponding date of last year and Rs. 17.25 a maund in 1959.

In the Muzaffarnagar market, *gur chaku* continued to rule steady at Rs. 14.50 to Rs. 16 a maund on brisk buying support from Gujerat, M.P. and Punjab. *Pansera* improved fractionally with restricted arrivals and good demand. *Shakker* advanced by 50 nP a maund on good Rajasthan and Punjab support. Arrivals during the week were 45,000 mds. and prevailing prices were: *pansera* Rs. 14.37 to Rs. 15.50; *laddo* Rs. 14 to Rs. 15; *shakker* Rs. 15 to Rs. 19 according to quality.

Gur biaskah delivery moved both ways. Opening at Rs. 14.17 last Monday, it declined to Rs. 13.96 on 1st March as sugar excise was not increased, but then spurted to touch new heights on vigorous bull support after formation of bull syndicate of operators in Northern India markets and touched highest at Rs. 14.63. It is presently quoted at Rs. 14.40, due to profit-taking at highest level.

Sowing of cane is being done vigorously.

WORLD FACING LIQUIDITY CRISIS?

(*Concluded from page 421*)

their currencies and avoid necessities for exchange and import controls as methods of keeping their international accounts in order.

A New World Money

In the United States there is a natural sympathy for the point of view that there is an international liquidity problem. We heard so much so long about "dollar shortages" abroad. And now the succession of balance-of-payments deficits—acting to enlarge reserves abroad—has led to an important decline in the U.S. gold stock and a worrisome increase in short-term liabilities to foreigners. As President Kennedy has pointed out, "the United States has a strong solvent position" in any reckoning of international assets and liabilities. Nevertheless it is somewhat painful to recognise that there are limits to what we can afford to spend abroad as a nation. The temptation is great to unload our gold and foreign short-term debts onto the shoulders of some kind of X.I.M.F., accepting a point of view expressed in *The Economist* that:

> . . . the long range problem is to take on the uncompleted work of Bretton Woods by altering the dollar exchange standard so that the ability of the United States to follow an independent monetary policy is never again in doubt.

The proposal for a new world money—X-dollars—suggests a further probing among monetary students for ways around recurrent shortages of gold. Professor Triffin's scheme calls to mind J. M. Keynes' proposal in 1943 for a new international money to be named "bancor" and to be issued by an International Clearing Union. Keynes accepted the alternative of the I.M.F. and urged approval of the I.M.F. plan as "the exact opposite of the gold standard." Whatever this was intended to mean, it did appeal to British desires to keep freedom from the discipline of gold.

Under Keynes' plan, gold would have been acceptable in exchange for bancor but bancor would not have been exchangeable for gold. In other words, gold would be drawn away from use of central banks just as, in the United States and elsewhere, it has been drawn away from use by the citizen. Paper credits in bancor would have constituted the means for financial settlements among the nations.

The bank could never go broke because its obligations—bancor—would be inconvertible. Individual countries could have their financial crises—if the bank saw no other way to get them to face facts and straighten out their finances. But the bank would always be free to create more money at its own discretion. The world's gold—disparaged by Keynes as a "barbarous relic"—would be accumulated and put back in a specially constructed mine.

This always seemed a devious way to cut loose from gold and also wasteful since people could find uses for the metal in protecting themselves from paper money inflation. It is this quality of gold that so far has required some tie of world monies to gold. Some governments have found it necessary, at times, to offer the metal on their free markets, to protect confidence in paper. This is the ultimate need for a national gold stock.

Cutting Loose from Gold

The X.I.M.F. would be less neat than Keynes' Clearing Union in cutting loose from gold. Encumbered by a network of gold guarantees, it would offer member nations a right to redeem, in metal, deposits in excess of minimum requirements. But risk of insolvency from this side could be avoided by the expedient of raising to 100 per cent the proportion of official reserves required to be kept on deposit with X.I.M.F. Carried to this logical extreme, the member countries would be required to turn all their gold over to X.I.M.F. and be denied rights to hold any at all. The X.I.M.F., with a vast gold hoard as a facade of security, would issue inconvertible paper money, lending it out to member countries on a basis of calculated need and with special attention to underdeveloped countries. The only way a member nation could keep a gold reserve would be to sell it out of official reserves into the hands of its own citizens.

With gold gone as a limit upon currency issues, the value of money would come to depend upon the will of the X.I.M.F.'s management. In the judicious exercise of their powers they would need to pass judgment on spending and borrowing decisions of governments the world over. Whether proud nations would ever consent to such an unprecedented concentration of money power seems dubious.

In any case it is the United States, architect and financier of post-war reconstruction, which has the most at stake. Adoption of X.I.M.F. would seem a confession of inability to keep a dollar that people can trust, the world over, as a standard of value.

Yet any X.I.M.F., and its X-dollars, still would have to rest on the integrity of American fiscal and monetary policies. As the distinguished scholar, Dr. Alexander Sachs, comments: "The Triffin Plan is a venture to establish an Esperanto currency. It will no more succeed than efforts of the past half century to spread an Esperanto language. Only a living language can become an international language. Only a successful mighty currency can be an international currency."

One of the allures of the X.I.M.F. is that it would offer to pay interest on deposits protected with gold guarantees. But gold is a sterile asset. To rely on a gold clause is to take a credit risk for there is no such thing as interest-bearing gold. Thus, anyone who would believe that the elaborate system of gold guarantees embraced in the X.I.M.F. could have tangible meaning over an indefinite future would only be practicing self-deception.

An International Conference?

Voices are heard commending the idea of an international conference to deal with all these questions. The vital thing, initially, is to obtain broad areas of common understanding among the nations which embrace the main money markets of the world. The proposed Organisation for Economic Co-operation and Development (O.E.C.D.), now before the Senate for ratification, could provide a useful forum for this purpose. It will include, besides the old 18-nation O.E.E.C. group, the United States and Canada.

The most sensitive question is the relationship of the U.S. dollar to the precious metals. There are many ambiguities to be cleared up, including the one of definition: are we on a gold standard or not? Should the free markets in precious metals be suppressed or liberalised?

U.S. Treasury policy puts us on a limited gold bullion standard. On the other hand, we may read in the April 1960 *Business Review* of the Federal Reserve Bank of Philadelphia that: "By Executive Proclamation on 4th March, 1933, the United States officially left the international gold standard." In the same *Review* we are reminded that "society will not permit gold movements to dictate domestic economic policy." Yet gold today is in fact influencing domestic economic policy, advising against fiscal extravagance and excesses of cheap money to get us out of a slump.

Certainly, as William Jennings Bryan prematurely advised, back in 1896, we must not "crucify mankind upon a cross of gold." But of this there seems to be little present danger. What the gold outflow has done is communicate a sense of hard reality to the need to keep our house in order. It is easier to accept this warning from an impersonal metal than from a council of financial dictators gathered in an X.I.M.F.

Notices

UPPER GANGES SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-eighth Annual General Meeting of the Upper Ganges Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Monday, the 27th March, 1961, at 4 p.m., for the following purposes:—

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1960.
2. To declare Dividends.
3. To appoint a Director in place of Shri R. K. Kanoria who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

By Order of the Board,
S. N. GUPTA,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA-1, *the 22nd February,* 1961.

Notes:—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

2. Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

3. The dividends, when declared, will be payable to the registered shareholders as on the 27th March, 1961.

4. The Register of Members of the Company will remain closed from the 17th March, 1961 to the 27th March, 1961, both days inclusive.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

ANNOUNCEMENT

THE ANNUAL GENERAL MEETING OF THE Members of the Company will be held on Wednesday the 22nd March 1961 at 2.30 p.m., at the Registered Office, 34 Chowringhee, Calcutta, 16.

Notice of the Meeting together with the Annual Report and Accounts have already been posted to the Shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 18th March 1961 to 22nd March 1961, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED,
Secretaries.

1st March 1961.

THE GWALIOR SUGAR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will remain closed from the 15th day of March 1961 till the 30th day of March 1961, both days inclusive, in connection with the Annual General Meeting of the Company to be held on the 30th March, 1961 at the Registered Office of the Company at Dabra (Madhya Pradesh).

By Order of the Board,
For THE GWALIOR SUGAR COMPANY LTD.,
J. COOMAR,
Secretary.

Karachi (Pakistan)— Receipts	1st Sept. to 9th Feb. 1960-61	660,970
	Corresponding period, 1959-60	706,047
Exports	1st Sept. to 9th Feb. 1960-61	294,196
	Corresponding period, 1959-60	291,766

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page* 411)

higher levels of silver prices eventually, in view of the upward trend of demand (without compensating increases in new production), following the persistent expansion in world economic conditions. To quote them: "Additional sources of secondary silver presumably will appear only at more attractive prices, and the natural forces of supply and demand will inevitably exert their influence on the market."

The forecast that the long-term outlook for silver is bullish appeals to commonsense. The experience of the past few years shows that world silver consumption has been well ahead of new production. Actually, the gap between the two has widened lately; it was 116.8 million ounces in 1960, as against 115.0 million ounces in 1959 and 64.3 million ounces in 1958. The total free world consumption of silver in 1960 was 319.3 million ounces, representing a rise of 20.3 million ounces as compared with 1959 and 49.3 million ounces as compared with 1958. As against this level of consumption, the quantity of newly mined silver in 1960 was only 202.5 million ounces. Although this was higher than the previous year's output of 184.0 million ounces by 18.5 million ounces, it was below the production in 1958, namely, 205.7 million ounces. The country-wise breakdown of free world silver production and consumption during 1960 is given below (figures in brackets relate to 1959 and 1958, respectively):

(In million ounces)

Production: Mexico 44.0 (44.1—47.6); U.S.A. 39.0 (23.0—36.8); Canada 32.5 (31.9—31.2); Peru 25.0 (24.8—25.9); Bolivia 5.0 (4.5—6.1); other South and Central American countries 7.0 (6.9—7.2); outside the Western Hemisphere 50.0 (48.8—50.9).

Consumption: *Industrial uses*: India 1.5 (2.0—3.3); U.S.A. 100.0 (103.0—85.0); Canada 4.2 (4.4—4.6); Mexico 4.0 (5.4—4.4); U.K. 16.5 (17.5—14.8); France 13.0 (10.6—14.1); West Germany 40.2 (33.3—31.1); Japan 21.6 (13.6—8.2); other countries 25.0 (25.0—25.0); total industrial 226.0 (224.8—190.5); *Coinage*: U.S.A. 46.0 (40.6—38.2); Canada 7.5 (5.7—4.7); Mexico 2.6 (1.4—2.2); France 12.2 (6.4—nil); other countries 25.0 (30.0—34.4); total coinage 93.3 (84.2—79.5).

The total free world consumption of silver during 1960, as already noted, was higher at 319.3 million ounces, as against 299.0 million ounces in 1959, representing a rise of 20.3 million ounces or 7 per cent. The rise was accounted for by both industrial uses and coinage purposes. The former increased by 5 per cent to 226.0 million ounces and the latter by 11 per cent to 93.3 million ounces. In both categories, nearly half the increase was noted in the U.S., where consumption of silver for coinage was larger by 5.4 million ounces.

Newly mined silver is only one source of supply. The other sources, with figures in brackets referring to their actual contribution to supply in 1960, are as follows:

Demonetisation of coins (10.0 million ounces), U.S. Treasury free silver (67.5 million ounces), official stocks of other countries (12.0 million ounces), sales by Communist China (9.7 million ounces) and miscellaneous (17.6 million ounces).

Reviewing the silver market in Bombay, Messrs. Handy and Harman observe that this market is almost completely an internal market, due to import and export restrictions. Silver prices were higher than in other centres, and the volume of business was restricted. In terms of U.S. currency, quotations ranged from a low of $1.18 per troy ounce on 20th January to a high of $1.29 on 9th November. Total consumption in India amounted to about 45 million ounces. Receipts of Tibetan coin, according to the U.S. firm, appear to have dwindled to insignificant quantities, owing to the trouble between India and China. The quarternary silver rupee coins are still in the process of being withdrawn, and about 20.00 million coins were retired since the last report. This would leave a balance of about 340.00 million coins in the hands of the public with an estimated silver content of 63.50 million ounces.

The U.S. made further progress last year in receiving back lend-lease silver. By the end of 1960, it had received 379.3 million ounces out of 410.8 million ounces it had lent. India, the largest beneficiary of lend-lease arrangement, had returned the entire amount of 172.5 million ounces. Only Saudi Arabia and Pakistan have outstandings, the former of the order of 21.3 million ounces and the latter 9.2 million ounces. Pakistan, which has already returned 44.3 million ounces, has agreed to settle the balance in two more equal annual instalments. Arrangements are under way for the settlement of Saudi Arabian obligation.

Changes in U.S. Monetary Policies

The most perplexing problem facing the Kennedy Administration today is that of checking the recession and initiating a process of rapid expansion in industrial production, employment and national income. In spite of some signs of improvement in the economic situation, industrial production slipped another point in the month of January and new orders for durable goods have continued to sag. Unemployment also has increased to 5.4 million, of whom 1.3 million persons are reported to have been out of job for as many as fifteen weeks or more. Trade even in the heavily populated regions is still depressed.

It is no wonder then that, in the face of these distressing facts, the major preoccupation of President Kennedy's economic advisers is to initiate measures which will bolster up business confidence and usher an era of sustained prosperity. By far the most important monetary remedy suggested by the new administration for this purpose is the familiar device of increasing the supply and cheapening the cost of credit without unduly cheapening short-term interest rates and thereby encouraging movement of hot money to other countries. Under the Eisenhower Administration, the Federal Reserve Bank discount rates were cut in June last, and, in the second half of 1960, the Federal Reserve Bank changed the cash reserves requirements of the member-banks with a view to adding substantially to the banks' lending capacity. But the low short-term rates spelt certain undesirable repercussions on the balance of payments. In his message on economic recovery and growth early last month, the President himself very succinctly outlined the goals of monetary policy, namely, achieving economic recovery and checking at the same time the flow of short-term funds to foreign countries. Mr. Kennedy suggested that long-term rates should be induced to decline for domestic purposes, but that further drop in short-term rates should not be allowed; if possible, they should be kept up at a little higher levels.

In order to achieve these policy objectives and to impart firmness to short-term rates, the Federal Reserve Bank has decided to supply bills whenever market demand tends to drive the yields down towards 2 per cent. Secondly, for supplying additional funds to the money market, the Bank is depending on buying less of short-dated Treasury Bills and more of short-dated Treasury certificates, notes and bonds. The Treasury, too, has been working towards the same end and has added some $500 million to the supply of Treasury Bills.

But this policy of maintaining firmness in Treasury Bill yields seems to have brought about some undesirable consequences. When short-term money rates are high, the Corporations have less incentive to keep money in demand deposits with the banks. In due course, therefore, the effect would be less resources with the member-banks and their power of lending would be hampered.

Another controversial issue has been raised by the Kennedy Administration's desire that the Federal Reserve Bank should, once again, resume the practice of dealing in long-term U.S. Government bonds. It will be recalled that, after a period of sharp controversy between the Treasury and the Federal Reserve Bank, this practice was suspended in 1951 and the Federal Reserve Bank completely stopped the transactions in bonds by 1953. One of the top advisers of the present President, Mr. Allan Sproul, is, however, of the view that such operations should be resumed. In his report, Mr. Sproul has argued that "action to provide bank reserves through purchases of short-term securities (as has been done by the Eisenhower Administration) may magnify declines in money market rates of interest and provide an undesirable incentive for short-term funds to move abroad." His report further maintains that there are occasions when it is necessary to exert some influence directly on long-term rates of interest by way of open market operations. While these discussions are proceeding in the highest quarters, the Federal Reserve Bank has already announced (on 20th February 1961) its decision to purchase U.S. Government notes and bonds of varying maturities. Some money market observers, however, have expressed doubts whether the Bank would be able to get sufficient amount of U.S. Treasury securities around the existing price levels. They, therefore, feel that this operation will drive up bond prices and bring down yields. The very expectation that, over a period, the yields on long-term bonds will go down will lead to speculative buying and quick capital gains to speculators. But the authorities, it is said, are alert to these perils and the Bank would make only occasional small purchases to tone up the firmness of the bond market.

NEW COMPANIES FORMED

Over 5,600 new companies have been formed since the enforcement of the Companies Act in April 1956, according to the latest data made available by the Department of Company Law Administration. In the calendar year 1960 itself, a record number of 1,641 new companies, with a total authorised capital of Rs. 288 crores, were registered all over the country, as against 1,399 new companies, with a total authorised capital of Rs. 169 crores, registered in the preceding year, that is, 1959. The authorised capital of the 5,638 new companies registered between April 1956 and December 1960 aggregated Rs. 983 crores. Of the total registrations, 406 were public companies and 5,232 private companies.

The new company registrations during this period accounts for about one-fifth of the total number of companies at work in the country.

The total paid-up capital of the companies at work increased by about Rs. 625 crores between April 1956 and December 1960. Of this increase, about Rs. 425 crores were in the Government corporate sector.

Of the new registrations in 1960, 141 were public companies, with authorised capital of Rs. 158 crores. The other 1,500 companies were private companies and had a total authorised capital of Rs. 130 crores. The States of West Bengal, Bombay, Madras and Delhi accounted for the bulk of the new registrations in 1960. Statewise, 418 new companies were registered in West Bengal, 397 in the Bilingual State of Bombay, 335 in the State of Madras and 184 in the Union Territory of Delhi. Of the new registrations in 1960, as many as 81 companies had an authorised capital of Rs. 1 crore or more. As regards the forms of management, 1,038 companies have proposed to be run directly by the board of directors and 574 companies managed by managing directors. Only 22 companies expressed themselves in favour of appointing managing agents. The number of companies chosen to be managed by secretaries and treasurers and managers, was three and four, respectively.

WEEK'S STOCK EXCHANGE TREND

Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2606 BOMBAY, 18th MARCH 1961 PRICE Rs. 2

A CRITIQUE ON INDIAN PLANNING

A MASTERLY critique on the country's economic planning has just been published by the Associated Chambers of Commerce of India, Calcutta. The author of this study is Sir Theodore Gregory, who, as Economic Adviser to the Government of India between 1938 and 1946, had something to do with the planning effort of the later years of that period, when the late Sir Ardeshir Dalal was the Member in charge of the portfolio. As one who has attained eminence on economic and financial matters and handled similar assignments in some other countries, Sir Theodore has tackled the subject of Indian planning with perceptivity and realism and done ample justice to it within the general framework of the terms of reference determined by the sponsors of the study. In the result, he has covered a vast field pertaining to the principles and progress of planning, agricultural development, balance of payments in the light of long-term foreign commitments, deficit financing and its effects and, above all, the contribution of the private sector to economic growth, with special reference to that section of it which is based on foreign enterprise. It in no way detracts from the value of his report, which carries the most appropriate title, *India on the Eve of the Third Five-year Plan*, that it has dealt with only some aspects of that Plan. If anything, its greater merit lies in its stimulating and positive contribution to the general thinking on the Plan.

This thought-provoking character of Sir Theodore's study is discernible even in the preliminary phase of his analysis. There is, for instance, his interpretation that the "Harrod-Domar" Model of economic growth, based on the concept of the "capital output ratio," and the "Rostow" Model, laying down the "take-off" stage for more or less automatic growth, have something of a Marxian determinist quality about them. The cocksure presentation of the idea in growth economics that, "if any economy desires a higher rate of growth of national income, *then all that it has to do is to manipulate economic forces* in such a way that both the proportion of savings and the average productivity of capital are raised," is too much for Sir Theodore Gregory, who rightly asks: "What if economic forces prove to be of a kind, in whole or in part, which are not amenable to manipulation?" His scepticism, almost bordering on iconoclasm, cannot be lightly dismissed as cynicism, for one of his pregnant sentences, carrying with it that rare attribute of perceptiveness, is as follows:

"...reformers and planners are apt to be impatient people, and, faced with the tangible facts of the Indian situation, poverty and unemployment in particular, it is not difficult to understand why 'Models' of the kind discussed above, with their implications of inevitability, should lead to an emphasis on authoritarian methods of achieving acceptable ends."

Sir Theodore does not doubt or underrate for one moment the devotion and the public spirit of those directly responsible for the task of formulating and implementing the successive phases of planning in India. What he means, on the contrary, is that, whilst the concepts of the present-day growth economics "do not *necessarily* lead to forcible methods of planning, they *encourage*, unless carefully interpreted, action of such kind." There is in all this no insinuation to the effect that Indian planning, as of today, partakes of the characteristics of totalitarian planning. His meaning should become clearer when some of his reflections on planning at the end of the report are taken into account. Here the emphasis is on such factors as truthful propaganda, practicability of particular plans, avoidance of arbitrary interference with the private sector "in all kinds of detailed ways," and pragmatism and flexibility in the application of industrial policy—all of which will further strengthen the democratic character of Indian planning. The relevant observations deserve to be quoted *in extenso*:

"The practical conclusions to be drawn are that propaganda in India should be severely truthful; that no advantages arise from drawing up plans which are not capable of realisation, and that insufficient attention has been paid to explaining to the Indian people as a whole what are the kinds (and consequences) of totalitarian methods employed to bring about the results which some, if not all, Indian intellectuals stress without harping upon their dehumanising and debasing character...

"So long as the official policy of the Government of India is adherence to the 'socialist pattern of society,' these extensions of State activity in the sphere of productive enterprise are probably unavoidable: it does not follow that they are necessary in the light of the fundamental objective of raising the standard of living and the productive potential of the country. There is no reason why the principle of joint undertakings by private enterprise and the State should not be extended: nor why 'State' enterprise, if successful financially, should not be offered to the investing public, nor, indeed, why further encouragement should not be given to direct borrowing by private enterprise—with a Government guarantee if necessary—from institutions such as the World Bank and its affiliated institutions.

"In any case, the danger to economic and political liberty arises ... far more from unnecessary and arbitrary interferences with the 'private sector' in all kinds of detailed ways (such as under some sections of the Industries Act bearing on management, supply and price of certain articles, etc., under the Essential Commodities Act, under the Companies Act of 1956, and under the Tariff Commission's price 'determinations,' from 'State Trading' and from the indirect political pressures that may arise from Community Development Schemes and from possible experimentations with 'co-operative farming' projects. It is in *these* directions, and not in the State ownership and operation of coal mines or of steel or machine-tool plants, that a real threat exists."

These observations are perfectly understandable in the context of Sir Theodore Gregory's basic proposition that, while "planning in some form must and will continue," there is room for doubt on the issues of detailed priorities and relative magnitudes and of general direction and execution of plans. Moderation is not necessarily conservatism, nor need planning involve increasing State intervention of an exasperating character in economic affairs. A freer role for private enterprise may well impart greater dynamism to the mechanism of production, resulting in a larger rate of economic growth. If Sir Theodore Gregory's approach can be interpreted in this manner, his detailed analysis of the inhibiting factors in the situation has a compelling logic of its own. While there is no threat of general nationalisation in the present situation, there is at least the inhibiting factor of what Sir Theodore calls "the *doctrinaire use of existing powers by the State*" in four leading cases, namely, the future growth of the manufacture of motor cars, the future relation between the oil industry and the Government, the future of road transport undertakings, and the role of the private sector in the coal industry. Since the automobile and oil industries are in the fortunate position of being able to secure the collaboration of financially powerful firms abroad and can, therefore, help to meet the scarcity of financial resources in India, the Government's doctrinaire approach in these fields is tantamount to folly. Such an approach, to the extent it prevails in particular fields, is a negation of the "pragmatic approach" which, though vaguely accepted by the Planning Authorities of today, is yet to be spelt out in all its bearings. What this "pragmatic approach" could and should mean has been admirably expressed in one of the finest passages in Sir Theodore Gregory's report:

"Firstly, it may mean that there is no longer an *a priori* assumption (as there was in the first and second Plans) that there must be a 'progressive widening' of the scope of the public sector. Secondly, it may mean that *the choice* of whether a *particular* productive operation is to be carried on by the State or by private enterprise is a matter of expediency in the sense that the advantages and disadvantages of either alternative must be weighed against one another. But, if this is so, it means, also, that the existence of a mixed economy is no longer to be regarded as a mere temporary and transitional stage, but as a *permanent* feature of the Indian situation. Thirdly, given that the existence of the private sector is likely to be permanent, the emphasis has shifted from speculation as to what *should* in contradiction to what *does*, motivate the business classes, to a consideration of what they can *do* in the way of increasing productivity and of improving the efficient working of the economy. From this point of view, it does not matter whether the business classes desire *only* to make a profit or whether they are also moved by other motives as well; pride in achievement, desire for prestige and a desire to serve the country. What matters are *results*: not motives. It may be 'reprehensible' to desire to make profits—though it is now becoming fashionable to harp upon the profit-making possibilities of the new State industries—but whatever the motives that impel the business classes, it is quite certain that the private sector cannot exist without making profits. And, if the *private sector is not merely to be tolerated*, but

accepted as a permanent feature of the landscape, profits must also be accepted as an indispensable proof of success in achieving ends.... The 'pragmatic approach', if it were officially and explicitly accepted, though in welcome contrast to dogmatism, would not, in and of itself, settle the concrete issues, but it would profoundly modify the manner in which they are handled."

What obtains today, under the Industrial Policy Resolution of 1956, can only be described as a "halfway house" between the purely dogmatic and the purely pragmatic approaches. This, perhaps, accounts for the confusing and contradictory interpretations to which parts of this resolution are subjected from time to time. Even in this "halfway house," things are by no means easy for private business which has to refer to a multiplicity of organisations for specific authorisations for specific purposes—for establishing or extending an enterprise, or widening the scope of its activities, for obtaining import licences, for capital issues, for securing foreign exchange, and so on. These occasion much expense and delay, especially where businessmen in the main industrial and commercial centres like Calcutta, Bombay and Madras have to await the "last word" from Delhi. What is still worse, the present mechanism of controls (under which direct controls on prices cover commodities which have nearly 25 per cent of the total weightage in the wholesale price index and influence, directly or indirectly, about half the weights in the index) is constantly disturbing the relationship between the production of certain commodities which are being price-controlled and that of other commodities which are not price-controlled. Given rising costs, a fixed price for a product also works in inequitable fashion in the sense of inadequacy of profit-margins. These, then, are some of the "detailed ways" in which official interferences with the private sector take place and act as a drag on its further growth and expansion. In calling pointed attention to this inhibiting factor, Sir Theodore Gregory has given the finding that the present degree of control on the private sector is really not necessary even in the given context of a planned economy.

The growth potential of the private sector will be greater still if other related elements of Sir Theodore Gregory's approach are given the consideration they undoubtedly deserve. The need for curbing the State's monopoly power which, as in the case of S.T.C's trading in cement and of the Steel Equalisation Fund, is exercised to secure extra-Parliamentary sources of taxation, is one of them. There is, secondly, the case for reducing the incidence of direct taxation, so as to encourage the process of "self-financing" of the organised industrial sector. The suggestion for reviewing the whole issue of monetary policy so as to achieve relative price stability has also been emphasised by Sir Theodore Gregory. The issues bearing on deficit financing, credit-expansion and interest rates are approached here as much from the point of view of maintaining a climate of monetary stability so very necessary for attracting foreign private investment as from that of avoiding inflationary distortions all round. It is in this context that Sir Theodore has considered it necessary to utter a note of warning about the likely lag between intent and performance in the third Plan.

E.C.A.F.E. SESSION

THE seventeenth session of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.), which began at New Delhi on 8th March 1961, has so far discussed a number of subjects covering the complex gamut of Asia's economic and social problems. The discussions pertaining to economic situation, regional economic co-operation, trade, industry and natural resources, and transport and communications were based on appropriate reports drawn up for the session. By far the most important discussion centred on the economic situation in Asia. The basis for this discussion was provided by the *Economic Survey of Asia and the Far East* 1960, which was covered in this journal last week, and the discussion itself was notable for the contributions made by the representatives of the U.K., the U.S.A., and the U.S.S.R. in particular. As these are the most significant countries which have been aiding Asian development, the speeches of their representatives at the E.C.A.F.E. session partook of the characteristics of policy pronouncements on behalf of their respective Governments. The Duke of Devonshire, Parliamentary Under-Secretary of State for Commonwealth Relations, for instance, reiterated the U.K. Government's policy of assisting the underdeveloped countries and gave the pledge that this would be continued, though the demands on Britain's resources were growing faster than the resources themselves. Already, within the E.C.A.F.E. region, Britain's commitments by way of capital aid and technical assistance in the past ten years had reached £170 million, and the annual rate of capital expenditure for development purposes had risen to £45 million in 1959-60; this did not include private investment which must have been much greater. The Duke was confident that, in spite of the unsatisfactory position of the U.K.'s balance of payments, maximum possible assistance would continue to be provided to the less developed countries even while maintaining the strength of sterling.

The British delegate's speech was also notable for its balanced approach to Asian economic conditions and requirements. The need to stimulate investment, to increase exports and to mobilise domestic resources, according to him, will be as real in ten years' time as they were ten years ago, for outdated techniques, insufficient numbers of trained people in administration, management and production, and shortage of food are deficiencies that cannot be remedied overnight. The less developed countries in Asia will have to tackle some baffling and intractable problems, namely, how to strike a balance between the ever competing and often conflicting demands on national resources—demands for both social improvement and economic growth—and how to overcome domestic instability and external imbalance which occur when the movement towards economic development has to take place against a background of increasing populations. The population problem, incidentally, is already acute in South and South-East Asia alone, with their 765 million people, and will be even more acute by 1980 when there will be a billion mouths in the region. The Duke of Devonshire in presenting these and other problems of the E.C.A.F.E. region, could only say in broad terms that they would have to be solved by co-operation both between the countries concerned and between them and the industrialised nations. The elements of such co-operation between the E.C.A.F.E. countries themselves, in the British delegate's view, would be exchanges of technical information and of training facilities and other practical measures of mutual assistance, for the forms suitable for European countries grouped in the E.E.C. and the E.F.T.A. may not necessarily be the most effective in an Asian context. As for co-operation between the E.C.A.F.E. countries and the industrialised nations, it will be more enduring and mutually beneficial when it is based on expanding trade and the less developed countries and those dependent on the export of a small range of primary commodities are able to sell more of their products at stable and remunerative prices in the expanding markets of industrialised countries. The Duke of Devonshire, who attached greater importance to trade than to aid as such, appropriately touched on the question of capital movement from the advanced countries to the less developed ones. His wise words, quoted below, would need to be seriously pondered:

> "I cannot emphasise too strongly the real, practical importance of creating a favourable climate for investment in the region so as to attract outside capital. Such emphasis is not just a way of trying to evade responsibility by a government anxious to reduce the calls upon itself. I am confident that the United Kingdom's record is an adequate guarantee against such an imputation. But risk-taking, experimentation with market possibilities, determination of the most efficient scales and forms of enterprise by pragmatic experience, the measurement of efficiency against the cost of assets employed—these are only some of the many advantages which constitute the major contribution of private business to development."

The Russian approach to Asian development, on the contrary, has always laid greater emphasis on bilateral aid than on trade. There is also no question of private capital investment in the context of co-operation between a Communist country like the U.S.S.R. and the E.C.A.F.E. region. So, whatever aid is given by Russia—it has so far granted a total of over two billion roubles worth of loans (in new roubles) to 14 countries of Asia and Africa—is Government-to-Government aid. Whether or not such aid has political strings attached to it, there can be no denying that it has the political objective of neutralising the influence of the other industrialised nations which have been assisting Asian countries. Otherwise, it is difficult to understand why the Russian delegate chose the E.C.A.F.E. forum to say that "one of the major ways of obtaining resources for speeding up the progress of the underdeveloped countries and for helping them to overcome their economic backwardness within the shortest period of time would be by implementing general and total disarmament." Reference to this controversial political issue at the E.C.A.F.E. session would have been more appropriate, if it had been made in its economic bearings by an uncommitted Asian country rather than by Soviet Russia which was deeply interested in securing propaganda advantage.

The United States delegate, Mr. Avery F. Peterson, was, therefore, in the right when he regretted that political and controversial issues had been raised during the proceedings of a purely economic commission. Still, it redounded to his credit that he conceded the economic significance of the disarmament question when he referred to the U.N. study, now under way, on the economic and social consequences of disarmament. While the United States has made immense contribution to industrial growth in the E.C.A.F.E. region, its role can no longer be so very outstanding as in the past, unless, of course, disarmament enables it to release greater resources for Asian development. But disarmament, if it is to come about, will depend almost entirely on the willingness of Communist countries to abandon their goal of world domination. Since all this is doubtful, the immediate prospects for expanded aid to the E.C.A.F.E. region as a whole are not excessively bright. If, in the alternative, trade between the region and the advanced countries of the West can somehow be expanded, it will be very good indeed. It is in this context that the U.S. delegate's reiteration of his Government's intention not to allow the country's deteriorating balance of payments position to be a pretext for returning to protectionism is to be welcomed.

Since both the U.S.S.R. and the U.S.A. are in no position to release vastly large resources for Asian development in the absence of disarmament, the accent in the years to come will have to be on private capital investment and expansion in trade. While it will be the responsibility of the Asian countries themselves to create the political and economic climate for attracting more foreign capital—in the latter respect India has still not done all it should and could—it should be the duty of the advanced countries to bring about a situation in which the underdeveloped or primary producing countries can improve their terms of trade with them. Since the import requirements of all the underdeveloped countries in the world are likely to go up from $20 billion at present to $60 billion by 1980, and since two-thirds of the E.C.A.F.E. region's total trade in particular are with the rest of the world, the key to future economic expansion in the region as a whole is to be found in a possible change in the pattern of international trade. Whether long-term contracting (as in the case of India's agreements with Japan for the supply of iron ore to the latter's steel industry, with Australia for the supply of bauxite to the latter's aluminium industry, and with the U.S.S.R. for the supply of some other products) represents a fruitful way of enlarging trade and laying a firm basis for development, is a question that has come up in this context. At the E.C.A.F.E. session, Mr. Satish Chandra, India's Deputy Minister for Commerce and Industry, expressed the view that long-term contracting would expand trading opportunities. This view seems to be sound, for such long-term contracting provides a reasonable guarantee to the primary producers and enables them to plan their production rationally and improve the quality and regularity of their export products. At the same time, a quantity-wise agreement of the kind, though on a long-term basis, does stipulate annual supplies and the prices to be settled from time to time and thus provides an elastic basis for both the exporting and the importing countries to adjust their plans and take advantage of world price levels. This technique of long-term contracting is illustrative of the possibilities of evolving a new approach to international trade so as to find a more natural way of financing the developing countries' requirements of imports and technical know-how from the advanced countries. Greater resourcefulness and creative thinking, rather than mere improvisations, are called for in this crucial field.

MARKET GOSSIP

E.P.T.—A Bad Tax

ONE of the major highlights of the four-day debate in the Rajya Sabha on the general budget was the suggestion made by some prominent members to revive the excess profit tax (E.P.T.). While airing the view that indirect taxation in the country had reached saturation point, Mr. Khandubhai Desai, a trade unionist and a former Labour Minister, said that the corporate sector had now reached a position at which it must be made to make a major contribution to the exchequer and suggested that the Government should reintroduce the E.P.T. Even an eminent member like Dr. H. N. Kunzru, known for his level-headedness, supported this plea. His justification was that the tax could be used to reduce the gap between the haves and have-nots. This demand was voiced in the Lok Sabha also and that too by two ex-Union Ministers, Mr. A. P. Jain and Mr. A. C. Guha.

The Finance Minister, Mr. Morarji Desai, has very boldly and rightly turned down the aforesaid suggestion. His assertion in the Rajya Sabha that this form of taxation would amount to penalising efficiency and enterprise showed his profound insight into the working of the excess profit taxes.

It is well known that two types of excess profits taxes can be conceived. E.P.T. is generally levied in times of war. The idea here is that the profits earned by a particular concern in war-time may be in excess of normal, in the sense that they are more than what were earned by the same company in times of peace. They may be abnormal in quite a different sense, too, namely, that they represent a higher rate of return on capital than is common in industry, or more than what is generally supposed to be a reasonable rate. This second type is called the high profit tax—a tax which may be levied in any contingency other than war, say, an inflationary period in a developing economy.

The point now at issue is whether excess profit tax of the second variety should be a normal feature of the tax system like income-tax and corporate tax. In the past, both war profit tax and high profit tax have been levied. Experience with the working of such taxes has shown that, whenever there is an active market in stocks and shares, the high profit tax falls to a considerable extent upon the wrong people. This happens because some of the original subscribers may have sold out their shares to the present holders at high prices, so that these new shareholders would be subjected to the penalty of higher taxation, even though they would not be securing any abnormal return on the capital they actually invested. Thus, the differentiation among concerns which the high profit tax imposes does not offer any rational basis for equitable distribution of the tax burden among shareholders of companies which are making excessive profits and of those which are not. The most effective method of taxing profits equitably is by a general proportional tax on profits, and this is exactly the function which the corporate tax is performing in the Indian tax system. The differentiation between low profits and high profits earned by companies should be properly introduced at the income stage, that is, when dividends are distributed and become liable to income-tax in the hands of shareholders.

No E.P.T., however carefully evolved, can achieve the objective of penalising the rich shareholders or those who secure an excessive return on their investment, because it is quite likely that investors holding shares of companies subject to E.P.T. may also belong to low-income brackets. Further, personal income taxation, based on the principles of progression, effectively takes care of bringing about a reduction in income disparities between individuals. And this is already being done with a vengeance in this country, where individuals in high-income group are subjected to highest rates of taxation in the world. In any case, E.P.T. is not an equitable instrument for reducing disparities among individuals, as Dr. Kunzru seems to think.

The Finance Minister was on firm ground when he stated that the proper time for excess profit taxation was only war. For, during war-time, a standard period from which the excess could be measured can be conveniently selected. If the tax is introduced immediately after the outbreak of war, the interval between the imposition of the tax and the base year can be fairly short, thus giving little opportunity for exchange of shares. In that case, the tax will fall on those who were the gainers from the windfall profits of war. In a developing economy, even though it may be subject to inflationary pressures, it would be difficult to devise an equitable excess profit tax, similar to war profit tax, because all the companies and industries would not be making high gains at the same time and there would always be the possibility of transfer of shares induced by expectations of prospective profits, all of which may not turn out to be correct.

Another powerful argument against the imposition of the tax is its adverse repercussion on the efficiency of production. Some restrictive effect is inherent in all taxes on profits. But the adverse effect of excess profit tax on efficiency and economy is more glaring. An excess profit tax is very conspicuous in damaging efficiency, because it falls with its full force upon all extra profits, including those that are deservingly made. Every business man knows that an additional enterprise means that capital of the company is exposed to an additional risk and such risk would only be undertaken if it is counterbalanced by some positive reward. And it is one of the most conspicuous drawbacks of E.P.T. that it cuts deeply into this positive reward.

E.P.T. is defective from another angle as well. It sets a premium on all kinds of wasteful expenditure. This follows from the fact that businessmen can spend money to suit their convenience at no cost to themselves, if they can satisfy the tax authorities that it is a genuine business expenditure. Experience all over the world has shown that this is not a difficult condition to fulfil.

Apart from the theoretical considerations against E.P.T. mentioned above, the fact is that there are not many industries in this country which are making abnormal profits. The ex-factory prices of several industries—coal, cement, iron and steel, textiles, paper, sugar, and staple fibre, to name only some—are strictly controlled by the Government. Then, there is compulsion on companies to provide for development rebate. On top of it, there is a capital gains tax on both companies and individuals. The ignorance displayed by some of the Members of Parliament on this point is shocking. And it is even more shocking to find that Mr. Khandubhai Desai (who pleaded for the reintroduction of E.P.T.) himself is guilty of this lapse. The State Trading Corporation is another device through which the Government has been trying to prevent excess profits in certain lines of trade also. Again, unlike in war years, world trade has become highly competitive and world markets are in favour of buyers, thereby ruling out the prospect of exporters and export industries making enormous profits. A lot of abnormal profit is, of course, being made in black markets. But it is for the Administration to catch the black marketeers, if they can. E.P.T. will be simply useless for this purpose. It will only strengthen their hands.

Needs of Tea Industry

"The Indian tea industry is the biggest producer of tea in the world; it is the largest employer of organised labour in the country; and over the last ten years, it has earned more foreign exchange for India than any other industry. Indeed, it is to the established industries like tea, jute, and cotton that so many of the new industries are indebted, for these three giants produce the bulk of the foreign exchange which is being used for the establishment of new undertakings and which will be used for the servicing of the debts which have inevitably been incurred." This was how Mr. N. S. Coldwell, Chairman of the Indian Tea Association, brought out the importance of tea industry to the national economy and it was against this background he stated the needs of the tea industry. And it was a good beginning, indeed, for the I.T.A. Chairman's speech. There is undoubtedly nothing new about it, for any student of Indian economy must be fully aware of this elementary feature. But it requires to be reiterated from time to time, because, in their anxiety to promote new industries, the authorities are inclined either to underestimate the importance of old industries or to relegate them to the back row of the chorus. *Commerce* has time and again pointed out that more foreign exchange, as well as internal resources, can be found by encouraging the established industries to improve their performance than by making heroic efforts to push up the exports of products of new industries which have yet to establish themselves firmly in this country and fully meet its demands. This journal has, therefore, no hesitation in recommending a careful and dispassionate study of Mr. Coldwell's address by the powers-that-be. They will find in it certain claims of industry which should be effectively and expeditiously met, if this goose that lays golden eggs is not to suffer from anæmia.

In the Draft Third Plan, a production target of 850 million lbs. per annum to be reached in 1966 is assigned to tea industry, as compared with a production of about 720 million lbs. in 1959 and a little less than 700 million lbs. in 1960. The Union Minister for Commerce and Industry, it will be recalled, had expressed dissatisfaction with this target on the ground that it was insufficient to cover India's need for exporting more tea and to meet its growing demand for domestic consumption. It is not known whether the final version of the Plan will provide for a bigger target, but, significantly enough, Mr. Coldwell said that there were talks of a target of even 900 million lbs. Mere target-setting, however, is not enough. It must be tackled by appropriate fiscal, transport, import-export, and labour policies. It is to these vital aspects, therefore, that Mr. Coldwell devoted the bulk of his speech.

The first point that must be realised, in this connection, is that, since it takes five years for a new tea bush to yield production, the increase in production envisaged in the Plan has to be secured from bushes which are already in the ground. This means that productivity of existing bushes has to be increased. One of the prerequisites for this purpose is the strengthening of the bushes by timely application of the right type of fertilisers in right doses. But, unfortunately, this item is in short supply. In 1960, the tea gardens in the North could get only 50,000 tons of sulphate of ammonia, in the place of 71,000 tons which they needed. Scientists have established that a single year's failure to apply fertilisers may result in a loss of 30 per cent of a year's normal production before the damage done can be made good. It is thus obvious that, if tea production is to be stepped up the supply of fertilisers to tea gardens must be increased and made available at the right time. Until domestic production of fertilisers expands to the requisite level, more imports of this commodity would have to be given a high priority.

Secondly, transport facilities for taking fuel, fertilisers, stores, etc., to the gardens and for bringing back made-tea must be expanded. Even as things are at present, these facilities are inadequate and many factories in North India have been experiencing shortage of coal. Several new industries, such as oil refineries, oil prospecting, and paper are being established in this region, not to mention the defence arrangements in the North-East. All these activities are competing for essential services with tea-makers. Unless, therefore, steps are taken to improve and expand these services, it will not be possible to increase the production of tea. Speaking of transport, it must be borne in mind that India's competitors—Ceylon, for instance—have the advantage of short lines of communications between the gardens and the sea. Some of the North Indian teas have to travel 1,200 miles before they even reach Calcutta.

Thirdly, there is multiplicity of taxation on tea—Central, State and Local. Some of the taxes, as, for example, the Assam carriage tax which was recently declared illegal by the Supreme Court, are *ultra vires* the Constitution and capable of doing irreparable damage to the economic unity of India and, therefore, to the political unity itself. Mr. Coldwell disclosed the interesting information that the Assam carriage tax alone has deprived the gardens in the State of a sum of Rs. 12 crores. Will the Assam Government bow to the Supreme Court's verdict and return this amount to the tea gardens or get fresh legislation enacted to validate the tax and legalise its past collections? No clear answer to this question is available in Mr. Coldwell's speech. In one place, he describes the tea industry's success in the Supreme Court as transcient and in another place he says that another long struggle lies ahead of it. But the sum of Rs. 12 crores is so large for a highly deficit State like Assam that its return to the industry is inconceivable, even though justice is on the planters' side. It is, however, to be hoped that the Assam Government will not try to perpetuate this unconstitutional levy. It is further to be hoped that the Government of Bengal will be gracious enough to abide by the spirit of the Supreme Court's judgment on Assam carriage tax by withdrawing the octroi on tea. The industry has already taken up this issue to the Court.

While welcoming the relief given in the export duty on tea by the Finance Minister in his budget proposals for 1961-62, Mr. Coldwell strongly deplored the increases in excise duties. He was, of course, not unmindful of the fact that, while the reduction in export duty would cost the exchequer Rs. 200 lakhs, the rise in excise levy would bring in only Rs. 198 lakhs. Nevertheless, he regarded the latter step as a disincentive to the planters for increasing production, as the enhanced duty would cut into their profits. He argued that, unlike the excise duties on tobacco, wines and spirits, and petrol, which were quickly passed on to the consumers, the increase in tea excise was not automatically transferable. On this point, however, Mr. Coldwell is not on solid ground. Apart from the fact that every manufacturer of products affected by the excise duties, including tobacco—*vide* the speeches of the Chairman of the Imperial Tobacco Company of India—has put forward identical arguments, Mr. Coldwell must quote actual facts and figures to show that the excise duty is not being passed on to consumers. It is our belief that, ultimately, it is the consumer who bears the excise burden and the trend of tea prices seems to confirm this belief. In any case, so far as one can see, there is, for some years to come, no prospect of a glut of tea for domestic consumption and the present sellers' market may persist. It should not, therefore, be difficult for the planters to pass on the incidence of the increase in excise duty to consumers. From the observations of the Finance Minister in Parliament, it is clear that he wants them to do so. Further, the effect of the rise in the duty on per cup of tea is not very considerable and the industry, as well as consumers, will have to put up with it as a contribution to the economic development of India which, by itself, will lead to a broadening of the domestic market for tea, as witness the experience of the past ten years. Mr. Coldwell is, however, perfectly right and reasonable when he says: "If money is to be collected (from industry), it should be collected with a minimum degree of administrative dislocation. Where the country's largest earner of foreign exchange is concerned, taxation is obviously inevitable, but it should be convenient and the industry should be given the right to indicate the manner in which the money required from it should be paid." It would be a good thing, if the Union Ministry of Commerce and Industry could sponsor a meeting of the Finance Ministries of the Centre and the States concerned with the spokesmen of the industry where this issue could be thrashed out to the satisfaction of all.

Steps for increasing production are not the only needs of tea industry. Equally important is the need for ensuring that consumption keeps pace with production. This aspect formed the final theme of Mr. Coldwell's speech. His observations show that he is also one of the planters in this country who feel that world production of tea may expand faster than consumption. And the much-talked-of F.A.O.'s projections into the future appear to have only confirmed his misgiving. Naturally, therefore, he harped on the old theme, namely, the necessity for reviving international agreement on tea in some form or other, not as a restrictive practice to the detriment of consumers but as a safeguard for producers against depression induced by overproduction. The political feasibility of such concerted action by all the producing countries is, however, in greater doubt than at any time in recent years. Will Pakistan, for instance, agree to toe the line? Will China be willing? Will Indonesia concede Mr. Coldwell's inference that its capacity to regain its pre-war status is extremely doubtful? Will East Africa or Argentina submit to a scheme of restricted or regulated growth? Even Ceylon may seek to drive a hard bargain with

SHARE MARKET CHEERFUL

TEXTILES AND SUGARS WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *16th March*

BARRING a few scrips which suffered a set-back to values as a result of liquidation by tired bulls, the share market continued to put on a cheerful appearance during the week under review. Buying support was well sustained, thanks to persistent hopes of bonus issues by companies with large reserves following the reduction in bonus tax from 30 to 12½ per cent and bullish interpretation of the Finance Minister's reply to the debate in Rajya Sabha on Monday the 13th inst. Operators noted with gratification the Minister's categorical rejection of the plea for reimposition of excess profits tax on the ground that it would only amount to penalising the more efficient units in the industry. Also noted was his declaration that wealth tax on companies "should not be there." Reports of Chinese incursion into Sikkim failed to have any decisive effect. Nor was the statement of the Reserve Bank Governor that monetary stringency as a general pattern would persist for quite a few years of much avail. Business put through was on a large scale and further additions to values were recorded. The improvement over the week would have been more notable but for the corrective profit-taking in several counters which had touched high levels after the budget was presented. The undertone of the market was distinctly firm.

Among steel shares in the equity section, Tata Steels began the week firm at Rs. 154.25, as against the previous close of Rs. 153.50, and, after easing to Rs. 153 on Saturday, recovered to Rs. 155 today. The net gain over the week was Re. 1.50. Indian Irons rose from Rs. 26.50 to Rs. 26.90 on Monday. Opening at Rs. 26.60 today, they improved to Rs. 26.80 but finished slightly lower at Rs. 26.75. Mukand Irons hardened from Rs. 26.85 to Rs. 27.25, after being higher still at Rs. 27.50 on Friday the 10th inst.

Under the impetus of excellent buying orders, textiles forged further ahead. The extent of the rise in prices of a few important scrips is indicated below:

	16-3-1961	*A week ago*	*Net rise*
	Rs.	Rs.	Rs.
Standard	1,423.00	1,332.00	91.00
Swan	545.00	542.50	42.50
Khatau	540.00	515.00	25.00
Podar	157.00	143.00	14.00
Century	550.00	537.50	12.50
Shree Niwas ...	266.00	254.00	12.00
Central India ...	119.00	108.00	11.00
Gokak	185.00	174.00	11.00
Elphinstone ...	73.00	76.50	6.50
Morarjee	355.00	350.00	5.00
Finlay	359.00	355.00	4.00
Svadeshi	254.50	250.50	4.00
New Great ...	205.00	201.00	4.00
B.R. Cotton ...	39.00	35.50	3.50
Simplex	179.50	177.00	2.50
Kohinoor	301.00	299.50	1.50
Bombay Dyeings ...	66.60	65.50	1.10

Sugar shares scored handsome gains. Belapurs climbed up from Rs. 292 to Rs. 309 today, or a rise of Rs. 17. Walchands advanced by Rs. 15.70 to Rs. 241.25. Kesars spurted by Rs. 15 to Rs. 250, reflecting the satisfaction of operators over the announcement of a higher dividend of 9 per cent (taxable) for the year ended July 1960, as against 6 per cent paid in the previous year. Phaltans strengthened by Rs. 6.50 to Rs. 155. Maharashtra Sugars hardened by Rs. 3 to Rs. 201. Ravalgaons, however, eased by Re. 1.80 to Rs. 78.20. Bhopals were unchanged at Rs. 29, despite the optimistic assessment of the outlook for the Company held out by the Chairman at the annual meeting last week.

In the cement group, Associated Cements improved by Re. 1.50 to Rs. 157.50. Digvijays gathered a rupee to Rs. 168. Ashokas rose by 76 nP to Rs. 9.76. Jaipur Udyogs were better by 8 nP at Rs. 12.36. Dalmias, however, eased by 24 nP to Rs. 12 and Orissas by 16 nP to Rs. 14.

Shipping shares evoked good support. Great Easterns improved by Re. 1.04 to Rs. 16.04. Scindias gained 68 nP to Rs. 16. Among automobiles, Premiers advanced by Rs. 4.50 to Rs. 185, while Mahindras receded by 88 nP to Rs. 21.36, in view of the Directors' decision to maintain the dividend for the year ended October 1960 at the previous year's level of Re. 1.25 per share subject to tax.

Persistent buying support lifted up the values of engineering shares. Alcock Ashdowns scored a gain of Rs. 20, today's closing rate being Rs. 312. Bradys Engineerings advanced by Rs. 18.50 to Rs. 88.50. Premier Constructions spurted by Rs. 16 to Rs. 227. Standard Engineerings rose by Rs. 9.50 to Rs. 219.50. Telcos increased by Rs. 6.50 to Rs. 342. Coopers put on Rs. 5.50 to Rs. 204. Asian Cables gathered Re. 1 to Rs. 121, on reports that the Company proposes to finance its expansion scheme by raising fresh capital of Rs. 1 crore through the issue of shares in the ratio of two for every one held. Larsen and Toubros improved by a like amount to Rs. 45. Khandelwals, however, receded by Rs. 2 to Rs. 91. Texmacos lost 52 nP to Rs. 24. Shivrajpurs fell by Rs. 11 to Rs. 90 on reports suggesting delay in the issue of bonus shares.

A sharp rise in the quotations for dyes and chemicals characterised trading in the miscellaneous section during the week under review. Amar Dyes were taken up to Rs. 440, a rise of Rs. 55 as compared with the last week-end rate. India Dyestuffs forged ahead from Rs. 472.50 to Rs. 572.50, a rise of Rs. 100. Colour Chems spurted by Rs. 30 to Rs. 385. Poly Chems by Rs. 18.75 to Rs. 256.25 and Dharamsis by Rs. 17.50 to Rs. 261.25. Alembics improved by Rs. 6.25 to Rs. 261.25. Synthetics increased by Rs. 2 to Rs. 138. Tata Chemicals (new) gathered Re. 1.16 to Rs. 18.80, Dhrangadhras Re. 1 to Rs. 131 and Citrics 50 nP to Rs. 62.50. But Adarsh Chemicals were neglected at Rs. 85, as against Rs. 90 last week.

Rayon shares registered a further improvement in prices, notwithstanding the reported move of the Government to ensure that the increase in excise duty on rayon yarn is absorbed by the spinning units themselves. Over the week, South Indian Viscose jumped up by Rs. 18 to Rs. 172. Barodas strengthened by Rs. 7.25 to Rs. 147.25, Indian Rayons by Re. 1 to Rs. 68.50 and Gwaliors by 50 nP to Rs. 47. National Rayons, however, dropped Rs. 6 to Rs. 536, on account of profit-taking by some bulls. Among other miscellaneous industrials, Ceat Tyres were well fancied and spurted by Rs. 26.25 to Rs. 287.50, after being higher still at Rs. 300. The Directors of the Company propose to issue 161,000 new shares of Rs. 100 each at a premium of Rs. 25 each in the proportion of seven shares for every five shares held. Laxmi Starchs rose by Rs. 18.25 to Rs. 218.75, Anil Hardboards by Rs. 14 to Rs. 305.50 *ex-div.*, Voltas by Rs. 10.50 to Rs. 298, Greaves Cottons by Rs. 7.50 to Rs. 177.50, Killicks by Rs. 6 to Rs. 105, Premier Tyres by Rs. 2.50 to Rs. 112.50, Philips Carbons by 64 nP to Rs. 19.12 and Tata Oils by Re. 1.68 to Rs. 84. West Coasts were firm at Rs. 225. But Bombay Burmahs were subjected to liquidation and fell by Rs. 14.50 to Rs. 621. Wimcos shed Rs. 3 to Rs. 300. Hindustan Levers eased by a rupee to Rs. 51, despite the excellent working results for the year 1960. The net profit is higher at Rs. 2.50 crores, as against Rs. 2.08 crores in 1959 and the gross dividend per share has been raised from Rs. 2.40 to Rs. 2.60.

Calcutta Stock Exchange

CALCUTTA, *15th March*

Although the steady upward trend of prices on the Stock Exchange during the week under review was marked by profit-taking here and there, buying interest was active. Operators and investors were optimistic, and the undertone was healthy. The fixation of special "marking-up" prices in Bombay checked bulls and, since speculative exuberance mellowed down, the market could not claim a similar situation here, as in Bombay, to call for restrictions on trading. Also, the Finance Minister's statement that a strict watch would be maintained by the Controller of Capital Issues over bonus issues changed investors' expectation of any spate of bonus issues. Further, the retention of the bonus tax of 12½ per cent was considered to act as a check. The decision of banks to increase deposit rates would, it was thought, attract more loanable funds to banks and contribute to easing of the tightness in the money market. Mr. Morarji Desai's hope that revenues from direct taxes would go on increasing even at existing rates was construed as official admission that the direct tax structure had reached a high level and that further increase would mean hampering of progress. This assisted sentiment. Measures for easing fibre shortage were a pointer to the revival of interest in jutes, while, although teas were steadier, the realisation that the Government, by raising excise duties, would be claiming more than revenue loss as a result of the export duty cut checked activity. Miscellaneous industrials recorded several buoyant counters, following hopes of improved working results and some bonus issues in the near future. Under the leadership of Indian Irons, engineerings forged ahead and the increased availability of steel for fabrication was a constant reminder of greater prosperity for the industry. Industry's criticism of the inability of the railways to provide adequate transport and the World Bank's concern drew attention to coals. Textiles met with modest support, as, with the improvement of cotton supplies, production in mills was bound to increase.

Coals met with profit-taking, thus reducing gains. Burrakurs closed at Rs. 20.19, after hardening from Rs. 20.56 to Rs. 20.62. At Rs. 31.62, Equitables were higher by 12 nP on balance, while Raneegunges eased to Rs. 17.12, as against the opening of Rs. 17.50. Central Indias closed at Rs. 14, after opening at Rs. 14.37, while East Indians at Rs. 34.56 recorded a small rise.

Jutes were better all round. Dalhousies were pushed up to Rs. 111 from Rs. 108.50 previously. At Rs. 140, Budge Budges gained Rs. 2. Barnagores were forced up from Rs. 128 to Rs. 135, and Aucklands from Rs. 160.10 to Rs. 181. Belvederes were as high as Rs. 168, as against Rs. 151 previously. Caledonians increased by Rs. 6 to Rs. 130. Unions picked up Rs. 17 to Rs. 176. Deltas had buyers at Rs. 167, as against Rs. 162. Kamarhattis were better at Rs. 155, but Howrahs were unchanged at Rs. 22.37 and New Centrals eased from Rs. 19.81 to Rs. 19.50.

Engineerings, following the general trend, recorded handsome gains, but, on profit-taking, gains stood reduced. Indian Irons opened at Rs. 26.30 and, after rising to Rs. 26.75, finished at Rs. 26.46. Indian Standard Wagons closed higher at Rs. 106, as against Rs. 102.50, while Texmacos at Rs. 23.60 closed lower on balance. Guest, Keen, Williams were better at Rs. 47.62, but Jay Engineerings, after being higher at Rs. 31.75, wound up at Rs. 31.06. J.K. Steels closed at Rs. 25.69, after rising from Rs. 24.25 to Rs. 26.19.

Among miscellaneous industrials, the listing of British Paints was hailed by the scrip rising from Rs. 23.25 to Rs. 28.81. National Pipes were fully steady at Rs. 25.69 and, at Rs. 39.12, National Cables, following rumours of an imminent issue, added a substantial gain. Isaac Holdens were another strong feature for the steady rise from Rs. 10.06 to Rs. 11.69. Associated Batteries scored to Rs. 39.31 from Rs. 37.25 and General Tyres to Rs. 7.15 from Rs. 6.50. Indo-Burma Petroleums were as high as Rs. 29, as against Rs. 25 previously. Hindustan Aluminiums were lifted up from Rs. 8.81 to Rs. 10.06. Martin Burns were fractionally higher at Rs. 30, Indian Coppers giving way from Rs. 5.46 to Rs. 5.34. Orient Papers eased from Rs. 42.40 to Rs. 41.45 and Rohtas Industries from Rs. 22.06 to Rs. 21.44.

Tea shares were better. Hasimaras closed at Rs. 25.06, after opening at Rs. 23.75 and scoring to Rs. 25.50. Dufflaghurs gained from Rs. 33.62 to Rs. 34.75, but Tezpores eased from Rs. 17.87 to Rs. 17.36.

Madras Stock Exchange

MADRAS, *15th March*

The Stock Exchange displayed a distinctly firm tone during the week under review. Scrips in both forward and cash lists made headway, thanks mainly to enlarged investment buying. Turnover was quite large. Textiles moved up on better enquiries from local as well as upcountry centres. The improvement in raw cotton supply also imparted strength. The plantation section ruled steady. Teas were well maintained on encouraging advices from auction centres. Coffees put on a better appearance this week. Rubbers were favoured at higher levels. Operators noted the statement of the Madras Home Minister at the meeting of the Rubber Board last week here that another 300,000 acres would be brought under rubber plantation by 1967 in the State. Sugars were well fancied, as also banks. Electricals were steady. Cements and chemicals were in the limelight in the miscellaneous section.

Among textiles, South India Viscose provided the bright spot, the quotation advancing by Rs. 20.50 to Rs. 173, following sustained support by certain Bombay interests. Lakshmis rallied from Rs. 157 to Rs. 166 on prospects of bonus share issue and enhanced dividend to commemorate the golden jubilee year of the Company. Bangalore Woollens were marked up by Rs. 3.50 to Rs. 202. Travancore Rayons rose by Re. 1.30 to Rs. 38.80 on expectations of higher dividend. Maduras spurted by Re. 1.15 to Rs. 38.30. Janardanas gained a rupee to Rs. 12.85. Buckinghams strengthened by 50 nP to Rs. 198. Kotharis put on 35 nP to Rs. 12.85. Trichinopolys hardened by 30 nP to Rs. 12.25. A higher dividend of 13.5 per cent, taxable, has been recommended for the year 1960, as compared with 12 per cent paid in the previous year. Vasantas were firm at Rs. 242, following the announcement of a dividend of 20 per cent taxable for 1960, which compares well with 16 per cent last year. Cannanores were fancied at Rs. 144. Coimbatore Cottons at Rs. 172.50, Metturs at Rs. 367, Premiers at Rs. 242 and Radhakrishnas at Rs. 30. Coimbatore Pioneers, however, lost Rs. 5 to Rs. 335, as the operators were disappointed at the lower dividend of 16 per cent, taxable, proposed for 1960, as against 25 per cent last year.

In the tea section, Nonsuchs attracted good attention and improved by Re. 1.35 to Rs. 28.35. The Company has declared an interim dividend of 10 per cent for the year ending June 1961. United Nilgiris rose by 60 nP to Rs. 12.75. Haileyburias were higher by 30 nP at Rs. 14.55. Devasholas gained a like amount to Rs. 30.30 *ex-div.* Parksides gathered 13 nP to Rs. 28.50. Chembras picked up 5 nP to Rs. 3.80.

Among coffees, Cowcoodys hardened by 14 nP to Rs. 5.20. Mysore Coffees were higher by 5 nP at Rs. 5.50. Consolidated Coffees fell initially from Rs. 24 to Rs. 23.65, but wound up at the last week's closing level. Ouchterlony Valleys were fully steady at Rs. 4.60, although the quotation had declined to Rs. 4.57 early in the week. Coffee Lands were maintained at Rs. 21, as also Anaparais at Rs. 4.70.

In the rubber group, Malankaras rose by 25 nP to Rs. 18.25. Travancore Rubbers were higher by a similar amount at Rs. 10.12. Midlands improved by 15 nP to Rs. 12.15. Cochin Malabars sagged from Rs. 7.90 to Rs. 7.87, but recovered to Rs. 7.92, also moved up by 2 nP to Rs. 5.13. Rajagiris were firm at Rs. 18.80.

East India Distilleries were in forefront in the sugar section, the quotation advancing by Rs. 4.15 to Rs. 45.40. The support followed rumours of a fresh right issue as well as the impressive working of the Company shown in its latest annual report. United Breweries increased by Rs. 3.25 to Rs. 115.25. Deccans strengthened by 37 nP to Rs. 14.45, following the announcement of an interim dividend of 7½ per cent., taxable, for the year ending May 1961.

Chemicals were particularly strong in the miscellaneous section. Travancores rose by Re. 1.25 to Rs. 16.50. Metturs hardened by 35 nP to Rs. 13.60. F.A.C.Ts by 25 nP to Rs. 11.05 and Mysore Fertilisers by 3 nP to Rs. 11.25. Among cements, Indias scored a gain of 22 nP to Rs. 6.42. Andhras and Dalmias put on 15 nP each, the former to Rs. 10.25 and the latter to Rs. 12.05. Among others, Textools spurted by Rs. 2.50 to Rs. 177.50. Indian Steel Rollings were higher by 40 nP at Rs. 10.40. Ashok Leylands rose by 18 nP to Rs. 9.53.

NEWS IN BRIEF

A TELEVISION centre is proposed to be established in Bombay during the third Plan period, subject to availability of foreign exchange.

The Bihar Government proposes to set up during the third Plan period a low temperature carbonisation plant capable of processing about a million tons of coal annually.

A proposal for growing coffee in the Agency tracts of Andhra Pradesh is being considered by the Government of India, according to Mr. Satish Chandra, Deputy Minister for Commerce and Industry.

Oil has been struck in well No. 8 in the village of Digas in Ankaleshwar area, Gujarat State. The final indication of the commercial possibility of the oil in this area will, however, be available only after the drilling of half a dozen more wells.

Smuggled watches valued at Rs. 32.96 lakhs were seized by the customs and excise authorities in 1960, as against Rs. 17.99 lakhs, in 1959, Rs. 9.60 lakhs in 1958, Rs. 7.56 lakhs in 1957 and Rs. 1.34 lakhs in 1956.

The ways and means of encouraging the use of furnace oil and other substitute fuels by industries located at places distant from coal fields currently facing coal shortage are being explored by the Central Government.

The Union Minister for Industry, Mr. Manubhai Shah, disclosed in the Lok Sabha that the Government had rejected the suggestion of the U.S. economist, Prof. Galbraith, that no Government employee should be appointed as a director in any public sector commercial enterprise.

The wide strip mill, the third and last unit of the Rourkela steel plant, will be inaugurated by Prime Minister Nehru on the 28th inst. The mill will produce 600,000 tons of wide steel strips per year. Steel strips form the basis for a number of industries in the country.

The Indian Airlines Corporation proposes to introduce shortly Fokker Friendship planes on its various routes from Calcutta. In the meantime, it will commence operation of two new routes from Calcutta with Dakotas, one to Ranchi and the other to Jamshedpur.

The working of the Indo-Pakistan trade agreement will be reviewed at New Delhi next week, by the official representatives of the two Governments. The question of enlarging the scope of trade between the two countries under rupee payment agreement is also expected to be examined.

The proposed all-India supergrid for power generation is unlikely to be set up during the third Plan period, according to Mr. J. L. Hathi, Deputy Minister for Irrigation and Power. The southern grid, comprising Andhra Pradesh, Kerala, Madras and Mysore, will, however, come into being by the end of the third Plan.

The total quantity of natural gas obtained at Naharkotiya in Assam upto the end of last January was 8,414 million cubic feet. The gross proved gas reserves are estimated at 511 billion c. ft. and indicated reserves at 189 billion c. ft. Out of the gas so far produced 5,000 million c. ft. of gas was supplied to the Assam Oil Company and the balance was utilised by the Oil India (Private) Ltd.

The oil refinery in the public sector at Nunmati, Gauhati, Assam, with an annual capacity of 750,000 tons, will be in full production by the end of 1961. As regards the proposed Barauni refinery in Bihar, for which a detailed project report has been submitted by Soviet experts, the first one million-ton unit of the project will be operated by October 1962, and another million-ton unit by March 1963. Both will go into full production by the end of 1963.

The Government of India has approved of the Rs. 25-crore thermal station scheme at Cambay in Gujerat. The scheme envisages the construction of a power house with an installed capacity of 200,000 kw. at Dhurwaran, near the Gulf of Cambay. Initially, this thermal station will have three turbo alternator sets. Each unit will be connected to two boilers while there will be a third stand-by boiler. These boilers will be designed to use coal, oil or gas.

India's exports in January 1961, according to preliminary figures, amounted to Rs. 54.54 crores, as compared with Rs. 51.35 crores in the corresponding month of 1960. The rise in exports was more than offset by the marked increase in imports which amounted to Rs. 83.42 crores, as against Rs. 70.71 crores in January 1960. Consequently, the adverse balance of trade during the month was larger at Rs. 28.88 crores, as against Rs. 19.36 crores.

An agreement for the purchase of refinery gas for the public sector fertiliser plant at Trombay is expected to be signed by the end of this month between the Fertiliser Corporation of India, which manages all the fertiliser factories in the public sector, and the Burmah Shell. A similar agreement for the purchase of naphtha from the Stanvac is also likely to be reached soon. The Trombay plant, which will produce fertilisers of about 90,000 tons in terms of nitrogen, is being set up with a D.L.F. loan of $30 millilion.

An official Bill to amend the Minimum Wages Act, 1948 has been introduced in the Lok Sabha. It seeks to do away with the time-limit of one year for wage fixation from the date of notification in respect of any employment added to the schedule of the Minimum Wages Act. Another amendment provides that no minimum rates of wages be fixed or revised in respect of employees in a scheduled employment during the pendency of any dispute before a tribunal over the rates of wages payable to them or during the period an award by a tribunal is in operation.

From Abroad

The International Tin Council has decided not to fix any total permissible export quota for the second quarter of this year.

A recent survey of savings deposits with banks in West Germany showed that 43 per cent of all persons below 21 years of age had savings accounts.

The view that Russia has started a trade war in sugar in world markets as part of a general plan to gain world supremacy in the economic field has been expressed by Sir Edmund Bacon, Chairman of the British Sugar Corporation.

Cotton is one of the principal crops that will be cultivated on large-scale co-operative farms proposed to be established shortly in Ghana. The samples of cotton grown in Ghana have already been tested in England with satisfactory results. Only the most suitable types are being selected.

In a bid to liberalise the import policy, the Government of Pakistan has placed ten essential commodities under Open General Licence, for the first time since the O.G.L. was withdrawn in 1952. The items include iron and steel, drugs and medicines, cement (for East Pakistan only), tyres and tubes, spare parts for automative vehicles, milk food and typewriters.

The first productivity seminar for the Asian Region of the International Labour Organisation commenced its 13-day session at Tokyo on Monday this week. Discussions at the seminar cover such subjects as structure of industrial enterprises, reasons for lower productivity and studies of a system for achieving maximum results. About 30 representatives from 14 nations, including India, Pakistan and Ceylon, are attending the meeting.

The employees of the General Motors Corporation, Detroit, U.S., received over $5 million in 1960 for submitting 111,203 suggestions to increase safety and efficiency of operations, almost $1 million more than in 1959 for the 87,264 suggestions adopted by the Company. About one of every four suggestions submitted during 1960 were accepted. Since the system began in 1942, General Motors paid $46 million for suggestions adopted.

The production of a new high-strength plastic, which is expected to replace millions of pounds of metals as well as other plastics, has been commenced at New York by the Celanese Corporation of America. The new plastics, called "celcon" plastic, manufactured by a new process, will have wide uses in automobiles, appliances, industrial equipment containers, piping and hardware. The Company claims that the market for "such high performance engineering plastic as celcon" would triple in the next three years and will reach a level of 200 million pounds a year by 1970."

Pakistan and the Soviet Union have signed an agreement providing for Soviet credit and technical assistance for exploration for oil in Pakistan. Under the agreement, Pakistan will receive a 12-year credit of $30 million carrying interest at 2½ per cent. Repayment will be in rupees which will be used mostly for the purchase of Pakistani goods. The credit, the first instance of economic co-operation between the Soviet Union and a member of C.E.N.T.O., will be utilised by Pakistan for purchasing Soviet equipment and material and for paying salaries to technicians and specialists to be deputed by the Soviet Union for prospecting of oil.

PERSONAL

MR. Ellsworth Bunker, U.S. Ambassador to India, is scheduled to leave for the U.S. on 23rd inst., after four years of distinguished service in this country. He is due to arrive in Bombay from New Delhi on 21st inst.

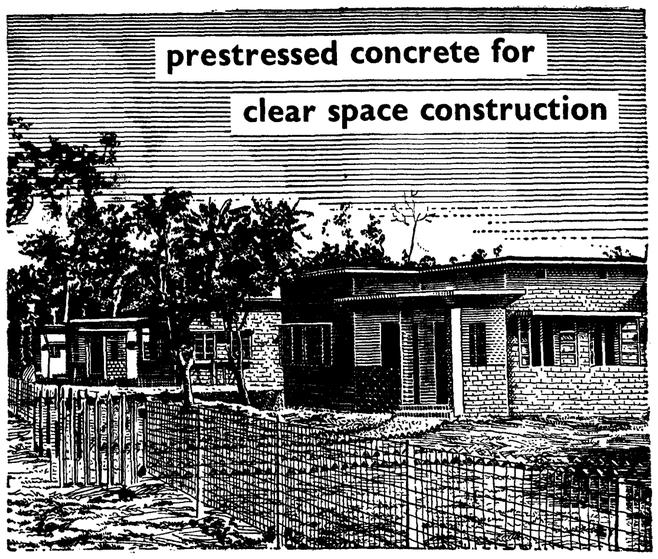
Mr. W. Averell Harriman, U.S. Ambassador-at-large, arrived in New Delhi on Wednesday the 15th inst., as a special representative of President Kennedy, with the object of meeting informally the delegation of over 20 countries to the seventeenth session of the E.C.A.F.E. and convey to them the President's interest in the work of the E.C.A.F.E. and the contribution it can make towards the economic progress of the region. He will also meet Prime Minister Nehru and other Government of India officials.

Mr. Richard S. Perkins, Chairman of the Executive Committee of the First National City Bank of New York and Chairman of the First National City Trust Company, was on a visit to Bombay this week as part of his inspection tour of the Far Eastern branches of the Bank.

Mr. Vallabhadas V. Mariwala and Mr. Javerchand Padamshi Shah have been elected President and Vice-President, respectively, of the Pepper and Ginger Merchants' Association for the current year.

Mr. Pratapsinh Mathuradas, Mr. S. M. Shah, Mr. Ratansi Champsi and Mr. Naval H. Tata have been elected representatives of the Indian Merchants' Chamber on the Board of the Bombay Port Trust for a term of two years from 1st April 1961.

Mr. F. Rozario and Mr. P. C. R. Coates have been elected to represent the Bombay Chamber of Commerce and Industry on the Board of the Port Trust of Bombay for the next two years.



Economy and Speed of Construction at a New Township

At the New Township at Nahorkatiya being built by Oil India Private Limited, the flat roofs of the buildings consist of 2" to 2½" thick x 14" wide precast prestressed concrete planks of span 12 to 20 ft. placed butting against each other. In-situ concrete 1" to 2" thick was laid over the planks to form a composite roof slab of 3" to 4½" thick. Foam concrete 2" to 4" thick was laid over the roof for additional heat insulation. The roof was finally waterproofed with Stp "Tarfelt"

Precasting and absence of shuttering have enabled each bungalow to be completed in all respects within a month.

JUTE PRICES

SOON after we went to press last week, the Government of India assumed powers for enforcing certain control measures designed to bring down the prices of raw jute and jute goods. By an order promulgated on the 10th inst. under the Essential Commodities Act—the order is called the Jute Licensing and Control Order—the Government has invested the Jute Commissioner with the following powers:

To issue licences to dealers in raw jute and jute goods from year to year, after taking into consideration the stocks available in the locality, the business ordinarily carried on by the applicant and other relevant factors; to fix the maximum and minimum prices for purchase and sale of raw jute and jute textiles; to prescribe the maximum quantity of raw jute that the manufacturers of jute textiles may buy or have in their possession; to requisition stocks, with a view to ensuring an equitable distribution of both the raw material and the finished products; and to enter and inspect the places concerned, in order to ensure compliance with the Order.

The Government has clearly warned that those who contravene the provisions of the Order or fail to carry out directions or requisitions made under it shall be liable to punishment as prescribed under Section 7 of the Essential Commodities Act.

The promulgation of the Order is not surprising, in that it is in accordance with the understanding reached at New Delhi on 24th February 1961 when the representatives of the Indian Jute Mills Association (I.J.M.A.) met the officials of the Union Ministry of Commerce and Industry. The Government did not, it was stated at the meeting, intend to use the powers assumed under the Order, except those in respect of requisitioning raw jute and, in certain circumstances, jute goods, provided the I.J.M.A. would effectively operate a voluntary scheme for a maximum price for raw jute. Without any delay, the I.J.M.A. announced, on 28th February, (*a*) maximum prices for raw jute based on Rs. 62 per maund for Assam bottoms with other grades and qualities in proportion; (b) compulsory registration of all contracts for raw jute with the I.J.M.A., reinforced by requisitioning of raw jute stocks by the Jute Commissioner from both sellers and, if necessary, from mills; and (*c*) a move to limit the quantity of unsold ready goods that may be held by its members, the quantity in excess of the limit being requisitioned by the Jute Commissioner, if the mills fail to abide by the voluntary arrangement. It is clear now that, if this arrangement fails to serve the purpose for which it is intended, the Government can and will intervene to enforce the control effectively.

In pursuance of the aforesaid Jute Control Order, the Jute Commissioner is reported to be already discussing the steps in regard to licensing raw jute dealers with the officials of the West Bengal, Assam, Bihar, Orissa, Uttar Pradesh and Tripura State Governments. He is also keeping a close watch on forward sales. Meanwhile, he has asked the jute mills to inform him about the stock position of raw jute and directed the Calcutta jute dealers with large holdings to file within a week the returns on the existing stocks.

Thanks to the aforesaid measures, the prices of both raw jute and jute goods have suffered a setback, though the currently ruling levels are still very much above those a year ago, as will be seen from the quotations given below:

	Latest available	Before the New Delhi meeting	A year ago
Raw jute (per maund)—	Rs.	Rs.	Rs.
Assam bottoms	62.00	64.50	30.35
Northern bottoms	61.00	63.50	31.60
Dalsee bottoms	64.00	66.50	33.25
Jute goods —			
B. twills (per 100 bags) ..	201.00	208.50	111.45
Hessians 40" 10 oz. (per 100 yds).	66.75	67.50	41.05

It is thus evident that there has not been any appreciable decline in prices of raw jute and jute goods. Nor can one expect such a decline in the next few weeks or months. For the supply position of raw jute continues to be tight. That it would be so was known even as far back as April 1960 when the prospects for the 1960-61 season's crop had become highly unfavourable, owing to the unprecedented hot and dry spell that hit India's jute belt. Naturally, speculators exploited the situation and prices forged ahead, notwithstanding the steps, albeit halting, taken by the Indian Jute and Hessian Exchange.

If the Government had taken stringent action, instead of merely issuing warnings, and abolished all forms of forward dealings, the position would not have deteriorated to the same extent it has done. But the Government continued to proceed on the wrong assumption that the crop would not be so badly affected as was being made out and that only the speculators were to be blamed. It failed to realise that speculators are adept at getting advance information and that they cannot succeed in their attempts unless the basic trend was in their favour. The Government did not have any means of knowing the real size of the crop. Nor would it listen to those who had superior crop intelligence and warned the Government that a serious shortage of crop was in the offing. It would not open its eyes even when it was told that large quantities of jute were being smuggled into Pakistan and exported overseas. It simply dismissed these reports as mere speculators' tales. Even now, it is stated that large quantities of jute are being smuggled into Pakistan almost every day. In view of the fact that the maximum prices in India are well below those in Pakistan, preventive measures against smuggling across the border to Pakistan must be strengthened. Simultaneously, the non-member mills of the I.J.M.A. should be brought within the I.J.M.A. scheme. The I.J.M.A. representatives, it may be noted, pointed out to the official spokesmen at New Delhi the inequity of its members having to reduce working hours and accept other restrictions in respect of raw jute purchase, etc., while non-members were free from any controls over their manufacturing or purchasing activities. And they in turn were assured that this matter would receive "prompt and effective attention." It remains to be seen what steps the Government will take in this direction.

SOME LABOUR PROBLEMS

Since the composition and terms of reference of the Bonus Commission still remain unsettled issues, it is only natural that Mr. B. A. Forsyth, Chairman of the Employers' Federation of Southern India, Madras, should have thought it fit to devote a good part of his speech at this year's annual meeting of the Federation, held this week at Madras, to these controversial issues. Mr. Forsyth reviewed the disconcerting developments that preceded and followed the announcement of the personnel of the Bonus Commission and fully endorsed the opposition to the appointment of Mr. M. R. Meher as Chairman of the Commission. Mr. Forsyth pointed that, in view of the vital question which the Commission was called upon to decide, only a high power body, as recommended by the Supreme Court, with all the interests concerned represented on it, could find a satisfactory solution. He felt that the Commission's terms of reference should be exhaustive so as to include in it not only the two major issues contained in the draft terms prepared by the Union Ministry of Labour, namely, (1) the conditions under which bonus should be paid and the method of determination of prior charges and (2) the appropriate machinery for the settlement of bonus claims, but also many others such as merger of a part of dearness allowance with wages, the abolition of annual bonus altogether by substituting it with another less cumbersome system.

The Chairman appreciated the firmness with which the Government dealt with the general strike of its employees last year. One beneficial effect of the strike, he said, was that strikes had fallen into disfavour. He felt that, henceforth, the Government would view the intermeddling of outside office-bearers of trade unions with suspicion, and that trade union leaders would be more cautious and their followers less precipitate in their actions. These inferences, however, appear to err on the side of optimism. It is true that present signs justify them, but there is no certainty that the prevailing mood of sobriety will be sustained.

Commenting on the principle of "no work, no wages," which is currently under study by the Standing Labour Committee with a view to examining its applicability to India, Mr. Forsyth said that the principle was fair and reasonable. It had been accepted in other countries and there was no reason why India, too, should not follow suit. He was of the opinion that unions should be held responsible for loss of production resulting from illegal and unjustified strikes. This is a logical attitude to take, but its feasibility in practice is doubtful even if the Government is prepared to give the necessary backing.

Among the other problems touched upon by Mr. Forsyth, special mention must be made of his pertinent and incisive remarks about the Code of Conduct. In the absence of effective sanctions to back it, the Code, according to him, remained a mere dead-letter, admonitions incapable of being enforced. He cited instances where the implementation machinery of the Code had to remain practically silent when the unions called strikes even though the relevant disputes were under conciliation or adjudication. Incidentally, this instance only reinforces our concluding remark in the previous paragraph. Mr. Forsyth, however, did well to pinpoint this aspect of the Code, because it is the violation of the Code with impunity that undermines the faith of the parties in the Code and leads to its eventual failure. Another factor which discredits the Code is the scant respect shown to it by the various employing Ministries of the Government. If the Code is to succeed, it is therefore necessary to ensure that it is universally honoured and not respected at convenience as is the case now.

HINDUSTAN STEEL

The record of the State-owned Hindustan Steel (Private) Ltd., which manages the three giant steel plants in the public sector at Rourkela, Bhilai and Durgapur, cannot, by any standards, be regarded as exemplary, even after making allowance for the fact that it has been in existence only for a few years. Neither from the point of view of managerial efficiency nor of the much-vaunted progressive labour policy which the State undertakings profess to follow has the Hindustan Steel seemed to have set standards worthy of emulation by others. Comments about Hindustan Steel's disregard of labour laws in the Press, Parliament and elsewhere have been so extensive and adverse that its management itself had to admit, albeit indirectly, some lapses and try to make amends. While the welfare side of its activities has not thus been above board, the business side, too, has not fared any better.

This conclusion is confirmed by two recent reports on the working of the three steel plants under the management of Hindustan Steel, one on Durgapur steel project by a Colombo Plan team of experts, headed by Sir Eric Coates, and the other by the Public Accounts Committee of the Lok Sabha on the Bhilai and Rourkela steel projects. The Colombo Plan experts' report was submitted nearly a year ago, in May 1960 to be precise. But for some mysterious reasons, it does not seem to have been officially published so far. Judging by the excerpts from it published in a section of the daily Press, it appears that the experts found themselves constrained to point out quite a few unpleasant things about the way the work was organised and carried out at Durgapur. Two of the more serious defects, on which the team turned the spotlight, are the absence of devolution of authority to functional heads and the lack of cost-consciousness. Striking a note of urgency, the team urged remedial action in the following words:

"We counsel as rapid action as possible to clear detail from the General Manager's immediate control and effective delegation of authority.... Any one of these problems by itself could be tackled without much difficulty but, coming together and interacting as they do, they are liable to reduce the works to a state of chaos. Too much is at stake to hesitate too long. The necessity for the economic operation of the plant has hitherto hardly been considered by works or general management, apart from finance. At present, works management is fully occupied with getting the plant operating, whether economically or not. But the cost factor clearly cannot be ignored because Durgapur running at a loss will be a liability to the country instead of an asset.... In general we believe that failure to act is yet another expression of the absence of managerial responsibility and initiative."

Lack of co-ordination between the different departments has also attracted the critical attention of the team which found that the administrative and works departments existed in separate worlds and that there was "almost a state of guerilla warfare between them." That this lack of co-ordination has cost the Hindustan Steel and the taxpayer dearly is evident from the financial reviews on the Durgapur project published from time to time. Absence of advance planning has resulted in piecemeal and uneconomic purchases. Rush purchases based on a single tender and spot quotations (or no quotations at all) have been made on grounds of extreme urgency. The non-commissioning of the arc-furnace in the foundry for lack of electrodes since March 1960 has been attributed to the purchase branch's delay in processing the indent. To give an instance. Although a firm requisition was placed in June 1959 for the purchase of 600 electrodes, final orders were placed by the purchase branch only as late as in June 1960.

Similar findings have been recorded by the Public Accounts Committee in respect of the Bhilai and Rourkela plants in its thirty-fourth report presented to the Lok Sabha on the 13th inst. The Committee points out that, in both the plants, the third blast furnaces had been ready for some weeks, but they were not commissioned. Consequently, production has been much below what it should have been. At Rourkela, for instance, output of pig iron was less than 30,000 tons a month during the period April-August 1960, though the rated capacity was double this figure. Steel production, too, was below capacity.

The most deplorable feature of the situation is that no one is prepared to accept responsibility for the shortcomings. The projects administration points out that poor and irregular supplies of coal, in addition to the frequent breakdowns in dolomite calcining plant (at Rourkela), has been responsible for this state of affairs. But the Ministry of Mines and Fuel denies that there has been any shortage of coaking coal at the pithead and blames the railways for its failure to move the coal regularly and in adequate quantities. The Railway Ministry defends itself by arguing that the wagon allotments for the steel plants could not be met in full owing to certain operational difficulties and track doubling works, besides inadequate allocation of resoures made in the second Plan.

The extent to which the bungling on the part of the authorities of Hindustan Steel has affected the Company's financial position is disclosed by the audit report on Hindustan Steel for the year ended 31st March 1960. In addition to disclosing serious accounting irregularities and grave discrepancies in the evaluation of production and stocks, the audit report has highlighted quite a few acts of negligence and heavy overpayments which are not of an unavoidable nature. None expected the Hindustan Steel to show a profit for 1959-60. It would not be anything extraordinary even if it does not report a profit for a couple of years more, for everyone knows that it takes some years for a new company engaged in a heavy industry to make a net profit and pay the maiden dividend. It must also be readily conceded that the job undertaken by the Company is a tremendous one which has to be finished as fast as is humanly possible. But all this does not mean that those in charge of the Company could expect the public to refrain from criticising them, if they are found guilty of complacency, carelessness and avoidable financial irregularities.

GRAPE INDUSTRY

It looks as though the Indian farmer shares the proverbial fox's taste for grapes. But, unlike the crafty quadruped adventurer, the farmer seems to have concluded that grapes are sour without having tried to reach at it. There is perhaps no other reason why our farmers should have neglected the cultivation of this most profitable cash crop for such a long period. There are, however, instances of sporadic attempts to take to this crop and these have shown highly impressive results, both in terms of yield and quality. This has exploded the myth that the good quality grapes are best grown only under temperate and sub-tropical conditions, and not under tropical climate which prevails over the bulk of India. It is not well known that grape-growers at Hyderabad (Andhra Pradesh) are earning a net income of upto Rs. 25,000 per acre annually. At least a net profit of Rs. 3,000-4,000 per acre is usually derived from grape cultivation. That there is tremendous scope for cultivating grapes in India is vindicated by the yield derived from experimental orchards, set up by the Agricultural College and Research Institute, Coimbatore in Madras State. Each vine of *anab-e-shahi* species of eight years old is now carrying a crop of about 800 bunches and are expected to yield this year an aggregate of 75,000 to 80,000 lbs. per acre for one crop alone. This will probably be a world record. The average yield in other countries, such as the U.S., Australia and France, ranges from 4,000 to 8,000 lbs. only. Although the average yield in India varies from place to place, it compares well with that of other countries. Mysore, which accounts for half of India's total acreage under grape cultivation, has shown yields ranging from 12,000 to 20,000 lbs. in different areas. The total area covered by this crop in India is only 10,000 acres, which is negligible as a proportion to the total area under cultivation. The major producing States are, in the order of importance, Mysore, Maharashtra, Andhra Pradesh and Madras. Possibilities are being explored to introduce grape cultivation at Chini in Himachal Pradesh, where the Indian Council of Agricultural Research has established a Raisin Grape Fruit Station to facilitate the work. It will be interesting to note, in this connection, that vineyards in the world as a whole have taken up about 26 million acres, the largest area under any single fruit. The grape is grown in almost all countries of Europe, the U.S., parts of Africa, Palestine, Iran, Turkey, Afghanistan and Russia.

Fruits, especially grapes, are a class of protective foods, which give energy to the body in the form of sugar and starches. Grapes, in particular, are a rich source of calcium and iron and contain a fair amount of vitamin B, in addition to small quantities of vitamins A and C. It is only natural to expect a rise in the consumption of grapes in India, as the national income goes up. A large part of the demand is met by imports now, mainly from Afghanistan. In 1960, the total imports of grapes, it is estimated, aggregated around 7,000 tons (valued at about Rs. 65 lakhs), as against 7,800 tons (Rs. 71 lakhs) in 1959 and 4,100 tons (Rs. 33 lakhs) in 1958. Imports (which are now restricted) can be fully dispensed with only if production of the sweeter varieties of grapes goes up. One of the major difficulties of prospective grape growers is the need for large initial investment, without the prospect of any immediate return (that is until vines bear fruit). It is only in the fitness of things, therefore, that the Council of Agricultural Research should have pleaded for granting credit of Rs. 1,000 per acre of vine yards to newcomers in the field. Already the Government is granting loans to the tune of Rs. 300 per acre. This is obviously too small an amount to be of any use for those who wish to raise grapes.

Another important point to be borne in mind is that there is an urgent need for disseminating information on the results of researches carried out on new techniques of production, etc., either in some parts of this country itself or abroad. This object may be served, at least to some extent, by organising such exhibitions as the All-India Grape Show held at Poona on Tuesday and Wednesday this week. The Poona exhibition was of particular significance in that it provided Maharashtra, which is lagging far behind the South in the matter of yield per acre of grapes, an opportunity to acquaint its farmers with the new methods of production employed elsewhere.

Side by side with stepping up production, due attention must also be given to ensure a sustained demand for grapes. As Mr. M. Bhaktavatsalam, Minister for Agriculture, Madras, observed, while inaugurating the State Grape Society at the Agricultural College and Research Institute, Coimbatore, the other day, there is good scope for establishing industries in India, based on grapes, such as dried grapes or raisins, grape juice and other non-alcoholic drinks. Such efforts should be supplemented by introducing scientific canning, storage facilities and adequate transport of the right type for expeditious movement of grapes and its products from the producing centres to the major cities and towns.

INDIA'S FOOD PLAN: A CLARIFICATION

Apropos the article entitled "India's Plan for Food Unbalanced," published in *Commerce* of 4th February, 1961, Dr. P. V. Sukhatme, its author, writes as follows:

"The article was based on the material which I used in my public talk on "Food Problem in India" at Vigyan Bhavan, New Delhi. While the contents of the article generally agree with the analysis presented by me in my talk, the title of the article gives a somewhat exaggerated impression about my views regarding India's food plan. In actual fact, I consider the plan to be perfectly sound, except that a larger target for milk production was called for.

"I hope, however, that the publication of the article will lead to a reconsideration of the target for milk production at the hands of the Planning Commission. I propose to contribute to you a fuller analysis of the problem for publication in your journal at a later date.

"I would appreciate it if you would be good enough to publish this letter in your next number in order to avoid possible misunderstanding."

AN important feature of the educational facilities at Jamshedpur is the leisure-time training of employees. Instruction provided, after hours, helps steelmen like J. P. Pathak to acquire wider knowledge and new skills.

Pathak, who started his career in Tata Steel as an office boy in 1929, passed his matriculation examination from the Company night school in 1944. Pathak next took up an evening course in basic mechanical drawing at the Jamshedpur Technical Institute. In 1957, he was selected for overseas training, and went to Canada, the U.S.A., West Germany and Holland, to learn techniques of operating a sinter plant. Today, Pathak is operator-in-charge of the sinter plant added under the two million ton expansion programme.

Notwithstanding initial handicaps, enterprising men like Pathak have the opportunity to better their prospects through further education and training at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

The Passing Away of Pandit Pant

SOME of the finest tributes that were ever paid to any Indian national leader have been paid to the memory of Pantji, especially by his close contemporaries, President Rajendra Prasad and Prime Minister Jawaharlal Nehru. The quality that received greatest praise in him was his lofty serenity which has been compared to that of a rock of the Himalayas. As the President said of him: "He was never perturbed in the midst of difficulties and differences and maintained an equilibrium of mind which was remarkable." The Prime Minister has bemoaned his loss with great depth of feeling and sense of personal desolation. Having had to go away to the United Kingdom a few hours before Pantji's end arrived, the Prime Minister's sorrow was particularly poignant. There were tears in his eyes when he was interviewed by Press reporters at London Airport and he was unable to keep his great sorrow to himself.

All Eastern nations talk of the art of gracefully growing old with increasing serenity and poise as the years go by, but the tragedy of old age does present itself when others of the same age or younger people pass out and memories come crowding in, memories of troubles and thoughts shared, kindnesses received and achievements partnered in. The symphony of life does not always end with a grand finale of peace and serenity and material comfort or spiritual contentment. Perhaps, the Prime Minister was in such a mood of reminiscence when he landed from his plane at London, and so he was found to be in the depth of grief. It would have been a gesture of kindness and human sympathy to the sensitive person that Mr. Nehru is if the papers had desisted in flashing the news with headlines that he was found 'weeping.' Moments like those when, under the stress of great mental emotion, he was found to be in tears, are too sacred to be made public, and it seems to be a tragic development of modern publicity that every such personal incident should be pulled out into the open and laid bare to the world to satisfy the public craze for 'news.'

Another incident which troubles my mind in regard to journalistic handling of obituaries is the publication of the photograph of Pantji's corpse which almost every newspaper has carried. It seems to be the inescapable penalty which our national leaders have to suffer for being idols of the nation, to be photographed in death with flowers and garlands covering all but the face. One can understand the cortege being photographed in procession and pictures being taken of the vast concourse of mourners and State regalia, but one is unable to see anything but a crude attempt to satisfy vulgar curiosity in the publication of photographs of the corpse or the funeral pyre in flames. Indeed, it is time we stressed a national taboo against these two practices. The humility and respect with which Indians all over the country treat the bodies of their departed ones, and the sanctified significance of our funeral rites, deny any place or merit to the practice of photographing the dead body, and it is nothing short of sacrilege to indulge in it.

Pantji was a grand person when he was alive and at work, physically, mentally and morally. Would it not be infinitely better to sustain ourselves on that memory of him, instead of on a poor photographic reproduction of that grand old figure extinguished in death?

Suggestions Galore

Three suggestions are reported to have been made in the Rajya Sabha by lady members: (*a*) to have compulsory registration of marriages, past and future, with a fee levied for such registration; (*b*) to enforce compulsory sterilisation of persons having two or three children; and (*c*) to levy a tax on parents with more than two children. The fiscal implication of the sterilisation suggestion has not been indicated. Suggestion (*a*) is highly regressive and aims at digging up the pasts (and bitter memories in some cases, perhaps) of millions of persons who were married twenty, thirty or forty years ago, and who would not like to go through even the shadow of a matrimonial ceremony before a Registrar after all that lapse of time, and pay a fee in the bargain. To those men who have more than one wife living, legally married in the bad old days when polygamy was not a penal offence, it might be embarrassing to record the extravagance (or indiscretion?) in a formal document and be stung with a fee for doing so. Why be so cruel as to rake up their past? As regards suggestion (*b*), which indicates that the lady who made it is deeply concerned about the dangers of unchecked growth of population, it is not clear whether sterilisation has been suggested for the male or the female or both. It would be interesting to know if she has realised the great dangers to family life if the male is sterilised and the female is left fertile. I am reminded of the story of a middle-aged widow with ten children, the youngest of whom was two years old, who was asked by a census enumerator when her husband had died, and answered that the sad event occurred eight years before. When the enumerator looked puzzled and asked how that could have happened with children aged six, four and two, the widow answered, almost with indignation, "My dear man, I said that my husband died eight years ago, but can't you see that I have been alive all that time and am still alive?" However, no democratic State in this world appears to have taken concrete steps towards eugenics of human population, positive or negative, and it is very surprising indeed that there is an open suggestion for the imposition of scientific tyranny in a country like ours where the freedom of the human spirit has been controlled by religion almost from the dawn of history. As for suggestion (*c*) which calls for a tax on every child born to parents who have already more than two, if a couple is not deterred from increasing the strength of its family by the stress and strain of modern life, it is certainly not likely to get frightened by taxation; further, there are as many good reasons for having a large number of children as there are for family limitation, as is indicated by the Biblical saying, "Blessed is the man who hath his house full of children for he shall not be afraid of the enemy at the gate."

Having discussed the above suggestions, I shall satisfy my vanity by making a positive proposal, but this is in serious vein. There is a theory, perhaps well founded, that marriages of couples after the ages of twenty-five and round about thirty, tend to lessen the growth of large families for them. At any rate, men and women belonging to professional classes in those age groups, are likely to have a better appreciation of the economic advantages of limited families and plan their lives accordingly. In many communities in India, marriages between boys and girls is the business of the parents and family members, and they take place even while they are in their teens and before they are set up in life. Such couples start having children even before they realise the full extent of the responsibilities they have undertaken in doing so. To discourage this, Government should establish a rule that no married young man or woman will be considered for appointment in any of the administrative or technical services, and will not be confirmed in his or her appointment, if he or she gets married before the completion of the first five years of service. Such a rule was in force in many foreign banks (also the Imperial Bank of India) and business houses in India in pre-independence days and it applied to all European personnel, the underlying principle being that, if the officer started on a basic salary of Rs. 500 per month and worked his way to Rs. 750 in five years, he could not maintain a wife or rear a family before the end of that period during which he was not economically viable. A similar consideration should now apply to present-day recruits in Government service and, if marriage is treated as a disqualification for initial recruitment, there would be a progressive decline in the number of junior officers getting financially embarrassed at the start of their career, and perhaps, as we may hope, a postponement of parenthood. If all enlightened employers in the private sector also adopt a similar policy and impose it as being applicable to all grades of employees (except specialists enlisted at middle age) who seek initial employment as a career, we may have a progressive improvement in peoples' views on the responsibilities resulting for marriage and parenthood, and the sociological need for planned parenthood and family limitation.

Bonus—Why, What and How?

Several years ago, I attended a performance by a group of American Negro entertainers—I think they called themselves "Wilbur's Blackbirds"—and, during an interlude, heard two of the troupe talk to each other in a lighthearted banter. One bit was like this:

George: You know, Robin, there is a proverb which says that the early bird catches the worm.

Robin: Haven't heard of it. What does it mean?

George: Well! It means that, when a bird gets up early in the morning, it has a chance of getting a worm for breakfast.

Robin: That's a stupid bird. Why get up early only to catch a worm? I should say, get up comfortably late and get something better for breakfast.

George: Perhaps you are right. I never thought of that.

And the banter went on in this strain, every statement of George being challenged in its fundamental assumptions, leaving him confused and unable to proceed further. I should think it will be good for most of us to be like Robin, not to accept any assumption as inviolable, and think with some measure of virility on many of the burning topics of the day, including, for instance, the subject of bonus to industrial labour. It is somewhat refreshing to observe that at least one person advocates a "scientific approach" to the whole question of the what, why and how of bonus. He is the Chairman of the Employers' Federation of South India, Mr. B. A. Forsyth. He is of the view that, while bonus, as it exists in India today, is almost unknown in the West, the annual problem of a profit-sharing bonus in this country, mooted by labour, has been the headache of almost every well-established industrial enterprise. Like Robin of Wilbur's Blackbirds, Mr. Forsyth asks: What about the many other questions (besides the appropriate machinery for the settlement of labour claims) such as the merger of a part of the dearness allowance with wages, and the abolition of the annual bonus altogether by substituting a less cumbersome method of payment along with wages every month. The anomalies between the State and the Central Acts with reference to the definition of 'worker,' and the absence of any sense of finality in the recommendations of Wage Boards have also been raised by Mr. Forsyth with a hope that the Bonus Commission will start its investigation from 'scratch' and adopt a scientific method of inquiry.

It has puzzled me to find that, so far, no one has asked or answered the question whether there should be such a thing as 'bonus' in industry, and whether that form of payment which has given rise to a great deal of industrial unrest in the past, could not be substituted by something less unpredictable and less contentious. Should it be related to profits (and, if so, at what stage of computation) or to productivity? Should it be considered as deferred wage, and if so, why defer it and why not integrate it with wage? (Why rise early and catch a worm?) If a deferred wage is the only incentive to increased productivity, why not rationalise such a system of payment, to each worker according to his performance, instead of clinging to an outmoded form of wholesale disbursement from the annual profits of the enterprise? These are problems which raise doubts about the relevance of even certain basic assumptions and only when an investigation is undertaken with that measure of scientific freedom which is necessary to assail fundamentals, can we hope to achieve lasting results.—*All Rights Reserved.*

INDIA'S POPULATION

According to the provisional figures based on the latest census, population of Kerala rose by about 25 per cent to 16.88 million during 1961, as compared with 1951. The percentage of literates was 46.2 per cent, as against 40.7 per cent a decade ago. In Maharashtra, population went up by 23.44 per cent to 39.5 million. Of this, 30 per cent were literates, as against only 21 per cent in 1951. In Mysore, there was an increase of 21.4 per cent in population, that is, from 19.4 million to 23.6 million. The proportion of literates in the State was higher at 25 per cent, as compared with only 19 per cent. The growth of population in Andhra Pradesh was slightly lower at 16 per cent, bringing the total to 36 million.

THE MERRY-GO-ROUND

PRESSURE ON STERLING

From Our Own Correspondent

LONDON, *10th March*

LONDON LETTER

IT was bound to happen. The buoyancy of sterling in the latter part of last year supported on a wave of gold was always precarious. But it was not expected that the wave would break on the rocks of a token German revaluation. For many months, Germany has been under pressure to bring her currency into line with its true external value, and estimates of what that would be have varied from between 10 and 20 per cent over its recent parity. But Dr. Adenauer, dizzy with the success of the German export drive and under pressure from the German industrialists, refused to budge until the new American President began to put his pressure on. Now that the dollar has stopped being a weak currency—although perhaps not yet a strong one—and now that Mr. Kennedy has shown himself a man of purpose, the German Chancellor felt he could not maintain his adamant stand which was steadily sucking gold into the German vortex.

But the step he has taken of a mere 5 per cent upward valuation, a step described by the Americans as simply one in the right direction, has done more harm than good. Dr. Adenauer probably means it to be the last step. He gives away a little now in the hope it will satisfy his international colleagues. Very likely he is right. But those whose business it is to shift hot money about where it can make most profit, still see investment in D-marks as worthwhile. The fact that the Dutch florin immediately followed started a wider speculative wave as to who might be next. The Swiss were the first obvious candidates, and, with less justification, the Italians. But the real malaise of European currencies has centred in the D-mark. If only Dr. Adenauer had taken a proper plunge and revalued the D-mark up by, say, one-eighth, and no one else had moved, that would have done Europe and sterling, a power of good.

As it is, all the uncertainties bear *against* sterling. It is even suggested that sterling ought to be devalued. This is upside down thinking, since it is not sterling which is overvalued in terms of many other currencies, and this point of view is recognised by those who suggest that the dollar perhaps should be devalued as well. If one is to think on those lines, then there is justification for a general devaluation in terms of gold to make up for what the Germans would not do by themselves. France, Belgium and the Scandinavian countries would also come along. There is a great deal to be said for such a wholesale movement, and the I.M.F. would be the right place for working out such a plan. Unfortunately, international co-operation has not yet reached that advanced stage and most countries are concerned with their own immediate positions.

Sterling has withstood the pressure against it only by dint of heavy sales of gold and dollars by the Bank of England. The Bank's action has been quick and firm and has done more than the statements of the Chancellor of the Exchequer to maintain confidence in sterling. There is one further step that could be taken: the Bank could arrange with the I.M.F. to borrow as much as is necessary to meet the outflow of hot money which is now embarking on its Continental adventures.

This is all the more necessary, since the Government drive of exhortation to exporters is bearing fruit, and there is a great deal of industrial keenness to sell more abroad. But how can one maintain an export drive if there is doubt as to whether the currency may be devalued? Importers will be bound to defer their orders. Fortunately, this uncertainty about sterling has not yet taken hold and, provided adequate and public measures are taken by the Bank and the Treasury, the country may come out of the present turmoil with nothing worse than a little gold letting.—*All Rights Reserved.*

The view that the U.S. would welcome the British move towards joining the Common Market of the Six was given by Mr. Averell Harriman, President Kennedy's roving ambassador, during his recent visit to Italy. He observed that the U.S. policy in the post-war period had been to encourage the formation of the largest possible trading groups of European nations.

PROGRESS OF CENTRAL BANK NOTABLE

INCOME RISES—PROFIT IMPROVES—DIVIDEND STEPPED UP

THE shareholders of the Central Bank of India Ltd. (General Manager: Mr. N. K. Karanjia, Bombay), which is the country's biggest commercial bank in the private sector, have every reason to feel gratified at the remarkable progress made by the Bank since its inception fifty years ago; it was founded in 1911, one year after *Commerce* was brought into existence. The balance-sheet total of the Bank as on 31st December 1960 stood at as high as Rs. 268.33 crores. During the year 1960, the year that marks its golden jubilee, the Bank's working funds aggregated Rs. 225 crores, deposits alone accounting for Rs. 200 crores. The credit made available by the Bank to trade and industry as at the end of the year amounted to over Rs. 151 crores. The gross income of the Bank for the year was Rs. 10.78 crores and the profit was of the order of Rs. 1.94 crore. The Bank has in all 195 branches (186 in India, 7 in Pakistan, one in Burma and one in the U.K.) and 122 pay offices.

These figures are quite impressive and the management of the Bank can certainly look back on its career with considerable satisfaction and pride. Appropriately enough, the Directors have proposed to distribute a special jubilee bonus of 2.0 per cent per share (subject to tax) for the year 1960, which, together with the taxable dividend of 18.4 per cent, including the final dividend of Rs. 2.50 per share, makes the total dividend 20.4 per cent. The net distribution without taking into account the special jubilee bonus comes to 12.88 per cent. This is higher than the 12.04 per cent paid for 1959, though it is below the 14 per cent level of the three years preceding it. The staff, too, is being paid a special jubilee bonus equivalent to one month's pay.

* To investment account.
† Subject to deduction of tax.
‡ Only unencumbered securities are taken into account.

The gross income of the Bank in 1960 is substantially higher, exceeding for the first time in the Bank's history of half century the Rs. 10-crore mark. To be precise, it is Rs. 1,077.79 lakhs, as against Rs. 899.95 lakhs in 1959, or a rise of Rs. 177.84 lakhs. The rise is accounted for by both interest and discounts earned and commission and exchange, the former being higher by Rs. 157.64 lakhs and the latter by Rs. 29.56 lakhs. A large part of the improvement in income is, of course, neutralised by the marked increase of Rs. 47.64 lakhs in interest paid on deposits and borrowings and of Rs. 36.52 lakhs in administrative and other expenses. Even so, the profit of the Bank for 1960 after providing for depreciation (Rs. 5.02 lakhs) but before taxation is considerably larger than that for 1959, being Rs. 194.27 lakhs, as against Rs. 101.33 lakhs. The improvement (of Rs. 92.94 lakhs) is in distinct contrast to the decline of Rs. 1.17 lakh suffered in 1959 and of Rs. 7.26 lakhs in 1958. In view of this perceptible improvement, the ratio of profits to gross income stands as high as 18.0 per cent; the ratio, it will be recalled, had dropped from 16.1 per cent in 1956 to 12 per cent in 1958 and 11.3 per cent in 1959.

The working results of the Bank and the balance-sheet for 1960 are compared with those for the preceding three years in the table in column two.

Despite the notable increase in profit, the Bank has again not found it possible to add to its reserves to any significant extent; only the contingency fund has been provided with Rs. 8 lakhs, as against nothing last year, and the sinking fund on the Bank's property has received a few thousands more at Rs. 1.22 lakh. This is apparently due to the Government and the staff taking away the bulk of the profit. The provision for taxation has absorbed Rs. 60 lakhs; a year ago nothing was set apart for this purpose due to a change in the system of corporate taxation following the abolition of grossing. Besides Rs. 10 lakhs transferred to staff gratuity fund, same as last year, bonus to staff has taken up Rs. 51 lakhs, an increase of Rs. 17.25 lakhs. In total, these two items of staff benefits alone have taken up Rs. 61 lakhs or 46 per cent of the net profit.

Although the pace of growth in the deposits of scheduled banks as a whole in 1960 was smaller than in 1959, the Central Bank was able to gather more deposits than it did in the previous year. Thus, the deposits of the Bank registered an increase of Rs. 19.26 crores to Rs. 199.52 crores which is Rs. 1 crore more than the expansion in 1959. Of the rise of Rs. 19.26 crores, the share of fixed deposits and cash certificates alone was Rs. 12.58 crores, the total of these as at 31st December 1960 being more than Rs. 101.33 crores. Savings bank deposits were also higher by Rs. 3.13 crores at Rs. 35.56 crores and current accounts, call deposits, contingency accounts, etc., by Rs. 3.55 crores at Rs. 62.62 crores. Notwithstanding this sizable improvement, the Bank found it necessary to increase borrowings from the Reserve Bank and other banks, in order to meet the heavy demand on it for accommodation from trade and industry. Accordingly, there was a sharp rise of nearly Rs. 13 crores to Rs. 15.77 crores in the borrowings from other banks. Reflecting the expansion in bank credit in the country, the total advances of the Bank were higher by almost Rs. 31 crores at Rs. 150.78 crores; the rise in advances during 1959 was of the order of just Rs. 20.05 crores. Since the rise in advances is much higher than that in deposits, the credit ratio has gone up to touch the all-time peak of 75.5 per cent, from 66.5 per cent in 1959 and 61.6 per cent in 1958. The Bank's investments, too, are higher but by only Rs. 1.68 crore at Rs. 56.60 crores. The investments are, as usual, shown at book value, the market value thereof being Rs. 56.34 crores, showing a small depreciation of Rs. 26,000. The cash balances of the Bank have increased by about Rs. 40 lakhs, but the ratio of total liquid assets (cash *plus* investments) to deposits has fallen sharply from 42.3 per cent to 32.7 per cent. But even the latter level is well above the limit considered necessary as the minimum.

During the year 1960, the Bank opened one new branch, seven sub-branches and four pay offices at various centres. One pay office had to be closed down, since it was found to be unremunerative. The total number of employees of the Bank is nearing the 12,000-mark, as against a little over 10,000 at the beginning of the second Plan.

In view of the fact that the Bank has just completed its fiftieth year, the following comparative figures showing its progress since its inception will be of added interest to readers:

(Figures in thousands of rupees)

Year	*Deposits*	*Advances*	*Working Funds*
1912 ..	87,56	80,93	1,09,95

1952 ..	123,37,18	56,33,20	132,33,41
1960 ..	200,07,47	150,95,51	225,41,85

BANK OF INDIA'S PERFORMANCE IMPRESSIVE

ALL-ROUND IMPROVEMENT

IN refreshing contrast to the declining trend of profit witnessed during the past two years, the working results of the Bank of India Ltd. (General Manager: Mr. T. D. Kansara, Bombay) for the twelve months ended 31st December 1960 show a welcome, and substantial rise in profit (before providing for taxation) from Rs. 82.63 lakhs (for 1959) to Rs. 103.37 lakhs. It may be recalled here that between 1957 and 1959, the profit had contracted by Rs. 10.79 lakhs. The main reason for the impressive rise in the profit for the year under review is the all-round improvement in its activities and intensive utilisation of resources. The gross income has jumped up by 15 per cent from Rs. 455.09 lakhs to Rs. 523.21 lakhs. Of this, the income by way of interest and discount shows a marked expansion of nearly Rs. 50 lakhs and that from commission and discount has gone up by Rs. 18.36 lakhs. On the expenditure side, the interest paid by the Bank on its deposits has expanded by Rs. 17.49 lakhs and other expenses have risen by Rs. 24.77 lakhs to Rs. 196.77 lakhs. Taking both the outgoings, it is found that they have increased from Rs. 371.54 lakhs to Rs. 413.80 lakhs or by 11 per cent, which is appreciably well below the increase of 15 per cent in gross income noted above. Consequently, the Bank's profit margin in 1960 was distinctly better.

In consonance with the improvement in profits, the Directors of the Bank have decided to raise the rate of dividend from 16 per cent (taxable) to 20 per cent (taxable), which is equal to a net return of 14 per cent. Even after this increase, the net dividend is less than the rate the shareholders used to get before investors were denied the grossing facility. It is necessary to mention this point, lest the critics of the private sector should jump to the unwarranted conclusion that the Bank has sought to fritter away the improvement in its profit by raising the dividend. At the current market value of Rs. 120 *cum-div.*, the ordinary shares (partly paid Rs. 50) provide a yield of 6.3 per cent per annum, free of tax.

The following comparative table shows at a glance the progress of the Bank since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Gross income	5,23.21	4,55.09	4,46.30	4,10.95

Cash	11.0	12.1	11.9	14.5

* Subject to deduction of tax.
† After taking into account investments earmarked against borrowings.

It will be seen from the above table that the provision for taxation has been stepped up from Rs. 18.00 lakhs to Rs. 25.00 lakhs and the bonus to staff absorbs Rs. 18 lakhs, as against Rs. 17 lakhs in 1959. The Directors have again not transferred any sum to reserve fund. It may be noted that, since 1951, the Bank has enhanced its reserves by transfers from profit only twice, once Rs. 3 lakhs in 1955 and then Rs. 8 lakhs in 1956. It is, of course, true that the reserves at Rs. 3.10 crores are already in excess of the paid-up capital at Rs. 3.00 crores. Even so, there is a strong case for ploughing back at least some part of the profit to reserves in order to serve as a cushion against risks and vicissitudes in future. The total amount allocated for distribution to shareholders is Rs. 60 lakhs, an increase of Rs. 12 lakhs over the previous year. The Directors had already paid an interim dividend at the rate of 7.50 per cent subject to tax, for the six months ended 30th June 1960. They have now proposed a final dividend at the rate of 12.50 per cent for the second half of 1960.

An analysis of the profit and loss account of the Bank shows that of the rise of Rs. 24.77 lakhs in expenses other than interest paid, salaries, allowances and provident fund alone account for as much as Rs. 12.47 lakhs or more than half; rent, taxes, insurance and lighting for Rs. 4.59 lakhs; stationery and printing for Rs. 2.04 lakhs and other expenditure for Rs. 4.50 lakhs. Another major expense incurred during the year under review is the repairs to Bank's property included under the provision for depreciation, which has increased from Rs. 0.86 lakh (in 1959) to Rs. 6.04 lakhs.

Judging from the rise in gross income the turnover of the Bank must have recorded a marked increase during 1960. The balance-sheet total as at the end of the year, which has moved up from Rs. 118.77 crores to Rs. 133.34 crores, also confirms that inference. The deposits of all categories have recorded an expansion; but such has been quite marked in the case of fixed and savings bank deposits. Thus, fixed deposits have grown from Rs. 45.50 crores to Rs. 51.26 crores, and savings bank deposits from Rs. 13.89 crores to Rs. 16.36 crores, while the current deposits have risen only nominally from Rs. 41.30 crores to Rs. 41.82 crores.

In spite of the improvement in the profit noted earlier, the profit margin (ratio of profit to gross income) has not shown any marked rise, having gone up from 18.2 per cent in 1959 to 19.7 per cent only in 1960. Four years back, it was 26.2 per cent and, in 1949, it stood at as high a percentage as 42. Even the fractional improvement achieved in 1960 might not have been there but for the inter-bank agreement, which reduced the overall interest outgoings, and the acute stringency in the money market which enabled the Bank to secure better rate on its advances.

In fact, one of the arresting features of the Bank's latest balance-sheet is the very sharp rise in advances from Rs. 67.94 crores to Rs. 83.86 crores, or by more than 23 per cent. This growth is quite in keeping with the general trend of advances and bills of the scheduled banks as a whole, the total of which rose by Rs. 207 crores or nearly 22 per cent in 1960. The Bank of India has thus fully shared in the general expansion in bank credit witnessed during the year under review. Another noteworthy feature is that the Bank seems to have mainly depended on its deposit resources and investments in gilt-edged securities for meeting the tremendous demand for accommodation. Significantly enough, its borrowings from other banks at the end of the year were only nominal at Rs. 42,000; a year ago, this item stood at Rs. 3 crores. The advances (to deposits) ratio has increased from 67.5 per cent to 76.6 per cent. The investments of the Bank, which are shown at below market value, have gone down substantially from Rs. 29.82 crores to Rs. 20.77 crores and their ratio to deposits has consequently declined from 26.6 per cent to 18.6 per cent. The high ratio of advances and lower ratio of investment show how the Bank made the adjustments in its two main income-earning portfolios in order to improve its profitability. The Bank's acceptances, endorsements, etc. have more than doubled, from Rs. 6.54 crores to Rs. 14.11 crores, on top of a rise of Rs. 1.46 crores in the previous year. Cash shows only a slight decline from Rs. 12.20 crores to Rs. 12.09 crores. The total of liquid assets (investments plus cash) still gives a ratio of nearly 30 per cent. This has been possible because the Bank's owned resources are over Rs. 6 crores.

The Bank continued its branch expansion programme during 1960, having opened six new branches, as against four in the previous year. Of the six new branches, only one was opened abroad, at Hongkong, the boom town of Asia. The rest were at Calcutta, Madras, Delhi, Indore, and Bombay.

DENA BANK'S PROFIT UP

RESERVES STRENGTHENED FURTHER

THE financial results of the Devkaran Nanjee Banking Company Ltd. (Managing Director: Mr. Pravinchandra V. Gandhi, Bombay) for the twelve months ended 31st December 1960 are highly encouraging, disclosing as they do a distinct improvement over those for the previous year which themselves were better than the achievements in 1958. Thus, the balance-sheet total has jumped up from Rs. 45.86 crores to Rs. 48.71 crores and the gross earnings have risen by Rs. 43.62 lakhs to stand at the impressive figure of Rs. 2 crores. The management of the Dena Bank, as it is popularly known, has continued to follow the policy of extending its activities to new areas and, in 1960 it opened 13 new branches, taking the total number of its offices to 96. The number of accounts has also gone up sizably from 175,000 to 200,000.

During the previous two years, the profit has shown a downward trend, declining from Rs. 18.77 lakhs for 1957 to Rs. 15.30 lakhs for 1959. The profit for 1960, however, shows that this trend has been reversed, as it is no less than Rs. 26.20 lakhs, an increase of Rs. 7.43 lakhs even over that for 1957. Apparently, more of the Bank's branches must have attained the stage of yielding a net gain. And, secondly, the Bank must have benefited considerably by the widening in the spread between the rates of interest on deposits and those on advances. The Directors have provided Rs. 9 lakhs for taxation (as against *nil* in the previous year) and have stepped up the amount to be transferred to reserves from Rs. 6 lakhs to Rs. 8 lakhs. They have also decided to distribute a handsome amount of Rs. 2.65 lakhs as bonus to the staff. After making these necessary provisions and adding the amount of Rs. 5.69 lakhs from the previous year's account, the Directors have recommended a final dividend at the rate of Rs. 2.52 per share subject to tax for the half-year ended 31st December 1960. Together with the interim dividend at the rate of Re. 1.86 per share, the total dividend for the whole year works out to 8.76 per cent subject to tax. Net of corporate tax at the rate of 30 per cent, the return is equal to 6.13 per cent, same as that for 1959 but slightly higher than the 6 per cent per annum (net) declared for 1957 and 1958.

It will be seen from the aforesaid review of the appropriation account that the Central Government and the staff of the Bank have greatly profited by the improvement in the Bank's working and that, of the balance of profit available, the major proportion has been used to strengthen the reserves, which, as we shall show presently, are 20 per cent higher than the paid-up capital.

A bird's-eye view of the progress of the Bank since 1957 can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December

* Subject to deduction of tax.
† Only unencumbered investments are taken into account.

It will be observed from the table that the income from interest and discount has risen by Rs. 36.70 lakhs to Rs. 1.64 crores and that from commission and exchange from Rs. 22.01 lakhs to Rs. 27.21 lakhs. The expenses of the Bank show an increase of Rs. 19.07 lakhs and interest paid has gone up by Rs. 13.61 lakhs.

(Continued on page 520)

SMART RISE IN BARODA BANK'S PROFIT

GOVERNMENT IS THE CHIEF GAINER

FOR the third year in succession, the progress of the Bank of Baroda Ltd. (General Manager: Mr. N. M. Chokshi, Baroda) has been very impressive. Thus, for the twelve months ended 31st December 1960, the financial results of the Bank reveal a distinct all-round improvement, deposits, advances and profits all being higher. The turnover of the Bank, as indicated by the total income and balance-sheet total, is substantially larger, thanks to the policy of vigorous branch expansion pursued by the management in the more recent years and the improvement in industrial and agricultural production in the country. In 1959, the balance-sheet total rose by some Rs. 20 crores and the gross income by Rs. 57 lakhs. In 1960, the expansion in the corresponding items has been Rs. 5.42 crores and Rs. 75 lakhs, respectively. In other words, on a smaller increase in total assets, a larger rise in income has been brought about. This means that, during the year under review, the Bank's resources found more profitable outlets than in the previous year. It also reflects the relatively larger spread between the borrowing and lending rates that prevailed during the year for reasons well known to our readers.

Over the year, the deposits have gone up by only Rs. 3.99 crores, as compared with Rs. 13.88 crores in 1959. This is in keeping with the general trend of bank deposits, but they still stand at the impressive figure of Rs. 84.98 crores. In 1956, that is, the beginning of the second Plan period, they were only of the order of Rs. 45.14 crores. The advances have also recorded a sharp rise of Rs. 9.30 crores during 1960 and the profit (before providing for taxation) has jumped up from Rs. 33.46 lakhs to Rs. 70.85 lakhs, that is, by more than cent per cent. The greatest beneficiaries of this strident rise in profit have been the Government and the Bank's staff. Thus, the provision for taxation has taken up as much as Rs. 30 lakhs, as against a mere Rs. 4 lakhs and that for payment of bonus to staff is Rs. 17.10 lakhs, as against Rs. 9.40 lakhs last year. The Directors have no doubt increased the dividend from 14 per cent (taxable) to 17 per cent (taxable) and that on a higher paid-up capital. Nevertheless, the amount required to pay this dividend at Rs. 23.49 lakhs is only Rs. 6 lakhs more than the sum disbursed to shareholders last year. This year, too, the Bank has not been able to set aside anything for reserves, excepting a fractional amount by way of development rebate.

A synoptical view of the progress of the Bank since 1957 can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Gross income	4,61.14	3,55.88	3,28.89	2,85.28
Interest and discount earned	3,85.55	3,11.54	2,78.19	2,33.40
Commission and exchange	73.37	68.79	49.97	51.15
Interest paid	2,22.24	2,04.00	1,85.45	1,40.05
Expenses	1,62.50	1,47.50	1,12.96	99.47
Depreciation	5.55	4.92	3.06	1.91
Profit	70.85	33.46	27.43	43.85
Provision for taxation	30.00	4.00	5.50	21.00
Bonus to staff	17.10	9.40	8.00	9.50
Development rebate	0.19	0.57		
Dividend	23.49* (17%)	17.50 (14%)†	15.00 (12%)‡	14.00 (14%)
Carry forward	1.09	1.03	3.04	4.11

	As on 31st December			
	1960	1959	1958	1957
Capital	1,50.00	1,25.00	1,25.00	1,00.00
Reserves	1,61.15	1,60.07	1,59.50	1,28.00
Deposits	84,98.24	80,98.73	67,10.39	52,82.81
Borrowings from other banks	2,71.98	4,96.11	2,44.79	0.63
Advances	60,17.78	50,87.66	49,11.24	34,99.62
Investments	23,13.23	30,92.10	26,72.75	11,87.32
Cash	8,16.75	7,84.30	6,51.68	8,71.49
Balance-sheet total	109,86.21	104,43.76	84,66.52	64,32.58
Ratio to deposits of—	%	%	%	%
Advances	70.8	62.8	59.8	66.2
Investments	24.4§	33.0§	36.8§	22.5
Cash	9.6	9.7	9.7	16.5

* Includes Rs. 2.24 lakhs for paying final dividend at the rate of 20 per cent. on equity shares of the new issue of Rs. 50 lakhs.
† Subject to deduction of tax.
‡ On the increased capital of Rs. 1.25 crores.
§ Only unencumbered investments are included.

It will be noticed from the table that the gross income has increased substantially by Rs. 75.26 lakhs to Rs. 461.14 lakhs. Of this rise, the bulk of the increase, Rs. 74.01 lakhs, to be precise, is accounted for by the income from interest and discount. The income from commission and exchange has risen from Rs. 68.79 lakhs to Rs. 73.37 lakhs. The interest paid by the Bank on deposits and borrowings has gone up at a relatively smaller pace than in 1959, from Rs. 204 lakhs to Rs. 222.24 lakhs and other expenses by Rs. 15 lakhs to Rs. 162.50 lakhs. Together the increase in these two outgoings aggregates Rs. 33.24 lakhs, as against the sharp rise in gross income of Rs. 75.26 lakhs. This explains the remarkable improvement in profit from Rs. 33.46 lakhs to Rs. 70.85 lakhs as noted earlier. The profit margin has consequently registered a good rise from 8% to 15.4%.

The table further reveals that the total deposits have gone up from Rs. 80.99 crores to Rs. 84.98 crores. Of this rise, the increase in savings bank deposits and current deposits is Rs. 2.85 crores and Rs. 1.81 crores respectively. The fixed deposits, however, have actually gone down from Rs. 49.14 crores to Rs. 48.47 crores. The changes in the pattern of assets of the Bank of Baroda closely resemble the general trend for the scheduled banks as a whole. Thus, advances, the most remunerative of all assets, have gone up from Rs. 50.88 crores to Rs. 60.18 crores, taking the advances (to deposits) ratio from 62.8 per cent to 70.8 per cent. The investments, on the contrary, have dropped from Rs. 30.92 crores to Rs. 23.13 crores and their ratio (taking into account only the unencumbered portion) has fallen from 33.0 per cent to 24.4 per cent. These higher and lower ratios of advances and investments clearly reflect the changes made by the Bank in its structure of assets in order to maximise the profitable utilisation of resources, availing itself of the opportunity presented by the increased demand for bank accommodation resulting from larger economic activity in the country. In addition, the Bank appears to have also relied upon borrowed resources to augment its lending capacity. The borrowings from other banks are of the order of Rs. 271.98 lakhs. This includes an amount of Rs. 54 lakhs borrowed from the Refinance Corporation of India. A year ago, however, these were actually greater at Rs. 4.96 crores. The decline only goes to show that the Bank has tried to keep down inter-bank borrowings and dependence on the Reserve Bank to the minimum, in view of their high cost.

The Bank is continuing the policy of branch expansion and during the year under review, in all five new branches were opened, taking the total number of offices to 100, of which ten are in foreign countries.

The Rs. 50 paid-up shares of the Bank are currently quoted in Bombay at Rs. 97.50 and, at the current rate of dividend, the yield works out to 6.49 per cent per annum, free of tax.

MODERNISING WOOLLEN INDUSTRY

WORKING GROUP'S PROPOSALS

THE development of woollen textile industry in India during the third Five-year Plan period will be modernisation-oriented, rather than expansion-oriented. For the programme drawn up for the industry under the Plan does not envisage the installation of any additional spindles and looms, since the present installed capacity is considered to be more than sufficient to produce the entire requirements of woollen-worsted yarn and cloth, inclusive of export demand. The capacity calculated on the basis of two shifts and 300 working days is estimated at 67 million lbs. of yarn and 48 million yards of cloth, whereas the anticipated demand in the last year of the third Plan (1965-66) is put at 45 million lbs. and 30 million yards, respectively. The existing capacity is proposed to be utilised more intensively by increased shift working and through rehabilitation and modernisation. The Government of India is broadly in agreement with the Working Group on Woollen Industry which has recommended in its report that the industry must be rehabilitated and modernised within a period of five or six years. The Working Group, it will be recalled, was constituted in January 1960 by the National Industrial Development Corporation.

The need for modernising the woollen textile industry is very urgent. The Working Group has highlighted the fact that some of the woollen machinery installed is so dilapidated that it would ultimately be more economical to replace the entire machinery rather than to replace parts. Indeed, some of the mills are finding it increasingly difficult to procure spare parts, as the original makers of some of these machines are either not in existence now or have changed their lines of manufacture. The Group has clearly warned that, unless the country keeps pace with the many-sided technological developments, the progress so far achieved in the expansion of the industry will not be of much avail. And it has done well to point to the move of the machinery manufacturers everywhere to embody the principles of automation and electronic controls which make it possible not only to have greater productivity and efficiency and to reduce the cost of manufacture but also to reduce (at the same time) the stress and strain on operatives, to improve quality of production, to save floor space for housing the machines, and to cut down wastage of raw materials.

Lower Cost, Higher Earnings

It will be interesting to note here that the installation of the latest type of machinery by a woollen mill in India has lowered the cost of manufacturing fine worsted yarn by 20 per cent after making due allowance for providing full depreciation on machinery and for enhanced wages to operatives to compensate for additional workload. Similarly, the introduction of the latest type of box looms, a pair of which can be operated by one worker, has resulted in a saving of about 30 per cent in production cost. One operative with the helper, we are told, can attend from six to ten Texmaco tape looms converted into semi-automatic looms, with the addition of George Fisher shuttle changing equipment, and this will raise the workers' daily basic wage by an average of 71 nP.

The specific lines on which the working group wants the rehabilitation and modernisation to take place are as follows:

Worsted spinning sector: Although the sector should be free to install the latest type of machinery the objective will be better served if suitable modifications are made in the existing plants by having auto-levellers and super-drafting equipment fixed in the existing machinery.

Woollen spinning sector: Some of the new innovations can be easily incorporated in the existing plants with minor adjustments. The urge for replacement in this sector, it is found, has not been great, because it is not as prosperous as the worsted sector and does not have the necessary monetary resources to meet any large-scale programme of rehabilitation. Nor have technological advancement in machinery designs been so outstanding as in the worsted sector.

Woollen mill having less than fifty powerlooms: Replacement of looms by automatic looms is not advantageous. The establishments will do well to replace the old looms by drop box or any other type of powerloom which will enable them to produce specialised and varied types of fabrics.

The Working Group has estimated the aggregate outlay on the complete rehabilitation of woollen industry at Rs. 11.25 crores, of which the cost of plant and machinery accounts for Rs. 10.25 crores, the balance representing the expenditure on land and building (installation of machinery, better ventilation and lighting facilities, etc.). The foreign exchange component of the plant and machinery cost is put at Rs. 8.50 crores. The Group does not think that it will be difficult for the industry to finance 75 per cent of the total outlay, either out of its own resources or through its own banking arrangement, and it is felt that there should be no insuperable difficulty in meeting the additional charges, that is, interest on loan to finance the rehabilitation programme. It suggests that the industry may get loan assistance from the National Industrial Development Corporation to meet 25 per cent of the rehabilitation cost. Apropos this suggestion, the Government points out that it cannot accept it at present, particularly because the cotton textile and jute industries are getting prior call on the limited loan facilities available.

Foreign Exchange Allocation

The Government has, however, accepted in principle the recommendation of the Group that essential expenditure on spare parts must have first charge on foreign exchange resources. It has also agreed with the view that, while efforts must be made to manufacture within the country certain preparatory and finishing machinery during the third Plan period, spinning, power-weaving and other finishing machinery will have to be imported. A Committee has already been set up to examine the extent to which the requirements of textile machinery can be met from indigenous sources and to explore the possibility of manufacturing all wool preparatory and finishing machinery.

Forming part of the woollen industry rehabilitation programme recommended by the Working Group are the following suggestions:

1. A suitable scheme be devised to enable the spinning sector which produces yarn going into carpets to import machinery; if any other link between supply of yarn to export of carpets can be devised, it may be left to the exporters of carpets to nominate the spinners who can get the licences for import of machinery.

2. The question of liberalising import incentives against exports till such time as the industry's products are well introduced in the overseas markets needs to be examined. It may be necessary to raise the present incentive for import of machinery from 10 per cent to 20 per cent of the f.o.b. value of exports to enable the industry to carry out its rehabilitation programme in a period of five to six years. A suitable scheme be devised by the Woollen Development Council as modification of the existing scheme.

3. The spinning mills can be accommodated in the export promotion link by their obtaining certificates of exports effected by hosiery and shawl manufacturers with the proviso that the latter will pass on to the spinners some portion of the incentive, so that, by such a link, the spinning mills are able to procure licences for machinery against replacement. It may also be stipulated that the spinners provide the yarn to hosiery units at fair prices. The Woollen Development Council should, *inter alia*, consider this aspect while formulating a new scheme in collaboration with the Textile Commissioner.

4. There are no encouraging signs of export of old machinery, but this cannot be entirely ruled out. If any firm succeeds in exporting its old machinery, the benefits of foreign exchange thus earned be made available to such units against replacement of their old machinery.

5. The development of wool combing and establishment of shoddy wool making plant will result in some saving in foreign exchange resources.

6. It is of the utmost importance so to coordinate planning and rehabilitation of the industry as to relate to the targets and means of production.

7. In the general interest of the woollen industry, the disparity in the application of excise duty should be narrowed.

Presumably in pursuance of the last mentioned suggestion, the Union Finance Minister has reduced, as part of his budget proposals, the exemption limit for purpose of excise duty from four looms to one loom. The reduction will surely check the deliberate tendency towards fragmentation which suffers from two disadvantages, namely, deterioration in the quality of products manufactured and the inability of small units to take full advantage of latest machinery that are available.

Jet your goods to LONDON

Take advantage of our 5 Boeing flights every week to the Middle-East, Continent and the U.K. Jet your goods in the modern manner to the great markets of the West in a matter of hours!

Air transportation ensures streamlined distribution of goods — an important factor in business today...it eliminates incidental charges including heavy warehousing costs. That's why flying your goods on Air-India means less tied-up capital, quicker turnover and larger profits.

Plan your exports now...jet-speed them in the holds of Air-India's Boeing 707s, which have a 5 ton capacity for cargo.

FOREIGN CLOTH ARRIVALS LARGE

EGYPT'S BID TO RECAPTURE ITS TRADITIONAL COTTON MARKETS

From Our Special Correspondent

MANCHESTER, *7th March*

MANCHESTER LETTER

THE Directors of the City Centre Properties Ltd, have made their £2,400,000-bid for the Manchester Royal Exchange unconditional. Later they refused to disclose the percentage of acceptances they had received. This was in answer to a direct request from the Board of the Manchester company which controls a valuable site and building in the city containing the trading floor of the Exchange, claimed to be the biggest commercial meeting place in the world, and a large number of offices.

In a statement, Mr. Edward G. Speakman, Secretary of the Exchange, said: "The Directors consider that this information which is, in their opinion, of considerable importance to those stockholders who have not hitherto accepted the offer, ought to be immediately made available to the public."

Pulse of the Market

Although regarded by many as an anachronism, the habit of foregathering on the Manchester Royal Exchange for discussion of trade affairs is a longstanding feature of carrying on business in Lancashire-made textiles. Even those who have never used its facilities are inclined to regard the building as an institution and, in consequence, regret that its ownership now looks like passing into hands which have no valid reason to value the history or current predicaments of the cotton industry in this country.

Pledges have been given that the members of the Royal Exchange will still be provided with the opportunity of contacting their colleagues and competitors in suitable surroundings. It is, however, scarcely surprising that traders are chary of accepting such statements at their face value, in view of the obviously lucrative nature of the site itself and the possibility of providing more commercial accommodation within the building. The Directors of the Exchange had themselves drawn up plans for the conversion of more of the trading floor into offices.

The contraction of the industry, especially within the past couple of years, has inevitably led to a reduction in the number of those using the Exchange. Others who have condemned its existence as "the biggest talking-shop in the country" may have received more ammunition for their arguments as a result. There are still, however, numerous people engaged in textile production and distribution in Lancashire who would heartily regret the abandonment of its functions, which have provided a forum for ideas and permitted those who used its boards intelligently an opportunity to test the atmosphere of the market at any particular time. If the new owners plan at a later date to dispense with this historic Manchester landmark, which is still symptomatic of Lancashire's heyday, they are certain to meet with strong opposition.

From the Four Corners

A postscript to the astonishing rate of foreign cloth arrivals in 1960 comes in the final figures illustrating imports of cotton grey fabrics, which make it clear that the cargoes were, in fact, shipped from the ends of the earth. While they did not actually stretch from China to Peru, they certainly came from as far afield as Formosa and Chile, Ghana and Greece, Australia and Afghanistan, covering all five continents.

In all, 46 countries shared in the 600 million yards of loomstate cloth shipped to Britain last year at a cost of nearly £37,000,000. The major suppliers are already known through the Board of Trade returns, but the gaps in the "other foreign countries" total can now be filled. These show, as suspected, that the chief continental source of imports was the Iberian peninsula.

Arrivals from Spain amounted to 57,689,686 square yards, exceeding the quantities shipped from Japan, China and Pakistan. They were, in fact, third in the list, coming after India and Hong Kong only. Portugal sent 15,065,860 square yards. Other countries which supplied more than 5,000,000 yards were the United States, Yugoslavia, the Irish Republic, Canada, France, the Soviet Union and Egypt.

Egypt As A Seller

The belief that Egypt will make a real effort next season to recapture its traditional markets for raw cotton is expressed by Mr. W. Williams, President of the Manchester Cotton Association, in a report made following a visit sponsored by the Egyptian Cotton Promotion Committee. Eventually, he believes, the only sellers will be those favoured by the Government, and all non-Egyptians will gradually be squeezed out of business.

Egypt's commercial outlook has undergone considerable changes in recent years. During the economic blockade after the Suez incident, the Government signed bilateral agreements with the Eastern European countries and thereby succeeded in opening new markets for its raw cotton, which is the main export cash crop, averaging rather more than 75 per cent of total shipments.

There are now 42 markets open to Egyptian cotton, whereas there were only six before Suez. According to Mr. Williams, the Government is now anxious to resume more normal trading operations with its former customers. Its current selling programme aims at eliminating the barter system, stopping the re-export of cotton, modifying prices by dropping the export tax on all types except Ashmouni and limiting the quota provided for exporters, according to their capacity and past activities. At the same time, the Ministry of Agriculture is doing its best to maintain and, if possible, improve the quality of Egyptian cotton. Although complaints are received that desirable cotton is not obtainable in the quantities required, there are now many more users than in the past and competition is therefore keener.

Pre-cleaning of some grades is liable to be overdone, the report continues, destroying the whole character of the cotton. Another reason for higher grades not being available in sufficient quantities is that the pickings of the crop have been reduced from three to two, while the replacement of upcountry classers, most of them European experts who have now returned to their own countries, is proving a serious problem and threatening to lower the standards of Egyptian cotton.

Stocks And Sales

Considering the very marked difference in climatic conditions in Britain during the summer months of 1959 and 1960, the way in which textiles maintained their rate of progress through distributive channels was highly satisfactory and enabled the mills in Lancashire to keep running at near maximum levels for long periods. Official figures relating to sales and stocks for the past year have now been issued by the Wholesale Textile Association which reflect the rising movement of supplies.

Total sales in 1960 over the year as a whole were the highest since 1951, the average of monthly index numbers, based on 100 in 1950, being 104.2. Sales of women's and children's wear at 105.5 were the highest for any year in the current series. Although the disposal of goods in December was 5½ per cent lower than in the same month of 1959, the annual average sales increased by 6.8 per cent over the previous year. Total stocks held at the end of each year are generally on the low side. The index number in 1960 fell from 119.8 in November to 109.8 a month later, but the end-of-the-year was still the highest since 1951. Supplies held by wholesalers throughout 1960 were the largest for any year covered by the current series of index numbers and averaged 120.5. As compared with 1959, the total stocks at the end of December were up by 10.9 per cent.

Board of Trade index numbers, however, show that orders on hand in the textile and clothing industries at the end of last year were slightly higher than twelve months previously. The rate of new orders received in December dropped by 27 per cent, as compared with the same month in 1959, but the decrease in contracts placed during the final quarter of last year was only 8 per cent compared with the final three months of 1959 when buying was exceptionally heavy.

Although deliveries showed a seasonal reduction in December as compared with the previous two months, they remained at practically the same level as in December 1959. Orders on hand, based on the figure 100 as at April 1959, were 136, as against the peak index number of 142 in November and 137 in October 1960.—*All Rights Reserved.*

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1960

To

THE MEMBERS OF

DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet and the Profit and Loss Account of the Company, hereinafter called the Bank, for the year ended 31st December, 1960. The Auditors' Report is also annexed.

2. The Bank has, during the year, made generally good all-round progress. The Bank's deposits at the end of the year were over Rs. 35 crores, the total working funds about Rs. 42 crores, and the number of accounts over two lakhs. Thirteen branches were opened during the year—at Worli, Sion and Mulund (in Bombay), Cambay, Nandurbar, Palanpur, Umreth, Botad, Gondal, Dhoraji, Upleta, Sihor and Wankaner (in State of Gujarat)—bringing the total number of the Bank's branches to 96 at the end of 1960. Two Safe Deposit Vaults were opened—at Mulund (in Bombay) and Anand (in Gujarat)—bringing the total number of Safe Deposit Vaults to 23. Steps were also taken to expand the activities of the present branches. Your Directors are also happy to state that the Reserve Funds of the Bank have now reached the figure of Rs. 60 lakhs.

Since the end of the financial year to which the annexed Balance Sheet relates, till the date of this report, one branch was opened at Ellis Bridge, Ahmedabad, the present capital of the State of Gujarat, along with a Safe Deposit Vault, raising the total number of our branches to 97 and of our safe deposit vaults to 24.

3. The Bank has made a net profit of Rs. 26,19,731.96, which, together with the sum of Rs. 5,69,301.47 brought forward from last year's account, amounts to Rs. 31,89,033.43. Out of this, your Directors have made the following appropriations:

	Rs. nP
To Ad-Interim Dividend for the half-year ended 30th June 1960 at the rate of Rs. 1.86 per share	1,86,000.00
To Amount of Provision for Bonus to Staff	2,85,000.00
To Reserve Fund under Section 17 of the Banking Companies Act	8,00,000.00
To Provision for Taxation	9,00,000.00
and propose to appropriate the balance as under:	
To Pay a Final Dividend for the half-year ended 31st December 1960 at the rate of Rs. 2.52 per share (making in all 8.76 per cent. per annum, subject to deduction of tax)	2,52,000.00
and To Carry Forward	7,86,033.43
Total .. Rs.	31,89,033.43

4. In accordance with Article 100 of the Articles of Association, Shri Lalitchandra C. D. Nanjee, Prince Udaybhan of Porbandar and Shri Natvarlal S. Choksey retire from the Board of Directors by rotation but being eligible offer themselves for re-appointment.

5. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

BOMBAY, *9th February*, 1961.

Balance Sheet as at 31st December, 1960

CAPITAL AND LIABILITIES	Rs. nP	Rs. nP
1. Capital—		
AUTHORISED— 2,00,000 Ordinary Shares of Rs. 50 each	1,00,00,000.00

SUPER-TAX ON INTER-CORPORATE DIVIDENDS

FINANCE MINISTER'S ARGUMENTS NOT CONVINCING

By George Carvelho

THE proposals relating to taxation of inter-corporate dividends are intended to remove two anomalies in the present system. One is that formation of subsidiary companies by Indian and foreign companies is encouraged by the concessional rate of super-tax on dividends received by a parent company from its subsidiary, as compared with the rate of super-tax, where the dividend income is received by a company which is a minority shareholder. The other anomaly is that the tax on dividend income received by a minority-shareholding foreign company is substantially higher than on an Indian company with a minority investment. It is, therefore, proposed that the rate of super-tax on dividends paid on inter-corporate investment, whether Indian or foreign and whether on a majority or a minority basis, should be fixed at 20 per cent.

While admirable in principle, the proposals are open to criticism on the following points:

The uniform rate of super-tax on inter-corporate dividends is to be fixed at 20 per cent in all cases, whether the dividend receiving company is Indian or foreign and whether it holds a majority or minority interest in the dividend-paying company. At present, the rate of super-tax in the case of dividends paid by subsidiary to parent companies is 10 per cent. It is a pity that uniformity is to be attained by raising this rate to 20 per cent, instead of reducing the rate in the case of minority shareholding companies to 10 per cent. The present rates of tax on inter-corporate investment are extremely high, except in cases covered by Section 56A of the Income-tax Act, which exempts completely from super-tax, the dividends received from companies engaged in any of the industries specified in the section. In all other cases of inter-corporate investment, the tax burden is heavy, as the following examples show:

If a company uses its funds to create a subsidiary, the return on its investment is subject to taxes at two stages. First, the subsidiary company pays income-tax and super-tax on its profits. Then, the profit after tax, passed on to the parent company as dividend is further subject to income and super-tax. Assuming that the entire profit, after taxation is distributed as dividend, we get the following:

	Rs.
Income of subsidiary company ...	100
Income-tax and super-tax at 45% ...	45
Net income after tax	55
Dividend paid to parent company ...	55
Tax at 30% (20% income-tax, 10% super-tax)	16.5
Net income after tax of parent company ...	38.5
Total tax ...	61.5

In the case of a non-subsidiary company formed and registered *after* 1st April 1959, the position will be:

	Rs.
Income of non-subsidiary company ...	100
Income-tax and super-tax at 45%	45
Net income after tax	55
Dividend paid to minority shareholding company	55
Tax at 40% (20% income-tax, 20% super-tax)	22
Net income after tax of minority shareholding company	33
Total tax ...	67

In the case of a non-subsidiary company formed and registered *before* 1st April 1959:

	Rs.
Income of non-subsidiary company ...	100
Income-tax and super-tax at 45% ...	45
Net income after tax	55
Dividend paid to minority shareholding company	55
Tax at 45% (20% income-tax. 25% super-tax)	24.75
Net income after tax of minority shareholding company	30.25
Total tax ...	69.75

In case where there are more than two companies in the chain of inter-corporate investment, a further slice of the profit is taken away at each stage, till the ultimate shareholders are reached. These individuals are then liable to income-tax and super-tax on their dividend income and since such receipts are treated as unearned income for tax purposes, this income could attract an 84 per cent rate of tax. The eventual yield to the ultimate shareholders or entrepreneurs at the end of the chain is relevant to a study of inter-corporate taxation, because it is they who have the final decision-making power regarding the whole chain of investment.

To those who question the economic utility of inter-corporate investment, whether involving two or more companies, the National Council of Applied Economic Research points out, in its study of "Taxation and Private Investment," that the two-tier corporate structure was found necessary in the industrialisation of developed countries. "A great merit of the corporate form is that the entrepreneur can gather together resources of many savers, including the earnings of the company itself and invest them, either in the expansion of the same enterprise or in starting new ventures. If a new venture is to be started as a company with pooled resources, the two-tier structure becomes inevitable."

More Complicated

A great limitation of the budget proposals relating to inter-corporate dividends is that the position described above remains substantially unchanged. For one thing, the new rates are to apply only in the case of dividends from companies formed and registered after 1st April 1961. The crushing burden of taxation on inter-corporate investment in existing companies is thus to continue. Furthermore, even with regard to dividends from companies to be formed and registered after 1st April 1961, the new rates are lower than the old only with regard to dividends received from an Indian company by a foreign company who is a minority shareholder. In such a case, the new rate of super-tax on dividends is 20 per cent, as compared to 33 per cent at present on companies formed and registered after 1st April 1959 and 43 per cent on companies formed and registered before that date. Where the dividends are received from non-subsidiary Indian companies by Indian companies in which the public are substantially interested and whose total income does not exceed Rs. 25,000, the new rate of 15 per cent is the same as the present rate on dividends from companies formed and registered after 1st April 1959 and lower than the 20 per cent rate on dividends from companies formed and registered earlier. Where dividends are received by other Indian companies, the new rate of 20 per cent is again the same as the present rate on dividends from companies formed and registered after 1st April 1959 and lower than the present rate of 25 per cent on dividends from companies formed and registered earlier.

An already needlessly complicated state of affairs is thus, again needlessly, to become even more bewilderingly complex. There will henceforth be three different schedules of rates for taxation of inter-corporate dividends, one for dividends paid by companies formed after 1st April 1961, another for companies formed before this date but after 1st April 1959 and a third for companies formed earlier than that.

Assumptions Unreal

The Finance Minister's explanation for limiting the applicability of the new rates to companies formed after 1st April 1961 is that such limitation was necessary "in order that this change does not affect investments already made under different assumptions." The importance of not changing the assumptions under which investments have already been made seems to have been exaggerated. For one thing, in cases where the new rates are lower than the old, as in dividends received by foreign companies from Indian companies which are not their subsidiaries, no one will object to the alteration of the earlier assumptions. The only case in which the new rate is higher is that of dividends received by a parent company, Indian or foreign, from an Indian subsidiary. The additional complexity could, therefore, have been avoided, if the rate of super-tax in such cases were not raised to the level of the rates on dividends from non-subsidiary companies, but instead the latter were reduced to the level of the former.

DEVKARAN NANJEE BANKING COMPANY, LIMITED—*(Continued)*

Profit and Loss Account for the year ended 31st December 1960

EXPENDITURE	Rs. nP	INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Rs. nP
1. Interest paid on Deposits, Borrowings, etc.	93,04,935.15	1. Interest and Discount	1,63,52,574.10
2. Salaries, Allowances and Provident Fund (Includes Rs. 60,750 to Managing Director)	55,84,399.53	2. Commission, Exchange and Brokerage	27,21,344.27
Directors' and Local Committee Members' Fees and Allowances	40,075.00	3. Rents	1,23,451.25
3. Rent, Taxes, Insurance, Lighting, etc.	6,72,583.30	4. Net Profit on Sale of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves, or any particular Fund or Account)	2,248.29
4. Law Charges	50,575.12	5. Net Profit on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves, or any particular Fund or Account)	Nil
5. Postage, Telegrams and Stamps	4,51,212.35	6. Income from Non-Banking Assets and Profit from Sale of or Dealing with such Assets	Nil
6. Postage, Telegrams and Stamps	11,190.00	7. Other Receipts	8,20,732.97
7. Auditors' Fees	2,53,900.78		
8. Depreciation on and Repairs to Banking Company's Property	7,43,560.83		
9. Stationery, Printing, Advertisement, etc.	Nil		
10. Loss from Sale of or Dealing with Non-Banking Assets	5,53,526.86		
11. Other Expenditure	23,54,731.96		
12. Balance of Profit (subject to Taxation)			
Total .. Rs.	2,00,20,350.88	Total .. Rs.	2,00,20,350.88

NOTE:—1. Remuneration received by three Directors for their own use from other companies by virtue of nomination by the Bank on the Board of other companies amounted to Rs. 2,205 during the year.
2. During the year the Bank has contributed a sum of Rs. 1,001 to Bombay Pradesh Congress Committee.
3. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have examined the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the audited returns of 4 branches and the unaudited returns from all the other branches not visited by us for the purposes of this report. Exemption from audit of these Branches has been obtained by the Bank from the Department of Company Law Administration, Ministry of Commerce and Industry, Government of India, New Delhi.

We report that—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

In any case, it cannot be seriously argued that the assumptions under which investments were made in the past should, under no circumstances, be disturbed. When investments are made in Indian companies, whether by individuals or companies, Indian or foreign, there is no question of any sort of assurance or guarantee against future changes in tax rates. The risk of a future increase in taxation in the country in which capital is invested is one of the unavoidable risks that any investor must be willing to take. It will probably be found that intending investors are quite prepared to face such risks, which will, in all likelihood, be found to influence their decisions less than others, arising from the general economic, social and political conditions in the country.

Besides, the assumptions to which the Finance Minister attaches so much importance have, in fact, been substantially changed through the adoption of the new system of company taxation, under which shareholders have been deprived of the "grossing-up" facility in regard to dividend income. The change to the new system involves, for the majority of shareholders, Indian and foreign, in Indian companies, a reduction in the net dividends received by them. Mr. Morarji Desai's indifference to this radical alteration of the assumptions under which past investments were made does not accord with his present concern over the inviolability of these assumptions.

Other Serious Consequences

There are other consequences that are likely to follow from the limitation of the new rates of super-tax on dividends to new companies. One of the most serious of these is that foreign companies will henceforth try to avoid investments in existing companies, because the rate of tax on dividends from new companies will be lower. Foreign equity participation is needed not only in the case of new companies but for expansion of the activities of existing companies. There is no justification for what amounts to a fiscal deterrent to foreign participation in such schemes.

Another danger is that, while formation of new subsidiary companies in future will lose the advantage it enjoyed in the past, there will continue to be a tax benefit in acquiring a controlling interest over existing companies.

Yet another consideration is that those foreign companies that responded to India's efforts to attract foreign private capital in the past and became minority shareholders in Indian companies are now to be deprived of the lower tax rates on dividends payable by foreign companies that will invest in new Indian companies. They must be regretting that they were in such a hurry to come in and wishing that they had held off until the tax rates changed in their favour. Those who have been hesitating and holding off till now will congratulate themselves on their foresight and may be tempted to delay their investments in India even more, in the hope that some further advantages may ensue. It seems all wrong to deprive past investors of tax concessions that will be enjoyed by new-comers on the ground that assumptions that governed past investment should not be disturbed.

The corollary to this cavalier treatment of companies which are minority shareholders in existing Indian companies is that the companies that acquired subsidiaries in the past are to continue to enjoy a tax advantage. Thus, those who acted in a manner that we consider socially undesirable and contrary to the official policy on foreign capital (which disapproves of foreign controlling interests in Indian enterprises) are to be rewarded by being allowed to retain their tax benefit, while those that fell into line with Government policy and came in as minority shareholders are to be penalised by being deprived of the concessions we intend to extend to those who do so in future. The whole situation is somewhat incongruous.

All these incongruities and paradoxes can be avoided if two simple changes are made in the Finance Bill. First, the rate of super-tax in the case of dividends paid by a subsidiary to a parent company should remain unchanged at 10 per cent and the super-tax rates on all other inter-corporate dividends should be reduced to the same rate of 10 per cent. Second, the new rates of super-tax on inter-corporate dividends should apply to all companies old and new, irrespective of the date on which they were formed and registered.

CAR INSURANCE BASED ON MILEAGE

A new system of car insurance, which relates premium to the distance driven, the age of the licence-holder and the car engine output, has been introduced by the insurance companies in Sweden. The scheme will cover about 70 per cent of all private cars in Sweden and has been developed on the basis of an inquiry among some 65,000 car-owners in Stockholm. For the majority of the car-owners, about 60 per cent of whom drive between 6,200 and 15,500 miles a year, there will be no change in premium charged. The estimated 30 per cent of the motorists, who drive less than 6,200 miles, will obtain a rebate of 20 per cent on the premium, while a surcharge of the same percentage will be added to the premium for those who drive more than 15,500 miles a year.

At the same time, the present bonus groups have also been reshuffled. One of the effect of this reshuffle will be that it will favour experienced drivers at the expense of inexperienced and young drivers. Thus, drivers of at least 25 years of age and holding a licence three years old will directly obtain a 20 per cent bonus. The highest bonus obtainable remains unchanged at 70 per cent. Investigations made by the companies are said to have shown that there exists a direct relation between the distance driven and the accident rate. This disproves the theory that the heavy mileage consumer is a safer motorist than the Sunday driver from an insurance point of view. Cars with low engine power have also been found to cause fewer accidents than bigger cars. Consequently, all cars have been divided into five insurance groups: the lowest with an engine power up to 20 h.p. and the highest in excess of 80 h.p.

A giant 16,000-ton Russian tanker carrying 9,600 tons of superior kerosene and 1,000 tons of top-quality high-speed diesel oil arrived in Bombay last week. This is the third shipment of Soviet petroleum products to India under the Indo-Soviet trade agreement. The first consignment of 11,390 tons of diesel oil was received in August last, followed by 10,784 tons of kerosene oil in November last. The oil products have been bought by the Government-owned Indian Oil Company. The total quantity of Soviet oil products to be imported by the I.O.C. is 1.5 million metric tons over a period of four years.

DIRECTORY OF INDIAN ENGINEERING EXPORTERS

FOURTH REVISED EDITION

We are glad to inform that material for publication of the fourth revised edition of the Directory is now being collected by the Council. The Directory will contain names and addresses of Indian manufacturers and exporters, who are members of the Council, along with the details of exportable engineering goods, an illustrated chapter on important brands and trade marks in Indian engineering goods and other useful news and information such as addresses of Indian trade representations in foreign countries and foreign trade representations in India, list of Showrooms, Showcases maintained by the Government of India in foreign countries, etc.

The book will be printed on imitation art paper and will contain hundreds of illustrations of exportable products in the engineering line.

This Publication provides very good media for the manufacturers/exporters of engineering goods for carrying their advertisement. Advertisement rates are as follows:—

Full Page	...	**Rs. 500/-**
Half Page	...	**Rs. 300/-**
Quarter Page	...	**Rs. 160/-**

We Share Your Disappointment too!

The overwhelming demand for Philips Quality Lamps is pleasing to us, but what a pity we can't meet it. And how disappointing it is for our dealers who, with sad faces, do their best!

All of us know that the lamp industry is more self-sufficient than many others. Yet there is a small but vital content in lamp manufacture which has to be imported. That is where foreign exchange restrictions creep in. So the supply becomes difficult.

Certain positive steps are being taken in the Third Five-Year Plan to ease the position. Until supplies become plentiful again we request you to bear with us.

Meanwhile, while wishing you happy lighting, here is a list of our retail prices to help you the next time you want to buy Philips Quality Lamps:

		Retail price per piece
25W. Vacuum clear	...	Rs. 1.25
40W. Gasfilled clear	...	Rs. 1.44
60W. Gasfilled clear	...	Rs. 1.56
100W. Gasfilled clear	...	Rs. 2.00
150W. Gasfilled clear	...	Rs. 3.50
200W. Gasfilled clear	...	Rs. 5.12
60W. Argenta (inside white)	...	Rs. 1.75
100W. Argenta	...	Rs. 2.25
150W. Argenta	...	Rs. 3.94
4 ft. 40-Watt Fluorescent	...	Rs. 9.69

These prices are inclusive of excise duty but exclude sales tax and local taxes

THE BRADY ENGINEERING COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifteenth Annual General Meeting of the Shareholders of the Brady Engineering Company, Limited, will be held at the Company's Registered Office, "Brady House," 12/14 Veer Nariman Road, Fort, Bombay, on Wednesday the 12th day of April, 1961, at 4.00 p.m. (S.T.), to transact the following business:

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.
2. To sanction the declaration of Dividend.
3. To appoint a Director in place of Mr. Nanabhoy B. Jeejeebhoy who retires by rotation and is eligible for re-appointment, and, if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company.

   RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Nanabhoy B. Jeejeebhoy who retires by rotation and who is a Director, Member and an Associate of W. H. Brady & Company, Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board) be and is hereby re-appointed a Director of the Company liable to retire by rotation.
4. To appoint a Director in place of Mr. Bhagvandas C. Mehta who retires by rotation in accordance with Article 156 of the Articles of Association of the Company and being eligible offers himself for re-election.
5. To appoint a Director in place of Mr. J. N. Guzder, who was appointed an Additional Director of the Company by the Board of Directors and who ceases to hold office under Section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a Notice in writing from some members proposing his candidature for the office of Director.
6. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

   RESOLVED that pursuant to provisions of Section 359 of the Companies Act, 1956, the Company hereby authorises W. H. Brady & Company, Limited, the Managing Agents of the Company, to retain all commissions or other remuneration earned or to be earned by them as Agents of Home Insurance Company at any time during the period they continue to act as Managing Agents of the Company in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Company with the Company, provided always that the amounts charged to this Company in respect of such insurances are at rates which are not less favourable than the market rates or which are otherwise reasonable.
7. To appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,
W. H. BRADY & COMPANY, LIMITED,
V. MATHALONE,
Secretary,
Managing Agents.

BOMBAY, 23rd *February*, 1961.

"BRADY HOUSE",

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-fifth Annual General Meeting to be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Fort, Bombay, on Monday, the 27th day of March, 1961, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1960

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960. The Auditors' Report is also annexed.

Ther tansactions for the past year have resulted in a profit of Rs. 1,03,37,098.89. To this has been added the balance of Rs. 12,47,743.19 brought forward from the previous year, making a total sum of .. .. **Rs. 1,15,84,842.08**

An interim dividend was paid for the half-year ended 30th June, 1960, at the rate of 7.50 per cent., subject to deduction of tax at the prescribed rates, on the Paid-up Capital of *Rs. 3,00,00,000*, which absorbed **22,50,000 00**
Provision made for Income-tax and Super-tax for the year **25,00,000 00**
Bonus to Staff **18,00,000 00**
The Directors now propose :—
To pay a final dividend for the half-year ended 31st December, 1960, at the rate of 12.50 per cent., subject to deduction of tax at the prescribed rates, making 20 per cent. for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb .. **37,50,000 00**
To carry forward to the next account **12,84,842 08**
Total .. Rs. **1,15,84,842 08**

The Company's business continued to function satisfactorily.
The Bank Rate remained stationary at 4 per cent.

Branches were opened during the year abroad at Hong Kong and in India at Bhowanipur in Calcutta, at Mount Road in Madras, at Ajmere Gate Extension in Delhi, at Indore and at Walkeshwar in Bombay.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Mr. A. D. Shroff, Mr. Ramniwas Ramnarain, Mr. Bhagvandas C. Mehta, Mr. Krishnaraj M. D. Thackersey.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

(Continued on next page)

CENTRAL BUDGET

ACCOUNTING STRUCTURE RATIONALISED

AN important aspect of the Central Government budget for 1961-62 that deserves special mention is the modification of the accounting structure. The Finance Ministry's decision to rationalise and recast the budget in the light of constitutional changes and the rising tempo of Government developmental expenditure must be widely welcomed. Indeed, this accounting reform was long overdue. Ever since the presentation of the first Central budget over a century ago, the accounting procedure adopted for showing the financial transactions of the Government has remained practically unchanged. A new accounting structure was, of course, drawn up at the time of the introduction of the Government of India Act 1935, but it was more or less the same as before, excepting that some changes were incorporated so as to suit the exigencies of the provincial autonomy inaugurated in 1937. The budgets merely give the receipts and expenditure of the Government under one or other of the major heads either in the Consolidated Fund or in the Public Account in accordance with the prescribed rules of classification. Although the estimates are fairly detailed, they lack a rational classification of receipts and disbursements on both revenue and capital accounts. All kinds of development—economic, social and cultural—are mixed up, with the result that one finds it difficult to assess the magnitude and direction of the types of development. How can a budget which is intended primarily to serve the accountability purpose and which does not adequately recognise the importance of fiscal policy aspect be looked upon as an instrument of economic development and a powerful tool for carrying out social objectives?

All this has now been changed. With effect from the budget for 1961-62, the Finance Ministry, has, in consultation with the Comptroller and Auditor-General, recast the budget so as to reflect the changed role of the State more effectively than hitherto. A notable change is the splitting up of the group head "Civil Administration" into two groups, namely, "Administrative Services" and "Social and Developmental Services." The group head "Civil Administration," it will be recalled, was both defective and misleading, in that it included not only budget heads dealing with administration such as general administration, audit, police and jails but also major heads pertaining to developmental activities like education, agriculture and health. The combined total of both the items of expenditure gave an exaggerated idea of the growth in the cost of administration to lay people and provided a convenient stick to beat the Government with. Accordingly, the Union Government was the worst sufferer under this arrangement. With the splitting up of the two heads, the public is now enabled to assess more correctly the growth of administrative expenditure. The only disadvantage arising from this change is that comparison of the figures for the coming year with those for the current and previous years will not be easy, if not impossible. But this is an inconvenience inherent in any rationalisation and cannot be helped.

The above modification has necessitated a regrouping of the major heads in the section Civil Administration. Inasmuch as the expenditure on community development projects, national extension service and local developmental works has now become a regular feature, it cannot be treated as an extraordinary item of expenditure. It has accordingly been transferred to the new section "Social and Developmental Services." Similarly, the expenditure on labour and employment, which was hitherto

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Bank of India Ltd. as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

The Central Government have, by an order dated 3rd February, 1961, exempted all the Branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1960.

We report that :—

(*a*) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns ;

(*e*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

BOMBAY, 16*th February*, 1961.

Statement pursuant to Section 212 of the Companies Act, 1956.

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1960, does not include any profit or loss of its subsidiary. The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance Sheets copies of the Balance Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1960

The Directors submit the Balance Sheet for the year ended 31st December, 1960. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Ltd., of which the Company is a wholly-owned subsidiary.

S. C. KOTHARI,
S. H. BRADFORD, } *Directors.*

LONDON, 1*st January*, 1961.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

Balance-Sheet as at 31st December, 1960.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1960, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

TRENDS IN WORLD COFFEE

SOME SUGGESTIONS FOR IMPROVING EXPORTS FROM INDIA

IN view of the marked increase in coffee production in recent years, the slow growth of domestic consumption and the need for earning more foreign exchange, it is natural that increasing emphasis should be laid on maximising exports of coffee. Even at current world prices, every ton of coffee exported by India will fetch approximately Rs. 2,500 and, if this country could export, say, 20,000 tons, the foreign exchange earned will be Rs. 5 crores, not a small amount by any means in these days of foreign exchange scarcity. But mere emphasis is of no avail. Concrete measures must be taken to put the export trade in coffee on a permanently stable footing. This aspect is to be specially stressed in the present context of the growing competition in world markets, particularly from Africa and Latin American countries. Evidence of such competition is provided by the fact that, as compared with the pre-war years, the percentage share of Africa in the aggregate world coffee exports has gone up markedly from just 7.8 (1934-38) to 22.5 (1954-58), of Colombia from 14.1 to 15.6 and of other Latin American countries from 18.0 to 19.0, while that of India has remained almost constant at 0.5.

How an Indian coffee successfully withstand the keener and keener competition that is emerging in world markets? An attempt has been made to study the issue by Mr. C. B. Madhava Rao of the Coffee Board, Bangalore. The study was carried out in the International Research Department of Messrs. J. Walter Thompson Company's New York office. The findings of the study are quite useful, in that they are based on the valuable documents made available by the Department, its knowledge of world marketing and experience in marketing surveys, as well as by taking the assistance rendered by the Pan American Coffee Bureau in New York, the U.N. Food and Agricultural Organisation in Rome, the World Bank and the Indian Embassy at Washington. The report highlights the place of India on the world coffee map—both as a producer and consumer—brings into focus certain factors in the present markets conducive to their expansion, suggests new markets, and formulates a model for analysing study in market research at the Coffee Board's headquarters which will promote a closer liaison between its marketing and advertising functions.

Three comparative tables showing the world trend of coffee are given on this page. The first two tables are based on the data provided in the aforesaid publication. As these figures do not give a picture of the latest position, we have given a third table showing the trend of production and exportable surplus, as compiled by the U.S. Department of Agriculture.

Production and Exports

It will be seen from Table I that, over the period from 1934-38 to 1954-58, world output of coffee has risen by 17 per cent. The increase in exports has been more marked, being 27 per cent. Production of coffee in India has been steadily increasing. Coffee production in Latin America has caught up with pre-war levels, though its share in world total has declined as a result of growing competition from Africa. Production in Indonesia, which had declined owing to war and plant diseases, has picked up lately. Latin America and Africa together account for 95 per cent of the total world output and cover between them almost the entire world market, their percentage share in 1954-58 being 97.4. French West Africa and Madagascar have increasingly claimed a share in Africa's exports at the expense of (*a*) Angola, (*b*) Belgium Congo, Ethiopia and (*c*) East Africa (Kenya, Tanganyika and Uganda). Nevertheless, the share of all the three groups in world exports has risen, so that the whole of Africa has been having a much larger share of world exports than it did during mid-thirties. In Latin America, the position is different. Its share in world total has been falling, though, quantitatively, pre-war levels have been surpassed by 11 per cent. Brazil has been a steady loser. It is from Colombia and other Latin American countries (Costa Rica, Cuba, Mexico and Ecuador) that there has been a considerable increase in exports during the post-war years.

There are three main types under which coffee is recognised in the world markets. They are: (1) Milds. These are the arabicas grown in Latin America, except in Brazil, and among other countries including Kenya, India, Yemen and Hawaii. They are mostly washed coffees. (2) Brazils—mainly arabicas which are cured in the dry manner. (3) Robustas—exported from Asia and Africa. In more recent years, the robustas have been gaining on the arabicas, in view of their greater suitability to the manufacture of soluble coffee, as will be evident from the figures given below:

Varieties	1958-59		Pre-war average	
	Production (Metric tons)	Share in world total (Per cent.)	Production (Metric tons)	Share in world total (Per cent.)
Robusta	567,000	17	195,000	9
Milds	1,009,000	29	639,000	28
Brazil and other arabicas	1,868,000	54	1,433,000	63

In trend, India has followed the world pattern. The percentage share of robusta in the total Indian output has increased from 25.8 in 1948-52 (annual average output of 5,336 tons) to 41.3 in 1960-61 (blossom estimate of 22,015 tons), whereas that of arabica has declined from 74.2 (15,345 tons) to 58.7 (31,340 tons).

Analysing the recent position in respect of world coffee supplies and distribution, Mr. Madhava Rao's report says: "Exports have not been increasing as fast as production. Domestic distribution in producing areas has actually fallen. Supplies have outstripped demand and closing stocks are accumulating. These stocks are held obviously in the producing countries among which Latin America and Africa are leading.... The surplus offer meeting internal requirements is exported from India." An idea of the imports of coffee by the more important consuming countries and the *per capita* consumption in them can be had from Table II.

Nearly three-fifths of the world's imports of coffee are for the U.S. and Canada. India has practically had no share in these markets.

It is against this background that the report assesses the outlook for Indian coffee exports. According to the report, India's place in world coffee markets has been on the basis not of quantity but quality. It is because of quality that its coffees are fetching attractive prices and this position has to be guarded against increasing competition from other countries. To quote the report:

"The customers have to be wooed. Priorities in advertising dictate a prescience of local markets. These vary in developed economies from country to country and even region to region. The nuances of market research will be of some use.... The aid of an international advertising agency in an execution of publicity schemes seems equally axiomatic."

Indian coffee, as already noted, has practically no share in the U.S. and Canadian markets.

Brown Recording-Integrating Flow Receiver

What is the cost of process flows for the various production departments of your plant? You must have accurate records of the quantities of steam, water, air, chemicals, fuel oil and other fluids supplied to each department to know where your money goes and why. Honeywell Flow Meters aid cost accounting by providing the information you need.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

The Madras Industrial Investment Corporation Limited, incorporated in 1949, has been helping industries by giving long-term loans for acquisition of fixed assets. Latterly it has been underwriting and subscribing for the ordinary and preference shares of new Issues. The Corporation obtains its funds mainly by means of fixed deposits, which are guaranteed unconditionally as to principal and interest by the Government of Madras.

For terms please apply to:

S. RAJARATNAM,
Secretary.

Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is available for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of this Prospectus having attached thereto the documents specified below has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Application is being made to the Calcutta Stock Exchange for permission to deal in the Debenture Stock now being offered and for an official quotation.

The Subscription List will open at 10 a.m. on Wednesday the twenty-second day of March, 1961 and will remain open until the close of banking hours on Friday the twenty-fourth day of March, 1961 or later at the discretion of the Directors.

The Debenture Stock now being issued was created by a Resolution of the Board of Directors of the Company passed on the twenty-third day of February, 1961 and will be constituted and secured by a Trust Deed in favour of Dalhousie Holdings Limited as Trustees for the Stockholders. Interest will be payable on 1st May and 1st November in each year in respect of the half-yearly periods ending on the previous day. The initial payment of interest will be made on 1st November, 1961 and will amount to Rs. 38 per Rs. 1,000 of stock (subject to deduction of Income Tax).

The Trust Deed will contain *inter alia* the following provisions:—

1. SECURITY

(*a*) Payment of principal and interest will be secured by a floating charge upon the whole of the Company's undertaking and assets.

(*b*) The Company shall be at liberty however to hypothecate pledge and create mortgages or charges over its stock of coal and coke, consumable stores and book debts outstanding monies receivable claims bills contracts engagements securities investments rights and assets ranking in priority to the said floating charge to secure sums borrowed from or obligations incurred to Banks in the ordinary course of business of the Company and for the purpose of carrying on the same but save as aforesaid and save as mentioned below the Company may not create any hypothecation, pledge, mortgage or charge over its properties ranking in priority to or *pari passu* with the floating charge. The existing hypothecation and any hypothecation supplemental thereto in favour of The State Bank of India will take priority over the floating charge to be created by the Trust Deed.

(*c*) The principal amount of the Stock to be issued pursuant to the Trust Deed is limited to Rs. 60,00,000 but the Company is to be at liberty from time to time to issue further stock ranking *pari passu* in point of security with (but not in priority to) the said Rs. 60,00,000 Stock carrying such rights as to interest, redemption and otherwise as the Directors may determine provided that:

(i) The amount outstanding of the Stock or any stock ranking *pari passu* therewith (including such further issues) shall not exceed 50 per cent of the value of the Company's fixed assets as certified by its Auditors and

(ii) The average of the combined profits of the Company and its subsidiaries (if any) calculated before charging depreciation, taxes on income and development rebate (or its equivalent) but after charging all expenses of working and management, including maintenance and repairs, for the three financial years for which accounts have been audited last preceding the date of any such further issue, was sufficient to cover twice the amount required to pay the aggregate of one year's interest and the contribution (if any) to the Sinking Fund on the total sum outstanding in respect of the Stock and all stock ranking *pari passu* therewith, including any such further issues. A certificate by the Company's Auditors as to any of the foregoing matters shall be conclusive.

2. REDEMPTION

(*a*) Such part of the Stock as has not been previously redeemed or purchased will mature for repayment at par plus accrued interest on 31st October, 1975. The Stock will be redeemable as to Rs. 5,00,000 in each year from and after 1964 inclusive by the annual operation of a Sinking Fund hereinafter mentioned.

(*b*) The Company will constitute a Sinking Fund to which during the year ending 31st October, 1961 and during each succeeding year the Company will contribute out of its distributable profits (as defined in the draft Trust Deed) a sum of not less than Rs. 4,00,000. Any excess sum which may be set aside in any one year may be applied in reduction of the Company's obligation to contribute for any later year. The Sinking Fund will be applied annually commencing from 31st October, 1964 in the redemption of Stock selected by drawings plus accrued interest. The Fund may be utilised in the purchase of Stock in the market at a price not exceeding par plus accrued interest or may be invested in trustee securities or deposited with a Bank till required for redemption.

(*c*) The Company may at any time purchase Stock in the market at any price not exceeding par or at a higher price with the consent of the Trustees (which consent is not to be unreasonably withheld) plus accrued interest but exclusive of expenses and may in lieu of or in partial satisfaction of its Sinking Fund obligations in each year surrender to the Trustees Stock so purchased by it; such stock to be accepted by the Trustees at par plus accrued interest. All stock purchased or redeemed out of the Sinking Fund or tendered to the Trustees shall be cancelled.

3. ADDITIONAL PROVISIONS

(*a*) The rights of stockholders may be modified or compromised by a Special Resolution passed at a meeting of stockholders held in accordance with the Trust Deed, a quorum for this purpose being five stockholders present in person. On a show of hands each stockholder present in person will have one vote and on a poll each stockholder present in person or by proxy (who need not be a stockholder) will have one vote for every Rs. 1,000 of stock held.

(*b*) A register of the Stock will be kept at the registered office of the Company. It may be closed for any periods not exceeding a total of 45 days in any year and not exceeding 30 days at any one time.

(*c*) Stockholders will be entitled to their stock free from equities or cross claims by the Company against the original or any intermediate holder.

(*d*) The Stock will be registered and transferable in amounts and multiples of Rs. 1,000.

HISTORY AND BUSINESS

The Company was formed in 1844 and has been carrying on business as colliery proprietors for the last 116 years. The Company is at present working 17 collieries, most of which are in the Raniganje field, whose raisings during the financial year ended 31st October, 1960 were over 3 million tons of coal. The coal reserves of the collieries at present being worked by the Company are estimated to be in the region of 300 million tons.

DEVELOPMENT

In the context of the third Five-Year Plan it is estimated that an additional 8,000,000 tons of superior grades of non-coking coal will be required from Ranigunge field alone by 1965-66. The Company has plans to increase its raisings from the present level to over 4,000,000 tons per annum at the end of 1965.

FINANCE

It is estimated that the capital expenditure required for the development of the Company's existing collieries to attain the increased production planned therefrom will amount to Rs. 1,56,35,000. An offer of 20,000 shares of Rs. 100 each as rights shares was made to members of the Company on 8th December, 1960 at a premium of Rs. 100 per share. The issue was fully taken up and provided the sum of Rs. 40,00,000. The present offer of Debenture Stock will provide the sum of Rs. 60,00,000 subject to payment thereout of the expenses of the issue (estimated at Rs. 3,00,000 as mentioned below) and the balance of the capital expenditure will be met from the Company's internal resources.

AUDITORS' REPORT

The following is a copy of a Report which has been received from Price, Waterhouse, Peat & Company, Chartered Accountants, the Company's Auditors:—

THE DIRECTORS,
THE BENGAL COAL CO., LTD.
8, CLIVE ROW,
CALCUTTA-1.

B-4, GILLANDER HOUSE,
CALCUTTA-1.
14th February, 1961.

Dear Sirs,

We have examined the books and accounts of The Bengal Coal Co. Ltd. as kept in Calcutta in which are incorporated the certified returns from the Collieries and the agents at Madras, Visakhapatnam and Chittagong, for the five years ended 31st October 1959 and for the six months ended 30th April 1960, and report that the profits of the Company are as set out below. The accounts for the financial year ended on 31st October, 1960, in which the transactions now included in the interim accounts for the half-year to 30th April, 1960, will be taken in, have not been prepared.

The profits set out below have been arrived at after charging all expenses of working and management including provision for normal depreciation on the basis allowable for taxation and after making such regroupings and adjustments, subject to the notes given below, as are, in our opinion, material and appropriate.

	Year ended 31st October, 1955	*Year ended 31st October,* 1956	*Year ended 31st October,* 1957	*Year ended 31st October,* 1958	*Year ended 31st October,* 1959	*Half-year ended 30th April,* 1960

	16,53,663	13,86,332	14,75,916	6,38,211	7,90,844	4,06,288
Wealth Tax	....	1,56,342	1,91,158	1,84,289	DISCONTINUED	
2. Calculated at Income Tax rates (normal) the depreciation on the book values of the Fixed Assets (which are, in aggregate, higher than the Income Tax written down values) is estimated as below:	18,05,000	17,51,000	18,48,000	17,92,000	19,35,000	10,00,000

* Estimated. † Estimated at old rates.

3. The tax liabilities have been calculated in the light of the previous assessment orders and after making adjustments as embodied above and charging normal depreciation for Income Tax purposes.

4. The Company's trading results during the year ended 31st October, 1956 were affected by a strike at the Company's collieries in West Bengal for a period of about four weeks.

5. The commission payable to the Managing Agents has been calculated at the rate of 7½ per cent. of the profits. According to the new agreement effective from 15th August, 1960 the Managing Agents are entitled to commission, on a sliding scale basis, at rates varying from 7½ per cent. to 4 per cent.

We also report that the assets and liabilities of The Bengal Coal Co. Ltd., as at 30th April, 1960, which is the last date to which the Company's accounts were made up prior to the date of this report, are as set out below. These assets and liabilities have been arrived at after making such regroupings as, in our opinion, are appropriate.

STATUTORY AND GENERAL INFORMATION

The main objects specified in the said Deed of Settlement dated 8th June, 1844 and Supplementary Deed of Settlement dated 24th September, 1853 were described as chiefly consisting in digging, trenching, working and winning the mines, seams and veins and carrying on all other operations for the effectual working of the Company's collieries and in manufacturing and transporting to market and selling of coals and other materials raised in the said collieries and in purchasing coals when deemed expedient or necessary; in sinking coal pits or mines for minerals erecting buildings, making tram, rail and other roads for the conveyance of coals etc. or anything connected with the efficient working of the mines and property of the Company and in the cultivation or letting of the lands held with, or appertaining to the said collieries and properties or any of them and expressly including the acquisition by lease or purchase of such fresh collieries, Talooks or zamindaries, lands, hereditaments and premises as might be deemed advisable for the benefit of the Company, and the sale of all or any portion of the collieries, properties, mines, plants, engines, implements, lands, Talooks, hereditaments and premises then belonging or at any time thereafter to belong or appertain to the Company or held and enjoyed therewith.

No share or loan capital is under option or agreed to be put under option.

The Company has not issued any Redeemable Preference Shares nor is there any present intention to do so. No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this prospectus as fully or partly paid up otherwise than in cash.

On 8th December, 1960 the Company offered 20,000 Ordinary Shares of Rs. 100 at a premium of Rs. 100 for subscription by existing members of the Company. No consideration for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for those shares or any other shares in or debentures of the Company has been paid within the two years preceding the date of this prospectus nor is any such consideration intended to be paid other than the underwriting commission and brokerage on the present issue of Debenture Stock referred to below.

No amount or benefit has been paid or given within the two years preceding the date of this prospectus or is intended to be paid or given to any officer of the Company save as remuneration for services as a Director or Employee of the Company.

Messrs. N. Stenhouse and A. D. Ogilvie, Directors of the Company, are Directors and Mr. R. R. Iyer and Lord Sinha of Raipur, Directors of the Company, are members of Andrew Yule & Co., Ltd., the Company's Managing Agents and as such are interested in Contract No. 1 below.

No Director of the Company is directly or indirectly interested in any property acquired by the Company within two years of the date of this prospectus or in any property proposed to be acquired by it.

On 17th March, 1950 Rs. 50,00,000 of the Company's reserves were capitalised and applied in paying up in full 50,000 Ordinary Shares of Rs. 100 each which were issued to members of the Company as Bonus Shares.

The qualification of a Director is the holding in his own name or jointly shares of the face value of Rs. 1,000.

The remuneration payable to a Director is Rs. 200 per meeting attended by him and a share of a commission of one per cent of the net profits of the Company computed in accordance with Sections 349 to 351 of the Companies Act, 1956. The Directors are entitled to be paid reasonable travelling and hotel and other expenses incurred in the execution of their duties as Directors.

The Managing Agents are entitled to appoint Directors in terms of the Companies Act, 1956 and such Directors are not liable to retirement by rotation.

The Managing Agents have been appointed to hold office until 15th August, 1970, on the following terms as to remuneration:

(a) a sum of, or in respect of any period of less than a year calculated at the rate of Rs. 50,000 per annum and

(b) such further sum, if any, as together with the said sum payable under (a) shall make up an amount equal to:—

(i) 7½ per cent on the first Rs. 50 lacs of the net profits as defined in Sections 349 to 351 of the Companies Act, 1956 or any fraction thereof.

(ii) 5½ per cent on the next Rs. 25 lacs of the net profits as defined in Sections 349 to 351 of the Companies Act, 1956 or any fraction thereof.

(iii) 5 per cent on the next Rs. 25 lacs of the net profits as defined in Sections 349 to 351 of the Companies Act, 1956 or any fraction thereof.

(iv) 4 per cent on net profits over Rs. 1 crore.

The Managing Agents are a Public Limited Company. Their issued and subscribed capital is Rs. 1,80,00,000 consisting of 90,000 4½ per cent Preference Shares of Rs. 100 each fully paid and 90,000 Ordinary Shares of Rs. 100 each fully paid.

The share capital of the Company is Rs. 1,40,00,000 divided into 1,20,000 Ordinary Shares of Rs. 100 each and 20,000 Preference Shares of Rs. 100 each. The Preference Shares confer the right to a fixed cumulative preferential dividend at the rate of 4½ per centum per annum (subject to deduction of Indian Income-Tax therefrom at the rate from time to time current) and in a winding up to payment off of capital and arrears of dividend up to the commencement of the winding up in priority to the ordinary shares but no further right to participate in profits or assets.

All or any of the rights and privileges attached to each class of shares may be modified, commuted, affected, abrogated or dealt with by Agreement between the Company and any persons purporting to contract on behalf of that class provided such agreement is (a) ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of that class or (b) confirmed by a Special Resolution passed at a separate meeting of the holders of shares of that class and supported by the votes of the holders of not less than three-fourths of those shares.

On a show of hands every member present in person or by general proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share, whether Ordinary or Preference, held by him. Provided that the Preference Shares shall not confer any right to vote at any Meeting of the Company on any question affecting the disposal of the surplus profits available in any year after payment of the preferential dividend on the Preference Shares.

The Directors may decline to register a transfer of shares upon which the Company has a lien or, in the case of shares not fully paid up, to a transferee of whom they do not approve.

The Directors may borrow and secure the payment of money for the purposes of the Company within the limitation imposed by Section 293 of the Companies Act, 1956 in such manner and upon such terms and conditions in all respects as they think fit.

Every Director, Managing Agents, Manager or Officer of the Company or Auditor shall be indemnified by the Company against all liability incurred by him in such capacity in defending any proceedings in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Companies Act, 1956 in which relief is granted to him by the Court.

The Trust Deed will contain provisions to the following effect among other provisions for the indemnification of the Trustees.

(a) The Trustees shall not be bound to take any steps to ascertain whether any event has happened upon the happening of which the security constituted under the Trust Deed becomes enforceable or to give notice to any person of the execution thereof.

(b) The Trustees shall not be responsible for the money subscribed by applicants for the Stock or any part thereof or be bound to see to the application thereof.

(c) The Trustees shall not be bound or concerned to examine or enquire into nor be liable for any defect in or insufficiency of the Trust Deed.

(d) No Trustee shall be liable for anything whatever except a breach of trust fraudulently committed by such Trustee; provided nevertheless that nothing in any of the foregoing shall exempt a Trustee from or indemnify him against any liability for breach of trust where such Trustee has failed to show the degree of diligence and care required of him as a Trustee having regard to the provisions of the Trust Deed conferring on him any powers, authorities or discretions.

CONTRACTS

The following contracts not being contracts in the ordinary course of business which are or may be material have been entered into by the Company within two years of the date of this prospectus.

(1) Dated 26th May, 1960 between the Company and Andrew Yule & Co., Ltd. appointing Andrew Yule & Co., Ltd. to be Managing Agents of the Company to hold office until 15th August, 1970 on the terms as to remuneration stated above and with the normal powers and duties.

(2) Dated 23rd February, 1961 between the Company and Place, Siddons & Gough Private Limited relating to the underwriting of Rs. 50,00,000 Debenture Stock for a commission of 2 per cent of the par value thereof.

(3) Dated 24th February, 1961 between the Company and the Life Insurance Corporation of India relating to the underwriting of Rs. 10,00,000 Debenture Stock for a commission of 2 per cent of the par value thereof.

UNDERWRITING

The entire issue is being underwritten as to Rs. 50,00,000 by Place, Siddons & Gough Private Limited and as to Rs. 10,00,000 by the Life Insurance Corporation of India for a commission of 2 per cent of the par value thereof. In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

BROKERAGE

Brokerage of one half of one per cent will be paid by the Company on the nominal value of allotments made in respect of applications bearing the stamp of a recognised Broker.

EXPENSES

The expenses of the issue including underwriting commission and brokerage are estimated not to exceed Rs. 3,00,000 and are payable by the Company.

CONSENTS

The consents in writing of the Auditors, Solicitors, Brokers and Bankers to the Company to act in the capacities stated have been obtained. Price, Waterhouse, Peat & Company have given and have not, up to the date of delivery of the Prospectus for registration, withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their report set out above in the form and context in which it appears.

The foregoing written consents have been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration together with copies of Contracts 1, 2 and 3 above.

DOCUMENTS

Copies of the Articles of Association of the Company, draft Trust Deed constituting the Stock now being issued (subject to modification), audited accounts for the five years to 31st October, 1959 the Auditors' report contained herein, the Consent Order of the Controller of Capital Issues and copies of other contracts, agreements and documents herein mentioned can be inspected between 10 a.m. and 12 noon on any business day till the expiration of 14 days from the date of publication of this Prospectus or until the subscription list closes whichever is the earlier at the Registered Office of the Company, 8, Clive Row, Calcutta.

APPLICATIONS

Applications must be for amounts of Rs. 1,000 Stock or multiples of Rs. 1,000 and must be made on the accompanying form. All application forms properly completed must be lodged, together with the full amount payable, with one of the following offices of State Bank of India:—

Calcutta Local Head Office,
No. 3, Strand Road,
Calcutta, 1.

Bombay Local Head Office,
Apollo Street, Fort,
Bombay, 1.

Madras Local Head Office,
1st Line Beach,
Madras, 1.

New Delhi Local Head Office,
Parliament Street,
New Dehi, 1.

Payment should be made by cheque or draft drawn on a bank in Calcutta, Bombay, Madras or Delhi in favour of "State Bank of India A/c Bengal Coal Co., Ltd. Debenture Stock" and crossed "A/c payee only." Cheques or bank drafts drawn on banks elsewhere WILL NOT BE ACCEPTED.

No receipt will be issued in respect of moneys paid but an acknowledgment will be forwarded by post in due course by Letter of Allotment or Letter of Regret and, where allotment is not made in full, by return of any surplus application money paid, in which latter event any bank commission will be payable by the applicant. Allotment Letters along with Refund Orders, if any, will be despatched within two months of the closing of the subscription list. Due intimation will be given when these Letters of Allotment should be surrendered to the Company in exchange for Debenture Stock Certificates.

Debenture Stock Certificates will be ready for despatch by registered post within four months from the date of allotment. Pending the issue of Certificates the Company will register transfers against Letters of Allotment accompanied by duly completed forms of Transfer.

CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

STATEMENT OF CHAIRMAN, DR. T. M. A. PAI

SUGGESTION FOR RESTORING PUBLIC CONFIDENCE IN BANKING

IN his annual statement to shareholders on the working of the Canara Industrial and Banking Syndicate Ltd., Udipi, Mysore State, during the year ended 31st December 1960, Dr. T. M. A. Pai, the Chairman, dealt at length with the trends in, and problems of, banking in the country. Referring particularly to the collapse of some banks last year and its impact on banking habit, Dr. Pai underlined the need for restoring the confidence of the public in the stability of banks and put forward some suggestions for improving the position. He suggested, for instance, the formation of a special bank, jointly owned by the Reserve Bank of India, the State Bank and all the scheduled banks, which should guarantee the safety of every depositor of small banks that find themselves in difficulties and be prepared to take over all their assets and liabilities. He also urged suitable changes in banking legislation so as to make such securities given against loans as landed property easily realisable without having to go to courts of law.

The following is the full text of Dr. Pai's statement:

"Nineteen sixty was a year of record progress and accomplishment for The Canara Industrial and Banking Syndicate Ltd. with an all-time high in net income, deposits and loans.

Deposits and Advances

"Total deposits of the Syndicate increased from Rs. 17.09 crores to Rs. 18.87 crores during the year, in spite of the adverse conditions of the money market. The increase represents a 10.4 per cent rise over the previous year's figures. It is noteworthy that, during the last five years, the deposits have shown a very substantial improvement each year, and the deposit figures as on 31st December, 1960 were more than double of the 1956 figures. The pattern of deposits has almost remained the same, the preponderance of time deposits over demand deposits being a feature of our deposits. Time deposits were 67 per cent of our total deposits in 1960 against 68 per cent in 1959 and 66 per cent in 1958. The percentage of savings deposits to total deposits has risen from 17 per cent in 1959 to 19 per cent in 1960, which is a welcome feature as providing an index to the response of the people to the efforts that the Bank has been making to pool small savings.

"The total advances including bills discounted stood on 31st December, 1960 at Rs. 12.24 crores and were Rs. 134 lakhs higher than last year's figures, and represent a rise of 12 per cent. The total advances have been maintained judiciously at about 60 per cent of the aggregate of capital, reserves and deposits of the Bank, the percentage for the three years 1958, 1959 and 1960 being 59 per cent, 61 per cent and 62 per cent respectively. The proportion of secured advance to total advance has registered a rise during the year from 80 per cent for 1958 and 1959 to 84 per cent in 1960 which is again a welcome feature, in the light of the recent directives regarding clean credit. Our advances now make up 60 per cent of our earning assets and our investments in Government and other securities and shares which stood at Rs. 6.17 crores, form 30 per cent of our earning assets.

Earnings and Dividend

"Gross earnings for 1960 amounted to Rs. 1.34 crores against Rs. 1.10 crores for 1959, and were 22 per cent higher than in 1959 due to the improvement under advances. Interest received on advances and investments and discount on bills discounted together account for 91 per cent of the Bank's earnings, the percentage being the same as in 1959. The earnings under commission, exchange and brokerage were 6 per cent of the total earnings, and registered an increase of 20 per cent over last year's earnings under the head, reflecting another welcome feature of an increase in collection business handled during the year. The net earnings of the Bank, which were at Rs. 25.22 lakhs, amounted to 19 per cent of the gross earnings as against 18 per cent last year and were 26 per cent higher than last year's figures. Interest paid on deposits and borrowings accounts for a smaller proportion of the gross income at 39 per cent for 1960 as against 42 per cent for 1959, reflecting particularly the Bank's relying more on its own funds for investments and advances and relying less on borrowings from other sister institutions. Establishment charges have taken up a higher percentage of the gross income at 30 per cent for 1960 against 28 per cent for 1959. The rise of Rs. 9.40 lakhs over 1959 figures under this head reflect both a growth in the number of staff, which rose from 1,402 in 1959 to 1,606 in 1960, as well as increases in salaries paid from the previous year. Out of the net earnings for the current year, 30 per cent amounting to Rs. 7.50 lakhs has been transferred to reserves and 25 per cent amounting to Rs. 6.35 lakhs is to be paid out as dividends to shareholders and 38 per cent amounting to Rs. 9.63 lakhs is set apart for payment of taxes. This represents 6 per cent, 5 per cent and 7 per cent respectively of the gross earnings as against 7 per cent, 4 per cent and 5 per cent under the same heads for 1959. The dividends payable to the shareholders, as a percentage of the capital and reserves, will be 7 per cent this year as against 6 per cent for 1959.

"The capital and reserves of the Bank now stand at Rs. 89.71 lakhs, as against Rs. 55.46 lakhs as on 31st December, 1958 and constitute 4.8 per cent of the total deposits against 4.2 per cent as on 31st December 1958. As providing an improvement in protection to depositors and a source of strength for the Bank, the increase in the percentage of capital and reserves to deposits is another feature which is welcome.

Investors' Agency Department

"During the year, the Bank pioneered a unique investment service, the first of its kind to be introduced by any bank in India. A separate department known as the Investors Agency Department was inaugurated on the 30th April 1960 for rendering this investment service. The department aims at giving to the investor expert financial guidance through its specially trained personnel to enable him to invest his surplus funds in sound and remunerative shares and securities and envisages accumulation of the periodical income thereon to be reinvested similarly. The investment scheme, which works on compound interest tables, would enable a building up of an investment of Rs. 1,38,000 for an annual investment of Rs. 1,000 over 35 years with the yield at 7 per cent. The response to the scheme has been very encouraging, particularly from middle-class investors who have been quick to appreciate the merits of an organised investment programme with expert guidance.

"The Staff Training College of the Bank has been doing very useful work in the training of young men and women for absorption into the Bank's service. During the year, 83 candidates trained by the college were taken up by the Bank into regular service. Since its inauguration in July 1957 the college has been able to train up 272 persons seeking services in the Bank, and its services in providing these men and women with the necessary technical knowledge and inculcating in them a spirit of service have been most invaluable. Attention is also being given to training of the higher personnel. Mr. H. N. Rao, a Divisional Manager of the Bank was sent abroad to participate in the deliberations of the 13th International Summer School held in Noordwijh, Holland, and to receive advance training in banking.

Banking Trends

"Coming now to the general banking conditions in the country, I would like to make the following observations:

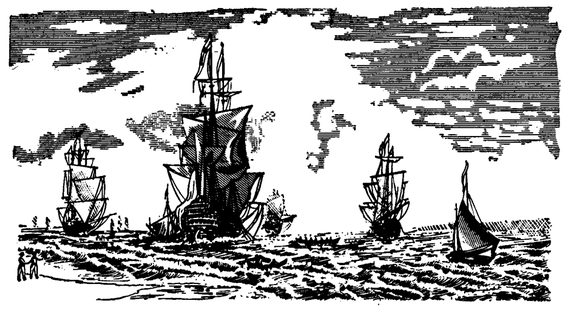
"The failure of one or two banks during the year was not only a failure of these banks but of the Indian banking system as well to some extent, which after the Banking Companies Act and the control and regulations of the Reserve Bank of India had considerably toned up and continued to build up growing public confidence in itself over the past decade. This resulted in a number of smaller banking institutions in some parts of the country coming to grief and brought about a state of mind in the vast majority of the people which is not conducive for the development of banking in the country. In spite of all efforts that all the banks in this country have put in over the last several decades, even now 85 per cent of the people in this country have little to do with modern banking. Growth in the habit of thrift and accumulation of savings and channelising them through an organised banking system continues to be a task and responsibility of the banking system in this country as well. Anything, therefore, that comes in the way of this should be considered as a setback. Banks in India have failed to keep up the tempo of rising deposits in the year 1960 which they experienced in the earlier years of 1958-59. Nor have the State Bank of India or the State subsidiary banks been successful in diverting large deposits from the banks in the private sector to themselves. As long as banks have to work in the private sector, it is their duty to see that they voluntarily assume responsibility for any weakness inherent in the banking system at present. Failure to do so would be to make the people of this country feel that safety of their funds could only be guaranteed by the banks being taken over by the public sector and identify safety and security only with the idea of State management. Judged from that point of view, I have often reflected whether the tragedy that befell the banking system in Kerala could have been possibly averted or mitigated by the bigger banks in India willingly coming forward and helping the Reserve Bank of India to formulate a constructive policy in rescuing them.

Amalgamations

"Confidence that has been shaken now in the system deserves to be reinforced and could be done not only by thinking of reorganisations and amalgamations, merely with the idea of eliminating the smaller substandard units so that the recrudescence of the trouble that we experienced this year might not be repeated, but through a positive assumption of the responsibility by all the bigger banks in this country that they stand guarantee for the safety of every rupee in the banking system in this country. This should be done by the Indian Banks' Association speaking for all the major banks in this country with the active assistance and guidance of the Reserve Bank of India. Recently there have been attempts in certain amalgamations of the smaller banking units with bigger banking units. One of the major problems facing this process would be the integration of the staff of these varoius units. These amalgamations also should not result in the bigger banking units closing down offices in the smaller places as, with the increased emoluments given to the new staff and the maintenance of their own standards of management, many of the branches might become uneconomic. If the mergers and amalgamations are to result in closing down such uneconomic branches, many of the places, which are now served by banking institutions, however inadequately, would be deprived of this facility. The mergers also should take place in an atmosphere of goodwill and perfect understanding. The smaller banking institutions have had their own place in the scheme of things. Unless the bigger banking institutions, which take them over, are willing to adapt themselves to the needs of the smaller places and the small type of accounts, which are now being catered to by the smaller institutions, the vast majority of the people would not consider amalgamations favourably. There has been an unconscious fear among the public that they might even be deprived of normal banking facilities which they are now enjoying.

"By the very nature of the business transacted by the banks in this country, no bank can develop by identifying itself exclusively with any region or caste. With the growth of industry and commerce in dynamic proportions in recent years, banks are being called upon increasingly to handle different types of business with ever-increasing resources. And it is only big institutions, with larger resources, that are finding themselves at an advantage in discharging these responsibilities. With the increasing control of the Reserve Bank of India and the Companies Act there is no attraction for running smaller banking institutions nor are there the prospects of the shareholders getting more attractive dividends through the maintenance of their small size. They have to be competitive, offering higher rates of interest on deposits and enter into fields of losing competition in the

(Continued on page 514)



a hundred years in India

An East Indiaman in the last century brought young Robert Stanes to Madras in 1857. His name was to become famous over a century in South India long after he began business in 1861 in Coimbatore. Few could have imagined that the independence and resolution of youth were to bear such fine fruit in the years to come.

Pioneering in Coffee and Tea in the Nilgiris, Robert Stanes started the first Coffee Curing Works in Coimbatore in 1861, the first Cotton Mill in 1888, and in 1862—as a young man of 21—laid the first foundations of Stanes High School.

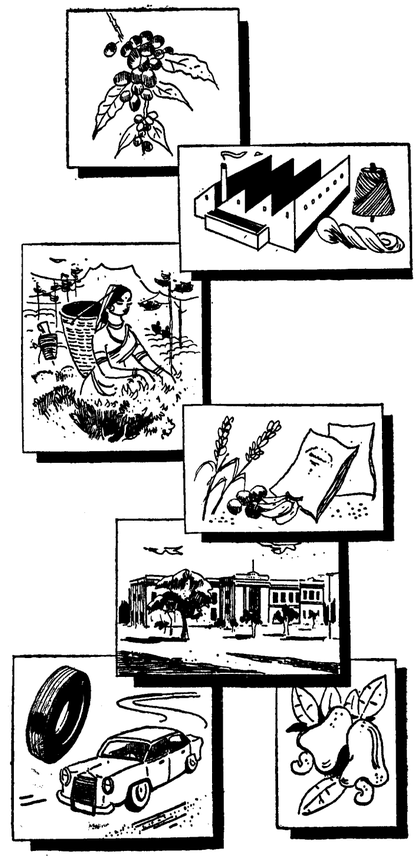
Tea and Coffee Estates and their requirements have always formed a large part of the business, besides Fertiliser Factories, Coffee Roasting and Sales through The United Coffee Supply Company Limited, and now the manufacture of Instant Coffee.

With the arrival in India of the Motor Car—Robert Stanes held the registration number C.O.1—also developed Stanes Motors (South India) Limited, with its many activities and branches throughout the South,—including "Tyresoles" and "Vaculug" for reconditioning of all sizes of Tyres—and a model bus service in Coimbatore.

Robert Stanes, knighted in 1920, was the first Chairman of the Coimbatore Municipal Council, and until his death in Coonoor in 1936, took a keen interest in the social welfare problems of all communities, and in particular in Stanes High Schools, both in Coimbatore and Coonoor.

The present Estate business includes The United Nilgiri Tea Estates Company Limited and Stanes Amalgamated Estates Limited, manufacturing 2½ million pounds of Tea per year.

Celebrating the Centenary of the start in Coimbatore in 1861 and Golden Jubilee of the Limited Company, the Stanes Group look forward with a sense of achievement to continued service to the community and to the nation.



T. Stanes & Company Limited, Coimbatore

THE CENTRAL BANK

SIXTY-SIXTH REPORT OF THE

GENTLEMEN,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.

The Net Profit for the year, including the sum of Rs. 18,82,560.07 brought forward from the previous year's account, amounts to		Rs.	1,51,87,470 96
The following appropriations have been made :—			
An ad-interim Dividend was paid for the half-year ended 30th June, 1960, at the rate of Rs. 2.10 per share subject to tax on 12,60,000 shares		Rs.	26,46,000 00
Amount transferred to Staff Gratuity Fund		,,	10,00,000 00
Amount transferred to Contingency Fund		,,	8,00,000 00
Amount provided for Bonus to Staff, including Special Jubilee Bonus		,,	51,00,000 00
		Rs.	95,46,000 00
The balance of Rs. 56,41,470.96 the Directors propose to recommend to the Shareholders to dispose of as follows :—			
To pay a final Dividend for the half-year ended 31st December, 1960, at the rate of Rs. 2.50 per share subject to tax on 12,60,000 shares (making in all 12.88 per cent. net for the whole year)		Rs.	31,50,000 00
To pay a Special Jubilee Bonus of 2 per cent. per annum per share, subject to tax		,,	6,30,000 00
To carry forward to next year's account		,,	18,61,470 96
		Rs.	1,51,87,470 96

The Bank's business during the year under review showed satisfactory progress. During the year one Branch, seven Sub-Branches and four Pay Offices were opened at various centres, and one Pay Office had to be closed down as it was found to be uneconomic.

The Directors record with deep regret the death which took place on the 16th August, 1960, of their colleague, Mr. Framroze J. Guzdar. Mr. Guzdar took a very keen interest in the affairs of the Bank and his advice and guidance were greatly valued by his colleagues. The Board desire to place on record their appreciation of the very valuable services rendered by him to the Bank.

Notes :—1. In view of the changes in the basis and rates of deduction of tax at source introduced by the Finance Act, 1959, the previous year's figure of "Interest and Discount" is not strictly comparable.

2. Total remuneration to General Manager, including Salaries and Allowances (shown under Item 2 of "Expenditure") and Bonus Rs. 81,800.

3. Remuneration received by Directors for their own use from other companies by virtue of nomination by the Bank on the board of other companies amounted to Rs. [illegible] during the year.

OF INDIA, LIMITED

BOARD OF DIRECTORS

Three of your Directors, Mr. Cooverji H. Bhabha, Mr. Dharamsey M. Khatau, and Sir Jamsetjee Jejeebhoy, Bart., retire under Article 92 of the Articles of Association, read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

Shareholders are requested to appoint the Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is also drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, The Depositors' Benefit Insurance Co., Ltd. Though the tax liabilities of the aforesaid Subsidiary have now been finalised, the necessary Certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company which has been applied for, has not yet been received.

H. P. MODY,
Chairman.

BOMBAY, *2nd March*, 1961.

Statement Pursuant to Section 212 of the Companies Act, 1956

(*a*) The Bank's interest in its Subsidiary, The Central Bank Executor and Trustee Company, Private Limited, as at 31st December, 1960, comprised 1,998 shares of the face value of Rs. 1,000 on each of which Rs. 500 per share has been paid up.

(*b*) The undistributed balance of profit of the Subsidiary Company as at 31st December, 1960, after a transfer of Rs. 20,000 to General Reserve, amounted to Rs. 20,197.50 which has been carried forward in the accounts of the Subsidiary.

(*c*) The net aggregate amount of Rs. 11,76,322.50 received as dividends from the Subsidiary Company for its previous financial years, since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 57 branches audited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to Section 228 of the Companies Act, 1956.

We report that :—

(*a*) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(*c*) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us ;

(*d*) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) The reports on the accounts of the branches audited by other Auditors have been forwarded to us and the same have been considered in preparing our report ;

(*f*) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

THE BANK OF BARODA, LIMITED

(ESTABLISHED: 20TH JULY, 1908)

FIFTY-SECOND ANNUAL REPORT OF THE DIRECTORS.

To be presented to the Shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at Mandvi, Baroda, on Friday, the 24th March, 1961, 11-30 a.m.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account of the Bank duly audited for the year ended 31st December, 1960.

	Rs.	nP
The net profit for the year 1960, after providing for taxes, including Rs. 1,02,800·87 nP. brought forward and after taking Rs. 5,33,157·84 nP. towards depreciation on buildings and furniture amounts to	41,68,551	98
An ad-interim dividend at the rate of 14 per cent. per annum subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June, 1960, which absorbed	8,75,000	00
Provision for bonus to Staff	17,10,000	00
	25,85,000	00
The Directors now recommend—		
(a) To pay a final dividend at the rate of 20 per cent. per annum per Equity (Ordinary) share (i.e., Rs. 5 per share of old Ordinary issue and Consolidated "B" Ordinary issue) subject to deduction of income-tax at the appropriate rates for the half-year ended 31st December, 1960, making in all 17 per cent. per annum for the year amounting to	12,50,000	00
(b) To pay a final dividend at the rate of 20 per cent. per annum per Equity (Ordinary) share of the new issue of Rs. 50,00,000 in proportion to the period commencing from the 1st day of the month following the date of receipt of application money subject to deduction of income-tax at the appropriate rates for the portion of the year ended 31st December, 1960, amounting to	2,24,194	17
(c) and to carry forward to the next account	1,09,357	81
Rs.	41,68,551	98

The business of the Bank during the year under review continued to be satisfactory.

The issue of 50,000 Equity shares of Rs. 100 each (Rs. 50 paid) at par issued during the year in terms of Resolution No. 8 (C) passed at the Fifty-first Annual General Meeting of the shareholders was allotted in full. Out of the 50,000 shares offered, 46,830 shares were taken up by the shareholders entitled thereto and the remaining 3,170 shares not applied for upto the extended date, viz., 30th day of November, 1960, were in terms of clause (m) of the aforesaid resolution, disposed of by the Board of Directors at a premium of Rs. 28 per share. The sum of Rs. 88,760 so realised has been credited to the "Share Premium" account.

Although exemption from audit under Section 228 of the Companies Act was obtained in respect of 84 branches, 9 branches outside India and 4 branches in India were audited by the Bank's local auditors as in the past. Auditors' reports on some of the East African Branches had not been received at the time of signing of the Balance Sheet (although audited returns were duly received) and these will be sent to the Bank's Auditors as and when received.

The Bank has opened branches during the year at Delhi-Chakla (Ahmedabad), Khanderao Market (Baroda), Kakinada and Vile Parle (West), (Bombay). A branch of the Bank was opened at Chandigarh on the 18th of January, 1961.

On his appointment as a Director of the Local Board of the Reserve Bank of India, Shri Arvind Navinchandra Mafatlal tendered resignation of his office as Director of the Bank which the Board of Directors have accepted with effect from 16th December, 1960, with very great regret. The Board put on record their sincere appreciation of the valuable services rendered by Shri Arvind N. Mafatlal and for the able guidance and help received from him from time to time during his tenure as Director.

In accordance with the Article 145 (1), four Directors, Shri Durgaprasad S. Laskari, Shri R. D. Birla, Shri Chinubhai Chimanbhai and Shri B. K. Daphtary, retire by rotation and being eligible, offer themselves for re-appointment.

Under the provisions of Article 140 of the Bank's Memorandum and Articles of Association, Shri Rasesh Navinchandra Mafatlal, who has been appointed as an additional Director during the year, will hold office upto the date of the Annual General Meeting. He being eligible offers himself for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,
TULSIDAS KILACHAND,
Chairman.

BOMBAY, *27th January*, 1961.

HEARTENING DECISIONS IN THE U.S.

MAJOR CHANGE IN SENTIMENT IN FOREIGN EXCHANGE MARKETS

By W. T. C. King

EDITOR, *THE BANKER*, LONDON

IN the realm of international finance, by far the most important development in this past month (February) has been the announcement by President Kennedy of the broad lines of policy to be followed by his administration in dealing, on the one hand, with the recession in the domestic economy of the United States and, on the other hand, with the pressures on the dollar and the American balance of payments. The two principal messages to the Congress on these themes, which were transmitted by the President early in February, have calmed down most of the fears that had been worrying international financial circles about the likely course of American economic policy.

The new administration is determined to start the American economy moving upwards again as soon as possible and, on a longer view, it will aim at a bigger growth rate than has been achieved in recent years; but it seems well aware of the dangers of rushing into excessive "pump priming" expenditures and other measures of stimulation. Some risk of inflation must always lurk in any policy of re-expansion; what is important is that over-hasty action, or an anxiety to get very rapid results, should not make this risk greater than it need be, and that the responsible authorities stand ready to dilute their stimulating action, or even to swing over to restraining action, as soon as there is any reason to suspect that the resultant expansion may be going too fast. In this sense, neither the technical merits of a reflationary policy nor the wisdom of those who administer it can be fully praised until they come to this ultimate test; but, in this first month of exposition and discussion of Mr. Kennedy's essay in reflation, most of the portents have been reassuring.

External Payments Problem

Even more obviously heartening have been the new administration's first decisions about its approach to the problem of America's balance of external payments. So far from turning back towards some new protectionism, President Kennedy and his advisers see America's balance of payments problem against the background of their desire to promote an expanding world economy. While attaching great importance to the long-run stability of the dollar, they will not attempt to reduce the current pressures against it by sweeping cuts in America's expenditures overseas—and especially not in its overseas aid programmes. Instead, they put their emphasis upon promoting further expansion of American exports, on encouraging still closer co-operation between the monetary authorities of the principal industrial countries of the free world (notably with the aim of "avoiding excessive short-term money flows") and on strengthening the international monetary institutions.

Hence, while the President gave a categorical denial of any intention to devalue the dollar (remarking incidentally that "those who hope, for speculative reasons, for an increase in the price of gold will find their hopes in vain"), he equally denied that there would be any recourse to exchange controls over trade or international investment. The whole of the United States' gold stock—including the portion at present earmarked as statutory cover for the federal reserve note issue and deposits—is pledged to sustain the dollar parity, and the 4.1 billion dollars of the United States drawing rights at the International Monetary Fund are to be regarded as part of its international reserves. Notable among several technical measures intended to give quick relief is the decision to amend the law fixing maximum interest rates allowable on bank deposits: to discourage overseas monetary authorities from converting their dollar holdings into gold, and perhaps to encourage them to switch from other currencies into dollars, separate (and higher) maxima are

(Continued on page 510)

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Bank of Baroda, Limited, as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 10 Branches audited by us, 18 Branches audited by other Auditors and unaudited returns from 71 Branches. Exemption from the provisions of Section 228 of Companies Act, 1956, has been obtained from the Central Government for all the Branches except those audited by us.

We report that :—

(*a*) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) the reports on the accounts of the Branch offices audited by other Auditors, so far as were received till the date of our audit, have been dealt with in the manner considered necessary by us ; and

(*f*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REINSURANCE BUSINESS

SOME COMMENTS ON GOVERNMENT'S LATEST STEP

By "Insurer"

THE Bill seeking to amend the Insurance Act of 1938 pertains to reinsurance and is expected to be passed by the Lok Sabha in the course of this week. Indeed, it may be adopted even before these lines appear in print. The introduction of the Bill in the Lower House a few days ago was very similar to the circumstances that prevailed at the time of nationalisation of life insurance. Not only were these two events kept closely guarded secrets, but some people were almost led to believe that these expected events might not be enacted for quite sometime.

In the case of nationalisation of life insurance, the private sector was preparing a detailed memorandum to be submitted to, and discussed with, the Government almost a day before nationalisation. All approaches made to the Government then had evoked the assertion that the Government would like to take the interests concerned into confidence before taking any important decision. But it was never respected. In the present instance, scenting that something was in the offing, the Indian Insurance Companies Association had recently sent a representation to the Ministry of Finance, analysing the available statistics from Government publications and showing that the drain on account of foreign exchange was mostly due to hull and aviation insurances which were being handled by Government's own companies. No reply seems to have been received by the Insurance Association to this representation. Nor is it known whether spokesmen of general insurance were given an opportunity to discuss this memorandum which they had sent to the Government after a great deal of detailed work. Thus, in this case also, the Government has acted on its own.

The statement of objects and reasons attached to the Amendment Bill makes it clear that the Bill is intended to "foster the growth of Indian reinsurance companies and also to save foreign exchange." The Bill seeks to provide that every insurance company operating in India must reinsure a certain percentage of its Indian business with Indian reinsurance companies approved by the Central Government. Under the Bill, the government has power to fix a maximum percentage of thirty, but this power will be exercised only after consulting the Advisory Committee which has to be constituted. This Committee will consist of five persons having specialised knowledge and experience of insurance business. It will be within the Central Government's power to allocate compulsory reinsurance among the approved Indian reinsurance companies.

Immediate Purpose

The immediate purpose of this Bill is to give substantial support to the State-owned company, namely, the Indian Guarantee, which already has a good base for operations consisting of the reinsurances of Government companies. The "Government" companies are the three general insurance subsidiaries of the Life Insurance Corporation which are placing all their reinsurances with the Indian Guarantee. It may be recalled here that the Indian Guarantee, which is also a subsidiary of the Life Insurance Corporation and now does only reinsurance business, approached the general insurance companies in the private sector generally for their support. It, however, received a poor reception and what could not be done by negotiations is now being done through legislation. In this situation, however, the individual insurance companies have come off second best, as now all their terms of exchange are fixed for them by the Government and they have to accept them as they are.

It is expected that all companies will have to reinsure 20 per cent of their fire and marine insurance in India. Of this, 10 per cent each will go to the Indian Guarantee and the India Reinsurance Corporation, respectively. The latter is a co-operative venture, in that it was brought into being with the consent and co-operation of all companies operating in this country. The present move means that cessions inside India are being doubled with effect from 1st April 1961, because 10 per cent is already being ceded to the India Reinsurance Corporation for some years now.

Whilst at the moment all the compulsory reinsurance inside India is sought to be divided equally between the India Reinsurance Corporation and the Indian Guarantee, it is very likely that further increases will go only in favour of the Indian Guarantee, the profits of which will ultimately go to the Government through the L.I.C. As for the miscellaneous business, 5 per cent each will have to be ceded to both the reinsurance companies, but it is expected that the Government may ultimately make use of the wide margin of 30 per cent provided for in the Bill and raise the extent of compulsory cessions by stages for all types of business.

Net Retention Accounts

The net retention accounts of individual insurance companies will be adversely affected by the Government's proposal of asking for a share of each and every policy. The industry has made a case for the amount of the premium required to be made good by way of a first surplus treaty, instead of a fixed quota share arrangement as initially proposed by the Government. This would mean that the same amount of premium would be made good by way of excess reinsurances of larger risks rather than a fixed share in each and every risk. It is expected that the Government will agree to this suggestion, at least for those companies which are at present ceding to the India Reinsurance Corporation by way of a first surplus treaty arrangement.

The biggest worry of general insurance business in India is not the extent of compulsory reinsurance, but the terms on which this reinsurance may be purchased. The insurance companies buy their business at a high cost and, if this high price is not again paid by the reinsurance companies to them, they are likely to be the net losers for that part of the business which is compulsorily acquired. Some companies are rebating heavily and their acquisition cost is higher and it was expected that the Government might be tempted to fix a low commission rate at least to cut down the resources available for payment of rebates. Whilst this possibility is not ruled out, at the moment the Government has agreed to allow the Indian Guarantee to give the same commission rates to individual insurance companies which they have obtained from the India Reinsurance Corporation in the past.

The legislation now on the anvil is a very short piece and appears to be simple, but it is not without its complications in actual working. The Central Government, for example, is to constitute an advisory committee consisting of not more than five persons having special knowledge and experience of insurance. The advice of the Advisory Committee will normally be accepted by the Government but not necessarily so in all cases. Again, the Advisory Committee will consist of representatives of the Department of Insurance, the two reinsurance companies, and Indian and Foreign insurance companies. It will thus be quite easy for this Committee to give advice which might be against the interest of direct-business-writing insurance companies which will be in a minority. It is also likely that this Advisory Committee will be something like the General Insurance Council which carries on discussions for years but never arrives at any decision. If each member is supposed to represent the interests of any association or corporation, then, he is not necessarily appointed for his knowledge and experience of the business. Putting the Controller of Insurance on the Committee would make it more like the Government machinery which is out of touch with real general insurance business. The Controller and his office are mainly equipped for life business and all moves on their part would appear to be efforts to create vacancies for all their surplus staff.

Indirect Effect

One indirect and immediate effect of the aforesaid legislation is the revival, with a fanfare of publicity, of the efforts made by the Indian Insurance Companies Association to form five big groups of companies. This and similar ideas were already put forward from many chairs for quite some time, but they now seem to have gathered strength, because of the initiative taken by the bigger companies. The smaller insurance companies have realised that they are not economic units and that it will be in their own interest to have joint offices which will do underwriting, etc., on an approved basis. The main advantage, of course, will be the non-diversion agreement, under which the companies would agree not to steal each other's business. But it is worth noting, in this connection, that the present provisions of the Code of Conduct regarding complaints of loss of business have been quite ineffective, as it is almost impossible to prove who stole whose business and how. It is expected under the new agreement that any company getting new business from members of the agreement will automatically reinsure the new business with the old company at the low reinsurance commission of 30 per cent.

All these matters are still in the discussion stage and it will be at least one year before anything comes out. It is to be hoped in the meantime that the premature publicity given to these discussions will not encourage any of the smaller companies to ask for a higher price for their co-operation.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The associated banks, The Chartered Bank and The Eastern Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.

More and more trade with the East

NEW PRODUCTS AND PROCESSES

Instrument to Test Resilience of Fabrics

A NEW instrument which will test with close precision and at high speed, the elongation and resilience of fabrics used in the clothing industry, has been designed by a U.K. firm, Kelston Engineering Company. It will also carry out similar tests on plastic film, paper and a variety of other materials. The machine is housed in a cabinet of moulded plastic material, containing a pneumatically operated mechanism and a motor-driven air compressor, which enables the unit to be used on any power point. Two "arms," or spindles, are mounted in front of the machine at an angle of 45 degrees. The spindle on the left can be adjusted by a hand wheel on its horizontal track, and its setting is shown on a clear vision scale. The spindle on the right also indicates its movement on a scale, but is always returned to zero, from which it is moved to the right by power from the pneumatic cylinder. A large gauge mounted in the centre indicates the air pressure and the effect of pull in pounds (weight) as the operating cylinder has a working area of one square inch. The air pressure is controlled from zero to 70 lbs. per square inch for most purposes, but higher pressures can be arranged as required.

This machine enables a new approach to be made to the control of power net and other similar fabrics, because it allows testing of basic materials and garments to be carried out with speed and accuracy in all stages of manufacture, so that every product can be guaranteed correct to size, sound in materials, seams and fastenings. The machine can also be used for the testing of cellophane and plastic film and tube; the testing of paper, the inspection and measurement of springs; the measurement of endless driving belts or ropes, and the comparison of heavier fabrics, such as those used in the manufacture of gloves or furnishings.

Two-Chamber Furnace for Non-Ferrous Metals

A new type of two-chamber mains-frequency furnace, for the simultaneous melting and holding of non-ferrous metals, has been designed and launched on the market by Asea, Sweden's large electrical engineering company. Claimed to be particularly useful in conjunction with die-casting of aluminium and its alloys as well as brass, the new furnace may also be used for melting both ferrous and non-ferrous metals for mould casting. The two chambers of the furnace are accommodated in a robust sheet-steel casing and are connected to one another by means of two melting ducts, between which the air-cooled furnace transformer is mounted. The charging material in the form of ingots or scrap is placed in the charging or melting chamber, while the molten metal is taken out with a ladle from the holding or casting chamber and transferred to the die-casting machine or mould. The temperature in the holding chamber is regulated automatically to the desired value. Provided that the melting chamber is not charged to irregularly, a continuous supply of molten metal will always be available at the desired temperature. One of the advantages of this two-chamber furnace—besides doing away with troublesome and costly transport of molten metal—is that the bath movement in the melt ensures an almost pure surface, since the greater part of the oxides and impurities will remain in the melting chamber. If any impurities should penetrate into the holding chamber they tend to accumulate on the inside of the bath surface, close to the centre of the furnace. The furnace does not require any special foundation and it can be placed direct on the floor, even when it is fitted with a special tilting arrangement.

Purification of Salt Water

A new process for extracting salt from sea water has been developed by the General Electric Company of Schenectady, New York, U.S. The distillation system, if used in ships, will require about half the space and weigh about half as much as conventional distillation systems. If used on land, the new system could be designed for low-cost operation. The new process makes water salt-free within one part of salt per million parts of water—42 pounds of fresh water from each 100 pounds of sea water. Boiling of the salt water which could seriously diminish purity, has been eliminated. The bubble-free distillation, it is claimed, produces fresh water of exceptionally high purity by avoiding the carry-over of mineral particles. The evaporator in the distillation system consists of two vertical tubes, one inside the other. Sea water is fed into an assembly where slowly revolving wiper blades spread the salt water on the inner surface of the inside tube in a film scarcely one-thousandth of an inch thick. Steam-produced heat going through the outer tube makes the salt water evaporate. The pure water leaves the evaporating chamber as vapour, and the concentrated brine is drained off. The heat transfer rate, a critical factor in the process, is at least four times higher with the double tube system than with any other distillation unit now in commercial use. The process, it is claimed, is applicable to salt, brackish or polluted water.

Foambacked Fabrics

Lightweight foamed polyurethane is being used by the Plastics Group of the Calico Printers' Association, St. James's Buildings, Oxford Street, Manchester 1, England, as a backing for a variety of fabrics to give warm but lightweight materials for outerwear. An 8-oz. dress, for instance, is said to take on the bulk and warmth of a 24-oz. coating. Use of the foamed backing is also claimed to give a crease-resistant material which "breathes" despite the extra thermal insulation. The variety of materials which can be treated is apparently unlimited, although at the moment the majority produced by the association's Plastics Group consist of cotton-knits. There are also synthetic fibres such as long-haired brushed Orlon, and a rayon gaberdine. The backing is washable but it is expected to take some weeks before it is possible to offer one which is suitable for dry-cleaning by all known methods.

Fibre for Industrial Use

An entirely new fibre based on fluorocarbon resins has been developed in the United Kingdom. It can be produced, it is claimed, in two sizes—250 denier (with a cross-section diameter equivalent to five-thousandths of an inch) and 1,200 denier. This latter size is equivalent to a cross-section diameter of eleven-thousandths of an inch. It is expected to be espedially useful in chemical engineering fields, where wires manufactured from precious metals have now to be used as, for example, in certain distillation processes. It can also be used in gas demisting plant and for the production of vacuum filters. This latter application is of particular interest in that the caking of residues is currently a problem, and the non-sticking characteristics of the new fibre should make the cleaning of these filters exceptionally quick and easy. The new fibre is also expected to find a number of applications in mechanical engineering, where high-strength, non-sticking characteristics and high-temperature resistance are important, together with exceptional resistance to abrasion.

Device to Detect Worn-out Screws

A novel device which can be fitted to a standard micro-calibration unit, and which can be operated by one hand, has been developed for checking-up on the amount of wear experienced by screws in Britain. It is said to be capable of measuring the pitch diameter of screw threads with exceptional accuracy. At the same time, because it can be used by one hand, it is expected to be especially useful for maintenance purposes. This should enable worn screws to be tested and replaced far more readily than is at present possible. It can also be used for checking screws before they are used, and can be readily adapted to fit into an automatic production control system. The device is expected to find widespread applications in the engineering industry, as well as being of vital importance in such fields as atomic energy and guided weapons. It is believed to be the first device of its kind to be developed in the world.

Filter Material

The United Wire Works of Granton, Edinburgh 5, U.K., is to introduce a filter medium made of extremely fine wire which it is thought will be of particular value in fuel and hydraulic systems in aircraft and in highly specialised applications. Known as 352/2,300 mesh Stainless Steel Micro-Hollander, the material is described as a wirecloth woven with 0.001-inch diameter wire whose cross-sectional area is about 10 times less than a human hair. A square inch of the material has 325 wires running lengthwise and these are interwoven with 2,300 cross wires. This provides 747,500 openings per square inch, the dimension of each opening being of the order of 0.00039 inch. In spite of its delicate texture the mesh is said to be robust and, at first glance, to resemble sheet steel. The maker says that a wire-cloth to this specification has not previously been produced in this country.

Hardness of Water

A new apparatus which, it is claimed, makes it possible to measure and record continuously, and completely automatically, the hardness of industrial or domestic water supplies has been developed by a Czechoslovakian concern. Chemicals which bring about a colour change (from wine-red to blue), dependent upon the percentage of calcium and magnesium salts present, are added to a sample of the water. This colour change is then measured with the aid of a photo-electric cell, converted into an electrical quantity and recorded with the aid of a device for measuring small voltages. Accurate, automatic sampling of water and dosage of chemicals is made possible, says the company, by the use of electronic controls.

Safety Bottle Top

A "safety top" has been introduced in America to keep children from unscrewing the tops of bottles or jars containing poisons. It may also be used in factories and laboratories where precautions are necessary. The device consists of an inner cap with internal threads mating with threads on the bottle or jar. An outer cap turns freely on a flange on the inner one. To open, the outer top is forced down against the pressure of plastic springs until a dog, or catch, on it engages with a catch on the inner cap. The inner cap can then be unscrewed with a combined pressing and turning movement. It is stated that small children are expected to be unable to combine these movements.

Paste Compound for Aluminium

A specially formulated paste compound for joining aluminium at low temperature. Auto-Chemic 990, has been introduced by the Eutectic Welding Alloys Company Ltd. This compound is said to give high strength, corrosion resistant joints on virtually all types of aluminium and aluminium alloys and requires no finishing or after treatment. No filler alloy is required. The compound is merely painted on where required, facilitating pre-placement on multiple or production joining applications, and giving great economy in use. Auto-Chemic 990 is claimed to be admirable for all fine work such as wire and cable joining, instrument parts, cans, small wave guides, floats and other small fabrications. A neat fillet easily cleaned in warm water is produced by applying the compound and heating indirectly. A series of chain-type reactions takes place terminating in metallic reduction at the reaction temperature of 400°C.

REPORT OF THE AUDITORS

To THE STATE BANK OF INDIA:

We, the undersigned Auditors of the State Bank of Hyderabad, appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, report on the Balance Sheet and Accounts of the Bank as at the 31st December, 1960.

We have examined the above Balance Sheet of the State Bank of Hyderabad as at the 31st December, 1960, and the Profit and Loss Account for the year ended upon that date with the Accounts and Vouchers relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts, and report:

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(iii) that, the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(v) that, the Profit and Loss Account shows a true balance of profit for the year covered by such Account;

(vi) that, in our opinion the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law, and

(vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

SAFETY AND ECONOMY IN AIR TRANSPORT

TOO MUCH EXTRAVAGANCE EVERYWHERE

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

SAFETY and economy should be the first two policy objectives of every airline operator. Speed is the third objective. For some unexplained reason, speed has been given first priority, whilst comfort and luxury service play prominent parts in airline propaganda.

It is very difficult to say how this has come about. Probably, there are several reasons, amongst which Government's anxiety to use air transports as military aircraft vehicles must take first place. Then, there is competition encouraged by manufacturers who not unnaturally wish to keep the airlines in a state of perpetually purchasing new equipment.

In order to analyse the problem, it is necessary to lay down, in simple language exactly what are the public requirements of air transport services. First, as well as above all other considerations, the public expect the maximum possible safety. Secondly, the cost per seat-mile or ton-mile must be as low as possible, so that as many as possible may enjoy the advantages of air travel, also the use of airlift for freight and mails.

Speed is the third important requirement. This has to be judged not as the speed of the aeroplane but the lapsed time for the journey from start to finish. For example, the journey between London and Paris requires less than one hour flight time plus little short of one hour fifteen minutes at each end to get between the airport and the city including formalities, customs and clearance. It would be absurd to employ faster and more costly aircraft to save ten minutes' flight time. The real answer from the public's point of view, to improve a journey between any two cities within three hundred miles of each other, is to use aircraft capable of operating from city centres. The flight time may increase to as much as one and a quarter hours London to Paris, but the overall journey time would be less than two hours, which is the important convenience from the traveller's angle. But aircraft capable of operating from city centres have not been developed. Luxury service and spacious accommodation are best described as "frills" which can be supplied for those who are prepared to pay for them.

Safety

Every form of transport contains a certain element of risk. The degree can be calculated by the number of fatal accidents per million miles of travel. There are several yardsticks that can be used but none gets down to the fundamental question: "Is air travel as safe as it could be?"

No matter how the record is dressed up for public consumption, the final conclusion must be that air transport could be considerably safer than it is and almost certainly safer than other forms of transport. The truth of the matter is that Government authorities, as well as air transport operators, have come to accept certain conditions because they have always existed. The fact that science and aerodynamic design have progressed, so that it is possible to eliminate or reduce these risk conditions, is ignored.

Another factor is that aircraft performance has advanced faster than the capabilities of equipment used to control and aid air traffic. For example to aid the big jet airliners in their approach to airports and the final let-down, radar coverage from the airport control tower should have a 300-mile range, whereas for slower aircraft a 50-mile radar coverage has been adequate. Very few airports have the necessary radar coverage to handle jet air transport traffic. Now the point is this: Was it wise or safe to introduce 600 m.p.h. airliners into an air-traffic system which is not capable of handling them?

Communications play a vital part in air traffic control. The existing systems are so out of date, and is being so overloaded with messages that airliners arrive at their next airport of call before the A.T.C. has received particulars of their departure from the airport from which they started! This can produce dangerous situations, and may deprive the aircraft commander of vital information, such as changes in weather conditions and wind direction. Again, I ask, would it not have been wiser and safer to have developed the communications systems to a level capable of handling so much air traffic, including such fast airliners?

Hardly anywhere in the world are the meteorological services capable of giving accurate weather forecasts for the upper air above 20,000 feet. The jet airliners' most economical cruising altitude is 30,000 to 40,000 feet. A friend of mine in aviation only a few weeks ago was flying non-stop across the U.S.A. He spent a good deal of time in the cockpit. The commander called for upper wind direction and force at 35,000 ft. so as to check his navigation. The control replied that they had no information above 20,000 ft. Over the North Atlantic, pilots rely on reports from other aircraft flying ahead of them.

Is this good enough? Imagine ships putting to sea with charts that only show the currents or rocks up to five or ten miles of land. Navigation would become an impossibility, or at best it would be a hazardous business. Yet, similar conditions are accepted as normal for air transport.

Aerius, in *The Log*, the official journal of the British Air Line Pilots' Association, December 1960, discussing the problem of excessive noise created by the big jet airliners, remarks: "Most jet airliners have plenty of power and manœuvrability, but, in my estimation, some of the procedures which operators have asked of their pilots in order to record good scores at the listening posts have reduced safety margins alarmingly." The point is, jet take-offs have had to be restricted, because the noise level is unacceptable, and the authorities are liable to take action against an operator whose aircraft make excessive noise above an agreed level. Cutting down power on take-off is one method of reducing noise, *plus* steep climb out, but this kind of thing is dangerous.

Surely, before jets were introduced or even ordered, their operational advantages and disadvantages should have been carefully assessed and any problems discovered, such as objectionable noise, should have been solved before the aircraft were certificated as safe for public transport. Since introduction, the operators have had to fit noise suppressors to each engine, which impose a heavy financial penalty both in capital outlay and hourly operating cost. It does not make sense adopting a class of vehicle for commercial air transport without knowing all the facts about it before it is purchased.

Rate of Accidents

What does all this sum up to? Taking the 1960 record from Lloyd's List and the previous years record from the International Civil Aviation Organisation, the accident record for 1960 was the worst since 1954. The statistics show a 1.27 passenger fatality for every 100 million passenger-miles.

The breakdown of accidents discloses alarming facts that conclusively prove that air navigation and air traffic control have been outstripped by aircraft performance. For example, twelve aircraft flew into the ground, hit hills or mountains. There were eight collisions on descent or approach to land. A part from this, there were twenty-five approach accidents. During take-off, fourteen accidents occurred, mostly to piston-powered types of aircraft.

Such a record clearly indicates that the authorities, together with the operators, have failed to develop air transport as a whole and that the essential aids and facilities are inadequate or entirely lacking. The effort has been to improve the aircraft so as to carry bigger loads at faster speeds but the control and navigation systems have not kept pace with these advances. There is no other explanation.

Those best qualified to judge, such as the pilots and air traffic control officers associations, have warned the authorities time and again but the only answer given to them is: *"the necessary equipment is being designed and is expected to be complete and in service within ten years."* Jet airliners have already been in service for more than two years. These same authorities are lavishing money on the design, development and building of supersonic airliners which may come into service by 1968 *or before the ground aids have been brought up to date to cope with subsonic air transport.*

If this is maintaining air navigation safety at a proper level, then I fail to understand aviation.

One of the great advantages of the turbine jet aero-engine is that it can use kerosene which is a much safer fuel than gasoline which has had to be accepted for piston engines in spite of the great risk of fire. There was no option in the case of the piston-powered type of aircraft. Believe it or not, but it is a fact that some operators have accepted the use of a fuel known as JP4, which is a mixture of gasoline and kerosene and which has combustion qualities nearly as dangerous as pure gasoline. Here is a totally avoidable risk which is being accepted, merely because JP4 is more readily available and also it is generally cheaper! Is it right to accept this unnecessary risk?

Storm Warning Radar (S.W.R.) an indispensable aid to safe air navigation of all turbine-powered aircraft, and almost as essential for all piston-powered aircraft, is not compulsory. Many operators do not equip their aircraft with S.W.R. Some have gone so far as to paint the aircraft noses black to give the experienced air traveller the impression that S.W.R. is fitted. This is sheer deception and should not be allowed. In fact, S.W.R. should be mandatory equipment. Aircraft have been lost in storms, others have been seriously damaged only escaping by luck or the skill of the pilot. The navigation aid exists that enables this risk to be eliminated, but it is not in general use!

Do these facts indicate that the authorities and the air transport operators are genuinely out to make air transport as safe as it could be?

Economy

The factor that controls the decision of the individual whether to use air transport in preference to other means of travel is, in ninety-nine cases out of a hundred, the cost. For the vast majority, the use of air transport, even for posting a letter over long distances, is far too expensive. It is estimated by a competent authority in America, where incomes are the highest in the world, that more than seventy per cent of the population has never even given air transport a thought, let alone used it for travel. In other words, the whole structure of air transport is planned to serve a small fraction of the richer classes, *plus* the businessman who has to pay whatever price asked, so as to procure quick travel to meet his business commitments.

Is this serving the general public or the needs of the average man? I fail to see that it is, especially when aircraft could be built to carry passengers at 30 to 40 per cent of the present air fares.

The astounding fact remains: not one aircraft operator in the world has ever gone to an aircraft manufacturer and asked him to produce an aeroplane that would carry the largest possible number of passengers for a distance of 1,000 miles for the lowest possible cost per seat-mile. The average air passenger journey is less than 700 miles so the thousand-mile range aircraft is adequate for most of the world's air traffic. Nobody wants such an airliner. Why? I am unable to explain, because such an aircraft makes a lot of sense to me.

The whole system of airline administration reeks with extravagance. The very ticket is an indication that the whole system is totally removed from practical business methods. Our domestic airline handles more than 700,000 passengers a year on scheduled air routes; for every one of these passengers a ticket has to be written out by hand, with carbon copies, and in addition passenger lists have to be prepared. Every bit of paper has to be double-checked and audited within the area, again centrally. Hundreds of clerks are permanently employed filling in all this waste-paper, when a cardboard ticket like the railways use would do perfectly well.

If perchance the passenger has excess luggage, the whole process has to be repeated for the luggage, instead of ringing up the amount charged on a cash register and handing the passenger the receipt slip, in the same way as the telegraph offices give receipts for telegrams.

This method of handling passengers is only an example of the totally unnecessary expenditures, all of which must be included in the air fares and cargo rates. Is there any wonder air travel is so fabulously costly. From anywhere in India to any capital in Europe the return air fare should not exceed Rs. 1,200. This would give the passenger a comfortable seat, but all meals and drinks would be extra, as they should be.

Air fares are internationally agreed. The operators maintain the International Air Transport Association which holds "Traffic Conferences" to decide the air fares and cargo rates,

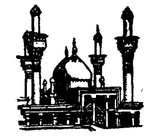
A tale of Twenty-two Cities



From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

ASIAN CABLES CORPORATION LIMITED

CHAIRMAN, MR. G. B. KOTAK'S SPEECH AT FIRST ANNUAL MEETING

PRODUCTION TO COMMENCE IN ABOUT FIVE MONTHS

THE L.T. insulated wires and cables manufacturing plant of the Asian Cables Corporation Limited will commence operation within the next five months. This was disclosed by the Chairman of the Company, Mr. Girdharlal B. Kotak, when he addressed the First Annual Meeting of shareholders held at Bombay on Friday, 10th March 1961. Mr. Girdharlal Kotak also disclosed that the Company had planned to take up the production of L.T. plastic covered wires, for which the Government had already granted a licence and the Industrial Credit and Investment Corporation had agreed to give an additional foreign exchange loan of Rs. 5 lakhs. He further disclosed that foreign technical collaborators, Messrs. Enfield Cables Ltd., and their business associates, Messrs. Phelps Dodge Copper Products International Corporation of the U.S., had agreed to invest substantially in equity capital for the manufacture of H.T. paper insulated and P.V.C. power cables and super enamelled copper wires. Referring to the increasing demand for various kinds of electric cables following the expansion of the electricity generating capacity, he said that the Company's products, which would be manufactured strictly in conformity with the relevant Indian and other standard specifications, were assured of a very good market.

The following is the full text of Mr. Kotak's speech:

"GENTLEMEN,

"It is a matter of great pleasure to my colleagues and to me to welcome you all to this first annual general meeting of the Company. The Directors' report and the balance-sheet and the profit and loss account along with the auditors' report have been with you for some time and, with your permission, I shall take them as read.

"I wish, at the very outset, to thank you all for coming to this meeting which is a sign of the keen interest which you have in the progress of the Company. Let me assure you, on behalf of the Board of Directors, that the confidence which you have reposed in the management will be fully justified by the sustained progress of the Company's undertaking which is soon expected to start yielding results.

Intense Activities

"The year under review have been a period of intense activities for the planning of the Company's plant for L.T. insulated wires and cables and overcoming various bottlenecks and hurdles. However, thanks to the wholehearted efforts of all concerned, I am glad to inform you that the construction of the buildings and the erection of the plant are either completed or are in an advanced stage of implementation and the Company's plant will go into operation in about five months. Plans have also been made to add the manufacture of L.T. plastic covered wires to the present plant for which the Company has already received an industrial licence and the Industrial Credit and Investment Corporation of India Limited have agreed in principle to grant an additional loan of foreign exchange of Rs. 5,00,000 to enable the Company to import the required machinery from abroad. This additional plant will result in a much fuller utilisation of a considerable portion of the other plant and equipment of the first project and the increased production will provide a larger spread for overhead expenses and thus further augment the profit-earning capacity of the Company from their first project.

"Besides implementing the first project, our efforts have been directed towards achieving the establishment of the second project for the manufacture of H.T. paper insulated and plastic insulated power cables and enamelled copper wires, which your Directors consider most timely and promising in the context of the economic dynamism generated in the country today.

"Our nation, spear-headed by the national Government, has embarked on a bold and ambitious programme of industrial and economic development of the country to remove the poverty and unemployment as well as underemployment of the vast masses inhabiting this country. The development plans for both the public and private sectors involving an investment of nearly Rs. 10,000 crores are given a concrete and effective shape now in the third Five-year Plan. Although some critics feel that the investment target in the third Five-year Plan is over-ambitious, the consensus of responsible and well-informed opinion both in India and abroad is that the Plan targets are not only practical but also the minimum required to keep our march of economic progress comparable to that of another great Asian country, China, which is following the path of totalitarianism against that of social democracy followed in India.

Growth of Electrification

"The rapid industrial and economic progress under the impact of the first and second Five-year Plans has resulted in a phenomenal growth of electrification in this country. The total installed capacity of electricity generating plants has increased from 2.3 million kw. in 1950 to 6.9 million kw. in 1960-61 during the first and second Five-year Plans. The quantum of electricity generated in the year 1950 was 5,110 million kw. hrs. only, as against the estimated electricity generation of 20,700 million kw. hrs. in the year 1960-61 (the end of the second Five-year Plan).

"During the third Five-year Plan, the electricity generating capacity will be doubled and new power plants with an installed capacity of over 6 million kw. will be established. This means that the expansion during the next five years in electricity will be equal to what has been achieved during the last fifty years. Moreover, by the end of the third Plan a total of 38,520 towns and villages are proposed to be electrified. As a result of the programme of rural electrification, there is a tremendous spurt in the growth of small-scale and medium-size industries. The natural outcome of all this is an increasing demand for various kinds of electric cables. This, therefore, ensures a very good market for the Company's products which will be manufactured strictly in conformity with the relevant Indian and other standard specifications.

Project II

"After sending the Directors' report, a new development has come about which might necessitate revising some of our views on Project II, as has been mentioned in the report. Recently, the Government of India has directed that aluminium should be substituted, wherever technically feasible, in place of copper in the manufacture of cables. Our technicians and our collaborators are studying this question with a view to co-operating with the Government in this matter. It may, however, necessitate some changes in the project inasmuch as this change-over from copper to aluminium in the bulk of the cable conductors might obviate the necessity for the copper rod mill and, in its place, we will include an aluminium rod mill of the Properzi type. These changes, however, would not affect the equity capital to be issued.

"Our present technical collaborators, Messrs. Enfield Cables Ltd. have evinced a keen interest in the proposed Project II for the manufacture of the H.T. paper insulated and P.V.C. power cables and super enamelled copper wires. They, along with their business associates, Messrs. Phelps Dodge Copper Products International Corporation, one of the biggest cable manufacturers in America, have shown their willingness to invest substantially in the equity share capital of the Company. The terms of this foreign collaboration agreement, covering both capital participation and technical assistance, are under the scrutiny of the Government of India. Your Directors are actively pursuing the matter and the shareholders can rest assured that, immediately on getting the Government's approval, steps will be taken to implement the expansion scheme of Project II.

"Before I conclude, it is my pleasant duty to express thanks on behalf of the Board and on my own behalf to the two Managing Directors, Shri P. B. Kotak and Shri N. H. Kotak, who have been all along working tirelessly and without receiving any remuneration, Dr. C. A. Mehta, Executive Director, Shri S. R. C. Poti, the Technical and Commercial Manager, and all the other members of the Company's staff, for the hard work they have put in to establish the industry.

"Gentlemen, I now move that the Directors' report and audited statement of accounts for the period ended 31st December 1960 be adopted."

Swiss Industries Fair Basle

15th April to 25th April 1961

An impressive parade of products spotlighting Swiss Manufacturers' Skill and Craftsmanship in Plastics, Electrical and Watch Industries, Mechanical Handling Equipment and Textile Machinery will be on display at the 45th Swiss Industries Fair.

MORE ON L.I.C.'S NEW BUSINESS

SOUTHERN ZONE LEADS OTHERS

WRITING in the January 1960 issue of the *Yogakshema* on the prospects for new business in 1960, Mr. P. A. Gopalkrishnan, I.C.S., Chairman of the Life Insurance Corporation of India, stated: "1960 is a crucial year for the progress of life insurance in India. The Corporation has consolidated its position and is well poised to reach greater heights of achievement in its efforts to offer the benefit of life insurance protection to every eligible person in the whole of India." The new life insurance business done in 1960, the details of which are now available, shows that the Chairman's estimate of the Corporation's ability to meet the challenge of life insurance has been largely correct. Although new business booked during the year failed, as was briefly reported in our last issue, to reach the target of Rs. 525 crores fixed for the year under the Corporation's five-year plan, the performance must be regarded as encouraging, inasmuch as the new business written rose by an impressive Rs. 68 crores, or over 15.4 per cent, as compared with the previous year. Business in India, as usual, accounted for the bulk of the new underwriting, Rs. 484.47 crores, as against Rs. 429.17 crores in 1959. Foreign business recorded only a modest increase of Rs. 0.23 crore to Rs. 9.70 crores, as against Rs. 9.47 crores in 1959. The reasons for this poor increase are: (1) political situation in certain countries where the Corporation operates, leading to a flight of capital, (2) migration of Asian and Indian population from these areas and uncertainty amongst those remaining behind.

The following table gives the zone-wise break-down of new business done in India, foreign business in 1960 and the percentage of completion, as compared with the previous year:

(In crores of rupees)

Zone	1960 (completed business)		1959 (completed business)	
	Total	Percentage of completion	Total	Percentage of completion
Northern	72.96	85.6	54.66	86.8
Central	63.51	83.2	54.61	83.4
Eastern	118.34	91.9	97.27	91.4
Southern	122.85	89.0	113.02	90.7
Western	113.46	86.1	100.24	86.6
Total(Indian'business ..	486.29	87.7	419.70	88.8
Foreign business ..	9.70	82.3	9.47	84.6
Grand Total ..	495.99	87.5	429.17	88.2

From the point of view of total business, the southern zone, with Rs. 122.85 crores of completed business, topped the list, followed by the western and eastern zones accounting for Rs. 113.46 crores and Rs. 111.74 crores, respectively. But from the point of view of increase in business over the 1959 figures, the northern zone, comprising Rajasthan, Delhi, Punjab, Himachal Pradesh and Kashmir, has the distinction of the first place, by showing an increase of 34.8 per cent. In respect of percentage of completion of business, however, the eastern zone, comprising Bengal, Assam, Orissa and Bihar holds the pride of place, by completing 91.9 per cent of introduced business, as is evident from the following table:

(Sum assured in crores of rupees)

Zone	1960		1959	
	Sum assured	Percentage of completion	Sum assured	Percentage of completion
Southern	122.85	89.0	113.01	90.7
Western	113.46	86.0	99.96	86.6
Eastern	111.74	91.9	96.15	91.3
Northern	72.92	85.5	54.09	86.7
Central	63.50	83.2	54.48	83.4
Foreign	9.7	82.3	9.47	84.5
Total* ..	494.17	87.5	427.16	88.2

* Excluding *Janata* business.

The average sum assured per policy in respect of business in and outside India during 1960 showed an increase over that of 1959 and 1958. The average sum assured per policy for the total business of the Corporation was Rs. 4,008 in 1960, as compared with Rs. 3,805 in 1959 and Rs. 3,666 in 1958. The average for business in India itself was higher at Rs. 3,954, as against Rs. 3,747 in 1959 and Rs. 3,627 in 1958. Zone-wise, the northern zone has maintained its first position in this respect. The western, central and eastern zones have ranked second, third and fourth, respectively. The southern zone continues to be at the bottom of the list, with the average sum assured per policy aggregating no more than Rs. 3,488 which is below the average for both the total business (Rs. 4,008) and Indian business of the Corporation (Rs. 3,954). These trends broadly reflect the economic status of the people in the various zones of India.

The following table gives the average sum assured per policy in different zones:

Zones	1960	1959	1958
	Rs.	Rs.	Rs.
Northern	4,794	4,531	4,693
Western	4,169	3,987	4,022
Central	4,020	3,992	4,056
Eastern	3,832	3,667	3,642
Southern	3,488	3,266	2,894
Total (in India)	3,954	3,747	3,627
Foreign	12,534	11,069	10,409
Grand Total ..	4,008	3,805	3,666

With the completion of Rs. 496 crores of new business in 1960, total life insurance business in force at the end of the year amounted to about Rs. 2,400 crores, as compared with Rs. 1,862 crores at the end of the previous year. Although total business in force at the end of 1960 is more than double that at the close of 1955, it still accounts for only about 19 per cent of the national income (Rs. 12,470 crores in 1958-59 at the then-current prices). It is true that this figure compares favourably with the percentage of 11 that obtained in 1955, but it is very much below the percentages obtaining in other countries. For instance, in Canada and the U.S., to mention only two countries, life insurance business in force actually exceeds the national income. In the former country, it exceeds by as much as 157 per cent. India is, by comparison, a poor country and the saving potential of the people is consequently low. Nevertheless, the present coverage is quite meagre even after making allowance for the low standard of living and *per capita* income.

Announcing the new business figures for 1960, the Chairman of the Corporation, Mr. P. A. Gopalkrishnan, referred to some of the main developments during the year which have a bearing on the new business figures for 1961. One was the stoppage of issuing joint life policies and the reimposition of certain restrictions on female lives. This decision was taken, the Chairman explained, because the experience in respect of joint life policies was adverse. The mortality of female lives had shown an alarming increase of 150 per cent in three years. It was found that, in many cases in which joint policies were issued, there was no real need for insurance on the female life, the motive being purely speculative. Consequently, the Corporation decided to stop issuing policies under the joint life plan, except in the case of proposers who were partners in business. Moreover, most of the restrictions, subject to which policies on female lives were issued and which were removed in 1957, were reintroduced, because it was found that a considerable measure of adverse selection was being exercised against the Corporation in respect of such business. A revised schedule of ratings, containing extra charges on account of sex to certain categories of female lives, has also been drawn up.

The aforesaid actions, it must be said, were wise and in the larger interests of the policyholders as a whole. The adverse selection exercised against the Corporation was due partly to the overenthusiasm on the part of the field force to increase the volume of business and partly to the failure of the Corporation's medical examiners to adhere strictly to the standards of physical fitness laid down. Unless there was some form of collusion between the proposers and the Corporation's field and medical staff, it is difficult to understand how so fantastic a rise in mortality of 150 per cent during three years could have happened. This only underlines the need for stricter discipline and more integrity on the part of agents and medical staff, which alone can safeguard the Corporation from the speculative manœuvrings of unscrupulous clients.

One of the avowed objectives of the Corporation is to carry the message of insurance to rural areas, so that every man and woman, who has need for life insurance and who can afford to pay for it, is enabled to obtain it. The fact that the Corporation's activities are increasingly penetrating into rural areas is evident from the share of rural business in the total which has shown a steady improvement over the past few years. From 37 per cent in 1957, the percentage of rural insurance to the total business has risen to 46 per cent in 1960. The *Janata* scheme, which has been specially tailored to suit the needs of the small man, has, however, not proved popular, except in some areas. Nevertheless, the Corporation has decided to continue the scheme, albeit only in areas where it has been found worthwhile. The Corporation will do well to undertake a special study of the *Janata* scheme, with a view to assessing the degree of success or failure in different areas and the reasons for them. The cost of the scheme also needs to be kept under constant scrutiny, so that, should it be found uneconomical, steps could be taken to mend or end it. The important point to be borne in mind, in this connection, is that it should not prove a drag on other sound and profitable plans.

PLANTING

(*Concluded from page* 484)

The report, however, considers that prospects of exports to these markets are quite good, subject to three considerations. In the first place, continuity in supplies should be assured. Secondly, price is an important consideration with the geographical and political proximity of Latin America. Thirdly, building up of a "quality image" direct with the consumer can have long-range marketing potentialities for washed arabicas. In this connection, the report says:

"Many of the larger American coffee manufacturing concerns operate in both the countries. India as a sister member of the Commonwealth is entitled to import concessions as in the case of Canada. Soluble coffee has come to stay in these markets. The Indian robustas could, perhaps, compete with the Africans for this portion of the markets. Any characteristic to our advantage that could be assessed on a scientific basis is sure to have an advertising value in these educated markets. This would apply to the United Kingdom and Australia too."

Among the West European countries, mention is made of Italy, the U.K., and Finland. The latest position is summed up thus:

"India's exports to Italy have been increasing; in the U.K., however, they have lost to the British territories in Africa; in Finland, their foothold is loose. Price is once more the dominating factor. The other considerations which seem to weigh with the trade are the ambiguity about supplies and a lack of proper classification."

The report commends for acceptance some suggestions put forward by a trader in Italy. Among them, three stand out prominently, namely (*a*) specific mentioning of the name "Indian robusta"; (*b*) a more detailed classification of coffees according to types and prices; and (*c*) removal of the minimum prices at public auctions for large, sampled lots. Promotional activities in Italy, it is felt, cover first trade promotion, followed by consumer promotion and then personal contacts by meeting propagandists followed up by monthly illustrated brochures giving up-to-date information on crops, prices and refinement in cultural practices. Further, it is stressed that the creation of a prominent local restaurant of an Indian blend will promote popular taste, and this will have to be supported by a tie in advertising programme in suitable media. It is also stressed that a public relations programme with articles of general interest in weekly magazines will help create an atmosphere for Indian coffee with the consumer.

With regard to Finland, the report expects that negotiation for a possible change in Finnish customs rates may prove fruitful and emphasises the need for personal approach. In the case of Lebanon, it suggests the distribution of free samples for tasting by a leading importing firm there. Speaking of Continental Europe generally, the report says that, with an expanding economy and plans for improved standards of living in this part of the Western Hemisphere, the promotional activities of the recently formed European Coffee Bureau augurs well. In its opinion, a "Coffee Congress" for Indian coffee under the auspices of this Bureau in a few central places will promote contacts with importers.

The foregoing account will show that the author of the report has concentrated only on the situation obtaining at the importers' end and offered some suggestions. He has not indicated what measures are required to improve conditions at the exporting end, that is, within the country. It is this lacuna that limits the importance of the survey. On more than one occasion in the past, this journal has drawn the pointed attention of the authorities to the urgency of reforms in spheres such as the constitution of Coffee Board, weird and outdated multi-channel sales, auction by closed bids, and export sales by calling tenders, and restricting the trade only to registered dealers.

MR. AL FOIL
OBSERVES THE FORMALITIES
Foil's the name, Al Foil, alumnus of aluminium and many titles besides. But you can call me Al. Being a tidy sort of chap and very hygiene conscious, I like to wrap up things for you in shiny aluminium foil—in fact, been so 'wrapped up' in the 'wrapping business' that I haven't had the chance of meeting you wonderful people. . .not for the last 57 years which is when I entered the 'foiling fray' And that puts me in a reminiscing mood. A long time . . . 57 years at Kamarhati . . . must have wrapped thousands of tons of tea for export, and now chocolates, biscuits and such toothsome confectionary. But that's only the 'sweet side' of my job . . . there's the bitter too, for the medicine men like to keep their pills fresh and efficacious by using 'foil protection' Fact of the matter is that I have had to supply almost the entire requirement of foils for the confectionary, pharmaceutical, tea and cigarette industries in the country. Long and wide experience you'll agree . . . might even call me an expert. So whenever, in packaging, you have a 'foiling problem', remember I am here to serve you—no 'foiling problem' is difficult enough to foil Al Foil, alumnus of aluminium.

WILL BRITAIN JOIN COMMON MARKET?

CHANGES IN COMMONWEALTH PREFERENCE LIKELY

THE major preoccupation of the Commonwealth Prime Ministers at their conference this week at London is bound to be international political affairs, such as *apartheid*, disarmament and the Congolese imbroglio. Nevertheless, some of the latest developments in the European economic and commercial scene are too important to escape their attention. It may be recalled that, at last year's conference, the U.K. presented to the other Commonwealth Prime Ministers the blue-print of the Outer Seven (E.F.T.A.), a new trading bloc in Western Europe (which came into being in July 1960). No less significant is the new trends in the British thinking *vis-a-vis* the rest of Europe which confront the Commonwealth Prime Ministers now. The U.K. proposes to join the Common Market of the Six (France, West Germany, Italy and Benelux countries), albeit with certain reservations. Mr. Edward Heath, Lord Privy Seal and British Minister for European questions, put forward the present British stand a few days ago at Paris at a meeting of the West European Union—the only body at present with both the U.K. and the Six as its members. Mr. Heath's suggestions are particularly important, in that it is the first official exposition of the new turning point in British thinking. If the Six could somehow reconcile themselves to Britain's obligations to the Commonwealth and its agriculture, Mr. Heath observed, the U.K.'s entry into the Common Market could be facilitated. In such an event, he said, the U.K. would consider a system based on a common or a harmonised tariff on raw materials and manufactured goods imported from countries other than the Seven or the Commonwealth. In effect, this means that, if the latest suggestions of Britain were accepted by the Six, the Seven would continue to exist side by side with the Six, with the U.K. having preferential trade ties with both the blocs. Accordingly, the U.K. will have, for some time to come at least, a four-tier tariff structure with different tariffs on some goods, in ascending order, first the Commonwealth, then the Seven, third the Common Market and fourth the rest of the world.

U.K. and Commonwealth

From what transpired at the Paris meeting, which was held *in camera*, it would appear that, so far as Commonwealth preference is concerned, the U.K. is willing to sacrifice the advantages which it derives from Commonwealth preference. But, at the same time, it will not, it is averred, impose common tariffs against imports from the Commonwealth countries even though the latter will be free to import, for instance, French cars, at the same tariff as the British. Mr. Heath hoped that this arrangement would be welcome to the Commonwealth countries. He added, significantly enough, that the U.K. would not stand in the way of direct negotiations with the Six by any of the Commonwealth countries on reductions in tariff preferences which the U.K. still enjoyed.

Giving an insight into the merits, as well as limitations, of Mr. Heath's proposals, the London *Economist* observes as follows:

"The proposals show that British European policy has taken two steps forward. Either would have been regarded as pure heresy a year ago. It is true that in practice the two concessions mean less than appears at first sight. Study has shown that the total British tariff against third countries is remarkably similar to the common market tariff with which it would need to be harmonised. Still, harmonisation would involve considerable changes for particular items (including sharp cuts for some manufactured goods), and the idea of allowing our tariff against, say, Japanese goods to be fixed for all time by somebody other than the British Parliament itself is pretty revolutionary. Since the preferences in the Commonwealth are declining steadily in value, it is no more than common sense to use what is left to bargain a way into Europe. But here again a political sacred cow is being sacrificed, and the common sense is welcome. So is the new political attitude Mr. Heath expressed in Paris. The Government no longer excludes membership of the Common Market. It has an open mind. The new interest British opinion has been showing in Europe during the past year has now found some articulate reflection in Government policy."

France Invites U.K.

While the British proposals do reflect its unmistakable desire to associate itself with the Six, subject to certain conditions, they amount to nothing more than a new "approach" rather than any cut and dried plan on the basis of which the U.K. would join the Six. It has not been made clear, for instance, whether the U.K. is prepared to accept the basis of the Rome Treaty, with all its political implications. Be that as it may, it is significant that France, one of the leading members of the Six, which until recently was almost hostile to any plan for associating the U.K. with the Six, has tended to reciprocate the British proposals in a conciliatory attitude. Following close on the heels of Mr. Heath's statement, M. de Murville, French Foreign Minister, made it clear in a speech at the Consultative Assembly of the Council of Europe at Strasbourg, that it would welcome any new European country desirous of joining the Common Market. He added that, in expanding the Common Market, the character of each country and the ties or particular obligations contracted by it in certain respects must be taken into account. M. de Murville's speech is considered as a virtual invitation to the U.K. to join the Six. France, however, maintains that it is upto the U.K., if it decides to join the Six, to propose solutions which will fit in with the Rome Treaty and be acceptable to the French and Common Market opinion. The other members of the Six, too, have generally welcomed the British proposals. Mr. Luns, the Dutch Foreign Minister, considered to be an ardent advocate of closer union of the Six with the U.K., for instance, has expressed the view that the new proposals were "extremely important and opened up new prospects." A clear picture of the probable solutions will be available only after the proposed discussions between the French and the U.K. officials scheduled to be held at London in next May.

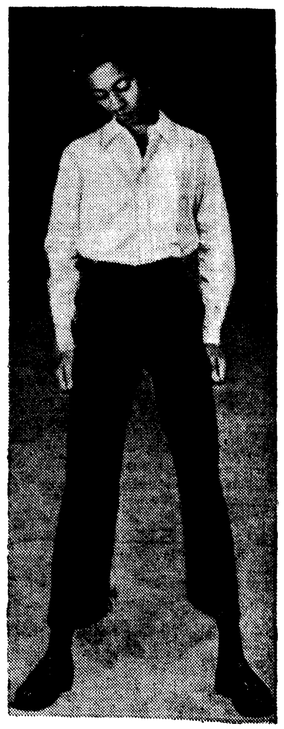
The growing enthusiasm of the leading members of the Six, as also of the U.K. itself, over the question of the latter's participation in the Common Market, seems to have side-tracked, at least for the time being, the major issue now confronting the Western Europe, namely, the need for bridging the gulf between the two trading blocs, which have come to stay as separate and well-defined entities. While lip-service is being paid to the importance of avoiding a schism in Western Europe, there has hardly been any attempt to reach an amicable settlement based on a positive programme. In fact, both the blocs have been taking determined steps to accelerate the pace of integration among themselves. The Ministerial Council of the Seven, which met at Geneva in the middle of last month, (a short report on which appeared in *Commerce* dated 28th February 1961) decided to put into effect a further tariff reduction of 10 per cent on 1st July next, even though it was originally scheduled, under the Stockholm Treaty, to take place only on 1st January 1962. It may be recalled that the Seven had reduced tariffs by 20 per cent on 1st July 1960, for the first time. By the middle of this year, tariffs within the E.F.T.A. will have thus been brought down by 30 per cent.

Tariff Reduction

The process of speeding up the cut in E.F.T.A. tariffs is welcome to the extent that it will enable this bloc to keep in step with its confrere, that is, the Common Market. With an additional 10 per cent cut in internal tariffs on industrial goods in the beginning of this year, the Common Market has already reduced its tariffs by 30 per cent—the previous two cuts of 10 per cent each were made in January 1959 and July 1960, respectively. According to the revised time-table, the Six will have completely removed internal tariff barriers by 1965, as against the original year of 1970. The next tariff cut of 20 or 10 per cent will, it is said, be made in January 1961, and the E.F.T.A. is likely to follow suit, unless means are found to bring the two blocs together before the current year is out. Another important measure implemented by the Six from the beginning of this year is the move towards a common external tariff in respect of industrial goods. By 1965, all the members of the Six will have identical customs duties on imports from countries outside the bloc. The common external tariff, it may be noted, was to be the arithmetic average of the duties among the Six, but this arrangement has been so revised as to reduce this level further, that is, the arithmetical average minus 20 per cent.

The Birthday Gift

Mother stitched a pair of trousers for his birthday and sent them to the laundry so that they would look fresh, crisp, new. But they shrunk—she had forgotten to look for the label 'Sanforized'!



If only she'd taken a little more care in the selection of the fabric, these trousers would have retained their immaculate fit even after many, many washings.

Make certain you get the full measure of value of the material you buy—
Look for
'SANFORIZED' REGD TD'MK
on the label
and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

UNION CARBIDE ENTERS PLASTICS FIELD

TROMBAY PLANT COMMISSIONED

TROMBAY, once a forlorn and desolate suburb of Bombay, is at present humming with industrial activity. With two petroleum refineries, a thermal power station and an atomic reactor already functioning and many more plants springing up every year, Trombay is fast becoming a solid base for a vast industrial complex. The latest addition to this list of industries is the Rs. 4.5-crore plant of Union Carbide India Ltd., located on a 61-acre site, which was inaugurated by Mr. Manubhai Shah, Union Minister for Industry on Saturday the 11th inst. The Trombay plant marks the entry of Union Carbide, for the first time in this country, into the chemicals and plastics manufacturing fields—fields in which the Company's parent body, the Union Carbide Corporation, U.S., is an acknowledged leader. This brings the total number of the Company's manufacturing units in India to five. The Trombay plant has an annual capacity to produce about 15 million lbs. of polythylene resins and organic chemicals, such as acetic acid, butyl alcohol, butyl acetate and ethyl acetate, worth Rs. 2.5 crores. The indigenous production of these important raw materials, which caters to the needs of a wide range of industries, it is claimed, will help save the country Rs. 2 crores in foreign exchange annually. An important feature of the Trombay plant is that all the products manufactured there are based almost exclusively on the indigenously available industrial alcohol as the primary raw material. Its anticipated requirement of about three million gallons of alcohol annually will be met by the Government of Maharashtra's Chitali Distillery, situated about 200 miles from Trombay. The management of the Union Carbide is already contemplating expansion in the sphere of other new chemicals, entailing an additional capital outlay of Rs. 10 crores.

Mr. J. R. Galloway, Managing Director of Union Carbide India Ltd., considered the new venture a shining example of Indo-American co-operation at its best. He added that the new plant was the contribution of the Union Carbide towards India's economy in its onward march to the take-off stage. Mr. Manubhai Shah, in his inaugural speech, complimented the management of the Company on their new venture. He made an impassioned plea to other foreign entrepreneurs also to help industrialise India by providing both financial and technical collaboration. He assured all assistance and encouragement to prospective entrepreneurs from abroad.

With the commissioning of the new plant, the happy association of Union Carbide India Ltd., with this country, which extends over the last half century, has taken deeper roots. It was as far back as 1905 that the Company—then under the name Ever Ready Company—commenced business on an indent basis in India. In 1926, it started manufacturing operations in India under the name Ever Ready (India) Company. Its first unit was the Canal Road Works which was located in Calcutta with an annual production capacity of 6 million flash-light cells. Business continued to boom and, in 1934, the Ever Ready Company (India) Ltd. was incorporated in India as a private company. Within a year, the Company's installed capacity was increased to 15 million cells. The next development was the formation in 1938 of the United Battery Distributors Limited which was appointed the sole selling agent in India for the Ever Ready Company (India) Limited and National Carbon Company Inc., with sales offices in Bombay, Calcutta, Karachi and Madras.

In 1940, the Company established at Camperdown, near Calcutta, India's first modern dry battery plant with an annual capacityi of 40 million cells per year, which was subsequently raised to 100 million cells. The following year Ever Ready Company (India) Limited changed its name to National Carbon Company (India) Limited and assumed the selling functions of United Battery Distributors Limited. The headquarters of this newly-formed company was located in Calcutta with regional sales offices in Bombay, Delhi and Madras. In 1949, the Company installed a manganese ore crushing and grinding mill—the first of its kind in India—enabling the Company to use basic raw materials direct from the mine in bulk for further processing. In 1952, it established a second battery plant with an annual capacity of 25 million cells at Madras, and the following year special equipment was installed at Camperdown Works to produce Mini-Max flat cell batteries for radios, telecommunications equipment and other specialised applications with an annual capacity of 35 million cells. In 1956, the Company erected a zinc rolling mill—India's first—at Kidderpore, Calcutta, for the production of high quality zinc alloy strips, which had been wholly imported until then. From 1948 onwards, the Company started operating as distributor in India for a wide range of chemicals, plastics and allied products manufactured by its American associates as well as certain other reputed international manufacturers.

The organic chemicals, now being manufactured at the Trombay plant, serve as raw materials, intermediates and aids in the processing and manufacture of a whole host of products for industry and the home—from paints to printing inks to pharmaceuticals and antibiotics and from foodstuffs to furniture and photographic films. End-products made from the other primary product of the Trombay plant—polyethylene resins and compounds—find equally diverse uses in the agricultural, industrial and domestic fields.

Attached to the Trombay plant is the Polyethylene Service Laboratory, which seeks to help convertors in technology and engineering matters as well as to widen the usage of polyethylene. The Union Carbide Corporation, U.S., in its 28 research laboratories located all over the world, is already spending annually the equivalent of about Rs. 35 crores on research. It is to be hoped that the Indian Company and consumers of its products will benefit from the parent Company's rich experience in technology and research in the sphere of organic synthetic chemicals.

AIR TRANSPORT

(*Concluded from page* 500)

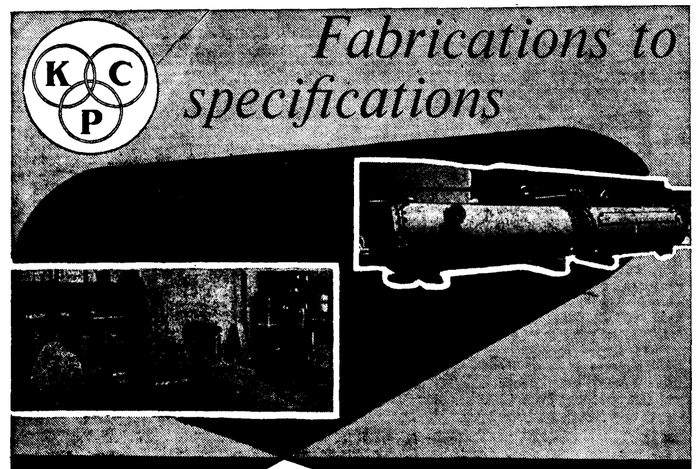
which are then submitted to Governments for approval. By adopting this device, the operators can loudly proclaim that they are not responsible for "fixing" air fares. Many of the operators are owned by their Government, so it is a foregone conclusion that any air fare submitted for approval will be accepted by Government, who rubber stamp the proposal, probably without even looking at it.

There are operators who are very far from satisfied with this state of affairs. Over the last two years, the I.A.T.A. conferences have been conflicts. The 1958 one broke down completely and only a last minute settlement on a compromise basis saved I.A.T.A. from disintegration. Now the 1961 Paris conference on cargo rates has broken down, and both Panam and B.O.A.C. have announced cargo rate reductions over the North Atlantic ranging between sixty and seventy per cent, to come into operation from 10th April 1961, if no agreement is reached beforehand. The North Atlantic is the gold-ribbon route of the air and other routes are tuned to it. So, if cargo rates come down in April this year, it may be expected that lower rates will be applied to other routes within a year.

The vital thing is this: if no I.A.T.A. agreement is reached, this virtually means the break-up of I.A.T.A. air fare and cargo rate fixing machinery. Nothing could be better for the progress of air transport. Some operators will go down in the struggle, but the law of supply and demand will find the correct economic level for air fares and cargo rates. The public will benefit by reasonably priced air travel and cargo carriage.

There are powerful influences behind I.A.T.A. so, perhaps, it is too much to hope that open rates will prevail, safeguarded with moderate controls such as exist throughout the shipping world. The air transport industry is comparatively inexperienced, being a newcomer in the field of world transportation, but the sooner it learns that keen competition is the way to prosperity and that monopoly is a dangerous umbrella under which to shelter, the better it will be for all concerned.—*All Rights Reserved.*

Fabrications to specifications



Under licences
from Messrs Fives-Lille-Cail,
France, who built the largest sugar and cement plants in the world and have supplied Soviet Russia in 1959 a five thousand ton daily capacity cement plant, we manufacture machinery and equip complete sugar and cement plants.

We also manufacture and supply complete sulphuric acid and super phosphate plants. We have secured orders for five complete sugar plants, of one thousand tons daily sugar cane crushing capacity.

ALKALI CHEMICAL ACHIEVES RAPID PROGRESS

SUBSTANTIAL ADDITION TO RESERVES—ONLY MODEST RISE IN DIVIDEND

THE financial record of the Alkali and Chemicals Corporation of India Limited (Secretaries: Imperial Chemical Industries (India) Private Limited) is a matter of pride for this premier chemical company in the country, which produces a wide range of products. The sale proceeds of the Company have been continuously rising in recent years. During the year ended 30th September 1960, the latest year for which accounts have been published, sales fetched Rs. 539.89 lakhs as against Rs. 343.93 lakhs in the previous year and Rs. 263.10 lakhs in 1957-58. Thus, in two years' time, the sales have doubled, a striking achievement indeed. This rapid progress has fulfilled the optimism of shareholders in the higher earning potentialities of the Company. The quotation for ordinary shares have steadily moved up, from a low of Rs. 22.81 last year to Rs. 38.25 at the time of writing.

The closing stocks of finished and semi-finished products and work in process is higher at Rs. 79.58 lakhs, as against Rs. 56.01 lakhs in the previous year, but the stocks as percentage of sales is lower at about 14 per cent, as against about 16 per cent in the previous year. The manufacturing expenses have increased by Rs. 98.93 lakhs to Rs. 292.51 lakhs, the notable increase being in raw materials consumed of Rs. 65.75 lakhs. The selling expenses have risen by Rs. 19.56 lakhs to Rs. 65.08 lakhs on account of rise in selling commission from Rs. 38.98 lakhs to Rs. 54.85 lakhs, but this only reflects the higher sales. It is significant to note that the total of expenses charged to the profit and loss account has increased by only 46 per cent, as against an increase of over 57 per cent in sales. The net profit at Rs. 104.32 lakhs is about 170 per cent higher as compared with that for the previous year. The net profit, it may be noted, has risen to this extent after higher provision for depreciation of Rs. 33.12 lakhs as against Rs. 19.91 lakhs in the previous year and for taxation at Rs. 25 lakhs, as against *nil*. The bulk of the increase in profit has been utilised to strengthen the reserves. Thus, the Directors have transferred a bigger amount of Rs. 78 lakhs to reserves as against Rs. 35 lakhs last year. After allowing for retransfers from previous year's accounts, the net amount ploughed back is Rs. 65.50 lakhs, as against a mere Rs. 5.80 lakhs last year. The Directors have, of course, recommended a higher gross dividend of 12 per cent as against 9.5 per cent for 1958-59 and a net of 8 per cent for 1957-58. This means that the net dividend, which works out to 8.40 per cent, is only a shade better than that paid two years ago, despite the strident expansion in sales and profit. Apparently, the management wants to follow a cautious policy of distribution that is in keeping with the country's current economic needs and thinking.

The following comparative table for the last four years shows at a glance the progress made by the Company.

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	539.89	343.93	263.10	225.46
Other income	5.03	2.75	5.56	2.84
Closing stocks	79.58	56.00	66.80	47.96
Manufacturing expenses	292.51	193.58	172.77	124.43
Other expenses	113.55	85.12	66.60	64.61
Gross profit	162.48	57.68	47.62	48.46
Provision for—				
Depreciation	33.12	19.91	11.99	12.18
Taxation	25.00		22.35	18.30

Transfer from reserves and provisions	13.50	29.20	13.70	2.65
Transfer to reserves	78.00	35.00	0.75	18.84
Dividends—				
5% tax-free preference	2.01‡	2.21†	1.55	1.55
Ordinary	37.20‡ (12%)†	29.45† (9.5%)†	24.80 (8%)*	4.96 (8%)
Carry forward	1.34	1.40	1.09	1.20

* On the increased capital of Rs. 3.10 crores, raised by the rights issue of Rs. 2.48 crores in the ratio of 4 shares for 1.
† Subject to deduction of tax.

The paid-up capital of the Company stands at Rs. 341 lakhs, comprising Rs. 31 lakhs in 31,000, 5 per cent cumulative preference shares of Rs. 100 each and Rs. 310 lakhs in 31 lakh ordinary shares of Rs. 10 each. Out of the total ordinary capital of Rs. 310 lakhs, nearly Rs. 235.34 lakhs or over 75 per cent is held by the Imperial Chemical Industries (India) Private Ltd., a subsidiary of the ultimate Holding Company. Reserves and surplus have risen from Rs. 92.90 lakhs to Rs. 158.34 lakhs. The building up of large revenue reserves indicates a very healthy state of affairs. It is of interest to note that the secured loan is lower by Rs. 21.55 lakhs at Rs. 124.48 lakhs. The net block of the Company stands at Rs. 481.28 lakhs after providing Rs. 123.51 lakhs for depreciation. The capital work in progress at cost is of Rs. 30.55 lakhs. The total of current assets at Rs. 231.80 lakhs is well above the current liabilities and provisions amounting to Rs. 119.81 lakhs. It will thus be seen that the overall financial position of the Company is quite sound.

The "Financial Statistical Record" given in the Directors' report and statement of accounts reveals an increase of Rs. 101 lakhs to Rs. 572 lakhs in the total funds applicable to ordinary shareholders. This gives the break-up value of ordinary shares (Rs. 10 paid-up) at Rs. 18.45, as against the current market price of Rs. 38.25. The difference between the two figures reflects the large measure of confidence of investors in the Company. This confidence is not unwarranted. It is fully supported by the significant increase in income before taxation as a percentage of total net assets employed, which has risen to 17.9 as compared to 5.8 in the previous year.

During 1959-60, production in the various departments of the Company was satisfactory, as can be seen from the following extract from the Directors' report:

"The successful operation of the polythene plant for the whole 12-month period has made a significant contribution to the increase in the year's turnover. The plant achieved a high rate of production with remarkable facility, testifying to the excellent assistance received from the Technical Consultants, Imperial Chemical Industries Limited, London, throughout this period.

"The paints plant ran well and a high level of production was achieved, despite inadequate supplies of imported raw materials. Extensions to the plant were taken in hand during the year and are nearing completion. The demand for Pre-Treatment Chemicals continued to rise.

"The chlorine and caustic soda unit has worked at full capacity. The profit margin was, however, restricted by the price ceiling fixed by the Government and by the increasing cost of salt —the major raw material used in this process.

"Production of 'Gammexane' Technical BHC recorded an increase over the previous year along with the formulations made from it.

"The 'Alfloc' unit went into production during the year and ran satisfactorily.

"Development work in the rubber chemicals plant on site is in progress. Modifications to the plant design are being made to permit greater operational flexibility."

In order to meet the increasing demand for the Company's products and to maintain the competitive position, the Directors are thinking of extending the capacity of most of the units. The growing demand for polythene is proposed to be met by expanding the capacity threefold, plans for which are well advanced now. The proposal of the Company has been accepted by the Government of India and application has been made for a licence. The cost of extension planned is placed at about Rs. 3 crores.

The current quotation of Rs. 10 paid-up ordinary shares at Rs. 38.25 *cum-div.* gives a net yield of 2.2 per cent on a net dividend of 84 nP per share.

BOMBAY POTTERIES AND TILES

The results of the Bombay Potteries and Tiles Limited (Chairman: Mrs. Kusumbai Motichand Shaha) for the year ended 30th September 1960 are encouraging. The Company made record sales during the year of Rs. 33.32 lakhs, an increase of Rs. 3.29 lakhs over the previous year; they have nearly doubled in five years' time.

A study of the accounts for the last few years reveals steady progress by the Company. The gross profit has risen in four years by about 122 per cent to Rs. 13.65 lakhs, while expenses, including raw materials consumed, have increased by only 57 per cent in the same period. The Company's production in this period shows a rise of only 720 tons to 18,480 tons. This means that the profit margin of the Company has expanded considerably, presumably through a change in the types of products manufactured by it. During these four years, the gross block has risen by only Rs. 6.65 lakhs. The paid-up capital has remained at the same level, while reserves and surplus have moved up from Rs. 4.29 lakhs to Rs. 10.55 lakhs. The dividend at 12.86 per cent per annum, taxable, is the same as that for the preceding year and, on a tax-free basis, is only a fraction better than the dividend for 1957.

T. STANES CELEBRATES GOLDEN JUBILEE

SPECIAL BONUS TO SHAREHOLDERS

IT is heartening to find that the golden jubilee year of T. Stanes and Company Limited (Chairman: Mr. E. H. Stanes, Coimbatore), which coincides with its accounting year ended 30th September 1960, has turned out to be a year of improved trading results. The results for the year under review are the best, since the reconversion of the Company into a public limited concern in 1956. The receipts from sales improved during the year by Rs. 12.84 lakhs or over 18 per cent to Rs. 80.88 lakhs. The gross receipts from coffee curing and shipping improved from Rs. 2.86 lakhs to Rs. 3.57 lakhs. An increase was also recorded in dividends from subsidiary companies from Rs. 2.28 lakhs to Rs. 3.33 lakhs. The gross profit has gone up from Rs. 7.15 lakhs to Rs. 8.90 lakhs, an increase of nearly 24 per cent. Besides the expansion in sales and income from subsidiaries, the improvement in profit is also due to a relatively lower increase in expenses and smaller closing stocks. Thus, the total expenses have risen from Rs. 70.95 lakhs to Rs. 79.47 lakhs, an increase of only 12 per cent as against the increase of 18 per cent in sales. The closing stocks are lower at Rs. 7.40 lakhs as against Rs. 9.84 lakhs in the previous year.

As against an increase of Rs. 1.75 lakhs in gross profit, the net profit has increased by Rs. 0.76 lakh only to Rs. 5 lakhs. This is due to a rise of Rs. 0.90 lakh to Rs. 3.25 lakhs in the provision for taxation. The depreciation account, too, has received a slightly higher amount of Rs. 65,000.

The calculation of dividend on preference shares has once again been changed, this time strictly in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960. Thus the dividend on 7 per cent taxable preference shares is calculated at 6.216 per cent per share. The ordinary shareholders will celebrate the jubilee year by a special bonus of 5 per cent over and above the dividend of 27½ per cent taxable. Thus, the total amount of dividend will be 32½ per cent taxable, that is, Rs. 3.25 per share gross or Rs. 2.275 per share net.

The comparative results of the Company's working during the last four years are given in the following table:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	80.88	68.04	55.89	53.60

Carry forward	0.41	0.42	0.46	0.52

* Includes centenary bonus of 5 per cent, subject to tax.
† Subject to deduction of tax.

The paid-up capital of the Company stands at Rs. 13.06 lakhs, comprising Rs. 1.50 lakhs in 1,500 seven per cent taxable cumulative preference shares of Rs. 100 each and Rs. 11.56 lakhs in 115,630 ordinary shares of Rs. 10 each. The reserves and surplus at Rs. 16.06 lakhs exceed the ordinary capital by over Rs. 4 lakhs. The gross block of Rs. 13.62 lakhs stands well depreciated at Rs. 6.24 lakhs. The book value of total investments of Rs. 13.39 lakhs consists of Rs. 2.55 lakhs in quoted investments (market value of which is Rs. 4.65 lakhs), and Rs. 10.84 lakhs in unquoted investments. The total current assets exclusive of investments are Rs. 31.01 lakhs and well above the current liabilities aggregating Rs. 21.55 lakhs.

The current market quotation of Rs. 10 paid-up ordinary shares is Rs. 35 *cum-div.* (final Rs. 1.575 net). On an *ex-div.* basis, the net yield is 6.8 per cent per annum.

With effect from 1st October 1960, the controlling interest of the Company has passed into the hands of Messrs. Simpson and Co. Ltd., a progressive industrial house of Madras under the energetic leadership of Mr. S. Anantharamakrishnan. This change in ownership augurs well for the Company's future.

SIRPUR PAPER REPORTS HIGHER TURNOVER

WILL THERE BE A RIGHTS ISSUE?

A STRIKING increase of over 70 per cent in production, that is, from 17,600 tons in the previous year to over 30,000 tons for the year ended 30th June 1960, is revealed by the Sirpur Mills Limited (Managing Agents: Messrs. Birla Brothers Private Limited). In spite of such a sharp increase in production, the gross profit has risen by only about 31 per cent to Rs. 75.19 lakhs. This is due to a reduction in prices in the wake of the revised prices for paper and board which came into force from 1st January 1960 in accordance with the recommendations of the Tariff Commission. The relatively lower increase in profit was also due to labour unrest, serious indiscipline and acts of violence which have become a deplorable feature of labour in Andhra Pradesh. As a result, the Company's production suffered, both in quantity and quality. For the third year in succession, the Company's dividend is no more than 6½ per cent per annum, and that too taxable.

The net receipts from the sale of paper, after payment for commission, railway freight and excise duty, improved from Rs. 288.73 lakhs to Rs. 433.19 lakhs. The closing stocks of finished goods and in process are also substantially higher at Rs. 15.76 lakhs, as against opening stocks of Rs. 6.56 lakhs. The excise duty paid increased by Rs. 26.03 lakhs to Rs. 66.53 lakhs. The purchases of raw materials during the year amounted to Rs. 102.24 lakhs, as against Rs. 57.84 lakhs in the previous year and consumption of stores, materials, chemicals, etc., cost Rs. 117.45 lakhs, as against Rs. 67.11 lakhs in the previous year. The closing stocks of Rs. 33.44 lakhs of raw materials is about one and a half times higher than the opening stocks at Rs. 22.61 lakhs. The expenses for power and fuel have also gone up by Rs. 19.85 lakhs to Rs. 67.71 lakhs. The bill for salaries, wages and bonus has gone up by Rs. 16.46 lakhs to Rs. 61.75 lakhs. All these increases reflect partly the expansion in production and partly the cost inflation which became particularly marked in the year under review.

The following comparative table provides at a glance a picture of the progress made by the Company since 1956-57:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds (gross)	5,23.10	3,48.94	3,41.92	2,61.82
Other income	6.16	6.70	6.15	6.99
Closing stocks of finished goods and in process	15.76	6.56	6.71	7.35
Raw materials, stores, etc., consumed	2,08.86	1,16.29	1,08.11	86.06
Power and fuel consumed	67.71	47.86	44.38	39.41
Excise duty	66.53	40.50	46.85	26.99
Other expenses	1,30.15	93.59	85.73	1,00.09

Carry forward	0.85	0.72	0.19	0.05

* 7.80 per cent. taxable. † Subject to deduction of tax.

Out of the gross profit of Rs. 75.19 lakhs, the Managing Agents' commission has absorbed a small sum of Rs. 2.88 lakhs and depreciation Rs. 46.82 lakhs, an increase of over 50 per cent on the provision made in the previous year. Because of this sharp rise in the allocation for depreciation, the net profit shows only a fractional rise from Rs. 24.21 lakhs to Rs. 25.50 lakhs. The transfer to development reserve is only Rs. 6 lakhs, as compared with Rs. 23 lakhs last year, even though the additions to block account in the year under review (at Rs. 129.56 lakhs) were almost as much as those (Rs. 135.05 lakhs) were almost as much as those (Rs. 135.05 lakhs) were almost as much as those (Rs. 135.05 lakhs) in 1958-59. There is, however, one important difference, namely, that, whereas last year a sum of Rs. 18 lakhs was written back from reserves, this year no such withdrawal has been effected. The balance of net profit has just been sufficient to maintain the dividend on ordinary shares at 65 nP per share, subject to tax. According to the Preference Shares (Regulation of Dividends) Act 1960, the Directors recommend payment of dividend on 6 per cent tax-free cumulative redeemable preference shares at the enhanced rate of 7.80 per cent, subject to deduction of tax, under the Income Tax Act.

The paid-up capital of the Company at Rs. 289.97 lakhs consists of 2,185,524 ordinary shares of Rs. 10 each and 70,926 preference shares of Rs. 100 each. Reserves and surplus aggregate Rs. 62.91 lakhs. The gross block of Rs. 657.32 lakhs has been written down to Rs. 470 lakhs, the depreciation provided so far being Rs. 187.32 lakhs. It is important to note that additions to the block account in the last two years alone amounted to Rs. 264.61 lakhs. The total of current assets at Rs. 180.37 lakhs is well below the total of loans and current liabilities amounting to Rs. 320.61 lakhs.

Two points emerge from a study of the Company's balance-sheet. One, the block account is well over Rs. 2 crores higher than the paid-up capital. And, two, borrowings from banks are large, well in excess of Rs. 2 crores. In other words, there is a case for increasing the share capital of the Company. This becomes even more obvious, when account is taken of the Company's plan for manufacturing special varieties of lightweight papers. It has been successful in obtaining a development licence for a plant with a rated capacity of 950 tons per month. The Directors have, however, given no idea of the capital cost of the project.

It is not known whether the Company intends to issue new capital in the near future. But, in the past one week, its equity shares have jumped up from Rs. 16.52 *c.d.* to Rs. 18.36 *c.d.*, bringing down the net yield to as low as 2.5 per cent per annum. The spurt in prices may have been due to prospects of a better profit for the current year. There has been some improvement in the labour situation, but there is a probability of the wage bill going up when the disputes pending before the Andhra High Court, Industrial Tribunal and Supreme Court are decided. The Company's Chairman will be rendering a distinct service to investors if he throws clear light in his speech at the forthcoming annual meeting of the Company on the pros and cons for assessing its future.

(*Concluded from previous page*)

The paid-up capital of the Company of Rs. 24.54 lakhs, comprises Rs. 1.13 lakhs in 6½ per cent cumulative first preference taxable shares of Rs. 100 each, Rs. 8.63 lakhs in 4½ per cent cumulative second preference tax-free shares of Rs. 100 each and Rs. 14.18 lakhs in ordinary shares of Rs. 100 each. Over and above this, the Company holds nearly Rs. 0.60 lakh in forfeited shares account making a total of Rs. 24.54 lakhs. The net block of the Company stands at Rs. 18.27 lakhs after providing Rs. 15.32 lakhs for depreciation. The financial position of the Company is quite sound, inasmuch as the cash and bank balances alone stand at a very impressive figure of Rs. 22.52 lakhs out of the total of current assets amounting to Rs. 32.75 lakhs and the current liabilities are no more than Rs. 14.98 lakhs.

The expansion programme of the Company for the manufacture of glazed tiles and sanitarywares, for which there is a great demand, is well under way. The necessary permission for expansion under the Development Regulation Act was obtained last year. The building operations have now been completed. On receipt of the import licence for a value of Rs. 10.22 lakhs, the Technical Adviser was deputed to the U.S.A. to select the machinery for the proposed expansion. The machinery and furnace are expected by the end of April 1961 and the plant is due to go into production by the end of 1961. The demand for white glazed tiles and sanitarywares is so great that the Company is booked for delivery well in advance.

The following table reveals at a glance the trend of financial results since 1956-57:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	83.82	80.03	23.42	19.13

* Subject to deduction of tax.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 185.50 *cum*-dividend. This gives a net yield of 5.1 per cent.

MARTIN BURN REPEATS THE DIVIDEND

LOWER INCOME FROM TRADING DEPARTMENTS

THE sales of Martin Burn Limited (Chairman: Mr. T. Leslie Martin, Calcutta) in the year ended 30th September 1960, have dropped, once again, to Rs. 749.31 lakhs from Rs. 767.50 lakhs in the previous year and Rs. 904.49 lakhs in 1957-58. The results of the Company for the year under review must, however, be considered to be satisfactory in view of higher closing stocks and work-in-progress and slightly better gross profit. An appreciable increase, during the year, by way of managing agency allowance and commissions from Rs. 50.87 lakhs to Rs. 61.74 lakhs has been offset by a decline in profit earned by the trading departments. Lower earnings were particularly perceptible in the building, electrical and engineering departments, due to restrictions on imports and shortages of cement and steel, involving increased costs and overheads. The net income from trade investments increased by only Rs. 0.14 lakh to Rs. 13.08 lakhs.

On the expenditure side, the purchases of raw materials show an increase of Rs. 30.13 lakhs to Rs. 98.42 lakhs while that of general merchandise has decreased by Rs. 51.85 lakhs to Rs. 579.39 lakhs. Salaries, wages and bonus, exclusive of Directors' remuneration, account for an increase of Rs. 13.86 lakhs to Rs. 88.15 lakhs. The total remuneration, including perquisites, of three Directors, one Governing and two Managing, amounts to Rs. 8.10 lakhs as against Rs. 7.96 lakhs in the previous year. In view of the ever-increasing volume of business which requires personal attention and guidance, the Directors have decided to appoint an additional Managing Director. Mr. N. R. Pillai, ex-Secretary-General to the Ministry of External Affairs, Government of India, has taken up this post from 1st March 1961.

The gross profit, which had gone down from Rs. 93.65 lakhs to Rs. 86.30 lakhs, has improved a little to Rs. 87.22 lakhs. But the net profit of the Company at Rs. 49.37 lakhs is slightly lower by Rs. 0.12 lakh as compared with the previous year, because of higher provisions for depreciation (Rs. 0.54 lakh more at Rs. 2.35 lakhs) and taxation (Rs. 0.50 lakh more at Rs. 35.50 lakhs). Out of the net profits, the transfer to general reserve has been maintained at Rs. 5 lakhs. After payment of dividend on preference shares, under the Preference Shares (Regulation of Dividends) Act 1960, the dividend on ordinary shares has been comfortably maintained at Rs. 2.75 per share subject to deduction of tax, or a net of Re. 1.925.

The following table depicts the Company's achievements on the financial side:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sales	749.31	767.50	904.49	767.86

* Subject to deduction of tax.

The Company, which carries on business as general merchants, managing agents, contractors, constructional and mechanical engineers, etc., has a wide range of trading and manufacturing activities. The following extract from the Directors' report will be read with interest:

"On the expiry of all managing agency agreements on the 15th August 1960, in terms of the provisions of the Companies Act, 1956, the Company was re-appointed managing agents for 10 public companies (the statutory maximum number) and one private company, and appointed secretaries and treasurers for seven companies as from 16th August 1960. With the reduced scale of remuneration applicable to the new appointments, the total remuneration under this head is likely to decline in future except to the extent that the decline is offset by improved earnings of the managed companies.

"In regard to the companies managed by the Company, those in the engineering group have

shown good results and, in the context of the planned industrial development of the country, there is ample scope for their future progress. The group of electricity supply companies have barely maintained their profits, despite their progressively increasing gross revenue, their profitability and future capacity for self-financing expansion being inhibited by the onerous restrictions imposed by the Electricity (Supply) Act, 1948. The group of light railway companies have shown some improvement in working results.

"Apart from the remuneration received from the managed companies, the other sources of revenue of the Company are merchandising and processing of various lines of foreign and indigenous products, contracts for the construction of buildings, medium and light structures and electrical installations and the manufacture of certain products in the electrical engineering line. With the present serious decline in imports in view of the balance of payments position of the country, efforts continue to be made by the Directors in the direction of widening the range of indigenous items handled, and participating in the manufacture of certain engineering products in collaboration with foreign manufacturers. One instance of such participation is the formation and commencement of production of the Vaughan Burn Crane Company Private Limited for the manufacture of cranes, pulley blocks, etc. in collaboration with Vaughan Crane Company Limited of England and Burn & Company Ltd."

The Company's financial position is strong. It has a paid-up capital of Rs. 206.96 lakhs, comprising Rs. 60 lakhs in 5 per cent tax-free redeemable preference shares of Rs. 100 each and Rs. 146.96 lakhs in ordinary shares of Rs. 10 each. The paid-up capital shows an increase of Rs. 1.13 lakhs during the year, on account of conversion into ordinary shares of convertible notes of Rs. 0.32 lakh, the total outstandings of such notes being Rs. 4.94 lakhs. Reserves and surplus stand at Rs. 118.93 lakhs, as against Rs. 112.74 lakhs in the previous year. The net block of the Company stands at Rs. 64.23 lakhs after providing Rs. 18.19 lakhs for depreciation. The market value of the quoted investments at Rs. 286.12 lakhs is Rs. 109.15 lakhs higher over the book value of Rs. 176.97 lakhs. The total of current assets exclusive of trade investments amount to Rs. 734.83 lakhs and are substantially above the current liabilities of Rs. 545.63 lakhs.

The current market quotation of the Rs. 10 paid-up ordinary shares of the Company at Rs. 29.87 cum-dividend gives a net yield of 6.9 per cent per annum.

HEARTENING DECISIONS IN THE U.S.

(*Concluded from page 495*)

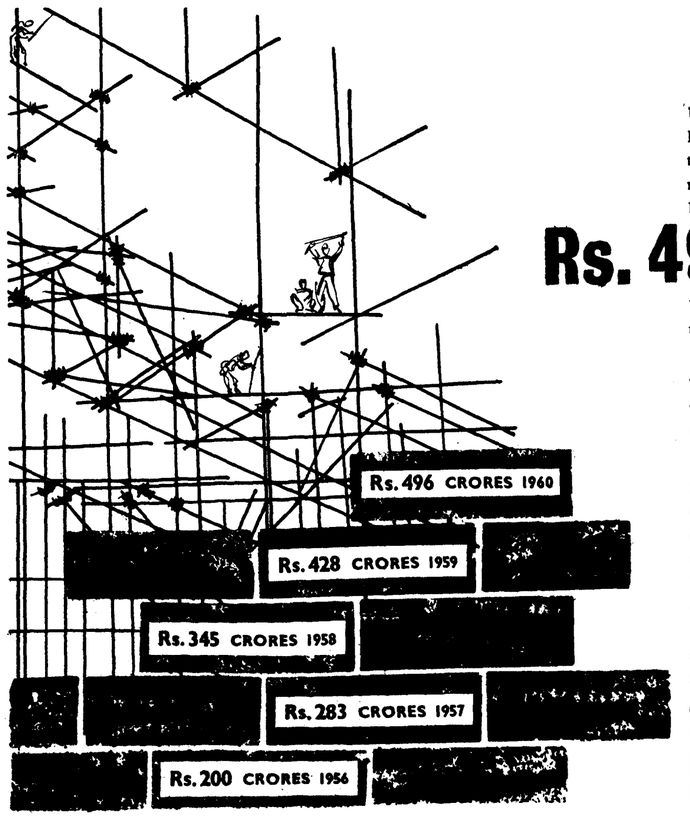
to be fixed for the rates payable on official balances.

The world's approval of these general lines of policy can be very clearly seen in the behaviour of the principal financial markets since the Kennedy administration took over the reins. Distrust of the dollar had been diminishing significantly in the early weeks of this year; but, in spite of that noteworthy progress, few people expected the restoration of confidence to go so far or so fast as it has done in this past month. The President's assurances about the dollar quickly floated it off its support points in the exchange markets; and the outflow of gold diminished sharply. In the last week of February, as the President himself announced, there was no outflow at all—for the first time since last July. Equally significant was the performance in the London bullion market. The London gold price, which had registered in spectacular fashion the fears for the dollar when the run was at its height last October, returned for the first time since then to within the limits set by the New York parity—at the moment of writing the quotation is 35.07—35.12 dollars.

It is no coincidence that, over this same period, there has been a marked weakening of sterling. The New York rate has dipped below the 2.80 dollars parity for the first time since the short-lived fall last June, and, towards the end of February, it touched 2.79½, in spite of intervention from time to time by the exchange equalisation account. In consequence, the monthly statement of Britain's holdings of gold and convertible currencies—that is, the central first line reserve for the sterling area as a whole—showed the first decline for more than 12 months (there would have been a decline last December, however, but for the special receipt of $367,000,000 transferred by Ford, Detroit, for the purchase of the remaining "outside" shareholdings in Ford, England). At 28th February, the reserves stood at 3,195 million dollars, or $50,000,000 less than at end January. This outflow, at a time when seasonal factors normally work in sterling's favour, can be presumed to reflect some repatriation of dollar funds in response to the revival of confidence, or at least some covering of commercial requirements of dollars that had been left open on the chance that the dollar might be allowed to slip from its moorings.

Inevitably, there is much discussion in city circles at present about the extent of the pressure that might be put upon the sterling area reserves if the restoration of confidence in the dollar is fully consolidated. It is hard to draw any reliable conclusions about that, however, from the experience of these past few weeks: in this period, it is important to bear in mind, the markets have been facing the impact effect of a major change in sentiment. Britain will certainly have to be prepared for a further outflow of funds, but the authorities have repeatedly affirmed that, since the reserves were swollen last year by the large inflow of funds, they are prepared to let the reserves fall when mobile funds flow out again. Hence, although the change in the tone of sterling caused banking circles, and especially the discount market, to abandon their hopes of an early reduction of Bank rate (now standing at five per cent), it does not follow that further strain of this kind will force the Bank rate up again. The London Treasury Bill rate, having risen in this past month almost as much as has the New York Treasury Bill rate (following the decision of the U.S. authorities to drop their "bills usually" policy for open market operations, in order to enable them to depress long rates while raising short rates), still shows an excess over that rate of not far short of two per cent though it is more than half per cent below the Bank rate. Even after arranging forward exchange cover, the interest rate cost of which is now a little over one per cent per annum, compared with just under one per cent a month ago, it still pays to shift funds from New York to London—on the basis of the Treasury Bill average allotment rates, the new margin of profit is just over ¾ per cent (a month ago it was nearly one per cent). In this phase of newly revived confidence in the dollar, relative interest rates are obviously not the dominant factor in determining the capital flows.

Meanwhile, the quarterly figures of overseas holdings of sterling have shown that, in the fourth quarter of 1960, balances held by non-sterling countries rose even faster than in the third quarter—by no less than £241,000,000, as compared with £226,000,000, to £1,407,000,000, making a growth of no less than £604,000,000 over the year as a whole. Of the latest accretion, however, £131,000,000 was attributable to the Ford deal, so that, as expected, the inflow of mobile funds proved to be much less than in the quite exceptional third quarter.



Up and up soars the edifice of Life Insurance.
In the second year of its Five-Year Plan,
the Life Insurance Corporation is at the half-way
mark to its target of Rs. 1,000 crores in
1963, with yet another new business record of

Rs. 496,00,00,000

Year after year, the L.I.C. has improved
upon past records. In 1960, it advanced by
Rs. 68 crores upon its 1959 high of Rs. 428 crores.

Thus, since 1956, the L.I.C. has multiplied
its new business intake nearly two and a half times.
From Rs. 200 crores to close on Rs. 500 crores
..in five years.

Figures speak volumes—they point to the increasing trust and confidence placed in the L.I.C. as an institution. They speak of the growing belief by the average breadwinner that Life Insurance—and Life Insurance alone—can provide his family with the complete security he wishes for them—a security in which funds are guaranteed for a man's old age, for his son's education, his daughter's marriage, or for his family in case they should lose him.

Life Insurance Corporation of India

SYNOPSES OF COMPANY REPORTS

Mercara Rubbers Ltd.

THE directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Madras) present the audited accounts of the Company for the year ended 30th June 1960.

The result of the Company's working for the period under review is a profit of Rs. 1,27,371 (Rs. 1,35,162). Out of this depreciation written off on buildings, machinery, etc., amounts to Rs. 9,955 (Rs. 10,588) and the Company's contribution to provident fund to Rs. 7,834 (Rs. 7,011). There is left a net profit of Rs. 1,09,582 (Rs. 1,17,563) to which is added the amount brought forward from last year of Rs. 11,686 (Rs. 9,123) making a total of Rs. 1,21,268 (Rs. 1,26,686). Provision for agricultural income-tax and Central income-tax absorb Rs. 23,600 (Rs. 27,000). The directors recommend payment of dividends as follows: A dividend of 20 (20) per cent subject to deduction of tax, on ordinary shares, absorbing Rs. 65,000 (Rs. 65,000) and a dividend of 6 per cent tax-free on preference shares and income-tax thereon, absorbing Rs. 22,500 (Rs. 23,000) leaving a balance of Rs. 10,168 (Rs. 11,686) to be carried forward to next year.

Working.—The results for the year ended 30th June 1960 have been very satisfactory. A crop of 2,60,146 (2,70,020) pounds was harvested during the year under review against the estimated crop of 2,60,000 lbs. The average price realised for 1960 rubber is: Sheets 154.20 (155.56) cents and scrap 120.75 (115.82) cents.

The estimate for 1960-61 provides for a rubber crop of 2,60,000 pounds.

The cost of production during the year has gone up mainly due to extra bonus paid to labourers and labour and staff welfare expenses. The planters have been agitating for an increase in the controlled prices of raw rubber and the matter is under enquiry by the Central Government. In view of the steep rise in the cost of labour wages and staff salaries, the demand by planters is justified and the directors hope the Government would increase the prices suitably.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,75,000	Gross block	7,67,594
Reserves ...	2,50,000	*Less*—Depreciation	9,954
Provision for taxation ...	48,542		7,57,640
Liabilities ...	1,72,482	Net block ...	7,57,640
Profit and loss account (surplus)	10,168	Rubber stock	1,64,395
		Stores, tools, etc. ...	33,111
		Book debts	53,143
		Cash ...	47,903
Rs.	10,56,192	Rs.	10,56,192

Kumergode Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Mangalore) submit the audited accounts of the Company for the year ended 31st October 1960.

After providing for depreciation and all charges except taxation the accounts show a profit of Rs. 2,31,540 (Rs. 1,79,272). With the balance brought forward from last year of Rs. 12,518 (Rs. 44,346) and surplus transferred from reserves for taxation no longer required of Rs. 1,152 (*nil*), there is a total amount of Rs. 2,45,210 (Rs. 2,23,618). After providing for taxation reserve Rs. 75,520 (Rs. 51,100) and for greater reserve Rs. 75,000 (Rs. 80,000), there remains a balance of Rs. 94,690 (Rs. 92,518). The directors recommend payment of a dividend of 20 (20) per cent subject to deduction of tax, absorbing Rs. 80,000 (Rs. 80,000) leaving a balance to be carried forward of Rs. 14,690 (Rs. 12,518).

Coffee Crop and Costs.—These are given in the following table with corresponding figures for the previous two years:

Year	Crop (metric tonnes)	Estate expenditure: Per acre	Estate expenditure: Per metric tonne	All-in cost per metric tonne
		Rs.	Rs.	Rs.
1957-58 ..	190.665	644	2,054	2,530
1958-59 ..	172.481	607	2,138	2,679
1959-60 ..	193.192	564	1,781	2,190

The entire crop for the season was delivered to the Coffee Board and was awarded 2,87,869 points. The valuation taken is Rs. 2.15 per point which is equivalent to Rs. 3,203 per metric tonne, and payments received to-date amount to Rs. 2.00 per point. Final payment on the 1958-59 crop has been received making a total of Rs. 2.45 per point or Rs. 3,387 per metric tonne for that year.

The estimates of crop and costs and estimated capital expenditure for the current year, i.e., 1960-61 are as follows:

Crop metric tonnes	Estate expenditure: Per acre	Estate expenditure: Per metric tonne	All-in cost per metric tonne
183.000 ..	Rs. 590	Rs. 1,976	Rs. 2,332

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Gross block	9,82,417
Debentures	63,500	*Less*—Depreciation ...	1,85,014
Reserves ...	3,75,000		7,97,403

		Stores, etc.	24,177
		Book debts	5,180
		Investments	250
		Cash ...	1,40,962
Rs.	10,88,201	Rs.	10,88,201

Jeypore Sugar Co., Ltd.

The directors of the above Company (Managing Agents: R. S. Industrial Corporation Private Ltd., Madras) present the audited accounts of the Company for the year ended 30th June 1960.

The accounts show, after providing for depreciation and bonus to the staff at Rayaghada, a profit of Rs. 5,01,789 (Rs. 6,14,416) to which has to be added the amount brought forward from 1958-59 of Rs. 2.090 (Rs. 156), excess provisions made during last year for bonus and doubtful debts written back 7,345 (*nil*), refund on cane cess received Rs. 3,017 (*nil*) and excess provision made during last year for payment of dividends Rs. 11,994 (Rs. 184) making a total of Rs. 5,26,235 (Rs. 6,16,579 including Rs. 1,823 being receipts not relating to the year). Out of the same, appropriations have been made as under:—Donations paid Rs. 550 (Rs. 2,241), provision for taxation (Agricultural) Rs. 10,000 (Rs. 15,000) and transfer to development rebate reserve Rs. 3,60,000 (Rs. 4,55,000) leaving an available balance of Rs. 1,55,685 (Rs. 1,12,640 after writing off Rs. 31,698 for capital issue expenses). To this is added the amount transferred from general reserve No. 1 of Rs. 3,00,000 (Rs. 2,20,000) and from general reserve No 2 of Rs. 54,084 (Rs. 57,000) making a total of Rs. 5,09,769 (Rs. 3,89,640). The directors recommend the payment of the following dividends:—A dividend of 7.623 (6 per cent tax free) per cent less tax on cumulative first preference shares, absorbing Rs. 15,246 (Rs. 12,000), a dividend of 8.8935 (7 per cent free of tax) per cent less tax on cumulative second preference shares, absorbing Rs. 88,935 (Rs. 70,000) and a dividend of 12.5 (10) per cent on equity shares less tax [subject to the consent of the Industrial Finance Corporation of India], absorbing Rs. 4,05,406 (Rs. 2,70,407) leaving a balance to be carried forward to the next year of Rs. 182 (Rs. 2,090 after making a provision of Rs. 35,143 for grossing up of preference dividends).

Preference Dividends for 1958-59.—Since the last balance sheet, the position regarding preference dividends was clarified by Central Act No. 63 of 1960, according to which, the dividend on preference shares for 1958-59 has to be grossed up by 28.23 per cent of the stipulated dividend. Provision has already been made for the extra payment and supplemental dividend warrants totalling Rs. 23,149 will be posted to holders of Preference shares.

Issue of Capital.—During the year of report, Rs. 3,86,300 was drawn, mostly out of the capital reserve, for distribution of bonus equity shares in the ratio of one equity share of Rs. 10 paid for every six shares held by the equity shareholders; after which, "Right" shares were issued to equity shareholders in the ratio of one share of Rs. 10 paid for every five equity shares held, bringing up the equity share capital to Rs. 32,43,250.

The sugar factory at Rayaghada started crushing on 5th December 1959 and closed on 20th March 1960 after crushing 30,101 (29,786) tons of cane and producing 2,786 (2.814) tons of sugar with a recovery of 9.27 (9.45) per cent. The price realised for sugar during the year was satisfactory.

Sugar Factory at Nagaram.—For the reasons stated in the directors' previous report, the factory at Nagaram did not crush any sugarcane. Some loss had to be incurred on this factory because of the maintenance of staff, etc. Some of the machinery installed at this factory has been shifted to Chagallu in the West Godavari district where the Company has acquired an industrial undertaking from the Krishna Industrial Corporation Ltd., and is now erecting, in two stages, a sugar factory with a daily crushing capacity of 1,250 tons of sugarcane. The new factory at Chagallu will not suffer under any disability due to non-availability of sugarcane.

Plantations.—8,887 (9,076) tons of sugarcane was produced on the Company's own farms at Rayaghada, which was wholly crushed at the factory or used as seed.

Mining Division.—14,442 tons (13,604) of manganese ore was mined in the Company's own mines, out of which 9,295 (18,365) tons were sold and 4,109 (3,622) tons were utilised in the ferro-manganese plant. The profit on manganese ore suffered a further decline because of the changes made in the method of levying royalty on the ore removed from our mines.

Ferro-manganese.—The Company's second Electric furnace was commissioned only in June 1960, the delay being due to the non-arrival of the German experts whose presence was considered necessary at the start of the furnace. A total of 5,994 (4.988) tons of ferro-manganese was produced during the year, out of which 2,880 (1,702) tons was sold to Hindustan Steel Limited and another. The Company had to pay large amounts as interest to Banks because of the delay in the shipment of the product by the State Trading Corporation of India. The average cost of production was also higher during the year as the Company had to purchase large quantities of low phosphorous manganese ore from Madhya Pradesh to blend with its own ore in order to produce the maximum amount of U.S. standard grade ferro-manganese.

Early in January 1961 the Company despatched 10,200 tons of ferro-manganese of United States standard grade to the U.S.A. through the State Trading Corporation of India. The Company has contracted to ship 20,000 tons of ferro-manganese before the end of June 1961. The Company had guaranteed a minimum annual consumption of electricity for its electric furnaces but it could not consume that amount in 1959-60 because of the delay in commissioning the second furnace caused by reasons beyond control, amounting to *force majeure*.

COMPANY MEETINGS AND DIVIDENDS

KESAR SUGAR WORKS LTD. Annual General Meeting, Bombay, 23rd March 1961. Dividend: Rs. 9.00 per ordinary share, subject to deduction of tax, payable on and after 29th March 1961. Transfer books remain closed from 9th to 23rd March 1961, both days inclusive.

RAMPOORIA COTTON MILLS LTD. Annual General Meeting, Calcutta, 24th March 1961. Transfer books remain closed from 10th to 24th March 1961, both days inclusive.

Notices

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT A general meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday the thirtieth day of March 1961, at 11 o'clock in the forenoon, to consider and if thought fit, to pass with or without modification, the following Resolutions:

1 (*As a Special Resolution.*) "That subject to the sanction by special resolutions passed at separate meetings of the holders of the issued Preference Shares of the Company and of the holders of the issued Ordinary Shares of the Company respectively being obtained within three months from the date of passing of this resolution, Article 4 of the Articles of Association of the Company be deleted and the following Article 4 be substituted in place thereof:—

"The Capital of the Company is Rs. 3,50,00,000 divided into 3,00,000 Ordinary Shares of Rs. 100 each and 50,000 Preference Shares of Rs. 100 each, and the said Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 5 per cent per annum without deduction therefrom on account of income-tax payable by the Company but subject to deduction of tax under Section 18(3D) of the Indian Income-tax Act 1922, or any statutory modification thereof, on the capital for the time being paid up thereon, and the right in a winding-up to payment off of capital and arrears of dividend, whether declared or not up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any further right to participate in profits or assets, nor confer any voting rights."

2 (*As an Ordinary Resolution.*) "That for the purpose of giving effect to the modification of rights in the manner specified in the foregoing special resolution an Agreement be entered into between the Company of the first part, Mr. Girdharilal Mehta representing the holders of Preference Shares of the Company of the second part and Mr. Chhedi Lal Gupta representing the holders of Ordinary Shares of the Company of the third part in terms of the draft placed before and approved by this meeting and for purposes of identification signed by the Chairman thereof and that the Board is hereby authorised to affix the Common Seal of the Company to the Agreement and that such Agreement be executed on behalf of the Company in the manner provided in the Articles of Association of the Company."

3 (*As an Ordinary Resolution.*) "That the Board is hereby authorised to take the necessary steps to obtain sanction to the Agreement and to the modification of rights envisaged therein at separate meetings already convened of the holders of the issued Preference Shares and the holders of the issued Ordinary Shares of the Company respectively to pass the necessary special resolutions thereat."

4 *As an Ordinary Resolution of* which special notice as required by section 281 of the Companies Act, 1956, has been received by the Company, viz.:—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, the Hon. Sushil Kumar Sinha who has attained the age of sixty-five years in June 1960 and who in accordance with the provisions of Section 280 of the said Act (prior to its amendment) vacated his office as a Director of the Company on 22nd December 1960, be and is hereby appointed a Director of the Company and it is hereby specifically declared that the age limit for directors prescribed by Section 280 of the said Act shall not apply to him and that he be remunerated by way of a fee of Rs. 600 for each Meeting of the Board attended subject to a maximum in the aggregate of Rs. 6,000 per annum."

5 (*As Special Resolutions*)—

(a) "That with effect from the commencement of the Companies (Amendment) Act, 1960, and in compliance with the provisions of Section 314 of the Companies Act, 1956, as amended thereby consent be and is hereby accorded to Mr. Sree Lal Mehta, a relative of Mr. Girdharilal Mehta, a Director and a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant in the Company carrying a total monthly remuneration of five hundred rupees or more, viz:—

Basic Salary in the time scale: Rs. 350—25—500—50—1,000 per month (with annual increments).

Basic Allowance—Rs. 200 p.m.

Dearness Allowance—65% of the aggregate of Basic Salary and Basic Allowance.

Provident Fund—up to 15% of Basic Salary, the Company making a similar contribution limited to 10% of Basic Salary."

(b) "That with effect from the commencement of the Companies (Amendment) Act, 1960, and in compliance with the provisions of Section 314 of the Companies Act, 1956, as amended thereby consent be and is hereby accorded to Mr. Surendralal Girdharilal Mehta, a relative of Mr. Girdharilal Mehta, a Director and a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant in the Company carrying a total monthly remuneration of five hundred rupees or more, viz:—

Basic Salary in the time scale: Rs. 225—25—500—50—1,000 per month (with annual increments).

Basic Allowance—Rs. 200 p.m.

Dearness Allowance—40% of the aggregate of Basic Salary and Basic Allowance.

(in the event of his marriage he would be entitled to receive 60% of the aggregate of Basic Salary and Basic Allowance up to and including Basic Salary of Rs. 250 p.m. and thereafter at 65% of the aggregate of Basic Salary and Basic Allowance).

Provident Fund—up to 15% of Basic Salary, the Company making a similar contribution limited to 10% of Basic Salary."

6 (*As Ordinary Resolutions*)—

(a) "That pursuant to the provisions of Section 294 of the Companies Act, 1956, the appointment of Messrs. R. Donaldson & Co., in terms of an agreement executed by the Board on 18th October 1960 as the Company's sole selling agent for jute goods in Australia be and is hereby approved."

(b) "That pursuant to the provisions of Section 294 of the Companies Act, 1956, the appointment of Gollin and Company Limited, in terms of an agreement executed by the Board on 9th February 1961 as the Company's sole selling agent for jute goods in New Zealand be and is hereby approved."

(c) "That pursuant to the provisions of Section 294 of the Companies Act, 1956, the appointment of Aldo Luzzati S.R., Ltda., 25, De Mayo 294 Buenos Aires 3, in terms of an agreement executed by the Board on 23rd February 1961 as the Company's sole selling agent for jute goods in Argentina, Uruguay and Paraguay be and is hereby approved."

Notice is also given that the Share Transfer Books of the Company will be closed from the 27th March to the 30th March 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

By order of the Board,
D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA, *24th February* 1961.

An Explanatory Statement pursuant to the provisions of Section 173 of the Companies Act, 1956, is annexed to the Notice issued to the Members of the Company.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT A separate meeting of the holders of Ordinary Shares in the capital of the Company will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday the thirtieth day of March 1961, at 11-30 o'clock in the forenoon, to consider and, if thought fit, to pass the following resolution as a special resolution, pursuant to Article 65 of the Articles of Association of the Company and Section 106 of the Companies Act, 1956, viz.:—

"That this separate general meeting of the holders of Ordinary Shares of Jardine Henderson, Limited, hereby confirms an Agreement dated the thirtieth day of March 1961, made between Jardine Henderson, Limited of the first part, Mr. Girdharilal Mehta on behalf of the holders of Preference Shares in the capital of the Company of the second part and Mr. Chhedi Lal Gupta on behalf of the holders of the Ordinary Shares in the capital of the Company of the third part (which Agreement has been produced to this meeting and for the purpose of identification initialled by the Chairman thereof) and sanctions and approves of the rights attached to the Preference Shares in the capital of the Company being modified and varied in accordance with the said Agreement."

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE Bombay Dyeing and Manufacturing Company, Limited, will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 6th April 1961, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Accounts for the year ended 31st December 1960.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-election, and to consider, and if thought fit to pass, the following Resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company (and the relative Explanatory Statement for which is annexed hereto as required by Section 173 of the said Act):—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 71 years and who retires by rotation, be and he is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in the place of Mr. N. K. Petigara who retires by rotation, and being eligible offers himself for re-appointment.
5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

6. AND for the purpose of considering, and if thought fit to pass (with or without amendment as may be permissible), the following Resolutions as Special Resolutions and/or Ordinary Resolution as specified below:—

SPECIAL RESOLUTIONS

I. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956 (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Airfreight Private Limited, Bombay (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by one month's notice given by either side to the other, in respect of the supply or rendering of any service by Messrs. Airfreight Private Limited to the Company including the rendering of service as carriers of goods and travel agents; and in respect of the sale or supply of any property or any article produced, dealt in or owned by the Company and the supply or rendering of any service by the Company to Messrs. Airfreight Private Limited, subject to the condition that all payments to be made to the Company by Messrs. Airfreight Private Limited shall be made within one month from the date of the sale or supply of any property or article or the supply or rendering of any service by the Company to Messrs. Airfreight Private Limited."

II. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956 (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft letter placed before the Meeting, and, for the sake of identification, initialled by the Chairman, purporting to be from Messrs. Gherzi Eastern Private Limited, Bombay (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to the Company, for the rendering of services by the former to the latter by way of planning a complete reorganisation of the Spinning and Weaving Departments of the Spring Mills of the Company adopting modern processing and working methods, in consideration of which services the Company will pay a fixed fee of Rs. 1,97,800, and also a daily fee of Rs. 100 per technician actually employed by Messrs. Gherzi Eastern Private Limited on the work, and conveyance and medical expenses as set out in the draft aforesaid."

III. "RESOLVED that, pursuant to Section 360 of the Companies Act, 1956 (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Gherzi Eastern Private Limited (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by three months' notice given by either side to the other, in respect of the supply or rendering of services as Textile and Engineering Consultants and Experts, by Messrs. Gherzi Eastern Private Limited to the Company; and in respect of the sale or supply of any property or any article produced, dealt in or owned by the Company and the supply or rendering of any service by the Company to Messrs. Gherzi Eastern Private Limited, subject to the condition that all payments to be made to the Company by Gherzi Eastern Private Limited shall be made within one month from the date of the sale or supply of any property or article or the supply or rendering of any service by the Company to Messrs. Gherzi Eastern Private Limited, and that payments made by the Company to the said Messrs. Gherzi Eastern Private Limited for services to be rendered by them shall be such as are deemed reasonable by the Board of Directors having regard to the nature of the services asked for."

ORDINARY RESOLUTION

IV. "RESOLVED that, pursuant to Clause (*d*) of sub-section (1) of Section 293 of the Companies Act, 1956 (as amended), and all other enabling provisions (if any), the consent of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company, (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees ten crores."

Explanatory Statement under Section 173 *annexed in respect of the above Resolutions*

The drafts of the contracts and letter referred to in Special Resolutions Nos. I, II and III are open for inspection by any member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

By Order of the Board,

NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

BOMBAY, 6*th March*, 1961.

Note:—(*a*) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

(*b*) The Share Transfer Books of the Company will remain closed from Friday, the 10th March 1961, to Wednesday, the 29th March 1961, both days inclusive.

(*c*) The dividend when declared will be made payable at the National and Grindlays Bank Limited, Bombay, on or after the 27th April 1961, to those Members whose names stand on the Register of the Company on the 29th March 1961, and the Dividend Warrants will be duly posted to them.

(*d*) The Members are requested to notify immediately any change of address to the Company.

(*e*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed to the Notice of the Annual General Meeting posted to the Members.

UNITED BANK OF INDIA LIMITED

7. To elect a Director in place of Sri S. N. Ray who retires but offers himself for election and to consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

   "Resolved that pursuant to the relevant provisions of the Companies Act, 1956, Sri S. N. Ray be and is hereby elected and appointed a Director of the Company."

   A notice in writing under Section 257(1) of the Companies Act, 1956, has been received by the Company in this connection.
8. To appoint Company's Auditors and fix their remuneration and to authorise the Board to appoint Branch Auditors and fix their remuneration under Section 228(3) of the Companies Act, 1956 as amended by Companies (Amendment) Act No. 65 of 1960.

SPECIAL RESOLUTION

The following Resolution will be moved as Special Resolution:—

9. "Resolved that the Board is hereby permitted if they so desire, to appoint Sri C. R. Sen, Chartered Accountant of 4, Clive Ghat Street, Calcutta, who is a relative of Sri B. K. Datta, Managing Director of the Company, as one of the Branch Auditors to audit some of the branches on a remuneration as paid in the last year or at a higher remuneration as may be considered necessary by the Board from time to time.

By Order of the Board,

A. K. ROY,
Secretary.

Dated, Calcutta,
The 4th March, 1961.

Note: (i) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

(ii) The Transfer Books of the Company will remain closed from Monday, the 27th March, 1961 to Monday, the 10th April, 1961 (both days inclusive).

(iii) The dividend, when sanctioned, will be payable on and after the 1st May 1961 to those shareholders whose names stand on the Register on the 10th April, 1961 and who are entitled to participate in the distribution of dividend in terms of Article 149 of the Company's Articles of Association.

(iv) Dividend Warrants will be posted to shareholders at their registered addresses or in accordance with their mandates. Such mandate, if not already given, and intimation of any change of address should be given to the Bank early in time.

The Explanatory Statement required under Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

CANARA INDUSTRIAL AND BANKING SYNDICATE

(*Concluded from page* 490)

matter of advances. The desire of the bank personnel to be treated alike wherever they are serving, be it in a smaller or bigger institution, cannot be resisted for long, unless the smaller institutions are willing to lose their able personnel for the bigger ones by and by. All these difficulties should help smaller banks to make up their minds to lose their identity with bigger ones voluntarily at the present stage of development of banking in this country, so that the adjustments that are brought about are smooth, effective and to the advantage of all.

"If we have to get all the smaller institutions to merge with bigger institutions now, my own suggestion is to have another bank floated specifically for this purpose, the capital of which could be shared equally between the Government of India, the Reserve Bank of India, State Bank of India and all the scheduled banks. Each scheduled bank may be asked to contribute, by law if necessary, capital proportionate to its own capital and reserves. This institution must see that every depositor of smaller institutions, which find themselves in difficulties, sometimes not of their own making, is assured of the safety of his deposits by taking over all assets and liabilities of these institutions, guaranteeing their deposits in full and taking over their staff. This might facilitate the integration of the staff also and create immediately the confidence in the banking system itself. I wish the Indian Banks' Association takes a lead in this matter.

"Banking in this country has to evolve itself in a manner most advantageous to the economic and industrial development of this country; consistent with safety, it has to continuously adapt itself to the changing conditions and changing values. In a rapidly developing economy things which had no value before, are getting economic values and the banker has to play a more effective role in national reconstruction through his intimate knowledge, experience and enterprise of men and matters. Very often trouble has arisen because the banking system in this country has either identified itself with the interests of the shareholder, which of course is regulated through the Companies Act, or with the depositor which is sought to be looked after by the Banking Companies Act, but nothing positive has been done to identify it with national interests. It has to be realised that only through a well organised, effective and efficient banking system, the country's needs, which are ever changing and complex, could be met and therefore whenever the State Governments enact legislations like the Debt Relief Acts or similar legislation effects of such legislations on the banking system should not be lightly treated. It is the Kerala Debt Relief Act that was to a very large extent responsible for some of the grief of banks in Kerala which overnight found frozen the security and the advances in several cases, making many transactions sticky and converted short-term advances to long-term ones.

"The concept of liquidity is the ability of the banker to realise the security readily without loss in the market. Now this concept of liquidity could be varied by necessary changes in law. In several parts of this country, one cannot ignore that the people's savings are preserved mostly through investment in landed property and their habits in investing in shares or Government securities, however desirable it may be from many other points of view, have been slow-growing. Therefore, very often, whether it be the industrialist or business man, whenever he has to provide any security for advance, what he offers is the landed property or buildings that he has. Banks are finding it difficult to accept them because of the difficulties of realisation of these assets which could be done only by going to a court of law, involving themselves in very lengthy and costly legal processes. I do wish necessary changes in legislation are brought about which could enable such securities like landed property given to banks easily realisable without recourse to a court of law. It is also necessary that wherever litigation for the realisation of the dues to the banks are involved, delay involving court orders, as it often happens nowadays, should be cut short, so that the security may not depreciate in value or the ability of the borrower is not adversely effected on account of this delay. In short, there should be a better appreciation of the role that banks play in the economic development of this country and help them to do so effectively. They should be thought of not only to keep people's moneys safe, but as a dynamic organisation to canalise them for productive purposes in the country.

"I wish to express my sincere thanks to our valued customers for their continued patronage and to the Bank's Directors, shareholders and employees for their loyalty and efforts. I am also deeply appreciative of the enthusiasm, ability and hard work that our General Manager, Mr. T. A. Pai, as given to the institution and the continued support and co-operation which our employees have shown during the year, but for which our progress during 1960 might not have been as encouraging as it has been. I am confident that, with this continued support and zeal, the Syndicate will reach yet another landmark in the coming year."

SLOW PROGRESS OF IRRIGATION

The Union Ministry of Food and Agriculture has just published the statistics pertaining to irrigated area in 1957-58. Even these figures are described as provisional. Still, they must be deemed more reliable than the estimates of the Irrigation Ministry, since they (the former) are based on the returns of the State Revenue Departments which maintain the irrigation statistics and records:

(In million acres)

	1957-58	1956-57
Net area sown	317.6	322.5
Total cropped area	359.2	368.4
Net area irrigated	57.1	55.7
Details of irrigated area:		
(i) Government canals	20.3	19.6
(ii) Private canals	3.3	3.3
(iii) Tanks	11.2	11.1
(iv) Tube-wells	1.1	..
(v) Other wells	15.8	16.2
(vi) Other sources of irrigation ..	5.4	5.5
Total ..	57.1	55.7

Why the Ministry continues to take three years to assemble and publish the irrigation statistics pertaining to an agricultural year defies explanation. Is it so very difficult to get timely returns from the State Revenue Departments which maintain the irrigation statistics? The usefulness of the figures will be enhanced if the irrigated area in an agricultural year is published at least before the close of the following agricultural year.

PRELIMINARY WORK ON SOME POWER PROJECTS

The Government of India has authorised preparatory work in the current financial year, that is, 1960-61, on seven power projects which are included in the third Plan. The names of these projects and their proposed capacities are as follows:

	Capacity in thousand kilowatts
Kundah Stage III, Madras	240
Mettur Tunnel Power Scheme, Madras ...	100
Pamba-Kakki Hydel Scheme, Kerala ...	300
Cambay Thermal Station, Gujarat ...	150
Khaperkheda Thermal Station extension, Maharashtra	30
Naharkatiya Power Station, Assam ...	50
Barauni Thermal Station, Bihar	15
Total ...	885

It is stated that the power generated at these stations will be largely used for industrial development.

MONEY STILL TIGHT

(From Our Own Correspondent)

BOMBAY, 15*th March*

The most outstanding development in the money market during the week under review was the decision of the bankers to revise the ceiling rates of interest for various categories of deposits under the inter-bank agreement, as for details given in our last issue. The new rates came into force with effect from 15th March and are applicable to banks the deposits of which exceed Rs. 25 crores. Banks with smaller deposits will be permitted to pay ½ per cent more than the prescribed rates. It is reported that the subsidiaries of the State Bank have also agreed to the maximum rates prescribed. They have, however, reserved the right of charging ¼ per cent more, in case their deposits tend to go down.

The general tone of the short-term money market remains unchanged. The demand for funds is greater than the available supply and the stringency continues, with no sign of relief in the near future. The inter-bank call money rate remains unchanged at 5½ per cent. House money repayable on 3 to 30 days notice was offered 3 per cent from Wednesday. Other deposits too, fetched the aforesaid increased ceiling rates. These are given below for purposes of ready reference:

Usance	*Rate per cent per annum*
For notice money at a withdrawal notice of 3 days and more	3
For term deposits of:	
3 to 30 days	3
31 to 60 days	3½
61 to 90 days	3¾
91 days to 12 months	3¾
12 to 24 months	4
24 to 48 months	4½
48 to 60 months	4¾
60 months and over	5

The result of the 91-days Government of India Treasury Bills sold through weekly tenders, disclosed the usual trends and showed plainly that the market was not interested in locking up their funds in these Bills. The total amount offered was Rs. 2.25 lakhs only, the amount actually invited and accepted being Rs. 2 crores. The average rate of accepted tenders was unchanged at Rs. 2.750 per cent per annum. There were no sales of 91-days Intermediate Treasury Bills during the week, but they are being continued.

A rise of Rs. 32.80 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 10th March 1961. As the notes held in the Banking Department have also gone up by Rs. 5.68 lakhs, the total notes issued have increased by Rs. 32.86 crores. Foreign securities held by the Issue Department are constant at Rs. 128 crores, but, as the balances held abroad have expanded by Rs. 1.55 crores, the total foreign assets are better by that amount to stand at Rs. 158.85 crores. The deposits of the banks with the Reserve Bank show an accretion of Rs. 2 crores and appear at Rs. 73.87 crores. There has been an increase of Rs. 2.70 crores in other loans and advances given by the Reserve Bank, which include borrowings by the scheduled banks also. The advances against usance bills alone show a rise of Rs. 1.75 crores and their total stands at Rs. 29.30 crores. A year ago, they were only Rs. 7.49 crores.

The scheduled banks' statement for the week ended 3rd March 1961 discloses a drop of Rs. 77.79 lakhs and of Rs. 1.84 crore in demand and time deposits respectively. Since the deposits of the State Bank of India went up by Rs. 1.33 crore during the week, the actual decline in the deposits of commercial banks other than the State Bank of India must have been much larger. It is in the context of this trend of falling deposits that the bankers' suggestions to raise the rates on deposits have to be seen. The decision to introduce insurance of deposits may also help in arresting the downward tendency. The scheduled banks' borrowings from the Reserve Bank during the week under review went up by as much as Rs. 10.32 crores, the share of those against usance bills being Rs. 1.40 crore. The borrowings from the State Bank of demand nature have increased by Rs. 93.09 lakhs, while those of time nature are down by Rs. 31 lakhs. A marked rise of Rs. 11.85 crores is noticed in advances and bills (bank credit) on top of a rise of Rs. 3.59 crores in the preceding week, bringing their total to Rs. 1,277.91 crores. A year ago, they were of the order Rs. 1,070.73 crores. Of the rise of Rs. 11.85 crores in bank credit, the State Bank's share is to the tune of Rs. 2.65 crores. The investment of the scheduled banks have dropped by Rs. 3.01 crores, the fall in those of the State Bank alone being Rs. 8 lakhs only.

In the Gilt-edged market, short-dated issues were in demand mostly from special quarters, such as the sinking funds, local authorities and provident funds. Among the Central loans 3 per cent 1963-65, 3 per cent 1964, 3½ per cent 1963, 1964 and 1965 gained 10 nP each; 2½ per cent 1961 closed 5 nP higher. The rest of the Central loans remained unchanged. In the State loans section, the 4 per cent and 4½ per cent medium-dated loans of only a few States moved up. Thus 4 per cent 1963, 1964, 1969, 1970 and 1971, and 4½ per cent 1970 and 1971 Maharashtra Government loans showed improvement ranging between 5 nP and 10 nP. 4 per cent 1969 Gujarat showed a rise of 20 nP and 4 per cent 1968 and 1969 Madras issues closed 5 nP and 10 nP higher. The 4 per cent 1968, 1969 and 1971 Mysore loans registered increases ranging from 30 nP to 50 nP and 4 per cent 1969 U.P. loan gained 5 nP. The rest of the State issues remained steady.

In the foreign exchange section, the rupee has slightly firmed up in tune with the pound sterling. The banks' selling and buying rates for ready

BULLION PRICES RECOVER AFTER DECLINING EARLIER

(From Our Own Correspondent)

BOMBAY, 15*th March*

The bullion market ruled distinctly easy during the first four sessions of the week, but staged a recovery yesterday which gathered further momentum today. The earlier easiness was due to heavy arrivals and reports that the Bullion Association had decided to introduce a six-monthly contract, instead of monthly contracts. Consequently, selling ensued and prices tended to recede. On Monday, the selling pressure was pronounced in silver which followed reports in Calcutta, as also a local, daily to the effect that the Government of India was contemplating to sell in the open market about 3,200 bars of silver out of the holdings of pre-war coins. Prices, as a result, suffered a severe setback. In sympathy, gold was quiet. Yesterday, however, the market picked up considerable strength, thanks to reports that the Reserve Bank of India was not aware of the Central Government's move to sell silver, as well to the decision of the Bullion Association Board to commence, subject to the approval of the Forward Markets Commission, business simultaneously in *Vaisakh* and *Jeth* settlements. Under the impetus of fresh bull support and short-covering, both gold and silver scored handsome gains. Further additions in values were noted today. Nevertheless, the closing rates were well below those prevailing on Wednesday last week.

The daily average offtake of gold at 3,000 tolas during the week was the same as that in the previous week, while arrivals were slightly lower at 6,000 tolas, as against 6,700 tolas. In silver, both offtake and arrivals were at an average of 14 bars; last week, they amounted to 9 bars and 22 bars, respectively. The floating stocks of gold are reported to be around 40,000 tolas and those of silver are estimated at 700 bars.

Adjustment rates fixed today were Rs. 122.75 per 10 grams for gold and Rs. 205.40 per kilogram for silver. The corresponding rates on Wednesday last week were Rs. 123.90 and Rs. 207.75, respectively.

The question of switching over from monthly to six-monthly settlements in bullion was considered by the Board of the Bullion Association at a meeting held on Friday the 10th inst. The proposal was approved by the Board and the same has been sent to the Forward Markets Commission for its sanction. Although the Commission is said to be in favour of six-monthly settlements, actual business is not expected to commence for at least another two months, in view of the time required for the completion of formalities. At the Board meeting, it was generally felt that business might be permitted only in the first *Jeth* settlement and that trading in *Vaisakh* settlement need not be allowed. No final decision was taken. The Board, however, decided at the meeting held yesterday to start business simultaneously in both *Vaisakh* and *Jeth* (first) settlements.

A feature of trading in the bullion market during the week was that ready silver which was quoted at a discount of 85 nP under the forward (*Chaitra* settlement) last week-end, commanded a premium of 20 nP today. Ready gold continued to be quoted at a discount under the forward. The actual discount today was 35 nP, as against 5 nP last week.

The world price of gold in the London bullion market eased further during the week from $35.07¼ to $35.07 per fine ounce. In view of the continued easiness of world gold and following a slight recovery in the value of the pound sterling *vis-a-vis* the dollar, ready gold in London declined from 251s. 2*d.* to 250s. 7*d.* Forward silver shed ⅛*d.* to 80*d.*, while ready was unchanged at 79⅝*d.* Silver in New York stood at 91.375 cents, same as last week.

The following table shows the trend of the market during the week:

	15-3-1961 (closing)	High	Low	8-3-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	123.00	123.95	121.90	124.15
Forward:				
Chaitra*	123.35	124.10	122.20	124.20
Sovereign	95.25	95.25	94.50	94.25
SILVER				
Ready (.996 fine)	205.40	207.50	202.75	207.50
Forward:				
Chaitra†	205.20	207.75	202.80	208.00
London—	14-3-1961	—	—	7-3-1961
Silver Ready	79¼d.			79⅝d.
Silver Forward	80d.	80⅛d.	80d.	80⅛d.
Gold	250s.7d.	251s.1¼d.	250s.7d.	251s. 2d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 3rd April settlement. † 4th April settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

T.T. on New York have moved down, the former from Rs. 479.25 to Rs. 478.50 and the latter from Rs. 476.00 to Rs. 474.75 per 100 dollars. In the New York market, there has been a further slight improvement in the value of pound sterling due to continued support by the Bank of England and the rate came up nearly to parity. The latest available rates are 279.910-279.950 cents per £ for spot and 278.660-278.700 cents per £ for three months forward. Over the week the gain is 0.65 cent and 0.20 cent respectively.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 15*th March*

The firm trend witnessed in the cotton futures market towards the close of last week gathered further momentum during the week under review. The inspiration for the keen bidding noted on Wednesday last, which persisted during the week under review also, and the consequent spurt in futures prices, especially that of the maturing April contract, came from the bullish twist which was sought to be given, in some quarters, to by-law 61 of the East India Cotton Association, Bombay, relating to invoicing back rates in respect of cotton rejected in tender. It was argued by this section that cotton rejected in tender under this by-law on or after the twenty-fourth day of the delivery month had to be invoiced back at the spot rate *plus* a penalty of Rs. 3 per quintal. As the spot rate is already about Rs. 100 per candy above the futures quotations, it was feared that those who tendered cotton towards the end of the delivery month were running the risk of having to make sacrifices substantially higher than those prevailing at present. This prompted those who had gone short to rush to cover. Bulls applied the squeeze to take advantage of this opportunity. The Board of the East India Cotton Association could not throw any light on the issue and decided, at its weekly meeting held on Friday, to seek legal opinion on the interpretation of by-law 61. The Board also decided that the delivery dates for the maturing Jarilla April contract should be increased from two to three in a week and that the time granted to the buyers for survey and appeal should not be extended.

Another factor which imparted strength to the market this week was the expectation that tenders against the April contract would be small in volume. The signing of the agreement, according to which 300,000 bales of U.S. cotton will be imported under P.L. 480, failed to produce any adverse effect on the market immediately. This is attributed to the fact that, both price-wise and quality-wise, American cotton is not attractive. Sustained support pushed the maturing Jarilla April contract to as high as Rs. 592. The August contract showed, by comparison, only moderate improvement, the rise being mainly sympathetic. Even this small gain was erased towards the end of the week. Consequently, the spread between the two contracts, which was as much as Rs. 15 a fortnight ago, has narrowed down to Rs. 6.50 today. The trend of the market is steady at the time of writing.

The following table indicates the trend of prices of the contract during the week:

(In Rs. per three quintals)

	15-3-61	*High*	*Low*	8-3-61
I.C.C. Jarilla:				
April 1961 ...	588	592	580	582
August 1961 ...	594.50	596	590.50	594

The spot section reported brisk activity by mills. Spinners from all centres showed interest in popular varieties like CO2, L.147, Surti, Laxmi, Kalyan, Vijay, Digvijay, Berar, etc. There are rumours that the fourth, and perhaps final, instalment of India cotton quota will be issued shortly. This seems to have influenced mills to show better interest in all new crop varieties. Export demand was noted for *zoda* and yellow pickings. Shippers were also interested in Kalagin, Wagad and Bengal *Deshi* cotton in anticipation of a quota.

Interest in foreign cotton was confined to higher grade Egyptian and selected East African quotas. As mills were not particularly enthusiastic about the agreement concluded for importing 300,000 bales of U.S. cotton, the trade also did not show much interest in participating in the imports for which it is understood to have been specifically invited. The reason is the same as in the case of mills' lack of interest, namely, the higher price of U.S. cotton and the uncertain quality.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Jarilla 880; Khamgaon 900; L.147 1,000; Laxmi 1,042; B.P. 52 1,290; CO2 1,040-1,427; B.P. (U.N.U.G.) 1,295; Sudan XG35 1,900.

The Karachi cotton futures market ruled firm during the week under review. The March contract rallied further on good support prompted by the expectation of meagre tenders from Rs. 68.95 last week-end to Rs. 70.15 yesterday. The May contract rose in sympathy from Rs. 69.05 to Rs. 69.15.

An erratic trend was witnessed on the Alexandria Cotton Exchange during the week. Support was selective, being confined only to certain delivery months of both the long-staple Karnak and medium-staple Ashmouni contracts. Consequently, gains were interspersed with losses. The export price discount rate remained unchanged this week also. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 69.15; May 70.07; July 71.20.

Ashmouni: April 59.05; June 60.15; August 60.89.

Cotton futures in Liverpool recorded modest gains during the week under review. Strong advices from New York and moderate support from local traders were responsible for the rise in price. Sudan cotton futures at Liverpool were subdued. Values, however, remained changed. The following are the latest available quotations—in pence per lb. —from Liverpool:

American cotton one inch staple contract: March 24.15; May 24.65; July 24.95.

American cotton mixed growths contract: March 24.50; May 25.05; July 25.30.

Sudan: March, May, July 33.50.

The firmness witnessed in the New York cotton futures market during the past two weeks gathered further momentum during the week under review also. Values advanced further on speculative buying based on expectation of holding back of supplies in anticipation of higher prices later this season. The strength of the spot market imparted further firmness to futures.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	14-3-61	7-3-61	28-2-61
Spot	33.25	33.20	33.00
March	—	32.83	32.57
May	33.37	33.25	33.03
July	33.78	33.77	33.52

ART SILK YARNS RALLY

(From Our Own Correspondent)

BOMBAY, 15*th March*

There was a rally in the prices of art silk yarns during the week under review. *Good* buying support was in evidence, thanks to fears of a shortage of supplies developing in the next few weeks, owing to the continued restricted import policy. Even reports indicating the possibility of many weaving mills cutting down production in view of the steep increase in rates of excise and import duties on yarns and excise duty on fabrics failed to have any effect. In sympathy with art silk yarns, staple fibre yarns also tended to move up. Cotton yarn ruled quiet, as operators were not inclined to enlarge their commitments pending a clear picture regarding the effect of the newly imposed excise duty on cotton yarn on the offtake by handlooms and powerlooms.

Imports of art silk yarn into Bombay port during February 1961 amounted to 1,198,416 kg., as against 1,151.192 kg. in the previous month. During the same month, 93,452 kg. of synthetic yarn (76,931 kg. in January 1961), 1,707 kg. of staple fibre yarn (616 kg.) and 4,365 kg. of cotton yarn (8,727 kg.) were imported. Exports of cotton yarn and cotton sewing thread from Bombay port aggregated 316,466 kg. and 42,607 kg., respectively. The corresponding figures for January were 377,194 kg. and 21,890 kg.

In the course of a communication addressed to the Union Finance Minister, the Silk and Art Silk Mills Association has pleaded for the reconsideration of the proposal to raise taxes on art silk yarn and staple fibre. The proposal, it is pointed out, "affects the weaving sector only, since the excise duty is passed on to it by spinners, due to scarcity of yarn, and as such the incidence of the increase cannot be shifted to consumers owing to market conditions. In its opinion, the countervailing import duty on yarn is not necessary, because the indigenous yarn is assured of market and no protection is needed by indigenous spinners who are well protected by scarcity conditions. The proposed change in the rates of excise duty on rayon fabrics, the removal of slab exemptions, the equalisation of rates of duty for first and second shifts, and the increase in third shift rates, it is feared, will all act as deterrents to higher productivity. It is also feared that the export trade will be affected by the increase in costs and that the result will be more yarn shortage. To quote the Association: "Weaving sector will be financially ruined, if proposals are implemented."

Addressing a Press conference on Monday the 13th inst., Mr. D. N. Shroff, Chairman of the Association, declared that the powerloom weaving sector of the rayon industry had been burdened with multiple and crushing imposts and hence its protest was not perfunctionary but it was a protest of the greatest vehemence. He said that the effect, apart from the "incidence" of the taxation proposals, would be the ruination of the rayon weaving sector and added:

"The net incidence of the taxation proposals, both in respect of yarn and fabrics, is that the rayon weaving sector will have to bear an additional impost of Rs. 8,99,34,900, making a total impost of Rs. 24,11,79,607. In comparison with the expectation of an additional revenue of Rs. 60.87 crores in 1961-62, the net additional incidence on the rayon weaving sector is Rs. 8,99,34,900, which is 14.77 per cent of the total, an incidence which is out of all proportion, specially taking into consideration the investment in the sector, its structure, its difficulties in obtaining raw materials, the price at which it obtains its raw materials, its machinery, its wage bill, etc. ... The realisation of the weaving sector from sales of fabrics being about Rs. 60 crores per annum, the total incidence of taxation comes to 40 per cent of the realisation."

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with the previous week.

	15-3-1961	8-3-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupresa Bemberg (100 kg.)

SEEDS FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 15*th March*

The firmness of oilseeds noted last week gathered further *momentum* during the week under review, with the major seeds and oils scaling new peaks. Bulls lent considerable support and the bears were covering their positions. Groundnuts continued to be in the forefront on reports of an acute scarcity of offerings, particularly from the main sources of supply such as Kathiawad. Despite high prices, local demand for groundnut oil for edible purposes was steadily on the increase, owing to seasonal factors. Encouraged by such demand, crushers and *vanaspati* manufacturers, whose stocks were fast dwindling, were keen buyers of seeds.

Spot groundnuts Nizam bold spurted by Rs. 2.50 to Rs. 55.25. Coromandels and Khandesh quality advanced by Rs. 2 each to Rs. 55.50 and Rs. 55.25, respectively. Among oils, railway receipts rose by Re. 1.10 to Rs. 23.25. Ex-mills gained a rupee to Rs. 23. There was hardly any transaction in the forward (May 1961) contract.

Castorseeds and oil ruled distinctly firm. While arrivals were limited, there was good demand for oil from shippers, following sustained enquiries from the U.K. and some communist countries. The devaluation of the Brazilian currency was not considered to affect adversely India's competitive position. For, since Brazilian stocks were said to be limited, a section of traders felt that it might not have much to offer in the open market after meeting its contractual obligations. May 1961 contract advanced by Rs. 5.38 to Rs. 179.50. Ready Madras improved by 87 nP to Rs. 35.12. Oil commercial put on 90 nP to Rs. 15.10 and B.S.S. 65 nP to Rs. 15.80.

Linseeds met with keen half support induced by high level oil offtake in the wake of relatively scarce arrivals, partly for purposes for adulterating with dearer edible oils. The export section for oil however, continued to be dull with the domestic prices remaining out of parity with world prices. Linseed May 1961 contract made headway from Rs. 35.81 to Rs. 38.25. Bold ready strengthened by Rs. 4.25 to Rs. 39.50. Linseed oil was marked up by Rs. 2.20 to Rs. 18.60.

In sympathy with the general trend and on sustained buying by *vanaspati* interests, cottonseeds staged a smart rally. May 1961 *contract* firmed up by Rs. 3.25 to Rs. 98. Whites gathered 90 nP to Rs. 20. Both *non-whites* and Berars were quoted higher by 50 nP at Rs. 19.75.

Sesame continued to put on distinctly cheerful appearance, thanks to enlarged enquiries from the South in the face of tight statistical position. Bold variety spurted by Rs. 15 to Rs. 370 (per 250 kg.). Sesame oil rose by Re. 1.75 to Rs. 29.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	15-3-1961	8-3-1961	28-2-1961
	Rs.	Rs.	Rs.
Groundnut			
May 1961	—	220.00	220.00
Nizam bold	55.25	52.75	50.75
Coromandel ready	55.50	53.50	51.62
Khandesh quality	55.25	53.25	51.50
Oil ex-mill ready*	23.25	22.25	21.06
Railway receipts*	23.00	21.90	20.96
Castorseed			
May 1961	179.50	174.12	170.25
Ready Madras	35.12	34.25	33.62
Ready Kanpur	33.50	32.87	32.50
Oil B.S.S.†	15.80	15.15	15.00
Oil commercial†	15.10	14.20	14.00
Linseed			
May, 1961	38.25	35.81	35.06
Bold ready	39.50	35.25	35.25
Oil ready†	18.60	16.40	16.30

May 1961	98.00	94.75	92.75
New seed	42.00	39.50	37.00
Kardi seed	28.50	27.25	27.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA WELL MAINTAINED

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 7*th March*

A total of approximately 385,000 kilograms was offered in Sale No. 10 held today. Quality from all districts was well maintained. There was good general demand. Low medium and medium descriptions met useful support and sold at firm to sometimes slightly dearer rates. Good mediums sold well at around last prices with buyers following quality closely. Highgrowns were very irregular; the best sold at about last rates but others were again irregular and easier, and there were some withdrawals. Black leaf brokens and fannings were steady whilst the plainest kinds were generally slightly lower. Whole leaf grades met with fair support at slightly easier levels. C.T.C. and legg cut types met active demand at dearer rates.

	1961	1960
	Rs.	Rs.
Low medium	4.70-4.90	4.30-4.52
Medium	4.90-5.20	4.52-4.96
Good medium	5.20-5.60	5.18-5.73
Quality	5.30-7.85	6.39-10.47

The average price realised in sale No. 10 was Rs. 5.20 per kilo, as against Rs. 5.18 a week ago and Rs. 5.42 in the corresponding sale last year.

Dust Sale No. 10: 183,000 kilograms were offered in dust sale No. 10 held on Thursday, 9th inst. The market opened to strong active demand which slackened as the sale progressed. Medium and low medium descriptions were well supported at the opening at 10-20 nP above last rates although closing at an advance of 5-10 nP. Good coloury mediums sold well. Residuals met keen enquiry at the beginning of the sale but towards the end they were a weak feature and were generally slightly easier. Highgrown dusts came to an irregular market; where quality was improved they sold at dearer rates but other types were lower. Legg cut and C.T.C. types were the strongest features of the market selling at fully 20 nP above last prices.

The average price realised in dust sale No. 10 was Rs. 4.87 per kilo as compared with Rs. 4.75 a week ago and Rs. 4.59 in the corresponding sale last year.

Export quota: The market has been extremely quiet and the quotation stands nominally at ½ nP per kilo at which rate there are heavy sellers.

Colombo: In this week's export sale there was strong general demand. Best highgrowns were appreciably dearer following quality but others were about steady. Uvas and mediums brokens were ½ cents easier following less activity from Australia. Liquoring fannings, however, sold well. Lowgrowns registered a slight drop in price. Tippy fannings met much less interest and were considerably easier.

London—North Indian and other growths: In Monday's auction there was good general demand and the better liquoring Assams were firm to dearer. All others were steady. Plain BP is quoted at 3-10d.

Ceylon and South Indians: In Tuesday's offerings 25,897 packages were offered and of this quantity 7,824 packages came from South India. There was fair general demand although prices tended a little easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wires:

"*Sale No.* 11:—463,000 kilograms. Good general demand. Plain and low medium barely steady. Medium and good firm and sometimes dearer. Nilgiris very irregular."

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 14*th March*

Steady demand at firm rates was in evidence during yesterday's export sales. The price trend followed quality. During last week's internal sales, prices eased and there were some withdrawals.

Trade circles have felt, on second thoughts, that the increased rates of excise duty on tea would not only compensate the Government fully for the loss of revenue of the order of Rs. 2 crores as a result of the export duty cut but would in fact also bring to Government increased revenues. Since gardens have to pay the excise duty to Government on production and the increased rates are steep, the industry cannot expect the consumer to reimburse it in full through higher price for tea.

As such, it is felt that the brunt of the increase would have to be borne by the gardens. When output cost increases and the increase cannot be passed on in full to a specific class of consumers the result would be that attempts would be made to pass on the burden equally to all consumers which would mean that prices of export tea would also be raised. Viewed thus, it can hardly be said that the reduction in the export duty would mean that prices of export tea could be reduced to that extent and that Indian tea would gain more competitive strength in world markets.

In his presidential address to the annual meeting of the Indian Tea Association held here on Friday last, Mr. N. S. Coldwell dealt with the several problems faced by the tea industry. Referring to the proposed changes in the excise duties, he said that the duty, as applicable to the Cachar district gardens, had been increased by as much as 110 per cent. The output in Cachar was less by 25 per cent last year as a result of the earlier drought and when the industry was struggling to overcome the financial strain resulting from lower output, the increase in excise duty was hardly justified.

Since the duty is paid at production point, the gardens would now have to increase cash in hand in the first instance whether the duty is passed on to the consumers or not. Conditions in the money market are already tight and this additional burden would only add to the problems of the tea industry and increase the cost structure further.

In the internal sales held last week, dusts on offer aggregated 23,149 packages. Except for good C.T.Cs prices of which were dearer, rates realised were generally lower. Demand was, however strong. Orthodox teas declined by 10 to 20 nP, while the small types were firm. Legg-cut teas eased by 20 nP; some withdrawals were reported. Irregular trend was in evidence in the medium C.T.Cs having clean leaf appearance. Fibrous teas were difficult to sell. Quotations per 1 kg., inclusive of excise duty, were: good Assam C.T.C. dust Rs. 6.20 to 6.60, medium Assam C.T.C. dust Rs. 5.50 to 5.90, legg-cut dust Rs. 4.90 to 5.30, medium Assam dust Rs. 4.70 to Rs. 5.10, and plain orthodox Rs. 4.60 to Rs. 4.80.

Leaf grades amounting to 2,351 chests met with good demand at dearer rates.

At export sale No. 34 held yesterday, offerings were only 36,173 packages, as was usual at this time of the season. There was good demand, but prices were irregular. Strong competition was offered to all clean and well-made orthodox teas and "teas for price" and prices gained. The few bright best liquoring C.T.Cs also advanced; residual teas of this category were about firm. On the other hand, a decline of 5 to 10 nP in prices of the poorer plain fannings was recorded. In view of the meagre quantity, there were no quotations.

LICENSING OF JUTE DEALERS

(From Our Own Correspondent)

CALCUTTA, 14*th March*

While offers of raw jute at the I.J.M.A. maximum prices tended to fall during the week under review, prices of jute goods moved upward, the

rise being slow and often interrupted. The maximum prices became minimum prices and the sellers of fibre were not many in number during the week. Indeed, there were doubts as to whether the system of ceiling would work after all. It is, however, too early to be pessimistic. The fact that prices have now settled at the controlled rates and that offers are forthcoming should be taken as an encouraging sign to hope that, given time and patience, the foundation of the system may become sound.

During the week, the Jute Commissioner was empowered, through the issuance of a Government order under the Essential Commodities Act, to control jute prices by licensing dealers in raw jute and jute goods, fixation of maximum and minimum prices for both fibre and goods, regulation of stocks of raw jute held by mills and requisitioning fibre stocks and goods. It was indicated here that the Commissioner would at present introduce the system of licensing dealers only. Thus, sufficient time would be afforded to give a fair trial to the voluntary scheme of the I.J.M.A. which, it must be said, from the progress made so far, has made a good start indeed. It is expected that the licensing system will come into being as from the end of this month.

Market circles felt that, since the periodic returns on stocks received by the Jute Commissioner would provide the Government with all market and trade details, there would be no further need for the Government to fix maximum prices and/or to requisition stocks. For, if only these returns are checked properly and investigated periodically, such a course would be a damper for any unscrupulous tendencies. For the present, the Commissioner does not propose to requisition raw jute stocks, but he will do so if he has sufficient reasons to believe that fibre is held back to push up prices.

In the meantime, the sowing time for the next crop is heralding, and the prevailing high prices are a guarantee that the farmers would bring under jute as much land as possible. They may even convert a portion of their foodgrains land to grow jute. It is considered that the next season would be an appropriate time for the mills to organise a central combined purchasing organisation of their own and to hold a buffer pool under the ægis of the I.J.M.A. Rumours current during the week make the market believe that the mills are already considering such a proposal. The financial problem involved in implementing such a proposal will be tremendous and this would be a sphere where the Government can lend a helping hand. A buffer pool would be beneficial not only to mills but also to cultivators. The fag end of the season has invariably been a trying time for the mills as well as for the Government.

The uncertain fibre supply position is fully reflected in the lack of an adequate number of offers in goods for forward delivery. It is but natural that the mills are disinclined to enter into forward commitments without covering for fibre. This is a situation which exasperates the foreign buyer and lends a helping hand to substitutes. If bag manufacturers in the U.S. or consumers of hessian and heavy goods in Europe and other countries are to be kept in suspense thus, it is no wonder if India stands to lose markets. The problems of mills are acute, and an unofficial pool would alone be a remedy. Plans can be made even from now and the I.J.M.A. should create a central buying organisation. A few years ago, the Government had set up a Jute Board for this purpose and it was a failure. The problems faced by the Board were many. The same problems would again present themselves and a non-official organisation would be better placed to tackle the same than a Government arm.

A disturbing feature of the present situation has been the steady trend in fibre prices at Narayanganj. Prices there are higher by about Rs. 15 a maund as compared with the maximum prices ruling at Calcutta. Pakistan prices were firm during the week, but it was reported that the fall in Calcutta prices caused anxiety to stockists. Further, there had been reports of rains aiding sowing in lowland areas. According to a preliminary estimate, production in these lowland areas would be as much as double. If only the jute mills were able to maintain world markets, production of goods would increase. Against this background, it is good news that Pakistan proposes to raise the target of 4,000 looms in the next five years to 6,000 looms. This was announced this week by Mr. A. Khan, the Pakistan Minister for Industries.

The jute goods market opened very firm on Wednesday the 8th inst. A fair number of inquiries for hessian as well as heavy goods was received from overseas countries, but offers from mills were few and far between in view of the uncertain fibre outlook. Ready B. twills were firm at Rs. 203.75 and ready hessian 40" 10 oz. at Rs. 68.25. The fact that at the maximum prices offers of fibre had dwindled caused anxiety to mills. It was feared that, if this situation were to continue, their production would be hampered inasmuch as their stock position is vulnerable. The existence of the quota system, although it helped to check the rising trend in fibre prices, had restricted buying by mills. Business passing in goods was insignificant and, with B. twills at Rs. 203 and hessian 40" 10 oz. at Rs. 68, prices were fractionally lower. Market reports from the U.S. indicated that buyers there were content to continue the hand-to-mouth position and reluctant to enter into forward commitments at the prevailing high prices. At this stage, figures relating to goods in stock with mills at the end of February were released. The total at 83,800 tons showed a small decline of 900 tons. Hessian at 24,000 tons accounted for a big drop of 4,500 tons, while sacking and miscellaneous constructions at 47,600 tons and 12,200 tons rose by 1,300 tons each. On Friday, B. twills were firm at Rs. 203.50 and hessian 40" 10 oz. at Rs. 68.00. Over the week-end, with B. twills and hessian 40" 10 oz. at Rs. 201 and Rs. 66.75, prices declined by a little, following the announcement that the Jute Commissioner had been armed with power by the Government to take steps to control the fibre situation. Although business passing yesterday was little, B. twills eased to Rs. 199.00 and hessian 40" 10 oz. to Rs. 67.00.

Fibre prices were firm at the maximum levels during the week, Assam bottoms quoting at Rs. 62, northern bottoms Rs. 61, and daissee bottoms Rs. 64 per maund. However, at one time, no offers were forthcoming at the maximum prices. The week-end announcement that the Jute Commissioner would introduce a system of licensing of raw jute dealers shortly imparted quietness and cautioned stockists.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 13*th March*

A steady trend was noted in the foodgrains market during the week. Arrivals of *rabi* grains were small due to the end of the season, and new grain arrivals had still not commenced. The Union Food Ministry was reported to be anxious to remove zonal restrictions on movement of wheat and this would be finally decided as soon as the results of wheat crops were known, perhaps in a few weeks. The standing crop prospects were very bright and, while harvesting of wheat would begin by the end of the current month in east U.P., it would be late by another fortnight in west U.P.

Wheat recorded modest gains during the week to be quoted on Monday at Rs. 17 a maund for *dara* quality and upto Rs. 18 for better farm produce. Wheat bought here from Punjab, however, was quoted at Rs. 17.25 and inferior quality sold by the U.P. Government was being resold at Rs. 16.25 a maund. Daily arrivals of wheat were small, but consumers were using reserves expecting a fall in prices following new wheat arrivals. It was reported that stocks in the Punjab were heavy and the Centre was giving all possible facilities to dispose of those stocks.

Rice ruled quietly steady with increasing seasonal demand. Local rice stock was put at 5,000 maunds. Prices were: rice *sela basmati* Rs. 28 to Rs. 30; *basmati* superior Rs. 35.50; *mainpuri* Rs. 20.75; *ramajwayan* Rs. 24; *raimunia* Rs. 25.50 a maund.

Gram recorded fractional gains during the week to be quoted at Rs. 16 a maund for Punjab variety. Stocks left with the trade were small and new grain arrivals would begin towards the end of April. Barley and *bejhar*, however, were stationary around Rs. 13 a maund, with poor stocks left, but harvesting of *bejhar* would soon begin. Maize had lost its seasonal demand and, as stockists were anxious sellers, prices drifted lower to be quoted at Rs. 13 to Rs. 13.50 a maund according to quality. Local stock was put at 2,000 maunds. While *guwar* stayed steady at Rs. 13.25 to Rs. 13.50, *jowar* was quoted lower at Rs. 11.75 to Rs. 12.75, thanks to easy advices from the producing areas of the South. *Bajra* was stagnant at Rs. 14.87 and stocks left were meagre.

In pulses, arrivals of peas had begun in small quantity, but as the quality reaching the market was poor and damp, prices sought lower levels at Rs. 12.50 a maund for *dara* quality, Rs. 13 for better farm produce and Rs. 14 a maund for peas *dal*. Arrivals of new peas will soon mount, as harvesting is in full swing and new arrivals are fairly good in east U.P. *Arhar* lay flat at Rs. 13.25 a maund, as demand was dormant and local stock was unchanged at 8 *khatties* and new crop prospects were bright. Harvesting of *arhar*, however, would begin after six weeks. Other pulses were steady on good consumer demand in the face of poor stocks and prevailing prices were: *Urd* Rs. 20 to Rs. 21; *urd dal* Rs. 24; *moong* Rs. 21 to Rs. 22; *moong dal* Rs. 25; *massoor* Rs. 14; *massoor dal* Rs. 16.

SUGAR SUPPLY EASY

(From Our Own Correspondent)

HAPUR, 13*th March*

Sugar ruled quietly steady in the local market, though the supply position was easy, but prospects of early export kept the prices steady. Production was still going on vigorously, as cane supplies to factories was still adequate and production by the end of current season was expected to touch new heights. Prevailing prices in the week-end here were: Rs. 112.75 per bag and Rs. 1.09 per *seer* in the open market.

Sugar drifted lower in the Muzaffarnagar market during the week, as the supply position eased further with the release of heavy quantity of damaged sugar of 1959-60 season for open sale and its prices were far below the controlled price at Rs. 102 to Rs. 105 per bag. A heavy quantity of sugar against allotment made by the State Government to its nominee for the month of January remained undelivered, because the lifting speed was very low. Some factories, however, were faced with an acute shortage of coal and coke and were apprehending closure any moment if supplies were not rushed in time. The prevailing price of sugar was Rs. 108 to Rs. 109 per bag which is very near the controlled price.

Khandsari suffered a fall of 50 nP to Rs. 1.25 per maund during the week, thanks to the downward trend of sugar. Slackness in demand from the Punjab, Rajasthan, Gujerat and east U.P. were the main influencing factors. Daily arrivals of *khandsari* in Muzaffarnagar market were 5,000 maunds and stock was put at 40,000 maunds, the corresponding figure last year being 100,000 maunds. *Khandsari* manufacturers reduced cane purchasing price to Rs. 1.25, as cane growers were again diverting supplies to them as the season was becoming warm and standing cane crop was likely to be affected. Week-end prevailing prices were: *khandsari* inferior Rs. 25 to Rs. 29; superior Rs. 30 to Rs. 33; crystal Rs. 33 to Rs. 33.50; *boora* Rs. 33 to Rs. 36; *galawat* Rs. 22.50 to Rs. 23.50; old Rs. 25 to Rs. 29 a maund.

Ready *gur* eased further, as demand was reported to be slack from the consuming areas of Gujerat, M.P. and the Punjab as it was being met from the producing areas of the South where quality offered was better and more solid. Loading, too, continued completely stopped except on Sunday when, due to free loading day, twelve wagons were loaded. Local stock has mounted to 75,000 maunds, as against 42,000 maunds last year, although this year total arrivals at 4.56 lakh maunds were much lower than 5.57 lakh maunds in the corresponding period last year. *Gur* arrivals here were about 2,000 maunds but were reported still better in *mofussil* markets of Gulaoti, Sinana and other centres and stocks in these centres are estimated at 5 lakh maunds. Prevailing prices here were: *pansera* Rs. 12.37 to Rs. 12.75; *shakker* Rs. 14.50 a maund.

Barring superior *chaku gur* which registered fractional gains in the Muzaffarnagar market during the week on good demand from the stockists of Gujerat, M.P. and the Punjab, other qualities sought lower levels there, following slack demand in the face of increasing stocks and heavy arrivals at an average of 10,000 maunds daily. Total arrivals of *gur* and *shakker* during the current season in the Muzaffarnagar market were 10.37 lakh maunds, the corresponding figures last year being 12.97 lakh maunds and 11.75 lakh maunds in 1959. Local stock was now put at 1.5 lakh maunds and prevailing prices in the week-end were: *Chaku* Rs. 14.25 to Rs. 15.25; *pansera* Rs. 14 to Rs. 14.50; *ladoo* Rs. 14 to Rs. 14.37 a maund.

Gur futures ran down sharply. Although gains were about 62 nP in *baisakh* delivery prices last week following formation of bull syndicate and their support, prices sagged heavily this week on active bear pressure. *Baisakh* opened at Rs. 14.40 last Monday and, after touching the highest of the week the same day at Rs. 14.52, declined in successive sessions to the lowest of the week at Rs. 13.28. It is currently quoted at Rs. 13.39, due to profit-taking at low levels.

Sowing of cane is still in progress. The land recently vacated from peas crop is now available for cane sowing and it can be predicted that cane acreage would increase further.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 14*th March*

Firm conditions prevailed in the metal market during the week under review. The confusion created by the imposition of excise duties on specified semi-manufactures of zinc, copper and brass (10 per cent *ad valorem* on pipes and tubes and Rs. 300 per metric tonne on sheets, strips and circles) has now been worse confounded. As mentioned in these columns last week, the first category had been interpreted by local excise authorities to include gunmetal bushes, castings also and the latter to include strips and flats. It is now rumoured that brass square rods and copper square rods—and perhaps sectional rods also—will come under the term "strip" and thus attract the 10 per cent *ad valorem* duty! No official clarification has been issued yet. This confusion has adversely affected normal business activities. It is hoped that New Delhi will issue clear instructions as to the items that are to be included in the two categories above stated.

Meanwhile, industrial circles have pleaded that the Finance Minister should consider the dropping of the proposal to levy excise on non-ferrous metal industry at the present time. This industry, it is pointed out, is in its teens in India and a good portion of semis and the end-products made of non-ferrous metals is still imported. The excise duties would only add to the cost structure of the industry, and it is easy to see that the output cost in India would be higher than in the advanced countries. It has hitherto been thought that only the fully developed industries would be called upon to pay excise duties. Hence the inclusion of non-ferrous metals in the Finance Minister's list of dutiable goods has taken the industry by surprise. It is hoped that the Finance Minister will sympathise with the industry and drop the proposal altogether. If for any reason the Finance Minister considered that the proposal should remain, it is suggested by industry spokesmen that the possibility of proposing the duty on pipes and tubes on tonnage basis instead of as at present at, *ad valorem* should be examined. The revision of the proposal in this manner, it is pointed out, would not lower revenue receipts. At the same time it would reduce much paper work.

Although the price of electrolytic copper on the London Metal Exchange fell to £224 per ton from £225-1/8, after rising to £226, local prices for copper scrap were fully firm. Berry quality scrap was quoted at Rs. 462.50 per 100 kgs. and utensil scrap at Rs. 450. Electrolytic zinc was in good demand, and hence the shortage was more acutely felt. However, the price here gave way to Rs. 328.75 per 100 kgs. after opening at Rs. 331.75 but recovered to Rs. 330.75. In London, electrolytic zinc was higher at £85½ per ton against opening of £84⅜. Lead here was unchanged at Rs. 124 per 100 kgs. Tin was steady at Rs. 1,279.50 per 100 kgs. On the London Metal Exchange, the price gained to £808 per ton from £803.

KIPS HARDEN

(From Our Own Correspondent)

MADRAS, 11*th March*

Arrivals of kips were of the usual volume and demand kept pace with arrivals at firmer prices. There was good demand from the U.K. for light and medium weight cow hides and prices hardened further. There was no change in the cow calf, buff hides and buff calf sections.

Inquiries for tanned goat skins from the U.S.A. and Continent were more pronounced. Prices at raw centres advanced sharply due to competitive buying by tanners. Tanned sheep also ruled firmer in sympathy.

MARKET GOSSIP

(*Concluded from page 467*)

India. The best thing for this country, therefore, is to launch a vigorous export drive and try hard to improve its position as the world's largest producer and exporter of tea. For this purpose, the industry and the Government must join hands and put up a united front.

Insurance-cum-Investment

The search for new methods of investment suited to the needs and abilities of the small investor is an essential part of the growing efforts now being made in the advanced countries of the West to popularise the savings and investment habit. Many novel forms of, and agencies for, investments have already been evolved to help the small investor in spreading his investments over a considerable variety and number of investments which would have been impossible for him without their help.

The latest addition to this list of ingenious schemes was announced recently in London by M. and G. group of unit trusts. A new savings scheme evolved by the group seeks to combine the investment advantages provided by a unit trust with the tax advantages of endowment assurance. The scheme is simple. An insurance company sponsored by the group will issue endowment policies maturing in 10 to 35 years. The premium on these policies will be invested in the unit shares of M. and G. General Trust Fund. The return on them will, in turn, be used to buy more shares and so on. On the maturity of a policy, the policyholder will receive, not the sum assured as in conventional insurance, but the unit shares bought with the premium paid by him and the income from it. In case the insured dies before the policy matures, his nominee will get the unit shares bought up to that date *plus* the cash sum equal to the amount of premiums unpaid.

This two-in-one scheme offers the tax advantages common to all life insurance policies in Britain, such as tax relief (within limits) on premium paid, freedom from surtax on the investment income which goes to increase the value of the policy and the possibility of reducing estate duty if the policy is taken out for the benefit of wife or children. At the same time, it has also the advantages of investment such as capital appreciation and dividend which could be ploughed back.

Considered in relation to the advantages it offers, the cost of the scheme is low. In fact, the reasonably low and fixed nature of the charges is said to be one of the attractions of the scheme. The charges are low because neither the sponsoring company nor the London Life Association which reinsures the life risks pay commission for the business introduced under this scheme. Policies issued under the scheme will also have a much higher surrender value during the first few years of their life than ordinary endowment policies.

The price which the policyholder pays for all these advantages is the risk he takes on the share prices during the period in which the policy is in force. It has, therefore, attractions only for those who believe in the long-term advantages of equity investments. Further, the tax advantages offered by the scheme might constitute a sufficient attraction only for those who bear heavy tax burdens. Precisely for this reason, the scheme could be expected to prove popular in countries like India where taxation is high, at least among those sections of the population which have become investment-minded. It may be worthwhile for the Life Insurance Corporation of India to examine whether the scheme, with suitable modifications, could be adopted in India. This, of course, implies that, to begin with, there must be unit trusts. The case for formation of such institutions in this country has already been put forward in this journal. It has also been ably presented in an article in a recent issue of the Reserve Bank of India *Bulletin*. It deserves to be acted upon at an early date, as part of the drive for stimulating savings in the country.

Import of U.S. Cotton

The agreement signed on the 9th inst. at New Delhi by the representatives of the Governments of India and the U.S., under which India will import 800,000 bales (of 500 lbs. each) of U.S. cotton under Public Law 480, has failed to enthuse both the mills and the trade. The lack of interest on the part of mills is attributed to the fact that the cotton will be mostly shorter staples (1" and below) in which mills are not interested now as much as they used to be this time last year. U.S. cotton of this staple range is about Rs. 150 higher than Indian cotton of identical quality and staple length. Ample supplies of domestic cotton of almost every description are now available, thanks to the good crop this season. Moreover, in view of the monetary stringency, not many mills are willing to go in for U.S. cotton even for the purpose of building up stocks.

Since mills are not very much interested, the reaction of the trade to the news has also been lukewarm, notwithstanding the fact that, after the lapse of over six years, it has been allowed to participate in cotton imports on its own. It has been the constant complaint of the trade that, since 1954, the Government has almost completely overlooked the existence of the trade and that, by allowing imports only on the basis of actual-user licence, professional importers, who had once played a prominent role in getting foreign cotton on the most advantageous terms, have been reduced to the status of mere commission agents. Importers are disheartened that the Government has made up its mind to give them a share only in respect of cotton which is difficult to sell. They, therefore, seem to have decided to decline the offer politely.

The prospects for quick import of cotton under the latest agreement thus appear to be gloomy. But this cotton has got to be purchased in any case. How to get this done seems to be the current headache of the Textile Commissioner. Some experts think that, if mills are not prepared to import this cotton voluntarily, they may be compelled to do so. One possible way of doing this, it is said, is to link the issue of the remaining 25 per cent of Indian cotton quota to imports of U.S. cotton. But this solution is not generally favoured, because of the element of compulsion in it. A more satisfactory method, it is suggested, would be to extend the shipment period beyond 31st July fixed at present so that mills can spread their purchases over a longer period and also take advantage of the higher U.S. export subsidy of 8½ cents per lb. available from 1st August next, as against the present subsidy rate of 6 cents per lb. It is also suggested, as an alternative, that imports of longer staple cotton (1.1/16" and above) for which there is good demand and which is relatively attractive in price, should be permitted. One difficulty in regard to this suggestion is that, if it is put into practice, it might lead to the violation of the undertaking given by the Government of India that imports under the present agreement will be over and above the usual commercial imports during the U.S. fiscal year 1962 of not not less than 420,000 bales (of 400 lbs.) of U.S. cotton.

It is not known whether the U.S. Government would be agreeable to this suggestion, for it might require Congressional approval as the period might extend into the next financial year.

In any case, if the trade and industry are not prepared to take up the cotton, the Government should consider the feasibility of using it for building up a buffer stock on its own for balancing supplies in lean seasons. Last two seasons' experience of acute shortage of supplies and shooting prices should not be allowed to repeat. If, however, the Government does not have the guts to take this step, it should try to persuade the U.S. Government to permit the financial allocation made under this agreement to be used for importing oils and fats in which there is a growing shortage in this country. It will, however, strike the outside world as something odd that a Government should want to make such a change within a few days of signing the agreement. But losing face is certainly a less important consideration than doing things that are most useful, economical and far-sighted.

Bengal Coal's Debenture Issue

The buoyancy of equities in the past two years has somewhat relegated to the background the debenture-stocks of companies. Not only have the fresh issues of debentures been limited but some companies have even converted the debentures into equities by raising capital through issue of new shares. While such a development is a healthy one, it is well to recognise the importance of debentures. For debentures serve two notable purposes. One, they provide funds to companies for financing a part of the expansion and development programme that may be undertaken without resulting in overcapitalisation. From this point of view, the importance of debentures is all the greater to a company which is engaged in exploiting wasting assets such as coal. Two, the debentures form an essential constituent in the investment portfolio of individual and institutional investors. It would be foolish for an investor to have all his savings in equities. He must always balance his portfolio by having some fixed-yielders as well. Debentures are repayable on a specified date, carry a fixed rate of interest and are fully secured. They are, therefore, more readily marketable than equities.

The aforesaid purposes will be well served by the proposed issue of 6,000 6½ per cent Rs. 1,000 debenture-stock 1964-75 announced by the Bengal Coal Company Ltd., which ranks as the largest, oldest and soundest coal company in India. The subscription list will open on Wednesday the 22nd inst. and be closed on the 24th or later at the discretion of the Directors. The issue will be at par, that is, Rs. 1,000 per stock, payable in full on application, and the rate of interest is subject to deduction of income-tax. Interest will be payable half-yearly on 1st May and 1st November, the initial payment of Rs. 38 per stock being made on 1st November 1961. The stock will mature for repayment at par plus accrued interest on 31st October 1975. It will be redeemable at Rs. 5 lakhs in each year from and after 1964 by the annual operation of a sinking fund.

Of the proposed debenture issue amounting to Rs. 60 lakhs, firm applications in respect of Rs. 30 lakhs have already been received by the Company and it has been announced that these will be accepted in full. The applications received include one for Rs. 5 lakhs from the Life Insurance Corporation.

The main object of the debenture issue is to raise a part of the finance for the implementation of the expansion programme which envisages an increase in the Company's coal raisings from the present level to over four million tons per annum by the end of 1965. The actual output in 1960 was more than three million tons. The total capital outlay on the programme is estimated at Rs. 156.35 lakhs. It will be recalled that, in the second week of December 1960, the Company issued to the shareholders 20,000 shares of Rs. 100 each at a premium of Rs. 100 per share. The issue was fully taken up and provided the sum of Rs. 40 lakhs. The proposed offer of debenture-stock will yield Rs. 57 lakhs (after excluding expenses). The balance of outlay—Rs. 59.85 lakhs—is to be met from the Company's internal resources.

Founded way back in 1844, the Bengal Coal Company today ranks, as already stated, as the largest coal company in the private sector. It is at present working 17 collieries—most of them are in the Raniganje field—with total reserves estimated at 300 million tons. A full picture of the Company's finances can be had from the prospectus published on pages 468-469 of this issue.

CENTRAL BUDGET

(*Concluded from page 483*)

classified under "Miscellaneous," has been transferred to this section as a separate new major head. This is only as it should be, considering the importance assumed by labour and employment in the context of economic development.

Another notable change effected pertains to the adjustment of all grants given by the Centre to the States under one major head, "Grants-in-aid to States," but the various types of grants—statutory, Plan and non-Plan—will be indicated separately according to the Ministries administering them. This arrangement rectifies the defect in the old procedure which inflated not only the receipts of State Governments under the major head concerned but also the total expenditure of the Central and State Governments together in any particular field. Surely, the new arrangement, as the Finance Minister claimed, will give at one place the total of the grants from the Centre to the States, besides facilitating an integrated control over their utilisation. The usefulness of this arrangement is enhanced by the inclusion of the provision for all grants to the States in a composite demand for the next year under the control of the Finance Ministry, the grants debitable to revenue and capital accounts being shown under separate sub-heads according to the subjects to which they relate and portions thereof placed at the disposal of the Ministries concerned.

Further, the payments to States of their share of Union excise duties, hitherto shown as expenditure under the major head "Union Excise Duties," will hereafter be shown under a distinct major head "States' Share of Union Excise Duties," since these payments also represent the resources transferred to the States. Likewise, the payments to local bodies of the net proceeds of certain duties and taxes, such as terminal taxes, entertainment taxes and taxes on vehicles, which, too, represent transfer of revenue from the Centre, will be adjusted in the accounts of both Central and State Governments instead of treating them as just cost of collection of the taxes and adjusted under the major heads concerned in the section "Direct Demands on Revenue" as at present.

The aforesaid changes are quite valuable, giving as they do a clearer idea of the purposes for which sums are being provided in the Central Government budget. But this alone is not sufficient. The entire financial position of the Government of India, together with a consolidated picture of India's finances as a whole (including the States), should be presented in a manner which a layman can understand, just as well as he is able to understand and appreciate the position of a joint-stock company from its balance-sheet and profit and loss account. This can be done in a separate paper or by devoting a special chapter to it either in the Explanatory Memorandum or in the Economic Survey.

BANKING

(*Concluded from page 474*)

The greater expansion in gross earnings, as compared with the rise in outgoings, has enabled the Bank to improve its profit by Rs. 10.90 lakhs. The profit-margin (the ratio of profit to gross income) has gone up from 9.7 per cent to 11.7 per cent.

The total deposits show only a small rise of Rs. 42 lakhs, from Rs. 35.38 crores to Rs. 35.80 crores, but the fixed deposits have actually declined from Rs. 17.45 crores to Rs. 15.98 crores. It is mainly the savings deposits that have prevented a drop in total deposits by staging a substantial accretion of Rs. 1.10 crores. Current accounts are better by Rs. 0.78 crore. The Bank's advances to trade and industry have gone up from Rs. 19.46 crores to Rs. 24.34 crores. Consequently, the advances (to deposits) ratio has shown a smart increase from 55 per cent to 67.9 per cent which is the highest on record since 1948. The demand for more accommodation from its clients has been met by larger borrowings from other banks and by a reduction in investments.

The paid-up capital of the Bank is Rs. 50 lakhs, divided into 100,000 ordinary shares of Rs. 50 each fully paid-up, supplemented by reserves of Rs. 60 lakhs. Although the reserves are in excess of paid-up capital, the Directors have followed the prudent policy of transferring substantial amounts to reserves. At a time when the banks in India have to assume increased responsibilities, the building up of adequate reserves is a sound policy and must be continued in future also.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2607 **BOMBAY, 25th MARCH 1961** **PRICE Rs. 2**

U. S. PRESIDENT GIVES A BOLD LEAD

EVEN during the first two months of office as the President of the United States of America, Mr. John F. Kennedy has provided enough evidence to show that he is a man not merely of imagination and foresight but also of dynamic action. While his inaugural address and the State-of-the-Union Message reflected the former characteristic, his messages to the Congress on revival of economic buoyancy at home and reducing the balance of payments deficit to a manageable proportion constituted a testimony to the latter. These messages showed that he meant business. The drain on the U.S. gold reserves has been checked to a considerable extent and confidence in the stability of the U.S. dollar has been visibly restored, as witness the return of the dollar price of gold in the European bullion markets to its normal level. There are, of course, still some doubting Thomases who are not free from misgivings about the efficacy of President Kennedy's proposals, but they belong to the class of speculators who are prepared to take the chance of making a profit even on the basis of very remote possibilities. It suits these "financiers" to give public expression to their "doubts." Obviously, this sort of talking the world into a crisis is one of the inconvenient freedoms which the free world has to suffer even in this era of planning for the future. The risk inherent in this freedom can, however, be minimised if Governments practise wise economic policies in the domestic sphere and if there is mutual cooperation between the surplus and deficit countries. The free world is certainly moving in that direction and President Kennedy has been zealously and vigorously trying to accelerate the pace of this movement. His special message to the Congress on foreign aid to underdeveloped countries, sent on 22nd March 1961, is one more proof of his transparent sincerity and the readiness of his Administration to play its part in solving the economic problems confronting the world. It is also a proof of his determination to translate into early practice the ideas he propounded before and after he became President. Those who thought—and there were many both within and outside the U.S.—that Mr. Kennedy as President would be different from Mr. Kennedy as a Senator in the Opposition have now been trounced.

The programme of aid to underdeveloped countries outlined by President Kennedy in the aforesaid message is very gratifying, for it is so designed as to suit the needs and aspirations of the countries that deserve to be helped better than is the case with the existing arrangements. If the U.S. Congress fails to respond to it, despite the President's powerful advocacy, there will be widespread disappointment in all the underdeveloped countries. What is more, the Congress will emerge as an unenlightened body, incapable of viewing the world events in their proper perspective even after it has been vividly presented by the President. The only people who will feel delighted at such an outcome will be the rulers in the Communist countries and the Communist Party in India. The more we read President Kennedy's message the more we feel that it will come as a rude shock to the people of underdeveloped countries if it does not succeed in winning the support of the Congress, for there can be no better cogently argued case than this message. It is so packed with reason and emotion and so full of human angle that only a Shylock can remain unmoved.

Three first class points have been made by the President in his attempt to bring out the importance of assisting the economic and social progress of the less developed areas of the world. These are:

1. "Existing foreign aid programmes and concepts are largely unsatisfactory and unsuited for our needs and for the needs of the underdeveloped world as it enters the sixties.

2. "The economic collapse of those free but less developed nations which now stand poised between sustained growth and economic chaos would be disastrous to our national security, harmful to our comparative prosperity and offensive to our conscience.

3. "There exists in the 1960's an historic opportunity for a major economic assistance effort by the free industrialised nations to move more than half the people of the less developed nations into self-sustained economic growth, while the rest move substantially closer to the day when they, too, will no longer have to depend on outside assistance."

The programme which President Kennedy has recommended for the approval and acceptance of the Congress is noteworthy for the new set of eight basic concepts and principles. These, in the words of the President himself, are:

1. *Unified administration and operation*—a single agency in Washington and the field, equipped with a flexible set of tools, in place of several competing and confusing aid units.

2. *Country plans*—a carefully thought-through programme tailored to meet the needs and the resource potential of each individual country, instead of a series of individual, unrelated projects. Frequently, in the past, the development goals and projects have not been undertaken as integral steps in a long-range economic development programme.

3. *Long-term planning and financing*—the only way to make meaningful and economical commitments.

4. *Special emphasis on development loans repayable in dollars*—more conducive to business-like relations and mutual respect than sustaining grants or loans repaid in local currencies, although some instances of the latter are unavoidable.

5. Special attention to those nations most willing and able to mobilise their own resources, make necessary social and economic reforms, engage in long-range planning, and make the other efforts necessary if these are to reach the stage of self-sustaining growth.

6. *Multi-lateral approach*—a programme and level of commitments designed to encourage and complement an increased effort by other industrialised nations.

7. *A new agency with new personnel*—drawing upon the most competent and dedicated career servants now in the field, and attracting the highest quality from every part of the nation.

8. *Separation from military assistance*—the U.S. programme of aid to social and economic development must be seen on its own merits, and judged in the light of its vital and distinctive contribution to its basic security needs.

The President has proposed that the various agencies through which aid is being administered such as the I.C.A., D.L.F., P.L. 480, the local currency lending activities of the Export-Import Bank, the Peace Corps and the donation of agricultural surpluses be brought under a single administration in Washington which will work through a single mission chief in each country under the U.S. Ambassador. He is of the view that this arrangement will enhance the utility of foreign aid as an effective instrument of the overall efforts of the U.S. for securing world peace and security. The President has further proposed that the Congress should authorise the new aid agency to make long-term commitments for not less than five years and vest it with borrowing authority also for five years, so that it can make available loans repayable in dollars. Thirdly, he has suggested that, out of the total foreign aid (military and non-military) budget of $4 billion previously requested for 1961-62, $2.4 billion be earmarked for economic aid, as against $2.2 billion intended by the Eisenhower Administration, and that military assistance be reduced correspondingly. (These figures do not reflect P.L. 480 operations.) The President is confident that this readjustment can be effected without any adverse effect on the military commitments to its Allies abroad. And, fourthly, the President has proposed that, henceforth, an increasing proportion of aid should be in long-term loans at low or no rates of interest repayable in dollars rather than in local currency. The terms of repayment will vary from as long as 50 years for those countries just starting on the road to development to a much shorter period of time for those countries that are nearing the stage of self-sufficient growth. In the coming year, $900 million out of the proposed $2.4 billion will be available in long-term low or interest-free development loans repayable in dollars. Again, of the total, $2 billion will be spent directly for goods and services benefiting the U.S. economy. To those who may object to the long-term loans on easy repayment terms on the ground that they will undercut the other normal lending institutions, Mr. Kennedy has provided the telling reply that lending on the terms suggested by him is not a normal banking practice.

From the point of view of underdeveloped countries, every one of the proposals, concepts and principles is welcome. Some may feel that the shift in the emphasis from loans repayable in local currency to loans repayable in dollars will mean a hardship to the recipient countries. But it need not be so, as the rates of interest will be *nil* or only small and the repayment will begin after a very long period. Further, loans repayable in local currency are not proposed to be given up altogether. In any case, as such loans virtually amount to charity in actual practice, they are repugnant to those who value self-respect. Sentiment apart, availability of loans the repayment problem of which is passed on to the

lender to be tackled is not conducive to fostering good economic habits, such as efficiency, thrift and rectitude among the receiving countries. Moreover, this change may serve as an easier example to be followed by other industrially advanced countries in rendering economic aid to the developing countries. None of them, it may be noted, is now favourably inclined to adopt the U.S. practice of giving loans repayable in local currencies.

The most valuable of all the proposals of the U.S. President is that aid should be authorised on a long-term basis. Whenever spokesmen of India put forward this proposal, their U.S. confreres used to say that the Congress would not agree to give up its right for sanctioning the budget only for one year. The same explanation was offered by other countries also. President Kennedy has, therefore, taken a bold step in trying to break fresh ground in this respect and blaze a trail for other countries. He has shown that his suggestion does not in any way materially reduce the rights and privileges of the Congress. Thus, close consultation and co-operation with the Congress, according to him, will still be essential, including an annual review of the programme. And the Administration will still need annual appropriations of those amounts needed to meet requirements for which loans repayable in dollars will be unsuitable. The reasons advanced by President Kennedy in favour of long-term authorisations are worth quoting. He said:

"A programme based on long-range plans instead of short-run crises cannot be financed on a short-term basis. Long-term authorisation, planning and financing are the key to the continuity and efficiency of the entire programme. If we are unwilling to make such a long-term commitment, we cannot expect any increased response from other potential donors or any realistic planning from the recipient nations.... No other step (than long-term authorisation) would be such a clear signal of our intentions to all the world. No other step would do more to eliminate the restrictions and confusions which have rendered the current foreign aid programme so often ineffective. No other step would do more to help obtain the service of top-flight personnel. And in no other way can we encourage the less-developed nations to make a sustained national effort over a long-term period. For, if we are to have a programme designed to brighten the future, that programme must have a future. Experience has shown that long-range needs cannot be met evenly and economically by a series of one-year programmes. . . . The new continuity and flexibility this kind of long-term authority will bring cannot help but result in more productive criteria, a greater effort on the part of the developing nations, greater contributions from our more prosperous allies, and more solid results and real long-run economy to the taxpayers. The new emphasis on long-term plans and realistic targets will give both the Congress and the Executive a better basis for evaluating the validity of our expenditure and progress."

It would thus be seen that President Kennedy is vigorously pleading the cause of India and underdeveloped countries both in the U.S. Congress and in the rest of the developed countries in the free world. Simultaneous with the delivery of the aforesaid message to the Congress, he has deputed the Under-Secretary of State, Mr. George W. Ball, to confer with the representatives of the O.E.C.D. countries on a specific formula for stepping up the foreign aid contribution of his European partners. It is now for the underdeveloped countries to render the task of President Kennedy easier by drawing up their plans realistically. "It is essential," as the President pertinently said, "that the developing countries set for themselves sensible targets, that these targets be based on balanced programmes which use their own resources to the maximum, and that each recipient Government seriously undertakes to the best of its ability on its own those efforts of resource-mobilisation, self-help and internal reform—including land reform, tax reform, improved education and social justice—which its own development requires and which would increase its capacity to absorb external capital productively." India satisfies in full measure most of these requirements. Only, the Government has to be a little more pragmatic in framing and practising its economic policies and a lot more efficient in drawing up its development projects.

JUTE PRICES AND EXPORTS

THE jute industry was India's biggest earner of foreign exchange in 1960, having brought in Rs. 134 crores as compared with the tea industry's earning of Rs. 120 crores. While the volume of jute goods exports during the year fell by 6 per cent as compared with 1959, their value had increased by about 21 per cent over the latter year's figure of Rs. 111 crores. It would thus appear that the higher export earnings of the jute industry in 1960 were obtained not through an increase in the volume of exports but through an increase in the prices of jute goods. In a sense, this was not quite a healthy export performance, for, when buyers were called upon to pay anything from 30 per cent to 50 per cent more for their requirements of jute goods, some degree of consumer resistance came into play, leading to a fall in the volume of exports. Since the higher prices were, in the main, caused by a 100 per cent increase in the cost of raw material, namely, raw jute, any prolongation of this situation would only spell further consumer resistance, leading to a permanent loss of some foreign markets for jute goods through substitution. Mr. D. C. B. Pilkington, Chairman of the Indian Jute Mills Association, was, therefore, on no alarmist ground when he said, in his speech at the annual general meeting of the Association at Calcutta last week-end, that the higher value for a lower volume of exports was only a temporary advantage and that, unless prices fell, export earnings, too, would ultimately decline.

Mr. Pilkington's speech thus had the central theme of raw material cost. The prices of raw jute, which began rising since the close of 1959, nearly doubled during 1960. This price rise was *basically* caused by an acute shortage of raw jute and not by speculation. If anything, speculation—from which the jute market no doubt suffers more than most other commodity markets—was an effect of the price rise caused initially by the shortage of raw jute and, as such, did exaggerate the price movement. Where the price trend was determined, in the ultimate analysis, by the size of the jute crop which, in 1960, turned out to be a partial failure due to drought at the time of its sowing, Nature, more than man, was responsible for the difficulties of the industry in that year. Still, it is an undeniable fact that the industry's difficulties would have been mitigated to some extent, if it had been able to import all the jute and cuttings then deemed necessary and if two lakh bales of the best quality Indian jute had not been exported in 1959. That at least man-made mistakes should have been avoided is the lesson learnt from the experience of the last two years.

It is in the light of this lesson that Mr. Pilkington laid down two sound requirements—one, a substantial increase in the Indian jute crop which, given normal weather conditions, can fully meet the industry's needs and even leave a small surplus for export, and the other, building up a buffer stock of jute to cushion the mills against a temporary shortage due to unfavourable weather. As far as the second requirement is concerned, it is heartening to know that the I.J.M.A. has on hand a buffer stock scheme which can be implemented as soon as there is again a surplus of jute. And it is noteworthy that this scheme is designed not only to build up a reserve stock of jute for the mills but also to prevent jute prices from falling to levels which would be unremunerative to the cultivators. As for the first requirement, it is all a question of how the yield of jute can be increased without expanding further the acreage under that crop. The yield in India, it may be noted in this connection, averages only about 2½ bales per acre, as compared with about 3½ bales in Pakistan which itself is by no means a high yield and is capable of further improvement. Much remains to be done in this field and it is, therefore, gratifying to know that the recently constituted Jute Development Section of the I.J.M.A. has been actively supplementing the work of the Central and State Governments by establishing areas of intensive cultivation in the jute growing districts to demonstrate to the cultivators the use of improved seeds, modern cultivation techniques and proper application of fertilisers. As the Section has also been collaborating with the Governments concerned in the development of seed multiplication farms and in the distribution of both seeds and fertilisers, the chances are that the next jute crop will be bigger than the last, provided Nature does not let the country down again. If this happens, the credit therefor can certainly be claimed by the I.J.M.A. which has adopted a practical and constructive approach towards the raw material question. Essentially, this approach is aimed at ensuring a bigger and better jute crop year after year.

But the industry cannot hope to be entirely independent of the vagaries of Nature, and so it will have to adopt some suitable approach towards the price question, if only to maintain its overseas markets in the face of competition from substitutes and competition from Pakistan. Such an approach cannot possibly be in the nature of temporary expedients and improvisations of the kind adopted in the last year to adjust the industry's consumption of jute to the available supplies. The steps taken by the industry to reduce, by stages, the working week to 42½ hours with 12 per cent of looms being sealed, the measures instituted by the East India Exchange to curb or temporarily suspend futures trading in jute and the Reserve Bank's directive to the scheduled banks to restrict advances against jute and jute goods—all these were of no avail, relatively speaking, because the price rise was a genuine reflection of the statistical position of raw jute. If, in these circumstances, the powers-that-be began to think in terms of imposing statutory maximum prices on jute and jute goods, it was not altogether surprising. But, if they had actually resorted to such price control, it would have been a remedy worse than the disease, ignoring the lessons of control attempted ten years ago. What these lessons are and how any such control is inadvisable are better described in the words of Mr. Pilkington himself:

"We all know what happened when this was attempted ten years ago. Black marketing in jute goods was rife, the export trade was diverted from the established channels to unscrupulous dealers and the industry suffered a substantial loss of markets to paper and bulk handling, most of which have never been recovered. The fact is that, for an international commodity like jute goods, it is quite impracticable for any one producing country to impose an artificial price below the market level; and there is no doubt that, if this were again attempted today, the consequences would be equally disastrous."

But, at the same time, "price stability at economic levels and continuity of supply" are most essential, if the overseas markets are to be maintained and expanded in the face of fierce competition from substitutes. Since such price stability can be ensured for jute goods only by keeping the prices of raw jute within bounds, the question is whether voluntary price fixing can be more effective than statutory control. The I.J.M.A. seems to think that it can operate successfully a voluntary scheme of maximum prices for raw jute. It has, in fact, drawn up a schedule of maximum prices related to current market conditions and also extended the quota system so as to limit the purchases of jute by the mills not only to the quantities but also to the maximum prices fixed by the Association. Mr. Pilkington's hope, in this connection, is that, so long as consumption of raw jute by mills is kept in line with available supplies, the I.J.M.A.'s maximum prices for raw jute would remain realistic. If imports of early Pakistan jute are freely licensed in terms of the Governments recent announcement, it may also be that production will not be curtailed for want of raw material. In that case, the maintenance, by the I.J.M.A., of maximum prices for raw jute at a level fair to the industry and the cultivator alike may well make for an increase in the volume of jute goods exports through a possible return to more stable and competitive prices. That only an increase, so brought about, in the volume of exports can be a sound basis for a lasting rise in the jute industry's export earnings requires to be emphasised again.

Fortunately for the country, the export prospects are not gloomy, for, in many markets, consumers have curtailed their purchases and drawn heavily on stocks thus far, in the hope that prices of jute goods will fall with the arrival of the next jute crop. In fact, this is the opinion of an I.J.M.A. delegation which visited a number of foreign countries last year and found no widespread tendency towards a switch from jute to other substitutes. But these export prospects should not be allowed to be marred by any increase in labour costs unrelated to higher productivity or by any arbitrary limitation of modernisation to the preparing and spinning processes alone. Mr. Pilkington's warning that the Indian jute industry might be left behind if it were prevented from adopting the emerging new techniques in weaving would need to be taken seriously. Let not the mistakes made in cotton textile industry in this respect, mistakes which have dearly cost the country's export trade in cloth without any tangible benefit to labour or handloom industry, be repeated in jute industry, too.

MARKET GOSSIP

The Pragmatic Approach

THE word 'pragmatic,' like the other word 'realistic,' is more often intuitively understood than precisely defined. With varying emphasis in different contexts, the word is yet to carry a generally acceptable connotation. But there is at least one definition which is reasonably eligible for general acceptance on the score of its pregnant brevity. To be pragmatic, according to this definition, is "not to allow the attainment of agreed ends to be deferred by doctrinaire preferences in the selection of means." This was the definition which a former President of the Bombay Chamber of Commerce and Industry offered in 1956 while moving a resolution on the subject of private enterprise and investment at the then annual general meeting of the Associated Chambers of Commerce of India. While recalling this significant definition in his presidential address at the annual general meeting of the Bombay Chamber of Commerce and Industry held on 23rd March 1961, Mr. C. H. Campbell did well to recall, at the same time, the no less significant context in which his predecessor had used that word.

What Mr. Campbell's predecessor had said was to the effect "that, if, within the limitations imposed by the Government's policy statements, Government adopted a pragmatic approach towards individual propositions and if that pragmatic approach were more widely demonstrated by decisions of the Government of India, it would have a profoundly good effect on the volume and variety of foreign investment." This was something in the nature of a prophecy which, in the words of Mr. Campbell, is "slowly, much too slowly, coming true." Obviously, the Chamber's President, though gratified by the certain manifestation of pragmatism in at least three recent instances (namely, the decision to allow private collieries to mine adjacent as well as non-contiguous or proximate areas, the official clarification to the effect that the private sector is free to establish new fertiliser factories in collaboration with foreign capital, and the declaration of the Union Commerce and Industry Ministry that industry would be allowed to exceed the capacity licensed under the Industries Act in so far as this could be done by using indigenous raw materials and spares and incurring no further liability for foreign exchange), desired a faster and surer pace of pragmatism from the point of view of greater production and economic growth.

Much remains to be done or undone, if the economy is to be taken further on the pragmatic road. For instance, the Union Ministry of Oil is yet to discard its doctrinaire preference in regard to the means to be selected for *refining* oil in India, though foreign companies have been invited, albeit in a half-hearted manner, to discuss *prospecting* for oil. In order to drive home his point, Mr. Campbell could not have done better than recall that one refinery unit, namely, Burmah-Shell, had offered to expand, without involving this country in any foreign exchange commitment, its capacity to four million tons within 18 months and also to complete a lubricating oil manufacturing complex of between 60,000 and 100,000 tons annual capacity within a further year. If this offer, which carries with it the promise of a net saving in foreign exchange of Rs. 6 crores per annum, is yet to be accepted, though it is nearly a year since it was made, it can only mean that pragmatism is still not strong enough to assert itself in the field of oil. Again, in the case of textiles, the pragmatic approach is nowhere in evidence, what with the many deterrents to the mill sector. And there is the more recent instance of the Maharashtra Land Ceilings Bill in which the pragmatic approach is conspicuous by its absence, for the proposal to take over the most efficiently managed and integrated sugarcane farms operated by sugar factories is more likely to decrease than increase production. By any pragmatic test, the need of the hour is for greater and still greater production. There can, therefore, be no two opinions on Mr. Campbell's plea for a more vigorous assertion of pragmatism in the evolution of economic and industrial policies or in their interpretation and implementation.

Cement Shortage

The current shortage of cement, which seems to have forced the Government to decide in favour of reintroducing the permit system of sale enforced only in war-time, is the result of its own shortsighted approach to the question of cement production right from the beginning. Cement is a basic commodity which, both literally and metaphorically, holds together the entire construction programmes under the Plan—whether it be building of dams or construction of factories, houses and roads. Cement production cannot be stepped up overnight. It requires elaborate production planning, sustained execution and careful management to keep costs under control and prices reasonable. The fact that, in the past, surpluses and shortages of cement have alternated indicates that cement production needs to be more carefully planned, so that the gap between supply and demand is narrowed.

Considering the present shortage which has become so acute as to necessitate introduction of permit system, it looks as though the demand for cement has been terribly underestimated. The second Plan target is 10 million tons capacity and 8.8 million tons production. The shortage has occurred in spite of the fact that the second Plan production target has been very nearly reached. It may be noted that the second Plan target was originally proposed at 15 million tons. This was, however, regarded as unrealistic, on the ground that it was far above any conceivable rise in demand during the Plan period and impossible of achievement. Foreign exchange difficulties and a temporary lull in demand owing to slowing down of the execution of projects lent weight to this argument. The targets were consequently revised in a downward direction, an unwarranted action as has been proved by the current shortage.

The Draft Third Plan has set a capacity target of 15 million tons and production target of 13 million tons to be reached by 1965-66. Demand is estimated to reach 13.50 million tons at the end of the third Plan. If production increases as expected, this demand would be largely met. But judging from the experience of the second Plan period, this estimate could well turn out to be an underestimate. It is necessary, therefore, to plan for an expansion of capacity that will be ahead of all possible increases in demand.

One thing that needs to be borne in mind in planning cement production is the great potential demand for cement. With the pressing need for more housing, better and more roads, cement requirement is capable of continuous rise. The apparent lack of demand, which at times emerges, is due more to higher prices and the lull in construction activities brought about by extraneous influences, than to supply outstripping actual requirements. In other words, higher cement prices tend to discourage demand. If, on the other hand, prices are not sufficient to cover costs and to ensure a fair return on the capital employed, producers will have no incentive to increase or even maintain production. It is from this angle that the Tariff Commission should look at the problem of prices which it has been asked to investigate. Cement producers have, with considerable force and justification, been pressing for a higher ex-factory price for cement which will offset, to some extent at least, the increase in cost of production.

Ensuring a higher return to producers is the best encouragement for higher production. At present, the difference between the price which the consumer pays and that which the producer receives is too large. The price structure certainly admits of a judicious readjustment which, while ensuring a higher price to the producer, will keep the price for the consumer at a reasonable level. But no inducement, however attractive, can lead to higher production through full utilisation of existing capacity or installation of new capacity, unless shortage of essential raw materials for cement production is made good and adequate transport facilities are provided.

Hot Money in W. Europe

The modest revaluation of the D-mark still seems to be having quite an unsettling effect on the European currency system. There is a general feeling in the foreign exchange markets of most of the continental nations that, in spite of the denials of Dr. Erhard, there may be a further upward revision of the external value of D-mark. And such a feeling or a calculated possibility is disturbing the currencies of other countries too. It is believed that, if D-mark were revalued again, other continental currencies, too, might undergo a revaluation. This factor is chiefly responsible for a fresh movement of short-term funds to Germany, the Netherlands, Italy and Switzerland, the countries which have been able to increase their foreign currency reserves substantially in the past two to three years. The Swiss Central Bank alone, for instance, has had to absorb some $300 million in the first trading days, since revaluation of the D-mark. The German Central Bank is reported to have gained $125 million in the week ended 7th March, a period covering only the first two days after revaluation. Although these figures are expressed in dollars, it should not be thought that the pressure is only on the U.S. dollar. Actually, traders switching out of the pound sterling into continental currencies tend to do it through dollars, as it is more readily taken by the European central banks.

The movement away from sterling has taken two forms. In one case, it pertains to spot transactions of the kind associated with the exodus of investment funds. The other involves forward transactions. When the external stability of the sterling was not in question, the importers in the U.K. and other sterling area countries did not care to cover themselves against exchange risks. But now they seem to be adopting a more cautious attitude and these importers have entered the exchange market as forward buyers against sterling of the foreign currencies they are going to need afterwards.

It was against this background that the Bank for International Settlement, the annual meeting of which was held at Basle a few days back, issued a statement, endorsed by all its member-banks, to the effect that the European central banks were fairly confident of counteracting any large 'hot' money movements in the period ahead. Further, the statement announced that the central banks were co-operating closely in the exchange markets and that fairly extensive provisions for mutual aid had in fact been made. It remains to be seen how far this revelation by the B.I.S. will effectively discourage speculative movement of funds. It is believed in knowledgeable financial circles in Britain that the Basle *communiqué* actually implies that, in case hot money movement out of sterling went too far, other European central banks would hold agreed sums of sterling and not convert them for some time to come into gold or other convertible currencies. It is stated that the sums agreed to are large enough to cope with any likely hot money movements in the next few months. Even this move is considered as only of a stop-gap nature. For it does not include the U.S. dollar. A lasting solution to the problem of present currency maladjustment must, it is said, await the decision regarding the future scope of the I.M.F. itself. As is well known, there are proposals which are being discussed in the highest quarters in the U.S., the U.K. and several other countries, for widening the scope of the I.M.F. so as to make it a central bank of central banks. There are, however, many opponents to this view also. They feel that the real trouble is not inadequacy of international liquidity, but its maldistribution. They, therefore, contend that only the sustained co-operative efforts of the major European and other nations that can end the existing sense of uncertainty about the stability of Western currencies.

Atlantic Air Cargo Freights

The problem of bringing about an agreed reduction in the air cargo freight rates of the scheduled airlines has been hanging fire for quite some time. Almost all members of the International Air Transport Association (I.A.T.A.) have felt the need for this change. It is being increasingly realised that the fuller utilisation of the existing capacity can only be achieved if the airlines charge lower rates to their customers. In fact, several experts, who have made a close study of the existing freight structure, the pattern of demand for the freight services and the freight rates prevailing in international shipping, have unanimously concluded that the existing high air cargo freights are primarily responsible for inhibiting the growth of demand. There is, therefore, a general consensus that a downward revision of freight rates would go a long way towards opening up the potentialities of the market.

It will be recalled that it was in this context that the representatives of the scheduled airlines met in Paris last month to reach an agreement over freight rates. To begin with, the conference was concerned with only the Atlantic route. But it did not succeed in evolving a convention acceptable to all the parties on this limited objective. Some of the prominent airlines, however, immediately announced their intention of reducing their rates unilaterally, if the other airlines failed to settle their differences before 10th April 1961. Notable among them was Pan-American Airways. There are no signs of an agreed understanding emerging within this specified date.

Meanwhile, the B.O.A.C., too, has now decided to go ahead with price cuts in air cargo rates between the U.K. and the U.S.A. It has proposed a reduction in freight rates ranging from 32 to 76 per cent in general rates. The B.O.A.C. is even today charging concessional rates to special commodities. These will continue to remain in force. But, in addition, the B.O.A.C. intends to introduce even lower rates for some of the commodities, including textiles, shoes, books, automobiles, agricultural machinery and parts, china and glassware, chemicals, drugs and medicines. Some of the rate reductions are quite substantial. For example, the freight for certain sizes of consignments of textiles has been lowered from 5*s.* 2*d.* a kilo to 4*s.* 6*d.* a kilo. The rates on agricultural machinery, automobiles, china and glassware, also show considerable reduction. B.O.A.C. is also understood to be contemplating to bring down the rates for special commodities flown from the U.S. to Britain This category includes automobiles, agricultural machinery and parts, and such would be given the same preferential rates as on the westbound routes. It also proposes to reduce the rates for traffic between the U.K. and Canada. Since Air-India International is working in collaboration with the B.O.A.C., it is reasonable to presume that the A.-I.I.'s rates also will be tuned to those of the B.O.A.C.

The new rate structure is bound to have widespread repercussions on trade and commerce, as other airlines are bound to follow suit with a view to maintaining their share of the total freight. To the extent that the cheaper rates attract more and more cargo traffic to the airlines, the shipping interests are likely to be affected. Some time lag, of course, may be expected to intervene before trade and industry come to appreciate the potentialities and the benefits which quicker movement of cargo can confer on them. In this connection, Mr. Ralph Cohen, the Public Relations Officer of the I.A.T.A., while doing some crystal gazing on the possibilities of airline companies reducing their cargo rates, stated at Calcutta a few days ago that the real importance of carrying cargo by air lay in the revolution of distribution methods which it was bringing about. Mr. Cohen appropriately quoted the example of a manufacturer of electronic equipment in the U.S.A. who had done away with regional warehouses, because he could send supplies by air against orders from all his dealers in the United States. This helped to release an enormous amount of working capital tied up in inventories. Such effects could not be limited only to the internal distribution system in the U.S. In due course, as air cargo freights come down over most of the main inter-continental routes, the system of distribution of even internationally traded commodities is bound to be affected. It will also come into vogue in the internal air services of countries of continental sizes such as India, provided the domestic airlines have foresight and the necessary drive. Has the I.A.C. any concrete plan for expanding its cargo services in India by bringing them within the reach of a larger section of the business community?

A SHORT WEEK FOR SHARE MARKET

PRICES EASE AFTER INITIAL RISE

(From Our Own Correspondents)

BOMBAY, *23rd March*

THE share market had only three working sessions during the week under review, as it remained closed on Friday (*Gudi Padva*), Saturday (succeeding day of the Account period's ending) and Tuesday (*Jamshedi Navroz*). The three-week new account period, as against the normal fortnightly settlements, commenced on Monday the 20th inst. The market depicted a distinctly firm trend, notwithstanding higher carryforward charges at the previous settlement. The firmness was engendered by persistent investment support and scarcity of offerings. The scrips of companies having large reserves were particularly favoured on hopes of bonus issues. Most of the company reports published during the week were highly encouraging and this too helped to sustain the bullish trend. Consequently, quite a number of counters in both cash and forward lists scored handsome additions to values. The upward trend was, however, halted on Wednesday following liquidation by tired bulls and profit-taking at higher levels. The easy trend gathered further momentum today, as buyers were reserved, though some shares staged a recovery induced by expectations regarding grant of liberal financial assistance from the U.S., West Germany and other countries. The scrips of a few newly floated companies were bid at higher rates on expectations of rights issues to raise capital for financing expansion schemes.

So far as the share market at Calcutta is concerned, this week witnessed buoyant conditions, thanks to continued support from genuine investors and reluctance of holders to part with their possessions. Encouraging working results of several companies led to hopes of greater industrial activity. The impetus to exports of light engineering products and the prospects in this regard against the background of improvement in the supply of steel caused engineerings to rise further. The fall in prices of jute goods, coupled with the prospects of a bumper fibre crop in the next season, resulted in increased activity in jutes. Coals were favoured at hardening rates, since it was held that the present crisis of shortage of fuel might prompt New Delhi to be sympathetic to coal industry. Paper shares were firm. Tea shares were quiet on fears that the increased excise duties would raise the cost of output; however, a late recovery was in evidence.

To revert to the Bombay market. In the steel section, Tata Steels advanced from Rs. 155 to Rs. 156.25 on Monday the 20th inst. and, after declining to Rs. 153.75 today, recovered to finish at Rs. 154.25. The net loss over the week was 75 nP. Indian Irons increased from Rs. 26.75 to Rs. 27.25 before closing at Rs. 26.95. Mukand Irons eased by 25 nP to Rs. 27, after being higher at Rs. 27.50.

Among textiles, Kohinoors provided a bright spot, the quotation moving up by Rs. 11 to Rs. 312. At one time, they had gone up to as high as Rs. 318. Simplex also attracted good support and spurted by Rs. 10.50 to Rs. 190. Centurys advanced by Rs. 10 to Rs. 560, reflecting the operators' satisfaction over the excellent results for 1960 which show a notable rise in gross profit to Rs. 2.85 crores from Rs. 1.76 crores for 1959. The net dividend for 1960 is also higher by Re. 1 at Rs. 22. Swans hardened by Rs. 5 to Rs. 550. Shreeniwas gathered Rs. 4.50 to Rs. 270.50. The Directors of the Company have recommended a higher taxable dividend of Rs. 18 per share (net of Rs. 12.60) for 1960, as against Rs. 15 (net of Rs. 10.50) paid in the previous year. Gokaks improved by Rs. 3 to Rs. 188, Svadeshis by Rs. 2.50 to Rs. 257 and Osmans by Rs. 2 to Rs. 59. Bombay Dyeings and Tata Mills put on 50 nP to Rs. 67.10 and Rs. 47.50, respectively. India Uniteds gained 16 nP to Rs. 14.60. New Greats were firm at Rs. 205 and Indores at Rs. 141. Standards, however, were subjected to long liquidation and dropped Rs. 15 to Rs. 1,408. Central Indias declined by Rs. 8 to Rs. 111, Finlays by Rs. 6 to Rs. 353. B. R. Cottons by Rs. 4 to Rs. 35, Khataus by Rs. 2.50 to Rs. 537.50, Morarjis by Rs. 2 to Rs. 353, and Elphinstones by Re. 1.50 to Rs. 71.50. The Directors of Finlay group of mills have maintained the dividends (taxable) for 1960 at the previous year's level of Rs. 23 for Finlay, Rs. 36 for Swan and Rs. 21.50 for Gold Mohur.

Sugar shares encountered selling, as the hopes that the Joint Committee of the Maharashtra Legislative Assembly would recommend the exclusion of cane farms attached to sugar mills from the purview of the Land Ceilings Bill were belied; the Committee has not suggested any radical change in the provisions of the Bill that are applicable to sugar companies. Belapurs receded from Rs. 309 to Rs. 292 yesterday, but recovered to Rs. 300.50 today. The net loss over the week was Rs. 8.50. Maharashtra Sugars and Phaltans fell by Rs. 5 each to Rs. 196 and Rs. 150, respectively. Walchandnagars lost Re. 1.25 to Rs. 240. The Company has sought the official permission for the issue of 50,500 equity shares of Rs. 100 each to existing shareholders in the proportion of one share for every two held.

Cements were generally easy. Digvijays slipped down by Rs. 5.50 to Rs. 162.50. Associated Cements shed 75 nP to Rs. 156.75, after being higher at Rs. 158.75 yesterday. Sone Valleys lost 12 nP to Rs. 5.08 and Jaipur Udyogs 4 nP to Rs. 12.52. Bagalkots, however, were well fancied and improved by Re. 1.08 to Rs. 9.60.

Among automobiles, Premiers were done at Rs. 177 *ex-div.*, as against Rs. 185 *cum-div.* Hindustan Motors rose by 51 nP to Rs. 21.68 *ex-div*; the *cum-div.* quotation last week was Rs. 21.80. In the shipping group, Scindias eased by 12 nP to Rs. 15.88. Great Easterns softened by 4 nP to Rs. 16.

A sharp rise of Rs. 40 to Rs. 340 in the quotation for T. Maneklals was the feature of trading in the engineering section during the week. Josts Engineerings jumped up by Rs. 21 to Rs. 102. Jyotis spurted by Rs. 7 to Rs. 185. Telcos advanced from Rs. 342 to Rs. 351 on Monday. Thereafter, they slided down and touched Rs. 341.50 today before finishing at Rs. 343.50. New Standards rose by Rs. 3 to Rs. 191. Coopers and Khandalwals gathered a rupee each to Rs. 205 and Rs. 92, respectively. Larsen and Toubros were firm at Rs. 45. Mahindras spurted by 88 nP to Rs. 22.24. But Structurals were hammered down from Rs. 235 to Rs. 207.50. Premier Constructions fell by Rs. 7 to Rs. 220. Alcocks receded by Rs. 5 to Rs. 307. Texmacos shed Re. 1 to Rs. 23. Shivrajpurs were unchanged at Rs. 90.

In the dyes and chemicals section, Alembics evoked very good support and were marked up by Rs. 21.25 to Rs. 282.50. Synthetics and Chemicals spurted by Rs. 7 to Rs. 165. Poly Chems advanced by Rs. 6.25 to Rs. 262.50. Chemo Pharmas put on Re. 1.75 to Rs. 28.30, Citrics Re. 1.50 to Rs. 64, Dharamsis Re. 1.25 to Rs. 262.50, Dhrangadhras 50 nP to Rs. 131.50 and Tata Chemicals 28 nP to Rs. 19.08. Adarshs were fully maintained at Rs. 85. Colour Chems, however, encountered selling and fell by Rs. 20 to Rs. 365. Amar Dyes declined by Rs. 17.50 to Rs. 422.50. India Dyestuffs receded by Rs. 15 to Rs. 557.50.

There was a further rise in the values of rayon shares this week. National Rayons advanced by Rs. 9.50 to Rs. 545.50; they were quoted at as high as Rs. 558 at one time on the 20th inst. Barodas strengthened by Rs. 5.75 to Rs. 153. The Directors of the Company have decided to raise the issued equity share capital from Rs. 3.50 crores to Rs. 4.90 crores by issuing at par 140,000 shares of Rs. 100 each. Indian Rayons rose by Rs. 5 to Rs. 73.50. Gwaliors picked up Re. 1.50 to Rs. 48.50. South Indian Viscose rallied from Rs. 172 to Rs. 176 today but lost the gain to finish at Rs. 172.

Among other miscellaneous industrials, Ceat Tyres shot up by Rs. 22.50 to Rs. 310, Premier Tyres rising by Rs. 3.50 to Rs. 116. New India Fisheries spurted by Rs. 12.50 to Rs. 102. Killicks improved by Rs. 5 to Rs. 110. Bombay Burmahs began the week at Rs. 630, as against the previous close of Rs. 621, and advanced to Rs. 635 yesterday. After declining to Rs. 168 today, they finished higher at Rs. 625. Wimcos hardened by Rs. 3 to Rs. 303. The dividend for the year 1960 is Rs. 16 per share subject to tax, as against Rs. 16 inclusive of Re. 1 as bonus paid in 1959. Anil Hardboards gathered Rs. 2 to Rs. 307.50. Standard Batteries gained Rs. 3.50 to Rs. 212.50 *ex-div.* Tata Oils were firm at Rs. 84. Indian Hume Pipes rose by Re. 1.50 to Rs. 184. West Coasts, however, fell by Rs. 10 to Rs. 215. Voltas declined by Rs. 6 to Rs. 292, following the statement of the Chairman at the last annual meeting that the management had no intention whatever to issue fresh share capital. Laxmi Starchs eased by Rs. 4.30 to Rs. 214. Hindustan Levers shed 30 nP to Rs. 50.70, Greaves Cottons 50 nP to Rs. 177 and Philips Carbons 12 nP to Rs. 19.

• • • •

Madras Stock Exchange

MADRAS, *22nd March*

The Stock Exchange put on a distinctly cheerful appearance during the major part of the week under review, thanks to enlarged buying support from both investors and professional operators. Higher levels, of course, attracted profit-taking, but still the closing prices were generally well above those at the end of last week. Textiles were firm, in view of the impressive working results of several units for the year 1960. On encouraging advices from auction centres, teas attracted good attention. Coffees moved up following reports of larger crop in the major plantations during this season. Active conditions prevailed in the sugar section. Banks also evoked support and registered handsome gains. Electricals ruled steady. Chemicals and cements were particularly firm in the miscellaneous section.

ASHOK PAPER MILLS LTD.

A new company, the Ashok Paper Mills Ltd., proposes to enter the capital market in the first week of April, with an offering at par of 115,000 equity shares of Rs. 10 each and 20,000 redeemable cumulative preference shares (6.25 per cent free of Company's tax, but subject to deduction of tax at prescribed rate) of Rs. 100 each. This offer represents only a part of the total issue of equity and preference shares of the face value of Rs. 2.25 crores; for the Directors and their friends have subscribed to equity shares to the tune of Rs. 51.4 lakhs and their friends have further agreed to take up equity shares of Rs. 8.6 lakhs. A French participant, Messrs. Cogemic, will subscribe to the equity capital to the extent of Rs. 30 lakhs.

The Company will put up an integrated paper and pulp mill, with a daily production capacity of 50 tons of writing and printing paper, at Rameshwaranagar, near Darbhanga in north Bihar. The estimated cost of the project is Rs. 6 crores. The plant will utilise sugarcane bagasse as the chief raw material, with variable quantities of bamboo and sabai grass. A French group of manufacturers, Messrs. E.M.P.A.C.E.I., will give technical collaboration and carry out the erection of the plant.

PROGRESS OF CHARTERED BANK

FROM STRENGTH TO STRENGTH

A FURTHER expansion in business taking the balance-sheet total to a fresh peak, a high degree of liquidity, and a notable rise in profit—these are the outstanding features disclosed by the Directors' report and accounts of the Chartered Bank for the year ended December 1960. The balance-sheet aggregate as at the end of 1960 stood at over £316.20 million, which represents a rise of more than £45.81 million as compared with the previous all-time record total of £270.39 million a year before. The figure will be higher still at £362.76 million if account is taken of the Bank's wholly owned subsidiaries as well. The Bank maintained a high degree of liquidity as evidenced by an improvement of 1.47 per cent to 19.55 per cent in the ratio of cash to demand and time liabilities. The Bank and its subsidiaries together earned during 1960 a total profit of £761,916, as against £619,696 in the previous year, or an increase of £142,220. This profit figure has been arrived at after the allocations to premises account and pensions and other staff funds, the sums actually provided under these two heads being £250,000 (same as in 1959) and £155,000 (£145,000 in 1959), respectively.

Thanks to the larger profit earned by the Bank thus, the dividend to shareholders has been stepped up from 15 to 15½ per cent. The interim dividend paid on 30th September 1960 was 8 per cent less income-tax, as against the interim dividend of 7½ per cent paid for 1959. And the Directors have recommended a final dividend of 7½ per cent less income-tax on the enhanced capital of £5.5 million, the corresponding rate of dividend distributed on the old capital of £5.0 million in 1959 being the same. It will be recalled that, in October 1960, the issued capital of the Bank was increased from £5.0 million to £5.5 million by capitalising £500,000 out of the reserve fund. The total amount required for paying the dividend for 1960 is £497,656, as against £459,375 for 1959 and £405,375 for 1958. A larger sum of £250,000 has been allocated to reserve fund; in 1959, only £150,000 had been allocated as reserves for contingencies.

The statement below compares the Bank's main items of liabilities and assets as on 31st December 1960 with those at the close of the preceding three years.

(In thousand £ sterling)

	As on 31st December			
	1960	1959	1958	1957
LIABILITIES (MAIN)				
Capital	5,500	5,000	5,000	4,400
Reserve fund	5,700	5,500	5,500	5,700
Undistributed surplus	470	463	455	412
Current and other accounts	181,455	183,655	176,296	178,329
Fixed deposits	108,802	59,578	42,338	26,842
Notes in circulation	4,732	3,869	3,806	3,731
Bills payable	2,337	1,668	1,557	1,810
Acceptances (contra item)	7,524	10,396	7,365	10,143
ASSETS (MAIN)				
Cash	57,085	44,289	48,783	47,458
Investments—				
Government and other securities	69,431	63,821	57,857	47,458
Securities lodged against note issue	4,706	3,945	3,882	3,876
Advances	144,436	116,587	98,809	97,784
Bills of exchange	23,734	22,699	24,180	18,382
Bank premises	3,310	3,190	2,887	2,621
Holdings in subsidiaries	2,897	2,899	2,895	2,883
Trade investments	416	385	197	8
Balance-sheet total	316,208	270,390	243,118	231,623

The rise in the profit of the Bank for 1960 must be attributed to the marked expansion in its advances and bills business. Over the year, the total advances have gone up by £27.85 million to as much as £144.44 million. The bills of exchange have also gone up, albeit by £1.04 million to £23.73 million. The increase in bank credit has been rendered possible by the substantial rise of £46.52 million to £289.76 million in total deposits. The rise is solely accounted for by fixed deposits which have jumped up from £59.58 million to £108.30 million. A part of this remarkable increase has been neutralised by the fall of £2.20 million to £181.46 million in current and other accounts, including reserves for contingencies and provision for taxation. The spectacular growth in the time deposits of this Bank, operating in several countries of the world, suggests that the feature is not confined to India alone but is of a world-wide character. Unlike in the case of advances and bills, there has been a drop of £2.87 million to £7.52 million in acceptances on account of customers; this is also in contrast to the improvement of 3.03 million noted in the previous year.

The Bank has maintained, as stated earlier, a high degree of liquidity. This has been due to the significant expansion in cash balances from £44.29 million in 1959 to £57.09 million in 1960. Not only was the previous year's fall of £4.49 million completely made good but the total of £57.09 million is the highest on record. The Bank's investments have also risen quite perceptibly, the total at the end of 1960 being £74.14 million, as against £67.77 million a year before and £61.74 million two years before.

NEWS IN BRIEF

ISRAEL and also the United Arab Republic have asked the Government of India whether it will be possible to supply iron ore to them.

The question of setting up a new factory for the manufacture of telephones is being examined by the Government of India, in consultation with the Planning Commission.

The stocks of foodgrains with the Government of India amounted to 2,153,000 metric tons as on the 5th inst., as against only 793,000 tons in the beginning of 1960. Besides, stocks with State Governments early this month aggregated 800,000 tons.

Licences have been issued by the Government of India for establishing eight new sugar factories, each with a crushing capacity of 1,000 tons per day, in the Madras State. Of these, three will be in the co-operative sector and the rest in the private sector.

The Integral Coach Factory, Perambur, Madras, has undertaken a new line of production, namely, electric multiple unit coaches. It will turn out 64 E.M.U. four-unit coaches at a cost of about Rs. 15 crores. The order has been placed by the Railway Board on behalf of the Calcutta Railway Electrification Project authorities.

The Caltex Oil Company, it is learned, has decided not to give up the duty protection on diesel and fuel oil, both of which are products of its refinery at Vizag, Andhra Pradesh. Its reluctance is attributed to certain "physical difficulties" associated with the location of the plant and also with the shipping of the products to other marketing centres.

A licence for the establishment of a Rs. 1.5-crore plant at Coimbatore for the manufacture of ball and roller bearings in the private sector, has been granted by the Central Government. The annual capacity of the plant will be 600,000 of ball bearings on an eight-hour shift basis. The project, which is likely to get foreign collaboration, will commence production by the middle of next year.

A team of Russian refractory experts is now touring the country in order to examine the possibility of setting up a refractory plant in the public sector, with an annual capacity of 120,000 tons of firebricks and basic bricks. It has already visited Mysore, and Salem in Madras State, where large deposits of magnesite are being worked. The team is expected to submit to the Government of India a preliminary project report shortly.

The Government of India has approved of a scheme for setting up a new plant at Coonoor in Madras State for the manufacture of 300,000 watches annually in collaboration with a West German firm. Disclosing this in the Lok Sabha last week, Mr. Manubhai Shah, Union Minister for Industry, stated that the Government had also approved of four schemes in the small-scale sector, three of them to be located at Ludhiana and one at Chandigarh in the Punjab. Each of these units will have a capacity of 12,000 watches per annum.

An agreement for the manufacture in India of heavy duty 10-ton trucks is expected to be signed shortly between the Union Defence Ministry and a Japanese firm, the Mitsubishi-Nippon Heavy Industries Company. Under the proposed agreement, the Japanese firm will initially sell 100 trucks for final assembly in India. Subsequently, a progressively increasing proportion of the truck parts and components will be manufactured in India each year.

The population of Assam has gone up by 34.3 per cent—perhaps the highest rate of growth in India—over a decade, that is, from 8.83 million in 1951 to 11.86 million, according to provisional figures of the latest census. The rate of growth of population of West Bengal during the same period was about 33 per cent, with the total number of persons increasing from about 26 million to 35 million. Population of Orissa at 18 million and that of Bihar at 46 million showed an increase of 19.94 per cent and 19.78 per cent, respectively.

From Abroad

The text of an agreement seeking to admit Finland into the European Free Trade Area has now been prepared and submitted for ratification to the countries concerned.

The G.A.T.T. has set up a working party to carry out a review of the application of the escape clause under Article 35 by a number of countries in their trade with Japan.

Britain's sixteenth census (the first was in 1801) will be taken on 2nd April. It is expected to show a total population of 53 million—an increase of over 3 million, or 6 per cent., as compared with 1951.

Pakistan and the U.K. have signed an agreement under which the latter will provide a loan of £3 million to be used for the purchase of British railway wagons. With this new agreement, the total loan assistance given by the U.K. to Pakistan has reached £28 million.

The International Nickel Company, U.S., subsidiary of the International Nickel Company of Canada, has developed a new "18 per cent nickel alloy steel," which is expected to pave the way for a new family of high-strength steels with advanced engineering design possibilities for civilian and defence applications, where exceptionally high pressure and stress requirements are desirable.

A £1-million rayon factory is being set up by a new company, called Kenya Rayon Mills, at Mombasa, the first of its kind in East Africa, in collaboration with the Japanese textile manufacturer, Mitsubishi. The Japanese firm will provide technical assistance and a substantial part of the capital. Production is expected to start in July 1962. The plant will have a capacity to produce 15 million square yards annually.

The view that recessionary trends in the U.S economy are "bottoming out," with prospects of improvement in the second half of 1961, which will culminate in a great prosperity in 1962, has been expressed by Mr. Butler, Vice-President and Economist of the Chase Manhattan Bank of the United States. According to him, the current recession, which started in May 1960, is the "second mildest one" in recent history and is due almost wholly to inventory adjustments. He has added that a decline in the rate of inventory liquidation now is causing the "bottoming out" of the recession.

An agreement has been reached between France and the former French West African franc-zone countries—Ivory Coast, Upper Volta, Niger, Dahomy, Mali, Togo, Mauritania, Senegal—on the question of the formation of a single central bank for the eight countries, following talks at Paris last week. The agreement lays down that (1) the monetary union of (French) West Africa should be maintained, (2) West African currency, to be managed by a multi-lateral central bank, should continue to be backed by the French Treasury and (3) each State should have its own credit policy, taking into account the common good.

(*Concluded from next column*)

Saxena, Assistant to the Managing Director of the State Bank of India, have been invited by the Chase Manhattan Bank, New York, to participate in a credit seminar for banks in Asia which it has arranged to be held at New York next month.

PERSONAL

MESSRS. R. C. Shah and P. V. Hazarat have been elected President and Vice-President, respectively, of the All-India Importers' Association for the year 1961.

Mr. K. Santhanam, M.P., a former Union Minister for Railways and Transport, has left for Malaya as the leader of a three-man team, selected under the auspices of the Colombo Plan, to advise the Malayan Government on transport problems.

Mr. K. J. Cleetus, who retired last month as the Sales Manager of the Tata Iron and Steel Company Ltd., has been appointed one of the nine Directors of the Hindustan Steel (Private) Ltd., which manages the three steel plants in the public sector. He will be in charge of sales and planning.

Dr. Raja Ramanna, head of the Nuclear Physics Division of the Atomic Energy Establishment, Trombay, has been selected by the International Atomic Energy Commission to be the Chairman of the Managing Committee, which will determine the joint research programme in Norway in reactor physics utilising zero power reactor.

Mr. S. Gulta, until recently *Charge d'Affaires*, Bucharest, Rumania, has taken over as Joint Secretary in the Ministry of External Affairs. He succeeds Mr. S. K. Banerji, who has been appointed Chief of Protocol in the place of Mr. R. A. Baig, India's Ambassador-designate to Iran.

Mr. T. N. Ramamurthy, Assistant Manager of the Central Bank of India Ltd., and Mr. J. N.

BUNKER AND GALBRAITH

AFTER four years of unremitting work in the cause of Indo-American understanding and co-operation, Mr. Ellsworth Bunker has just left for his country, ending his tenure as U.S. Ambassador to India. This great "emissary between the world's two largest democracies" did constant travelling throughout India during the period of his service—a period longer than that of any of his predecessors—and thereby helped bring Indo-American friendship to a more understanding and enduring level. In contributing greatly to American appreciation of India's role in world affairs and to Indian awareness of this appreciation, this deeply religious and unassuming envoy had played a truly outstanding role. This role had much to do with the historic visit of President Eisenhower to India in December 1959, and with the fifth and largest P.L. 480 Agreement signed in May 1960, for the supply, over a period of four years, of 17 million tons of American foodgrains to this country. These were, indeed, the highlights of his long and varied career in many fields—in the sugar industry and in insurance business, in education and social research, in the humanitarian work of the American National Red Cross and, above all, in diplomacy since 1951. His success in India was due, in no mean measure, to his "diplomatic temperament" leavened with a "warm interest in human problems." Both the United States and this country owe a great deal to Mr. Bunker and to his ideal partner in life, Mrs. Bunker, for having brought the two countries nearer each other.

It is this nearness and warmth in current Indo-American relations that the incoming U.S. Ambassador, Professor John Kenneth Galbraith, has the good fortune to inherit and avail of for furthering the cause which was so dear to Mr. Bunker's heart. The new American envoy is not unknown to this country. As an economist belonging to the pragmatist school in the United States, he had been invited to India on two occasions since 1956 for consultation on some planning problems. The Government of India and its Prime Minister have thus already known and valued him as an unofficial ambassador of his country. Like Mr. Bunker, Prof. Galbraith carries a warm interest in human problems. As he himself has just stated, his "larger task is to get on with the problems which our two republics share with all mankind—the tasks of helping to ensure peace, helping to eliminate misery and disease, and helping to enhance the literacy, learning, and individual dignity of all men." Again, like Mr. Bunker, Prof. Galbraith is a Democrat of long standing and may, therefore, be expected to carry on his work in the best traditions of the Democratic Party which had always taken a lively interest in the problems of India. His tenure as U.S. envoy, it is to be hoped, will strengthen the edifice of Indo-American friendship.

STEEL SHORTAGE AND ENGINEERING INDUSTRIES

The Indian Engineering Association—not to be confused with the Engineering Association of India—has as its members many of the leading civil, structural, mechanical, electrical and chemical engineering companies. This Association, which claims to represent firms having a quarter of a million men on their pay-rolls and an employed capital of Rs. 350 crores, recently held its fiftieth annual general meeting at Calcutta under the chairmanship of Mr. P. Bhattacharji. In his address at the meeting, the Chairman referred to the threefold expansion of general, electrical and chemical engineering industries since 1951, saying that their achievements deserved greater publicity and recognition. Impressive as this expansion was, it would have been still greater if the persistent shortages of raw materials like steel, pig iron and scrap had not been there. And so Mr. Bhattacharji had to cover familiar ground and deal with the most acute problem of raw material availability.

It is revealing to know from the Chairman's address how the shortage of steel supplies in recent years had curtailed production in the engineering industries. For instance, four leading wagon building units, which had increased their capacity at Government's request and produced 13,000 wagons in the year ended June 1958, had to curtail their production to 6,500 wagons and 6,200 wagons, respectively, in the following two years for want of steel. This shortfall in wagon production has aggravated the railway transport difficulty which, in turn, has affected the movement of raw materials to the steel plants and other industries. It may be recalled here that the Railway Minister, too, in his recent Railway Budget speech, had admitted that there was a shortfall in the second Plan target of wagons. If the railways are unable to allot more wagons now for coal movement, it is partly due to the fact that new wagons have not wholly made up for the number of wagons condemned in recent years. That wagon building has been mostly seriously affected by steel shortage is beyond dispute.

Mr. Bhattacharji's suggestions for relieving the shortage of steel and pig iron are, therefore, quite appropriate in the present situation. His basic idea is that, as in the United States, steel-making capacity in the country should always keep ahead of the steel requirement, thus enabling full utilisation of its fabricating capacity. So the target of 10 million ingot tons for the third Plan is by no means ambitious in his view. But, before the big overall shortage of steel can be completely overcome, some measures to relieve the present shortage as much as possible are called for. One of these, as suggested by Mr. Bhattacharji, is that if coal and other raw materials now available for the steel plants are not of the requisite quality, a specification for a lower quality steel in place of "untested" steel could be laid down. Such a lower quality steel could be used by the engineering industries till the present difficulties are over. Secondly, adequate imports of specific types of steel like Cl. III and IV Lloyds tested plates for ship repair and building, tin plates and alloy and tool steels would have to be licensed. Thirdly, there should be no export of any pig iron when the production of foundries all over the country is suffering on account of pig iron shortage, both in quantity and in quality. And, lastly, a complete ban is suggested on the export of steel scrap which is not available in any substantial quantity now for use in electric furnaces. The two last suggestions would involve the sacrifice of some foreign exchange that is now earned from pig iron and scrap exports. Since much larger expenditure of foreign exchange will be involved in the suggested imports of special types of steel, it will be very difficult to persuade the powers-that-be to stop the exports of scrap or of those grades of pig iron which may not be wanted in the country. As the Engineering Association is not also optimistic on the score of possible exports of capital and semi-capital engineering goods which will all be required for the implementation of Plan schemes, the foreign exchange problem may continue to cause anxiety to the engineering industries, unless, of course, some maintenance imports come to be financed by 'untied' foreign loans in the third Plan period. The chances are that they will be so financed.

ROPE INDUSTRY

A cogent plea for liberalising the import policy in respect of manila and sisal fibres was made by Mr. H. D. Wahi, Chairman of the Rope Manufacturers Association, in his address to the tenth annual general meeting of the Association held at Calcutta over the week-end. While indigenously available fibres, such as aloe, coir, cotton, jute and sunn hemp are used for making rope, the industry also depends upon imports for other important raw materials like manila and sisal. Actual users alone are now permitted to import these two raw materials. Since 1956, when the import of these fibres was removed from the Open General Licence, as Mr. Wahi pointed out, the industry has not been given licence for import of its full requirements. Consequently, most of the units have been working much below their installed capacity.

The restrictive import policy on Manila and sisal would appear to result in a foreign exchange saving to the tune of only Rs. 20 lakhs annually. If this restriction on imports is removed as suggested by Mr. Wahi, the industry would be able to expand its production and channel a part of it for exports, thereby securing a substantial net addition to foreign exchange earnings. It may be recalled, in this connection, that exports of ropes have fallen to an annual rate of about Rs. 2 lakhs now, as against about Rs. 11 lakhs six years ago, mainly as a result of the shortage and high prices of raw materials, which adversely affect the competitive position of the industry in world markets. In view of the hope held out by official spokesmen at the recent Import Advisory Council that a portion of the foreign aid might be earmarked for maintenance imports, it is to be hoped that the rope industry's plea for liberalisation of import policy will receive due consideration.

Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry, who inaugurated the rope manufacturers' meeting, disclosed that, presently, the Jute Commissioner, who had recently been authorised to deal with matters concerning the rope industry, would make a detailed study of the industry's problems. On the basis of the proposed study, Mr. Satish Chandra observed, the Government's policy would be formulated. While the proposed study is to be welcomed, it should not be forgotten that a permanent solution to the shortage of imported fibres can be found only in their cultivation, on a large scale, within the country itself. Mr. Wahi, therefore, rightly drew pointed attention to the need for developing indigenous sources of fibres. How important this is may be recognised from the following passage in his speech:

"The industry's requirements of sisal and aloe fibres are about 10,000 to 12,000 tons per year. Out of this, hardly 4,000 tons aloe fibres are available from indigenous sources. For sisal, the industry has to depend solely on imports. The supplies of indigenous aloe fibre are irregular and inadequate, since it is not grown in India on commercial scale. Unless cultivation of this fibre is done under Government's supervision, I am afraid, even the present availability may dwindle resulting in the factories to depend more and more for their requirements of fibres on imports. With regard to sisal, except for the planting of 1,000 acres in West Bengal Government sisal farm at Rajnagar, nothing much appears to have been done. Even in respect of this farm harvesting of leaves for fibre extraction is not likely to be ready before the middle of 1962. In this connection, the Central Government had appointed a Sisal Sub-Committee in April 1959 to go into the question of production and usage of sisal fibre to achieve self-sufficiency. The Sub-Committee, I understand, met only on few occasions. I am not aware of the recommendations made by it for the development of sisal industry in India, but at the present rate of progress it looks as if it will not be possible for the industry to do away with the import of sisal fibre for some more years to come. The saving in foreign exchange, which would be effected by a large-scale venture to grow sisal, would be an adequate compensation to the investment and the effort would prove sufficient inducement to the Government to give such a proposal favourable consideration."

The Association itself or some of the major producers of rope in Calcutta will also do well to make a start by encouraging the cultivation of these fibres in selected areas, without waiting for official agencies to do it. Such efforts are bound to get the assistance of Government in due course. In effect, this will mean co-operation between the Government and the industry in the matter of growing sisal fibre—the kind of co-operation which Mr. Wahi himself envisaged.

The rope industry is already in a position to meet the entire requirements of the country. The combined installed capacity of the constituent members of the Association for the manufacture of ropes and cordages of manila, sisal and aloe is about 19,800 tons annually. They are also capable of producing a further 10,000 tons of ropes and cordages every year from coir, jute, hemp, etc. Where there is so much installed capacity and such capacity, too, cannot be fully utilised for want of raw materials, the Government would do well to heed Mr. Wahi's advice and rather encourage the growing of sisal fibre in India than add to the industry's difficulties by licensing new units both in the organised and the small-scale sector without regard to the already available surplus capacity.

REINSURANCE

What the Government could not get by consent it has at last got by compulsion. The efforts made by the State-owned Indian Guarantee to persuade insurance companies in the private sector to cede to it voluntarily a percentage of their Indian reinsurance business having failed, it has now secured what it wanted through legislation. The Insurance (Amendment) Bill, 1961, passed by the Lok Sabha on the 20th inst., empowers the Government to compel every insurer to reinsure with approved Indian reinsurers up to a maximum of 30 per cent of the sum assured under each policy or renewal thereof, with effect from 1st April. Power is also vested in the Government to specify the proportions in which the said percentage shall be allocated among the approved Indian reinsurers.

The approved Indian reinsurers are those who carry on reinsurance business exclusively and are approved as such by the Government. There are only two insurers who meet this test, namely, the Indian Guarantee and General Insurance Company Ltd., a subsidiary of the Life Insurance Corporation of India, and the India Reinsurance Corporation, a co-operative venture of general insurers in the private sector.

Although, under the Bill, 30 per cent has been fixed as the maximum, the Government is understood to have given a verbal assurance to insurance companies that, in practice, care will be taken to see that the percentage does not exceed 20. This assurance is of little value as long as it is not statutorily recognised. It looks as though this 20 per cent will be shared equally between the India Reinsurance Corporation and the Indian Guarantee. Since insurance companies already cede 10 per cent of their business to India-Re, the Government might take this as constituting its share of the 20 per cent. Companies might, therefore, be asked to cede an equal percentage to the Indian Guarantee. In other words, if the assurance stated above is observed in practice, the present legislation will have given effect to the original suggestion of the Indian Guarantee for voluntary cession.

The objectives of the Bill are stated to be (1) to strengthen Indian reinsurance companies and (2) to reduce the foreign exchange drain on account of reinsurance. Neither the statement of objects and reasons of the Bill nor what Mrs. Tarakeshwari Sinha, Deputy Minister for Finance, who piloted the Bill, said in the Lok Sabha has made it clear how exactly these objectives would be served by the Bill. The Indian Insurance Companies' Association, Bombay, in its well-documented memorandum on the Indian Guarantee's suggestion for voluntary cession of business, had argued that such a step would not serve any of these objectives. It had pointed out that marine cargo and miscellaneous reinsurance business had caused no drain on foreign exchange resources and that the drain was only in respect of fire, marine hull and aviation business. The drain on account of fire business was small and was certain to be eliminated in due course. Aviation reinsurance business was handled entirely by the Indian Guarantee. The only other section which did cause a drain, though this too, was showing a declining trend, was the marine hull business. This is regarded as unavoidable, because of the limited retentive capacity of the Indian reinsurance market, the need for reinsurance cover abroad and the time lag in obtaining suitable reciprocity. Fixed cessions to the Indian Guarantee, voluntary or compulsory, the memorandum had averred, would not solve the problem of foreign exchange drain.

The Government has not cared to answer these arguments or to show how the enactment now made will save foreign exchange. If reducing the foreign exchange drain is the objective, that could be achieved, if it all it could be, by surplus reinsurance, for the drain arises, from the disposal of the surplus, and not by quota share cession to Indian Guarantee which, except in the case of fire insurance, has now been made compulsory under law. If the Government could accept, as it has now done, the former basis in respect of fire business, why did it not do so in respect of other sections, too? Obviously, this concession in regard to fire business has been made, because the India Reinsurance Corporation permits companies to cede fire insurance on a surplus basis under the stipulation that the premiums so ceded will not be less than what it would have got on a quota share basis. It is evident, therefore, that the real objective of the Government in bringing forward this legislation is to see that the companies treated the State-owned Indian Guarantee in the same way as they did the India Reinsurance Corporation. But it has very conveniently forgotten that the India-Re is jointly owned by all the insurance companies and that what they lose on the swings is made up on the roundabout. The Government's concept of equality seems to be very strange. For it wants equal treatment from insurance companies for the Indian Guarantee over and above the facilities which this company enjoys as a Government-owned enterprise. And these are by no means insignificant. Thus, the Indian Guarantee receives all the reinsurances of the Government-controlled companies and also the bulk (as much as 75 per cent) of the reinsurance business of the Pool, in addition to the entire aviation reinsurance business. According to the estimate of the Indian Insurance Companies' Association, the Indian Guarantee is already having a premium base of over Rs. 3 crores, as against Rs. 2 crores which was considered an adequate base for India-Re to ensure which the companies had agreed to cede 10 per cent of their business. On top of this, the Indian Guarantee will now receive that percentage allotted to it under the present enactment, which could range between a minimum of 10 and a maximum of 20 per cent. Thus, nothing can conceal the fact that the present legislation is designed to bolster the State-owned Indian Guarantee and dwarf the India-Re which is co-operatively owned by the insurance companies in the private sector. Any resulting foreign exchange savings will only be marginal.

In actual practice, the compulsory cession to the Indian Guarantee will only adversely affect the insurance companies, because the terms they obtain from it may not be as favourable as those which they could otherwise get by skilful bargaining based on their profit position from year to year. In fine, their bargaining position *vis-a-vis* the Indian Guarantee is rendered weak because they are legally obliged to cede the specified percentage to that company. The Indian Guarantee will, therefore, always have the upper hand. Further, the fact that a substantial percentage of their business will be absorbed by the two reinsurers will tend to encourage less prudent underwriting by the ceding companies.

EXPORT PROMOTION

A new turning point in the Government's policy on export promotion appears to be an imminent possibility. The Union Minister for Commerce, Mr. Nityanand Kanungo, disclosed at a meeting of the World Trade Department of the Indian Chamber of Commerce last week at Calcutta that the Government of India was examining a proposal to entrust prominent businessmen with the task of export promotion. A meeting of business leaders would be called shortly at New Delhi for thrashing out a workable scheme. This move is welcome, as it seems to reflect the Government's growing realisation of the indispensable role of industry and trade in the promotion of exports. But it will be naive to assume that businessmen possess the magic wand, the mere tilting of which will open out new vistas for India's export trade. Generally speaking, businessmen are already taking active part in export promotion activities. Not all their efforts, however, have uniformly been successful. Reasons for this are not far to seek. They include, among others, defective industrial and labour policies which have retarded modernisation of industries and growth in their productivity, transport bottlenecks, failure to ensure rapid expansion of agricultural production (cotton, raw jute and oilseeds, for instance), shortage of raw materials, fuels as well as machinery for industrial development, and the growing pressure of domestic consumption—all of which tend to raise cost of production, and, thereby, reducing the competitive capacity of Indian-made goods. Heavy export duties on products like tea over a number of years have encouraged establishment of competitive producers abroad. Absence of an appropriate system for giving prompt refund of excise duties has also been a big handicap. The impact of these factors cannot be easily and quickly got over, but can be softened to some extent, if the Government takes businessmen into full confidence and redresses their legitimate grievances. The Government will do well to realise that, if immediate steps are not taken to rectify the defects in its economic policies which have been cumulatively responsible for pricing out Indian goods abroad,

MR. AL FOIL GIVES A LIGHT

Fifty seven years' experience as Manufacturers of Aluminium Foils for packaging goods in Cigarette, Pharmaceutical, Confectionary, Tea and many other industries.

"Delightfully fresh, my Lady Nicotine . . . just as I like her." "Naturally," replied Mr. Foil with a knowing smile, "these are the virtues of the lady in question. Think of the protection she enjoys. Snugly wrapped in aluminium foil from tip to toe, the flavour of her tobacco, the freshness and fragrance are sealed within. Her foil wrap, as decorative as mink, protects her from dirt too. Sufficient reasons you'll agree, sir," finished Mr. Foil, "for the lady to insist on a foil wrap, whether she comes to you as a pipe smoke or a slender cigarette !"

ON THE ARENA

By The Archer

Alarm Chains in Trains

WE live and learn something every day. We have just learnt the phrase "blank off" which in effect, means "cut off without cutting"; the chain is there with a handle of some sort to pull, but, when you pull, nothing happens and you look blank. The instruction to immobilise the chain is called a "blank-off order"; so, I believe the whole operation may be called "blanking of alarm chain." When Mr. Jagjivan Ram approved of the order to such blanking on the Dinapur section of the Eastern Railway, he had also blanked off Section 62 of the Indian Railways Act, which provides that "the Central Government *may* require any Railway Administration to provide and maintain in proper order in any train worked by it which carries passengers, such *efficient means of communication* between the passengers and the railway servants in charge of the train as the Central Government has approved." (Italics mine.) My lawyer friends tell me that 'may' in the above section means 'must', and that, according to its wording, the provision of an efficient means of communication in proper order should be considered mandatory. When Members of Parliament questioned the wisdom of railways in blanking off alarm chains for their own failure to check unauthorised pulling, the Railway Minister said that it was a matter of opinion, meaning, perhaps, that there can be more than one opinion about the wisdom or unwisdom of blanking off, and about the failure or success to check unauthorised pulling. He added that instructions had been issued that, where there was large-scale unauthorised pulling of chains, the apparatus should be blanked off, and that that constituted very good reason; one or two persons might be inconvenienced by this, but unauthorised chain pulling on a large-scale caused inconvenience to hundreds or thousands.

Some people misuse pavements on the sides of roads, and vendors occupy them much to the inconvenience of pedestrians; so let us dig up all pavements and efface them from existence. Some people prefer false complaints in police stations and waste the time of police officers; so let them refuse to accept any complaints from anybody. Some people send false alarms to the fire brigade through telephone; so let us blank off all telephonic calls to fire-fighting units. Some neurotic people waste the time of doctors in hospitals with imaginary complaints of sickness; so let us authorise all doctors to drive away all persons suffering from nervous diseases. Some men beat their wives; so let us say that marriages shall not take place, at any rate not between men and women. On the Dinapur section, some people pulled chains for fun or mischief, in spite of the increase of the fine from Rs. 50 to Rs. 250 and, since this was found to be a blankety blank nuisance, all chains were blanked off.

The mandatory provision in Section 62 of the Indian Railways Act can be brought home to the Railway Administration by a writ directing them to comply with the statute. The wisdom or unwisdom of the blank-off order will be adjudged by a court of law, and there will be no two opinions on the question. However, one reason why lapses often occur in the discharge of duties and obligations to members of the public by administrative personnel is that they are not, except in rare cases, sued for damages in torts. If members of the public are eternally vigilant about establishing their rights as citizens (under law) and if officials entrusted with specific performance of duties are kept on their toes all the time by fear of being made liable in torts, there would be less of responsibility in both sectors and a greater measure of public co-operation in the maintenance of a healthy administration. Article 300 of the Indian Constitution states that the Government can be sued and sue as if the Constitution were not passed. This only means that the law relating to the liability of the State remains unaffected by Independence, thus leaving the vast body of case law prior to Independence unaffected. The Constitution does envisage legislation in this regard but none has been promulgated so far.

There was an old case in 1861 decided in the Privy Council by Sir Barnes Peacock, called the *P. & O. Steam Navigation Co.* versus *The Secretary of State for India*. This has been the leading case on the law relating to the liability of Government for the torts of its servants. In that case, the Company sued the Government for damages for the negligence of its servants at the Hooghly dockyard where the plaintiff's horse was injured. Damages were ultimately awarded against the State and the principle was recognised that the State (in India) was liable for the torts of its servants committed *in the course of trading or other commercial and non-sovereign activities*. This case has been followed in India for the last 100 years, and has always been applied only to the restricted extent indicated above. The large body of case law which has arisen from the application of the principle enunciated by Sir Barnes Peacock may be summarised briefly thus:

(a) Government is liable for the torts of its servants committed in the course of such transactions as may be undertaken by private persons, e.g. commercial, transportation of person and property, carriage of freight, etc., subject to such specific statutory exemptions from liability as may have been laid down.

(b) Government cannot be sued for torts committed by its servants in the exercise of *sovereign functions*. What these sovereign functions are is not clearly defined. Some decisions have held that commandeering goods during war, recovery of fines through courts, restoration of order, etc., come under sovereign functions, and these seem reasonable enough; but there are also some judicial verdicts which have included maintenance of a road or a hospital, or the management of an estate by a Court of Wards in sovereign functions and these call for further examination. It is now left to a judge to decide whether an activity in the course of which a tort was committed was a sovereign activity or non-sovereign.

(c) The State will not be liable, unless it had expressly authorised or ratified the tort. This is an unsatisfactory rule, as, in many cases, the plaintiff will fail in proving that the State had given ratification or authorisation. In an old case from Bombay (1904), 62,500 bundles of hay were seized from the plaintiff by the Chief Constable on the ground that it was stolen property; the complaint failed, and, when the plaintiff demanded return of the property, only 14,700 bundles were handed back, the rest having been lost through negligence of the officer in charge of its safe custody. The plaintiff's suit for recovery of the value of the hay was, however, dismissed by the High Court, which observed that the seizure of the hay was not in obedience to any express order of Government, nor did the Government expressly ratify what he had done.

(d) The State is liable for torts relating to illegal detention of property, etc., under cover of the authority of a statute.

In the United Kingdom, the position that the "King can do no wrong" has been abrogated by the enactment of the Crown Proceedings Act of 1947, Section 2 of which says that the Crown shall be subject to all those liabilities in tort to which, if it were a private person of full age and capacity, it would be subject. The present position in the U.K. is that the Crown is answerable for the torts of all its servants committed in the course of their work, provided they are paid out of the Consolidated Fund of the State. Curiously, however, the police in the U.K., who are not paid wholly out of that fund, escape, and the Crown is not liable for the torts of its policemen. The position of statutory bodies and other bodies of Government like the Transport Commission is not clear and their wrongs may not expose the Crown to damages. Even so, the present law of the U.K. does open a wide field of liability for the State for the civil wrongs committed by Government servants.

There is, therefore, a need for comprehensive legislation in India on the subject of torts, clearly delimiting the exceptions to the general rule, which should be as it exists in the U.K., viz., universal liability of Government for the torts of its servants. We continue to apply the 1861 dictum of Sir Barnes Peacock, ignoring the fact that even in the U.K., the Crown Proceedings Act of 1947 has made great changes. Public opinion should demand that a democratic Welfare State should claim to be judged by the same standards as are applicable to private citizens, and that the connotation of the terms 'rights' and 'responsibilities' do not vary between members of the public and officers in charge of the administration, otherwise called the 'public servants.' Public opinion should also bring about the establishment of a vigilant all-India organisation, maintained by public contribution, for the filing and conduct of all legal actions relating to 'Torts' solely with a view to instilling a sense of responsibility among all classes of public servants. If the organisation is manned by eminent lawyers with public spirit, every such legal action could be examined and scrutinised for its content of social purpose before its conduct is undertaken.

All About Census Figures

Mr. C. Subramaniam, Minister of Finance in Madras State, has dropped a brick on the floor of the Madras Legislative Council. As a result, Dr. B. C. Roy, Chief Minister of Bengal, has come down on him like a ton of bricks. Mr. Subramaniam complimented the Tamils on being more prudent than others in the country in the matter of production of children with a population increase of only 11.7 per cent over the last decade. So far no one can quarrel with him, he is welcome to pat the Tamils on their backs for being less prolific than others. But he pointed to West Bengal's increase of 33 per cent and thought that this figure needed verification. The Minister is reported to have stated that West Bengal appeared to claim this increase as due to a fall in the death rate to 8.5 per thousand of population which figure, in his view, was much less than the 10 per thousand death rate in the U.K. and, hence, needed to be looked into a little.

Explaining why he found it necessary to comment on West Bengal's census figures, Mr. Subramaniam is reported to have said: "Normally the West Bengal census figures would not be the concern of Madras, but they might be so regarded, because, in allocating finances, the population of the several States might be taken into consideration by the Finance Commission." Dr. B. C. Roy is amazed at Mr. Subramaniam's statement and feels that the Madras Minister has shown bad taste. The Census Superintendent of Bengal described the phenomenal increase in population figures as a "population explosion." In his view, though the influx of refugees was a contributory factor, natural growth in the birth rate itself accounted for between 21.9 to 25.5 per thousand, while the death rate between the years 1951 and 1961 fell from 13 to 8.5 per thousand. Dr. B. C. Roy is reported to have called upon the people of Bengal to be prepared to fight on all fronts—the Centre, the Planning Commission and the Finance Commission—for more money. It is not known if he also sent out a call to fight on the most important front, namely, family limitation; I think he should.

One would wish that this argument between two clever Ministers had been carried on in private correspondence rather than in public discussion. To the many acrimonious controversies between various States in the Union on such matters as boundary disputes, sharing of river waters, establishment of industrial enterprises, etc., need we add another one on the entitlement to Central revenues on the basis of population figures? As for the people of Tamil Nad, their feelings must be very mixed; glad that they have done well in population control, but sorry that they might miss the bus by doing so! Life is, indeed, complicated!

• • • •

Would You Believe It?

Dr. B. V. Keskar is reported to have stated in the Lok Sabha on 14th March that, subject to foreign exchange being available, a television centre would be established in Bombay during the third Plan period. Dr. Thomas Balogh, the Oxford economist, declared that the idea of producing a low-cost "peoples' car" in India was absolute madness. Of course, the Government did not agree with this view and is going ahead with the project. Another eminent foreign economist or broadcasting expert may come along and, perhaps, call Dr. Keskar's television project by something equally rude. What does he care? Or who cares? Perhaps, television has gone up in priorities, because the eventual manufacture of television sets in India might add one more item to excisable luxuries and our fiscal revenues may be augmented. Some such subtle reasoning must be behind the decision to find foreign exchange for the project, while many established industries, including newspapers, are being starved of essential raw materials and machinery, and many expansion projects in export-promoting industries are held up for the same reason. The subtle reasoning may not be based on adult logic, but should it be?

AMERICAN LETTER

LABOUR AND POLITICAL LEADERS SHORT-SIGHTED

GOVERNMENT SUPPORT TO SMALL INVESTORS

From Our Special Correspondent

NEW YORK, *17th March*

THE business situation continues more or less unchanged. The First National Bank of Chicago, located in one of the most industrialised areas of the United States, says, in its latest bulletin, that "almost all indicators of current activity show declining trends."

This decline, however, has been modest and evidence indicates that the downward movement will be mild. The trouble with all such prognostications and the appraisal of current affairs is that, unless spot checks are made, the analysts go on the basis of figures which are anywhere from six to eight weeks old. The same is true, of course, so far as the decisions of the Federal Reserve banks are concerned. By the time reports from the 12 districts have reached Washington and New York, the picture may have changed.

In my own contacts and travels, I have detected a good more optimism than is shown in official reports. Obviously, the recent inventory liquidation has just about reached its end. The extraordinarily severe winter did not stimulate consumer buying in the sense that people just stayed home, instead of fighting snowdrifts, windstorms and below freezing temperatures.

The weather killed incentives. The automobile industry, for example, began 1961 with about one million unsold cars on hand. This was almost twice the level of the like 1960 period. The U.S. railroads in the East were hit hard by harbour strike, by snow removal and maintenance problems which added to their already existing financial difficulties.

But there has been some improvement in steel output. The percentage gain was relatively small and it was the first one in almost a year. The industry, as a whole, has not yet recovered from the last steel strike, during which foreign competition gained a firm foothold.

The net result is that there is more and more emphasis on automation. In the meantime, workers are being laid off which creates the so-called "distressed" areas which are a great political argument for politicians who want to spend money to alleviate the situation.

Squeeze on Profit

In addition to automation, there is the U.S. tax situation. Coupled with trade unions' demands, which are supported by the present Administration by legislative demands to boost the minimum hourly wage from $1 to $1.25 an hour, the squeeze on the profit of business and industry has been increased.

Trade union leaders support this, of course, because their jobs depend on ever higher benefits for their members, but they lose sight of the fact, and have no inclination to recognise, the reality that jobs are receding because domestic and world markets are being lost.

I had a meeting the other evening with the President of Manhattan Shirt Company which produces both men's and ladies' shirts of very good quality. The shirts manufactured in the U.S., he told me, he cannot sell under between $7 and $8 each. He has curtailed his export operations severely but has now licensees in 18 countries who can manufacture them. The same shirt, made according to U.S. specifications, can be sold in Japan for about $3.95 (U.S.). This is just an example of what is happening throughout U.S. industry.

Unfortunately, there have been continual reiterations about the U.S. recession from Washington. In a country like the U.S. with its rapid communications, such as newspapers, magazines, radio and television, it is quite easy to talk the people into a recession. Such talk instils fear. It postpones consumer buying, because of apprehension of the future. It is thus a deterrent to buying.

Politically, though, it justifies, or seeks to justify, more Government spending to make the people happy. In this respect, two major areas of expenditures, according to the Kennedy Administration, have come to light. One is a new housing programme and the other is more emphasis on ground force defence and lesser reliance on missiles. The new armed forces' programme should mean more tanks which should help the steel industry.

These implements would be used in "little wars" like Korea. Other equipment will be required, too, and additional manpower. It may help employment, but also inflation.

United Nations News

The greatest concern these days in the United Nations is over Africa. It does not concern the Congo alone, but South West Africa and the Union. Developments as have happened on that Continent have been expected here for some time. Yet, the rapidity and violence with which they happened were not anticipated. There are plenty of African spokesmen here, beautifully educated and most articulate. What is missing is a cohesion. And that is where the debates break down. "Africa for the Africans" is a fine motto, but there are so many and different from one another.

The role of the U.N. in the Congo is, obviously, disputed widely. The choice of troops of various racial origins is also questioned. In the meantime, trade and commerce with that area and the rest of the world have been damaged gravely. In my opinion, and after talking with many of the delegates here, it will be a long time before the African question can be settled.

World's Fastest Air-liner

India and the rest of the world will benefit later this year by service of the intercontinental Convair 990 Coronada. It is now being tested. The jet has a maximum cruising speed of 640 miles, the equivalent of 1,028 kilometers, close to the speed of sound. It will facilitate both passenger and freight service.

The plane is being built at San Diego, California, and orders from four large airlines are on hand. The maiden flight of the pilot model was made on 24th January 1961.

Small Investment Companies

Something new has been added to the U.S. financial scene. The U.S. Small Business Administration, with Congressional authority, has licensed 145 small business investment companies with capital funds exceeding $142 million. About 270 more applications for such companies are being processed. The main purpose of these concerns is to provide equity capital and unsecured loans of five years or more which cannot be obtained from any other sources. Only about 27 per cent of the present capital is provided by the Federal Government. The balance is from private investors, including commercial banks, which cannot indulge in such investments directly, since they are limited more or less to orthodox short-term loans.—*All Rights Reserved.*

THE COMMONWEALTH CONFERENCE AND TRADE

(From Our Own Correspondent)

LONDON, *18th March*

LONDON LETTER

"THE Commonwealth is a vital, dynamic thing." So said Prime Minister Nehru at his Press Conference which marked the end of an historic week in London. He was referring to the matter which occupied the minds of most present at the secession of South Africa. Mr. Nehru's own feelings were of relief. The whole process he saw as following a course with one inevitable end; that end might come cleanly or tortuously, bitterly or with a relative understanding. The argument was over, and it was over with far less bitterness of feeling than had been anticipated when the Conference opened. As to the Commonwealth, it has emerged, in Mr. Nehru's view, strengthened, more vital, more dynamic.

This meeting of Prime Ministers was not concerned with economic matters, though it is in this field that the values of the Commonwealth link to the various members can be most observed. And, oddly enough, it is this aspect—the economic one—which is unlikely to be disturbed by the decision that South Africa should withdraw. There is already a precedent: the position of the Irish Republic *vis-a-vis* the Commonwealth both as regards the free movement of persons and trade relations. Eire is in no different position from that in which it would be as a member. The same, therefore, is likely to apply to South Africa. After all, the purpose of excluding South Africa was political. Its value to the Commonwealth is political and the same sharp eye of public criticism does not bear on economic relations. Not, of course, that South African economic relations with the other member-countries will go unscathed. But such restrictions of trade as may follow through some countries boycotting or excluding South Africa's goods will be taken as private measures of disapproval. They will not be part of a Commonwealth policy.

A Costly Victory

The sharp pressure against sterling has been relieved this week and, with the publication of happier trade figures for February which showed a narrowing of the trade gap as compared with January, it begins to look as if the Bank of England will have got off lightly. Last week your correspondent commented that the Bank had had to spend gold and dollars to hold the sterling rate. That was simply as a result of the speculation to move into other currencies which might be ripe for revaluation. The next thing that happened was the devaluation rumours and that started off a much heavier offensive which forced the Bank to spend lavishly buying up all sterling offered. It may have been an expensive victory for the Bank, but a victory there is no doubt it is.

Views differ as to how good the February figures are. Official hints indicated that something even better was coming. But, after all, views based on one month should never be given too much weight. It is, therefore, encouraging to find that, allowing for seasonal variations, U.K. exports in the *three months* December-February were 5¼ per cent more than in the preceding three months, and 4¼ per cent more than the average for 1960.

Re-exports have shown virtually no change on the rate at which they ran all through last year. Imports, on the other hand, were 1 per cent less in December-February than in the preceding three months, and only 2 per cent above the 1960 figure.

Expressing these figures quantitatively, exports and re-exports (*f.o.b.*) total £964 million over the last three months (these are seasonally adjusted figures) and imports (*c.i.f.*) on the same basis £1,162 million. If we correct this latter figure to an *f.o.b.* basis, we arrive at £1,035 million for imports, giving an adverse visible balance over the three months of £70 million. At this rate, the overall balance should be favourable.

The seal on this turn of events has been placed by the statement issued by the Bank for International Settlements that all members should co-operate closely in the exchange markets, and the German Finance Minister made it clear that he thought sterling was perfectly reliable. This is praise indeed!

CANARA INDUSTRIAL AND BANKING SYNDICATE

ALL-ROUND PROGRESS REPORTED

FOR the third year in succession, the Canara Industrial and Banking Syndicate Ltd. (Managing Director: Mr. T. M. A. Pai, Udipi, Mysore State) has made remarkable progress. The profit of the Bank, as disclosed by its audited accounts for the year ended 31st December 1960, has staged a sharp rise from Rs. 20.2 lakhs for 1959 to Rs. 25.23 lakhs. This expansion reflects the growth in gross income which has been substantial from Rs. 110.17 lakhs to Rs. 135.85 lakhs. Almost the whole of this increase is due to larger turnover of banking business proper. Thus, income by way of interest and discount has gone up by Rs. 21.75 lakhs to Rs. 121.40 lakhs and that by way of commission, exchange and brokerage has risen by Rs. 1.24 lakh to Rs. 7.46 lakhs. The bulk of the increase in profit has been offset by a higher provision for taxation at Rs. 9.63 lakhs as against Rs. 5.50 lakhs in the previous year. A sizable sum of Rs. 7.50 lakhs, same as last year, has been used to strengthen the reserves. The return to shareholders also remains unchanged at 20 per cent, composed of 10 per cent dividend and 10 per cent bonus on A, B and C class equity shares. This requires Rs. 4.80 lakhs. In addition, the dividends at 7.8 per cent per annum on six per cent cumulative preference shares and at 6.5 per cent per annum on five per cent cumulative preference shares absorb Rs. 1.56 lakhs. The provision for bonus to staff has been slightly reduced from Rs. 2 lakhs to Rs. 1.75 lakhs. The gross dividend for 1960 is equal to the dividend declared in the previous year and would give a tax-free return of 14 per cent. As compared with the tax-free dividend of 15 per cent paid for 1958, the dividend for the year under review is clearly still on the low side. The Rs. 100 ordinary shares of the Bank are currently quoted at Rs. 188, *cum*-dividend. On an *ex-div.* basis, they will give a net return of 8 per cent per annum.

A bird's-eye view of the progress of the Bank can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
