NEED FOR FRESH THINKING ON BONUS

THE New Year does not seem to have begun well for the Union Labour Ministry. In its attempt to steer clear of one problem, this Ministry has unwittingly sailed into another. It appears to have abandoned its original idea of a Bonus Commission composed of representatives of workers and employers with an independent Chairman in favour of one consisting of all independent members, presumably because it found it difficult to reconcile the rival claims of the central organisations of trade unions for representation. What is still worse, it has given the chairmanship to a person who has all along been arbitrating on disputes pertaining to bonuses. By making this departure from its earlier assurance, the Ministry has brought unhappiness at least to one of the two parties directly concerned with the issue, namely, employers. Although the composition of the Commission has not yet been officially announced, Mr. G. L. Nanda, Union Minister for Labour, is reported to have named the members of the Commission as Mr. M. R. Meher, President of the Industrial Court of Maharashtra (Chairman), Prof. B. N. Ganguli of the Delhi University and Mr. Govinda Reddy, a Member of Parliament. Employers are greatly perturbed over this news and their reaction to it is as sharp as it is prompt. They are not happy with the choice of the Chairman, because they feel that the President of an Industrial Court, which has had to deal with a number of bonus disputes, is not a suitable person to head the Commission. Their objection is understandable, for such a person, howsoever competent and independent he might be, cannot normally be expected to approach the question with an open mind. He is bound to be obsessed by the various decisions given by him and his colleagues in the Industrial Court. The employers may have no right to question the Government's privilege to appoint whomsoever it pleases to the chairmanship or membership of the Commission. But they are well within their right to contend that only a truly independent Commission can be expected to take an objective and unbiased view of the complex and controversial issues which will come up for its decision. Surely, Mr. Gulzarilal Nanda, with his expert knowledge of labour problems, ought to be able to appreciate this point better than anyone else. It is, therefore, a painful surprise to find from today's papers that he has defended the choice of Mr. Meher for this key post. Mr. Meher has undoubtedly rich experience of industrial problems. But the important point to be realised here is that he is now being asked to head a Commission recommended by the Supreme Court which had posed several issues in regard to bonus and had set aside some of the awards given by Mr. Meher. This amounts to giving an opportunity to Mr. Meher to comment on the Supreme Court's observations, especially those on his own awards. It must, indeed, be an embarrassing position for Mr. Meher himself.

It was unwise on the part of the Government to have gone back on its earlier decision to give representation on the Commission to both employers and workers. As the experience of Wage Boards for cement, cotton textiles and sugar industries has amply demonstrated, the association of representatives of employers and workers with the Commission, apart from giving it added prestige and authority, would make both the parties morally obliged to abide by its recommendations. There is considerable force in the contention that the Government, having thrown overboard the tripartite principle, should at least ensure that the Commission is composed of independent persons acceptable to both employers and workers. The Government would do well to bear in mind that, if it decides to ignore this modest suggestion, it would be inviting more trouble. For, if the party which does not have confidence in the Commission refuses to implement its recommendations, the Government will be left with only one of two alternatives, either to bring forward legislation to enforce the recommendations or to shelve the issue, both of which will be equally undesirable.

Since employers have already expressed their disapproval of the proposed chairman, the Government stands to lose nothing by reconsidering whether a person acceptable to both the parties could be found. An ideal choice would be a retired judge of the Supreme Court. Since the main objection to the appointment of Mr. Meher is his close association with the adjudication of disputes regarding bonus, care should be taken to see that the choice falls on one who does not suffer from any such disadvantages. A person who has served on the bench of the highest court in the land can be expected to take a strictly impartial view and be fully conversant with judicial processes. Neither of the parties should have any reason to object to such a person. Adequate consideration of the technical and economic aspects of bonus could be ensured by the appointment of an economist (as has already been announced) and an accountant as members of the Commission.

Unfortunate though these developments are, they only go to show the baneful consequences of the bonus system. Bonus is one of the many undesirable legacies of war-time, when, thanks to the soaring costs of living, some arrangement to bridge the gap between the actual wage and the living wage was found necessary. The continued inflationary pressures have helped the perpetuation of this practice to an extent that even companies which are incurring losses, as well as those which, being new, have not yet reached profit-earning stage, have to pay a bonus to their staff and workers. Recurring bonus disputes have been a source of constant friction between employers and employees. Neither from the point of view of equity nor of efficient production, outright payment of bonus, unrelated to any test of efficiency, is a desirable way of compensating the workers for their contribution. The wide disparity in the quantum of bonus paid to workers in the same area, or even in concerns under the same management, has been a source of great dissatisfaction and discontent among workers. Since, by and large, the quantum of bonus payable is determined by the profit level, which itself fluctuates from year to year, bonus continues to be an uncertain element in the cost calculations of industry. The sooner this expediency is replaced by a scientific system of payment, which, while assuring workers a fair minimum wage, links the extra remuneration more directly to the efforts put in by the workers, the better it would be for industrial peace in this country. Accordingly, the Bonus Commission should be entrusted with the task of examining the ways and means of replacing the present pernicious system with something which will be more conducive to increased efficiency all round, rather than of laying down norms for determining and paying bonus. The need for establishing contentment among the workers is certainly not denied here. Only, it should be fulfilled in a manner that will yield satisfaction to all—consumers, investors, Government and workers. There are numerous examples elsewhere in the free world where the problem has been solved in an economic way. There is thus a clear need for fresh thinking on the subject. There is no harm in taking the assistance of some competent foreign experts, perhaps under the auspices of the I.L.O., if the experts in this country are unable to hit upon a healthy solution to the problem.

WANTED—ECONOMIC STATESMANSHIP

THERE can be no two opinions on the background of ideas and facts against which Mr. H. M. L. Williams, President, Associated Chambers of Commerce of India, has approached the theme, "Industry, its development and its problems at the beginning of the third Plan," in his address at the recent annual general meeting of the Chambers at Calcutta. Some ideas which are widely and generally accepted form part of this background. There are in his speech, to be sure, certain generalities, as, for instance, that the people of this country should redouble their efforts to conserve and develop indigenous resources, to provide more domestic investment and to intensify productive effort all round; that the third Plan, though bigger than the second, is not large enough to meet the country's need for a higher standard of living; that there is need for flexibility in execution of Plans; and that planning, which is as necessary for good company management as for the economy as a whole, has to be continuous. As generalities—not vague but pregnant—these are hardly open to dispute. Nor, indeed, can it be disputed that the continuing foreign exchange crisis, by restraining the inflow of capital goods, technical know-how and industrial raw materials, threatens to slow down the pace of development. The quantum of rise in industrial production and its diversification over the last decade have no doubt been very impressive. But there are also the disconcerting facts that low levels of productivity are still too common over much of industry; there are critical shortages in transport facilities, coal and power supplies and technical and managerial skills; and, above all, production of food and agricultural raw materials has lagged far behind industrial production. These, too, are some incontrovertible facts which appropriately form part of the background against which Mr. Williams has presented some points of view and advanced some suggestions. These views and suggestions which find dignified and restrained expression in his presidential address are so realistic, balanced and constructive that they carry with them the attribute of "economic statesmanship of the highest order," to borrow a phrase the esteemed speaker used in another context.

If only Government policies and procedures are informed by such economic statesmanship, even the present problems and difficulties may turn out to be a blessing in disguise, in the sense that they will have enabled readjustment and consolidation. The measures appropriate to this phase of consolidation, which is not to be confused here with any pause for breath, shou'd be quite capable of application. Two related sug-

gestions advanced by Mr. Williams in this connection are that existing capital resources should be employed to capacity and that installed productive capacity be kept going even if it is at the expense of some new schemes. Since the bottlenecks to full utilisation of industrial capacities are to be found in insufficient technical manpower, inefficient supervision, bad management and inadequate import of industrial raw materials and spares, existing idle capacities should receive first priority as far as the removal of such bottlenecks is concerned. The problem of creating new managerial and technical skills in a country like India where so much of industry is new and large numbers of new recruits are flocking to industry from a non-industrial background has been rightly spotlighted by Mr. Williams as one of very large dimensions.

While the Finance Minister, Mr. Morarji Desai, in his speech at the meeting of the Chambers, recognised in a general way the need to employ existing capital resources to their full capacity, it is strange that he whittled down the force of this recognition by not facing squarely the problem of maintenance imports, that is, imports of raw materials and components, for maintaining the highest possible level of production in existing industries. Mr. Desai's argument that external credits and aid funds could be used mostly for new development, tied as they were to particular projects, and not for import of industrial raw materials and components was, of course, theoretically correct. But it concealed the fact that the Government had not presented a forthright and cogent case to the "Aid-India Club" for assistance covering maintenance imports also. The Government's current view, to which the Finance Minister referred, would seem to be that each industry must cover as much of its own foreign exchange needs as possible by making a "conscious" effort to increase its exports, so that its reliance on the common pool of foreign exchange was reduced to the minimum. It would appear that this was a tall order which not only evaded the issue but ignored the potentialities of traditional exporting industries for earning much more foreign exchange than they are doing now. While diversification of export trade is undoubtedly a desirable proposition, it must be recognised that finding markets for new products all on a sudden is by no means easy. Industries established in the first instance for catering to the domestic market cannot possibly be expected to develop overnight products of the kind suitable for export.

Indeed, the repeated stress on diversification of exports seems to be encouraging a fatalistic attitude that there is no more room for the traditional foreign exchange earners—an attitude which leads to adoption of policies and practices that actually tend to restrict the export markets over a period of time. It is also leading to the application of export incentive schemes in an injudicious manner which, if persisted in for some more time, might threaten the external value of the rupee itself. Why should not the powers-that-be recognise that more foreign exchange can be saved or earned in other easier and more economic ways? For instance, substantial savings of foreign exchange can be effected in such possible ways as enabling private enterprise to refine more Assam crude oil and thereby to reduce the import bill on account of petroleum products and growing more raw cotton and raw jute to reduce or eliminate their imports. Again, substantial earnings of foreign exchange can be effected by reducing the financial impositions on tea, textile and jute industries so as to restore their competitive capacity in export trade, by growing more oilseeds for export and by eliminating superfluous cattle by stages and exporting more raw hides and skins. Apart from trying to get more 'free' aid, as distinct from 'tied loans', the powers-that-be would need to exercise their thoughts much more on the above lines. Exhortation of the kind addressed by Mr. Desai to new industries to export would surely not do the trick. The export incentives given or promised to such industries could be more usefully provided to traditional exporting industries. And the newer industries could be left free for a good many years to cater to the domestic market. This, however, does not mean that they need not participate, wherever possible as in the case of engineering goods, in export promotion.

It is here that the role of the State Trading Corporation would have to be clearly defined. There is much wisdom in the view expressed by Mr. Williams that maintenance imports should be actually handled by existing channels wherever they have proved themselves capable of rendering reliable service. But it is surprising that he adopted an approach of compromise where he stated that exports through the S.T.C. could be confined to nation-to-nation trading in raw materials and semi-processed commodities. It is all the more surprising because Mr. Williams himself admitted that well-established export interests were in constant personal contact with their customers throughout world markets. The idea that Communist countries like to deal only with State-operated agencies for their export or import purposes is, perhaps, not wholly true to reality. The U.K., West Germany and a number of other European countries, for instance, are doing a growing volume of trade with Russia without the assistance of State Trading Corporations. Nor is it possible to assert dogmatically that private business interests in India or elsewhere will somehow reconcile themselves to the continued prospect of having to deal with a State trading agency for their export or import purposes. A more forthright approach to this question of State trading in the foreign trade sector is certainly called for.

Two other directions in which economic statesmanship could conceivably be displayed were also touched upon by Mr. Williams. One of these related to the establishment of secondary and necessary complementary processing and consumer goods industries by using the basic raw materials and semis and the capital goods produced by the expanded heavy industries. If private enterprise is to play its full part in establishing these industries, it must have such conditions as would enable it to pay good wages, to provide a reasonable return to shareholders and to build up the reserves necessary for continuous modernisation and expansion. The telling point made by Mr. Williams that, if even in North America the plough-back required in industrial enterprise for self-regeneration represents 14 per cent. of gross income, it should be more in a country like India engaged in rapid industrialisation, deserves full consideration by the Tariff Commission in determining fair ex-works prices and fair returns on capital employed.

Related to the above approach is the one pleading for a few fiscal concessions which Mr. Williams listed as necessary for giving a fillip to new industrialisation. The desirability of applying the provisions of Section 56A of the Income-tax Act to all the industries specified in the first schedule to the Industries Development and Regulation Act is one of them. The need for removing the taxation of capitalisation from reserves and from share premium accounts is another. A third desirable concession could be the commencement of five-year relief period afforded by Section 15C of the Income-tax Act only after a new industrial undertaking has reached a profit-earning stage. This concession, however, must be so provided as to see that it will also act as an incentive to expedite the attainment of that stage. And, lastly, any possible reduction in the high level of personal taxation will generate more personal savings for investment in new industries. While it was hardly to be expected that the Finance Minister would commit himself so far in advance of the Budget to any of these suggestions made by the President of the Associated Chambers of Commerce of India, their patently reasonable character could not have failed to impress Mr. Morarji Desai. It is to be hoped that the Budget for 1961-62, covering the first year of the third Plan, will bear out this inference.

EXPORT OF ENGINEERING GOODS

IN its memorandum to the Planning Commission on the Draft Outline of the third Plan, the Engineering Association of India, it may be recalled, had expressed the view that no spectacular rise in exports of engineering goods could be expected in the absence of a plan for a good deal of diversification in products. But a plan of this kind would succeed only if there were enough resources in technical know-how, product design and skilled manpower. It is not surprising, therefore, that, at the present time, more than 50 per cent. of the export trade in engineering goods is confined only to about 16 items and to about 30 firms. While exports of such goods in value terms have increased by 45 per cent. in 1960 as compared with 1959, in absolute terms they are not very substantial; being only Rs. 8.9 crores in the former year, as against Rs. 6.1 crores in the latter. In highlighting these facts, Mr. R. S. Agarwal, Chairman of the Engineering Export Promotion Council (Calcutta), has also appropriately outlined, in his address at the Council's fifth annual general meeting, a plan for a vigorous export promotion drive. Such a drive could conceivably have a target for 1965 of as much as Rs. 50 crores worth of exports of engineering goods (as against the Council's present target of Rs. 30 crores for 1965, Rs. 25 crores for 1964, Rs. 20 crores for 1963, Rs. 16 crores for 1962 and Rs. 12 crores for 1961), if some inhibiting factors are removed and positive incentives given.

The present factors standing in the way of export promotion are: First, production even in those engineering units which could be relied upon for exports is only around 50 per cent. of their installed capacity on account of shortage in the supply of steel and pig iron; and, secondly, there is a wide gap, ranging from 15 to 40 per cent., between net ex-factory realisation on sales of engineering goods in India and net realisation on sales abroad—a gap rendering export an uneconomic proposition. As for the first factor, namely, physical shortage of raw materials, present trends point to a distinct improvement in the supply of steel in 1961, as its production is currently about 250,000 tons per month, as against 160,000 tons per month in the beginning of 1960. But the position in respect of foundry pig iron may not be that easy until the Bokaro plant is set up and the proposed five or six medium (or small?) scale pig iron plants, each up to a capacity of 100,000 tons a year, are established in the private sector. Whatever be the expected course of pig iron production in the country, it should not be difficult for the powers-that-be to make some priority allotment of this raw material to the engineering industries for the purpose of export promotion.

This factor of raw material supplies has also another aspect, namely, that of prices. The higher production costs of Indian engineering goods would have to be brought down, as Mr. B. S. Agarwal has pertinently emphasised, by reductions in the prices of steel, pig iron and tinplate. Mr. Agarwal's observation that "the Steel Prices Committee has already submitted its report to the Government and we hope that they would accept their recommendations and give relief to the export promotion industries," gives rise to the hope that something will be done in this regard. It is high time this was done, because the present steel prices paid by the consumer include the surcharge of Rs. 115 per ton—a surcharge for which there is less justification now in the context of smaller steel imports. Similarly, the present pig iron prices paid by the consumer also include the surcharge of Rs. 62 per ton. Whether or not the Government accepts the Engineering Association's advice that it "should not try to find finance for general purposes except through accepted taxation channels," it ought to do something to cheapen raw material costs in the interests of export promotion of engineering goods.

But any reduction in raw material costs may only partly cover the gap between net ex-factory realisation on sales of engineering goods in India and net realisation on sales abroad. The gap would need to be covered fully by other positive incentive measures, for, as Mr. Agarwal has so happily put it, "sentiments and exhortations (to export) alone do not work in business" and "export to be a success must be made a worthwhile proposition." Such incentive measures could conceivably include (i) income-tax rebate and building up of tax-free reserves as has been the practice in Japan and West Germany, (ii) credit facilities at concessional rates of interest, and (iii) retention of foreign exchange earned for utilising in import of raw materials and stores for sale in the market. Of these measures, only the third one is already being applied to the special export promotion schemes, but, according to the Chairman of the Engineering Export Promotion Council, some modifications are necessary here too. At the same time, there is a case for lower shipping freights for engineering goods by placing them in a separate classification instead of continuing to keep them in the miscellaneous group for which highest freight rates are charged; and there is also a case for concessions in railway freight on account of all engineering goods moving from inland centres to ports or from one port to another. These requisite concessions and reliefs hardly call for comment. Since opportunities are opening out for the supply of engineering goods, including parts and components, even to highly industrialised countries like the United Kingdom, West Germany and the United States—in 1960 we exported Rs. 1.5 crores worth of engineering goods to North America and Rs. 1.2 crores worth to Europe as against Rs. 1.1 crores and Rs. 0.3 crore respectively in 1959—the time has verily come for providing all possible incentives in this regard.

MARKET GOSSIP

THE birth of a new year in the Christian Era rarely generates any bullish enthusiasm among the stock exchange fraternity in India. It is so, because the end of February is Budget day for this country and, usually, speculation about the budget is predominantly bearish. A.D. 1961 has been no exception to this general trend. With the third Plan bigger than the second, envisaging an additional tax burden of Rs. 1,650 crores for the five-year period and with Defence expenditure showing no prospect of diminishing, the desire to play for safety is strong among speculators and investors alike. There is, of course, subdued confidence that the Government will not resort to any new direct taxes or enhance the existing ones with the object of winning the votes of the masses in the next General Elections. It is this confidence that is restraining the bears to exploit the situation. Nevertheless, none is inclined to go long.

In the short-term money market, the Reserve Bank's policy of dear money is proving effective. The inter-bank call money rate has gone up to the unprecedented level of 5½ per cent. and several banks are said to be borrowing from the Reserve Bank against Government securities at the maximum penal Bank rate of 6 per cent. Some of the Exchange banks, we hear, have even found it necessary to bring funds from abroad. There is no change in the Reserve Bank's open market policy so far as the Gilt-edged securities are concerned. It has commenced buying outright, instead of against a switch, the Central loans maturing in 1962, but this is being done with a view to facilitating their re-payment rather than for easing the pressure on the short-term money market. The banks are hopefully awaiting the return of the balance of special deposits lying with the Reserve Bank. Even if this hope were to materialise, the resulting relief would not go very far. And, with deposits not expanding fast enough, they will do well to reconcile themselves to the prospect of the effective Bank rate continuing at 6 per cent. throughout the current busy season and the inter-bank call money at 5 to 5½ per cent.

Madras Aluminium—A New Growth Issue

The first largest capital issue of 1961 is provided by the Madras Aluminium Company Ltd. A detailed summary of the prospectus appears on pages 20 and 21. A careful study of it suggests that the project is a sound one and that it should be an early success. Aluminium has established itself as a useful industrial and building material. Constant research in its uses has proved that it is a good and gainful substitute for steel, as well as for some of the other non-ferrous metals. Its special features as a metal are lightness combined with strength, good conductibility, high corrosion resistance, easy adaptability for a variety of uses, and lower maintenance cost. Its indispensability for the manufacture of aircraft is well known. Not so well known, perhaps, is the fact that it is being increasingly used in automobile industry. The present world demand for aluminium is about 4 million tons. Nine years ago, it was no more than 1.8 million tons.

As industrialisation grows in India, the demand for aluminium also will expand rapidly. Even as it is, production is very much less than demand. For India, which is not well endowed with copper and other non-ferrous metals, aluminium is more important than even steel, because it can be substituted for other non ferrous metals, too, as in the case of A.C.S.R. cables and utensils. It was no doubt this realisation that impelled our planners to set a target of 75,000 tons of production and 82,500 tons of capacity for aluminium against the present production of a little over 17,000 tons per annum and a capacity of 17,500 tons. In terms of potential demand during the next five years, this target is undoubtedly modest and India may even find it necessary to import aluminium ingots.

In order to achieve the aforesaid target, the Government of India has allowed three new entrants into the field and one of them is the Madras Aluminium Company Ltd. The initial capacity sanctioned is 10,000 tons, but the project is so designed that it can be expanded by stages to 40,000 tons to take care of the country's future requirements. The special features of this Company may be highlighted here, as all the essential details are given in the announcement:

(1) Availability of adequate power at a reasonably low price is an important prerequisite for the economic working of an aluminium manufacturer. Even an increase of one naya paisa will mean a rise of Rs. 220 per ton in the cost of production of aluminium, because some 22,000 kw.h. of electric power is required to produce one ton of ingot. The Company has been assured of adequate supply of power by the Madras State Electricity Board at the rate of Rs. 55 per kw.h. for the alumina section for five years and Rs. 120 per kw.h. for the smelter (aluminium section) for ten years. These are the lowest rates which any manufacturer of aluminium has so far been able to get in India.

(2) The bauxite deposits found in the Shevaroy Hills are of a superior grade, in that the ore is soft and easily amenable to smelting.

(3) The mining of bauxite deposits in the Shevaroys is relatively cheaper, as the deposits are found on top of the hills, requiring only surface mining.

(4) The project enjoys the best locational advantages. The distance between the bauxite mines and the factory site is only 42 miles. Plenty of water and power are also available on the site. There will thus be a great saving in freight. Even the markets for the finished product are easily accessible. The demand for aluminium for electrical uses in the Madras State alone is said to be 10,000 tons per annum.

(5) The manufacturing programme is so drawn up as to enable production to begin by stages. In less than 18 months from now, the Company expects to start production of alumina which can either be sold within the country or exported abroad until the aluminium section is in a position to convert it into ingots. The mining of bauxite is already in full swing and the ore is being stockpiled. In fine, the Company should be able to attain the stage of profit-making and yielding a return on capital well within four years.

(6) Technical collaboration of a high order has been obtained. The Montecatini Group in Italy is internationally well known for its success in the chemical and metallurgical industries. The collaborators have a big stake in the Company and also a big say in its affairs.

(7) The Madras Government, too, has a large financial stake and can be depended upon to take paternal interest in the progress and performance of the Company.

(8) The foreign exchange side has been well taken care of and the project belongs to those industries which will not be materially affected by difficulties in India's balance of payments position. In fact, if it is allowed to export alumina, as is planned, it should be able to earn Rs. 1.50 crore by way of foreign exchange.

(9) Only a sum of Rs. 25 per share is payable now and the balance of Rs. 75 in three calls at convenient intervals.

In fine, the project of the Madras Aluminium Company Ltd. stands favourable comparison with others in respect of raw materials, power, location and markets. Incidentally, the location of the plant, adjacent to the Mettur Chemical Factory would enable the pumping of chemicals by pipelines, thereby saving time and transport costs in regard to this essential raw material also. With such advantages, it is rather surprising that the promoters should have gone in for underwriting their issue on a vast scale and on terms which appear to be generous. Apparently, they did not want to take any chances with the vagaries of the capital market. Be that as it may, the issue belongs to the variety of "growth scrips" and should prove sufficiently attractive to those who are in no hurry for an immediate reward and look for handsome capital appreciation in due course.

1960 ANNUAL NUMBER

Owing to unforeseen circumstances there has been some delay in the publication of our Golden Jubilee-cum-1960 Annual Number. The Number will be ready for distribution to subscribers on 10th January 1961. In view of its bulk, its despatch through post has to be spread over two days, namely, 10th and 11th January 1961. This slight delay, which has been unavoidable, is regretted.—Ed.

British Paints: A Promising New Issue

The British Paints (India) Limited has offered for public subscription 216,346 equity shares of Rs. 10 each at a premium of Rs. 5 per share. Consent of the Central Government, as well as of the existing shareholders of the Company, has been obtained for this public issue. Of this issue, a small percentage, representing 20,000 shares, is reserved for Directors, their friends and the employees of the Company. The subscription list will open on 16th January 1961 and close on 18th January or later, at the discretion of the Directors. Applications must be made for a minimum of 100 shares or in multiples thereof and the issue is open only to those who are residents in India. The whole amount is payable with the application.

The Company under reference was originally incorporated as Hadfields (India) Limited on 17th December 1923 in West Bengal. The present name was acquired by the Company in December 1947, when the British Paints Ltd. of the U.K. secured a controlling interest in the Company. The authorised capital is Rs. 1 crore and the present issued and paid-up capital Rs. 28,36,540, all in ordinary shares of Rs. 10 each; this is now sought to be raised to Rs. 50 lakhs.

Since the acquisition of controlling interest by the British Paints Ltd. of the U.K., the Company has made rapid progress. The net sales, for instance, increased from Rs. 31.75 lakhs in 1947 to Rs. 166.91 lakhs in 1959. The Company's net profit after taxation has almost doubled during the five years beginning from 1955. Its management has been sound and proof of it lies in the fact that the Company's reserves and surplus, as at 31st December 1959, amounted to Rs. 26.57 lakhs, as against a paid up capital of Rs. 28.36 lakhs. On the basis of this factor alone, it can be stated that the premium of Rs. 5 per share is not unduly high. When the present issue is fully taken up, as it is bound to be, the reserves and surplus will go up to Rs. 35.38 lakhs, a level which will be equal to 71 per cent. of the increased paid-up capital (of Rs. 50 lakhs).

The principal business of the Company is manufacture and sale of paints, enamels, varnishes, synthetic resins, and allied products, for all of which there is an expanding market in this country. Being a subsidiary of the British Paints of the U.K., the Company also enjoys the benefit of research and the vast technical experience and knowledge of the network of the subsidiaries situated in the U.S.A., Canada, Australia, New Zealand, Trinidad and Great Britain. The Directors anticipated the sales to increase further in the near future. They are quite optimistic particularly with regard to synthetic resins, because of the present restrictions on their import which have created a large unsatisfied demand. Further, the Company intends to manufacture a special type of protective coating, which is currently not being manufactured in India but is imported in large quantities. For this purpose, the Company has entered into negotiations with a foreign concern. If the negotiations are successful and the Central Government gives its sanction, it is proposed to form a separate company for this purpose in collaboration with the foreign manufacturer. In this new company, the British Paints (India) Ltd. will have a majority of 51 per cent. of the issued share capital.

On the basis of the past performance and the growth prospects, the Directors feel that the Company would be in a position to pay a taxable dividend at the rate of 12½ per cent. per annum. This would give a tax-free yield of 5.83 per cent. per annum. As the growth prospects are good, this is by no means a poor yield. The Directors of the Company are all thoroughly experienced persons and they could be expected to employ the additional capital fruitfully so as to benefit the shareholders.

The shares now being offered rank as regards dividends and in all other respects pari passu with the existing equity shares of the Company. Only, they will not be entitled to any dividend that may be declared for the year ended 31st December 1960. There are no special rights or restrictions attached to the present issue.

Travancore Electro-Chemical Industries

Ten thousand new ordinary shares of Rs. 100 each have been offered for public subscription by the Travancore Electro-Chemical Industries Ltd. The subscription list opened on the 4th inst. and is scheduled to close on 11th January 1961. The applicants have to pay Rs. 25 per share on application and Rs. 25 per share on allotment and the balance in two equal instalments.

The Company was incorporated on 4th April 1945 under the Travancore Companies Act and started its operations in 1952, owing to delay in securing electrical equipment. For some years past, the Company has been passing through its developmental stage. But it has many creditable features to its record. It has proved, by its own working, the advantages of using sea-shells for manufacturing quicklime. The high purity of the calcium carbide produced by the Company has been certified by the Ministry of Defence, Government of India. In its report of 1956, the Tariff Commission has specifically stated that the existing plant of the Company enjoyed certain marked locational facilities for procurement of raw materials and electrical energy at economic rates and that expansion at the same spot should seem to afford the Company a reasonable assurance of success.

With the new capital now being raised and the financial assistance proposed to be provided by the Government of Kerala, the Company intends to raise the productive capacity of the calcium carbide plant to 10,000 tons per year. As the Government of Kerala has agreed to supply electric power at favourable rates, the Company hopes to produce calcium carbide at economic cost. The other locational advantages are plentiful supply of labour and good transport facilities by both rail and water for the movement of raw materials and finished products.

The Company is very optimistic about the prospective demand for calcium carbide. As is well known, calcium carbide is widely used in the manufacture of such important chemicals as acetylene gas, polyvynil chloride, calcium cynamide, and a variety of commercial solvents and intermediates, synthetic rubbers and resins. The demand for this product is continuously increasing as a result of rapid industrialisation, especially due to the growth of chemical industry. The outlook for future profits would, therefore, appear to be fairly bright.

The Company has secured the collaboration of a German firm and the latter has agreed to supply a complete carbide plant of 30 tons daily capacity as well as technical personnel. The German firm has also agreed to give credit terms for 75 per cent. of the total purchase price of the plant and to charge interest at only 3 per cent. per annum on the outstanding balance.

Coffee Situation

The concern lately expressed by coffee growers over the trend of supplies and prices is not unfounded. A huge stock of nearly three million metric tons of coffee is reported to be currently hanging on the world market and prices are naturally depressed. Uganda Robusta grade is now fetching in London no more than £6 13s. 6d. per cwt., as against £8 8s. 6d. a year ago and £15 2s. in the latter half of May 1958; actually, sometime early in 1960, it was quoted at as high as £10 10s. The continued low level of prices has adversely affected the prospects for coffee exports from India. Nor is the trend of internal offtake encouraging, especially when production has gone up quite markedly, from 46,520 tons in 1958-59 to 49,248 tons in 1959-60 and 52,290 tons in 1960-61 (estimate). It is stated that the unsold stocks of coffee with growers are quite large, prices are falling and the return to growers is beginning to prove to be uneconomic. How disquieting is the position was vividly described by Mr. C. I. Machia, Chairman of the Consolidated Coffee Estates, when he addressed the recent annual meeting of the Company. Here is what he said:

"... Growers are faced with an adverse export market. We are now faced with the position of suffering a loss, as coffee is to be exported on the basis of any price which it could fetch. There is no doubt that, until now, the grower has subsidised the (domestic) consumer. It is extremely

INVESTORS' ELATION YIELDS PLACE TO ANXIOUS CONCERN

TREND OF MADRAS STOCK EXCHANGE IN 1960

By Messrs. Maconochie & Co.

MADRAS, 30th December

THE most outstanding feature of 1960 was the emergence of a vigorous capital market. In few years since independence, did we witness such rousing response for new issues as we had this year. In fact, the enthusiasm was carried to such a pitch as to attract the wrath of Government who stepped in after the self-imposed curbs of the Stock Exchange authorities had proved ineffective. The four-pronged drive initiated by the Reserve Bank in its directive of 11th March, by which (a) 25 per cent. of the excess bank deposits were impounded, (b) a minimum of 50 per cent. margin for advances against equities was made obligatory, (c) banks were prohibited from engaging in budla business and (d) the restrictions on bank advances were further tightened, proved comparatively ineffective. Hence, the deposit impounding scheme was further tightened in May when banks were obliged to hold 50 per cent. of the excess deposits, with the Reserve Bank. The climax of this novel scheme of credit control was seen on 1st October when the Reserve Bank introduced the three-tier Bank rate system according to which Scheduled banks could borrow up to a prescribed quota from the Reserve Bank at the Bank rate beyond that quota upto double of it at 1 per cent. above the Bank rate, and over double the quota at 2 per cent. above the Bank rate. Further, banks were advised to put up their lending rates, in consequence of which borrowing against shares became costlier by ½ to 1 per cent. By now, the speculative fervour for new issues had subsided and therefore the October directive dealt a severe blow to share prices which hurtled down so steeply as to almost wipe off the gains made since the commencement of the year. The Reserve Bank's index number of variable Dividend Securities (base 1952-53=100) which stood at 160 at the beginning of the year soared to 182 at the end of July, when the downtrend started and by mid-October, it was down to 165.1. From then on, there has been a hesitant recovery to 169.4 for the week ended 12th November.

Subdued Optimism

The elation of the investor over the continuous rise in the value of his holdings, during the first seven months of the year, has now given place to anxious concern about the immediate future outlook, especially in the context of the 1961 budget which would herald the third Five-year Plan. At the close of the year, however, market sentiment showed subdued optimism, perhaps on account of the fact that the agricultural and industrial outlook for 1961 promises to be better than during 1960, thanks to the exceptionally, favourable monsoon all over the country. Industrial production in the first five-months of 1960 recorded a 13 per cent. increase over the corresponding period of 1959. Anxiety about foreign aid has also abated considerably, since the victory of Mr. Kennedy in the U.S. Presidential election, because he is known to be an ardent advocate of aid to India. There is optimism that the price line will be held, thanks to the credit control measures of the Reserve Bank of India and the modest provision for deficit financing in the third Plan of Rs. 550 crores out of a total outlay of Rs. 7,000 crores, as compared with Rs. 1,200 crores in the second Plan, out of Rs. 4,800 crores outlay. The stability of the rupee seems better guaranteed and investors would naturally welcome this development, even though the inflationary impact of Plan spending will continue to be felt as long as the Five-year Plans form the basis of Governmental spending.

The year 1960 has proved a dismal one for the Gilt-edged market, preference shares and other fixed interest securities. The credit control measures of the Reserve Bank had a direct impact on the price and marketability of Government securities. The measures introduced in March and May had little or no effect, but the October directive had a drastic effect coming as it did so close after the States had completed their borrowing programme. The Reserve Bank's indication of a change in its open market operations by which it would consider offers of loans maturing only within the next 12 months for outright purchases, resulted in several institutions being obliged to dispose of their securities on an unwilling market. For almost two months Government securities were practically unsaleable and State loans were the worst sufferers, so much so the Reserve Bank had to relax the curbs which was done by reducing the additional reserve requirements, from 50 per cent. to 25 per cent. as and from the 11th of November. This led to some revival in the Gilt-edged market, though there has not been any appreciable improvement in prices.

Holders of preference shares were again left high and dry, as the Finance Minister left it to the companies concerned to decide whether the tax-free preference dividends should be grossed up or not. He, however, gave a broad hint about Government's intention in the matter. Thanks, however, to influential representation by the Life Insurance Corporation of India and the other investment corporations, some relief has been secured. According to the Bill recently passed by the Lok Sabha, it is obligatory to increase the dividend by 30 per cent. in respect of tax-free preference shares and by 11 per cent. in respect of taxable preference shares. Even so, the net return in the hands of preference shareholders continues to be less than what it was before. Hence preference shares have gone out of favour and the emphasis has shifted to investment in growth equities.

Banks

1960 may be considered the year of crisis and consolidation as far as the banking industry is concerned. The unfavourable development in the latter half of the year and the failure of a bank in the South threatened to engulf even the larger ones. But, fortunately, such a calamity has been thwarted by the timely assistance of the Reserve Bank and the encouraging statement issued by the Finance Minister. The Banking Companies Act has been specially amended to make provision for a moratorium and many of the smaller banks have found it necessary to have recourse to this procedure. The present trend is towards amalgamation of the smaller units, especially those having their head offices in the same region and taking over of certain others by the larger banks. Bank shares attracted very little attention and transactions were largely of an investment nature confined to a few scrips. The Travancore Bank became a subsidiary of the State Bank from 1st January 1960 and the compensation payable to shareholders was determined to be Rs. 34.15 per share of Rs. 25. The Bank of Mysore became a subsidiary to the State Bank from 1st March 1960 and the compensation payable to the shareholders was fixed to be Rs. 360 per share of Rs. 100 which was considerably below market expectations.

Sugars

Sugar shares attracted considerable attention and several notable gains were recorded. The industry has had a good time with favourable seasonal conditions and good internal offtake. The progress has been so satisfactory that Government is seriously considering the removal of controls. Andhra Sugars gained Rs. 4. Cauvery Sugars rose from Rs. 122 to Rs. 154 and closed at Rs. 147. Deccans were the most active counter in the sugar section. Opening at Rs. 13.41, the shares declined to Rs. 12.60. The peak was touched in July when the shares soared to Rs. 17, and since then the price has declined steadily, the closing being Rs. 15.15. The Company has paid a dividend of 25% per cent. thus maintaining the 18 per cent. T.F. dividend. E.I.Ds were avidly taken. To implement the composite fertiliser project, the Company issued equity shares of £1 each at Rs. 20 in the ratio of 11 new shares for 15 ordinary or preference share held. From the opening level of Rs. 46.25, the shares touched a low of Rs. 43.50. The right issue expectation in July pushed up the price to Rs. 61.75 cum-div. which is equal to Rs. 43.70 ex-div. ex-right. Owing to forced selling by holders who wanted to finance their rights, the shares fell to Rs. 38 from which level they again rose to Rs. 44.50—the highest for the year. The closing was quiet at Rs. 41. Mysore Sugars repeated the 30 per cent. dividend, and the shares rose from Rs. 56.50 to Rs. 60.50. Travancores maintained the 10 per cent. dividend but were not much in favour.

Plantings

Planting shares, despite their investment attractions, were not much fancied during the year, on account of markets' craze for growth equities and capital appreciation. In their very nature, few planting companies have growth prospects, in view of the limited scope for expansion and diversification of interests. Some of them have actually launched upon industrial projects, but it is the intention of the Government to prohibit, in future, such diversification, as is not in accordance with the Company's principal objective. Should this come about, the development of planting companies would be sealed and they will not be able to step up their dividends in the years to come. Rubber growers have had a raw deal at the hands of Government, their legitimate demand for an increase in price having been again unceremoniously turned down. Rubber companies are now caught in the pincer of mounting estate costs and a static price structure. The plight of coffee growers is, perhaps, a little worse. Thanks to an appreciable increase in world production and the consequent slump in world coffee prices, growers have been fetching progressively lower prices at the export auctions. Nor is the level of internal price sufficient to compensate this loss. To make matters worse, several estates in Coorg and Mysore have been afflicted by an unknown disease termed "die-back," the deleterious effects of which are yet to be accurately assessed. It is some mercy that tea has been on a better wicket, particularly common and low-medium grades. These have fetched steadily higher prices and currently are at their peak while the high-grown varieties have continued to fetch the same remunerative prices as in the past year.

Rubbers

For the year ended February, 1960, Cochin Malabars stepped up the dividend from 15 to 17½ per cent. Opening at Rs. 7.17, the shares touched a high of Rs. 8.70 to close at Rs. 6.95. Kailas stepped up the dividend from 20 per cent. to 22½ per cent. and the shares were well absorbed. Malankaras dropped the dividend by one per cent. but the shares closed almost unchanged at Rs. 18. Midlands were actively traded, the Company having raised the dividend by 2½ per cent. to 12½ per cent. The 5 per cent. dividend declared by Pullangodes being below market expectations, the shares fell from par to Rs. 1.85 but were well absorbed. Rajagiris have maintained the 20 per cent. dividend and the shares, after rising to over Rs. 23, fell to Rs. 20.25 cum-div. Teckoys passed over the dividend and the shares declined from Rs. 8 to Rs. 6.10. Thirumbadis pruned the dividend from 10 to 7 per cent. and the shares lost 50 nP to close at Rs. 1.51. There was interested buying in T.R. & Teas which pushed up the price to Rs. 9.80. The Company has declared a 7½ per cent. dividend for 1959 and an interim of 4 per cent. for 1960. Vaikundams closed at Rs. 31, recording a rise of over Rs. 3.

Coffees

A major shock was provided by the dividend announcements of Coffee Lands and Consolidated Coffees. The former pruned the dividend from 25 to 6 per cent. and the latter from 25 to 20 per cent. Coffee Lands have earned about Rs. 2 lakhs, as compared with Rs. 8.71 lakhs last year, while the profit of Consolidated Coffees shrunk from Rs. 26.6 lakhs to Rs. 13 lakhs. The former opened at Rs. 24.50 and, after gaining a rupee, slumped to Rs. 18.50 cum-div. on the announcement of the dividend. The latter opened at Rs. 23.20 and, after rising to Rs. 28.75, fell sharply to Rs. 22.70 cum-div. at the close. Cowcoadys declined from the opening level of Rs. 6.37 cum-div. to Rs. 4.81 ex-div. Kumergodes lost over a rupee at the closing quotation of Rs. 5, while Ossoors rose to about Rs. 4, but closed lower at Rs. 3.28. The opening quotation of Rs. 6.08 for Ouchterlonys has turned out to be its peak and the shares, despite consistent absorption declined to Rs. 4.63. Shevaroys stepped up the dividend from 6¼ to 9 per cent.; nonetheless, the shares were comparatively quiet.

Teas

Chembras have announced the issue of bonus shares in the ratio of 1 : 2 and have stepped up the dividend from 15 to 20 per cent. Starting at Rs. 4.40, the shares touched a high of Rs. 5.65 and closed a shade lower at Rs. 5.40 cum-right. Coonoors were scarce and put on Rs. 2. Devasholas maintained the 25 per cent. dividend but the shares lost Re. 1.50 over the year. Haileyburias pruned the dividend from 20 per cent. to 12½ per cent. while Highlands maintained the 15 per cent. Kil Kotagiris stepped up the dividend by as much as 20 per cent. Starting at Rs. 4.98 the shares touched a high of Rs. 6.50 cum-div. but finished lower at Rs. 5.30. Lucky Valleys rose by almost Rs. 2 to close at Rs. 14. Neelamalais remained dull at about Rs. 4.90 cum-div. Nelliampathys stepped up the dividend from 10 to 13 per cent., and Nilgiri Teas from 5 to 8 per cent. Nonsuch were well absorbed and the Company maintained the 20 per cent. dividend. Opening at Rs. 25.40, the shares closed a rupee higher. Parksides, besides maintaining the 27½ per cent. dividend issued 1 bonus share for every 10 shares held. From the opening level of Rs. 24.65, the shares rose to Rs. 30.75 cum-div. cum-right and closed at Rs. 26.68 ex-div. ex-right. Peermades stepped up the dividend from 16¼ to 22½ per cent. and the shares gained over Rs. 2 at the closing quotation of Rs. 22.50. Periakaramalais put up the dividend by one per cent. to 13½ per cent. and the shares were actively traded. However, the price declined from Rs. 3.85 to Rs. 3.40. Twyfords reduced the dividend from 15 to 10 per cent. and the shares declined to Rs. 12. U.N. Teas were keenly taken. The Company stepped up the dividend from 19½ to 21 per cent. Opening at Rs. 21.37, the shares gained Rs. 2 at the close. Blue Mountains and Waterfalls, besides maintaining the 12½ per cent. dividend, issued right shares at par in the ratio of 1:5 and 1:2, respectively.

Textiles

Despite uncertainties over the Wage Board award which happily has since been compromised, and the occasional difficulty in securing cotton supplies, the textile industry in the South has had a reasonably good year. Textile scrips, however, barring a select few, did not evoke that much attention as in the past. A noteworthy feature was the improvement in the prospects of coarse and medium count spinners. The steps taken by Government to ensure adequate cotton supplies to the mills in return for which the industry has agreed to a further voluntary cut effective from 1st January 1961, as also the 10 per cent. cut in August 1960, made little or no impression on share values. Bangalores and Burkinghams were well absorbed though the closing was a shade lower than the opening quotations. Cannanores stepped up the dividend from 15 per cent. to 17 per cent. and the shares closed practically unchanged at Rs. 155. Cauvery Spinnings paid 4 per cent. more at 13 per cent. and even here there was no appreciable change in price. Coimbatore Pioneers paid 25 per cent. against 20 per cent. last year and the shares were rather scarce. Dhanalakshmis were well absorbed. This Company has increased the dividend from 10 per cent. to 17½ per cent. Kothuris resumed dividend payment with a 10 per cent. for 1959 and the shares closed at Rs. 11.80, showing a decline of about a rupee from the highest level. Lakshmis sprung a pleasant surprise by stepping up the dividend by as much as 8 per cent., paying 20 per cent. against 12 per cent. last year. The Rs. 50 paid shares rose to Rs. 172 cum-div. but closed quieter at Rs. 149. Loyals attracted speculative attention rising by Rs. 6. The payment of a 12½ per cent. dividend for Maduras for 1959 against nil for 1958 was most welcome news and the shares resumed their popularity during the year. Opening at Rs. 30.50, they gained about Rs. 5, closing a shade lower at Rs. 34.99. Metturs stepped up the dividend from 25 per cent. to 30 per cent. but the price declined from the opening level of Rs. 410 to Rs. 369 at the close. Radhakrishnas were well absorbed and closed at Rs. 29.45, as also Rajalakshmis which rose from Rs. 67 to Rs. 74.50. Both the rayon shares of our market were quite active. South India Viscose, the new entrant, shot into popularity, recording a high of about Rs. 175, but fell to Rs. 145 at the close. Movement in Travancore Rayons was influenced by its counterparts in Bombay and Calcutta. Opening at Rs. 28.43, the shares soared to over Rs. 40, to react gradually to the closing quotation of Rs. 33. The setback in rayon scrips was brought about mainly by apprehensions of raw material shortage and of further increase in excise duty.

Miscellaneous

Buoyant conditions were witnessed during the first seven months of the year, the industrial equities of this section attracting maximum attention. The speculative fervour of the other two markets was reflected mainly in the sharp rise recorded by a few scrips like Aluminium Industries, Ashok Leylands, Mysore Papers, Rallis, Tube Investments and Western India Plywoods. Aluminium Industries made a right issue at par in the ratio of one for four shares. The Company paid 18 per cent. taxable on the original capital thus maintaining the 12½ per cent. tax-free dividend. Opening at Rs. 122.40, the shares rose to over Rs 29 cum-div. cum-right but lost ground gradually, closing at Rs. 22. Ashok Leylands were actively traded. The Company is issuing new shares at par in the proportion of one for every five shares held. Opening at Rs. 7.20 the shares gained Rs. 2.50 but the closing was lower at Rs. 8.12 ex-right (equal to Rs. 8.75 cum-right). F.A.C.Ts went out of favour and the shares declined to below par. Amongst cement shares, Daimias and India Cements accounted for maximum absorption, especially the latter which rose to Rs. 7.30 cum-div cum-right. The Company has announced the issue of right shares at par in the ratio of one for every two shares held. However, the right issue has brought about liquidation for financing the rights, which has caused the price to drop to Rs. 5.88 cum-div. ex-right. Mettur Chemicals stepped up the dividend from 8 8 to 12½ per cent. and the shares were very well absorbed. The closing at Rs. 12.20 was over a rupee below the best. During the year, the Company made a right issue at par in the ratio of 1 : 4. Mysore Chemical Fertilisers doubled the dividend to 10 per cent. Mysore Electrical Industries increased the dividend from 15 per cent. tax-free to 24 per cent. taxable and the shares were scarce, the price rising to Rs. 200. In September, the Company issued fresh capital as per to the tune of Rs. 5.95 lakhs. Mysore Lamps were scarce. The Company paid 20 per cent. taxable against 16 per cent. tax-free last year. Mysore Papers paid 15 per cent. taxable against 12½ per cent. tax-free last year. The Company has a vast expansion programme to finance which it has proposed the issue of fresh capital at par in the ratio of four new shares for every share held. In view of the heaviness of the issue, the price slumped from a high of about Rs. 36 to the closing quotation of Rs. 24.75. In July, Parry Confectioneries issued bonus shares in the ratio of one for three shares held. The Company also stepped up the dividend to 30 per cent. taxable. The shares were extremely scarce and closed high at Rs. 5.30. Rallis attracted considerable speculative attention, owing to favourable working reports and, at one time, the shares rose to Rs. 155 from the opening quotation of about Rs. 155 from the opening quotation of Rs. 83. The price has since fallen to Rs. 120. Spencers paid 18 per cent. taxable, against 15 per cent. last year and the closing quotation of Rs. 32.65 was almost the highest. Standard Motors rose from Rs. 13 to Rs. 17 and T. Stanes from Rs. 24.10 to Rs. 35. Tube Investments maintained the 10 per cent. dividend and, after rising to about Rs. 375, the shares closed lower at Rs. 350. Western India Plywoods also repeated the dividend of 10 per cent. The shares rose from Rs. 112 to Rs. 166 but fell to Rs. 161 at the close.

U.K. BALANCE OF PAYMENTS 1960

(From Our Own Correspondent)

LONDON, 31st December

LONDON LETTER

THE British Treasury has just published its analysis of the U.K. balance of payments for the third quarter of this year, which shows a deterioration in the external monetary position of £75 million. This deterioration has been more than concealed by an inflow of foreign funds which increased the overseas sterling holdings of this country (on behalf of non-sterling countries) by £226 million. Against this, the sterling liabilities in this country to United Nations and International organisations fell by £57 million and liabilities to the sterling countries fell by £97 million. The net result was a rise in the country's sterling balances of £72 million. To this must be added funds held by private persons and organisations, representing part of the general inflow due to the flight from the dollar, of another £80 million, thus giving a total gross increase in liabilities of £152 million.

During this third quarter the gold stock of the Bank of England increased by £77 million, that is to the extent of about half only of the increase in the country's external liabilities. The difference between the two figures of £152 million increased sterling liabilities and £77 million of gold inflow represents the deterioration in the country's position. Indeed, the position on current account was a great deal worse, for the net deficit between imports and exports (f.o.b. was £133 million reduced, as a result of invisible income, to just over £100 million, and only the inflow of long-term capital improved this to the figure of £75 million mentioned above. These figures put the U.K.'s current gold inflow in proper perspective. The gold inflow in the third quarter was only half the net increase in liabilities and was only made possible by the vast inflow of foreign funds. If all these foreign funds had not come in then, there would have been a substantial gold outflow to pay for the deficit on current account.

We are now able to assess the payments position for the first nine months of the year, and by taking account of the export-import figures for October and November, to arrive at a fairly close view of the balance of payments figure for the whole of 1960. Over these nine months, there was a visible trade deficit of £160 million. But to this must be added Government external spending (mainly for defence) of £239 million and, even after offsetting a very healthy invisible income of £303 million, there remains a deficit on current account for the nine months of £66 million. But regardless of the external trade position, this country, as a traditional overseas lender, made long-term capital investments of a net £47 million. It also permitted the holders of the sterling balances to draw their balances down by £127 million and reduced its obligation to international organisations by £101 million. Thus, the country incurred total liabilities on trade and capital account of no less than £341 million and gold would have flowed out to this extent had it not been that the inflow of foreign funds from the non-sterling area which, either in the hands of the British banking system or foreign holders in this country, brought in no less than £474 million. As a result, gold flowed in to bridge the gap to the extent of £133 million.

Danger Still

For the months of October and November, there is a deficit on current trade (f.o.b. basis) of some £80 million. In other words, a greater deficit for these two months than for the previous nine months together. Assuming that Government spending and other invisibles will balance out as they did in the fourth quarter last year, and making also the large assumption that trade will not deteriorate excessively in

LLOYDS BANK LIMITED

and

NATIONAL AND GRINDLAYS BANK LIMITED

It is announced that, as from the 1st January 1961, the business of the branches of Lloyds Bank Limited in India, Pakistan and Burma has been merged with and is being carried on by National and Grindlays Bank Limited.

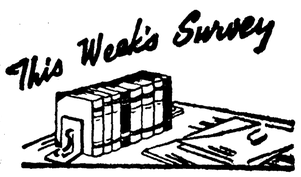
The interest of Lloyds Bank Limited in the banking business of the territories concerned is being continued through a substantial shareholding in National and Grindlays Bank Limited and by representation on their Board of Directors.

National and Grindlays Bank Limited

(amalgamating National Bank of India Limited, Grindlays Bank Limited, and the Eastern Branches of Lloyds Bank Limited)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The liability of members is limited.

Head Office: 26 Bishopsgate, London, E.C. 2



STEEL INDUSTRY

SARDAR Swaran Singh, Union Minister, for Steel, Mines and Fuel, told the recent meeting of the Iron and Steel Advisory Council that steel production had just reached the level of 250,000 tons a month (as against 160,000 tons in the beginning of 1960) and that this higher rate of output would make possible a substantial reduction in steel imports in 1961. While the picture drawn by the Minister may be deemed hopeful as far as the current calendar year is concerned, it cannot conceal the fact that there will be a shortfall of 0.4 to 0.5 million tons in the achievement of the second Plan's end-year (April 1960-March 1961) target of 2.6 million tons. For, with an estimated total production of 1.9 to 2.0 million tons of finished steel in the calendar year 1960, the most that can be hoped for in the Plan year 1960-61 is 2.1 to 2.2 million tons. While this shortfall can be explained by a reference to the critical shortages throughout 1960 in raw materials of appropriate quality—coking coal and limestone in particular—any such explanation in the current year will not constitute a justification for a possible lower rate of production than 300,000 tons a month.

If Sardar Swaran Singh thinks that a total production of 3 million tons or so in 1961 will fully meet the internal demand—the idea of exporting some surplus categories of steel and of using the foreign exchange earned thereby in the import of some other categories of steel needed in the country means, in effect, that there will not be any large unsatisfied hunger for steel—he is probably erring on the side of underestimation. Since the entire quantity of about a million tons of steel imported in 1960 is not going to be replaced by indigenous production in 1961, the total demand (which may be broadly estimated at about 4 million tons in the current year) will mean that as much as 3.5 million tons must be produced by the country's old and new steel plants. Otherwise, the demand for steel by engineering industries which are now working very much below their capacity for want of raw materials—steel and pig iron—may still not be fully satisfied at a time of heavy construction activity connected with projects, old as well as new. Although in a note on engineering export promotion in this issue, it is stated that there may come about a distinct improvement in the supply of steel to the engineering industries in 1961, it is by no means clear that their demand therefore will be fully met if the rate of steel production turns out to be no more than 250,000 tons a month. It is here that the need for a higher rate of production should become apparent. But, then, according to the Minister's own admission, the continuing shortage in limestone supplies to the steel plants causes concern. Even the stated improvement in coal supplies is, perhaps, not very significant, for new coal washeries are yet to be established for ensuring more adequate supplies of coking coal to the steel plants. If improvement in the coal position refers to better movement by rail, it will probably not mean much, for larger quantities of inferior coals will still not mean a substantially higher rate of steel production. It would thus appear that Sardar Swaran Singh's optimism is rather excessive so long as a higher priority is not assigned to the construction of new washeries. It would be interesting to know how the high level standing committee on raw materials for the steel industry is concerting measures for overcoming the raw material bottlenecks.

If Sardar Swaran Singh did not throw more light on this problem at the Iron and Steel Advisory Council's meeting, he at least gave the cheerful news that five or six pig iron plants, each of upto 100,000 tons capacity, were being, or would be, licensed in the private sector. Already one such unit had been licensed for Maharashtra and a licence had also been granted to a unit in Orissa for substantial expansion upto 100,000 tons of pig iron per annum. Although saleable pig iron supplies had increased to about one million tons in 1960 as compared with 800,000 tons in 1959, the demand from engineering industries could not be satisfied in full. Hence the move to license pig iron units in the private sector is welcome. An equally welcome move by the Government, as the Minister disclosed, is to license a number of units in the private sector to manufacture steel wires with the object of increasing the total wire-drawing capacity upto 500,000 tons a year. This, of course, would demand greater supplies of steel—an additional reason why steel production should not be allowed to fall below a possible level of 300,000 tons a month in the current year.

U.S. AID FOR FERTILISER PLANT

One more agreement, providing for a substantial amount of U.S. aid to India, was signed at Washington last week between the Governments of the two countries. The aid, amounting to Rs. 27.61 crores ($58 million), will finance the entire cost of the fertiliser plant proposed to be set up at Trombay in Bombay by the Hindustan Chemicals and Fertilisers Ltd., a Government of India concern. A little over half the aid—Rs. 14.28 crores or $30 million—will represent the foreign exchange component of the project, to be given as a loan from the U.S. Development Loan Fund. The balance of Rs. 13.33 crores ($28 million) will represent the Indian currency cost, to be met by a loan of rupees derived from the sale of U.S. agricultural commodities to India.

The significance of the loan cannot be described better than in the words of Mr. M. C. Chagla, India's Ambassador in the U.S., who said on the occasion of the signing of the agreement that it lay not in the amount of dollars advanced but in the cause for which it was advanced, that is, establishment of fertiliser plant. How important is this project will be evident from the woefully inadequate supply of fertilisers which continues to hamper progress on the agricultural front. The Draft Outline of the third Five-year Plan envisages an increase of 30 to 33 per cent. in the production of foodgrains and other agricultural commodities. And such an increase can be accomplished only through greater and wider use of fertilisers. Appropriately enough, the Plan contemplates a three-fold expansion of nitrogenous fertiliser output and six- or seven-fold rise in the production of phosphatic fertilisers, the total target fixed to be achieved by 1965-66 being one million tons. Surely, the Trombay plant, as Mr. Hart Perry, Acting Managing Director of the D.L.F., aptly put, will be a major step towards the fulfilment of this objective. To quote Mr. Perry: "Our loan is also significant because of its meaning for the future. During the negotiations of this loan, the Indian Government gave us an assurance that U.S. private enterprise will have an opportunity to participate in the establishment of other fertiliser plants." Incidentally, Mr. Perry expressed the willingness of the Fund to give sympathetic consideration to any application in this field, and said: .... negotiations are under way looking forward to the establishment of at least two more fertiliser plants, in addition to the Trombay plant."

A welcome feature of the agreement is that the loan is repayable in rupees. This means that there will not be any drain on the foreign exchange resources the position in respect of which will continue to be tight for many years to come.

SOVIET INDUSTRIAL PRODUCTION

An increase of 8.8 per cent. in industrial production and 9 per cent. in national income is envisaged by the 1961 plan for the development of the Soviet economy adopted by the Supreme Soviet towards the close of 1960. Employment is expected to go up by 3.2 million and real income per employed person by 5 per cent. The increase in capital goods output is expected to be 9.5 per cent. and that in consumer goods production 6.9 per cent. The rise in overall industrial production during 1961, estimated at 8.8 per cent., will bring the mean annual rate of industrial growth during the first three years of the Seven-year Plan (1959-65) to 10 per cent., as compared with only 8.3 per cent. envisaged in the Plan. This is in conformity with the observed pattern of totalitarian planning under which actual performance almost always tends to exceed targets unlike planning in a democratic framework where the reverse is found to be the case.

Presenting the plan for the consideration of the Supreme Soviet, Mr. Vladimir Novikov, Vice-Chairman of the Council of Ministers and Chairman of the State Planning Committee of the U.S.S.R., stated that, in 1960, Soviet steel output increased by five million tons, oil production by 18 million tons and power generation by 30,000 million kilowatt hours. It is said that the growth of industrial production has been at the rate of 10 per cent. per annum during the period 1958-60 or 30 per cent. in three years. This means that the balance between the Soviet and U.S. economies (the rate of growth of industrial production in the U.S. during the period 1958-60 was only 8 per cent. or 2.66 per cent. per annum) has been tipped further in favour of the U.S.S.R.

A notable feature of the plan for the current year is the heavy investment proposed in light and consumer industries which is one and a half times that in 1960. Production of television sets, radios, washing machines, refrigerators and such other durable consumer goods will be higher than in 1960. Production of washing machines and refrigerators, for instance, is scheduled to increase by as much as 150 per cent. in 1961, as compared with 1960. Nevertheless, heavy industries are still accorded high priority in the Soviet Plan. Engineering and chemical industries occupy the pride of place. Thus, the Plan envisages a 42 per cent. increase in investment in chemical industry and a 40 per cent. rise in investment in engineering industry. Output by the chemical industry is planned to increase by 14½ per cent. Production of plastics will go up by 32 per cent., of synthetic rubber by 30 per cent. and synthetic fibres by 20 per cent. Production of oil is scheduled to rise by 11 per cent. and natural gas by 34 per cent. It is anticipated that these two will account for 42 per cent. of the total fuel consumption by the end of 1961. Planned production targets for metallurgical industries are—steel: 70 million tons, pig-iron: 50 million tons, rolled metal: 55 million tons, steel tubing: 6.3 million tons and electricity 327,000 kilowatt hours. In keeping with the planned rise in production, Soviet foreign trade too is expected to record an overall increase of 6.5 per cent. Most of the increase, it is said, will occur in the trade with newly independent nations, the percentage rise being as much as 22.

Science and scientific research have all along received top priority in Soviet planning. Expenditure planned on these for 1961 is 15 per cent. more than in 1960 which, in turn, was 15 per cent. higher than the provision made in 1959. It is claimed that the U.S.S.R. would turn out three times as many engineers in 1961 as the U.S. did in 1959.

Soviet statistics on agricultural production have never been satisfactory. They seldom give comparative data or even absolute figures. Increases or decreases are often expressed in percentages. This time, too, the Soviet authorities have decided to maintain this studied ambiguity. Apart from the statement that in 1961 it is planned to raise grain production considerably, there is no mention of actual production last year or the target fixed for the current year. It is, however, stated that cultivated area would be increased by 3 million hectares (about 7.5 million acres) to 205.8 million hectares.

CAUSTIC SODA INDUSTRY

Despite many handicaps, the caustic soda industry has made phenomenal headway during the last decade or so. The major handicap has been the inadequacy of raw materials of good quality particularly industrial salt, and power required for the electrolysis of brine water. Nevertheless, the development of several industries, such as textiles, rayon, soap, vegetable oil refining, aluminium, petroleum, dyes, insecticides and miscellaneous chemicals, has considerably stimulated the expansion of the industry. Tariff protection and severe import restrictions have also helped the growth of this industry. The production of caustic soda increased tenfold in the decade immediately after independence, that is, from 5,800 tons in 1948 to 57,000 tons in 1958. Subsequently, the output almost doubled within two years, such having touched the 100,000-tons-mark in 1960. The production target for caustic soda in the third Plan is laid down at 400,000 tons. This means that there would have to be a fourfold increase in production in the next five years. It would appear that the domestic demand may even exceed this limit by the end of the third Plan. No less a person than Mr. Manubhai Shah, Union Minister for Industry, recently expressed the view that the extent of development envisaged for other industries which use caustic soda as a raw material would certainly require an upward revision of this target by the middle of the third Plan period. He made this observation while inaugurating the seminar on "caustic soda industry" held under the auspices of the Development Council for Alkalies and Allied Industries in Bombay in the last week of December.

There are at present 18 units producing caustic soda. Besides, 12 more units are expected to come into existence in the next five years. The unit size of production now varies from 2 tons to 80 tons per day. Drawing particular attention to the need for expanding the existing uneconomic units, Mr. Shah pointed out that the minimum unit size should increase to at least 30 tons per day for captive units and 100 tons for other units, "as otherwise it will not be possible to produce caustic soda at competitive prices in this country."

The expansion of the industry, however, will call for much greater imports of machinery. A unit to produce 50 tons per day will require about Rs. 1.5 crores for machinery, of which about Rs. 1 crore to Rs. 1.20 crores is the foreign exchange component. Mr. Shah called upon the industrialists to impose a "voluntary ban" on the purchase of complete package units from abroad. He wanted them to find out indigenous sources of machinery for caustic soda factories, and thereby reduce the dependence on imports. It is, however, not known to what extent this will be possible, for two issues are involved here, even assuming that there are plant manufacturers in this country who can meet this demand. One, the quality of the plant will have to be of a high order and, two, the price of the plant should at least be equal to that of imported variety. If these conditions are not fulfilled, the Indian-made caustic soda will not be competitive in terms of quality and price alike. And, if a basic chemical like caustic soda were to suffer from this defect, the competitive ability of products in the manufacture of which it is used and, consequently, their export performance would also suffer. National self-sufficiency in such plant and machinery is, therefore, a highly complicated problem and should be sought only where the balance of advantage is clearly in favour of this country.

The prospects for the development of caustic soda industry depend also on the availability of cheap raw materials, particularly salt of industrial grade and power. The demand for salt from the Alkali industry (caustic soda, as also soda ash) alone is expected to reach 2.25 million tons by 1965, that is, nearly 40 per cent. of the anticipated total production and equal to consumption for edible purposes. Mr. Shah emphasised, in this connection, the need for stepping up the manufacture of salt by modernising and mechanising salt farming techniques. There is no doubt that this can be achieved, but only by encouraging large-scale salt producers and not by giving all kinds of encouragement to uneconomic units, as the Government does now, for political considerations. Besides, the cess levied on salt is also enhancing its cost to the alkali manufacturer. The Government will certainly be helping the industry if it removes the cess at least in respect of industrial salt. Such a gesture will serve to bring down the cost of production of this industry.

The cost of power is also relatively high in India. Further, while the demand for power is rapidly expanding, the generation of power is not keeping pace with it. Mr. Shah's suggestion, in this connection, is that the industry should minimise the use of power by adopting new techniques in brine purification, electrolysis, fusion, and liquidation of chlorine.

LONDON LETTER

(Concluded from page 5)

December, it seems that there is still the danger of adding to the deficit of the first nine months another £100 million or so, making a total deficit on current and capital accounts combined for the whole year (allowing for the drawing down of sterling balances) of £450 million or more. Nevertheless, gold has continued to flow in, indicating that the deficit on current account for October and November is still being more than met by the net inflow of foreign funds. By the end of the year, these are likely to have reached a figure of some £600 million. Does this immense figure represent in its entirety a threat to the gold reserves?

Fundamentally the threat is more theoretic than real. It is theoretic in the sense that this country will, in the whole of 1960, have incurred a net indebtedness overseas to the tune of £600 million, little more than a quarter of which will have been covered by gold. Moreover, a large part of this indebtedness is to international organisation, and it is the intention in the dealings between the Bank of England and the I.M.F. that, in the event of a drain on sterling, that indebtedness be reversed. That is, the I.M.F. would acquire sterling to meet the outflow of foreign funds. On balance, the figures suggest that the U.K. has hanging over its head a weight in the form of withdrawable foreign funds of perhaps some £300 million. This is the *net* amount of "hot money" involved. Low British interest rates, relative to others, a lack of confidence in sterling, and in a few weeks the £300 million could melt away in the form of a gold outflow.

Nevertheless, the British gold stock could stand that strain, even if it did not receive additional assistance from the I.M.F. to mitigate the psychological effect of such gold movements. The real cause for concern is, therefore, not to be found so much in this weight of "hot money" as in the deterioration in the current balance of payments which looks like producing a deficit on current account at the end of the year of £150 million.—*All Rights Reserved.*

BRITAIN HELPS U.S. FURTHER

With the payment of £16.9 million ($47.4 million) in dollars which Britain made to the International Monetary Fund on 30th December 1960, that country's gold and dollar subscriptions to the Fund have been raised to the normal level of 25 per cent. of its quota. The primary objective of the payment is, it is said, to help ease the strain on the U.S. gold stocks. The dollars will be transferred to the U.S. Treasury (against non-interest bearing notes) and Britain will receive an equivalent sum in sterling. It is explained that the significance of the payment lies in reducing the dollar-holdings of the Bank of England by $47.4 million and, since these dollars would have been converted into gold at the U.S. Treasury any time in accordance with the usual practice, the transaction represents, in effect, a reduction of $47.4 million in the demands likely to be made on the U.S. gold stock. So far as Britain is concerned, no sacrifice is, of course, involved, because its drawing rights at the I.M.F. has been automatically raised by an equivalent amount.

Since 1935 Simon-Carves have received orders for and put into service, one hundred and thirty two Simon-Carves-Monsanto sulphuric acid plants of which 21 have been installed in India. With an aggregate rated capacity of nearly 3¼ million long tons of 100% sulphuric acid per annum, these plants have been built in twenty three countries throughout the world. Their individual rated capacities range from 10 to over 400 tons of 100% acid per day. Designed to use any sulphur bearing material including raw sulphur, pyrites, sludge acid, refinery waste gases, anhydrite etc, their output is used in oil refining, steelmaking, uranium processing, the production of fertilisers, explosives, rayon, dyestuffs, pigments and many other industries.

By The Archer

An Incentive of Dubious Value

THE Union Government has decided to introduce annual awards by the President to encourage industrial enterprises of the Central Government to exceed their production targets and achieve outstanding all-round performance. The awards will consist of shields in copper and silver, but there will be certificates of merit and certificates of honour also. The shields will be awarded to five undertakings for outstanding performance in financial working, cordial labour relations, and special contribution made to the country's economy through research, discovery of new processes, design of machinery or equipment *etcetera*. (I presume the *etceteras* will cover spectacular illuminations and buntings on Republic Day, glamorous receptions to visiting dignitaries, chaste and telling advertisements and propaganda literature, not on the pattern of "Foolishly yours.") The certificates will be awarded to undertakings whose performance is adjudged to be satisfactory (the Also Rans, I take it). On the whole, the scheme will be one of all prizes and no blanks, much on the lines on which sports events were conducted in the good old days in lower secondary schools managed by Taluk Boards, when every child was made to compete and was awarded at least a slate pencil or a piece of coloured chalk.

The idea seems to be that, if economic prosperity cannot be brought about by generating a struggle for survival which will eventually eliminate the unfit and leave only the fittest—and this could be adopted only for the private sector, not for the public sector—the next best thing is to institute a system of varying decorations. But why, one may ask, should there be a decoration even for the enterprise which is just 'satisfactory'? And one may likewise ask, should there not be some punishments for the unsatisfactory enterprises, some booby prizes perhaps, in the form of discs moulded in cast iron each with a clown's face in the centre? If the honorific recognitions are to be taken as impersonal, there can be no danger of the booby prizes being construed as slander on the management, or will they be? But, of course, there is one factor to be remembered, namely, that, while the technique in private sector enterprises is to apply hot mustard paste on the tails of managements to spur them to fruitful activity, their public sector counterparts will not submit to such treatment, but may, perhaps, respond to a bunch of carrots dangled in front. Yes, there is all the difference in the accepted technique and any change therein will be wholly abhorrent to the tenets of the Civil Service.

The awards to which I have referred above will be applicable only to "Central Government Industrial enterprises which are in production." State Government enterprises will be considered out of bounds and may well feel left out. I therefore suggest that there be a "Gymkhana Race" for them also, with shields made of brass and tin while copper and silver may be reserved for the thoroughbreds.

Economics of Postal Operation

When a monopolistic public utility concern like the Postal Department starts regulating its diverse operations strictly on the basis of what each operation costs, it can become so blatantly mercenary as to undermine Government's prestige. And, on top of it, if its services are inefficiently performed, the very inefficiency may tend to increase its earnings as more and more people will be forced to avail themselves of the costlier methods of postal transmission. These economic facts are indeed exasperating, but entirely true, as one may see from a quick examination.

We are informed by the Minister for Transport and Communications that the Express Delivery System may be abolished, if, after an examination by the Post and Telegraph Board which is now on, it is found that its economics discloses adverse results. The brain behind such a move can be only that of a Cost Accountant with a one-track mind. For no one with a sense of social purpose or commercial concept will consider it proper to restrict the performance of postal services only to those whose earnings can be justified strictly on the basis of costs, and drop the rest, especially when all will agree that the diversified services require to be maintained in order to achieve an integrated common purpose. On such reasoning the Indian Post Office may well consider a *uniform* postage rate throughout the country as uneconomic, although the system has existed in the United Kingdom since 1840 and has been adopted all over the world. It might interest the P. & T. Board to know (and I presume they do not) that the Postmaster General's Department in Australia has been making a loss on the working of the Postal and Telegraph Departments, and a profit only on the working of the Telephone Department, and that the figures for 1956-57 were: Postal £1,526,000 (loss), Telegraph £638,000 (loss), Telephone £5,281,000 (profit)—(Ref. *Year Book of the Commonwealth of Australia*, 1958). I assume that Australia still carries on with the Postal and Telegraph services.

In any business undertaking which manufactures a variety of types in one product, pricing is done according to market conventions and practice, the differentials being arrived at on the basis of what the consumer of each type can bear and not strictly on the basis of costs. Inevitably, therefore, certain types are priced to subsidise certain others. Under no circumstances will a manufacturer drop the production of any type as long as there is a sizable demand for it. The Cost Accountant produces the basic data relating to costs, but pricing is the prerogative of the sales executive who knows the market, and is fully alive to the need for maintaining the prestige of the concern and satisfying the consumers with comprehensive service. There are many industries in which profit-margins on the several types vary (small in certain cases, high in others and even none in a few), but production continues uninterrupted while pricing is regulated on the basis of market conventions, although in all of them there is usually a basic bread-and-butter line. Similar considerations should also weigh with public utility services such as road transport organisations, public carriers of goods, travel agents, hoteliers and others. And, if the Indian Post Office calls itself a trading concern (as the British Post Office does), it should follow wholesome business practices, with, if possible, a heavier accent on public service.

The British Post Offices' services have been developed to match the needs of the traffic. In addition to the numerous motor mail vans serving many districts, and postal sorting carriages on the railways, there are special mail trains on certain routes as also the ingenious apparatus by which mail bags are collected and delivered by trains running at express speed. Within Central London, the Post Office operates an automatically controlled underground railway that runs for 6½ miles connecting Paddington in the west with Whitechapel in the east, and serving seven intermediate stations. It has mechanised its services considerably and has a partly electronic letter sorting machine and a parcel sorting machine. The main post offices are being equipped with machines for issuing parcel post labels printed with appropriate value and the date and name of the office, thus avoiding the use of stamps and eliminating the operation of cancelling the stamps. Above all, postal articles and telegrams are delivered with the utmost speed, while during periods like Christmas week, when the post offices are inundated with mails, special staff is recruited to expedite the work; and the safety of articles consigned through post is never doubted which is more than any one of us can say of our postal system. Speaking for myself, every time I consign to the post anything of importance or value, I start saying prayers and continue to repeat them many times a day until I receive an acknowledgment.

We value the Express Delivery system for the same reason that we undertake a journey by a motor bus instead of in a bullock cart, or travel by an express train instead of by a slow passenger shuttle. Personally, I have another reason. I feel that there is less chance of an Express letter dropping out of a telegraph peon's pocket than of an ordinary letter falling out of a post peon's bundle, which contains envelopes, packets and cards of all odd sizes loosely tied with a string; nowadays, our postmen do not carry the commodious leather bags which they used to in the past. However, it is the tardiness of the postal delivery system that forces us to pay extra for Express Delivery, the extra of thirteen naye paise, which reminds me of the fact that, when the surcharge was changed from two annas to 13 nP, I felt that the unlucky number presaged bad luck both to the post office and the public.

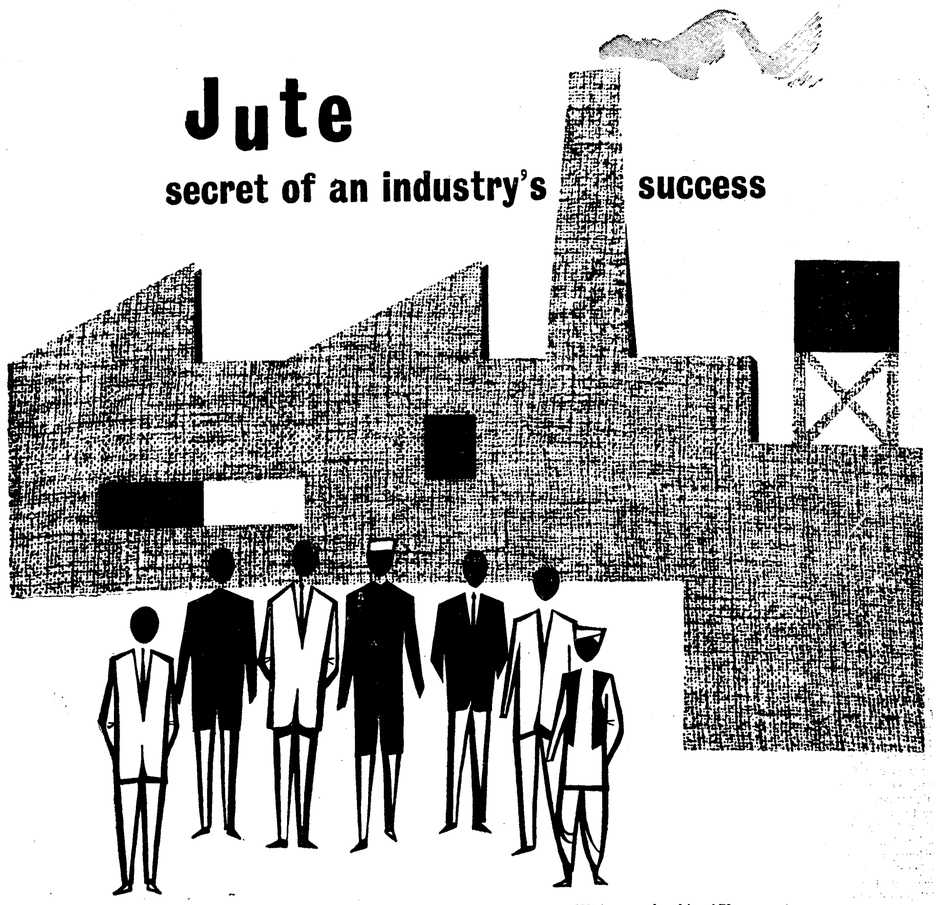
I can cite many more examples of the way in which postal earnings increase through postal inefficiency. Most of us send letters through registered post only to make sure of their comparatively safe delivery. The number of registrations will greatly decrease, if public confidence increases in safe postal transmission as in the U.K.; so, in its own enlightened (?) self-interest, the Postal Administration should maintain existing conditions! When we send an article "acknowledgment due" and paid for, the attached postal slip invariably becomes a runaway. So we write a special letter to the consignee and beg for an acknowledgment, or, as most banks and business houses do, enclose a stamped and addressed post card inside the envelope. All this adds up to more business for the post office. Sometimes, the postal slip comes back with the signature of some strange person in a remote locality (due to a mix up of slips at the registration counter, a very common occurrence) and the consignor gets alarmed and sends a frantic telegram to the consignee. Quite often the telegram is delayed in transmission, and so the trunk telephone is resorted to. In this manner, a chain of exciting communications ensues, each costlier than the previous one and each adding a little to postal revenues, establishing the apparently paradoxical fact that, in a monopolistic public utility undertaking, inefficiency brings in more money.

I have just seen a letter in a daily newspaper in which the writer complains that a folded reply post card sent by him did not reach the consignee but came back, blank, with the stamp cancelled. On complaining to the postmaster, he was informed that the quality of cards was so poor that they give way at the fold during sorting. Poor quality stationery can also attract more revenue, as this instance would indicate. All of us have experienced loss of magazines and journals in postal transit, and there must be many like me who have stopped paying annual subscriptions (at concessional rates) and have resorted to buying each number in a news stall; it is worth paying a little more and securing a copy rather than getting nothing for advance payment. As for calendars and diaries, the less said about their fates, the better. The latest casualties in postal transmission, according to another complaint in a newspaper, are foreign postage stamps of philatelic value which are removed before the letters are delivered. The complainant is, of course, a philatelist, but I have no sympathy for him. If he is an Indian, he is opening his mouth too wide; he should be thankful that the letter was delivered with the contents intact and not ask for more. There are hundreds of people who have suffered worse.

I do hope that the cost consciousness of the Post and Telegraph Administration will not be copied by the Railway Administration. There must be several unremunerative projects which are being maintained by the latter on grounds of social and economic security and the infectious obsession to ensure profits for each project may perhaps result in some of them being given up. The private sector has often been ridiculed for its emphasis on securing profits and its inability to appreciate the philosophy of socialism. By and large, it can score a point over the public sector, in that it knows its job regarding pricing and selling. As for its lack of the philosophic outlook, it will eventually learn, in the only way that businessmen will ever learn, when it faces competition and fights for survival. A monopolistic public sector undertaking will not go through that experience, hence its philosophy will remain at textbook maxim level.

A quotation from Alfred Buehler's treatise on Public Finance will, I feel, be appropriate at this stage. After emphasising that postal systems are service rather than strict business undertakings, he concludes: "If the national government cannot operate efficiently the relatively simple postal system, with its lack of heavy investment and highly technical processes, how could it manage such industries as the railroads, the telephone and telegraph and other utilities? The fundamental question of the relative efficiency of Government enterprise is thus raised by an enquiry into postal management."

Jute
secret of an industry's success



With a membership of 70 companies, comprising 100 manufacturing units, the IJMA represents almost 95% of the total jute loomage in India.

Providing employment to millions of farmers, traders and mill-workers ... earning about Rs. 115 crores annually in foreign exchange ... contributing large sums in taxes to the State and Central Exchequers — the Indian jute industry occupies a prominent place in the nation's economy.

Guarding the interests of this nationally important industry and guiding its destiny, is the Indian Jute Mills Association. Founded in 1884, the IJMA — representing almost 95% of India's total jute loomage — protects, forwards and defends the trade of its members. The Association carries on research ... to improve the quality of jute products and to develop new uses of this already versatile material. In the field of export promotion the Association has been active for well over a decade, undertaking publicity and promotional work which has helped make jute goods India's largest dollar-earner. Its labour welfare activities have set standards throughout industry.

The Indian Jute Mills Association looks forward to serving the Indian jute industry in ever-increasing measure in the years to come.

AMERICAN LETTER

ECONOMIC TRENDS IN UNITED STATES

POPULATION RISING—WAGES AND COSTS INCREASING—OUTLOOK FAVOURABLE

(By Our Special Correspondent)

NEW YORK, 16*th December*

THE changeover from Republican President Eisenhower to Democratic President Kennedy should present no problem to either the the United States or the outside world. Mr. Kennedy's appointments to important posts, with few exceptions, have been very good, indeed. He has been quite cautious, since, at the latest count, he only won the Presidency by a majority of a little better than 110,000 votes. Even the staid old National Association of Manufacturers, at its 65th Congress of American Industry last month, said that United States business had little to fear from the incoming Kennedy Administration. This feeling was accentuated by the cordial meetings of President Eisenhower and Senator Kennedy before he took office.

The objectives of the business community will remain unchanged. They will include three major phases—tax reform which has been badly lagging in this country in the face of changing economic conditions, a drive for increased Government efficiency and a stepped-up assault against union monopoly. This is not directed against union members, but rather against some trade union leaders who have been able to coerce their members into economically destructive strikes and other practices which are against the best interests of the U.S. and the world as a whole. For much depends on U.S. productive capacity to keep the wheels of Western industry turning and increase the standard of living which is an antidote to Communism.

The Soft Spots

As the second year of the new decade begins, conditions are quite different from what they were 12 months ago, when nearly **every**one spoke of the "glorious 1960s." For some reason or other, there is a mania here at the present time to point out the soft spots in the economy. These centre primarily around steel and automobiles. Steel output reached a new low in terms of capacity, but, in terms of tons, it is still close to 100 million, or three basic points higher than the average of the previous three years. Steel spokesmen suggest that the 1961 showing will be better.

Automobile inventories by factories and dealers are quite high at the present time. It is somewhat nebulous how this situation can be resolved. The urban centres are so congested, traffic-wise, that they discourage, rather than encourage, ownership of a motor car. This, in turn, has finally led U.S. manufacturers to imitate the foreign small "compact" auto. They have created a lot of excitement and interest and the prospects are they will continue to do so throughout 1961. Current predictions are that passenger car sales this year should be between 6.5 and 7 million units. This would be the best record for that industry since 1955.

Platitudes Many

Hopes are high in many fields, but, as usual, there are many platitudes in many announcements. The best description which I have seen appeared in the *Monthly Review* of the Federal Reserve Bank of New York which described the U.S. economy as being presently in a "high level of stagnation." This does not mean that 1961 prospects are non-existent.

In addition to steel and automobiles, building and construction contribute a good deal to the well-being of the U.S. economy. Present estimates are that public housing, which accounts for one-third of all construction, will rise by about 5 per cent. this year. At the same time, a decline in residential building is anticipated. The big question mark revolves around industrial building and construction activity in outlays for plant and equipment.

If confidence in the future is accepted, spending for such purposes is liberal and extensive. It may be of interest to note that, at the present time, some estimates are that industry spending may be off anywhere from 15 to 20 per cent. in 1961, against 1960. It should give readers in India a fair idea of the sentiment prevailing in the U.S.

Yet, there is a lot of optimism in counterbalance. There is a general expectation now that, as 1961 progresses, there will be a gradual upturn in business. This applies even to the railroad industry which has been in the doldrums for a long time.

What the solution for the railroad industry will be in 1961 and thereafter cannot be predicted. With few exceptions, U.S. railroads have failed miserably on many counts. They have been losing money on passenger traffic, despite continually higher rates. Their only two other major sources of income are from freight and real estate holdings. There is now a quasi-form of Federal subsidy which keeps them alive.

The outlook for the oil industry, despite setbacks in 1960, is regarded as reasonably good for 1961. Thus, an increase in earnings is projected for 1961. This assumes a normally cold winter—and it has been quite severe so far—it also assumes no drastic Governmental acts in any areas and no worsening of the supply-demand ratio.

There seems to be little chance that general living costs, including food prices, will increase materially in the near future, unless there is a radical change in monetary policy and an increase in the price of gold, for example.

Payments Position

The foreign payments position of the U.S. has been a matter of private and official concern recently. In my opinion, Secretary of the Treasury Anderson compromised himself and the U.S. by going to West Germany, looking for financial assistance and being turned down. The U.S. still has gold stocks of about $18,000 million, as compared with Russia's alleged holdings of $9,000 million and West Germany's $6,000 million which are larger than those of Great Britain. There was not too much to worry about so far as Washington is concerned and there was no point, diplomatically, in revealing the psychological weakness which has resulted here as a result of the continual outflow of gold.

There are quite a few factors contributing to the financial inferiority complex at Washington. The U.S. has been in "the drivers' seat" for many years. Leaders could not conceive that other nations could equal or catch up with the U.S., socially or economically. The fact is that other nations have caught up. Continually rising wages and costs in U.S. have made American products uncompetitive here and abroad. Markets have been lost. In the past decade, it was easy to outsell the rest of the world. This condition does not prevail any longer. West Germany has outbid the U.S. in countries like Brazil for factories and there are more Japanese transistor radios sold here than American-made ones, to mention just two examples. There is little indication that this trend will be reversed in 1961.

Labour Force

Future business conditions in the U.S. in 1961 and beyond will also be influenced greatly by a growing labour force. Like in India, it will continue to be a problem, owing to the increase in population. The question is: Will business come up with enough opportunities to absorb all employables? The latter word, of course, is a loose term.

While there were nearly 71 million people gainfully employed in the U.S., at the latest count, out of a total population of more than 181 million—and this includes the armed forces—unemployment reached 6.4 per cent. of the total in October, the highest since 1958. It is a matter of concern here.

Another matter which is bothering U.S. economists is the downward rate of corporate profits which will continue into 1961 until drastic changes in tax laws are made. Income-tax revenues have been falling. It all depends on the business climate in 1961 what the showing will be. In 1960, profit margins have been declining, quarter by quarter.

Earnings, after taxes, may approach in 1960 the 1959 level of $23,800 million. This is about equal to the previous decade and experts consider this figure inadequate, in view of the growth of population and the economy, as well as inflation. Unless the new Adminis ration injects a new stimulus, which is an unknown factor at this time, there is no reason to assume that the picture will change materially in 1961.

There are some hopeful signs for the U.S., economically. Several major countries have reduced their interest rates which will make it less interesting for so-called "hot money" from here to flow overseas. It should stem the speculative monetary transactions which have no relation to foreign trade at all. In fact, the foreign trade position of the U.S. has been improving and should do so throughout 1961.

In a recent statement, the International Monetary Fund noticed an encouraging shift in favour of the U.S. dollar. The Fund stated that it considered the U.S. dollar still "the most important reserve currency in the world."

Foreign Aid

The question of foreign aid will be of outstanding importance in 1961. Proposals to raise the sights to $5,000 million a year are under discussion at Washington at this time. The Eisenhower Administration asked for $4,200 million this year and the Congress appropriated $3,800 million. According to high level projections, loans and grants by the Western world to developing countries may reach $30,000 million by 1980. There is very good reason to believe, on my part, that the Kennedy Administration will not deviate materially from the previously established pattern. In fact, it cannot afford to do so, in view of Russian aggressiveness in this field. If anything, foreign aid, it seems to me, should be higher on the calendar in a Democratic, rather than in a Republican, Administration. This should benefit India which is now held in high respect in this country.

With all respect to human frailities, and in comparison with other countries, it is recognised here that India made the smoothest transition from colonialism to independence than any other country in the world. While not everybody agrees with the viewpoints of Prime Minister Nehru altogether, nearly everybody in the United States and in the United Nations to which I am accredited as a correspondent, agrees on the importance of the increasing role that India, as a country, plays as a balance in world affairs. This state of affairs should well continue throughout 1961.

In addition to its problems with Asia, the U.S., at this writing, is concerned quite seriously with the question for an international balance of payment equilibrium. It is likely to be of continuing concern throughout 1961.

The chief culprit, in the eyes of Washington, is West Germany. This prompted the ill-fated visit of Treasury Secretary Anderson to Bonn. The Germans have been plagued by a huge and persistent external surplus. In order to stem it, they lowered tariffs substantially, they reduced the Bank rate to 2½ per cent., the lowest in the history of German central banking, among other measures.

The cut in the British Bank rate to 5 per cent. is also apt to help the American monetary authorities somewhat. It is expected to ease pressure on the dollar in the immediate future. The French central bank has also made a token cut in its rate.

Outside of these difficulties, there is very little wrong with the U.S. economy. People in the U.S. on wages, salaries or depending on income from investments had a combined annual income of about $410,000 million. This compared with $409,000 million a month previously and with 384,000 million a year ago. There is no substantial change expected.

In the meantime, the American public is in a spending mood. Dollar-wise, this would have been the biggest holiday season ever. After all the tallies are counted, total retail sales may have reached $18,500 million which would be 5 per cent. larger than in 1959.

To sum up, the change of Administration this January is likely to have little effect on domestic or foreign policies of Washington. Perhaps, the attitude of the Kennedy Administration will be a little more liberal than that of the Eisenhower group, but, essentially, it should be regarded as the *status quo*. Business, industry and trade will go on, as before. The final decisions will rest with the Congress, anyway, and the composition of that body of lawmakers, politically, has not changed too much. The general outlook remains for a favourable business climate in the U.S. in 1961.—*All Rights Reserved.*

STEEL manufacture at MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60
	(Rs. in lacs)		
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND | STEEL STRENGTHENS THE NATION

COTTON TEXTILE MACHINERY INDUSTRY

PROTECTION FOR THREE MORE YEARS GRANTED

PROTECTION to cotton textile machinery industry in respect of complete ring frames, spindles, spinning rings, fluted rollers and automatic looms has been extended by the Government of India for three more years—that is, upto the end of December 1963—at the existing rate of protective duty, namely, 10 per cent. *ad valorem*. This is in accordance with the recommendation made by the Tariff Commission. The continuance of protection is fully justified, considering that the manufacture of textile machinery is a high precision and heavy industry which requires to be sheltered against foreign competition until it acquires a firm foothold in the domestic market. This aspect must be specially borne in mind because of two considerations. One, the industry, as the Tariff Commission has pointed out, is today at a considerable disadvantage on account of shortage and high cost of raw materials, as well as enhanced prices of bought-out components which have inflated their costs during the last two years. Two, the industry needs every encouragement to take up as many new lines as it can, so as to achieve self-sufficiency in supplies in the years to come. The Commission has expressed the hope that the country's requirements of textile machinery will be met to the extent of 75 per cent. by indigenous producers by the end of the third Plan period (1965-66).

The cotton textile machinery industry, it will be recalled, has already enjoyed tariff protection for nearly eleven years; it was in 1950 that protection was first granted for a period of three years ended March 1953. This was extended first upto 31st December 1953 and subsequently upto the end of 1954. The fourth enquiry was undertaken by the Commission in 1954 and, on its recommendation, protection to all items of textile machinery with the exception of tin rollers was extended upto 31st December 1957. The last enquiry was held in 1957 and, as suggested by the Commission, the Central Government continued protection for all items except plain looms upto the end of December 1960. The latest enquiry was undertaken in the first half of 1960.

Prices Compared

The fair selling prices of spinning ring frames, fluted rollers and automatic looms are compared with the landed cost without duty of items imported from Japan in the following table:

	Spinning ring frames	Fluted rollers	Automatic looms
	Rs.	Rs.	Rs.
Imported from Japan:			
C.i.f. prices	28,750.80	350.00	3,421.91
Clearing charges	287.51	15.00	34.22
Landed cost ex-duty ..	29,038.31	365.00	3,456.13
Produced within the country:			
Fair selling price ..	38,041.00	258.70	4,376.32
Difference between fair selling price and landed cost ex-duty	9,002.69	—106.30	920.19
Percentage difference ..	31.31	—30.37	26.89

Note.—The estimated fair selling prices of spinning rings and spindles have not been compared with the c.i.f. prices of foreign products, since the f.o.b. prices could not be obtained.

It will be seen from the above table that the indigenous industry has a price disadvantage to the extent of 31.31 per cent. in regard to spinning ring frames and 26.89 per cent. in respect of automatic looms. Since the import of spinning ring frames is at present banned and as there is no likelihood of any relaxation of import policy in the near future, the Tariff Commission did not consider it necessary to step up the rate of import duty from the existing level of 10 per cent. *ad valorem*. Although fluted rollers enjoy a price advantage to the tune of 30.37 per cent. of the c.i.f. price of imported rollers, the Commission felt that it would not be proper to withdraw protection, because fluted rollers, along with spindles and spinning rings, are vital components of spinning ring frames. The Government of India has accepted these views.

It must, indeed, be said to the credit of the cotton textile machinery industry that it is endeavouring its best to fulfil the obligations of a protected industry. There has been a distinct expansion in the capacity of the industry in recent years and plans are afoot to augment the capacity further. The table below indicates the progress made by the industry. The progress would have been more marked but for the setback received by the industry as a result of a fall in demand for major items like spinning ring frames and automatic looms in 1958-59.

At present, thirteen units are engaged in the manufacture of the protected items of textile machinery and three units in producing plain looms which were deprotected from 1st January 1958. The main producers of spinning ring frames and automatic looms have diversified their production and are developing new lines of manufacture like doubling, draw, speed and fly frames, carding engines, high-speed warping and winding machines, and calender bowls. These are all important items which are much in demand for modernisation of textile mills. It is gratifying to be told that some of the producers have endeavoured to keep abreast of technological developments in other countries and sought to incorporate such improvements in their designs and processes of manufacture as are suited to Indian conditions. The industry seems to be now in a position to meet adequately the domestic demand for protected items in so far as the spinning equipment is concerned. The same, however, cannot yet be said of automatic looms, though, lately, the Central India Machinery Manufacturing Company, Ltd. (a Birla group concern), the sole producer of automatic looms in the country, has entered into technical collaboration with a Japanese firm and expects to start production of automatic looms under the name Cimmco-Sakamoto from March this year.

Besides the organised sector, there are 417 small units located in different regions producing parts and components of cotton textile machinery. These are generally sold in the replacement market.

Alongside efforts to expand capacity and production, the cotton textile machinery industry is also endeavouring to improve the quality of the products. The Textile Commissioner has stated that the quality of spinning ring frames has improved considerably since 1957 and that the manufacturers are making further efforts to bring their products in line with those of foreign producers. The quality of spinning ring frames is also considered to be satisfactory and there has been no complaint from the mill industry. Similarly, it is said that the quality and performance of spinning rings, spindles and fluted rollers are satisfactory. In regard to automatic looms, the Textile Commissioner has expressed the view that the mill industry has been rather slow in implementing the scheme of installation of automatic looms allotted to them either for export incentive or for purposes of replacement due to reasons connected with the quality and performance of indigenous looms. We are, however, told that, lately, the Central India Machinery Manufacturing Company has taken effective steps to rectify the deficiencies of automatic looms.

Items of cotton textile machinery	Rated capacity (single-shift)		Additional capacity licensed	Actual production			
	1957	At present		1960 (Jan.-Sept.)	1959	1958	1957

"Ashok Leyland COMETS carry in 5 trips what others would need 7 to clear"

says The Engineering Construction Corporation Private Limited, Madras

"FOR THE Madras Harbour Job we shall need upto 500 tons of blue metal a day. All this has to be moved from our Quarries at Pallavaram to the Madras Harbour 15 miles away. Since a lorry can make only a limited number of trips a day, the larger the load it can carry, the more economical it will be for us. That is why we are happy to have Ashok Leyland Comets in our fleet. They carry in 5 trips what others would need 7 to clear. We save on fuel, maintenance and overheads too. Breakdowns? No...None so far!"

Testimonials like this show why LEYLANDS are the most wanted vehicles in over 50 countries in the world. Every vehicle is built to exacting standards of precision and craftsmanship

The Forward-Controlled Leyland Comet Chassis is designed specially to combine large body space with easy handling. The quick starting, long life Leyland Diesel engine, with its high torque output combines pulling power with remarkably low fuel consumption. *The Ashok Leyland Comet is the only 7½ ton payload chassis made in India.*

ASHOK LEYLAND COMET · precision built to give lasting service

ASHOK LEYLAND LIMITED, Madras, Madras

Defects Still There

In spite of all the claimed improvements in quality, there are complaints from several mills about specific defects in the spinning equipment as well as automatic looms. Besides, there is also the general complaint of delay in delivery of spinning ring frames and their components. The cotton mills have rightly stressed that they, being obliged to use indigenous machinery, should not be deprived of the benefit of technical developments that are rapidly taking place among their competitors abroad. Appreciating this point of view, the Tariff Commission observes:

"In serving the requirements of one of the largest industries in the country, namely, Indian cotton textile industry, the textile machinery manufacturers should keep abreast of the technical developments in other countries and produce machines which are comparable in quality and performance with the machines which their competitors are using in other countries. The industry has a special responsibility to maintain the high standard of quality of its products, because, on the one hand, as a result of the import restrictions, the textile industry is obliged to use indigenous machinery and, on the other, it has to maintain high efficiency standards in textile production to face keen foreign competition in export markets. We, therefore, attach great importance to the aspect of improving quality of indigenous textile machinery.

"We are firmly of the view that the only way in which the prejudice against the indigenous textile machinery can be eliminated is by insisting upon the highest standards of quality and performance of the domestic products and by convincing the Indian mills that the textile machinery and components produced in the country were as good as the imported ones. The industry is embarking on expansion and is taking up new lines of manufacture. We consider that the need for an objective and impartial technical agency is, indeed, great for assessing the requirements of the textile industry and assisting the textile machinery manufacturers to meet them."

Although the Commission suggested more than three years ago the setting up of an Inspectorate in the Textile Commissioner's Office with adequate staff to ensure that the quality of textile machinery is upto the requirements of textile mills, the Government of India has still not taken any decision. It is said that the matter is still under consideration. The Commission has, therefore, found it necessary to reiterate the suggestion. The Government will do well to give effect to it without any further delay.

Imports

Imports of spinning ring frames, spindles and fluted rollers have been completely banned since April 1958 and those of spinning rings from the subsequent licensing period. The only protected item of cotton textile machinery for which imports are licensed on an *ad hoc* basis is automatic looms. The domestic producer had pleaded for banning the import of this item also. But the Commission has rightly turned down the plea. As the Commission itself has pointed out, there is a marked reluctance on the part of mills to buy indigenous automatic looms, because they are not convinced that these looms will work as efficiently as the imported ones to which they have been accustomed so far and, further, they will not be able to produce quality cloth for export at competitive prices. Viewed thus, a complete ban on imports at the present juncture will not be in the interests of the national economy.

As already stated, it is expected that, at least 75 per cent. of the country's requirements of cotton textile machinery will be met by indigenous producers by the end of the third Plan period. The current and future demand for the more important items for expansion, replacement and modernisation as assessed by the Tariff Commission are indicated below:

	1960-61	1961-62	1962-63
Spinning ring frames—			
Expansion	375	850	850
Replacement	950	950	950
Total	1,325	1,800	1,800
Spindles	700,000	850,000	850,000
Spinning rings	1,000,000	1,000,000	1,000,000
Fluted rollers (lines) ..	8,000	12,000	12,000
Automatic looms	6,000	6,000	6,000

Raw Materials

The cotton textile machinery industry seems to be faced with the problem of getting adequate and regular supplies of some of the raw materials. One such raw material is pig iron. The Tariff Commission has asked the industry to take up the matter with the steel plants concerned. It is to be hoped that the managements of steel plants will exercise due care and vigilance in making correct despatches, so that the manufacturers of textile machinery receive the pig iron of grades indented by them. Another important raw material is mild steel. The Commission has supported the industry's plea for extension of the period of licence for the import of such items as cold-rolled close-annealed steel sheets from six months to one year. The Industry depends entirely on imports of free cutting alloy steel and hard drawn bright flats, rods, bars, etc. The position regarding the supply of coke, as well as tinplates, is fairly satisfactory. The manufacturers of spinning machinery have complained about the supplies of some bought-out components, especially spindle inserts. Delivery periods are said to be long and prices high. The Commission has recommended licensing of additional capacity for the manufacture of spindle inserts, particularly the preferred types which are at present not produced in the country. The position in respect of drafting material and Tecalmit lubricating equipment supplies is expected to improve in future.

If the long and uncertain deliveries of textile machinery equipment to cotton mills are to be avoided, it is imperative that bottlenecks in production, especially of spinning ring frames and other components, are removed. The authorities should take steps to ensure regular and adequate supplies of essential raw materials to the industry.

CLOTH AND YARN PRICES

The Indian Cotton Mills' Federation has enforced a new schedule of cloth and yarn prices, with effect from the 1st inst. The additional percentages over August 1959 contract prices of cloth that the mills are asked to charge have been lowered as compared with those announced early in September 1960. The total output of cloth is divided into two types, namely, popular and others, the former comprising 25 per cent. of the production for internal consumption. The popular varieties cover not only coarse and lower medium goods but also higher medium, fine and superfine fabrics. The reduced percentage of increases over the August 1959 prices are given below:

	Popular varieties	*Others*
Coarse	17	20
Lower medium	14	17
Higher medium	10	13
Fine	6	8
Superfine	4	6

The previous schedule, it will be recalled, made no such distinction between two varieties but had stipulated percentage increases for the varieties taken as a whole, namely, 25 for coarse cloth, 22 for lower medium counts, 18 for higher medium varieties, 11½ for fine categories and 9 for superfine goods. All contracts entered into by mills with merchants prior to 21st December 1960 for delivery upto the end of December or earlier are to be fulfilled at old prices. All unstamped baled cloth lying with the mills will be stamped with new prices after the 1st inst.

The prices of yarn have also been revised downward as follows, the figures in brackets relating to the prices prevailing up to the end of December 1960:

(In rupees per bundle of 10 lbs.)

6s manufactured from cotton waste 13.03 (13.57); 6s manufactured from cotton mixing containing not more than 25 per cent. cotton waste 15.12 (15.75); 10s 17.04 (17.75); 12s 17.76 (18.50); 14s 18.72 (19.50); 16s 20.30 (21.15); 18s 20.54 (21.40); 20s 20.75 (21.60); 21s 21.02 (21.90); 22s 21.31 (22.20); 24s 22.47 (23.05); 26s 23.70 (24.18); 28s 24.28 (24.78); 30s 24.80 (25.32); 32s 25.58 (26.10); 36s 27.25 (27.75); 40s 28.25 (28.75).

These are ex-mill rates for a bundle of 10 lbs. single hank yarn made from Indian cotton only. The differentials for use of foreign cotton for supply of yarn cones and for double yarn, which were already fixed, will continue unchanged. Mills will be stamping prices of yarn on this basis from 1st January 1961. It has also been decided that, against all contracts entered into prior to 21st December 1960 for December or earlier delivery, the delivery will be at contract prices provided the yarn in question is already stamped at old prices and is marked and ready for delivery before 31st December 1960. Bales containing yarn bundles which bear no stamping of prices will have to be opened and stamped with new prices.

The revised prices of cloth and yarn are in accordance with the understanding reached between the spokesmen of the Federation and the Union Commerce and Industry Ministry officials at New Delhi in the third week of December 1960. They represent a reduction of 5 per cent. in the prices of coarse, lower medium and higher medium categories of cloth and of 3 per cent. in respect of fine and superfine counts as compared with the prices fixed in September 1960.

At the same time, the margin allowed to the trade over the ex-mill prices has been increased from 15 to 18 per cent. Making a statement on the question of cloth and yarn prices in the Lok Sabha on 21st December 1960, Mr. Lal Bahadur Shastri said:

"The problem of prices can be solved on a continuing basis only by increased production and augmented supply. In the short run, an increase in the supply can be brought about only by utilising the existing productive capacity to the maximum extent. The Indian Cotton Mills' Federation have agreed to request all mills to work three

ACUTE RAW JUTE SHORTAGE PERSISTS

MILLS TO CUT WORKING TIME FURTHER

IT is a misfortune that the jute industry, one of the three principal earners of foreign exchange for the country, has to struggle against the heavy odd of raw jute shortage from time to time. The magnitude of the problem currently facing the industry is already well known. The Government spokesmen, however, have held the view for some months now that the shortage of raw material is not as acute as has been made out by the trade and industry, that there was sufficient jute but that it was being withheld by growers and middlemen, and that more than half the trouble was due to rank speculation that was being indulged in by the operators in futures. Whatever the accuracy of these claims, the fact remains that the mills are not having sufficient jute and that there is no wanton exaggeration of the prevailing scarcity by them, for no manufacturer will go to the extent of curtailing his production just to prove the correctness of his reading of the situation. Just a few days ago—on 29th December—the Committee of the Indian Jute Mills' Association (I.J.M.A.) asked the member-mills in West Bengal having more than 220 looms, temporarily to reduce, with effect from the 30th of this month, the working hours from 45 to 42½ per week, keeping the level of looms sealed at 12 per cent. The move, though it will have a disquieting effect on labour and on overseas buyers of Indian jute goods and inflate the industry's production costs, is nevertheless contemplated because the situation cannot be managed in any other way. Regretting the move, the I.J.M.A. Committee says:

"This decision . . . has been taken in consultation with both the Central Government and the Government of West Bengal and is a further—and it is hoped the last—step in implementing the Association's policy of adjusting the industry's production to the availability of raw jute so as to ensure that supplies will last until the arrival of the new jute crop and that the output of manufactured goods will be maintained at a constant level. From the industry's point of view, a reduction in the weekly working hours is much less economic than an increase in the percentage of sealed looms as a means of curtailing production, and this method has been adopted solely in the interests of the labour force, in order to minimise the effect of the restriction of output on the employment situation in the jute industry in West Bengal.

"By bringing the industry's consumption of raw jute into line with the supplies likely to be available, this further curtailment of production is designed to prevent a squeeze developing in raw jute later in the year. As a further means of avoiding undue pressure on the jute market, the Association has also for some time been regulating the purchases of jute by the mills on a quota basis, so as to level out stocks and prevent competitive buying between individual mills."

Lower Crop Feared

Even when the current jute season (July 1960-June 1961) began, it was clear that the output of jute and mesta would suffer a setback for the second year in succession, in view of the decline in the area sown. The all-India first estimates of jute and mesta crops for the season place the total area at 1,605,000 acres (649,500 hectares) and 489,000 acres (197,900 hectares), respectively, as against the corresponding adjusted estimates of 1,752,000 acres (709,000 hectares) and 512,000 acres (207,200 hectares) in the 1959-60 season. It is, therefore, feared that the crops harvested will be much smaller than in 1959-60 (4,548,000 bales of jute and 1,098,000 bales of mesta) and 1958-59 (5,158,000 bales of jute and 1,488,000 bales of mesta). With a view to regulating consumption of jute so as to ensure that available supplies were adequate to maintain production of jute goods at stable levels, the I.J.M.A. decided, in September 1960, to extend its scheme of voluntary sealing of looms under which 12 to 14 per cent. of the member-mills' looms had been sealed from June 1960. This level of sealing which was voluntary was later replaced by a compulsory sealing of 17 per cent. of looms. In order to minimise the displacement of labour, the sealing of 17 per cent. was subsequently reduced to 12 per cent., but the working week was cut down from 48 hours to 45 hours. As a result of the latest decision, there will be a further reduction of 2½ hours after 30th January 1961, in accordance with the latest decision of the I.J.M.A.

Effect on Jute Goods Supplies

With the proposed economy in jute consumption and taking into account the imports authorised from Pakistan as well as non-traditional sources, jute goods production is expected to be maintained at a stable level till the middle of new crop jute makes it possible to restore the full working time. There will, of course, be a fall in the output of standard goods, but such, according to the Jute Commissioner, Mr. Ajit Mazoomdar, is not likely to lead to any shortage for export or for internal consumption. For internal demand for jute goods, we are told, will be substantially reduced by the permission recently given to the cement industry to pack cement in used bags. And, with the industry's present stock of ready goods at over 80,000 tons, there will be an adequate buffer to absorb for several months any excess of demand over current production from February 1961. Explaining this position in the course of his talk to Press men at Calcutta the other day, Mr. Mazoomdar said:

"In the first half of every year—January to June—the demand for jute goods is usually low due to seasonal factors. The foreign demand for jute goods had to some extent already been curtailed due to the high prices prevailing especially since October. The demand for burlap from the U.S.A. in 1961 is also likely to be adversely affected by the current business recession in that country, which may also affect Canadian and European demand to some extent. It should be clear, therefore, that there is nothing in the present situation to warrant any further rise in raw jute and jute goods prices beyond the uneconomic levels to which these have been pushed already mainly by the unrestrained speculation of early October. The demand for jute is being reduced by adjusting the rate of mill production to its availability."

If, in spite of all this, jute goods prices were to firm up, the authorities would not hesitate to take appropriate steps to bring the situation under control. In fact, a clear warning to this effect was given by Mr. Mazoomdar. He revealed that the Union Government had decided to vest the Jute Commissioner, under the Essential Commodities Act, with statutory powers to requisition stocks of raw jute and jute goods and to obtain all necessary information for the purpose. Replying to a question, he said: "Jute goods stocks are held in mills' godowns at Calcutta, but, so far as raw jute is concerned, it is spread over a large area. It is not the Government's intention at present to requisition stocks from growers." The following are the other points made by Mr. Mazoomdar:

"Members of the Indian Jute Mills' Association will continue to purchase jute only against the Association's quotas. Purchases by other mills are also being regulated through the special margin deposits on forward contracts. The recent measures of the Forward Markets Commission have been designed to maintain free flow of raw jute to the mills and of jute goods to genuine shippers, by penalising speculative purchases and hoarding by other parties. The administration of these measures is being tightened up. The powers of the Commission to enforce these measures have been greatly enhanced by the recent amendments to the Forward Contracts (Control) Act. Meanwhile, the Reserve Bank has directed the banking system to reduce the volume of credit against jute goods, and to raise the margins for advances against both raw jute and jute goods. This directive should reduce the volume of credit by about Rs. 5 crores and so reduce the extent of hoarding and speculative purchases.

"The Government does not intend to tolerate the continuance of harmful speculative activity which will aggravate the present situation by manipulating prices and which will threaten the future of India's export trade in jute goods. Unfortunately, certain mills have also sought to exploit the present abnormal situation by trying to pre-empt and hoard an unduly large part of the limited jute supply by refraining from normal forward sales of their own goods and by making unusually large purchases of goods from the market. These activities must be deemed to be undesirable speculative activity as much as any transactions by pure speculators. It is proposed to investigate all speculative dealings fully."

The current season's jute crop, as already stated, is expected to suffer a sharp setback. One estimate places the output at no more than 5.2 million bales (of 400 lbs. each), as against 5.7 million bales harvested last season (1959-60). Mr. Mazoomdar, however, characterised this as being wholly without foundation and said: "The fact is that the final fore-

REINSURANCE AND "INDIAN GUARANTEE"

INSURANCE COMPANIES' MEMORANDUM

THE thirteen-page memorandum submitted by the Indian Insurance Companies' Association, Bombay, to the Ministry of Finance, Government of India, makes out a very strong case against the voluntary cession, by Indian and foreign insurers operating in India, of an agreed percentage of their Indian reinsurance business to the Indian Guarantee and General Insurance Company Ltd., a subsidiary of the Life Insurance Corporation of India, which, as readers are aware, was converted into a purely reinsurance company with effect from 1st January 1960. The latter had approached some Indian insurers and the Overseas General Insurance Association for a voluntary, marketwise agreement by which a fixed share of their Indian business will be ceded to "Indian Guarantee" on the same basis as they are giving to the India Reinsurance Corporation. The object of the Indian Guarantee's move is stated to be twofold: (1) to broad-base the reinsurance market in India and (2) to stop the foreign exchange drain caused by placing reinsurances abroad. At the specific request of the Overseas General Insurance Association and some Indian insurers, the Committee of the Indian Insurance Companies' Association, Bombay, has made a study of the whole question and its views are embodied in a memorandum addressed to Mr. B. K. Kaul, Joint Secretary, Department of Economic Affairs, Ministry of Finance, Government of India.

The Committee claims to have approached the question without any bias or preconceived notions and taken an entirely objective view, keeping in view only what it thinks to be in the best interest of the insurance market and the country. The Committee does not have any quarrel with the objective of the proposed move. It agrees that the reinsurance market in the country needs to be broad-based and that the foreign exchange drain arising from reinsurances should be minimised. But it does not see eye to eye with the Indian Guarantee as to how this could best be done. And it firmly believes that the cession, voluntary or compulsory, of an agreed percentage of the reinsurance business of Indian insurers to the Indian Guarantee will neither help to strengthen and broad-base the market nor stop the foreign exchange drain.

The Committee deals with these two aspects separately. It points out that the object of broad-basing of the reinsurance market could be achieved through agencies other than professional reinsurers. This, according to it, is borne out by British experience. The British market, with its large volume of business and international operations, has only four active professional reinsurance companies. The market writes a non-life net premium income of over £1,200 million, of which the share of all the four professional reinsurers is less than £24 million, or 2 per cent. In spite of this, the British market is one of the most broad-based reinsurance markets in the world. Similar is the case, it is said, with other leading markets. Following the British pattern, every Indian company actively engages itself in reinsurance business commensurate with its resources. The reinsurance market can be broad-based, the Committee argues, not only through professional reinsurers but also, and largely, by direct-writing companies.

Formation of "India Re"

In spite of this, however, the insurers agreed, after careful consideration, to the formation of the India Reinsurance Corporation in 1955, as a co-operative enterprise of the trade as a whole with the blessings of the Government. It was felt imperative for the promotion of the "India Re" to provide it with a premium base of about Rs. 2 crores so that it could be built up into an actively operating Indian professional reinsurer. Accordingly, insurers in India agreed, albeit reluctantly, and at some sacrifice to themselves, to give 10 per cent. of their business to this company. The argument that, if the companies could give a 10 per cent. voluntary cession to "India Re" to provide it with a base, why should they not give a similar voluntary cession to Indian Guarantee, is, the Committee points out, untenable. For the Indian Guarantee, according to the Committee, already enjoys a strong base for its reinsurance activities. It receives all the reinsurances of Government-controlled companies and also the bulk of the business of the Indian Insurance Companies' Association Pool and the Aviation Pool. Its current portfolio from these sources, the Committee estimates, may be over Rs. 3 crores. Indian Guarantee thus already possesses a larger base than "India Re" on the strength of which it is in a position to play as leading a role in reinsurance business as the "India Re" or other direct-writing companies. There is, therefore, no justification, the Committee avers, for calling upon insurers to make yet another sacrifice through fixed cession to the Indian Guarantee. It contends that, if the proposal were enforced, it would have the following consequences: (1) Indian companies weakened by the Government-owned companies taking over 75 per cent. of the Pool business will be further weakened by voluntary or compulsory cessions. (2) The position of the "India Re", which is fast getting into strides, will be adversely affected. (3) In the field of reinsurance, there is always a time-lag for building up reciprocity. There is no ground for the Indian Guarantee to suppose that it would be able to build up reciprocity for its own portfolios sooner than even the best private companies for whom it took years to get suitable reciprocity. If the cession is made compulsory, the Government, in the opinion of the Committee, will be taking away from insurers, for the benefit of Indian Guarantee, a part of their business for which they are on the whole securing more favourable terms than what the Indian Guarantee can hope to achieve.

Ideal Steps

The Committee is, therefore, of the firm opinion that the proposal will not, in any way, help the broad-basing of the Indian reinsurance market. On the other hand, it will only weaken the position of Indian insurers and adversely affect their overseas operations. The steps which the Committee considers ideal for broad-basing the market are the following:

(*a*) The direct-writing companies and the two reinsurers should be encouraged to cultivate, on a competitive basis, as much reinsurance business as possible both inside and outside India.

(*b*) The Indian Guarantee, with its large premium base, should become an active unit of the market and put its best efforts to strengthen and broad-base the market.

(*c*) Non-Indian insurers should be encouraged to trade more actively in this country.

(*d*) As much marine hull and aviation business as possible should be placed locally both for absorption and for trading.

As for the second reason advanced by the Indian Guarantee, namely, that the drain on foreign exchange on the score of reinsurance can be reduced, the Committee argues that it is based on the assumption that the Indian Guarantee will secure better trading terms than those obtained by the various units over a number of years. Although the Committee does not subscribe to this view, it has examined the foreign exchange drain caused by reinsurance business of Indian and non-Indian insurers separately and portfolio-wise over the six years, 1953 to 1958. It has found that some portfolios like fire and marine hull business, did cause a drain, while others such as marine cargo and miscellaneous business (other than aviation business) did not result in any drain.

Foreign Exchange Drain

In fire business, the drain is only in respect of profit which is of the order of Rs. 43.1 lakhs or 4.9 per cent. of the average total gross direct premium. On the other hand, there has been an average annual premium gain of Rs. 59 lakhs.

The profit drain is attributed to the fact that two very good years of Indian companies have coincided with two very bad years of British companies with whom the bulk of the reinsurance exchange of Indian insurers is carried on. The British insurance market is taking corrective measures to restore its business to normal profitability. At the same time, Indian insurers have been improving the quantum and quality of their reciprocal business and have also obtained increased premium and profit commission on their outgoing business. With the reduction in fire rates already effected early in 1960, the profitability of Indian business will be further reduced. The Committee is, therefore, of the view that it will not be long before the drain on account of fire business is completely eliminated.

Marine business, principally marine hull business, has caused a premium drain of Rs. 1.61 crores per annum while the profit drain has been considerably less at Rs. 18 lakhs. This drain is being progressively reduced. Some drain is, however, said to be unavoidable because of the limited retentive capacity of the Indian market, the need for reinsurance cover abroad and the time-lag in obtaining suitable reciprocity. Fixed cession to the Indian Guarantee will not, therefore, according to the Committee, meet or correct the problem of drain of foreign exchange.

Aviation business does cause a drain and the net loss arising from this is likely to increase in future. But, as the aviation reinsurances are now being handled almost entirely by the Indian Guarantee, the question of fixed cessions by insurers does not arise.

Foreign Insurers

As regards non-Indian insurers, their operations in India have resulted in a drain. Percentage-wise, however, the share of non-Indian insurers in the business of the country has been progressively declining. At the same time, their retentions within the country are on the increase. Non-Indian insurers are alive to the problem of drain of foreign exchange, and it is expected that increased retentions, supported by more active trading within the country, will result in substantially diminishing the drain caused by their reinsurances. Moreover, this drain, it is pointed out, is the result of the policy of freedom of trade adopted by the Government. The Committee is of the opinion that, in the larger interests of Indian insurance which is steadily expanding its activity in foreign markets, India should continue to follow this policy and that, in the meantime, the insurance market should make an all-out attempt to eliminate the consequential drain. The Committee pleads that non-Indian insurers should be encouraged to reduce substantially the drain by helping the Indian insurance market through local reinsurances and that Indian insurers should do their best to make up the balance of the drain by doing more active business abroad. The foreign business of Indian insurers, it is pointed out, is expanding rapidly and their overseas direct premium should, in the near future, exceed the premium written by non-Indian insurers in India. This expansion in business, supported by their reinsurance activities, would, in due course, make good the foreign exchange drain that the country suffers on account of the reinsurance placed abroad by non-Indian insurers.

The Committee's conclusion is that the proposal for fixed cessions to the Indian Guarantee will not stop the foreign exchange drain. On the contrary, it will, if enforced, accentuate the drain and its total effect will be detrimental to the interest of both the insurers and the country.

Main Objection

It will be seen from the foregoing account that one of the main objections of the Association to the cession of business to the Indian Guarantee is that, apart from reducing the business of individual units, the move is designed to build up the Indian Guarantee, a public sector enterprise, at the expense of the "India Re", a private sector enterprise. This is, in fact, a form of back-door nationalisation. As long as this fear persists, the companies naturally cannot be expected to be a willing party to an agreement which will weaken an institution jointly owned by them. If, therefore, the Government's case is to carry conviction to them, it must be based only on the larger national consideration of reducing the drain of foreign exchange. The Association does not believe that this could be achieved by ceding a percentage of the business to the Government-owned company. On the contrary, it has endeavoured to show that the objective could be easily served without restricting the scope for insurers in the private sector. The Indian Guarantee has, therefore, got to show how, and to what extent, its proposal is a better and more effective remedy for the foreign exchange problem.

Most of the insurance business relating to policies covering aircraft hulls and passenger third-party risks in the Australian aviation industry has in the past been arranged with insurance companies in London. Local companies have now formed a pool to cater for this business locally, and a strongly-financed group of 16 companies will engage in the underwriting. They have formed the *New Australian Aviation Underwriting Pool Pty., Ltd.*, which will operate in all states. It will be operated by the Victoria Insurance Company as the official agent for the group. The move follows recent announcements of several new companies and expansion plans by existing underwriters. Another group project just announced, is the move of United Holdings, Ltd., to seek listing on the stock exchanges of Sydney and Melbourne.

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

LICENSING OF INDUSTRIAL UNITS

PRESENT PRACTICE LEAVES MUCH TO BE DESIRED

By A Special Correspondent

WHEN Government undertakes economic planning, with control over location of industrial enterprises, capital issues, allocation of foreign exchange, terms of technical collaboration, terms of deferred payments, licensing of manfacturing capacity, procurement of plant and machinery, approval of phased programmes, and a whole series of cognate arrangements, the public has a right to assume that the grant of Government approval to a project carries with it the implied assurance that no difficulties will arise, as a result of Government policies themselves in the way of its successful implementation. Licences issued by Government may contain the qualifying clause that the grant of a licence should not be taken as guarantee or assurance of the success of a venture but this is a protective clause necessitated by our legal system; Government's moral obligation does not vanish. It follows, therefore, that, for planned economic development, every project has to be examined for viability, not only under existing conditions, but also with due regard to possible variations in those conditions arising out of our progressive march towards a socialist pattern of society. Whether the establishment of new capacity will fulfil the social purpose of increasing production to meet the growing needs of the community at a price which the consumer could bear, whether it will ensure fair and healthy competition (both for price and quality) among existing units, and, in the context of our growing needs, whether it will be able, eventually, to compete with products of other countries in foreign markets, are considerations which should call for the exercise of eternal vigilance in planning. We are, indeed, struggling with our scarce resources for the attainment of self-sufficiency in every conceivable direction, but cannot afford to forget that there is a perpetual emphasis on export promotion. It is, therefore, imperative that the course of trends in other advanced countries, where the establishment of giant capacities in units and the achievement of high outputs have been seen to be the only way of securing economies in operation and absorbing the spiralling increases in capital costs and labour charges, is kept as a standing guide to our approach to planned development.

Defects

Viewed from this angle, the seemingly heart-warming announcements of licences being granted to new units in several sectors fail to sustain our enthusiasm on close scrutiny. There is evidence of a certain submission to pressure, regional, and therefore, perhaps political, and recognition of considerations which are more ideological than economic, and thus irrelevant to economic judgment. Up to a point, it may be necessary to recognise the force of regional aspirations to achieve uniform development in this vast country, but the current agitation for steel plants, aluminium plants, heavy machinery and electricity plants, heavy chemical and fertiliser plants, rubber tyre plants and so on by all the States without their undertaking introspective analyses of their natural, financial and human resources, has perhaps resulted in a measure of capitulation here and there, with resultant lowering of basic standards and the assumption of empirical ones.

Only by way of illustration I would refer to the sanctioning of capacities for establishing manufacture of rubber tyres for automobiles. We have two large companies in operation, viz., Dunlop and Firestone, and four more in the offing, in various stages of establishment. The individual capacities of the four units are stated to range from 100,000 tyres to 240,000 tyres, with schemes for later expansion in stages. The combined manufacturing capacity of Dunlop and Firestone was one million in 1955 and considerable expansion is stated to have taken place since, as also the erection of an additional Dunlop factory in Madras. It is obvious, therefore, that the operating costs of these two large established companies, which observe a common pricing policy, will be very much less than those of the new companies, for, in addition to high output, they have the advantage of greatly written down values of plant and machinery and accumulations of reserves. The new companies will, no doubt, add to production, but it is very doubtful if they will be able to withstand competition in prices. Would it not have been better to insist on the establishment of new plants each capable of much higher individual output even from the start? And, in granting licences to four units, each with its own foreign collaborator, has due cognisance been taken of the added cost to the country by the quadruplication of technical know-how?

Foreign Collaboration

Considerable emphasis is being laid on the need for establishing indigenous manufacture of machinery needed for the production of paper, sugar, cement, dairy products, etc., but no steps have been taken for starting pilot plants to acquire technological competence in the manufacture of products like rubber tyres, heavy electrical equipment, etc., although sizable sums of money are being paid away to foreign companies in the form of royalties. One is inclined to the view that this aspect of securing self-sufficiency in technical know-how has not been given sufficient attention by the Planning Commission as is evidenced by the case of a new cement manufacturing company which has secured U.S. collaboration for the purpose. (A wag who drew pointed attention to this case thinks that it may not be long before we seek foreign technical collaboration for making *samoosas*. His sarcasm seems fully justified. We have been manufacturing cement in India for over forty years and the process is in no way esoteric such as to call for foreign assistance.) This unit has been licensed for an output of 100,000 tons per annum, which, as even a tyro would admit, is an uneconomic limit. Best operating results are achieved with kilns having large capacities of 600 to 750 tons a day, and lasting economies in overheads are best achieved when optimum planned capacity (with all ancillary services) is established even at the start of the venture.

When sanction is accorded for the establishment of factories with small capacities, the danger is that the units may not be able to compete with the larger ones in price if there is a free market, and may ask for special treatment if the price is fixed by Government and kept under control. In the former case, the economic law of survival of the fittest will operate, while, in the latter, the cost of production of the marginal units might influence the fixation of a uniform controlled price, with corresponding detriment to consumers' interests. Above all, these units will be unable to participate in export promotion and will suffer from a perpetual handicap. Their position may become economically untenable to such an extent that merger with bigger units will be the only possible alternative to closure. These are factors which have to be taken into account by the planners, if they wish to avoid misdirection of scarce resources at this critical time of our planned development.

Price Fixation

Anyone who is conversant with the operation of simple economic laws will agree that no social purpose is served by fixing ex-factory prices of commodities, unless they can be enforced at the consumers' end, for

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THIS IS ONLY AN ANNOUNCEMENT—NOT A PROSPECTUS.

Consent of the Central Government has been obtained to this issue.

A licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking.

A copy of the Prospectus, together with the documents specified therein, has been delivered for registration to the Registrar of Companies, Madras.

An application will be made in due course to the Bombay and Madras Stock Exchanges for a quotation for the shares of the Company and permission to deal in them.

The Subscription List will open at 10 a.m. on 9th January 1961 and will close at 2 p.m. on 16th January 1961 or earlier as soon as subscriptions approximating to the amount issued hereunder to the public have been received, but not earlier than 2 p.m. on 12th January 1961.

THE MADRAS ALUMINIUM COMPANY, LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

AUTHORISED CAPITAL:

2,50,000 Cumulative Preference Shares of Rs. 100 each.	Rs. 2,50,00,000
7,50,000 Equity Shares of Rs. 100 each	Rs. 7,50,00,000
	Rs. 10,00,00,000

ISSUED CAPITAL:

1,50,000 Redeemable Cumulative Preference Shares of Rs. 100 each	Rs. 1,50,00,000
4,50,000 Equity Shares of Rs. 100 each	Rs. 4,50,00,000
	Rs. 6,00,00,000

RIGHTS OF PREFERENCE SHAREHOLDERS

The preference shareholders will be entitled to a fixed cumulative dividend of 9.3% per annum (free of Company's Income-tax but subject to deduction of taxes at the prescribed rates), payable in priority to the ordinary shares. This means the shareholders will get a dividend of 9.3% less a deduction of tax under Section 18-3 (D) of the Indian Income-tax Act, which at present is 30%.

In the event of winding up, the preference shareholders will be entitled in priority to equity shareholders to repayment of the capital paid-up at par, plus all accrued dividends, whether earned or declared or not declared, and also declared but not paid.

The preference shares will all be redeemed at par, on 1st January 1975, on giving three calendar months' notice, with the option to the Company to redeem the whole or part of the preference capital outstanding at any time, at par, after 1st January 1972, on giving six calendar months' notice. The proposed method of redemption, whether from profits or by fresh issue of capital will be decided by the Directors at the time of giving the notice, taking the then circumstances of the Company into consideration.

The voting rights of the preference shareholders will be as per Section 87 of the Companies Act, 1956.

The issued capital is payable as follows :

(1) Along with application at Rs. 25 per share, whether Equity or Preference.

(2) The balance of Rs. 75 per share, whether Equity or Preference will be called up in three calls of Rs. 25 each, with an interval of at least one month between each call, and the first of such calls will not be earlier than three months from the date of allotment of the respective shares.

PREFERENTIAL ALLOTMENTS AND RESERVATION

(1) The signatories to the Memorandum of Association have subscribed for 1,200 equity shares. The promoters, directors, and their friends, have subscribed for a total of 48,800 equity shares of Rs. 100 each.

(2) The Government of Madras have agreed to the Madras Industrial Investment Corporation Ltd., Madras, underwriting and subscribing for 70,000 preference shares of Rs. 100 each and 80,000 equity shares of Rs. 100 each.

(3) The Life Insurance Corporation of India, Bombay, have agreed to underwrite and apply for 10,000 equity shares of Rs. 100 each and 20 000 preference shares of Rs. 100 each and these will be allotted in full.

(4) There is a specific arrangement with Messrs. Dalal & Co., Madras, for their tendering applications for 35,000 equity shares of Rs. 100 each and these will be allotted in full.

(5) As per the agreement entered into with Messrs. Montecatini of Italy, 1,20,000 equity shares of Rs. 100 each will be reserved for allotment to them

(6) In accordance with the provisions in the underwriting agreement with the Underwriters and Brokers, 28,500 equity shares of Rs. 100 each have been reserved for firm allotment in respect of applications procured and marked for " firm allotment " by them.

PRESENT ISSUE

The balance that is now unconditionally offered for public subscription is as follows :—

60,000 Preference Shares of Rs. 100 each.

1,26,500 Equity Shares of Rs. 100 each.

THE ENTIRE ISSUE OF 60,000 PREFERENCE SHARES AND 1,26,500 EQUITY SHARES HAVE BEEN UNDERWRITTEN BY THE INDUSTRIAL FINANCE CORPORATION OF INDIA, NEW DELHI, AND BY THE VARIOUS PARTIES, AS PER DETAILS HEREIN GIVEN.

DIRECTORS

OBJECTS

The Company was incorporated on 31st August 1960 for the several purposes set forth in the Memorandum of Association, and in particular to undertake the manufacture of aluminium ingots and alloys, from the bauxite reserves in the Sheveroy Hills. The plant capacity will be 10,000 tons, of which 7,000 tons will be ingots and 3,000 tons alloys, as per the Licence No. L/1B(1)/N-7/60, dated 6th May 1960, granted to this Company by the Government of India.

The Company has also applied to the Government of India for a licence to erect a Rolling Mill, as an adjunct to the proposed factory for the manufacture of A.C.S.R., and A.A.C. Cables, extrusion, rods, foils, etc., and the licence is awaited.

The rapid progress made by the aluminium industry can be gauged from the fact that world production of aluminium, which was a little over 7,00,000 tons in 1939, has increased to over 3 million tons at the present time.

The development of a large-scale aluminium industry is of particular importance to our industrial economy. Aluminium is the only non-ferrous metal for the manufacture of which, on a scale commensurate with our increasing requirements, adequate natural resources are available in the country. And as indicated above, it is a non-ferrous metal with properties which permit its use as a substitute for several purposes for other non-ferrous metals like copper, lead, zinc, and tin, the indigenous production of which cannot be developed to the required extent because of the very limited resources of the necessary raw materials as far as is known at present. It is in this context that the development of aluminium industry assumes a special significance in our plans for industrial progress.

According to the draft outlines of the third Five-year Plan, the estimated capacity of the Aluminium Industry in 1960-61 has been placed at 17,500 tons and production at 17,000 tons, against the production of 7,300 tons in 1955-56. The 1965-66 targets are estimated at a capacity of 82 500 tons and production of 75,000 tons.

The *per capita* consumption of aluminium in India is very low at about 0.12 lb. compared to 19 lbs. in U.S.A., 12 lbs. in Canada and 10 lbs. in the United Kingdom. With the growing use of aluminium for industrial purposes, the demand for aluminium is bound to far exceed production for several years to come.

RAW MATERIALS

Bauxite is the basic raw material for the production of alumina, while electric power is also as vital a necessity as bauxite. Bauxite deposits of Sheveroy Hills are considered to be very suitable for the manufacture of aluminium, because it is so soft and easily soluble in caustic soda in the process for the manufacture of alumina. The deposits in Sheveroy Hills are estimated at about 7 million tons.

In view of the advantages of nearness of bauxite, power, water, transport facilities etc., the factory will be located at Mettur on a plot of about 400 acres, reserved for this Company by the Government of Madras. The Madras State Electricity Board have assured adequate power supply at the rate of Rs. 155 KW./y for the Alumina section and Rs. 120 KW./y for the Smelter section.

TECHNICAL COLLABORATION

The Company has been fortunate in having secured the technical collaboration with Messrs. Montecatini of Italy, who are associated with the Neyveli Project of the Government of India, and who are one of the world known names in the manufacture of aluminium products, designing, erection and successful working of aluminium plants. Under the terms of the collaboration, Messrs. Montecatini are to supply technical know-how, designs and specifications, procure the required machinery for the Indian Company, attend to erection, to supply required technical personnel and also train Indian technical personnel in their factory. The Government of India have approved the technical collaboration terms under which Messrs. Montecatini are to be paid Rs. 45 lakhs for technical know-how, Rs. 40 lakhs for engineering fees, drawings, assistance in purchase of plant and other allied services, and Rs. 35 lakhs for cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges etc., and these payments are to be satisfied by the issue of 1,20,000 equity shares of Rs. 100 each. No further technical know-how fees are payable either for expansion of the plant capacity upto 20,000 tons or more of the Smelting Section.

COST OF THE PROJECT

The cost of the project, as estimated by Messrs. Montecatini, for a plant capacity of 10,000 tons of aluminium, of which 7,000 tons will be ingots and 3,000 tons alloys, is approximately as follows :—

	Rs.	Rs.
Foreign Side :		
Plant and Machinery (to be imported)	.. 3,40,00,000	
Technical Know-how	45,00,000	
Fees for designing, specifications, etc.	40,00,000	
For Technical Services	35,00,000	
		4,60,00,000
Indian Side :		
Land and Buildings ..	.. 1,70,00,000	
Fabrication of Machinery	.. 1,00,00,000	
Customs Duty, Freight and Insurance	75,00,000	
Erection and implementation expenses	40,00,000	
Pre-operating expenses (plant trial expenses including raw materials)	13,00,000	
Bank guarantee commission for 3 years for deferred payment .	15,00,000	
Preliminary expenses, Underwriting Commission, Brokerage and Share Issue expenditure	18,00,000	
Working Capital ..	50,00,000	
Contingencies	19,00,000	
		5,00,00,000
	Total ..	9,60,00,000

The estimated foreign loan requirements (less Montecatini's share participation) of about 5,000 million Italian lire, equivalent to about Rs. 3.80 crores would be financed by a long-term loan under deferred payment arrangements, by "Mediobanca" of Italy, for repayment in nine years commencing from 1st January 1965 in which direction preliminary negotiations have been completed.

The Industrial Finance Corporation of India have agreed to give guarantee for the foreign loan plus interest on the terms and conditions specified by them, one of which is mortgaging all present and future fixed assets in favour of the said Corporation for the duration of guarantee commitment.

ESTIMATE OF PROFITS

Aluminium ingots are now imported to meet the needs of the Rolling Mills in India. Secondly, rolled metal fetches good prices. The Company intends to install up-to-date machinery and equipment and utilise the latest methods in the manufacturing processes. Based on current market conditions, the Directors anticipate that the operation of the factory will yield a satisfactory return on the capital invested.

COMMENCEMENT OF BUSINESS

After incorporation of the Company on 31st August 1960, in order to facilitate carrying of all the arrangements and entering into early contracts for going ahead with the project, the Company obtained the certificate of Commencement of Business on 26th December 1960 from the Registrar of Companies, Madras, after filing the Statement in lieu of Prospectus.

MANAGING AGENTS

Messrs. Salcoe & Co., a partnership firm consisting of Sri R. Venkataswamy Naidu, Sri P. R Ramakrishnan, Sri T. S. Narayanaswamy, and Sri V. Radhakrishnan as partners, are proposed to be appointed as the Managing Agents of the Company for a period of ten years, as per the terms and conditions laid down in the draft agreement, with such modifications as may be suggested by the Central Government, and approved by the Board at their meeting held on 20th September 1960, based on which an application has been made to the Central Government for approval of the appointment of the said Messrs. Salcoe & Co., as the Managing Agents of the Company.

The Managing Agents will be entitled to a remuneration in accordance with the prescribed graded scale of commission on the Company's annual profits to be computed and determined as provided by Sections 349, 350 and 351 of the Companies Act, 1956, subject to a minimum of Rs. 50,000 per annum in the event of absence or inadequacy of profit in any year.

DIRECTORS

The number of Directors shall neither be less than four nor more than twenty-one.

The qualification of a Director, other than the Ex-officio Directors, Italian Directors, if and when appointed by virtue of clause 135 of the Articles of Association, Corporation Director, Government Director, Debenture-holders' Director and Alternate Director shall be the holding of at least fifty Equity Shares of Rs. 100 each in the Company, of the total nominal value of Rs. 5,000.

PAYMENT TO PROMOTERS

No amount of benefit has been paid or given or is intended to be given to any Promoter or Director of the Company, apart from the sitting fees for the Directors and the Managing Agency commission to the three Directors, Sri R. Venkataswamy Naidu, Sri T. S. Narayanaswami and Sri P. R. Ramakrishnan, as partners of the proposed Managing Agents, Messrs. Salcoe & Co.

UNDERWRITERS

The Industrial Finance Corporation by their Letter No. U.C.12/60—20657 dated 24th December 1960 have agreed to underwrite 60 000 equity shares of Rs. 100 each, and 60,000 redeemable cumulative preference shares of Rs. 100 each, and these 60,000 equity shares and 60,000 cumulative preference shares are offered unconditionally for public subscription.

In addition to the specific underwriting arrangements with the Madras Industrial Investment Corporation Ltd., Life Insurance Corporation of India and Messrs. Dalal and Co., set out in the paragraph under "Preferential Allotments and Reservation," the Company, has entered into underwriting agreements with the following parties, who have agreed to underwrite the number of equity shares set out against each of their names. The number of shares for which they will be tendering applications for full allotment (marked for "firm allotment") has also been shown as a deduction from the number of shares underwritten, in order to give clearly the number of shares offered unconditionally for subscription by the public.

	Number of shares underwritten	*Less firm allotment promised*	*Balance offered unconditionally for public subscription*
1. Messrs. Dalal & Co., MADRAS	12,500	3,750	8,750
2. Messrs. Kothari & Sons, MADRAS	5,000	1,500	3,500
3. Messrs. Maconochie & Co., MADRAS	5,000	1,500	3,500
4. Messrs. Somayajulu & Co., MADRAS	3,000	900	2,100
5. Messrs. Swastik & Co., MADRAS	3,000	900	2,100
6. The Investment Trust of India Ltd., MADRAS	5,000	1,500	3,500
7. Messrs. Devkaran Nanjee & Co., BOMBAY	10,000	3,000	7,000
8. Messrs. Jamnadas Morarjee & Co., BOMBAY	10,000	3,000	7,000
9. Messrs. Merwanjee Bomanjee Dalal, BOMBAY	5,000	1,500	3,500
10. Messrs. Harish Chandra Gutt & Co., BOMBAY	10,000	3,000	7,000
11. Messrs. Ramanbhai Lalbhai Sheth, BOMBAY	10,000	3,000	7,000
12. Messrs. P. R. Subramanyam, BOMBAY	5,000	1,500	3,500
13. Messrs. A. B. Pandit & Co., BOMBAY	5,000	1,500	3,500
14. Messrs. G. M. Pyne, CALCUTTA	3,500	1,050	2,450
15. Messrs. M. Nanjappaiah Jahgirdar, BANGALORE	3,000	900	2,100
Total ..	95,000	28,500	66,500

The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

All the Underwriters will be paid an underwriting commission of 2½ per cent. of the nominal value of shares underwritten by each of them.

BROKERAGE

Brokerage at the rate of 1 per cent. will be paid on all allotments made in respect of applications bearing the Stamp of any Bank or recognised Broker.

Brokerage on the same basis is payable to the Underwriters, in addition to the underwriting commission, as mentioned in the preceding paragraph, on allotments in respect of shares allotted on applications made or procured by them and bearing their stamps.

APPLICATION FOR SHARES

Copies of the Prospectus and application forms can be had from the Registered Office of the Company, or from the Underwriters or Brokers or from the Bankers of the Company, or from the Branches of such Bankers, at Madras, Bombay, Calcutta, Delhi, Bangalore, Coimbatore or Ahmedabad.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A formal Prospectus dated the 28th December, 1960, has been delivered to the Registrar of Companies, West Bengal, for registration and copies thereof, along with Application Forms, are obtainable from the Bank and Brokers named below.

Consent of the Central Government has been obtained to this Issue, and a Licence has been obtained from the Central Government for a substantial expansion to this Industrial undertaking. It must be distinctly understood that in giving this Consent and the Licence, the Government of India do not take any responsibility for the financial soundness of any scheme or the correctness of any statement made or opinion expressed with regard to them. Consent of the Shareholders of the Company has also been obtained for this Public Issue.

The Subscription List will open at the commencement of the Banking hours on the 16th January 1961 and will remain open until the close of Banking hours on the 18th January 1961 or later, at the discretion of the Directors.

Applications must be made for 100 Shares or multiples thereof and Applicants must be Residents in India.

20,000 Equity Shares of Rs. 10 each are reserved in the first instance for the Directors and their friends and the employees of the Company ; to the extent to which these shares are not taken up by them, these will also be available for meeting the applications from the public	2,00,000

NOW AVAILABLE FOR PUBLIC SUBSCRIPTION

1,96,346 Equity Shares of Rs. 10 each	19,63,460
	Rs. 21,63,460

The whole of this Issue of 2,16,346 Equity Shares of Rs. 10 each will be available in the manner stated above, AT A PREMIUM OF Rs. 5 PER SHARE, on the opening of the Subscription List and the amount payable in respect of each share, including the premium of Rs. 5 per share is PAYABLE IN FULL ON APPLICATION.

The Shares now to be issued will rank as regards dividends and in all other respects *pari passu* with the existing Ordinary (or Equity) Shares of the Company save that the Shares now to be issued will not rank for any dividend that may be declared in respect of the Company's financial year ending 31st December, 1960.

All the Shares now to be issued are Equity Shares within the meaning of Section 85(2) of the Companies Act, 1956.

The Consents in writing of the above mentioned Brokers, Solicitors, Auditors, Registrars and Bankers to act in those respective capacities have been obtained and delivered to the Registrar of Companies, West Bengal, along with the Prospectus and have not been withdrawn.

HISTORY AND BUSINESS

This Company was incorporated on the 17th December 1923, in West Bengal. A controlling interest in the Company was acquired by British Paints (Holdings) Limited, Newcastle-upon-Tyne, England, in 1947, and accordingly its name was changed from "HADFIELDS (INDIA) LIMITED" to "BRITISH PAINTS (INDIA) LIMITED" on the 12th December 1947. Since this changeover there has been a rapid progress in the business of the Company; the net sales have increased from Rs. 31,75,150 in 1947 to Rs. 166,90,983 in 1959.

PAST PROFITS, PAID-UP CAPITAL AND DIVIDENDS FOR THE LAST FIVE YEARS HAVE BEEN AS FOLLOWS:

For the Year ended 31st Dec.	*Nett Profit before Taxation*	*Nett Profit after Taxation*	*Paid-up Capital*	*Rate of Dividend*
	Rs.	Rs.	Rs.	
1955 ..	6,95,103	3,90,443	2,59,940	25%
1956 ..	9,08,245	3,80,935	2,59,940	25%
1957 ..	11,48,303	4,83,885	2,59,940	40%
1958 ..	9,18,133	3,46,980	28,36,540	10%
1959 ..	13,33,765	6,76,765	28,36,540	10%

OBJECTS OF THE COMPANY

The main objects of the Company are contained in the Company's Memorandum of Association, and have been set out in the "Prospectus." The principal business is manufacture and sale of Paints, Enamels, Varnishes and Synthetic Resins and allied products.

FOREIGN ASSISTANCE

The Company is a subsidiary of British Paints (Holdings) Limited of Newcastle-upon-Tyne, England, who hold a controlling interest in other subsidiary Companies in Great Britain, the U.S.A., Canada, Australia, New Zealand and Trinidad. The Company has been granted the right to use the Trade Marks owned in India by British Paints Limited of Newcastle-upon-Tyne, England, in accordance with British Paints Limited's specifications and on the basis of technical assistance granted by that Company; thus this Company enjoys the benefit of the vast technical experience and knowledge of

the network of the subsidiary Companies of British Paints (Holdings) Limited, England.

FUTURE PROSPECTS AND DIVIDENDS

The Company's paint sales have been on the increase and it may reasonably be anticipated that the rate of increase will be maintained. With regard to Synthetic Resins, for which there is large internal demand due to restrictions imposed by the Government on the importation thereof, the Company is now in a position to manufacture, in its newly-established resin factory different types of synthetic resins for sale to consumers in reasonable quantities.

Furthermore, negotiations with a Foreign Company for a collaboration arrangement in regard to the manufacture in India of a special type of Protective Coating which is currently not manufactured in India but is imported in large quantities, have satisfactorily progressed; should these negotiations fructify and the sanction of the Central Government be granted, then it is proposed to form a new Company in conjunction with the foreign collaborators in which this Company will hold 51 per cent. of the issued share capital.

On the basis of the past working results of the Company, and considering the growth prospects outlined above, the Directors have every reason to hope that, with the additional finance now to be made available by the present issue and with the Company's development plan and extension projects gradually materialising, and provided no unforeseen circumstances arise which have the effect of hampering or curtailing the Company's operations, the profits of the Company will be sufficient to enable it to pay a dividend rate of 12½ per cent. (taxable).

The relationship of the Paid-up Capital of the Company with its Reserves and Surplus is shown below:—

	Rs.	Rs.
The Reserves and Surplus of the Company as at 31st December, 1959 amounted to ..		26,56,775
Add: Share Premium to be received from this Issue, on the assumption that it will be fully subscribed	10,81,730	
Deduct: Estimated cost of this Issue	2,00,000	8,81,730
Total ..		Rs. 35,38,505

This total Reserves and Surplus will represent roughly 71 per cent. of the Increased Paid-up Capital of Rs. 50 lacs, if this Issue is fully subscribed.

MINIMUM SUBSCRIPTION

The minimum amount, which in the opinion of the Directors, is required to be provided is Rs. 20,00,000 to be utilised for Purchase price of Property, meeting the expenses of this Issue and for additional working capital.

MANAGEMENT

The management of the Company is vested in its Board of Directors and the Company has no Managing Agents nor Secretaries or Treasurers.

DIRECTORS

The Chairman of the Board of Directors receives a fee of Rs. 600 per annum and other Directors, excepting the Managing Director, a fee of Rs. 400 per annum for attending the meetings of the Board. Mr. A. V. Niblett is the Managing Director and receives remuneration for his services; Mr. D. P. Dunderdale and Mr. F. C. H. Rustomjee are Partners in the firm of Messrs. Sandersons and Morgans, the Solicitors of the Company, and are to that extent interested in the fees payable to that firm. Save as above, no Director has any financial or other interest in the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

EXPENSES OF THE ISSUE

It is estimated that the expenses of the Issue which will be paid by the Company will not exceed Rs. 2,00,000.

UNDERWRITING

The Shares now intended to be issued have not been underwritten.

RESTRICTIONS ON THE RIGHT TO TRANSFER SHARES, ATTEND MEETINGS AND VOTE

The holders of fully paid shares are not restricted either in respect of attendance, speaking and voting at Shareholders' Meetings or in respect of the transfer thereof. It is only in respect of Shares not fully paid up or upon which the Company has a lien that there are restrictions, namely, that no member of such shares shall be entitled to be present or vote on any question either personally or otherwise or in the capacity of Attorney or proxy at any General Meeting or upon a poll to be reckoned upon in a quorum whilst any call or any money shall be due and presently payable to the Company in respect of the Share of such member.

VOTING RIGHTS

The Articles of Association provide that on show of hands every member present in person or by proxy shall have one vote and on a poll every member present in person or by proxy shall have one vote for every Ordinary (or Equity) Share held by him. There are no special rights or restrictions attaching to the present Equity Share Capital of the Company.

PAYMENT TO PROMOTERS

No amount of benefit was paid or given within the two years preceding the date of the "Prospectus" or is intended to be paid or given to a Promoter or to any Officer of the Company apart from normal remuneration and reimbursement paid to such officers.

COMMISSION

No sums have been paid within the two years preceding the date of the "Prospectus" or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or Debentures of the Company or as discount in respect of shares issued.

OPTION TO SUBSCRIBE

The Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any shares in or Debentures of the Company.

APPLICATIONS AND ALLOTMENTS

Applications for shares will only be considered if made by residents in India and must be for a minimum of 100 shares or multiples of 100 shares (except in the case of employees of the Company where applications for 25 shares or multiples of 25 shares will be entertained) AND MUST BE MADE OUT IN ONE NAME ONLY ON THE OFFICIAL FORM AND WILL BE REFUSED IF NOT SO MADE. The Application Form together with the remittance for the full amount payable on application must be sent to a Branch in India of the Chartered Bank.

The Chartered Bank maintain Offices at the following places in India:—

At Calcutta ...	(a) Netaji Subhas Road, Calcutta 1.
	(b) 31, Chowringhee Road, Calcutta 16.
At Bombay ...	Mahatma Gandhi Road, Bombay.
At Madras	Netaji Subhas Chandra Bose Road, Madras 1.
At New Delhi ...	Connaught Circus, New Delhi.
At Delhi	Chandni Chowk, Delhi.
At Kanpur	Mahatma Gandhi Road, Kanpur.
At Amritsar ...	Hall Bazar, Amritsar.
At Cochin	Vi/37, Calvetty Road, Fort, Cochin.
At Calicut ...	Copra Bazar, Calicut.

Payment should be made in cash or by Bankers draft or cheque. If payment is made by cheque or draft, the cheque or draft must be drawn on a bank which is situated in the town at which the application form is submitted. All cheques and drafts drawn on banks in towns other than those mentioned above will not be accepted. Cheques or drafts should be drawn in favour of "The Chartered Bank, A/c British Paints (India) Limited," and should, for the applicant's protection, be crossed "A/c Payee only." A separate cheque or draft must accompany each application form. Applications carefully completed together with the cash, cheques or drafts for the full amount payable on application must be lodged before the close of the Subscription List with any of the branches of The Chartered Bank referred to above. Application forms and cash, cheques or drafts *MUST NOT* be sent to the Registered Office of BRITISH PAINTS (INDIA) LIMITED.

Allotment will be notified by the despatch of an Allotment Letter but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant within two months of the closing of the Subscription List, in which event bank's commission, if any, will be payable by the applicant.

BROKERAGE

Brokerage at the rate of 18 nP per share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised Stock Broker.

A commission will be paid by the Company to the Managing Brokers referred to in the Prospectus at the rate of 7 nP per Share on all Equity Shares offered and actually allotted to the public.

PROSPECTUS AND FORMS OF APPLICATION

Copies of the Prospectus on the terms of which alone applications will be considered, and Forms of Applications may be obtained from the abovenamed Bankers and Brokers at the places stated above.

STUDY OF STATE-OWNED OIL COMPANIES

EXPERIENCE OF LATIN AMERICA AND ITS LESSON FOR INDIA

By V. S. Swaminathan, M.A., M.Sc. (London)

THE list of Government concerns engaged in oil operations is long and growing. In the New World, we have Mexico, Brazil, Argentina, Bolivia, Colombia, Chile, Uruguay and Peru to which should soon be added Venezuela. In the Eastern Hemisphere, we have Italy, Austria, Finland, Turkey, U.A.R., Iraq, Iran and India. But every State oil company is unlike any other, and, in some cases, it is virtually impossible to draw a line between what and what is not a Government undertaking.

At one extreme, there is Pemex in Mexico, which is the only company with a complete monopoly on all aspects of Mexican oil and natural gas industry. At the other end, there is the British Petroleum Company 55 per cent. of which is owned by the U.K. Government and which appoints two members of the Board of Directors of the B.P. In practice, the State keeps its hands off, and the B.P. operates strictly as a private enterprise. Other State-owned oil companies fall somewhere in between these two extremes. The C.F.P. is popularly considered the French Government's appendage, but, technically, it is not, since private stockholders control a majority interest.

What makes Governments enter the oil business? There are three possible reasons. There are regimes wedded to socialism which believe in the nationalisation of key industries, including oil. There are others who have no room for foreign capital, since they apprehend that the latter might meddle in their internal affairs. Finally, there is much to be said for strategic and economic considerations.

The main drawbacks from which the majority of State-owned companies labour are two, that is, lack of enough capital and paucity of technically trained personnel. National oil companies have not enough capital to generate adequate income to promote self-sustaining growth. This is because the funds at the disposal of the State are limited and there are far too many compelling calls on them. Again, although there are many able executives and technologists in the ranks of such companies, there just are not enough to go round.

Another recent trend is for the oil producing countries to get together and present a united front against "foreign oil monopolies." A case in point is the formation of the Organisation of Petroleum Exporting Countries (O.P.E.C.) in the Middle East. Across the Atlantic, a mutual assistance programme is under discussion by Latin American producers led by Mexico and Argentina. These two countries recently decided to invest in each other's petroleum industry. This is to be the first step towards forging an international agreement involving also Bolivia, Brazil, Peru and Venezuela. Eventually, by mutual investments and joint operations these six Latin American countries will constitute a bloc to defend a common market. It is to be an international consortium to "protect free Latin America from foreign oil monopolies." The financial implications of this move are still to be worked out. In the meanwhile, it is of interest to review the activities of the State-owned Latin American oil companies.

Mexico

Pemex (Petroless Mexicanes) is the most famous and thorough-going of all Government-operated oil companies. Since 1938, it has had a virtual monopoly of all primary spheres of petroleum operations from prospecting to oil and natural gas production, refining and marketing as well as importing and exporting. Its current output of 270,000 barrels a day of crude oil represents half the volume produced in 1921, the peak year of private operation. When the Mexican oil workers took over the industry lock, stock and barrel, production was on the wane, exploration at a standstill and the refineries were obsolete. Two years later (in 1940), a law was passed which assigned 60 per cent. of the net income of the oil industry to the Government. This was in addition to royalty payments ranging from 10 to 35 per cent. Another 20 per cent. of the net income was earmarked for labour and the balance went into the reserve fund. Pemex might not be considered a commercial success, but then Mexico deems this secondary to keeping the nation's fuel costs down.

Pemex is now in the throes of a radical reorganisation programme. It is trying to break away from the traditional pattern by floating substantial loans from the United States and European banks. Although the manufacture of all oil or gas-derived "basic" chemicals is exclusively reserved to this State undertaking, there are provisions for permitting private firms to make either independently, or in co-operation with Pemex or its petrochemical subsidiaries, chemical and products from base materials or intermediates placed at their disposal. Also, this State monopoly does not preclude private enterprise from supplying the technical equipment and process technology for putting the plants to work. Indeed, Pemex vitally depends on the extensive co-operation of foreign firms in this respect, and has already enlisted the services of ten major petrochemical engineering concerns in the United States, Canada, Britain, France and Italy.

Argentina

Turning to Argentine, when Dr. Frondizi's Government assumed office in May 1958, gold and foreign exchange reserves were barely $250 million, and it became obvious that the choice lay between drastically curtailing oil consumption with resulting economic stagnation, or expanding domestic oil and natural gas production. For over two decades nationalist sentiment in the country prevented successive Governments, including that of Peron, from enlisting foreign and private capital in the development of the local petroleum industry. All this when the State oil company, Y.P.F. (Yacimientos Petroliferos Fiscales), and the country itself were not in a position to provide the finance for carrying out the necessary exploration and development of the national oil resources.

In July 1958, Dr. Frondizi announced the first of a series of contracts designed to permit private and foreign capital to contribute to the development of the country's petroleum resources. These contracts fall into two groups: (i) exploration and development contracts, the contractor to receive payment on the basis of the quantity of oil delivered to Y.P.F.; and (ii) drilling contracts, payment depending on the number of wells or metres drilled. A new works and service contract was recently signed between Y.P.F., and S.A.I.P.E.M., a subsidiary of the state-owned E.N.I. Corporation of Italy, for a programme of drillings in the Comodaro Rivadavia area. It provides for the drilling, equipment and operation of 600 wells (including 300 covered by a previous contract) and for the refinancing of Y.P.F's payment obligations under the earlier agreement.

To cut a long story short, sharply diminishing oil imports, despite rising consumption, and a prospective surplus of crude petroleum for export are the results of Dr. Frondizi's break with the past, and his acceptance of foreign help for developing the country's oil resources. The output of natural gas is now also rising rapidly. Pipelines and refining capacity are being expanded, and plans are under way to develop the nascent petrochemical industry. The improved balance of payments position has been reflected in the stability of the peso, thus encouraging the reconstruction of the economy in other fields.

Brazil

Petrobras (Petroleo Brasileiro S.A.) has a monopoly on oil exploration and production, as well as refinery construction, in Brazil. Its best successes to date have been in getting over 75,000 barrels a day of production from the Bahia field, discovered by an earlier State-owned company, and in refinery building. Its poorest showing is in finding new oilfields. The financial resources of Petrobras are too limited to explore adequately the vast Amazon basin, a sedimentary area covering over a million square miles. The Federal State and Municipal Governments hold stock in this State-owned company. Its income is derived from a partition of tax revenues on oil products and vehicle imports; a 5 per cent. share of foreign exchange earned from all types of exports, and 80 per cent. of foreign exchange saved from refinery operations. Private companies handle all oil marketing in Brazil and operate refineries built before 1952.

Bolivia

Under a law enacted in 1955, Y.P.F.B. (Yacimientos Petroliferos Fiscales Bolivianos) can conclude contracts with private companies in one zone of Bolivia providing it retains 50 per cent. interest. Other zones are open to foreign capital on a concession basis. At present Y.P.F.B. is producing about 8,400 barrels of oil a day, and it monopolises refining and marketing. Peru's E.P.F. (Empresa Petrolera Fiscal) acts as the nation's concessionaire with authority to make agreements with foreign firms. It has also a small crude oil production of its own (2,500 barrels daily), and certain exploration areas are reserved for E.P.F.

Venezuela

Venezuela is the world's second largest producer of petroleum and the leading exporter of the commodity. Its new national oil company (Corporacion Venezolano de Petroleos), reputedly modelled on Italy's E.N.I., is scheduled to start operations soon. It will engage in all sectors of the oil industry in competition with private concerns. It will have no special privileges, except that it has received gratis concessions where commercial production is considered secure. The Venezuelan national oil company will start drilling offset wells along the edges of private concessions. Reservoirs may be developed as units with private operators possibly called upon to market the Government's production. Eventually, this company has plans to branch out into other operations, including marketing and export.

Even with its long-established dominant position in the international oil trade, and its favourable geographical location in relation to major markets, Venezuela's economy is passing through a critical period. The virtual stagnation of its oil production this year contrasts with a 6 per cent. increase in 1959, and reflects the imposition of U.S. import restrictions and lower export demand due to rising output in consuming countries and to lessened competitiveness of Venezuelan oil. The Soviet capture of the Cuban market represents a loss of 4 million tons in exports to Venezuela. For some months past, Maracaibo oil has been offered by three major companies at a discount of $1 per barrel, when the Middle East crude petroleum was available at discounts ranging from 30 to 50 cents a barrel. Financial strains and stresses and the collapse of the real estate boom pose formidable problems to the Venezuelan Government launching its Four-Year Plan of Development with borrowed capital. Worst of all, oil production is not now expanding, as has been hoped, since oil revenues account for over 80 per cent. of the country's income.

Conclusions

Two broad conclusions emerge from this survey of the oil industry of the leading Latin American countries. The most successful of the State oil corporations are those which operate most nearly like private companies. Where private capital and/or technical skill was solicited as in Argentina, Mexico and elsewhere, under terms that satisfied national aspirations, there has been a marked improvement in the outlook for the oil industry.—*All Rights Reserved.*

This is only an announcement for information and not a Prospectus and applications are invited on the basis of the Prospectus copies whereof are available from the Company's Bankers and Brokers mentioned herein.

An application will be made to the Stock Exchange of Madras and Bombay for permission to deal in the shares now being offered and in due course for an official quotation.

PROSPECTUS OF

THE TRAVANCORE ELECTRO-CHEMICAL INDUSTRIES LTD.

(Incorporated on 4th April 1945 under the Travancore Companies Act IX of 1114)

AUTHORISED CAPITAL:

1,00,000 Equity Shares of Rs. 100 each	Rs.	1,00,00,000

PAID-UP CAPITAL:

13,288 Equity Shares Fully Paid-up at Rs. 100 per Share	Rs.	13,28,800
1,912 Equity Shares previously forfeited but subsequently re-allotted at Rs. 100 per Share and now partly paid at Rs. 25 per Share	Rs.	47,800
	Rs.	13,76,600

CAPITAL NOW ISSUED FOR PUBLIC SUBSCRIPTION:

10,000 Equity Shares of Rs. 100 each	Rs.	10,00,000

AMOUNT PAYABLE IN RESPECT OF SHARES

The amount payable in respect of Equity Shares is as follows:

Rs. 25 per Share on application.

Rs. 25 per Share on allotment.

and the balance in two equal instalments provided that there shall be an interval of not less than three months each between calls and between the allotment and the first call. Each application must be for a minimum of 5 Shares or in multiples thereof.

Where no allotment is made, the Deposit will be returned in full and where a partial allotment is made, the unutilised balance will be adjusted against amount due on allotment.

The Share Certificates will be issued within six months of the date of allotment.

Note: By a Resolution passed on the 7th of December 1960 the Deferred Shareholders of the Company have given their consent to the conversion of the Deferred Shares issued by the Company into Equity Shares of the Company in the ratio of five Deferred Shares to one Ordinary Share ranking *pari passu* with the existing Equity Shares.

REGISTERED OFFICE

P.O. CHINGAVANAM. KOTTAYAM, KERALA STATE

OBJECTS OF THE COMPANY

The Company was established to manufacture and deal in Calcium Carbide, Carbon and Graphite in various forms, all types of Electro-chemical, Electro-thermal and High Temperature Furnace products like Carbides, Abrasives, Metal Alloys and Refractories, and Derivatives and by-products of the above.

HISTORY OF THE COMPANY

Although the Company was registered in 1945 it started operating as late as in 1952 owing to late delivery of the electrical equipment. The Company's activities were then on a developmental or experimental stage as it had put up a pilot furnace with a capacity of Calcium Carbide upto 1,000 tons per year only. The Company in its developmental stage, therefore, made small losses, particularly as the cost of production of Calcium Carbide in a small capacity furnace was high. The Company's experimental activities are of great importance inasmuch as it proved the advantages of using sea-shells for manufacturing Quick-lime—an important raw material, at very cheap rates and of prescribed purity. The Company in its development stage also proved that it could produce Calcium Carbide of high purity meeting the requirement of the British Standard Specifications, as borne out by the Certificate in this respect of the Technical Development Establishment (M.E.)—Kirkee (Ministry of Defence). The purity of the Company's products has also been confirmed by the *Tariff Commission Report of 1956.*

PROSPECTS OF THE COMPANY

Thanks to the developmental activities of the Company in the past, it is only now that the possibility of commercial production of Calcium Carbide appears to have come.

In 1956 the Company planned to expand its capacity to 10,000 tons per year. The Company since then have secured the necessary Industrial and Import Licences from the Central Government for raising the production capacity to 10,000 tons per year. The Tariff Commission Report of 1956 commented on the proposed expansion project of the Company thus:—"The existing plant enjoys certain marked locational facilities for procurement of raw materials and electrical energy at economic rates, and expansion at the same spot should seem to afford them a reasonable assurance of success."

ASSISTANCE FROM KERALA GOVERNMENT

The Kerala Government has given the Company co-operation and assistance in this proposed expansion of the capacity of Calcium Carbide plant to 10,000 tons per year. The Government of Kerala have also invested Rs. 5 lacs recently in the equity shares of the Company.

ELECTRIC POWER

The cost of Electric Power determines to a substantial extent the cost of production of Calcium Carbide. The Company has the advantage of having Electric Power at cheap rates and on favourable terms from the Kerala Government.

TRANSPORT FACILITIES

The Company is located favourably so as to enjoy good transport facilities by rail as well as by water for the movement of its raw materials and finished products.

SCOPE AND PROSPECTS

Calcium Carbide is a basic chemical which is used in the manufacture of many other important chemicals and materials such as—Acetylene, Polyvynil Chloride, Calcium Cynamide, a variety of commercial solvents and intermediates, synthetic rubbers and resins. Calcium Carbide is also used for the manufacture of certain types of explosive in which area the Defence Ministry of the Government of India may find considerable use of this product. Already Calcium Carbide is very widely used in India for generating Acetylene Gas in welding and cutting steel and for lighting purposes.

The demand of Calcium Carbide is continuously increasing in India as a result of rapid industrialisation and especially with the growth of Chemical Industry. With the development of Organic Chemical Industries the demand for Calcium Carbide in the coming years is expected to grow at a rapid pace as estimated above.

For the years 1957, 1958 and 1959, local production of Calcium Carbide has been 3,600, 3,804 and 4,074 long tons respectively. For the same years imports of Calcium Carbide have been 8,595, 9,588 and 8,430 long tons respectively. The latter figures show that there have been substantial imports of Calcium Carbide in India. In the recently published Outline of the Third *Five-year Plan, looking* to the rapid rise in demand for Calcium Carbide in India, the local production of Calcium Carbide *in 1960-61* and in *1965-66* are estimated at 20,000 and 60,000 tons respectively. It is, therefore, *expected that the Company's* entire production of 10,000 tons will find a ready market within the *Country.*

ESTIMATE OF PROFITS

The Company will be in a position to produce Calcium Carbide at a cheap price in view of the cheapness of labour, and electric power and the availability of raw materials of good quality. The cost of production of Calcium Carbide of the Company is estimated by the Tariff Commission at Rs. 462 per ton. Even assuming that this estimate of cost of production goes up in future to some extent, the Company appears assured of a substantial margin of profits considering the ex-factory selling price of Calcium Carbide fixed by the Tariff Commission, 1958, at Rs. 865 per ton for corresponding grade of this product.

SUPPLY OF MACHINERY AND TECHNICAL KNOW-HOW

The Company has secured collaboration from Messrs. Deutscher Innen-Und Aussenhandel Invest Export, of the German Democratic Republic. The Company has entered into two agreements with the abovenamed firm, one for supply of a complete Carbide Plant of 30 tons daily capacity and the other for supply of technical personnel and of project-true supervision of erection, function tests, trial run and putting into commercial operation the plant. The total purchase price of the plant inclusive of the necessary basic and execution projects, constructional documents etc. amounts to about Rs. 17 lacs. The machinery suppliers have further agreed to charge an interest of only 3% on the outstanding balances. The payment is to be made in Indian Currency. The Company has secured the necessary import licence and permission from the Reserve Bank of India to make the payments.

BROKERAGE

Brokerage at the rate of 1% on the nominal value of each Equity Share will be paid to registered Brokers on recognised Stock Exchanges and Banks on allotment being made in respect of applications bearing the stamp of such Brokers or Banks.

Messrs. Lewis and Jones have been appointed the Managing Brokers to this Issue. They will in addition be entitled to a brokerage of ½% on the face value of the shares subscribed by the public and a further sum of Rs. 5,000 as incidental charges.

Subscription List will open at the commencement of Banking hours on 4th January, 1961 and will close at the close of the Banking hours on 11th January, 1961.

SERIOUS SHORTAGE OF POWER SUPPLY FEARED

ADVANCE WARNING TO PLANNERS

THE power-hunger of economic development, in general, and of industrialisation, in particular, is such that the demand for energy at any point of time seems to be outstripping the supply. To the continuing shortage of good quality coal is now added the shortage of electricity. This latter shortage has manifested itself in the shape of power cuts, rationing of electricity supplies and inability to give power to new consumers. The World Bank Mission, it may be recalled in this connection, has found evidence of power shortage in all the main industrial centres in India and given the finding that this shortage will become intensified in the future. Apprehending the seriousness of the situation which is stated to be a major factor inhibiting the proper growth of industrial enterprises in most areas of the country, the Associated Chambers of Commerce of India, Calcutta, adopted a resolution on the subject at its latest annual meeting. This resolution urges the need for a comprehensive review of the requirements of electric power and the initiation of measures necessary to fulfil them and for assigning a high priority to the allocation of foreign exchange for the import of the necessary generating and other plant and equipment. The resolution also calls for the consideration of measures whereby the electric supply industry can be enabled to expand its existing resources, particularly by a re-appraisal of the restrictions imposed by the Electricity (Supply) Act to enable that strengthening of company finance which expansion requires. The Associated Chambers has thus done well to focus the attention of the powers-that-be on this basic industry of electricity generation just on the eve of inauguration of the third Plan.

An Instance

The debate on the resolution at the 1960 annual meeting of the Chamber has brought to light a number of facts bearing on the critical power shortage in some parts of the country. In Madras State, for instance, according to Mr. R. M. King of the Madras Chamber of Commerce, it is estimated that, by the end of the second Plan, 571 MW. of installed capacity will be available, of which only 344 MW. will be "firm" power (that is not subject to seasonal fluctuations), whereas the demand will be 727 MW., leaving a deficit of 383 MW. It is further estimated that by the end of the third Plan, the total demand in that State will be 1,448 MW. whereas the total installed capacity will amount to 1,441 MW., of which only 910 MW. will be "firm" power; this will mean a shortage of 37 per cent. even if all the sanctioned projects are completed and they work to their full capacity by the end of the third Plan period. The total demand of 1,448 MW. by the end of the third Plan seems to be an underestimate, for only licences already issued for industries and industries proposed in the Techno-Economic Survey Report of the National Council of Applied Economic Research have been taken into consideration in this connection. Since new industries for which licences may be issued in the future have not been taken into account, the eventual total demand for power by the end of the third Plan may well turn out to be greater still in Madras, even after allowing for some saving on account of existing licences which may not fully utilise their quota of supply. But, at the same time, all available hydro-electric supplies in that State will have been fully exploited by then. The expected gap between demand and supply will, therefore, have to be covered by sources other than hydro-power.

The position in other States might be as bad as, or even worse than, in Madras which is reputed for its progressivism in the matter of generation of electricity and its utilisation as much for rural and agricultural purposes as for industrial. Since, however, a complete State-wise or regionwise picture of current demand for, and supply of, electric power is not readily available, the most that can be done here is to present the all-India position. The second Plan, it may be recalled here, provided for an increase of 3½ million kw., at a cost of Rs. 450 crores during the five-year period so as to reach a total generation target of 7 million kw. It is now admitted that actual power supply in the end-year (1960-61) of the current Plan will be only 6 million kw., as against the year's total demand estimated at over 10 million kw. Thus, there is currently a gap of about 4 million kw. between the demand for and the supply of electric power.

It looks as though this gap will be widened, not narrowed, by the end of the third Plan, unless a different approach to this problem is adopted right from now. The total generation target for this Plan is laid down as 13 million kw. on the assumption that the increase of 6 million kw. over the second Plan target could be secured in the following ways: 3.50 million kw. from thermal stations, 2.25 million kw. from hydro-electric stations and 0.25 million kw. from a nuclear station. If the second Plan's shortfall of one million kw. is taken into account, it would mean a total increase of 7 million kw. under the third Plan. Here, again, there is the risk of a shortfall—probably to the tune of 2 million kw.—on account of the likely delays in the execution of hydro-electric and nuclear schemes. On this basis, the total power supply in the end-year of the third Plan may only be about 11 million kw. But the demand then may well be of the order of 20 million kw. if all the other industrial and agricultural projects are executed according to schedule.

No Exaggeration

It is feared that, if a power shortage of this magnitude were to develop, industrial development would be gravely retarded and probably no more than 60 per cent. of the industrial output estimated for the end-year of the third Plan would be actually realised. This is not an alarmist forecast, for already industrial loads account for two-thirds of all electricity consumption in the country. The pattern of electricity utilisation in 1959-59, for instance, shows that industrial loads accounted for 67 per cent., domestic and commercial 17.8 per cent., irrigation 6 per cent., railway track electrification 4.1 per cent., water supply and drainage 3.6 per cent. and street lighting 1.5 per cent. Even an expert in the Central Water and Power Commission has recognised that, in a country like India which has entered a phase of what may be termed a modest industrial revolution, the demand for electric power is bound to be at a very much faster rate than in the past.

When a power crisis is thus foreseen, it would be prudent to think of some practical alternatives for generating more electricity. The suggestion, canvassed at the meeting of the Associated Chambers of Commerce of India by Mr. F. C. Badhwar of the Punjab and Delhi Chamber of Commerce, for a 25 per cent. cut in the third Plan allotment for heavy industries and for a corresponding increase in the allocations for power and, incidentally, transport does not seem to be a desirable proposition, even though it has been justified on the ground that there would then be a greater probability of at least 75 per cent. of the third Plan's industrial targets being achieved. It is not desirable because any drastic cut in the proposed public investment in heavy industries may also have the effect of retarding industrial production in general. An upward revision of the targets for power generation is the only way out of the problem. Since, however, the public sector will not be in a position to invest adequately in both power and heavy industry projects, the powers-that-be must recognise betimes the realities of the situation and impart further flexibility to the Industrial Policy Resolution of 1956.

Under this resolution, generation and distribution of electricity is treated as a Schedule 'A' industry, that is, an industry "the future development of which will be the exclusive responsibility of the State." While all new units in this industry, "save where their establishment in the private sector has already been approved, will be set up only by the State," the same resolution states that "this does not preclude the expansion of the existing privately-owned units, or the possibility of the State securing the co-operation of private enterprise in the establishment of new units where the national interests so require." The current and future power shortage is such that a rigid interpretation of the Industrial Policy Resolution would not be in the best interests of the national economy. The national interests require that private enterprise be permitted not only to expand its existing electricity undertakings but also to launch new ones.

The need for liberal permission for expansion of existing private undertakings is immediate, because the projected supplies from the public sector stations have not come forth according to schedule. It would be revealing to recall in this context that the Calcutta Electric Supply Corporation Ltd. was persuaded by the West Bengal Government in 1955 to abandon its plan, then in an advanced stage, for the construction of yet another generating station on the ground that a bulk supply could be made available to the Company from the Damodar Valley Corporation. What has actually happened in this case is that the D.V.C. has thus far not been able to supply the Company with all the power it has required; if the Company has been able to meet all demands made on it without load shedding, it is because of the fact that it has been keeping certain of its older and less economic plants in commission. What is true of the Calcutta Electric Supply Corporation is quite true, albeit in varying degree, of other private electricity undertakings also. The Ahmedabad Electricity Company Ltd., for instance, has scope to expand further its generating capacity, but there is the risk that, like the Calcutta Electric Supply Corporation, it may be asked to import power (which may or may not be forthcoming) from the Gujarat Electricity Board. In any case, this Company, like any other existing electricity undertaking, does not seem to be sure of raising, under present conditions, the requisite financial resources for expansion, even if such expansion is liberally permitted.

Incentives

If the existing private electricity undertakings are permitted to expand and new units in the private sector are also licensed, certain concomitant incentives and facilities would also be called for. In the first place, the factors which adversely affect investment in the electricity supply industry would need to be removed, for the electricity shares have continued to slump since the application of the financial provisions contained in the Electricity (Supply) Act. Remedial measures should take the form of (i) shifting of the tax burden on to the consumer and (ii) increasing the standard rate of profit by one per cent. on the old capital block and 2 per cent. in respect of new finance. There is thus an urgent need for offering adequate incentive to new capital as well as for restoring values in existing equities. It will be obvious to anyone who knows about the ways in which the capital market functions that halting the disinvestment in the electricity industry, already evident in the loss in share values, is as important as providing incentives for attracting new capital. The present low standard rate does not permit the industry to make profits sufficient to enable it either to attract new capital or to build up its own resources. That is clear enough. But, what is worse, it does not permit the taking of loans or the issue of debentures, for the formula regarding permissible profits does not allow for their repayment as an item of expenditure. The recent changes regarding tax on dividends and profits have also had the effect of further reducing the amount available for appropriation without conferring on electricity companies the compensating tax advantages available to other industries.

If these disincentives to expansion of existing undertakings are removed and if, at the same time, new units are licensed in the private sector by a flexible interpretation of the Industrial Policy Resolution, it may be that, as Mr. H. M. L. Williams observed in his recent presidential address to the Associated Chambers of Commerce of India, the progress so far made in the utilisation of low quality coal for thermal generation could be availed of in thermal stations of far bigger capacity. After all, there is no dearth of low quality coal and of coal dust; the existing shortage is in respect of only coking and high-grade coals and that, too, not because of lack of adequate proved coal reserves but because of the failure of the Government to create favourable conditions for the exploitation of the available reserves by the private sector. There is no conceivable reason why some thermal stations of upto 500 MW. capacity should not be constructed as in other parts of the world, if the private sector in India is enabled to come forward to undertake the responsibility. The pragmatic arguments favouring greater coal production in the private sector at a time when the public sector is not in a position to deliver the goods apply, with equal force, to power generation which would need to be stepped up somehow.

MYSORE KIRLOSKAR LIMITED

SPEECH OF DR. MAHADEVAN AT ANNUAL GENERAL MEETING

CALL FOR LIBERAL IMPORTS OF CAPITAL GOODS FOR MACHINE TOOL INDUSTRY

AN indication to the effect that the targets for the production of machine tools envisaged in the third Plan might not be fulfilled, unless the Government permitted the industry to import capital goods "urgently required" for its expansion programme, was given by Dr. M. N. Mahadevan, Director and Chairman of the Mysore Kirloskar Ltd., in the course of his address to the Nineteenth Annual General Meeting of the Company held at Yantrapur P.O., Harihar, on 26th December 1960. No less significant was his plea to the Government of India for the renewal of facilities of initial depreciation and additional depreciation in respect of industries like machine tools, "where the requirement of fixed capital is heavier than in other industries."

The following is the full text of Dr. Mahadevan's speech:

"LADIES AND GENTLEMEN,

"It is my proud privilege and pleasure to extend to you all the most hearty and cordial welcome to this nineteenth annual general meeting of your Company today.

"The balance-sheet of the Company as at 30th June 1960 and the profit and loss account for the year ended 30th June 1960 as also the Directors' report and the Auditor's report are already in your hands and according to the usual practice and with your permission I take the same as read.

"At the time of the last general meeting held on 28th December 1959, I had informed you that the paid-up capital of your Company was then Rs. 32.49 lakhs. The last call was made since and the paid-up capital of your Company is now Rs. 40 lakhs. Your Company has large expansion programmes and requires still further capital and your Directors have proposed to issue a further capital of Rs. 40 lakhs made up of Rs. 15 lakhs equity capital and Rs. 25 lakhs preference capital. Further steps in issuing this capital will be taken in due course. I hope, in view of the very good prospects, you will extend your substantial co-operation in this matter.

Repayment of Loan

"As regards the loan of Rs. 25 lakhs taken by your Company from the Industrial Finance Corporation of India, New Delhi, the repayment of the said loan by instalments will begin from this year and the first instalment to be so repaid, amounting to Rs. 1 lakh, falls due on 28th December 1960.

"Last time I had informed you that additional land measuring about 37 acres and 7 guntas was still to be purchased and that the matter was pending acquisition proceedings. The acquisition proceedings are now almost at a final stage and we would be receiving the possession of this land in the course of the next month or so.

"From the published accounts you must have seen that the Company has added to its block capital assets during the year of the value of Rs. 16.43 lakhs.

"The Company has submitted its applications for the import of capital goods of the order of about Rs. 1 crore and the matter is still pending with the Government of India. In view of the foreign loans recently negotiated by the Government, your Company may stand to get some relief in this regard and if all the applications for import licences are granted by the Government, the Company would be in a position to make rapid progress in its expansion programmes.

"The Company has, however, already received sanction from the Central Government for its proposed expansion programmes, namely, doubling the production of centre lathes and also for the substantial increase in the manufacture of capstans and turrets.

"The Company has already received the manufacturing licence for the manufacture of grinding machines and also for automatic lathes.

"At the time of the last annual general meeting, I had also informed you that it was proposed to put up a separate building for the manufacture of capstans and turrets and I am now glad to inform you that the said building is almost nearing completion and may be available by the end of March 1961.

"From the published accounts and in particular from the trading and profit and loss account for the year ended 30th June 1960, you will have noticed that the net sales amounted to about Rs. 141 lakhs, as against Rs. 105 lakhs during the preceding year. There has thus been a rise of about Rs. 36 lakhs in sales during the year under report. This is certainly a substantial achievement during the year and all those who contributed for achieving this deserve your warm appreciation.

Allocation of Factors of Production

"The percentage allocation of the various factors of production as also the provision for taxation and the balanace of profit during the two years ended 30th June 1960 and 30th June 1959 has been as under:

"Raw materials and stores consumed, including works-in-process and transport charges, accounted for 42 per cent., as against 35 per cent. last year. Wages were 24 per cent., as against 29 per cent. last year. Indirect working expenses came to 10 per cent. this year, as against 12 per cent. Fuel and power stood at 2 per cent., as against 3 per cent. Statutory depreciation, including the development rebate, worked out at 6 per cent. this year, as against 8 per cent. Taxation liabilities were of the order of 7 per cent. and this percentage was the same as that of the last year. The balance of profits stood at 9 per cent., as against 6 per cent. last year. This percentage allocation of the various factors of production would enable you to appreciate that there has been some progress in the efficient working of the factory.

"As shareholders, you may be aware of the recent amendments to the Companies Act 1956. The Company Law Amendment Act is already passed by Parliament and would be soon applicable to all the companies including this Company.

"The management has been already following certain conventions and precedents in tune with the changing concepts of company management and it is for this reason that I feel that the new amendments to the Company Law may not affect materially the working of your Company. So far as this Company is concerned, an equitable consideration has been given to the various interests concerned all these years and I need hardly add therefore that the management will be in a position to show the same equitable consideration in future also.

Third Plan Targets

"We are in the last year of the second Five-year Plan and we will step in soon to the first year of the third Plan. The Planning Commission had recently called a meeting of the machine tool manufacturers to assess the production target for the third Five-year Plan. The position of your Company was placed before the Planning Commission. The difficulties experienced by the Company were also brought to the notice of the Planning Commission. The Planning Commission has tentatively assessed the total requirement of machine tools of all descriptions in the country which would be of the order of Rs. 60 crores per annum by 1965-66. The contribution from the private sector in respect of this target is estimated at Rs. 17 crores per annum. This will give you an idea of the tremendous scope for further expansion in the machine tool line. It was impressed on the authorities of the Government that the speedy expansion programme would necessarily depend upon the extent to which the Government would help the industry in allowing the import of capital goods urgently required for their expansion programme.

"At the time of the last annual general meeting, I had referred to the facilities of initial depreciation and additional depreciation which were discontinued by the Government and I had then urged that these facilities should be renewed and continued. But so far nothing has been done in this regard by the Government and I take this opportunity of requesting the authorities again to reconsider this matter and extend these facilities again at least to industries like the machine tool industry where the requirement of fixed capital is heavier than in other industries. After all, these facilities by way of initial depreciation and additional depreciation amount only to temporary financial accommodation and in the total result over a period the Government is not going to lose anything. I hope the authorities concerned would give their earnest consideration to this.

Labour Relations Satisfactory

"The labour relations in your factory have been generally satisfactory, though however, the disputes in relation to bonus for the past five years are still pending adjudication at various levels.

"Ladies and gentlemen, during the year under report, the management and the members of the organisation, including the workmen and the staff, have done their best in raising the production substantially and I take this opportunity of sincerely thanking them and congratulating them not only on my behalf but also on behalf of you all.

"Ladies and gentlemen, I also thank you for the very patient hearing that you have given me.

"I now propose that the balance-sheet and the profit and loss account and the Directors' report be adopted."

N.B.—*This is not a report of the proceedings at the above annual general meeting.*

NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR, REVIEWS PROGRESS OF NEWSPRINT PRODUCTION

CHLORINE CAUSTIC PLANT TO BE ESTABLISHED

IN his speech at the Thirteenth Annual General Meeting of the shareholders of the National Newsprint and Paper Mills Ltd., held at Nepanagar (Madhya Pradesh) on 27th December 1960, the Chairman, Dr. A. Ramaswami Mudaliar, touched upon a matter of general importance to all public sector projects. He observed that, unless conditions regarding maximum salaries payable for the staff were made less rigid and the Directors were given more freedom in the matter, public sector projects would be severely handicapped. Strict financial regulations in this regard, according to Dr. Ramaswami, were already having its effect on staffing, especially appointment of higher technical personnel. The Chairman disclosed that, in view of the difficulty of getting adequate supplies of chlorine and caustic soda, the Directors were considering the question of setting up a chlorine caustic plant.

The following is the full text of Dr. Ramaswami's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the thirteenth Annual General Meeting of the shareholders of the National Newsprint and Paper Mills Limited.

"The Directors' report, the balance-sheet and the audited accounts for the year ended 31st March 1960 have been in your hands for some time and with your permission I shall take them as read.

"The progress for the year ended 31st March 1960 can be considered satisfactory and we have completed another year in which we have been able to show good working results. During the year, 22,411 tons of newsprint was manufactured, registering an increase of 573 tons over that of the previous year. The production consisted of bleached variety 19,203 tons and unbleached variety 3,208 tons. The working showed a net profit of Rs. 37,76,278.97 after providing for depreciation and development rebate reserve. The profit has been utilised to reduce the debit balance of the profit and loss account of Rs. 1,36,38,131.85 at the beginning of the year leaving a debit balance of Rs. 98,61,852.88 on 31st March 1960. I have to bring to your special notice that this is the second year in succession in which the Company has made a clear profit and I will repeat what I said during my last year's speech that we have definitely turned the corner and we shall continue to improve our position year by year and hope that in the near future the financial position of the Company will be such that it may be possible to declare a dividend.

Loan Repayment

"As on 31st March 1959, the loans outstanding to the Madhya Pradesh and Union Governments stood at about Rs. 95 lakhs and Rs. 32.73 lakhs. During the year under review, the entire interest-bearing loan to the Government of Madhya Pradesh was repaid in full and Rs. 7.73 lakhs loan from the Union Government was also repaid. I am glad to say that since then, due to the improvement of the ways and means position, we have been able to pay the entire interest-bearing loan due to the Union Government as well. We have also been able to pay the second instalment of Rs. 11 lakhs due before the end of this month towards the interest-free loan payable to Madhya Pradesh Government. The balance of interest-free loan to be paid to Madhya Pradesh Government is Rs. 88 lakhs. This is now the only outstanding loan still payable in eight instalments.

Increase in Output

"Last year, I referred to the additions to the Chemical Mill. Some of the equipment ordered from abroad were received and were put into commission and during the year we have been able to commission the third Digester, the Mordon Refiners, the Uni-Clarifier and the Rechipper. The work on the Calcium Hypochlorite Plant is in progress. With the addition of some of the equipment it has been possible to increase the output and also the quality. In fact, on three occasions recently we have been able to manufacture more than 100 tons a day, the target capacity of the mill.

"There has been very little improvement in the position of supply of electrical power and steam as offered by the Chandni power station. The Madhya Pradesh Electricity Board have a programme to expand the power house to meet our requirements for a production of 100 tons per day through extensions to the existing installations. Two Lancashire boilers have been installed by them recently but the additional power and steam supply is not such as to maintain a sustained production of 100 tons per day. In addition, from 1st April 1960 the Madhya Pradesh Electricity Board have revised the tariffs very steeply. This will result in payment of about 25 per cent. additional charges for the supply of power and steam. This is being paid under protest. Your Directors are examining the revised tariffs.

Improvement in Quality

"The quality of our newsprint has also been improved to a certain extent. A certain degree of improvement has been achieved by mixing a small proportion of imported chemical and mechanical pulps which has added not only to the strength but also improved its appearance and colour. Further investigations are still proceeding on the lines which I mentioned in my speech last year.

"We have had difficulties in procurement of chlorine supplies. At present we are getting supplies from Delhi, Bombay and Ahmedabad. There have been several occasions when the supplies failed on account of breakdown in the suppliers' plant or transport difficulties. On account of the long distances heavy freight charges have to be incurred. Your Directors, therefore, are examining a proposal to have our own chlorine caustic plant to meet our requirements of chlorine and caustic soda. This scheme is being progressed and, if adopted, will not only ensure steady supplies but also ensure considerable saving. We have also drawn up plans for doubling the capacity of the plant stepping up the production to 200 tons per day during the third Five-year Plan. The scheme has been accepted and included in the draft third Five-year Plan and is progressing.

Ceiling on Salaries

"During the ten years that I have been the Chairman of this Company, the ownership and the constitution of the shareholders has radically changed. When the Company was purely a shareholders company, although a good proportion of the shares were held by the Madhya Pradesh Government, there was a certain latitude granted to the Board of Directors to choose technical personnel at levels of salary which would attract the most competent and efficient staff. As you are aware, we had foreign personnel who received very high salaries and even the Indian personnel were granted salaries according to existing demands for such personnel. Today the Company is a public company, not merely under the definition of the Companies Act, but also according to rules and regulations issued by the Government. The strict financial regulations in the matter of the level of salaries which could be granted are having their effect on the staffing of higher technical personnel. I would like to state, as my personal opinion, that public projects generally would be seriously handicapped if, in appropriate cases, according to the nature of the technique required of the personnel, less rigid conditions regarding maximum salaries are not established. The matter is of general importance to all public sector projects and needs serious and early consideration at the hands of the Government.

Newsprint Supply

"The demand for newsprint has been increasing and the quantity supplied to the newspapers has been stepped up. During the year, about 9,400 tons have been supplied to the newspapers. Next to the newspapers, priority is given to the printers and publishers of textbooks and the books of general interest. The quantity supplied to printers and publishers came to 3,662.35 tons during the year 1959-60. The balance of the production was distributed to Governments and dealers as duty-paid goods through our various agents and distributors.

Staff Welfare

"The welfare of staff continued to be given attention by the Directors. This was the first year in which an incentive award, equal to a month's pay and allowances, was paid to the employees getting a basic pay of Rs. 500, subject to a maximum of Rs. 325. The construction of 100 more F-type quarters and 10 C-2 type quarters have been taken in hand as the accommodation was found to be insufficient to house the employees. These are in progress. In addition a welfare centre, a new maternity and child welfare centre and a recreation hall have been constructed for the benefit of the workers in the third and fourth stage residential areas. These have been completed and brought into use. A bachelors' hostel to accommodate about 25 persons is under construction. Sports and recreational facilities continued to be attended to. The contribution to the provident fund has been increased from 6¼ per cent to 8¼ per cent. of the total emoluments, that is, basic salary and dearness allowance. The workers have also shown a spirit of co-operation in stepping up the production.

"I have to specifically mention on this occasion the resignation of Mr. S. R. Krishnaswamy who worked as the Works Manager of this mill for nearly five years. He has contributed, in no small measure, to bringing up the production in this mill to the present level with his knowledge and experience. I would like to pay a special tribute to his work during his stay in the Nepamills.

"I would like to convey my thanks to all the workmen and the staff who have worked with zeal and enthusiasm in spite of difficulties and grievances. They have given their best to produce these excellent results and I hope will continue to give their hearty co-operation and improve the results even more.

"Finally, I wish to thank all shareholders and all our agents and customers who have encouraged us by using our paper and without whose patronage it would not have been possible to make the progress that we have achieved during the last year."

ALUMINIUM CORPORATION OF INDIA LIMITED

TWENTY-SECOND ANNUAL MEETING

MR. LAKSHMIPAT SINGHANIA OPTIMISTIC ABOUT THE OUTLOOK FOR ALUMINIUM

ALUMINIUM may be in a position to help the country to make good, to a great extent, India's deficiency in other non-ferrous metals which are likely to be required in the context of our expanding industrial economy. This view was expressed by Mr. Lakshmipat Singhania, Chairman of the Aluminium Corporation of India Ltd., in his speech at the Twenty-second Annual General Meeting of the Company held at Calcutta on Tuesday, 27th December 1960. Mr. Lakshmipat felt very happy that this aspect had been realised and that there was planning and thinking for higher production of the metal. He no doubt considered it possible that there might be a time lag between consumption and production when all the new plants came into production and that such temporary phase might be disheartening for the industry. But he was confident that, ultimately, consumption of aluminium was going to be higher than production.

The following is the full text of Mr. Lakshmipat Singhania's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the twenty-second annual general meeting of the Corporation. You will be no doubt gratified to observe from the audited accounts and Directors' report which have already been circulated to you, that, in spite of higher expenses, the Corporation has been able to maintain the level of profits. You will notice from the Directors' report and accounts that adequate appropriations have been made towards depreciation and allocation towards general reserve has also been maintained. The appropriation towards taxation has been reduced by Rs. 2 lakhs and this advantage has been passed on to the shareholders. As explained in the Directors' report, the dividend on preference shares will be paid after deducting tax but now the Preference Shares (Regulation of Dividends) Bill, 1960, has been passed by the Legislature and, as proposed, immediately the full details are available, whatever further dividend, if any, is due to the holders of the preference shares will be paid in due course.

"During the year, the cost of production has gone up further due to increased cost of labour, stores, spares and raw materials, etc., and also due to heavy expenses for replacement and renovation which have been incurred for the maintenance of the Corporation's plant in up-to-date working condition, as the plant is in continuous operation now for more than 17 years. Besides, there have been fresh impositions by the Government in various spheres, including higher railway freight and other charges. In the expanding economy of the country, I do not expect that there will be a downward tendency of these costs. Therefore, future should be viewed with cautious optimism.

Future of Aluminium Industry in India

"As you are all aware, momentous changes are taking place in the country for the development of aluminium industry. I have pointed out before from time to time that aluminium is the only non-ferrous metal which can be produced not only to meet the country's requirements but even beyond due to the availability of sufficient physical raw material, that is, bauxite which is available in abundance in the country. However, power being still the basic raw material for production of this metal, by its anticipated rapid development as envisaged in the third Five-year Plan, the production of aluminium metal is expected to rise to a level which was not possible to comprehend before and which is still difficult to judge, in view of the scarcity of raw materials in developing other non-ferrous metals. There are high hopes that this metal may be in a position to help the country in filling the gap of requirements of other non-ferrous metals to a great extent which are likely to be required in this expanding industrial economy. I am very glad that this fact has been realised and there is planning and thinking for higher production of the metal in the country. Although I may be repeating myself, your Corporation has played an important role by first producing this important metal from Indian bauxite in 1944 with Indian capital, Indian management, Indian labour and on top of that Indian technical 'know-how' and personnel and without any foreign collaboration or help whatsoever in earlier stages. I feel that the services rendered by your Corporation in developing this industry, in the country, would be really realised by the historians at a later date.

"In my last year's statement before you, I estimated the expected consumption due to factors available then, but, due to accelerated industrial advancement, it seems that the earlier thinking regarding pattern of consumption in this country is changing and the consumption probably is going to be much higher than anticipated earlier. For the time being, the Planning Commission has accepted a target of 82,500 tons of metal production as included in the third Five-year Plan. But the Hon'ble Minister for Industries, Mr. Manubhai Shah, declared in the Lok Sabha on 7th September 1960, that the estimated requirements of the country in 1965-66 would be 150,000 tons of metal per annum. In my opinion, there should be no doubt that this consumption can be achieved in this country and as such, production should follow this pattern of requirements. It is, however, possible that there may be a time lag between the consumption and production when all the new plants come into production and such temporary phase may be disheartening for this industry, but ultimately, I am convinced that the consumption is going to be higher than production.

Heavy Excise Duty

"At this stage, I would like to draw your attention to the imposition of heavy excise duty on aluminium metal and its products announced by the Hon'ble Finance Minister in his budget proposals for 1960-61. This step is rather unfortunate, as it will make this metal less competitive in comparison to other non-ferrous metals and may lead to hindrance in increasing the consumption of this metal which is being built up by the Indian producers at a very great sacrifice. The Indian producers have maintained their prices at a lower level without taking full advantage of the tariff protection. My humble opinion is that the consumption of this metal will rise more if it is left alone to find its own market, at reasonable prices by development in future years. However, I am happy that we have an assurance from the Hon'ble Finance Minister that the position will be watched carefully and, if necessary, suitable steps will be taken.

"During the year, the Tariff Commission has again examined the case of this industry and the recent announcement in the Lok Sabha shows that the Government of India has accepted to continue protection till 31st December 1964. At present, there is surplus capacity in several parts of the world for this metal, while there is scarcity in certain parts where the industry has not developed. This is in addition to the fact that some type of protection to this metal is given in particular in every part of the world and in every country. The protection question here has to be judged and watched with great caution in future.

"Since the production of aluminium industry is increasing in this country, it is necessary to examine very carefully the availability of other raw materials such as petroleum coke for electrodes and cryolite for electrolysis which are to be imported. Though small quantity in comparison to the cost of the metal itself, these play a very important part in the production of the metal. It is necessary that our oil refineries should produce the country's requirement of petroleum coke which is needed not only for aluminium industry but many other industries also. This, in my opinion, can be done without much difficulty. The production of synthetic cryolite should also be given higher priority for investigation and production from indigenous raw materials.

"Labour is a very important link indeed in any industrial development. There is a disquieting trend of the trade union movement becoming more and more political, specially in this State. At the moment, I am more concerned with the area wherein your Corporation's factory is situated. Unfortunately in this State and particularly in the area around Asansol where industrial development is rather quite rapid, there have been certain disturbances rather regularly, specially in the collieries, mainly due to political factions between trade unions. The maintenance of the employer-employee relation is becoming more and more difficult and efforts to create a better understanding through Code of Conduct and direct negotiations have no meaning unless and until full co-operation is shown from both sides. I want to mention another danger to employer-employee relations which has taken shape recently. I think I will do better in quoting the recent description by Sir Biren Mookerjee in his own words as follows:

"'There has been for some time an agitation sponsored by some trade unions and several of the State Governments to insist on the restriction of jobs to those popularly described as 'sons of the soil.' If this principle is carried to its logical conclusion, it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other State. The mobility of industrial labour, which is of benefit both to the workers and their employers, will be seriously impaired and cause no small embarrassment to the management of industrial establishments all over the country.'"

Employment Opportunities

"Such slogans popularly described as job for 'sons of the soil' or 'children of the State' are rather difficult to understand and, in my opinion, such a thing is neither in the interests of the State nor in the interests of the nation. Dr. B. C. Roy, Chief Minister, has correctly defined at a recent meeting of the Legislature that the 'sons of soil' are sons of this country. This State of West Bengal, at one time a pioneer in industrialisation, is now getting behind in sharing the industrial progress of the country and employment figures do not reflect a happy position as compared with the position of the employment figures of other States during the last 10 years. More industrial development means more employment in the area where the development takes place, but let me be honest, jobs are not charities. These cannot be distributed. The jobs are the right of the people who can make themselves capable for them and the slogan should be that people should make themselves capable of acquiring the jobs and not accepting charity. If this attitude is not adopted, I am sorry to say that there will be more loss to the State where already a condition is created that the people are afraid of putting up new industries and also the existing offices are being transferred. There was a time when Calcutta was considered the principal financial city of the country, whereas now it has been noticed that even the main financial offices are away from the city and there is a tendency of more offices being shifted. There must be some reason behind this and I must emphatically urge the people of this State to examine the position very carefully and, for the sake of this State and creation of employment in the State, they should bring about conditions and atmosphere where more employment opportunities are available to the *sons of the soil* or *children of the State*. It is my appeal to all parties that this should be adopted for the interest of the State. I would like to emphasise that the first interest of every employer in any State is to see that the people available locally must be employed and all opportunities be offered to those who are living in the vicinity, otherwise there is no object of establishing an industry in that area. As far as the Corporation is concerned, the employment opportunities are open without any restriction of any kind to everyone of those who are suitable for the job.

Expansion

"As indicated last year as well as clarified in your Directors' report, the Corporation has undertaken the expansion programme for trebling the production of the existing plant. After

MYSORE TOBACCO COMPANY LIMITED

CHAIRMAN, MR. M. MALLARAJ URS, HIGHLIGHTS PROBLEMS OF TOBACCO MANUFACTURE

UNHEALTHY COMPETITION DEPLORED

ADDRESSING the Twenty-third Annual General Meeting of the Mysore Tobacco Company Ltd., held at Bangalore on 17th December 1960, Mr. M. Mallaraj Urs, Chairman of the Company, observed that unfavourable seasonal conditions, intense and unhealthy competition among manufacturers to secure tobacco, and the all-round rise in costs of production had adversely affected the Company's results. He, however, said that this situation was only a passing phase and that the Company was considering diversification of its activities so as to stabilise earnings. The following is the full text of Mr. Mallaraj Urs's speech:

"LADIES AND GENTLEMEN,

"*It gives me great* pleasure to welcome you and to place before you for adoption, the twenty-third annual report of the Directors and the statement of accounts for the year ended 31st March 1960. These reports have already been circulated and have been in your hands for some time and, with your permission, I shall take them as read.

"You will remember that, in the extraordinary general meeting of the shareholders held on 25th June 1960, we amended Section 113 of our Articles of Association, with a view to bifurcate the functions of the Chairman and Managing Director. I am glad to inform you that our Government have accordingly appointed Mr. B. P. Balakrishna as a Government Director and also the Managing Director of your Company. I take this opportunity to welcome him on your behalf.

"You would have read in the report that a sum of Rs. 75,422 has been arrived at, as the net profit, which includes a sum of Rs. 43,858 representing the excess provision made towards sales tax in previous years. You will naturally consider this return as very small. It is necessary that you should be informed of the reasons for the reduced profit during the current year and the steps that are being taken to improve the earnings of the Company in future.

Failure of Crop

"During the year under review the seasonal conditions continued to be unfavourable for the second successive time. You would have known that the unfavourable weather conditions for tobacco crop not only prevailed in Mysore, but also in the Andhra State where the crop produced a large quantity of low grades. In Mysore the quantity and quality were both reduced although the quality of the crop was slightly better than last year. In the Gowribidnur area, the production of tobacco in Company's and private sector diminished and in the Mandya area the appearance of spot disease continued to lower the quality of the leaf. The successive failure of the crop has discouraged the growers, who are showing interest in other commercial and food crops, particularly sugarcane and paddy, whose prices ruled high. Your Directors have taken note of this to arrest the declining interest in tobacco cultivation.

"Your Company was acquiring a large quantity of leaf from private curers who produced flue-cured tobacco; but with the gradual reduction in the production of tobacco in this sector, there has been, however, an intense competition to purchase the available tobacco by the other competing companies. Their interest in Mysore tobacco appears to have increased and they are continuing to buy all grades of tobacco. This severe competition has adversely affected the acquisition of tobacco from this sector. What has been considered more harmful to the business of tobacco is the acceptance of lower standard of grading from the ryots and imperfect grading. This has naturally confused the grower in the marketing of tobacco, as he finds that our system of grading and payment on quality, in contrast, as unprofitable to him. It is also unnecessary for me to add the unfair methods of competition. These methods have been resorted to, in a desperate attempt to secure tobacco at any cost, and I am sure everyone realises that such lowering of standards is unhealthy to organised business of tobacco marketing. Under these circumstances, we have been obliged to enhance the prices of graded tobacco to retain our permanent suppliers. It is to be hoped that, with large expansion of tobacco production, proper standards will be insisted in buying tobacco.

Rising Costs

"I wish to refer, to the most important and the third factor which has affected our earnings. It is needless to say that the leaf industry is faced with rising cost on all sides. The cost of green leaf, the cured leaf, the operational expenses of curing, grading and transport have all increased our cost of production. You will no doubt agree that these increases are inevitable. The value of raw material and salaries on personnel account for nearly 62 per cent. of total cost. Both these costs are rising costs and have to be met with, however much reduction and economy is aimed at. The increase in the rate of green leaf has been paid to retain the growers' interest in tobacco cultivation, particularly during the rising prices of other crops. It is also necessary to make them feel that the Company can always be relied upon to 'stand-by' even in unfavourable years. All this has to be done from a long-range point of view, although the high cost of green leaf has not yielded corresponding high quality in cured leaf. The operational expenses of fuel has gone up due to higher rates paid for fuel and larger quantity of coal consumed. Fuel, on which we depend so much for our operation, is becoming scarcer. The cost of repairs and renewals and transport have all shown increases which have affected our nett return. You will, therefore, see that successive unfavourable weather conditions, the reduced output of tobacco in both Company's and private sector, added to it, increased value of raw material, salaries and wages have diminished our returns.

Expansion

"The intensive cultivation in the existing areas of production and large expansion in Company's centres and private production in new areas are practical steps at improving the working of the Company and I need hardly add how anxious your Directors are in examining proposals for the expansion of the Company. The development of new areas under Company's and private sector is naturally slow and involves large investment of capital. A beginning has been made and it will take some more years to derive the benefit of increased production. We are, however, doing our best to improve in the existing areas. The introduction of new varieties known to give higher percentage of brighter grades and application of balanced fertilisers have already been demonstrated. The control of spot by early removal of basal leaves and spraying is also being carried out.

Critical Period

"I wish to inform you that we are passing through a critical period of rapidly rising cost, on one side, and decreasing quantity of production of tobacco with low outturn of quality, due to high incidence of diseases and successive unfavourable conditions, on the other. It is not unusual for intense fluctuations, as tobacco, of all agricultural crops, is valued more for its quality which is, more often than not, dependent on favourable weather conditions. The demand for our tobacco has not fallen down. The quality is rated very high and there is keen demand for this type of tobacco. Our buyers, Messrs. Indian Leaf Tobacco Development Company, are actually assisting us, in improving the quality of the tobacco, by sending their experts and, therefore, I consider that there is no cause for undue anxiety about the future. But it is inevitable that anxious periods have to be passed, in the hope of better conditions favourable for tobacco cultivation. During the year under report, your Company increased the quantity of tobacco export to foreign countries. A quantity of 3,15,020 pounds of tobacco was exported, as against 2,64,218 pounds in the previous year. Your Company is well established and is expanding its activities. Your Directors are seriously considering other proposals which will ensure a stable return, despite seasonal conditions, by undertaking other kinds of work. During this year, we continued to process tobacco of outside agencies and it is hoped to secure increased quantities of the same. It is the desire of your Directors that this Company, in addition to encouraging cigarette tobacco cultivation also includes other types of tobacco grown in other parts of the State and thus expand the activities of the Company.

Storage

"Your Directors are examining the proposal to build a large cool stores for tobacco at Whitefield, which will undoubtedly place the Company in a more secure position. As this question is pending sanction of additional power supply, negotiations are being made with our Government for grant of electricity. The flue-curing of tobacco by several growers in various parts of the State is carried on as a small-scale industry and your Company is supporting a network of these, through material and technical aid and organised marketing, and is also the mainstay of several small growers. It is, therefore, imperative that facilities are granted for expansion of the industry. This will indirectly help in the development of agricultural industry in rural areas.

"Your Company has continued to maintain cordial relations with all the growers.

"We are most grateful to our buyers, the Indian Leaf Tobacco Development Company Ltd., Calcutta, for their continued co-operation and assistance in several fields of our activity.

"In conclusion, I wish to acknowledge with gratitude the continued assistance and encouragement given to your Company by the Government of Mysore. I also acknowledge, with thanks, the valuable advice, guidance and co-operation received from my esteemed colleagues on the Board. The employees and the officers of the Company have put in very hard work and they deserve particular mention for their loyal services.

"I now move that the Directors' report and the audited accounts for the year ended 31st March 1960 with the auditors' report thereon be adopted."

Note:—This does not purport to be a report of the proceedings of the general meeting.

ANNOUNCEMENT

THE GREAT EASTERN SHIPPING CO. LTD.

60, Mahatma Gandhi Road, Bombay 1

INSTEAD OF SPEAKING AT THE ANNUAL GENERAL MEETING HELD ON 29TH DECEMBER 1960, THE CHAIRMAN ISSUED A STATEMENT IN ADVANCE TO THE SHAREHOLDERS. A COPY OF THE CHAIRMAN'S STATEMENT CAN BE OBTAINED FROM THE SECRETARY OF THE COMPANY BY REQUEST.

MYSORE CHEMICALS AND FERTILISERS LTD.

CHAIRMAN, MR. T. SHAMANNA, ON TRENDS IN FERTILISER INDUSTRY

KEEN COMPETITION IN PRODUCTION AND DISTRIBUTION ENVISAGED

ADDRESSING the Twenty-fourth Annual General Meeting of the shareholders of the Mysore Chemicals and Fertilisers Ltd., Mysore, held at Mysore City on 14th December, the Chairman of the Company, Mr. T. Shamanna, I.A.S., observed that, in spite of the growing market for fertilisers, the rapid expansion in productive capacity, now under way, was sure to spark of keen competition among the producers of fertilisers. In order to withstand this competition, it was necessary, according to him, to hold the cost of production under check and keep a constant watch over the needs and trends of the market. He said that small-scale plants and operations had become uneconomic and it was necessary, in the interest of efficiency, to think in terms of bigger units and expanded operations.

The following is the full text of Mr. Shamanna's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to the twenty-fourth annual general meeting of your Company. The Directors' report and the audited statement of accounts for the year ending 31st March 1960 have been with you for some time now and I trust you will permit me to take them as read.

Higher Dividend

"A clear picture of the working of the Company during the year under review has been briefly given in the Directors' report. I hope you will be satisfied to see that the production and sales for this year have been higher than that at any time in the past which enabled a fair margin of profit being secured by the Company. This has been achieved in spite of the very heavy electric charges that we have been made to pay. Although your Directors, with their usual prudence, thought of appropriating a good proportion of this profit towards reserves and maintain the same rate of dividend as before, it was thought finally that the shareholders should be made to participate in the increased profits and, therefore, a higher rate of dividend has been proposed for this year.

"I expect that the production and sales for the current year will be higher than last year's. We are trying our best to maintain the same level of profits although our costs of operation are higher and selling prices of some of our products lower.

"You will recall that at the last general meeting I had indicated your Directors' intentions to expand the production of sulphuric acid and superphosphate. I am glad to inform you that definite steps have since been taken to carry out these intentions. We have placed orders for a sulphuric acid plant of 50 tons capacity at a cost of approximately Rs. 10 lakhs. We are expecting that the plant will be ready for operation within about 18 months. A decision has also been taken to install a mechanised unit of about 60,000 tons annual capacity for manufacture of superphosphate. We have made an application to the Government of India to secure a licence under the Industries (Development and Regulation) Act, 1951 and we are hoping that the Government will consider our application favourably at an early date. The outlay on the superphosphate plant, including the cost of the plant, buildings, etc., is expected to be of the order of Rs. 20 lakhs.

"Altogether, our expansion plans are estimated to cost about Rs. 35 lakhs, including some provision for working capital and the question of financing them has been engaging our very careful attention. The approval of the general body was obtained to increase the authorised capital of the Company to Rs. 50 lakhs. While this is so, your Directors have been seriously thinking that it might be possible to meet the cost of our expansion programme from the existing resources of the Company supplemented by borrowings to the extent required and therefore issue of fresh capital may not be necessary. It is indeed a healthy feature that the Company is in a position to find its requirements of such large sums of money in this way.

Keen Competition

"While shape is being given to our expansion plans in this manner, you must be aware that the development of the fertiliser industry in the country is being taken up seriously by the Government of India and large-scale units are being planned all over the country. One such large unit is proposed to be established in the Mysore State. It is, however, not yet decided whether it should be in the public or private sector. It is likely that other smaller units will be set up in the private sector. With such development of the industry in our own State, there is no doubt that we will have to face in the years to come severe competition and it is, therefore, necessary that we should think of catering to the market in a proper manner by supplying quality products at as cheap a rate as possible. The indications are that we have a growing market for superphosphate and the severity of competition may be minimised, to some extent, if our agriculturists begin to use more and more phosphatic fertilisers. But, we have to be vigilant and keep a constant eye on our production costs and the market. The Ministry of Agriculture, Government of India, have selected Mandhya District as one of the few centres in India for their intensive agricultural programme known as the 'package programme.' This means that there will be a sizable increase in the demand for our fertilisers in our home market. While this is so, it is necessary for us to explore new markets and establish a growing demand for our products in other parts of the State and the country.

Expansion and Diversification

"The industrial pattern in the country is changing so fast and so radically that perhaps, in the next five years, all our ideas of manufacture, management and marketing will have to undergo a considerable change. It is therefore necessary that we should continuously think of expanding and, if possible, diversifying our production. Our dependence on cheap electricity, which has acted as a great handicap, must be reduced. In fact, our present plans have been formulated with this object in view.

"No industry can afford to remain stagnant. It can do so only at the cost of its very existence. I, therefore, venture to suggest that the present expansion schemes should be considered as a prelude to further plans that we should think of right from now.

"Due to force of circumstances, we in Mysore have been thinking in terms of small-scale plants and small-scale operations all these years. Such operations have now become uneconomic with the result that we are not in a position to face competition from more modern and large-scale plants. People in charge of industrial concerns in Mysore have to change their thinking radically to suit the new trend in the country. Almost all the industries that were set up in the State about 15 to 20 years ago were great pioneering efforts and were characterised by boldness and vision which put Mysore in the van of industrial progress in the country, but they are small considered from the present-day standards. Unless we change the pattern of our thinking and develop our industrial units in line with the present pattern in the country, we will be left far behind. It is a happy augury that most of the industries in the State have such expansion plans and I have no doubt that the pioneering efforts made by Mysore in various directions will be stabilised in a manner fitting into the present context.

"On behalf of the Company, I wish to express our grateful thanks to the Central and State Governments for their sustained interest in the progress of the Company and their assistance in the implementation of our expansion plans.

"I am grateful to my colleagues on the Board for their wholehearted co-operation and valuable guidance.

"Our thanks are due to all the employees of the Company for their willing work and co-operation and for continuing the cordial relationship between the management and labour.

"Gentlemen, with these observations, I hereby move that the Directors' report, the audited balance-sheet, and profit and loss account for the year ending 31st March 1960 be approved and adopted."

PROTECTION FOR BICYCLES TO STAY

SHORTAGE OF RAW MATERIALS HAMPERS INDUSTRY'S GROWTH

THE indigenous bicycle industry, though of comparatively recent origin, has made substantial headway. Nevertheless, much leeway remains to be made up before the industry could be in a position to compete effectively with foreign products on equal terms, particularly in respect of price and quality. It is, therefore, gratifying to hear that the period of tariff protection to the industry, which was to expire at the end of 1960, has now been extended for a further period of three years, with effect from the 1st inst. The Government recently announced its agreement with the recommendation of the Tariff Commission to this effect.

Many vital considerations weighed with the Commission in recommending continuance of protection. In the first place, the industry is still dependent on imports for certain essential raw materials, including steel. Not only is the cost of imported steel comparatively high to Indian producers, but they are also finding it difficult to get adequate supplies of suitable quality. Secondly, there is need for considerable improvement in quality, particularly in the case of small units. Thirdly, the structure of the industry requires gradual readjustment to bring down costs. Some of the large-scale units produce a much larger number of components themselves than their counterparts elsewhere. "This deprives the domestic industry of the benefits of lower costs by the large-scale production of components, which foreign manufacturers derive." Besides, the Commission has noticed that there is a genuine apprehension in the minds of small-scale producers that unfair competition may develop between units with foreign collaboration and the rest, once protection is withdrawn. In view of all these factors, the Commission feels that the industry requires close watch till it is in a position to compete with imports without high rates of protective duty.

Rate of Duty

The industry has been enjoying tariff protection for the last 14 years. As in the previous three years, the preferential rate of duty on bicycles has been fixed at 65 per cent. *ad valorem* or Rs. 80 per cycle, whichever is higher, and that on parts and accessories of bicycles 65 per cent. *ad valorem*, the standard rates of duty being 10 per cent. higher in both cases. The present scheme of protection covers complete bicycles and parts and accessories thereof. The Tariff items relating to them are 75(5), 75(6), 75(7), 75(7A) and 75 (8). The first mentioned item covers cycles (other than motor cycles) imported in sections, or otherwise, but excludes saddles, tyres and tubes and certain accessories. The next three items cover frames, handlebars, and roller chains of certain sizes whether imported, cut to length or in rolls. Item 75(8) covers all other parts and accessories of bicycles, not otherwise specified.

Under the shelter of protection, the industry has made great strides. There are at present 21 units engaged in the industry, as against 17 units in 1957, no more than six in 1953 and only two in 1949. Among the existing units, three have an annual installed capacity of 200,000 bicycles each and another has 100,000 bicycles. The rest are of medium size. Only three of these units (of which two are large ones) have entered into technical collaboration with foreign firms. The annual licensed capacity of all these 21 units aggregate 1,415,000 bicycles and the installed capacity 1,296,000 bicycles. The number of bicycles manufactured in India rose from a mere 114,275 in 1951 to 264,169 in 1953, 796,549 in 1957 and 990,982 in 1959. In the first half of 1960, production increased further to 509,627 bicycles, or an annual rate of over one million bicycles. The table at the bottom of this page shows the trend of progress in respect of installed capacity and production of bicycles in India since 1957.

Small Units

Apart from these large- and medium-scale units, there are numerous small units engaged in the manufacture of bicycles and components. In the beginning of 1960, for instance, there were as many as 130 small units manufacturing complete bicycles, most of them situated in the Punjab and West Bengal, with a total capacity of 750,000 bicycles a year. This compares with only 49 small units, with an annual installed capacity of 219,000 bicycles in 1957. The volume of production has also gone up substantially. The production of bicycles in the small-scale sector is as follows:

1956	...	...	...	45,000 bicycles
1957	...	...	...	111,000 "
1958	...	...	...	171,000 "
1959	...	...	...	197,000 "

The existence of such numerous small producers in an item like the bicycle which, as the poor man's vehicle, deserves to be mass-produced in order to keep its cost down, is a serious weakness in the structure of this industry. What is more, like the big units, the small ones also are said to be making too many components at the same time. Consequently, they are not able to pay sufficient attention to the development and production of a standard product of specified quality. The Governments, Central and States alike, are making a grave mistake in permitting them to grow as they have done and it is high time something effective was done to correct it. In this context, the Commission's remark that "it would be better to encourage them, in the initial stages, to specialise in the production of a few component parts each" is pertinent and deserves the attention of the authorities.

The total number of bicycles produced in the large, medium and small sectors aggregated 1,188,000 in 1959, as compared with 1,084,000 in 1958, 908,000 in 1957 and 691,000 in 1956.

Components

In respect of components, besides large-scale bicycle manufacturers, some of which have surplus capacity over and above their own requirements, there are other units both in the large-scale and small-scale sectors, which manufacture components alone. Licences have been issued to bicycle manufacturers and ancillary units for the expansion of existing units and addition of new ones. When these go into production, the volume of components manufactured in India will go up substantially. The following table shows the current, and prospective capacity for major components on the basis of licences given to the large-scale manufacturers and ancillary units, as also production in 1959, as compared with 1957:

(In millions)

	Present capacity	Capacity licensed	Production	
			1959	1957
Saddles (Nos.) ..	1.14	1.74	0.56	0.24
Hubs (Nos.) ..	1.64	1.79	1.66	0.98
Rims (Nos.) ..	2.81	3.05	2.96	2.27
Chains (Nos.) ..	1.07	4.15	0.96	0.45
Spokes (gross) ..	1.13	1.49	0.85	0.71
Free-wheels (Nos.).	1.33	3.69	0.62	0.19

In addition, there are over 612 units in the small-scale sector (as in 1958, the latest year for which data are available), manufacturing bicycle components, as against 501 units in 1957. The production of these units is available only in terms of value. It is estimated to have gone up from Rs. 175 lakhs in 1955 to Rs. 294 lakhs in 1956, Rs. 277 lakhs in 1957 and Rs. 316 lakhs in 1958.

Demand

The demand for bicycles for 1960 is estimated by the Commission at 1.25 million and is expected to go up by 200,000 bicycles annually, that is, to 1.45 million in 1961, 1.65 million in 1962 and 1.85 million in 1963. In arriving at these figures, the Commission has taken into account the likely growth of industrial townships, development of roads in the rural and urban areas, improvement in the standard of living, etc. It may be noted here that the annual capacity already licensed in the organised sector is 1.42 million bicycles, on a single-shift basis. The approved capacity in the small-scale sector is 750,000 cycles. Thus, both the sectors taken together have sufficient capacity to meet domestic requirements. Much, however, will depend upon the availability of raw materials for these units. In its report, the Commission has also given an idea of the trend in growth of demand for components. The demand for these components, according to it, is expected to go up sizably *pari passu* with that of bicycles.

The principal raw materials required by the industry are steel items, such as tubes (used for frame, pedal, handle bar, seat pillar, fork column, brake, etc.), strips (used for rims, mudguards, chain wheel, B.B. fittings, hubs, fork crown, chain, etc.), bars, wires and sheets. Tubes, sheets and black bars are available indigenously. The requirements of strips, free cutting bars and wires are largely met by imports. Besides steel items, the other raw materials required are brass for brazing, brass wires for nipples, and copper, nickel and chromium anodes. Brass wires and anodes are imported and brass for brazing is available indigenously. The industry also requires a number of consumable stores, including chemicals for polishing, brazing, electroplating and heat treatment. The bulk of these items is imported.

Steel Tubes

The most important raw material for bicycles is steel tubes. Indigenous availability of this item has considerably improved since the last inquiry and at present both the major producers, namely, Indian Tube Company Ltd. and Tube Investments of India Ltd., along with two previous suppliers of tubes, namely, Premier Automobiles and Godrej and Boyce Company Private Ltd., are able to meet the bulk of demand for steel tubes by the bicycle industry. One of the bicycle manufacturers has, however, complained about the following technical defects in indigenous steel tubes: (1) Excessive ribbed surface, (2) pit marks on the surface, (3) heavy corrosion inside the tubes, and (4) under annealing, resulting in "orange pooling" of the surface. While we are told that such defects are not eliminated even in imported tubes, tube manufacturers, according to the Commission, have already taken note of these defects which were noticed in the initial stages of production and steps are being taken to remedy them. The Commission says that such complaints in themselves will not justify import of tubes. The tube manufacturers, in turn, have also complained that they do not get full quota for imports of cold rolled steel strips and that the quality of indigenous steel strips is not as good as that of the imported ones and that they are not also available in requisite quantity.

Referring to the difficulties experienced by the industry in the way of securing steel items from indigenous sources, the Commission has suggested that the Iron and Steel Controller, in consultation with the Development Wing and the Development Commissioner, Small Scale Industries, should examine the possibility of reducing the delays in the procurement of steel items. In respect of imported items, too, the industry has complained about shortage in supply and procedural delays. In particular, the industry has pleaded for increasing the initial validity period of import licences for special steel items for the industry to one year, while formulating import policy in future.

Quality

The Commission's report reveals that many of the producers in the organised sector have taken various steps to improve the quality of their products by the introduction of new designs, improvement in manufacturing and finishing processes, usage of improved tools, tightening of inspection and testing procedure, introduction of quality control, employment of trained and experienced technical experts and provision of training facilities to staff. It would appear that the large-scale manufacturers, particularly those with foreign collaboration, have not received any complaints with regard to their products. Complaints received by other manufacturers pertained "to wear and tear, and improper adjustments and lack of finish." Manufacturers have informed the Commission that these defects are being rectified as and when pointed out. In this connection, the Commission regrets that no unit has so far availed of the facility of the "certification mark" scheme of the Indian Standard Institution, in spite of its recommendation to do so in its last report (1957). The Commission feels that particularly in the case of producers of components, some of whom have complained about keen competition with indigenous products bearing foreign brand names, the "certification marks" scheme will really prove of some advantage. It has suggested, in this connection, that the I.S.I. should look into the complaints of the manufacturers against the "excessive" fees charged by the I.S.I. for certification marks and remove any basis for genuine grievances, so that popularity of the certification marks scheme which may prove of advantage to the small-scale sector and the ancillary industry, may be furthered.

Fair Ex-works Prices

For the purpose of computing fair ex-works prices, the Commission has examined the costs of three units, namely, Hind Cycles, T.I. Cycles and Pearl Cycles. The estimated fair ex-works prices of the bicycles produced by these three manufacturers are given below:

	Unit A Rs.	*Unit B* Rs.	*Unit C* Rs.
Raw materials and finished parts (inclusive of tyres and tubes) including excise duty.	85.30	65.70	97.82
Labour and establishment and indirect labour	11.44	20.58	19.01
Other direct charges less recoveries	9.16	15.33	10.49
Depreciation and other overheads	6.07	6.93	5.82
Return at 10 per cent. on capital employed	7.59	5.49	6.42
Total ..	119.56	123.03	139.56

The landed cost (without duty) of an imported Japanese bicycle is estimated at Rs. 79.20. It will thus be seen that the difference between this and the fair ex-works price of indigenous products from the units A, B and C is Rs. 40.36 (51.47 per cent.), Rs. 55.89 (55.89 per cent.) and Rs. 60.36 (76.97 per cent.) respectively. The Commission has also worked out the difference between the fair ex-works price of the indigenous and imported components as well. In view of the wide disparity in prices, the Commission is justified in recommending continuance of protection to the industry. The industry should, however, spare no efforts to bring down its cost of production, for protection entails a great burden on consumers. It is only reasonable to assume that there is considerable potential demand for bicycles, which will be realised only when prices are brought down sizably. At the same time, it is necessary to concede that the industry's ability to bring down prices is related to ready availability of raw materials at reasonable prices. In view of the plans for expansion of steel production envisaged at present, there is reason for optimism that a solution to this problem is not far off.

Capacity and Production of Bicycles in India

Names of companies (with the year of their commencement of production in brackets)	Installed capacity (single-shift)		Production	
	Current	1957	1959	1957
Hind Cycles, Bombay .. .. (1941)	100,000	100,000	150,890	156,094

* This unit discontinued manufacture of complete bicycles in 1958.

CENSUS 1961

10 February—5 March

A million persons are working together to take the most comprehensive census ever taken in our country.

They are being thoroughly instructed, each in his appointed task. Above all, they will have elaborate and intensive practical training.

They will come to every one, for each one of us is equally important for the census.

Let us help them as best as we can.

All information given to them will be strictly confidential and fully protected.

A.C.C. IS PASSING THROUGH HARD DAYS

RETENTION PRICE POLICY OF GOVERNMENT MOST UNREASONABLE

IT looks as though investors in cement companies will soon share the fate of electricity undertakings, unless the Government of India is at least reasonable in fixing the retention prices payable to producers. At present, the Government is less than reasonable. Indeed, it is very unfair, especially to the larger cement-producing companies. Its present policy of parsimony in this matter is ruinous, as it will not permit rapid expansion in the production of cement, a basic construction material without which there can be no economic progress. Evidence of this shortsighted policy is provided by the report of the Associated Cement Companies Ltd. (Managing Agents: Cement [Agencies] Private Ltd., Bombay) for the year ended 31st July 1960. This shows only a modest improvement in profit over the previous year, despite a substantial rise in production and sales. The result is that the Directors have recommended only a slightly higher dividend. At 12 per cent. per annum taxable, the proposed dividend is equivalent to a tax-free dividend of 8.4 per cent., which represents only a slight advance over the tax-free dividend of 7.7 per cent. for the previous accounting year. Even for paying the small dividend of 8.4 per cent., the Company's distributable profit, amounting to Rs. 1.46 crores, is not adequate, as the dividend requires Rs. 2.29 crores. The Directors have, therefore, withdrawn Rs. 84.50 lakhs from the general reserve. Since they have set aside a sum of Rs. 70.04 lakhs from the net profit to the development rebate reserve and another sum of Rs. 1.77 lakhs to the amortisation reserve, the actual net depletion of reserves this year is of the order of Rs. 12.69 lakhs.

This clearly indicates that Government's policy of fixing low retention prices for the cement industry combined with the heavy incidence of the statutory provision requiring a company to set aside 75 per cent. of the development rebate allowable on new plant and machinery installed after 1st January 1958, is compelling the Company to draw down its general reserves year after year, in order to maintain only a modest return on the shareholders' capital. It is no wonder then that the shares of even this first class company should be quoted perceptibly lower than a year ago, that is, at Rs. 146.50 *cum-div.*, as against Rs. 152.50 a year ago. At this rate, the yield on the scrip is as high as 6 per cent. per annum, free of tax. Such a high yield reflects the investor's lack of confidence in the growth prospects for the Company, in particular, and the industry, in general. Even the fact that the Directors have decided on an increase of 0.70 per cent. in the net dividend (the quantum of increase would be much more in the case of investors who are entitled to a full or even a partial refund of the tax deducted at source) has only prevented the scrip from going down further in market value.

Sales Improve

In the previous accounting year, the Company was confronted with a sudden drop in the demand for cement, particularly for Government requirements, with the result that the despatches had failed to keep pace with the increase in production. The aggregate sales in 1958-59, therefore, had gone up only slightly from Rs. 24.34 crores to Rs. 25.55 crores. In the year under review, however, there was an improvement in the offtake of cement and sale proceeds increased to Rs. 27.09 crores. The gross profit also registered an advance but only by Rs. 52.36 lakhs over the previous year's level of Rs. 550.23 lakhs. What is more, a large part of this increase has been absorbed by the provisions for depreciation and taxation. The addition to depreciation account has increased from Rs. 2.13 crores to Rs. 2.40 crores, while taxation has taken up Rs. 1.11 crores, as against only Rs. 1 crore last year. The net profit, after providing for these essential set-offs, has fractionally increased from Rs. 2.00 crores to Rs. 2.13 crores. Of this, a sum of Rs. 70.04 lakhs, or about 33 per cent., has been credited to development rebate reserve, as compared with Rs. 74.16 lakhs transferred to this reserve a year ago.

The following comparative table shows at a glance the trend of the Company's financial results for the past four years:

(Value in lakhs of rupees)

	For the year ended 31st July			
	1960	1959	1958	1957
Sale proceeds of cement	27,08.68	25,55.37	24,34.48	22,02.79
Other income	82.22	78.48	80.27	53.92
Closing stocks	1,17.68	1,29.60	1,01.80	92.00
Expenses	21,76.30	21,11.51	19,73.65	18,55.07
Gross profit	6,02.59	5,50.23	5,50.90	4,87.41
Managing agency commission	38.96	37.14	41.02	36.06
Provision for—				
Depreciation	2,39.60	2,12.74	1,80.24	1,56.04
Taxation	1,10.93	1,00.35	1,17.57	1,17.45
Net profit	2,13.10	2,00.00	1,82.07	1,77.86
Excess provision written back	2.60	3.92	20.13	12.30
Withdrawal from reserves	84.50	79.00		
Transfer to reserves	70.04	74.16	55.00	55.00
Transfer to amortisation reserve	1.77			
Dividend	2,28.89 (12%)* 0.42	2,09.82 (11%)* 0.92	1,47.80 (8¼%)† 1.98	1,35.51 (9%)† 2.59
Carry forward				

* Subject to deduction of tax at 30 per cent.
† Free of tax.

It will be noted from the table that the margin of gross profit (that is, the ratio of gross profit to sales) has registered only a slight advance, increasing from 21.6 per cent. in 1958-59 to 22.2 per cent. in the current year. In the year 1956-57, the ratio stood at as high as 24.7 per cent. Several factors have been responsible for the declining trend of the profit-margin of the Company in recent years. In spite of effecting technical improvements, designed to increase efficiency and higher production, costs have continued to rise steadily due to the enhanced railway freights and the higher burden of wages and dearness allowances. In computing the retention prices for cement, the Tariff Commission has not given sufficient allowance to cover the increase in labour costs per ton of cement, because it has adopted as the basis the installed "rated" capacity, instead of the actual level of production, which has been much below the capacity in recent years. And from what the Directors say in their latest report, there does not appear to be any hope of the Company securing redress against the rise in costs at least till 1st July 1961, when a new retention price may become operative. None knows whether the Company's claim will be admitted by the Tariff Commission and the Government and, if so, to what extent. The Directors have rightly deprecated the unsympathetic attitude of the Government towards a major controlled industry like cement. They are undoubtedly very mild in their criticism when they describe the present position as "frustrating."

Besides the Government's unhelpful policy of price fixation based on false assumptions, the Company has also been suffering from shortage of coal and general inadequacy of transport. Consequently, neither production nor despatches could attain the level of installed capacity.

In spite of the gloomy situation currently confronting the Company, the Directors have decided to continue their ceaseless efforts at expanding the capacity of their workshops and factories, but, for various reasons, the implementation of the expansion programme and the full realisation of the fruits of expansion, wherever completed, are somewhat obstructed, as will be evident from the following extracts from the Directors' report:

"The extension of the Shahabad Works which raised its capacity from 4.00 lakh tons to 5.65 lakh tons per annum, was completed in June 1960. The full benefit of the extended capacity is not, however, likely to be reaped for some time as the Mysore State Electricity Board has not yet been able to meet the requirement of additional power. The first stage of the modernisation and extension of the Kymore Works was completed early this year with the removal of certain initial difficulties experienced since April 1959, when the first of the two 500-tons-per-day kilns went into production. The second phase of the extension has now been completed with the lighting up of the second 500-tons-per-day kiln in September 1960. As a result of this extension, the capacity of the factory has risen from 3.60 lakh tons to 5.73 lakh tons per annum. At Chaibasa, the flotation plant installed for the beneficiation of limestone was commissioned in July 1960. This has enabled the use of low quality limestone which would otherwise have been rejected, and will therefore prolong the life of the factory for many years to come. The installation of the coal washing plant at the Nowrozabad Colliery was completed at the end of 1959 and, after initial trials, the washery was put into operation from the beginning of February 1960.

"The second dry-process kiln at Mancherial was originally scheduled to commence production in March 1960. However, due to prolonged labour unrest at the factory, it was not possible to complete erection work as programmed. Although the labour situation is gradually returning to normal and erection work has been almost completed, it is feared that the operation of the plant may be further delayed on account of the inability of the Andhra Electricity Board to supply the full requirement of additional power. Work on the slag cement project at Chaibasa and the slag granulation plant at Jamshedpur has almost been completed, but there has been delay on the part of the railways in approving extensions to the railway siding within the works at Chaibasa. Regular production of slag cement, which will raise the annual capacity of this factory from 3.10 lakh tons to 4.80 lakh tons, is expected to commence by about the middle of 1961. Work has been started on the extension of the Katni Factory for the manufacture of refractories to enhance the present capacity of 17,640 tons to 30,000 tons per annum."

It will be seen from the foregoing extracts that it is the failures of the public sector that are chiefly responsible for the slow growth of expansion in cement production. Shortage of power due to the inability of States' electricity boards to complete their programmes in time is proving to be a serious handicap to progress on the production front.

During the year under review, the Company made a capital investment of Rs. 2.34 crores on top of the capital expenditure of Rs. 4.69 crores incurred in the previous year. The total gross value of the fixed assets now stand at Rs. 42.05 crores. The depreciation provided so far is Rs. 16.71 crores, so that the book value of the block account is Rs. 25.35 crores. Unallocated capital expenditure and machinery in transit amount to Rs. 95.66 lakhs and other current assets Rs. 18.01 crores. As against these, the current liabilities (including secured loans) and various provisions aggregate Rs. 14.45 crores. The net assets over liabilities work out to Rs. 29.86 crores, represented by a paid-up capital of Rs. 19.07 crores and reserves and surplus of Rs. 10.79 crores.

A perusal of the Company's dividend record clearly confirms our remark at the outset of this review. The net dividend of Rs. 8.40 for 1959-60 is less than that for 1957-58, namely, Rs. 8.50 per share. In fact, it is the lowest since 1948-49 (barring 1958-59), for which year a tax-free dividend of 7 per cent. was paid. Between 1950-51, the first year of the first Plan and 1959-60, the penultimate year of the second Plan, the Company's sales rose from about Rs. 12.50 crores to a little over Rs. 27 crores, but its net profit to sales realisation followed the reverse trend, coming down from 12 per cent. to about 5.25 per cent. and the dividend from 9.5 per cent. to 8.40 per cent. per annum. This is the result of the pseudo-socialism which is being relentlessly pursued by the powers-that-be, a result which runs contrary to another of their declared policy, namely, financing of industrial expansion through retention of profit by the corporate sector. Here is a striking example of an economy which suffers from adherence to dogmatic socialism.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank has provided from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA'S-58-15

JUTE

(*Concluded from page 14*)

cast of the Directorate of Economics and Statistics, Ministry of Food and Agriculture, of the jute crop for 1960-61 has been delayed by late harvesting; the second preliminary estimate of the acreage under mesta is also incomplete due to lack of reports from some States. The available information indicates, however, that the total jute and mesta crop this year will be approximately of the same size as last year's."

If this is the position, one would like to know as to where the crop is being held. If the usual data have been delayed, how and from where did the Jute Commissioner get enough information to assert that the current season's crop will not be less than that of the previous season? Surely, the observations of Mr. Mazoomdar are by no means convincing.

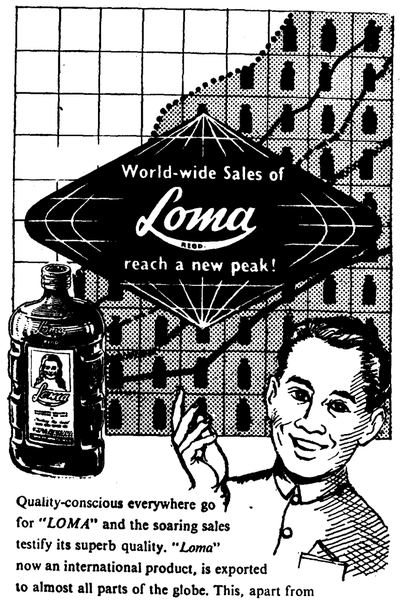
The recurrent raw jute shortage hampering production of jute goods must be avoided at all cost. Mr. S. K. Patil, Union Minister for Food and Agriculture, merely repeated the oft-declared pronouncement of the Government when he declared, at a meeting of the Indian Central Jute Committee at Calcutta last week, that the goal must be self-sufficiency in this vital raw material for this vital industry. The fact, however, remains that self-sufficiency in jute is still very much a gamble on the monsoon and the authorities have failed in reducing this dependency as well as in raising the yield per acre. The Government, Mr. Patil stated, was particularly anxious to secure an extension of the area and cultivation of mesta to increase its yield as a safeguard against shortage of jute. But this is a poor solution even as a short-term remedy. If successful, it will result in a fall in the quality of Indian jute goods, the impact of which on their traditional export markets will be rather serious. The aim should be to grow more and more of only superior varieties of jute.

SURVEY OF JUTE PRODUCTION COST

The Economic Research Wing of the Indian Central Jute Committee has been asked to prepare a scheme for a comprehensive survey of the cost of jute production based on adequate and representative samples. The scheme is to be submitted by the end of this month for scrutiny by the Expert Committee which went into the cost studies of the I.C.J.C. earlier last year and indicated the lines that the investigation should follow. In making this recommendation, the Economic Research and Publicity Sub-Committee of the I.C.J.C., which met at Calcutta on 24th December 1960 under the chairmanship of Mr. V. Shankar, Special Secretary, Union Ministry of Food and Agriculture, considered the utility of a large mass of data collected over the last 10 years by way of a multipurpose approach to the jute grower's economy. It was felt that these data could be profitably analysed for a study of trends and relationships. Pending the operation of the proposed survey, the Sub-Committee recommended suitable reorientation of the existing cost study scheme with more bias to such variable factors as wages, prices, labour, seeds, manures, etc., and enlargement of the study base by utilising data available from other agencies along with those collected from the Committee's selected centres. It also directed a new publicity approach in concert with the State Governments to publicise through Press hints to the farmers with a view to helping them to deal with their daily or seasonal problems.

The Technological Research Sub-Committee reviewed the achievements of the jute laboratories during the second Plan period and suggested some modification of their programme of work keeping possibilities of extension of applied research in view. It was announced at the meeting that the prospect of utilising jute and mesta sticks, some three million tons of which were being annually burnt up as fuel, as a source of pulp for paper making on a commercial scale had improved with the yield of pulp having now gone up to 70 per cent. through the mechano-chemical process recently introduced at the laboratories. This investigation assumes significance, in view of the known deficiency in the country of standard raw materials for paper making and the fast increasing rate of literacy among the population.

A proposal for the establishment of a Central sisal research station at Bamra in Orissa was adopted by the Agricultural Research Sub-Committee. It also accepted in principle a scheme for quick multiplication of improved jute seeds with the help of registered growers. The details of the scheme are to be worked out with a view to early implementation in the States which offer to work it. It was also felt that a clear division of research fields between the States and Central agencies such as I.C.J.C. was called for to avoid wastage, duplication or development on parallel lines. The main emphasis of research in or through Central agencies should be on fundamental or basic research or research of importance to more than one State or co-ordinated development of research in common fields. It was realised that the utilisation of research resources, talents and potentialities in the States should be fully taken into account in planning Central research programmes. Following this line the sub-committee decided to reorganise research sub-stations and extension schemes.



Quality-conscious everywhere go for "*LOMA*" and the soaring sales testify its superb quality. "*Loma*" now an international product, is exported to almost all parts of the globe. This, apart from conserving valuable foreign exchange, through exports, has set an example for Indian-quality in the international market. Millions of bottles of "*Loma*" in use everywhere testify the confidnece millions have in "*Loma*" - the ideal hair oil-cum-hair darkener.

SYNOPSES OF COMPANY REPORTS

National Iron and Steel Co., Ltd.

THE directors of the above Company (Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The net loss for the year amounts to Rs. 4,49,138 (Profit of Rs. 4,01,806) after providing Rs. 6,08,644 (Rs. 6,48,230) for depreciation. As the working of the Company during the year has resulted in a loss, no provision for development rebate reserve which amounts to Rs. 99,505 (Rs. 38,500 provided) as required under Clause (b) of Proviso to Explanation 2 of Section 10(2) (vib) of the Indian Income-tax Act, 1922, has been made but the same is carried forward to the following year.

The balance to the debit of the profit and loss account, after adjusting previous years' expenses and liabilities, and this year's loss, is Rs. 3,57,973 (credit of Rs. 12,72,208) which, when set off against the net balance of the general reserve account, leaves a debit balance of Rs. 1,08,083 (credit of Rs. 1,33,508 after paying dividend at 75 nP per share absorbing Rs. 3,74,700; transferring Rs. 5,00,000 to dividend equalisation reserve; Rs. 1,34,000 to general reserve and placing Rs. 1,30,000 to investment depreciation reserve) and the same is carried forward to the next year.

The Government of India in a Resolution dated the 24th September, 1960, has finally revised the conversion charges for Bars and Rods and fair retention price for Electric Furnace Billets produced by the Re-Rollers from the 1st January, 1957, to 31st December, 1960. A copy of the resolution has been forwarded to the Company by the Iron and Steel Controller recently. On the basis of the said revision adjustments on the sales and closing stocks of the above materials pertaining to the equalisation fund would be required during the aforesaid period. In the opinion of the directors, the provision made in respect of the equalisation fund upto the year ended 31st March, 1959, is sufficient to cover the liability pertaining to that fund upto the year ended 31st March, 1960, and accordingly no provision on the sales and closing stocks in respect of the equalisation fund has been made in this year's accounts. Communications in this respect are being made with the Iron and Steel Controller and the final accounts are being worked out. It is expected that the same would require some further time before the actual position is known.

The working of the year has been very adverse due to a number of reasons, prominent amongst them being increase in the cost of production due to higher cost of power, fuel, labour charges and consumable stores. Shortage of raw materials mainly 1st grade melting scrap continued and is still continuing. Due to accidental burning of a transformer and a high horse power motor one-ton electric furnace and the Rolling Mill No. 3 producing certain special types of bars are out of commission. Strenuous efforts are being made to make them ready for work at the earliest possible time.

The directors, however, take pleasure to inform that a Polish Expert Team visited the Factory during the year under review and their report on certain development schemes has since been received and is under consideration.

The 4 per cent. mortgage debentures issued in 1946 were fully redeemed during the year under review and a new series of 7 per cent. taxable mortgage debentures were issued in April, 1960.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	49,96,000	Gross block	1,37,17,076

Consolidated Coffee Estates (1943) Ltd.

The directors of the above Company (Managing Director: Mr. C. I. Machia, Pollibetta, Mysore) present the audited accounts of the Company for the year ended 30th June 1960.

The net profit for the year is Rs. 13,08,089 (Rs. 25,60,562). After adding to this the refund of agricultural income-tax for the year ending 30th June 1956 of Rs. 4,67,268 (nil) and the balance as per last directors' report of Rs. 79,917 (Rs. 75,345) there is a total of Rs. 18,55,294 (Rs. 26,35,907). From this is deducted the dividend on preference shares, at 6 per cent. subject to deduction of tax under Section 18 (3) (D) of the Indian Income-tax Act, absorbing Rs. 1,12,500 (Rs. 1,12,500), transfer to development rebate reserve of Rs. 1,074 (Rs. 6,528) and transfer to general reserve of Rs. 2,50,000 (Rs. 6,00,000), leaving a balance of Rs. 14,91,720 (Rs. 18,68,667 after providing Rs. 48 212 for income-tax). Out of this amount the directors recommend the payment of a dividend of 20 (25) per cent. subject to deduction of tax, on the ordinary shares, absorbing Rs. 14,31,000 (Rs. 17,88,750) leaving a balance of Rs. 60,720 (Rs. 79,917) to be carried forward.

Crops—1959-60

	Estimated Metric Tonnes	Actual Metric Tonnes
Coffee—Arabica ...	1,829	[illegible]
Robusta ...	1,016	[illegible]
Total coffee ...	[illegible]	[illegible]
Pepper ...	[illegible]	[illegible]
Cardamoms ...	[illegible]	[illegible]

The crop has been valued on the basis of Rs. 2-20 a point. The difference of 378 Metric Tonnes between the estimated Arabica crop and the actual Arabica crop harvested may be attributed to a new malady in coffee which has recently been under study by a team of scientists appointed by the Coffee Board. Their report is awaited.

Season 1960-61—Crop estimates are as follows:—Coffee—Arabica 1,880 Metric tonnes and Coffee—Robusta 1,219 Metric tonnes. Pepper 61 Metric tonnes and cardamom 4 Metric tonnes.

Kushalnagar Works:—During the year under review, the Works cured 3,709 Metric Tonnes compared to 2,240 Metric Tonnes the previous year.

During the year, the Company's capital expenditure amounted to Rs. 7,74,902 of which labour and staff quarters cost Rs. 3,71,720.

No provision has been made for any additional dividend that may be payable in the event of The Preference Share (Regulation of Dividend) Bill, 1960 being passed into law. Any such additional dividend will be very small as in the relevant assessment years the Company's income is mainly agricultural. Full provision for taxation is made in the accounts for Mysore Agricultural Income-tax and Indian Income-tax.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	90,30,000	Gross block	1,58,60,009

Cherra-Chhatak Ropeway Co., Ltd.

The directors of the above Company (Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The result of the year's working shows a profit of Rs. 97,509 (loss of Rs. 21,416). From this is deducted the debit balance brought forward from last year of Rs. 18,821 (credit of Rs. 2,595) leaving a balance of Rs. 78,687 (debit of Rs. 18,821). The directors recommend to dispose of this amount as follows:—

To provide for income-tax Rs. 32,263 (nil) and to pay a dividend to the shareholders at 45 nP (nil) per share, subject to deduction of income-tax absorbing Rs. 42,750 (nil) leaving a balance to be carried forward to the next year of Rs. 3,675 (debit of Rs. 18,821).

The raisings and deliveries of coal for last three years are as follows:—

Year ended		Raising Tons	Deliveries Tons
31st March 1958	... ...	24,690	21,575
31st March 1959	... ...	23,900	23,051
31st March 1960	... ...	26,754	27,157

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	4,75,000	Gross block ...	12,02,416
Reserves ...	4,73,368	Less—Depreciation ...	10,62,954
Provision for taxation ...	44,000		
Liabilities ...	2,93,529	Net block ...	1,39,462
Profit and loss account surplus ...	3,675	Stock of coal	69,295
		Stores ...	89,224
		Book debts ...	8,64,097
		Investments	11,572
		Cash ...	1,15,922
Rs.	12,89,572	Rs.	12,89,572

Textool Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balasundaram and Co., Coimbatore) present the audited accounts of the Company for the year ended 30th April 1960.

After deducting all working expenses, and interest and providing Rs. 3,97,115 (Rs. 3,53,813) for depreciation, the Company has made a net profit of Rs. 8,35,143 (Rs. 8,24,616). Out of this amount the directors have paid as bonus in respect of the year ending 30th April 1959 Rs. 1,67,431 (Rs. 2,68,878), provided for payment of bonus for the same period to persons not in service Rs. 10,000 (nil), and have paid as donations and charity Rs. 5,397 (Rs. 4,316) leaving a balance of Rs. 6,52,314 (Rs. 5,51,422). Adding to this Rs. 932 (Rs. 30,338) balance of profit brought forward from previous year a sum of Rs. 6,53,246 (Rs. 7,61,760 including Rs. 1,80,000 transferred from dividend equalisation fund) is available for distribution. The directors recommend the same be appropriated as follows:

To reserve for development rebate Rs. 60,000 (Rs. 2,57,000), provision for taxes Rs. 2,60,000 (Rs. 2,05,000) and to proposed dividend at 15 (13½) per cent. subject to tax, absorbing Rs. 3,28,681 (Rs. 2,98,828) leaving a balance to be carried forward to next year of Rs. 4,566 (Rs. 932).

There is an increase in turnover of nearly 30 lakhs over that of last year. This forms part of execution of high draft conversion orders executed mostly out of purchased components.

Though there was some slackness in the sale of textile machinery in the beginning of the year under review, the directors are glad to inform that they were able to book considerable number of orders especially from Ahmedabad and Calcutta areas, as a result of which the textile machinery section is again busy from the coming year.

The salient feature in the turnover, in this year under review is the increase of orders for reconditioning of old textile machinery such as conversion of drafting system, change of lift etc. With the slowing down of the erection of new mills, this work though not as profitable as manufacture of machinery is on the increase in the textile industry and consequently changing the Company's pattern of programme of manufacture.

With the State departments all over the country showing greater interest in agriculture and well irrigation there is very great demand for the Company's diesel engines for use with pumping sets and the directors are doing their utmost to increase the manufacturing facilities quickly to meet at least a part of the demand in the country and also to meet a part of the demand that exists for export.

Besides the activities in Iron, Special Steel and Machine Tool Sections, the Company has concluded a collaboration agreement with Nippon Signel Company Ltd., Japan, for the manufacture of all kinds of Railway signal equipment. The directors are expecting good manufacturing as well as trading activity in this as the requirement of the railways are large and the Japanese Collaborators are already well established in this line of business in this country.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	33,22,450	Gross block	69,49,005

Cottanad Plantations, Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Calicut) present the audited accounts of the Company for the year ended 31st March 1960.

The result of the Company's working for the period under review after providing for depreciation, contribution to provident fund and managing agency commission shows a profit of Rs. 57,396 (Rs. 79,942). Adding the balance brought forward of Rs. 3,461 (Rs. 8,519) and the amount transferred from general reserve of Rs. 35,000 (Rs. 20,000) the total amount available for disposal is Rs. 95,857 (Rs. 1,08,461). Out of this amount the directors propose to appropriate towards provision for taxation a sum of Rs. 25,000 (Rs. 33,000) leaving a balance of Rs. 70,857 (Rs. 75,461). The directors recommend the payment of the following dividends:—7½ (12) per cent. on preference shares [gross] absorbing Rs. 9,375 (Rs. 12,000) and at 10 (15 per cent. tax-free) per cent. taxable on equity shares absorbing Rs. 60,000 (Rs. 60 000) leaving a balance of Rs. 1,482 (Rs. 3,461) which the directors recommend to be carried forward. Note: Both the grossed preference dividends and the equity dividends are subject to deduction of tax at 30 per cent. The dividend on ordinary shares for the year ended 31st March 1960 is on the increased capital of Rs. 6,00,000 while the dividend for the previous year was on an equity capital of Rs. 4,00,000.

Against an estimate of 150,000 pounds the actual tea crop harvested amounted to 149,8[illegible] pounds. Rubber crop was 43,132 pounds against an estimate of 55,000 pounds. 1,253¾ cwts. of coffee was produced. Cashew crop amounted 208 candys. Cardamom crop raised was 155 pounds. Pepper crop was 4,882 pounds. The average sale price for tea was 168.9 nP; for rubber 151.2 nP and for coffee Rs. 127.6 per cwt. cashew sale price was Rs. 221 per candy. Price realised for cardamom was Rs. 9 per pound and for pepper Re. 1.90 per pound.

Estimates for 1960-61 are as follows:—Tea—160,000 pounds at a cost of 108 nP per pound; Rubber—50,000 pounds at 76 nP per pound and Coffee—2,100 cwts at Rs. 77 per cwt.

In spite of the comparatively lower net profits for the year ended 31st March 1960, the directors feel that the working of the company during the year has been satisfactory. The cost of production of tea has come down sharply while the average price realised has been well above last year's level. But the substantially lower rubber crop and absence of profit from timber have adversely affected the net results.

A METAL BOX TUBE!

Your favourite toothpaste comes to you in a Collapsible Tube, a speciality of The Metal Box Company of India Ltd. Wherever necessary, this tube is given an inner coating of a specially devised, chemically inert lacquer that keeps the toothpaste from reacting with the metal of the tube itself. The tube collapses with reducing contents, thereby protecting the toothpaste from oxidation and dehydration. The Metal Box Collapsible Tube is therefore a functional as well as a convenient package. It is scientifically designed to ensure that the toothpaste remains fresh for months.

Backed by their knowledge and experience drawn from India and abroad, Metal Box are manufacturing a wide range of scientifically designed packages for the consumer goods you use.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal
COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks

By Order of the Board,

WALLACE & CO.,
Secretaries and Treasurers.

BOMBAY, 27*th December* 1960.

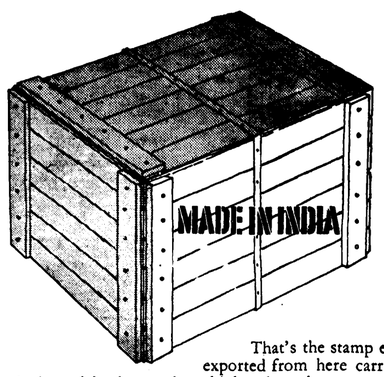
ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN TO ALL concerned that in exercise of the option vested in the Company, the period of repayment of debentures of Rs. 1 crore issued by the Company in the year 1951 on the terms and conditions as mentioned in an indenture dated the 1st May 1951, has been extended by another 10 years, i.e., upto the 31st March 1971, subject to the approval of the Central Government.

By Order of the Board,

B. K. VYAS,
Secretary.

8, INDIA EXCHANGE PLACE,
CALCUTTA, 24*th December*, 1960.



That's the stamp each article exported from here carries. With it the article also carries a high stake—the country's prestige. If the article is below standard quality—if it does not conform to specifications or supplies are not according to approved sample, down goes India's prestige.

Let's give no occasion for the door to be slammed by others on further exports. One manufacturer's fault may spoil other's market as well and all goods "Made in India" get the blame.

Keep the country's reputation high—preserve the confidence which goods made in India have gained. Help the country to earn the much needed foreign exchange. Let your transactions be clean in letter and spirit and your manufactured articles maintain the highest standard. Strict quality control and adoption of modern techniques will enable your goods to compete in world markets.

Deliveries on schedule and arrangement for Service after Sale will ensure repeat orders.

ENGINEERING EXPORT PROMOTION COUNCIL

INDIA EXCHANGE (7th FLOOR) CALCUTTA-1

INTER-BANK CALL MONEY AT 5 PER CENT.

(*From Our Own Correspondent*)

BOMBAY, 4*th January*

Acute stringency is the state of the short-term money market. Almost all banks are borrowers, with hardly any lenders. As only a small part of the requirements can be met from the inter-bank section, the Reserve Bank has been the principal provider of funds. As anticipated by this journal in some of its earlier issues, the inter-bank call money rate has gone up from 4½ per cent. in mid-December to 5 per cent. per annum. Some small banks are said to be paying as much as 5½ per cent. At best, this rate may go up to 5½ per cent. for big banks and 5¾ per cent. for small banks, for a rate higher than these limits will make the banks go to the Reserve Bank for their entire requirements rather than depend upon inter-bank credit which may be called back overnight. As readers are aware, the maximum rate of interest payable by banks on their borrowings from the Reserve Bank is 6 per cent. per annum.

It will be interesting to recall here that, a year ago, the inter-bank call money rate was 3½ per cent. And, two years ago, it was even less at 3¼ per cent. This comparison goes to show that, despite the marked growth in money supply, the demand for money has expanded so enormously, due mainly to the growth in industrial production and partly to the rise in price levels, that it is much more than the capacity of the money market to accommodate it. Accordingly, the intensity of seasonal pressure of demand for bank credit is more sharply felt than a year or two ago.

While the inter-bank call money rate is 5 to 5½ per cent., the rates for short-term deposits are unchanged at the ceilings under the inter-bank rate agreement. These are: 2 per cent. for house money repayable on notice of 3 to 21 days, 3 per cent. for house money repayable on notice of over 21 days, 3½ per cent. for deposits of 31 days and over but up to 60 days, 3¾ per cent. for over two months to 12 months and 3¾ per cent. for one year.

The Treasury Bill rate has gone up from 2.548 per cent. in the week ended 17th December to 2.556 per cent. in the week under review. As against an invitation for Rs. 2 crores of 91-days' Bills, the amount offered this week was Rs. 2.40 crores. The offer of 91-days' intermediate bills was not availed of, but is nevertheless being continued.

According to the Reserve Bank's statement, the week ended 30th December 1960 saw an expansion of Rs. 10.43 crores in notes in circulation, taking the total upto Rs. 1,869 crores. The total notes issued was up by Rs. 9.88 crores, as a result of a slight contraction in notes held in the Bankihg Department. Rupee securities held by the Issue Department were raised by Rs. 10 crores to cover the growth in note issue. Foreign securities remained unchanged at Rs. 128.00 crores, but, as balances held abroad suffered a contraction of Rs. 3.86 crores, the total of foreign assets has come down to stand at Rs. 151.73 crores.

The latest available Scheduled banks' weekly statement is for the week ended 23rd December 1960. This reveals a rise of Rs. 4.89 crores in demand deposits, accompanied by a fall of Rs. 1.41 crores in time deposits. The small net increase of Rs. 3.48 crores in total deposits is solely due to a rise of Rs. 6.97 crores in the deposits of the State Bank of India. In other words, the deposits of other banks must have actually gone down. Borrowings from the Reserve Bank have shot up by Rs. 11.45 crores, while those from the State Bank are up by only a modest sum of Rs. 1.15 crores. Advances and bills (bank credit) have staged a rise of Rs. 11.57 crores, while investments show only a fractional fall of Rs. 96 lakhs. The changes in the corresponding portfolios of the State Bank of India are a plus of Rs. 2.13 crores and plus of Rs. 0.37 crore, respectively. The total cash is higher by Rs. 7.38 crores (the share of the State Bank being Rs. 3.45 crores). Money at call and short notice is down by Rs. 2.65 crores, of which the share of the State Bank is Rs. 73 lakhs.

The Gilt-edged market is dull, with very little turnover. During the past three weeks, the Central Government loans show a fractional fall of 5 to 10 nP in a couple of medium-dateds and a rise of 10 nP in 3½ per cent. 1974. Among State loans, some enquiry for investment of provident funds has imparted a rise of 15 to 25 nP in the 4 per cent. and 4½ per cent. issues.

There is hardly any change in the rupee-dollar exchange rate since our last report. In the New York market, sterling, however, is a shade lower, with spot being quoted at 280.560-280.600 cents per £ and three months' forward at 279.840-279.880 cents per £. On 15th December 1960, the corresponding rates were: 280.760-280.790 cents per £ for spot and 280.060-280.090 cents for three months' forward.

KIPS WEAK

(*From Our Own Correspondent*)

MADRAS, 2nd *January*

The kip market ruled weak during the second half of December 1960, due to poor U.K. export trading and importers resistance to prices quoted at origin. Some demand was in evidence for light weight cow calf which was in short supply. Arrivals of buffalo hides were readily taken up by exporters to the U.S. and for local trade. Inland demand for low grade cow hides was small.

There was good call for all selections in medium weight goat skins of top marks and lower ends in light weights. Inquiries for prime sheep were good and for mediums not encouraging.

RECOVERY IN BULLION

(*From Our Own Correspondent*)

BOMBAY, 4*th January*

The bullion market moved rather indecisively during the two weeks that followed our last report dated 14th December 1960 but depicted a firm trend on Saturday this week which persisted till the close yesterday. The market was closed today, owing to the death of a member. The earlier indecisiveness was due to absence of any fresh encouraging news. Offtake of both gold and silver was at a low ebb. Business put through was, therefore, small and values fluctuated narrowly, the general tendency being downward. On Saturday, 31st December 1960, the market picked up strength following better demand from upcountry centres. There was also support from spot houses on hopes of a large improvement in offtake in the coming weeks. Consequently, the two precious metals registered a recovery. This gathered further momentum in the subsequent two sessions, thanks chiefly to seizure of 29,260 tolas of contraband gold worth Rs. 38 lakhs in Bombay on the 1st inst.; this is believed to have come from the Persian Gulf. Bullish advices from Calcutta and buying by option dealers also imparted strength. The closing rates today were higher than those three weeks ago.

Reports indicating the possible closure of the Kolar gold mines have been discounted by the Chief Minister of Mysore. In fact, it is stated that an expansion project has been taken on hand. According to the Chief Minister, the Nundydrug and Champion Reef Mines set up all-time records by milling 24,759 ounces of gold in August 1960 and 19,380 ounces in September 1960.

The average daily arrivals of gold and silver in the past week were 7,000 tolas and 11 bars, respectively, while the average offtake was of the order of 4,200 tolas and 7 bars. The floating stocks of gold are reported to be around 80,000 tolas and those of silver are estimated at 700 bars.

The *Poush* (January) settlement in gold eased from Rs. 114.90 on 14th December to Rs. 113.85 on 30th December but recovered subsequently and went off the board at Rs. 115.05 on Monday the 2nd inst. Business in *Maha* (February) settlement commenced at Rs. 116.25 on 19th December. After declining gradually to Rs. 114.90 on Friday this week, it moved up to Rs. 116 yesterday before finishing at Rs. 115.90. The rate for transferring commitments from the *Poush* to *Maha* settlement continued to be against bulls throughout. The actual rate increased from 20 nP on 24th December to Re. 1 on Saturday this week, but declined to 70 nP on Monday the 2nd inst.

In the silver section, *Poush* settlement ran out at Rs. 195.30 yesterday, as against Rs. 114.90 three weeks ago, the highest and lowest levels touched being Rs. 196.70 and Rs. 193.10, respectively. The *Maha* settlement, business in which commenced at Rs. 197.75 on 19th December, receded to Rs. 194.45 on the following day, but recovered to touch Rs. 197.05 yesterday. The closing rate was lower at Rs. 196.85. The rate for transferring commitments from the *Poush* to *Maha* settlement was against bulls. It stood at Re. 1.55 yesterday, as against Re. 1.20. Since it was more than a rupee on several days, the bears were required to pay margin.

The feature of trading in the ready section during the major part of the three weeks under review was that both gold and silver continued to be quoted at a discount under the forward positions (*Maha* settlement). The actual discount yesterday was 70 nP in gold and Re. 1.55 in silver. The closing rates were Rs. 115.20 and Rs. 195.30 respectively, as against Rs. 114.20 and Rs. 194.15 three weeks ago.

The world price for gold in the London bullion market now stands at $35.61, as against $35.64 on 13th December 1960. Ready gold in London, after declining from 354*s.* on 13th December to 253*s.* on 16th December, moved up to 254*s.* 1*d.* on 29th December, but eased again to 253*s.* 9*d.* yesterday. Ready silver softened by ¼*d.* to 79¾*d.*, while forward silver continued unchanged at 79¾*d.* Ready silver in New York was firm at 91.375 cents.

The American gold stocks fell by 88 million dollars during the week ended 28th December, according to the New York Federal Reserve Bank. This brought the total outflow of gold from the United States during 1960 to 1,619 million dollars. The total loss of gold during 1959 was 1,078 million dollars. On 28th December, the American gold holdings amounted to 17,837 million dollars.

The following table shows the trend of the market during the three-week period under review:

	3-1-1961 (closing)	High	Low	14-12-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	115.20	115.40	113.60	114.20
Forward:

Silver	91.875 cents	—	—	91.875 cents

* 31st January settlement. † 1st February settlement.
‡ As on 19th December 1960. ‡‡ As on 2nd January 1961.
¥ N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECEDE

(*From Our Own Correspondent*)

BOMBAY, 4*th January*

The most important development affecting the raw cotton market since our last issue was the agreement reached between the Indian Cotton Mills Federation and the Union Minister for Commerce and Industry according to which the former agreed to a fresh cut in cloth prices with effect from 1st January 1961. The cut, which, on an average, works out to 5.45 per cent., is the second reduction in four months. This, coupled with the constant fear of Government intervention and requisitioning, was responsible for the absence of any flare up in cotton prices during the three-week period under review. In fact, but for the presence of these two restraining influences, cotton futures would have risen to higher levels, especially because the crop is now estimated at only 4.85 million bales, as compared with 5 million bales at the beginning of the season. Further, the cold weather and heavy dew fall in parts of Gujerat, especially in Vijay tracts will, it is feared, adversely affect the crop. The Jarilla April contract, which was quoted at Rs. 609 on 14th December, after a brief spell of firmness when it rose to Rs. 614, is currently ruling round Rs. 605. The Contract's future course will depend upon the size of the crop and the volume of foreign cotton imports. Barring any adverse developments on the crop front, no sharp rise in futures is generally anticipated, although, depending upon the pace of arrivals of new crop, some fluctuations in futures prices are expected.

There was excellent mill demand for cotton in the spot market. Popular varieties such as Jarilla, CO2, 197/3, 0394, etc. were in constant enquiry. Prices were maintained at and near the ceiling. Vijay, Digvijay and Kalyan were also well favoured. The grade and staple of these varieties are reported to be satisfactory, except those from certain parts of Vijay and Kalyan tracts where, due to adverse weather, early pickings were found to be of unsatisfactory quality. Meanwhile, the plea of growers for the upward revision of the ceiling price of Kalyan and Vijay B cotton grown in Ahmedabad and Sabarkantha districts has been opposed by the cotton textiles industry. The latter is reported to have represented to the Textile Commissioner that the raising of the ceiling was not warranted, in view of the cut in cloth prices agreed to by the industry. It is also pointed out that revision of prices in the middle of a season is a bad precedent.

As the ceiling in respect of the export quota for 50,000 bales released on 8th December 1960 was reached as early as 17th December, export interest in Bengal *Deshi* was subdued. But some export business was put through on a subject-to-licence basis in anticipation of a fresh quota. The currently ruling price for Bengal *Deshi* is Rs. 564 (per three quintals).

Demand for foreign cotton was confined to East African growths. But turnover was small, thanks to the high prices of East African cotton and the absence of offers at lower rates. Current quotations—in rupees per candy of 784 lbs.—for some East African varieties are:

B.P. 52, 1,360; Jinja 1,245; Busoga 1,350; Egyptian and U.S. growths were comparatively neglected.

In spite of the reduction in crop estimate and the absence of any substantial competition from India, cotton futures in the Karachi market declined during the three-week period (13th December 1959 to 3rd January 1961) under review. The N.T.R.G. January contract, which was quoting at Rs. 72-2 on 13th December declined to Rs. 71-8 on 30th December. The March position receded from Rs. 73-4 to Rs. 72-4 during the same period. The market was closed on 31st December, 1st and 2nd January. The easiness of the market was due mainly to the increased volume of new crop arrival and lack of export interest in Pakistan cotton. However, this is considered to be only a passing phase, what with the progressive reduction in crop estimate. It is now almost certain that Pakistan's exportable surplus this season will not exceed last year's 475,000 bales. Since India is not in a position to release substantial quantities for export Pakistan will have no difficulty in disposing of its cotton, especially Deshi variety.

Cotton futures in Alexandria market showed a declining trend during the period under review. Both the long-staple Karnak and medium-staple Ashmouni Contracts receded, thanks to pressure of new crop arrivals and the relative scarcity of buyers who preferred to keep off a falling market. Foreign demand too was slack. Bulk purchases were few and far between. The discount on new crop remained unchanged at 6 per cent. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being the closing rates on 13th December.

Karnak: January 69.55 (71.30); March 72.67 (72.95); May 73.75 (73.60).

Ashmouni: February 62.50 (62.62); April 63.01 (63.20).

Liverpool cotton futures market, after having ruled subdued during the most part of the period under review, firmed up when the market reopened after the Christmas and New Year holidays on the 2nd inst. Buying in fulfilment of accumulated orders and replenishment on home account led to a smart rally in futures prices. The near deliveries of both the American and American type contracts, however, were a shade easy. Sudan contracts too receded, thanks to lower Khartoum advices. The latest available quotations—in pence per lb. from Liverpool are as follows—the figures in brackets being the closing quotations on 13th December 1960.

American cotton one inch staple contract: March 23.00 (23.20); May 23.55 (23.30); July 23.90 (23.60).

American cotton mixed growth contract: March 23.20 (23.30); May 24.15 (23.60); July 24.25 (24.20).

Sudan: January, March, May 35.00 (35.25).

New York cotton futures market witnessed dull and featureless trading. The Christmas and New

Year holidays and the consequent reduced mill demand were responsible for the small turnover. Export demand was well maintained but actual business done was considerably less, as compared with a few weeks ago.

The following are the latest available quotations from New York, as compared with those three weeks and a month ago:

(In cents per lb.)

	3-1-61	13-12-60	5-12-60
Spot	32.25	32.25	32.30
December	32.25	—	31.62
March	32.70	32.40	32.32
May	33.07	32.85	32.72

ART SILK YARNS RALLY

(From Our Own Correspondent)

BOMBAY, 4th *January*

The past three weeks witnessed a sharp rise in the prices of art silk yarns. The rise followed hectic purchases by bulls on fears that an acute shortage of supplies would be felt in the coming weeks. The fears stemmed from reports that a large quantity of foreign yarn worth Rs. 30 lakhs, due to arrive in Bombay by the *s.s. Indian Navigator* had been damaged by fire on the high seas. Traders noted the reported plea of the Silk and Art Silk Mills' Association for additional art silk yarn import quota but were inclined to feel that the authorities might not concede the plea, in view of the continued tight foreign exchange position. Staple fibre yarns, however, lacked support, in view of the hand-to-mouth buying by consuming interests. Cotton yarns ruled irregular. Operators preferred to study the implications of the latest cut in yarn prices and the enchancement of the profit margin of traders from 15 to 18 per cent. before entering into large fresh commitments. Details regarding the reduction in yarn prices are given elsewhere in this issue (*vide* page 12).

Over the three-week period from 14th December to 4th January, Cupressa Bemberg yarn (60 x 1) February contract climbed up from Rs. 2,246 to Rs. 2,366. Spot Cupressa advanced from Rs. 2,217.81 to Rs. 2,341. Among imported art silk yarns, 150 Italy picked up Rs. 40 to Rs. 1,570. 120 Italy hardened by Rs. 41.50 to Rs. 1,254. 120 Japan spurted from Rs. 1,294.12 to Rs. 1,310 and 150 Japan from Rs. 1,543.25 to Rs. 1,653.

Staple fibre yarn (40 x 2) February contract encountered selling and declined from Rs. 792 to Rs. 775. Spot Kohinoors shed 4 nP to Rs. 9.42. Centurys were quiet at Rs. 9.42.

In the cotton yarn section, ten counts Podars were neglected at Rs. 18.12. Forty counts Maduras eased by 38 nP to Rs. 31.62, but Minaxis gathered 25 nP to Rs. 31.25. Sixty counts Finlays were unchanged at Rs. 59.59. Eighty counts Moderns lost 50 nP to Rs. 69.50. Mahendras dropped a rupee to Rs. 68.68. Finlays were unaltered at Rs. 79.79.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those three weeks ago.

	4-1-1961	14-12-1960
	Rs.	Rs.
Art silk yarns—		
60/1 Cupressa Bemberg (100 kg.) February	2,366.00	2,245.00
60/1 Cupressa Bemberg spot	2,341.00	2,217.81
120 Japan (per 100 kg.)	1,310.00	1,294.12
150 Japan (per 100 kg.)	1,653.00	1,543.25
120 Italy (per 100 kg.)	1,254.00	1,212.50
150 Italy (per 100 kg.)	1,570.00	1,530.00
Staple fibre yarn—		
40 x 2 February (per 50.78 kg.)	775.00	792.00
60 x 2 Century (per kg.)	9.42	9.42
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.12	18.12
20s New Great	22.12	22.37
40s Minaxis	31.62	32.00
60s Finlay	59.59	59.59
80s Modern	69.50	70.00

OILSEEDS TOUCH NEW PEAKS

(From Our Own Correspondent)

BOMBAY, 4th *January*

A fresh bout of buying in both oilseeds and oils was noted during the three-week period, following our last review dated 14th December 1960. Groundnut, castorseed, linseed and cottonseed touched new peaks for the season. In view of the sharp rally in prices and in order to curb any further rise, the Forward Markets Commission took some important steps to discourage speculation. These included fixation of ceiling prices for groundnut futures, stiffer margin regulations in castorseed futures and introduction of special margins in linseed.

Before trading in the oilseeds market commenced on 16th December, the Bombay Oilseeds and Oils Exchange announced the imposition of a ceiling of Rs. 220 per 250 kgs. in respect of groundnut February contract and Rs. 44 per 50 kgs. in the case of transferable specific delivery contracts. Late in the evening on the same day, the F.M.C. issued a Press note revising the margin rules and rates of special margins on castorseed May 1961 delivery to Rs. 20 and Rs. 40 per 250 kgs., whenever prices ruled above Rs. 177 and Rs. 187, respectively. The previous rates of special margin (imposed in the middle of November last) was Rs. 20 per 250 kgs. above the price level of Rs. 187. Even before the F.M.C.'s Press note was released, a few operators liquidated sizable stocks and, consequently, castorseed May contract slumped by Rs. 5. Some in oilseeds trade feel that these operators had advance information about the F.M.C's move. A fortnight later, that is, on 31st December, a special margin of Rs. 4 per 50 kgs. on May 1961 contract and February-March 1961 transferable specific delivery contract in linseed, whenever the price exceeds the marginal line of Rs. 35.60 nP per 50 kgs., was imposed.

The Forward Markets Commission has convened a meeting of oilseeds traders from Bombay, Madras, Adoni and Saurashtra to be held in Bombay City from the 7th to 9th inst. The meeting is expected to review the position regarding the supply and demand for oilseeds and oils, as well as to consider measures necessary to check unbridled speculation in these commodities.

The firmness of groundnuts was engendered by fears regarding an acute scarcity of spot supplies. Arrivals from Andhra and Karnataka, the usually surplus areas, were quite limited. At the same time, *vanaspati* manufacturers and crushers were keen buyers. Reports of good offtake of H.P.S. groundnuts by some Communist countries imparted further strength. Even rumours that the Government was contemplating to requisition supplies of groundnuts and impose restrictions on distribution had no effect. February 1961 contract moved up from Rs. 212.12 on 14th December to Rs. 218.50 today, just Re. 1.50 below the ceiling. Nizam bold improved by Rs. 3.37 to Rs. 46.12. Groundnut ex-mill rose by 90 nP to Rs. 19.70.

Despite protracted absense of export business in castor oil with the U.S., the castorseed section put on a distinctly cheerful appearance, in the beginning of the period under review. This was mainly on account of sustained speculative support, induced by hopes of better export prospects. Subsequently, however, the increasing pressure of Brazilian supplies in world markets led to a fall in values. May 1961 contract receded from Rs. 181.50 to Rs. 175.37 towards the end of December, but recovered to Rs. 178.37 today. Ready Madras rose from Rs. 35 to Rs. 35.12 before closing at Rs. 34.87. Oil commercial fell by 45 nP to Rs. 14.16, after touching Rs. 14.53 earlier.

Linseed ruled buoyant, notwithstanding the imposition of special margins. This was due to scarcity of supplies and good offtake by various parties, presumably for mixing this cheap oil with groundnut and sesame oils. Linseed May 1961 contract forged ahead from Rs. 34.31 to Rs. 35.66, after fluctuating between Rs. 34.84 and Rs. 36. Bold ready spurted by as much as Rs. 4.50 over the period, today's closing rate being Rs. 38.75; it was higher still at Rs. 39.50 earlier. Linseed oil closed firm at Rs. 17.20 today, as against Rs. 15.05 on 14th December.

In sympathy with other major oilseeds, cottonseed attracted good attention. Akola and Gujerat operators extended good speculative support. February 1961 contract rose by Rs. 2.50 to Rs. 95.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	4-1-1961	28-12-1960	14-12-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	218 50	216.00	212 12

PEPPER ADVANCES

(Messrs. Parekh and Co.)

BOMBAY, 4th *January*

After fluctuating narrowly, Malabar black pepper prices improved during the period between Christmas and New Year. The improvement gathered further momentum during the week ending 4th January 1961 in sympathy with New York and Singapore.

New York rallied from $0.43½ to $0.50 under pressure of buying by grinders and owing to reserved attitude of stockists who were selling sparingly as they were not able to replace from primary markets like Singapore, Indonesia and India. Prices at these centres were ruling higher owing to reserved attitude of growers, exporters and dealers. While India was offering at $0.40 to $0.42, Singapore dealers, though sellers, did not reduce their price below $0.43 as they were not able to replace from Indonesia where the check price for Singapore was reported to be higher. The deterioration in the political situation at Laos was a supporting factor.

Despite fair-sized arrivals at Alleppey, Cochin and Calicut, values did not go below Rs. 345 per quintal as exporters and Commission Houses continued to lend support.

In a declining market New York dealers remained selective buyers. In some cases, they were reported to have done some re-selling to Singapore with a view to bringing down prices still lower. But, when Singapore and Indian sellers saw improved inquiries from New York, they raised their prices at every next sale. Sizable business by India, Singapore and Indonesia was reported at $0.43 to $0.47.

Singapore improved from Str.$235 to Str.$247½ for white and from Str.$142½ to Str.$152½ for black.

Ungarbled at Alleppey and Cochin rose from Rs. 364 to Rs. 427 per quintal and garbled from Rs. 380 to Rs. 435 per quintal. January delivery advanced from Rs. 394 to Rs. 443 and February delivery from Rs. 402 to Rs. 436 per quintal. Growers were, however, reserved sellers. Bulls began to collect contracts in futures at every rise. This contributed to the present improvement in the market.

The future of the market depends upon the buying attitude of New York but the present rise being too rapid, some reaction is expected, particularly in view of the fact that all principal markets like Indonesia, India and Singapore are sellers at every rise. In Bombay, ready pepper is nominally quoted at Rs. 215 per 50 kilos.

TEA EASY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 20th *December* 1960

Sale No. 49:—Approximately 700,000 kilograms were offered in Sale No. 49 held on Tuesday, 20th December 1960. Quality in general showed a seasonal decline. However, a few later Nilgiri invoices offered had improved liquors. There was a fair demand but at lower rates. Highgrowns met with limited enquiry and the majority were difficult of sale. Those that sold realised considerably lower rates. Medium and low medium sorts sold at a drop of 10-20 nP. Good mediums met less support and registered declines of up to 20 nP per kilo. Colourv good mediums and clean black fannings received useful support at around last rates. Plainest descriptions followed the downward trend of the market. C.T.C. and legg-cut types also tended easier. Whole leaf grades came in for less support and were easier.

	1960	1959
	Rs.	Rs.
Low medium	4.60-4.75	4.63-4.85
Medium	4.75-4.95	4.85-5.18
Good medium	4.95-5.20	4.96-5.29
Quality	5.20-7.75	5.51-9.37

The average price realised in sale No. 49 was Rs. 4.88 per kilo, as against Rs. 5 in the previous sale and Rs. 5.12 in the corresponding sale last year.

Dust Sale 'UU':—Sale 'UU' held on 22nd December 1960 amounted to 256,000 kgs. The market met a good general demand but prices were barely steady for most descriptions. Plain and medium sorts declined by 5 nP to 10 nP. Mediums with useful colour, however, met better support and sold at firm rates. There was useful enquiry for highgrowns at slightly easier rates than last. C.T.C. and legg-cut types sold at around last week's prices.

The average price realised in sale 'UU' was Rs. 4.86 per kilo, as compared with Rs. 4.84 in the previous sale and Rs. 4.29 in the corresponding sale last year.

Export Quota:—There are sellers at ¼ nP per kilo.

Colombo:—Just over 7 million pounds were offered and there was a good demand for highgrowns at prices which were 10-15 cents dearer but medium and lowgrown descriptions declined 5-10 cents.

London: North Indian and other growths:—In Monday's auction there was a good demand at firm rates particularly for plain teas which were the strongest feature. Plain broken pekoe remains at 3-9d.

Ceylon and South Indians:—Tuesday's sale totalled 21,239 packages. Of these 5,416 packages were from South India. There was good demand throughout the sale and prices were generally fully firm on last week's rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 1:—749,000 kilograms. Good demand at easier rates. Low medium and medium 10 nP to 15 nP easier. Good mediums declined irregularly 15 nP. Highgrowns limited enquiry at lower rates. Whole leaf barely steady."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 3rd *January*

The last export sale was held on 19th December and the internal sale on the following day. On both days, there was good demand and prices rose. In the two weeks following our last report, tea bookings to the U.K. were good and maintained the improvement noticeable for the past few weeks. However, in the last week tea bookings were insignificant, as there were no auctions due to Xmas holidays. Now that tea production in North-East India in 1960 is lower than in 1959, it is more than likely that prices would be steady in the auctions to come, depending, of course, on quality. Market has taken note of New Delhi's offer to Pakistan to permit exports of 5 million lbs. of tea in order to relieve the prevailing scarcity there.

Presiding over the annual meeting of the Calcutta Tea Traders' Association, its President, Mr. R. G. Hales, suggested some important measures to enable the industry to earn more foreign exchange for the country. He said that if India should maintain its position in market abroad, output must be increased and more attention should be paid to export promotion and export incentives. He called upon the authorities to see if the taxes could not be collected on fewer points. Mr. Hales declared that the total burden of the existing taxes was already heavy, and hoped that this burden would not be increased in future.

Export offerings at the auctions held on 19th December amounted to 73,760 packages. The general demand was good for most teas excepting medium Assam B.O.Ps which were very weak. The poorest and more fibrous teas in C.T.Cs were sold at higher prices, although the better medium C.T.Cs eased by 20 nP and the very best C.T.C. teas by 20 nP to 40 nP. Legg-cut teas were firm. Prices of medium Assam O.Fs gave way by 10 nP to 20 nP. Similar fannings also eased, but the poorer descriptions recorded a small gain. Teas for price, fannings and plain brokens were steady, and fannings hardened. Leaf grades met with steady support. Tippy teas eased, while brighter Darjeelings were firm. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.70 to Rs. 6.20, clean black pekoe fannings Rs. 5.30 to Rs. 5.45, best Assam C.T.C. B.P. Rs. 5.40 to Rs. 5.80, medium fannings Rs. 4.85 to Rs. 5.15, plain fannings Rs. 4.80 to Rs. 4.95, plain B.P. Rs. 4.50 to Rs. 4.65, and medium B.P. Rs. 4.70 to Rs. 4.90.

In the internal sale held on 22nd December dusts on offer amounted to 23,232 packages, prices of which, on good demand, rose. Keen competition was offered for medium C.T.Cs and as a result, prices of these gained by 15 nP. The best lots of this category met with good support, and the smaller liquoring kinds added smart gains. Orthodox teas received keen attention. The thick liquoring Assams were bid at high rates. Legg-cut Dooars were fully steady. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. dust Rs. 6.20 to Rs. 6.40, medium Assam C.T.C. dust Rs. 5.50 to Rs. 5.75, medium Assam dust Rs. 4.85 to Rs. 5.25, and medium Dooars dust Rs. 4.75 to Rs. 4.95.

Leaf offerings amounting to 534 packages met with good support, but prices were irregular.

JUTE GOODS FIRM UP

(From Our Own Correspondent)

CALCUTTA, 3rd *January*

Although earlier in the period under review—this review covers the period from 13th December to 3rd January—quiet conditions prevailed in both raw jute and jute goods markets and prices registered small declines, attractive gains were a feature on 19th December. At high levels, profit-taking set in and prices moved down in the next two or three days. Since then, the uptrend had been maintained and closing levels as on 30th December were much higher on balance and were not much lower than the highest levels for the year. This was not a little due to the announcement last week-end of the decision by the Indian Jute Mill's Association to recommend to mills having more than 220 looms to reduce their working hours, from 45 to 42½ a week, with effect from the week 30th January. There would be no change in the percentage of looms remaining sealed, that is, 12 per cent.

During the period under review, export business in goods was not striking, as shippers showed interest for small quantities only. However, there was good covering business done against expected orders from overseas buyers. Indeed, Russia showed moderate interest and internal buyers were active. Government of India's call for tenders for B. twills, once postponed but subsequently announced for partial quantity, also added to tone up sentiment.

Meanwhile, market circles noted the proposal made by Mr. S. K. Patil, Union Food and Agriculture Minister, to increase mesta production as a safeguard against raw jute shortage. However, it was a surprise why the Minister, who was addressing the annual meeting of the Indian Central Jute Committee in Calcutta last week-end, should not think of increasing the quality of raw jute.

It was noted that, in its report recently made, the Pakistan Jute Commission has recommended measures for increased cultivation of jute and adequate marketing facilities. In the absence of details regarding the measures recommended, market comment should remain reserved. Fibre prices in Pakistan tended to decline very slowly during the period, but reports indicated that the uptrend has been arrested. For overseas buyers are showing interest for small quantities only. Details of export in November indicated that China was a prominent buyer of fibre from Pakistan. Of the total sales for export in that month, amounting to 218,746 bales, sales to China alone accounted for as much as 30,000 bales. Other countries that bought included Poland, France and the United States.

A factor that contributed to the earlier decline in prices was the directive of the Reserve Bank asking scheduled banks to reduce advances given against security documents on raw jute and jute goods. It was stated that bank's advances against goods. It was stated that bank's advances against jute textiles had risen to Rs. 24 crores from Rs. 20 crores in August and those in fibre to Rs. 14 crores from Rs. 11 crores in October. The rise in the former is 66 per cent. above the level a year ago and that in raw jute is 22 per cent. above the level a year ago. The directive recommended that advances to mills should not be higher than 75 per cent. and those to parties other than mills not more than 60 per cent. Since raw jute sellers finance most of their business from Bank advances against documents through brokers, and brokers keep a margin of 10 per cent., the actual advance to fibre sellers would amount to only 50 per cent.

Quiet conditions were in evidence in the goods market on 13th December when ready B. twills were quoted at Rs. 173.50 and ready hessian 40" 10 oz. at Rs. 54.25. These prices were maintained on the following day, but, on 15th December, with B. twills at Rs. 174 and hessian 40" 10 oz. at Rs. 54.50, a small rise was recorded, following invited tenders for 5,250 bales of B. twills against short-covering in hessian and further purchases of woolpacks by Australia. The Government of India assumption of burlap in the U.S. also led to sentiment. On 16th December, B. twills fell to Rs. 171.50 and hessian 40" 10 oz to Rs. 53.90 in the absence of incentives. On the next day, prices were unchanged. After the week-end, the market re-opened on 19th December and conditions became steadier, following the announcement of Government tenders for 10,000 bales of B. twills for December and 12,000 bales for January. B. twills scored to Rs. 180 and, in sympathy, hessian 40" 10 oz. hardened to Rs. 55.15. However, on 21st December, B. twills moved down to Rs. 178, following rumours that the above tenders had been postponed. However, hessian 40" 10 oz. hardened to Rs. 55.75. At this stage, some covering business was done in ready and near delivery hessian and, for this reason, on 22nd December, hessian 40" 10 oz. remained unchanged at Rs. 55.75, while B. twills were a shade lower at Rs. 177. Conditions were about firm on 23rd December and B. twills were offered at Rs. 178.50, hessian 40" 10 oz. remaining unchanged at Rs. 55.75. Soon reports that Soviet Russia would enter the market circulated, and whether actual business was done or not these rumours were sufficient to raise hessian 40" 10 oz. to Rs. 56.25 and B. twills to Rs. 179. After the X'mas holidays, the market re-opened on 27th December when covering business against Russia was done to raise B. twills to Rs. 181 and hessian 40" 10 oz. to Rs. 57.25. On the next day, the announcement of a Government tender for 4,000 bales of B. twils pushed up B. twills to Rs. 183.50. In sympathy hessian 40" 10 oz. rose to Rs. 58.30. Prices spurted on 27th December, following the decision of mills to reduce working hours from the end of January. B. twills scored to Rs. 186 and hessian 40" 10 oz. to Rs. 59.75. On 30th December, conditions remained fully steady and B. twills closed for the year at Rs. 186 and hessian 40" 10 oz. at Rs. 59. The market has remained closed since then, in view of New Year holidays.

In line with the trend in goods, fibre prices also rose. Mills gave support to fulfil their quotas. Arrivals were limited, but the earlier decline in prices was abated by sellers' refusal to operate until prices rose again. The low arrivals in November caused concern, since, although they were higher than in October, they were the lowest for November since November 1953. The total arrivals this season upto November were lower than the estimated consumption for this period by 478,000 bales. It should be noted that, every year at this time, arrivals would surpass consumption, thus aiding mills to build-up stocks for the bad time of the season. Building-up of stocks for the worse period of the season remains a problem. Assam bottoms opened at Rs. 128.50 per 100 kgs. (Rs. 48 per maund), against December-January delivery and the closing for the week ended 17th December was Rs. 131.25 (Rs. 49). In the following week, the price rose to as high as Rs. 136.75 (Rs. 51). Subsequently, the trend was fully buoyant to take the rate upto Rs. 142 (Rs. 53) by 30th December.

TIN AND ZINC RISE

(From Our Own Correspondent)

CALCUTTA, 3rd *January*

The feature of trading in the metal market during the three-week period under review was the upward trend of tin and zinc prices, following good support. There was no change in copper scrap prices—Rs. 212 a cwt. for "berry" quality and Rs. 200 a cwt. for utensil scrap. This was so because virgin copper was available in plenty against permits. More scrap was also on offer. There was shortage of coal in consuming centres and so copper scrap met with poor demand.

On 12th December, copper on the London Metal Exchange was quoted at £234½ a ton. On bull liquidation, it weakened and touched a low of £226 eight days later. At lower level, consumer demand improved and the Continent also showed interest. The quotation as on 30th December was £227½.

Earlier here, electrolytic zinc attracted keen interest and rose from Rs. 163 to Rs. 166 a cwt. However, demand soon abated, in view of the coal situation and the price, after falling to Rs. 163.50, regained to Rs. 166, before closing at Rs. 164. In London, however, the price recorded a progressive decline in the absence of adequate outside demand. The closing level was £76½ a ton, as against £84½ on 12th December. Tin was in scarce supply here and arrivals were limited. The price opened at Rs. 578 a cwt. and, after falling to Rs. 570, closed at Rs. 575. In London, tin opened at £796 a ton and, after being higher at £798½, eased to £786½. This was due to lower advices from Singapore. Lead here was unchanged throughout the period at Rs. 63.00 a cwt. Demand was moderate, but the supply position was comfortable. In London, the price closed at £62½ a ton, as against £65½ on 12th December.

SUGAR PRODUCTION IN FULL SWING

(From Our Own Correspondent)

HAPUR, 2nd *January*

Sugar recorded a quietly easy trend during the week under review, thanks to easy supply position. The latest available price is Rs. 110.50 per bag wholesale and Rs. 1.06 per seer retail in the open market. Production of sugar continues with vigour all over U.P., as cane supplies to factories are reported to be adequate. It is hoped that the production would touch a new high this year. With a carry-over of about 600,000 tons and good production prospects, the Union Government is naturally anxious to export the commodity. Out of the quota of 50,000 tons announced on 17th September last, it is gathered that 31,000 tons have been exported so far to Ceylon, Malaya and Middle East countries and the time limit for export has been extended up to the end of March 1961.

Trading in sugar was dull in Muzaffarnagar market during the week. Prices continued unchanged at Rs. 110 per bag and retail at Rs. 1.06 per *seer*. The stocks allotted in the last two months were not fully lifted and trade circles were hopeful of early decontrol of sugar. Some transactions were reported to have been finalised in Kanpur and Calcutta for specific deliveries below the present control prices.

Khandsari drifted lower, as demand was poor and new production stocks were increasing. Some demand was reported from the Punjab and Rajasthan. Arrivas of new *khandsari* averaged 4,000 maunds daily in the Muzaffarnagar market where latest prices were: inferior Rs. 25 to Rs. 29.50; superior Rs. 30 to Rs. 33; old Rs. 22 to Rs. 29; crystal Rs. 31 to Rs. 36 a maund.

New *gur* continued to rule depressed, as loading during the major part of the last fortnight continued to be restricted. Daily arrivals here were about 4,000 maunds, but these dropped considerably towards the week-end, due to rainy conditions. It is reported that about 50 per cent. of the produce has already reached the markets. The latest prevailing prices were: *pansera* Rs. 13.25; *balti* Rs. 13.75; *shakker* Rs. 15.25 a maund.

Gur also eased considerably in Muzaffarnagar, due to loading restrictions during the week. Total arrivals of *gur* and *shakker* in the market during the current season was estimated at 575,000 maunds and latest prevailing prices were: *pansera* Rs. 13 to Rs. 13.50; *khurpapar* Rs. 14.25; *laddo* Rs. 14; *danaminja* Rs. 11 to Rs. 13 per maund.

Future *gur* also ruled bearish in line with ready. *Fagun* opened at Rs. 14.07 last Monday and, after declining in successive sessions to Rs. 13.83, was quoted today at Rs. 13.87.

Preparation of land for next cane sowings has already begun. Actual sowings, however, will commence by the end of the month.

"RABI" CROP PROSPECTS GOOD

(From Our Own Correspondent)

HAPUR, 4th *January*

After ruling steady to firm in the past two weeks due to good demand in the face of falling stocks and absence of winter rains, foodgrains ruled quiet towards the week-end, thanks to fairly good rains all over Northern India which had very much brightened *rabi* crop prospects. Wheat here touched the highest level of the year to be quoted at Rs. 17.50 a maund for average quality and upto Rs. 18.50 for better farm produce. Daily arrivals of wheat from producing areas were almost nominal and most of the consumers requirements were met from sales through fair-price shops in the form of wheat flour. The latest rains in last two days have done immense good to all *rabi* crops and a fairly heavy crop now can be safely predicted.

Rice also recorded modest gains in the last fortnight, in line with other cereals, although the supply position was reported to be satisfactory as new crop grain was still reaching the markets. The week-end prevailing prices, in the local market were: *rice mainpuri* Rs. 20.75; *sela basmati* Rs. 27 to Rs. 29; *ramajwayan* Rs. 23; *raimunia* Rs. 24; and *gadda* Rs. 18.50 a maund.

Gram also touched new high levels to be quoted at Rs. 17 a maund, as stocks left with the trade were small and advices from the Punjab recorded a steady trend. Prospects of gram crop have improved considerably, due to latest rains and prices are now likely to register a downward trend. Barley was quoted at Rs. 12.75 and *bejhar* inferior quality at Rs. 12.75 and *moongia* variety at Rs. 13 a maund. Maize, too, recorded gains in the last fortnight in the absence of winter rains and active consumer support. Maize stocks here were fairly good at about 30,000 maunds. *Bajra* recorded a hardening trend in the last two weeks, as arrivals were meagre in the face of good seasonal demand. The quotations are: maize Rs. 13 to Rs. 13.75; *bajra* Rs. 15 to Rs. 15.50; *juwar* continued to be quoted at Rs. 13 and *guwar* white at Rs. 13.25 to Rs. 13.50 a maund.

In pulses, peas and *arhar* advanced fractionally on good demand from Madras side in the form of *dal*. The local stocks were small. Peas and *arhar* crops have been very much benefited from the recent rains. Other pulses were almost stationary and latest prevailing prices on Monday were: peas *dara* Rs. 13.50; superior white Rs. 15; peas *dal* Rs. 15; *arhar* Rs. 13.50; *arhar dal* Rs. 18 to Rs. 18.75; new *urd* Rs. 19; *moong* Rs. 18.50 to Rs. 19.50; *massor* Rs. 15 to Rs. 17 a maund.

TEXTILES

(Concluded from page 13)

shifts, so as to increase the production of cloth by at least 10 per cent. The third shift is already operative in some mills and it will now become operative in the rest. It is expected that all the steps necessary in this connection would be completed within four to six weeks. Government have no doubt that the increased quantity of cotton required for this purpose would be available to the mills. The Textile Commissioner will be keeping a continuous watch on the position of stocks of cloth with the mills, so as to make sure that the supply of cloth is keeping pace with the demand and the pipelines are not interrupted."

While the anxiety of the powers-that-be to ensure plentiful supplies of cloth to the consumers at reasonable prices is understandable, there is no denying that the latest revision of prices will adversely affect the marginal units of the industry producing coarse and medium cloth. Nevertheless, the industry has agreed to the revision in the larger interest of the nation. It is to be hoped that the industry will now be allowed to function undisturbed for a reasonably long period so that it might, to quote the Federation, "concentrate on achieving higher production which offers the only solution to the problem of cloth and yarn prices."

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of August 1960 amount to 9.53 lakhs of rupees.

SHARE MARKET QUIET

SUGARS SUFFER SETBACK

(From Our Own Correspondents)

BOMBAY, *5th January*

A QUIET trend was in evidence in the share market during the last working week of 1960 and the first four days of the New Year. The market was officially closed from 24th December to 1st January. Investment support was at a low ebb, thanks to uncertain international political situation, tight money conditions and the Union Finance Minister's statement at the Associated Chambers' meeting at Calcutta that there would be no relief in company taxation. There was also scattered professional selling in some counters, so that values tended to move down.

Despite the rise in the output of steel during the month of December, steel shares lacked support. Tata Steels receded from Rs. 140.25 on 15th December to Rs. 138.50 on Tuesday this week (3rd January 1961). After recovering to Rs. 140.25 today, they finished lower at Rs. 139.75. Indian Irons declined from Rs. 23.36 to Rs. 23.04. Mukand Irons, however, were well fancied, the quotation rising by Rs. 2.76 to Rs. 22.76.

Textiles encountered selling. Operators were inclined to feel that the latest reduction in prices of cloth and yarn would adversely affect the mills, particularly the units producing coarse and medium varieties of cloth. Khataus fell (as compared with our last review) by Rs. 15 to Rs. 432.50. Swans dropped Rs. 9 to Rs. 480. Standards eased by a like amount to Rs. 983. Finlays declined by Rs. 5 to Rs. 318. Ahmedabad Advances receded by Rs. 3.50 to Rs. 168, notwithstanding the declaration of a higher dividend of Rs. 10 (subject to tax) for the year ended June 1960, as against Rs. 7 distributed in the previous year. Gokaks lost Rs. 3 to Rs. 166, Kohinoors Rs. 2.50 to Rs. 264, Bombay Dyeings Re. 1.20 to Rs. 59.90 and Podars Re. 1 to Rs. 130. Simplex were unchanged at Rs. 160, as also Morarjis at Rs. 314 and India Uniteds at Rs. 13.08. Sreeniwas, however, evoked special enquiries and improved by Rs. 6 to Rs. 228. Similarly, Indores hardened by Rs. 5 to Rs. 128, New Greats by Rs. 2 to Rs. 192 and Centurys by Re. 1.50 to Rs. 451.50.

Sugar shares were subjected to heavy selling pressure induced by apprehensions regarding the possible effects of the proposed land ceiling legislation of Maharashtra Government. Belapurs slumped by Rs. 41 to Rs. 329. Maharashtra Sugars suffered a loss of Rs. 22.50, today's closing rate being Rs. 212. Phaltans climbed down from Rs. 178 to Rs. 164. Operators were disappointed at the reduction in net dividend to Rs. 8.40 (gross of Rs. 9.45) for the year ended September 1960, as against Rs. 12 (gross of Rs. 14.50) in the previous year. Walchandnagars declined by Rs. 15.50 to Rs. 265. Bhopals were neglected at Rs. 29. The Directors of the Company have declared a lower dividend of Rs. 2.25 (subject to tax) for the year 1959-60, as against Rs. 2.50 in 1958-59.

Cement shares were dull, in view of the steadily rising cost of production and uneconomic prices for cement. Associated Cements retreated from Rs. 149 on 15th December to Rs. 146.50 on the 3rd inst., but recovered to Rs. 148 today. Jaipur Udyogs shed 62 nP to Rs. 11.20. Dalmias 12 nP to Rs. 11.36 and Sone Valleys 8 nP to Rs. 4.80. But Orissas picked up 24 nP to Rs. 15.20. Ashokas were better by 33 nP at Rs. 9.12 *ex-div.*

Among shippings, Scindias improved by 52 nP to Rs. 14.68. Great Easterns gained 8 nP to Rs. 15.28. Operators took note of the Chairman's statement that he was not very optimistic about the prospects for the current year. In the automobiles group, Premier Automobiles eased by Re. 1.50 to Rs. 164. Hindustan Motors shed 52 nP to Rs. 19.12.

Engineering shares were generally subdued. Premier Constructions declined by Rs. 2 to Rs. 283.50. Larsen and Toubros were done 75 nP lower at Rs. 34.25. Telcos lost 50 nP to Rs. 291. But Alcock Ashdowns moved up on special support from Rs. 227 to Rs. 238. Cooper Engineerings strengthened by Rs. 2 to Rs. 156.50.

In the miscellaneous section, Wimcos declined by Rs. 3 to Rs. 260. Hindustan Levers and Alembic Chemicals receded by Rs. 2.50 each to Rs. 41.50 and Rs. 227.50, respectively. Greaves Cottons lost a rupee to Rs. 155. Asian Cables shed 50 nP to Rs. 110.50. Tata Oils were neglected at Rs. 73.50. Some dye and chemical shares attracted good attention of operators. Indian Dyestuffs spurted by Rs. 23.75 to Rs. 426.25. Amar Dyes advanced by Rs. 17.50 to Rs. 367.50. Colour Chems rose by a like amount to Rs. 300. Polychems put on Rs. 7.50 to Rs. 207.50. Among other industrials, Ceat Tyres hardened by Rs. 27.50 to Rs. 217.50. Khandelwals by Rs. 11 to Rs. 86, Premier Tyres by Rs. 2.50 to Rs. 75.50 and National Rayons by Re. 1 to Rs. 475. Voltas gathered 50 nP to Rs. 262.50.

Madras Stock Exchange

MADRAS, *4th January*

The Stock Exchange began the New Year on Monday the 2nd inst. on a subdued note which persisted till the close today. Since most traders were still in a holiday mood, the turnover was very low with values moving narrowly. Coffee shares were neglected in view of apprehensions regarding export prospects, huge world surplus and low prices. Rubbers also ruled dull. With the exception of a few selective scrips, tea shares too lacked support on reports from auction centres that demand was forthcoming only at reduced prices. In the absence of any investment buying textile scrips drifted lower. Operators preferred to study the full implications of the recent cut in textile prices before extending their commitments. Sugars and miscellaneous industrials moved in sympathy with the general trend, prices generally showing a decline.

ALUMINIUM CORPORATION OF INDIA

(Concluded from page 29)

personal examination of the most modern plants in different parts of the world and in consultation with our technical collaborators, Messrs. Aluminium-Industrie-Aktien-Gesellschaft, Zurich, Switzerland, we have adopted the latest trends in the designs of our plant. We believe that, when the plant starts production, it will be one of the most modern technically and will be setting up a new example in the country. The building design of the cell house again represents the most modern thoughts at present existing in the aluminium world and this design, according to the studies made by various experts and universities, is likely to be most suitable for tropical conditions as existing in our country. I do hope that your Corporation will continue to play the important role of most economic production of the metal in this country as it has done in the past. According to present indications, we hope that the first production from this expansion would start by end of 1961.

"As mentioned in the Directors' report, we will very shortly be coming to you to raise a small amount of capital by way of equity shares to the extent of Rs. 31.25 lakhs out of the requirement of about Rs. 4.5 crores for this expansion programme by offering one equity share at par to the holders of every two existing ordinary shares. The rest of the finance has already been arranged through loans and deferred payments.

"The coming years will make a new history in the Corporation's existence. Government was good enough to renew the managing agency agreement for the next 10 years. The Corporation has indeed grown from a very humble start under the able guidance of the Managing Agents and through co-operation and efforts of the humblest worker in the factory to the team of technicians and Directors, and I am sure, they will continue to render services in the same spirit of dedication as before. The Corporation is no doubt proud of the team of technical personnel whom it has trained."

LICENSING OF INDUSTRIAL UNITS

(Concluded from page 18)

which, of course, the State should maintain an unlimited force of policemen. It, therefore, follows, that the well accepted canon that no administration should attempt the impossible, lest it should be brought into contempt of the public, is not respected by the Government when it seeks to control the prices of commodities which do not pass directly from manufacturers to consumers and are handled by traders whose activities cannot be regulated except by massive police action. Textiles, sugar, paper, rubber tyres, chemicals like soda ash and caustic soda and bleaching powder, are all products brought under infructuous price control. This being so, one has to turn one's attention to a field where Government could take effective action, and achieve a purpose. Such a field is, indeed, available and covers the manufacture of machinery for sugar plants, paper plants, cement plants, cotton textile machinery, and also heavy electrical equipment such as transformers, motors, conductors, switchgear, insulators and the like. I understand that quotations for certain types of indigenous sugar plant equipment are more than for those of foreign origin by about forty to fifty per cent., and even the installation charges are on the high side. This has resulted in considerable increases in the estimates of capital costs for some new units, much beyond anticipated levels, and may well be repeated in the case of paper plants cement plants, etc., where Government has been stipulating procurement from indigenous sources. While I do not suggest that prices have been deliberately boosted or likely to be, I still feel that it will be satisfactory all round, if they are subjected to careful scrutiny, so that no one may allege that the situation arising from scarcity of foreign exchange and resultant insistence on procurement of indigenous equipment has been exploited by machinery manufacturers for their own benefit. Here, at any rate, is one field where statutory price control will be effective and, therefore purposeful.

MARKET GOSSIP

(Concluded from page 3)

doubtful if it could be expected that the consumer is now to subsidise the grower ... the trend of internal offtake of coffee is not in consonance with that of production. On the contrary, the internal consumption during the eleven months of 1960 was slightly lower at 27,321 metric tons than in the corresponding period of 1959 ... with the increased production in 1961 (some place the estimate at 55,000 tons), we may well find ourselves at the end of the year with a stock of 10,000-12,000 tons, if not more, waiting to be marketed. We are now obliged to sell coffee at whatever the price that is offered."

It is against the background of increasing production and the very large stocks of coffee held by producing countries that Mr. Machia urged a proper revision of the Coffee Board's marketing policy. Indeed, he declared that, if the coffee industry were to exist, the system of marketing must be completely overhauled and some bold decisions taken. And Mr. Machia commended for the most earnest consideration of the authorities a ten-point programme of action, the details of which are as follows:

(a) The appointment of a well-known Coffee Taster with his headquarters at Bangalore, say, for a period of three years during which he will also train a number of assistants.

(b) All Arabica coffee produced in India to be liquor tested and the best coffees earmarked for export.

(c) The coffees offered for export should be from estates which have earned premium points.

(d) Such coffees should not be bulked with other coffees.

(e) Samples will be true to the particular outturn.

(f) The coffee offered should be in the name of the estate or by a distinguishing mark.

(g) Coffees offered in subsequent years will continue to bear the same distinguishing marks.

(h) The coffees should be sold in public auction and not by sealed tender.

(i) Auctions should be held at weekly intervals to enable importers to cover their requirements quickly if they fail to do so in a previous auction.

(j) The interval between sale and shipping of the coffee should be reduced.

These suggestions are certainly very pertinent ones which deserve to be implemented earnestly. That the marketing policy of the Coffee Board is by no means the right one in the present context of deteriorating coffee situation was forcefully pointed out by the Nilgiri Wynaad Planters' Association in the course of a resolution passed by it recently. The resolution said:

"Growers have to wait more than one year for final payments for their coffee which they have to deliver to the pool. Many producers have to finance the running of estates on an overdraft, thereby incurring extra expenditure. The Board also makes payments to growers mainly on overdraft, the permitted maximum of which is Rs. 5 crores. The Board charges growers for marketing their coffee, thus adding still more to their expenditure. Even then, should the Board fail to sell the unsold surplus from last season, as well as this season's record crop, the unsold coffee will be lost due to deterioration. This, in turn, will reduce still further the return to the grower. With this year's record crop, the return to the grower is only just sufficient to balance expenditure. Next season, many growers will harvest a smaller crop. If prices are also lower, as they certainly will be if the present policy is continued, many units will be involved in enormous losses, and the industry will be ruined within the next two or three years. Some of the best coffees in the world are produced in India. These coffees, if the expertise of the trade is made use of, would sell at prices which would be remunerative to the grower. As it is, with only two dealers participating in export auctions, they are being sold at less than the internal price, and very much less than their value in European markets. The internal market in turn is flooded, partly with coffee of export standard. It is likely that much of this will have to be sold at prices which will not cover the growers' expenses. The coffee market should be made free, and should be run on the same lines as the tea market."

The authorities, however, do not seem to feel that the coffee industry is passing through a period of crisis. Addressing the fifty-first meeting of the Indian Coffee Board at Bangalore on Tuesday this week, Mr. H. Sitarama Reddy, Chairman of the Board, sought to stress that there was no question of huge surplus stocks of coffee lying with the Board which was anxious to sell, since the carry-over stocks as on the 1st inst. aggregated about 9,200 tons, as against 9,637 tons a year before and 8,307 tons two years before. The carry-over, he added, was designed to be a little larger than in former years, with a view to meeting the internal demands for the old crop in the early months of the year, so that as much of the freshly cured coffee of new crop as possible could be made available for export during that period when there would be good demand with better prices in foreign markets. Mr. Reddy admitted that prices in export sales had been dwindling and that internal market was sluggish, but laid emphasis on the need for improving quality of coffee and called upon the pool agents to improve the existing storage system.

Whatever be the explanation given by the Coffee Board Chairman, the fact remains that the marketing policy is out of date. In particular, those who grow high quality coffee should be enabled to receive a sufficiently attractive return. It is regrettable that the Government continues to keep in cold storage the report of the Expert Committee on Coffee submitted as far back as eighteen months ago. The Government will do well to take any early decision on the report and reorganise the Coffee Board in such a way as to make it a dynamic organisation which can anticipate market developments and adapt the marketing policy to changing circumstances.

CONGRESS ELECTION MANIFESTO

THE Indian National Congress has begun bracing itself for countrywide participation in the General Elections to be held early in 1962. Already, at its Bhavnagar session over the week-end, the Party has taken the first step of laying down the basic principles of its election manifesto which is to be spelt out in greater detail by the All-India Congress Committee in the next few months. Whether it will turn out to be a prosaic and colourless document, it is not possible to say, for much will depend on the quality of draftmanship. Nor is it possible to predict whether it will turn out to be a "treasure-house," as Mr. Nehru would have it, "from which Congressmen could draw inspiration." Whatever be the final shape that the manifesto takes, its substance is already contained in the 22-point resolution passed by the Bhavnagar session. This resolution has the current importance of being the election manifesto in its embryo form.

In this embryonic stage, however, the manifesto has one great advantage and one serious disadvantage. The advantage is that it is only a "broad" outline of the direction in which the Congress wishes to go or to take the country; it hardly admits of any serious controversy so far as Congressmen are concerned, for they can continue to be "broadly" agreed on many things without any conscientious difficulty. But the disadvantage is that Congressmen who have voted for this resolution, as for any other, in overwhelming majority may not have sincere faith in them; this is not our inference, for the Congress President, Mr. Sanjiva Reddy, himself had some such thing to say in his address at the Bhavnagar session. It is this habit, on the part of Congressmen, of voting for resolutions even while having serious mental reservations that has caused complications in respect of such questions as land ceiling, co-operative farming and State trading and may yet complicate matters in so far as the role of the public sector and the proposed reduction of income disparities are concerned. It is high time that Congressmen learned from their own experience of according "broad" and uncritical approval to policies which are later shown up as impractical, and of thereby vitiating the political and economic climate for greater enterprise and production in the private sector which has, whether socialists like it or not, a dominant role to perform in our mixed economy.

That leads on to one of the most controversial points in the manifesto, namely, the role visualised for the public sector. The relevant passage in the manifesto reads as follows:

"The industrial policy resolution of 1956 lays down in clear terms the policy to be pursued in the programme of industrialisation of the country. In view of our policy of socialisation, the public sector will increasingly expand and play a dominant role. Public and private sectors should function in unison as parts of a single mechanism. There should be no conflict between the two sectors, and it should be emphasised that only through the successful and efficient functioning of these two sectors that the industrial programme can be successfully implemented."

What is manifestly controversial in the above passage is the second sentence which contains two disquieting words, namely, "socialisation" and "dominant." The use of the first word is unfortunate, because the industrial policy resolution of 1956, to be sure, has not laid down the kind of socialisation policy which should logically involve nationalisation of existing private enterprises. It has merely reserved to the public sector some industries for future development; even here, it does not preclude the possibility of the State securing the co-operation of private enterprise in the establishment of new units in the relevant industries where the national interests so require. There is, therefore, no question of the public sector playing a "dominant" role either in the sense of nationalising existing private undertakings in the industries reserved to the public sector or in the sense of not allowing private enterprise to set up new units in those fields at any time, or of both. That the "dominant" role visualised by the Congress for the public sector is impossible of achievement is proved by some recent developments, namely, the Government's decision, late in November last, to permit private collieries to work new or non-contiguous areas and its more recent decisions to license in the private sector pig-iron plants for an aggregate capacity of 500,000 tons, two projects for the utilisation of the Nahorkatiya natural gas and four fertiliser factories (two in Andhra and one each in Madhya Pradesh and Rajasthan). Sooner or later, similar concessions will have to be extended to such other industries as petroleum, generation of electricity and some mining and heavy industries. If these concessions to the private sector—both which have already been made and which may be in prospect—are deemed necessary in the interests of higher production, they must also be deemed to be indicative of the limitations to the capacity of the public sector in the field of industrialisation. It would be more realistic and appropriate, therefore, to redefine the role of the public sector as something "complementary" to the private sector. Any suggestion of a "dominant" role for the public sector could only keep alive an unseemly conflict between it and the private sector—a conflict which, as it is recognised in a way in the last sentence of the passage quoted above, would do the nation no good. The self-contradictory character of the relevant passage in the manifesto would, therefore, require to be removed, so that neither the Congressman nor the general voter may be left in doubt as to what is deemed feasible and desirable in national interest.

Where the manifesto itself recognises the need for a greater productive effort in view of the pressure of a fast growing population and the planners themselves are slowly but surely recognising the potentialities of the private sector for achieving greater production, it is strange that another point in the manifesto lays down that "taxation should be so devised as to aim at lessening disparities of income and increase the resources available for development." Surely, it is not as if the present system of integrated taxation lacks the egalitarian bias. If any further egalitarian twist is given to that system, it will only reduce further the resources available for development in the private sector which cannot be denied the major role belonging to it in the fields of agriculture, industry and transport. Whether or not a particular egalitarian tax measure brings in more revenue to the exchequer and lessens income disparities, it has at least one certain effect of vitiating the climate for enterprise and investment and, thereby, of lessening the chances of greater production. Even where the redistributive aspect of taxation is emphasised, greater revenue would depend only on greater production. There is, happily, the recognition elsewhere in the manifesto that the attainment of social aims (through social services) is dependent on economic progress (in terms of greater production). Where, from any point of view, the accent has to be on greater production (both agricultural and industrial), such frightening references to egalitarian taxation and the like would seem to be out of place in the current context which demands, in the

words of the manifesto itself, a rapid rate of economic growth.

There are also some other points in the manifesto which, though less frightening, call for comment. There is, for instance, the reference to State trading which is to be undertaken "wherever found necessary." Why this reference to State trading should have been made in the manifesto, after having omitted it from the resolution on the third Plan passed at the same Bhavnagar session, passes one's comprehension. Surely it cannot be that the voter will be enthused by the prospect of State trading, especially in foodgrains, of which he may not have very pleasant memories. But some amount of State trading has always been there and can continue to be there, provided the general body of consumers is not subjected to any hardship and the normal channels of distribution are not supplanted. But there is no need to lay this down as an article of faith in the manifesto. It may, however, be that this reference to State trading is more a matter of habit than of steadfast principle like the other reference to co-operative farming which, the manifesto says, should be organised on a voluntary basis "wherever found possible." Since the Congress Party cannot be expected to discard completely such planks as State trading, co-operative farming and prohibition, without loss of some prestige, critics could more usefully examine how these policies are actually implemented to know whether there is any fanatical attachment on its part to them. When so examined, it will be found that they are least likely to assume, in actual practice, any formidable proportions in the near future. For instance, only a few thousands of pilot co-operative farming societies are going to be formed in the next five years—just a trickle in a country of 600,000 villages. Again, in so far as prohibition is concerned, there is no likelihood of its being rapidly extended, for the States can hardly afford to lose the present excise revenue of about Rs. 50 crores per annum during the third Plan period. Nor is there any likelihood of any State trading being undertaken on a massive scale, for the financial commitments which it will involve will be far too heavy for the Central and State Governments—commitments which cannot be lightly undertaken without any reference to the ways and means position. Although, thus, these planks have no frightening potentialities, their reiteration in the manifesto is nevertheless inappropriate, because the voters' general support to them might be later taken to justify possible measures of dubious value to implement them, albeit in limited forms, as is now sought to be done by the Maharashtra Government in regard to imposing a ceiling on land.

While thus far some undesirable points in the Congress manifesto have been criticised at some length, some commendable ones would also need to be mentioned. The twin point, namely, that the fast growing population of India is raising new problems and will make it increasingly difficult to raise adequately the living standards of the people and to provide employment opportunities for all and that birth control and family planning, therefore, have assumed great importance, represents a wholesome recognition of realities. It is to be hoped that the final manifesto will spell out in greater detail the measures that will be required to bring down the birth rate in the next five or ten years and seek the voters' specific support for them. If the country-wide election campaign is not availed of for this purpose, the Congress will have lost a unique opportunity for educating the public on the relationship between population, food, employment and standard of living.

Another noteworthy point in the manifesto is "that production of luxury and non-essential articles should not be encouraged." This is followed by the general statement that consumption has to be controlled for increasing the rate of saving for investment. If the first point is to prevail, there will be no justification, for instance, for manufacturing a small car which will be a costly luxury for the lower middle class. If the second point is interpreted to justify any curbs on the production of mill cloth or sugar, it will be a case of enforcing austerity in respect of necessities of universal consumption. That no such austerity is meant but that consumption of only luxury and non-essential articles will be curtailed may have to be more clearly stated. Restraint on necessary consumption either through excessive taxation or through inflation cannot possibly be thought of in this context, if experience during the second Plan is any guide.

Above all, the point made in the manifesto that "any marked progress towards the achievement of a socialist society is inseparably bound up with a rapid rate of economic growth," read along with the statement that "the new social order must preserve the worth and dignity of the individual" and it should be evolved through "democratic peaceful means," gives rise to the hope that the Congress Party will attach greater importance to pragmatism and gradualism in its social and economic policies.

MAHARASHTRA ACTS ON NAGPUR RESOLUTION

THERE is neither social nor economic justification for placing a ceiling on the quantum of agricultural land that a farmer can hold. No equitable distribution of land can be ensured through this measure, because the surplus land that can be had is so small that it is insufficient to vest even a fraction of landless labour with economic holdings. The hunger in this country is not for land. It is for food, clothing and housing; in short, it is for an opportunity to make a decent living. Ceiling on land-holdings is no answer to the problem. There is even less justification for imposing an upper limit on land-holdings from the point of view of securing an increase in production. Indeed, from this point of view, the proposal is a retrograde step, for it will lead to a break up of lands that are being scientifically and economicaly cultivated. Accordingly, to describe this measure as a part of land reform is to misuse the word "reform." It is simply an act of expropriation, designed to keep the Congress Party in power. The compensation proposed to be given is only a pittance and bears no relation to the market value of land or the price paid by the landholder. India is predominantly a country of have-nots, with all adults enjoying franchise. Land ceilings are meant to exploit the natural feelings of this class against the haves and to create among them the impression that the Congress Party is for the masses and is with the masses. The worst sufferers of this piece of expediency for winning votes are not millionaires but the middle class in rural areas which is the backbone of any free society. It is also an act of gross discrimination, because no such limitation is proposed to be placed on holders of any other property. Nor are the principles followed in fixing compensation for surplus land the same as those followed when an industry or a commercial service is taken over by the Government.

Much has been said and written about the injustice involved in the land ceiling legislation. But all that has fallen on deaf ears, because whatever political opposition there is to it is ineffective. Excepting a few independents and the Swatantra Party, all the other political parties are in favour of land ceiling. Indeed, the socialists and communists are for more drastic proposals than those put forward by the Congress Party. Their extreme attitude only helps the Congress to implement its programme, which seeks to water down the property rights of individuals. The victims quietly submit to the pressure of the Congress Party as the lesser of the two evils. Almost every State has come forward with proposals for placing a ceiling on land-holdings and, with General Elections only a year ahead, the necessary legislation will be rushed through where it has not already been initiated. The latest to join this race is Maharashtra. The Government of this State has just published the relevant Bill, known as the Maharashtra Agricultural Lands (Ceiling on Holdings) Bill, 1961.

In fundamentals, the Bill differs from the corresponding legislation in other States. In a few respects, the departure is pleasant and in other respects most unpleasant. To the credit of the Maharashtra Government, it must be said that it has adopted a wider classification of land than most other States and fixed the ceilings on a somewhat liberal scale. It has divided the State into as many as 74 local areas to make allowance for the varying types of land and climatic conditions. The ceiling for dry crop land varies from 84 to 156 acres, depending on the productivity of land. The irrigated lands have been divided into three types, though the same ceiling area has been fixed for the whole State. The ceiling is: 16 acres in the case of perennially irrigated land; 24 acres in the case of double-crop seasonally irrigated land; and 48 acres single-crop seasonally irrigated land. This ceiling is for families consisting of members not exceeding five. For larger families, extra land is allowed to the extent of one-sixth of the ceiling area for each member in excess of five, subject to a maximum of two ceiling areas. A member of family means father, mother, spouse, brother, son, grandson, or dependent sister or daughter and, in each case of Hindu undivided family, a member of such family. It is, therefore, possible that many families will be able to get a ceiling which will cover a substantial acreage. But the defect here is the handsome bonus given to persons who did not practise austerity in their marital life. There could be no greater disincentive to the adoption of family planning methods by people in rural areas where the birth rate is already high. Another defect in the Bill is the provision which says that, as soon as a farmer brings his dry land under irrigation or converts a single-crop irrigated land into a double-crop, he will be subjected to the ceilings applicable to the improved types of land and the surplus land taken away from him. This provision, too, runs counter to the national objective of securing an increase in agricultural production, for a farmer will not be easily inclined to take to irrigation if he has to give away a part of his land.

Since the administration of the land ceiling law will be in the hands of District Collectors, who are already overburdened with innumerable functions, there will be a further serious fall in the standard of government in the interior. The enforcement of law and order will suffer, making way for anarchy. Besides, the powers sought to be vested in the Collectors are so enormous that they are liable to become quite authoritarian in their verdicts. There may also be scope for endless litigation, providing a golden opportunity for lawyers in the mofussils, a development which will by no means add to rural prosperity.

In the matter of compensation, the Maharashtra Government's proposals are unfair and virtually expropriatory, as the price offered bears no comparison to market values, such being related only to the revenue ("assessment") payable to the Government which has remained unchanged for decades. Not only is the rate of compensation niggardly, but the mode of payment proposed is also unsatisfactory. Thus, compensation will be paid in transferable bonds carrying interest at 3 per cent. and repayable in 20 years either in a lump sum at the end of the period or in equated annual instalments. As the rate of interest is appreciably below the prevailing interest rates for State Government loans, a 3 per cent. 20-year issue will straight-away depreciate by 25 per cent. Even a 4 per cent. loan of the Bombay Government repayable ten years hence is now quoted at a discount of 1.75 per cent. If, therefore, the compensation bonds are not to go down in value, they should carry interest at the minimum rate of 4.5 per cent. and be repayable in 15 years.

The most undesirable feature of the Bill is its application to all economically and scientifically managed farms, including sugarcane plantations. When there were strong reports about this move early last month, one could not believe them, for it was incomprehensible that an enlightened Government like the one in Maharashtra, which is fully acquainted with the history of the development of sugar industry in the State and well aware of its notable achievements, would bring forward a proposal that would deal a heavy blow to that industry and, what is more, endanger the whole economy of the State. It is a very painful experience to find that these reports have proved to be quite true; actually, the terms of compensation indicated in the Bill that has now been published are more unfavourable than those mentioned in the first draft. The Maharashtra Government's move, as mentioned in an earlier issue of this journal, runs counter to the Planning Commission's decision to exempt from land ceilings "tea, coffee and rubber plantations, orchards constituting reasonably compact areas, specialised farms engaged in cattle breeding and dairy farming, sugarcane farms owned and operated by factories and efficiently managed compact farms with heavy investments and permanent structures." This is the policy laid down in the second Plan which was approved by Mr. Yeshwantrao Chavan himself as the Chief Minister of the erstwhile Bombay State and as a member of the National Development Council, the highest policy-making body in the country. Further, it was only in October last that this policy was reiterated by the Land Ceiling Sub-Committee of the Planning Commission. Again, it was under the strength of this policy that the Kerala Land Reform Bill, sponsored by the Communist Party when it was ruling the State, was modified by the President of India.

It is true that, in its Land Ceiling Bill, the Madras Government has not specifically exempted sugarcane plantations, but it has at least made a provision for exempting them if a high-powered Commission which would be appointed for this purpose were to recommend such exemptions. There is no such saving clause in the Maharashtra Land Ceiling Bill. In any case, what the Madras Government has done is itself not the right thing. If State Governments are not prepared to follow policies laid down by the Planning Commission and accepted by them, what is the use of planning? And what reliance can the public place on the observations of Ministers? There is no wonder that investors in the Deccan sugar companies have got scared and are trying to cash their holdings even at depressed prices. Is this the way to promote confidence among investors without which there can be no industrialisation under the auspices of the private sector and which the Maharashtra State badly needs for its economic progress? What certainty is there that the tactics adopted for undermining the strength of sugar industry and for going back upon contracts entered into with sugar factories will not be repeated tomorrow in the case of other industries in the name of equitable distribution of wealth, economic power and opportunities?

In the Maharashtra Land Ceiling Bill, there is a close similarity to what Dr. Fiedel Castro has done in Cuba to break up the sugarcane farms in that country. There is no exaggeration whatever in this statement. The object of the Maharashtra Government in applying the land ceiling to sugarcane plantations would appear to be to introduce joint co-operative farming. Here is a ready-made outfit, built up by joint-stock companies through years of hard, pioneering work, which is now proposed to be taken away from them for a song and handed over to joint-farming societies consisting of small landowners, landless workers and technicians working on the plantations. Those who join the societies will be under compulsion to do as directed by the Government and sell the sugarcane to specified factories at prices fixed by the Government. These societies will not have even the virtue of having been formed voluntarily by the farmers themselves. They will be voluntary only on paper, but, in actual practice, they will be the product of expropriation and coercion. There is little reason to think that they will function more efficiently than the joint-stock companies. On the contrary, there is every prospect of (*a*) a fall in the productivity of land that is now sought to be taken over from the companies, (*b*) a severe setback to the growth of sugar industry in Maharashtra, and (*c*) a heavy drain on the financial resources of the State Government which will have to find funds not only for paying compensation to those from whom land is being taken over but also for providing the working capital that will be required by the existing sugarcane farms and for expanding sugarcane cultivation, for all of which money is now being provided by investors in the private sector.

It is wrong to treat joint-stock companies in the same footing as individuals. A joint-stock company is owned by a number of individuals. It is computed that the 12 joint-stock sugar companies in the Maharashtra State have well over 21,000 shareholders and, as these factories have a holding of 99,000 acres, the average holding per shareholder is about 4.67 acres only. A joint-stock company has all the merits of a co-operative society *plus* a high degree of efficiency. It is as democratic an organisation as a co-operative. Further, in some of the sugar companies, the Life Insurance Corporation, a public sector enterprise, is a large shareholder. The workers employed in the sugarcane farms of joint-stock companies enjoy a higher standard of living than their confreres working in private farms in their respective regions. Whichever way one looks at the issue, there is no justifiable case for bringing in the sugar plantations within the mischief of the Land Ceiling Bill. If the Maharashtra Government is unwise enough not to exempt these plantations, it will be, besides earning the kudos for implementing the Nagpur Resolution with a vengeance, opening the floodgates for new demands which it will find difficult to resist. The conferment of ownership of land on landless workers now employed in sugarcane plantations may, for instance, induce the workers engaged in making sugar to ask for a share in the ownership of sugar factories. And this demand can easily spread to other industries and commercial establishments all over India. If the Maharashtra Government fails to understand the implications of mass jealousy which it is unleashing on the society, the other States and the Centre will, it is to be hoped, prevail upon it not to exceed the limits set in the second Plan.

MARKET GOSSIP

Special Deposits Suspended

THE operation of varying reserve ratio, or the special deposit system has been completely suspended by the Reserve Bank of India with effect from the 13th inst. Accordingly, the 25 per cent. of additional deposits over those prevailing as on 11th March 1960 which the banks had to keep with the Reserve Bank will be returned to them. The revocation of additional reserve requirement has been done, with a view to assisting banks further to meet the demand for funds during the current busy season and is in conformity with the Reserve Bank's assurance that it would use this weapon of credit control in a flexible manner and without detriment to production. The exact amount that will be released to banks as a result of this step is not known, but it is estimated to be of the order of Rs. 15 crores. The banks will first use this amount to reduce their borrowings from the Reserve Bank on which most of them are believed to be paying the maximum Bank rate of 6 per cent. The inter-bank call money rate which is now well over 5 per cent. should quickly come down to near 4 per cent., but this will only be a passing phase, unless, of course, the Reserve Bank reverses its present policy of open market operations and starts buying Government securities on an outright basis.

The total withdrawal of this credit restraint has come not a day too soon. Some banks are of the view that it should have come much earlier, as a state of acute stringency had come to prevail after the year-end was over. In fact, one of the big banks is reported to have paid this week as much as 5½ per cent. for inter-bank money repayable in seven days. Evidently, this bank did not prefer to borrow further from the Reserve Bank, as it wished to keep the remainder of its gilt-edged investments free for other purposes.

The banks will now have some relief for a few days, perhaps up to the end of this month. But they will soon have to go to the Reserve Bank, as the peak of the current busy season is yet to be seen. As a next step in the relaxation of credit controls, the banks will naturally look forward to a downward readjustment of the three-tier system of Bank rate. Will the Reserve Bank oblige them as accommodatingly as it has done in regard to special deposits?

Banks' Profits

As in the past, the Devkaran Nanjee Banking Company Ltd. was the first to announce its results for 1960, too. These, as had been expected, show a substantial improvement in profit. Its gross profit has jumped up, from Rs. 15.30 lakhs for 1959 to Rs. 26.20 lakhs. The bulk of this increase has been used to meet the tax liability, the provision for this purpose being as much as Rs. 9 lakhs, as against *nil* last year. The balance has been utilised to strengthen the owned resources of the Bank. The reserves have been augmented by Rs. 8 lakhs, as against Rs. 6 lakhs and the undistributed surplus is kept at a higher level, namely, Rs. 7.86 lakhs, as compared with Rs. 5.69 lakhs a year ago. The Bank has only maintained the dividend at the modest level of 8.78 per cent. gross, or a little over 6 per cent. net.

The Bank of Maharashtra was the next. Its profit also discloses an improvement from Rs. 7.72 lakhs for 1959 to Rs. 9.50 lakhs for 1960 which marks its silver jubilee. A slightly larger sum of Rs. 3.50 lakhs, as against Rs. 3.40 lakhs, has been set aside for taxation and the transfer to general reserve has been raised from Rs. 1.60 lakhs to Rs. 2 lakhs. While maintaining the dividend proper at 9 per cent. (gross), the Directors have proposed a jubilee bonus of 2 per cent. (gross).

The Indian Bank Ltd., Madras, has also reported a higher profit, as will be seen from the details published elsewhere in this issue. This leading bank of South India has only maintained the return to shareholders at 15 per cent. subject to tax.

As we go to press comes the Bank of India's preliminary statement of profit for 1960 and its appropriation. This shows a handsome growth in profit, after a setback for two consecutive years. The profit before taxation is reported at Rs. 103.37 lakhs, an increase of Rs. 20.68 lakhs over that for 1959 which is in refreshing contrast to a fall of Rs. 3.09 lakhs and Rs. 7.70 lakhs in the previous two years. The Directors have raised the dividend by a fourth, from 16 per cent. (gross) to 20 per cent. (gross), including the interim of 7.5 per cent. The net dividend works out at 14 per cent., but this is still less than the 16 per cent. per annum paid for 1958 and 1957. One need not, therefore, rush to the conclusion that the Directors of the Bank of India have been unduly generous to their shareholders. The provision for taxation has gone up from Rs. 18 lakhs to Rs. 25 lakhs. Nothing has been provided for reserves. The amount carried forward is, of course, a shade higher at Rs. 30.85 lakhs, as against Rs. 29.48 lakhs brought in, but it is subject to payment of bonus to the staff.

From the trend of bank profits announced so far, it will be seen that, despite the credit restraints imposed by the Reserve Bank, the banks have done better in 1960 than in the previous year. This is due partly to the intensive utilisation of their resources at slightly higher rates of interest on advances and bills and partly to lower cost of deposits, thanks to the inter-bank agreement.

A Snippet

Who gained by the competition in kerosene started by the Indian Oil Company—a public sector corporation, with the full backing of the Defence Department? Not the consumer, of course, the contrary, he had to pay through his nose for three days or go without it, as this surreptitious competition led to a strike by the bullock-cart drivers who deliver the oil from the storage tanks to retail shops. When one of the private sector oil companies competed with the I.O.C. in the marketing of diesel oil, it was the consumer, mainly a public sector transport corporation, that benefited. In its anxiety to find customers for kerosene, the supply of which is by no means plentiful, what with shortage of foreign exchange, the I.O.C. started giving rebates to middlemen. That brought about the whole trouble and has compelled the private sector oil companies also to follow suit. The I.O.C. is setting a fine example indeed! At this rate, how will it earn enough profit and contribute to the revenues of the Exchequer?

Shareholding in India

One of the remarkable features of the trend in property ownership in the advanced countries in recent years has been the wider diffusion of shareownership. The economic prosperity in these countries, coupled with a desire to protect the real value of savings in an inflationary era, has enabled even people of modest means to join the ranks of investors. The spread of investment habit has also been facilitated by devising new and ingenious methods for attracting the savings of small investors to equities.

In India, however, the investment habit is confined to a very small percentage of the population belonging to the upper income group. But the habit is gradually growing. This inference is confirmed by an interesting analysis of dividend income and its distribution published in the latest (December 1960) issue of the *Reserve Bank of India Bulletin*. The study is based on the data contained in the All-India Income-tax Revenue Statistics published by the Central Board of Revenue and relates to the five-year period 1955-56 to 1958-59.

The analysis shows that both the number of shareholders and the dividend income earned by them increased during the period 1955-56 to 1958-59, the former by 25.5 per cent. and the latter by 48.5 per cent. The total number of shareholders (all classes) was 141,189 in 1958-59, as against 112,471 in 1955-56. Total dividend income aggregated Rs. 75 crores, as against Rs. 50.50 crores in 1955-56. The rise in dividend income does not provide an accurate measure of the spread of investment habit, because the rise may be due to more companies declaring dividends and/or the existing ones declaring higher dividends. The increase in the number of shareholders, other than companies, is, therefore, a better index of wider shareownership. Even this index, however, provides only a rough picture, for there are numerous individual investors who do not send in their tax returns for some reason or other. Further, when data pertaining to 1959-60 and 1960-61 are collected, they will show a marked increase in the number of investors, for it is only since the second quarter of 1959 that individual investors, especially those belonging to the middle class, began to take keen interest in stocks and shares.

The total number of shareholders (exclusive of companies and other concerns assessable at company rate) was 26 per cent. higher at 139,077 in 1958-59, as compared with 110,605 in 1955-56. Individual shareholders, whose number increased by 25 per cent. from 99,948 in 1955-56 to 125,099 in 1958-59, accounted for 89 per cent. of the total. The increase has been higher in respect of salary earners (39 per cent.) than non-salary earners (21 per cent.), indicating that persons with fixed income are displaying increasing interest in stock exchange investments. The following table gives the different categories of shareholders and their relative shares in dividend income in 1958-59, as compared with 1955-56 and the percentage change over the four-year period.

(Dividend income in crores of rupees)

Category of shareholders	1958-59		1955-56		Percentage change	
	No. of shareholders	Dividend income	No. of shareholders	Dividend income	No. of shareholders	Dividend income
Individuals	125,099 (88.6)	39.72 (53.0)	99,948 (88.9)	29.57 (58.6)	25.2	34.3
(*a*) Salary earners	32,802 (22.9)	11.15 (14.9)	23,274 (20.7)	7.64 (15.1)	38.8	45.9
(*b*) Non-salary earners	92,797 (65.7)	28.57 (38.1)	76,674 (68.2)	21.93 (43.5)	21.0	30.3
Hindu undivided families	10,595 (7.5)	4.51 (6.0)	8,598 (7.6)	3.55 (7.0)	23.2	27.0
Unregistered firms and other associations of persons	2,726 (1.9)	3.22 (4.3)	2,059 (1.8)	2.19 (4.3)	32.4	47.0
Registered firms	857 (0.6)	0.94 (1.2)	..	..	..	..
Companies and other concerns assessable at company rates	2,112 (1.5)	26.61 (35.5)	1,866 (1.7)	15.19 (30.1)	13.2	75.2
Total	141,189 (100)	75.00 (100)	112,471 (100)	50.50 (100)	25.5	48.5

Note.—Figures in brackets are percentages to totals.

Income-wise, the percentage increase in the number of individual shareholders in 1958-59, as compared with 1955-56, was the highest (40 per cent.) in the income range Rs. 25,000 to Rs. 1,00,000 while that in the income group of over one lakh of rupees was the lowest, 11.7. This shows that more and more people of modest means are beginning to appreciate the value of placing their savings in shares. A further analysis of data shows

HESITANT TREND IN SHARES

TEXTILES, HOWEVER, IMPROVE TO SOME EXTENT

(From Our Own Correspondents)

BOMBAY, 12*th January*

THE share market was in a vacillating mood practically the whole of this week. Operators were not inclined to extend their commitments either way. They apparently thought it wiser to wait till the outcome of the forthcoming meeting of the National Development Council scheduled to meet at New Delhi next week to finalise the draft third Five-year Plan. They were particularly curious to know the measures that the Council would suggest to fill the larger gap in resources, in view of the proposed expansion of outlay. Fresh investment support was conspicuous by its absence, except in a few select counters, thanks to the concern over the persistently rising trend of production cost in several industries and unrealistic price control policies. The flow of funds into equities was also thin, as a result of many new issues coupled with the acute stringency in the money market and the continued restrictions on bank advances against shares. Business put through was, as a consequence, small, with values generally tending to move down.

Steel shares were irregular. Tata Steels began the week at Rs. 140.50, as against the previous close of Rs. 139.75, and receded to Rs. 138 on Saturday. At lower levels, there was some support and the scrip recovered to Rs. 139.75 today. Indian Irons fluctuated between Rs. 23.40 and Rs. 23 before winding up the week at Rs. 23.12, as against Rs. 23.04 on Thursday the 5th inst. Mukand Irons, after rising from Rs. 22.76 to Rs. 23.24, declined thereafter and touched Rs. 21.24 on the 7th inst. It recovered to Rs. 22.24 on Tuesday but declined again to Rs. 21.52 today before finishing at Rs. 21.76.

Textiles which had suffered losses last week staged a handsome recovery this week. This was due to some buying support induced by the Cotton Textile Consultative Board's recommendation to extend the Export Incentive Scheme upto the end of June next and the Textile Commissioner's notification regarding the allocation of cotton to mills to raise cloth production by 10 per cent. by working extra shifts. Gokaks and Standards advanced by Rs. 7 each to Rs. 173 and Rs. 990, respectively. Centurys picked up Rs. 5 to Rs. 456.50. Svadeshis hardened by Rs. 4.50 to Rs. 227 and Kohinoors by Rs. 4 to Rs. 268. Simplex gathered Rs. 2 to Rs. 162. Tatas rose by 75 nP to Rs. 40, India Uniteds by 56 nP to Rs. 13.64 and Apollos by 8 nP to Re. 1.36. Bombay Dyeings improved from Rs. 59.90 to Rs. 60.40 today. Podars were firm at Rs. 130. Central Indias, however, receded by Rs. 2.50 to Rs. 97, reflecting the disappointment of operators over the working results of the Company for the year 1959-60 which show a loss. Khataus lost a like amount to Rs. 430. New Greats declined by Rs. 2 to Rs. 190. Morarjees shed a rupee to Rs. 313.

Sugar shares continued their downward march on renewed selling pressure due to fears about the disquieting impact of the Maharashtra Government's Land Ceiling Bill. The market took serious note of the Deccan Sugar Factories Association President's statement that the Bill in its present form would throw the sugar industry out of gear. Walchandnagars fell by Rs. 27.50 to Rs. 237.50. Belapurs dropped Rs. 13 to Rs. 316. At one time, they had touched a low of Rs. 285, the subsequent recovery, which had taken up the rate to Rs. 325, being due to short-covering and some speculative buying. Phaltans retreated from Rs. 164 to Rs. 154.50. Operators were disappointed at the cut in dividend to Rs. 12 (subject to tax) for the year ended September 1960, as against Rs. 13.50 for the previous year, following the reduction in the gross profit of the Company from Rs. 32.09 lakhs in 1958-59 to Rs. 24.10 lakhs in 1959-60. Maharashtra Sugars were marked down by Rs. 19 to Rs. 193. Bhopals continued to be neglected at Rs. 29. Changdeos were subdued at Rs. 32.75.

Cement shares came in for some selling and moved down. Thus, Associated Cements declined by Re. 1.25 to Rs. 146.75. Orissas softened by Re. 1.75 to Rs. 13.64. Ashokas shed 12 nP to Rs. 9, Jaipur Udyogs 8 nP to Rs. 11.12 and Dalmias 4 nP to Rs. 11.32. Sone Valleys were quiet at Rs. 4.80. There were good buying enquiries for bank shares, due to hopes of encouraging working results for 1960. Central Banks firmed up by Rs. 2.20 to Rs. 55.50, 'A' shares spurting by Rs. 3.20 to Rs. 59.50 on expectations of higher dividend and rumours of bonus issue. There seems to be no basis for these rumours. Bank of Indias put on Re. 1.75 to Rs. 108.75. Denas rose by a rupee to Rs. 53.50, following its excellent results for 1960. Unions gathered 12 nP to Rs. 6.16. Barodas were fully maintained at Rs. 82, as also United Commercials at Rs. 84.

Among electrics, Andhra Valleys were well fancied, the quotation rising by Rs. 13.75 to Rs. 93.75. Tata Powers gained Rs. 2.50 to Rs. 1,015, while Hydros eased by 75 nP to Rs. 100.25. Ahmedabad Electrics were quiet at Rs. 84. Bombay Suburbans were better by 10 nP at Rs. 83.75 *ex-div.*

Automobile shares tended to look down, notwithstanding the news of higher production in 1960 as compared with 1959. Premiers dropped Rs. 5 to Rs. 159. The Directors of the Company have maintained the dividend for the year ended June 1960 at the previous year's level of 9 per cent. (subject to tax). Hindustan Motors lost 8 nP to Rs. 19.04; at one time today, they were lower still at Rs. 18.76. In the shipping group, Great Easterns declined by 40 nP to Rs. 14.88. Scindias softened by 20 nP to Rs. 14.48.

Engineering shares lacked support. Telcos receded by Rs. 5.50 to Rs. 285.50. Premier Constructions fell by Rs. 4 to Rs. 279.50. Asian Cables lost 50 nP to Rs. 119. Larsen and Toubros shed 25 nP to Rs. 34. Kamanis eased by 12 nP to Rs. 15.12. Alcocks were subdued at Rs. 238. Cooper Engineerings at Rs. 156.50 and Texmacos at Rs. 22.60.

Quite a number of popular miscellaneous industrials suffered a setback this week. Anil Hardboards were hammered down by Rs. 60 to Rs. 292.50. Indian Dyestuffs fell by Rs. 18.75 to Rs. 407.50, Colour Chems by Rs. 12.50 to Rs. 287.50, Adarsh Chemicals by Rs. 11 to Rs. 54, Chemo Pharmas by Rs. 3.25 to Rs. 26.50, Synthetics and Chemicals by Rs. 3 to Rs. 108, and Dhrangadhra Chemicals by Re. 1 to Rs. 112.50. But Poly Chems recorded a rise of Rs. 11.25, today's closing rate being Rs. 218.75. Voltas retreated from Rs. 262.50 to Rs. 254. Wimcos dropped Rs. 6 to Rs. 254. Bombay Burmahs eased by Rs. 550 to Rs. 545.50. Premier Tyres slipped down by Rs. 5 to Rs. 70.50 and Ceat Tyres by Rs. 6.25 to Rs. 211.25. Greaves Cottons receded from Rs. 155 to Rs. 150. National Rayons, however, evoked good support and advanced by Rs. 7 to Rs. 482.

* * * *

Calcutta Stock Exchange

CALCUTTA, 11*th January*

Lack of incentives and fresh support contributed to listless conditions on the Stock Exchange during the week under review. The new issues, which are quite a few in number, have siphoned off funds, and that can be the only rational explanation why, despite the fact that the Congress resolution on planning has not made further inroads in developing and explaining the Congress concept of socialism, activity in the market was at a low ebb. Uncertainty about the forthcoming budget was, of course, writ large on the faces of operators. For it is widely known that the Finance Minister does not think the present tax burden too heavy and it is not yet forgotten that it was at the beginning of the second Plan that Mr. Morarji Desai's predecessor imposed additional burdens to yield Rs. 100 crores per year. The third Plan is about to be launched, and the fact that there is a wide gap between resources and ambition made operators cautious. They were reluctant to enter into commitments. Further, with the hardening price trend throughout the country, it was thought that dividends had not risen proportionately. There were rumours during the week that the deposit impounding scheme was being abolished. Notwithstanding these rumours, it was felt that, with the onset of the busy season and a number of new issues still to come, bank credit would remain tight. The worsening of the international situation was a point of anxiety.

Sectionwise, coal shares were firm on hopes that the World Bank would provide the foreign exchange required for purchase of machinery and equipment in order that production might increase. Jutes were quiet, but a late recovery in a few counters followed the news of a fall in goods in stock with mills. This fall in stocks was taken as an indication that high prices had not distracted buyers. The higher production figures for Indian Iron and Steel Company, Ltd., for December (pig iron 111,516 tons, as against 106,499 tons in November, steel ingots 86,424 tons, as against 76,619 tons, and saleable steel 61,395 tons, as against 59,380 tons) pleased the market, and some replacement buying in Indian Irons was in evidence. The decision of Indian Oxygen Ltd. to issue rights shares in the proportion of two new shares for every five existing shares did not elicit delight, because the issue had been anticipated for long now and, therefore, discounted and also because the premium of Rs. 8 was a great dsappointment. There were several bright spots in the mscellaneous industrials section on interested buying.

As the week closed, coals met with greater attention, as the lower levels were considered attractive against the background of the proposals made by the industry to achieve greater production. While Bengals remained unchanged at Rs. 317, Burrakurs hardened to Rs. 18.81 from Rs. 18.62 to close at Rs. 18.75. Equitables at Rs. 28.12 put on a fractional gain, Dhemo Mains rising from Rs. 7 to Rs. 7.87. Churulias were bought at Rs. 3.37, as against Rs. 3.25 previously to close at Rs. 3.28.

Textiles were dull. Jayshrees moving back to Rs. 13.87 regained to Rs. 14, but Muir Mills sagged to Rs. 58 from Rs. 58.50. Profit-taking saw J.K. Rayons touch Rs. 13.93 from Rs. 14.56 to close at Rs 14.12. Kesorams were fractionally lower at Rs. 26.44, while Dunbars were fractionally higher at Rs. 22.56.

Jutes were listless, and the volume of transactions declined markedly. Howrahs moved down from Rs. 20.12 to Rs. 20, while Ballys remained unchanged at Rs. 185 and New Centrals were quiet at Rs. 20.94. At Rs. 61, Naihattis accounted for a loss of Rs. 3, while, later in the week, Megnas recovered from Rs. 10.34 to Rs. 11.19 and Aucklands from Rs. 153 to Rs. 154. Baranagores eased from Rs. 121.50 to Rs. 119.50 and Ganges were unchanged at Rs. 10.25.

Engineering shares were about firm. Indian Irons opened at Rs. 22.92 and hardened to Rs. 23.40, but closed at Rs. 23.08. On balance, Texmacos at Rs. 22.70 were higher by 30 nP, while Guest Keen Williams declined to Rs. 36.12 from Rs. 36.87 and Jessop & Cos. to Rs. 19.37 from Rs. 19.75. Britannia Engineerings were firm at Rs. 13.12. Jay Engineerings were a shade higher at Rs. 32, as the prospects were thought to have improved.

Some features were recorded in the miscellaneous industrials section. National Pipes and Tubes continued to meet with buyers at the higher rate of Rs. 21.12. Rallis, after being higher at Rs. 134.50, eased to Rs. 132.75. Indian Cables closed fractionally higher at Rs. 31.81, and Indian Oxygens were firm at Rs. 39.62. General Tyres were admitted for transactions and changed hands at Rs. 5.28, as against the paid-up value of Rs. 5. Orient Papers gained to Rs. 40.20 from Rs. 39.30. Union Carbides were in keen demand on hopes of further expansion, and the rate gained to Rs. 47.62 from Rs. 46.12.

* * * *

Madras Stock Exchange

MADRAS, 11*th January*

Distinctly easy conditions prevailed on the Stock Exchange during the week under review. Fresh support from both investors and professional operators was lacking, with the result that the volume of transactions actually put through was moderate in the cleared as well as cash section. Market circles seemed to be awaiting the trend of the outcome of the forthcoming meeting of the National Development Council, scheduled to be held at New Delhi next week, to finalise the outlay and resources position of the third Plan. Teas were subdued on reports of growing competition in world markets. Coffees were also subdued on apprehensions regarding disposal of heavy coffee surplus. Rubbers encountered some selling. Textiles suffered a setback in the absence of any new encouraging news regarding offtake for domestic consumption and export. Sugars were listless on fears of a possible downward trend of sugar prices, as a result of the surfeit of supplies. Miscellaneous industrials too were dull.

In the tea section, Nonsuchs declined by 25 nP to Rs. 26.25. Blue Mountains lost 9 nP to Rs. 3.94. Periakaramalais shed 3 nP to Rs. 3.38. Devasholas were quiet at Rs. 30.50, as also Haleyburies at Rs. 14 and Kil Kotagiris at Rs. 5.30. Coorgs were quoted at Rs. 5.43. An extraordinary general meeting of the Company will be held on 1st February next to consider the proposal to sell the coffee area now owned by the Company to a wholly-owned subsidiary, Titmaty Coffee Company.

Among coffees, Coffee Lands suffered a loss of 60 nP to Rs. 18.90. Ouchterlony Valleys dropped 2 nP to Rs. 4.55. Mysore Coffees changed hands at Rs. 5.34, Amalgamateds at Rs. 13.25 and Rajendras at Rs. 14. Consolidated Coffees fell from Rs. 22.50 to Rs. 22.35, but recovered to close at Rs. 22.55.

Rubbers tended to move down. Rajagiris and Travancores receded by 50 nP each, the former to Rs. 19.75 and the latter to Rs. 10.40. Thirumbadis eased by 2 nP to Rs. 1.49. Cochin Malabars, after rising from Rs. 6.95 to Rs. 7, fell to Rs. 6.95. Malankaras and Midlands were neglected at Rs. 18 and Rs. 11.40, respectively.

In the textile section, Dhanalakshmis were marked down by Rs. 7 to Rs. 223. Pankajas gave way from Rs. 69 to Rs. 63. Coimbatore Pioneers slipped down by Rs. 3 at Rs. 344 and Coimbatore Cottons by Rs. 2.50 at Rs. 158.50. Buckinghams retreated from Rs. 198 to Rs. 196.50. Lakshmis eased by a rupee to Rs. 148. Bangalore Woollens lost 75 nP to Rs. 196.75. Travancore Rayons lost a like amount to Rs. 32.25. Radhakrishnas dropped 33 nP to Rs. 29.45. Cannanores were quiet at Rs. 148.70, Metturs at Rs. 369, Premiers at Rs. 225 and South Indias at Rs. 147. But Maduras were better by 15 nP at Rs. 35 on hopes of better dividend. Kotharis picked up 5 nP to Rs. 11.80.

Bank shares were easy. Indian Overseas drifted lower by Re. 1.50 to Rs. 177.50. Indians too receded by a rupee to Rs. 169. Andhras were neglected at Rs. 100, Canaras at Rs. 83.50 and Pandyans at Rs. 33. Indians A, however, rose by 50 nP to Rs. 170.50.

Among electrics, South Madras were unaltered at Rs. 9.90. The Company's 5½ per cent., taxable debentures for Rs. 2 lakhs will be redeemed at par on 1st April 1961, after which they will cease to carry interest. Vellores were unchanged at Rs. 12.90, Cochins at Rs. 10.20, West Coasts at Rs. 13.10, and Salem Erodes at Rs. 11.66.

Among sugar shares, Cauverys fell by Rs. 6 to Rs. 140.50. East India Distilleries lost Re. 1.50 to Rs. 41 and Travancores 12 nP to Rs. 10.50. Deccans declined by 10 nP to Rs. 14.45. Mysores were done at Rs. 60.50, same as last week. K.C.Ps were fancied at Rs. 26. The Company proposes to issue to shareholders on the list on 31st January 1961, 100,000 equity shares of Rs. 10 each at par, at the rate of 17 shares for every 100 shares held. United Breweries, however, spurted by Rs. 10.50 to Rs. 114.50 on special support. Indias scored a gain of 20 nP to Rs. 12.50.

In the miscellaneous section, Textools fell by Rs. 5.50 to Rs. 186. Western India Plywoods moved down by Rs. 3 to Rs. 241. Among chemicals, Mysore Fertilisers receded by 70 nP to Rs. 11.15 and F.A.C.Ts by 17 nP to Rs. 9.28. Mysore Chemicals and Travancores were dull at Rs. 26.10 and Rs. 15.50, respectively. Among cements, Indias shed 2 nP to Rs. 5.83. Orissas were unaltered at Rs. 14.90, so also Andhras at Rs. 9.90. Among others, Aluminium Industries declined by 8 nP to Rs. 21.88. Ashok Leylands were unchanged at Rs. 7.90.

NEWS IN BRIEF

ASHOK Leylands Ltd. of Madras has just introduced a suggestion scheme modelled on the lines of that at the parent British company of Leyland Motors Ltd. Cash awards will be made monthly by a special committee, under the scheme.

An agreement, covering a loan of $50 million for the purchase of capital equipment for India's third Plan from the U.S., has been signed between the Governments of the two countries. The loan will be channelled through the U.S. Export-Import Bank.

The Government of India has decided to take over the Kolar gold mining undertaking in Mysore from the State Government. The mine was nationalised in 1956. Meanwhile, plans are afoot to undertake intensive exploitation of the mines.

Oil has been struck in a new well at Rudrasagar in Assam at a depth of two miles below the surface, according to Mr. K. D. Malaviya, Union Minister for Oil and Mines. No estimate of the quantity of oil that can be produced from the new well can be made, without further exploratory drilling.

The foundation-stone of the first watch factory of India to be built at Bangalore in the public sector as an adjunct to the Hindustan Machine Tools Factory, will be laid by Mr. Manubhai Shah, Union Minister for Industry, on the 28th inst. The Citizen Watch Company of Japan is collaborating in the project.

The cotton textile mills' production in November 1960 is provisionally placed at 148 million lbs. of cotton yarn and 427 million yards of cotton cloth. At the end of November 1960, the composite mills of the cotton textile industry carried an estimated total stock of 381,000 bales of cloth (1 bale =1,500 yards), comprising 190,000 bales of unsold cloth and 191,000 bales of cloth sold but not lifted.

An expert committee has been set up by the Union Ministry of Works, Housing and Supply to suggest measures for more effective eradication of malpractices and corruption prevailng in the Central Public Works Department. The terms of the Committee include an assessment of the adequacy of the measures that are being taken for the elimination of corruption and steps to be taken for their further improvement.

The existing *ad hoc* price agreement between the Government of India and the oil companies, which is due to expire at the end of March next, has now been extended by three more months. The extension is made because the Oil Prices Committee (Chairman: Mr. R. K. Damle) is likely to take a longer time to prescribe an alternative long-term formula for fixing the prices of petroleum products.

The Life Insurance Corporation of India has extended the scheme for the grant of loans on mortgage of property to include Ahmedabad, Kanpur and Bangalore also. The minimum amount of loan given to one borrower will be Rs. 25,000 and the maximum is fixed at Rs. 5,00,000. The scheme, which was introduced last year, now covers only the cities of Bombay, Calcutta, Madras and Hyderabad.

Exports from India during the month of November 1960 were higher at Rs. 62 crores, as against Rs. 56 crores in the previous month and Rs. 61 crores in the corresponding month of 1959, while imports were lower at Rs. 69 crores, as compared with Rs. 73 crores and Rs. 78 crores, respectively. Consequently, the adverse balance of trade was to the extent of only Rs. 6.71 crores, as against Rs. 17 crores each in October 1960 and November 1959.

The inter-State movement of inorganic fertilisers, except that made in accordance with a permit issued by the Central Department of Agriculture, has been banned by the Government of India. The fertilisers covered by the order include sulphate of ammonia, urea, ammonium sulphate nitrate, calcium ammonium nitrate, and ammonium nitrate. Another order permits the regulation of inter-district movement, if a State so desires, but, in such cases, the prior permission of the Centre will have to be obtained.

The 74-mile Akola-Amalkhurd section of the Central Railway was opened to passenger traffic last week by Mr. Jagjivan Ram, Union Minister for Railways. The new rail-link provides for the first time an alternative metre-gauge channel for the movement of traffic between the north and southern parts of India. Besides, it opens up new areas of Vidarbha which have not been hitherto served by rail and provides an all-metre-gauge link between Madhya Pradesh, Vidarbha, Marathwada and Andhra Pradesh.

The Employees' Provident Funds (Amendment) Act, 1960 came into force on 31st December 1960. The amended Act provides, among other things, for the extension of the benefit of compulsory provident fund to establishments employing 20 or more persons. Hitherto, this benefit was confined to establishments with 50 or more persons. Provision has also been made to ensure that the establishments once covered under the Act do not go out of the purview of the Act because of a reduction in their employment strength, except where the strength is reduced to less than 15 and remains so for a period of one year continuously.

The Kerala Government has finalised arrangements for the issue of long-term loans to small-scale rubber holdings of not less than ten acres. This facility will be made available to private individuals who own lands suitable for rubber cultivation and also to those who come into possession of forest land auctioned by Government. The loan will be limited to Rs. 750 per acre and disbursed in six instalments. It is estimated that 14,000 acres of private land and 6,000 acres of auctioned reserve forest land will be brought under rubber annually for the next five years under this scheme. 100,000 acres of land is expected to be brought under cultivation of rubber by the end of the third Plan.

The Planning Commission has approved of a proposal to enable the public to hold minority shares in the public sector industrial ventures. The proposal was put forward by a panel appointed by the Commission. It is said that the shares of industries in the public sector, now exclusively held by the Government, will be offered to the public upto 20 to 25 per cent. On an experimental basis, the scheme will be introduced in public undertakings which are making profit now, such as Hindustan Machine Tools at Bangalore and Antibiotics Factory at Pimpri. If the proposal is endorsed by the Government, the public sector industrial ventures, which are now private limited companies, will be converted into public limited companies. Such shares are likely to be included in the lists of important stock exchanges.

With the output of cars, commercial vehicles and jeeps at 5,073 in December 1960, the whole year's production reached the peak level of 52,115, as against 36,923 in 1959 and 32,138 in the first year of the second Plan (1956). A break-down of the 1960 production shows that the second Plan production target in respect of jeeps has been exceeded and in the case of passenger cars, the target has been virtually reached. The output of motor cycles, scooters and auto-rickshaws was 17,375 in 1960 which was more than double that of the previous year. In 1956, production of such vehicles in the country was only about 6,300. The rise in production in 1960 was achieved within the same allocation of foreign exchange as in 1959. The automobile ancillary industry also made considerable progress in production, which in 1960 was of the order of Rs. 10 crores, as against only Rs. 50 lakhs in 1951.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and Central excise duty paid on raw materials used in the manufacture of electrical accessories, cigarettes, pipe or cigarette tobacco, fluorescent lamps, matches, articles made from aluminium circles and sheets, petrol pumps, gas plants, fabrics containing noil yarn and silk yarn, air compressors, flashlight cases, coir products, micanite or built-up mica, r.s. pilfer proof closures, flat files fitted with clips and oiled coir ropes. Besides, changes have been made in the rates of drawback for steel products, plastic goods, fabrics, etc., made of artificial silk, mixed total fatty acid obtained from coconut oil, tea chests and jute manufactures. Alterations have also been effected in the items relating to mixed fabrics containing terylene, glassware, coffee, electrical accessories and artificial teeth. Further, the item of "crown corks" has been transferred from first schedule to the second schedule (Brand Rates) of the General Drawback Rules.

The Railway Board proposes to make available to foreign tourists visiting India in the current year a first-class "travel-as-you-please" ticket for Rs. 495, as part of the Government of India's drive to popularise tourism during the "Visit the Orient—Year 1961" programme, sponsored by the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.). Under the scheme, a foreign tourist, after the production of a valid certificate from any of the tourist offices run by the Government of India, can purchase a "travel-as-you-please" ticket for air-conditioned and first class travel valid for a period of 30 days for a lump-sum payment of Rs. 495. Children above three but under 12 are entitled to half concession. Besides this, the foreign tourists have also been allowed to travel by air-conditioned class on payment of fare at 25 per cent. below the basic fare. It may be noted that the number of foreigners who visited India in 1959 was 109,464, as against 92,202 in 1958. The total foreign exchange earned from tourists during 1959 amounted to Rs. 20 crores.

From Abroad

The U.S. outflow of gold in 1960 aggregated $1,619 million, as against only $1,078 million in 1959. At the end of December last, the total gold holdings of the U.S. stood at $17,837 million.

The merchant shipping fleets of communist countries are growing rapidly. This is disclosed by the Royal Netherlands Shipowners Association in its latest annual review. The Russian fleet, which stood at 3.4 million registered tons in mid-1960, is expected to reach as high as 5.6 million tons by 1965. The increase in Soviet tonnage since 1939 comes to 160 per cent., as against only about 50 per cent. (to 66 million tons) attained by the tonnage of non-communist countries. In the same period, the fleet of underdeveloped countries in Africa, the Middle East and the Far East rose by only half-a-million tons to 4 million tons.

The U.S. Development Loan Fund has approved of a credit of $130 million, the single largest credit ever made by the Fund, to Turkey. The loan will be used for financing the establishment of a $240-million iron and steel works at Eregeli in collaboration with U.S. companies, including Koppers, Inc., Westinghouse, Blaw Knox and International Combustion. They will provide $12 million. Some French and Italian interests are expected to contribute $20 million, the balance being met by the Turkish Government and local industrialists. The plant, which is expected to be completed by the middle of 1964, will have an initial capacity of 268,000 tons of rolled products, including 50,000 tons of tinplate and also 110,000 tons of imports for use at the only other existing iron and steel works at Karabuk. The final annual capacity will be one million tons.

The total number of telephones in use throughout the world rose to 133.6 million in 1959, a gain of nearly nine million over the previous year, according to the 1960 edition of *The World's Telephones*, released by the American Telephone and Telegraph Company (Bell system). More than half of these phones are in the U.S. The U.S. had 70.82 million phones, or 39.5 per 100 persons at the end of 1959. Since 1950, the number of telephones in the world has almost doubled. Phones in the U.S. increased by 74 per cent. during that period, while in Asia, the number of phones more than tripled. In Europe and South America the number doubled.

Total expenditure on scientific research in Great Britain during 1958-59 was £478 million, about 40 per cent. more than was spent in the three previous years. This represented about 2.3 per cent. of the gross national product, comparing with about 2.7 per cent. in the U.S. Excluding research for defence purposes, the U.K. expenditure doubled in the three years to £243 million, about 1.25 per cent. of the gross national product, or roughly the same as the U.S. figure. About two-thirds of the research was paid for out of public funds, but more than half of it was carried out by private industry working partly under Government contract. Government research had risen more sharply than that of industry, though there had been a 6 per cent. increase, to 29 per cent., in the amount of finance coming from private sources. Research for manufacturing industries had cost £265 million with science-based industries, such as aircraft construction and chemicals spending a far higher proportion than the traditional industries.

The world rice situation in all its major aspects is scheduled to be reviewed at the fifth session of the F.A.O. Consultative Sub-Committee on the Economic Aspects of Rice, to be held at New Delhi from the 13th to 20th inst. The Sub-Committee of the Committee on Commodity Problems will also take stock of the crop estimates for 1960-61 and trade outlook for 1961. It will study trends in supply and demand for rice, analyse the fluctuations in international trade and prices and discuss methods of reducing instability in them. National marketing policies, marketing problems of rice and its by-products and improvements in statistical and economic information regarding rice and its utilisation will be examined at the meeting. An international exhibition of different grades of milled-rice will be a feature of the conference. About 50 delegates from 20 countries are expected to participate.

The gross national product of West Germany rose by 11 per cent. to DM 274,200 million (at current prices) in 1960, as compared with the previous year. During the year, German development aid, both private and Government, amounted to DM 1,306 million, of which DM 744 million were given bilaterally and the rest to international institutions. The total includes both grants and credits. The Federal budget reached an all-time high of DM 41,900 million for the year, as also Federal taxes which were DM 36,036 million. Another all-time high was social security expenditure, amounting to DM 35,600 million, a rise of 10.2 per cent. over 1959. Of this, nearly 50 per cent. was paid for old-age, disablement and survivors' pensions. Foreign long-term investments in the country amounted to DM 1,137.6 million in the first six months of 1960, a level which is higher than that for the whole of 1959 (DM 924.7 million). West German long-term investments abroad rose to DM 1,900.7 million in the first half of the year. This amount is DM 280 million more than the average for the same period in 1959. The *per capita* income of the working population rose by 8.8 per cent. over the previous year and personal savings by 10 per cent. and reached 897 marks per head, while the cost of living index rose by only 2.5 per cent. to 123 (1950=100). Foreign trade continued to expand, with imports rising faster than exports. Imports were higher by 23 per cent. at DM 42,339 million and exports by 17 per cent. at DM 47,179 million. Industrial production increased by 11 per cent.

PERSONAL

MR. N. M. Wagle, Managing Director of Greaves Cotton and Co., Ltd., has been elected President of the Bombay Chamber of Commerce and Industry for the year 1961-62.

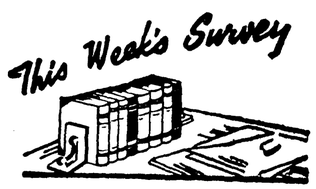
Mr. S. P. Chambers, Chairman of the Imperial Chemical Industries Ltd., London, will be arriving at Calcutta at the end of this month on a two-week tour of India.

Mr. D. N. Shroff and Mr. S. M. Mehta have been elected Chairman and Vice-Chairman, respectively, of the Silk and Art Silk Mills' Association Ltd., Bombay, for the current year.

Mr. H. L. Khanna, Deputy Managing Director of the British India Corporation Ltd., Kanpur, has been elected President of the Upper India Chamber of Commerce, Kanpur.

Mr. Nawab Ali Yavar Jung, Ambassador of India to Yugoslavia, has been appointed Ambassador of India to France. He is expected to take charge of the new assignment next month.

Mr. B. F. H. B. Tyabji, until recently Ambassador to West Germany, has taken over charge as Special Cabinet Secretary, *vice* Mr. Y. D. Gundevia who has become the Commonwealth Secretary. Mr. M. J. Desai, the previous Commonwealth Secretary, has been appointed Foreign Secretary. He succeeds Mr. S. Dutt who has been appointed Ambassador to Moscow *vice* Mr. K. P. S. Menon, who is due to retire shortly.



PROFESSION AND PRACTICE

SAYS the Chief Minister of Andhra to industrialists intending to start ventures in that State:

> Reduction in sales tax on locally manufactured industrial products and lowering of power rates are two of the steps under consideration for attracting new enterprises to the State.

One company which was in distress about two years ago in Andhra Pradesh was Sirsilk Ltd. (whose management had been taken over by Birla Brothers Ltd. in 1953) in which the State had a substantial financial interest. The Tariff Commission was asked by the Government of India to fix fair prices for acetate yarn produced by Sirsilk, and the Commission's report published in June 1959 provides interesting material to indicate that, while much of the malaise from which the Company was suffering was due to its peculiar capital structure and indebtedness to the State Government, both inherited from inception, part, at least, was due to increase in the cost of power alcohol used as raw material and a heavy excise duty on the same product needed for manufacture of acetic acid, and that it was within the competence of the Andhra Government to afford relief to the Company on both counts. The Tariff Commission recommended that the Andhra Government should reduce the price of power alcohol to 87 nP per gallon (in accordance with the recommendation of the Alcohol Committee appointed by the Government of India in 1955), as against a calculated rate of Rs. 1.63 per gallon (inclusive of gallonage fee and excise charges) which the Company was under notice to pay. The Commission also recommended that a threatened excise duty of Rs. 70 per gallon on alcohol used for acetic acid manufacture should be withdrawn to enable the Company to employ its plant to full capacity, as, otherwise, the acid was unsaleable. The Government of India accepted the recommendations; it was for the Andhra State Government to implement them in due course, and it is not known if they did. This case is of relevance in the context of the anxiety of the State Government to create favourable conditions for industries to be established in the State and illustrates the need for Governments' fiscal policies to be integrated with their solicitude for industrial development. There should be no divergence between profession and practice at all levels of a State administration. The best incentive for new entrants into States will be the happy experiences of old units already established, and any case of avoidable distress to the latter will be a sure deterrent to the enthusiasm of the former.

HINDUSTAN SHIPYARD

The Hindustan Shipyard has, as of 1959-60, an issued and paid-up capital of Rs. 5.60 crores, of which shares of the value of Rs. 4.55 crores are held by the Government of India and the balance of the shares of the value of Rs. 1.04 crores by the Scindia Steam Navigation Company, Ltd. It is seen from the speech of Mr. G. L. Mehta, Chairman, at the eighth annual general meeting of the Hindustan Shipyard Ltd., that "the question of releasing the capital invested by Scindias in the shipyard is now engaging the attention of Government." This information should not be startling in the context of the continuing poor financial performance of the Shipyard and Scindias' own pressing need for finance for developing its shipping service. In 1957-58 and 1958-59, it may be recalled, this enterprise incurred net losses of Rs. 4.8 lakhs and Rs. 4,764 respectively. It is only in the year under review that its working has resulted in a small net profit of about Rs. 69,000. Even this small profit is stated to be due to the profit made on the construction of certain items of small craft. But for the subsidy, provided by the Government of India to cover a part of the cost of ships built in the yard, the results would have been, and will continue to be, far worse. The production costs of Hindustan ships continue to be high, while the world prices of ships continue to be much lower. Although the prospects for a fall in the cost of production of ships in the Vizag shipyard are somewhat encouraging, as evidenced by some improvement (in 1959-60) in productive efficiency in terms of the number of man-hours spent in processing a ton of steel weight on hull construction and in terms of the number of man-hours required in processing a unit of materials other than steel on the outfit, it is extremely doubtful if the need for cost subsidy will be eliminated in the near future or whether the Shipyard will make such profit as will provide a reasonable return on share capital.

Mr. Mehta's speech is notable for bringing out the unsatisfactory character of the present procedure for fixing the price of Hindustan ships. It is unsatisfactory, because "experience has shown that the correct ascertainment of the U.K. parity price and its adaptation for fixing the price to be paid by the Indian shipowners has been a complex matter." Nor will a different procedure such as the one suggested by Indian shipowners, namely, that pricing of Hindustan ships be done at the lowest world price, be any less unsatisfactory, for the Shipyard would be in no position to ascertain the world parity price when it has found it difficult to ascertain correctly even the U.K. parity price. Mr. Mehta's suggestion is that the price payable for vessels should represent a certain percentage of the cost. But the difficulty here, as he himself has visualised, is that the shipowners would like to know the precise financial implications of a percentage formula when placing an order. This would involve a prior assessment, by the Shipyard, of the estimated cost of its ships. Mr. Mehta's view that the solution suggested by him is a more practicable one is not quite convincing, for the shipowners intending to place orders can still bring into the picture what, according to their ascertainment, is the world parity price. So long as the cost of Hindustan ships continues to be much more than the price of ships in world markets, some kind of reference to the latter will be unavoidable. Ultimately, it can only be in the nature of a process of higgling and bargaining between the Shipyard and the shipowner, the excess of the estimated cost over the price settled between the two parties being covered by the Government subsidy as hitherto—a subsidy which, incidentally, has come to as much as Rs. 1.14 crores on the construction of the four vessels which were completed and delivered during 1959-60 alone.

The expectation of Hindustan Shipyard that shipowners should be generous enough to pay something more than the cheapest world price has no reasonable chance of being fulfilled at a time when there is lack of orders and when the shipping companies themselves are passing through hard days on account of low freight rates. The fear that the yard would receive a setback, if firm orders for at least two ships were not secured immediately, is, therefore, real. It is recognised by the Board of Directors of the Shipyard that the inclination of Indian shipowners to place orders abroad for their ships at cheaper prices and with quicker deliveries is understandable. Still it has made an appeal, in the name of long-term national interest, to shipowners to take a broader view of this matter and co-operate with the Shipyard. This is, indeed, a pathetic appeal, for the shipowners themselves are frantically appealing to the Government for more and still more assistance to keep themselves alive. If this is the state of affairs relating to the only shipyard which has been working for quite a number of years now, the likely fortunes of a second shipyard proposed to be built at Cochin during the third Plan period may be readily imagined.

ELECTRIC FANS

Electric fans have the distinction of being one of the few young industries in India which have made a determined break through in the highly competitive world markets. It is, indeed, no small achievement that, fighting against heavy odds, the industry has exported its products to no less than 53 countries, including the U.K., which till recently was the principal supplier of electric fans to India. Most of the countries that bought Indian fans, however, belong to Asia, the Middle East and Africa. But, even in these countries, there was serious competition from the highly developed European countries, such as the U.K., West Germany, and also Japan. During the ten months ended October 1960, exports of fans amounted to Rs. 67.29 lakhs, which was higher by almost 114 per cent., as compared with the corresponding period in 1959. Mr. Mohanlal Kathotia, Chairman of the Fan Makers Association, in his address at the annual meeting of the Association held at New Delhi this week, expressed the view that there was scope for further promotion of exports, "provided a more determined and purposeful effort is made." He, however, made no bones about the fact that Indian publicity abroad is poor and personal contacts, so very essential in export trade, are not as they should be. Given good publicity and experienced selling agents who can organise satisfactory after-sale service, Mr. Kathotia observed, Indian fan makers could secure a substantial part of the foreign market. Organised efforts by the industry are essential to solve these difficulties. The Association itself will do well to see how best it can enlist the co-operation of its members for promoting collective action in respect of overseas propaganda and provision of appropriate after-sale service, which are essential for popularising Indian engineering goods abroad. It can very conveniently take a leaf from the Japanese book.

The industry has registered steady expansion during the past few years not only by increasing the output but also by devoting much time and resources for technical improvements. During the first seven months of 1960, the total number of fans produced in India was higher at 556,000, as compared with 409,500 in January-July 1959. This means that the current production is running at an annual rate of about 960,000 fans, as against the actual output of only about 290,000 fans in 1955-56. Although this performance is quite impressive, Mr. Kathotia sounded a note of warning which should serve to alert the *entrepreneurs* in this field against any sense of complacency. He drew attention to the fact that engineering technology is fast changing and the domestic industry has, therefore, to keep abreast of the new developments and adapt itself accordingly. He urged the manufacturers to improve further the standard and efficiency of fans, particularly table and miscellaneous fans, by using modern methods. This will help reduce the cost of production and thereby raise not only the competitive capacity of the industry in world markets but also tend to create a substantially larger domestic market. The domestic demand is bound to go up, in view of the development of power generation, improvement in standard of living, increased industrial activity, etc. The domestic demand is exected to go up to 2.5 million by the end of the third Plan, the whole of which is expected to be met from indigenous production.

The future development of the industry, however, will be conditioned by the availability of adequate raw materials of good quality. The supply position of such raw materials as electrical steel sheets, copper, nickel and chromium, has been far from satisfactory. The shortage of ball bearings, an essential component, has also adversely affected the production programmes of several units. Mr. Kathotia, therefore, called upon the Government to arrange for the establishment of at least one more large-scale unit for manufacturing ball bearings. For the time being, however, he has suggested that the Government should allow imports of ball bearings in adequate quantities. Another point made by Mr. Kathotia was that the imposition of excise duty on aluminium sheets and ingots had led to an increase in the cost of production of fans and thereby reduced the competitive capacity of the industry, especially in foreign markets. There is no sufficient reason why the Government should not exempt the fan manufacturers from the payment of excise duty on their requirements of aluminium, for there is already an excise duty on the finished product. All talk about export promotion will be meaningless unless adequate incentives are given at least to those industries which have proved their capacity to earn the much-needed foreign exchange for the country.

WORLD WHEAT

A welcome recommendation of the International Wheat Council which has received comparatively little notice in this country is that the excess supplies of wheat be distributed as food assistance to developing nations. Such distribution will undoubtedly help several countries which are today faced with a critical food shortage and which cannot afford to utilise the limited foreign exchange resources for importing foodgrains, because of the pressing need to secure many other essentials required for economic development. From the point of view of the producing countries also, the suggestion is a very sensible one, in that it will go a long way towards not only reducing the huge surplus stocks of wheat but also avoiding a more severe imbalance in the world wheat situation in coming years as a result of the persistently rising trend of production.

As it is, the aggregate world supply of wheat in excess of effective demand amounts to as much as 60.0 million tons, or about 60 per cent. more than one year's total world consumption. This would have been much more but for the Government-assisted exports to the less developed areas which, in 1960, amounted to over 10 million tons, same as in 1959. The supply is expected to be higher still at the end of the current year, following the marked rise anticipated in output. The 1960-61 world wheat crop (excluding mainland China) will be the second largest on record, with total production at 221.0 million tons, as against 215.0 million tons harvested in 1959-60, according to the latest forecast made by the Wheat Council. This quantity, together with the carry-forward stocks of 52.9 million tons from the 1959-60 crop, gives a total available supply of 273.9 million tons, which represents an increase of 5.4 million tons as compared with the previous season supply of 268.5 million tons (production of 215.0 million tons plus carry-forward stock of 53.5 million tons). When there is such an abundance of supplies, it is, indeed, curious that world wheat prices continue to rule pretty high. The latest available quotation for Canadian wheat (March shipment) at Chicago is 212¼ cents per bushel, as against 204⅞ cents a year ago. The Canadian Wheat Board's export price (in store Fort William or Port Arthur) of No. 1 Northern Manitoba now stands at 168¼ cents per bushel, as against 166 cents this time last year.

The major wheat producing countries, especially Canada, Australia and the U.S., can certainly afford to step up Government-assisted exports to the less developed areas as well as to lower the prices of wheat sold on commercial basis. The Government-assisted exports will be advantageous to the producing countries themselves, inasmuch as they will, as the Wheat Council has aptly stated, lead to an expansion of imports by the developing countries on a purely commercial basis sooner or later. Simultaneously with the adoption of the aforesaid measures, the wheat producing countries must examine the feasibility of reducing the high level of support prices. Such a reduction is, of course, likely to cause some economic dislocation inside the producing countries, but it cannot be avoided. If, however, a reduction in price is absolutely not possible, the more highly developed countries and the less economically producing nations must at least agree to overall cuts in acreages sown to wheat and help the more backward parts of the world to produce more wheat by supplying them with fertilisers, tractors and other means for raising the productivity of agriculture. This they can easily do, as they will have a surplus of these when they curtail their wheat production.

CO-ORDINATION OF AID

Reports from London indicate that official thinking in Britain is crystallising in favour of the creation of a new Government Department to co-ordinate economic and technical assistance provided by the U.K. to underdeveloped countries, especially those with which Britain has special relationships. Although it cannot be said that the idea has been accepted in principle, the Government is said to be favourably disposed towards it.

Those who favour a new department consider that the sooner it is established the better, in view of the probable reappraisal of the development aid by the new Administration in the U.S. They argue that, if a new department could be established in time in the U.K., the chances of channelling American money behind British efforts in the technical assistance field would be substantially higher. It is also felt that, as Britain's capacity to give aid is limited, the field in which Britain can make its greatest contribution to the development of underdeveloped countries is technical assistance. It has the men, the experience and the expertise. If American and West German money could be harnessed behind British skills that, it is argued, would be an ideal arrangement.

Since technical assistance is as much needed by underdeveloped countries as capital equipment, the emphasis on it is welcome. But this argument proceeds on the assumption that Britain has a surplus of technical man-power which it can freely spare for export to the needy countries. This assumption, however, is not fully supported by the facts of the situation. That apart, the stress on technical assistance should not lead to the playing down of the importance of capital exports by Britain. It is true that Britain has been doing its best, in spite of its own difficulties, to aid underdeveloped countries. For instance, the annual rate of overseas aid, which was £80 million in 1957-58, was raised to about £130 million in 1959-60. In addition to this, there is private investment abroad estimated at about £100 million a year, which is a major factor in assisting the less-developed countries. But measured against the needs of the underdeveloped countries and its own national income, these sums, though substantial in themselves, are far too small. It is to be hoped that neither the emergence of new industrial countries with a surplus of capital nor its own insatiable desire for more and more prosperity will prompt Britain to cut the quantum of aid it now provides. Britain and also other developed countries, which have attained the goal of affluent society, that is, a Welfare State with full employment and high living standards, should pause for a while and divert a part of their savings to investment in underdeveloped countries, so that the gap between the have and have-not nations in the free world can be narrowed, at least to some extent, and the scope for spread of Communism minimised.

TECHNICAL EDUCATION IN BRITAIN

A scheme for a thorough overhaul of technical education in Britain has been blueprinted in a White Paper on the subject published by the British Government on the 5th inst. It envisages a major reorganisation of technical education to match the industry's growing needs for technicians, craftsmen and operatives. The scheme seeks to correct the two main defects in the present system, namely, the difficulties of transition from school to technical college and the wide gap between the training of the highly trained technologists and the technical assistant. In fact, for many industries, the lack of properly trained technicians is said to be a major handicap.

Under the existing system of technical education in Britain the largest group of students attending technical colleges are young employees and apprentices who are released by their employers for study usually on one day a week. This is often supplemented by attendence at evening classes. A wide variety of craft courses is available for young workers in various trades and occupations leading to appropriate qualifications at the end of a course lasting three to five years. Courses of a more professional character, which are suitable for technicians or for those who aim ultimately at a membership of a professional institution, are also provided, leading to the National Certificates approved by joint committees consisting of representatives of education departments and the appropriate professional body. Full-time courses are taken by a large number of young students who leave school to enter secretarial or clerical work and also as an introduction to apprenticeship. One form of advanced course, which is rapidly growing popular, is the "sandwich" course which lasts from three to five years and consists of periods spent alternately in studying full-time in a technical college and in gaining practical experience in industry. The majority of diplomas in technology courses are "sandwich" courses.

The new scheme enables students to enter technical colleges direct from school without having to take up evening courses. Preliminary evening courses will be abolished. The ordinary National Certificates course will last two instead of three years. But the standards for entry will be raised. There will also be new courses of four to five years' duration for technicians, with standards suited to their needs and abilities. More time would be provided under day-release schemes. No student will have to rely wholly on evening study. Sandwich courses—especially for technicians—will be increasingly developed. Sir David Eccles, Minister for Education, claims that the courses under the new system will be broader and of higher educational value than the old ones and will better suit an age of

(Continued on page 53)

AN important feature of the educational facilities at Jamshedpur is the leisure-time training of employees. Instruction provided, after hours, helps steelmen like J. P. Pathak to acquire wider knowledge and new skills.

Pathak, who started his career in Tata Steel as an office boy in 1929, passed his matriculation examination from the Company night school in 1944. Pathak next took up an evening course in basic mechanical drawing at the Jamshedpur Technical Institute. In 1957, he was selected for overseas training, and went to Canada, the U.S.A., West Germany and Holland, to learn techniques of operating a sinter plant. Today, Pathak is operator-in-charge of the sinter plant added under the two million ton expansion programme.

Notwithstanding initial handicaps, enterprising men like Pathak have the opportunity to better their prospects through further education and training at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

UNEASY FEELING PERSISTS

U.N. EXPERT FOR SURVEYING OYSTER BEDS IN INDIA

By Our Special Correspondent

NEW YORK, 1st *January*

THERE is a strange feeling of uneasiness in the United States. It concerns the future of the economy. This is quite difficult to rationalise, particularly in view of the high level of activity in nearly all branches of business. Just the same, it is somewhat frightening to encounter such pessimism.

Part of the reason for this, of course, the change of Administration. Some of the latest appointments of President-elect John Kennedy have not been received with much enthusiasm. There is also apprehension that Mr. Kennedy's father, Joseph Kennedy, might interfere in national and international affairs. The father is a former U.S. Ambassador to Great Britain, and for numerous reasons his solidity in policy matters are questioned by a good part of the business and industrial community.

In order to counter this feeling, reports have been allowed to "leak out" that son John and father Joseph do not get along too well and father Joseph issued a statement that he will not interfere, which does not prove anything yet. The President's-elect press secretary is Pierre Salinger, a former editor of the *San Francisco Chronicle*. Two other things which have been criticised widely are the appointment of Mr. John Kennedy's brother, Robert, as Attorney General, and the naming of a New England university professor as economic adviser who is known to be just a little bit too liberal.

The general business pessimism, while there was a year-end surge, was reflected in a sharp drop in the stock market. The averages, for the year as a whole, declined 68.56 points. Sales fell more than 6 per cent. below the 1959 volume.

Other, but political, reasons affecting business thus displayed, included disappointment that most of the predictions of the "glorious sixties" in the first year of the decade came to naught. This was emphasised by the extremely poor production, in terms of capacity, in the steel industry. However, this is quite relative.

It is quite possible that steel capacity has been overbuilt, since more than 100 million tons of steel were produced last year, anyway. It must also be recognised that steel, one of the biggest industries here and one of the bellwethers of the U.S., is rather unwieldy in management. The latest steel strike, for lack of management imagination, was so extended that foreign competition now has a firm foothold. It could have been foreseen, but it was not. As compared with former days, decisions are made no longer by men of vision. Rather, matters are referred to committees which are making surveys. And most of them are meaningless by the time they are completed. In the meantime, the industry moves along by the momentum of sheer bigness.

A good deal of that also applies to the U.S. automobile industry. Lack of vision and imagination, as well as poor design in body and engine operation, opened the way for foreign competition, such as Volkswagen.

United Nations News

Much interest was aroused here that attempts are being made to revive the pearl oyster trade in India. As outlined here, surveys of oyster beds are being conducted in the Gulf of Manaar in the South of India.

People at the U.N. are very much pleased that the New Delhi Government has invited Dr. Francesco Baschieri-Salvadori for his second exploratory mission. The doctor's background is rather interesting. He attained a degree in law but finally chose under-water exploration as a career.

The contention here is that the former adage that cultured pearls have driven natural pearls out of business is true no longer. The trend seems to be that natural pearls are becoming increasingly popular.

The reason is that they are preferred more for their colour and natural irregularity, rather than the size and uniformity of shape of the cultured variety.

If all works out well, it is felt at the U.N., it could be a profitable industry for India, as it was about 100 years ago.

The appointment of Adlai Stevenson as Ambassador to the U.N. by President-elect Kennedy got a lukewarm reception here. He was defeated twice running for President of the U.S. He is a Chicago attorney, with a great command of the English language. I like him personally, but many people distrust him for his glibness. The post of U.S. Ambassador to the U.N. carries with it a $30,000-a-year apartment at the Waldorf.—*All Rights Reserved.*

EMPLOYEE BENEFITS IN U.S.

United States industry paid an estimated $18,000 million in 1960 to provide employee pension, welfare and unemployment benefits. The National Industrial Conference Board reports in its weekly "Road Maps of Industry" chart that the 1960 total represents an increase of $2,100 million over the amount employers paid for employee security in the previous year.

Last year—the 25th anniversary of the U.S. Social Security Act—employers contributed $5,200 million for old age, survivor and disability insurance and $2,900 million for unemployment insurance. These two social security components accounted for 45 per cent. of employer payments for employee security. Another 47 per cent. was accounted for by private pension and welfare funds, to which employers contributed $8,500 million in 1960. The remainder consisted of compensation for injuries.

During the decade of the fifties, total wages and salaries of employees in private industry increased 81 per cent., while employer payments for employee security rose 179 per cent. As a result, these fringe benefits climbed from 4.9 per cent. of aggregate compensation in 1950 to 7.4 per cent. in 1960.

IS THE GOLD TIDE RECEDING?

(From Our Own Correspondent)

LONDON, 6th *January*

LONDON LETTER

OVER the whole of 1960, the British gold and currency reserves rose by £177 million to a total of £1,154 million. But, and indeed there are two buts, £131 million of this is accounted for by the special payment received in the month of December from the Ford Motor Company of America in consideration of their purchase of the formerly British held shares. The second "but" is that, in December, for the first time in the year, the gold reserves *fell* by £22 million on ordinary commercial account.

Thus, without the special Ford deal, the gold reserves would have risen by only £45 million over a year, in the last six months of which refugee and profit-seeking gold was flowing in. We have yet to assess accurately the loss on the ordinary balance of payments for the last six months.

A good deal of publicity was given this week to the apparent rise of £23 million in the reserves, but what is important to realise is that this rise disguises a commercial deficit. Taken by itself a commercial deficit in December, when heavy payments for imports are being made, is quite a normal thing, but we have become accustomed to having such a commercial deficit covered by private short-term capital inflows—hot money—and it is pertinent to ask what has happened to this. The answer is probably somewhat complicated: on the one hand, the inflow of hot money may have dried up as a result of the new Wall Street stock boomlet and the feeling of optimism towards the incoming Administration; and, on the other hand, at the end of the year, gold which may have been left on deposit in London by Continental, particularly Swiss, banks, moves home to window-dress balance-sheets, and is just as likely to flow back again in January.

The December gold transactions were in themselves also complicated. On the one hand, there was the gold inflow from America of £131 million—the Ford affair—and, on the other, there was the annual payment of tribute to the United States and Canada on post-war loans of £67 million (only £28 million of this is capital repayment and the rest is interest). Furthermore, the Bank of England brought up its share of gold and dollars in the International Monetary Fund to 25 per cent. of its total subscription, involving the purchase of £17 million sterling against the sale of gold. Finally, Britain made its opening subscription to the International Development Authority of £2 million.

Special transactions thus ended up with a surplus of £45 million to offset the £22 million of the commercial deficit, leaving a net inflow of £23 million.

A Misinterpretation

Oddly enough, a lot of publicity was given to the payment by the Bank to the I.M.F. of £17 million and this was represented as a gesture, but, after all, it did no more than bring the U.K.'s share of its subscription in gold to the customary level and, secondly, the amount is trivial in relation to American gold movements. It is trivial, indeed, even in relation to the £131 million of gold coming in for the Ford shares and, if the Treasury had been so solicitous for American welfare, they would have done much more good by telling Ford that they could not have the shares at present.

The query which now hangs over gold movements is what is likely to happen, if the British balance of payments continues in poor shape, while, at the same time, the American business cycle continues on the upswing, with an active stock market and a reversal of the flow of hot money. The £17 million contribution to the I.M.F. might then appear to be a little ill-timed and the Bank, which attracted so much publicity by this small gold contribution, might find unwanted publicity when it arranged a suitable line of credit with the I.M.F. to counteract the gold outflow.—*All Rights Reserved.*

ON THE ARENA

By The Archer

The Painful Fortnight in January

FOR a sensitive person, the first fortnight, after the ushering in of the new year, is usually boring, colourless and, therefore, somewhat painful. No doubt, the financial journals come out with bumper annuals, but one does not feel like reading through them at a stretch and they lie piled up on a side table for leisurely perusal. The newspapers are highly excited and almost hysterical but not exciting to readers. Politics, by which name they describe the activities, deliberations, pronouncements and policy decisions of the big shots in the Congress, fill pages of printed matter, and there is little in them to paint the clouds with sunshine. It is the usual sordid catalogue of our national weaknesses, our parochial jealousies and rivalries, our fissiparous deeds and misdeeds, our disunity, discord, disorderliness, disloyalties, disintegration and all our other disgusting mistakes and failings, flung at us as though each of us is a culprit, while, in fact, the people assembled at the Congress pavilion are the real delinquents, the spanner throwers, flame throwers and what not. The whole *tamasha* conforms to a pattern which has been going on for a decade and will, perhaps, go on for a century.

Once in a way, one reads of a bright idea emanating from a leading personality, flashed in the papers in headlines, something that makes one sit up and think, but, after an hour's thought, one has to recline and then go to sleep, for the idea turns out to be impracticable, hence entirely purposeless. Take, for instance, the suggestion of the Congress President that Congressmen who had been in office for ten years should voluntarily relinquish and make available their experience to the organisation, so that there may be an equitable distribution of talents in Government and in the organisation. In the first place, this is a negation of the theory of indispensability which is imbedded in the pile-driven concrete in the social and political life of the country and the idea of trying out fresh talent becomes a sacrilege when it is mooted, something irreverent, obnoxious, revolutionary and, therefore, positively dangerous. Secondly, the stress on *voluntary* relinquishment lets the cat out of the bag; it envisages in the exit of every office-holder a spectacular demonstration of teeming millions tearfully beseeching the quitter to stay and not desert the arena, whereas, more often than not, the anguished cry that is invariably stifled and rarely heard beyond a whimper, is "must you stay, won't you go?" Very few, especially among politicians, know when to go, namely, when the going is good. At the same time, it is generally believed that no one but a freak or imbecile would quit an important position of his own accord, so that even a genuine case of voluntary retirement is believed to be the result of a push from behind or extrication from an impossible or unsavoury situation. Tradition, based on decades of human conduct, has corrupted popular assessment to such a vicious extent that, if a man is not considered as indispensable, he is regarded as being extinguished.

It is all very well for Mr. Sanjiva Reddi to suggest graceful voluntary relinquishment, but it is not every one that can jump into the Presidentship of the Congress from the Chief Ministership of a State. To the extent that, in his loud thinking, Mr. Reddi is many steps ahead of most policy-making people in the country, his presidential address will be considered lacking in pragmatic content. It would almost seem that he has attempted to suggest a way of life on the basis of his own personal experience. That way of life can appeal only when opportunities to people are unlimited, unrestricted and uninhibited; and such is not the case in our country. Can one, for instance, ever hope to find in the Government of this country such a variegated collection of individuals as will shortly function in the U.S.A—a head of the Rockefeller Foundation (Dean Rusk) as Secretary of State, an Arizona Lawyer (Stewart Udall) as Secretary of the Interior, the Ford Motor Company's President (Robert McNamara) as Secretary of Defence, a Professor of Economics at the University of Minnesota (Walter Heller) as Chairman of the Council of Economic Advisers, an Under Secretary of State for Economic Affairs in the previous administration (Douglas Dillon) as Secretary of the Treasury and a Harvard University Professor of Economics (J. K. Galbraith) as Ambassador in India? To all these men, the acceptance of public office is a call to duty involving financial sacrifice, although the implied recognition of their talents can be a satisfying experience. To them, therefore, voluntary relinquishment would be easy at any time, almost a welcome change over to another, perhaps equally colourful, environment. But to most office-holders in India, political as well as official, it will be a painful prospect, a removal from a glamorous environment, *sans* power, *sans* prestige, *sans* everything that contributes to a satisfying way of life. Mr. Sanjiva Reddi's suggestion is, of course, bright, but will be, I am afraid, stillborn. It might, perhaps, be accepted in principle, but I doubt if it will ever be implemented in any sector in the country.

* * * *

Seats in the Guard's Van

The Planning Commission has accepted a proposal that the public may be allowed to hold minority shares in industrial ventures in the public sector, limited to about 20 per cent. or 25 per cent.; the experiment will be tried in certain select industries, that is, those which are already making a profit. The public should be as happy with this proposal as if they had been offered accommodation in a corner of the guard's van in a goods train on payment of mail train fares. The privilege of securing safe and slow travel in the carriage of a dignitary like the guard should be deemed valuable.

The smug and superior complacency in the announcement leaves one astounded. The scheme is called an 'experiment' and it will be 'tried' in select industries which are already making profits. I would like to have a look at the mug who is prepared to buy shares in a concern, even Government-owned, which is not making a profit. At the same time, I am not aware of the existence of a long queue waiting to seize the opportunity of investing in Government undertakings, especially after what has appeared in the papers about Government's pronounced views on the subject of investment for capital appreciation, the criticisms in Parliament of Government's failure to implement the Menon Committee's recommendations regarding the administration of public sector undertakings, Professor J. K. Galbraith's forthright views on the "Rationale of Indian Economic Organisation" with special reference to State-owned enterprises, and the Finance Minister's reported indication to Parliament's informal consultative committee on finance that Government would insist on shares of new companies being issued at a premium. All these, cumulatively, have made the public feel that the Government of India is not only lackadaisical in its handling of business enterprises, but is also very envious of the success of the private sector in attracting investment. The condescending manner in which Government proposes to permit the public to buy shares in State undertakings is, perhaps, an effort to syphon off surplus funds in the hands of the public, an anti-inflationary move, but, if it is expected that the thousands of opportunists who subscribed to new issues last year with hopes of quick and spectacular capital appreciation will now respond with similar alacrity to Government's prosaic offer, it will find itself seriously mistaken. The motive force behind the share market boom of 1959-60 was something entirely different from what is now required to lap up the Government's intended offer.

* * * *

The New U.S. Ambassador to India

A *Reuter's* message from Washington states that the appointment of Professor Galbraith as U.S. Ambassador to India has been 'reliably' mentioned. To the fanatical adherents of a particular ideology in this country who must have squirmed on reading his trenchant criticisms it will be a new experience to meet him in flesh and blood, for he is stated to be six feet eight inches tall, and will literally look down on them. He is a very hard hitting but well meaning critic of India's efforts to achieve economic prosperity but, perhaps, as ambassador, he may not come out so much in the open as he has, as a consultant and adviser. That particular phrase of his—"Post Office Socialism"—which, in his words, indicates public ownership which contents itself with avoidance of loss or a modest profit which it returns to the Treasury, is likely to be mentioned in India throughout his stay, and I do hope that the stagnancy of economic organisation, of which he was ruthlessly critical, will show some improvement.

* * * *

President-elect John Fitzgerald Kennedy

has wished that newspapers would stop referring to him as 'Jack' and would just call him Kennedy or refer to him by his initials J. F. K. He felt that it was not in keeping with the dignity of the office of the Presidency to call him 'Jack'.

There is always something very adhesive about nicknames and they are hard to peel off. Mr. Kennedy must have enjoyed shouts of "Welcome Jack" and "We want Jack" when he was at the peak of his electioneering campaign. After that was over and he was trying to assume the dignity of "Mr. President", a shout like "Hello Jack" could have an extremely disconcerting and deflating effect, and, at any rate, a little too familiar. It is unpleasant enough to hear one's nickname shouted at a mass gathering, but it is worse to read it in cold print. I am thus full of sympathy for Mr. Kennedy and hope that U.S. newspapers will refrain from exhibiting an excess of familiarity when referring to J. F. K.

In this matter we, in India, have inherited a tradition for appending to every name a honorific which is incorporated in every one of our regional languages. This absolves us of any charge of familiarity. Panditji, Pantji, Rajaji, Shastriji, and Nandaji, for instance, are all considered to be quite respectful; and, where we find the *Ji* is already integrated with the name, we take the safe course of adding a *Bhai* as in Morarjibhai. There are, likewise, other appendages such as *Babu, Garu, Avargal* which help to preserve the niceties of expression both in writing and speaking, as also the aristocracy of age or position or status as the case may be.

The occasions when a few more alphabets in a name cause worry are when newspapers wish to flash an item of news in a four-column or five-column headline. The type-setter attempts to achieve technical perfection even at the sacrifice of appropriate respectability by contracting a name. "Kennedy announces massive assistance" thus gets changed to "Jack announces massive assistance" when it is found that the latter fits into four columns with a particular large type, while the former, with the extra four alphabets in the name, does not. So it is that the practice starts and, once it starts, it never dies but gets established. The funniest thing about all this is that the type-setter is always dead set on the size of the type which, in his view, will just satisfy the needs of the headline, and will not care two hoots about how the use of the contraction in the name or use of the nickname will affect the observance of proprieties.

SURVEY

(*Concluded from page 51*)

changing technology which calls for a flexible system of education.

Programming for courses under the new scheme has already started. Those wishing to qualify in mechanical and electrical engineering could begin in September next. Courses to suit the needs of metallurgical industries, mining, textiles and science-based industries such as chemicals, paints and plastics are being framed. Local educational authorities are being asked to co-operate to the fullest possible extent in the preparation of new courses and the revision of old ones to suit the new specifications.

The role of industry in the new scheme will be to specify the jobs to be done by technicians and to provide appropriate industrial training. It is up to the colleges to provide educational courses to match the training in industry. This reform of technical education in Britain has a moral for India, not so much in its details as in the principle underlying it, namely, having an educational system attuned to the needs of a world of fast changing technology.

A Working Group has been set up in the Union Ministry of Food and Agriculture, with Mr. V. Shankar, Special Secretary to the Ministry, as Chairman, to supervise and guide the implementation of the intensive agricultural programme, known as "package programme," proposed to be implemented in various districts shortly. The Group includes representatives of the Ministries of Food and Agriculture, as well as Community Development and Co-operation, the Planning Commission and the Reserve Bank of India.

LONDON BECOMES WORLD'S MOST ACTIVE GOLD MARKET

SCARCITY OF SILVER EXPECTED TO BECOME MORE ACUTE

THE year 1960 saw London consolidate its position as the most active and best-supplied gold market in the world, says the annual circular of Mocatta and Goldsmid, bullion brokers and dealers in the City of London since 1684, and now a subsidiary of Hambros Bank Ltd. The structure of the market, says the circular, was found to be proof against the exceptionally violent strains to which it was subjected. Dealing with the sudden activity in gold and the sharp increase in price during October, Mocatta and Goldsmid conclude that all gold sold in London since 19th October has gone into hoard, since central banks are precluded by the rules of the International Monetary Fund from buying at more than $35.35. The demand for small bars has been large enough to strain the capacity of London refiners and there has been a considerable increase in the demand for sovereigns. At the beginning of the year, sovereigns commanded a price of $9.30 apiece and in May they could be bought for $9.05. Stimulated by Belgian demands for Queen Elizabeth sovereigns due to troubles in the Congo, the price gradually climbed back to $9.30 before it was virtually suspended by the violent fluctuations of bar gold. In November, dealings were resumed at $9.45 and by mid-December the price had risen to $9.70.

Reviewing the events of the year, Mocatta and Goldsmid observe that, from the last week in June onwards, the market could smell thunder in the air. The failure of the Summit Conference, followed by troubles in the Congo, gave rise to considerable demands which, despite continuing Russian sales, pushed the price of gold up to $35.14. In August, some strong buying by Continental central banks was piled on top of a persistent private demand from Belgium. Russian sales were easily absorbed and, with a greatly increased turnover, the dollar price of gold, at $35.16, stood higher than at any time since the market was reopened in 1954.

Central banks evidently preferred to buy in London at around 250s. rather than in New York at $35.08⅜. In September, with the dollar price as high as $35.25½ on the 27th and 28th, it would actually have paid them to buy in New York and ship to Europe at their own expense, but they still did not do so.

In the meantime, a bomb explosion at Amman and some anxiety about Laos in the Far East had further disturbed a nervous market, which was not wholly convinced by the denial, during the annual meeting of the International Monetary Fund in Washington at the end of September, that an increase in the price of gold was contemplated. The dollar price did decline to $35.22 on 1st October and still further to $35.20½ on 5th October, but Russian sales had ceased and the improving prospects of a victory for the Democrats in the U.S. Presidential Election were held to justify a bullish view of gold. Too many people not usually interested in the price were saying that, sooner or later, it was bound to go up.

In mid-October, the market began to move more jerkily, with advances on the 18th of three cents at the fixing and ten more later in the day. Between morning and evening on the 19th, there was a further rise from $35.39 to $35.60, and, on the 20th, the price ranged from $36.60 to more than $40. These, says the firm, were not nominal but effective prices, at which substantial business was done. Canada was prominent, no doubt partly for account of U.S. residents. In the following week, the sterling price rose to 270s., the highest official price of the year in London, equivalent to $38. But an Executive Director of the Bank of England was already then paying an unobtrusive visit to Washington and, by the end of the month, not only had the dollar price relapsed to $36, but the market had somehow recovered its poise. In November, demand began to fall away even before the result of the U.S. Presidential Election was known and, in apparent contradiction to previous anticipations, it went on falling afterwards. A balance was reached somewhere between $35.60 and $35.80, and in December the price still drifted downwards, with occasional but only moderate reactions.

Mocatta and Goldsmid, who have been silver brokers to the Bank of England ever since its establishment in 1694, say that the silver market has had a dull year. But, although the market remains very quiet, there is a steady undertone, which indicates that those who take a longer view are inclined to foresee a deficiency of silver which will make itself increasingly felt in the quotations of the London market. Demand has again exceeded the current supply of newly-mined silver, with the result that the free stocks held by the U.S. Treasury fell to a level at which they would seem to be no more than sufficient for about three years to come. Under the existing law, the U.S. Treasury might even cease to sell silver to American industry without waiting for its free stocks to be exhausted.

In the last days of December, forward silver was quoted at ¼d. premium over spot. This was the first time since the war that forward was able to establish a premium over spot. Throughout the year it was noticeable that much more forward silver was being bought for domestic consumers, and, in the second half of the year, there was forward buying which could be interpreted as a currency hedge.

At slightly over sixteen million ounces, the domestic turnover was a little smaller than in 1959 as a result of some slowing down of British industry in the second half of the year; but it was still substantially greater than in 1958.

The demand for coinage has been sustained, chiefly by the French Mint but also by Vienna, Rome and Lisbon. The supply from recoinage in the United Kingdom might have amounted to some five million ounces, if the greater part had not been retained by the Royal Mint to meet foreign orders. But, in the last few months of the year, small amounts were made available to the market. Imports from the Western Hemisphere, at over eight million ounces (or more than twice those of 1959) reflected this deficiency in official supplies.

ACTIVITIES OF I.F.C. IN 1960

Investments of the International Finance Corporation (I.F.C.) during 1960 continued at the high level reached in the previous calendar year; 13 investments were made, aggregating the equivalent of $18.6 million, some $8.4 million above last year's record. The Corporation has now made 36 investments totalling $45 million in 17 member countries.

Of the projects in which I.F.C. invested during 1960, eight are owned and managed by residents of the country where the project is located, four are joint enterprises of local and foreign ownership and management; and one is a subsidiary of a foreign firm. The sizes of enterprises helped by I.F.C. during the year ranged from the equivalent of about $600,000 to $22 million, with I.F.C.'s own investments ranging from $156,000 to over $3 million.

Seven of the year's investments—in Tanganyika, Argentina, Venezuela, Finland and Italy—were made in countries where I.F.C. had not previously invested. The purposes for which I.F.C. investments were made show the usual concentration on industrial enterprises. Thus, in Tanganyika, I.F.C. invested in a new company to grow and mill sugarcane and to produce refined sugar for the Tanganyikan market. In Argentina, two investments were made—one for a wide range of steel products; and the second for pulp and paper. In Australia, a private enterprise producing rubber products received a supplemental investment to increase its output capacity and add a new product line. In Chile, additional funds were used to defray extra costs incurred by the company in building a new cement plant. In Colombia, I.F.C. is assisting a company in the construction of a plant to manufacture metal cans for food packing and for general use. In Mexico, a jointly-owned manufacturing company used I.F.C. funds to finance production of high speed twist drills. In Venezuela, two companies, one producing steel and steel products, and the other, food products, also received funds from the Corporation. In Italy, a locally-owned company is using an I.F.C. investment to construct a plant near Naples for the manufacture of low and medium voltage circuit-breakers. In Finland, two locally-owned companies, one producing textiles and the other pulp, lumber, machinery and shipbuilding, were able to expand operations with the help of investment funds from I.F.C.

In India, an I.F.C. investment will assist a company in producing refractory bricks.

Participations by private investors in I.F.C. investments, which in December 1959 totalled $3,175,000, increased during the year to $5,839,000.

During the year, Spain and the Sudan joined the Corporation; at the same time, Cuba and the Dominican Republic withdrew from membership in the World Bank, thus automatically ceasing to be members of I.F.C. Total membership numbers 58 countries, with a subscribed capital of $96.2 million.

I.D.A.

Thirty-seven countries have now joined the International Development Association (I.D.A.), the new World Bank affiliate, as original members, and the funds subscribed to it amount to the equivalent of $852 million, mostly payable in convertible currencies. The members are Australia, Canada, Chile, China, Denmark, Finland, France, Germany, Ghana, Honduras, India, Iran, Iraq, Ireland, Israel, Italy, Japan, Jordan, Malaya, Morocco, Nicaragua, Norway, Pakistan, Philippines, Saudi Arabia, Spain, Sudan, Sweden, Thailand, Tunisia, Turkey, Union of South Africa, United Arab Republic, United Kingdom, United States, Viet-Nam and Yugoslavia. The I.D.A. came into existence on 24th September 1960 and was organised for business on 8th November, when its Executive Directors held their first meeting. The purpose of this body is to promote economic development, and so raise living standards in its member-countries, by loans that will bear less heavily on the balance of payments than do conventional loans. The I.D.A. may make loans, for instance, with very low interest charges and payable over very long periods of time. It may also lend for a wide range of projects, including not only power, transportation and other directly productive schemes such as are financed by the World Bank but also projects of a social character. It will have the same management and staff as the World Bank, and will apply the same careful standards as the Bank with respect to the planning and administration of the projects it assists.

INDIAN BANK LTD.

The net profit of the Indian Bank Ltd., Madras, for the year 1960 after providing for contingencies and meeting all expenses, together with the sum carried forward from the previous year's account, amounts to Rs. 41,03,696, as against Rs. 37,45,143 for 1959. An *ad-interim* dividend at the rate of 5 per cent. and a bonus of 2½ per cent. (subject to tax) had been paid. The Directors now propose to recommend a final dividend of 5 per cent. and a bonus of 2½ per cent. (subject to tax) for the year 1960, thereby making the total dividend and bonus for the year amount to 15 per cent. (subject to tax). This is the same as that for 1959.

U.K.'S NATIONAL SAVINGS

Britain's national savings receipts in 1960 exceeded repayments by £252 million, so that, with accrued interest, the year's net savings amounted to £343 million. Commenting on the year's result, Lord Mackintosh of Halifax, Chairman of the National Savings Committee, says: "Nineteen sixty was a sterling year for the small saver. It will rank second, in the 45 years' history of the savings movement, only to 1959, when net receipts, with interest, amounted to £398,000,000. Despite the measures in 1960 to restrict credit, the result means that nearly £1,000,000 a day was invested in national savings throughout the year." During the year, savings certificates gave a net yield of £58,500,000, defence bonds £116,336,000 and premium savings bonds £47,470,000.

Notice

THE SURAT ELECTRICITY COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN interim dividend for the half-year ended 30th September, 1960 at the rate of 8.45 per cent. (being 6½ per cent. plus 30 per cent. thereof in accordance with the Preference Shares (Regulation of Dividends) Act, 1960) per annum on preference shares subject to deduction of tax under Section 18 of the Indian Income Tax Act and at the rate of Rs. 2.50 nP per share on Ordinary (Equity) shares, subject to deduction of tax under Section 18 of the Indian Income Tax Act has been declared and made payable at the Chartered Bank, Bombay, on and after 8th February, 1961, to those shareholders whose names stand on the Register on Tuesday the 7th February, 1961, to whom Dividend Warrants will be posted.

Intimation of any change of address and Tax exemption certificate, if any, should be sent so as to reach the Share Department of the Company on or before 1st February, 1961.

The Transfer Books of the Company will be closed from Monday, 23rd January, 1961 to Tuesday, 7th February, 1961, both days inclusive.

By Order of the Board,
For THE SURAT ELECTRICITY COMPANY, LIMITED,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

KILLICK HOUSE,
HOME STREET, FORT,
BOMBAY-1, 11th *January*, 1961.

CONSTRUCTION OF OIL INDIA PIPELINE

A CHALLENGING TASK BEING SUCCESSFULLY TACKLED

[With three spreads working simultaneously in three different districts of Assam, India has embarked on construction of the largest oil pipeline system in the country, according to Mr. M. J. Condon, Chairman of the Oil India Private Ltd. The 720-mile pipeline project will connect the Upper Assam Oilfields of Oil India Private Limited, which is a participatory scheme and essentially a joint venture between the Government of India and The Burmah Oil Company Ltd., with the two Government refineries at Nunmati (Assam) and Barauni (Bihar). The pipeline will be constructed in two stages, the first stage of 270 miles as far as Nunmati being scheduled for completion by November 1961, and the second of 450 miles to Barauni in Bihar in the second half of 1962.

As far as Nunmati, the pipeline will have a diameter of 16" and from Nunmati to Barauni a diameter of 14". The pipeline was originally intended to convey 2.75 million tons per annum of crude oil from Nahorkatiya to Nunmati and to convey 2 million tons per annum from Nunmati to Barauni. It has, however, been designed so as to make possible, as and when required, an economic expansion of throughput of 4 million tons per annum. The construction agency appointed by Oil India is The Burmah Oil Company (Pipelines) Ltd. and the main construction contractors are Messrs. Mannesmann and Saipem.

The 16" pipes for the first stage have been imported from the U.K., and was manufactured by Stewarts and Lloyds. The 14" pipe for the second stage is being supplied by Hindustan Steel from its Rourkela plant. World tenders have been invited for all major items, but indigenous suppliers, where their bids have been competitive, have been given preference.

Besides the variable terrain through which the pipeline passes, for example, paddy fields, tea gardens, forests, hills and swamps, its most interesting feature is the large number of river crossings with which it has to contend. Throughout its length, it has to cross 78 rivers including the Brahmaputra. The Brahmaputra crossing alone will cost about Rs. 1 crore.

Pumping stations will be erected at intervals of approximately 90 miles along the line to maintain the flow of oil. Repeater stations will also be installed along the line to maintain radio communications throughout its length. The radio system will carry signals which will indicate to pipeline headquarters at Gauhati conditions at every pumping station and also enables operation of pumping stations by remote control. In the event of an emergency, the whole pumping system can be shut down from the central headquarters control or individual valves can be closed to isolate particular sections. Construction of pumping stations between Nahorkatiya and Nunmati is now in progress. In this context, the article below will be found interesting. It clearly shows what a serious challenge the whole project is to those responsible.]

PETROLEUM refineries may not generally be located near the oilfield. Quite often, oil wells from which crude oil is pumped out are situated far away from the refineries where the oil is broken down into kerosene and other products. The main link between them is the pipeline and the tanker. In the need to move oil from where it is found to where it is wanted, the pipeline takes precedence over all other means of transport on land. Pipelines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from the wells to the refineries and finally to the places of consumption.

Even in ancient days pipelines were used for centuries as a mode of transport. The Chinese are believed to have used bamboo pipes 7,000 years ago for conducting water. The early Mediterranean civilisations used pipes made of clay or hollowed out of the rock, and when the King of Persia invaded Egypt some 1,500 years ago, his army was supplied by a trans-desert of pipeline made of ox-hides sewn together. Outside the gate of Jerusalem, there is still in existence a tube of stone which was used for channelling water into the pool of Siloam. In the excavation of the city of Pompeii, lead water-pipes were found.

But the transportation of oil has always presented a complex problem. Because crude oil is a volatile liquid, as compared to water, elaborate precautions must be taken to minimise the enormous loss by evaporation. Another problem arises because of its being inflammable. The means of transport must not be capable of producing the heat or the spark which could ignite an inflammable cargo. The transport problem varies widely with conditions and the means of communication available.

In Ancient Days

In the 1860's when producing fields were in remote spots, horse-drawn wagons hauled petroleum in barrels to nearby refineries or to railroads or waterways for a longer journey. Drake's contemporaries built large wooden storage tanks near their wells, and pumped oil from them into wooden barrels for transportation to refineries. At one time 6,000 two-horse teams and wagons were used in the oil city, Pennsylvania, district alone, creating a traffic jam worse than those encountered in city traffic today. Flat boats carrying oil down Oil Creek in north-western Pennsylvania often capsized, losing their precious cargoes. Even if the barrels arrived safely at their destinations, some of their contents had usually leaked out or evaporated.

As more oil was discovered, it became physically impossible to haul it in barrels, and different conditions and problems spurred imaginative oilmen to develop more efficient methods of transportation.

When it comes to moving petroleum, pipelines rank first over water, rail or highway carriers. Only a few years after Colonel Drake made the first discovery of oil in the U.S.A. 1859, American engineers constructed a cast-iron surface line of two-inch diameter, delivering 70,000 gallons of crude daily over a distance of about six miles. This was probably the first successful "long-distance" oil pipeline. After that more pipelines were built, even though the teamsters protested and occasionally fought pitched battles with pipeliners in attempts to wreck the lines.

The first really long-distance pipeline was built in Pennsylvania, from Corvallis to Williamsport, in 1879, and regarded as an engineering marvel of the age. It was a six-inch buried line of 125 miles in length, whose extension eight years later included a five-mile under-water section across the sea bed of Newark Bay.

By 1910, some 20,000 miles of pipelines were already in operation in North and South America, Russia, Rumania, Borneo and Persia. Today, in the United States alone, there are over 100,000 miles of trunk pipelines, excluding subsidiary lines and those used for carrying gas. Many of the modern pipelines are covering distances of well over a thousand miles and there are plans for still more pipelines in various parts of the world.

As the crude oil is produced, it is carried through the flow lines into field storage tanks. The gathering lines pick up the oil from these tanks and move it to trunk lines. The trunk lines, in turn, move the oil to refineries or to shipping points from which it is transported by tanker, rail or other means to its destination.

Pipelines range from two inches in diameter for gathering lines up to the "big-inch" trunk line. "Big-inch" is the pipeliner's term for any pipe over 12-inches in diameter.

Before the war, there were very few pipelines more than 12 inches in diameter. The big-inch line of 24-inch diameter from Texas to New England covering about 1,234 miles was the giant of its day. But, since then, there have been a number of 32-inch lines in operation, not forgetting the 500-mile, 34-inch natural gas line from Arizona to California. In Russia and elsewhere, 40-inch lines are reported to be under construction.

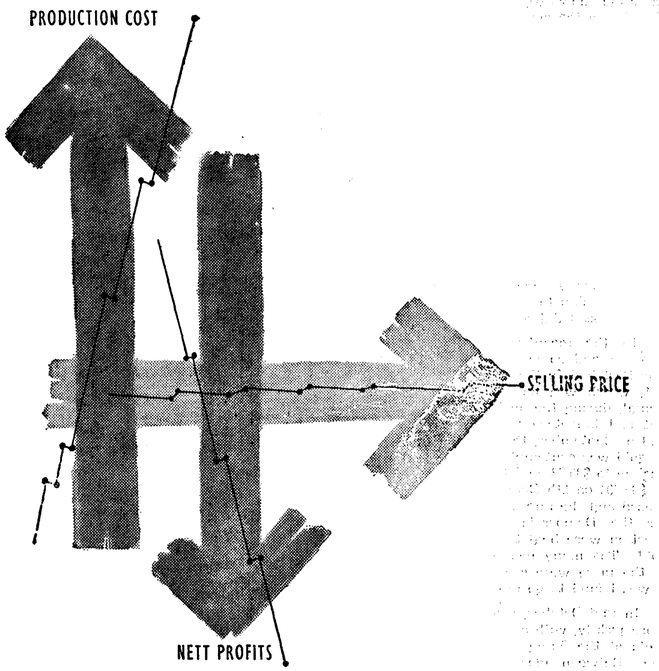
The Preliminaries

Laying a pipeline is a masterpiece of teamwork, skill, patience, endurance and ingenuity, all backed by careful planning and organisation. In planning a larger trunk pipeline, the engineering aspects have to be considered first and they are bound to vary widely with the kind of territory to be traversed. It obviously makes all the difference both for the laying and the operation of a line whether it runs across desert or jungle, over mountains, or through stretches of water or sea or uninhabited country, through rocky or soft grounds, etc. A single long-distance line project may encounter any combination of greatly diverse physical conditions, which, though not intractable technically, may impair its economic feasibility.

Because of the static nature and physical inflexibility of a pipeline, the capital costs of a large trunk line are inherently high. To justify the investments, the line must be built for long life and assured of continuous service at or near capacity for at least 20 years. Thus, before embarking on a major project, its economics must be assessed carefully in comparison with the alternative means of batch transportation, which for the carriage of oil comprise rail and road tank cars, and sea-going and coastal tankers and barges.

Laying the Line

The first step in building a pipeline is to plan its route. This is done by study of maps and by aerial and ground surveys. Once the line's path is decided upon, the acquisition of a right of way may involve many legal problems. Many property owners are to be contacted for securing permission to lay the line across the land. Then surveyors,



Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay • New Delhi • Calcutta • Madras

CAL/10-61-B

bulldozer crews and other construction men move on the job—marking, clearing and grading the route.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the ditch, welding crews move along the line to join them together.

Before the pipe is lowered into the ditch, a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt to protect it from corrosion. A dry pipeline will not corrode. Protective coatings on lines are designed to keep the lines dry. This is impossible of complete achievement, but relatively reliable protection is afforded by proper external coating. The type of coating varies in accordance with soil conditions, terrain and other factors.

When this is done, tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and, in a short time, the whole line becomes invisible and buried.

Modern pipelines are almost invariably constructed of steel. Among the constructional problems which the pipeline engineers have to overcome is the expansion and contraction of the steel pipe with temperature changes. To prevent the pipeline pulling apart when the temperature drops, a considerable amount of slack is left which serves to take up the contraction. Although slack loops have been used since the beginning of pipelines there are many engineers now who insist that temperature changes underground are too slight to result in appreciable expansion and contraction of the line and slack loops, therefore, unnecessary. Others say that contractions have pulled lines apart. Research on this subject is under way currently.

Pumping Stations

Oil is kept moving through pipelines by pumping stations. These stations, which move the oil at a speed of two to three miles an hour, may be as many as 60 miles or more apart, depending on the terrain or the type of oil to be moved. At intervals along the way, the pipe emerges from ground and enters a station where the oil is given a thrust by powerful pumps before it dips again into the earth. Where the oil has to be pushed over hills or mountains, the pumping stations are closer together.

Diesel engines are generally used to pump the oil along the line to the next pump station. In recent years, more and more stations are electrically powered. At the newer stations, a separate control building houses a flow control panel. This panel provides a diagram of the valves and piping of the entire station, with lights indicating the open and closed positions of each valve. Gauges indicate the tank-manifold, suction, and discharge pressures for each pump, as well as volume of liquid contained in each tank. The panel also provides push-button control for all pump motors and motor-operated valves.

Years of study and experiment have gone into design of modern pipelines and pumping systems, and their construction calls for technical skill of the highest order. The recently completed pipeline which links the oilfields of Saudi Arabia to the Mediterranean cost Rs. 100 crores to build. No port existed at which the pipe and all the machinery for laying it could be unloaded and an artificial island had to be constructed and connected to the mainland by an aerial cable.

The Economics

The cost of pipeline transport drops sharply with increased line capacity, as, with the enlargement of the pipe diameter, capacity goes up much more rapidly than do the costs of construction and operation. With the exception of fuel for driving the pumps, most of the costs of line operation such as labour and maintenance, etc., are independent of the amount of oil transported. Thus, optimum operating economy can be obtained only at continuous day-and-night operation of the line at full capacity, below which the unit cost will rise steeply.

The pumping of a given amount of oil over a given distance may be achieved by larger diameter lines with smaller pressure-drop, involving higher capital costs but lower running costs, or by smaller lines with greater drop with smaller capital costs but higher running costs.

The pressure loss in a pipeline system depends very largely on the viscosity of the product to be pumped and sometimes it is necessary to reduce the viscosity of an oil by heating to make economic pumping possible. If the line is long, reheating is necessary at regular intervals and such lines are generally buried to insulate them.

While the economic capacity of crude oil lines of between 6 and 8-inch diameter may range from 400,000 to 1,300,000 tons throughput a year, and the usual pump station spacing from 30 to 80 miles, the respective figures for lines between 10 and 16-inch are 1.3 to 8 million tons and 40 to 100 miles; for a 24-inch line the useful capacity is between 12 and 18 million tons per annum, and for a 30-inch line between 20 and 40 million tons, the pump station spacing in the last two instances being 60 to 200 miles.

There are, however, several limitations in having long pipelines. The heavy capital cost of a long pipeline, which necessitates continuous 24-hour operation of the line to make it pay and to keep it in order, and also its inflexibility—for once laid its direction cannot be changed and the maximum capacity is virtually fixed—are no less important factors to consider before the planning of a project. The planning of product pipelines poses problems quite different from those of crude lines.

An essential prerequisite for the progress of marine pipelining is the growing mastery of the techniques of corrosion prevention, among which cathodic protection is today of outstanding importance for land and sea pipelines alike. Since corrosion is due to the action of minute electrical cells on metal surfaces wherever these are in immediate contact with the atmosphere, soil, water, steam or acids, an effective way of suppressing corrosion is to create artificially an electric flow counteracting the electric current flowing from the metal to the surrounding medium. For instance, in a buried pipeline, the flow from an exposed metal surface to the soil will be stopped by supplying current to a piece of metal (anode) buried in the soil at some distance from the pipeline, where it passes through the soil to any weak points in the line insulation. Thanks to sufficient experience now being available for determining the suitable size, spacing and distance of these anodes in accordance with existing soil conditions, full protection and long life can now be assured for adequately coated pipes at a relatively small cost.

THE BANK OF INDIA LIMITED

RESULTS OF TEXTILE FIRMS BETTER

BIG RISE IN CLOTH IMPORTS INTO U.K.

From Our Special Correspondent

MANCHESTER, *3rd January*

FINANCIAL returns issued by companies predominantly working in the cotton industry during 1959 were adversely affected by the narrow margins obtainable in spite of the very substantial orders booked in the second half of that year. Twelve months ago when commenting on the situation, the following forecast was made: "Company news which comes to hand after, perhaps, the first three months of 1960 should create a far truer picture of the phenomenal demand which has lately been experienced."

MANCHESTER LETTER

The results now under review fully justify this assertion, which was made in the knowledge that only some totally unexpected development could cut down the earnings of cotton companies in 1960 from reaching much higher levels.

Combines Make Money

The aggregate net earnings of the 14 combines and their subsidiaries announced during 1960 amounted to £5,255,949 against £1,694,085 in 1959. Their average profit was £375,425 against £121,006. The dividend distributed averaged 12.48 per cent. against 9.73 per cent.

Continuing their policy of keeping credit balances and liquid assets reasonably large, many millowners have arranged for substantial sums of money to be carried forward on profit and loss account. Aggregate credits retained by these 14 groups totalled £8,637,364 against £8,741,234 in the previous year, an average of £616,955 against £624,374.

Profits announced by the 40 single-unit spinning firms whose results were obtainable in 1959 were the lowest on average for any year since the beginning of the last war. It was, however, inevitable that the subsequent buying wave would bring a pronounced change in the situation. From a low point the survivors of the redundancy plan have rebounded triumphantly to an average which has only been bettered during the highly prosperous 1950-51 phase.

The average profit announced by the 24 spinning firms concerned during 1960 was £31,146 against £13,425 for the same firms in 1959, while the 40 companies included in last year's summary averaged only £5,987. The average dividend paid by 24 spinning mills last year was 17 per cent. against 14.97 per cent. for the same units in 1959.

The average profit of 17 concerns which combine spinning and weaving was £112,844 per company in 1960 compared with £73,562 for the same companies in the previous year. The average dividend paid by these firms was 14.17 per cent. against 11.39 per cent. For the weaver combination, the average profit was £65,021 last year against £38,360 for the same firms in 1959. The dividend averaged 15.83 per cent. against 13.48 per cent.

Aggregate credit balances accumulated by the 41 firms now total £6,523,557, an average of £159,111. A year ago 60 companies had credit balances totalling £9,366,110, an average of £156,102.

Weaving has frequently come under the "give-a-dog-a-bad-name" stricture and there have been plenty of occasions in the past when manufacturing units have found great difficulty in maintaining profitability in the face of competing influences both at spinning and merchanting level. If recent results are the forerunner of future developments, however, this form of discrimination may not continue much longer.

Our analysis indicates that net earnings have more than doubled compared with 1959. The 20 firms concerned announced aggregate profits of £949,838 in 1960, whereas the same companies reported earnings of £400,690 in the previous twelve months. The average profit was £47,492 last year against £20,035 in 1959. Dividends averaged 9.66 per cent. against 7.42 per cent. Credit balances amounted on average to £148,596 per company against £131,092.

Some Still Waiting

The weaving section has had the unenviable record of producing the largest number of firms to withhold their dividend to shareholder in the recent past. Out of the 20 now under review, four remain in this category, but the figure a year ago was nine out of 22 and in the twelve months before that 12 firms passed their ordinary payment.

At this point it is legitimate to observe that a proportion of all the results included in this analysis were, as usual, recorded in the early months of last year and therefore covered a trading period which stretched back into 1959 when remunerative contracts were hard to get. As the year just ended progressed, so the general level of financial results released by cotton firms improved. The pressure for supplies which continued well into the autumn of 1960, culminating in another short but intense buying spurt, has still to be reflected in reports yet to come.

In 1960 capital reductions were made by six spinning firms, the aggregate original capital being reduced from £3,529,077 to £2,020,946; five spinner-weavers cut their capital from £10,230,000 to £7,467,334 and seven weaving concerns were involved in capital reductions from £1,099,000 to £538,324.

Four of the big combines figured in scrip bonuses and between them accounted for a large proportion of the £7,449,547 involved in the issues. In the previous twelve months only four cases of this kind were reported, the total sums involved being £1,018,550, while in 1958 scrip issues totalled only £242,488.

Hours Decision At Last

The reason for the delay in reaching a settlement over the hours issue in spinning and weaving is now apparent. Long order books, a blessing in one way to producers and a curse in others, were again the culprits. The employers, knowing that a straight reduction in hours would mean that currently-held contracts would take even longer to complete, wanted to find some means of getting their affairs into better shape while still conceding the principle of the shorter working week.

As almost invariably happens in such negotiations, a compromise was arranged. The operatives are to have their cut in hours—from 45 to 42½ weekly—a similar system to that adopted in several other textile trades, to which the woollen industry must now be added. This is to operate from the middle of January, but for more than four months the employers may require their workpeople to continue the 54-hour week in order to meet their delivery commitments.

There is to be no loss of earnings under the new arrangements and in those firms where the extra 2½ hours are worked—and they will comprise a majority of the trade—payment will be at the rate of time-and-a-half. This seems a very sensible way of getting round an awkward problem and the negotiators should be congratulated on their shrewdness.

Shift-work Variations

More complications arise when shift-work is involved, as there are already different hours being operated in different areas and sections. Under the settlement the normal working week on double-day shifts will vary between 37½ and 38¾ hours, a ballot being held when more than the minimum hours are proposed. The pay rates are to yield for 37½ hours the same level of earnings as for the normal 42½-hour week. There is to be no change in hours or rates of pay for those operatives at present engaged on a 37½-hour treble or double shift.

November Imports Peak

Once again the rate of foreign cloth arrivals made the headlines so far as overseas trade in November was concerned. More goods were received than in any other single month so far recorded, the total reaching 68,142,000 square yards against the previous peak of 65,139,000 square yards in March. For the first time the cost of imports of grey and finished fabric exceeded £6 million, bringing the eleven-month total to £54,350,000 against £35,541,000 in the same period of 1959.

Comparable exports from the United Kingdom to the end of November just failed to top the 300 million yard mark, earnings being valued at £40,170,000. This represented a fall of about 14 million square yards on the 1959 level and a drop of nearly £1,000,000 in earnings.

No major change occurred in the trend which had persisted throughout 1960, with imports consistently higher than the level of shipments abroad. Cotton yarn arrivals reached 35,513,000 lbs. at a cost of £6,900,000, whereas in the same period of 1959 the figures were 19,130,000 lbs., valued at £3,477,000. Imports of man-made fibre yarns showed an even bigger increase at 8,210,000 lbs. against 3,330,000 lbs.

Mills Step Up Output

The first official assessment of the effect on output of the £30 million reorganisation scheme in the Lancashire cotton industry was given in Manchester by the Cotton Board, which reported "an encouraging improvement" in output per head since the scheme was completed in the spinning and weaving sections.

"The general picture is of the level of production being held back only by a shortage of labour," the Board said in its quarterly statistical review.

An exception was the doubling section, where some short time was being worked. Heavy imports of doubled yarn were a major depressing factor. In the first four weeks of November, doubled yarn output in terms of weight was running about nine per cent. below the May level.

But the report showed an upward trend in the figures in the spinning and weaving sections. Taking June 1959 as the best pre-organisation period for purposes of comparison, output per head in spinning has gone up by over ten per cent. In the case of weaving, said the report, output per head in Lancashire had increased by nearly seven per cent.

There has almost certainly been a considerable rebuilding of stocks of many types of cloth in the pipeline, says the Board. On the other hand, any reduction in the standard working week would certainly reduce the level of production, at least temporarily.—*All Rights Reserved.*

INTERNATIONAL WOOL SECRETARIAT

Fundamental changes in the constitution of the International Wool Secretariat in London have been announced by the Chairman of the Secretariat's controlling body, Dr. J. G. van der Wath of South Africa. The changes were recommended to the three partner wool boards of Australia, New Zealand and South Africa after recent meetings in London and were approved by all three boards. The new constitution recognises the part which Australia, as the largest contributor, will have to play in future operations. The control of the Secretariat will in future be vested in a board consisting of seven members nominated by Australia, three by New Zealand and three by South Africa. The board will normally meet once a year in Australia. All decisions will be by majority vote except any which concern the proportionate contribution by the three boards to the funds of the Secretariat. For the wool promotion and research operations of the Secretariat, the world will be divided into three zones—the United Kingdom and Europe, Asia, and America. Each Zone will be controlled by a regional director who will be responsible to a managing director based at Secretariat headquarters in London. Immediate steps will be taken to appoint the managing director who will have far-reaching responsibility under the board of the International Wool Secretariat. The three wool boards have agreed that substantially greater funds will be necessary for research, product development and promotion throughout the world.

The International Wool Secretariat was set up 23 years ago by woolgrowers of Australia, New Zealand and South Africa to promote the greater use of wool throughout the world. It operates in 14 countries. The total capital investment of the 175,000 Commonwealth wool-growers approaches Rs. 7,000 crores and raw wool sales now amount to more than Rs. 600 crores a year.

RECORD WORLD COTTON CROP PREDICTED

DISAPPEARANCE WILL STILL EXCEED PRODUCTION

A RECORD world cotton crop has been predicted by the International Cotton Advisory Committee, Washington, for the 1960-61 season which commenced on 1st August 1960 and is now almost half-way through. The Committee estimated, in its latest monthly review of the world cotton situation, that world production in 1960-61, including output in the Communist bloc, would be round 47.30 million bales (of 478 lbs. each) which is 300,000 bales more than the output during 1959-60. In spite of this record production, supply during the season would not only not be higher than in 1959-60 but would probably decline. This is because of the reduced carryover stock on 1st August 1960 which, at 20.30 million bales, is about one million bales below a year back. Moreover, according to the Committee, despite a possible record crop, the chances are that, for the fifth year in succession, disappearance would exceed production and there would be a further reduction in the end-season carryover stocks though not by as much as during 1959-60.

The following table gives a preliminary indication of the world cotton supply during 1960-61, as compared with that in the previous three seasons:

(In million bales)

	1957-58	1958-59	1959-60	1960-61
United States:				
Stocks	11.4	8.7	8.9	7.4
Production	11.0	11.5	14.5	14.3
Total ..	22.4	20.2	23.4	21.7
Elsewhere:				
Stocks:				
(1) In net exporting countries	3.0	3.9	3.5	2.7
(2) In net importing countries	6.2	6.1	5.3	6.3
Production	16.9	17.6	16.5	18.0
Total ..	26.1	27.6	25.3	27.0
Grand total ..	48.5	47.8	48.7	48.7
Communist bloc:				
Stocks	2.7	3.2	3.4	3.9
Production	13.8	15.7	16.0	15.0
Total ..	16.5	18.9	19.4	18.9
Total world ..	65.0	66.7	68.1	67.6

In the U.S., with a much lower carryover (7.40 million bales, as against 8.90 million bales in the previous season) and a slightly smaller crop (14.30 million bales, as compared with 14.50 million bales in 1959-60), the supply is expected to be lower at 21.70 million bales during 1960-61, as compared with 23.40 million bales in 1959-60. Disappearance this season is estimated by the Department of Agriculture at 15 million bales which is about one million bales less than in 1959-60 but still about three-fourths of a million bales more than production. On this basis, stocks in the U.S. are expected to decline to below 7 million bales, the lowest since 1953.

Production in other free world countries is expected to be around 18 million bales, as against 16.50 million bales during last season. This, however, should not be construed, warns the Committee, as anything but a nominal estimate, because, though actual estimates are available for a number of countries, it is too early to frame estimates in respect of a number of other countries.

Export Availability

At first sight, therefore, it might appear that considerably more cotton would be available for export in countries outside the U.S. this season, but such, in the Committee's opinion, is not the case. In the first place, carryover stocks in the net exporting countries at the beginning of the season were lower by half a million bales and had been drawn down to a minimum in many instances. Second, over half of the expected increase in production outside the U.S. will be in India which, because of the continuing tight supply conditions, would not be reflected in increased exports. Indeed, a larger crop than the one now being harvested is needed by India to sustain the present level of domestic consumption and to replenish depleted stocks. Exports are not, therefore, likely to be affected. On the other hand, in spite of the larger crop, imports into this country are expected to be as large as in the previous season. Taking all these factors into consideration, the Committee estimates total export availabilities outside the U.S. in 1960-61 at 8.5 million bales or roughly the same as in 1959-60. This represents the maximum volume of cotton that could be exported under the most favourable circumstances. Stocks in the net importing countries are, of course, at their highest level for many years, but this factor must be considered in relation to a record level of consumption. Nevertheless, exports from outside the U.S. are likely to decline, unless the importing countries decide to increase their stocks further. An influencing factor would, however, be the demand from the Communist countries, which is likely to be higher this season, owing to the setback to production, unless, of course, it is offset by drawing down stocks.

In spite of these unfavourable factors, the Committee is of the firm opinion that exports during the season from the free world countries taken as a whole would continue to be at a relatively high level, though probably below the last season's export of 15.2 million bales. Present estimates are that exports would aggregate 14.5 million bales. At this level, shipment of an estimated 6.5 million bales from the U.S. would leave a market for about 8 million bales for other free world exporters. This will be sufficient to absorb the major portion of the export availability which, as noted above, would not exceed 8.5 million bales.

These estimates are based on the assumptions that the present level of consumption in the net importing countries will be maintained, that there would not be any change in their overall stock position, that increased imports by India will continue and that net exports to Communist countries would be maintained at the previous year's high level. If actual trends deviate from these assumptions, the estimates would also vary to that extent.

U.S. EXTRA LONG-STAPLE COTTON

With a view to reducing Commodity Credit Corporation's stocks of extra long-staple cotton acquired under price support operations and stimulating consumption of U.S. extra long-staple cotton abroad, the U.S. Department of Agriculture announced recently a new sales programme. Under this programme, extra long-staple cotton would be sold to U.S. exporters on a competitive bid basis. Sales would be made by the Department's New Orleans office periodically in the same way as upland cotton was sold in the 1958-59 marketing year.

U.S. exporters would receive the current subsidy of six per cent. per lb. on all cotton sold abroad. The programme would permit sales of cotton for local currencies as laid down under Public Law 480, barter transactions and sales under the credit programme of the Commodity Credit Corporation.

C.C.C. stocks of extra long-staple cotton aggregated 61,000 bales on 18th November 1960. Supplies of this type of cotton were estimated by the Department of Agriculture at 300,000 bales which the Department of Agriculture considers as "twice the quantity of this type of cotton necessary to fill the demand at the current rate of disappearance." Carrying charges alone on the stocks of long-staple cotton aggregated one million dollars a year. However, stocks of long-staple cotton released to the Agriculture Department in 1957 from the U.S. national stockpile of strategic materials, would not be included in this sales programme."

The Department gave the assurance that sales would be made in an orderly manner at such prices and quantites determined by the Commodity Credit Corporation as would not disrupt world market prices and impair the competitive position of friendly countries.

COTTON MISSION TO EGYPT

At the invitation of the Egyptian Cotton promotion Committee of the Ministry of Economy in the United Arab Republic (Egyptian Province), a mission of the International Federation of Cotton and Allied Textile Industries is to visit Egypt from the 16th to the 21st inst. The mission will be composed of cotton merchants, spinners and manufacturers from Austria, Belgium, the Federal Republic of Germany, France, Italy, Japan, the Netherlands, Portugal, Spain, Sweden, Switzerland, the United Kingdom and the United States of America. Mr. Alfredo Sedó from Barcelona, Spain, Senior Vice-President of the International Cotton Federation, will be the leader of the mission.

The purpose of the mission is to study the progress made in the improvement of existing and development of new Egyptian cotton varieties and to examine modern harvesting and breeding techniques and current raw cotton varieties. The members of the mission will have discussions with high Government officials of the Ministries of Economy and Agriculture in Cairo.

PAKISTAN COTTON CROP

Despite a decrease of 2.9 per cent. in area, the cotton crop in Pakistan during the season 1960-61 is estimated higher at 1,715,000 bales of 400 lbs. each as compared with 1,657,000 bales in the previous year, showing a rise of 3.5 per cent. according to the Food and Agriculture Ministry. While the production of the American variety of cotton is expected to increase from 1,446,000 bales in 1959-60 to 1,539,000 bales in the season under review, that of the *deshi* variety is expected to decrease from 211,000 bales to 176,000 bales.

BAN ON MOVEMENT OF BENGAL DESHI LIFTED

The ban on the movement of Bengal *Deshi* cotton from the Punjab, U.P. Rajasthan to any other part of the country, imposed with effect from 28th November 1960, has been lifted. Announcing this, a Press note issued by the Textile Commissioner on the 5th inst. stated that, since the ban was imposed, 6,000 bales of Bengal *Deshi* cotton had been requisitioned for the industry.

On the 9th December 1960, the export policy for Bengal *Deshi* was announced which required every exporter to deliver to local mills a quantity equal to that proposed to be exported. Since this stipulation would ensure that a quantity equal to that exported would be delivered to mills, the ban on the movement of this variety of cotton had been found necessary.

With a view to making sure that the mills, which have submitted bank guarantees undertaking to import American cotton 1" and below and 1-1/16" and above but below 13/16" under P.L. 480 before 31st December 1960, against the sub-authorisations issued to them in terms of the Trade Notice No. 110/60, have imported the cotton before the target date, the importers and/or the mills are required to produce documentary evidence such as bills of entry, bills of lading invoices, etc., showing the actual import of American cotton in India against the sub-authorisations issued, says a Government Press Note issued on the 6th inst. The importers and/or mills need not wait till the last date but should produce evidence as and when the cotton is imported.

US* MAKE COLD CASH...

India today is caught up in the feverish activity of industrial advancement. Projects are planned...dams are being built...all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines...and the STEEL consumed by them. In dams and bridges. In the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country... indicative of what a country is worth in cold hard cash.

This is the hallmark of

QUALITY

This is the certification mark of the Indian Standards Institution. It is given to many consumer and industrial articles manufactured or processed according to relevant Indian standards.

The ISI mark has many advantages. To the manufacturer it means increased demand through customer satisfaction, and protection from unfair competition. To the consumer it offers an assurance of quality of goods and services purchased, and better value for the money spent. The granting of the licence to use the ISI mark is a trust placed with the manufacturer. ISI maintains a constant vigil to see that it is not misused in any way, for the interest of the consumer has to be safeguarded.

NO CHANGE IN SUGAR PRICES AT PRESENT

FURTHER EXPORT QUOTA OF 50,000 TONS RELEASED

TWO important decisions pertaining to sugar have been announced by the Government of India since the New Year began, one concerning prices and the other exports. Until further orders, the same ex-factory prices for sugar produced in the current season (1960-61) by the mills in Uttar Pradesh, North Bihar, South Bihar and the Punjab as those fixed for the sugar produced in 1959-60 under the notification dated 15th September 1960 will continue. The prices are Rs. 37.85 per maund of sugar (I.S.S. D-29 grade) in respect of factories in Uttar Pradesh and North Bihar and Rs. 38.35 per maund in South Bihar and the Punjab, with prescribed price differentials for other grades. The prices for sugar produced in the rest of India will remain unchanged as hitherto. A further quantity of 50,000 tons has been released for export. This quantity and the 50,000 tons released on 17th September 1960 are expected to be exported before the end of March next.

The Government's decision not to effect any change in the price structure of sugar is understandable, considering that the whole question of sugar price is now engaging the attention of the Tariff Commission. The Commission, it will be recalled, has been asked (*a*) to examine the issue in all its effects and suggest modification with a view to improving it or recommend a revised all-India formula or regional formulæ in the light of cost schedule given by it earlier, (*b*) to consider the sugar industry's claim for rehabilitation allowance in the matter of sugar price division, (c) to indicate whether the formula should apply to regions where ex-factory prices are fixed and, in case the formula is not applied, how the advantage of special incentives given to factories in years of control should be shared between mills and growers, and (*d*) to assess the effect of the price linking formula on the establishment of new sugar factories with heavy capital outlay and see whether any concession is to be allowed to them. Since the Government has specially requested the Commission to submit its report "as early as possible"—the reference of the question to the Commission was made early in October last—it has not considered it desirable to make any alterations in the existing ex-factory prices of sugar. This also explains why the Government has stated that prices will remain unchanged until further orders.

Export

The Government's decision to release a further export quota of 50,000 tons of sugar has evidently been prompted by the comfortable supply position and the pressing need for earning foreign exchange. The current sugar season commenced with fairly large carry-forward stocks with mills amounting to 542,000 tons (excluding 41,000 tons out of the 1960-61 season's output before November 1960). This quantity, together with the estimated output of 2,600,000 tons, will give a total available supply of as much as 3,142,000 tons, as against 2,580,000 tons available in 1959-60 and 2,249,000 tons in 1958-59.

While it is true that a further sugar export quota of 50,000 tons will not cut into the supply available for domestic consumption and that the export of this quantity earns for the country a foreign exchange of over three crores of rupees, one will have to consider the huge loss involved in exports as a result of the wide disparity between Indian and world prices. On the basis of the currently prevailing world market prices, it is calculated that the total loss on 50,000 tons sold abroad will be as much as Rs. 3.70 crores, of which the loss of rupee resources arising from the full remission of excise duty and cane cess comes to Rs. 1.71 crore.

Nearly four months have elapsed since the Government of India released the last sugar export quota of 50,000 tons. It is not known how much of this quantity has actually been sold and shipped, what is the price realised on such sales and which are the countries that have bought the sugar. A recent Press report only avers that the sale of about 39,000 tons has already been contracted. It is unfortunate that the Indian Sugar Mills Association, through which exports are being effected, does not care to release any statement to the Press indicating the progress made in exports. The Association will do well to keep the public informed of the position through Press notes issued periodically.

The question of selling Indian sugar to the U.S. is still being negotiated. The prospects of the U.S. buying large quantities of sugar from India every year would appear to be quite good. In the course of a statement issued to the Press recently after a six-week visit to the U.S., Mr. S. S. Kanoria, Chairman of the I.S.M.A.'s Export Agency Division, for instance, has expressed optimism about the ultimate result regarding the U.S. quota for Indian sugar, though he feels that further efforts from both the Government of India and the sugar industry would be required at the highest level for achieving definite success. Mr. Kanoria says:

"The U.S. annual requirements are about 96 lakh tons of sugar, out of which it imports about 45 lakh tons annually from different countries. . . . During my talks with the State Department and Agriculture Department officials in Washington, I found considerable sympathy and interest for India. But I feel that a lot of public relations work is necessary to educate the Americans about the Indian sugar industry and to mobilise the American public opinion in our favour."

Referring to the chances of India getting an export quota in the U.S. market, Mr. Kanoria gave the following particulars:

India's allocation can come only after the Congress reassembles in February 1961 and the first shipment could start not before April 1961. Several countries such as the Philippines, Peru, San Domingo, Mexico and Formosa from amongst the present quota-holders and Brazil, Argentine, Australia, South Africa, British East Indies and French West Indies among the new entrants are seeking a quota from the United States. Although Indian sugar has to be carried over a long distance, which may normally go against it, there is a distinct advantage in so far as it would enable American food ships arriving in India at the rate of one per day to carry sugar on their return voyage. Another point in India's favour is that this is a step in the direction pointed out by the World Bank and other financial institutions that India should develop her export trade instead of relying solely on aid and loans for financing the third Five-year Plan. Only about 12 per cent. of the world sugar production is traded in the free world market which is, in fact, a low-priced dumped market utilised by different countries to export their surplus production after supplying to the preferential markets. If there are no preferential markets, prices in the world market will not remain at the present low levels which are much below the actual cost of production of sugar in the exporting countries. But, in the present circumstances, it is understandable that every country should try to get a U.S. quota so as to divert its supplies from the world market to the preferential market, as far as possible, in order to get higher prices.

Mr. Kanoria made special mention of the fact that the U.S. is interested in importing only raw sugar to keep the refineries in that country working and that its quota for "direct consumption" sugar is just 12½ per cent. of the total imports. Naturally, some difficulties will be encountered even in asking the U.S. to accept the Indian white sugar as raw sugar. Mr. Kanoria, therefore, suggests that, in order to sell sugar to the U.S. and also to sell competitively to other countries, India will have to manufacture some quantities of raw sugar. This is a suggestion that deserves to be examined carefully. By and large, however, one wonders whether any large-scale export of the magnitude of half a million tons of sugar to the U.S. is possible without any compensation by way of a higher internal price.

Sugar production during the month of November 1960 was 233,000 tons, as against 180,000 tons in the corresponding month last season. This excludes 52,000 tons produced by some factories for the season 1960-61 prior to November, as against 32,000 tons last season by this date. The offtake of sugar from factories during the month was 150,000 tons, as against 131,000 tons. The total closing stocks of sugar with factories as on 30th November 1960 was 676,000 tons, as against 222,000 tons on the same date last season.

BANKING ALMANAC 1960-61

A Handy Reference Book for Banks, Industrialists, Insurance Companies, Importers, Exporters, Stock and Share Brokers and in fact for every concern having dealings with banks.

PRINCIPAL CONTENTS

* Complete Particulars of Banks operating in the Indian Union. Directorate, Management, Capital, Branches and Summary of Balance Sheets for the last two years.
* Complete particulars of the Leading International Banks of the whole world.
* Alphabetical list, Town-wise and Bank-wise, of Bank Branches in India and the principal countries of the world.
* Banking Companies Act and Rules, Reserve Bank of India Act, Negotiable Instruments Act, etc.
* The General Information section contains a mineful of useful information.

Cloth Bound Rs. 25 (Packings and Postage Rs. 3.50 nP.)

OUTLOOK FOR JUTE GOODS EXPORT

FINDINGS OF I.J.M.A. DELEGATION

OUT of every Rs. 100 earned by goods and commodities exported from India, jute manufacturers alone account for as much as Rs. 24. The value of jute goods actually shipped during the first six months of the current financial year amounted to Rs. 69.52 crores, representing about 24 per cent. of the aggregate exports of Rs. 292.88 crores. The importance of jute manufactures as a precious foreign exchange earner will be all the greater in the next few years, what with the prospect of a tight balance of payments position that will confront the country. In view of this and considering the growing competition from Pakistan, with its expanding loomage, not to speak of the increasing resort to bulk handling and use of paper and plastics bags as packaging materials, every effort will have to be made to put the jute goods export trade on a firm and secure footing. Viewed thus, it is, indeed, gratifying that the Indian Jute Mills Association is sparing no pains to assess the prospects for the export trade in the overseas markets. Towards the end of 1959, the Association sent a delegation to North America which made a comprehensive survey of the market conditions there. This was followed by another delegation (consisting of Messrs. D. C. B. Pilkington, D. P. Goenka and T. R. Crook) which undertook a tour of Argentina, the U.S. Canada and the U.K. during the period from 14th October to 10th November 1960.

That the delegation did much useful work is borne out by the interesting report submitted by it. It will be seen from this report that the delegation sought to foster personal contacts with importers and consumers of jute manufactures in the countries visited and to explain the conditions in which the prices of jute and jute goods had risen during 1960. On the basis of the trend of discussions, the delegation has assessed the effect of higher prices on the demand for Indian jute goods and on the future market prospects from both short- and long-term points of view. In particular, the delegation has done well to warn against an undue rise in prices of jute goods. It says: "In a market such as North America, where jute fabrics have to face strong competition from paper, plastics and bulk handling as a packaging medium and from paper, cotton and other substitutes in the industrial sphere, it is obvious that a rise in the price of burlap must weaken its competitive position and adversely affect its sales."

Argentina

The findings of the I.J.M.A. delegation reveal that, given price stability at an economic level, the market for jute goods in Argentina will be maintained at its present size, namely, about 40,000 tons annually. This view is based on the following grounds:

Since the programme of monetary stabilisation and economic rehabilitation was introduced at the end of 1958, Argentina has made appreciable progress towards economic recovery, and there is a feeling among businessmen that, given political stability, there will be something in the nature of a boom by 1962.

Argentina is still unavoidably dependent on jute bags for the packing of most of its crops and, although the surcharge of 40 per cent. on hessian imports greatly accentuates any rise in their landed cost, the demand for hessian in Argentina is less sensitive to the price factor than it is in India's other large export markets.

There is a certain amount of bulk handling in Argentina, mainly for the movement of maize, but this affects less than one-fifth of the total agricultural production and labour costs are not so high as to constitute a strong inducement to the introduction of bulk handling methods. Moreover, any substantial expansion of bulk transport is at present ruled out by the inadequacy of the roads, and, although a large-scale road building programme has recently been drawn up, its implementation will take some time. For the present, therefore, there will be no serious threat to jute bags from this direction.

Looking somewhat further ahead, apart from retarding the development of industrial uses for jute fabrics, the recent high prices will not seriously damage the market for hessian in Argentina, provided they do not continue too long. The lower offtake in 1960 has meant drawing on stocks, which will ultimately have to be made good; and, if we cannot hold out any hope of a significant expansion of demand, in the forseeable future, any losses to bulk handling will be offset by the expected increase in agricultural production.

Nevertheless, the I.J.M.A. delegation emphasises that the demand for Indian burlap in Argentina is inevitably influenced by the Argentine Government's policy in regard to import surcharge, which, it is felt, places it at a disadvantage with indigenous methods of transport such as bulk handling. It considers that an early reduction in the rate of surcharge is a matter of importance to the Indian jute industry.

U.S. and Canada

Reviewing the trend of the U.S. and Canadian markets for burlap, the I.J.M.A. delegation stresses that the essential prerequisites for the maintenance of burlap sales in the fiercely competitive market of the U.S. are regular supplies and reasonably stable level of prices. "To this end," to quote it, "shortages of raw materials must be avoided and we cannot emphasise too strongly the need for prompt and vigorous action on the part of all concerned to improve the yield of the jute crop and ensure that India achieves early and lasting self-sufficiency in raw jute." The outlook for Indian burlap exports to the U.S., as assessed by the delegation, is as follows:

The volume of agricultural produce requiring transport is expanding considerably and this means an increase in the potential market for burlap as a packaging medium. The competition that Indian jute manufacturers now face in North America will come not so much from foreign jute industries as from substitutes, and any loss that may result from the present high prices will constitute almost a permanent inroad into the market for burlap, for it will not be easy to retain the lost market. The total burlap consumption in the U.S. in 1959 was 895.1 million yards—674.0 million yards for bags and 221.1 million yards for industrial use. The total consumption in the first nine months of 1960 was 644.5 million yards. Notwithstanding the rise in prices, the industrial consumption of burlap, at 180.8 million yards, was up during the first nine months of 1960 by 22.3 million yards, or 14 per cent. over the corresponding period of 1959. On the other hand, the cut-up for bags showed a decline of 44.3 million yards to 463.7 million yards, or 8.7 per cent. and overall, the total consumption was down by 22 million yards or 3.1 per cent. at 644.5 million yards. While the decline in burlap consumption for bags undoubtedly reflects consumer resistance to higher prices—the low consumption figure in July, for example, reflects resistance to the very high prices of forward bag sales in May, when Calcutta prices were at a peak—it does not necessarily mean a corresponding fall in the demand for burlap.

Besides urging all possible steps to ensure stability in prices, the I.J.M.A. delegation has drawn pointed attention to the need for (*a*) manufacturing hessian with a lower oil content than the average for the movement of foodstuffs in the U.S.; (*b*) reducing the cost of canal lining, as, for example, through a downward revision in freight for shipment of cloth from Calcutta and rot-proofing of hessian cloth in India before shipment; (*c*) development of new uses for burlap as an industrial packaging medium; (*d*) maintenance of a high standard of quality at all times; (*e*) strict adherence to specifications; (*f*) ensuring continuity in the supply of specialty goods; (*g*) elimination of manufacturing faults by effective supervision in the mills; and (*h*) proper promotion and publicity work.

United Kingdom

The United Kingdom differs from other countries, in that it has a sizable jute industry of its own. In assessing the likely effects of the recent rise in prices on the demand for Indian jute manufactures in the U.K., the I.J.M.A. delegation has taken note of the operation in that country of the Jute Control, particularly the system whereby the prices at which imported hessians are sold by the Control are marked up by fixed percentages of their landed cost. It observes:

"The remedy for this state of affairs is, of course, a return to the more stable and competitive prices prevailing a year ago; but the current high prices are basically due to the world shortage of jute and cannot be expected to fall substantially until jute is again in adequate supply. In the meantime, however, the position in the U.K. is greatly aggravated by the mark up which, though originally designed to protect the jute industry in Dundee, is now seen to operate as a direct encouragement of the use of substitute materials and bulk handling methods to the general detriment of the market for jute manufactures as a whole, whether imported or locally produced. ... The paper industry in Britain is now bringing out a 70-lb. bag to replace the 140 lb. hessian bag for the packing of cubes and has already produced a 56-lb. bag for general packaging purposes. Members of the jute goods trade in the U.K. were of the opinion that there would be a considerable market for smaller hessian bags in these sizes, if lighter weight fabrics between 7½-oz. and 9 oz. and narrower widths around 30" were available at prices proportionately comparable with that of 10 oz. cloth. That these lighter weight fabrics cost proportionately more is due partly to the premium on narrow width cloth and partly to the higher rate of mark-up on such constructions."

In the considered opinion of the delegation, there is manifestly a strong case not only for a further reduction in the quantum of the mark-up—on the higher prices prevailing today, the 20 per cent. rate in terms of cash is now greater than the 30 per cent. rate a year ago—but also for an extension of the reduced rate to a wide range of fabrics. It is encouraging to hear from the delegation that the U.K. Board of Trade officials have appreciated the position and promised to give the matter their full consideration. No change is, however, expected in the present application of the mark-up, until the results of the enquiry into the jute goods trade under the provisions of the Restrictive Practices Act, due to take place in April next, are known. The delegation has invited the attention of the Indian jute mills to one or two specific complaints made by the U.K. buyers and called upon them to take proper measures to rectify them. One of the complaints is that the packsheet used by some mills does not give adequate protection to the contents of the bale and results in the cloth being stained during shipment. Instances are also reported of cloth having been cut by the baling hoops used in the packing of the bale. Further, both the U.K. Jute Controller and one of the larger consumers have complained about faults in the sewing of bags. It is reported, too, that bales of 40"×10 oz. hessian have sometimes been found to contain less than the full 2,000 yards of cloth and as many as four or even five short lengths.

All these irregularities are certainly disquieting, as they will damage India's credit abroad. The buyers should have no cause for dissatisfaction with the quality of jute goods, especially when prices are high. The mills should, as the delegation has rightly pointed out, not relax their efforts to maintain the highest possible standard of quality. The delegation has agreed to join a joint publicity campaign in the U.K. as proposed by the British Jute Trade Federal Council. The suggestion is that, if the Council contributes £5,000 annually for three years, the I.J.M.A. should contribute a like amount and the U.K. Jute Goods Association a lump sum of £7,000, so that a total fund of £37,000 would be available over the three-year period, apart from the contribution that the Pakistan Jute Mills Association may agree to make. The proposals, we are told, are now being examined in detail by the interests concerned, and a decision in regard to the joint advertising programme is expected to be reached in good time before the Federal Council's current campaign expires in August next.

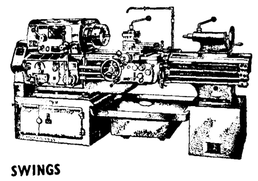
Machine Tools for Precision plus Production

IMPROVED MODEL 'RL' LATHES



SWINGS OVER BED DIA 375 mm to 570 mm

These versatile Lathes possess the qualities of ruggedness and outstanding performance which distinguish all Mysore Kirloskar products.

The all-geared headstock of these heavy duty, sliding, surfacing and screw cutting Lathes transmits maximum power throughout the spindle speeds. All the gears are made of specially selected alloy steel, hardened and ground to give long service.

These high speed, precision Lathes have several other special features described in an illustrated literature. Please send for it today.

MANUFACTURERS: THE MYSORE KIRLOSKAR LTD., YANTRAPUR P.O., (MYSORE STATE).

PROTECTION TO ALUMINIUM TO CONTINUE

TARIFF COMMISSION'S PROPOSAL FOR LOWER DUTY, HOWEVER, NOT ACCEPTED

THE latest enquiry by the Tariff Commission into the circumstances of the aluminium industry has led to the finding that the industry is still in a developmental stage inasmuch as various schemes for expansion of existing units and establishment of new ones have just been taken in hand. Since, in its estimation, these schemes will take anything from three to five years for completion, the Commission has recommended the continuance of protection to aluminium ingots, bars, etc., for a further period of four years, that is, till the end of 1964. It has also recommended that the rate of protective duty be fixed at 25 per cent. *ad valorem* for developmental considerations although, according to its finding, a duty of no more than 18 per cent. would be required to equate the domestic ex-works price of ingots with the landed cost ex-duty of the imported product. In making this recommendation, the Commission has taken note of the present excise duty on domestic ingots and the countervailing duty on imported ingots as well as the need to keep the prices of a basic raw material like aluminium as low as possible. As for aluminium manufactures like sheets, circles, etc., they do not, in theory, need any protective duty, because there are no unfavourable differences between their domestic ex-works prices and the landed cost ex-duty of the imported products. But they would need compensatory protection so long as the raw materials, namely, ingots, bars, etc., are in the protected category. The Commission has, therefore, recommended that protection to these aluminium manufactures, namely, sheets, circles, etc., be also continued till the end of 1964 at the same rate of duty as that recommended for ingots, that is, 25 per cent. *ad valorem* (as against the existing effective rate of duty of 35 per cent. *ad valorem*).

The Government, however, has not accepted the Commission's recommendation for a reduction in the rate of duty from 35 per cent. to 25 per cent., though it has accepted the other recommendation for the continuance of protection for a further period of four years. Apparently, the Government thinks that the needs of the developmental phase would justify the maintenance of the protective duty at the existing level of 35 per cent. *ad valorem*. At the same time, it has not ruled out the possibility of a reduction in the duty if a further study shows that consumers of aluminium require some relief or incentive and that such reduction will secure the developmental objective. For the present, the Government's decision to continue to maintain the existing duty of 35 per cent. *ad valorem* is as realistic as it is understandable for more than one reason.

Demand

The first reason is that the needs of development are going to be very exacting. While the present (1960) installed capacity is only 17,800 tons of ingots (made up of 5,600 tons in the Alupuram plant and 10,000 tons in the Hirakud plant of the Indian Aluminium Company, Ltd., and 2,200 tons in the plant of the Aluminium Corporation of India at Jaykaynagar, Asansol) and production during that year has reached an estimated level of 18,500 tons, further development has to take place to the point of installing a total additional capacity of about 65,000 tons by the end of 1963 or so and of producing an additional 56,500 tons per annum by the end of the third Plan. The Commission's estimate of demand for aluminium at 74,000 tons in 1963 (as against 45,000 tons in 1960) may also be usefully given here in its details:

	Tons
Utensils	16,000
A.C.S.R. and A.A.C.	27,000
Transportation and aluminium alloys	11,500
Building and construction	5,000
Food and farming	2,500
Canning and packaging	6,000
Miscellaneous	6,000
Total ...	74,000

Even in the present pattern of demand for aluminium, indigenous production of ingots now accounts for more than 45 per cent. of actual availability, of which imports of ingots, sheets, etc. in 1960 were of the order of about 22,000 tons. Imports have been strictly controlled in recent years, and established importers have not been granted any licences since the licensing period October 1958-March 1959. Only actual users of ingots, bars, sheets, circles, etc. have been given limited import allocations. It looks as though even these limited imports will continue to be substantial in the next two years, for the growth in indigenous production will not be commensurate with the growth in demand. If it is assumed, for instance, that imports in 1961 may not be less than 20,000 tons, the actual users will be paying by way of import duty alone (at the rate of 35 per cent. *ad valorem*) as much as Rs. 1.75 crores on that much quantity.

Development Plans

The development plans relating to existing and new units call for brief mention in this connection. The existing unit, namely, the Aluminium Corporation of India, which belongs to the J. K. group, expects to install, in technical collaboration with a Swiss firm, an additional ingot capacity of 5,300 tons per annum by 1962-63. The other existing unit, namely, the Indian Aluminium Company, Ltd., which is a Canadian enterprise in collaboration with Indian investors, expects to install, in technical collaboration with the Aluminium Laboratories Ltd. of Canada, an additional ingot capacity of 10,000 tons at its Hirakud plant. As for the new projects, there are three of them. The first of these is the Hindustan Aluminium Corporation of which Birla Gwalior Ltd. are managing agents; this company, which is erecting its plant of 20,000 tons ingot capacity at Rihand (U.P.) in technical collaboration with Kaiser Aluminium and Chemical Corporation of U.S.A., is expected to commence production by June 1962. The second new unit, namely, the Tendulkar Industries (Private) Ltd. has been granted a licence to erect an aluminium plant with an ingot capacity of 20,000 tons near Chiplun in Maharashtra State; this company is engaged in negotiations for securing the technical and industrial collaboration of the Aluminium Company of U.S.A. And the third new unit, namely, Madras Aluminium Ltd., which has just entered the capital market with a large issue of preference and equity shares, proposes to erect a plant of 10,000 tons ingot capacity at Salem in the Madras State in technical and financial collaboration with the Italian firm of Messrs. Montacatini; this unit is expected to go into production by the end of 1962. It would be seen from this brief survey that the aluminium industry has a big development programme for the next three or four years—a programme calling not only for continuance of protection but for maintenance of protective duty at the existing level.

Another reason for the Government's decision to maintain the present quantum of protection is probably explained—though this is by no means clear—by the Tariff Commission's not-so-confident estimate of fair ex-works prices. This estimate, based on the weighted average cost of the Alupuram and Hirakud plants of the Indian Aluminium Company Ltd., is as follows:

(Rs. per ingot ton)	
Cost without depreciation	1,962.39
Depreciation	343.27
Margin for contingency (at 5 per cent. on works cost without depreciation)	98.12
Return (at 12 per cent. on employed capital)	559.23
Total ...	2,963.01

In this estimate, the Commission has worked out depreciation at normal income-tax rates on the written-down values, even though it has recognised, in theory, the need for providing depreciation on the straight line basis to maintain stable prices over a period in a capital-intensive industry like aluminium. Although actually the Company is providing depreciation at different rates on different assets on straight line basis, the Commission has not accepted this basis on the ground that, at the moment, the difference in the total cost will not be significant even if depreciation is provided on straight line basis. The Commission has, however, suggested that new units coming into production in this industry should, from the very start, maintain plant registers in sufficient detail to work out depreciation on straight line method. It looks as though the provision for depreciation may have to be increased when the new units go into production. In any case, the estimated fair ex-works price of Rs. 2,963.01 for ingots, as the Commission itself has stated, is for the purpose of arriving at the quantum of protection and does not include selling and distribution expenses. That it is only a rough estimate with a substantial margin of error could be inferred from the fact that the recommended quantum of protection represented by a duty of 25 per cent. *ad valorem* would cover a possible difference of Rs. 622.25 per ingot ton (as against Rs. 449.12 worked out by the Commission in the following table) between fair ex-works price and landed cost ex-duty and thus mean a possible fair ex-works price of Rs. 3,136.14 per ingot ton:

(Rs. per ton)

	Ingots	Manufactures	
		Sheets	Circles
C.I.F. price	2,489.00	4,928.00	5,219.20
Clearing charges at 1% ..	24.89	49.28	52.19
Landed cost ex-duty ..	2,513.89	4,977.28	5,271.39
Fair ex-works price ..	2,963.01	4,647.03	4,448.31
Difference between fair ex-works price and landed cost ex-duty	449.12	—330.25	—823.08
Difference as a percentage on c.i.f.	18.24	— 6.70	— 15.77

It will be seen from the above table that no duty is required to protect indigenous sheets and circles. But, actually, they will be covered by the compensatory scheme of protection, as their raw material, namely, ingot aluminium, is in the protected category. Incidentally, it may be noted here that the two existing major aluminium units themselves have together an installed capacity of 11,100 tons a year for sheets and circles, manufacturing them at a monthly rate of about 1,000 tons as of 1960. There are also nine other units with an aggregate capacity of 7,900 tons a year for sheets and circles, manufacturing them at a monthly rate of under 300 tons only as of 1960.

Apart from the two major recommendations made by the Tariff Commission regarding aluminium ingots and aluminium manufactures, there is another, namely, that the existing concessional rates of duty of 20 per cent. *ad valorem*, standard, and 10 per cent. *ad valorem*, preferential, on imports of alumina by the aluminium manufacturers be continued upto 31st December 1964. This latter recommendation has been accepted by Government. Two other recommendations, namely, that the Railway Board should consider the possibility of classifying alumina consigned to smelters in the same category as other beneficiated or crude ore for charging freight, and that rates for supply of electric power to the aluminium industry be kept stable for a fairly long period and adequate quantities of it be supplied at reasonable rates have also been taken note of by Government.

In conclusion, it may be noted that the present enquiry by the Tariff Commission has been confined to an investigation into the protection granted to the aluminium industry. The Commission has specifically stated that the fair ex-works price computed by it is for the purpose of arriving at the quantum of protection and that it cannot be taken as the fair price at which the product should be available to the consumer. There is no suggestion in the report that its computation could form the basis for purposes of price control. At present, both the existing units fix their own selling prices, taking into consideration their cost of manufacture, distribution, etc. It is worthy of note that these selling prices have not been changed during the last three years. While the consumers have represented to the Tariff Commission that prices of the domestic products are high, they have also generally conceded that prices could be brought down only by effecting economies in production costs.

U.K.'S DUNGENESS NUCLEAR POWER STATION

The Nuclear Power Group, formed on 1st January 1960, as a partnership between the Nuclear Power Plant Company Ltd. and the Associated Electrical Industries-John Thompson Nuclear Energy Company Ltd., has won the contract to build the Dungeness nuclear power station on the Kent coast of England. This will be the fourth nuclear power station to be built by the Nuclear Power Group, the other three stations that are being built by the Group being at Berkeley (Gloucestershire), Bradwell (Essex) and Latina in Italy. When completed in 1964, the Dungeness station, the sixth commercial nuclear power station to be built in Britain, will begin supplying electric power to the national grid. This station is designed for a net electrical output of 550 MW. and will have two identical reactor units of approximately 840 MW. thermal output. That this huge station may be completed to schedule can be predicted with a measure of certainty since the Nuclear Power Group commands large design, manufacturing and construction resources.

NEW PRODUCTS AND PROCESSES

Flow Indicator

THE problem of observing the flow of an opaque liquid through a pipe line has been a subject of study by a U.K. engineering firm and has resulted in the production of a range of flow indicators. The instruments, which can be used with liquids of almost any viscosity—such as thick oils—are equally suitable for indicating flow either horizontally or vertically upwards. As the fluid travels through the chamber of the indicator it moves a hinged metal flap which incorporates a set-in magnet to operate a pointer against a scale. As there are no springs or other moving parts, the risk of mechanical breakdown or jamming is eliminated, and the pointer and scale are in a separate chamber so that the fluid cannot obscure the window. Internal parts of the instrument are readily accessible for cleaning while the body is still in the line, and can be turned through 90 degrees if required to change the direction of flow. A particular feature is that the indicator can be easily adapted for extremely low flow rates, and has a sensitivity of an order that the smallest change in relative flow is shown against the scale. It will also accept a wide range of capacities when full flow is shown on the scale. In situations where the liquid may contain ferrous materials which might adhere to the magnet a special screened type of indication has been provided, in which the magnet is fully enclosed in an intermediate chamber. A switch type is also available so that when flow stops completely or falls below a certain rate, a switch is automatically operated to give a reinforcing audible indication of an emergency.

Steel Alloy

A new steel alloy containing from 29 to 31 per cent. of aluminium has been developed by the National Research Institute for Materials and Technology in Prague. It has been given the name Pyroferal and is protected by patent in five countries, including Britain. The matrix is a solid aluminium-iron solution and aluminium carbide. Its mechanical characteristics are comparable to those of grey cast iron although bending strength may be increased by the addition of titanium. Pyroferal is very hard and resistant to abrasive wear. It does not get brittle during long-term service at high temperatures. Owing to the formation of a protective layer of aluminium oxide, it remains resistant to heat almost up to its melting point. It withstands attacks by sulphur oxides.

Grinding Machine for Laboratories

Small automatic grinding machines for laboratories are now being offered for export by a West German firm. The machines, which are electrically-powered, are fitted with timing devices so that after being filled with the material to be pulverised they can be left to work on their own. Each machine has a pestle and mortar incorporated in it, pressure on the pestle being variable up to a maximum of 20 lbs. The maker says that all kinds of material—including samples of metallic powders, pigments, glass, ceramics, cement and pharmaceutical products—can be ground up by the machine to "analytical fineness." The pestle and mortar and operating mechanism are completely enclosed in a dust-proof housing, but there is a "window" which enables the laboratory technician to watch the pulverising process.

Novel Aid for Fire Brigades

A novel aid to American fire brigades is a device to reduce the oxygen in the air, choking the fire but leaving enough oxygen for the firemen to breathe. The inventor, a combustion engineer, says that if the oxygen is reduced from its normal 20 per cent. to between 10 and 15 per cent. it will not support flame. He claims, however, that firemen are able to work on this proportion of oxygen which is roughly equivalent to the amount left in the air at an altitude of 5,000 feet. The device, which obviously can be used only on enclosed fires, consists of a combustion chamber about the size of an office desk, transported on a fire trailer. Measured fuel oil is burned in the chamber to reduce the oxygen to the desired amount. The resulting thin air is then cooled by water sprays and led to the fire in a big, flexible hose.

Solidifying Soil

A chemical grout for sealing underground curtain walls in and around dams or dykes, for solidifying weak granular soil masses during tunnelling or the sinking of caissons, and for other similar uses in civil engineering projects has been developed by Cyanamid International. It is the AM-9 Chemical Grout, a mixture of water-soluble organic chemicals applied as an aqueous solution after the addition of a catalyst. In a time controllable by the choice and amount of catalyst, the solution, which penetrates any formation in which water flows, sets to a stiff gel. This both binds the particles together and makes the mass impenetrable to water. The grout is quickly applied and is useful for oilwell drillholes, basements, tunnels, mine shafts, coffer dams, sewer-pipe joints and open excavations.

Novel Foundation for Buildings

Multi-storeyed buildings can be built on permafrost on ferro-concrete piles instead of conventional foundations. This new method has been developed by a group of Krasnoyarsk engineers. With the new technique several score, ferro-concrete piles are hammered into the ground under each building into holes drilled by means of special rigs. This obviates the need for digging foundation pits which presents great difficulties in permafrost areas. As a result houses can be built more quickly and considerably more cheaply. Dwellings with a total of 3,000 flats have already been built on piles in Norilsk beyond the Arctic circle.

The Flying Sherpa

AIR-INDIA's own cargo service, The Flying Sherpa, between India and U.K. via the Middle East and Europe.

The Flying Sherpa is a specially designed Super Constellation freighter aircraft with a total capacity of 12 tons. It has double doors and reinforced flooring for the uplift of heavy and bulk cargo.

Pressurized and heated cabin for livestock, with trained attendants on board.

Ideal for imports of heavy machinery and spare parts at attractive charter rates. Please apply.

AIR-INDIA

IN ASSOCIATION WITH B.O.A.C. AND QANTAS

AI/7 AII. 1552

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS and applications are invited on the basis of the Prospectus, copies of which are available from the Company's Registered Office, the Bankers to this issue and Brokers mentioned hereunder.

A copy of the Prospectus has been filed with the Registrar of Companies, Bihar, Patna, for the purposes of registration together with the documents mentioned therein as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained for this issue by an order, a complete copy whereof is open to public inspection at the Registered Office of the Company at Samastipur, Bihar. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licence has been obtained from the Central Government for the establishment of this new Industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Applications have been made to the Stock Exchanges at Calcutta, Bombay, Delhi and Madras for permission to deal in and for official quotation for the Equity Shares now being offered.

The Subscription List will open at the commencement of the Banking hours on the 13th January 1961 and will close on 23rd January 1961 at the close of the Banking hours, or earlier, at the discretion of the Directors but not before the Banking hours on 16th January 1961.

THAKUR PAPER MILLS LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

1. AUTHORISED CAPITAL:

10,00,000 Equity Shares of Rs. 10 each	Rs.	1,00,00,000

2. ISSUED, SUBSCRIBED AND PAID-UP:

30,000 Equity Shares of Rs. 10 each fully called and paid up in cash	Rs.	3,00,000

3. PRESENT ISSUE:

3,70,000 Equity Shares of Rs. 10 each	Rs.	37,00,000

No call will be made earlier than three months from the date of allotment. Subject to this the calls will be made as may be determined by the Directors in accordance with the provisions of the Companies Act, 1956. At least 30 days' notice shall be given in respect of each call and there shall be minimum interval of one month between any two calls.

UNDERWRITING AND GUARANTEE

1. The Central Bank of India Ltd. has underwritten 50,000 Equity Shares of Rs. 10 each	Rs.	5,00,000
2. The State Government of Bihar, has guaranteed 2,00,000 Equity Shares of Rs. 10 each	Rs.	20,00,000
	Rs.	25,00,000

4. OUT OF THE PRESENT ISSUE:

(i) ALREADY SUBSCRIBED:		
70,000 Equity Shares of Rs. 10 each of the aggregate nominal value of Rs. 7,00,000 have already been subscribed by the Directors, Managing Agents, present Shareholders, their friends and associates	Rs.	7,00,000
(ii) AGREED TO BE SUBSCRIBED:		
50,000 Equity Shares of Rs. 10 each of the aggregate nominal value of Rs. 5,00,000 have been agreed to be further subscribed by the Directors, the Managing Agents, their friends and associates	Rs.	5,00,000
(iii) BALANCE OFFERED FOR PUBLIC SUBSCRIPTION:		
2,50,000 Equity Shares of Rs. 10 each are now offered at par	Rs.	25,00,000
	Rs.	37,00,000

PAYABLE AS FOLLOWS:—

On Application	Rs. 2.50
On Allotment	Rs. 2.50
On First Call	Rs. 2.50
Second and Final Call	Rs. 2.50

BOARD OF DIRECTORS

1. SRI C. C. DESAI, I.C.S. (Retd.), (*Chairman*), Industrialist, 44, Friends Colony, New Delhi. *Director*:—1. Life Insurance Corporation of India. 2. Industrial Finance Corporation of India, etc.

REGISTERED OFFICE

SAMASTIPUR, BIHAR

CONSENTS

Consents in writing of the abovenamed Bankers, Brokers, Solicitors and Auditors to act in their respective capacities have been obtained and filed with the Registrar of Companies, Bihar, Patna, along with the Prospectus, and have not been withdrawn.

OBJECTS

The Company was formed generally for carrying on all or any of the objects mentioned in its Memorandum of Association. The immediate object is to set up a plant for the manufacture of Writing and Printing Paper with a production capacity of 3,000 tons per annum.

PROSPECTS

In view of the Industrial advancement of the Country, the demand for writing and printing paper has considerably increased. At the present level of production there is a large gap between production and demand. There is therefore further scope for establishment of new units. The advancement made in recent years has enabled paper to be manufactured not only from the traditional bamboo pulp but also from other materials like Rice and Wheat straw and Sugarcane Bagasse. The Company proposes to manufacture writing and printing paper from the above materials mixed with long fibre pulp like that of rags, etc. Plants upto 10/15 tons per day production capacity can be worked not only efficiently but also economically. Some special equipments are being imported for better recovery of pulp and of good quality paper. Application has been made for permission for expansion of the production capacity by 2,700 tons per annum for manufacture of special quality paper.

CAPITAL OUTLAY

The Capital required to reach the stage of production based upon the feasibility report is estimated as follows:

	Rs.
Cost of Land, Building and other miscellaneous expenses	19,00,000
Cost of Machinery, imported or indigenous, including Freight, Insurance, Transport, Custom Duty, Erection and other engineering acquisition (including Brokerage, underwriting/guarantee commission preliminary expenses and other contingencies)	44,00,000
WORKING Capital (excluding such further sums of money as may be required from time to time which will be financed by borrowing from Banks against hypothecations of running stock)	7,00,000
Rs.	70,00,000

This is proposed to be met by:—	Rs.
SHARE Capital	40,00,000
Borrowings from the Industrial Finance Corporation of India	20,00,000
Borrowings from the Bihar State Financial Corporation	10,00,000
Rs.	70,00,000

The Industrial Finance Corporation of India and Bihar State Financial Corporation have sanctioned long terms loans of Rs. 20 lakhs and Rs. 10 lakhs respectively. Both the loans are against equitable mortgage of fixed and other capital assets on usual terms ranking *pari passu* charges. The loan of Bihar State Financial Corporation will carry interest at 6½ per cent. subject to rebate at ½ per cent. on prompt payment of interest and is repayable in 12 yearly instalments first of which is payable on 1st January, 1965. The Managing Agents have agreed to furnish personal guarantees for the aforesaid two loans.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present issue upon which the Directors will proceed to allot shares is 2,00,000 Equity Shares of the face value of Rs. 20,00,000 payable in cash.

MANAGING AGENTS

The Company is under the Management of Messrs. Ram Bahadur Thakur & Co., a partnership firm, whose appointment and terms have been approved by the Government of India. The remuneration payable to the Managing Agents is 10 per cent. of the net profits of the Company subject to the limit of sliding scales over Rs. 10 lakhs of net profits as determined by the Government of India. The Managing Agents shall not be paid for the present any minimum remuneration in the event of absence or inadequacy of profits.

SITE

It has been decided to locate the factory at Samastipur by the side of the river Burhi Gandak in the State of Bihar. The selection of the site has been approved by by Messrs. Kinsho Trading Co., Ltd., Tokyo, Japan, the suppliers of the machinery for the project.

LAND AND BUILDINGS

Land measuring about 36 acres has already been acquired near the proposed site for the mill as well as staff and labour quarters.

PLANT AND MACHINERY

Orders for import of Machinery have been placed with Messrs. Kinsho Trading Co., Ltd., Tokyo, Japan, supply whereof is expected to be completed by March 1961.

COMMENCEMENT OF PRODUCTION OF THE MILL

The mill is expected to go into production by October, 1961.

RAW MATERIALS

Sufficient quantity of raw materials like Rice and Wheat Straw, Wastepaper, Rags, Sugarcane Bagasse are available around the proposed site, which can be procured without any difficulty at economical rates.

WATER

The site is on the Bank of River Burhi Gandak which has a perennial flow of water.

COAL AND POWER

Coal will be available from South Bihar for which there is good arrangement of Rail Transport over the Mokameh Bridge on the Ganges. Electric power will be required at the first stage to the extent of 1,200 K.V.A., which will be available from the Government Power House located at Samastipur. The State Government of Bihar has agreed to supply adequate electric power as and when required.

APPLICATION FOR SHARES

Copies of the Prospectus and application forms for Shares will be available from the Brokers, Bankers to this issue and Registered Office of the Company. Applications for Equity Shares must be made for a minimum of 25 Shares or multiple of 25 Shares on the application forms accompanied by the full amount payable on applications, and to be lodged with any branches of the bankers to this issue.

THE MADRAS ALUMINIUM COMPANY LIMITED

Registered Office: "KAMALA NILAYAM," PEELAMEDU, COIMBATORE 4

AUTHORISED CAPITAL:

2,50,000 Cumulative Preference Shares of Rs. 100 each	Rs.	2,50,00,000
7,50,000 Equity Shares of Rs. 100 each	,,	7,50,00,000
	Rs.	10,00,00,000

ISSUED CAPITAL:

1,50,000 Redeemable Cumulative Preference Shares of Rs. 100 each	Rs.	1,50,00,000
4,50,000 Equity Shares of Rs. 100 each	,,	4,50,00,000

The Subscription List will open at 10 a.m. on 9th January, 1961 and will close at 2 p.m. on 16th January, 1961 or earlier as soon as subscriptions approximating to the amount issued to the public have been received, but not earlier than 2 p.m. on 12th January, 1961.

With reference to the last paragraph under the heading TECHNICAL COLLABORATION (Page 11 of the Prospectus) of the announcement published on 7th January 1961, about the approval of the Government of India of the terms of the Collaboration agreement with Messrs. Montecatini of Italy, we have to clarify that the Government of India have approved the said collaboration on the following terms:

I. (1) Allotment of 45,000 shares of Rs. 100 each in the equity share capital of the Madras Aluminium Company Ltd., Coimbatore, to Messrs. Montecatini of Italy in consideration of the transfer of the collaborators' technical know-how in the field of the mining of bauxite ores and production of alumina, aluminium ingots and aluminium alloys. It is noted that the collaborator would be agreeable not to charge any additional fees for the supply of technical know-how either in regard to further expansion upto 20,000 tons of aluminium smelter or in regard to manufacture of aluminium fabrications.

(2) Payment to Messrs. Montecatini of Italy of a sum not exceeding Rs. 40 lakhs in Italian lire towards engineering fees, drawings, assistance in purchase of plant and other allied services.

(3) Payment to Messrs. Montecatini of Italy of a sum not exceeding Rs. 35 lakhs in Italian lire for the cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges, etc. This amount of Rs. 35 lakhs represents the payments in foreign exchange to the technical personnel of Montecatini in India. The rupee expenditure on such personnel, it is understood, is estimated at Rs. 15 lakhs.

II. It is noted that Messrs. Montecatini will, apart from the equity shares to the extent of Rs. 45 lakhs issued to them for the know-how, would also invest a sum of Rs. 75 lakhs in equity capital of the company as and when this sum that is being paid to the Italian collaborator for engineering fees and personnel become due.

The reservation of 1,20,000 shares for allotment to Montecatini in page 2 of the Prospectus is to meet the commitments stated above as and when they fall due.

CONDITIONS FOR ACHIEVING HIGHER PRODUCTIVITY

GOOD LABOUR–MANAGEMENT RELATIONS A DESIDERATUM

A POINT that is often overlooked or not sufficiently emphasised in discussions on productivity is that higher levels of productivity cannot be attained, unless the basic conditions of production, let alone productivity, are created. Any manufacturer will testify that shortage of raw materials and essential machinery and spare parts that have to be imported is the chief obstacle in the way of higher production and productivity. This is no doubt due to the restrictive import policy which the country has been forced to follow because of the difficult foreign exchange situation. If the drive for higher production and productivity is to bear fruit, the import policy should give top priority to raw materials, machinery and spare parts.

The need for relating import policy to the productivity drive was underlined by Mr. H. C. Mahindra in his speech, while moving the resolution on higher productivity and efficiency, at the recent annual meeting of the Associated Chambers of Commerce, Calcutta. At present, he pointed out, production was seriously interfered with by shortage of raw materials or spare parts. These were not available precisely when they were required most. The restrictive import policy, which was responsible for this situation, was understandable, but that did not mean, said Mr. Mahindra, that efforts should not be made to minimise the serious effects the present policy had on production. Attempts now being made by the Government to facilitate imports of essential items, though welcome, were not sufficient to ease the situation. Mr. Mahindra had no doubt that the removal of this bottleneck would constitute a major contribution to the productivity drive.

Encourage Expansion

An issue closely related to this subject is that of encouraging existing industries to produce more which they can do at marginal cost provided they are permitted to do so and given the necessary facilities. Drawing attention to this, Mr. J. M. Lall of the Bengal Chamber of Commerce, pointed out, that a number of industries were being asked to limit their production, or not to make extensions to their existing units, in order to enable uneconomic units to be installed. He suggested that, instead of restricting existing industrial units from producing more than their licensed capacity, Government should encourage them to do so, by giving some form of income-tax relief on additional production.

Mr. Mahindra, of course, did not underrate the importance of creating a climate conducive to productivity improvement. He conceded that, of late, productivity had received much attention both in Governmental and business circles. But the practical effects of this were still depressingly 'meagre' and the country was still not productivity-conscious in the sense that there was no general awareness of the need for higher productivity and the benefits that flow from it. There was, therefore, need for intensifying the efforts of the National Productivity Council to promote productivity consciousness.

Mr. Mahindra then went on to say that educational efforts must, to a large extent, aim at fostering a new attitude to productivity among workers. At present, the attempts made by employeers to improve efficiency was viewed with suspicion by workers. This was due to lack of confidence in the employers' intentions and bona fides and a fear that new methods aimed at increasing productivity would result in contraction of employment and increased workloads.

Role of Trade Unions

The task of educating the workers and readjusting their mental attitude to productivity-oriented change and experiment is one in which trade unions can play a leading role. Mr. Mahindra did well to stress their role in the matter. Trade unions, according to him, had hitherto shown hardly any awareness of the problem. He felt that it was in their own, as well as in the national, interest to inculcate in workers a belief in the need for higher productivity. Mr. Mahindra conceded that in such matters as these the responsibilities were mutual. He defined employers' role as follows:

"It is their duty to see that the workers receive a fair share of the benefits arising from improved output and higher productivity. When increased productivity is the result of greater effort and improved skill on the part of the workers, they must be rewarded with an appropriate share of the value of the increment in output. Generally, however, such gains are not entirely due to greater effort on the workers' part. They are usually, at least partly, due to expenditure on the creation of better working conditions and investment in new equipment and techniques of production; and, where such factors are involved in increased production, each must receive due weight in the sharing of the gains."

While a change in the attitude of employers and workers was necessary, that alone, according to Mr. Mahindra, was not sufficient. The attitude of labour courts and tribunals also needed to be productivity-oriented. In spite of the recommendation of the Fair Wages Committee (1949) that productivity should be one of the factors to be taken into consideration in assessing fair wages, in practice, labour courts and tribunals continued to take cognisance of only the arguments with which wage claims are commonly supported by the unions, namely, the vague concept of social justice and the inflationary course of the cost of living index. This attitude, he pointed out, must give place to the recognition of the dependence of real wages on productivity. More and more importance should be attached to the introduction of incentive schemes and linking increases in wages to productivity. Incentive schemes should be based on standards of performance evolved from scientific work studies and work measurement.

Labour Laws

Neither a change in the attitude of workers and management nor plentiful supply of raw materials, stores, spares and machinery can result in higher production, if labour laws, which regulate industrial relations, are defective. In fact, defective laws, or the absence of suitable legislation can do more harm to labour-management relations and the smooth flow of production than is generally recognised. Quite a few instances of interruptions to production caused by defective labour laws were cited by Mr. E. F. G. Hunter, in the course of his speech at the aforesaid meeting of the Associated Chambers of Commerce of India, moving the resolution on labour relations.

Mr. Hunter said that, in industrially advanced countries, labour relations were founded on the premise that wage and conditions of work should, wherever possible, be determined by voluntary agreements between trade unions and employers' organisations. Employers in India had accepted this essential principle of collective bargaining in a realistic manner. But they had good reasons to be concerned over the attempts of minority unions to frustrate or break agreements between the management and the majority unions. This problem, Mr. Hunter averred, was aggravated by the Supreme Court's interpretations of the provisions of the Industrial Disputes Act (in the case of the Associated Cement Companies *vs.* its workmen) to the effect that a minority union in an industry or an establishment can terminate an award which meant that it could also terminate a settlement entered into with a majority, and therefore, representative, union.

Recognition of Unions

Attempts made by irresponsible trade unions to keep workers in a state of perpetual unrest can best be met, according to Mr. Hunter, by strong action by the Government against the leaders of the unions concerned. Apart from penal action, the Government should pass legislation to the effect that only one union could be recognised for an industry in a local area—a principle which is incorporated in the second Plan—and that agreements between employers and such trade unions could not be terminated by other trade unions or groups of workers. It should also be laid down, Mr. Hunter suggested, that no union other than the recognised one might raise an industrial dispute in any industry in a local area.

There is considerable force in the contention of Mr. Hunter that, if a minority union were allowed to have its way, irrespective of the agreement or understanding reached between the management and the majority union, industrial peace cannot be expected. The position is worse when, as is usually the case, the minority and majority unions are controlled by rival political parties. For then political rivalries between them will invariably be reflected in the relations between the unions. The remedy suggested by Mr Hunter, namely, making agreements reached by management and the majority union binding on minority unions, however, involves the fundamental issue of the right of a worker, or group of workers, to raise a dispute on his or their own without joining or identifying himself with a union. This problem has now acquired new dimensions because of the application of the Industrial Disputes Act to a variety of employees, including the middle class (as, for example, working journalists) which does not wish its cause to be championed by political leaders who dominate trade unions but which, at the same time, needs some protection against exploitation by unscrupulous or die-hard employers. This aspect of the question needs to be considered carefully before a final decision is taken along the lines suggested by Mr. Hunter.

EMPLOYEES' PROVIDENT FUND

The Employees' Provident Funds Scheme, framed under the Act of the same name, applied to 39 industries at the end of March 1960, as compared with six initially, according to the annual report on the working of the scheme during 1959-60. The number of subscribers to the Fund increased to 2.7 million during 1959-60 from 2.54 million in the previous year. The total contributions to the Fund amounted to Rs. 16.36 crores, as compared with Rs. 14.59 crores in 1958-59.

The scope of the scheme was widened during the year to bring certain classes of workers within its ambit: (a) employees working outside the precincts of a covered establishment in connection with its work; and (b) employees, with emoluments exceeding Rs. 500 per month, if they apply for membership of the Fund with the consent of their employers.

The condition regarding the qualifying period for membership of the Fund was also liberalised so that an employee, who actually worked for not less than 240 days, during a period of 12 months or less, became eligible for membership of the Fund. Previously, the qualifying period was one year's continuous service or actual work for not less than 240 days, during a period of 12 months. As a result of the amendment, a regular worker could become a member of the Fund without having to complete 12 months.

During the year, contributions to the Fund continued to be invested exclusively in Central Government Securities through the Reserve Bank of India, but the pattern of investment was slightly altered in order to fetch a better yield. By the end of March 1960, a sum of Rs. 73.40 crores had been invested, and the yield from these investments during 1959-60 was Rs. 2.09 crores, as compared with Rs. 1.58 crores in the previous year.

The number of establishments covered under the Employees' Provident Funds Act, on a voluntary basis, increased during the year from 53 to 95, an index of the growing popularity of the scheme among the employers also.

Further efforts were made during the year under review for recovery of outstanding amounts. Against recovery cases filed during the year and the overdues of the preceding year, a sum of about Rs. 2.09 crores was realised; this was more than twice the recovery during 1958-59, which stood at Rs. 98.76 lakhs. At the close of 1959-60, 1,747 revenue recovery cases were pending involving a sum of about Rs. 2 crores.

During the year, a special reserve fund, with Rs. 20 lakhs transferred from the reserve and forfeiture account of the Employees' Provident Fund, was set up to assist outgoing members of the Fund or their nominees or heirs, in cases where their employers had not paid in full the provident fund contributions.

HUMAN IMPLICATIONS OF WORK STUDY

Observation of the effects of work study on human relationships and day-to-day organisation is reported in a case study published by the U.K.'s Department of Scientific and Industrial Research. It deals with the impact of work study at all levels in an industrial organisation and describes what happened during, and after, the introduction of work study by consultants into a medium-sized firm in the English Midlands. It is a study of change and people's reaction to it.

The D.S.I.R. say that the application of work study was not wholly successful, but subsequent analysis of the difficulties encountered revealed that their real cause was neither obvious nor technical—they were due to different expectations and basic assumption of the various groups concerned. For example, the same words and phrases held quite different meanings for different people. Analysis showed that the changes which were introduced involved a closer control of people's activities and they felt under constraint and pressure. Management and the consultants did not anticipate this closer control nor did they recognise it when it happened. While making it clear that it is impossible to draw up a series of "do's" and "don'ts" for the introduction of work study, the report contains a number of useful recommendations and is issued as a work valuable both to industry and for teaching purposes in management courses.

INDIA'S AIR TRANSPORT

SOME SUGGESTIONS FOR DEVELOPING IT ALONG THE MOST FRUITFUL LINES

By WING COMMANDER R. VAUGHAN-FOWLER, R.A.F. (Retd.)

AIR Transport is an essential part of a country's communications, its national importance increases in direct proportion to the size of a country. India being a large country, air transport becomes a vital factor in the industrial, domestic and political life of the whole nation.

Under the existing laws governing air transport in this country, the major scheduled air services are operated by two Government-owned corporations. The Indian Airlines Corporation is responsible for all domestic air services and connecting links to neighbouring countries and the Air-India International operates all India's international air services; these now stretch across Europe and the North Atlantic to New York, north-east to Tokyo and southwards to Sydney.

Within the framework of our national air power, a few non-scheduled operators are permitted to maintain certain air services, also special charter flights, including a variety of airlift functions under special short-term licences. This is the greatest weakness in our air transport system, as, due to the restrictions imposed on these "non-skeds," as they are known, they are not financially healthy.

No Merger Please

There are two distinct classes of scheduled air transport, international and domestic. Each has its own particular problems and these are resolved by operations of an entirely different kind. The types of aircraft employed are entirely different. Even the functions as well as the aircrews' daily life routine is different. These factors and many others have to be taken into account when proposals are made to merge the two national airline Corporations. Those who are not conversant with airline management and operation are often deceived into the belief that there are many advantages to be gained by having all air services operated by one giant corporation. In practice, this would prove unwieldy as well as being technically unsound. The economic gains are only problematical, as, in practice, savings would be unlikely to be more than petty.

Our domestic air services are quite extensive, approximately 100 aircraft are engaged with 327 pilots, the total number of employees being 9,553. The I.A.C. is not a small undertaking and its traffic is increasing. It is estimated that, in five years' time, the number of passengers carried and tons of cargo moved will more than double. No increase in technical or traffic staff to carry the extra work-load should be necessary for some considerable time, as the present revenue ton-miles flown per employee are exceptionally low as compared with other operators handling the same class of air traffic.

Obviously, to plan and develop air services on such a scale as the country really requires calls for the full time attention of the executives—they have more than enough to handle without complicating operations by mixing in international operations, with all the additional complications involved in crossing frontiers.

Air-India International is heavily engaged in a perpetual struggle for existence amongst a horde of competitors many of whom are gigantic organisations. Competition does exist, although not in air fares as these are fixed under international agreements rigged by the International Air Transport Association and approved by Governments. It is much to the credit of Air-India International that its sales staff procure a very good share of the traffic offering in all the countries the Corporation serves.

Our international airline Corporation would soon find itself in complications, if it mixed in domestic air transport services. These are particularly complicated in India, because each of the States has certain autonomous rights which, incidentally, permit the operation of air services within the State boundaries by independent operators, in particular the Flying Clubs. No advantage has been taken of this right, although it could be a very lucrative activity for the more advanced Flying Clubs.

Jungle Air Services

It is important to realise that the air transport policy in India requires different treatment to that which may have been adopted in other countries. There is no logical reason why an experienced Flying Club employing qualified staff should not engage in short haul internal State air services, using single-engine and small twin-engine aircraft, which are perfectly safe and adequate and which are similarly employed in many parts of the world. For some unexplained reason, no Flying Club has displayed enterprise in this direction, with, perhaps, the exception of one, the Hind Flying Club. It is significant that, many years ago, long before the last world war, the Delhi Flying Club operated a regular service for the carriage of mails between Delhi—Jodhpur—Karachi. This successful operation has at least proved that, with good management, activities of this kind can be undertaken by the Flying Clubs.

In both Australia and Canada, there are excellent examples of this class of air transport in the "bush" and "back-woods" services which are frequently operated by individuals who are working in these out-of-the-way parts of the country. For example, in Australia, many doctors fly the "flying-doctor" services which seem to go everywhere and land anywhere. In addition to transportation, many of the farmers use aircraft for agricultural purposes. In India, very little interest has been taken in developing these sides of our national air transport system.

Bearing in mind the vast areas ill-served with surface transport, and the difficulties of bringing medical service to the villages, also administration, and fast communications for the majority of the population, one wonders why there has not been some move to develop "Jungle Air Services" operated by the Flying Clubs, each working within the limits of its own State boundaries.

It will be a mistake to regard such services as unimportant. Not only would they benefit the State Governments even if they did have to pay a few hundred thousand rupees per annum in subsidy, but such services would automatically create entirely new traffic for the nationalised domestic scheduled air services. Many people would become accustomed to aircraft operating with regularity, confidence in the use of air transport would be created throughout the countryside and not only in a few of the larger cities. Many would at least try a ride to the nearest city, and, finding that a pleasurable experience, they might well be persuaded to venture further afield; then, they would become passengers for I.A.C.

Any suggestion that I.A.C. should indulge in this class of air service should be strongly opposed. The Corporation already has more than enough to do developing both the secondary and the major scheduled air services. Policywise, it would be just as bad for I.A.C. to become a jungle operator as it would be to merge the two nationalised airline Corporations into one giant organisation.

For some unexplained reason, many M.Ps. seem to have fixed ideas in regard to commercial air transport. They hold the view that only the two nationalised airline Corporations should be allowed to engage in air transport. To create giant monopolies is economically unsound and, if all competition is eliminated by law—and many want it this way—our airline Corporations in the years ahead will become indifferent to public demand. The air services will deteriorate and will not meet the needs of a country with expanding industry. What have the Corporations got to fear? There is more business than they can conveniently handle and some classes of air traffic requires the elastic treatment that the non-sked operator specialises in. Flying off the beaten track is not part of the business of scheduled airline operators. The two do not go together.

One vital aspect must not be overlooked. The country needs a large reserve pool of pilots. Also, small communication aircraft are required in large number in the event of war or immediate danger of war. There could be no better way of experiencing hundreds of pilots in real jungle flying. Getting on with the job on their own, without all the aids common to air route flying. The Government grants liberal subsidies to the Flying Clubs, but they do little more than teach pilots to fly round the houses. By developing jungle air services, many pilots would find employment and they would become a valuable asset to the country. Defence should not disregard this possibility, and, in reason, Defence might help financially to get the jungle air services going.

Interline Co-operation

The possibility of I.A.C. and Air-India International co-operating closely in respect of certain common requirements is well worth review. There are two considerable activities in which both Corporations engage which are actually somewhat outside the field of aviation. Surface transport is one, and the other is catering. Both are specialist forms of business, requiring expert handling. There are many users of both these services in addition to the two Corporations, many foreign operators call at our major airports and have need of catering facilities as well as surface transport.

It is a matter of opinion if individual operators should handle these services themselves. There are very good reasons clearly indicating that the logical answer is for all surface transport to and from the airport to be common to all airlines. It should be operated by an entirely independent organisation which would charge for the carriage of passengers and other than hand luggage. Coach services would have to be operated so as to ensure the air passengers city centre or airport departures within reasonable waiting time. At a busy period of the day when air services are coming and going frequently, the coaches to and from the city would require to operate at least every fifteen minutes. During the slack periods, a less frequent service would be adequate. The services would operate to meet the public demand.

A public service of this nature would relieve the airline operators of the heavy cost of maintaining their public transport, also their aircrew transport which could be under contract with the coach operator. If this system could be applied internationally, it is believed that it would lead to a reduction in air fares.

Catering is one of those headaches which the airline operators have brought upon themselves. International operators use their meal service and the specialities they can offer as direct inducements to passengers. Putting it another way, meal service in the airliners has become a form of competition between operators. Their fares are regulated by international agreement, fixed by the International Air Transport Association and confirmed by individual Governments. Competition can only take the form of something better, such as a more comfortable seat, or a more luxurious meal. Good personal service plays an important part, also a friendly atmosphere in booking and transit offices undoubtedly does much to create passenger goodwill. Air-India International is particularly adept at creating the right atmosphere. Even allowing that each particular operator requires some special menu, it should still be practical at the major airports to establish central catering establishments to serve all airlines. Presumably, it should be possible to achieve as good results as the individual operators now manage, but a universal caterer could surely produce at a lower cost.

These aspects of air transport may appear unimportant. Actually, they are not. For air transport to achieve the maximum service to the public, air fares have got to come down and anything that helps to reduce the actual cost of operation must be regarded as important.

Airport Administration

Airport maintenance costs are an indirect charge that has got to be met. If the returns from aircraft landing charges, housing, and airport building rentals fail to cover the total cost of maintaining the airport, then somebody has to make good the loss.

MONETARY STABILITY AND LIFE INSURANCE

RESPONSIBILITY OF INDUSTRIAL COUNTRIES

By Per Jacobsson

MANAGING DIRECTOR, INTERNATIONAL MONETARY FUND

LIFE insurance companies all over the United States are entrusted with the care of much of the savings of the citizens of their country. By and large, these savings come from people with quite moderate incomes, giving them security over the years ahead. It is a terrible thing if, by a wild inflation or because of unwise management, their efforts to provide for safety and security would come to nought, and such calamities have occurred in more than one country during my lifetime. The consequences have not been confined only to the economic field, and, particularly in Europe, have had political effects not very pleasant to recall.

It is, as a rule, those who have a sense of foresight and responsibility that take out life insurance—people who are in many respects the backbone of their country. If these people lose what they have painfully saved, political power may get into less responsible hands. This is probably the more dangerous nowadays when Governments have a greater capacity to direct, and even suppress, the lives of the inhabitants, but it was bad enough even in the past. Some of the world's greatest writers, among them Goethe and Voltaire, have written memorable words about the nature of inflation. Voltaire, after the crash caused by the inflationary policies pursued by John Law, the Comptroller-General in France early in the eighteenth century, remarked: "Paper money has returned to its intrinsic value."

In all these circumstances, it is natural that those responsible for life insurance funds should concern themselves not only with the problems of safe and suitable investments from an accounting point of view, but also with the general trend of prices in order to determine whether or not there is likely to be any substantial change in the value of money.

Fiscal and Credit Policies

If we examine those countries in Europe which have passed through periods of almost limitless inflation since the last war—for instance, Germany and Italy—we find that, for a number of years, saving was unpopular and people almost ceased to take out life insurance policies, for they had no confidence in their national currencies. To restore monetary confidence, the authorities in these two countries decided to carry out very cautious fiscal and credit policies, designed to build up substantial reserves. I need hardly tell you that they succeeded in restoring confidence in the mark and the lira. There has been a revival in the business of the life insurance companies, which has been greatly beneficial from both an economic and social point of view. I might add that the cautious fiscal and credit policies which these countries have pursued have not impeded economic growth. On the contrary, economic expansion in Germany and Italy has been at a higher rate than in almost any other country. We have here very telling evidence that the objectives of monetary stability and economic expansion are in no way incompatible.

There are a number of other countries which have been spared the ordeal of galloping inflation, but which nevertheless have had to submit to a fair dose of inflation, both during and since the war. For instance, in the United States, prices are now fully twice as high as they were in the 1930's. But this has not really impaired confidence in the currency, and therefore has not curtailed the business of life insurance companies. Fortunately, the price increases were, on the whole, gradual. In the minds of the public, a dollar has remained a dollar—even if the statisticians do tell us that today the dollar is worth only fifty cents. But for the ordinary man who is busy earning his living, this statistical calculation has not been an impelling reality in his daily life.

I think that the ordinary citizen also took into account, perhaps subsconsciously, that the world war was such a great calamity, such a vast and fearful undertaking, that it had to be accepted that there would be certain price increases. And while shortages existed after the war, the people in the United States also accepted, I think, with a certain equanimity, the continued rise in prices. As the years passed, however, and supplies became more plentiful under conditions of fully restored production, the public began to expect the authorities to arrest inflation and restore the benefits of stable money. In the U.S., fortunately, price increases have become much less marked in recent years. Over the last two or three years, wholesale prices have been practically stable, and the cost of living has risen by little more than one per cent. a year. This stability has already had beneficial results, and I think it came in the nick of time, for there were certain signs of uneasiness in the minds of the public.

Long-term Interest Rates

The stability of world prices has been helped by the increase in the output of goods of all kinds, which now far exceeds the pre-war production. There are plentiful supplies of fuel (both coal and oil), and of the whole range of raw materials and foodstuffs. More and more consumer goods are available, and there is an increasing output of all kinds of tools and machinery. Transport facilities have been expanding, and freight rates are still low. At the same time, there is a greater willingness by the authorities to pursue cautious fiscal and credit policies. Inflationary financing of budget deficits is looked upon with disfavour, and, in any case, long-term interest rates are no longer pegged at any artificially low levels.

As far as the supply of goods is concerned, there is no reason to believe that production will not continue to increase as a result of the large investments which have been made in practically all fields. Nor are there any reasons to expect any irresponsible reversal of financial policies, or such a "pushing up" of costs that prices must inevitably be raised. I would like in this connection to make three observations:

First, the very fact that we have not one country in the world, but a number of countries with their own fiscal and monetary policies, constitutes a certain safeguard against inflation. For given present ideas and the mood of people, it is most unlikely that any number of countries would adopt inflationary policies at the same time. If one or two countries were to do so on their own, they would soon experience a deterioration in their balance of payments, resulting in a reduction in their gold and foreign exchange reserves, and the likelihood is that these warning signs would be heeded and that the proper corrective measures would be taken.

Secondly, although a large country can have a greater influence on world prices than a smaller country, I think, that for a number of reasons, the United States alone can no longer determine the trend of prices on world markets. Indeed, I would go so far as to say that I believe that these trends are today largely determined by forces outside the United States. Western Europe imports about three times as much raw materials and foodstuffs as the United States, and most of the international commodity markets are situated outside the U.S. The United States is so largely self-sufficient that its influence on world prices is not in proportion to its economic capacity and output. It is, therefore, not surprising that, in the last few years, the United States has felt more strongly the impact of competition from other countries, and market conditions abroad have had an effect on prices here.

Thirdly, in the past, great wars have been the cause of inflation, but in between those wars there have often been long periods of considerable stability; that was the case not only in the nineteenth century between the Napoleonic wars and the First World War, but also in earlier times. If it is true that the very frightfulness of a nuclear attack will prevent a third world war, the chances for a period of monetary stability would seem to have been greatly enhanced.

No Recession

You will no doubt recall the state of mind which prevailed in the U.S. a year ago, when we heard so much optimistic discussion about continued and growing prosperity in the "roaring sixties." There were, however, a few who did not share this exuberant optimism, but held the view that the U.S. economy would have to pass through a period of somewhat difficult readjustment. After years of predominantly inflationary climate, the economy had to be adjusted to conditions of more stable prices: in other words, it was necessary for people to learn how to live without inflation. Much of the readjustment which was necessary has already been carried out and, I am glad to say, under conditions of quite good business. As was to be expected, it was accompanied by a certain relaxation in activity. There has been some discussion whether or not this relaxation should be called a recession. This is really a question of terminology.

I do not think that the recent relaxation can be compared with a cyclical decline in business activity. So many of the typical signs of a cyclical decline have been absent; the total awards of heavy construction contracts have, for instance, this year been some 12 per cent. larger than last year; and, internationally, boom conditions have continued—especially in Europe. The relaxation here has been the direct result of the "deflation of inflationary tendencies," to employ an expression of Mr. William McChesney Martin, the Chairman of the Federal Reserve Board in Washington. It was indeed fortunate for this country that the change in psychology came at the time when there was no cylical decline, for it might have had disastrous effects if it had coincided with a real recession.

Boom Gone

Recently, however, there have been some signs of a moderation of the boom in Europe, and also of some intensification of the relaxation in the U.S. Even so, I believe that, in certain respects, business conditions in the United States are today somewhat healthier than they were a year ago. In the first place, a considerable readjustment has already taken place. For many products, domestic and export prices have been adjusted to what the market can carry. Inventories have not risen. Stock exchange prices are more realistic now that there is little or no hedging against inflation.

And this is true not only of the stock exchange. Businessmen's expectations generally are more realistic. There may still be those who dream about the possibility of raising prices without any adverse effect on sales, but they are getting fewer and fewer. This change in expectations has had an influence on the attitude towards costs. In brief, there is today a stronger resistance against cost increases than there has been at any time since the war.

U.S. Balance of Payments

As far as the balance of payments is concerned, it is common knowledge now that there has been an impressive increase in U.S. exports, which may amount to $3½ billion for the year, and that imports have remained at very much the same level as before. Although the increase in exports has been facilitated by the boom in Europe, it proves, I think, that American industry can still compete in many export markets. There has thus been a basic improvement in the U.S. balance of payments, and the trade surplus will probably amount to $4½ billion. With net income from investments and services, making $6½ billion, this should be more than sufficient to cover all Government expenditure abroad, including expenditure for military purposes and official foreign assistance of all kinds.

The improvements which I have just mentioned have taken place in what the Europeans call "the current account of the balance of payments." For the United States, this account is now fully in equilibrium, and this has already contributed to a less pessimistic evaluation of the U.S. balance of payments' problem and to a calmer attitude in recent weeks on the foreign exchange and gold markets.

But the U.S. balance of payments is also affected by movements on capital account—private long-term investments abroad and movements of short-term funds. With a strong boom in Europe, interest rates there have been higher than in this country, and so, for some time, it has been possible to invest funds more profitably in Europe. But, when such investments are made, the United States acquires valuable assets as a counterpart. The outflow of funds has, however, been considerable, and, for 1960, the overall deficit in the balance of payments will probably reach $3½ billion, and thus be of about the same magnitude as in 1958 and 1959. Such a large deficit can obviously not be allowed to continue for ever, and neither will the boom in Europe last for ever. Official discount rates have recently been reduced in France, Germany, and Great Britain, and it is likely that these reductions will have some influence on the movement of short-term funds.

Europe

As far as more permanent investment abroad is concerned, I am inclined to think that, before very long, some alleviation will also set in. For I believe that there will in years to come be more capital available in Europe for use abroad. It is expected that the population there will grow at a slower rate than in the United States; the experts tell us that, in the next forty years, the annual increase in population in Western Europe will be about 0.7 per cent., while, in the United States, it will be something like 1.4 per cent., and in the rest of the world nearly 2 per cent. Much of the demand for capital comes, of course, from the needs of a growing population, not only for houses, hospitals, schools, and services, but also for tools and equipment. It is interesting to remember that, before 1914, France, with a relatively small rate of growth of population, was the main centre for the issue of foreign loans. If, therefore, more capital is available after meeting Europe's own needs, it will very likely flow to other Continents, including the United States. It will presumably take many forms: the financing of international trade, repurchase of assets now owned by Americans in Europe, purchase of stock exchange securities, as well as direct investment by Europeans in the United States.

Do not let me give the impression, however, that there will be any immediate relief for the U.S. balance of payments. That country will still have to continue with cautious fiscal and credit policies, and watch the trends of costs. A few weeks ago Professor Galbraith, in a statement on the U.S. balance of payments' problems, put the avoidance of cost increases as the No. 1 desideratum of the policies to be pursued to reduce the overall deficit. I agree with him that this should certainly have the very highest priority. Money wages are high in the United States, and so is productivity, but the relation is not so comfortable that costs can be allowed to increase without giving rise to a danger that U.S. industries might price themselves out of export markets, with further adverse effects on the balance of payments.

An Illusion

Some people clearly recognise this danger, but think that attention to costs is required only for balance of payments reasons, and believe that, if it were not for the balance of payments, the U.S. economy would enjoy much greater freedom of action. As far as I can see, this is an illusion; there is an equally great danger that American industries might price themselves out of the domestic market as well. One of the main objectives of policy in the coming year will be to overcome the slackening in activity and reduce unemployment. Whether one listens to Keynes or his predecessors, an essential condition for success is that costs should not be allowed to increase. I think that, in the present state of activity, the authorities can well permit the continuation of fairly easy money and also take steps to stimulate activity, especially in the depressed areas, provided the measures taken do not lead to cost increases or hamper the essential adjustments of the free market. The experience of many countries shows that a combination of cost adjustments with credit expansion is the most effective way of achieving a recovery in business activity. Costs can, of course, be reduced in many ways, even without reducing money wages. Indeed, cost adjustment through rationalisation is the policy most likely to improve real wages over a period of time under conditions of rising employment.

Easy Money—Dear Money

When I said that a fairly easy money policy may be pursued, I would like to underline that this will basically reflect the continuing high level of savings in this country. While business has passed through the transition from an inflationary psychology to the expectations of more stable prices, there has been a certain tendency to hold back a little in making investments in stocks and bonds, and also in plant and equipment. Those who have funds at their disposal have often preferred to keep a large part liquid. As a consequence, there has been an accumulation of funds awaiting investment. This is generally "good" money—money earned and saved—most of which is likely to seek in the end more permanent employment, and which will thus exert a steadying influence on capital values. I believe we have seen signs of such an influence in recent months on the stock and bond markets—and this has had a steadying influence on confidence.

For the future, easier money conditions in the short-term market and subsiding fears of inflation will naturally tend to bring interest rates down in the long-term market as well. But only if business fails to pick up again would long-term rates decline substantially. When recovery sets in after the present period of relaxation, there should once again be a strong demand for capital, which would bring to a halt any further decline in long-term rates. *The experience of the last seventy years shows that there has been a concurrence of rapid economic growth and rising interest rates. In those conditions, rising rates do not impede growth, they are rather a reflection of growth. Instead of being looked at askance, rising interest rates should then be considered as a sign of favourable developments—something to be welcomed* (Italics ours—ED.)

Now these considerations will have some consequences for debt management policies. The limitation of a rate of interest of 4¼ per cent. on the issue of Government securities with a maturity of more than five years poses rather less difficulties today than it did a year or so ago. But it may well happen that, with more business activity, this limitation may once again prove to be a serious disadvantage and I think it would be proper to consider a relaxation of this limitation well in advance of any change in market conditions. May I add that, for anyone familiar with the capital markets in Europe, it seems strange, indeed, that such an inflexible limitation is maintained in this country. I do not want to imply that the U.S. should feel it necessary to follow what is done in Europe, but I do believe that, in the future, this limitation may be a handicap not only internally but also in U.S. financial relations with the other side of the Atlantic.

U.S. Monetary Reserve

In a recent speech, Mr. Henry C. Alexander, Chairman of the Board of the Morgan Guaranty Trust Company of New York, also suggested that the Federal Reserve System's obligation to maintain 25 per cent. gold backing against notes and deposits should be abolished, so that all the U.S. gold would be fully available as cover against external liabilities. In a Staff Study on International Liquidity, which was published by the International Monetary Fund in 1958, it was noted that a great number of countries have seen fit to abolish cover requirements in terms of gold, because gold is mostly no longer needed for internal purposes, but only for the settlement of international obligations. For my part, I think it would be all to the good if the maintenance of the 25 per cent. gold cover rule, as well as the 4¼ per cent. interest rate limitation, could be removed simultaneously. I am sure that opinion abroad would regard the simultaneous removal of these two limitations with approval, and that such steps would thus contribute to a strengthening of confidence in the dollar.

Looking back at the relations between the financial forces here and in Europe over the last forty years, two things stand out. The first was a failure: the failure to establish close relations between the European and American financial authorities in the period between the two world wars. The result was the derangement of the world's financial affairs throughout the 1930's, when the world was split up into separate currency areas—the dollar area, the sterling area, for a time the gold bloc, and Dr. Schacht's regime in Germany and Eastern Europe. The punishment was a complete stagnation of world trade, with massive unemployment in many countries.

The second event of outstanding importance was the pre-eminence of the United States in financial affairs after the Second World War. I think it must be said that the United States used this pre-eminence with a magnanimity and generosity which, even though it may have been in its own enlightened self-interest, will stand out in history as an almost unparalleled act of statesmanship.

Underdeveloped Countries

But events have moved on and we are now in a new situation. The European countries have recovered from the ravages of war, and can again play their part in the world's economic and financial affairs. Today, Western Europe has an influence on the trend of world prices at least as great as that of the United States, and it will probably be able to provide, as I have already mentioned, increasing amounts of capital for investment in other parts of the world. The Western European countries should then be able to share more fully in assistance to the less developed areas. Co-operation between Europe and the United States in the formation of economic and financial policies will indeed be essential. I think this is becoming more generally appreciated. One of the purposes of the International Monetary Fund, as set out in its Articles of Agreement, is to promote international monetary co-operation and to provide machinery for consultation and collaboration on international monetary problems. The Fund can play, and has already played, a very useful role in this respect. The transformation of the Organisation for European Economic Co-operation, in which the United States and Canada are associate partners, into the Organisation for Economic Co-operation and Development, in which the United States and Canada will be full members, is also an event of great significance.

Fortunately today, the leading industrial countries have nearly all accumulated sufficient—or almost sufficient—reserves, taking into account the secondary reserves available to them through access to the International Monetary Fund. In these circumstances, the industrial countries can together exert a very great influence on the world's monetary affairs. I should like to finish with a plea for support for an increasingly close economic and financial collaboration between Europe and the United States. This is, of course, largely a matter for the authorities, but the support and example of influential private institutions—and not least those which manage so great a portion of the public's savings, as the life insurance companies—can be of real help in achieving this objective.

Note.—This article has been adapted from the speech of Mr. Jacobsson at a luncheon following the annual meeting of the Institute of Life Insurance in New York on 13th December, 1960.

CONSERVATION OF FOREST WEALTH

SHORTAGE OF TIMBER FEARED

THE immense potentialities of forests in promoting the tempo of industrial development have not yet been adequately appreciated in this country. For centuries together, there has been a persistent destruction of forests for a variety of reasons. It is said that over 75 per cent. of India's forests have been cleared so far for agricultural purposes alone. Besides, forests have been relentlessly exploited for purposes of fuel. What is unfortunate, however, is that the exploitation of forests was not accompanied by any scientific measures for afforestation. Consequently, there has been decadence of forest wealth. It is only now that the immense damage inflicted on India through thoughtless and unplanned destruction of forests has come to be realised. The inception of planning in the last decade and the development of industries, particularly saw-milling, paper, plywood and rayon, as also the growth of building construction, mining activities and communications, has brought to light the grave deficiency of forest resources, especially timber, in Indian economy. The havoc played by floods in many parts of India has also been a grim reminder of the need for re-establishing forests. A recent pilot survey jointly held by the F.A.O. and the E.C.A.F.E., with a view to assessing the timber trends in this region, has drawn pointed attention to the fact that India is likely to suffer from "serious shortage of wood products in the next few years." The Draft Outline of the third Five-year Plan also concedes that "supplies of all kinds of timber are likely to fall appreciably short of demand over the next 15 years, unless appropriate remedial measures are adopted." This is a pitiable situation, in that the shortage of forest products, resulting mainly from human indifference and lethargy on the part of our agricultural ministers, will virtually put a break on the growth of certain industries which are vital to the onward march of India.

Small Forest Area

At present, only about 20 per cent. of the total geographical area in India is covered by forests, which compares unfavourably with the world average of about 33 per cent., or one-third of the total land surface. The *per capita* forest area in India is as low as about 0.5 acre, as against 9 acres in Russia and 4.5 acres in the U.S. Not only is the percentage acreage too low, but the productivity of Indian forests, or the yield per acre, is substantially below those in industrially advanced countries. Productivity per acre per annum is placed at 3 c.ft., as compared with as much as 57 c.ft. in France, 37 c.ft. in Japan and 18 c.ft. in the U.S. Further, forests are unevenly distributed, with the proportion of forest land varying from 11 per cent. in the north-west to about 44 per cent. in the central region. Explaining this, the Planning Commission says, in the second Plan, as follows: "Forests are most scarce in areas where they are most needed as, for example, in the densely populated and intensively cultivated gangetic basin. Over most of the country, the forests are of a tropical character, being naturally somewhat open in the drier region and being everywhere composed of a large variety of species of which only a few have an economic value. Thus, an acre of forest land even in the valuable mixed moist deciduous forest yields less utilisable timber than an acre of forest in the purer European forests. Some improvement in this matter can be effected (and indeed has been effected) by finding uses for secondary timbers through research and by avoiding waste in extraction." It is against this background that the National Forest Policy Resolution of 1952 sought to raise the area under forests to 33 per cent. of the total area, the proportion to be aimed at being 60 per cent. in hilly regions and 20 per cent. in the plains.

In spite of this policy of extending the area under forests, the figures published by the Government show that the acreage under forests has actually declined. Thus, the area under forests fell from 277,232 sq. miles in 1950-51 to 263,701 sq. miles in 1955-56, the latest year for which data are available. Area under coniferous forests, in particular, suffered a distinct setback, such having fallen by about 30 per cent., that is, from 14,107 sq. miles to 9,736 sq. miles. The table in column 1 shows the classification of the area under forests from the point of view of composition, out-turn and legal status.

The output of forest products in general has shown steady increase in recent years. It may be noted that, in terms of quantity, firewood is the most important item among major forest products, accounting as it does for about 60 per cent. of the total. This is, of course, the case with the other underdeveloped regions as well. It is estimated that, in Asia, Africa and Latin America, about four-fifths of fellings are used as fuel locally, whereas in the developed countries the proportion is lower: 15 per cent. in North America, 34 per cent. in Europe and 37 per cent. in Russia. In fact, the underdeveloped regions, which account for 60 per cent. of the world's forests, produce much less commercial timber (as distinguished from fuel wood) than Europe which has only 3.5 per cent. of the world's forest area.

(Area in sq. miles)

Classification of area	1955-56*	1950-51
By composition :		
(a) Coniferous soft wood)	9,736	14,107
(b) Broad leaved (hardwood) :		
(1) Sal	40,448	40,747
(2) Teak	22,415	18,794
(3) Miscellaneous	196,071	205,584
Total	268,701	277,232
From out-turn point of view :		
(a) Merchantable	215,139	225,714
(b) Inaccessible	53,562	51,518
Total	268,701	277,232
By legal status :		
(a) Reserved	138,791	192,795
(b) Protected	64,911	45,582
(c) Unclassed	64,999	38,725
Total	268,701	277,232

* Provisional.

Production

Apart from providing the raw materials for paper, matchwood and plywood industries, forests in India are also the source of minor forest produce, such as bamboos, gums, resins, tanning materials and medicinal herbs, which are either essential raw materials for industries or serve as valuable articles of export. The following table shows the production of timber and firewood, as also minor forest produce, in 1955-56, as compared with 1950-51:

	Quantity ('000 cubic ft.)		Value (Rs. lakhs)	
	1955-56*	1950-51	1955-56*	1950-51
(a) *Major produce :*				
Timber	119,867	105,676	1,632	1,301
Round wood	25,437	29,549	206	105
Pulp and matchwood	1,451	475	33	1
Firewood	326,057	394,319	555	892
Charcoal wood	55,661	27,569	20	11
Total	528,503	557,588	2,446	1,900
(b) *Minor produce :*				
Bamboos and canes	..	..	137	152
Gum and resins	..	..	101	42
Others	..	..	564	498
Total	..	..	802	692

* Provisional.

Forests are also a good source of revenue for the Government. The total net contribution of forests towards revenue amounted to Rs. 26.96 crores (including Rs. 3.05 crores to the Central exchequer) in 1959-60 and is expected to go up to Rs. 28.34 crores (including Rs. 31.5 crores for Central Government) in 1960-61. It may be noted here that forests are now owned mainly by the Government. With the abolition of *zamindari* system, private ownership of forests has declined to a negligible proportion. The Government of India constituted, in 1950, a Central Board of Forestry, to co-ordinate the forest policy pursued by the different States, to adopt conservation measures and to integrate research on forests conducted by various institutions.

Forestry Board's Work

During the last ten years, the Central Board of Forestry has met six times; the latest meeting was held at Bhubaneswar on 29th December last and was addressed by both Mr. S. K. Patil, Union Minister for Food and Agriculture and Dr. Punjabrao Deshmukh, Minister for Agriculture. Dr. Deshmukh claimed many achievements to the credit of the Board. These are: greater consciousness about the important role played by forests in the economy of the country; procurement of sleepers, timbers, wood poles, etc.—the railways' entire requirements of sleepers now being met from indigenous resources, as against a good deal of imports a few years ago; inauguration of soil conservation measures and arresting of the spread of desert conditions; and introduction of important and efficient logging methods.

Although the *vanamahostava* campaign (inaugurated by Mr. K. M. Munshi, when he was the Union Minister for Agriculture) sought to highlight the importance of afforestation, it has not led to any notable improvement in the situation. The general policy of the Government of India has been to secure long-range development of forest resources and also to increase output through better techniques for timber extraction, development of forest communications and increased use of preservative and seasoning process of timber. The two Five-year Plans made special provision for forestry; but they have touched only a fringe of the problem. In the first Plan, a sum of Rs. 9.6 crores was earmarked for development of forests. We are told that State Governments carried out a number of schemes relating to afforestation, development of forest communications, strengthening of forest administration and formation of village and small-scale plantations. On an area of about 75,000 acres, the vegetative cover was restored by afforestation or planting, apart from constructing or improving over 3,000 miles of roads, during the first Plan period. The second Plan set apart Rs. 47 crores. It is expected that the original target of establishing plantations over 50,000 acres with suitable wood for the match industry and about 200,000 acres with industrial timber, will be fulfilled by the end of the Plan period. But it remains to be seen whether this will actually be achieved. We are told that about 400,000 acres of denuded forests have also been taken up for rehabilitation. Surveys and demarcation of 21,000 square miles have also been in progress. Besides, over 5,000 miles of forest roads will have been constructed by the end of the second Plan. It is also said that, in order to avoid wastage resulting from the traditional methods, improved techniques of logging are being introduced in the Punjab, Himachal Pradesh and Jammu and Kashmir. The Union Government has secured from Switzerland 20 sets of improved tools and implements for 400 pairs of loggers for use in Indian forests.

Forests in Third Plan

In respect of the projects for the development of forests during the third Plan period, the Draft Outline points out as follows:

"With the object of meeting a part of the shortage of firewood, it is proposed to create village forests comprising quick growing species during the third Plan over an area of about 2 million acres. This programme will be taken up in village common lands with community participation. The State will provide technical advice and also supply plants and seedlings. By supplying alternative fuel to the villagers, the programme will help conserve cowdung for use as manure.

"Other development programmes envisaged for the third Plan are the raising of sal and coniferous plantations on 50,000 acres in U.P., the Punjab, Jammu and Kashmir, Himachal Pradesh and West Bengal, teak plantations on 200,000 acres in Madhya Pradesh, Assam, Kerala, Mysore, Andhra Pradesh and Bihar and miscellaneous plantations, especially fast growing species, on another 450,000 acres in the Punjab, U.P., Rajasthan, Madras, Kerala and some other States. Programmes for raising plantations along canals, roads and rail-tracks will be continued. About a million acres of degraded forests will be rehabilitated. In addition, consolidation work will be undertaken over 33,000 square miles of forest area."

Among the other schemes, mention may be made of the proposals for constructing 15,000 miles of forest roads, establishing six seasoning and preservation plants, and making arrangements for the local manufacture of tools and implements for logging to be done on scientific and modern lines.

These schemes for the development of forests will be as much helpful to development of agriculture as they are to non-agricultural activities. For forestry serves to promote soil conservation. In many parts of the country, cultivation has become impracticable on account of soil erosion, floods, silting up of streams, extension of ravines and spread of arid regions. These defects can be remedied only by systematic and organised afforestation in the affected areas. No wonder then that Mr. S. K. Patil, Union Minister for Food and Agriculture, stressed, in his address to the aforesaid meeting of the Central Board of Forestry that there was "no field where nation-wide co-ordination is as necessary and desirable as in the case of forests, the enormous utility of which is as yet not properly understood." It is to be hoped that the various State Governments will appreciate the spirit in which Mr. Patil called for a better deal for forests, and follow it up with concerted efforts aimed at preservation and expansion of India's forest wealth. They must remember that forests have to be looked after, especially if the best and sustained results are to be got out of them.

THE CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE EIGHTY-SIXTH ANNUAL GENERAL MEETING of THE CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Tuesday, the 14th February, 1961, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1960, and the audited Balance Sheet as at 30th June 1960.
2. To appoint a Director in the place of Mr. K. M. D. Thackersey who retires by rotation and is eligible for re-appointment.
3. To appoint a Director in the place of Mr. D. R. D. Tata who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in the place of Mr. J. D. Choksi, who was appointed an Additional Director of the Company by the Board of Directors and who ceases to hold office under Section 260 of the Companies Act, 1956, but who is eligible for appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
5. To appoint a Director in the place of Mr. Jal H. Mehta, who was appointed an Additional Director of the Company by the Board of Directors and who ceases to hold office under Section 260 of the Companies Act, 1956, but who is eligible for appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that the Articles of Association of the Company be altered in the manner following:—

(i) For Article 27(*a*) substitute the following Article:—

"27(*a*) The certificates of title to shares shall be issued under the Seal of the Company which shall be affixed in the presence of and signed by (i) two Directors or persons acting on behalf of the Directors under a duly registered Power of Attorney and (ii) the Secretary or some other person appointed by the Board for the purpose. A Director may sign a share certificate by affixing his signature thereon by means of any machine, equipment or other mechanical means, such as engraving in metal or lithography.

Provided always that, notwithstanding anything contained in this Article, the certificates of title to shares may be executed and issued in accordance with such other the provisions of the Act or the Rules made thereunder, as may be in force for the time being and from time to time."

(ii) In Article 48 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(iii) In Article 88 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(iv) Delete Article 131.

(v) Delete Article 132.

(vi) In Article 135 delete the words and figure "Article 137 and" and the figure "261".

(vii) In Article 136 delete the words and figure "Article 137 and" and the figure "261".

(viii) Delete Article 137.

(ix) In Article 139 delete the words "Director ex-officio, a Special Director and".

(x) In Article 156 delete the words "provisions of Section 261 and other".

(xi) In Article 166 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xii) After Article 168 insert the following additional Article as Article 169A:—

"169(A). The Directors may elect one of their number to be the Chairman of the Board of Directors and determine the period for which he is to hold office and unless otherwise determined the Chairman shall be elected annually." Existing Article 169 shall be re-numbered "169(B)".

(xiii) In Article 170 delete the words "Ex-officio".

(xiv) In the proviso to sub-clause (1) of Article 180 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xv) In Article 181 in sub-clause XIX for the words "Managing Agents" wherever they occur, substitute the words "Secretaries and Treasurers".

(xvi) In Article 182, in sub-clause (1), for the words "Managing Agents" and "a Managing Agent" wherever they occur, substitute the words "Secretaries and Treasurers".

(xvii) In Article 184 for the words "Managing Agents" where they occur at the first two places the words "Secretaries and Treasurers" shall be substituted, and for the existing proviso the following proviso shall be substituted:—

"Provided nevertheless that certificates of debentures may be signed by one Director only or by an Attorney of the Company duly authorised in this behalf and countersigned by the Secretaries and Treasurers and certificates of shares shall be signed as provided in Article 27(*a*)."

(xviii) The heading "Managing Agents" occurring over Article 186 shall be substituted by the heading "Secretaries and Treasurers."

(xix) In Article 186 for clause (1) the following clause shall be substituted:—

"(1) Subject to the provisions of the Act, Tata Industries Private Ltd., their successors in business and assigns shall be the Secretaries and Treasurers of the Company from the 16th day of August 1960 for the period and upon the terms provisions and conditions set out in the Secretaries and Treasurership Agreement dated the 29th day of December 1960 and which were approved by the Company at the Extraordinary General Meeting of the Company held on the 31st day of March 1960 and by the Central Government with certain modifications agreed to by the Board. The said Agreement may (subject to the provisions of the Act) be further modified from time to time in such manner as may be mutually agreed upon between the Company and the Secretaries and Treasurers."

In clause 2 for the words "a Managing Agent" and "Managing Agents", the words "Secretaries and Treasurers" shall be substituted.

(xx) In the marginal notes to Article 186 for the words "Managing Agents" and "a Managing Agent" the words "Secretaries and Treasurers" shall be substituted.

(xxi) In Article 187 for clause (1) the following clause shall be substituted:—

"(1) The Secretaries and Treasurers, subject to the provisions of the Act and these Articles, shall be entitled to the management of the whole of the affairs of the Company and they shall exercise their powers as such Secretaries and Treasurers including the powers conferred on them by the Secretaries and Treasurership Agreement dated the 29th day of December 1960, subject to the superintendence, control and direction of the Board of Directors of the Company and subject also to the restrictions contained in Schedule VII of the Act and Article 189."

(xxii) In Article 187 in sub-clause (2) for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxiii) In the marginal note to Article 187 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxiv) In Article 188 for the words "Managing Agents" substitute the words "Secretaries and Treasurers"

(xxv) In the marginal note to Article 188 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxvi) In Article 189 in clause (*e*) for the words and figures "Section 2(3)" the words and figures "Section 2(4)" shall be substituted.

(xxvii) In Article 189 for the words "Managing Agents" wherever they occur, substitute the words "Secretaries and Treasurers", and after sub-clause (*f*) insert the following sub-clauses as sub-clauses (*g*) and (*h*):—

"(*g*) Power to sell any goods or articles manufactured or produced by the Company, except to the extent to which they are authorised by the Board or permitted by the Act;

(*h*) Power to purchase, obtain or acquire machinery, stores, goods or materials for the purposes of the Company or to sell the same when no longer required for those purposes except to the extent to which they are authorised by the Board or permitted by the Act."

(xxviii) In Article 190 for the words "Managing Agents" wherever they occur substitute the words "Secretaries and Treasurers".

(xxix) In the marginal note to Article 190 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxx) At the end of Article 191 the following proviso shall be added:—

"Provided always that any capital paid up on a share during the period in respect of which a dividend is declared shall, unless the terms of issue otherwise provide, only entitle the holder of such share to an apportioned amount of such dividend proportionate to the capital from time to time paid up during such period on such share."

(xxxi) In Article 210 in sub-clause (1) for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxxii) In Article 227 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxxiii) In Article 229 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxxiv) In Article 230 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxxv) In Article 234 for the words "Managing Agents" substitute the words "Secretaries and Treasurers"

7. To appoint Auditors for the current year and to fix their remuneration.

Notes—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of special business under items 4 to 6 set out above, are being posted to all shareholders.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company remain closed from Friday, the 30th December 1960 to Thursday, the 12th January 1961, both days inclusive.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Secretaries & Treasurers,

N. H. TATA,
Director.

BOMBAY, 6*th January*, 1961.

THE AHMEDABAD ADVANCE MILLS, LIMITED

NOTICE

THE FIFTY-EIGHTH ANNUAL GENERAL MEETING of THE AHMEDABAD ADVANCE MILLS LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Wednesday, the 8th February, 1961, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1960, and the audited Balance Sheet as at 30th June 1960.
2. To declare dividends on Preference and Ordinary Shares.
3. To appoint a Director in place of Mr. Gautam Sarabhai who retires by rotation and is eligible for reappointment.
4. To appoint a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation and is eligible for reappointment.
5. To consider and, if thought fit, to pass the following resolution of which special notice, as required under Section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED, pursuant to the provisions of Sections 280 and 281 and other applicable provisions (if any) of the Companies Act, 1956, that Sir Fazal Rahimtoola, Kt., C.I.E., a Director of the Company who has attained the age of 65 years and who ceases to be a Director of the Company at the conclusion of this Meeting, be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of the said Act shall not apply to him."

6. To appoint a Director in place of Mr. N. H. Tata who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under Section 260 of the Companies Act, 1956, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
7. To appoint a Director in place of Mr. D. R. D. Tata who was appointed an additional Director of the Company by the Board of Directors and who ceases to hold office under Section 260 of the Companies Act, 1956, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
8. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that the Articles of Association of the Company be altered in the following manner:—

(i) For Article 27(*a*) substitute the following Article:—

"27(*a*). The certificates of title to shares shall be issued under the Seal of the Company which shall be affixed in the presence of and signed by (i) two Directors or persons acting on behalf of the Directors under a duly registered Power of Attorney and (ii) the Secretary or some other person appointed by the Board for the purpose. A Director may sign a share certificate by affixing his signature thereon by means of any machine, equipment or other mechanical means, such as engraving in metal or lithography.

Provided always that, notwithstanding anything contained in this Article, the certificates of title to shares may be executed and issued in accordance with such other the provisions of the Act or the Ru'es made thereunder, as may be in force for the time being and from time to time."

(ii) In Article 48 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(iii) In Article 88 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(iv) Delete Article 131.

(v) Delete Article 132.

(vi) In Article 135 delete the words and figure "Article 137 and" and the figure "261".

(vii) In Article 136 delete the words and figure "Article 137 and" and the figure "261".

(viii) Delete Article 137.

(ix) In Article 139 delete the words "Director ex-officio Special Director and".

(x) In Article 156 delete the words "provisions of Section 261 and other".

(xi) In Article 166 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xii) After Article 168 insert the following additional Article as Article 169A:—

"169(A). The Directors may elect one of their number to be the Chairman of the Board of Directors and determine the period for which he is to hold office and unless otherwise determined the Chairman shall be elected annually".

Existing Article 169 shall be re-numbered "169(B)".

(xiii) In Article 170 delete the words "Ex-officio."

(xiv) In the proviso to sub-clause (1) of Article 180 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xv) In Article 181 in sub-clause XIX for the words "Managing Agents" wherever they occur, substitute the words "Secretaries and Treasurers".

(xvi) In Article 182, in sub-clause (1), for the words "Managing Agents" and "a Managing Agent" wherever they occur, substitute the words "Secretaries and Treasurers".

(xvii) In Article 184 for the words "Managing Agents" where they occur at the first two places the words "Secretaries and Treasurers" shall be substituted, and for the existing proviso the following proviso shall be substituted:—

"Provided nevertheless that certificates of debentures may be signed by one Director only or by an Attorney of the Company duly authorised in this behalf and countersigned by the Secretaries and Treasurers and certificates of shares shall be signed as provided in Article 27(*a*)."

(xviii) The heading "Managing Agents" occurring over Article 186 shall be substituted by the heading "Secretaries and Treasurers".

(xix) In Article 186 for clause (1) the following clause shall be substituted:—

"(1) Subject to the provisions of the Act, Tata Industries Private Ltd., their successors in business and assigns shall be the Secretaries and Treasurers of the Company from the 16th day of August 1960 for the period and upon the terms provisions and conditions set out in the Secretaries and Treasurership Agreement dated the 14th day of December 1960 and which were approved by the Company at the Extraordinary General Meeting of the Company held on the 31st day of March 1960 and by the Central Government with certain modifications agreed to by the Board. The said Agreement may (subject to the provisions of the Act) be further modified from time to time in such manner as may be mutually agreed upon between the Company and the Secretaries and Treasurers."

In clause (2) for the words "a Managing Agent" and "Managing Agents", the words "Secretaries and Treasurers" shall be substituted.

(xx) In the marginal notes to Article 186 for the words "Managing Agents" and "a Managing Agent" the words "Secretaries and Treasurers" shall be substituted.

(xxi) In Article 187 for clause (1) the following clause shall be substituted:—

"(1) The Secretaries and Treasurers, subject to the provisions of the Act and these Articles, shall be entitled to the management of the whole of the affairs of the Company and they shall exercise their powers as such Secretaries and Treasurers including the powers conferred on them by the Secretaries and Treasurership Agreement dated the 14th day of December 1960, subject to the superintendence, control and direction of the Board of Directors of the Company and subject also to the restrictions contained in Schedule VII of the Act and Article 189."

(xxii) In Article 187 in sub-clause (2) for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxiii) In the marginal note to Article 187 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxiv) In Article 188 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxv) In the marginal note to Article 188 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxvi) In Article 189 in clause (*e*) for the words and figures "Section 2(3)" the words and figures "Section 2(4)" shall be substituted.

(xxvii) In Article 189 for the words "Managing Agents" wherever they occur, substitute the words "Secretaries and Treasurers", and after sub-clause (*f*) insert the following sub-clauses as sub-clauses (*g*) and (*h*):—

"(*g*) Power to sell any goods or articles manufactured or produced by the Company, except to the extent to which they are authorised by the Board or permitted by the Act;

(*h*) Power to purchase, obtain or acquire machinery, stores, goods or materials for the purposes of the Company or to sell the same when no longer required for those purposes except to the extent to which they are authorised by the Board or permitted by the Act."

(xxviii) In Article 190 for the words "Managing Agents" wherever they occur substitute the words "Secretaries and Treasurers".

(xxix) In the marginal note to Article 190 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxx) At the end of Article 191 the following proviso shall be added:—

"Provided always that any capital paid up on a share during the period in respect of which a dividend is declared shall, unless the terms of issue otherwise provide, only entitle the holder of such share to an apportioned amount of such dividend proportionate to the capital from time to time paid up during such period on such share."

(xxxi) In Article 210 in sub-clause (1) for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxxii) In Article 227 for the words "Managing Agents" substitute the words, "Secretaries and Treasurers".

(xxxiii) In Article 229 for the words "Managing Agents" substitute the words "Secretaries and Treasurers"

(xxxiv) In Article 230 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

(xxxv) In Article 234 for the words "Managing Agents" substitute the words "Secretaries and Treasurers".

9. To appoint Auditors and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies

(*Continued on next page, col. 3*)

SUNDATTA FOODS AND FIBRES LIMITED

CHAIRMAN'S STATEMENT

THE plans of the Sundatta Foods and Fibres Limited to expand production and diversify activities were outlined by its Chairman, Mr. N. D. Sirur, in his statement to the shareholders of the Company at the Eighth Annual General Meeting of the Company held on Saturday, 31st December 1960. Mr. Sirur stated that the Company was steadily increasing the production of fully refined and packaged non-saturated vegetable oil (from crude oils) and vitaminised compound cattle feed cubes (from residual oilcakes and other nutrients). He also stated that the Company proposed to set up a distilled fatty acid plant to reclaim the refinery wastes, to increase the production of such key items as cotton linters, and to manufacture linter pulp and cellulose acetate flake.

The following is the full text of Mr. Sirur's statement:

"While it is not the customary practice in our group of companies to present a statement or speech at the annual general meetings, it is felt that, considering the somewhat erratic fluctuation in the market price of the equity shares of your Company during the year now about to end, it would be in the interests of the Company to place matters in their proper perspective. It is with this object that I am issuing this statement on the plans of your Company.

"As you well realise, the present activities of your Company at Hubli in Mysore State, based as they are on the large-scale processing of agricultural commodities such as cottonseed and groundnut, are subject to ups and downs depending on the size of the crop each year and other factors which are sometimes unpredictable. Our constant endeavour has been to diversify our end products so as to offset the variable nature of the business of processing agricultural commodities. We have thus been steadily increasing our production of fully refined and packaged non-saturated vegetable oil (SUNFOOD) from crude oils, vitaminised compound cattle feed cubes (SUNFEED) from the residual oilcakes and other nutrients, and are shortly proposing to set up a distilled fatty acid plant to profitably reclaim our refinery wastes.

Cotton Linters

"We have also endeavoured to increase the production of such key items as cotton linters which are a valuable by-product of cottonseed processing. In this respect, we have fully succeeded in spite of the vicissitudes through which the cottonseed processing industry has had to pass in its formative years. Quite candidly, had it not been for the fact that your Company has become a major producer of chemical grade cotton linters, which domestically are a critical raw material for the cellulose industry, I doubt whether the Government of India would have encouraged the efforts of your Company to promote a cellulose-based chemical industry in Mysore State. You will, however, appreciate that a Company of your size and resources is in no position by itself to undertake very large projects, but, fortunately, it is part of a textile group whose combined strength is quite formidable. It is in this context that we have approached the question of building up a cellulose-based industry with a pronounced textile bias so as to remain within the ambit of the textile industry, by and large.

Rayon Project

"The largest and most prosperous textile company in the group, the Modern Mills Ltd. (approximately 40 per cent. of whose present equity capital is held by the original parent Company, The Mysore Spinning and Manufacturing Company Ltd.) holds about 10 per cent. of the present equity capital of your own Company. The Directors of Modern Mills had indicated their willingness to take up the project for manufacture of 5 million lbs. of bleached rayon-grade linter pulp per annum based on your Company's production of cotton linters, and manufacture from the pulp 5 million lbs. per year (or 6¼ tons per day on 60 denier basis) of cuprammonium rayon yarn for which your Company had secured an industrial licence early this year, and which licence has since been transferred to the Modern Mills.

"In our view, this is the finest rayon project under Indian conditions today, considering the excellent demand in India for cuprammonium yarn which during 1960 is understood to have constituted over 25 per cent. of the total man-made fibre imports into India. A detailed Project Study and Report for the cuprammonium plant has already been completed, at considerable cost to Modern Mills, by a well-known American firm of consulting engineers, who are currently setting up a high-tenacity viscose rayon tyre cord plant for a Bombay rayon manufacturer, and who have thus gained sufficient experience of Indian conditions. The aforesaid American firm has expressed complete confidence in the successful establishment of a cuprammonium rayon project in India by Modern Mills, based on the 'know-how,' design, engineering and procurement of machinery, as well as initial technical management, which the American firm is in a position to supply. This rayon project of Modern Mills is now in a fairly advanced stage, since the foreign exchange question has already been cleared in so far as the Government of India is concerned.

Linter Pulp

"In the meanwhile, your Company received another licence from the Government of India to produce an additional 10 tons per day of linter pulp at Harihar in North Mysore on the banks of the Tungabhadra river. This application had been made by your Company as far back as 1958, and it was rather a pleasant surprise to receive this additional licence. It consequently occurred to us that, instead of Modern Mills producing just the quantity of linter pulp required for their cuprammonium yarn, it might be worthwhile for your Company itself to consider undertaking the manufacture of linter pulp by combining the total quantity of pulp licensed under your Company's own licence and the Modern Mills' licence, making a total effective capacity of 16 tons of linter pulp per day. In other words, it was felt that, instead of the Modern Mills spending nearly Rs. 50 lakhs on a linter pulp plant just to feed their cuprammonium plant, they could as well invest a portion of this sum, within the limits prescribed by the Companies' Act, in the equity shares of your Company which could undertake the manufacture of linter pulp on a larger scale than was contemplated under the Modern Mills' licence.

"Accordingly, the authorised capital of your Company was recently raised to Rs. 1 crore to permit an appropriate issue of capital in the second half of 1961 for financing the setting up of a separate unit of your Company at Harihar for the manufacture of linter pulp. First-class American technical collaboration for this linter pulp project of your Company has been assured, and an import licence for the requisite machinery is shortly being applied for.

"It may be mentioned here, in passing, that rayon-grade wood-pulp from bamboo, which is proposed to be made by other manufacturers on a large scale in the country, can at best be used for the manufacture of the cheapest type of rayon, namely, standard viscose, which is currently the bulk of the Indian production of rayon. Therefore, in the context of India achieving complete self-sufficiency, linter pulp, with its high alpha cellulose content, is eminently suited for the better types of rayon such as cuprammonium and high-tenacity viscose whose production is under way, as well as for the manufacture of various cellulose derivatives.

"We were accordingly advised by prospective foreign collaborators that the manufacture of linter pulp could be advantageously undertaken by your Company with a view to manufacturing some cellulose derivative as well. We weighed the relative advantages of a number of cellulose derivatives and came to the conclusion that the manufacture of cellulose acetate flake is the most promising under Indian conditions, since it has a multiplicity of end uses in textiles, plastics and film. Moreover, industrial alcohol, which is the other main raw material required, is available in the area in sufficient quantities.

"Your Company, therefore, recently applied for a licence to manufacture 7½ tons of cellulose acetate flake per day, in addition to 16 tons per day of linter pulp. We have just this month received the industrial licence from the Central Government for this manufacture, and are currently in serious negotiation for foreign collaboration in this project. Simultaneously with our application, Modern Mills had applied for a licence to spin some of your Company's contemplated cellulose acetate flake production into acetate yarn and staple fibre, so that their rayon project could become more versatile. This licence for acetate spinning has also been granted to the Modern Mills by the Central Government.

"To sum up, it is now decided that your Company should make the linter pulp and sell a little over one-third of its pulp production to Modern Mills for manufacture of cuprammonium rayon yarn. Moreover, a further one-third of your Company's pulp production is proposed to be converted into cellulose acetate flake by your Company, of which a portion would be sold to Modern Mills for manufacture of acetate yarn and staple fibre, and the remainder would become available for plastics manufacture. The surplus pulp production of your Company would also become available for sale to other high-grade rayon manufacturers as well as to manufacturers of nitro-cellulose and specialty paper.

"The relative economics of the linter pulp and cellulose acetate flake project of your Company, as compared to the rayon project of Modern Mills, indicate that both projects in terms of yield on invested capital, appear to be equally sound and profitable. However, it will be quite necessary to phase the overall programme in such a manner as to complete it during the course of the third Five-year Plan. We are now in touch with prospective foreign collaborators and our American consulting engineers to decide on an order of priority. Suffice it to say for the present that we have received full encouragement in our overall plans from the Central Government and the Government of Mysore, for which we are deeply grateful."

(Concluded from previous page)

Act, 1956, in respect of the special business under items Nos. 5, 6, 7 and 8 set out above, are being posted to all shareholders.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(c) The Transfer Books of the Company were closed from Monday, the 28th November, 1960, to Tuesday, the 20th December, 1960, both days inclusive.

(d) If dividends on shares, as recommended by the Directors, are passed at the meeting, payment will be made on and after Thursday, the 9th February, 1961, to those members whose names were on the Register of the Company on the 20th December, 1960.

IMPLICATIONS OF MAHARASHTRA LAND CEILINGS BILL TO SUGAR COMPANIES

"A VERY RISKY AND DANGEROUS MOVE," SAYS MR. EDWARDS

THE implications of the Land Ceilings Bill of the Maharashtra Government to the joint-stock sugar companies in the State were impressively brought out by Mr. F. Edwards, President of the Deccan Sugar Factories Association, in the course of his talk to Pressmen in Bombay on Tuesday this week. Mr. Edwards characterised the Bill as a very risky and dangerous move. Indeed, he warned that the effect of the Bill, if enacted in its present form, would be detrimental to the progress of the sugar industry and, therefore, urged the exclusion of the sugarcane farms attached to factories from the provisions of the Bill. In view of the importance of the proposed measure we give below the full text of Mr. Edwards' statement:

"The proposed Land Ceilings Bill of the Government of Maharashtra is a very risky and dangerous move! No right-thinking businessman or industrialist could possibly support such a retrograde step. The very basis of the success of the sugar industry in Maharashtra is being undermined, and the benefit, experience and efficiency built up over a period of 40 years is being thrown to the winds. Maharashtra is the most successful sugar producing area in India and this success is only due to the pioneering work and perseverance put in by the old-established joint-stock companies. Their experience has proved that only by having the growth of its sugarcane under its own complete control can a factory produce quality sugar at low prices. The profits made by such factories are not due to high selling prices, or profiteering, because the selling rates are fixed by the State Government! They are due solely to lower costs of growing cane and manufacturing. Looking to the yields of cane per acre and quantity of sugar produced per acre of cane, it is completely beyond all comprehension why there should be State Government interference, when the Central Government are urging higher production at lower costs, to enable the country to participate in world trading and earn valuable foreign exchange.

"Maharashtra produces results equal to the averages in other well-known sugar producing countries of the world. Take Java, for example, and study the following figures:

	Yield of cane per acre	*Average recovery of sugar from cane*
	(Tons)	(Per cent.)
Java	56.20	11.49
Maharashtra ..	53.25	11.80
All-India	14.70	9.84

"Compare Maharashtra's results with the averages throughout India, and ask yourselves the question: Why should the State Government attempt to disturb such progress in Maharashtra, when the rest of the country's sugar industry is obviously so sick and ailing? The answer cannot possibly be that it is in the interests of the nation or even in the interests of the State. There are abundant facts to prove that. It is, therefore, astounding that the Central Government should allow such legislation to be brought forward. The only obvious answer to the question is that the move is entirely political and is an effort to attain some ideological goal at any and all costs. The intention to apply ceilings to sugarcane farms is all the more astonishing when one recalls the utterances of Ministers and the Planning Commission in recent times and the steps that have been taken in other States to exclude industrial undertakings from their Land Ceiling Bills. Surely, it cannot be that the Governments of Andhra, Kerala, Madras, etc., are more enlightened than that of Maharashtra! In the Madras Bill, provision is made for the setting up of a Sugarcane Board with a High Court Judge as Chairman to determine whether sugarcane farms shall continue to be run by the factories which have been cultivating them hitherto. This is fair enough, as it is expected that the decisions will depend on facts and merit, but the Maharashtra Government has set itself up as the sole judge as to what it should do with the surplus lands which become vested in it. And if any difficulties should arise in administering the Bill when it is enacted, the Government has taken the power to make such adjustments or take such decisions as it may consider necessary to meet the case. This is a bad feature of the Bill and should be opposed vigorously. Another possibility is that some of the sugar factories in the country may find themselves deprived of their farms, while others will not, and this discriminatory treatment should not be allowed by the Central Government.

"The whole Bill is another example of unnecessary political interference in industry and commerce and the effect, if the Bill is enacted in its present form, must inevitably be detrimental to the progress of the sugar industry in the Deccan. It is to be hoped that the Government, even at this late stage, will indulge in some re-thinking and come to the right conclusion that it would be infinitely wiser to exclude well-run sugarcane farms attached to factories from the provisions of the Bill."

Soviet specialists have prepared for Nepal designs for a sugar mill and a cigarette factory. The Soviet Union is rendering free economic and technical assistance to Nepal under an agreement signed between the two countries in the spring of last year. The cost of the work which will be carried with the Soviet Union's participation is estimated at three million roubles (at the new 10 to 1 price scale). The designed capacity of the sugar mill which will be built in Birganj will be 10,000-11,000 tons a year. The cigarette factory in the area of Jenakpur will produce 2,000 million cigarettes a year which is more than what Nepal imports now. The construction of both factories, which will be the first industrial plants in the country, will start in 1961. Soviet specialists will also help Nepal to extend its sugarcane and tobacco plantations and to improve the quality of these crops.

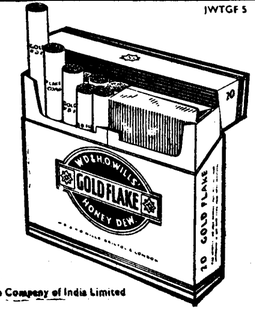
Puri. Sea's warm, wonderfully refreshing. Lazy hours on superb beach, perfectly peaceful. Acquiring antiques—also smattering of temple architecture. Prolonging week-end by week. (No trouble getting Wills' Gold Flake—really fresh—wherever you go they're good.)



Issued by The Imperial Tobacco Company of India Limited

MYSORE KIRLOSKAR SHOWS ENCOURAGING RESULTS

PAID-UP CAPITAL TO BE DOUBLED

EXCELLENT progress is disclosed by the accounts of the Mysore Kirloskar Ltd. (Managing Agents: Messrs. Kirloskar Associates, Yantrapur P.O., Mysore State) for the year ended 30th June 1960. The net sales of the Company have recorded a substantial increase of Rs. 35.38 lakhs in the year under review, on top of an increase of Rs. 18.75 lakhs achieved in the previous year. This shows that the Company's machine tools are in good demand and are popular with the consuming industries. In the previous year, the improvement in sales was accompanied by a sizable increase in the cost of raw materials and stores consumed as well as in the wage bill. During the year under review, however, the Company was fortunate in reducing the ratio of wage cost to aggregate expenses from 29 per cent. to 24 per cent., the items under other working expenses and fuel and power, expressed as a percentage of total manufacturing expenses, also showed some welcome decline. These economies in working expenses are reflected in the substantial rise in gross profit, which has increased from Rs. 25.05 lakhs in 1958-59 to Rs. 35.41 lakhs in 1959-60. This means that, for the fourth year in succession, the gross earnings of the Mysore Kirloskar have maintained their upward trend at an accelerated rate, trebling themselves in the last four years.

The net profit, too, has staged an impressive rise from Rs. 9.12 lakhs to Rs. 15.08 lakhs. For 1957-58, it was no more than Rs. 6.36 lakhs. This improvement is noteworthy, considering that the provision for taxation was stepped up from Rs. 7.50 lakhs to Rs. 10.50 lakhs. The transfer to depreciation account has been fully maintained at Rs. 6.80 lakhs.

After making these provisions, the Directors have maintained the dividend at 12 per cent. taxable (8.40 per cent. tax-free) but on a higher paid-up capital of Rs. 40 lakhs, as against Rs. 32.50 lakhs a year before. Even then, the amount absorbed by this dividend is only Rs. 4.24 lakhs, or 28 per cent. of the net profit. The whole of the balance has been conserved, which is undoubtedly a commendable feature and reflects the management's preference for a conservative and farsighted appropriation policy.

The following comparative table shows the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sales proceeds	1,40.75	1,05.37	86.62	54.43
Other income	7.52	5.15	2.30	1.08
Closing stocks	32.64	34.06	18.67	21.20
Expenses	1,11.44	1,00.86	68.69	45.09
Gross profit	35.41	25.05	17.70	12.21
Managing Agents' remuneration	3.08	2.08	1.39	0.66
Provision for—				
Depreciation	6.80	6.34	6.38	6.01
Taxation	10.50	7.50	3.61	3.15
Net profit	15.08	9.13	6.36	2.39
Provisions written back	..	0.06	0.02	..
Adjustment relating to previous year	0.16	..	0.14	..
To development rebate reserve	2.44	2.88	..	..
other reserves	8.54	3.37	4.70	0.90
Dividend	4.24	3.45	1.87	1.42
	(12%)*	(12%)*	(7½%)†	(6%)†
Carry forward	0.07	0.04	0.08	0.07

* Subject to tax at 30 per cent. † Tax-free.

The Company, as already noted, had raised the paid-up capital to Rs. 40 lakhs. As it has a large expansion programme on hand, the Directors propose to raise, during the current year, a further capital of Rs. 40 lakhs, made up of Rs. 15 lakhs of equity capital and Rs. 25 lakhs of preference capital. Thus, for the first time, the Company is going to have preference shares. As the authorised capital is only Rs. 50 lakhs now, the Company will have to get it raised to an appropriate level first. Since the Company has been following a cautious dividend policy and ploughing back substantial parts of profits, it should not be difficult for it to maintain the dividend on the capital now proposed to be raised, until the expansion schemes pay their way, whereafter one could even expect an increase in the dividend level.

The acquisition proceedings for additional land measuring about 37 acres have entered a final stage and the Company expects to receive the land in the near future. It has submitted its application for permission to import capital goods of the value of Rs. 1 crore and, if the Government expedites the issue of necessary licences, the Company would be in a position to make rapid progress in expanding its production capacity. For the production of centre lathes and for increasing the output of capstans and turrets, the Company has already received Government sanction. The separate building for the manufacture of capstans and turrets which was under construction is nearing completion.

Much of the progress of the Company would, of course, depend on Government's policy regarding the import of capital goods and the granting of facilities for renewing initial depreciation and additional depreciation allowances. In his presidential address on the occasion of the annual general meeting held on 26th December 1960, Dr. M. N. Mahadevan, Chairman of the Company, urged the Government, once again, to grant the benefit of accelerated depreciation for a few years more, because the machine tool industry by its very nature required very heavy capital outlay.

During the year under review, the Company made a capital expenditure of Rs. 16.43 lakhs; this was on top of Rs. 12.55 lakhs spent during the previous year. The gross block now stands at Rs. 106.26 lakhs and the depreciation so far provided amounts to Rs. 51.59 lakhs. The current assets aggregate Rs. 106.86 lakhs and exceed by a comfortable margin the current liabilities (including bank borrowings and the loan of Rs. 24.38 lakhs from the I.F.C. of India) and provisions at Rs. 80.71 lakhs. The paid-up capital of Rs. 40 lakhs is supplemented by reserves and surplus amounting to Rs. 40.83 lakhs, that is, the reserves and surplus are equal to more than 100 per cent. of the capital. This is, indeed, a significant achievement for a company engaged in capital goods industry.

The Company's shares are currently quoted at Rs. 142, *cum-div.*, as against Rs. 125 a year ago. On an *ex-div.* basis and at the current rate of dividend, the yield on the share works out to 6.28 per cent. per annum, free of income-tax. This is quite attractive, considering the sound financial position of the Company and the promising outlook for the machine tool industry.

SOUTHERN INDUSTRIAL CORPORATION LTD., MADRAS

The Southern Industrial Corporation Ltd., Madras, was established as a private limited company on 10th May 1955 and was converted into a public limited company on 29th July 1960. The Company has been manufacturing woodscrews, gate hooks and eyes, ship chains, tinmen's rivets and machine screws. On the paid-up capital of Rs. 5,00,000 for the last several years, the Company has done well and has paid a dividend of 6 per cent. tax-free in 1956, 15 per cent. in 1959 and 15 per cent. interim in 1960. Recently, the Government gave permission to capitalise reserves to the extent of Rs. 70,000 and issue bonus shares to the existing shareholders. The present paid-up capital is, therefore, Rs. 5,70,000. The Company has now obtained an industrial licence to manufacture flexible shaft machines in collaboration with Messrs. Otto Suhner Ltd. of Brugg, Switzerland. Machinery has been ordered and the Engineer-in-charge was in Switzerland and has been trained in the manufacture of flexible shafts, speedmeter cables, etc., and has returned to India after making arrangements to ship the machinery. The machinery is expected in India next month and erection will be completed by March next and the concern is expected to start production a month later.

The expansion of the present capacity of the woodscrew section from 50,000 gross per month to 70,000 gross has been licensed under the Industries (Development) Act and import application for additional machinery is pending with the Government. Machinery has already been installed for the production of Dowell screws and Phillips recessed head screws and for electro-plating. Application has also been made to permit expansion of the flexible shaft section by installing machines required for the various types of remote control cables such as automobile choke and brake cables.

In order to meet the cost of the expansion programme, the Company is issuing Rs. 9,30,000 of equity capital and the proceeds will be utilised as follows:

	Rs.
Plant and machinery	7,00,000
Buildings	1,75,000
Working capital	55,000

Additional working capital will be met by borrowings from the banks.

The Company proposes to issue next month 93,000 equity shares of Rs. 10 each. The Directors and staff have agreed to take 3,000 shares and the balance of 90,000 shares to be offered to the public is entirely underwritten.

COMPANY MEETINGS AND DIVIDENDS

CHERRA-CHHATAK ROPEWAY CO., LTD. Annual General Meeting, Calcutta, 16th January 1961. Dividend: Re. 0.45 per share, subject to deduction of tax. Transfer books remain closed from 5th to 16th January 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Cacutta, 18th January 1961. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books remain closed from 4th to 18th January 1961, both days inclusive.

GHUSICK AND MUSLIA COLLIERIES LTD. Annual General Meeting, Calcutta, 25th January 1961. Dividend: *Nil*. Transfer books will remain closed from 16th to 26th January 1961, both days inclusive.

NELLIAMPATHY TEA PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala, 31st January 1961. Dividend: 13 per cent. or Re. 0.26 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books will remain closed from 17th to 31st January 1961, both days inclusive.

PHALTAN SUGAR WORKS LTD. Annual General Meeting, Bombay, 3rd February 1961. Dividend: Rs. 12.00 per share, taxable. Transfer books remain closed from 19th December 1960 to 17th January 1961, both days inclusive.

INDIAN OXYGEN LTD. Annual General Meeting, Calcutta, 14th February 1961. Transfer books will remain closed from 28th January to 14th February 1961, both days inclusive.

INDIA PAPER PULP CO., LTD. Taxable interim dividend of Re. 0.50 per share, for the year ending 31st March 1961. Transfer books remain closed from 11th to 20th January 1961, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Taxable interim dividend of 6 per cent. or Re. 0.60 per share, for the year ending 31st March 1961. Transfer books remain closed from 11th to 18th January 1961, both days inclusive.

BOMBAY POTTERIES AND TILES LTD. Dividend of Rs. 12.86 per share, subject to deduction of tax, for the year ended 30th September 1960. Transfer books will remain closed from 13th March to 11th April 1961, both days inclusive.

KHODYAR POTTERY WORKS LTD. Dividend of Rs. 10.00 per share, subject to deduction of tax, for the year ended 31st July 1960.

DECCAN SUGAR AND ABKARI CO., LTD. Final dividend of 18¾ per cent. (making a total of 25¾ per cent. for the year), for the year ended 31st May 1960.

NATIONAL ELECTRICAL INDUSTRIES LTD. Dividend of 12 per cent. or Rs. 6.00 per ordinary share, subject to deduction of tax, for the year ended 31st March 1960.

INDIAN VEGETABLE PRODUCTS LTD. Net dividend of Rs. 11.90 per share, for the year ended 30th September 1960, payable on 23rd January 1961.

BOMBAY SAFE DEPOSIT CO., LTD. Net dividend of Rs. 21.00 per share, for the year ended 30th September 1960.

BHOPAL SUGAR INDUSTRIES LTD. Dividend of Rs. 2.25 per ordinary share, subject to deduction of tax, for the year ended 30th September 1960.

AHMEDABAD ADVANCE MILLS LTD. Dividend of Rs. 10.00 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960.

CAUVERY SUGARS AND CHEMICALS LTD. Dividend of 6 per cent. or Re. 6.00 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960.

CHANDRAMALAI ESTATES LTD. Dividend of 10 per cent. or Re. 0.20 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books will remain closed from 24th to 30th January 1961, both days inclusive.

KAILAS RUBBER CO., LTD. Interim dividend of 10 per cent. or Re. 0.20 per share, for the year ending 28th February 1961. Transfer books remain closed from 5th to 15th January 1961, both days inclusive.

NEELAMALAI TEA AND COFFEE ESTATES LTD. Taxable dividend of 7½ per cent. or Re. 0.375 per ordinary share, for the year ended 30th June 1960.

PANCHURA ESTATES LTD. Taxable dividend of 40 per cent. or Re. 0.40 per share, for the year ended 30th June 1960. Transfer books remain closed from 9th to 16th February 1961, both days inclusive.

SHEVEROY ESTATES LTD. Taxable dividend of 9 per cent. or Re. 0.18 per share, for the year ended 30th June 1960. Transfer books will remain closed from 7th to 13th February 1961, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Taxable interim dividend of 4 per cent. or Re. 0.40 per share, for the year ended 31st December 1960.

MYSORE KIRLOSKAR LTD. Dividend of 12 per cent. or Rs. 12.00 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960.

CENTRAL INDIA SPG., WVG. AND MFG. CO., LTD.

The persistently disquieting conditions obtaining in the cotton mill industry are clearly reflected in the working results of the Central India Spinning, Weaving and Manufacturing Company Ltd., for the year ended June 1960. Thus, despite the substantial increase of Rs. 126.68 lakhs in sales to Rs. 427.42 lakhs during 1959-60 as compared with the previous year, the Company incurred a loss of Rs. 8,93,325 and that without making any provision for depreciation. The loss is, of course, very much less than that suffered in 1958-59, namely, Rs. 52,69,282. Thanks to the loss, the Directors of the Company have decided not to recommend any dividend on ordinary and preference shares for the fifth year in succession. The Rs. 100 paid-up ordinary share of the Company is currently quoted at Rs. 99. The annual meeting of the Company will be held on 14th February 1961.

AIR-INDIA'S FINANCIAL RESULTS

ANOTHER YEAR OF LOW PROFIT

THE financial results of Air-India International Corporation (a Government of India enterprise, with Mr. J. R. D. Tata as Chairman of its Board of Members) for the year ended 31st March 1960, are encouraging in some respects and disappointing in others. They are encouraging because the operational revenue has increased from Rs. 11.56 crores in the year ended 31st March 1959, to Rs. 12.59 crores in the year under review. But they are disappointing because the total operating expenses have also increased—from Rs. 11.40 crores in 1958-59 to Rs. 12.40 crores in 1959-60—with the result that, for the second year in succession, the operating profit has turned out to be very low, being Rs. 18.3 lakhs as against Rs. 15.9 lakhs in the previous year. Even after adding the non-operating surplus of Rs. 8.7 lakhs in 1959-60 and Rs. 2.4 lakhs in 1958-59, it is found that the figures of total profit in the respective years are only Rs. 27.0 lakhs and Rs. 18.3 lakhs, working out to just 1.5 per cent. and 1.9 per cent., respectively, of the net (depreciated) block and to 1.2 per cent. and 1.3 per cent., respectively, of the gross block in the two years concerned.

The following table shows at a glance the Company's progress during the year under review against the background of the results for the previous three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Operating revenue—				
Traffic	11,99.61	11,10.12	10,47.59	9,35.66
Other sources	58.87	45.65	34.11	29.21

Carry forward	15.03	0.05	..	..

* Other than depreciation and obsolescence.

It is clear, therefore, that the profit-making capacity of the Corporation has gone down substantially in the last two years. There have, of course, been some extenuating causes for this state of affairs. The annual report under review has listed the adverse circumstances as severe competition from more up-to-date equipment operated by other international airlines, the severe restrictions imposed by the Government on the issue of foreign exchange, the pilots' strike, and the rising costs of material and services. Of these causes, worldwide competition is the most acute one. It is stated that this is likely to intensify in the current year (1960-61), as large fleets of new jet aircraft are brought into operation by other international airlines. But, at the same time, the Corporation claims that its competitive capacity has been augmented in the current year by the three Boeing 707 International Jet planes introduced after the close of the year under review (1959-60) on the India-U.K. route and on the new service across the North Atlantic to the U.S.A. The Corporation's ability to withstand competition has been further strengthened recently by the tripartite revenue pooling arrangement entered into with B.O.A.C. and Qantas Empire Airways in respect of its services to the U.S.A., Australia and Japan. It may thus be hoped that performance in the current immediately ahead would be distinctly better. But no such hope is held forth by the latest annual report which contains such ominous observations as the following:

"The period ahead, and particularly the next two or three years may, however, well prove to be difficult ones. Half the capacity of the Corporation's fleet is still provided by piston-engined aircraft which, though operationally entirely sound, are no longer competitive. . . .

"Although the trend throughout the world towards mergers, consortiums or revenue pools will, to some extent, relieve competitive pressures, the fact remains that, backed by their respective Governments, the world's airlines, by and large, provide a total capacity on most routes far in excess of the demand. . . . The addition of large fleets of high capacity jet transport planes will aggravate the situation.

". . . . In this context, the fact must be faced that both, commercially and operationally, the jet is a less flexible instrument of air transport than its propeller-driven predecessor was. While its costs of operation per revenue ton-kilometre or passenger ton-kilometre are low at high load factors, they are extremely high when operated with light loads, particularly if combined with low utilisation. . . ."

In spite of these uncertainties connected with the introduction of jets, the Corporation has gone ahead with its Boeing Project. Under this project, it has already drawn the entire loan of about Rs. 8.0 crores negotiated with the World Bank and the Commercial Banks in the U.S.A. to meet the dollar content of three Boeing 707 jets; and it has also placed an order during the year under review for an additional Boeing Jet at an estimated total cost of Rs. 4.0 crores.

The high cost of jets has already meant a far higher capital outlay, with the result that the Corporation's gross block has increased steeply from Rs. 14.21 crores in 1958-59 to Rs. 23.42 crores in 1959-60. And the net (depreciated) block (Rs. 18.02 crores) in the year under review has nearly doubled as compared with the previous year (Rs. 9.72 crores).

Since the year under review may be said to have brought to a close the first chapter of Air-India International's history, the following comparative table showing the Company's growth since the airline was founded will be read with interest:

		1949	1959-60
Fixed assets at cost	(Rs. in lakhs)	143.57	1,801.75
Average number of passenger aircraft ..	..	3.2	9.3
Unduplicated route mileage (year-end)	..	5,188	24,671
Number of foreign stations served ..	..	8	21
Revenue passengers carried	..	7,781	89,385
Mails carried	(lbs. in million)	0.222	1.931
Cargo including excess baggage carried	(lbs. in million)	0.408	6.176
Total available ton miles* ..	(million)	6.669	59.518
Revenue ton miles† performed ..	(million)	4.626	34.618
Total operating revenues earned..	(Rs. in lakhs)	148.37	1,258.48

* Product obtained by multiplying the capacity in tons available for passengers, mail and cargo by the distance in miles flown by the aircraft.

† Revenue earning load of passengers, mail and cargo in tons multiplied by the distance flown in miles.

If, as the present annual report says, the Corporation must inevitably "go jet" (and that, too, completely) if it is to remain in the long-range international air transport business at all, the change-over will involve a further enormous capital outlay. Already the Corporation has received, upto 31st March 1960, equity capital from the Government to the tune of Rs. 8.27 crores and loan capital at 4½ per cent. per annum from the same source to the tune of Rs. 8.27 crores, on which interest has been waived upto 1st October 1966. With the guarantee of the Government of India, the Corporation has also taken a loan of Rs. 2.67 crores from the World Bank and another of Rs. 5.33 crores from U.S. commercial banks. It looks as though the Corporation will be in the run in the next two or three years for much more loan capital both from the Government of India and the foreign financing institutions for financing the complete change-over to jets, for there is indication in the report that the second stage of the Corporation's re-equipment programme involving the retirement of the present nine Super Constellations from all or most passenger services and their replacement by Boeing Jets must be undertaken in the next two years or so.

This indication in the annual report has been followed by the news given by Mr. J. R. D. Tata, Chairman, on 3rd January 1961, that Air-India is planning to acquire two more Boeing 707 jets by March 1962. The matter is now under the Government's consideration. If this proposal is approved by the Government, it will mean a further capital expenditure of about Rs. 8 crores. With the possible addition of these two jets, Air-India will have a fleet of six giant Boeings which will enable it to operate daily flights to London and New York, two flights a week to Tokyo and Nairobi each and one flight each to Moscow and Sydney.

INDIA'S AIR TRANSPORT

(*Concluded from page 69*)

First, a well run airport, with a proper business management at the head, could perfectly well undertake all the surface transport services and the catering. Both should produce a comfortable profit without making excessive charges. This would immediately bring the airport a steady income. At the same time, it would make it possible to create a public centre of entertainment, with restaurant services classified to meet the public requirement in respect of expenditure. All the public enclosures at the airports should be run without interfering with the air service operators or the air travellers.

The jungle air services would also contribute to the airport income, landing charges would be small but numerically many, so the total would be a worthwhile contribution to airport income at no extra cost to the airport authorities. More people and passengers would pass through the airport because of these jungle air services. More money would flow into the public services offered, surface transport and catering, also the stall-holders' shops, all would benefit.

In these ways and several others, airports can earn more money. As they become self-supporting, they can reduce landing charges, which will contribute towards lowering air fares. This is the all-important factor in air transport today, lower the air fares and up goes the traffic.

But an airport under Government departmental administration is not run as a business. Airports serving big cities should be owned by the city and should be administered as a City Trust, with a business management team in charge under an Airport Commandant. There are airports run on these lines; Schiphol, the airport of Amsterdam, is an outstanding example. As operated at present in many countries, the airports are a heavy burden on the taxpayer which is unjustified. This is an important feature of an air transport system.

The Non-Skeds

However brief this review of air transport may be, it could not serve a useful purpose if it did not take into account the non-scheduled operators. Whatever may be said against this class of independent aircraft operator—and it is admitted that a great deal can be charged against them and their activities—it is contended that had they been treated in a more liberal manner, and not been harassed with peculiar restrictions which are like 'will-o'-the-wisp' in that you can never put your finger on a concrete case, the non-skeds would have grown up in a healthy manner instead of being driven to behave like a bunch of urchins picking a living as best they can, and not being too particular as to how they achieve a gain.

Having studied the activities of these operators as well as the efforts that have been made to deprive them of their legitimate business, it is only possible to come to the conclusion that the time has come for Government to enforce its announced policy. It has been officially stated many times and confirmed in writing that the non-scheduled operators are welcome and will be encouraged. The bare statement of policy without implementation is worthless. That is the position today.

There are those who say that all air transport should be nationalised and brought under the direct control of the two airline Corporations. These individuals doubtless hold this view in all good faith, but they display ignorance of the facts. The non-scheduled operator compares with the merchant shipping company that sends its vessels "tramping" round the world, picking up cargo at one port and carrying it to another, and then discovering another load in that port and so on. Much of the world's cargo moves in tramp steamers being handled by these real cargo carriers, who also carry passengers. They could be classified as independent ship operators, they do not concern themselves with scheduled sea services but their ships operate with regularity between many ports. The flow of traffic dictates their activities.

In time of war or emergency, it is many times more important to maintain scheduled air services. In fact, with trouble on hand, these services are crowded to capacity and have to be increased to meet the national demands. Therefore, how can Air-India International and Indian Airlines Corporation divert their aircraft fleets to the urgent military airlift that will immediately be required in times of war? Without the non-scheduled operators in a healthy condition in this country, there can never be a real air transport reserve. In Defence circles, this matter requires serious consideration. Also every member of the public should give it attention.

SYNOPSES OF COMPANY REPORTS

East Indian Coal Co., Ltd.

THE directors of the above Company (Managing Agents and Secretaries: Messrs. Jardine Henderson Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th April 1960.

After providing for depreciation and taxation on investment income, the year's working has resulted in a net loss of £3,196 (profit of £20,631). The amount at the credit of profit and loss account at 30th April 1959 was £9,562 (£19,431) and there has been transferred from the reserve for equalisation of dividends the sum of £20,000 (*nil*) leaving a credit balance of £26,366 (£40,228 including £166 being profit on sale of investments, etc.) Out of this balance there has been transferred to development rebate reserve account the sum of £1,360 (£8,000) leaving a balance available for disposal of £25,006 (£32,062 after writing off loss on sale of investments £166). The directors now recommend the payment of a first and final dividend for the year at the rate of Re. 1.00 (Re. 1.25) per share on the 240,000 shares subject to deduction of Indian income-tax and super-tax at the prescribed rates, absorbing £18,000 (£22,500) leaving a balance at the credit of profit and loss account of £7,006 (9,562) to be carried forward to the next account.

Raisings for the year amounted to 583,111 tons while 519,824 tons were despatched. These figures compare with raisings of 574,849 tons and despatches of 591,599 tons during the previous year. As foreshadowed in the last report, the Company failed to achieve the maximum permitted output for 1959 but it is anticipated that output during the current year will exceed the target of 758,000 tons fixed by the Coal Board, in spite of continued difficult underground working conditions.

The result of the year's working was a net loss of £3,196, after providing for depreciation and taxation on investment income. While no improvement over the previous year's working results had been anticipated, it has to be recorded that working conditions proved to be even more difficult than had been expected so that the failure to expand output substantially resulted in a further increase in working costs, with a consequential fall in profits. It is, however, gratifying to record that a sizable increase in output during recent months has resulted in some reduction in costs and the directors are accordingly of the opinion that prospects for the current year are more favourable.

Contrary it is believed to the experience of the industry as a whole, throughout the second half of the financial year covered by the accompanying accounts the transport position at neither of the Company's collieries was satisfactory and stocks at the pit-head increased over the period. In the early part of the current year the position worsened and accumulated stocks caused considerable inconvenience, as well as adding to costs, until the railway authorities were able to arrange increased wagon allotments. The position as at the date of this report is, however, greatly improved.

Reference was made in the report of the directors for the previous year to the fire which had broken out in the old workings of No. 14 seam in Khoira section and to the fact that some equipment had been lost in the sealing off of Nos. 2 and 3 pits at Kendwadih which had been ordered by the Mines Department. An attempt was made in May 1960 to reopen the area as tests indicated that heating was extinct. Within a few hours of the reopening, however, there were definite signs that heating was becoming active and it was accordingly decided to close the main seals again. A further attempt will be made early in 1961 to reopen this area.

By a notification in the *Gazette of India* dated 6th August 1960 the Government of India gave notice of its intention to prospect the area comprising the Company's Sutikdih Colliery which has not been worked since 1928 but which contains large reserves of selected coal. It had been the Company's intention to reopen Sutikdih on completion of the reorganisation and expansion programmes at Bararee and South Bulliari Collieries and accordingly a suit has been filed in the Supreme Court of India whereby it is sought to restrain Government from taking any action under the notification referred to.

Accounts in brief are as under:—

Rajendra Coffees Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Mysore) present the audited accounts of the Company for the year ended 31st March 1960.

The coffee crop for season 1959/60 was estimated at 147 tons of robusta and 1 ton of arabica and the actual realisation was only 53 tons of robusta and half a ton of arabica cherry. After the blossom estimates were taken there was unprecedented erratic rain fall and the coffee berries did not develop properly and also there was very heavy droppings after the berries developed. Even though all possible steps were taken to reduce the damages to the coffee crop it was not possible to pick more than the actual collection. The directors are glad that for the 1960-61 season the estimate of the coffee crop is placed at 125 tons robusta and 1½ tons of arabica.

In view of the sound financial position and the large amount of reserve available the directors have transferred Rs. 53,963 from the general reserves of the Company to dividend equalisation fund and also have transferred Rs. 51,000 from dividend equalisation fund to profit and loss appropriation account.

The result of the Company's working for the period under review is a loss of Rs. 16,498 (profit of Rs. 1,76,231) to which is added depreciation written off on buildings, machinery, etc., of Rs. 8.399 (Rs. 9,179) and Company's contribution to staff provident fund of Rs. 1,853 (Rs. 2,011) leaving a net loss of Rs. 26,750 (a net profit of Rs. 1,64,791 after deducting loss on investments Rs. 250). After deducting the amount brought forward from last year of Rs. 41,924 (Rs. 34,633) there is a credit balance of Rs. 15,174 (Rs. 1,99,424). The directors have transferred from dividend equalisation fund Rs. 51,000 (*nil*) making a total amount available for appropriation of Rs. 66.174 (Rs. 1,53,424). The directors recommend to make the following appropriations:—

To payment of a dividend at 6 per cent. agricultural income-tax and Central income-tax-free on 10,000 cumulative preference shares and income-tax thereon, absorbing Rs. 8,000 (Rs. 6,000), to payment of a dividend at 5½ per cent. agricultural income-tax and Central income-tax-free on 10,000 redeemable cumulative preference shares and income-tax thereon, absorbing Rs. 7,400 (Rs. 5,500) and to payment of a dividend at 25 per cent. (50 per cent. agricultural income-tax-free) agricultural income-tax-free on 40,000 ordinary shares subject to Central income-tax, absorbing Rs. 50,000 (Rs. 1,00 000) leaving a balance of Rs. 774 (Rs. 41,924) to be carried forward.

The directors feel that the working results for the year ended 31st March 1960 has not been satisfactory. Even though the staff and officers of the Company did their best the damage to the coffee crop by unfavourable weather conditions could not be prevented, hence the crop realised for the year under review was 54 tons as against the estimated crop of 148 tons. The coffee crop estimate for 1960-61 is 125 tons robusta and 1½ tons arabica.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Central Provinces Railways Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1960.

The following table shows the statistics of traffic for the past three years:—

	1957-58	1958-59	1959-60*
Number of passengers ...	21,83,836	21,66,034	23,13,628
Gross earnings (in rupees) ...	9,81,196	9,81,273	10,13,008
Merchandise (in tons) ...	1,33,054	1,40,151	1,36,648]
Gross earnings (in rupees) ...	6,08,372	5,54,845	5,16,457

* The figures for 1959-60 in respect of the number of passengers and tonnage carried during September, 1960, will require adjustment as the audited figures have not been received.

Coaching Traffic:—There has been an increase of about 1,47,000 in the number of passengers carried and of over Rs. 32,000 in coaching receipts.

Goods Traffic:—The tonnage of merchandise carried shows a decline of about 3,500 tons resulting in a reduction of over Rs. 38,000 in earnings.

After payment of Government's share of surplus profits amounting to Rs. 1,58,260 as against Rs. 1,94,745 in 1959, and providing Rs. 2.67,456 (Rs. 2,85,110) for taxation, the net profit for the year is Rs. 3,27,063 (Rs. 3,49.572). To this has to be added the balance brought forward from the previous year of Rs. 6,607 (Rs. 1,46,056) and amount overprovided for final dividend in the previous year of Rs. 471 (Rs. 9) making a total of Rs. 3,34,141 (Rs. 4,95,637). Out of this amount, there has been paid an interim dividend at the rate of Rs. 1.50 (Rs. 2.00) per share, subject to deduction of tax, for the half year ended 31st March 1960, absorbing Rs. 1,41,000 (Rs. 1,88,000). The directors recommend a final dividend for the year ended 30th September 1960, at the rate of Rs. 2.00 (Rs. 2.125) per share, [making Rs. 3.50 (Rs. 4.125) for the year], subject to deduction of tax, which will absorb Rs. 1,88,000 (Rs. 1,99,750) leaving a balance to be carried forward to next year of Rs. 5,141 (Rs. 6,607) after providing Rs. 1,01.280 for wealth tax for the years 1956; 1957 and 1958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	94,00.000	Block ...	95,61.236
Reserves ...	55,000	Book debts ...	3,91,969
Provision for taxation ...	1.83.452	Investments	500
Liabilities ...	3,28,515	Cash ...	18,403
Profit and loss account (surplus) ...	5,141		
Rs.	99.72.108	Rs.	99,72,108

Coffee Lands and Industries (Mysore) Ltd.

The directors of the above Company (Secretaries and Treasurers: The Consolidated Coffee Estates (1943) Ltd., Pollibetta, Mysore State) submit the audited accounts of the Company for the year ended 30th June 1960.

The net profit for the year is Rs. 2,03.662 (Rs. 8,71,249) to which is added the balance brought forward of Rs. 1,28,049 (Rs. 1,52,288) making a total of Rs. 3.31,711 (Rs. 10.23,537). The dividend on preference shares at 5 per cent. subject to deduction of tax, under Section 18(3)(D) of the Indian Income-tax Act, absorbed Rs. 52,030 (Rs. 52,030). The directors have transferred to development rebate reserve Rs. 2,302 (Rs. 8.661) and to general reserve Rs. 50.000 (Rs. 2,50.000) leaving a balance of Rs. 2,27,379 (Rs. 6,90,549 after paying Rs. 22,297 as income-tax). Out of this amount, the directors recommend the payment of a dividend of 6 (25) per cent. subject to deduction of tax, on the ordinary shares, absorbing Rs. 1,35.000 (Rs. 5,62.500) leaving a balance of Rs. 92,379 (Rs. 1,28,049) to be carried forward.

Crop—1959-60

	Estimated Metric tonnes	*Actual* Metric tonnes
Arabica coffee ...	726	603
Robusta coffee ...	66	74
Total ...	792	677
Cardamoms ...		Maunds 20

The difference of 123 metric tonnes between the estimated Arabica crop and the actual Arabica crop harvested may be attributed to a new malady in coffee which has recently been under study by a team of scientists appointed by the Coffee Board. Their report is awaited. The crop has been valued on the basis of the minimum release price of Rs. 2.20 a point.

Season 1960-61—*Crop Estimate*:—Arabica coffee 711 metric tonnes and robusta coffee 147 metric tonnes.

Hunsur Works:—3,526 metric tonnes of coffee was cured during the season, compared to 3,849 tonnes in the previous season.

During the year the Company's capital expenditure amounted to Rs. 3,88.940 of which labour and staff quarters cost Rs. 2,23,373.

Preference Dividend:—No provision has been made for any additional dividend that may be payable in the event of The Preference Shares (Regulation of Dividends) Bill, 1960 being passed into law. Any such additional dividend will be very small as in the relevant assessment years the Company's income is mainly agricultural.

Taxation:—Full provision is made in the accounts for taxation.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	32.90.600	Gross block	53,64,399

Madhya Pradesh Industries Ltd.

The directors of the above Company (Managing Agents: Messrs. J. K. Agents Private Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The profit and loss account for the year shows a profit of Rs. 5,10.464 (Rs. 9.88,075). Out of this provision has been made for depreciation Rs. 1,17,700 (Rs. 1,15.849) for development rebate reserve Rs. 2.095 (*nil*) and for taxation Rs. 2.50.000 (Rs. 5,60,000) leaving a sum of Rs. 1,40,669 (Rs. 3,12.226). With the balance brought forward from the last year's account of Rs. 56,593 (Rs. 74,367) there is a total amount available for disposal of Rs. 1,97,262 (Rs. 3,86,593). The directors recommend payment of dividend for the year ended 31st March 1960, as under subject to deduction of tax.

On 5.000 6 per cent. tax-free cumulative preference shares at (6 per cent.) tax-free per annum payable forthwith plus such further dividend as may be payable on enactment of the Preference Shares (Regulation of Dividends) Bill, absorbing Rs. 30,000* (Rs. 30,000) and on 1,50,000 ordinary shares at 10 per cent. (20 per cent.) free of tax i.e., Re. 1 (Rs. 2) per share absorbing Rs. 1.50,000 (Rs. 3,00,000) leaving a balance to be carried forward to next year of Rs. 17,262* (Rs. 56,593).

The Company has been charging depreciation on mining leases since the beginning. The Income-tax Department disallowed this depreciation and the Company contested it. However, the Bombay High Court has upheld the decision of the Income-tax Department on this issue and therefore it is necessary to provide additional amount for taxation. The directors have transferred a sum of Rs. 2 5 lakhs from general reserve to this account. In view of the fact that the value of the mining leases is of wasting nature, the directors have thought fit to continue providing depreciation on mining leases.

During the year under review, the working of the several mines of the Company as well as the production of manganese ore was satisfactory.

*Subject to payment of further dividend on preference shares as aforesaid which will be paid to those shareholders whose names are on the register of members as on the 29th December 1960.

The rate of royalty that was raised to 12½ per cent. on high grade manganese ore under the Mines and Minerals (Regulation and Development) Act, 1957 continued to be so till February 1960, when it was reduced to 7½ per cent.

Railway freight on manganese ore that was raised in October 1958, by more thas 40 per cent. continued during the year. Certain rebates that were announced in September 1959, on low and medium grade manganese ore did not result in any gain to the Company because the Company produces mostly high grade ore.

The price of manganese ore further deteriorated during the year. The *F.O.B.* price of 46/48 per cent. manganese ore came down approximately from Rs. 145 per ton in the beginning of the year to approximately Rs. 130 per ton at the close of the year under review. Although the Company produces mostly high grade ore with low impurities and the production was satisfactory, the profits were lower on account of fall in prices. The movement and export of manganese ore continued to remain under quota system, the State Trading Corporation of India Ltd., holding 50 per cent. of the available quota. Although the total quantity of ore exported from India during 1959 i.e., 9.65 lakh tons was practically the same as during 1958 i.e., 9.53 lakh tons, the value of export dropped by about 20 per cent., i.e., from Rs. 15.34 crores in 1968 to Rs. 12.62 crores in 1959. India has not been able to regain the markets which it has lost, specially of the main ore importing countries like U.S.A., France, U.K. and West Germany.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00.000	Gross block	18,79,279
Reserves ...	12,02.095	*Less*—Depreciation ...	13,27,977

Rs.	75,45,173	Rs.	75,45,173

Nelliampathy Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) present the audited accounts of the Company for the year ended 30th June 1960.

	Pounds	*Cost per lb.*
Tea crop harvested	10,18,200 (7,46,000)	Rs. 1.20 (Rs. 1.32)
Estimate	9,00,000 (9,00,000)	Rs. 1.17 (Rs. 1.11)
	Cwts.	
Coffee crop harvested	748.74 (729.63) (cured wt.)	
Estimate	540 (400)	

The cardamon crop for the year was 9,941 (24,162) pounds against an estimate of 15.000 (30,000) pounds. Tea seed crop harvested amounted to 6 (15) maunds against an estimate of 20 (40) maunds.

After providing for income-tax and Agricultural income-tax amounting to Rs. 1,80,000 (Rs. 80,000), and payment of Rs. 27,000 (Rs. 27,000) towards 6 per cent. preference dividend and Rs. 800 (*nil*) towards reserve for development rebate, the net profit including the previous year's carry forward of Rs. 150 (Rs. 33,440) amounts to Rs. 1,61,656 (Rs. 1,20,150 including Rs. 16,000 transferred from dividend equalisation fund). The directors recommend that this amount be disposed of as under:

By payment of a dividend on equity shares for 1959-60 at 13 (10) per cent. subject to deduction of tax, absorbing Rs. 1,56,000 (Rs. 1,20,000) leaving a balance to be carried forward of Rs. 5,656 (Rs. 150).

Estimates for 1960-61

	Crop lbs.	*Cost of Production* per lb.
Tea ...	9,00,000	Rs. 1.22
Cardamom ...	15,000	Rs. 6.20
	cwts.	per cwt.
Coffee ...	1,100	Rs. 151.85
	Mds.	per Md.
Tea Seed ...	15	Rs. 262.53

Tea Crop: The production has been substantially in excess of the estimate as well as the previous year's yield and the teas produced by the Company have also secured satisfactory prices in local auctions as well as in London to which market steady shipments have been made during the year. The average sale price for the year was Rs. 1.93 per lb. against Rs. 1.80 per lb. last year.

Cardamom: The short-fall has been due to adverse weather conditions and incidence of pests during the year. Special attention has been paid to this factor during the current season and the directors are able to report that the conditions are now satisfactory and for the current year the crop is expected to be over 200 per cent. of the estimate.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,50.000	Gross block	27,51,637
Reserves ...	6,37,638	*Less*—Depreciation ...	5,74,549
Provision for taxation ...	2,72,816

ECONOMIC CONDITIONS IN CANADA

INCOME AND EMPLOYMENT RISE FURTHER

By Hon. George Hees

CANADA'S MINISTER OF TRADE AND COMMERCE

CANADA comes to the end of another good year. The gross national product has established a new record, which is between two and three per cent. above the level for the previous year. Although prices, on the average, are up slightly, the total output of Canada's economy is higher than ever before. Personal incomes, in total, have risen by three per cent. On a *per capita* basis, real earnings have maintained the unprecedented level achieved in 1959. Employment has continued upward, having increased on an average of 100,000 persons, or 1.7 per cent. between 1959 and 1960.

While the year now ended has been one of notable achievement, there are no grounds for complacency. Canada has moved ahead, but so have other countries. Conditions of ample supply and intensified competition throughout the trading world have had a retarding effect upon the absorption of new productive resources. Although employment has increased, ways to achieve further expansion in job opportunities must be evolved. This is the challenge now before Canadians. The achievements of the past provide a firm base from which to move forward. Yet, move forward we must with intensified vigour.

Foreign Trade

In the first eleven months of 1960, merchandise exports were 6.4 per cent. higher than in the same period last year. This increase is due to larger sales in overseas countries, exports to which are up about one-sixth. Substantial increases have been achieved in Canadian sales to the three largest overseas market areas, namely, the United Kingdom, Western Europe and Japan. Most of this rise represents larger shipments of forest and mineral products, including pulp and paper, lumber, base metals, iron and steel, asbestos and chemicals. In addition, widespread increases have been achieved for various types of processed and manufactured goods. Despite continuing world surpluses, Canada's sales of wheat in commercial markets have held up well. Meanwhile, Canadian products have maintained their position in the United States import market, even though the actual level of shipments is a little lower than that for the preceding year.

Imports into Canada so far this year have remained at the 1959 level, and are now lower than four years ago. Though still facing intensified competition from imports, Canadian manufacturers, as a group, have about held their own in the domestic market.

Higher exports, together with an unchanged level of imports, have brought a substantial reduction in Canada's deficit on merchandise trade. This deficit amounts to $116 million in the first eleven months of the year, as compared with $410 million in the same period last year and $730 million in 1956.

A notable feature of Canada's trade this year and for several years past has been its growing geographic diversification. This has involved a lessening concentration of trade with the United States and a growing relative importance in our trade with the United Kingdom, West Germany and Japan. The steadily improving competitive position of overseas industrialised countries has enhanced their importance as sources of supply for the Canadian market. At the same time, strong internal growth rates within these areas has produced sharply-expanded markets for Canada's products.

Reflecting these broad influences, the proportion of Canada's exports to the United States has declined from 59 to 57 per cent. during the past four years, which means that 43 per cent. of Canada's total exports now go to overseas markets. During the same period, the United States' share of Canada's import market has declined from 73 per cent. to less than 68 per cent., while the share of overseas countries has risen correspondingly.

Additional Demand Stimulus

Internally, additional demand stimulus has come from the continuing rise in public and institutional investment, and further growth in consumer purchases. Expansion of business plant and equipment, while not placing additional demands upon the productive resources of the economy, has been proceeding on a major scale. Continued modernisation, diversification and expansion throughout all sectors of industry is a reflection of the strong forward momentum that underlies Canada's economic development. Meanwhile, less house-building and a diminishing rate of inventory accumulation in the business community at large have been important influences limiting the growth in overall demand within the Canadian economy.

Following a period of hesitancy earlier in the year, comprehensive measures of general activity now show a firm trend. A number of strong sustaining forces underlie demands within the Canadian economy. The recent upturn in housing starts foreshadows a firmer trend in house building activity. Public and institutional building is continuing to expand. Information now available on investment plans indicates that capital spending by the business community in 1961 will hold close to the previous year's level. The sustained upward movement in personal income should give continuing support to the consumer market. The liquidation of inventories now taking place in a number of industries will provide the basis for a strengthening in new orders in due course.

These sustaining forces are being reinforced by the special programme to stimulate Canadian development, now before Parliament. New provisions under the National Housing Act directed toward residential development, along with the improved availability of mortgage funds, have already had a stimulative effect upon house-building. New supports for urban re-development and low-cost loans for sewage construction will contribute to a rounded programme of local improvement. Additional impetus, given this year to the "Winter Works Programme," is helping municipalities get ahead with needed facilities and at the same time is providing a major stimulus to off-season employment.

Legislation providing for guaranteed bank loans to small business for improvement and additions to equipment and premises will give new support to small enterprises, and will add to activity in construction trades and other capital goods industries. Through the establishment of a National Productivity Council and in other ways, particular attention is being given to the competitive position of Canadian producers and to other measures that will increase participation of Canadian industry in both domestic and foreign markets. Taxation proposals recently announced will encourage new enterprise and increase production. These and other measures will stimulate Canadian development and add to employment opportunities.

Prospects in Foreign Markets

Prospects in foreign markets are now somewhat clouded by an easing in the tempo of business activity in the United States and by signs of hesitancy in the United Kingdom and some other overseas economies. Industrial activity in these countries has an important bearing on the demand for many of Canada's major exports. Despite the possibility of temporary fluctuation in international commodity markets, however, Canada's position in world trade remains basically strong. Rising income and consumption levels in overseas countries, together with the widespread reduction in import restrictions, has opened up new opportunities for the sale of Canadian goods. Vigorous action is being taken to see that these new market prospects are exploited in a practical way. For instance, new credit facilities are being made available to heavy goods exporters to enable them to compete on better terms with foreign competitors.

It became apparent to me, when I took over as Minister of Trade and Commerce, one of the things needed was to call in our Trade Commissioners from forty-nine countries throughout the world, and to bring them together with our primary and secondary producers.

During the Export Trade Promotion Conference, in Ottawa, Government and management were united in their efforts to explore all avenues leading to the procurement of a larger proportion of the world's markets for Canadian merchandise. Representatives of 1,268 Canadian firms held an aggregate of approximately 11,000 interviews with 110 trade commissioners. Businessmen sought their views on the sales potential for a wide range of products in their respective territories, and left the department with the impression that every effort will be made to display and sell their wares in foreign fields.

Many products, now manufactured in Canada, have never before been exported. One in five of the firms seeking interviews had never previously considered the export field as a possible outlet for their products. Many businessmen expressed the opinion they consider prospects favourable, following discussions with Trade Commissioners from ten or more countries. A number of these visitors to Canada's capital learned for the first time that a wealth of information and special services are obtainable from the Department of Trade and Commerce, both at home and abroad.

Quality of Goods

The reputation of Canada as a progressive, peace-loving country stands high, both in the larger and smaller nations of the world. But, the products we have to offer are not as widely known as they should be. This is, primarily, the task of individual producers in a free-enterprise economy such as ours. Canadian Trade Commissioners will provide the necessary introductions and will work alongside exporters and their agents abroad, provided both are genuinely interested in pushing sales for their goods.

We know that many countries, which until recently were markets for Canadian merchandise, are now our competitors and that the products they offer for sale are of high quality and reasonably priced. In order that Canada may maintain her present standard of living and provide for full employment in her many industries, it is essential that management and labour should reach an understanding that will enable us to produce the goods that are competitive in world markets. Not only must we preserve the quality of our goods but the price must be right. I am confident that many of the businessmen who talked with our Trade Commissioners carried home to their respective plants a message that will encourage all concerned, and that a great unifying force will be created to move forward on our objective.

Efforts which were considered good in the past will simply not do today. Ours must be the kind of effort which we produced in two world wars to defeat an enemy on the military front. Today, we need the same kind of effort on the economic front to protect the jobs of our people, just as we protected the lives of our people in wartime. I know I can count on management and labour in Canada to produce the goods that are competitive in both quality and price, and to maintain and expand our markets. Working together, we can produce a team effort that will be unbeatable.

U.S. EXPORT SURPLUS RISES IN 1960

The U.S. export surplus, which narrowed to about $1,000 million in 1959, will probably approach $5,000 million in 1960. This resulted from a rise in exports, while imports held were maintained at the 1959 level, according to the 1950 year-end review of U.S. foreign trade by Mr. Bradley Fisk, Assistant Secretary of Commerce for International Trade. The data for the first eleven months of 1960 indicate that non-military exports in the whole year will probably exceed $19,500 million, as compared with $16,300 million in 1959. Enlarged foreign demand, stemming chiefly from the business booms in Western Europe and Japan, was primarily responsible for the sharp rise in U.S. sales abroad in 1960. Another factor was liberalisation of import restrictions in many countries that facilitated expanding sales of dollar goods. The U.S. share of the total export market abroad will probably reach 20 per cent. of a greatly expanded total for 1960. This percentage represents improvement over the 19 per cent. share in 1959, but remains below the 21-22 per cent. range prevailing in several earlier years of the 1950's.

PHILANTHROPY BY AMERICANS

More than $8,000 million were given to philanthropy by Americans in 1960, the American Association of Fund-Raising Counsel has estimated. Among major beneficiaries were religious organisations which received about 6 per cent. more than in 1959. Construction of buildings for religious purposes exceeded the 1,000-million mark, ten per cent. higher than a year ago. Donations in the religious category account for about 50 per cent. of the total annual philanthropy in the U.S. Modest increases were reported in 1960 for health, welfare and recreation, expected to total over $468 million, or 2 per cent. higher than in 1959. Higher education was expected to show the greatest percentage increase of any category, rising markedly above the $939 million given in 1959.

MONEY QUITE DEAR

(From Our Own Correspondent)

BOMBAY, 11*th January*

There has been no improvement in the supply of funds in the short-term money market, but the demand has been gathering momentum. The hope that the Reserve Bank will release the remaining 25 per cent. of special deposits in order to relieve acute scarcity of money has not yet materialised. Banks are, therefore, meeting the demand for accommodation from the trade and industry by borrowing from the Reserve Bank. The major portion of these borrowings are believed to be at the maximum rate of 6 per cent.

There are very few lenders in the inter-bank section, even though the rate for day-to-day money is as high as 5¼ per cent. There have been a few borrowers at as high as 5¾ per cent. for one week inter-bank money.

There is no change in the rates of interest for short-term deposits. These are: 2 per cent. for house money repayable on notice of 3 to 21 days, 3 per cent. for house money repayable on notice of over 21 days, 3½ per cent. for deposits of 31 days and over but up to 60 days, 3¾ per cent. for over two months to 12 months and 3¾ per cent. for one year.

There has also not been any increase in the lending rates of banks, which vary from 6½ to 7 per cent. per annum. It would, however, appear that, in most cases, new borrowers have to pay ¼ to ½ per cent. more, if they require any sizable accommodation.

There is no move as yet to amend the inter-bank agreement on deposit rates which are, however, considered to be on the low side, having regard to the prevailing stringency in the money market.

The 91-day Treasury Bill results are in keeping with the trend of the market. Although the total amount offered (as against an invitation for Rs. 2 crores) was Rs. 20 lakhs more at Rs. 2.60 crores, the average rate of accepted tenders was higher at 2.576 per cent., as against 2.556 per cent. in the previous week. There were no sales of intermediate Treasury Bills, but they are being continued and so also the sale of Bills through tenders. Whatever support there is for Treasury Bills is mostly from "special quarters" and that, too, against maturities.

A sharp increase of Rs. 32.27 crores in notes in circulation, taking the total to Rs. 1,901 crores, is disclosed by the Reserve Bank of India's statement for the week ended 6th January 1961 as compared with that for the previous week, when there was an increase of Rs. 10.43 crores in this item. Since there has been a small increase of Rs. 18.42 lakhs in notes held in the Banking Department, the total notes issued have gone up by Rs. 32.45 crores. This has been balanced on the assets side by an addition of Rs. 35 crores in rupee securities and a fall of Rs. 2.5 crores in rupee coins. Since this fall reflects the issue of one-rupee notes to the public, the net addition to the currency in circulation during the week under review works out to nearly as much as Rs. 35 crores.

It may be interesting to note, in this connection, that, in the first week of 1960 also, there was almost an identical increase in currency in circulation. The only difference is that, a year ago, notes in circulation were lower by some Rs. 126 crores at Rs. 1,775 crores.

Foreign securities held by the Issue Department remain unchanged at Rs. 108 crores. But, as balances held abroad by the Banking Department have contracted by Rs. 4.12 crores, the total foreign assets are down by that amount to stand at Rs. 147.62 crores.

Reflecting the keen demand for money, deposits of banks with the Reserve Bank have slumped by Rs. 31.01 crores to stand at Rs. 84.67 crores. There has, however, been a fall of Rs. 8.45 crores in other loans and advances given by the Reserve Bank which include borrowings by the scheduled banks also. But it is not clear whether this fall is due to a reduction in the accommodation provided by the Bank to member-banks. There is actually a small increase of Rs. 3 lakhs in the advances against usance bills which now amount to Rs. 13.82 crores. The other variations in the Banking Department of the Reserve Bank are not of much consequence to the money market.

The latest available scheduled banks' statement is that pertaining to the week ended 30th December 1960 which, as compared with that for the previous week, shows a rise of Rs. 4.83 crores in demand deposits and of Rs. 4.08 crores in time deposits. But borrowings from banks of both demand and time nature have gone down by Rs. 5.58 crores in the aggregate. Borrowings from the Reserve Bank show a sharp increase of Rs. 18.67 crores, of which Rs. 5.35 crores are against usance bills. Borrowings from the State Bank, however, are lower by Rs. 1 crore. A marked rise of Rs. 24.57 crores is noted in advances and bills taking their total to well over Rs. 1,180 crores. A year ago, these stood at no more than Rs. 977.46 crores. There has been a sharp fall of Rs. 24.79 crores under investment, while cash balances are up by Rs. 30.02 crores. Balances with other banks in current account are better by Rs. 4.92 crores. But money at call and short notice is lower by Rs. 3.89 crores. The increase in deposits and the striking rise in cash balances largely reflect the usual year-end window dressing.

The statement of the State Bank of India for the week ended 30th December 1960 shows only a small fall of about Rs. 2 crores in deposits accompanied by an expansion of Rs. 6.20 crores in advances. There has been a fall of Rs. 46 lakhs in money at call and short notice. The total cash position reveals an improvement of as much as Rs. 21.06 crores, which has been brought about by a reduction of an almost corresponding amount in investments. These variations clearly show that the bulk of the changes noted in the position of scheduled banks as a whole has been on account of the State Bank.

There is nothing worthwhile to be said about the Gilt-edged market. The State loans show no variation whatever over the week. Among Central loans, there has been a rise of 55 nP in 3½ per cent. 1974 probably due to buying by tax-voucher hunters. The same explanation holds good for the rise of 10 nP in 4 per cent. 1979. Conversion loan has spurted by 20 nP and 3 per cent. 1970-75 by 5 nP.

In the foreign exchange section, there is no change in the rupee-dollar rate, the banks' selling and buying rates for ready T.T. being Rs. 477 and Rs. 473.50, respectively, per 100 dollars. This is due to the steadiness of sterling in terms of dollar. The latest available rate is 280.630-280.660 cents per £ for spot and 279.910-279.940 cents per £ for three months' forward. As compared with the corresponding rates a week ago, these show a fractional improvement of 0.07 cent.

SILVER TOUCHES NEW PEAK

(From Our Own Correspondent)

BOMBAY, 11*th January*

Ready silver in the bullion market touched today a new peak of Rs. 200.95 per kilogram (85.7 tolas), as against the previous highest level of Rs. 198.18 touched on 5th May last year; the closing rate on Tuesday last week was Rs. 195.30. The spurt followed hectic buying by bulls on hopes of considerably enlarged demand for the metal in the next few weeks, in view of the rise in agricultural production and inflationary psychology. Some Calcutta operators were reported to have made sizable purchases. Arrivals during the week were no doubt very large, the daily average rate being 23 bars (as against only 11 bars last week), but they were well absorbed. The average offtake of silver was 9 bars per day (7 bars last week). The floating stocks of silver in the city were believed to have declined from 700 bars last week to 500 bars this week.

Gold also registered a handsome rise in prices, thanks to reports of a marked rise in offtake in upcountry centres. The rate at one time today stood at Rs. 117.53 per 10 grams (0.85 tola) for ready delivery, which is just 36 nP less than the all-time peak of Rs. 117.89 reached on 5th May 1960. Last week's closing rate for the metal was Rs. 115.20. The average daily arrivals and offtake of gold during the week were 6,800 tolas and 3,600 tolas, those in the previous week being 7,000 tolas and 4,200 tolas, respectively. The floating stocks of gold are reported to be around 80,000 tolas.

Despite the rise in prices, both silver and gold continued to be quoted at a discount under the forward positions (*Maha* settlement) throughout the week. The actual discount, of course, declined from Re. 1.55 to 35 nP in the case of silver and from 70 nP to 50 nP in respect of gold. This shows that the bulk of the appreciation in value was due to speculative buying.

Forward prices in the bullion market moved up swiftly. The *Maha* (February) settlement in silver advanced from Rs. 196.85 on Tuesday the 3rd inst., to as high as Rs. 201.30 today before finishing at Rs. 201.10. Gold *Maha* settlement rose from Rs. 115.90 to Rs. 117.70. The closing was a shade lower at Rs. 117.65.

The world price for gold in the London bullion market improved from $35.61 to $35.65-$35.75 per fine ounce during the week under review, following sustained and widespread demand, especially from Canada, attributed to American buyers. The chief factors which influenced the market were international situation, continued heavy U.S. gold losses, apparent absence of fundamental remedies for the U.S. deficit, fears that the new Kennedy Administration might have to adopt inflationary measures to revive economic activity and growth, and inflationary tinge of many American comments. In sympathy with this trend and as a result of the easiness of the pound sterling *vis-a-vis* the dollar, ready gold firmed up from 253*s.* 9*d.* to 254*s.* 5*d.* Ready and forward silver, however, were unchanged, the former at 79¾*d.* and the latter at 79¾*d.* Ready silver in New York was also unaltered at 91.375 cents.

The following table shows the trend of the market during the week under review:

	11-1-61 (closing)	High	Low	3-1-1961 (closing)
GOLD				
Ready (.99 fine)	Rs. 117.15	Rs. 117.53	Rs. 114.95	Rs. 115.20

COTTON FUTURES ERRATIC

(From Our Own Correspondent)

BOMBAY, 11*th January*

Cotton futures moved irregularly during the week under review. Prices rose and fell on a moderate scale on alternate bouts of buying and selling. No definite trend was evident during most part of the week. The doubt whether, in the face of opposition from the mill industry, the second export quota for Bengal *Deshi* and the upward revision of the ceiling prices of Kalyan and Vijay cotton would materialise induced operators to be cautious. The case for and against export quota and the revision of ceiling prices for the said varieties was presented by the respective interests at the meeting of the Cotton Textile Consultative Board, held in the City yesterday. It is quite likely that a final decision on these questions will be taken only after the Cotton Advisory Board's meeting scheduled to be held towards the end of the month.

While these uncertainties deterred operators from entering into large-scale, firm commitments, reports of bulk arrival of new crop and quality deterioration in Vijay and Digvijay crops exerted a downward pressure on prices. It should, however, be noted that the decline in price was neither steady nor consistent. And so was the rise. In fact, losses were interspersed with gains. But the former outweighed the latter, so that, over the week, futures recorded a net fall of Rs. 10.25.

I.C.C. Moglai Jarilla April 1961 contract opened the week at Rs. 604 (per three quintals) and, after declining to Rs. 592 the next day, improved to Rs. 594 on Saturday. It again came under selling pressure and receded to Rs. 590 yesterday. Opening at Rs. 591 today, the Contract rallied on short-covering to Rs. 594.75 at which rate it closed.

In the spot section, mills continued to evince interest in popular varieties like Vijay, Khandesh, Berar, Moglai, L. 147, etc. Choice qualities of these varieties were in good demand. Prices were maintained at ceiling levels. The recent keen interest in Vijay and Digvijay, however, tended to fall off, as the quality of early pickings was found to be not up to the mark. Consequently, spinners were showing increased interest in substitutes such as L. 147 and CO2.

Following the lifting of the ban on the movement of Bengal *Deshi* from the Punjab, Rajasthan and Uttar Pradesh to other parts of the country, exporters showed interest in Bengal *Deshi*. But, in the absence of quota, much firm business could not be done. The ceiling in respect of the first quota of 50,000 bales released on 8th December was reached in just over a week. But out of this, only 40,000 bales were passed for shipment. About 7,500 bales had been detained because these were not passed as "superfine and above" by the *Ad Hoc* Committee appointed by the Textile Commissioner to make these eligible for export. Yellow pickings also attracted attention from Japan and some Continental countries.

There was moderate mill demand for foreign cotton. Apart from the usual interest in the U.S. cotton, East African, Sudan and Egyptian growths also attracted attention. Sudan XG4L was done at Rs. 1,570 per candy and X04S at Rs. 1,770 per candy. B.P.52 found buyers at Rs. 1.360 for February-April shipment and Busoga at Rs. 1.335.

The procedure for allocation of cotton to mills to raise cloth production by 10 per cent. by working extra shifts was notified by the Textile Commissioner yesterday. The notification reads:

"Mills desiring to work their spindles on extra shifts are requested to fill in the necessary particulars in the proforma prescribed and send it to this office promptly. On receipt of the same, necessary cotton quotas will be issued. Mills which have applied to this office before for extra allocation on account of working third shift or increased spindles are being granted additional quotas even at present.

"Cotton is allotted only for extra shift working of the spindles. If a mill does not wish to produce more yarn but wishes to work only the looms on extra shift, no additional quotas of cotton will be granted.

"The foreign cotton stapling 1" and below, which has been already made available, will be taken into account for this purpose, but if it falls short of the requirements after due examination, Indian cotton will be issued for such extra shift working till such time as a further quantity of foreign cotton stapling 1" and below becomes available for distribution."

In contrast to the easy trend noted during the past few weeks, Karachi cotton futures ruled firm during the week under review. The January contract, after its fall in the previous three weeks, rallied, thanks to short-covering and fresh buying. The March contract rose in sympathy early in the week but later came under selling prompted by the prospect of a higher crop. The 1960-61 crop is currently estimated at 1.79 million bales, as compared with 1.66 million bales during the last season. The increase in production despite a fall in the area under cotton by 2.9 per cent. is attributed to favourable weather conditions in West Pakistan and the successful control of pests.

Cotton futures in Alexandria declined during the week under review, thanks to paucity of export demand. Foreign buyers are waiting for a further fall in Egyptian cotton prices as soon as the commencement of Sudan cotton auctions. Favourable crop news, indicating an excellent harvest, was another bearish influence. Under pressure of selling both the Karnak and Ashmouni contracts receded.

The U.A.R. Government has reiterated that there would not be any change in the cotton export policy during the present season. The following are the latest available quotations—in tallaris per

lb.—from Alexandria, the figures in brackets being last week's closing quotations:

Karnak: January 69.10 (69.55); March 70.90 (72.67); May 71.51 (73.75).

Ashmouni: February 61.90 (62.50); April 61.72 (63.01); June 62.05 (64.15).

Cotton futures in Liverpool suffered a setback during the week under review. The post-holiday buying spree, witnessed last week, dried up and the market developed signs of easiness. Lower advices from New York imparted further weakness to the market. Both the American and American type contracts receded. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March 22.95; May 23.30; July 23.60; October 23.95.

American cotton mixed growth contract: March 23.25; May 23.60; July 24.20; October 24.30.

Sudan: January, March, May 35.00.

In spite of the likelihood of higher support prices, cotton futures in the New York market declined during the week. This was due to the continued quiet conditions in the piecegoods market and slackness of domestic mill demand. The uncertainties about Washington developments on farm problems affected the volume of turnover.

The following are the latest available quotations from New York, as compared with those a week and a month ago:

(In cents per lb.)

	10-1-61	3-1-61	13-12-60
Spot	32.25	32.25	32.25
December	—	32.25	—
March	32.05	32.70	32.40
May	32.53	33.07	32.85
July	32.96	—	—

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 11*th January*

Barring Cupressa Bemberg yarns (60 x 1) which tended to move up on good buying support, the yarn market depicted a distinctly easy trend during the week under review. Imported art silk yarns encountered selling induced by fears of reduced demand from the weaving units as a result of the latest official decision pertaining to allocation of indigenous yarn for the current quarter announced on the 7th inst. Staple fibre yarns also ruled easy, due to conflicting rumours regarding stamping of prices on staple fibre yarn bales. Cotton yarns changed hands at lower prices, in view of the latest cut in prices announced by the Indian Cotton Mills Federation.

According to the latest Press note issued by the Textile Commissioner, indigenous art silk yarn will be allocated to the powerloom weaving units for January-March 1961 period on the basis of the number of loom shifts worked during July-September 1960. For units submitting monthly returns in the prescribed form regularly to the office of the Textile Commissioner, the rate of allocation will be 0.65 kg. per loom per shift, whereas, in case of units which are not submitting such returns, the allocation will be at the rate of 0.4 kg. per loom per shift, provided they submit the returns in the prescribed WAS-1 Form along with their applications. The allocation will be made only to such units as are holding valid installation permit and/or registration certificate from the Textile Commissioner's office, to work powerlooms on artsilk-staple fibre yarn. Those card holders for the January-March 1961 period who are unable to procure supplies directly from indigenous manufacturers are required to approach the Distribution Committee, c/o the Association of Man-Made Fibre Industry, Ewart House, Bruce Street, Fort, Bombay, for supply of yarn against the allocation cards issued to them. The said Committee will endeavour to supply art silk yarn to the extent such card holders are entitled to through the common pool created by the members of the Association. The powerloom units whose cards against October-December 1960 period have been endorsed after 30th November 1960 can secure their balance requirement from indigenous yarn manufacturers in the ensuing period along with the allotment against January-March 1961 period.

It is reported that the Textile Commissioner has deferred for consideration the plea of the Cotton Mills Federation for stamping of prices on staple fibre yarn bales as in the case of baled cotton yarn. Traders has opposed the move for stamping prices on the ground that it will lead to malpractices and ultimately hamper free trade in this yarn. In the course of a communication addressed to the Textile Commissioner, the Bombay Yarn Merchants Association and Exchange observes:

"The recent rise to some extent in the prices of staple fibre yarn is mainly due to export of staple fibre fabrics under the Export Promotion Scheme, which, we believe, is only a temporary phase. If you will look to the trend of prices for the whole year, you will find that there was never the tendency of inflation in prices of staple fibre yarn. In fact, the prices of staple fibre yarn have generally remained subdued and a lower trend has prevailed. As it is only due to the incentive scheme in the export of staple fibre fabrics, envisaged recently by the Government, the prices have slightly risen temporarily, and we are sure that they are bound to recede and reach the normal level very shortly. In view of the above, we have to request you to watch the trend of the market at least for six months before taking decision to stamp the prices of staple fibre yarn."

Imports of art silk yarn into Bombay port during the month of December 1960 amounted to 782,458 kg., as against 1,376,528 kg. in November 1960. Imports of staple fibre yarn were 16,428 kg. In the same month, 105,995 kg. of synthetic yarn and 20,076 kg. of cotton yarn were imported. The corresponding figures for the previous month were 64,075 kg. and 8,523 kg., respectively. Exports of cotton yarn from Bombay port during December were 334,812 kg., as against 362,579 kg. in the previous month, and cotton sewing thread 31,315 kgs., as against 23,990 kgs.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	11-1-1960	4-1-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.) February	2,392.00	2,366.00
60/1 Cupressa Bemberg spot	2,383.00	2,341.00
120 Japan (per 100 kg.)	1,301.00	1,310.00
150 Japan (per 100 kg.)	1,140.00	1,053.00
120 Italy (per 100 kg.)	1,239.00	1,254.00
150 Italy (per 100 kg.)	1,598.00	1,570.00
Staple fibre yarn—		
40 x 2 February (per 90.72 kg.)	776.00	775.00
40 x 2 Century (per kg.)	9.35	9.42
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.75	18.12
20s New Great	22.25	22.12
40s Madura	31.50	31.62
60s Finlay	60.60	59.59
80s Finlay	79.79	79.79

OILSEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, 11*th January*

The oilseeds market was somewhat subdued during the week under review. Arrivals were large, while overseas enquiries for oils were not quite encouraging and offtake by domestic consumers was low. Consequently, prices of oilseeds and oils generally tended to look down. Traders were not inclined to enter into large fresh commitments either way pending the emergence of a clear picture regarding supply position of oilseeds and demand prospects.

A notable development of import to the market was the meeting of the Presidents of recognised associations at Bombay, Rajkot, Adoni, Hyderabad and Sangli held in Bombay this week under the auspices of the Forward Markets Commission. The main object of the meeting was to devise measures for eradicating illegal trading in non-transferable specific delivery contracts in groundnut and groundnut oil. After the meeting, the Commission issued a Press note in which it declared that, in the light of the discussion at the meeting, it would now take steps to eradicate illegal trading in non-transferable specific delivery contracts in groundnut and groundnut oil. Another notable development of the week was the commencement of trading in new hedge contracts in groundnuts and cottonseeds on Friday the 6th inst.

Oilseeds traders are rather perturbed over the reported move of the authorities to link exports of groundnut oil to imports of copra. In a telegram sent to the Union Ministry of Commerce and Industry, the Board of the Bombay Oilseeds and Oil Exchange has urged the Ministry to refrain from such a move. The Board considers it inadvisable for the Government to allow exports of groundnut oil and H.P.S. groundnuts, in view of the tight supply position and prevailing high prices. It has warned that, if an additional quota is announced, prices will rise further. If, however, the Government is still very keen on export promotion, the Board has suggested that a further quota of H.P.S. groundnuts may be permitted, since the ceiling of previous quota has already been reached. In respect of groundnut oil, the Board has suggested that incentives by way of import of copra should be given to established exporters of groundnut oil, instead of asking the millers of copra to export oil.

In the groundnut section, there was a strident rally in the earlier part of the week, induced mainly by good demand from exporters. The spot section, too, was distinctly firm, in view of the relatively smaller arrivals. But the sentiment turned easy subsequently, owing to low level of support from crushers and *vanaspathi* manufacturers. The closing prices today were lower than those in the beginning of the week. Despite the decline, the ready price per 250 kg. was still higher at about Rs. 230, as compared with the ceiling prices of Rs. 220 for forward contracts. Groundnut May 1961 contract, business in which commenced on Friday at Rs. 216.25, gradually declined to close today at Rs. 215.75. February 1961 contract improved initially from Rs. 218.50 to Rs. 219 (just a rupee below the ceiling), but fell to Rs. 217.50 yesterday. It, however, recovered to Rs. 218.75 today. Nizam bold fell from Rs. 46.12 to Rs. 44.75, before closing at Rs. 46. Khandesh quality lost 25 nP to Rs. 46.50. Oil ex-mill dropped 20 nP to Rs. 19.50.

The castorseed section ruled easy mainly on account of new crop arrivals. It was felt that the reports of increases in the pressure from Brazilian castor oil supplies and India's disadvantage in respect of price parity had reduced the scope for any sizable exports in the immediate future. These factors dampened the enthusiasm of bulls, resulting in heavy unloading. Castor May 1961 contract gave way from Rs. 178.37 to Rs. 175.87 yesterday. Although it rose to Rs. 176.25, it was still lower by Rs. 2.12, as compared with the opening rate for the week. Ready Madras eased by 25 nP to Rs. 34.62. Oil Commercial shed 15 nP to Rs. 14.05.

With the Indian prices of linseed oil continuing to rule higher than those in world markets, there was hardly any activity in this section. May 1961 contract was lower by 44 nP at Rs. 35.22. Bold ready dropped Re. 1.50 to Rs. 37.25. Oil lost 40 nP to Rs. 16.80.

There was a distinct setback to prices in the cottonseed section, in sympathy with the trend of the raw cotton market. February contract was marked down by Rs. 4 to Rs. 91.50. The new contract May 1961 was hammered down from Rs. 93 to Rs. 91.50. Both non-whites and berars eased by 45 nP to Rs. 19.30. Whites, however, picked up 30 nP to Rs. 20.05.

Among other seeds, sesame ruled steady on reports of reduced crop. Sesame bold was maintained at Rs. 340. Nigerseed closed today at last week's level of Rs. 36.50, after touching Rs. 38.25 early in the week. Kardi seeds hardened by 50 nP to Rs. 25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	11-1-1961	4-1-1961	28-12-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	218.50	218.50	216.00
May 1961	215.75	—	—
Nizam bold	46.00	46.12	43.75
Coromandel ready	46.50	46.75	44.75
Khandesh quality	46.50	46.75	45.00

Niger seed	36.50	36.50	37.50
Kardi seed	25.00	24.50	24.50

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 60 kilograms and oil per 10 kilograms.

BLACK PEPPER INDECISIVE

(Messrs. Parekh and Co.)

BOMBAY, 11*th January*

After a temporary spurt engendered by disturbing news from Laos, Malabar black pepper drifted lower during the week, with undertone indecisive, in sympathy with New York and Singapore where markets turned weak for want of followings. New York, after touching $0.50, came down to $0.46½, with buyers awaiting new developments in Indonesia for the reduction in check prices in line with the realistic rates ruling in other exporting as well as consuming countries. The check prices so far fixed by Indonesia were based upon the quotations supplied by the news agencies which did not disclosed the real prices asked by sellers and offered by buyers.

Ungarbled at Cochin, after touching the highest at Rs. 430 per quintal, came down to Rs. 400, with buyers withholding in the hope of further reduction, in view of increased arrivals during the coming weeks. Garbled slipped down from Rs. 438 to Rs. 410. January delivery, after surging to Rs. 446, receded to Rs. 414 and February from Rs. 456 to Rs. 426. Calicut, after going up to Rs. 450, came down to Rs. 410. Singapore was down from Str. $152½ to Str. $150 for black and from Str. $250 to Str. $240 for white, with turnover disappointing.

One of the market analysts has reviewed the present situation in Malabar black pepper in primary markets as under:—

The growers and small assemblers in the villages are dreaming of high prices, as the present prices look to them cheaper when compared with those available last year at this time of the season. As such, on the appearance of demand, however little, either for the interior or for export, they put up the prices. If the present poor overseas' inquiries persist, this may lead to accumulation of stock either on the terminal markets or in the jungle which, sooner or later, is likely to affect adversely, as there are other competitive sellers like Indonesia and Singapore who are equally anxious to liquidate their stock before the advent of the new season in Sarawak and Sumatra. There is likelihood of a surplus of about 14,000 tons of pepper in these areas as on 1st August 1961 after fulfilling the usual export from Singapore and other ports.

	Tons
Stock in Singapore as on 1-1-1961 ...	6,000
Stock of Lampong in Indonesia ...	16,000
Stock of Muntok in Indonesia ...	5,000
Stock in Sarawak	3,000
	30,000
Estimated average export from Singapore from January to July 1961	14,000
Estimated average export from other Ports from January to July 1961	2,000
Surplus available as on 1st August 1961	16,000
	14,000

The future of the market appears to be uncertain, in view of the ample supply in producing countries against the hand-to-mouth buying policy of the consuming countries. The market is likely to go down, though slowly, barring any unforeseen circumstances.

In Bombay, ready pepper is nominally quoted at Rs. 223 per 50 kilos.

TEA EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 3*rd January*

Sale No. 1: Approximately 750,000 kilograms were offered in the first sale of the year held today. Quality teas offered in this sale were irregular with mediums and low mediums showing a decline. The market met with good demand, but prices were generally easier, with fannings grades receiving better support than broken grades. There was good demand for low mediums and medium descriptions which were irregularly easier by 10 to 15 nP. Although good mediums elicited useful support, they also declined irregularly by 15 nP. Highgrowns were in limited demand and sold at lower rates following quality. Among whole leaf grades, flowery pekoes and pekoes were quoted barely steady, whilst orange pekoes met with better support and sold at around last week's levels. C.T.C. and legg-cut types also shared in the downward trend of the market and were sometimes easier by up to 20 nP. A small selection of tippy teas were well supported.

	1961	1960
	Rs.	Rs.
Low medium	4.55-4.70	4.63-4.85
Medium	4.70-4.85	4.85-5.18
Good medium	4.85-5.20	4.96-5.40
Quality	5.20-8.10	5.29-9.04

The average price realised in Sale No. 1 was Rs. 4.89 per kilo, as against Rs. 4.88 in the previous sale and Rs. 4.98 in the corresponding sale last year.

Dust Sale 'A': 335,000 kilograms were offered in Sale 'A' held on Thursday, 5th January. There was good general demand. Highgrowns came in for better support at irregular but slightly dearer rates. Medium descriptions were readily absorbed and were fully firm with buyers' emphasis on the powdery sorts. Residuals were keenly competed for and were quoted 10 to 20 nP dearer. C.T.C. and legg-cut types sold well and were dearer.

The average price realised in Sale 'A' was Rs. 4.80 per kilo as compared with Rs. 4.86 in the corresponding sale last week, and Rs. 4.29 in the corresponding sale last year.

Export Quota: The market remains unchanged with large sellers at ½ nP per kilo with no buyers.

Colombo: Approximately 7,000,000 lbs. were offered and met with a strong demand following generally improved quality. Best Dimbulas were easier but Dickoyas and Uvas were dearer following quality. Mediums came to a firm market whilst Persian Gulf types advanced 5-10 cents.

London.—North Indian and other growths: In Monday's auction there was a good general demand with prices mainly firm but any changes were in buyers' favour. Plain BP continues to remain at 3s. 9d.

Ceylon and South Indians: The sale on Tuesday comprised 22,525 packages of which 7,334 packages were teas from South India. There was a good demand and prices were generally unchanged on last week's rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale* 2: 914,000 kilograms. Good demand, particularly for plain and low medium which are steady. Medium and good medium firm to dearer, with quality best liquoring Nilgiris restricted demand at lower rates. Black leaf fannings dearer. Whole leaf fully firm."

QUALITY TEAS RISE

(From Our Own Correspondent)

CALCUTTA, 11*th January*

Quality tea met with good demand during export sales held yesterday, while inferior quality teas fell in last week's internal sales. After the Xmas and New Year holidays, shipping of tea has shown a steady improvement, and bookings to the U.K. during the week were indeed heavy. Latest figures indicate that in both South India and Ceylon production of tea in 1960 has been substantially higher. November 1960 output in Ceylon amounted to 45.5 million lbs. against 39.3 million lbs. in November 1959, bringing production so far to 401.1 million lbs. or representing an increase of 23.2 million lbs. In South India, production up to and including November 1960 totalled 157.9 million lbs. against 143.9 million lbs. in the corresponding period of 1959, thus recording a rise of 14 million lbs. On the other hand, production in North East India has disclosed a shortfall of about 35 million lbs. compared to 1959, output up to and including November 1960 totalling 548 million lbs. against 413 million lbs. in the corresponding period of 1959.

Dusts on offer in the internal sales held last week amounted to 23,621 packages. There was a good general demand although prices declined following quality. Medium C.T.Cs eased by 10 nP to 15 nP, but the best teas of this type met with good demand and the smaller thick liquoring teas were fully steady. In an irregular trend, orthodox tea registered a decline. The few bright liquoring Assams were firm, as were legg-cut Dooars. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 5.90 to Rs. 6.40, medium Assam C.T.C. dust Rs. 5.45 to Rs. 5.65, medium Assam C.T.C. dust Rs. 5.25 to Rs. 5.35, medium Assam legg-cut dust Rs. 5.25 to Rs. 5.25, and plain orthodox dust Rs. 5.05 to Rs. 5.25. Leaf on offer amounting to 1,289 chests met with good general demand at irregular rates.

Offerings during yesterday's export sale totalled 71,290 packages. Following a good and strong general demand, prices of quality teas rose. Choicest teas met with keen attention, and those with autumnal liquors hardened. Tippy teas, though small on offer, were an irregular feature. Well-made leaf grades were about steady, while the poorer stalky teas gave way. Among C.T.Cs, the best ones on keener attention rose, while the medium C.T.Cs eased and the secondary grades were irregular. Medium brokens and fannings were firm at previous rates. The cleaner and better liquoring teas were often sold at higher rates. Plain brokens and fannings were firm. Among legg-cut teas, those possessing bright liquors were in good demand at higher rates. Medium Assam B.O.Ps met with keener attention, and the brighter liquoring teas hardened. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.80 to Rs. 6.30, plain Assam C.T.C. B.P. Rs. 5.50 to Rs. 5.90, clean best Assam C.T.C. dust Rs. 5.25 to Rs. 5.50, medium fannings Rs. 4.85 to Rs. 5.10, medium B.P. 4.70 to Rs. 4.90, plain fannings Rs. 4.85 to Rs. 5.05, and plain B.P. Rs. 4.50 to Rs. 4.65.

JUTE GOODS STEADIER

(From Our Own Correspondent)

CALCUTTA, 10*th January*

Steadier conditions were in evidence in the jute markets during the week under review. The feature of trading was the mid-week rise in prices of goods, following inquiries for hessian from Argentina and covering business in B. twills. The improvement was not, however, maintained as a result of selling pressure and the closing rates were almost similar to opening levels. The fresh arrivals of fibre being poor, sellers were reserved and prices tended to move up. It was estimated that the proposed cut in working hours by mills from the end of this month would reduce production by 5,000 tons per month. Reduced production would mean a cut in profits of mills and, though the proposed step would be the last of a series of measures in order to cope with the existing fibre shortage, fibre prices had not yet reacted to the move. Market circles, however, hoped that, in view of the existing high prices, probably a high acreage would be sown in the coming season and that supplies would be sufficient to meet demand. Until then, they felt, the present high prices would continue.

In the course of a statement issued to the Press, the President of the Indian Chamber of Commerce, Mr. Russi Mody, declares that the problem of high prices of raw jute and jute goods can be tackled only if production is raised. He points out that fibre prices in Pakistan are higher than in India, deploring the Government of India's restrictive measures to keep prices at an artificial level. Market circles are prepared to agree with Mr. Modi, as they feel that prices all over the world have risen and India is paying for imports more than original estimates.

After the New Year holidays, the goods market reopened on the 3rd inst. Mills were sellers in ready and January-March delivery goods and, in the local dealers' market, there was selling pressure. Ready B. twills were quiet at Rs. 181.50, as also ready hessian 40" 10 oz. at Rs. 58.15. At this stage, fair covering business was done in hessian and, on the following day, 40" 10 oz. hardened to Rs. 58.75. However, there was no follow-up interest and B. twills lost to Rs. 180.00. On Thursday, prices gained in several points in heavy goods and one point in hessian. Ready and near delivery goods were bought by local operators. Inquiries from Argentina for January-March hessian were thought to be imminent. There were some purchases of B. twills against a Government tender. The cumulative result of all these was that B. twills rose to Rs. 184.50 and hessian 40" 10 oz. to Rs. 59.75. Holders turned sellers and, as a result, there was a sharp decline in prices on Friday. B. twills sagged to Rs. 182 and hessian 40" 10 oz. to Rs. 58.75. Over the week-end, conditions were quiet, and prices were Rs. 181.50 and Rs. 58.75, respectively. Yesterday, prices rose, following the announcement that stocks of goods with mills at the end of December had fallen by 1,900 tons. B. twills rose to Rs. 184 and hessian 40" 10 oz. to Rs. 59.25.

Fibre prices declined, but mills showed only limited interest. Sellers continued to be reserved. Agencies reported a marked fall in imports. Assam bottoms opened at Rs. 140.50 or Rs. 52.50 a maund on Tuesday last and, after falling to Rs. 139.35 (Rs. 52), regained to Rs. 140.50 (Rs. 52.50).

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 9*th January*

Quietly depressed conditions prevailed in the foodgrains market during the week, although at the fag end of the season, arrivals of *rabi* grains declined further. The Union Food Minister, Mr. S. K. Patil, stated the other day that the long-term 17-million-ton Indo-U.S. food deal had contributed a great deal to create "a climate of confidence" in the country. Another factor leading to an improvement in the food situation, he added, was the linking up of surplus States with deficit ones. The Union Government's decision to allow the Punjab and Madhya Pradesh Governments to export surplus wheat to other States was widely welcomed by the trade, as it would ease the supply position in deficit areas.

Wheat at Hapur recorded a modest fall towards the week-end to be quoted at Rs. 17.25 a maund for average quality and Rs. 18.50 for farm produce. Daily arrivals of wheat improved, as holders of stocks were sellers, in view of good *rabi* crop prospects, following the recent timely winter rains. Arrivals averaged 150 to 200 maunds daily and, besides, the State Government was selling heavy quantities of wheat and wheat flour through fair-price shops.

Rice ruled steady, though the supply position was reported to be satisfactory, as the new crop was still reaching the markets. The prevailing prices on Monday were:—*mainpuri* Rs. 21; *gudda* Rs. 19; *sela basmati* Rs. 27 to Rs. 28; *ramajwayan* Rs. 23; *ratnunia* Rs. 24 a maund.

Gram recorded modest gains in the week-end, as fairly good rains over a wide area were considered to have improved gram and coarse grain crops. Gram was quoted at Rs. 16.75 and barley was quiet at Rs. 12.75 a maund. Inferior quality *bejhar* was done at Rs. 12.75 and *moongia* variety at Rs. 13 a maund. Maize continued to attract demand, but, as local stocks were better at 30,000 maunds, prices ruled quiet at Rs. 12.75 to Rs. 13.50 a maund. *Bajra* was also in request for seasonal requirements and prices drifted lower to Rs. 14.87 to Rs. 15.25 a maund. *Jowar* was stationary at Rs. 13 and *guwar* white at Rs. 13.25 a maund.

Among pulses, peas improved fractionally to Rs. 13.62 a maund for *dara* quality, while farm white produce was quoted at Rs. 15.12 and Peas *dal* at Rs. 15.25 a maund. Stocks left with trade were small at 6 *khatties*. Demand was mostly from Madras side for *dal*. *Arhar*, however, was depressed in the absence of new urges, with local stocks remaining stationary at 8 *khatties*. Standing crop prospects of peas and *arhar* were fairly good, thanks to timely winter rains. Other pulses were also quietly depressed, *urd* being quoted at Rs. 18.87, *moong* at Rs. 18.50 to Rs. 20 and *massoor* at Rs. 15 to Rs. 17 a maund.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, 9*th January*

Sugar drifted lower, following the release of a further quantity of 200,000 tons. The reported decision of the U.P. Government to release 50 per cent. of its sugar quota of 25,000 tons per month for free sale also contributed to the fall in prices. The Development Council for Sugar was reported to have urged sugar decontrol in view of large production in 1959-60 and expectations of a further sizable increase in output in the current season. Even after allowing 200,000 tons for export, the sugar position in the country was considered to be quite easy. Another release of 50,000 tons was announced for export this week.

Sugar production in west U.P. is going on vigorously, thanks to increase in producing capacity and adequate cane supplies. The week-end prevailing prices here were: Rs. 109.50 per bag wholesale and Re. 1.06 per seer in the open market.

Sugar continued to rule depressed in the Muzaffarnagar market. The release of further 50,000 tons for export failed to cheer the market. The week-end prevailing price in the open market was Rs. 109.50 to Rs. 110 per bag for spot delivery.

Despite good demand from the Punjab and Rajasthan, new *khandsari* continued to rule quiet as stocks were fairly good. Production, however, was hampered, due to rains last week. Sugarcane was available in sufficient quantity for *khandsari* manufacture at Re. 1.12 to Re. 1.25 per maund. Old stocks were still lying flat and week-end prevailing prices of *khandsari* in the Muzaffarnagar market were: Dry inferior Rs. 25 to Rs. 29; superior Rs. 31 to Rs. 33; crystal Rs. 33 to Rs. 36; old Rs. 25 to Rs. 29; *boora* Rs. 32 to Rs. 35.

Gur continued depressed, as demand from the main consuming areas of Gujarat and Saurashtra was restricted even at present levels. Loading facilities, which were fairly good earlier, were again stopped in the week-end. *Pansera* recovered modestly to be quoted at par with *balti* quality, following deterioration in the quality of the latter, as *balti* quality was reported to be reaching the market mixed with rusket. Daily arrivals during the week were small, following rains. The latest prices on Monday were: *Pansera* Rs. 13.50; *balti* Rs. 13.56; *shakker* Rs. 15 a maund.

Following better demand, *gur* improved slightly in the Muzaffarnagar market during the week. Daily arrivals were small at an average of 5,000 maunds, following cloudy weather. The latest prevailing prices were: *Chaku* Rs. 14 to Rs. 14.75; *khurpapar* Rs. 14; *laddo* Rs. 14.25; *shakker* Rs. 14 to Rs. 15.25 per maund.

Gur fagun moved both ways during the week in active bouts of buying and selling. It opened at Rs. 13.88 last Monday and is presently quoted at Rs. 13.82, having touched the highest and lowest in mid-session at Rs. 13.92 and Rs. 13.62, respectively.

Sowing preparations for cane for the next season have begun. Actual sowings will commence by the end of this month.

ZINC AND TIN RALLY

(From Our Own Correspondent)

CALCUTTA, 11*th January*

The feature of trading in the metal market during the week under review was the impressive rise in prices recorded by electrolytic zinc and tin, as demand was keen while stocks were very low. That this increase in prices was merely due to local considerations was evident, inasmuch as prices in both London and New York registered a decline. In the Far Eastern markets, however, tin recorded a small addition to price.

The news of the week was the reported official view that, in an attempt to use more and more aluminium in place of copper, the copper quota of conductor manufacturers would be reduced. Copper scrap met with little demand and copper scrap berry and utensil scrap were unchanged at Rs. 212 and Rs. 200 a cwt., respectively. Coal shortage continued to hamper the plan of manufacturers. On the London Metal Exchange, electrolytic copper opened at £226¼ a ton and declined to £223, following the news of the threatened strike at El Teniente not having taken place. The closure for the week was at £224.

Electrolytic zinc here opened at Rs. 165 and closed fully firm at Rs. 169.50. A further rise was apprehended, in view of the poor stocks of this metal. In London, earlier in the week, electrolytic zinc was quoting at £81¼ a ton but closed lower at £80¾.

Tin at one time was as high as Rs. 581, against the opening of Rs. 578. The closure was at Rs. 579. The rise was due to poor stocks. In London, the price closed at £788, against opening of £789¼ and the mid-week rise to £790¼ a ton.

Virgin lead continued to be quiet at Rs. 62

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include these from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of September 1960 amount to 9.53 lakhs of rupees.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

§.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December, 1955. ¶ Investment at cost.
M.—Clive Row Investment—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1958 and 37 nP for the year ended 31st March 1956. * Includes bonus.
(e) United Breweries Ltd.—The dividend for 1959 consists of an interim dividend of Rs. 7.50 per share and a final dividend of Rs. 57.50 per share of which the shareholders will receive Rs. 2.50 in cash and Rs. 50.00 per share by the allotment of five newly created shares of Rs. 10 each. *N.B.*—Dividends paid since 31st March 1956 are shown as taxable.
M.—Managed by the Board of Directors. (k) Investments. "C"—On increased Capital.

MARKET GOSSIP

(*Concluded from page 47*)

that the expansion in the Rs. 0—25,000 income bracket, at 23.7 per cent., was smaller than the overall rise, but, in this bracket, the number of salary earners, deriving income from dividend, increased by 41 per cent., as against the increase of 19 per cent. in the case of non-salary earners. In the income range Rs. 25,000-Rs. 1,00,000, however, the increase in the case of non-salary earners was much higher (48 per cent.) than in the case of salary earners (23 per cent.). All these figures clearly show that the investment habit is spreading.

U. K. Shipping Wants More Protection

It is well known that the British shipping industry, like shipping in many other parts of the world, is facing bad weather. The relative size of the British merchant fleet has steadily fallen from 45 per cent. in the period before the first World War to less than 17 per cent. at present. Consequently, the contribution of this industry to the invisible earnings of Britain has also sharply declined in recent years. Also foreign ships have been increasing their share of Britain's trade; and, since 1950, the proportion of foreign flags among ships entering British ports has increased from one-third to one-half. Even the perceptible improvement in the fortunes of this industry in 1960 has not brought about any appreciable gain in freights, even though new launchings in Britain amounted to 8.5 million gross tons and the idle tonnage registered a sizable fall.

In the face of these circumstances, the representatives of British shipping could not be expected to follow a policy of masterly inactivity. It is not surprising, therefore, to find the General Council of British Shipping presenting a closely reasoned case for financial and other assistance to the industry. Analysing the basic causes which are affecting the competitive strength of the British shipping industry, the survey vividly narrates how the nationalistic policies of flag discrimination, subsidies and tax-free flags of convenience followed by several foreign Governments are sapping the British industry. It categorically declares that there is no simple answer to these problems and states that action by foreign Governments cannot be met by the industry alone through mere commercial practices. In order to meet the threat of the growing international competition to British shipping, the General Council wants the British Government to take every opportunity to reach an identity of interests with the U.S.A. in combating flag discrimination. How far, however, such an identity of interests could be realised in practice is difficult to say. Because it is known that some of the measures pursued by the U.S. to support its merchant marine are equally discriminatory and the newly developing countries are rightly following the American policy for encouraging their own respective merchant marines.

If protests and persuasion are not adequate, the spokesmen of British shipping would like the Government to adopt counter-measures ranging from trade sanctions to measures aimed directly at the ships of discriminating countries. The survey states that the trade sanctions could be in the form of general embargo on imports or penal tariff rates. While the counter-measures are elaborated to include the denial of the use of ports to ships of discriminating countries or the banning of these ships from carrying of British exports. It also suggests that commercial treaties and trade agreements negotiated by the British Government should contain strong discriminatory clauses. Of particular interest to underdeveloped countries like India receiving aid from the U.K. is the suggestion of the Council that the British Government should make it a condition before giving aid that the recipient country should not discriminate against British shipping in favour of its national shipping.

British shipping is not suffering from external factors alone. The growing competition from air transport artificially maintained by subsidies from Government in one form or another and the effects on the coasting trade of competition from the railways facilitated by substantial Government assistance to the British Transport Commission are also adversely affecting British shipping. The General Council has, therefore, asked the Government to reduce the disparity between shipping and air transport so far as public expenditure on research and development is concerned.

Discussing the question of financial aid to British shipping, the survey states that such aid would be justified on the national interests where a particular shipping service or a particular section of the industry is likely to be abandoned or substantially reduced by unfair competition. Recalling the timely assistance provided to the Cunard Line, the Survey urges the U.K. Government to grant similar aid when similar circumstances develop. Another important form of aid suggested by the Council is an increase in the investment allowance from the existing level of 40 per cent.

As compared with these heavy demands for more protection and sustenance made by the doyen of world shipping on its Government, the plea for financial and other assistance from the State put forward by Indian shipping, one of the youngest mercantile marines in the world, pales into insignificance. The point to be noted here is that the assistance so far provided by the Government of India to our national shipping is negligible, as compared with the massive support given by the British Government to its shipping, or for that matter, by any Western Government to its shipping.

THAKUR PAPER MILLS LTD.

Considering the continuously expanding demand for paper arising from the rise in population, industrial development and spread of literacy, the annual production target of 700,000 tons fixed to be achieved by 1965-66, as against the anticipated actual output of 320,000 tons in 1960-61, is, indeed, a realistic one. The target is proposed to be fulfilled partly by setting up new factories and partly through expansion of the existing units. Out of the net addition of 380,000 tons of paper that is expected to occur during the next five years, the Thakur Paper Mills Limited, a new Company formed to establish a factory in Samastipur in North Bihar, will contribute 6,600 tons annually —the present licensed capacity of 3,600 tons and a further capacity of 3,000 tons (consisting of cheque paper and other specialised kinds of paper) for which official permission has been sought.

The authorised capital of the Company is Rs. 1 crore, of which equity shares of the value of Rs. 40 lakhs have now been issued. Excluding the Rs. 15 lakhs contributed by the Directors, prom

VOL. CII. No. 2598 BOMBAY, 21st JANUARY 1961 PRICE Rs. 2

THE FINAL DRAFT OF THIRD PLAN

THE Draft Outline of the Third Plan, as revised first by the Planning Commission and now by the National Development Council, has just emerged as the final (or nearly final?) draft. It only remains to incorporate in the final draft the details of the revised physical targets which, in terms of the latest N.D.C. resolution, might entail a total outlay of the order of Rs. 8,000 crores in the public sector covering the Central and State Governments. What schemes and projects, corresponding to a financial ceiling of Rs. 7,500 crores in terms of the N.D.C.'s current assessment of the resources in sight for the public sector, are to be executed as a matter of higher priority may also be possibly indicated in the final draft, perhaps in the same manner as the second Plan was cut up at a later stage into Part 'A' and Part 'B'. The final draft will then be ready for presentation to Parliament sometime in March next for its formal approval before the Plan is officially launched as on 1st April 1961. Between now and the date of possible debate in Parliament, the Planning Commission will be coming to grips with the problem of processing the Centre's Plan (accounting for an outlay of Rs. 3,775 crores in the total financial ceiling of Rs. 7,500 crores) in consultation with the various Union Ministries. The Commission which has pruned, relatively more easily, the State Plans may well find that the Union Ministries are harder nuts to crack. The process of determining two sets of priorities in the case of the Central Plan would be even otherwise difficult, for the difference (Rs. 378 crores) between its total size (Rs. 4,153 crores) and its financial limit (Rs. 3,775 crores) is much larger than the difference (Rs. 122 crores) between the State Plans' total size (Rs. 3,847 crores) and their financial limit (Rs. 3,725 crores). But, then, the Planning Commission is by now so well used to this kind of pruning and processing on paper that it should not find the present exercise unduly difficult. When the time comes, the Commission may also do its familiar exercise in reappraisal of resources without any very great difficulty.

There is, however, no need to labour these points here, for the aggregates fixed by the National Development Council can be taken, for the nonce, to be final and examined as such. The first aggregate, that is, Rs. 8,000 crores, representing an increase of Rs. 750 crores on the Draft Outline's provision of Rs. 7,250 crores (composed of an investment outlay of Rs. 6,200 crores and current development outlay of Rs. 1,050 crores), has been determined on the basis of some revised requirements. In the first place, there is an increase of Rs. 197 crores over the Draft Outline's provision of Rs. 3,650 crores for State Plans. Secondly, there is an increase of Rs. 385 crores over the Draft Outline's provision of Rs. 1,470 crores in the Central Plan for "industries and minerals." This increase of Rs. 385 crores is accounted for as follows:

Rs. 100 crores to make up for the Draft Outline's underestimation in the aggregate cost of spill-over projects from the second Plan, new projects for which external credits are already assured and new projects for which foreign credits have not yet been arranged; Rs. 100 crores to make up for the upward revision of estimates in respect of new schemes, allowance for some rise in costs over the Plan period, enlargement of projects in a few cases and higher township costs; and Rs. 185 crores for the cost of projects on which preparatory work should continue and projects of a contingent nature like the Gujarat refinery (now a priority scheme).

Thirdly, there is an increase of Rs. 100 crores over the Draft Outline's provision of Rs. 1,225 crores in the Central Plan for "transport and communications"; of this increase Rs. 30 crores are accounted for by the railways' additional demands. And, fourthly, the newly proposed 150,000 kilowatt thermal or atomic power station in the Delhi-Punjab area, the additional demands of the Union Ministries of Agriculture, Community Development, etc., probably account for an increase of Rs. 68 crores.

In all, therefore, the total increase is of the order of Rs. 750 crores over the Draft Outline's provision for the public sector. But the additional resources in sight have been definitely estimated at only Rs. 200-250 crores which include Rs. 60 crores by way of further additional taxation by the States. Incidentally, how the States are going to raise Rs. 610 crores in all by way of additional tax revenue is itself a moot question, considering that only a few months ago they took the stand that they might not be able to raise anything more than Rs. 350-400 crores. It can, however, be assumed here that, if there is any shortfall in the States' own resources, the Centre will have come to their rescue by providing greater assistance than what is now contemplated, namely, Rs. 2,430 crores.

The gap, thus estimated, of about Rs. 500 crores in financial resources, according to one optimistic view in official circles, may come to be covered by "unforeseen additional resources" that may be generated by some development schemes, by possible greater public participation and local community effort and by flexible phasing of major projects. Since there will be uncertainty on these counts, the financial limit has been fixed at Rs. 7,500 crores for the public sector's outlay. This is where the planners seem to have been unduly cautious and timid. They could as well have fixed the financial limit at the desired level of Rs. 8,000 crores and proceeded on that basis to negotiate for the appropriate foreign aid component. Or, in the alternative, they could have more realistically kept down the public sector outlays on "industries and minerals" at about Rs. 1,500 crores and released a number of industrial and mineral projects for execution by the private sector. It is amazing that the National Development Council concerned itself, at its latest meeting, only with the public sector and virtually ignored the requirements of the private sector, the share of which was left unchanged at Rs. 4,000 crores. If a bigger plan of the size of Rs. 12,000 crores was deemed desirable and necessary, surely it should have been possible to raise the share of the private sector at least to Rs. 4,500 crores, if not more, while keeping the financial ceiling for the public sector at Rs. 7,500 crores or less.

If a reallocation of this kind is made, the private sector's share for "industries and minerals" alone can go up to Rs. 1,500 crores (as against the Draft Outline's provision of Rs. 1,000 crores). The foreign exchange problem will, of course, be there, but it is something common to both the sectors. In the case of the private sector, its additional requirements of foreign exchange could conceivably be met by an inflow of more foreign private capital into joint projects. But this cannot possibly happen in the absence of greater flexibility in the operation of the Industrial Policy Resolution of 1956. Given such flexibility, joint industrial projects in the private sector with foreign collaboration would seem to be not only feasible but most likely. The Bokaro steel project, for instance, could be assigned to the private sector for execution in collaboration with foreign private capital, and the Government of India could content itself with, say, a 25 per cent. participation in its capital. The Government's gesture in licensing five or six pig-iron plants, each with a capacity of up to 100,000 tons, is no doubt laudable, but it is not quite realistic, because, in the iron and steel industry, plants of that size are relatively uneconomic.

In the same way, the private sector could be allotted greater refining capacity in terms of crude petroleum not only because the public sector may not find it easy to install a total capacity of 2.7 million tons in terms of crude oil but because the requirements will be more than what can be met by the present private sector capacity of 5.3 million tons (which cannot be increased if there is no change in the Government's oil policy) *plus* the proposed public sector capacity of 2.7 million tons. In the case of coal industry, the scope for a bigger target of production for the private sector has yet to be recognised. All the alloy and special steel projects could also be transferred to the private sector and so also the manufacture of diesel locomotives. Expansion of existing units and construction of new ones in the field of power generation could be licensed in the private sector, for, as the Prime Minister himself told the N.D.C. meeting, "even after going as fast as possible, we might be short of power." More fertiliser plants than the four so far licensed in the private sector would have to be allotted to that sector, because the country is now producing only about one lakh tons in terms of nitrogen per annum, as against the second Plan target of 3.8 lakh tons and the third Plan target of 10 lakh tons. The manufacture of intermediates required by the dyes and chemical industries could also be left to the private sector.

In all the industries mentioned so far, the private sector deserves to be assigned a bigger role in the interest of expeditious execution, because the public sector's capacity to perform the tasks which it has reserved for itself has been proved, in actual practice, to be extremely limited. There is no convincing reason to believe that it will improve to any marked extent in the next five years. Indeed, it remains to be seen whether it will be able to manage successfully the new heavy industries which are now going up under its auspices and which must be worked to their full capacity if the resources expected from them for the third Plan are to be found without a shortfall. It is

here that the "dog-in-the-manger" policy of the Government in not allowing private enterprise (with or without foreign collaboration) to do what the State itself is unable to do would need to be given up. A more careful scrutiny of the public sector projects under "industry and minerals" is thus called for from the point of view of transferring quite a few of them to the private sector. It is still not too late to make the necessary changes.

MORE ON LAND CEILING

THE Socialists and Communists in Maharashtra are doing their best to gain mass support for the Land Ceiling Bill introduced by Mr. Chavan's Ministry. They are particularly happy that Mr. Chavan has brought the sugarcane farms owned by the sugar factories within the provisions of the Bill and have deplored the factories' plea for exempting the farms on the ground that it is quite reactionary. Apparently, their agitation is designed to ensure that the Maharashtra Government does not go back on the stand already taken by it on this issue. As was feared in these columns last week, these leftists have begun to avail themselves of the opportunity presented by Mr. Chavan to re-emphasise their demand for a ceiling on incomes in urban areas as well. It is true that, on several occasions in the past, the Congress leaders who occupy seats of power had emphatically stated that the imposition of a ceiling on incomes is neither feasible nor desirable. But this observation has not deterred the Socialists and Communists, nay, even some Congressmen, from raising the issue again. Why should it? Has not the Maharashtra Government ignored the understanding reached at the highest level to the effect that sugarcane plantations should be exempted from land ceiling legislation? As partners of the Samyukta Maharashtra Samiti, the Socialists and Communists have learned from experience that creation of mass hysteria compels the Congress Party to go their way sooner or later. The break-up of the fine bilingual State of Bombay into two unilingual States is an impressive example of the success of this technique and they are bound to adopt it for winning their other goals by preaching to the have-nots the desirability of imposing a ceiling on non-agricultural investments also.

Even purely from the point of view of sugar economics, the course chosen by the Maharashtra Government is retrograde in the fullest sense of that word. The sugar industry in Maharashtra is a model of the economic and efficient manner in which sugar should be made in this country. As this journal has pointed out on many occasions in the past, sugar is primarily made in the ground. It is on the sucrose content of the cane crushed by a factory that the cost of sugar depends. The higher the sugar content of the cane and larger the quantity of such cane raised per acre, the lower will be the cost of sugar and bigger will be the return to workers, Governments and investors. By practising good husbandry, the sugar mill-owners of Maharashtra have been able to produce more sugar per acre and at a lower cost per ton than anywhere else in India. Their impressive achievements in growing sugarcane on large-scale modern plantation system would not have been possible if they did not have complete control over the land as they have now. Instead of being proud of this possession, a tribute to the foresight of the then Bombay Government under the British regime, the present Maharashtra Government is out to destroy it for no other reason than winning political popularity.

As production of sugar expands, it will be necessary to bring down the price of sugar so that consumption may keep pace with it. This journal does not think that India can count upon sugar as a regular foreign exchange earner. In times of boom in world markets, it may be possible for India to export some sugar on a profitable basis. In times of acute shortage of foreign exchange as is the case now, it may be necessary for India to sell sugar in world markets even at a heavy loss as is being done at present. But this country cannot afford to export sugar on this basis year in and year out. How long can a country go on selling goods at well below the cost of production? Even an efficiently managed sugar company in Maharashtra with all the advantages of growing sugarcane on modern lines finds that it cannot sell sugar for export except at less than its production cost. The position of factories elsewhere in India, which have to buy the sugarcane raised by small growers with a per-acre yield equal to only one-fourth or one-third of that obtained by the Deccan factories, can be easily imagined. India is too poor a country to indulge in the luxury of subsidising exports of sugar—an article of food—at the expense of domestic consumers. Nor is such necessary, for there is scope for building up India's exports by gainful means. Accordingly, the domestic market is the mainstay of sugar industry and, as a matter of policy, the Government and industry must aim at a reduction in the price of sugar. And the best way of realising this aim would be to take such positive measures as would cause a fall in cost of production. High in the list of these measures must be formation of large-scale sugarcane farms on the model now obtaining in the Deccan. A second best alternative would be to introduce co-operative farming in zones where sugar factories have been established, so that the best varieties of cane may be grown on modern plantation lines. The proposal of the Maharashtra Government is to convert the best means of raising sugarcane which this State now has into second best. Could there be a more striking example of foolishness? As compared with this attempt, even the follies of Muhammad Bin Tughlak pale into insignificance. That such a thing should happen in a planned economy is no credit to our planners and policy-makers.

India is not blessed with a surplus of cultivable land or of irrigation. The essence of planning should, therefore, be economy in the use of both land and water. If the yield of sugar per acre in the rest of India could be raised to levels nearer to those obtaining in Maharashtra, a sizable amount of land, labour, water and other resources that are now devoted to sugarcane can be diverted to other agricultural crops which will go a long way towards strengthening India's balance of payments position. When viewed against this context, the folly of Maharashtra Government in wanting to switch over from what is best in the management of land to something that is inferior becomes quite apparent. Of all the States in India, Maharashtra has less irrigated or irrigable land. It should, therefore, be more careful than the rest in introducing land reforms which are of dubious value from the point of view of production. On the contrary, it is now attempting to throw away even the benefits which it has through an accident of history.

Apart from the fact that a loss to Maharashtra is a loss to the whole country, by subjecting the sugarcane farms to land ceiling, the Government of Maharashtra is setting a bad example for others. If its proposal were approved by the Union Government, the other State Governments, which have been sensible enough to exempt plantations, orchards, well-managed farms, etc., would be hard put to resist the demand for a similar measure from the left-wingers. Consequently, the Maharashtra Land Ceiling Bill is not a subject that concerns Maharashtra only but the whole of India. The Centre must, therefore, intervene in this matter before it is too late. For the same reason, the Deccan Sugar Factories Association would be well advised to request the Federation of Indian Chambers of Commerce and Industry to prevail upon the Planning Commission to withdraw its alleged consent to this Land Ceiling Bill.

It is obvious from all that has been said so far on this subject in these columns that, to most of the sugar factories, sugarcane cultivation on plantation scale has been highly profitable, notwithstanding the high cost of labour and irrigation. It is undoubtedly these profits that have attracted the envious eyes of politicians. There was a strong case for imposing the system of agricultural income-tax on these plantations even years ago. Other State Governments have been wielding this fiscal weapon for quite sometime now, thereby taking away a substantial slice of the profits of planters. It is a mystery to us as to why the Bombay Government refrained from resorting to this weapon. In fact, operators in sugar shares on the Bombay Stock Exchange used to expect this levy on the eve of every Bombay Budget only to find that they were wrong. If the Maharashtra Government were to drop the Land Ceiling Bill, or at least exempt the sugarcane plantations and, instead, introduce agricultural income-tax on a reasonable basis, it would be doing a wise thing; it must, of course, take care to see that it does not copy the regressive features that are found in the agricultural income-tax legislations of Madras, Mysore and Kerala. We have no doubt that this alternative solution will prove to be a more agreeable and healthy drink for quenching its thirst for socialism.

THE EISENHOWER ERA

PRESIDENT Eisenhower has just relinquished the U.S. Administration to Mr. John F. Kennedy, who was elected to this high office in November last in a neck-to-neck race with the Republican candidate. An era has thus ended, bringing to a close eight years of Republican rule which had the singular good fortune of ensuring peace in the world, at least in the negative sense of avoiding war, and prosperity at home. The achievements of the Eisenhower Era were of no mean proportions, for otherwise the very nearly 50 per cent. popular vote for the defeated Republican candidate, Mr. Richard M. Nixon, would defy explanation. Some at least of these achievements were due to the bipartisan approach of the United States in the realm of foreign policy. In his final "State of the Union Message" to Congress on 12th January, Mr. Eisenhower rightly referred to the "co-operative achievement" of the American people and those in the Congress of both Parties who were united in their determination to keep their nation "strong and free" and to utilise their vast resources "for the advancement of all mankind." This "co-operative achievement," in the sense of general peace and mutual security, was hardly in doubt at any time during the Eisenhower Era, for the world recognised "the catastrophic nature of nuclear war" and yet it saw "the wondrous potential of nuclear peace."

On the home front, too, the eight years of Republican rule from 1953 to 1960 were marked by a high level of economic prosperity. Economic expansion was so great that, by the end of 1960, the nation's output of goods and services was 25 per cent. higher than in 1952 and the real income (in terms of 1952 prices) of an average American family had also gone up by 15 per cent. There was, during this period, a remarkable improvement in general industrial peace through strengthened processes of free collective bargaining, as evidenced by the fact that the time lost since 1952 through strikes was half that lost in the eight years prior to that date. The economic security of workers was strengthened by an extension of unemployment insurance coverage to 2.5 million ex-servicemen, 2.4 million federal employees and 1.2 million employees of small businesses. The period also saw a vigorous enforcement of anti-trust laws —a factor which promoted economic growth by strengthening the competitive enterprise system. The creation of the Small Business Administration in 1953 to assist existing small businesses and encourage new ones was another unique achievement of the Eisenhower Administration. This agency has provided over one billion dollars in loans to small businesses and helped them secure $3.5 billion worth of Government contracts. The Eisenhower Era also saw the fulfilment of a great dream—the St. Lawrence Seaway opening the heart-land of America to ocean commerce. Twenty-five per cent. of the largest public construction programme in American history—the 41,000-mile national system of inter-State and defence highways—was also opened to traffic during the period. In the sector of agriculture, production went up by leaps and bounds and provided large surpluses of food and fibre to feed and clothe the needy abroad at an annual rate ranging from $2.8 billion in 1953 to $4.5 billion in 1960. Low-income farm families were enabled for the first time to increase their incomes through the rural development programme and farmers and their families were also made eligible for social security benefits. Reclamation and irrigation projects were executed on a vast scale, with the result that the storage capacity increased by 50 per cent. over that in mid-1953. In the realm of social services, the coverage of the Social Security Act had been broadened since 1953 to make 11 million additional people eligible for retirement, disability or survivor benefits for themselves or their dependents. And, above all, more houses were built during the eight years 1953-60—over nine million—than during any previous eight years in history.

This, then, was the record of the Eisenhower Administration which brought about and maintained greater economic prosperity and social welfare without provoking fiscal irresponsibility or resorting to recurrent deficit financing. Throughout the period, it held fast to the wholesome stand that "resort to deficit financing in prosperous times could easily erode international confidence in the dollar and contribute to inflation at home." This had its effect in terms of a virtually stable dollar, and there was no inflation of the kind which had led to a rise of 36 per cent. in the cost of living between 1939 and 1952. And all this happened in spite of the fact that, in 1954, the United States had the largest tax cut in its history, amounting to $7.4 billion annually (of which, incidentally, over 62 per cent. went to individuals mostly in the small income brackets). The Eisenhower Administration's policy of discontinuance or curtailment of public sector commercial enterprises, numbering nearly 2,500 in all, had also reduced Government competition with private enterprise and promoted further growth in the latter sector. On all these grounds, therefore, it may be truly said that the American people have never had it so good. But it is also true that there are problems left behind for the Democratic Administration to tackle—continuing unemployment in some depressed areas, deficit in balance of payments, continuing surplus production of agricultural commodities and deficiency in health and educational programmes. That the Eisenhower Administration has laid a stable foundation for further progress which could solve these problems is beyond dispute. By all accounts, the Eisenhower Era has brought the biggest "capitalist" country in the world much nearer the goals long cherished by socialist thinkers.

MARKET GOSSIP

THE share markets are now somewhat more optimistic than they were at the beginning of the New Year. New Delhi despatches aver that at the meeting of the National Development Council last week-end, the Union Finance Minister discounted the prospect of any significant increase in taxation, especially direct taxation, for financing the third Plan. These are probably responsible for infusing a certain amount of confidence among speculators. Some of the bulls who had held on to their commitments for a long time are, however, reported to have liquidated a part of them. This had an unsettling effect for a while, but, on Thursday, the buying fervour gently reappeared.

Taking an overall view of the market, one finds that it is still a narrow one. The turnover is small. Neither the bulls nor the bears are aggressive. Investment is confined to bargain-hunting. The demand for capital issues of new companies is definitely slackening, though the new issues of existing companies are being avidly taken up. Even the much-boosted Bombay Oxygen Corporation has not proved such a rage as it was expected to be. It used to be said that it would prove to be another Colour-Chem or Baroda Rayon. That has not happened. This is equally true of the Madras Aluminium also. In the case of quite a few of less advertised new issues, allotment has been said to be of the order of 50 to 60 per cent. This trend is no reflection on the promoters or the projects. It only suggests that the craze for shares of new companies is dying down and that investors have tended to become a little more choosy.

The most important factor responsible for this development is the shrinkage in the heavy premium which some of the new issues had commanded a few months ago. Among other factors, mention may be made of (1) marked decline in the value of existing equities, (2) increase in the number of offers, (3) their appearance in quick succession, and (4) calls on shares offered earlier. In fine, the capital market is gradually getting saturated and, if the Budget for 1961-62 turns out to be adverse to investors, the response to new issues will become perceptibly poor and many new ventures will find it hard to raise the capital they want. It is but natural that an investor would not like to add to his risk by taking up more and more equities if he finds that the capital profit he was counting on paper has either melted away or is only a fraction of what it was during the recent boom. In a way, it is a good thing that the boom in share markets has now petered out and the operators are in a more chastened mood. Otherwise, it would have provided an excuse for the Government to enhance, in the forthcoming Budget, the tax burden and to lay further stress on the distributive aspect of their fiscal policy.

No Change in Money

The refund of the balance of special deposits by the Reserve Bank to Scheduled banks has failed to make any impression on the state of the short-term money market. The expectation that the inter-bank day-to-day money rate would come down to 4-4½ per cent and stay at that level, at least for a few days, has not fructified at all. Last Saturday, the rate was fractionally lower at 5 per cent but that too only for a while. From Monday onwards, it has been again 5½ per cent, with some banks willing to pay even 5¾ per cent. It would appear that banks had used almost all the special deposits released last week to reduce their borrowings from the Reserve Bank, with the result that none was left for raising the supply of funds in the inter-bank section. The keen demand for accommodation, in the face of static, if not falling, deposits, is inducing banks to convert a part of their medium-term advances into cash by discounting them with the Refinance Corporation. The resort to usance bills, especially by the Exchange banks, is also steadily increasing and is bound to gather momentum in the coming weeks, as borrowings against Government securities have already gone up substantially.

Bonus Commission's Terms of Reference

Reports appearing in a section of the daily Press about the terms of reference of the Bonus Commission are likely to give the erroneous impression that, in spite of protests made by employers, the Government is going ahead with the Bonus Commission. But the fact is that, even before the personnel of the Commission was "unofficially" made public by the Union Labour Minister, Mr. Gulzarilal Nanda, the Ministry of Labour had circulated a draft terms of reference for consideration and comment by the representative organisations of employers and workers. This, no doubt, was contrary to the earlier decision taken at the eighteenth session of the Standing Labour Committee, held at New Delhi in April 1960, namely, that the terms of reference should be decided by a small, tripartite sub-committee set up for that purpose. The explanation given by the Ministry for not complying with this decision and, instead, itself preparing a draft terms of reference, was that it was to expedite the appointment of the Commission and commencement of its work. The draft terms are:

1. To consider the question of payment of *bonus in all* its aspects in relation to industrial employments in private and public sectors.

2. To determine the extent to which bonus payments should be influenced by the wage level in an industry.

3. To determine the conditions under which bonus payments should be based (i) industry-*cum*-region-wise and (ii) industry-wise, and the method for determination of prior charges in each case.

4. To consider whether the bonus due to workers should be paid, beyond a specified amount, in the form of National Savings Certificates or in any other form.

5. To suggest the appropriate machinery for settlement of bonus claims.

6. To make such recommendations regarding the question of bonus as the Commission deems suitable.

It is learnt that employers have not so far submitted their views on the terms of reference which they were required to do by 10th January. Presumably, they consider that the personnel of the Commission is no less important and that unless they are satisfied with it, there is little point in being particular about the questions it is called upon to decide. Their stand on the whole issue is expected to be finalised by the end of this month.

Comment on the draft terms must concern itself not with what the draft includes but with what it has omitted. The six terms cover between them almost all aspects of the question of bonus, except, and this is most important, the rationale of bonus—whether it is a system worthy of being perpetuated and, if not, how it could be abolished and replaced by a more satisfactory form of rewarding efforts by workers. Of course, in that case, the Commission should be called by some other name.

Overstaffing—A Virtue!

Overstaffing, which modern management practices everywhere condemn as a vice, can be a virtue in India, according to Mr. Morris J. Solomon, a T.C.M. expert attached to the Indian Statistical Institute, Calcutta. Most industrial managers would surely raise their eyebrows at this apparently fantastic suggestion. But Mr. Solomon, who is a specialist in operational research, production scheduling and allied subjects, and has worked on a variety of assignments for the U.S. Bureau of Census, Departments of Agriculture and Labour and the U.S. Air Force, maintains that, in the conditions of low productivity and shortage of capital equipment and machinery existing in India, it is possible to derive advantages, in terms of output and profit, by controlled overstaffing. This is one of the three suggestions he made in a paper presented at the seminar on plant utilisation held at Calcutta this week under the auspices of the Institution of Production Engineers. Mr. Solomon argues that overstaffing will reduce the time the machine lay idle due to such factors as the machine waiting for feed, for allocation of a job, for an operator, tool, inspection, repair, etc. In an Indian machine shop, according to him, the time a machine lies idle for such reasons works out to 60 per cent. of the time it actually worked. It is possible, he feels, to achieve a 50 per cent. increase in productivity by means of a 50 per cent. increase in staff. Thus more jobs and higher output would result.

The second suggestion of this distinguished adviser from the U.S. is introduction of multi-shifts and seven-day weeks. This, Mr. Solomon concedes, will impose greater burden on managements and require excellent co-ordination. Intensification of machine utilisation in each shift is the third suggestion made by him. This, according to him, is even more important than increasing the number of shifts. But it calls for a reduction in the waiting time of machines. He emphasises that both controlled overstaffing and fuller use of machines require understanding between workers and the management. Sub-contracting, which would obviate needless duplication of costly machines, can help to ensure a more intensive utilisation of machines. For achieving this, however, geographical groupings, fast transportation, quality control and greater procedural flexibility are essential.

According to the T.C.M. expert, for the application of such methods to increase output and profit, a special approach is required. Certain strong inertial factors, such as the tendency to treat technical personnel in the public sector as different from that in the private sector, have to be removed. It is wiser, he points out, to err on the side of generosity in the matter of remuneration for trained personnel in the public sector. Otherwise, there is the risk of a serious erosion of effective capacity, especially in the public sector, which today has to depend on what few men it could train and retain.

Mr. Solomon's suggestions, though novel and challenging, may not find favour with industrialists, unless their practical work, in terms of output and profit, is proved on the shop floor. It is desirable to try out these suggestions in a few selected units in the public and private sectors. Once their practical value is established, a large number of industrial managements may be willing to adopt them.

"Factoring"

"Factoring" is one of the many products of American ingenuity which are fast becoming popular abroad. In the U.S., factoring service is already a million-dollar business. The idea behind this unique service is that one organisation should be able to supply businessmen with a whole range of service such as credit insurance, finance, debt collection and assistance in obtaining sales representatives overseas. This sort of multipurpose service is considered to be particularly helpful to small business firms, with little contacts abroad, to enter the export market or stay strong therein. The factoring firm will render all services normally required in export business at a reasonable charge.

The establishment of a new company, called International Factors, in London marks the entry of factoring services into Britain in a big way. The Company has been jointly launched by the First National Bank of Boston, through its subsidiary, M. Samuel and Company, merchant bankers, and Tozer Kemsley and Millbourn (Holdings), a well-known confirming house in the U.K.

The promoters of the new Company hope to transact an annual business of £5 million to start with which, it is hoped, will rise to £10 million before long. Finance will be provided to exporters on short-term basis with three months as the customary period. Apart from rendering services other than providing credit, the Company will also assume credit risks involved in export transactions and thus obviate the need for Export Credit Guarantee Department's cover.

To start with, the Company will confine its business to Anglo-U.S. trade, imports into both the U.K. and the U.S. from third countries and domestic British trade. The range of coverage will be extended in due course to include trade with more countries. Here is a new line of business which banks in India can take up and thereby help India's export drive, as well as assist the flow of foreign private capital into this country.

Whither Gold And Dollar?

Another step to stem the continued outflow of gold from the U.S. was announced by the American Administration on Saturday the 14th inst., which, incidentally, is the last important official decision taken under President Eisenhower's regime. This pertains to the order (a) forbidding U.S. citizens and enterprises overseas to purchase gold forthwith and (b) requiring them to sell whatever holdings they have before 1st June next. Hitherto, it will be recalled, the U.S. citizens had been prohibited from hoarding gold only within the U.S., in accordance with the legislation enforced as far back as 1933, but there was no ban on their buying gold outside the U.S. and keeping it abroad. Justifying that the action has been taken to help the U.S. balance of payments position, the White House announcement says:

"It is not believed that a large amount of gold is being held abroad by citizens and corporations. However, since individuals and enterprises subject to the jurisdiction of the United States are not permitted to hold gold in the United States, it is reasonable to prohibit such holdings abroad where purchases generally represent an outflow in the U.S. balance of payments. The prohibition of such holdings also underlines the fact that gold today represents principally a means of settling international payments between individual foreign countries."

Before analysing the significance of the latest measure, a brief reference may be made to the extent of the gold loss suffered by the U.S. The gold reserves of the U.S., which stood as high as $22,860 million towards the end of January 1958, started declining in the following month of that year and the downward trend has persisted till today. The total of the reserves as on the 11th of this month was no more than $17,615 million. The total gold loss over the past three years comes to $5,245 million, or an average monthly loss of more than $145 million. Such a heavy drain has followed the persistently large purchases of gold made by several central banks and foreign exchange banks, especially in Europe, following rumours of a possible upward revision in the International Monetary Fund's $35 per ounce parity, as well as fears regarding the devaluation of the U.S. dollar in terms of other leading currencies. These factors have also been responsible, to some extent, for the conversion of dollars into gold by Americans themselves. It may be recalled, in this connection, that, early in 1959, a commercial bank in Canada provided facilities for hoarding in gold by non-residents and transactions in gold were allowed on the Toronto Stock Exchange. Later, such facilities were broadened by issue of gold certificates by a British bullion house in collaboration with a Canadian bank. These facilities, which were gradually extended, enabled citizens in the U.S. and other countries to convert part of their savings in gold. It is, perhaps, with

EQUITIES EDGE FORWARD

ALL-ROUND RISE IN VALUES

(From Our Own Correspondents)

BOMBAY, *19th January*

EQUITIES on the Stock Exchange which were somewhat hesitant last week edged forward during the week under review. The slight advance followed a revival of buying support induced by hopes of better outlook for industries. The suspension of the special deposits system by the Reserve Bank with effect from the 13th inst. was widely welcomed by operators who thought that it would raise the quantum of bank finance made available to industrial firms. The sentiment of operators was also influenced favourably by the news that the National Development Council had not recommended any increase in the taxes to be raised by the Central Government for the Plan from the original level of Rs. 1,100 crores, though the investment outlay of the third Plan had been raised from Rs. 7,250 crores to Rs. 7,500 crores. Note was, of course, taken of the offer of States to increase their additional tax effort by Rs. 60 crores to Rs. 610 crores. Firm advices from Calcutta, rumours of higher retention prices for steel and reports indicating good offtake of cloth, too, imparted strength. Enquiries, therefore, broadened on a wide front and values registered an all-round, albeit modest, improvement. The trend, of course, was not uniformly upward throughout the week. There was sizable profit-taking on Wednesday in particular and prices came down appreciably. But, on Thursday, a part of the fall was made good and the market showed resistance at lower levels.

In the steel section, Tata Steels elicited good support and advanced by Rs. 4.25 to Rs. 144; at one time today, they were quoted still higher at Rs. 144.50, as against a low of Rs. 139 early in the week. Indian Irons improved by 76 nP to Rs. 23.88 on better Calcutta advices. Mukand Irons rose from Rs. 21.76 to Rs. 23 on Tuesday, but declined thereafter and closed at Rs. 22.12 today. The net gain over the week was 36 nP.

Among textiles, Standards picked up Rs. 15 to Rs. 1,005. Finlays hardened by Rs. 12 to Rs. 330. Khataus spurted by Rs. 8.75 to Rs. 438.75. Centurys and Svadeshis put on Rs. 7.50 each to Rs. 464 and Rs. 234.50, respectively. Shree Niwas strengthened by Rs. 6.50 to Rs. 234, Gokaks by Rs. 5 to Rs. 178 and Podars by Rs. 4 to Rs. 134. Simplex gathered Rs. 3 to Rs. 165. Indores gained a like amount to Rs. 130. Morarjees improved by Rs. 2 to Rs. 315. Central Indias and Kohinoors rose by a rupee each, the former to Rs. 98 and the latter to Rs. 269. Elphinstones gathered 50 nP to Rs. 57. India Uniteds were firm at Re. 1.58, Swans at Rs. 480 and Tata Mills at Rs. 40. Mysores, however, declined by Rs. 3.50 to Rs. 59.50. Bombay Dyeings rallied from Rs. 60.40 to Rs. 61.30 on Tuesday, but eased subsequently to Rs. 60.10 today.

Sugars were irregular. Maharashtra Sugars rallied from Rs. 193 to Rs. 200. Walchandnagars recorded a rise of Rs. 6 over the week, today's closing rate being Rs 243.50. Phaltans were higher by Rs. 2 at Rs. 156.50. But Changdeos encountered selling and dropped Rs. 3.25 to Rs. 29.50. Belapurs began the week quiet at Rs. 316 and, after receding to Rs. 309 on Saturday, recovered to Rs. 316 yesterday. They, however, declined again to Rs. 312 today before finishing at Rs. 313. The net loss over the week was Rs. 3. Bhopals were unaltered at Rs. 29.

Induced by good buying enquiries, cement shares moved up. Associated Cements spurted by Rs. 4 to Rs. 150.75. Digvijays rose by Rs. 5 to Rs. 149. Bagalkots gained 24 nP to Rs. 8, Jaipur Udyogs 16 nP to Rs. 11.28 and Orissas 8 nP to Rs. 13.72. Ashokas, however, softened by 20 nP to Rs. 8.80 and Sone Valleys by 4 nP to Rs. 4.76.

Bank shares met with renewed support, induced by the publication of encouraging working results by a number of banks. Bank of Indias advanced by Rs. 5.25 to Rs. 114, 'A' shares improving by Rs. 6.50 to Rs. 117.50. Barodas firmed up by Rs. 4 to Rs. 86. Centrals hardened by Re. 1.50 to Rs. 57; 'A' shares gained a like amount to Rs. 61. United Commercials increased by Re. 1 to Rs. 85, Denas by 80 nP to Rs. 54.30, Punjab Nationals by 40 nP to Rs. 19.68 and Unions by 16 nP to Rs. 6.32.

Among automobiles, Premiers gained Re. 1.75 to Rs. 160.75. The U.S. Government has approved of a Rs. 3.43 crore D.L.F. loan to the Company to finance the expansion and modernisation plan. Hindustan Motors rose by 56 nP to Rs. 19.60. In the shipping group, Great Easterns were better by 12 nP at Rs. 15 and Scindias by 4 nP at Rs. 14.52. India Steamships rose from Rs. 9.12 to Rs. 9.40.

Engineering shares were well supported at higher levels. Alcock Ashdowns spurted by Rs. 15 to Rs. 253. New Standards rallied from Rs. 147 to Rs. 164. Telcos advanced from Rs. 285.50 to Rs. 296.50 on Tuesday the 17th inst. on reports that the Company will soon receive official permission for manufacturing 24,000 trucks annually. The improvement would have been more sizable but for fears regarding special making-up prices. Coopers rose by Rs. 3 to Rs. 159.50. Kamani Engineerings gained 44 nP to Rs. 15.56. Texmacos 32 nP to Rs. 22.92 and Larsen and Toubros 25 nP to Rs. 34.25. Premier Constructions, however, eased by Re. 1.50 to Rs. 278.

The shares of chemical and dyes manufacturing companies attracted good attention. Indian Dyestuffs climbed up by Rs. 26.25 to Rs. 433.75. Synthetics and Chemicals recorded a rise of Rs. 25.50 to Rs. 133.50. Colour Chems advanced by Rs. 20 to Rs. 307.50. Dhrangadhras hardened by Rs. 8.50 to Rs. 121. Alembics put on Rs. 2.50 to Rs. 222.50. Poly Chems gathered Re. 1.25 to Rs. 220. Amar Dyes, however, declined by Rs. 2.50 to Rs. 377.50. Among other miscellaneous industrials, Bombay Burmahs improved by Rs. 5 to Rs. 550.50, after being higher still at Rs. 556 on the 17th inst. Wimcos picked up Rs. 3 to Rs. 257. Indian Hume Pipes were quoted higher at Rs. 160.50, as against Rs. 155 last week. Hindustan Levers gained Re. 1.75 to Rs. 43.25 and Premier Tyres Rs. 2.50 to Rs. 73. Tata Chemicals gathered 44 nP to Rs. 17.40. National Rayons rallied from Rs. 482 to Rs. 495 on Tuesday but declined thereafter on fears of special making-up prices and touched Rs. 480.50 today. The closing was slightly higher at Rs. 482. After improving from Rs. 38.50 to Rs. 42.50, Gwalior Rayons finished at Rs. 41.50. Ceat Tyres encountered selling and eased by Rs. 8.75 to Rs. 220.

* * * *

Calcutta Stock Exchange

CALCUTTA, *18th January*

Treading initially on a dull path but subsequently inviting investor attention at lower levels with speculative stocks, the Stock Exchange wound up the week under review on a cheerful note. Many counters closed higher on balance, though, at a time during the week, gains were erased. New issues such as the British Paints attracted and absorbed a good portion of the funds from the market. There was also support induced by greater industrial prospects as was evident from the reports covering the proceedings of the National Development Council's meeting. Further, despite several budget rumours, the line of reasoning common in market circles was that, since New Delhi had on occasions indicated that tax burdens would not hamper industrial progress—it would be remembered that this was termed by the Finance Minister as the pragmatic approach—any increase in the level of direct taxation was not anticipated. If changes there should be in order that resources might be brought more in line with ambition, they would be in the sphere of indirect taxation. Mr. Morarjee Desai's oft-repeated feeling that the tax burden on industry was not heavy was yet alive in the minds of operators, and, therefore, caution and avoidance of long-term commitments as far as possible prevented a broadening of activity during the week. Nevertheless, the withdrawal of the deposit impounding scheme on the eve of opening of subscriptions to several new issues aided sentiment. Expectations of financial assistance from abroad for expansion in the coal industry lent steadiness in the shares of those companies the expansion plans of which are likely to be approved by New Delhi as conforming to the revised coal policy.

Among coals, Bengals were better at Rs. 318, while Burrakurs were quiet at Rs. 18.75. New Beerbhooms were wanted, but offers could not be found, following the proposals for issue of ordinary rights in the proportion of four for every five held now at a premium of Rs. 4 per share. Raneegunges were fractionally better at Rs. 15.56. Western Bengals being unchanged at Rs. 7.72. At Rs. 8.75, Samlas gained 25 nP, with Pench Valleys moving up from Rs. 19.62 to Rs. 19.69.

Textiles were firm. At Rs. 18 Bharat Commerce were better by a few naye paise. J. K. Rayons regained to Rs. 15.19 from Rs. 14.12. Kesorams hardened from Rs. 26.87 to Rs. 28.75. On the other hand, Elgin Mills were lower at Rs. 18.31 and Bowreahs changed hands at Rs. 154, as against Rs. 181 previously.

The number of transactions in jute recorded a visible shrinkage, as it was now apparent that the crisis facing the jute industry would not be nearer a solution until next season's crop gave a higher yield. Judging, however, from the high level of prices of jute goods, the current accounting period of mills was not expected to be worse than previously. Such a reason would only explain this week's gains following replacement buying. Howrahs were lifted up to Rs. 20.75 from Rs. 20. At Rs. 126, Budge Budges gained by Rs. 3, while New Centrals were pushed down from Rs. 20 to Rs. 19.50. At Rs. 135, Kelvins disclosed a loss of Rs. 2, Baranagores giving way from Rs. 119 to Rs. 117 and Champdanies from Rs. 104 to Rs. 102. Birlas were better at Rs. 27.87.

Engineering shares were steady. A feature was the rise in Indian Oxygens to Rs. 41.25 from Rs. 39.50 earlier. Indian Irons closed firm at Rs. 23.54, as against Rs. 23.06 earlier. Jays were bought at Rs. 32, as against Rs. 31.44 earlier. Texmacos at Rs. 22.75 closed a few naye paise higher on balance, while Braithwaites sagged from Rs. 31.75 to Rs. 19.25. Jessop & Cos. returned to Rs. 19.25, after being higher at Rs. 19.31. At Rs. 37.50, Guest Keen Williams struck a small gain.

Among minings, Metal Corporations, on improved prospects, hardened from Rs. 9.62 to Rs. 10.19. Indian Coppers were shown greater attention and gathered strength to Rs. 4.64 from Rs. 4.44. Karanpura Developments were firm at Rs. 20.37. Assam Silliminites were firm at Rs. 11.25, following the issue of ordinary rights in the proportion of seven for every six held at present.

Miscellaneous industrials, were not improved, were firm. Following higher dividend, Alkali and Chemicals were better at Rs. 34. Associated Batteries, on anticipations of enhanced dividend, were difficult to be located and subsequently changed hands at the higher rate of Rs. 35.75. National Pipes and Tubes, on similar expectations, reached a high of Rs. 22.44, as against Rs. 21.12 earlier in the week. At Rs. 30.00, National Cables recorded a small gain. Issac Holdens met with persistent support and were fully firm at Rs. 8.12. Angelo Bros. were better at Rs. 22.12. Gillanders Arbuthnots hardened to Rs. 12.59 from Rs. 12.25. On reports of expansion, Union Carbides scored from Rs. 46.87 to Rs. 48.75. At Rs. 40.87, Dunlop Rubbers were fractionally better.

Reports relating to the possibility of an imminent rights issue caused by an early rise in Orient Papers to Rs. 40.30 but profit-taking soon took the scrip down to Rs. 40.20. Ballarpores returned to Rs. 69.69 from Rs. 70.50, but India Pulps at Rs. 19.31 recorded a small gain.

Teas were quiet. Methonis moved down from Rs. 18 to Rs. 17.50 and Brooke Bonds from Rs. 15.75 to Rs. 15.50. But Hasimaras were fully firm at Rs. 21.62 and Naga Hills at Rs. 42.25 were a shade higher.

* * * *

Madras Stock Exchange

MADRAS, *18th January*

After remaining subdued in the initial sessions, the share market picked up strength as the week progressed. The earlier easiness was due to the apathy of operators to enter into fresh commitments without getting a clear picture of the National Development Council's final decision on the question of outlay and resources for the third Plan. Later, although the N.D.C. favoured the upward revision of Plan outlay, traders held the view that there was hardly any possibility of further increase in direct taxation. There was also revival of investment buying in some shares which had touched lower levels. Another helpful factor was the suspension of the special deposit system by the Reserve Bank. Textiles were firm, though buying enquiries were selected. Teas were steady, notwithstanding the deterioration of labour relations in certain plantations in Kerala. Coffees were also steady. Operators were awaiting the outcome of the forthcoming meeting of the Coffee Board to be held on 2nd February. Rubbers, however, ruled easy on selling pressure. Business put through in electricals, sugars and other miscellaneous industrials was restricted. Bank shares attracted support induced by reports of satisfactory working results of many banks.

In the textile section, Premiers elicited good support and rose by Rs. 2 to Rs. 225. Travancore Rayons improved by 95 nP to Rs. 33.20. Maduras were higher by 62 nP at Rs. 35.62. Coimbatore Spinnings put on 50 nP to Rs. 42.50. Lakshmis were fully maintained at Rs. 148, as also Buckinghams at Rs. 196.50, Metturs at Rs. 369 and Coimbatore Cottons at Rs. 158.50. Coimbatore Pioneers, however, suffered a setback of Rs. 9 to Rs. 335.

Among teas, Parksides improved by 25 nP to Rs. 27. Chembras put on 2 nP to Rs. 5.50. Periakaramalais fell initially from Rs. 3.36 to Rs. 3.35, but recovered later to Rs. 3.37. Twyfords, however, eased by 10 nP to Rs. 11.90. Nelliampathys shed 3 nP to Rs. 2.73. Chandramalais lost a like amount to Rs. 2.90. Devasholas changed hands at Rs. 30.50, Halleyburias at Rs. 14, Kil Kotagiris at Rs. 5.30 and Nonsuchs at Rs. 26.25.

Among coffees, Coffee Lands were fully steady at Rs. 18.30, Cowcoodys at Rs. 4.90 and Mysore Coffees at Rs. 5.34. But Consolidated Coffees were marked down by 73 nP to Rs. 21.62. Ouchterlonys fell by 5 nP to Rs. 4.50, before closing at the last week's level of Rs. 4.55.

In the rubber section, Rajagiris declined by 55 nP to Rs. 19.05. Midlands softened by 10 nP to Rs. 11.30. Thirumbadis were a shade easy at Rs. 1.48. But Cochin Malabars strengthened by 3 nP to Rs. 6.98, after declining to Rs. 6.88 earlier.

Among bank shares, Indian Overseas made headway by Rs. 3 to Rs. 180. Indians (PP) moved up by Rs. 2 to Rs. 145. Andhras (PP) put on 50 nP to Rs. 86. Canaras were maintained at Rs. 83.50, as also Pandyans at Rs. 33 and Punjab Nationals at Rs. 19.15.

In the sugar section, Cauverys encountered selling and declined by Re. 1.50 to Rs. 139. Travancores lost 10 nP to Rs. 10.40. E.I.Ds were subdued at Rs. 39.50 and Indias at Rs. 12.65. But United Breweries elicited special support and forged ahead from Rs. 125 to Rs. 132. Deccans hardened by 25 nP to Rs. 14.95.

Among miscellaneous industrials, Western India Plywoods suffered a loss of Rs. 2 to Rs. 239. Textools gave way from Rs. 174.50 to Rs. 173. Spencers lost 25 nP to Rs. 22.40. The Company has announced a final dividend of 12 per cent., taxable, making a total of 18 per cent, taxable for the year ended June 1960, same as last year. Among cements, Dalmias lost 15 nP to Rs. 11.20. Andhras were neglected at Rs. 9.90, Travancores at Rs. 8.60 and Madras at Rs. 100. But India Cements scored a gain of 14 nP to Rs. 5.97. Chemicals fared better. Metturs hardened by 50 nP to Rs. 12.75, following the announcement of an interim dividend of 6¼ per cent., taxable, for the year ending March 1961. F.A.C.Ts gained 2 nP to Rs. 9.30. Mysore Fertilisers and Mysore Chemicals were steady, the former at Rs. 11.25 and the latter at Rs. 26.10. Among others, Ashok Leylands rose by 30 nP to Rs. 8.20 and Aluminium Industries by 8 nP to Rs. 21.95. Indian Steel Rollings were maintained at Rs. 10.17. The Company proposes to raise fresh capital by issuing new 250,000 equity shares of the value of Rs. 25 lakhs. The capital will be used for the expansion of the Company's production capacity for wires and wire products from 3,600 tons to 7,200 tons.

The cotton textile mills' production in Decem- | of the treaty and promote co-operation between | year's record crop of

NEWS IN BRIEF

THE Planning Commission is considering a proposal to allot Rs. 25 crores for the establishment of a steel plant in the South which is expected to be located at Neyveli.

The Wage Board for jute industry is understood to have submitted an interim report to the Government in which it has recommended an increase of Rs. 5 in workers' monthly wages as an interim relief.

A coal tar distillation plant will be installed at Durgapur by the Government of West Bengal at a cost of Rs. 1.8 crores. The State Government has also decided to take over the D.V.C. spun pipe factory at Durgapur, which will produce pipes (used mainly for channelling water) worth Rs. 5 lakhs annually.

The Government of India has set up the Fertiliser Corporation of India, with Mr. K. R. Damle, Secretary to the Union Ministry of Food and Agriculture, as Chairman. The new body is formed by the amalgamation of the Sindri Fertilisers Corporation and the Hindustan Chemicals and Fertilisers at Nangal.

Extraction of lignite from the Neyveli project in Madras is expected to commence in July-August next. Lignite mining operation is at present proceeding in one quarter of the open pit area, and a depth of 140 ft. has already been reached. Lignite will be located by excavating another 40 ft.

An Italian economic mission is expected to arrive in India early next month for a two-month tour of the country. The mission, headed by Senator Emilio Battista, comprises 20 experts, representing different sectors of Italian industry and trade. The visit has been sponsored by the Italian Government as part of its drive for export promotion.

The Gujerat State Co-operative Marketing Society has been given the agency for distributing imported Russian oil and petroleum products throughout the State. The distribution work will begin first in six districts, namely, Ahmedabad, Kaira, Baroda, Panchmahals, Surat and Broach, where initially kerosene and diesel oil will be put on the market. Arrangements are also expected to be made for storage at Ahmedabad, Surat and Baroda.

The cotton textile mills' production in December 1960 is provisionally placed at 159 million lbs. of cotton yarn and 447 million yards of cotton cloth. At the end of December 1960, the composite mills of the cotton textile industry held an estimated total stock of 411,000 bales (of 1,500 yards each) of cloth, comprising 206,000 bales of cloth unsold and 205,000 bales of cloth sold but not lifted.

An official Bill, providing for the introduction of compulsory in-plant training for apprentices, will be introduced during the budget session of Parliament. Under the proposed legislation, it will be obligatory on the part of private factory owners to admit persons nominated by State Governments for training in their establishments. The move is designed to expand technical training facilities and improve the position of trained personnel.

The Government of India has revised the Merchandise Marks Regulations which require the goods to bear an indication of the country or place where they are produced. The main object in amending the regulations was to avoid any deception being practised by unscrupulous members of the trade. The regulations specify that the origin of goods should be indicated in large and conspicuous letters and further prescribe a minimum size of the lettering for such indication.

A pilot plant for the manufacture of firebricks was inaugurated this week at Churk in Uttar Pradesh by Mr. C. B. Gupta, the State's Chief Minister. The pilot plant, put up as a subsidiary of the Government cement factory, has at present an annual capacity of 1,500 tons of refractories, which will be expanded to 30,000 tons during the third Plan period. The plant, it is said, will be capable of meeting the entire demand for refractories in the State.

The number of passengers carried on Indian railways during the year ended March 1960 was 1,515 million, as against 1,275 million in 1955-56, the last year of the first Plan. This represents an increase of 19 per cent., which is 4 per cent. more than what was anticipated while formulating the second Plan. The heaviest traffic was on Western Railway which carried 369 million passengers in 1959-60. Northern Railway was the only zonal section showing a drop, the number of passengers being lower by one million, as compared with 1955-56.

The services of Mr. S. Barraclough, steel expert from the U.K., have been made available to the Indian Standards Institution for a three-month period under the Colombo Plan programme for Technical Co-operation in South and South-East Asia. During his stay in India, Mr. Barraclough will work on the I.S.I. Project on rationalisation of carbon, alloy and tool steel specifications, now nearing completion. Under this project, six schedules covering various types of steels are being prepared. When finalised and implemented, these specifications will help reduce the number of steels manufactured in India and help to conserve some of the most important alloying elements for steel, such as nickel and molybdenum, which are scarce in the country.

The Government of India has established six [illegible] research-cum-training centres for promot[illegible]search in the use of local [illegible] and improvement of construction techniques for village houses. These centres will also train technical personnel employed in the planning and implementation of projects under the village housing projects scheme. They have been set up in the form of a separate wing attached to six engineering institutions located at Bangalore, Anand (Gujarat State), Sibpur (Howrah), Roorkee, New Delhi, and Chandigarh. They will serve under the guidance of the National Buildings Organisation (N.B.O.) of the Union Ministry of Works, Housing and Supply. Appropriate arrangements will also be made by the N.B.O. for co-ordinating their activities so as to avoid any duplication of work at the centres.

The Government of India has appointed a committee under the chairmanship of Mr. M. R. Sachdev, Secretary, Union Ministry of Irrigation and Power, for detailed examination of the utilisation of raw coal and middlings from the existing washeries, and those proposed during the third Plan period. The committee will assess the advocacy of protection envisaged against the requirements of raw coal and middlings for the power generation programme during the third Plan period, and ensure that such middlings would be consumed in thermal power stations at or near the coal washeries. The Committee will also draw up a time schedule for the establishment of raw coal washeries. The report of the Committee will be submitted to the Government by the end of this month. It is estimated that about 20 million tons of inferior and low-grade coal will be required for power production by 1965. During the third Plan period, 17 thermal power stations schemes will be continued from the second Plan. In addition, 26 new schemes for thermal power stations are proposed for inclusion in the third Plan.

India and Pakistan exchanged instruments of ratification for the Indus Waters Treaty 1960 at New Delhi on the 12th inst. Mr. N. D. Gulhati, Additional Secretary to the Union Ministry of Irrigation and Power, and leader of the Indian delegation to the talks on Indo-Pakistan canal waters, represented India. Pakistan was represented by Mr. G. Mueenuddin, Secretary to the Ministry of Fuel, Power and Natural Resources, and leader of the Pakistan delegation to the talks on Indo-Pakistan canal waters. In accordance with Article VIII of the Treaty, the Government of India has appointed Mr. Hari Chand Kalra as its Commissioner for Indus Waters. Mr. Kalra, together with his counterpart to be appointed by the Government of Pakistan, will form the Permanent Indus Commission, which will establish and maintain co-operative arrangements for implementation of the treaty and promote co-operation between the two countries in the development of the waters of the Indus system of rivers. Mr. Kalra will also be Ex-officio Joint Secretary to the Government of India in the Ministry of Irrigation and Power.

The Board of Directors of the Central Warehousing Corporation, which met at Madras on the 16th inst., approved the programme of activities and the budget estimates of the Madras, Andhra and West Bengal State Warehousing Corporations for the next financial year (1961-62). The Union Food Secretary, Mr. B. B. Ghosh, who is Chairman of the Central Corporation, presided over the meeting. The Madras State Warehousing Corporation has so far opened 14 warehouses in hired accommodation. One more warehouse at Rajapalayam is expected to be set up by the end of the current financial year. The Corporation expects to set up five more warehouses during the next financial year. Side by side with this, the State Corporation has also gone ahead with schemes for building its own warehouses to replace the hired accommodation. Acquisition proceedings for land are now in progress at ten centres. Construction of warehouse buildings is expected to be completed at two centres by the end of the current financial year. The Andhra State Corporation will have 19 warehouses by the end of March 1961. Four more warehouses are to be set up next year at Tandoor, Chittoor, Anakapalle and Vizianagaram with a total storage capacity of 20,000 tons. The Corporation has acquired sites at seven centres and purchased godowns at four places with a view to shifting warehouses to its own buildings. The construction programme is to be further speeded up during the next financial year.

From Abroad

A transatlantic cargo carrier, Seaboard and the Western Airlines, proposes to reduce general cargo freight rates that would reduce ocean shipping costs by 70 per cent.

The foreign trade of France was almost balanced in 1960, for the first time in 23 years. Exports and imports touched record figures of N.Frs. 23,750 million and N.Frs. 24,000 million, respectively.

World production of cocoa in the current season (1960-61) is expected to reach 1.11 million long tons, an increase of 9.5 per cent., as compared with the previous year. Ghana alone is expected to produce 400,000 tons, representing a rise of 26 per cent.

The Shell-Mex and B.P. in Britain has raised its price of motor lubricating oils by 1d. to 1½d. a pint. This increase is ascribed to higher cost of raw materials, packaging and distribution charges, and improvements in the quality of oil.

The British National Union of Bank Employees has asked for pay rises, ranging from 7½-10 per cent., for the 120,000 bank employees. The Union points out that, while the bank salaries exceeded average earnings of other workers by 42 per cent. in 1949, this difference fell to just 14 per cent. last year.

PERSONAL

MR. N. S. Worah has been elected Chairman of the Western India Minerals Association for the year 1960-61.

Mr. Pratap Bhogilal, Director-in-charge of Shree Ram Mills Ltd., has been elected Chairman of the Millowners' Association, Bombay, for the current year.

Mr. Vallabhadas V. Mariwala and Mr. Pravinchandra V. Gandhi, have been elected President and Vice-President, respectively, of the Indian Merchants' Chamber, Bombay, for the year 1961.

Unemployment in the U.S. rose by half-a-million in December to 4.54 million—the highest level for the month in 20 years. The unemployed persons in December represented 6.8 per cent. of the labour force, as against 6.3 per cent. in the previous month. As compared with November, the number of persons employed fell by 1.17 million to about 66 million.

One of the leading British caterers, Messrs Fortes Company, proposes to invest several million pounds in constructing a chain of luxury motels (hotels with facilities for parking lodgers' cars) all over the country. Each motel costing about £25,000 will have a restaurant with seating arrangements for upto 200 persons and a bar.

The U.K. and U.S. Governments have protested to the Ceylon Government against certain proposals in the Petroleum Corporation Bill, which seeks to set up a State organisation to import and distribute petroleum products. The protest is related particularly on the proposal to empower the Corporation to acquire by compulsion the plant, equipment and property of the oil companies now operating in Ceylon, and to fix minimum and maximum prices. The U.S. and the U.K. have also taken objection to the proposal to buy Russian oil.

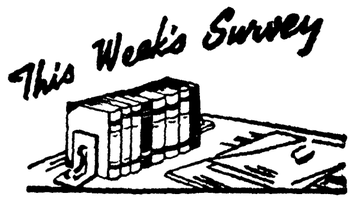
In view of the comfortable world supply position of coffee, the Government of Uganda proposes to reorganise coffee production and marketing. The new proposals seek to remove present controls on African-grown coffee and bring both African and non-African coffee on a similar marketing basis. Producers will have the option either to sell their coffee or to export abroad directly by them, subject to specified quality and grading standards. Uganda is expected to grow in the current year more *robusta* coffee than the last year's record crop of 110,000 tons.

The Government of Pakistan has accepted the project report on steel plant in West Pakistan, submitted by the British consultants, Messrs. John Miles and Partners. This covers a variety of schemes costing over £12.5 million. The Government will accept foreign participation upto 40 per cent. of the total cost, the balance being met by local interests through the Pakistan Industrial Development Corporation. The plant will initially process imported ore (from Goa) and pig iron but expects later to secure ore from indigenous sources. No mining operations, however, have so far been started. Meanwhile, another steel factory with an annual capacity of 1,000 tons is proposed to be built at Chittagong in East Pakistan. Some Japanese firms have already expressed their readiness to collaborate in this project.

U.S. consumers spent about $76,000 million for food in 1960, as compared with $73,000 million in 1959, and the figure is expected to reach $78,000 million in 1961. In order to keep pace with its continuing growth, the industry will continue to increase its plant and equipment investments, according to Mr. Paul S. Willis, President of the Grocery Manufacturers of America. This year's capital expenditures by U.S. food firms in this country and abroad are expected to exceed $100 million touched in 1960. In 1959, the figure was $76 million. The industry invested over $100 million in basic and applied research during 1960. Consumers fared well pricewise during the year, according to Willis. Retail prices for food averaged 2 per cent. below the level of 1958.

Photography is a $1,000-million business in the United States, with over 50 million people taking more than 27,000 million pictures a year. A survey published by the *Journal of the Society of Motion Picture and Television Engineers* reports that about one-fifth of the expenditure is made by business and industry. Another $50 million are spent on educational, religious, civic and medical groups and individuals, while another $50 million are spent by Government at national, State and local levels. The photographic market is considered in the trade to consist of five groups, the home movie and amateur snapshot field with 36 per cent. of sales, commerce and industry with 28 per cent., Hollywood-type periodicals and books 14 per cent., and medical-dental 11 per cent.

A new form of international assistance which will enable developing countries to "import" top-level civil servants in the fields of education, science and culture has been approved by the Administrative Commission of the eleventh session of the U.N.E.S.C.O. General Conference which met at Paris last month. The Commission adopted a resolution which authorises the U.N.E.S.C.O. to supply to governments, upon their request, the temporary services of teachers, professors, heads of institutions and other technical personnel. While on duty, these "operational or executive personal," as they are termed in the resolution, will be servants of the governments which have requested them. They will be paid salaries by these governments similar to those offered to national civil servants at the same level, with the U.N.E.S.C.O. making up the difference required to attract outstanding personnel on an international basis.



SOME COAL AND STEEL PROBLEMS

THE Government of India did well last year to invite two expert teams from the United States—one for advising how best India's coal production could be stepped up and the other for appraising, in particular, the personnel requirements of the three public sector steel plants. It is noteworthy that both these teams have carefully studied the problems of the respective industries and made some practical recommendations. The coal team has recommended that suitable incentives be offered to private collieries to expand production. Such incentives should include credit facilities for modernising their equipment, a depletion allowance and liberalisation and simplification of the procedure governing import licences for coal machinery. More transport facilities for quick movement of coal from the mines to the consuming end and more washeries to improve the quality of coal are two other noteworthy recommendations. Particularly in regard to washeries, the team's recommendation is to the effect that the cost of installing such washeries should be offset by raising the price of washed coal which the consumers might not grudge paying in view of their buying less in quantity with improvement in quality.

Since the shortage of washed coal for steel plant continues to be acute, the price incentive recommended by the team and certain other favourable terms could well be provided to the private sector so that it may also set up some washeries. If more coal production has to be secured from the private sector, it must also be logically enabled to supply as much washed coal as possible. This problem of washing coal and the problem of equipping deep mines with modern machinery would need to be energetically tackled by the Government through provision of price and other incentives. Special permission to private collieries for working new or non-contiguous areas alone would not do in the absence of other necessary incentives. It is high time the Government formulated a more comprehensive policy governing coal production in the private sector, so that the possibilities of American technical and financial aid in this regard might be fully availed of. It may be that American aid could be secured particularly for mechanising deep and large mines. If that happens, it will have the additional advantage of facilitating replacement and availability of spare parts from the same manufacturing source. It is to be hoped that the practical advice of experts from a country which has been, and will continue to be, providing massive economic aid will not be ignored by the powers-that-be.

No less practical is the advice given by the other expert American team on the personnel problem of the steel industry. This team's critical approach to the problem may be initially resented by the authorities in charge of the public sector steel plants for two reasons. In the first place, the team has given the finding that the Board of Directors of the Hindustan Steel lacks authority to the extent that effective action to develop and implement organisational plans, particularly in the area of personnel training, are always subject to repeated review by the Ministry of Steel. Secondly, the team does not think that the need for training 600 additional engineers and senior supervisory personnel in the United States by 1963-64 has been solidly established by the Hindustan Steel. This latter finding has led to the recommendation that the Hindustan Steel's request to the American Iron and Steel Institute (on whose behalf the expert team came to India) for providing training facilities for 600 more Indians (besides the 600 trainees under the current programme due to be completed by July 1961) be deferred until fuller clarification of the Company's requirements is obtained. It may be that the Hindustan Steel did not have the Bokaro project in mind when it made the request to the American Iron and Steel Institute, for the programme of training 2,000 engineers in foreign countries for the three steel plants at Rourkela, Bhilai and Durgapur had not progressed satisfactorily as of 1959-60. Till the end of that year only 1,080 Indians had been sent out for training as engineers—387 to the U.S.A., 328 to the U.S.S.R., 200 to the U.K., 119 to West Germany, 45 to Australia and one to Canada. Probably firm arrangements had been made for training only about 1,500 engineers, including those who were to be sent to the United States under the joint auspices of the Ford Foundation and the U.S. Technical Co-operation Mission.

Whatever be the present actual position in regard to the training of 2,000 engineers, there is a patent need for increasing that number if the requirements of the Bokaro plant are also to be met by advance training before 1963-64. Since the American team has not entirely ruled out the possibility of training more technical hands in the United States, the Ministry of Steel would do well to accept its advice and decentralise its power to the extent of enabling the Hindustan Steel to have organisational and administrative autonomy. Such autonomy is needed to prepare and implement an effective training plan which, as recommended by the team, should be carried out in three phases—namely, (i) work, emphasising manual skills, for at least six months to a year in India at the plant where the trainee will ultimately become supervisor; (ii) nine-month technical training in the U.S.A. in the trainee's field of speciality; and (iii) provision of opportunity in India to the trainees to apply their technical knowledge in actual operations under qualified supervisors. As the team must have fully taken into account the practical implications of this training plan in three phases, its advice in the matter of administrative and organisational procedures deserves to be carefully considered.

SUGAR INDUSTRY

It is surprising that the Development Council for Sugar Industry has not released to the Press any information pertaining to the deliberations of its eleventh meeting held at Shakkarnagar in Andhra Pradesh last week or the decisions taken thereat. All that has been made available is a brief summary of the speech delivered by the Council's Chairman, Mr. L. G. Rajwade, I.C.S. If the public is to judge the work done by the Council, it must be kept adequately informed through publicity in the Press, at least whenever the Council holds important meetings. Be that as it may, it is gathered that the Council had before it an agenda which contained a number of interesting subjects, including implications of decontrol of sugar (based on the resolution moved by a member), review of the progress in the grant of licences for new sugar factories during the third Five-year Plan and the report on cane cess utilisation submitted by the Joint Committee of the Council and the Indian Central Sugarcane Committee.

In his opening speech at the meeting, Mr. Rajwade indicated that the pace of development of sugar industry would be greatly accelerated in the next five years. The production capacity of white sugar, we are told, is being stepped up from 2.5 million tons in 1960-61 to 3.5 million tons by the end of the third Plan (1965-66). Issue of licences has already been approved of for nearly 500,000 tons of capacity through the establishment of 20 new factories (including 14 co-operatives) and expansion of 49 existing units. In view of the sizable increase in capacity contemplated, it is but natural that due attention must be paid to ensure plentiful supplies of sugarcane. It is gratifying to hear from Mr. Rajwade that a large sum of Rs. 12.00 crores has been provided for cane development in the third Plan (of this, expenditure in the first year, that is, 1961-62, alone is expected to be Rs. 2.35 crores), as against the second Plan allocation of Rs. 8.00 crores and the actual estimated expenditure of Rs. 7.10 crores. The development schemes would be mainly directed towards increasing the acre-yield, though a small expansion in acreage may also occur, mostly in the newly irrigated areas.

The proposed move to intensify sugarcane development in the third Plan is to be welcomed, as it may well lead to an improvement in the quantity of cane raised in any given area of land. But from the point of view of the quality of cane grown, the progress achieved may not be much, unless efforts are made to replace the present defective method of paying for cane only on the basis of weight by one which takes into account both weight and sucrose-content. Unless this is done, the yield of sugar per acre will continue to be low. It is unfortunate that, although the authorities fully appreciate the need for linking cane prices to quality, they fight shy of the issue.

The progress of licensing in sugar industry as reviewed by Mr. Rajwade reveals that, as against the second Plan target of 2.5 million tons (installed capacity), licences had been issued for the setting up of 53 new mills (38 co-operatives) and expansion of 71 existing factories, covering an additional annual capacity of 1,016,000 tons. Of the 53 new units, 31 (24 co-operatives) had gone into production upto the 1959-60 season and three more commenced operation in the current season. Expansion has also been completed in 34 factories and a few others have carried out the programme in part. In all, a little over 600,000 tons of new capacity has been established so far. At the commencement of the first Plan, the installed capacity of the sugar industry was about 1,500,000 tons, of which nearly 78 per cent was in Northern India and the remaining 22 per cent in Maharashtra, Gujarat and other States in the South. As a result of licensing establishment of more capacity in the latter States during the first and second Plans, the ratio has changed to 63 per cent in the North and 37 per cent in the South. This shows that the industry is now dispersed over a wider area and there may, according to Mr. Rajwade, be a further dispersal along these lines during the third Plan.

Referring to the sugar supply position, the Development Council Chairman merely stated that the country seemed to have turned the corner with sugar output in 1959-60 touching the peak level of 2.422 million tons. He did not say anything about the question of decontrol, perhaps because he thought that it would be better to leave the question to be discussed by the Council itself. During the discussion, the representatives of sugar trade urged the immediate removal of controls on sugar. The spokesmen of sugar millowners are reported to have raised no objection to the plea, but they stressed that ways and means must be devised to prevent a fall in prices which, it was pointed out, would adversely affect production and the interests of cane growers. It is, however, not known whether the plea for decontrol of sugar was accepted or rejected by the Council.

COLOMBO PLAN: TECHNICAL CO-OPERATION

The Technical Co-operation Scheme is an integral part of the Colombo Plan. It provides a framework for exchange of technical assistance between the participating countries. The Council for Technical Co-operation not only acts as a clearing house where requests and offers of assistance are received and met but also co-ordinates the programmes under the scheme. Like the Consultative Committee, the Council also submits annual reports on technical assistance surveying the yearly progress of the technical co-operation scheme.

The annual report of the Council for 1959-60, just published, shows that technical co-operation during the year was on a more extended scale than in the previous twelve-month period. Technical assistance under the Plan continues to come mostly from member-countries outside the Plan area, but countries in the region themselves are providing assistance to each other in an increasing measure. Technical co-operation involves the provision of training facilities, the supply of experts and furnishing of equipment. The total number of new training places offered and accepted during the year ended June 1960 was 4,268, as compared with 3,962 in 1958-59, bringing the total since the inception of the Plan to 15,116. Of this, India accounted for 1,279. New training places awarded by Canada (277) and the U.K. (613) in 1959-60 were greater than in any previous year. Similarly, the number awarded by the U.S. increased from 2,245 in 1958-59 to 2,511 in 1959-60. The total number of places provided by Governments within the region, however, dropped from 321 to 309.

The distribution of training places among the recipient countries remained much the same as in the previous year. India was the largest recipient (1,045), followed by Thailand (570), Indonesia (457) and Viet Nam (403). The fields of training showed some significant changes. Education, general as well as technical, food, agriculture and forestry, industry and trade, and transport and communications were the categories in which major proportional increases had occurred. The smallest increases were recorded in such fields as statistics, fisheries and co-operation.

The total number of experts supplied during the year aggregated 535, as compared with 192 in 1958-59, bringing the total number of experts supplied since 1950-52 to 1,729. Of the 535 experts supplied last year, 324 were from the U.S., 62 from Japan, 50 from Australia, 46 from the U.K., 34 from Canada, 14 from New Zealand, four from India and one from Indonesia. In the earlier years of the Plan, medical and health experts predominated, but a decline came to be noted in the last few years in these categories which gave way to engineering experts. The demand for both these categories was displaced in 1959-60 by a request for experts in agriculture, food and forestry, and education. This is, perhaps, an indication of the growing realisation of the need for strengthening agriculture as a safe foundation for the industrial super-structure which all countries of the region propose to build up.

Supply of equipment is an essential part of technical co-operation. Provision of equipments is very important. When this facility accompanies an expert, it makes his assignment more effective. It also enables trainees to put their training to good use on their return home; it may directly assist the supply of skilled manpower by encouraging research, demonstration and training. In 1959-60, equipments worth £2.96 million were supplied by 12 countries, including India. The total value of equipment supplied since 1950 is £9.51 million.

Are these extended assistance programme sufficient to meet the demand? Certainly not; not because the supply is not increasing but because the demand is rising progressively and continually. Larger numbers than ever before are receiving training under the Plan now and more equipment is being supplied to train people to solve the problems of low productivity. But the demand is as great now as ever before. It is this fact, as well as the realisation that technical co-operation, as it exists now, is making a major contribution to the economic development of the region that has prompted the member-nations to extend the terminal date of the Plan from 1961 to 1966.

FOOD SITUATION

An encouraging feature of Indian economy as the second Plan draws to a close is the emergence of a slightly easier food situation. From the mid-1960, that is, the commencement of the new crop year, prices of foodgrains have tended to drift lower. The wholesale price index of cereals (base=1952-53) has declined, from 110 in July 1960 to about 99.7 by the third week of December, which compares with 99 a year ago. The index number of pulses has also fallen from 96 to 92.29 (as against 92 in December 1959). Towards the close of December, however, foodgrain prices showed a tendency to look up, thanks to reports of insufficiency of winter rains in the unirrigated areas in North India growing *rabi* crops. But this has proved to be a short-lived phenomenon. The revival of beneficial rains subsequently has brightened the prospects for *rabi* crops. Arrivals at terminal centres have also improved. The new year has thus opened on a note of relief. The latest available quotations from Hapur show that wheat of average quality and farm produce are ruling at Rs. 17.25 and Rs. 18.50 per maund, respectively, which compares favourably with Rs. 18 and Rs. 19.25 a year ago. *Basmati* rice is quoted at Rs. 27 to Rs. 28, as against Rs. 30 to Rs. 34 in the beginning of last year.

The following table shows the movement of wholesale price index of foodgrains since July 1960, the beginning of the current crop season:

1960	Rice	Wheat	Cereals total	Pulses
July	115	92	110	96
August	115	90	108	93
September	114	90	108	94
October	111	90	105	95
November	106	90	104	94
Week ended 24th December	N.A.	N.A.	99.7	92.29

N.A.—Not available.

There is nothing to suggest that this declining trend will be reversed in the immediate future. The long-term agreement with the U.S. for the import of 17 million tons of foodgrains, involving arrivals of about 300,000 tons every month, has virtually dampened the enthusiasm of hoarders. This deal has created a climate of confidence about the outlook for food, as Mr. S. K. Patil, Union Minister for Food and Agriculture, put it last week in the course of a broadcast talk from Bombay. Further, creation of food zones, linking the deficit States of Maharashtra and Gujarat with the surplus State of Madhya Pradesh, as also West Bengal (deficit State) with Orissa (surplus State), has prevented, in time, the possibility of any undue spurt in food prices in the deficit areas and prevented a slump in the surplus regions. Early this week, the Punjab Government lifted the ban on direct purchase of wheat in the open market by roller mills, except in the case of three flour mills, one each at Chandigarh, Jullundur and Gurdaspur. It has also removed the restrictions on the extraction of *maida*, *suji* and *rawa*. The mills will also be permitted to export these to Rajasthan, besides the States in the same food zone. With the easing of restrictions on the movement of foodgrains thus in the various parts of the country, it is reasonable to assume that the improvement in crops during the current season would serve to step up the flow of marketable surplus to urban areas.

Lest the present situation should generate complacency, it is necessary to remind that the "climate of confidence" that is now apparent is not so much the direct result of the Plan efforts but is the outcome of an extraneous factor, not thought of in the beginning of the second Plan, namely, the P.L. 480 agreement. This is in distinct contrast to the situation that prevailed at the end of the first Plan, when food production had exceeded the targets, enabling a substantial reduction in imports. The output of foodgrains in the 1960-61 crop year, which is well under way, will be, according to the Union Ministry of Food and Agriculture, about 75 million tons. This total is 5.5 million tons lower than the revised second Plan target. The current rate of increase (3 per cent. per year) in production is scheduled to be doubled in the third Plan. If this is to be fulfilled and the confidence of consumers retained, substantially bigger and more concerted efforts than has been the case so far are called for. Will the administration in the States and the Centre alike, on the one hand, and the farmers, on the other, rise to the occasion?

THE LAST EISENHOWER BUDGET

President Eisenhower's last Budget, that for the fiscal year July 1961-June 1962, was submitted to U.S. Congress on 16th January—four days before Mr. John F. Kennedy was installed President. Since the new Administration will be free to ask Congress to alter the Budget estimates of expenditure or of revenue in the light of its own policies and programmes, it would seem that comment here is rather premature. This may be so only in so far as the domestic economic and fiscal policies of the Democratic Administration are concerned. Already, Mr. Douglas Dillon, who will be the new Secretary of the Treasury, has told the Senate Finance Committee that the surplus of about $1,500 million estimated in the Eisenhower Budget is likely to turn into a deficit in view of the decline in corporate profits. While the outgoing President laid emphasis on balancing the budget and avoiding deficit financing so as to maintain international confidence in the dollar and prevent inflation at home, Mr. Dillon has just expressed himself against over-rigidity in trying to achieve a balance every year, though he has also conceded that it is important to achieve a balanced budget "over a period of years." There is also a report to the effect that President Kennedy's economic advisers have just made out a powerful case for raising civilian and defence expenditures through deficit budgeting so as to stimulate the economy towards a faster rate of growth. At the same time, it is not inconceivable that such stimulation may also be brought about by temporary tax cuts which, however, are not deemed currently advisable by Mr. Dillon. Obviously, the new Administration will take some time before it calls for changes in the Eisenhower Budget which has estimated receipts at $82,300 million and expenditure at $80,900 million. The budgeted expenditure includes $43,000 million for defence, representing an increase of about $1,500 million as compared with 1960-61, and $4,000 million for the total Mutual Security Programme, of which $1,800 million is for military, as distinct from economic, aid. The aggregates in the Budget, probably barring the one pertaining to foreign economic aid, may come in for revision and do not, therefore, call for comment here. It is the provision for economic aid—a provision which is least likely to be disturbed by the new Administration—that has a more immediate relevance, meriting fuller examination.

The Mutual Security Programme, under which the U.S. Government has been giving economic aid to a number of less-developed countries round the world, is allotted $1,875 million in the Eisenhower Budget—an amount substantially higher than the provision of $1,700 million in 1960-61. The present provision covers $425 million (representing an increase of $150 million over 1960-61 mainly because of earlier commitments) for the Development Loan Fund, $921 million for the economic cost of defence forces and for special economic assistance and $529 million for technical co-operation and other assistance. The increased allocation is explained by some new factors. The D.L.F. and the Export-Import Bank have now to meet larger requests for a variety of productive projects in such fields as electric power, transportation and industry. It is also recognised that some countries like India and Pakistan need loans on a broader basis than individual projects to ensure the success of their development plans. While the D.L.F. requires a supplemental appropriation of $150 million for 1960-61 and a budget provision of $425 million for 1961-62 (with new obligational authority of $700 million), the Export-Import Bank plans to finance its operations—without incurring new budget expenditures in 1961-62—by encouraging private lenders in the U.S. to participate in its loan programme, by using funds obtained through repayments and interest on prior loans and by selling notes from its large portfolio. An increase of $66 million, as compared with 1960-61, in special assistance funds asked for is due principally to the growing need for aid to Africa. The increased provision for technical co-operation and other assistance is explained by larger contributions to the U.N. Special Fund and the U.N. Technical Assistance Programme.

Over and above all these items (which, together, account for the total provision of $1,875 million under the head "economic aid"), there is an allotment of $369 million for economic and financial assistance to national and international agencies. This includes, besides contributions for inter-American co-operation and development purposes, a payment of $62 million to the International Development Association and $151 million earmarked for commodity grants for emergency relief and development abroad under U.S. Public Law 480.

It is thus noteworthy that the Eisenhower Budget has proposed substantially larger allocations for both bilateral and multilateral economic aid. This pattern of aid and its magnitude are least likely to be disturbed by the Democratic Administration under Mr. Kennedy. If anything, some improvement may conceivably be recommended to Congress now that Mr. Douglas Dillon (who created the Development Loan Fund) has been appointed Secretary of the Treasury in the Kennedy Administration and Mr. George W. Ball (who headed the group which recommended doubling foreign economic aid over a four-year period and financing the D.L.F. by borrowings from the Treasury) has become Under-Secretary of State for Economic Affairs—a post which is described as the most influential where foreign aid and trade policy are concerned. Incidentally, it may be significantly recalled that the task force headed by Mr. Ball also recommended a five-year extension of the Reciprocal Trade Act from 1962, giving the President authority to cut tariffs upto 50 per cent. If, under the Democratic Administration, development aid on a possibly larger scale comes to be coupled with freer trade, it will be a very salutary trend indeed for international economic progress.

Sell All That You Can; Buy Nothing

THIS is the slogan nowadays. If you like to have it in more direct language, you will find it in "Export or perish." The Minister for Commerce and Industry, being a good-natured and mild person, has not said so, not exactly, but, even when performing the act of laying the foundation-stone of a new industrial enterprise, he declared that, at least, 25 per cent of the product of each industry should be reserved for export. There was a further sting in the tail of his speech when he mentioned that, at one stage, the Government intended to introduce legislation in this respect but later gave up the idea and decided to enlist the co-operation of industries to achieve this objective.

Was it necessary to mention this at all? I ask, because it serves no purpose to tell any section of the public about the unexecuted intentions of Government, unless it be to administer a warning that they may be executed if it does not behave properly, a warning, so to say, of the shape of things to come. People who read ministerial utterances are shrewd enough to realise that the threat of a statutory directive to export a fixed percentage of industrial output is as impossible of enforcement as, for instance, a directive that a specified number of unmarried women in a particular locality should get married during a particular year. The willingness to get married is, perhaps, as much of a primordial urge for most girls (if only they spot the marriageable young men of their choice) as the willingness to sell goods in the export market for producers (if only they secure orders and the price of their choice) and, in both cases, the imponderable factors are so many and so varied that the parties make only feeble efforts, depending for the success of such efforts mainly on Divine Grace.

One interesting fact that has emerged from the Minister's speech is that, while commentators have labelled it as a tall order, they have also started demanding "suitable fiscal and monetary policies for creating the proper climate for export promotion." It always happens that, when the State assumes an extreme stand, the community replies by asking for a variety of safeguards and incentives; that is why wisdom demands that threats should not be used in a democracy where adults are concerned; the case of children is different. In this particular context what should have been insisted on is (a) superior quality of manufacture, (b) maximisation of production, and (c) achievement of as low a cost of production as possible. If these three requisites are secured, and the internal demand is reasonably satisfied, export follows almost as a natural corollary. One may try very hard to export, but will not succeed unless one's competitive position in a foreign market is secured by achievement of competitive quality and competitive price. As the main purpose of establishing indigenous industries is to satisfy internal demand, maximisation of production, that is, achievement of the highest output possible, should be insisted upon, so that an exportable surplus is available. And so it happens that the correct slogan which would stand the test of pragmatism should be "Achieve quality, increase production and reduce costs," and not "Export or perish."

There is another feature of this tricky business of exports which needs to be carefully studied in connection with export promotion. It relates to the type of products which will satisfy foreign tastes for which a continuing study of foreign markets is essential. Our textile interests seem to have realised this to some extent, but not fully, and there are several other industries which are still lacking in that kind of positive effort which goes to make successful salesmanship. There is an old Chinese tale which illustrates the kind of effort I am referring to. A leading manufacturer of coloured tiles had a visitor who looked a very desirable customer. It turned out that he was a millionaire and had conceived the idea of building a mausoleum for his dead wife, and it had to be magnificent, with all the colours of the rainbow, the most beautiful in all China. The visitor looked at the samples of the tiles, saw them in compartments neatly arranged and stacked, but could not make up his mind about their suitability for the design that he had conceived which was more riotous than orderly. The tile manufacturer was disappointed that he could not book the large order which was calculated to run into millions, but was still hopeful of satisfying the customer, if he was given time. A date was fixed some weeks later for another visit to the works when something new would be shown. The manufacturer then employed an army of workmen to break and reduce the tiles to fine powder and created a beautiful mountain of variegated colours—yellow, purple, blue, violet, red, green and orange, all of which flashed from a distance in blended brilliance. The customer came again on the appointed date and was fascinated; he bought the entire heap paying for the cost of the tiles, the charges for smashing and powdering and an extra for conception of the idea. The tile maker's good salesmanship consisted in catering to a taste which was not only expensive but also eccentric.

Land Ceiling Reform in Maharashtra

The sugar industry in the State of Maharashtra has developed high blood pressure. The immediate cause, according to the President of the Deccan Sugar Factories Association, is the proposed Land Ceilings Bill, which, it is feared, will undermine the success of sugar industry in the State, and efface the experience and efficiency which it has built up over a period of four decades. It is stated that the yield of sugarcane in Maharashtra is 53.25 tons per acre, as against 56.20 tons in Java and a meagre 14.70 tons in all India; similarly, the average percentage of sugar recovery is 11.80 in Maharashtra, 11.49 in Java and 9.84 in all India. These spectacular achievements are due to scientific farming methods adopted by the Deccan factories in extensive farm holdings wherein they have succeeded in cultivating high quality cane in abundance.

The sugar industry contends that, even conceding the ideological argument that land ceiling legislation could be justified on the ground that concentration of land wealth should be eventually eradicated, the statistics of proprietory and leasehold ownership of sugarcane land in Maharashtra go to show that the existing pattern discloses nothing sinister. The land that the factories own constitutes only 0.06 per cent of the total cultivable land in the State. The land owned and cultivated by some eleven factories totals 33,000 acres, and the land held on lease is 76,000 acres. There are over 21,000 shareholders in the companies who may be considered as holding the total of 109,000 acres of land. The average per shareholder works out only to 5.19 acres. The factories claim to give good wages for agricultural labour and are reported to maintain agreeable working conditions. From all accounts, they are credited with maintaining model farms and efficient laboratories and with having established improved agricultural practices in the rural areas. In spite of all these praiseworthy endeavours, should they be subjected to disintegration? It is apprehended that disintegration will result in setting back the clock of progress if the lands are turned over to less efficient agencies such as Government farms, co-operative societies and individual farmers as contemplated in the legislation. Pro-legislation spokesmen, however, seem to feel that they have effective counter-arguments. They say that the rent paid by the sugar companies to the farmers was Rs. 50 per acre while the profits earned on the lands amounted to Rs. 800 per acre. They also believe that the farmers living in the vicinities of factories have now acquired sufficient technical competence to continue the good work of the farms, and will be compelled, by legislation, to sell cane to the factories at fair prices. And so, in their view, the time is ripe for implementing the ideological concept of imposing a ceiling on land holdings, which implies the taking away of land from those having large holdings on payment of compensation, and the transfer of surplus land to farmers having uneconomic holdings or to landless persons.

The argument that the companies have fixed low rentals for leasing the farm lands and that they do not bear fair relation to the large profits made by them reminds me of a story that dates its origin to the days of Tenali

LONDON LETTER

A MOTTLED SKY FOR 1961

(From Our Own Correspondent)

LONDON, 13*th January*

SOON after Prime Minister Macmillan had given one of his usual cheerful summaries of the prospects for the nation, the Chancellor of the Exchequer made a speech in Liverpool in the heart of the cotton country this week, where only very realistic sentiments get much attention. Naturally enough, he saw *behind* the nation a number of encouraging signs of progress—he pointed out that, in the third quarter of last year, the latest quarter for which statistics are available, steel output was one-fifth up on the previous year, machine tool output one quarter up, commercial vehicle output one-tenth up and general chemical output one-seventh up. But he admitted that, for most of last year, the production curve in industry generally had levelled off. However, because capital expenditure by manufacturing industry was nearly one-third up in the third quarter on the previous year, he judged that business, generally, was not thinking in terms of a stagnating economy.

And then, as regards distribution, he pointed out that nearly one half of the wage earners in industry had had substantial increases in income last year which spread over the whole of the labour force represented a 5 per cent increase in *real wages*. Moreover, the profits of companies reporting last year showed an increase of 14 per cent.

The growth in productive activity and in national income had increased the nation's import bill at the annual rate of £635 million over 1959. More than two-thirds of this increase was in materials for industry, both raw materials and semi-manufactures. Another quarter of the increase was in respect of finished manufactures, the greater part of which were machinery, vehicles, ships and aircraft.

Thus, the growing import bill was not significantly due to commercial spending. It was the result of industrial development. And this, thought the Chancellor, was an excellent thing, provided the imports could be paid for. In assessing the trend of these imports, he thought the peak had been reached and therefore the country's concern should be to meet the import bill at the present level—but, on this occasion, Mr. Selwyn Lloyd did not propose to deliver an exhortation on imports.

Danger of Inflation

What he did was to give a lecture upon the general danger of inflation growing once again, and that, in the Government's view, was still the weak spot in the economy. And to the Chancellor inflation, as a result of rising costs, raised the old bogey of pricing ourselves out of our export markets and reducing the value of wages and small fixed incomes. But he also made it clear that the Government did not propose to do very much about this. The Government would stick to its monetary controls and beyond that it was up to industry to observe restraint in wages and profits. As for the various measures of credit restriction, the Chancellor said, "I will relax these measures as and when I can in the interests of the economy as a whole."

Unfortunately, he then took a look at Government expenditure, and pointed out that the spring estimates were going to be a good deal higher largely as a result of pay increases to Government servants and increases in educational facilities. He left his listeners with a sorry picture of the prospects of reduced taxation.

For the rest, he put the onus on "our people" whom he exhorted to

(1) Modernise industrial practices;

(2) Develop the will to work;

(3) Develop the will to export;

(4) Develop the will to forgo present consumption in the interest of investment;

(5) Realise that there is a limit to what can be provided from the public purse, and

(6) "Have a clear view of where we want to go as a nation."

So it looks like short commons for 1961, with not even the Chancellor providing a clear view of where we should go as a nation!

FUTURE OF INDIGENOUS BANKERS

REVIVAL OF DEMAND FOR DIRECT LINK WITH RESERVE BANK UNWISE

THE unique position held by shroffs, or indigenous bankers as they are called, in the credit system of India, namely, their pivotal role in financing agriculture, trade, commerce and small-scale industries, and the revival of the old demand for linking the shroffs with the Reserve Bank of India formed the highlights of the deliberations at the Golden Jubilee celebrations of the Bombay Shroffs Association. It is well known that, for the last fifty years, this association has set before itself the ideal of promoting unity and solidarity among the shroffs in the city of Bombay, as well as of bringing together in a common association the shroffs spread all over the country. The Association has also endeavoured to eliminate the disputes between its members *inter se* and brought about some common rules and regulations pertaining to the *hundi* business. It was also on the initiative of the Bombay Shroffs Association that the first all-India Shroffs Conference was organised a decade ago. It was this conference, it may be recalled, which requested the Reserve Bank authorities to renew the efforts to unite the shroffs with the organised banking system, so that they could be eligible for the special facilities provided by the central banking institution to member-banks.

In his presidential speech, Mr. B. M. Chinai very appropriately referred to the valuable services rendered by the shroffs to the important sectors of the national economy, such as agriculture, trade, commerce and small-scale industries. The development of organised joint-stock and co-operative banking, Mr. Chinai maintained, was still inadequate for financing the total credit requirements of the country and the indigenous bankers, with their traditional practices, were still providing the bulk of the finance required for internal trade. Citing the authority of the Committee on Finance for the private sector, better remembered as Shroff Committee, Mr. Chinai stated that 75 to 90 per cent of the total internal trade of the country was being financed by the shroffs. Despite the predominant role thus played by them, the shroffs remained outside the pale of organised banking and he regretted that their links with the latter were still rudimentary and nebulous. Mr. B. M. Chinai revived the age-old demand for directly linking the indigenous bankers with the central banking institution and appealed to the monetary authorities, as well as to the shroffs, to renew their mutual efforts of integrating indigenous banking with the general credit structure.

A Surprising Demand

It is well known that, in spite of the comprehensive treatment accorded by a number of committees of enquiry to the question of unifying the two sectors of the money market—the bazaar and modern banking—and the repeated attempts made by the Reserve Bank itself to provide a direct link with the indigenous bankers, the goal remains as distant as it was before the birth of the Reserve Bank. In fact, one had almost forgotten the existence of this problem. One thought that the goal had been given up as unattainable and, with the new policy that emanated from the report of the All-India Rural Credit Survey Committee in favour of co-operatives, there was no possibility of the issue coming to the fore. It is, therefore, surprising that Mr. Chinai should have resurrected it.

It was as early as in 1931 that the Central Banking Enquiry Committee recommended the need for linking the indigenous bankers with the Reserve Bank of India, when the latter was formed. The Committee specifically suggested that appropriate steps should be taken for the development of a modern bill market in which the indigenous bankers dealing in *hundi*, that is, their traditional bill of exchange, could actively figure. These suggestions, however, never materialised. The Bill Market scheme introduced by the Reserve Bank of India in 1952 has a different objective and has nothing to do with the problem of utilising the shroffs for developing a bill market, as is understood in the U.K. or elsewhere in the Western world. There are many reasons for the failure of efforts to unify indigenous banking with the general credit system of the country, even though there are quite a few indirect links that bind the shroffs with the organised money market and the credit policies pursued by the monetary authorities do, therefore, influence the interest-structure and the volume of business of indigenous bankers. First, the *hundi* is different in several respects from the bill of exchange that is negotiated in modern money markets. While a bill usually represents a particular trade transaction, the *hundi* may be used for raising or remitting funds without reference to any specific trade transaction. The *hundi* has also a restricted negotiability as against the universal acceptability of the bill of exchange. Discounting of *hundis* is generally a clean advance made on personal credit and standing of the particular borrower. The ambiguous nature of the *hundi* stems from the fact that it is not generally backed by documentary evidence, so that it is not possible to know whether it represents a trade transaction or it is simply an accommodation paper. Apart from the differences in the character of a *hundi* and a bill, it is also known that indigenous bankers who handle *hundi*-finance, often have trading business of their own and that they raise funds for their own purposes by drawing *hundis* on their bankers, customers and business firms.

Changed Conditions

The hopes of the Central Banking Enquiry Committee that *hundi* would eventually evolve into the modern bill and form the staple of the money market have not been fulfilled because the Reserve Bank of India had, for very good reasons, put several conditions for extending direct discounting facilities to the shroffs and the latter found these conditions rather too stringent to be complied with. The Reserve Bank expected the shroffs first to segregate their non-banking business and, in course of time, to abandon it completely. They were also asked to modernise their system of book-keeping, so that the monetary authorities could check on their credit standing. The Reserve Bank also desired that the ambiguous character of the *hundi* should cease and that it should become a negotiable instrument always representing a genuine trade transaction. Further, it wished the shroffs to play the role of the discount houses in the Western countries. The shroffs, with their age-old traditions of independence, declined to accept these restrictions as well as the compensating benefits of securing accommodation from the Reserve Bank of India on favourable terms. This was probably one of the reasons why the Bank thought of the second best alternative and introduced the Bill Market Scheme to relieve the stringency of money market during busy seasons. This facility is intended to enable banks themselves to convert a part of their overdrafts into bills of three months' duration, by special arrangement with their customers and rediscount these bills with the Reserve Bank, thereby putting themselves into funds which they could relend for financing the seasonal requirements of trade and industry. But the *hundi* has remained outside the scope of this scheme.

The shroffs have now clearly missed the bus. Their uncompromising attitude in the past is solely responsible for it. With the powers-that-be thinking, speaking and acting in terms of co-operative finance for rural areas and small industries, and with the conversion of the Imperial Bank of India into the State Bank of India specifically for the purpose of extending institutional credit facilities to the rural and semi-urban areas, the Reserve Bank authorities do not seem to be attaching great importance to reforming the *hundi*-finance. Nor does it appear to be contemplating to treat the indigenous bankers on the same footing as institutional banks. It appears to be veering round to the view that there is no great superiority in the form of credit provided by the shroffs and the lack of a traditional bill market need not be deemed as a serious shortcoming of the Indian money market. Accordingly, the creation of bill market, by integrating the indigenous bankers within the Reserve Bank's fold as recommended by the Central Banking Enquiry Committee thirty years ago, is not a very important aspect of the Bank's policy-objective now.

Besides the reasons mentioned earlier for the indifference of the Reserve Bank to shroffs, there is also the fact that, in recent years, there has been a universal trend against bills as a means of raising finance owing to the general preference for cash credits and overdrafts. The latter forms of credit have the advantage that repayment can be made more smoothly and interest is payable only on the amount used. The banks, too, can withdraw the credit on demand, in the event of any unforeseen deterioration in the borrower's financial position, so that there is greater flexibility from the lenders' point of view also. The *hundi*-finance is important only in times, or in areas, of inadequate banking and/or other financing institutions. In recent years, the official emphasis in credit policy is on building specialised institutions which would serve the credit requirements of different types of borrowers. It is with this objective that the State Financial Corporations have been formed. The extension of the branches of the State Bank of India with its pilot scheme for providing assistance to small industrial establishments has also the same goal. In respect of rural credit, too, the Gorwala Committee report on all-India rural credit survey has, as already stated, categorically ruled out indigenous bankers as an appropriate instrument for provision of rural credit.

Still Holding Their Own

In the face of these circumstances, the role and functions of indigenous bankers have to be judged from the important question of overall banking and monetary policy. That shroffs are still holding their own is clear from the available statistics of their operations. The Bombay Shroffs Association itself has estimated the annual turnover of its members alone at around Rs. 100 crores; about 80 per cent. of this is reported to be on account of sight *hundi* transactions and the rest for commercial purposes. It is also known that the Shikarpuri shroffs, with their headquarters in Bombay, have their businesses spread over 400 places in the country and that their outstandings are about Rs. 20 crores at any given time. In several parts of the country, however, the indigenous banking seems to be deteriorating and moneylenders as a class are fast disappearing from the scene. This is particularly true of South India.

But, in saying all this, we do not suggest that Mr. B. M. Chinai was wrong in remarking that "the indigenous bankers serve as an indispensable link between the Indian money market and the vast trading community." Funds are sought from them by borrowers of small means —traders, manufacturers, artisans, commission agents, etc.—who cannot fulfil the test of creditworthiness usually adopted, or supposed to be adopted, by the modern banks. These borrowers have no worthwhile collateral to offer and yet are in a position to put to profitable use all the funds they can borrow. As no other avenues of credit are open to them, these borrowers do not mind the peculiar methods of the shroffs or the comparatively high rates of interests charged by them. Thus, the indigenous banker in India is performing a specialised function of providing risk-finance in small amounts on a clean basis to those who would have felt thwarted in their business or vocation by the absence of short-term finance.

There is Still Good Scope

Notwithstanding the establishment of different types of credit institutions and the attempts that are being made to extend banking facilities in the rural areas with the help of co-operatives, there need be no fear that the specialised field of *hundi*-finance would narrow down in the near future. In cities like Bombay, Calcutta, Madras, Kanpur, Delhi, to name only a few, the indigenous bankers will continue to find profitable scope for their business. The risks they take cannot be easily assumed by banks. The failure of one shroff does not bring about a crisis of confidence as the failure of a bank will. Even in the U.S.A., about one half of the outstanding loans are unsecured. There are also serious complaints about specialised financial institutions. It is said, for instance, that these organised credit institutions are extremely rigid in their requirements of security and insist on margins which are too high for the majority of small borrowers. Many small-scale units do not possess sufficient fixed assets to secure the loans required by them. All this clearly indicates the vast scope that exists for the activities of indigenous bankers in supplying finance on a clean basis to a vast multitude of small borrowers.

Is it Worthwhile?

In appraising the future role of indigenous bankers in the general credit structure of the country, the vital question is whether the monetary authorities should subject these bankers to its restraints and regulations, such as modernising their accounting system, periodical audit

DECLINE IN CAPITAL EXPENDITURE LIKELY TO CONTINUE

RURAL ELECTRIFICATION SHOWS SPECTACULAR PROGRESS

From Our Special Correspondent

NEW YORK, 13*th January*

THERE has been no visible change in the United States economy. Some call it stagnation in relative terms, but nearly all forecasts are now suggesting a pick-up in the second half of 1961.

A change for the better, or worse, is quite possible, because by that time the direction of the John Kennedy Administration will have been established. Meanwhile, there is uncertainty. Caution has been displayed by business and industry. Spending for plant and equipment has been falling.

While total outlays for these purposes will probably have been about 10 per cent higher in 1960 than in 1959, they fell far short of the 13 per cent gain anticipated at the beginning of last year.

The chances are that the decline in capital expenditures will continue for a while. It is one of the major props of the U.S. economy and, therefore, significant. Estimates are that the 1960 figure probably has approached the $36,000 million mark, while spending in the first quarter in 1961 is expected to drop to an annual rate of $35,000 million, or below.

The drop in capital expenditures has been accompanied by a decline in consumer spending intentions of durable goods, according to certain unofficial economic surveys, which, however, are not always accurate. The surveys are made at great expense and, in my opinion, they are meaningless. But surveys relieve managements of big business to think for themselves. They produce figures on which decisions are based, rightly, or wrongly.

At any rate, recent surveys have shown that consumers intend to buy substantially fewer automobiles and appliances than previously. All these factors have not resulted in any sharp declines, but they have not helped to generate an air of optimism. But the obvious decline in durable goods was offset by a gain in soft, or non-durables.

President's Message

President Eisenhower in a parting gesture delivered his "state of the union message" to Congress. He spoke of the progress which had been made in his eight years of Administration, but he also pointed out there was little room for complacency.

There were many dangers at home and abroad, he said, and he cited the continuing Communist menace. In his foreign programme, suggestions and warnings to the incoming Administration, foreign affairs played a considerable part.

He pointed to the threat to the freedom of Berlin, to the explosive situation in Laos, to the Communist penetration of Cuba and to the many problems connected with the nationalist movement in Africa, notably the Congo. President Eisenhower was very gracious in extending good wishes to the incoming U.S. President Kennedy with expressions of hope that he could cope successfully with the many unsolved problems. It was a statesmanlike performance with which no future historian can find fault.

President Eisenhower's apprehensions about foreign affairs are shared at United Nations' headquarters here. Delegates and correspondents from all over the world consider the situations in Cuba and in Africa particularly explosive. But nobody seems to have an answer how to cope with them.

At this point, the U.N. is a high class debating society. It is far superior to the old League of Nations at Geneva, Switzerland, in organisation, information and scope. Although you hear every language in the world spoken here, and translated instantaneously, the two official tongues describing the proceedings are just in English and French. There is a strong feeling at the U.N.—which I share—that the foreign situation will decide much of the new President's economic policy.

Washington policy has been shifting gradually. The U.S. Government's interest in increasing private U.S. investments is centered almost entirely now on countries of Asia, Latin America, the Middle East and Africa. Very little effort is being made now here in extending help to the industrialised countries of the world which have outbid the U.S. in the international markets.

This policy is likely to continue under the Kennedy Administration. Also, a close liaison between Messrs. Eisenhower and Kennedy probably will continue. The basis of the philosophy is that, while public funds will have to be spent in some areas, the soundest way to assure economic development is through private *entrepreneurs* who have a facility to combine capital and skill for the purpose of developing profitable undertakings. In the broadest context, U.S. foreign economic policy is aimed at the creation of a climate satisfactory for business operations by investors. A cornerstone of this programme is the investment guarantee of the U.S. International Co-operation Administration whereby Washington protects investors against some of the political risks, such as expropriation, which are inherent in foreign private investment.

Rural Electrification

It may be of interest to readers in India that the Rural Electrification Administration and its services are now 25 years old. Some of the private utilities have fought, but it has been a boon to many farmers. Through the services of private industry and the R.E.A., the percentage of electrified farms climbed from a scant 11 per cent in 1935 to about 97 per cent of the 4.64 million farms now in existence in the U.S. The R.E.A. has been responsible, to a very large extent, for extending light as well as power for farm work into the remotest areas of the U.S.

During the past quarter of a century, some 1,500 rural electric systems have been financed with funds borrowed from R.E.A. As a result, more than half of the electrified are receiving service from R.E.A.-financed utilities. Earlier in this century, U.S. farmers had little experience with power-driven machinery. All this has been changed gradually.

In conclusion, it may be said there is nothing wrong with the U.S. economy. But President Kennedy's moves and those of his Cabinet will be watched closely. My own feeling is, as I said in previous despatches, that the transition from one President to another will be peaceful and harmonious. Mr. Kennedy will still have to prove himself. He has a very charming, young and attractive wife who is quite accomplished in her own right.—*All Rights Reserved.*

Medium Section Mill—Bloom reheating furnace and Mill run-in table

Construction and operation proceed side by side at Durgapur Steelworks ISCON's Medium Section and Merchant Mills—the final unit of the Rolling Mills Plant—are now well on the way towards completion. Three Mills were commissioned earlier this year and are in operation. The two new Mills will make a considerable addition to Durgapur's productive range.

WHY ARE CLOTH PRICES HIGH?

MR. NAVAL TATA EXPLAINS REASONS AND OFFERS SOLUTION

THE enforcement of a revised schedule of cloth and yarn prices with effect from the 1st of this month has set at rest an unfortunate controversy that had raged for some months, thanks largely to the failure of authorities to appreciate the cotton textile industry's point of view. This is no doubt to be welcomed, but has anyone paused to reflect on the possible consequences of the revision of prices? It is widely feared that the marginal units of the industry producing coarse and medium cloth will be the worst sufferers. Nevertheless, there are many in official circles and outside who continue to point an accusing finger against the mill sector, alleging that extortionate profits alone are responsible for the soaring prices of cloth. That this allegation is unjustified is vividly brought out by Mr. Naval H. Tata in his latest annual statements to the shareholders of the Ahmedabad Advance Mills Ltd. and the Central India Spinning, Weaving and Manufacturing Company, Ltd.

In these statements, Mr. Naval Tata has sought not merely to make an objective study of cost in an endeavour to assess to what extent the mill industry is guilty of profiteering but also to offer a solution to the problem of rising trend of textile production cost and prices. The following break-up of the consumer price per yard of cloth produced by the Ahmedabad Advance Mills in 1959-60 as given by Mr. Tata speaks for itself:

	nP
Cost of cotton	31.00
Manufacturing cotton	53.00
Total cost of cloth	84.00
Provision for gratuity, bonus, depreciation, development reserve and managing agency commission	7.75
Dividends	1.50
Net surplus carried to general reserve ...	2.25
Realisation (ex-mill rate)	95.50
Excise duty	17.75
Distribution charges	17.25
Approximate cost to the consumer	130.50

A Challenge to Government

It will be seen from the figures quoted above that the price paid by the consumer during 1959-60 was 37 per cent. more than the ex-mill rate. Out of this difference, one-half was paid to Government as excise duty, the other half representing distribution cost. Further, of the ex-mill price, as much as 88 per cent. was accounted for by items beyond the control of the industry, such as raw cotton, salaries and wages, bonus and stores. The remaining 12 per cent., which Mr. Tata calls "ostensible profit," included provisions for tax, dividends, depreciation and reserves for future rehabilitation. When the profit margin of a large mill such as Ahmedabad Advance is so small, one can well imagine the position in respect of quite a number of marginal units. Mr. Tata says: "I would like the Government to collect similar figures for other textile units and different industries to determine and compare the profitability of the cotton textile industry with industries manufacturing consumers' goods before the cotton textile industry is condemned as habitual profiteers." This is a challenge to the Central Government. Will it accept it and prove that its critics are wrong?

Mr. Naval Tata is wholly in the right where he says that no lasting solution to high cloth and yarn prices can be effected by an arbitrary directive to reduce prices; it can only be achieved by a 'judicious' increase in production. And no impartial observer of the trends in the Indian textile industry can dispute his contention that the organised mill sector alone can fully shoulder the responsibility of producing cloth to meet the demand of India's fast growing population. To quote him:

"It is, therefore, the primary duty of the State to do everything possible to assist the existing units to acquire all essential new and balancing equipment in as short a time as possible. Also, during the intervening period, the State should afford every opportunity to the mill industry to make the fullest possible use of the installed capacity. In the ultimate analysis, higher production is the surest cure for inflation. Any attempt on the part of Government to force a reduction in prices, directly or indirectly, without making an all-out effort to increase production is bound to upset the stability of the industry, as well as the economy of the country as a whole.

"Unless it is intended that our industry, which is the third largest foreign exchange earner, should remain for ever obsolete and antiquated compared to its international rivals, some consideration requires to be shown towards diverting a part of its profits towards the modernisation of plant and machinery. This cannot be achieved, unless the concept of profits in relation to prices takes into account the dire need for earning sufficient profit in order to build up enormous resources for rehabilitation. It is obvious that, with such low profits as dictated by Government, the industry cannot raise from its own resources the huge financial outlay required for renovation and modernisation of its outdated and inefficient plant and machinery. At the same time, the industry is unable to attract capital from the investment market, as capital flows in the direction where the yield is the highest. Thus, the industry is caught in a vicious circle. It cannot attract new capital due to its low profitability, nor can it improve its profitability unless it secures necessary funds for much needed modernisation and rehabilitation. This unfortunate position, under which the industry is likely to remain stagnant, can only be set right by a constructive and imaginative outlook on the part of the Government."

Not Asking Too Much

Mr. Naval Tata has certainly not asked for too much from the Government. He just wants the Government to do what its confreres in other countries have done to enable the cotton textile industry to maintain a high level of production, improve quality and ensure a reasonable level of prices. A notable example is provided by the U.K. Government which has acted boldly to salvage the textile industry from rack and ruin by timely financial assistance to enable the industry to modernise and rationalise its operations on an extensive scale. How can an industry which consists of a large number of units with plant and machinery that are obsolete and inefficient by modern production standards withstand the weather of keen competition in world textile markets? The industry's resources are too inadequate to meet the vast requirements of funds for renovation and modernisation.

In spite of official ineptitude, it is, indeed, gratifying to learn from Mr. Tata that the managements of the Ahmedabad Advance and Central India Mills are endeavouring to improve working conditions and produce better quality cloth at lower costs. The Ahmedabad Advance has put into commission new plant and machinery. The water softening plant will supply treated water with minimum hardness to the processing departments, resulting in more economical and improved processing of cloth. The combing equipment will permit production of finer quality fabrics. The high speed sizing machine will enable the production of improved warp yarn which will ultimately improve the quality of cloth. The drying range will help to increase the volume of processed goods which fetch much better prices than the sale of cloth in grey state. The Company holds an import licence for a Sanforiser but it is unable to import it, as Messrs. Cluett and Peabody, Inc., New York, who are the licensors of the patent and trade mark, are not willing to accept the new terms and conditions laid down by the Government of India regarding the registration in India of the trade mark 'Sanforised' and the payment of royalties for the use of this mark. This has been a great disappointment to the Company, as sanforising of fabrics is a matter of compelling necessity for the pattern of production the Company has now adopted and for operating its unit more profitably. The Company has now been granted the necessary essentiality certificate by the Textile Commissioner for the import of 96 automatic looms from Japan on deferred payment terms. Given adequate response from the trade union, the introduction of automatic weaving may well usher in a period of higher output of quality fabrics at a lower cost and at the same time give the workers an opportunity to earn higher wages. The Central India has completed the first phase of its renovation programme. It has yet to carry out extensive renovation, particularly in Mill No. 3, and attention is also required to improve processing and finishing capacity located in Mill No. 4. As soon as times permit, the management will, it is said, embark upon a programme of gradual renovation and replacement wherever necessary.

REVISION IN FLOOR AND CEILING PRICES

The uncertainty regarding the revision in the floor and ceiling prices of certain varieties of cotton has happily ended. The Textile Commissioner notified, on the 12th inst., that, in view of numerous representations from growers and traders, the Government has decided to raise the floor and ceiling prices for Kalyan 25/32" and Westerns 26/32". Prices before and after the revision are as under:

(In rupees per quintal)

	Floor		Ceiling	
	From	To	From	To
Kalyan 25/32" ..	135 (480)	139 (495)	236 (840)	241 (855)
Westerns 26/32" ..	145 (515)	151 (535)	239 (850)	245 (870)

Note.—Figures in brackets are prices per candy of 784 lbs.

As regards Vijay 'B' cotton, the Government feels, adds the Press note, that there is no justification for making any change in the floor and ceiling prices, particularly, as the floor and ceiling prices for Vijay 'A' variety, which constitutes the bulk of the Vijay crop, were substantially raised earlier. In order, however, to safeguard the position of Vijay 'A' qualities which are grown in Vijay 'B' tracts, it has, however, been decided that these qualities, if recognised as such, would be entitled to the floor and ceiling prices prescribed for Vijay 'A'.

It has also been decided to make no change in the floor and ceiling prices for Ankleshwar cotton.

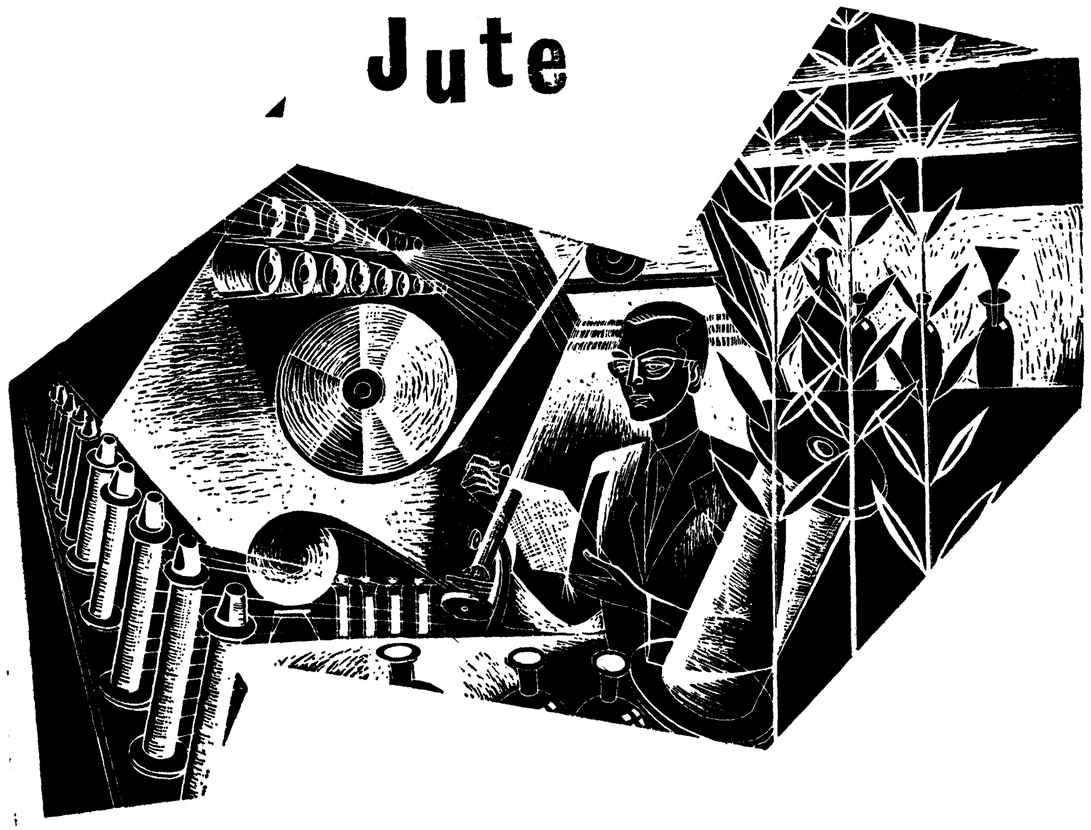
It may be noted in this connection, that, on the eve of the commencement of the present season, the Government had announced that, except for a few changes, the floor and ceiling prices for the 1960-61 season would, by and large, be the same as in the previous season. The changes made included a reduction in the price of Kalyan and Western varieties. It is now felt that the cut in the price of these varieties was too large to be effected in a single year. Hence the cut has been partially restored now. The Government has also made it clear that, in view of the importance of maintaining the floor and ceiling prices of all varieties unchanged during the season, no further representations for any alteration in prices would be entertained. The question of appropriate differentials for the different varieties of cotton for the next year will be considered at a meeting of the officials of the States Departments of Agriculture and representatives of trade and industry to be held under the auspices of the Indian Central Cotton Committee on 21st February 1961. The views of this meeting, as well as representations from the different interests concerned, would be considered by the Government before the floor and ceiling prices for the next season are fixed.

The increase in floor and ceiling prices of Kalyan and Westerns has, however, disappointed growers and the trade which consider it too small to bring the prices of these varieties to parity with those of others. Spinners of these varieties, on the other hand, have regarded the rise as unwarranted. Apart from the unhealthy precedent created by the revision of floors and ceilings in the middle of the season, it will also have, mill interests point out, the undesirable effect of enhancing the raw material costs of the industry, however small the rise might be, at a time when the industry has effected a voluntary cut in the price of cloth. But it must be said in fairness to the Government that, in deciding to revise the floor and ceiling prices, as it has done, it has maintained a reasonable balance between the conflicting interests of the producer and the consumer, inasmuch as the increase is only very modest.

A NEW PROCESS OF DYEING WOOLLEN CLOTH

The first major break-through in colour and design technique for woven woollen cloth for at least half a century has been claimed by a Scottish firm. By means of a new dyeing process, as many as 30 to 40 different colours can be incorporated in a single fabric. Hitherto, each thread of yarn has been of one colour, thus limiting to seven or eight the number of colours which can be used in a single pattern. Using the new technique, each thread of yarn can be dyed in five or six colours according for several years.

ing Director and designer, Mr. Bernat Klein, who founded the firm nine years ago in part of a disused Galashiels mill. Before coming to Galashiels, he studied textiles abroad and at Leeds University number of colours employed can be multiplied many times, if desired. Research was carried out for more than a year before the technique was perfected: application for patent rights has been made. Originator of the idea is the company's Manag- to the designer's requirements, so that the total



Jute

— an industry on the march

Long regarded as the cheapest heavy-duty packaging material, jute is today claiming attention as a fabric with greater possibilities and wider applications.

Laminated with paper or plastic, jute fabrics provide moisture-proof containers for fine or high-grade products. Treated with chemicals, they offer protection against rot, mildew, corrosion and attack by rodents and insects. Scientific experiments have resulted in the production of a hessian membrane for water-proof roofing... hessian in combination with asphalt is finding increasing favour as a material for canal-lining and a moisture barrier.

These and other discoveries which have dramatically widened the scope of jute usage, stem from the fundamental and applied research carried out at the Indian Jute Mills Association's Research Institute in Calcutta. Side by side, the Institute of Jute Technology—financed by the IJMA—provides facilities for training young men for important supervisory positions in jute mills.

Founded in 1884, the Indian Jute Mills Association seeks to serve India's vital jute industry in ever-increasing measure.

FUTURE OF COTTON TEXTILE INDUSTRY

COMMERCE CHAMBER STRESSES NEED FOR AVOIDING UNCERTAINTIES

From Our Special Correspondent

MANCHESTER, 10*th January*

THROUGH the medium of its sectional annual reports, the Manchester Chamber of Commerce is frequently in the news at this time of the year. These documents provide a useful commentary on the events of the past twelve months, as seen through the eyes of industrialists in a variety of trades, not necessarily on the basis of textiles only. In its final *Monthly Record* of 1960, however, the Chamber dealt with the cotton trade situation, arising from the reorganisation scheme and the ever-present threat of imports from abroad. It pointed out that the future long-term position of the Lancashire industry must soon be established so far as units, plant and equipment are concerned. When the finishing trade's scheme is complete, a total view of the position will be possible and estimates can then be put forward as to the likely extent of productivity and processing.

MANCHESTER LETTER

Very shortly, therefore, it may be possible to assess what targets should be set up and measures taken to provide sufficient confidence in the industry to encourage workers to make careers for themselves in textiles. As the Chamber says: "This latter aspect is most vital and care must be taken to avoid action and decisions which will create uncertainty."

Throughout the frequently chequered history of the Lancashire cotton and allied trades, the establishment of confidence has been of paramount importance. Producers and customers alike can be so easily swayed from their intentions by uncertain prospects that any attempt to achieve stability deserves commendation. "The whole success of the gigantic plan, which has been engaging so many, for so long, and at considerable cost, could be undermined by reasoning which did not take every factor into acount," is the Chamber's summing up of the situation.

Earnings Over the Decade

In dealing with the analysis of trading results announced by cotton textile companies in 1960, it is impossible to ignore the sharp decline in the number of public companies in the spinning section in the past 20 years due to a variety of causes. For this reason, strict comparisons are impossible and the table of profits and dividends covering this department alone has lost some of its original purpose. On the other hand, the growth of the large groups and the spinner-weaver combinations enable a more realistic comparison to be drawn between the earning power of such companies, at least in recent years. A similar situation exists in the weaving branch, but it must be clearly stated that the score of public concerns in this section represents a very small proportion numerically of the manufacturing units in the trade, although they constitute a major sector of the capital involved.

The following tables set out the experience of over 50 of the largest concerns in the producing sections of the trade during the past ten years:

	Companies	Average profit per company	Yearly average dividend
Combines		£	Per cent.
1951	11	761,526	19.00
1952	13	534,004	17.42
1953	12	264,180	11.94
1954	12	431,928	13.58
1955	14	333,213	14.99
1956	14	224,904	13.23
1957	14	354,919	12.72
1958	14	235,716	10.79
1959	14	120,254	9.73
1960	14	375,425	12.48
Spinner-Weavers			
1951	17	194,423	23.03
1952	17	177,045	19.98
1953	21	74,047	17.06
1954	17	82,200	16.32
1955	20	60,701	13.96
1956	18	50,233	12.53
1957	18	69,197	10.89
1958	19	71,504	10.74
1959	20	57,736	10.18
1960	17	112,844	14.17
Weavers			
1951	21	120,494	31.79
1952	21	79,837	24.99
1953	28	49,821	21.21
1954	28	38,120	15.98
1955	27	42,285	13.80
1956	24	28,090	9.61
1957	24	24,320	6.27
1958	23	25,015	5.07
1959	22	19,073	6.64
1960	20	47,492	9.66

Variations are inevitable even within the individual sections, but the general trend, particularly of dividend payments, is quite marked. In 1951, the industry was at the peak of its post-war prosperity and the level of earnings and dividends tended to decline until the past year's results.

Uncertainty still hangs about the industry, despite the busy hum of machinery in the mills and there are numerous factors which can adversely influence the position, even before the current year is out. At the same time, most boards of directors are quietly confident about being able to maintain their recent profitability, provided there are no unforeseen developments. The chief problem to be faced centres on whether the "open door" policy on imports will be reinstated.

U.S. Protection Attacked

Unless the United States Government can be persuaded to put into practice a real policy of trade liberalisation, attempts to secure greater penetration of the United States market by British exporters of cotton textiles will fail, according to the United States Section of the Manchester Chamber of Commerce. In its annual report, the section said that textiles were particularly affected by the protective measures adopted by the United States. Exports of cotton cloth in the first nine months last year were reduced from the already low figure of 5.8 million square yards in 1959 to 4.5 million square yards.

The Government should be urged by the industry to pursue the matter with more force and urgency than had so far been apparent. Sectional reports for many years had criticised the protection afforded to American manufacturers, but some hope of a change had been raised by the result of the Presidential Election.

Lancashire's traditional trade in typewriter ribbon cloths with the United States was being severely handicapped as a result of changes in tariff rates. The American domestic industry had claimed that it was suffering serious injury from imports and, after a Tariff Commission hearing, the President had increased the duty on typewriter ribbon fabric to the rate originally established in 1930.

Smaller Cotton Exchange

Lancashire millmen—salesmen, merchants and buyers—are unlikely to mourn the announcement that about half of the great trading floor of the Manchester Royal Exchange is to disappear in a scheme to build two five-storey office blocks rising from Exchange level. Generations of cotton men have operated there. At one time, it was the largest floor in the world, covering 4,400 square yards. It is now about half that size, but, when Princess Margaret reopened the war-damaged building in 1953, 6,000 people on the great floor watched the ceremony in comfort. Once, at peak trading hours, about 8,000 cotton men met to buy and sell yarn and cloth and negotiate on prices. Now it is a busy day when 1,200 people assemble on 'Change.

When the industry was at its busiest, there were between 10,000 and 11,000 members. The numbers are now down to about 2,000, the decline having been accelerated by the recent reorganisation scheme in the cotton industry.—*All Rights Reserved.*

HEAT RESISTANT FABRIC

A flame and heat resistant fabric made by the Minnesota Mining and Manufacturing Company Ltd., and introduced at the recent Public Works and Municipal Services Exhibition at Olympia, represents an important advance in the manufacture of protective clothing. At present, manufacturers of heat resistant clothing have to choose between light comfortable material which does not give efficient protection and heavy material which is bulky and stiff and which therefore restricts movement. Scotchshield, the new fabric, consists of woven rayon or asbestos covered with a coating of aluminium six-millionths of an inch thick. Material treated in this way is porous, light, supple, and efficiently heat resistant. The reflective properties of the aluminium produce a 90 per cent. throw-back of radiant heat. In experiments carried out in the United States, men have been submitted to furnace heats in excess of 1,500°F., without discomfort. A test of the product's resistance to molten metal splashing has shown that the fabric, which did not scorch, is superior to asbestos and heavy wool materials. It does not crack or ignite, and has a long span of life before the danger of fatigue need be considered.

MAHARASHTRA LAND CEILINGS BILL

INCLUSION OF CANE FARMS ATTACHED TO SUGAR MILLS HIGHLY UNJUSTIFIED

BY criticising the Maharashtra Government's move to include the cane farms attached to sugar mills under the purview of the Land Ceilings Bill and warning against its dangerous consequences, the spokesmen of the twelve joint-stock sugar mills in the Deccan have certainly not cried "wolf." They have just stated the facts. And in doing so, they have been prompted by the anxiety to safeguard the interests of not merely the sugar millowners, or the workers employed in mills and persons engaged in cane farms, or, for that matter, the 21,000 and odd shareholders of sugar companies, but of the community as a whole. Considering the immense contribution made by the joint-stock sugar mills to the present prosperous conditions in the economy of the Deccan region and the fine example they have set for the rest of the country of the way in which sugar should be produced, the representatives of the mills have earned a right to ask for a fair deal at the hands of the Government.

The aforesaid aspect would be appreciated fully if one were to have a look at the history of the sugar industry in the Deccan right since its inception more than three decades ago. In the early twenties, it will be recalled, the then Government of Bombay undertook, as a famine relief measure, extensive construction works in the Ahmednagar district. Forming part of the programme was the new famous Nira canal system. But soon after the implementation of the whole programme, the Government was faced with a big problem, because, since the land cultivation in the areas served by the Deccan irrigation canals was poor, the return on the investment to the exchequer was very low. In fact, even land revenue could not be collected by the Government. The latter had to attach some lands and auction them publicly for recovering arrears of land revenues. A special committee was appointed to suggest ways and means of improving the financial aspect of the irrigation works.

A Heavy Blow

In the light of the recommendations of this Committee and with a view to taking advantage of tariff protection accorded by the Central Government to sugar industry, the Bombay Government extended help and co-operation to *entrepreneurs* for acquisition and leasing of lands for growing cane to start sugar factories. It also gave an assurance of canal water supply on guaranteed basis for 30 years at concessional rates. It marked out appropriate areas as sugar factory areas. These concessions attracted enterprising industrialists and induced them to set up sugar mills. Many agriculturists leased out their lands to the mills at several times the land cess and also took employment in the cane farms. They were assured of employment throughout the year and also some returns on lands which were a burden to them because of poor returns. In addition to long-term leases, some sugar companies also purchased from time to time large areas of land from peasant owners who wanted ready capital in search of more remunerative ways of living. The total area of land sown to sugarcane partly owned by sugar mills and partly taken on lease is today no more than 125,000 acres, which represents a bare ¼ per cent of the total cultivable area of 46 million acres in the whole State. This is not going to help the State Government very much in achieving its objective of distributing enough land to each of the landless worker or farmer with uneconomic holdings. But it will deal a heavy blow to the economy of Maharashtra in general and the sugar industry in particular.

Thanks to the enterprising spirit of joint-stock companies and the enormous effort and pains taken by them, a vast area of land, which was once either barren land or a jungle of thorny bushes, today blooms with smiling sugarcane farms. How remarkable has been the progress made in cane-growing will be evident from the fact that the average yield of cane per acre in Maharashtra is more than four times the average for the whole of India and is higher than the yield obtained not only in other States but also in several other leading sugar-producing countries in the world. Similarly, the quality of cane grown is superior. The relevant details are given in the table appearing in column one.

The highest sugar recovery per cent in India was achieved by the Kolhapur Sugar Mills Ltd. in 1958-59, hitting a percentage of 13.04. This is only slightly lower than the world's highest of 14.33 per cent in Australia. Sugarcane farms in the Deccan are part of a composite unit and as such constitute an integral part of the sugar industry in Maharashtra. There is an intimate link between the factories and their farms. They are very efficiently managed on the most modern and scientific lines, so that they have become model farms to be emulated and are, in fact, being emulated by private cultivators in the vicinity of company-owned factories. They have made permanent structural improvements.

Extensive Research

It is only at the farms attached to sugar factories that extensive research laboratories and experimental stations have been established. Purity and recovery tests and other items of research have been undertaken by these laboratories for the general improvement of sugarcane. Factory estates work as consolidated units, utilising both light and heavy soil, which the small cultivators cannot afford to do. Individual cultivators will have to utilise a larger quantity of water for the same acreage than sugar factory farms. Large estates ensure supplies to the factory of quality cane at reasonable price, which is not the case with small cultivators.

Company-owned sugar factories provided its workers healthy residential quarters, free medical aid, free primary and even secondary education in many cases, provident fund benefits, bonus and recreational activity. Among agricultural workers, it is only the workers engaged in the sugarcane farms of the factories who are able to enjoy the benefits of the Industrial Disputes Act.

The joint-stock sugar companies have spared neither labour nor skill nor money in pursuing research and introducing the most advanced methods of crop raising and soil conditioning. This has gone on year after year. The experiments carried on in the mills' own laboratories and on the land, the results of research work undertaken by Government and semi-official institutions, and the experience gained by cane cultivators abroad have all been, and are being, constantly pressed into service by a trained and expert farm staff to increase the yield and improve the quality, thereby reducing the cost of sugar production. When the sugar companies have done all this for the community and brought all prosperity to the land, it is absurd that the Government of Maharashtra should want to quarrel with the system purely out of devotion to some vague ideology and desire for attaining short-term political gains.

The Case for Exemption

The case made out by the sugar industry for exemption of cane farms attached to mills from the purview of the Ceiling Bill can be summed up as follows:

For the economic development of the available land resources for growing sugarcane, it is advisable to have compact and large units as countenanced even by the Planning Commission.

Large industrial concerns would be more beneficial for exploiting maximum resources of the land by proper utilisation of finance and other resources and particularly managing the compact units on modern scientific lines.

The existence of compact and large agricultural units attached to a vital industry like sugar are necessary for carrying out proper research experiments and utilisation of the research for higher cane yield as well as sucrose percentage, thus putting the whole industry on a sound economic basis so as to be able to compete in the world market in the export trade.

For mechanical cultivation and for modern and scientific utilisation of methods, large compact units under industrial concerns are more adviseable than fragmented pieces of land brought under agricultural co-operatives lacking in enlightened and selfless leadership.

Labour welfare can be better secured by recourse to the application of welfare laws through industrial concerns or by making the owners of small holdings and putting them under co-operatives.

Presence of large size industrial concerns, with compact and large agricultural units serve also as educational value for small-scale agriculturists as well as their economic role in the rural economy of the country.

If, in spite of all that has been stated above, the Maharashtra Government were to reject the plea for exempting the farms attached to sugar mills from the provision of ceiling, the consequences are bound to be quite unfavourable to the Indian economy as a whole. It will mean undoing what has been done over a number of years. There is no exaggeration whatever in the statement that the move will adversely affect the productivity of cane farms and the technical efficiency of sugar mills, besides leading to a slowing down in the growth of sugar industry in Maharashtra which is blessed by Nature with favourable conditions for establishing more sugar units. The Bill clearly seeks to penalise heavily those who have displayed efficiency and enterprise, the two qualities which are essential for the economic progress of the country.

	Average yield of cane per acre (Tons)	Recovery of cane (Per cent.)
Maharashtra	58.86	11.46
Other States in India		
Andhra Pradesh	27.88	9.53
Madras	25.65	9.07
Mysore	24.11	10.35
U.P.	12.12	9.60
Bihar	4.87	9.78
All-India average	14.49	9.84
Other sugar-producing countries in the world		
Hawaii	62.5	12.22
Peru	41.14	12.33
Java	56.20	11.49
Egypt	30.42	9.97
Japan, Formosa	28.07	12.93

Note.—The average recovery of sugar in Maharashtra during 1959-60 was higher still at 11.70 per cent. The sugarcane farms attached to the Walchandnagar Industries is claimed to have obtained sometime ago 122.4 tons of cane, or 14 tons of sugar per acre, which is slightly below the world record of 129 tons in Hawaii.

SUGAR EXPORTS

According to Mr. S. S. Kanoria, Chairman of the Export Agency Division of the Indian Sugar Mills Association, the foreign sales of the 50 000 tons of sugar released by the Government of India for export in September last have already been completed. Sales are now being made out of the recent second release of 50,000 tons and sales of this additional quantity may be made more briskly. As India was out of touch with the international sugar market for over a year until the sales were resumed in September last, much of the spade-work originally done to establish Indian sugar in our natural markets had to be done again and Mr. Kanoria now feels that the sales are gathering momentum satisfactorily.

The geographical distribution of the sales made include the Malayan Federation, Singapore, Aden, Persian Gulf Ports, Saudi Arabia, etc. Particular mention is made of a shipment of 3.000 tons to Colombo at very short notice, which elicited thanks from the Ceylon authorities for this assistance rendered to them. Another matter for satisfaction is that about 20.000 tons out of these sales have been shipped already to all these destinations, the remaining 30 000 tons will be shipped before the end of February. Special care has been taken to ensure quality control at every stage and this has not only produced appreciation from the foreign buyers but also has tended to obtain better prices for Indian sugar. There is a better buying interest from abroad. The estimated foreign exchange earning will be £1.6 million.

J. K. COTTON SPINNING AND WEAVING MILLS COMPANY LTD.

KAMLA TOWER, KANPUR

It is hereby notified for general information that the Scrips for the new 6½ per cent. Tax-Free Cumulative Redeemable Preference Shares and Equity Shares issued by the Company (*vide* Prospectus dated 14th April, 1960) and allotted on 3rd June, 1960 are lying ready and are being exchanged for Letters of Allotment duly discharged. This information has already been posted to all the allottees. It is hereby requested that those who have not yet sent their Letters of Allotment duly discharged, should send them to the Company for being exchanged for respective Certificates.

KANPUR,
12th January, 1961.

R. N. GUPTA,
Secretary.

BRITISH STEEL INDUSTRY'S RECORD IN 1960

FURTHER EXPANSION PLANS UNDER WAY

BRITAIN'S steel industry increased its capacity last year to the level of 25.7 million ingot tons. Production also went up to the record level of 24 million tons, representing as much as 93.5 per cent. of capacity. All sections of the industry have shared in the increase in output which took place in 1960—heavy sections and bars being 26 per cent. above the previous year, light sections and bars close behind with a 24 per cent increase and plate running them close with a 23 per cent increase, and alloy steel having gone up by 22 per cent, sheet and tinplate by 14 per cent and tubes by 12 per cent.

According to the British Iron and Steel Federation, the three great development programmes since the war, on which £900 million has been spent, have raised Britain's steel-making capacity, by stages, to just under 26 million ingot tons in 1960. In that year alone, one-sixth of all the money (£780 million) spent by manufacturing industry on capital investment in Britain has been absorbed by the steel industry. By 1965, the industry will have spent another £450 million on development, of which over £150 million is expected to be spent in 1961. The expansion that will be under way will raise Britain's steel-making capacity between 1960 and 1962 by 17½ per cent, as compared with 10¼ per cent in France, 9½ per cent in Italy and 6¼ per cent in Germany. It is expected that capacity in 1962 will reach the level of 30 million tons—equivalent to the level of demand anticipated in 1965.

Steel consumption in the U.K., however, may show a net increase of only 2 to 3 per cent in 1961, as compared with 1960. This will be so because, while the requirements of the capital goods industries will continue to grow, orders from the motor vehicle and consumer durable industries will probably not recover until the second half of 1961. Stocks of steel, which rose by over one million tons (to 5.8 million tons) in 1960, are unlikely to rise by more than ½ million tons in the current year. Although the immediate prospect for overseas demand for steel is not encouraging, the British Iron and Steel Federation thinks that it may be possible for exports to exceed the record level of 4.2 million tons achieved in 1960. On present evidence, it is assumed that demand (both domestic and overseas) will support an output of about 24.5 million tons—equivalent to just over 90 per cent. of the estimated effective capacity in 1961.

Exports

Some interesting facts about Britain's steel exports may also be mentioned here. It is noteworthy that besides the enormous amount of steel which Britain exported last year in the form of manufactured goods, the steel industry's own direct exports of steel were over four million ingot tons, valued at about £230 million—a post-war record. According to latest figures, more than a third of this went to Commonwealth countries; exports to the Commonwealth were 20 per cent. up on 1959 in tonnage. Tonnage of exports to Western Europe showed a similar upsurge. Exports to the Soviet bloc including China, though small by comparison with total exports, also showed an increase.

Currently, the role played by Britain's steel industry in providing employment is something immense. As many as 300,000 people are directly concerned with making steel. There are another 2½ million people engaged in turning that steel into various useful things from cars to cookers. In Scotland, where there are 72,000 jobless, the industry is bringing hope of an industrial renaissance. Here, Colvilles, one of the leading steel producers, are going ahead with their plans to raise their steel-making capacity from 2.3 million to 3.3 million tons a year. They are planning to produce 500,000 tons of steel sheet and 175,000 tons of light plates a year. This project for making sheet steel, it is hoped, will attract manufacturers of cars, car accessories, refrigerators, washing machines, cookers and office furniture. A canning industry could also follow. It is stated that Rootes and the British Motor Corporation have already decided to go to Scotland. These motor car firms would not have elected to go there but for the strip mill projected by Colvilles. They are expected to give a fillip to a number of ancillary trades in Scotland.

It is the employment potential of the steel industry and of the steel-using industries that has justified the British Government's decision to lend Colvilles £50 million for their hot strip mill project. This loan, incidentally, caused a controversy in Parliament where the spokesmen of the Labour Party said it was wrong to use public money for the benefit of shareholders and the Conservative backbenchers attacked it as "bastard socialism." It is, indeed, strange how easily ideological considerations can blind critics—whether of the Left or of the Right—to the practical aspects of State assistance wherever, without it, no development is possible.

USE OF DIAMOND COMPOUNDS FOR GRINDING AND POLISHING

Since the days of Leonardo da Vinci (1485) diamond dust—usually suspended in olive oil—has been used for polishing precious or semi-precious stones; but only recently have methods of accurate sizing, followed by even distribution and permanent suspension in suitable carriers, been discovered.

High speed aircraft and guided missiles, demanding very great accuracy of form and surface smoothness to reduce skin friction, as well as precision in the instruments used for control and computation, provide a special impetus for continuing research. Accurate surface finishes on pump seals for the chemical and petroleum industries, and seals for use in underwater breathing apparatus are other modern requirements which only diamond polishing can meet.

Methods of crushing, sieving, separating and sizing the basic material are constantly under review. If diamond is crushed too violently it breaks up into needles and slivers, which will not resist the lapping pressures they may be called upon to withstand. Very fine particles adhere together in clots, which must be separated by means of a wetting or dispersing agent. A plasticising medium must also be added to give the correct consistency to the finished paste.

In all precision finishing compounds, uniform size and even distribution of the particles are vital factors. So are compressive strength and hardness, on which the clean action and effective life of the compounds depend. Diamond particles are found to be four times more resistant to fracture or deformities under pressure than other abrasives, such as the carbides of silicon and boron.

Today about 18 million carats of diamond are mined annually to meet a total world demand for more than 25 million carats. A high proportion of industrial quality diamond comes from the Congo, and other parts of Africa where labour or political difficulties may well lead to a falling off in output. Yet the demand for diamond compounds is steadily growing and with it the need to avoid any waste by haphazard application of these substances.

At the Maidstone Works of Engis Limited in Kent, new methods have been devised by which uniform distribution and permanent suspension at all temperatures can be guaranteed. This company has also devised a new micrometer-controlled syringe, known as the Hyplicator, for the accurate metering of their "Hyprez" grinding and lapping compounds. These compounds, which may cost up to £120 per ounce (£20 per 5 c.c.) are made from diamond particles between 1/10 micron (0.0001 mm.) and 90 microns (0.09 mm.) in size, sub-divided into 12 separate grades and permanently suspended in a variety of special pastes. Between them they cover the whole range of cutting and finishing processes on soft, hard and very hard materials.

Minute quantities are needed for each operation, and great economies can be made if these are accurately dispensed. They are used in preparing metallurgical specimens for the microscope, where the cleaner cutting action of diamonds over other abrasives prevents surface constituents in the metal from being disturbed. They are equally important in the manufacture of precision instruments, radar and gyro mechanisms, the precision fitting of turbine blades or the polishing of paper glazing rolls and engravers' plates for the printing industry. Steel moulds for making pills or plastics must be diamond-lapped to a high finish, so must the ceramic nose cones of rockets and tungsten carbide dies used in wire drawing.

Surfaces brought to a high finish in this way are naturally resistant to atmospheric corrosion since they contain no pores or crevices in which moisture could lodge. They might, however, be damaged by some of the products of corrosion—notably crystalline copper sulphate or verdigris—which could result from the use of a metal applicator gun. For this reason the body of the Hyplicator is made of moulded nylon, with a threaded nylon shaft which engages with a knurled micrometer screw (also made of nylon) in the top of the barrel. The shaft is connected to a neoprene plunger, whose base has been given a greater radius of curvature than the nozzle cup into which it descends. This ensures that every vestige of compound is forced into the centre of the cup and down the nozzle as the syringe empties. The whole nozzle fitting can then be removed and attached to a freshly loaded syringe, so that none of the compound is wasted.

Diamond compounds are also used at nuclear research establishments for grinding and finishing titanium, zirconium, tantalum and other rare metals including beryllium, whose highly toxic dust makes it necessary to machine the material by remote control in a totally enclosed cabinet. Under these conditions Hyprez compounds can be metered on to the work by means of an electric motor with a rubber driving wheel which bears on the knurled screw in the top of the Hyplicator.

HINDUSTAN MACHINE TOOLS ABOUT TO MAKE HIGH PRODUCTION TURRET LATHES

The State-owned Hindustan Machine Tools will shortly begin producing High Production Turret Lathes for the Indian market. This new machine, which has been completely designed and built by H.M.T's engineers, is to be one of the new series of turning machines built for the first time in India without any technical collaboration from abroad. It took about a year's research and development work for the Designs Department of the factory to build this machine.

Modern in its design technique, the machine is in line with the latest machines designed and developed in Europe. Its production also marks the first step towards the factory's attempt at attaining self-sufficiency in design and development. It is easy to maintain, is generously proportioned and indexed with extreme accuracy on account of its jig-bored index holes. The standard speed range of both the pre-selection and mechanical head stock is from 32 to 1,400 r.p.m., while alternative speed ranges of 23 to 1,000 or 45 to 2,000 r.p.m. could be provided if desired by a customer. The spindle runs in a precision double row, cylindrical roller bearing at the front end, and has an A1-6" standard spindle nose with metric 80 taper bore. Further, it is designed to take power-operated chucks if required. The machine will be available in three sizes with centre heights of 200, 225, and 250 mm. giving swings over the bed of 400, 450 and 500 mm. respectively.

Production of this machine on a large scale, it is estimated, will enable India to effect a saving in foreign exchange of about Rs. 2 crores. India absorbs about 300 machines of this type per year. It is expected that the machine built by H.M.T. will be priced 15 per cent. below the price of imported equivalent. The price of an imported machine of this type is around Rs. 60,000 now.

SCAMMELL REORGANISATION

The first stage of a large-scale reorganisation and production development scheme is now nearing completion at the factories of Scammell Lorries Ltd. Within the last few months £120,000 has been spent on the scheme, which includes new plant and extensions totalling 70,000 sq. ft. Car parking areas have been resited to make room for a new factory building that will be put in hand as soon as planning permission has been obtained.

The immediate object behind the scheme is to make fuller use of the existing overall factory area and labour force to boost production to meet the greater demand for Scammell vehicles and trailers. This demand is said to have increased overseas since the Scammell Company had the advantage of the Leyland Group Export Sales network, and very large quantities of four wheel and six wheel drive special oilfield type trucks and tractors are now operating in the major oilfields of the Middle East and other parts of the world.

These factors, coupled with the recent introduction of extremely attractive designs such as the 10-wheeled articulated Trunker and the Siberga dumper, as well as the heavier type trailers, have resulted in a record number of orders this year. In fact, orders in hand at the Scammell factories are at peak level. At the moment they are over 150 per cent higher than at the financial year ending 1959, and over three times higher than at the 1958 financial year end.

NEW PRODUCTS AND PROCESSES

New Sizing Machines for Textile Yarns

A DUTCH engineering firm has developed and started producing a new multi-cylinder sizing machine for cotton, linen, jute and synthetic yarns. This machine has a productive capacity of up to 600 kg. (1,320 lbs.) of dry yarn per hour and speeds of up to 110 m. (360')/minute at a power consumption of only 15 h.p. Steam consumption is very low. The yarn is conveyed to the size-box via a yarn feeding mechanism which has a variable speed. This is an important feature with synthetic yarns as well as with cotton yarns because they can be shrunk as soon as they become wet. The automatically controlled size temperature, size level and squeezing-out pressure ensure extremely uniform absorption of the size. The stainless steel drying cylinders, the first of which are coated with teflon to prevent adhesion of the yarn to the cylinders, are driven elastically, thereby enabling very low tensions to be used in the drying section resulting in a very low yarn stretch.

A compensating roller immediately behind the drying cylinders automatically adjusts the speed at which the yarn is fed to the rate of stretch. A drawing roller fitted between the compensating roller and the subsequent splitting reeds prevents the higher yarn tension required for splitting from being transmitted back to the size-box. The front part of the machine is driven by means of special variators or electric motors. The speed can be controlled by manual push-button operation or by means of an automatic hygrometer. The machine is equipped with an electro-magnetic staining device and a pneumatic pressing table. The machine is also provided with instruments for measuring the speed, yarn tensions, temperature of the size-box, steam pressure and air pressure. Both the yarn tension in the drying section and the winding tension for the loom beam can be accurately adjusted in kilogrammes from the control panel.

Creep Testing Machine

The research and development department of The United Steel Companies Ltd. has designed a compact creep testing machine which is now being built and marketed by Distington Engineering Company Ltd. The machine is expected to have many applications in industries concerned with the design and manufacture of steel parts for service conditions in steam boilers and turbines, gas turbines and certain chemical plant. Known as the Unisteel multi-specimen creep testing machine, it is designed to take either four high-sensitivity tests or 12 stress-to-fracture tests on the one machine, with one furnace and one temperature controller. The machine includes four loading systems, each of which provides for one high-sensitivity test or three tress-to-fracture tests in series. It can be used for the application of loads up to three tons on a specimen. A feature of the new machine is the concentration of a number of testing stations within a comparatively small space. It occupies a floor space of only slightly more than 1 sq. yd. and can be installed in rows at 4-ft. centres. The complete unit comprises, besides the machine itself, a furnace consisting of a fused silica tube wire wound in three zones for resistance heating, encased in a polished stainless steel cylinder; a control panel which includes an electronic temperature controller; and two auxiliaries —a ratchet spanner and lifting jack—which can be used with a number of machines.

Malted Milk Products

With a view to minimising some of the drawbacks of the existing methods of malted milk products, Central Food Technological Research Institute, Mysore, has developed a process which consists in mixing concentrated malt extract with milk powder, fats and carbohydrates and drying in vacuum drier. The product is powdered and packed in suitable containers. The salient features of the process are the use of milk powder in place of liquid milk and concentrated malt extract in place of mash liquor prepared from green or kilned malt, which reduces amount of water to be removed. The process has been tried on a bench scale unit where batches of 50 lbs. have been successfully prepared. The product has been subjected to limited consumer trials at the Institute and is reported to compare favourably with similar products of foreign origin both in taste and flavour. The shelf life of the product is about one year at 37°C.

Raw materials required for the process, namely, milk, rag jowar, barley and wheat are all available in the country. Total capital outlay for a plant having a capacity of 300 tons per annum is estimated at about Rs. 6.05 lakhs. Major equipments required are vacuum shelf driers, powder filling unit, mixers, seamers and granulator.

New Synthetics

Staff members of the Institute of Chemical Physics of the U.S.S.R. Academy of Sciences claim to have discovered a new class of synthetic substances. The substances, polythercrylates, belong in to a class between the monomers and the polymers. They are viscous liquids capable of forming glass-like or elastic polymer materials under normal temperature and pressure. These polymers are very tough, resistant to temperature fluctuations, oils and solvents, and are excellent electric insulators. Using polyethercrylates of different types it is possible to obtain polymer materials with desired properties. The discovery of a new class of synthetic substances has made it possible to overcome a number of serious technical difficulties in the processing and moulding of polymer products. Polyethercrylates are suitable for the manufacture of super-strong glass plastics, electric insulating materials, glue, and protective coatings which are widely employed in various branches of industry.

Quality-conscious everywhere go for "*LOMA*" and the soaring sales testify its superb quality. "*Loma*" now an international product, is exported to almost all parts of the globe. This, apart from conserving valuable foreign exchange, through exports, has set an example for Indian-quality in the international market. Millions of bottles of "*Loma*" in use everywhere testify the confidnece millions have in "*Loma*" - the ideal hair oil-cum-hair darkener.

6014-60

A CASE FOR AN EXTENDED THIRD PLAN

By R. M. Khatau and N. Dandeker

INDIA'S second Five-year Plan is now in its last few months, and, with the publication of the Draft Outline of the Third Five-year Plan, there has been considerable discussion in the Press regarding the size and scope of the third Plan and of the targets and priorities included in it. But, if the third Plan is to be realistically conceived and successfully executed, then a quick stocktaking of the second Plan—what we hoped to achieve and what we are likely to achieve—is plainly necessary.

The financial outlay in the public sector for the second Plan was revised to Rs. 4,500 crores. The actual expenditure in the first four years of the Plan was as follows:

Expenditure in 1956-57 to 1959-60

(In crores of rupees)

Item of expenditure	Centre	States	Total
Agriculture and community development	42.0	377.3	419.3
Irrigation and power	65.8	600.5	666.3
Industry and mining	770.8	77.7	848.5
Transport and communications	928.3	134.3	1,062.6
Social services	225.6	343.0	568.6
Miscellaneous	33.2	45.0	78.2
Total	2,065.7	1,577.8	3,643.5

An estimate of the current year's expenditure indicates that the target of 4,500 crores (*in money terms*) may well be reached, the shortfall, if any, not exceeding Rs. 100 crores. This shortfall is likely to be more than counter-balanced by a total net investment of Rs. 2,600 crores in the private sector, against the target of Rs. 2,400 crores.

Thus, judged purely in *money terms*, the targets of the Plan can be said to have been attained. However, to judge whether the targets have been attained in *physical terms*, that is, in real values, it is necessary to have a look at the behaviour of prices during the Plan period. This can be done by consulting Table I at the bottom of this page.

It is clear that there has been a continuous, progressive and persistent increase in prices of all commodities since 1956, the slight drop in prices of industrial raw materials in 1958 having been more than offset by their sharp rise subsequently.

In the first half of 1960-61, the rise in prices not only continued but became more pronounced, as will be seen from the following table:

Wholesale Prices

(Weekly average. Base : 1952-53 = 100)

Unit	1960					
	April	May	June	July	Aug.	Sept.
General index	120.5	122.7	122.9	124.7	125.0	125.3
Food articles	118.6	120.0	120.3	124.0	123.9	123.9
Industrial raw materials	134.2	140.1	139.7	137.1	137.0	138.8
Manufactured articles	117.8	119.8	119.9	121.0	122.3	122.7

II

Rising prices are not, of course, the only factor which has interfered with the achievement of the physical targets envisaged under the Plan. The foreign exchange crisis has been another important factor. The third is the technical, administrative and other limits inherent in all plans for rapid expansion and the innumerable, inevitable and unforeseen bottlenecks which one knows from practical experience are invariably encountered by all such projects. The effect of all these factors, including the steadily rising level of prices and costs, on the fulfilment of physical targets of the Plan must be assessed.

In the agricultural sector, the picture is as follows:

Item of agriculture	Unit	Original target*	Revised target†	Production 1958-59	Production 1960-61 (estimated) ‡
Foodgrains	Million tons	75.0	80.5	73.5	75.0
Cotton	Lakh bales	55.0	65.0	47.1	51.0
Sugarcane (in terms of raw *gur*)	Lakh tons	71.0	78.0	72.0	72.0
Oilseeds	Lakh tons	70.0	76.0	69.2	72.0
Jute	Lakh bales	50.0	55.0	51.8	55.0
Tea	Million lbs.	700.0	700.0	662.0	725.0
Tobacco	Thousand tons	250.0	298.0	263.0	300.0

* Embodied in second Five-year Plan.
† Second Five-year Plan Progress Report, 1958-59 (issued in April 1960).
‡ As estimated in third Five-year Plan, except for cotton which is latest trade estimate.

It will be seen that the estimated production in 1960-61 has, except in the case of cotton, exceeded the original targets. The latter have been revised upwards to correct a lacuna in the planning on agriculture. In the case of foodgrains, cotton and sugarcane, the 1960-61 estimates of production fall considerably short of the revised target. The shortfall in some items of agriculture and in particular foodgrains is of serious import, for, with both population and money increasing, it is of the utmost importance that the agricultural production should also have rapidly increased.

Equally serious is the shortfall in the achievement of the area under irrigation. The heavy capital-consuming medium and major irrigation projects create a potential for bringing in extra acreage under irrigation which, if not properly utilised, is a waste of national resources. The area brought under irrigation is as follows:

(In million acres)

	1950-51	1955-56		1960-61	
		Target	Achievement	Target	Achievement
Major and medium* irrigation.	22.0		24.9		31.0
Minor irrigation and other sources	29.5		31.3		39.0
Area irrigated (net total)	51.5	67.0	56.2	88.0	70.0

* Irrigation projects costing more than Rs. 5 crores are classed as major schemes and those costing between Rs. 10 lakhs and Rs. 5 crores as medium schemes.

The expected achievement of 70.0 million acres under irrigation falls substantially short of the target of 88.0 million acres.

The production of fertilisers, which can substantially increase agricultural productivity, has also fallen seriously short of expectations as follows:

(In thousand tons)

	Original target	Revised target	Production in 1959	Production achieved as % of revised Plan targets
Superphosphates (P_2O_5)	120.0	120.0	About 50.0	42
Ammonium sulphate (N_3)	290.0	290.0	About 75.0	26

Even allowing for a further period of 15 months in which actual production may rise, it is quite unlikely that it will approach the revised targets.

To sum up, shortfalls of considerable magnitude exist in the agricultural sector in the production of foodgrains, fertilisers, and in bringing acreage under irrigation which constitute a serious imbalance in the economy. A strong and stable agricultural sector is a prior "must" on which a large industrial base can be built in the third Plan.

Turning to transport, in recent months, the movement of coal, industrial raw materials and finished products has been considerably handicapped by the inadequacy of the railways to provide the wagons or power units or both, with the result that the goods traffic actually carried in 1958-59 was only 134.8 million tons. The Plan forecast a total goods traffic demand of 181 million tons in 1960-61, of which it was proposed to meet 162 million tons; but the heavy import of foodgrains from abroad was not envisaged in this estimate of traffic demand on the railways. A position has, therefore, been reached when industrial production may have to be slowed down due to the inadequacy of the railways to move both raw materials and finished products. This obstacle has largely been reached in some basic industries, notably coal, steel and cement.

The production of locomotives (in the private sector) and railway wagons, so necessary to create carrying capacity, has been as follows:

	Unit	Original target	Revised target	Production in 1959	Production achieved as percentage of revised Plan target
Locomotives (private sector)	Nos.	100	100	102	102
Railway wagons	Th. Nos.	25	25	8.46	34
Automobiles (all sorts)	Nos.	57,000	57,000	34,075	60

While the production of locomotives has been most satisfactory, the shortfalls in the production of wagons and automobiles, particularly trucks, have been a contributory factor to the present transport bottleneck.

Furthermore, the attainment of the target productions in the industrial sector will almost certainly be handicapped not only due to the inability of the railways as shown above, but also due to the insufficiency of available power. The power position, according to informed estimates, is as follows:

Original target Installed capacity under second Five-year Plan		Revised target installed capacity laid under second Five-year Plan	Installed capacity likely to be achieved by March 1961
Capacity at end of first Plan	3.4 million kw.		
Add. capacity under second Plan	4.8 million kw.		Not likely to exceed 5.8 million kw. on the basis of present progress.
Total	8.2 million kw.	6.4 million kw.	

The electrical industry's production in respect of some of the major items has reached the following levels:

	Unit	Original target		Revised target (Installed capacity)	Production in 1959	Production achieved as percentage of revised Plan target
		Capacity	Production			
Power transformers	Th. kVa	..	..	2,200	1,095.65	50
Electric motors	Th. H.P.	600	600	1,200	582.53	49
A.C.S.R. cables	Tons	20,400	18,000	30,000	14,612	49
V.I.R. and plastic coated wires	Lakh yds.	..	..	5,000	1,670.60	33

The electrical production in 1960-61 may fall short of the targets by a sizable margin, even when allowance is made for increase in production over 1959 figures.

In the basic industries which constitute the "hard core" of the Plan, the current levels of production are as follows:

	Units	Original target, Installed capacity	Revised target	Production in 1959	Production achieved as percentage of revised Plan target
Coal	Th. tons	..	60,000	47,032	78
Finished steel	Th. tons	4,700	4,300	1,673.40	39
Cement	Million tons	16	16	6.83	43

With the exception of cement, where the installed capacity expected by March 1961 seems adequate, the production of coal and finished steel lags woefully behind targets as well as immediate needs.

In the remaining industries a mixed picture emerges. In the following industries the target has already been exceeded by the end of 1959:

Industry	Unit	Revised target	Production in 1959	Production achieved as percentage of revised Plan target
Sugar machinery	Rs. lakhs	250.00	283.15	113
Locomotives (private sector)	Nos.	100	102	102
Bicycles	Th. Nos.	895	990.48	111

The target is likely to be achieved in the cotton textile industry. As against a target of 5,350 million yards, production in 1959 was 4,925.56 million yards and in 1960 it was of the order of 5,000 million yards.

In the other industries, the current rate of activity is as follows:

Industry	Unit	Original target		Revised target	Production in 1959	Production achieved as percentage of revised Plan target
		Capacity	Production			
Aluminium	Tons	30,000	25,000	30,000	17,242.53	57
Ferro-manganese	Tons	171,800	160,000	170,000	61,700	36
Sulphuric acid	Th. tons	500	470	500	283.51	57
Soda ash	Th. tons	253	230	253	93.82	37
Caustic soda	Th. tons	150	135	150	68.68	46
Industrial explosives	Tons	..	..	5,000	3,475.70	70
Plastic, synthetic moulding powders—						
P.F. moulding powder	Tons	..	..	12,810	1,764.00	42
U.F. moulding powder	Tons	..	..		317.50	
Polystyrene moulding powder	Tons	..	..		2,314.40	
					5,395.90	
Refractories	Th. tons	1,000,000	800,000	1,250	496.84	40
Rubber manufactures (automobile tyres)	Th. tons	..	..	1,450	1,138.64	79
Dyestuffs and intermediaries—finished dyes	Th. lbs.	..	..	27,000	10,109.69	37
Dyestuffs	Th. Nos.	..	..	300	214.92	72
Radio receivers	Th. tons	..	..	2,500	2,085.05	83
Sugar	Tons	60,000	..	60,000	19,679	33
Newsprint	Th. tons	450	350	450	290.91	65
Paper and paper board	Th. tons	..	..	65	53.99	83
Paints and varnishes	Th. tons	..	..	445	316.78	71
Vanaspati						

It will be seen from the above that there is considerable leeway to be made in the above industries before the targets of the Plan can be reached. Considering that a time interval of only 15 months remained after the period to which the foregoing figures relate, and that some of the industries may nevertheless attain the desired level of production, the clear picture is that the majority of industries, particularly food, fuel, steel, transport and power, i.e., the basic industries constituting the 'core' of the Plan, will require a greater period of time in which to reach the desired level of production. The target production levels will be attained in many industries only after the industries constituting the 'core' of the Plan have reached the desired levels. The time interval for some of the other industries to reach the targeted productions may be as much as a year *after* the basic industries have fulfilled their targets. Moreover, the extent of shortfalls in transport, power and basic industries are such that an additional year or two, i.e., upto March 1963, may be required to enable them to achieve the desired levels of activity. The groundwork from which the third Plan will start is thus unlikely to be completed before the end of 1962, and the third Plan itself will then stretch till the end of 1967. Or, looked at differently, the third Plan may be a seven-year Plan commencing with the actual levels prevailing in March 1961.

III

It is of the utmost importance that the period required for the consolidation of the 'core' of the second Plan, and which would constitute the base of the third Plan, that is to say, a period of eighteen to twenty-four months should be allowed for to enable the physical targets of the former to be achieved and to bring down the prices to levels more in keeping with those prevailing at the beginning of the second Plan. Unless this is done, the planning and achievement of the third Five-year Plan will fall even further short of targets in real terms, than in the current Plan. Together with allowing the additional period mentioned above for consolidation of the second Plan, the following fiscal and monetary restraints should also be observed to stamp out inflation:

(*a*) During the past four years, large dosages of deficit finance has been injected into the economy as follows:

Deficit Financing (Central and States)

Year	Rs. crores
1956-57	—253
1957-58	—503
1958-59	—136
1959-60	—228*
	—1,120

* Provisional.

Source: *Report on Currency and Finance—by the Reserve Bank of India.*

During the suggested period of consolidation of the second Plan, the deficit finance must not exceed what is budgeted in the present Budget; in other words, there should be no deficit financing at all during 1961-62 and 1962-63. Only so will it be possible for production and national income to catch up with the vastly expanded money supplies.

(*b*) The Union Government should refrain from borrowing directly or indirectly from the large 'rupee counterpart' funds arising out of transactions under P.L. 480, which in fact ought to be frozen. These funds should be utilised only when (and to the extent that) agreements are concluded between the U.S. Government and the Indian Government for their specific utilisation. Government borrowing of or against 'rupee counterpart' funds from the State Bank of India can only lead to inflationary finance.

(*c*) Advantage should be taken of the period of consolidation to reduce the drain on sterling balances and, if possible, to build them up.

(*d*) Government administrative expenditure has tended to increase from year to year—the combined non-development revenue expenditure has risen from Rs. 529.75 crores in 1950-51 to Rs. 600.56 crores in 1955-56 and to about Rs. 780 crores in 1958-59. This rising trend in Government expenditure has steadily reduced the net capital formation by Governments out of their current savings, as will be seen from the following table:

(In crores of rupees)

Year	Net capital formation by Centre and States	Governments' savings
1951-52	212.4	177.5
1952-53	210.3	70.2
1953-54	256.2	29.9
1954-55	340.6	43.5
1955-56	482.3	29.2
1956-57 (R.E.)	586.8	91.5
1957-58 (likely actuals)	717.6	38.1
1958-59 (B.E.)	860.5	—25.9

It is plain that what is needed is, first, a flat ban on any further increase in the strength of Government establishments and secondly the drastic pruning down of the man-power strengths in Government departments to at least the 1955-56 levels.

(*e*) In the monetary field, the Reserve Bank should persist with its "dear money" and "tight money" policies and should consider also:

(i) Raising the Bank rate and exercising more rigid "selective control" over commercial banks' credit expansion.

(ii) Attracting more money into the banking system by raising (not lowering) the "call money rates" and "term money rates" which may be offered by commercial banks.

(iii) Advising the Union Government to raise its long-term and medium-term borrowing rates to, say, 4½ per cent. and 4 per cent., respectively.

(*f*) The Reserve Bank's role in facilitating Government borrowings on new issues needs re-examination. The arguments advanced in defence of the Bank's present policy in this respect (*Reserve Bank Bulletin*, February 1960) are defective in two respects: (i) It involves anticipatory *inflationary lending* by the Bank to Government on a very large scale against possible subsequent purchases of new issues by the State Bank of India and/or the commercial banks and the public. This encourages boundless extravagance in Government spending. It would be better, instead, to make new issues available "on tap" for some time after they are floated and until the next busy season. And (ii) even then, the "tap" ought *not* to be turned on for the above purposes until these later demands have first absorbed the securities taken up by the Reserve Bank itself in conversion of Ways and Means Advances and/or Treasury Bills held in the Banking Department.—*All Rights Reserved.*

TABLE I

ECONOMIC TRENDS IN BRITAIN

GROWTH OF WAGE DEMANDS THREATENS PERIOD OF PRICE STABILITY

By W. T. C. King
EDITOR, "THE BANKER," LONDON

THE *spotlights of interest in the financial* centres of the world (in December 1960) have concentrated an even fiercer glare upon the problems of the United States of America's balance of payments and its implications to world trade. One reason for this, of course, is the uncertainty that is inseparable from the impending change at the White House—though the particular spasm of fear for the dollar that mounted so sharply when a Democratic victory first seemed probable had abated well before that expectation was confirmed at the polls.

Paradoxically, the latest phase of the uneasiness about the dollar seems to have been related less to the uncertainties about the policies of the new administration than to the efforts of the outgoing administration to tackle the underlying problems.

Pressure on the Dollar

The decision to reduce the cost of United States forces overseas by recalling dependants has advertised the seriousness with which the issue is now regarded in Washington while offering by itself only a moderate contribution to the filling of the payments gap. In the circumstances, the foreign exchange markets were bound to be sensitive to the reports that the visiting U.S. ministers had returned empty-handed from their talks in Bonn about defence costs. Then came the news that the U.S. gold stock had dipped, for the first time for 20 years, below 18,000 million dollars—a level that had acquired exaggerated psychological significance in some financial circles in the United States.

In spite of the sensationalising of these influences, the resultant pressures on the dollar have not shown any sign of developing the sort of cumulative force that seemed to be threatening in October. This better resistance in face of a good deal of irresponsible rumour and speculative discussion unquestionably owes much to the new equilibrium that has been reached in the gold market. Contrary to many expectations before the election, there has been no recrudescence of the excitement in gold dealings that was witnessed a few weeks ago. The demand for gold on the London market did, it is true, expand substantially again at around the time of the U.S. elections (though it never reached the extraordinary proportions encountered during the October flurry) and the sterling price at the daily fixing rose at one point to 256 shillings and sixpence (compared with October's peak of 270 shillings), with the dollar quotation at around 36-36¼ dollars.

Thereafter, however, there was a steady decline, and for the past few weeks the extreme range of the London fixing prices has been 252 shillings and ninepence—253 shillings and tenpence, with the dollar quotation unchanged for several days at 35.55-75 dollars and then easing to 35.40-55 dollars. This, it will be observed, is still significantly above the former limiting point of about 35.20-25 dollars—the point at which the price is roughly equivalent to the cost to central banks of buying gold in New York and shipping it across the Atlantic. It is also just above the highest price that central banks of countries that are members of the International Monetary Fund can pay for gold consistently with the I.M.F. rules: their buying price must not exceed the (gold) dollar parity of their currencies by more than one per cent. (that is 35.35 dollars).

Demand for Gold in London

In market circles it is assumed that central bank demand for gold in London, which at present is non-existent, would probably quickly revive if the London price dropped below the latter figure, and would almost certainly do so if it fell back within the limits current before the recent scare.

For this reason, it is thought that the premium over the dollar parity is unlikely to contract much further in the present circumstances. On the other hand, the risks of an abrupt widening have been much diminished. It is now well understood that the calming down of the excitement has been largely due to two official influences—to the technical management of the market by the Bank of England, and to a clear recognition by the United States authorities that the avoidance of any undue premium is an important objective in the long-term interests of the dollar.

The peculiarity of this market, amply demonstrated by the October experience, is that a rise in price beyond the accustomed limits encourages demand. In order to induce the gradual reduction of the price from the peak, it was obviously necessary to release to speculators a larger volume of gold than was flowing to the market from new production, and part at least of this additional supply has been indirectly provided from the official gold stock of the United States. But in the absence of this policy of meeting the market demand, the eventual strain on the U.S. reserves would almost certainly have been larger still, because of the resultant intensification of pressure on the dollar in the exchange markets.

As it is, the dollar has been saved from that source of stress, and the speculative demand for gold has been brought more or less into line with new gold output; in the past few days, indeed, the further easing of the market appears to have induced some re-sales of private holdings.

Market's Mood of Gloom

The international implications of the dollar problem have, however, combined with domestic influences to cast a mood of gloom over the London stock markets. In the second half of November, the easier trend of industrial equities was sharply accentuated, culminating in a drop of nearly eight and a half points in the London *Financial Times* industrial share index on a single day—28th November—when the index touched 295.2, a new low point for the year, though only a shade below the low of early May. Less than three months ago, however, the index had stood at more than 340, only a little under the all-time peak of 342.9 reached in the first few days of the year.

The immediate cause of the latest weakness was new evidence of the repercussions of the credit squeeze; but a more fundamental source of uneasiness was the feeling that the domestic and the external factors in economic policy are pulling in different directions.

Two consequences of the squeeze have attracted wide publicity in the past month. Short-time working in the motor-car industry, which had been introduced into some plants several months ago, has now become almost general, embracing not only the main groups but also many of the producers of components. There have also been some outright dismissals of workers, but the numbers involved have been small by contrast to the numbers put on short-time.

In spite of the fact that the net growth in hire-purchase debt for all purposes was kept down to only £13,000,000 (to £962,000,000) in the first five months after the reimposition of terms control at end-April last (in contrast with an increase of £142,000,000 in the corresponding months of 1959), this has not been the only major influence in bringing about the marked slackening in car output from the peak rates attained in the first half of this year.

Contraction of Car Exports

Another and possibly even more important influence has been the severe contraction of the North American market for imported cars—not only, of course, because of the easing of American business activity, but chiefly through the introduction of the American "compact" car. The effects of the hire-purchase restraints have lately been highlighted, however, in public discussion here by the fact that news of further short-time schemes coincided with a spate of rumours about the impact of these restraints upon the hire-purchase finance companies themselves. Some considerable losses have been admitted by several finance-houses—in the course of statements calculated to allay concern shown in stock markets—and there is little doubt that most of them have experienced some rise in their loss ratio.

It may be questioned how far this experience ought to be attributed to the squeeze, and how far to lax standards in credit-granting induced by the sheer pace of the expansion and the scramble for new business during the phase of decontrol. But, in the public mind, the troubles of finance houses have been joined to the short-time in the motor industry, the depression in certain consumer durable trades, and the acumulation of stocks by retailers of these products as providing a case for early relaxation of the credit restraints.

More sophisticated observers are well aware, however, that though these measures have had a sharp impact upon these industries, they have not yet had the ultimate result that had been expected of them. Though the atmosphere in the economy is no longer one of boom, the nip in the air has not been enough to prevent the growth of wage demands on a scale that threatens to end the long phase of price stability. Nor has the check to consumer demand in these spheres yet been accompanied either by any marked slackening in the rise in Britain's total imports or by a recovery in British exports. The balance of visible trade, so far from improving, as had been hoped earlier in the year, has deteriorated further—mainly, no doubt, as a consequence of the pause in world trade, the easing of commodity prices and the recession in the United States.

An Unenviable Dilemma

In these circumstances, the British authorities face an unenviable dilemma. Should they relax the restraints lest productive resources "run to waste," on the argument that the strain on the balance of payments is due to international influences (and for the time being, in any case, is being accommodated by the inflow of mobile international funds to London)? Should they, indeed, heed the more subtle argument that has been urged by the National Institute of Economic and Social Research—that aggregate industrial production has been stable on a plateau for these past six months, during which stocks appear to have been rising sharply, and that production is therefore liable to turn sharply downwards when the stock-building slows down, or goes into reverse. On this argument, demand needs to be stimulated now. But can the authorities risk giving any sort of "green light" when critical wage negotiations are pending, when no solution of the underlying balance of payments problem is in sight, and when the course of the American economy and of the external economic policy of the United States is more than usually uncertain?

Personalised

SERVICE

With specialised knowledge acquired through long experience, the Punjab National Bank is in a unique position to-day to be of positive help in providing PERSONALISED SERVICE.

EVERY DESCRIPTION OF BANKING BUSINESS IS UNDERTAKEN.

Head Office : New Delhi.

BRITISH SHIPPING LINES LOOK AHEAD

British passenger shipping lines are looking to the future in order to maintain a high standard of comfort and efficiency. New vessels are being built and older ones modernised. On Tuesday, the 17th inst., the longest passenger liner since the *Queen Elizabeth* was launched from the yards of John Brown & Co. (Clydebank) Ltd., Scotland. She is the 33,000 tons gross and 756 ft-long *Transvaal Castle*, built for the Union-Castle Line. The ship, with accommodation for 740 passengers, will be powered with a turbine installation capable of developing 44,000 s.h.p. The normal service power will be 40,000 s.h.p., giving a cruising speed of 23 knots. The Cunard Line is to have three more of its vessels—the *Saxonia*, *Ivernia*, and *Carinthia*—fitted with escort marine radar following the success of this equipment in the *Queen Elizabeth* and the *Queen Mary*. Installation will take place during the forthcoming winter refits. The P. and O.-Orient liner *Iberia* (20,614 tons gross) is to have a complete air-conditioning plant; over 100 new showers and toilets are also to be installed.

STATE BANK OF TRAVANCORE
(Subsidiary of the State Bank of India)

INVEST IN
our THREE YEARS and FIVE YEARS CASH CERTIFICATES and earn compound interest at 4% and 4½% p.a. respectively.

Our THRIFT DEPOSIT SCHEME enables those with limited income to save systematically.

SAFE DEPOSIT LOCKERS
in different sizes are available at our Trivandrum Branch.

All types of Internal and International Banking Business transacted.

Branches at Bombay and all important centres in South India.

FORWARD MARKETS BULLETIN
(Monthly)
Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES
- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription: In India .. Rs. 24.00; Abroad .. Rs. 40.00
Single copy: In India .. Rs. 2.50; Abroad .. Rs. 4.00

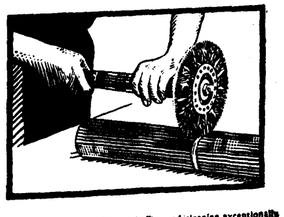
"SCCO"



These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

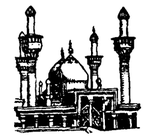
A tale of Twenty-two Cities



From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

MERGERS AMONG INSURANCE COMPANIES

DEVELOPMENTS IN BRITAIN OFFER FOOD FOR THOUGHT

IN Britain, the move for establishing giant corporations is gathering momentum. This is not confined to industrial concerns only but covers service undertakings also, including insurance. The year 1960, for instance, closed with the largest merger proposal in the history of British insurance.

The Royal Insurance Company Ltd. (Chairman: Mr. T. H. Naylor), Britain's largest composite insurance office, has made a share exchange offer worth £50.6 million to the London and Lancashire Insurance Company Ltd. (Chairman: Mr. R. M. Preston). If this offer goes through, it would result in the establishment of an insurance group having total assets exceeding £408 million. Of this, Royal's assets would be £337.4 million and London and Lancashire's £71.3 million. The previous largest insurance merger in the U.K. was in April 1959 when the Commercial Union Assurance Company Ltd. made a £37 million share exchange offer for North British and Mercantile Insurance Company Ltd., creating a group with total assets exceeding £300 million at that time.

The terms of the offer are as under:

Two Royal Insurance 5-shilling shares for every five of London and Lancashire's 5-shilling shares. The latter has £4.37 million of stock in issue. Royal's offer values the London and Lancashire shares at 57s. 11d., as against their closing rate on the 29th December 1960—the date of offer—of 48 shillings and the highest for the year of 51s. 6d. Royal's 5s. shares closed on the same day at 144s. 9d. The acceptance of the offer in full will require the issue by Royal of 6,987,474 units which will raise its present capital of £5,599,930 to £7,346,798.

Announcing the offer, the Board of the Royal said: "The whole purpose of the proposed arrangement is expansive and not restrictive. The Directors believe that the resources of the two groups can be developed more effectively and fruitfully in association than separately and are therefore satisfied that opportunities and scope will be increased and broadened." The Board also gave an assurance to the staffs of both companies that existing rights and privileges would be fully preserved.

The following table gives the breakdown by classes and territories of the premium written by Royal and London and Lancashire in 1959:

	Royal (£m)	%	London and Lancashire (£m)	%	Total	%
Class						
Fire ..	56.5	41	13.3	37	69.8	40
Accident ..	74.4	54	17.2	49	91.6	53
Marine ..	6.4	5	4.8	14	11.2	7
Total ..	137.3	100	35.3	100	172.6	100
Territory						
U.S. ..	83.2	61	12.8	36	96.0	55
Elsewhere ..	54.1	39	22.5	64	76.6	45
Total ..	137.3	100	35.3	100	172.6	100

The merger will make little change in the composition of the Royal's business, except to raise its stake in marine business and reduce the proportion of its premium income from the U.S. from 61 per cent. to 55 per cent.

The underwriting record of the two companies shows opposite trends. In 1959, Royal made an underwriting profit of over £1 million while London and Lancashire made an underwriting loss of £571,000. Over the five years ended 1959, Royal made an underwriting profit of £2.4 million while London and Lancashire made a loss of £664,000 during the same period.

The Royal simultaneously announced that it intended to pay a further dividend of 2s. 6d. per 5s. unit for 1960 which will bring total distribution to shareholders during the year of 100 per cent.

Some Reflections

The aforesaid development has stimulated the following thoughts in the minds of a correspondent who is interested in the growth of insurance in India on sound lines:

The recent news from London of the Royal Group of insurance companies taking over the London and Lancashire Insurance Company shows that the process of mergers is still going on and it will be years before all the full effects of integration are realised so far as the structures of the various companies are concerned. Companies in the London market also happen to be the biggest non-Indian groups in the Indian insurance market and so the events in London have their repercussions even in India. The process of mergers is equally strong among banks and other financial institutions.

One paradoxical feature of this situation is the fact that the immediate reasons for these mergers in the U.K. are slightly different from those operating in India. In the U.K., two strong and big units often merge to achieve an outstanding economy of scale or the necessary financial strength for operating in a highly competitive market like the U.S.A. If a smaller unit is bought over cheap, it is because it has enormous hidden resources and the market value of its shares has no relation to its real capital value. In India, however, an uneconomic unit tends to carry on almost till it has to close down. It is only then that it is forced into a merger. As is clear from the mergers forced on weaker and unsound banks recently by the Reserve Bank of India, the normal pattern is the merger of a small and weak unit with a bigger unit. The idea is to increase the security to the staff and the clients of the smaller unit by getting it reorganised into another administrative system which is vigorous and which has stood the test of time.

There is no pressure yet by the Controller of Insurance in India on any of the weak economic units to merge with stronger units and it is doubtful if he has such wide powers. The only pressure is the economic pressure on units of less than optimum size. But the processes of economic growth depend on some non-economic considerations also and bankrupt companies carry on for years before they close down or convert themselves into reinsurance companies or investment companies. The directors and managers go on getting their fees and commissions and salaries—sometimes not accounted as such—and these vested interests constitute the biggest hurdle in the way of any conclusion which might otherwise be reached on the basis of pure economic forces.

The Solution

The first step towards an improvement of the present unsatisfactory situation would be for a competent accountant to be employed in the office of the Controller of Insurance, which should have a section in Bombay and Calcutta which are the respective centres of Indian and British insurance interests in India. A competent accountant would be able to analyse the balance-sheets and returns of both Indian and foreign companies and classify them into groups of varying soundness. These classifications should be widely publicised, so as to build up a public opinion in favour of economic integration of the weaker units. As stressed by Prof. W. W. Boston in his essays on the processes of economic growth, propensity to develop fundamental sciences and to apply science to economic ends or propensity to accept innovations is as important as the propensity to seek material advance. Wide publicity of the reports of the Government-appointed auditors on the working of various insurance companies would also bring into prominence the fact that material advance of the promoters of insurance companies does not often coincide with any material advance on the part of the insurance companies, shareholders, employees or policyholders. Once this categorisation of insurance companies is made, it should be easier for sound companies to purchase weaker companies at as low a price as 40 per cent. of the paid-up capital in quite a few cases. This is the result of losses which eat into capital in the absence of accumulation of reserves. This would appear to be a better way of competing for a limited amount of business rather than trying to outbid each other in buying business.

Basis of Growth

Growth of the strength of an insurance company is only possible if sound underwriting results in considerable reserves to withstand adverse years and to pay a constant dividend from the income on invested reserves. This can be rapidly achieved if some of the Indian companies work in close collaboration with foreign insurance companies which are operating or may operate in India at a future date. It is quite possible for an Indian company to collaborate with a Japanese, German or Australian company, so that each supports the other's operations in its own country and, at the same time, broadbase their reinsurance portfolios. This is nothing but a normal corollary of foreign collaboration in the fields of industry, trade and banking. It will also assist India's invisible exports.

The final picture of economic units in India would be about twenty insurance groups operating on a premium base of between one and two crores each. This will obviate the duplication of uneconomic services all over the country for a total and almost constant premium of about twenty-five crores of rupees. At the same time it would retain the flexibility of the administrative machinery and the retention of the personal and non-bureaucratic relationship between the insurer and the insured. Such growth in the size of the various operating units will automatically raise the retentive capacity of the market and lessen the drain of foreign exchange. It is in this respect that some sort of liaison between the Reserve Bank and the Controller of Insurance would appear desirable.

INSURING RISK OF DAMAGE BY AIRCRAFT

More traffic in the international skyways of late has naturally resulted in an increase in the incidence of aircraft accidents. Loss of lives and damage and destruction to the aircraft are not the only hazards of accidents in the air. Property on the ground is also exposed to damage from falling aircraft. An article on the risk of damage caused by falling aircraft by the Insurance Correspondent of the *Financial Times*, London, throws some interesting light on the implications of this risk and the facilities available in Britain for covering it. We publish below an extract from it:

"Fire insurers freely grant cover against these risks (risks of falling aircraft) at a nominal rate of premium. In addition, where the material damage insurance is so extended, they are willing to include the aircraft peril also in the loss of profits insurance. This means that, if a firm's permises or its contents suffers aircraft damage, both the physical loss involved and the consequential losses which flow from the physical damage will be covered by insurance.

"In this country at least the operators or owners of an aircraft which causes damage on the ground are compelled by law to compensate for the physical loss which results to the owners of the property. With regard to property located overseas, in many countries the same position would obtain, although a thorough check on local laws would be necessary to establish this. There is a good deal of obscurity, however, surrounding the responsibility for consequential losses, which in any event cannot always be so clearly defined.

"Damage from aircraft is caused in two ways. Either the aircraft crashes and the impact damages property on the ground, or some part of the aircraft or its cargo falls on to property. The damage which may occur in the latter way can be much more extensive than might be supposed.

"When any damage occurs redress has to be sought against the owners or operators of the offending aircraft, always assuming that the particular craft can be identified. Identification may be difficult when damage is caused by some article dropped from the air.

"Whatever may be the nature of the cause of damage, the fact that the owners or operators of an aircraft may be domiciled other than in the U.K. or Commonwealth may make recovery or compensation much more difficult to obtain. There is always the possibility also that the resources of the operators may not be sufficient to meet the amount of any claim which can be established.

"As with several of the perils which can be added to the fire and profits policies, at the rate charged insurance against aircraft damage must be considered to be desirable. In return for a modest premium all the doubtful elements in the potential situation are removed and placed squarely on the shoulders of the insurers.

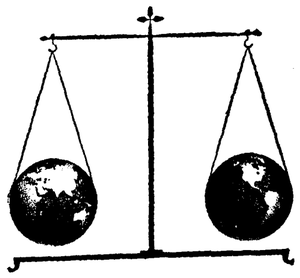
"The prior liability for damage, and for consequential losses as covered by the profits policy, are passed to the insurers. The firm which is the victim of damage can look to its insurers to make good its losses, and it becomes the ultimate responsibility of the insurers to seek redress wherever it may be obtainable. This is done through the medium of the subrogation condition in the insurance policies, and the insured firm is compelled to co-operate in the seeking of compensation. The cost of doing so, and the work involved, falls upon the insurers.

"Aircraft operators normally effect insurance against liability risks. In addition to insuring the hull and equipment in the aircraft itself policies are effected to meet claims from third parties for personal injury and damage to property for which the insurers or operators of the aircraft may be held responsible. This cover is similar to the third-party aspect of motor insurance, but the protection afforded by insurance is limited to the amount of cover agreed and for which premium has been paid.

"When a really bad accident happens it may arise that the amount of liability insurance carried by the airline operators is insufficient to meet all claims. This is another factor in favour of insuring property and profits against the aircraft risk.

"It is not inconceivable that the surplus resources of an airline may be insufficient to meet all claims made upon it after an accident, even

(Continued on page 126)



In both hemispheres . . .

. . . there are businessmen, *and in both hemispheres there are banks.* This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

STEEL PRODUCTION SOARS BY 173% AT MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58 (Rs. in lacs)	1958/59	1959/60
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND STEEL STRENGTHENS THE NATION

BANKING SERVICE OF EVERY— — DESCRIPTION

THE BANK THAT WORKS FOR YOU

These words are an expression of the way the bank feels about its responsibility to provide the most effective banking facilities for its customers.

We offer banking service of every description for trade, industry and personal requirements.

PROTECTION TO ALUMINIUM CONDUCTORS EXTENDED

COPPER CONDUCTORS, HOWEVER, DEPROTECTED

ON the recommendation of the Tariff Commission, the Government of India has extended the period of protection granted to the aluminium conductors industry (aluminium conductors steel reinforced and all aluminium conductors) which was due to expire at the end of 1960, by another three years, that is, till 31st December 1963. Copper conductors (including bare copper conductors and electrolytic copper rods) have, however, been removed from the protected list, since, according to the Commission, this industry has "acquired technical know-how, overcome prejudice against its products and may be deemed to be established on firm grounds." The price of indigenous copper conductors has also been quite competitive. So far, the Government has not announced the rate of revenue duty fixed for this product.

On the contrary, the aluminium conductors industry has still some way to go before it becomes self-reliant. For the purpose of measuring the quantum of disadvantage suffered by the indigenous industry, the Commission has taken the simple average of the fair ex-works prices of Aluminium Industries Ltd., Kundara, and Electrical Manufacturing Company, Ltd., Calcutta, in respect of their common items of manufacture. It will be noticed from the following figures that the quantum of disadvantage varies between 0.66 per cent in the case of the item "dog" and 12.53 per cent in the case of the item "mink":

(Price is quoted per mile of cable)

		"Dog" Rs.	"Mink" Rs.
1.	C.I.F. price	2,251.01	1,280.40
2.	Landing and clearing charges	56.28	32.01
3.	Landed cost ex-duty ...	2,307.29	1,312.41
4.	Fair ex-works price ...	2,322.17	1,472.82
5.	Difference between 4 and 3	14.88	160.41
6.	Difference as percentage	0.66	12.53

Price Disadvantage

If the A.C.S.R. is manufactured entirely from imported aluminium rods by paying a duty of 17½ per cent *ad valorem* plus Rs. 300 per metric ton, then the corresponding quantum of disadvantage will be higher, ranging between 4.90 per cent to 13.76 per cent. As regards A.A.C. whose cost of production has been worked out on the basis of imported metal price plus customs duty of 25 per cent *ad valorem* plus Rs. 300 per metric ton, the quantum of disadvantage varies from 21.03 per cent to 32.33 per cent for the various items in this category. Although, thus, the absolute price disadvantage suffered by the industry (covering both A.C.S.R. and A.A.C.) can be compensated by a lower rate of duty than that in the previous period (35 per cent *ad valorem*), the Commission has favoured the retention of the previous duty. For it considers that a lower rate of duty will act as a disincentive to further flow of capital into this industry. This is understandable in view of the fact that considerable amount of work remains to be done by the industry to promote the use of A.C.S.R. in electric traction, trunk telephone communication, etc., by undertaking research and field trials for developing suitable bimetallic joints and for overcoming some of the disadvantages the A.C.S.R. suffers at present *vis-a-vis* copper conductors.

In order to bring down the cost of production of aluminium conductors, the Commission has suggested that import duty on such raw materials for the aluminium conductors industry as aluminium ingots, bars and rods should be reduced to 15 per cent *ad valorem*, exclusive of such countervailing excise duty as may be imposed from time to time. The Commission had made the same recommendation in its previous report in 1957. Surprisingly enough, the Government has not acted upon it so far. The continuance of a higher rate of customs duty on raw materials apparently acted as a disincentive to the manufacture of A.A.C. The Indian Cable Company, the National Insulated Cable Company, and Electrical Manufacturing Company, have practically discontinued production of A.A.C., presumably on account of the higher cost of raw materials. In view of this situation, there is a clear case for granting a reduction in the customs duty on raw materials of the industry until indigenous production of conductor grade aluminium ingots, bars and rods catches up with the domestic demand.

There were nine units registered with the Development Wing for the manufacture of copper and/or aluminium conductors at the time of the last inquiry in 1957. They were the Indian Cable Company, Ltd., Calcutta, the National Insulated Cable Company of India Ltd., Calcutta, the Aluminium Industries Ltd., Kundara, the Electrical Manufacturing Company, Ltd., Calcutta, the Hindustan Electric Company, Ltd., Faridabad, the Jayant Metal Manufacturing Company, Bombay, the Jaipur Metals and Electricals Ltd., Jaipur, the National Screw and Wire Products Ltd., Calcutta, and the Devidayal Cable Industries (Private) Ltd., Bombay. Two out of these nine, namely, Indian Cable Company, Ltd., and National Insulated Cable Company were engaged in the manufacture of both copper and aluminium conductors, and of the remaining seven, four units, namely, the Jayant Metals, the Jaipur Metals, the National Screw and Wire Products and the Devidayal Cables were manufacturing only copper conductors, and three units, namely, Aluminium Industries, Electrical Manufacturing Company and Hindustan Electric were producing only aluminium conductors. All these nine units have maintained more or less the same pattern of production. Indian Cable Company commenced production of cadmium copper conductors on a commercial scale in 1959. National Insulated Cable Company has installed machinery for the production of grooved copper conductors for railway traction and has also set up additional drawing and stranding machines exclusively for the manufacture of A.C.S.R. and A.A.C. Electrical Manufacturing Company, Ltd. has installed a separate extrusion press for the production of electrolytic aluminium rods. The press was commissioned in June 1959 and its annual capacity on double shift is 6,000 tons of rods. Apart from the aforesaid units, two new units, one at Ulhasnagar, Kalyan (of the Hindustan Electric Company, Faridabad) and the other at Hirakud (of the Aluminium Industries, Kundara) commenced production of aluminium conductors in August 1958 and January 1959, respectively.

Production

The production of aluminium conductors has improved in recent years, while that of copper conductors has declined owing to "severe restriction of import of copper." The output of bare copper conductors was running at the annual rate of about 8,000 tons in 1960, which compares unfavourably with the actual production of over 9,000 tons in 1957. The following table shows the trend in the production of copper conductors in the whole year of 1959, as compared with the previous two years:

(In tons)

	Present capacity*	Production 1959	1958	1957
Indian Cables, Calcutta ..	5,000	1,927	2,667	2,550
National Insulated Cables, Calcutta	5,000	1,357	951	2,177
Jayant Metal Mfg., Bombay ..	2,400	400	601	733
Jaipur Metals and Electric ..	6,000	1,943	1,907	2,135
Devidayal Cable, Bombay ..	1,800	682	862	829
National Screw and Wire Products, Bombay	8,600	840	1,289	1,022
Total ..	29,800	7,158	8,337	9,446

* Capacity has remained unchanged since 1957.

The trend of production in respect of aluminium conductors is given in the following table:

(In tons)

	Capacity (double-shift) 1959	1957	Production 1959	1957
Indian Cables, Calcutta ..	1,500	1,820	560	705
National Insulated Cables, Calcutta ..	2,400	1,200	495	410
Aluminium Industries, Kundara	4,000	4,000	6,415	7,530
Aluminium Industries Hirakud	2,400	..	937	..
Electrical Mfg. Co., Calcutta ..	2,700	2,700	2,653	4,061
Hindustan Electric, Faridabad..	3,000	3,000	2,850	2,114
Power Cables, Kalyan ..	3,300	..	2,736	..
Total ..	19,300	12,720	16,446	15,366

Five other units for the manufacture of aluminium conductors had been licensed as early as in 1957. Although they have not commenced production so far, three units among them, namely, the National Screw and Wire Products, Anam Electrical Manufacturing Company, Ltd. and Indian Aluminium Cables are expected to go into production shortly. The Aluminium Corporation of India is also expected to produce conductors in 1962. The position regarding the establishment of a new unit by Devidayals remains uncertain as "it has not yet received necessary import licence for its machinery." Besides these five units, the Development Wing is considering the question of granting licences to a few more units. As regards expansion, Electrical Manufacturing Company has received a licence to increase its annual capacity to 5,000 tons (on double shift). If these schemes are implemented, the total capacity of the aluminium conductors will rise to 28,000 tons in 1961 and further to 31,200 tons by 1962. In the case of copper conductors, there is no prospect of expansion in the immediate future.

Demand

The Commission has estimated the demand for bare copper conductors at 10,000 tons and aluminium conductors at 20,000 tons for 1960. The following table shows the recent trend in consumption of conductors:

(In tons)

	1960 (Jan.-June)	1959	1958	1957
Bare copper conductors—				
Sales	4,626	7,352	9,251	11,230
Imports	24	90	128	115
Total ..	4,650	7,442	9,379	11,345
Aluminium conductors—				
Sales	8,486	12,956	14,494	14,565
Imports	1,220	4,511	1,902	5,837
Total ..	9,706	17,467	16,396	20,402

The decline in consumption in 1958 and 1959 is attributed to pruning of some of the power projects and slow rate of rural and urban electrification in 1957-58, 1958-59 and 1959-60. The decline in supply of aluminium conductors has also been attributed to the shortage of high tensile galvanised steel wire during 1958 and 1959, necessitating higher imports of aluminium conductors in 1959. It is also said that, had there been adequate supplies of steel wire, the consumption of aluminium conductors would have been maintained at the 1957 level. The future demand will depend on the tempo of development of power, as also the growth of communications. The Commission feels that demand for copper conductors will rise to about 12,500 tons and for aluminium conductors to 30,000 tons by 1963.

Raw Materials

The principal raw materials used in the manufacture of electrolytic copper rods, bare copper conductors, cadmium copper conductors, A.C.S.R. and A.A.C., are electrolytic copper wire bars, cadmium metal ingots, conductor grade aluminium ingots/bare or rods and high tensile galvanised steel wires. The consumable stores required are tungsten carbide dies and diamond dies, carbide abrasive grit, diamond powder, dungary and emery cloth and greases, lubricating oils, rapeseed oil, mutton tallow, suet, soft soap, etc.

There is no indigenous production of electrolytic copper wire bars, cadmium or high tensile galvanised steel wire. The entire requirements of the industry for these materials are met by imports. The Indian Copper Corporation has been given a licence to set up a unit to produce electrolytic copper bars, with an annual capacity of 8,400 tons. The unit is expected to go into production by 1962. Cadmium is also expected to be produced at Zawar (Rajasthan) by the Metal Corporation of India Ltd. The conductor grade aluminium ingots is also in short supply. The Indian Aluminium Company, Ltd. is supplying only a small quantity.

The Commission's report reveals that all consumers are satisfied with the quality of indigenous copper and aluminium conductors. Most of the units have availed themselves of the certification marks for copper and aluminium conductors. Despite the certification marks, the Director General of Supplies and Disposals and other consumers are said to have insisted on their own inspection. The Commission has rightly pointed out that the Union Ministry for Commerce and Industry and others concerned should devise means to avoid this unnecessary duplication of work, which entails the industry much inconvenience and useless expense.

THE BUSINESSMAN BEMOANED HIS TROUBLESOME PILES UNTIL HE STARTED USING HADENSA

Only genuine with this mark

HADENSA promptly cures Piles, Haemorrhoids and Fissures; relieves pain and itching and is an excellent lubricant.

HADENSA contains no narcotics and is non-staining.

NEW CENTRAL JUTE'S PROFIT AT RECORD LEVEL

ISSUE OF ADDITIONAL CAPITAL PROPOSED

THE accounts of the New Central Jute Mills Company Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) for the year ended 31st March 1960 disclose a distinctly encouraging picture. On a superficial perusal of the profit and loss account for the year 1959-60, one is likely to wonder how the gross earnings was shot up from Rs. 38.91 lakhs in 1958-59 to a record high of Rs. 78.48 lakhs in the year under review, when sales proceeds fell by Rs. 52.43 lakhs to Rs. 663.63 lakhs. The explanation for this somewhat paradoxical situation is not difficult to find. The Company combines trading as well as manufacturing operations under its management and its total turnover depends on two independent variables, namely, the output of jute goods manufactured in its mills and operations in the gunny market. During 1959-60 the gunny purchases amounted to only Rs. 121.66 lakhs, as against Rs. 271.62 lakhs in the previous year. The production of jute goods manufactured by the Company, however, increased substantially. This is borne out, to a considerable extent, by the figures pertaining to consumption of raw materials, which increased from Rs. 238.75 lakhs in 1958-59 to Rs. 251.74 lakhs in 1959-60. Other factors which contributed to the improvement in earnings are the programme of modernisation undertaken by the Company in 1955-56 and the following years and the brisk demand for the products of the mill, especially for the wide-loom varieties.

The net profit of the Company stands at Rs. 66.36 lakhs, as against Rs. 18.06 lakhs for 1958-59 and Rs. 12.38 lakhs for the fifteen months ended on 31st March 1958. This is largely due to the marked growth in gross profit but it is also due, to some extent, to savings in essential provisions. The transfer to depreciation has been reduced from Rs. 9.32 lakhs to Rs. 8.99 lakhs while there is no provision at all for taxation as against Rs. 9 lakhs in 1958-59. The Company's profits for the year under review are not liable to tax due to heavy capital expenditure during the year under review. Consequently, the dividend will have "the same tax incidence in the shareholders' assessment." This does not mean that the sum available for distribution is huge enough to declare large dividends. For the claim of statutory development rebate reserve is large. In fact, the entire amount of net profit, namely, Rs. 66.36 lakhs, has had to be set aside to this reserve and, in order just to maintain the dividends (7 per cent. on preference shares, subject to deduction of tax under Section 18(3D) of the Income-tax Act and 15 per cent. subject to tax on ordinary shares), a sum of Rs. 28.65 lakhs has been withdrawn from the reserves built up in the past. In effect, all this means that the net addition to the Company's resources from the current surplus is of the order of Rs. 37.71 lakhs.

The following table shows at a glance the Company's performance during the year under review:

(In lakhs of rupees)

	Year ended 31-3-60	Year ended 31-3-59	15 mths ended 31-3-58	Year ended 31-12-56
Sales proceeds	663.63	716.06	15,96.33	7,21.39
Closing stocks	69.29	57.52	60.67	67.70
Gunny purchases	1,21.66	2,71.62	9,87.01	3,05.47
Raw materials consumed	2,51.74	2,38.75	3,75.29	2,58.50
Other expenses	2,28.53	1,56.92	2,11.53	1,45.06

Carry forward	Nil	0.01	0.66	2.26

* Subject to tax. † Tax-free.

It will be seen from the table that, though the rate of dividend on equity capital has not been raised, the amount required for it is higher by well over Rs. 6 lakhs. This is due to the increase in the size of ordinary capital from Rs. 128.24 lakhs to Rs. 170.83 lakhs during the year under review. The Company had issued 427,500 ordinary shares of Rs. 10 each at par. This was on top of a similar number of shares that had been offered in the latter half of 1958-59.

The Directors say that they are considering issue of further equity shares in the ratio of one new share for every two existing ordinary shares for which the Government's sanction has been received. Unlike in the past two years, the proposed new issue will be at a premium of Rs. 3.25 per ordinary share, or 32.50 per cent. This is quite a stiff price to pay, having regard to the fact that the bulk of the Company's capital expenditure is on a new and difficult industry. If a separate company had been floated for implementing this project, the Government would not have been able to insist on such a high premium.

As the Company now has 1,708,346 ordinary shares, the aforesaid proposal will mean issue of 854.173 fresh shares and this will bring in Rs. 85,41,730 by way of capital and Rs. 27,76,062 by way of premium, or a total of Rs. 113.18 lakhs. With this issue, the Company will have raised Rs. 198,67,792 by way of capital funds in three consecutive years. While a part of this capital has been for financing modernisation of its jute mills, the bulk of it is towards the big heavy chemical and fertiliser project in U.P., known as the Sahu Chemicals which has been completed and begun production. It will be recalled that the Uttar Pradesh Government has given a large secured loan to the Company for financing this project; as at the end of 31st March 1960, the outstanding amount of this loan was Rs. 157.82 lakhs.

On the jute mills side, in addition to 30 looms installed in the wide-loom plant last year, the Company proposes to add a further 21 wide-looms and 14 new sliver spinning frames.

The paid-up capital of the Company as at 31st March 1960 stands at Rs. 203.99 lakhs, of which Rs. 33 lakhs are in 7 per cent. cumulative preference shares. The reserves and surplus aggregate Rs. 227.33 lakhs. Secured loans amount to Rs. 504.97 lakhs, of which Rs. 157.82 lakhs represent the borrowings from the U.P. Government for financing the Sahu Chemical project. Unsecured loans amount to Rs. 33.64 lakhs and current liabilities and provisions to Rs. 163.34 lakhs. The gross value of the fixed assets stands at Rs. 930.93 lakhs, of which Rs. 526.71 lakhs represent the value of Sahu Chemicals. The net book value of the block account is Rs. 794.39 lakhs, as against Rs. 730.62 lakhs a year ago.

It will be noted from the aforesaid summary of the balance-sheet that the Company is undercapitalised in relation to its net block. Even the proposed issue of new shares will rectify this disequilibrium only partly, though to a substantial extent.

The Directors' observations on the working of jute mills in the current year (1960-61) do not make encouraging reading. Apart from the prospect of an increase in the wage bill—the Wage Board for jute industry has already commenced its work—the various steps taken by the Government and the I.J.M.A. for placing the jute industry on a profitable working have not yet yielded satisfactory results. In their report for 1958-59 the Directors confidently stated that "the installation of Sahu Chemicals plant has been completed," "trials and initial adjustments are going on," "production is picking up and a steady pace is expected within a short time" and "profits of this unit will be reflected in the next year's working results." In their latest report, they observe a little less confidently as follows:

"As is usual with chemical plants, the Company's chemical and fertiliser unit has been facing teething troubles, particularly as the process is new and a pioneer one for the industry. During the current year, modification of certain sections of the plant has been carried out in the light of experience and on the suggestions on the spot of foreign technical experts. There is distinct improvement in consumption of materials and efficiency in production is gradually improving. The working of this unit would not, however, be able to contribute to the current year's profit."

It is thus clear that the progress of the chemical and fertiliser factory has been slower than anticipated and that the immediate outlook for the jute industry is not very promising. The future profits of the Company will largely depend upon the efficient working of the Sahu Chemical plant which accounts for nearly three-fifths of the block account. The outlook for this chemical industry is, however, good and, if the management succeeds in working this plant ably and to its capacity, the Company should be able to report handsome profits.

The current market value of the Rs. 10 fully paid-up ordinary shares is a little under Rs. 20 *cum-div.* and the yield works out to 5.43 per cent., free of tax. It may be interesting to note here that the ruling market price is less than the net worth of the scrip which roughly works out to Rs. 23.5 per share. As the current price includes the value of the proposed right, the *ex-right* value is about Rs. 17. Assuming that the Company will be able to maintain the dividend on the increased capital, the yield will be 6 per cent., free of tax. This is not low for the shares of a company which has a promising chemical project and has fully modernised its jute mills.

HOLDING OF ANNUAL MEETINGS

The Department of Company Law Administration has clarified that companies would now be granted extension of time upto three months for holding their annual general meetings and presenting the accounts relating to a financial year ended prior to 28th December 1960, when the Companies (Amendment) Act came into force.

This step has been taken to avoid any undue hardship that may be caused to companies by a strict enforcement of the provision in the Amendment Act that the accounts to be laid in any annual general meeting, held after 28th December 1960, should relate to a period, not earlier than six months. Companies, which find difficulty in complying with the amended provision in this respect, may apply to the Registrar of Companies for extension of time.

The Department has also notified that the balance-sheets and the profit and loss accounts of companies for financial years ended on a date prior to 28th December 1960, may be drawn up in the old form. In respect of financial years ending on or after 28th December 1960, the accounts must, however, be in accordance with the amended schedule.

Under the Amendment Act, private companies are required, in future, to file their profit and loss accounts, along with their balance-sheets. The annual accounts filed by a private company after 28th December 1960 must accordingly include its audited profit and loss account. In order to ensure that only the balance-sheet of a private company and, not the profit and loss accounts is accessible to members of the public for inspection, private companies are required to file the profit and loss accounts separately from the balance-sheets.

It has also been decided that companies, which had failed to file their documents with the Registrar of Companies within the prescribed period may now request the Registrar to accept these documents. The Registrars are being advised about the additional fee that would have to be paid for such late filing of documents.

INSURANCE

(Concluded from page 122)

with the assistance of such insurance as is carried.

"For private house property, both buildings and their contents, the aircraft peril is included in comprehensive policies. This is one of the many advantages of insuring house property and household goods comprehensively, and not merely against fire and other specified perils.

"Although the rate of premium charged for aircraft risks generally is nominal only it is not unusual for particularly vulnerable property to carry a higher rate. Obviously, houses or premises located on or near an airfield are exposed to greater risks, but even so the higher rates charged are modest in amount. Needless to say, property which is situated within a few miles of an airport is exposed to a greater degree of risk than more distant property."

BOOM IN LIFE INSURANCE IN U.K.

In contrast to the trend in other forms of personal savings, 1960 was a year of unprecedented growth for life insurance in Britain. Preliminary figures published by the Life Offices' Association, the Associated Scottish Life Offices and the Industrial Life Offices' Association show that the rate of increase in life insurance business last year was higher than in any comparable periods in the past. Total new premiums reached a record of £172 million, as compared with £143 million in 1959.

The share of the industrial (home service) branch of life business in the total premium income was £25.9 million, only £1.1 million higher than that in the previous year. This indicates that the growth in life insurance business occurred mainly in respect of policies with annual and single premiums and of annuities. Total new benefits secured on life policies aggregated £2,687 million, as compared with £2,303 million in 1959.

The boom in life insurance last year is attributed to the higher bonuses declared by the companies as well as to special factors such as the increase in mortgage insurance. The upward trend is expected to gather further momentum this year, as the uncertainty about the occupational pension schemes, which had adversely affected business last year, is expected to be removed.

RESULTS OF INDIAN OXYGEN IMPRESSIVE

NOTABLE RISE IN PROFIT—RESERVES ENHANCED

THE shareholders of the Indian Oxygen Ltd. (Managing Director: Mr. Amiya Kumar Sen, Calcutta) have every reason to feel gratified at the results of the Company for the year ended 30th September 1960, although the Directors have not proposed any enhancement of dividend which is maintained at the previous year's level of 15 per cent. subject to deduction of tax (or 10.5 per cent tax-free). For the Company's progress has been impressive. A further substantial rise in income from sales, a sizable improvement in net profit, a marked increase in the amounts ploughed back, thereby leading to a further strengthening of the Company's financial position, and renewed efforts of management to expand and diversify production with a view to meeting the continuously increasing demand for industrial gases and electrodes, which are the Company's main products, and other items of manufacture—these are the pleasant features of the Company's latest annual report. The management deserves to be complimented on publishing the Company's accounts and arranging to hold the annual meeting within 4½ months of the end of accounting year.

The gross profit of the Company for 1959-60, as compared with that for the previous year, is higher by Rs. 19.56 lakhs at Rs. 138.95 lakhs, but the net profit shows a modest rise of only Rs. 9.91 lakhs to Rs. 62.98 lakhs. This is due to larger provisions for depreciation and taxation, amounting to Rs. 37.11 lakhs and Rs. 38.86 lakhs, respectively, as against Rs. 31.69 lakhs and Rs. 34.63 lakhs provided for in 1958-59. Nevertheless, the net profit of Rs. 62.98 lakhs is not an unsatisfactory performance. This, together with the surplus of the previous year (Rs. 9.73 lakhs) and the refund of tax on profit for 1957 (Rs. 4.23 lakhs), brings the total available for distribution to Rs. 76.94 lakhs, as against Rs. 59.25 lakhs in 1958-59, or a rise of Rs. 17.69 lakhs. Despite such a notable improvement, the Directors of the Company have not stepped up the dividend. This only shows how anxious they are to plough back a large part of the profit and to maintain a steady dividend. Here is what Sir J. D. K. Brown, Chairman of the Company, has to say on this subject. In his annual statement to shareholders, he observes:

"Our is .... a capital-intensive industry and past experience has demonstrated the necessity continuously to plough back profits to provide for replacements at increased cost and for expansion which, as an industry serving other industries, we must always be prepared to carryout in anticipation of demand. .... So long as can be foreseen, there will always be the necessity to plough back substantial sums of money each year and, it is, in these circumstances, that your Directors have felt it appropriate, notwithstanding the increase in profits, to recommend the same rate of dividend as was paid in respect of the previous year."

The notable rise of Rs. 19.56 lakhs to Rs. 138.95 lakhs in the gross profit of the Company for 1959-60 has been due to the appreciable increase of Rs. 91.34 lakhs in sale proceeds which aggregated Rs. 645.52 lakhs and partly also to the rise of Rs. 1.52 lakh to Rs. 2.13 lakhs in income from other sources. A large part of the increase in sales has, of course, been offset by the rise (of Rs. 26.60 lakhs to Rs. 217.36 lakhs) in the cost of materials consumed and (of Rs. 46.70 lakhs to Rs. 291.33 lakhs) in other expenses. The following comparative table shows at a glance the results of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	6,45.52	5,54.18	4,85.91	4,17.74
Income from other sources	2.13	0.61	0.69	0.21
Materials consumed	2,17.99	1,90.79	1,89.74	1,87.30
Other expenses	2,91.33	2,44.63	2,03.66	1,40.98
Gross profit	1,38.95	1,19.39	93.19	80.73
Provision for—				
Depreciation	37.11	31.69	24.92	21.86
Taxation	38.86	34.63	30.30	44.02
Transfer from reserves	62.98	53.07	37.97	15.84
To reserves				10.00
Net profit	33.16	19.53	18.20	10.50
Goodwill written off				1.50
Dividend	20.00 (15%)*	20.00 (15%)*	20.00 (10%)	18.90 (10%)
Carry forward	18.78†	9.73	6.18	1.41

* Subject to deduction of tax at 30 per cent.
† Includes Rs. 4.23 lakhs representing refund of tax on profits for 1957.

Including the sum of Rs. 33.16 lakhs allocated out of the profit for 1959-60 to reserves, the total reserves of the Company stand strengthened at Rs. 142.60 lakhs (as at 30th September 1960). At this level, they represent over 70 per cent. of the paid-up capital of Rs. 200 lakhs. The total net assets of the Company thus come to Rs. 342.60 lakhs. The current assets (including investment, amount to Rs. 359.22 lakhs, while the current liabilities and provisions (including loans) are of the order of Rs. 395.87 lakhs. The gross value of the fixed assets is Rs. 599.69 lakhs (inclusive of the capital expenditure of Rs. 78.74 lakhs incurred during the year under review). After taking into account the depreciation provision of Rs. 248.66 lakhs so far made, the book value of fixed assets comes to Rs. 351.03 lakhs.

The Company has almost completed the replacement and expansion programme taken up in 1957. During 1959-60, the Company, according to the Chairman, succeeded in raising oxygen production at Ahmedabad and Madras by transferring plants from Bombay to Madras and leaves the oxygen plants at Bombay to be augmented and it is hoped that necessary licence will be obtained to import a plant with adequate capacity against foreign exchange procured by the Company. The other details of expansion are as follows:

An additional 400 M³ oxygen plant was installed in each of the Calcutta and Jamshedpur Works during the year.

At Burnpur, argon purification and high purity nitrogen production facilities were successfully commissioned.

The toxite cartridge manufacturing plant, established at Burnpur in May 1959, is producing, the additional cartridges required to match developing sales.

The level of production at the new factory in Khardah (Calcutta) improved during the year and new types of special electrodes were developed and introduced into the market.

The equipment factory at Calcutta, which two years ago undertook a phased programme of indigenous manufacture of gas-user equipment, is now on 100 per cent. local manufacture of the components required. Here again, plans are afoot to raise the level of production in the near future.

At Bangalore, construction of a new oxygen and dissolved acetylene factory is progressing on schedule and operations are expected to commence within the current financial year. When complete, this will afford increased production of dissolved acetylene in that growing industrial area.

At Gauhati, the Company has installed an oxygen plant within the premises of Indian Refineries Ltd.

Nitrous oxide, which is an anæsthetic widely used by the medical profession in India and which is also exported, is now produced in the Calcutta factory. A licence for setting up a second producing plant for nitrous oxide at Bombay has recently been obtained.

With regard to welding rods, miscellaneous gas-user and medical equipment and electric welding plant, the Company has encouraged their manufacture through feeder industries, thus reducing reliance on imports not only through the orders placed with them but with the technical help the Company has rendered to them by drawing on collaboration arrangements with The British Oxygen Company Limited.

The total capital expenditure on the expansion projects of the Company in the three years ending 30th September 1963 is estimated at Rs. 385 lakhs. In view of the steadily increasing investment in fixed assets, the Directors of the Company have decided to meet a part of the funds required for expansion by raising the ordinary share capital through the issue of 600,000 new shares of Rs. 10 each at a premium of Rs. 8 per share or 80 per cent. Of this issue, the British Oxygen Company of the U.K. will take up 60 per cent, that is, 360,000 shares, though it is entitled to 70 per cent., the balance of 240,000 shares being allotted to Indian shareholders. These will be issued in the ratio of two shares for every five shares now held and will rank *pari passu* with the existing shares for the dividend year 1960-61 and onwards.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 40 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 2.69 per cent. tax-free. But, if the proposed right issue also is taken into account, the yield works out to a little over 3.18 per cent tax-free. This low yield reflects the investors' confidence in the Company's growth prospects. This yield has been arrived at on the assumption that the dividend for 1960-61 will be maintained at 10.50 per cent net, not an unreasonable assumption, considering that the additional amount required for this purpose is only Rs. 9 lakhs.

COMPANY MEETINGS AND DIVIDENDS

GHUSICK AND MUSLIA COLLIERIES LTD. Annual General Meeting, Calcutta, 25th January 1961. Dividend: *Nil.* Transfer books remain closed from 16th to 26th January 1961, both days inclusive.

BASTI SUGAR MILLS CO., LTD. Annual General Meeting, Delhi, 27th January 1961. Dividend: Rs. 15.00 per share, subject to deduction of tax.

NELLIAMPATHY TEA PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala, 31st January 1961. Dividend: 13 per cent. or Re. 0.26 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books remain closed from 17th to 31st January 1961, both days inclusive.

SOUTH ARCOT ELECTRICITY DISTRIBUTION CO., LTD. Annual General Meeting, Madras, 31st January 1961. Transfer books remain closed from 16th to 31st January 1961, both days inclusive.

PHALTAN SUGAR WORKS LTD. Annual General Meeting, Bombay, 3rd February 1961. Dividend: Rs. 12.00 per share, taxable. Transfer books were closed from 19th December 1960 to 17th January 1961, both days inclusive.

WOODCOTE ESTATES LTD. Annual General Meeting, Coonoor, 4th February 1961. Dividend: *Nil.* Transfer books will remain closed from 28th January to 4th February 1961, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 8th February 1961. Dividend: Rs. 10.00 per ordinary share, subject to deduction of tax, payable on and after 9th February 1961. Transfer books were closed, from 28th November to 20th December 1960, both days inclusive.

PUNJAB MINERALS CO., LTD. Annual General Meeting, Calcutta, 10th February 1961. Dividend: *Nil.* Transfer books will remain closed from 28th January to 10th February 1961, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th February 1961. Dividend: *Nil.* Transfer books were closed from 30th December 1960 to 12th January 1961, both days inclusive.

INDIAN OXYGEN LTD. Annual General Meeting, Calcutta, 14th February 1961. Dividend: 15 per cent subject to deduction of tax. Transfer books will remain closed from 28th January to 14th February 1961, both days inclusive.

HENLEY CABLES INDIA LTD. First Annual General Meeting, Bombay, 20th February 1961. Transfer books will remain closed from 6th to 20th February 1961, both days inclusive.

SURAT ELECTRICITY CO., LTD. Interim dividend of Rs. 2.50 per ordinary share, subject to deduction of tax, for the half-year ended 30th September 1960, payable on and after 8th February 1961. Transfer books will remain closed from 23rd January to 7th February 1961, both days inclusive.

OUDH SUGAR MILLS LTD. Taxable dividend of Rs. 20.00 per share, for the year ended 31st July 1960.

NEW INDIA SUGAR MILLS LTD. Taxable dividend of Rs. 3.65 per share, for the year ended 30th June 1960.

BHARAT SUGAR MILLS LTD. Taxable dividend of Re. 1.50 per share, for the year ended 30th June 1960.

CAUVERY SUGARS AND CHEMICALS LTD. Dividend of 6 per cent. or Re. 6.00 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books will remain closed from 3rd to 17th February 1961, both days inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Dividend of Rs. 2.25 per ordinary share, subject to deduction of tax, for the year ended 30th September 1960, payable on 1st April 1961. Transfer books will remain closed from 23rd January to 11th February 1961, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Interim dividend on ordinary stock at the rate of 3½ per cent. net (tax applicable at 7s. 9d. in the £) for the year ending 31st March 1961, payable on 15th February 1961.

KIRLOSKAR ELECTRIC CO., LTD. Taxable dividend of 9 per cent. or Re. 0.90 per ordinary share, for the year ended 30th June 1960.

KIRLOSKAR BROTHERS LTD. Net dividend of Re. 1.75 per share, for the year ended 31st July 1960.

JAM SHRI RANJITSINGHJI MILLS LTD. Net dividend of Rs. 42.00 per share, for the year ended 30th June 1960, payable on 15th March 1961. Transfer books will remain closed from 16th to 23rd February 1961, both days inclusive.

METAL BOX CO., OF INDIA LTD. Taxable interim dividend of Re. 0.90 for the year ending 31st March 1961.

INDIA PAPER PULP CO., LTD. Taxable interim dividend of Re. 0.50 per share, for the year ending 31st March 1961. Transfer books were closed from 11th to 20th January 1961, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Taxable interim dividend of 6 per cent. or Re. 0.60 per share, for the year ending 31st March 1961. Transfer books were closed from 11th to 18th January 1961, both days inclusive.

BOMBAY POTTERIES AND TILES LTD. Dividend of Rs. 12.86 per share, subject to deduction of tax, for the year ended 30th September 1960. Transfer books will remain closed from 13th March to 11th April 1961, both days inclusive.

KHODYAR POTTERY WORKS LTD. Dividend of Rs. 10.00 per share, subject to deduction of tax, for the year ended 31st July 1960.

DECCAN SUGAR AND ABKARI CO., LTD. Final dividend of 18¾ per cent. (making a total of 25% per cent. for the year), for the year ended 31st May 1960. Transfer books will remain closed from 3rd to 17th February 1961, both days inclusive.

NATIONAL ELECTRICAL INDUSTRIES LTD. Dividend of 12 per cent. or Rs. 6.00 per ordinary share, subject to deduction of tax, for the year ended 31st March 1960.

CONSOLIDATED COFFEE ESTATES (1943) LIMITED

CHAIRMAN, MR. C. I. MACHIA'S SPEECH AT ANNUAL MEETING

REVISION OF COFFEE MARKETING POLICY URGED

A STRONG plea for modifying the system of marketing coffee in India was put forward by Mr. C. I. Machia, Chairman of the Consolidated Coffee Estates (1943) Ltd., in his speech at the Seventeenth Annual General Meeting of the Company held at Pollibetta (Mysore State) on 30th December 1960. Mr. Machia drew pointed attention to the heavy stock accumulations and the downward trend of prices and stressed the importance of a realistic approach to the whole problem of coffee marketing. In particular, he urged the Coffee Board to pursue a more practical propaganda policy and adopt Kenya's method of selling coffee according to liquor tests. Making it clear that Indian coffee can stay in the export market only on grounds of quality, he commended for acceptance a series of measures which, he declared, was "the only way of earning a little more in what is quite obviously a buyer's market."

The following is the full text of Mr. Machia's statement at the annual meeting:

"LADIES AND GENTLEMEN,

"It is with great pleasure that I welcome you here today on the occasion of the seventeenth annual general meeting of our Company. The Directors' report and the audited accounts for the year ended 30th June 1960 have been in your hands and, with your permission, I propose to take them as read.

"There has been a sharp decline in the income of the Company and the revenue from coffee at Rs. 71,99,953 is lower than that of last year by Rs. 18,49,420. The coffee crop harvested amounted to 1,451 tonnes of Arabica and 998 tonnes of Robusta, or a total of 2,449 tonnes. as against 1,793 tonnes of Arabica and 1,009 tonnes of Robusta, or a total of 2,802 tonnes in the previous year. Though the crop for the year is the fourth highest in the history of the Company, the Arabica crop in comparison to the previous year was less by 342 tonnes, the difference in Robusta being negligible. The points awarded in respect of Arabica for the year under review was consequently some 5,45,000 less than the previous year, which, with a valuation at Rs. 2.20 per point, lead to a decline in coffee income by Rs. 18,49,420 referred to earlier.

"The crop of 1958-59 was valued in the accounts at Rs. 2.37 per point, as against Rs. 2.20 per point for this season. At the same valuation, this year's crop would have been worth Rs. 77,56,313 or about Rs. 6,00,000 higher than the valuation now made in the profit and loss account.

Surplus Receipts Negligible

"Your Directors considered it wise to value this year's crop at only Rs. 2.20 per point, in view of the sharp decline in export prices for Arabica and Robusta, those for the latter being considerably lower than the basic minimum return to the grower fixed by the Board. The valuation at Rs. 2.20 per point is the highest that could be made with safety and it is feared that surplus receipts over the present valuation of Rs. 2.20 may well prove negligible.

"The income over valuation for 1958-59 received into this year's accounts is Rs. 3,67,344, as against Rs. 9,45,863 received in 1958-59 from the crop of 1957-58. An excess of only 8 nP per point making up to a total of Rs. 2.45 per point was received.

"It will be of interest to compare the valuation and final value per point for each of the last five years:

	Valuation in accounts	Final value per point	Amount received from previous year
	Rs.	Rs.	Rs.
1954-55 ...	2.12	2.37	6,88,290
1955-56 ...	2.37	2.55	7,27,779
1956-57 ...	2.50	2.81	13,43,214
1957-58 ...	2.25	2.51	15,40,484
1958-59 ...	2.37	2.45	9,45,863

"It will be seen that the income of Rs. 3,67,344 from the previous year's coffee crop received during the year is the lowest since 1954.

"The profit for the year under review after taxation was Rs. 13,08,089 and is the lowest since 1949. The fall in profit is accounted for by the lower crop, lower valuation and lower realisations resulting in a very much lower income from previous year's coffee.

Coffee Crop Position

"This makes somewhat dismal reading, but a brief comment on the state of the crop itself is necessary. The Arabica crop averaged 6.16 cwts. per acre and Robusta 7.51 cwts. per acre. Apart from the year 1956-57, a phenomenal year when the production per acre of Arabica was 11.32 cwts., the present production of 6.16 cwts. per acre is the fourth highest on record. The production of Robusta at 7.51 cwts. per acre is the third highest since the formation of the Company.

"It is necessary to offer an explanation for the very marked divergence between our revised estimates of crop and actual crop harvested. The revised estimate in September 1959 of Arabica was 1,829 tonnes, whereas the actual crop harvested was 1,451 tonnes, a reduction of 378 tonnes. Robusta was lower than estimate by 18 tonnes. The Company has had a fair record of estimating the crop and, barring 1947, this is the only instance where there has been such a large fall in actual yield.

"Mr. Paterson, in his speech last year, indicated that the unusual rains during November and December 1959 might lead to the estimates for Arabica not being realised. This fall in actual realisation may not, I fear, be attributed solely to the untimely rains but may well have been due to the appearance of a malady, particularly in Arabica coffee, further reference to which will be made later on.

Subsidiary Crops

"I will now refer briefly to our subsidiary crops.

"*Pepper*: Pepper produced during the year was 59 tons, as against 95 tons in the previous year. About 20 tons have been sold at an average price of Rs. 310 per cwt., whereas the highest price secured the previous year was Rs. 120 per cwt. We still hold about 38 tons of pepper which we have not been able to dispose of due to a sudden decline in prices Pepper is a highly speculative commodity, but we hope it will be possible to obtain the conservative valuation made in the accounts.

"*Cardamom*: The income from cardamoms at Rs. 82,468 is the second highest since the inception of the Company and is due to the higher prices obtained. The area under cardamoms is 158 acres and particular attention is paid to better cultivation and improved methods of preparing the cardamom for the market.

"*Oranges*: The income of Rs. 1,23,469 from oranges is also a record. The bulk of our oranges are marketed through the Coorg Orange Growers' Co-operative Society and prices realised have been good. Oranges in Coorg have generally been on the decline, but proper attention under the guidance and advice of the Research Station maintained by the Indian Council of Agricultural Research appears to be producing better results. This station has also improved on techniques of grafting and improved plant material, and it is proposed to take advantage of these for extending our areas under citrus crops.

"*Paddy and Straw*: Ruling high prices, coupled with the highest crop on record, have enabled us to earn an income of Rs. 2,12,490, as compared to Rs. 1,86,613 in the previous year. Our income under this head would be higher but for the fact that the larger portion of our paddy is issued to our labour on a 'no-profit-no-loss' basis from September to December each year to counter prevailing high market rates during that period. Our acreage under this crop is 625 acres and it should be possible to increase our yield further.

More Attention Wanted

"It will be noticed from the accounts before you that our income from subsidiary crops such as pepper, paddy, cardamoms, oranges and minor produce amounted to Rs. 7,01,474 or very nearly 7.2 per cent. of our total income. The income from these crops is not insubstantial and more attention will be paid to these subsidiary crops. They should prove a valuable stand-by in the highly fluctuating coffee market.

"'Haarer,' in his *Modern Coffee Production*, warned coffee producers that prices had reached their peak at the time of his writing (1955-56), and advised them strongly to prepare for falling prices and even for a slump. He recommended various measures to be taken in time to stave off disaster, for example, international agreements, improvement of quality, proper grading, increasing the demand by propaganda and producing instant coffee. He also suggested mixed planting. Most of the steps suggested by him have not been adopted and it seems that progress in that direction will be too slow, if not late, to be immediately effective as a remedy against what he foresaw.

"Coffee production will, of course, remain our main occupation, but more attention will be paid to pepper, cardamom, oranges and arecanut and for their extension wherever possible. These are undoubtedly long-term measures, but I fully believe that these will play a very substantial part in the coming years in the economy of your Company. The possibility of growing other crops such as nutmeg, cloves and cocoa is under study and will be taken up only on expert advice being favourable.

Coffee Planting Extension

"In the context of encouraging a mixed economy, it will not be out of place to comment briefly on the contemplated extension of coffee planting in Andhra, Assam and Orissa States. The Coffee Board is finding it difficult to market the existing production and it would appear to be wiser to encourage the cultivation of other crops in those areas.

"There is considerable overproduction in the world and, notwithstanding international agreements, the position is bound to deteriorate. We appear to be following countries like Costa Rica, Haiti, Ecuador and French Africa, which, despite the threat of overproduction, encouraged coffee growing by subsidies, loans and other forms of financial assistance, whereas it would be preferable and wiser to follow Brazil which is reported to be the only country with a scheme to assist farmers to move out of coffee growing.

"*Timber*: The income from timber this year is Rs. 2,98,537, as against Rs. 6,15,904 last year. This is not a regular source of income and sales will be made only as and when necessary.

"The Kushalnagar works has cured 3,709 tonnes which is the highest quantity cured since the start of the works. The trading results have been better than in previous years.

"It has not been possible to effect savings in the rate of expenditure except for the corresponding lower crop charges due to a smaller crop. These savings are limited to cost of gathering, pulping, transport to works and curing. The question of effecting economies is under serious consideration, but it must be remembered that our expenditure has so far been geared to a high rate of production and a corresponding high return for our coffee.

Capital Expenditure

"Our capital expenditure during the year amounted to Rs. 7,74,902, out of which Rs. 1,23,247 were spent for extending drying ground space and Rs. 1,09,125 for estate machinery. The balance accounts for new clearings, buildings, etc. We have so far built 2,199 new quarters for labour and we still have to build about 200 houses. These will be built on a phased programme and will eventually cost at present rates some Rs. 3 lakhs.

"It is necessary here to bring to your attention the fact that depreciation allowances under the Mysore Agricultural Income-tax Act are less than that allowed under the Central Act, particularly in the case of tractors, motor vehicles, machinery, spraying hose, etc. Under the old Coorg Act, over and above the normal depreciation allowance a special allowance of 20 per cent. was allowed for a period of five years which allowed for the writing off of all buildings and machinery in a period of four to five years.

"The fact that added to lower rates of depreciation no allowance is made for the capital value of an estate results in the agricultural income-tax working out at a rate higher than that of Central income-tax.

"Expenses incurred in new planting and replanting up to the yielding stage are treated as capital for which an allowance of only 10 per cent. is granted. In the case of replanting which is undertaken to replace a non-yielding or old and useless area, no allowance is made for the loss of capital invested.

Liberal Depreciation

"There is a very strong case for liberalisation in the matter of depreciation allowances and a memorandum on this subject first submitted when the Mysore Act came into force has not yet received consideration.

"The dividend of 20 per cent. recommended by your Board is as liberal as possible in view of our lower earnings, coupled with the necessity to allocate adequate funds to our reserve. It was only possible to pay this dividend because of the refund of agricultural income-tax, amounting to Rs. 4,67,288 received by the Company in respect of the tax paid for the year ended 30th June 1956. Tax had been demanded and paid on the basis of the Mysore agricultural income-tax in respect of the year 1955-56, even though Coorg at that time was a separate State. A further appeal is pending in respect of the agricultural income-tax paid for the four months ended 31st October 1956—merger of Coorg into Mysore having taken place as from 1st November 1956. In the event of the appeal being successful, a refund of about Rs. 2 lakhs may be expected.

"The Preference Share Regulation of Dividend Bill has been passed by Parliament and the question of how it affects an agricultural company as yours is to be considered. It is only fair to say that the portion of our profit subject to Indian income-tax is negligible and only that portion will require to be grossed up. The resulting extra payment will be very small indeed, but even without this, the preference shareholders will not be losing, as they will still have the benefit of Section 49B of the Indian Income-tax Act.

A New Disease

"The coffee crop that is now being harvested may be higher than our estimate of 3,099 tonnes, specially in Robusta. Some of our Arabica estates have been particularly affected by the new disease and it is apprehended that this may affect the outturns and quality of the coffee. In the year under review, it was found in some Arabica estates that the percentage of 'A' sized beans was substantially lower than the average and that there was a similar remarkable increase in Peaberry and the 'B' size. This naturally has an adverse effect on the quality of the coffee and results in a lower number of points being awarded. I hope that I am not being unnecessarily alarmist and will only be too glad if proved to be unduly pessimistic.

"I am afraid it is rather early in the season to venture any opinion on the prospects of the 1961-62 crop and this should as usual wait until we have had our blossom showers.

"I referred earlier to the prevalence of a new disease on coffee. This condition was first reported in 1957 but did not receive any attention, as the condition reported appeared to be not unlike 'Die Back' normally occurring in coffee. The disease appears to have spread since then and the condition of the coffee, especially from January 1960 onwards, has given cause for alarm.

"A Scientific Committee which was appointed by the Coffee Board to investigate the malady has submitted its report and has indicated that, while there is no cause for alarm, there is equally no room for any complacency. They go on to state that the problem is urgent and important and that the subject should be treated as a special project and studied in greater detail on a long-term basis. They have made suggestions for setting up a special project to undertake certain studies and it is hoped that these will be given effect to as early as possible.

"As the earliest diagnosis of this condition appears to be of the greatest importance, one wonders whether it would not be in our best interest to invite a scientific officer from Kenya or other coffee growing areas to undertake a short tour. It may be that, if such a condition has been noticed before that, he would be in a position to identify it and much valuable time to be spent in diagnosis would be saved.

"Due to this condition on coffee, it is considered that it would be better not to open any new clearings in 1961. We have 727 acres of immature coffee and it would be wiser for our estate managers to be allowed to look after and bring up the immature areas, instead of diverting their attention to opening new areas.

"Our relations with labour have been generally cordial. A wage agreement with the unions was entered into effective from 1st August 1960 under which the existing rates of wages were increased from Re. 1.50 and Re. 1.12 to Re. 1.62 and Re. 1.23, respectively, for men and women labourers and correspondingly for adolescents and children. This represents an increase of 8 to 9 per cent. on the existing wage bill. This increase inclusive of provident fund and leave wages will cost the Company about Rs. 2½ lakhs extra for 1960-61.

"The last increase in labour wages was in 1957. The present agreement lasts for two years, or until the Wage Board, which is to be appointed by the Central Government, makes its award, whether earlier or later. The increase in wages on plantations is inevitable and in an expanding economy essential.

"One serious effect of the increase in wages is that absenteeism appears to increase in proportion. The absenteeism in your Company varies between 16 and 26 per cent., and added to the poor output of work, really imposes on us the burden of having to maintain a large number of unproductive labourers and to incur the corresponding increase in capital outlay for providing labour quarters.

"In the present state of falling prices and a return which is beginning to prove to be uneconomic, labour must play its part in improving their output of work. Coffee plantations cannot be expected to face a situation where labour wages may be eventually doubled or trebled and still be expected to maintain the present rate of employment.

"The production of coffee is a purely agricultural occupation, and there are generally very few agricultural activities which can be paid for on the basis of a fixed task. Unless there are incentives to work and earn more, it will be impossible to obtain a full day's work from a labourer. Incentives at present are possible only in the picking and estate curing of coffee. It is essential that a special study of this subject as applied to coffee plantations is undertaken, and we propose to take up this matter with our Planting Association. It is surely the duty of labour unions to advise their members to do a full day's useful work.

Coffee Prices Recede

"I must now refer to a thought uppermost in the minds of all those interested in coffee. For the first time since 1948, that which we feared for many years has happened. The world price of coffee has come down below the minimum release price fixed for release in the internal market. In 1948, the Government of India withdrew the price control imposed on coffee. For almost 12 years thereafter, world prices were very high and the Indian producer was not allowed to get the full benefit of these high prices. Exports were restricted and, even where allowed, a very heavy export tax of as large as Rs. 70 per cwt. was imposed. In fact, at one stage, some 5,000 tonnes of coffee fit for export were not permitted to be exported, though this could have been done easily without affecting the stock position in India. The selling price of coffee in India itself was kept low on the ground that the profits made on exports was to subsidise the internal market prices.

"Recently, there has been a greater pressure to increase the exports of coffee and it is curious that this should come at a time when growers are faced with an adverse export market. We are now faced with the position of suffering a loss as coffee is to be exported on the basis of any price which it could fetch. There is no doubt that, until now, the grower has subsidised the consumer. It is extremely doubtful if it could be expected that the consumer is now to subsidise the grower.

"The world production of coffee in 1959-60 amounted to 4.5 million metric tonnes, representing an increase of over 1 million metric tonnes. The increase in world imports from 2.2 million metric tonnes to 2.5 million metric tonnes was not commensurate with the rise in output. The stocks with producing countries enlarged from 1.6 million metric tonnes to nearly 3 million metric tonnes, which is equal to one year's world consumption.

"In India itself, the estimate for 1960-61 when realised will be a record. The estimate amounts to 52,290 metric tonnes, made up of 30,885 metric tonnes of Arabica and 21,405 metric tonnes of Robusta, and it is possible that the Robusta crop may be substantially higher.

Internal Offtake

"The trend of internal offtake of coffee is not in consonance with that of production. On the contrary, the internal consumption during the 11 months of 1960 is slightly lower at 27,321 metric tonnes than in the corresponding period of 1959. As on 1st January 1961, the stock of old crop still to be marketed inclusive of carry-forward will be about 7,200 tonnes.

"The Food and Agricultural Organisation states as follows:—

"'Although world imports and domestic consumption of coffee will rise in coming years, it is unlikely that the annual increase will exceed 5 per cent., even at present reduced prices. The proposal has been advanced to extend the International Coffee Agreement for another year and consider, in the meantime, the conclusion of an export agreement for five years, to provide time for producing countries to enact and carry out measures of production control, at present still at the planning stage. Unless such measures are taken, stocks will continue to accumulate in producing countries and could reach twice their present size three to four years from now.'

Marketing Policy

"We have to consider our marketing policies against the background of what is stated above, namely, increasing production and the very large stocks of coffee held by producing countries. The system of marketing of coffee in India for internal consumption is multi-channelled. Coffee is sold by Pool auctions for whatever price it may fetch above the basic minimum release prices; coffee is sold at local auctions thereby reducing the demand on Pool auction buyers; and coffee is allotted to co-operative Societies at the basic minimum release price. In addition, in the name of propaganda, coffee is being issued to consumers again at basic minimum release prices. The return to the grower is thereby kept very nearly at the minimum. This system no doubt was a good system when stocks were short. The system was introduced in 1948 immediately after the removal of price control and when the production of coffee during that year was as low as under 14,000 tonnes. Prices were indeed very high and all these methods were devised by the Indian Coffee Board to keep prices down. With the doubling or even trebling of production as considered in relation to 1948 there seems little justification to continue, what were after all, expedients suited to a particular situation. Added to this is the fact that export prices have fallen to uneconomic levels. I make a strong plea that the entire marketing policy is overhauled and a more realistic one adopted.

"The first requirement is that the Board adopts a more practical propaganda policy. There are, I know, mixed opinions as to the utility of what were known as India Coffee Houses, but there is no doubt that India Coffee Houses were largely instrumental in increasing the coffee drinking habit and that the internal consumption of coffee rose from some 8,000 tons to over 20,000 tons. For various reasons, the Coffee Houses were closed down and the few that are running now are more in the nature of prestige houses and cater to a limited and favoured clientele. Propaganda is very necessary, particularly for Robusta coffee, if we are to sell our increasing production. The prices for Robusta on the world market are very much lower than our cost of production, and I am convinced that the best market for our Robusta is in India, as at its price it provides a cheaper drink to many of our people.

Export Marketing

"In particular, I refer now to export marketing. We are in no position, of course, to hold back the huge stocks being received into the Pool. With the increased production in 1961, we may well find ourselves at the end of that year with a stock of 10,000-12,000 tonnes, if not a little more, waiting to be marketed. We are now obliged to sell coffee at whatever price that is offered. In these circumstances, it is more than ever necessary to examine the export marketing activities of the Coffee Board in some detail. I would like to say at the very beginning that this is not an attempt to find fault with the Coffee Board's marketing policies. If the coffee industry is to exist, there seems to be little doubt that the system of marketing should be completely overhauled and some bold decisions taken.

"The method of marketing is briefly that of offering coffees for export and inviting bids by means of sealed tender. Inevitably this system has led to the concentration of the export business in the hands of only two or three large exporters, a position in which Jamaica found herself for the same reason. It is also

UNDP 23 JAN 1961 PUBLIC DEPARTMENT

significant that India at present is the only country which sells its coffee by this system.

"In making up lots for sale, coffees of the same type and grade of equivalent quality are bulked together and offered as separate district growths. There is, however, no guarantee that, each year, any lot of a particular district offered is comprised of the coffee from the same two or three estates of the district. In any case, the importer in foreign countries knows only that he is being offered the bulk of a particular district growth and is, therefore, not in a position to enter the market or interest himself on grounds of selective buying.

"Before the advent of the Coffee Board, all coffees were sold on the basis of estate marks. The quality of coffee of each estate was well known in London, and these estates always obtained premium prices for their coffees. With the method of marketing adopted by the Coffee Board and, in fairness, it must be said that, at that time, there was no alternative, estate marks disappeared from the London market. Recently, the Coffee Board sent some coffees of about half a dozen well-known estates without disclosing the names of these estates, and it was a pleasant surprise to see that these coffees did fetch very good prices, evidently on grounds of quality.

Coffee in Kenya

"It is relevant to consider the manner in which Kenya sells its coffee. Here they are sold strictly according to liquor tests, and the buyer knows that the coffee he purchases is the type that he requires for his own particular purposes. He also knows, and this is most important, that, in the following year, the same quality of coffee identifiable by him as similar to that bought by him previously will again be offered. This method ensures that an importer takes sustained interest in each type and grade of coffee and this should be our object also.

"There has been a decline in world prices, but it is, interesting to note the comparative prices fetched by Kenya coffee and our coffee. Tabulated below are comparative prices for Kenya and Indian coffee per cwt:

	Kenya Rs.	*Indian* Rs.
January	266 to 393	260
February	246 „ 380	250
March	213 „ 364	245
August	210 „ 333	201
September	200 „ 372	192
October	202 „ 400	184
November	200 „ 353	175

"If we are to stay in the export market, there is no doubt that we can do so only on grounds of quality. There is no question of our driving Kenya coffee out of the market, for I fully believe that there is room for both our coffees considering the volume of production of these extremely popular coffees. At best India can export only 15,000 tons of first class plantation and, in a quality-conscious market, there is plenty of room for our coffees sharing in some of the rewards paid to high class coffees.

Common Market and Coffee

"In respect of the effect that the European Economic Community market will have on our coffees, I quote from *The Commonwealth and Europe*, a study prepared by the *Economist* Intelligence Unit:

"'Coffee has an infinite variety of flavours and established blends have a following faithful, despite price changes. Kenya coffee, for example, is exceptionally popular in West Germany where importers willingly pay a premium to secure it; Jamaica's Blue Mountain coffee holds an enviable and almost unique position in many markets as do, though to a lesser extent, the high grade coffees of Southern India.'

"Consumption is also rising in the United Kingdom, and the same book goes on to state as follows:

"'So long as the small tariff preference is maintained in the U.K., or indeed even without it, Commonwealth producers can expect to take their full share of the growing British market, Kenya, India and Jamaica catering to the better end of the trade, other producers to the double coffee market.'

Measures for Improvement

"The above quotations offer an authoritative reply to those who may doubt that Indian coffees cannot compare in quality or compete on that basis. I would, therefore, propose for the most earnest consideration of the authorities concerned the following measures:

"(a) The appointment of a well-known coffee taster with his headquarters at Bangalore, say, for a period of three years during which he will also train a number of assistants.

"(b) All Arabica coffees produced in India to be liquor tested and the best coffees earmarked for export.

"(c) The coffees offered for export should be from estates which have earned premium points.

"(d) Such coffees should not be bulked with other coffees.

"(e) Samples will be true to the particular outturn.

"(f) The coffee offered should be in the name of the estate or by a distinguishing mark.

"(g) Coffees offered in subsequent years will continue to bear the same distinguishing marks.

"(h) The coffees should be sold in public auction and not by sealed tender.

"(i) Auctions should be held at weekly intervals to enable importers to cover their requirements quickly if they fail to do so in a previous auction.

"(j) The interval between sale and shipping of the coffee should be reduced.

"Without going into detail, I am convinced that the methods I have advocated will be the only way of earning a little more in what is quite obviously a buyer's market. All this requires a bold decision and courage to sell coffee in a way different to ours, but which is common throughout all other exporting countries. If an early decision is taken, it should be possible for us to start selling our coffee this year itself on basis of quality. Even if we sold 1,000 tons this year on this basis, we would be entering the export market on proper lines and we could expand this activity in coming years.

"One further suggestion I would make is that the Coffee Board should open a prestige Coffee House in London and one in Hamburg. All our coffees should be displayed and sufficient publicity undertaken to revive an interest in Indian coffee. This will be expensive, but it should be money well spent.

"Eventually the sale of coffee on the basis of cup tasting should also apply to internal sales and will ensure discriminative buying.

Bold Decisions Urgent

"I have touched on a few controversial matters but I trust these will receive earnest and sympathetic consideration. Bold and urgent decisions are necessary. Coffee producers have an unhappy feeling that their fate is decided by a body not truly representative and not close to them or to their problems and it is only by the adoption of realistic attitudes that satisfaction can be given. It is regretted that no decisions have yet been taken on the Expert Committee's report, though this was submitted some 18 months ago. Coffee producers and Associations feel that their problems are not dealt with with any sense of urgency or realism and the failure on the part of the authorities to release the report to associations confirms the feeling that the fate of producers is being decided without taking them into confidence.

"I must refer here to the excellent services rendered to your Company by my predecessor in office, Mr. R. C. Paterson. Your Company showed much progress during his term of office and I trust that his policies will continue to bear fruit in the coming years.

"I must express my thanks to all our managers and members of our staff both at head office and on the estates and at the Kushalnagar works for another year of hard and efficient work. They have a challenge to face in the coming years, occasioned by falling prices and overproduction and every effort will have to be made by them to run the estates as economically as possible.

"I would refer in particular to Mr. E. R. W. Walker, your Field Manager and a fellow-Director for the devoted service of some 30 years he has given to your Company and its predecessors. He will be going into well-earned retirement from the end of June 1961 and I would, on your behalf, like to thank him for all he has done for the Company. His devotion to duty and capacity for unsparing hard work is worthy of emulation by all of us and he will be seriously missed.

"Finally I must thank my fellow-Directors for their wise guidance and help."

RAMTIRTH

HINDI MONTHLY

Editor: YOGIRAJ SHRI UMESHCHANDRAJI

Published by:

SHRI RAMTIRTH YOGASHRAM, Bombay

• MORE THAN 130 PAGES PER ISSUE •

The main idea behind this magazine is to develop the physical, mental and moral aspect of the common man. Detailed information about the cure of diseases by naturopathy and yogic treatment is discussed also.

Annual Subscription Rs. 4/- only. Single Copy 40 nP only.

Agents shall place their orders and requirements by 15th of each preceding month.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices : Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: Rs. 2.50 including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD.

FOURTEENTH ANNUAL MEETING

CHAIRMAN'S PLEA FOR PROTECTING INTERESTS OF COFFEE PRODUCERS

ADDRESSING the Fourteenth Annual General Meeting of the Coffee Lands and Industries (Mysore) Ltd., held at Pollibetta (Mysore State), on 30th December 1960, Mr. C. I. Machia, Chairman of the Company, highlighted the difficulties confronting the coffee industry, as a result of the Coffee Board's marketing policy. He criticised the Board for its attitude of helplessness in times of falling prices and stated that the producer of coffee was entitled to as much protection as the consumer. Mr. Machia wanted a revision of the marketing policy and reorganisation of the Board. In his opinion, sales for export must be by open auction and on the basis of quality. He also pleaded for release of coffee in internal market only through Pool auctions, instead of through local auctions and co-operative societies, intensive propaganda and abolition of excise duty on Robusta coffee.

The full text of the Chairman's speech is reproduced below:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you on the occasion of the fourteenth annual general meeting of your Company. The Directors' report and the audited accounts for the year ended 30th June 1960 have been with you for the statutory period and, with your permission, I shall take them as read.

"There has been a sharp decline in profit before taxation from Rs. 14,21,249 in 1958-59 to Rs. 3,62,662 during the current year. The fall in profit is due to the harvesting of a lower crop of 677 tonnes, as against 902 tonnes in the previous year, combined with the valuation of the crop at only Rs. 2.20 per point, whereas the previous crop was valued at Rs. 2.37 per point. This has resulted in our earnings being reduced by Rs. 8,89,056. The final payment for 1958-59 crop realised only Rs. 2.45 per point or 8 nP over the valuation. This resulted in our receiving an income from previous season's crop of Rs. 1,48,410, as compared to Rs. 3,62,655 received in the previous year. The total reduction in profit has consequently amounted to Rs. 11,03,301.

Crop Harvested Lower

"The crop harvested was 225 tons lower than the previous year and production averaged 4.80 cwts. per acre, as against 6.97 cwts. in the previous year. The expenditure is about Rs. 856 per acre, while the earnings at Rs. 2.20 per point works out to Rs. 165 per cwt. or Rs. 792 per acre, resulting in a loss of about Rs. 1,76,000 on an area of 2,752 acres, exclusive of 25 acres of new clearing. This loss was partly covered by the carry-forward of Rs. 1,48,410 from the previous year and receipts from Ilehole estate. It will, therefore, be obvious that, just to break even at a valuation of Rs. 2.20 per point, the production should average a minimum of 5.15 cwts. per acre.

"Our expenditure has remained more or less the same as the previous year and steps for economies are under active consideration subject, however, to the fact that no step should be taken which will have the effect of reducing the production per acre.

Hunsur Works

"The profit from Hunsur works, inclusive of estate supplies, was Rs. 1,62,317 after tax and is the second highest on record. The earnings from the works has contributed the major share of the year's distributable surplus. The works cured 3,526 tonnes of coffee, and it is anticipated that a higher tonnage of coffee will be cured during the current year.

"The dividend at 6 per cent. recommended is in keeping with the profit which on the year's working amounted to only Rs. 2,03,662 and with the necessity to allocate some amount at least to reserve.

"As unfortunately the estates made a loss this year, there will be no profit assessable to agricultural income-tax and consequently shareholders will not be entitled to the benefit of relief under Section 49(B). The Preference Share (Regulation of Dividends) Bill is now passed into law and steps will be taken to implement its provisions.

"Our Arabica crop for the year under report was lower than the revised estimate by 123 tonnes as shown in the Directors' report. It is apprehended that the fall in crop may be mainly due to the prevalence of a condition in Arabica coffee which is possibly attributable to a disease. This has recently been the subject of a study by a team of scientists appointed by the Coffee Board and their report recommending the setting up of a project is pending implementation.

Low Valuation

"Our revised estimate in respect of the crop that is now being picked of 711 tonnes of Arabica and 147 tonnes of Robusta which will give an overall average of 6.1 cwts. per acre is likely to be realised. The crop is, therefore, expected to be about 180 tonnes more than that of the present year, but this increase must be considered with reference to the present low valuation at Rs. 2.20 a point. It is too early to say anything about the crop for 1961-62, as so much depends on the blossom showers.

"This year, our estates have sustained a loss and this is more noticeable, as we are entirely dependant on coffee for our income. Our income from subsidiary or minor crops was only Rs. 9,133 and it is essential for us to increase our plantings and acreages of subsidiary crops such as cardamom, pepper and arecanut. The prospects of doing so are under consideration and, though these may be long-term measures, they should eventually prove useful in the context of falling prices for coffee.

Higher Wages for Labour

"Our relations with labour have been generally cordial. A wage agreement was entered into by the Mysore State Planters' Association with the unions resulting in an increase of wages effective from 1st August 1960 from Re. 1.40 to Re. 1.62 for men and Re. 1.06 to Re. 1.23 for women and correspondingly for adolescents and children. According to the agreement, the wages for plantation labour will be the same for both Mysore and the erstwhile district of Coorg. This agreement will result in an increase in expenditure of about Rs. 1,15,000 per annum. The agreement is effective for two years or until the award of a Wage Board whether earlier or later.

"The wages were last raised by agreement from 1st April 1957 from Re. 1 to Re. 1.40 for men and 13 annas to Re. 1.06 for women, representing an increase of 40 per cent. and the present agreement enhances those wages by 16 per cent. The trend of increasing wages is there to see and we must be prepared to face the possibility of further increases as a result of agreements or Wage Board awards. The wage bill on a plantation, inclusive of amenities to be provided under the Plantation Labour Act, is the largest single item of expenditure being at present as high as 44 per cent. of the total expenditure.

"It will clearly be impossible to continue to employ labour at the present rate per acre. If a labourer will only do a full day's work, a lesser number can be employed and such reduced numbers would be in a position to earn a very much higher wage.

"I referred earlier to the fact that our expenditure is about Rs. 856 per acre. Labour accounts for Rs. 355, spraying for Rs. 100 and manuring for Rs. 128, representing 44 per cent., 11 per cent., 16 per cent. of the total cost. The balance of 29 per cent. accounts for depreciation, curing charges, transport to works, management and staff salaries, etc.

"The average production per acre in India is 3.5 cwts. per acre, our own production being 4.80 cwts. per acre for the year under review.

Price Policy Unrealistic

"It is significant that, despite the higher yield, we have experienced a loss. This can only be due to the continuance of a price policy which, in the context of increased production and rising costs, is unrealistic. The policy of subsidising internal prices by the higher prices obtained in export can no longer be followed due to unremunerative export prices.

"It is obvious that it is only the producer that suffers by these policies. At a time when export prices were very high, we were not allowed to receive their full benefit. Producers willingly shared the prosperity with the consumer, despite the fact that the higher earnings were curtailed by policies such as a refusal to export a clear surplus and the imposition at that time of an export duty.

"The final value of the point has been steadily going down each year. In respect of the current year's crop, which has been valued at Rs. 2.20 a point, it is expected that the final value may be, at the best, about 4 nP more. In spite of this, the policy is that the price to the consumer is not to be affected. It is only the producer who is to bear the adversity.

"An uneconomic return can only be countered by increased production per acre which is difficult to achieve due to falling prices, and it is more than likely that the problem may solve itself by a depression in production caused by the abandonment of unremunerative areas and less care being taken of plantations—in fact, a repetition of the state of affairs of the thirties.

Unremunerative Return

"A reference has already been made to the fall in export prices, leading to an unremunerative return to the grower. The prices for Robusta in the export market have fallen from Rs. 125.55 in February 1960 to Rs. 85.46 in November this year per cwt. The return to the Robusta grower based on Rs. 2.20 per point is Rs. 116.60 per cwt. and the minimum release price, inclusive of Central excise duty and Coffee Board's charges, is Rs. 150. The average price obtained for Robusta in the internal market is Rs. 152.65 in November. This means that Robusta in the internal market earns about Rs. 2 to Rs. 3 more per cwt. With nearly one quarter of the Robusta or about 4,000 tons being exported at prices almost Rs. 30 per cwt. below, the minimum return to the grower one begins to wonder how the return is to be ensured. Quite obviously, this can be done only by making up the deficit from the earnings under Arabica. It is worthy of note that Arabica earnings are themselves very near the basic release price and it may become impossible to ensure even this return.

Ever-increasing Costs

"Added to these difficulties is the problem of ever-increasing costs. I have already dealt with labour. Fertiliser prices have been steadily going up, particularly that of nitrogenous manures. All nitrogenous fertilisers are handled by the Central Government and, under the system of distribution, we are compelled to pay the value of the fertilisers in advance and as soon as an allotment is made. The actual delivery commences some considerable time later and, during that time, our money is kept idle without earning any interest, whereas we continue to pay heavy interest to our bankers. In addition to this, fertilisers are not received in time for application.

"Presumably on the fallacy that plantations can afford to pay, the cost of nitrogenous fertilisers supplied through the Coffee Board is much higher than that supplied to agriculturists through co-operative societies. For example, the retail price of sulphate of ammonia received through the Board is Rs. 405 per ton, whereas an agriculturist pays only Rs. 383.80 in addition to which he is entitled to a rebate of Rs. 14 per ton on production of a certificate from the District Agricultural Officer to the effect that he is a *ryot*.

"On the ground that tractors on plantations are not solely used for agricultural purposes and that the transport of manures and compost, coffee from estate to the pulphouse are not considered to be agricultural operations, coffee estates have to pay an additional sum of Rs. 3,000 per tractor being the excise and customs duty. The refund of this sum is allowed only if the tractor possesses a set of agricultural implements and is used exclusively for agriculture.

"Our obligations under the Plantation Labour Act continue to increase and the insistence on building créches and canteens imposes a very heavy burden, and it is not unlikely that we may in due course be compelled to provide electric lighting to all dwellings as power becomes available.

"There are no signs that the cost of production can ever be lowered and we are entitled to receive sympathetic consideration and relief, however small it may be, in the shape of tax reliefs, and the recognition of the fact that coffee producers are also agriculturists.

"I would now comment on the marketing of coffee. Prior to the amendment to the Coffee Act in 1954 and the consequent reorganisation of the Indian Coffee Board, the primary and sole function of the Coffee Board was marketing, propaganda and research. The planting members on the Board were accredited representatives nominated by long-established Planting Associations and brought to the deliberations of the Board a wealth of experience and the benefit of advice received from their associations. The Central Government exercised the power of control and direction on vital matters and in no case interfered in matters of detail. It also had the power to set aside any decision of the Board.

"The Board also had the privilege of electing its own Chairman and the Board under its then existing constitution had the benefit of the advice of the representatives of the Central Government on the Board, who in turn being present were in a position to take part in the deliberations and to appreciate the reason behind the decisions and recommendations arrived at. There was also a provision under which Government consulted the Board before taking any decision affecting the Board or the industry.

"The Indian Coffee Board under that constitution has many achievements to be proud of, principally the setting up of India Coffee Houses, the consequent increase in consumption in India from 8,000 to 20,000 tons per annum, the setting up of standards for the curing and grading of coffee and the development of the Research Department.

"In 1954, the Indian Coffee Board was reorganised and the planting associations were divested of the privilege of nominating their representatives to the Coffee Board, and a system of election of larger grower representatives similar to that obtaining for election to legislative bodies was introduced, the electors being owners of plantations over 50 acres in extent. At one stroke, this removed any sense of responsibility to producer associations which were and still are in the best position to offer professional and expert advice.

"Separate nominations to the Board were made in respect of small growers and Robusta growers as distinct from large growers, which only tended to create and accentuate a difference which did not exist between large and small growers. Except for the small element of elected large growers, all seats on the Board are now filled by nomination and represent a diversity of interests, some not connected with the marketing of coffee.

Coffee Cess

"The cess collected is now credited to the Consolidated Fund of India and is also utilised for additional purposes such as benefits to labour and education allowances, whereas, previously, the cess was rightly used in the exercise of the proper functions of the Board, namely, propaganda and research. The effect of this provision is that an additional cess is collected from coffee growers who have still to implement their obligations under the Plantation Labour Act. Their return to that extent is reduced.

"The Coffee Board is thus entrusted with functions not properly in its province. All these changes were effected despite universal protests from coffee producers and without any consideration for our point of view. It appears that, in the light of falling prices, rethinking on this very important matter is necessary.

"The system of marketing now followed, namely, release of coffee through Pool auctions, through local auctions and by allotments to co-operative societies, was a system introduced in 1948 immediately after the removal of price control and when the production was under 14,000 tons in an effort to stabilise prices. The system now in existence is very much the same, despite overproduction and lower prices both in the internal and export markets, and one is compelled to state that the Board has not risen to this challenge. On the propaganda side, a proved method of propaganda—the India Coffee House—was abolished, even though the signs of overproduction and falling prices were there to see.

"I consider that there is a very good case for the reorganisation of the Coffee Board. I do not advocate a return to the old constitution, but I would suggest the setting up of a very much smaller body chiefly concerned with propaganda, marketing and research, presided over by a chairman appointed by the Central Government. The producer members may be nominated by established producer associations and other members limited to two members each to represent trade, labour, and the consumer be nominated by the Central Government. Such a body would be an expert one and being small would have the advantage of meeting easily and taking quick decisions on problems as they arise. Any fear that this might become a grower-dominated body would be groundless due to the provision for an official Chairman and the inherent powers of the Government to control, direct and modify.

Attitude of Helplessness

"As I stated earlier, the Board has not been able to meet the challenge of overproduction and lowering prices by reorienting its marketing policies. It still continues with expedients devised at a time when prices tended to get out of control due to under-production, and the general attitude is one of helplessness because of falling prices.

"The producer is entitled to as much protection as the consumer. It should be remembered that every acre that goes out of production will result in loss of employment for three-quarters to one labourer, loss to Government in revenue, foreign exchange and the consequential loss in trade, transport services, etc.

"The remedies can only be drastic ones. If a proper return is to be ensured only the best coffee—Arabica Plantation—must be exported even at the risk of denying the Indian consumer this type of coffee. It also stands to reason that, as the Central Government desires to maximise exports, that the coffee which earns the highest foreign exchange should be exported. A system of sales on cup tasting should be brought in firstly in the case of export sales and coffees must be sold on this basis and under distinguishing marks, which will ensure particular marks being available year after year. Sales for export must, in my opinion, be by open auction and on the basis of quality. A beginning should be made this year as we cannot afford to wait for another full year before altering the marketing policy.

Internal Marketing

"This system will eventually extend itself to the internal market and make for selective buying. In the internal market, coffee should be released only through Pool auctions and expedients such as local auctions and releases through co-operative societies should be abolished.

"Intensive propaganda for coffee, and Robusta in particular, must be instituted and India Coffee Houses restarted, particularly in North India where only Robusta coffees should be sold.

"The export prices for Robusta are so very low and there appears to be little justification for imposing the same rate of export duty of 3 annas per pound or Rs. 21 per cwt. on Robusta as for Arabica coffee. The removal of this excise duty will enable Robusta to be offered at a very much lower price in the internal market. This will no doubt result in a loss of Central excise duty on Robusta amounting to about Rs. 80 lakhs per year, but it will be a small sacrifice in the interests of an industry which is now facing a crisis.

"The matters I have touched upon are undoubtedly controversial and there may be other proposals for improving marketing. But a sense of urgency is essential and the present system of marketing must be considered to be out of date. Internal consumption has not risen and in India we see what is happening in the rest of the coffee world. The rise in consumption has not been in keeping with the rise in production. In India, it should be possible to push Robusta if vigorous action is taken and if the price for that coffee can be reduced even by the element of Central excise duty. It should not be that only the producer is to make sacrifices.

"Mr. R. C. Paterson, your former Chairman, retired as from 1st April 1960, but still continues as a Director and his valuable advice is still available to us.

"I take this opportunity of thanking our Managers, members of the staff and labour both on the estates and in the Hunsur Works for their work during the year.

"Finally I must express my gratitude to my fellow-Directors for their wise guidance."

Elegant for every Occasion

Dressed in Mysore Government Pure Silks and Sarees you will look your charming best, at home or in parties and functions. Mysore Government Silks are available in attractive shades and designs in exquisite borders.

CHAIRMAN'S STATEMENT

INDIAN OXYGEN LIMITED

INDUSTRIAL GASES AND ELECTRODES PLAY INCREASINGLY IMPORTANT PART IN THE INDUSTRIALISATION OF THE COUNTRY

PROPOSED RIGHTS ISSUE TO FINANCE LARGE EXPANSION PROGRAMME

THE following is a statement by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited, issued to the shareholders, together with the Directors' Report and Accounts for the year ended 30th September 1960, and the Notice of the Company's 26th Annual General Meeting which is to be held on 14th February 1961.

The Directors' Report and Accounts for the year ended 30th September last are being circulated with this statement. In keeping with the trend in these matters, your directors have felt that the statement which is normally made by the Chairman at the Annual General Meeting, which is attended by only a very small proportion of the shareholders, should be circulated in advance to all members and that this opportunity might be taken to deal at some greater length than previously with the company's trading experience in the year under review, its financial position and its development plans with particular reference to its position in the expanding economy of India.

Profits, Taxation and Dividend

The profit for the year, after providing Rs. 37,10,806 for depreciation and Rs. 38,85,900 for taxation, amounted to Rs. 62,98,449. This compares with a net profit for the previous year of Rs. 53,07,450 which was arrived at after charging depreciation of Rs. 31,69,459 and taxation of Rs. 34,62,755. As stated in the report of the directors, the profit may be considered satisfactory. Ours is, however, a capital-intensive industry and past experience has demonstrated the necessity continuously to plough back profits to provide for plant replacements at increased cost and for expansion which, as an industry serving other industries, we must always be prepared to carry out in anticipation of demand. I shall refer later in this statement to the expansion which we visualise over the next few years and to the arrangements which are contemplated to finance it. Suffice it to say at this juncture that, for so long as can be foreseen, there will always be the necessity to plough back substantial sums of money each year and it is in these circumstances that your directors have felt it appropriate, notwithstanding the increase in profits, to recommend the same rate of dividend as was paid in respect of the previous year.

Sales

From the accounts for the year, you will observe that the value of sales exceeded that in the previous year by over Rs. 91 lacs, representing an overall increase of just over 16 per cent. While practically all products contributed towards this rise, the rate of increase was particularly high in the cases of piped oxygen supplies to the steel works, liquid oxygen explosives used in open-cast mining operations and electrodes. The increase in electrode sales was primarily due to the higher level of production at the factory and the introduction of new ranges of special types during the year. The rate of increase in sales of dissolved acetylene was disappointing and while partly due to delays in the completion of customers' own development programmes, was also accounted for by increased competition and the use of alternative products. The principal raw material used in the production of dissolved acetylene is calcium carbide and towards the close of the year, with the commissioning of a plant in South India to supplement the output of another plant which has been functioning for some time in Calcutta, the country is now approaching self-sufficiency in this item. While this development is particularly welcomed by us as ensuring supplies of one of our main raw materials without our having to concern ourselves with the problem of foreign exchange, I have to observe that the high price of indigenously produced carbide and its lower gas yield are already having an adverse impact on the cost of production of dissolved acetylene.

Industrial gases and electrodes, which are your company's main products, play an increasingly important part in the industrialisation of the country, and this was appropriately recognised during the year when the Planning Commission called a meeting of the major producers and consumers to discuss the requirements of these products in the Third Five-Year Plan period. The outcome has been the inclusion of our industry's overall requirements in the draft outline of the Plan published a few months ago.

Development and Expansion

While the Planning Commission has indicated the country's overall requirements of our major products during the next few years and while this is extremely useful as a basis for planning our own production facilities, these requirements have to be broken down to assess the needs of each region. This is particularly important in the case of industrial oxygen and dissolved acetylene, where extremely high distribution costs limit the frontiers of the market. The whole country, therefore, has to be divided into several regions to be served by carefully sited producing and supply points. Again, each production point has to be of a capacity geared to the needs of the region it serves, and as the state and pace of development varies from region to region, it is obvious that the capacity and size of the various plant units will also vary. In catering for additional oxygen requirements, therefore, we have to consider the alternatives on the one hand of multiplication of plants of similar capacity, and on the other of stepping up the size of each unit as a region progresses industrially, so that benefit may be derived from the economies of larger scale production. Your company is in a particularly favourable position to fulfil this requirement of regional development, and this is accomplished by transferring oxygen producing plants from one region to another, and installing plants of higher capacity and greater efficiency in regions which, by reason of economic advancement, require such plants. This incidentally results in a significant saving of foreign exchange as the import of one additional plant may, through a number of consequential transfers, help to increase available capacity in more than one region. Thus, during the past year, we have succeeded in stepping up oxygen production at Ahmedabad and Madras by transferring plants from Bombay to Madras and from Madras to Ahmedabad. This leaves the oxygen plant capacity at Bombay to be augmented, and we are hopeful that the necessary licence under the Industries (Development and Regulation) Act will be forthcoming in the near future, to enable us to import a plant with adequate capacity against foreign exchange procured by the company.

Oxygen requirements in the Calcutta and Jamshedpur region have been growing apace and an additional 400 M³ oxygen plant was installed in each of the Calcutta and Jamshedpur factories during the year.

Another Significant Development

Another significant development took place at Burnpur, where we installed argon purification and high purity nitrogen production facilities, which were successfully commissioned during the year with the help of technical assistance received from The British Oxygen Company Limited. In our Burnpur factory we are now equipped to produce and compress argon, high purity nitrogen and argon/nitrogen and argon/oxygen mixtures. The production of these gases for the first time in India will lead to substantial savings in foreign exchange which had hitherto been expended on importing them and the cylinders which contained them. Argon, high purity nitrogen and their mixtures will provide electric lamp manufacturers with an indigenous source of supply, while argon will help in welding and fabricating stainless steel and aluminium and aluminium alloys, which are to be produced in the country in growing quantities in the years to come, and will also fulfil the large requirements of the Government Alloy Steel Plant to be set up at Durgapur.

The present oxygen producing plant in Bombay also produces liquid nitrogen which is essential for the operation of India's atomic reactors. The additional oxygen plant we hope to install there will further augment our supply of this gas, the demand for which is increasing and will continue to increase as India progresses in the field of atomic power generation.

Through the pioneering efforts of your company, liquid oxygen is being more and more used with loxite cartridges as an effective and economical explosive in open-cast mining for coal, iron ore, limestone and manganese. In developing the use of this explosive, we have been closely associated with the National Coal Development Corporation, the Tata Iron & Steel Co. Ltd., and the Indian Iron & Steel Co. Ltd. The loxite cartridge manufacturing plant which was established at Burnpur in May 1959 is producing the additional cartridges required to match developing sales.

The draft outline of the Third Five-Year Plan envisages rapidly increasing requirements of electrodes and our new factory at Khardah, Calcutta, is being equipped to meet the greater demands. The level of production at this factory improved during the year and new types of special electrodes were developed and introduced into the market. Our equipment factory at Calcutta, which two years ago undertook a phased programme of indigenous manufacture of gas-user equipment, is now on 100% local manufacture of the components required. Here again, plans are afoot to raise the level of production in the near future.

At Bangalore construction of a new oxygen and dissolved acetylene factory is progressing on schedule and operations should commence within the current financial year. When complete, this will afford increased production of dissolved acetylene in that growing industrial area.

At Gauhati, we have installed an oxygen plant within the premises of Indian Refineries Ltd., and I think we can claim that we have contributed in no small measure to the progress of erection at the refinery by coming forward with timely supplies of oxygen.

Nitrous Oxide

Nitrous oxide, which is an anaesthetic widely used by the medical profession in India and which is also exported, is now produced in our Calcutta factory. A licence for setting up a second producing plant for nitrous oxide at Bombay has recently been obtained and when this plant is in operation, it is hoped to increase substantially both sales generally and in particular exports to the Near and Far East.

With regard to welding rods, miscellaneous gas-user and medical equipment and electric welding plant, it has been our policy to encourage their manufacture through feeder industries, thus reducing our reliance on imports. I am glad to say that in very many cases these feeder industries have been nursed and encouraged to undertake manufacture of these items, not only through the orders we place with them, but with the technical help we render them by drawing on our collaboration arrangements with The British Oxygen Company Limited.

It is obvious that with the increasing pace of industrialisation in the country and in particular having regard to the greatly increased quantities of steel which will become available for fabrication and machine building during the next Five-Year Plan period, the consumption of your company's products must continue to rise. What may not, however, be so widely appreciated is that based on the experience of the industrially developed countries, the rate of expansion of the industrial gases industry is likely to exceed the rate of expansion in the output of steel. Even today, in the United States of America, the consumption of oxygen per ton of steel produced is still increasing and this is a factor which I believe will have to be borne in mind in considering the scale of development required in India if shortages are

deficiencies are not going to handicap the steel-using industries in the highly competitive years which lie ahead of us.

Competition

Government's policy towards competition, especially with regard to industrial oxygen, has been indicated by the Planning Commission as follows:—

"……it was agreed that while recent entrants into this field and newcomers might be given some weightage in the interest of preventing overconcentration of growth, there could be no question of freezing the capacity of leading producers at current levels and that taking all relevant factors into consideration, an appropriate share of the expansion should be allowed to them also."

We accept this position which is in line with the declared economic and social objectives of planning in this country. I feel, however, that I should make one comment in this connection and it stems from what I have stated before, namely, that, by the very nature of its business, oxygen production facilities have to be sited at multiple points each serving a certain optimum area. If, therefore, the country is to reap the benefits of increased production each one of these production points should be allowed to grow to be able to achieve the economies of scale which in this industry are very considerable; indeed, spectacular. A careful eye should, therefore, be kept on this aspect of the problem so that wasteful competition is not allowed to lead merely to unnecessarily high prices to the detriment of our customers and therefore of the nation as a whole through failure to achieve economic cost levels.

Finance

The considerable expansion in our production facilities which has already taken place as well as the further expansion which is now visualised, necessarily involves financial commitments which cannot be completely met from cash retentions in the business. Apart from the quantum of the finance required, the necessity at this stage to import plants gives rise to a demand for foreign exchange, and this is being met in various ways. The biggest single item in the past year has been for oxygen and dissolved acetylene cylinders and for this purpose accommodation was arranged through the United States Export-Import Bank. As a counterpart of this arrangement, the rupee equivalent of the U.S. dollar cost, which could not be met from internal resources was secured by way of additional facilities from our Bankers in Calcutta.

Our capital expenditure in the three years ending 30th September, 1963 is presently estimated at a figure of Rs. 3,85,00,000. Your directors have carefully considered the methods of financing this large expansion programme and, in view of the steadily increasing investment in fixed assets have come to the conclusion that the ordinary share capital should now be increased. By virtue of The British Oxygen Company Limited's holding in our equity capital, this will also yield foreign exchange in our hands through the parent company's subscription towards the new Ordinary Shares to be allotted to them. The consent of the Controller of Capital Issues has, therefore, been sought and obtained, and it is now proposed to make a rights issue of 6,00,000 Ordinary Shares of Rs. 10/- each at a premium of Rs. 8/- per share. You will notice that various matters arising out of this issue of share capital are proposed to be dealt with at the meeting to which this statement is to be submitted and full information is contained in the explanatory statement attached to the notice convening the meeting. I would particularly point out that although on the basis of its current holding of ordinary shares, The British Oxygen Company Limited, is entitled to 70 per cent of the rights issue, they have agreed that they should take up only 60 per cent thereof, thus enabling 40 per cent to be offered to members other than The British Oxygen Company Limited, being very largely *members of the Indian public.*

Senior Executives

In an expanding organisation such as ours which by the nature of its production is necessary widely dispersed throughout the country, the need to provide for the development of senior executives is a continually increasing one. We have taken advantage of the facilities afforded to us by The British Oxygen Company Limited, to send a number of our officers to the United Kingdom for specialised training while nominees of the company have also attended the Administrative Staff College at Hyderabad as well as other specialised courses in sales and administration which have been available in India. We were particularly proud that our Secretary, Mr. A. K. Basak, was selected by the National Productivity Council to lead a Productivity Study Team on stores and inventory control to Japan, the United States of America and West Germany, while we are also pleased that one of our officers has been chosen for inclusion in a Productivity Team on welding which is to go abroad in 1961. The burden on our senior executives is a heavy one and I assure you that we have been well-served by them. Our particular gratitude is due to our Managing Director, Mr. A. K. Sen, who has been untiring in his devotion to the Company's interests. To him and to the other senior executives as well as to the staffs and work-people at our installations throughout the country I offer on your behalf our grateful thanks.

It would be inappropriate to close this statement without a special mention of the help and assistance which we continue to receive from our parent Company, The British Oxygen Company Limited. With the increasing tempo of development in India the contact between the personnel of the two Companies has continued to grow at all levels and we were particularly pleased to welcome just a few weeks ago, Mr. J. S. Hutchison, the Chairman of The British Oxygen Company Limited, who in a crowded programme visited Jamshedpur, Calcutta, Delhi and Bombay. On your behalf I extend to The British Oxygen Company Limited and to its Chairman our appreciation of their valued assistance and of the very real interest which I can assure you they continue to take in our progress.

The Company is now embarked on a further expansion programme, the scale of which is substantial even on the basis of its already widespread activities. We are, however, building on a sound foundation and from what I have already stated, shareholders will appreciate that I have no doubts regarding the future demand for our products. Expansion of the steel-using industries constitutes a basic feature of the third Five-Year Plan just as increased steel production was the central theme of the second Plan. In these circumstances, it is clear that our industry must forge ahead. At the same time I must point out that we have already shouldered substantial liabilities in the shape of foreign exchange loans and the likelihood is that the demands of Indian industry will compel us to consider before long a further stage of expansion, involving fresh financing problems. Having regard to all these considerations it may, I fear, be necessary for shareholders to be prepared to exercise a degree of patience in regard to the expectation of increased returns by way of dividend; but from what I have stated it is only reasonable that you should be able to look forward to a steady growth in the value of your investment in an industry which is vital to the continuing growth of the Indian economy. I have no doubt that, given a steady supply of the necessary raw materials, all industries in this country will bend themselves to the task of achieving what is expected of them under the third Five-Year Plan and in serving them Indian Oxygen will play its full part.

you have just opened

A METAL BOX CONTAINER!

The container in which your favourite vanaspati comes to you is specially designed to protect the contents from spoilage. The container is precision manufactured on specialised machines and the accurately fitting lid and diaphragm ensure that the contents remain free from contamination over long periods. For added protection, vanaspati containers are made pilferproof with the now-familiar aluminium foil diaphragm. An unbroken diaphragm is your guarantee that the vanaspati you are buying is genuine.

Manufacturing scientifically designed packages is the business of Metal Box, leaders in the packaging field. A result of years of research abroad and in India, the vanaspati container is another example of a Metal Box package that delivers the best in consumer goods to you.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal
COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising tablets and calendars
PLASTIC PRODUCTS including Diothene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats
MACHINERY Can Closing and Reforming and Bottle Sealing Equipment

SYNOPSES OF COMPANY REPORTS

Henley Cables India Ltd.

THE directors of the above Company (Chairman: Mr. A. D. Shroff, Bombay) submit the audited accounts of the Company for the period 31st August 1959 to 31st October 1960.

Of the Company's issued capital of Rs. 1,10,00,000 comprised of 1,10,000 equity shares of the face value of Rs. 100 each, 1,07,330 equity shares each of Rs. 100 face value were fully subscribed. Of this, 1,03,330 equity shares have been called and paid up to the extent of Rs. 50 per share and 4,000 equity shares have been allotted as fully paid up to W. T. Henley's Telegraph Works Company Ltd., England [with the approval of the Central Government] for consideration other than cash.

A further allotment of 2,670 equity shares, each of Rs. 100 as fully paid will be made to W. T. Henley's Telegraph Works Company Ltd., England, their successors or assigns or nominees, when manufacture is expanded to include *Winding Wires, Power Cables, etc.*

During the period under report, the Company has earned a sum of Rs. 1,03,446 by way of interest on investment of funds, which could not immediately be otherwise utilised, in short term deposits and treasury bills, and by way of sundry receipts. After providing for taxation and other expenses a sum of Rs. 39,813 has been transferred to the balance sheet as profit. This profit has technically accrued because expenditure which has been incurred towards the implementation of the project is to be capitalised. Such expenditure has amounted to Rs. 2,12,023.

The Company has selected and acquired from the Poona Municipal Corporation a site of approximately 40 acres at the Hadapsar Industrial Estate near Poona, at a total cost of Rs. 4,52,763. The Hadapsar Industrial Estate is being developed by the Poona Municipal Corporation for sale of plots to Industrial concerns at prices which represent only the purchase cost to the Corporation and development expenditure incurred by it.

The construction work of the factory building is progressing satisfactorily. The structural work, on the main factory building which will cover an area of approximately 84,000 square feet, is nearing completion. The planning of the office block, canteen and other amenity buildings has been completed. These ancillary buildings will cover an area of approximately 12,000 square feet.

The majority of the Plant requirements has been finalised and approved by the Import Trade Control Authorities and orders therefor have been placed. Shipment of plant is expected to commence early in 1961. Arrangements have been concluded for the installation of the plant to be proceeded with as items are received at the site.

The Company intends to manufacture certain types of *Rubber* and *Thermoplastic Insulated Cables* to the HENLEY quality standards and formulæ. Nothwithstanding the difficulties encountered, which are normal to the establishment of new industrial enterprises of this kind, the directors are pleased to observe that overall progress has been satisfactory.

Accounts in brief are as under:—

United Breweries Ltd.

The directors of the above Company (Chairman: Mr. Vithal Mallya, Bangalore), presented the audited accounts of the Company for the 45th year ended on 31st March 1960.

The working of the Company for the year under review resulted in a profit of Rs. 11,02,602 (Rs. 6,75,087). To this is added refund of income-tax in respect of previous years Rs. 21,383 (*nil*), excess provision for doubtful debts in previous years written back Rs. 187 (*nil*), adjustment of excess provision for depreciation in previous years Rs. 12,90,345 (*nil*), amount written off on investments in previous years written back Rs. 1,69,352 (*nil*) and unappropriated profit brought forward from the previous year of Rs. 27,831 (Rs. 9,488) making a total of Rs. 26,11,700 (Rs. 6,84,575). The directors have paid an interim dividend on 8,000 (8,000) equity shares of Rs. 100 each at Rs. 25 (Rs. 7.50) per share, subject to deduction of tax, absorbing Rs. 2,00,000 (Rs. 60,000). The directors have made the following appropriations:—To additional taxes paid in respect of previous years Rs. 3,17,257 (debit of Rs. 43,156), to development rebate reserve Rs. 40,000 (Rs. 99,900) and to general reserve Rs. 15,10,000 (Rs. 1,20,000) leaving an available balance of Rs. 5,44,443 (Rs. 4,47,831). The directors propose the payment of a final dividend at Rs. 3.50 (Rs. 52.50 per share, free of tax—consisting of a cash dividend of Rs. 2.50 per share and Rs. 50 by allotment of 5 equity shares of Rs. 10 each) per share, subject to deduction of tax, on 120,000 (8,000) equity shares of Rs. 10 each, which will absorb Rs. 4,20,000 (Rs. 4,20,000) leaving a balance of Rs. 1,24,443 (Rs. 27,831) which the directors propose be carried forward to the next year. A sum of Rs. 2,00,000, being the surplus on revaluation of the Company's lands, has been transferred to capital reserve.

During the year the authorised capital was increased to Rs. 1,00,00,000 by the creation of 920,000 equity shares of Rs. 10 each, out of which 40,000 equity shares were allotted in part payment of the final dividend for the previous year thus increasing the subscribed capital to Rs. 12,00,000. The directors are recommending the issue of equity share capital to the extent of Rs. 8,00,000 to be offered for subscription at par to the holders of the existing equity capital *pro rata* to their holdings. While there was a very good demand for the Company's products, production was hampered by reason of circumstances not within the control of the directors and sales were slightly lower than in the previous year. During the current year conditions have improved to some extent and both production as well as sales have increased appreciably.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Gross block	59,48,867

Indian Vegetable Products Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes, Forbes Campbell and Co. Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th September 1960.

The results for the year show a profit of Rs. 9,63,593 (Rs. 7,45,912). But after providing for bonus to staff Rs. 90,000 (Rs. 52,000), depreciation Rs. 61,833 (Rs. 54,835). development rebate reserve Rs. 7,930 (Rs. 2,290) and taxation Rs. 3,65,000 (Rs. 3,00,000) there is left a balance of Rs. 4,38,830 (Rs. 3,36,787). To this is to be added excess provisions for previous years written back of Rs. 96,990 (Rs. 1,09,535) and the balance brought forward from 1959 of Rs. 3,497 (Rs. 4,800) making a total of Rs. 5,39,317 (Rs. 4,51,122). From this is to be deducted transfers to reserve fund of Rs. 70,000 (Rs. 75,000), to staff gratuity and other reserves Rs. 30,000 (*nil*) and to dividend equalisation fund Rs. 75,000 (Rs. 55,000) leaving an available sum of Rs. 3,64,317 (Rs. 3,21,122). From this, the directors recommend the declaration of a dividend of Rs. 17 (Rs. 15) per share, subject to deduction of tax, which will absorb Rs. 3,59,975 (Rs. 3,17,625) leaving a balance to be carried forward of Rs. 4,342 (Rs. 3,497).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,17,500	Gross block	27,73,828
Reserves ...	7,73,396	*Less*—Depreciation ...	21,27,149

		Stock-in-trade	20,91,255
		Stores ...	4,74,359
		Book debts ...	10,78,841
		Investments	81,962
		Cash ...	11,56,517
Rs.	55,46,985	Rs.	55,46,985

Ganges Manufacturing Co., Ltd.

The directors of the above Company (Chairman: Mr. Lakshmipat Singhania, Calcutta) presented the audited accounts of the Company for the year ended 31st March 1960.

The gross profit for the year amounts to Rs. 28,58,672 (Rs. 8,88,325). To this amount is added refund of income-tax, unclaimed dividends and excess liabilities of previous years written back of Rs. 19,574 (Rs. 5,925) making a total of Rs. 28,78,246 (Rs. 8,94,250). After deducting the losses brought forward from last year of Rs. 8,77,459 (Rs. 13,33,925) there is a credit balance of Rs. 20,00,787 (debit of Rs. 4,39,675). From this amount the directors have provided for wealth tax for previous year Rs. 40 (Rs. 40,957), for depreciation Rs. 3,68,280 (Rs. 3,96,677), for transfer to development rebate reserve Rs. 16,898 (*nil*) and for transfer to general reserve Rs. 5,00,000 (*nil*) leaving a balance of Rs. 11,15,569 (debit balance of Rs. 8,77,459 including Rs. 150 being forfeited dividend paid). An interim dividend on 6,000 8 per cent. cumulative preference shares was paid on 29th June 1960 for arrears of dividend for 3¼ years from 1st October, 1955 to 31st March, 1959 at 8 per cent. per annum without deduction of tax but with a clear stipulation that in case the Company is called upon to pay the tax on behalf of shareholders on the amount of such arrears of dividend, the Company reserves the right of reimbursement of such amount of tax as shall be deemed to have been deducted on behalf of the shareholders, from the recipients of the dividend or from the shareholders, absorbing Rs. 1,68,000. The directors recommend payment of dividends for the year ended 31st March 1960, subject to deduction of tax as under: On 6,000 8 per cent. cumulative preference shares at 8 per cent per annum payable forthwith plus such further dividend as may be payable on enactment of the Preference Shares (Regulation of Dividends) Bill, absorbing Rs. 48,000* and on 8,43,210 ordinary shares at 10 per cent. per annum, i.e., Re. 1 per share, absorbing Rs. 8,43,210 (*nil*) leaving a balance to be carried forward to next year of Rs. 56,359* (debit of Rs. 8,77,459).

The directors are glad to report that the working for the year has resulted in a new figure of profits, being the highest in the last seventeen years and consequently it has been possible not only to wipe off the entire loss brought forward from the previous years but also to provide for the full arrears of dividend on the cumulative preference shares due for the last three and half years as also for the current year. Furthermore, the directors have recommended a dividend on ordinary shares at 10 per cent. per annum—a rate which has not been available to the holders of ordinary shares over the last thirty years.

The dividend on preference shares for the year under report has been recommended subject to deduction of tax pursuant to the provisions of the Finance Act, 1960. However, the directors have recommended that the preference shareholders may be paid such further dividend as may become payable on enactment of the Preference Shares (Regulation of Dividends) Bill.

Jute prices in April, 1959 were the lowest during the year under review. However, when it became known that the jute crop of 1959-60 would be smaller than estimated, the prices started rising and at the close of the year i.e. end of March 1960, the prices had risen by approximately 50 per cent. as compared to the beginning of the year. Subsequent to March 1960, the prices have further risen abnormally on *fears of exceptionally poor* crop for 1960-61. Although the crop has only started arriving, the prices have shot up further by 40 per cent. approximately from March 1960, the rise on April, 1959 figures being of the order of approximately 140 per cent. However, the prices of finished goods did not rise in parity with jute, the rise in price of Hessian and Sacking over April 1959, figures being approximately 4 per cent. and 20 per cent. respectively by March 1960. In view of such fluctuations in price of raw material, it is difficult for an industry to maintain stability. Since a good portion of the crop has yet to come, it is difficult to predict the position of the industry for the coming year. Although attempts are being made to regulate the prices and to ensure the supply of jute, it is difficult to say as to how it will affect the future.

A good portion of the Mills upto spinning has already been modernised and further modernisation is in progress. It is expected that the entire modernisation programme in hand will be completed soon. Consequent to modernisation, the No. 2 Mill has been completely re-organised and after modernisation has been completed, the No. 1 Mill will be closed, No. 2 Mill running on more shifts. This will bring about economy and saving.

Arrangements for the loan from the National Industrial Development Corporation for the purpose of modernisation have been completed.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,32,100	Gross block	2,24,66,716

*Subject to payment of further dividend on preference shares as aforesaid which will be paid to those shareholders whose names are on the register of members as on the 29th December 1960.

Ghusick and Muslia Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Bhatter's Agency Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

	Year ended 31-3-1960 Tons cwts.	*Year ended* 31-3-1959 Tons cwts.
Raisings	1,42,458 14	1,58,247 16
Despatches	1,49,952 12	1,32,258 18
Colliery consumption ..	6,736 14	10,236 16

The Muslia Colliery has still remained closed and its working cannot be started till opening up of new pits which is expected to take about a year's time. Working in Ghusick Colliery is expected to be started early next year on completion of arrangements required by the Mining Department. It is hoped that the working result of the Company on the basis of expected raisings of its four Collieries will be quite satisfactory in future.

During the year under review, machineries and other equipments of a total value of Rs. 2,87,139 have been added to the fixed assets of the Company.

The working for the year under review after meeting the usual expenses and charges and making a provision of Rs. 1,36,000 (Rs. 1,04,000) for depreciation of fixed assets—resulted in a loss of Rs. 2,16,615 (Rs. 2,56,418). Adding to this the amount of loss brought forward from the previous year's account, the total loss has been Rs. 5,80,078 (Rs. 4,55,316) to be carried forward to the next year's accounts.

Accounts in brief are as under:—

N.B.—Figures within brackets relate to the corresponding period of the previous year.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *18th January*

The complete withdrawal of the special deposit system by the Reserve Bank which took place a day after the last week's money market report was prepared has had no effect on the short-term money market. Conditions are still quite stringent, with borrowers over. There has been no fall in the inter-bank call money rate, which continues to be 5¼ per cent. per annum. It is said that some of the smaller exchange banks have been borrowing even at 5⅝ per cent., so great is the demand for bank credit.

The results of the 91-day Treasury Bills this week show that banks are not interested in them. The total amount offered (as against an invitation of Rs. 2 crores) was Rs. 30 lakhs less at Rs. 2.30 crores as compared with Rs. 2.60 crores tendered in the preceding week. These applications must have obviously been from "special sources." In keeping with the tight money conditions, the average rate of accepted tenders was higher at 2.580 per cent per annum, as against 2.576 per cent in the previous week. There was no response for the 91-day Intermediate Treasury Bill this week also, but they are being continued.

The Reserve Bank of India's statement for the week ended 13th January 1961 discloses that notes in circulation have gone up by Rs. 19.47 crores, taking the total to Rs. 1920.72 crores. Since there has been a fall of Rs. 5.46 crores in notes held in the Banking Department, the total notes issued have risen only by Rs. 14.01 crores. This has been balanced on the assets side by the addition of Rs. 14.99 crores in rupee securities and a fall of Rs. 0.98 crore in rupee coins.

Foreign securities held by the Issue Department is unchanged at Rs. 128 crores, but as the balances held abroad by the Banking Department have declined fractionally by Rs. 14 lakhs, the total foreign assets are down by that amount to stand at Rs. 147.48 crores.

The deposits of banks with the Reserve Bank have shrunk by Rs. 6.05 crores on top of a fall of Rs. 31.01 crores in the preceding week to stand at Rs. 78.61 crores. There has been only a slight drop of Rs. 0.67 crore in other loans and advances given by the Reserve Bank which include borrowings by the Scheduled banks also. There is a small increase of Rs. 76 lakhs in advances against usance bills which now amount to Rs. 16.59 crores.

The Scheduled banks' statement for the week ended 6th January 1961 reveals a decline of Rs. 3.26 crores in demand deposits and of Rs. 5.32 crores in time deposits. The borrowings from banks of demand nature have risen by Rs. 1.41 crores, while the borrowings of time nature have gone down by Rs. 3.49 crores. Borrowings from the Reserve Bank show a marked decline of Rs. 8.03 crores, though such against usance bills have increased fractionally by Rs. 11 lakhs. Borrowings from the State Bank of demand nature have increased by Rs. 2.61 crores, while borrowings from the same institution of time nature have declined by Rs. 1.14 crores. A marked rise of Rs. 17.46 crores is noted in advances and bills, taking their total to around Rs. 1,200 crores. A year ago this portfolio had stood at only Rs. 999.23 crores. The fall in investments witnessed in the previous week is reversed during the week under review; they have gone up by Rs. 9.55 crores. Cash balances, however, show a sharp fall of Rs. 33.05 crores.

The statement of the State Bank of India for the week ended 6th January 1961 shows a small fall of Rs. 1.20 crores in deposits accompanied by an expansion of Rs. 7.68 crores in advances. There has been a fall of Rs. 13 lakhs in money at call and short notice. The total cash shows a sharp fall of Rs. 27.07 crores, while there has been an expansion of Rs. 10.17 crores under investments.

There is still nothing noteworthy about the gilt-edged market. The State loans show no variations whatever over the week. Among Central loans, there has been a rise of 15 nP in the 3 per cent. 1970-75 first Development Loan. In all other central loans, there is either no change or only a very fractional variation.

In the foreign exchange section, the rupee dollar rate has remained unchanged, the banks' selling and buying rates for ready T.T. being Rs. 477 and Rs. 473.50 respectively, per 100 dollars. The sterling dollar rate has also shown only a minor variation. The latest available rate is 280.670-280.710 cents per £ for spot and 280.000-280.040 cents per £ for three months' forward. As compared with the corresponding rates a week ago, these show a fractional improvement of 0.04 cent.

SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *16th January*

Arrivals of E.I. tanned cow hides and calves during the week were moderate and clearance by shippers was slow. Export trading was selective, as tanners were quoting prices not workable by the importers. Demand for lower selections in cow hides continued to be brisk, which prevented sales [illegible] U.K. at importers' levels.

There was no change in the tanned skins [illegible]ket, except middle class sheep which showed [illegible] of easing.

The next London tanned skins public sales commence on the 23rd inst. when 175,000 goat and [illegible] sheep skins will be offered for sale.

SILVER FIRM AGAIN, GOLD QUIET

(From Our Own Correspondent)

BOMBAY, *18th January*

Silver continued to rule firm during the week under review, while gold was quiet. The renewed firmness of silver was engendered by a fresh bout of buying on hopes of brisk seasonal demand. Some operators held tight to their stocks and pushed up prices in order to enforce special clearing. A special clearing was, in fact, enforced on Thursday the 12th inst., as the advance in the quotation for the *Maha* (February) settlement was more than Rs. 5 as compared with the previous clearing rate. The average daily offtake of silver during the week was higher at 13 bars, as against 9 bars in the previous week, while arrivals were less, being 15 bars, as against 23 bars. The floating stocks of silver were believed to be no more than 600 bars. Consequently, prices registered a further handsome improvement. Ready silver was quoted at one time today at Rs. 203.50 per kilogram (85.7 tolas), which is the new all-time peak; the previous highest level of Rs. 200.95 was touched on Wednesday last week.

Gold, however, failed to follow silver. Rumours of large contraband arrivals led to scattered selling and, as a result, prices tended to look down. Some recovery was in evidence yesterday on reports of increased official vigilance to check smuggling, but, again today, the yellow metal encountered selling and prices drifted lower. The closing rates today were lower than those at the end of last week. The daily average arrivals and offtake of gold were 7,000 tolas and 4,000 tolas. The corresponding figures for last week were 6,800 tolas and 3,600 tolas, respectively. The floating stocks of gold are estimated at 65,000 tolas.

Trading in the *Fagun* settlement in both silver and gold commenced on Thursday the 12th inst. The starting for silver *Fagun* was fixed at Rs. 203.75. No business was put through in gold *Fagun* throughout the week.

A recent report from Rajkot avers that the customs authorities will soon take measures to seal off the Saurashtra area for gold smugglers. The measures include provision of two fast steam launches for patrolling the seas, two jeep station wagons fitted with wireless sets for "raids" and wire fencing on some points along the Indo-Pakistan border.

The *Maha* 31st January settlement in gold began the week at Rs. 117.35, as against the previous close of Rs. 117.65, and moved down to touch Rs. 116.75 on the 14th inst. After recovering to Rs. 117.55 yesterday, it fell again to Rs. 117.20 today before finishing at Rs. 117.25. Ready gold continued to be quoted at a discount under the forward, though the actual discount, which had increased from 35 nP on the opening day of the week to 75 nP on the 16th inst., tended to decline towards the close, such being 50 nP today. The closing rate for spot today was Rs. 116.75, as against Rs. 117.15 last week-end, the highest and lowest levels touched being Rs. 117.25 and Rs. 116.05, respectively.

In silver, the *Maha* (February) settlement fluctuated between Rs. 203.85 and Rs. 200.85 before winding up the week at Rs. 202.35, as against Rs. 201.10 on Wenesday last week. *Fagun* (March) settlement, business in which commenced at Rs. 201.60 on Thursday the 12th inst., advanced to Rs. 204.35 on Tuesday (yesterday) and, after declining to Rs. 203 today, finished higher at Rs. 203.30. The rate for transferring commitments from the *Maha* to the *Fagun* settlement continued to be against bulls throughout, the actual rate widening in the course of the week from Re. 1.05 to Re. 1.55 today.

Ready silver met with excellent support and spurted from Rs. 200.75 to Rs. 203.50 today. After easing to Rs. 201.85, it closed firm at Rs. 202.15. The net gain over the week was Re. 1.40.

The world price for gold in the London bullion market declined from $35.65-$35.75 to $35.52 per ounce during the week, following the imposition of a ban on the holding of gold abroad by U.S. citizens and enterprises overseas.

The U.S. gold drain continued in the week ended the 11th inst., albeit at a slower pace than in the previous week. The total stocks as on 11th January amounted to $17,615 million, a drop of $55 million over the week.

In view of the decline in dollar price of gold and owing to the firmness of the pound sterling *vis-a-vis* the dollar, ready gold in London eased from 254s. 5d. to 252s. 6d. on Monday the 16th inst., but recovered to 253s. 1d. today. Ready and forward silver continued unchanged at 79⅝d. and 79⅝d., respectively. Ready silver in New York was also unaltered at 91.375 cents.

The following table shows the trend of the market during the week under review:

	18-1-1961 (closing)	High	Low	11-1-61 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	116.75	117.25	116.05	117.15

COTTON FUTURES RECEDE

(From Our Own Correspondent)

BOMBAY, *18th January*

After having ruled easy during the first half of the week under review, the cotton futures market began to show signs of strength since Monday the 16th inst. The earlier weakness was due to speculative selling prompted by the fact that the increase in the floor and ceiling prices of Kalyans and Westerns fell short of expectations and that the plea for the revision in the corresponding prices of some other varieties was rejected by the Government. The downward trend of ready prices, following larger arrivals of new crop and reduced mill demand for ready cotton, thanks to the absence of unutilised quota, also adversely affected sentiment in futures. The crop outlook had little to encourage the bulls. Indications were that a crop of about 4.8 to 5 million bales, over one million bales more than last year's output, would be harvested this season. Prospects for imports of further quantities of U.S. cotton appeared good. The liquidation brought forth by these factors resulted in a sharp decline in prices. The Jarilla April 1961 contract receded from Rs. 594 per three quintals, in the beginning of the week, to Rs. 585.75 on Saturday. Since then, however, a recovery was witnessed. This was due to the emergence of fresh support prompted by rumours that the third instalment of Indian cotton quota would be released at any moment. Expectation of a second export quota for Bengal *Deshi* was also a helpful factor. Under the influence of these factors, the Jarilla April contract rallied to Rs. 595.75 on Monday. But the trend was again reversed today, thanks to weak advices from the spot market. After opening at Rs. 594.50 and rising to Rs. 597, the contract declined to Rs. 592 at close. The net loss over the week is thus Rs. 2.75.

In the spot market, spinners showed interest in such popular varieties as Vijay, Dig Vijay, Surti and Kalyan, CO2 L. 147, Berar and Khandesh qualities also attracted attention. Actual turnover was, however, small, because very few mills had unutilised quotas. Those that had quotas were inclined to postpone purchases in anticipation of a further fall in prices. Meanwhile, arrivals in the Bombay spot market from Gujarat, Khandesh and Vidarbha areas were mounting. This exerted a downward pressure on prices which declined by an average of about Rs. 25 per candy of 784 lbs.

There was moderate export interest in Bengal *Deshi*. Prices were well maintained at and near ceiling levels. But in the absence of export quota, much business could not be done. Some shippers were, however, reported as covering Bengal *Deshi*, Fully Good to Fine, in anticipation of a quota for an estimated 75,000 bales.

Interest in foreign cotton was subdued. East African prices are currently steady. The ruling price for B.P. 52 is Rs. 1,360, c.i.f. for March-April shipment. B.P. UNUG is priced at Rs. 1,385 for prompt shipment. Sudan qualities attracted stray buyers. Sudan G2L was done at Rs. 1,650 for March-April shipment.

A divergent trend was witnessed in the Karachi cotton futures market during the week. While the maturing January contract firmed up, the March position tended to recede. The strength of the former was due to support induced by considerations of tenders; the weakness of the latter was due to lack of buyers. Heavy movement of new crop and the slackness of export demand discouraged buying in the March contract. Sellers, therefore, found buyers reserved. Over the week, the January contract rose by 50 nP to Rs. 75.50. The March contract, on the other hand, dropped 20 nP to Rs. 72. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind *Deshi* 109; Punjab *Deshi* 107; 4F Punjab Roller 91.40; S.G. 95.90; L.S.S. Punjab Roller 92.90; S.G. 96.90; N.T. Roller 93.90; S.G. 98.40; 289F Punjab Roller 97.90; S.G. 102.90.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Both the long-staple Karnak contracts and the medium-staple Ashmouni contracts receded. Export demand was negligible. New crop arrivals were larger. Apart from the recent demand from the U.S., export interest was lacking. Export sales during December amounted to 111,292 bales (of 720 lbs.), as compared with 195,350 bales in 1959. Total sales from the commencement of the season till end of December amounted to 426,772 bales, as compared with 697,763 bales in the same period of the previous season. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: January 69.05; March 70.95; May 71.57.

Ashmouni: February 59.05; April 59.80; June 60.60.

Reports from Khartoum say that the yield of the Gezira new crop is likely to be less this season, thanks to jassid infestation. However, this is likely to be compensated by the larger area sown to cotton this season. But there is apprehension in some quarters that, although the total quantity of the crop might be unaffected, there may be scarcity of certain qualities.

Steady conditions prevailed in the Liverpool cotton futures market during the week. Values remained practically unchanged in thin trading. Trade covering in new crop positions absorbed hedge offering. Support for new crop was based on the encouraging prospects for changes in U.S. agricultural legislation favouring higher support prices. Sudan contracts, in contrast, were a shade easy. The following are the latest available quotations—in pence per lb.—from Liverpool:

American 1" staple contract: March 22.95; May 23.30; July 23.60; October 23.90.

American cotton mixed growth contract: March 23.25; May [illegible]

Sudan: January, March, May 34.75.

Trading in the New York cotton futures market was featureless during the week. Although the distant positions received speculative support based on expectation of higher support rate for the 1961 crop, interest in other crop positions was generally limited. Operators were generally inclined to await Washington developments in agricultural legislation. In the spot market too turnover was small, thanks to small mill interest. Values showed little net change over the week.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	17-1-61	10-1-61	3-1-61
Spot	32.25	32.25	32.25
December	—	—	32.25
March	32.04	32.05	32.70
May	32.52	32.53	33.07
July	32.90	32.96	—

YARNS BUOYANT

(From Our Own Correspondent)

BOMBAY, *18th January*

The yarn market ruled buoyant during the week under review. Under the impetus of excellent buying orders, following the reported scarcity in supplies in several centres, art silk yarn registered a handsome improvement in prices. In sympathy with art silk yarn and on expectations of better demand from consuming interests, staple fibre yarn also tended to move up. Cotton yarn, too, was well supported. Fine and superfine counts were particularly favoured.

Among imported art silk yarns, 120 Japan rallied from Rs. 1,301 to Rs. 1,365. 120 Italy spurted by Rs. 53 to Rs. 1,294. 150 Japan scored a gain of Rs. 13, today's closing rate being Rs. 1,653. 150 Italy was fully maintained at Rs. 1,598. Spot Cupressa Bemberg yarn (60 x 2) forged ahead from Rs. 2,383 to Rs. 2,425. February settlement picked up Rs. 37 to Rs. 2,429. April contract was quoted at Rs. 2,390 yesterday. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade rose by 13 nP to Rs. 11.48. 120 Bt. cones 1st grade hardened by 11 nP to Rs. 12.85.

Staple fibre yarn (40x2) February delivery met with good support and climbed up from Rs. 776 to Rs. 802. Spot Kohinoors strengthened by 13 nP to Rs. 9.48. Centurys put on 7 nP to Rs. 9.42.

In the cotton yarn section, sixty counts Finlays jumped up by Rs. 5.05 to Rs. 65.65. Gokaks advanced by Re. 1.50 to Rs. 48. Eighty counts Finlays gathered Re. 1.01 to Rs. 80.80. Mahendras were firm at Rs. 68.68. Forty counts Minaxis improved by 88 nP to Rs. 32. Maduras gained 50 nP to Rs. 32. Twenty counts New Greats were fully steady at Rs. 22.25. Ten counts Moderns were unchanged at Rs. 18.75, while Podars dropped 63 nP to Rs. 17.12.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago.

	18-1-1961	11-1-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.) February	2,429.00	2,392.00
60/1 Cupressa Bemberg spot	2,425.00	2,383.00
120 Japan (per 100 kg.)	1,365.00	1,301.00
150 Japan (per 100 kg.)	1,653.00	1,640.00
120 Italy (per 100 kg.)	1,294.00	1,239.00
150 Italy (per 100 kg.)	1,598.00	1,598.00
Staple fibre yarn—		
40×2 February (per 90.72 kg.)	802.00	776.00
40×2 Century (per kg.)	9.48	9.85
Kohinoor „	9.42	9.35
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.12	17.75
20s New Great	22.25	22.25
40s Madura	32.00	31.50
60s Finlay	65.65	60.60
80s Finlay	80.80	79.79

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *18th January*

The oilseeds market displayed distinctly firm conditions during the week under review, in contrast to the easy trend noted last week. Prices registered a rise, though turnover was moderate due to general scarcity of supplies, and absence of any sizable export business in oils. Groundnuts were particularly strong, the February contract touching the ceiling level of Rs. 220. With reduced arrivals from the South and Gujerat side, the spot section continued to make headway. In view of the pronounced paucity of supplies, even small enquiries from crushers and *vanaspati* manufacturers led to a marked rise in values. The small carryover of rapeseed from the last season and their consequent firmness also imparted strength to groundnuts. There were, besides, hopes of a further export quota of groundnut oil, presumably against import of copra. Some copra millers were reported to be interested in buying groundnut oil. Further, the operators took note of the rise in the price of soyabean oil in world markets, thanks to drought in China and consequent decline in soyabean crop. Soyabean oil is an inferior substitute for groundnut oil. The narrowing down of the price differential of the two commodities raises the demand for the latter. It is said that China, which accounted for about one-fifth of the total world exports of soyabeans in 1959-60, will be a net importer of this commodity in the current year. Any increase in world prices of groundnut oil will be beneficial to India in that it will reduce the price disparity between Indian and world market prices, thereby improving prospects for Indian exports. The world prices of soyabean cakes have also tended to be firm. Consequently, Indian groundnut cakes have come to be well sought after by European buyers.

Groundnut February 1961 contract advanced from Rs. 218.75 to Rs. 220 on Monday. Business in this contract, thereafter, became dull. May contract firmed up by Rs. 2.25 to Rs. 218. Nizam bold rose from Rs. 46 to Rs. 48.25. Khandesh quality spurted by Rs. 2.25 to Rs. 48.75. It may be noted that, for 250 kgms., spot prices amount to over Rs. 240, as against ceiling of Rs. 220 for the futures contract (per 250 kgms). Oil ex-mill improved by 90 nP to Rs. 20.40.

Castorseeds were rather subdued in the early part of the week, in the absence of any encouraging export enquiries for castor oil. But there was an abrupt change in sentiment, following the downward revision in the private estimates of the 1960-61 crop from 125,000 tons to 95,000 tons. Castor crop in both Gujerat and Andhra, it was stated, would be lower than the earlier assessment. Arrivals in the local market also showed no improvement. Castorseed May contract forged ahead from Rs. 176.25 to Rs. 177.12 before closing at Rs. 177. Madras small improved by 50 nP to Rs. 35.12. Commercial oil rose by 20 nP to Rs. 14.20.

Linseed was steady, despite absence of any improvement in the outlook for linseed oil. Towards the close, however, the spot section tended to look down, owing mainly to some arrivals of Nizam new crop. May contract improved from Rs. 35.22 to Rs. 35.44, but eased slightly to Rs. 35.31 today. Bold ready shed 50 nP to Rs. 36.75. Linseed oil lost 15 nP to Rs. 16.65.

Cheerful conditions prevailed in the sesame section, thanks to sustained offtake and tight statistical position. Bold variety was maintained at Rs. 340 (per 250 kgms). Sesame oil rose by 50 nP to Rs. 26.

Cottonseeds elicited good support. February contract was higher by Rs. 2 at Rs. 93.50 and May contract by Re. 1.75 at Rs. 93.25. Berars put on 25 nP to Rs. 19.25. Non-whites and whites scored a gain of 20 nP each to Rs. 19.50 and Rs. 20.25, respectively.

Among other seeds, niger rose by Re. 1.50 to Rs. 38. Kardiseeds were higher by a rupee at Rs. 26.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	18-1-1961	11-1-1961	4-1-1961
Groundnut	Rs.	Rs.	Rs.
February 1961	220.00	218.50	218.50
May 1961	218.00	215.75	—
Nizam bold	48.25	46.00	46.12

Kardi seed	26.00	25.00	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FOREIGN DEMAND FOR PEPPER SLUGGISH

(Messrs. Parekh and Co.)

BOMBAY, *18th January*

Malabar black pepper ruled steady to quiet for want of foreign buying during the week. Price range was narrow. After a small sale at $0.47, no new business was reported at Singapore, and Indonesia were underselling. The holding of an umbrella by Malabar over Lampong at this time of the season is likely to affect adversely both the price structure and the volume of export, as, with the passing of time, Sarawak and Indonesia will be all the more anxious to sell, in view of the proximity of their new seasons. Looking to the poorer export of Malabar new crop, the position of the market appears to be vulnerable, as the present steadiness at primary centres seems to be artificial, inasmuch as it is due to holding back by the growers who, instead of selling, are said to be putting their harvest into loan. The money market at Malabar is comparatively more tight, as five banks in Kerala are under moratorium by the order of the Reserve Bank of India. As such loans against pepper will not be available as freely as was the case last year. In the circumstances, if the present sluggishness in foreign demand continues for a week or two, the market is likely to go down. The growers shall have to reduce their price to attract foreign demand.

Ungarbled at Cochin, after spurting to Rs. 420, came down to Rs. 400 per quintal. Garbled, after touching Rs. 430, slipped down to Rs. 405. February delivery on the ring touched the highest at Rs. 450 but climbed down to Rs. 417, with turnover poor, as outside interest was small. Calicut is nominally quoted at Rs. 410. Internal demand is reported to be fair at the moment, but the present tempo of seasonal demand is likely to taper off after a month or so. Some bulls at primary markets are reported to be sending consignments to Bombay, Calcutta and Amritsar for selling at the best market price with a view to relieving the burden of daily arrivals which are averaging about 500 candies.

Although the quotations at Singapore are reported almost unchanged by the news agencies, the dealers there are said to be offering daily in competition with India. Same is the case in Indonesia where the check price, though high, the exporters there are willing sellers below the replacing parity for attracting buyers.

The future of the market is anything but rosy, as, without sizable export of Malabar black before the end of April, the Indian market cannot be sustained.

In Bombay, ready pepper is nominally quoted at Rs. 226 per 50 kilos.

TEAS WELL SUPPORTED

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *10th January*

Just over 914,000 kilograms were offered in Sale No. 2 held today. Nilgiri quality generally showed a slight seasonal improvement but medium continued plain except for a few invoices from the Anamalais, which were brighter. There was good demand which improved as the sale progressed. The few best highgrown brokens sold at around last rates and were occasionally dearer because of improved quality. Below best, however, received limited enquiry and were easier, with some withdrawals in this category, their fannings receiving less enquiry. Good mediums and medium brokens realised firm rates and were dearer following improved quality. Their fannings when offering black leaf inclined to be dearer. Plain and low medium descriptions were readily absorbed at around last rates. Black leaf brokens eased slightly. C.T.C. and legg-cut sorts were well supported at firm rates. Whole leaf grades were about firm with orange pekoes selling well, whilst tippy teas received good support.

	1961	1960
	Rs.	Rs.
Low medium	4.55-4.75	4.63-4.85
Medium	4.75-4.90	4.85-5.18
Good medium	4.90-5.50	4.84-5.40
Quality	5.50-8.25	5.29-8.60

The average price realised in Sale No. 2 was Rs. 5.01 per kilo as against Rs. 4.89 in the previous sale and Rs. 5.05 in the corresponding sale last year.

A little over 300,000 kilograms were offered in Dust Sale No. 2 held on Thursday, 12th January. A useful selection of dusts was on offer. There was strong and active demand at dearer rates. Low mediums, mediums and good mediums were well competed for and advanced by 5 to 10 nP. Residuals also were well supported at firm rates. Highgrowns came to a strong market and advanced in price following quality. Clean black leaf descriptions suitable for the Egyptian market were very strong and dearer. C.T.C. and legg-cut teas sold at firm to dearer rates.

The average price realised in Dust Sale No. 2 was Rs. 4.93 per kilo as against Rs. 4.80 in the previous sale and Rs. 4.34 in the corresponding sale last year.

Export Quota: There are still large sellers at ½ nP per kilo with very few buyers.

Colombo: Just over 6½ million lbs. were offered and met with good general demand. High-grown brokens advanced 15 to 25 cents while their fannings were 10 to 30 cents dearer. Mediums were 5 to 15 cents and lowgrown and plain descriptions 5 cents dearer.

London:—North Indian and other growths: In Monday's auction there was good demand with best Assams firm to dearer. Mediums sorts were irregular but plain kinds were steady. Plain broken pekoe remains at 3*s*. 9*d*.

Ceylon and South Indians: In Tuesday's sale, offerings amounted to 21,168 packages and of this quantity 6,384 packages were from South India. The market met with good demand and prices are quoted steady.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale* 3:—435,000 kilograms. Market steady for plain and low medium brokens. Similar fannings dearer. Improved quality medium and good mediums dearer. Best liquoring highgrown brokens restricted demand, but similar fannings stronger and dearer. Black leaf fannings keen enquiry."

QUALITY TEAS RISE FURTHER

(From Our Own Correspondent)

CALCUTTA, *17th January*

Yesterday's export offerings received keen attention of bidders and prices for quality teas recorded an improvement, while prices during last week's internal sales were irregular. A considerable quantity of teas was again loaded during the week in ships destined to the United Kingdom, but even then this year's shortfall in exports cannot be made good. Several gardens have reported the closing of the season following the setting in of the cold weather, and offerings suitable for export would be limited. The export auctions are, therefore, expected to close much earlier than usual.

Tea stocks in the United Kingdom for the week ended 6th January rose to 119 million lbs. from 117 million lbs. in the previous week. They are expected to rise till about the middle of February, when the lower shippings from Calcutta will begin to be reflected. Interest of buyers in the Mincing lane auctions of last week centred around plainer teas.

Dusts on offer in the internal sales, held last week, totalled 21,808 packages. Demand was good, but prices eased on an irregular trend. Prices of medium C.T.Cs eased, but the brighter teas of this category were a little dearer and the best lots declined, following quality. In line with the general trend, orthodox exportable teas gave way but the smaller kinds were about firm. The legg-cut Dooars gave way by 10 to 15 nP but Darjeelings were about firm. Quotations per 1 kg. inclusive

of excise duty were: good Assam C.T.C. dust Rs. 5.90 to Rs. 6.40, medium Assam C.T.C. dust Rs. 5.45 to Rs. 5.65, legg-cut dust Rs. 5.15 to Rs. 5.25, medium Assam dust Rs. 4.95 to Rs. 5.20, and plain orthodox dust Rs. 4.80.

Leaf offerings amounted to 723 chests and met with good demand.

A strong feature during yesterday's export sales, when offerings amounted to 78,831 packages, was the good support which the very best C.T.C. received. Generally there was good demand, although prices were irregular. The medium C.T.Cs eased by 20 nP, the secondary grades recording an irregular trend. A steady trend was in evidence in Darjeelings possessing autumnal liquors with tippy teas receiving keener attention. Medium Assam B.O.Ps were generally easier but the O.Fs possessing bright liquors were sold at higher rates. A firm tendency was in evidence in medium brokens and fannings having a clean leaf appearance hardened. Plain brokens and fannings eased from 5 to 10 nP. Legg-cut teas lost by 10 to 15 nP but the very best lots received keener attention and realised firm prices. Well-made leaf grades were fully firm with the poorer stalky teas easing. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.80 to Rs. 6.30, clean black pekoe Rs. 5.20 to Rs. 5.45, best Assam C.T.C. B.P. Rs. 5.50 to Rs. 5.90, medium fannings Rs. 4.90 to Rs. 5.15, plain fannings Rs. 4.80 to Rs. 5.00, medium B.P. Rs. 4.70 to Rs. 4.85, and plain B.P. Rs. 4.50 to Rs. 4.65.

JUTES RALLY

(From Our Own Correspondent)

CALCUTTA, *17th January*

A substantial rise in prices of both fibre and finished goods induced by keen demand was the feature of trading in the metal market during the week under review. The publication of lower stock figures in respect of goods with mills as at the end of November provided an early background for a gradual rise in prices. The total of all stocks at 80,300 tons fell by 1,900 tons during the month. But as compared with December 1959, the stocks were higher by 21,400 tons. Hessian stocks were 7,100 tons more and sacking 15,400 tons, but stocks of miscellaneous goods fell by 1,100 tons. As compared with November 1960, hessian fell by 900 tons and sacking by 1,900 tons, but miscellaneous goods rose by 1,100 tons. The decline in stock figures made buyers active against the background of the proposed cut in production of mills as from the end of this month. It would be remembered that, in an attempt to adjust production with the availability of raw jute but at the same time with a view to mitigating sufferings to labour from loss of employment, the Indian Jute Mills' Association had decided to cut working hours from 45 to 42½ a week as from the week commencing 30th January. This would avoid the need to seal more looms and the result would be, instead of total unemployment for some, the loss in earnings would be spread over the entire labour strength. However, this decision has been in rough weather in the past week, since workers are opposed to any cut in working hours also. The West Bengal Government has been aware of the latest developments and it is expected that an attempt would be made to convince labour of the reasonableness of the I.J.M.A.'s decision.

It was noted that the decline in December stocks had occurred despite December output having risen by 4,800 tons to 90,700 tons. Adding the November-end stocks of goods amounting to 82,200 tons, the total availability in December was 172,900 tons. December-end stocks were only 80,300 tons and demand was of the order of 92,600 tons, which exceeded production. What was of greater interest were the figures in respect of despatches in December 1960. The total despatches at 91,900 tons were higher by 10,800 tons. Despatches for local purposes increased by 5,200 tons to 29,000 tons and those for export by 5,600 tons to 62,900 tons. These figures fully endorsed the market view that willy-nilly buyers in foreign countries as well as within the country are supporting higher prices. It may be pointed out that prices of several agricultural commodities and finished goods the world over had risen, and the Government of India has had to revise estimates for the projects needing capital goods, in view of the rise in the prices of the latter. This is no defence for the abnormal rise in prices of raw jute. It should, however, be noted that India is not the only country where fibre prices have risen. Prices in Pakistan are higher than in India. In a free market, prices would be determined by the interaction of the forces of supply and demand.

The increase in export of gunny in December has caused some amount of jubilation in the market, as the fall in exports in October had been interpreted as being due to foreign consumers' reluctance to buy gunny at high prices. The figure relating to burlap consumption in December is awaited with interest. It is expected that consumption in December would be higher than in November. In recent weeks, orders for hessian have been received from other countries also. In heavy goods, the support has been mainly from Australian buyers. Recently, the Government of India purchased a considerable quantity of B. twills. A feature in the market has been that foreign buyers are not showing any interest in forward goods, in view of uncertainty arising from the delegation of authority to the Jute Commissioner to requisition stocks of raw jute and jute goods, if necessary. Transactions are, therefore, confined to ready goods as far as possible. This is one more reason why ready goods have been daily rising.

The rise in prices of raw jute has been more impressive than in goods. As the season is advancing, acute shortage in fibre is increasingly felt. All fresh arrivals are meeting with ready buyers and are on the decline. Sellers [illegible]

reserved and, in fact, there was nothing on offer. It would appear that the present system of buying by mills whereby they are forbidden to carry heavy stocks and are, therefore, forced to maintain a hand-to-mouth existence has only encouraged sellers to be reserved. The week's opening as well as closing levels for Jan-February delivery are indicated below:

(Per 100 kgs.)

	Opening	*Closing*	*Gain*
	Rs.	Rs.	Rs.
Assam bottoms ...	143.25	154.00	10.75
	(53.50)	(57.50)	(4.00)
Daissee bottoms ...	148.75	159.25	10.50
	(55.50)	(59.50)	(4.00)
Northern bottoms ...	142.00	152.75	10.75
	(53.00)	(57.00)	(4.00)

Note: Figures in brackets relate to rates per maund.

In the goods market, on Tuesday last, prices were firm. Although inquiries were limited, the rising fibre market lent support. Ready B. twills were thus unchanged at Rs. 184, as were ready hessian 40" 10 oz. at Rs. 59.25. A small quantity of cornsacks was bought by Australia for immediate shipment. On the following day, Australian buyers were again in the market and lifted about 8,000 bales of woolpacks for deliveries extending up to June. Local operators were active in buying both hessian and heavy goods. These factors were sufficient to force B. twills to Rs. 185.50 and hessian 40" 10 oz. to Rs. 60.25. On Thursday, a prominent feature was the keen interest shown by local operators and so B. twills hardened to Rs. 186 and hessian 40" 10 oz. to Rs. 61.25. On Friday, fibre prices rose further, and this factor, as well as the support accorded by local buyers, pushed up B. twills to Rs. 186.50 and hessian 40" 10 oz. to Rs. 61.50. Over the week-end also, local operators continued to be keenly active to push B. twills to Rs. 187.00 and hessian 40" 10 oz. to Rs. 62.25. A further sharp rise in prices was the feature during yesterday. Quotations should be considered nominal, as sellers were not inclined to do fresh business. Ready Hessian 40" 10 oz. rose to Rs. 64 and B. twills to Rs. 192.

METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *17th January*

Following good demand and apprehensions of limited supplies, prices of base metals added handsome gains during the week under review. On the other hand, it should be noted that advices from the London Metal Exchange and Singapore revealed decline in prices. That prices in India have risen despite a fall in prices in London should be attributed to India's restricted imports of these essential metals. The circulating rumour that the virgin copper quota in respect of cable manufacturers would soon be revised and reduced substantially led to increased demand for available copper scrap. Utensil scrap was quoted at Rs. 204 a cwt. as against Rs. 200 a week ago and berry scrap at Rs. 218 a cwt. against Rs. 212. Supplies were, of course, extremely tight. On the London Metal Exchange, electrolytic copper closed substantially lower at £216¾ a ton as against £222¼ earlier in the week. The decline was precipitated by the threatened strike at El Teniente not having taken place. Industrial demand was limited. However, as the price declined more demand developed in London. Tin here opened at Rs. 580 a cwt. and closed higher on balance at Rs. 584. This hardening tendency, despite the fall in Singapore prices, was due to the tight supply situation. In London the price eased to £779 a ton from £786 following the need for cutting down production in the U.K. motor industry. Electrolytic zinc at Rs. 170.50 a cwt. closed Re. 1 higher on balance, but at one time the rate was higher at Rs. 171.50. Supplies were short. On the London Metal Exchange, zinc closed lower at £77¾ a ton against £80¼ earlier in the week. Virgin lead was unchanged here at Rs. 63 a cwt.

THE CENTRAL BANK OF INDIA LIMITED

PROFIT FOR 1960

The net profit of The Central Bank of India, Ltd., for the year ended 31st December 1960, including the sum of Rs. 18,82,560.07 brought forward from the previous year's account and after providing for Taxation, amounts, subject to audit, to Rs. 1,51,87,470.96 which the Directors have disposed of as follows:—

	Rs.
An *ad-interim* dividend paid at the rate of Rs. 2.10 per share, subject to tax (i.e., Rs. 1.47 net) for the half-year ended 30th June 1960..	26,46,000.00
Amount transferred to Staff Gratuity Fund	10,00,000.00
Amount transferred to Contingency Fund	8,00,000.00
Amount provided for Bonus to Staff, including Special Jubilee Bonus	51,00,000.00
	95,46,000.00
The balance of Rs. 56,41,470.96 the Directors propose to recommend to the Shareholders to dispose of as follows:—	
To pay a final dividend for the half-year ended 31st December 1960 at the rate of Rs. 2.50 per share, subject to tax (i.e., Rs. 1.75 net) making in all 12.88 per cent net for the whole year	31,50,000.00
To pay a Special Jubilee Bonus of 2 per cent per annum per share, subject to tax.. ..	6,30,000.00
To carry forward to next year's account	18,61,470.96
	Rs. 1,51,87,470.96

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *16th January*

Quietly steady conditions were witnessed in the foodgrains market during the week. The Reserve Bank's latest directive allowing facilities of loan against foodgrain stocks acted as the bullish factor. Prospects of *rabi* sowings were fairly good and actual harvesting of peas and coarse grains will begin by the end of next month. Wheat at Hapur recorded modest gains to be quoted on Monday at Rs. 17.56 for average quality and Rs. 18.75 for better farm produce. Daily arrivals in the market were poor, but supplies were augmented by sales of wheat and wheat flour through ration shops.

Rice also continued steady, though the supply position was reported satisfactory as new grain was still reaching the markets. Stocks of wheat and rice were reported fairly heavy with both Central and State Governments. The latest prevailing prices of rice in the local market were: rice *mainmuri* Rs. 21.25; *gadda* Rs. 19.50; *basmati sela* Rs. 27 to Rs. 29; *ramajwayan* Rs. 23.50; *raimunia* Rs. 24.50 a maund.

Gram ruled quietly depressed during the week at Rs. 16.75 a maund for Punjab variety, thanks to easy advices from Punjab and good crop prospects following last rains. Local gram stock is put at 10,000 maunds. Barley was stationary around Rs. 12.75 a maund and *bejhar* at Rs. 12.75 a maund for inferior quality and Rs. 13 for *moongia* variety. Maize continued to attract good seasonal consumer demand and, as maize was still reaching here from nearby eastern districts and local stock was heavy at about 30,000 maunds, maize ruled quiet at Rs. 12.50 to Rs. 13.37 a maund. *Jowar* drifted lower to Rs. 12.87 a maund and *guwar* too was quoted slightly lower at Rs. 13 a maund. *Bajra* was very much in request during the week for festival demand and the price stood higher at Rs. 15 to Rs. 15.50 a maund.

Despite a fall in local stocks to 5 *khatties*, peas drifted lower on good crop prospects, harvesting of which would begin by the end of February. *Arhar*, too, sought lower levels in the absence of new urges and dormant demand, with local stock unchanged at 8 *khatties*. Other pulses were also quietly depressed. The latest prevailing prices (in rupees per maund) on Monday were: peas *dara* 13.25; white farm 14.75; peas *dal* 15; *arhar* 13.31; *arhar dal* 17.50 to 18.50; *urd* new 18.75; *moong desi* 18.50; from South 20; *massoor* 15 to 17.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, *16th January*

Sugar ruled quietly depressed during the week, due to easy supply position. The latest release of 50,000 tons for export failed to cheer up market sentiment. Following comfortable supplies, a plea for early decontrol of sugar has again been made by the sugar trade. Some State Governments have already relaxed controls on sugar. The U.P. Government has allowed relatively free disposal of unlifted sugar out of last quotas. Cane supplies to all factories here as well as in east U.P. are reported to be fairly heavy and, because of larger cane output this year, sugar production is expected to touch a new height of about 2.7 million tons in the current season. Prevailing prices here are: Rs. 109.50 per bag wholesale and Re. 1.06 per *seer* in the open market.

Sugar continued to rule easy during the week in the Muzaffarnagar market also, as the supply position was satisfactory. The week-end prevailing prices were: Rs. 109 to Rs. 109.50 per bag for spot delivery in the open market.

Sugar was also quietly depressed in the Kanpur market. Trade circles were clamouring for early decontrol of sugar.

Brisk demand from east U.P., mainly Kanpur and Allahabad side, accounted for modest gains in the prices of *khandsari* during the week for new stuff. Production was being carried out but half-heartedly and stocks were said to be comfortable. The latest prevailing prices are: *khandsari* inferior Rs. 25 to Rs. 30; superior Rs. 31 to Rs. 34.50; crystal Rs. 32 to Rs. 36.50; old Rs. 23 to Rs. 29; *galawat* Rs. 14 to Rs. 17; *boora* Rs. 32 to Rs. 35 a maund.

After a full week's lull following stoppage of loading facilities from the local station, *gur* tended to look up, as about 40 wagons were loaded yesterday on week's free loading day. Most of the stocks made up for early despatch were lifted. During the week, a part of stocks was retained and the rest carried to other stations to be loaded from there. Daily arrivals of *gur* were about 4,000 maunds average and the local stock was put at 12,000 maunds and prevailing prices on Monday were: *pansera* Rs. 13.25 to Rs. 13.75; *balti* Rs. 13.50 to Rs. 13.75; *shakker* Rs. 15.25 a maund.

Arrivals of *gur* continued to be small in the Muzaffarnagar market and booking facilities were also not available during the week, but prices improved fractionally. *Chaku* was quoted at Rs. 14.50 to Rs. 15.75, *pansera* at Rs. 14.25 to Rs. 14.50, [illegible] at Rs. 14.25 to Rs. 14.50, *rusket* at Rs. 8 to Rs. [illegible] and *shakker* at Rs. 15 to Rs. [illegible]

ON THE ARENA

(*Concluded from page 104*)

Raman. Two families entered into a matrimonial alliance after a sizable sum of money and goods had passed as dowry from the parents of the bride (Sita) to the parents of the bridegroom (*Rama*). In the course of thirty years, the married couple had produced and reared a fine family of six sons and three daughters who were all in flourishing condition; the grandparents were also alive. Sita being the dominant partner, her children gave extra attention to her parents and showered more gifts on them than on their paternal grandparents, which was a source of chagrin to the latter. Rama's father, thereupon, presented a demand on his opposite number for a fresh money gift stating that the dowry given at the time of marriage had been small and had vanished; further, his son had done a fine job of increasing the family by nine additional units who seem to be a source of great benefit to the maternal grandparents, so a further contribution was called for. Pat came the reply that (*a*) Sita's contribution to the effort of producing and rearing the children was much greater than that of Rama, and (*b*) it had always been held that maternity was an established biological fact, while paternity was, at best, a presumption, hence there was no case for a further payment.

When the Maharashtra State was formed I firmly believed that it would inherit and preserve the fine traditions of the former Bombay State for enlightened administration and objective handling of matters relating to industrial development. Indeed, I still hope it will, eventually at any rate. Andhra, Madras and Kerala seem to have taken care to see that, in accordance with the recommendations of the Planning Commission, efficiently managed farms which consist of compact blocks in which heavy investment or permanent structural improvements have been made are exempted from land ceilings legislations. I can see no reason why Maharashtra should not do likewise.

The matter is of considerable importance at the present juncture when the sugar industry is expected to export the commodity and earn valuable foreign exchange. As it is, the price at which exports could be effected is causing much concern as a measure of increase in internal price may be needed to meet the loss which the industry would incur in export. If the cost of production of sugar in Maharashtra is increased, as it is bound to go up by the withdrawal of the advantages which the industry has enjoyed through its own efforts in developing large farms, the country will be entitled to blame the State Government for its shortsighted policy.

* * * *

What Is the Point?

Reuter has flashed a report of the television programme presented by the National Broadcasting Company of U.S.A. tracing President Eisenhower's career from boyhood to the White House under the caption "Tribute to a Patriot." After summarising the tributes paid by Vice-President Nixon, Pandit Jawaharlal Nehru, Mr. Macmillan, Dr. Adenauer and President-elect Kennedy, the report concludes as follows:

> His teacher said he was a "good boy." His high school football coach said he had a reputation for liking girls. General James Van Fleet said that, as an army cadet, he had a great gift of the gab.

For sheer bathos this in unbeatable. I fail to see any point of substance in it.

BANKING

(*Concluded from page* 106)

and inspection, insistence on documentary evidence as a cover for their bills portfolio or whether the shroffs should be left free to perform their risk-bearing functions in their own way. With its plenitude of power which is at the command of the State and under the socialist pattern of society, which the party in power is bent upon imposing on every sector of the economy, it would not be difficult for the authorities to bring about a regimentation of the business practices of indigenous bankers if they want to. But to the credit of the authorities it must be said that it is not they who are raking up this old issue, namely, of linking indigenous bankers with the Reserve Bank. They have quietly left the latter to mind their business. It is Mr. Chinai who, as the spokesman of bazaar-bankers, has revived an issue which every one had clean forgotten. In so doing, he has not rendered any useful service to these bankers. The shroffs would be well advised to do some fresh thinking on this subject. Assured as they are with a fair field for their own activities—at least so long as organised credit institutions insist on stringent conditions of creditworthiness—the shroffs must ponder whether they should prefer the strait-jacket of rigid banking discipline to autonomy and freedom which they now have and which enables them to serve efficiently an important sector of productive borrowers by providing them with funds on the basis of mutual trust. In their own sphere of *hundi*-finance, the shroffs are undoubtedly performing a valuable social function. And so long as they keep their house in order and do not indulge in over-trading, they will not find it difficult to get accommodation from well-established commercial banks on reasonable terms. Good and sound shroffs are highly valued by these banks and have had no difficulty in raising adequate funds from them, without having to sacrifice their freedom or modify their accounting system or business practices. So far as professional village moneylenders are concerned, the position is, however, different. As economic development gathers pace, their importance is bound to diminish. This surely will not be an unwelcome trend.

UNITED COMMERCIAL BANK LTD.

The net profit of the United Commercial Bank Ltd. for the year ended 31st December 1960, after taxes, subject to audit, including the sum of Rs. 1,04,096 brought forward from the previous account amounted to Rs. 68,46,871. The Directors have transferred Rs. 30,00,000 to the reserve fund, raising it to Rs. 2,05,00,000 and provided Rs. 13,00,000 for bonus to staff. Out of the balance, they propose to recommend to the shareholders at the next annual general meeting the payment of a dividend of 12 per cent. (i.e., Rs. 6 per share) less tax at 30 per cent. which will absorb Rs. 24,00,000, and to carry forward to the next account the balance of Rs. 1,46,871.

The comparative figures for 1960 and 1959 are as under:

	1960	1959
	Rs.	Rs.
Net profit	67,42,775	60,41,998
Brought forward from previous account	1,04,096	62,098
Amount available for disposal	68,46,871	61,04,096
Appropriations:		
Reserve Fund	30,00,000	27,00,000
Bonus to staff	13,00,000	11,00,000
Proposed dividend ...	24,00,000	22,00,000
	(12 per cent.)	(11 per cent.)
To be carried forward ...	1,46,871	1,04,096

It will be seen that the profit is substantially higher and that the dividend, as well as the transfer to reserves, has been raised.

CENTRAL BANK OF INDIA LTD.

The results of the Central Bank of India Ltd. for the year ended 31st December 1960, according to the preliminary statement issued by the Bank, are highly encouraging. After providing for taxation, the net profit shows a rise of over 34 per cent., i.e., from Rs. 99.43 lakhs to Rs. 133.05 lakhs. While a part of this improvement has been used for paying a larger bonus to staff, and a higher dividend to shareholders, a sizable amount of Rs. 8 lakhs against *nil* in the previous year has also been utilised to strengthen the reserves; the said amount has been credited to the contingency fund. The amount set apart for bonus to staff, including jubilee bonus, is Rs. 51 lakhs, an increase of Rs. 17.25 lakhs over the corresponding provision a year ago. The transfer to staff gratuity fund remains unchanged at Rs. 10 lakhs. An *ad-interim* dividend of Rs. 2.10 per share subject to tax (i.e., Re. 1.47 net) had been paid early in the second half of 1960. This is now proposed to be followed by a final dividend at the rate of Rs. 2.50 per share subject to tax (i.e., Re. 1.75 net), making in all a total of 18.40 per cent. gross or 12.88 per cent. net for 1960. This compares favourably with a gross dividend of 17.20 per cent. or a net of 12.04 per cent. paid for 1959. In addition, the Directors have decided to pay a special jubilee bonus of 2 per cent. per share subject to tax (i.e., 1.40 per cent. net). The total amount required for these dividends is Rs. 64.26 lakhs which represents an increase of Rs. 10.08 lakhs over the year. The amount left to be carried forward is Rs. 18.61 lakhs, as against Rs. 18.82 lakhs brought in.

BANK OF BARODA LTD.

The Directors of the Bank of Baroda Ltd. have decided to pay a final dividend of 20 per cent. per annum subject to tax, for the second half of 1960. Together with the interim dividend at 14 per cent. per annum for the first six months, the total taxable dividend for 1960 comes to 17 per cent., as against the taxable dividend of 14 per cent. for the previous year. This higher dividend reflects the sharp increase in net profits from Rs. 24.89 lakhs for 1959 to Rs. 40.66 lakhs for 1960. With the last year's carry-over amount of Rs. 1.02 lakhs, the sum available for distribution is Rs. 41.68 lakhs. The total dividend of 17 per cent. absorbs only Rs. 23.49 lakhs, leaving Rs. 18.19 lakhs, subject to payment of bonus to staff, for other appropriations.

MARKET GOSSIP

(*Concluded from page 99*)

a view to checking this tendency and in order to get back the gold hoards of one kind or another in foreign lands that the American Administration has extended the long-standing ban on domestic hoarding of gold to include gold holdings overseas as well. Estimates of gold held by Americans abroad vary widely from $100 million to $1,000 million.

Evidently, the U.S. Government must have felt that the danger to the dollar through transfer of funds for hoarding in gold by the Americans themselves must be substantial. Since a high price of gold outside the U.S. is itself a stimulant for hoarding more and more gold in the hope of a further rise in the near future, the U.S. Government tried to bring down this price by selling the metal in the London market. This move did succeed to some extent. During the closing weeks of 1960, the dollar price of gold in London dropped to within 40 cents of the official parity. But, after the new year began, the gold price moved up again and stood in the vicinity of $35.80. This revival of upward trend followed buying by some of the European central banks themselves which they can do so long as the price is well within the limits permitted under the I.M.F. rules. There was also a broadening of demand by private buyers on reports that the American Administration might decide not to release, directly or indirectly, central bank gold for sale for private hoarding. In the first fortnight of January, a further quantity of gold worth $152 million is said to have flowed out of the U.S.

Will the latest order forbidding U.S. citizens and firms to hold gold overseas be effective in helping to check the gold drain? Some feel that it will. This view is based on three grounds. In the first place, gold dealers in London will not enter into forward purchases of gold beyond 1st June next on behalf of their American clients. Secondly, many prospective U.S. buyers of gold will be deterred by the severe penalties that can be imposed for the contravention of the order. And, thirdly, as several persons and all large corporations will simply not wish to indulge in illegal operations, they will sell out whatever gold they have kept abroad and take back the proceeds home. While all this can be expected, there are serious doubts among European observers as to the ultimate success of the move. It is, for instance, asked in London: In the absence of any exchange controls in the U.S., how can the U.S. Treasury trace funds which are first sent to a foreign bank and then used to buy gold? It is also asked: How can the Americans who are deterred from holding gold itself be prevented from buying foreign currencies or gold-mining shares which are not regulated?

It is against this background that Mr. Kennedy has assumed office as the new President of the U.S. Before these lines appear in print, Mr. Kennedy will have delivered his maiden policy statement (on Friday the 20th inst.). One of the "first pronouncements" that this statement will include pertains to the gold issue, according to Mr. Dillon, the new Secretary of Treasury. It is stated that Mr. Kennedy may indicate a new approach to the whole issue based on the suggestions made by some financial experts. These suggestions include removal of tax incentives to U.S. companies for retaining overseas earnings abroad; repeal of the percentage gold backing for the dollar as soon as conditions are psychologically favourable; reduction of duty-free allowance for "returning travellers"; re-examination of the question of U.S. troop and defence costs in Europe; measures to ensure that the freedom of U.S. companies to invest abroad should not be absolute; and proposals for a revision of the Bretton Woods Agreement, of which the most prominently canvassed reform is the plan for the holding of national reserves by an International Monetary Fund converted into a world central bank. It will be interesting to see what President Kennedy proposes to do for strengthening the U.S. dollar. It is significant that the aforesaid suggestions do not include an increase in the dollar price of gold.

D.L.F LOAN FOR PREMIER AUTOMOBILES

The United States Government has announced the approval of a $7.2 million (Rs. 3.4 crores) loan to the Premier Automobiles Ltd., Bombay. The loan, which will be channelled through the U.S. Development Loan Fund, will finance the foreign exchange costs of importing machinery needed to produce sheet-metal components for Dodge trucks and Fiat autos, and equipment needed to modernise and expand capacity of other portions of the Premier plant. All equipment will be purchased in the United States. Details of the loan agreement remain to be negotiated. Like all loans made by the U.S. Development Loan Fund, the credit may be repaid in rupees. Repayment in India's currency does not involve expenditure of India's foreign exchange earnings. This credit brings the total of U.S. aid to India to $3,747 million (Rs. 1,783 crores).

The Premier Automobiles' expansion project, which will be financed by the new loan, is expected to enable India to save more than $2 million per year in foreign exchange now spent in importing sheet-metal components. The loan will support the Indian Government's plans to increase the locally produced content of motor vehicles from the present figure of 60 per cent. to about 85 per cent. Premier's output will be increased from 12,000 trucks and cars per year to 21,000 units.

The Premier Automobiles, Ltd., was organised in 1944. It began producing trucks by assembling components manufactured by Chrysler Corporation of the U.S. It now makes various Chrysler products and also passenger cars in collaboration with Fiat of Italy.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2599 BOMBAY, 28th JANUARY 1961 PRICE Rs. 2

A MEMORABLE VISIT

TO those surviving older citizens of Delhi who had lined its streets in that forenoon of 7th December 1911, to have a glimpse of King George V, then on a visit to this country as its Emperor, but returned home without having recognised him as he "was dressed in a red coat like other generals and was riding a small horse," the historic State drive of Queen Elizabeth the Second, Head of the Commonwealth, in the forenoon of 21st January 1961, must have provided ample compensation. For, along with tens of thousands of the younger generation, they should have easily recognised and cheered the Queen. And, for her part, the Queen, too, could not have had the kind of disappointment that her grandfather had when he recalled, with some sorrow, that he was not recognised by his subjects. There is, to be sure, in this mutual recognition a lot more of significance than is apparent on the surface. The significance is that the Indo-British ties, which are historically derived and reinforced by the Commonwealth link, are stronger than ever before. Strange as it may seem, these are not so much political as economic and social, and the visit of Queen Elizabeth II as the Head of the Commonwealth symbolises the latter relationship to a far greater extent. After all, it was for this relationship that Queen Elizabeth I had laid the foundation late in the sixteenth century.

How broad-based this economic relationship is at the present time is more eloquently told in a few figures than in many words. Trade should claim first attention here, because of the historical fact that the British originally came to India for trade and left it centuries later in a climate of goodwill that reciprocal trade fosters. It is, indeed, remarkable that the two-way trade between India and the United Kingdom accounts for about two-thirds of the total sterling area trade with this country. While imports from the U.K. into India have increased from an annual average of Rs. 156 crores in the first Plan period to an annual average of Rs. 196 crores in the second Plan period, exports from the latter to the former have also increased, though only slightly, from an annual average of Rs. 164 crores during the first Plan period to Rs. 167 crores during the second. It is noteworthy that the excess of imports from the U.K. over India's exports to that country in the second Plan period has been due to our pressing need for capital goods. In a way, this country's adverse balance of trade with the United Kingdom may be taken to have been covered by the loan assistance given by the latter since 1958. Including the latest (23rd September 1960) loan, this assistance has come to Rs. 107.3 crores for the second Plan. This does not include the announcement of a loan of Rs. 40 crores as "an initial act of assistance" for India's third Plan to finance orders which can be placed in Britain for capital goods.

More than Government-to-Government loans, it is the large volume of U.K. private investment in India that provides a more telling index of Indo-British economic co-operation. This private investment is now more than Rs. 400 crores—representing more than 80 per cent of all foreign private investment—whereas it was only just half that figure in 1948. Some of the biggest firms in the U.K. are now investing in India in a wide range of joint ventures. Since private investment of this kind means, and will continue to mean, a living, creative relationship between the industries of Britain and India, it may be confidently expected that British industry, which has known India and its needs and problems all these years, will continue to play a leading and expanding part in this partnership for progress and prosperity. When this relationship is further strengthened, as it will surely be, by the training facilities and scholarships offered to Indian engineers and technologists by several U.K. industrial concerns, Indo-British co-operation will have reached a still higher level. It is the dearest wish of every Indian, who has clean forgotten the dark deeds of British rulers, that the present visit of Queen Elizabeth, who will be seeing for herself this country's economic conditions and its heroic efforts to improve them, may further cement the Indo-British ties in enduring ways.

MR. JEHANGIR GHANDY'S PLEAS

IT is as a practical man of industry, and not as an academic student of growth or projection economics, that Mr. Jehangir Ghandy, Director-in-charge, Tata Iron and Steel Company Ltd., has sought to bring out the role of steel in economic development in the Foundation Day Lecture delivered by him early this week at the Indian School of Mines and Applied Geology, Dhanbad. The practical conclusions he has drawn from the experience of other countries are of interest, as they have some relevance to industrial conditions in India at the present time. Foremost among these conclusions is that, in the first stage of industrialisation, consumer goods industries, particularly food processing and textiles, account for an overwhelming proportion of a country's total industrial output, while, in the second stage, the contribution of consumer goods industries to total output diminishes owing to the advance registered by the sector manufacturing capital goods. The applicability of this conclusion to Indian conditions is, however, not quite clear from Mr. Jehangir Ghandy's speech. It is, however, possible to piece together a number of related observations in some sort of a logical sequence and, on that basis, consider this country as being currently far advanced in the process of transition from the first to the second stage of industrialisation, or even as being at the commencement of the second stage itself. Since what takes an economy forward from the first stage to the second and then from there to the third (when the rapidly expanding capital goods industries draw level with the consumer goods industries in terms of output) are iron and steel and engineering industries, the "heavy industry orientation" of India's second and third Plans is justified in a way by Mr. Jehangir Ghandy's own argument. This argument is to the effect that the demand for capital goods required by consumer goods industries for replacement, modernisation and expansion has to be met more and more from domestic sources for the following three reasons:

(i) The cost of transportation of machinery and equipment from overseas is very high; (ii) labour costs in the highly industrialised countries producing capital goods tend to be high, giving their manufacture in the less developed countries an economic advantage, and (iii) the relatively inelastic nature of exports from underdeveloped countries leads to balance-of-payments difficulties when purchases of capital equipment sharply rise in a period of development, as has happened in India in the past five years.

If the above reasons can be taken to justify a greater accent on the indigenous development of capital goods and machinery manufacturing industries, the need for assigning the highest priority to iron and steel industry, which is basic to those heavy engineering industries, becomes self-evident. What is more, the growth potential of the economy as a whole in the wake of development of the iron and steel industry is known to be very substantial. As India is rapidly approaching the second stage of industrialisation or is right in it now, it may be that, as Mr. Jehangir Ghandy has referred to the relevant foreign experience, each one per cent increase in steel consumption will be associated with an increasingly larger rise in national income, living standards and capital formation. In a situation of rapid development, it would be wiser to proceed on the basis that the demand for steel, like the demand for power, may outstrip the supply. Any projection exercise in the matter of steel demand is a hazardous enterprise, for future imponderables cannot be precisely measured in advance. For instance, if urban population begins to grow, from the third Plan onwards, at a faster rate than the present 4 per cent a year, as it well may in the context of accelerated industrial development, the demand for steel for housing alone will go up further than what is currently estimated. If, thus, greater development itself should generate unsuspected additional demand for steel, it may also happen that, in several fields, possible availability of more steel alone will spell development. For all these reasons, therefore, it would be realistic even to over-estimate future steel demand rather than under-estimate it. Mr. Jehangir Ghandy's present admission

that there is "no overwhelming disagreement" between Tatas (who, not long ago, estimated the 1966 steel demand at 8 million tons) and the planners (who have estimated it at 9.5 million tons) is thus welcome.

But what detracts from the force of this admission is the fact that Mr. Jehangir Ghandy has pleaded, in the same breath, for a lower steel-making capacity than the 10.2 million ingot tons laid down in the Draft Outline of the third Plan. This he has done on the plausible ground that secondary (engineering) industries could be more easily encouraged to produce, out of imported rolled steel (costing round Rs. 400 per ton), goods for export which could fetch as much as Rs. 3,000 per ton. But the snag here is that, if export markets for Indian engineering goods do not turn out to be quite promising, the country will have probably spent on imported steel in the third Plan period so much foreign exchange which could have been better utilised in creating new steel-making capacity. How unconvincing Mr. Jehangir Ghandy's proposition is, can be easily illustrated. Suppose 400,000 tons of rolled steel are imported every year during the third Plan period for the use of engineering industries. The import bill will then come to anything from Rs. 80 crores to Rs. 100 crores—an amount that could meet the foreign exchange cost of a new one-million-ton steel plant or of an expansion project in one of the existing plants. Mr. Jehangir Ghandy's argument that his proposition does not call for consideration, if new steel capacity "can be financed in part by foreign equity capital," can be deemed relevant only in the sense that there should not come about any excessive concentration of steel-making capacity in the public sector. The whole argument boils down to a question of imparting greater flexibility to the Industrial Policy Resolution so as to give private enterprise the chance to establish additional steel-making capacity in collaboration with foreign capital, on the ground that the national interests so require it. In view of the basic and strategic nature of the iron and steel industry and in view of the mixed character of the economy, it would be wholly in order for the private sector to ask for parity with the public sector in so far as the level of steel-making capacity in either sector is concerned. If Mr. Jehangir Ghandy had put forward such a plea, it would have been more understandable and impressive.

But all this talk about new steel capacity, be it in the public sector or in the private sector, has currently an air of unreality about it, for, as Mr. Jehangir Ghandy himself has laid bare, "there is a fundamental imbalance in our mineral resources." His speech is thus more notable for its treatment of the shortage in the supplies of coking coal and limestone—two of the most important raw materials required by the iron and steel industry. Since for each ton of steel, 1.5 tons of coking coal and 0.5 ton of limestone are required, any continued shortage in their availability will only retard actual steel production, as they have done in the last one year, and widen the gap between capacity and production. As for coking coal, its production is not expanding fast enough. Mr. Jehangir Ghandy, who revealed elsewhere that the T.I.S.Co.'s steel production last year had fallen short of its target by 20 per cent because of the shortage of coking coal, was on unassailable ground when he urged that the Government should review the policies governing the coal industry and eliminate the brakes on production. Since this industry requires Rs. 30 to Rs. 60 per ton in capital expenditure to put down a new mine, a large expansion of the output of coking coals can come about only if practical steps are taken by the powers-that-be to help private collieries secure fresh equity capital and also to enable them to plough back more of their own profits into expansion. As for limestone, it is noteworthy that Mr. Jehangir Ghandy has advanced a practical suggestion to the effect that the untapped reserves of limestone in the Sundargarh district in Orissa should be worked and that, for this purpose, railway facilities be made available. His point that the high cost of haulage would preclude exploitation of limestone reserves in remote areas like the Cutch peninsula, Madras, Rajasthan and Assam is not open to dispute. Since the reserves of flux grade limestone at a few places within easy reach of the present steel works have been greatly depleted, Mr. Jehangir Ghandy's plea for State assistance in opening up the Sundargarh district for limestone quarrying deserves to be expeditiously examined for appropriate action.

INDUSTRIAL PEACE: THE NEED OF THE HOUR

By V. V. Giri

GOVERNOR OF KERALA

TODAY we stand on the threshold of the third Five-year Plan. Two Plans have been completed, successful in certain spheres and not to that extent in some others. As one looks back at the progress we have been able to make during the course of a decade or so—ever since Planning came to be an important way to solve our economic problems and in getting the people out of the fetters of underdevelopment—the picture, in its broad perspective, is one of satisfaction and hope. No doubt there are many cases wherein possibly we could have done better and achieved a greater measure of success. Nevertheless, the achievements made so far are much and warrant an optimistic future.

In the industrial sphere, our success and progress have been something phenomenal and significant. But the full impact of this is yet to be felt. Why? We cannot ignore the fact that the problems facing us are of a colossal nature and are of gigantic proportions. Tackling too many problems and of such serious nature we find the fruits are not sufficient to meet the demands, which are also growing fast.

Be that as it may, the prime question of the hour, it is accepted on all hands, is the rapid industrialisation of the country. We cannot and need not go through the same travails as undergone by others in the past. One of the basic prerequisites to attain the necessary success is the creation of a good climate of co-operation between workers and employers, maintaining good industrial relations or promoting industrial peace, as it is often described.

How could we do this? Certainly by actual deeds and not by pious words. There should be a clear and broad understanding, both among the employers and the workers, that they will not resort to direct action and that differences and disputes between them will not lead to a strike or lockout. I may rather elucidate this point: I do believe that the weapon of strike is an inalienable right of the workers and I do not even for a trifling moment suggest that the workers should do away with this last weapon in their armoury; but what I emphasise is this: they should restrict its use to the absolute minimum, almost to that extent as if it were non-existent. If the workers are bold enough and patriotic enough to do this, I have no doubt in my mind that there will be a definite change in the positive direction and new ventures would come into being and thereby solve many of the riddles and difficult situations confronting the State. The workers and employers should come to a gentleman's agreement in this regard. There should be a clear acceptance that resort to strikes or lock-outs will not be made under any circumstances.

In this connection, the employers too have a definite responsibility and should not consider such agreements by the workers as a sign of weakness on their part. The management should equally assure the workers that they would place their full emphasis and faith in collective-bargaining machinery and joint negotiations and will not have recourse to compulsory adjudication. In fact, I feel that, if the employers come out with a declaration of this kind, workers would only be too ready and glad to co-operate with them and assist them in securing industrial progress. In this regard, let our employers take a leaf from the past experiences which unfortunately are painful reminders of the cost which compulsory adjudication had entailed to themselves, the workers and the general community. Both parties—labour and management—should lay special stress on mutual negotiations and voluntary consultations. Internal settlement on a voluntary basis should be the keynote in solving all issues and differences between the workers and the management. Sometimes, I know, even with the best of intentions, they do not succeed and where they fail in their attempts at a general agreement, they can resort to voluntary arbitration. Here we can have a panel of names of conciliators and arbitrators, generally acceptable to both sides, whose services may be drafted whenever necessary to bring about a settlement between the contending parties. This will have the positive advantage over compulsory adjudication with its proverbial delays and the never-ending process of litigation.

As an advocate of the internal settlement—mutual negotiation and voluntary conciliation—I have always held my faith that it is better for both management and labour to settle their differences by themselves. My approach to the whole issue of compulsory adjudication is very clear and well known to all. Compulsory adjudication, while it might have been of some utility in the past, especially during war-time, has some attendant defects which, however much one may improve upon the machinery, shall remain inherent in it. It is common knowledge that any decision by a third party cannot be as good as one evolved from within and based on mutual trust.

What I stated in October 1952, when as Minister for Labour, Government of India, I presided over the twelfth session of the Indian Labour Conference, regarding compulsory adjudication, still remains true. The spirit of self-confidence and self-reliance engendered by healthy bargaining has given place to the habit of importunity and litigation. That is bad enough, but what is worse is the deplorable effect that this dependence on a third party has brought about in the outlook and attitude of the parties towards each other. In a system of straightforward bargaining, there is no doubt a keen struggle during the period of negotiation, but, except in the few cases that lead to a strike or lock-out, the parties conclude their bargaining in a spirit of "give and take"—in an atmosphere of goodwill and understanding. Neither party entertains any sense of humiliation or feels the urge for retaliation. Where one party has lost and the other won, the victor and the vanquished get back to their work in a sullen and resentful mood towards each other; and neither can forget nor forgive. The loser awaits the next opportunity to make good the loss, while the winner is carried away by a sense of victory which is not conducive to co-operation. Such an attitude of suppressed hostility in one party and of unconcealed satisfaction and triumph in the other may lead to transient truce but not lasting peace. Apart from this, the inevitable delays which such adjudication cases entail with a good deal of expenditure could hardly be afforded either by the workers or their organisations. Compulsory adjudication is a many-tiered system and one cannot be sure if one succeeds in the lower tribunal, for the other party might take the case to the higher courts. Instances are not wanting when the final decision in particular cases instead of marking the end of the disputes, provided the starting point of another. It is a vicious circle and should be broken through at some stage and at some point. And the best way to do this is to place our entire faith by the collective bargaining machinery.

While my friends agree that emphasis should be laid on mutual negotiations, they still would like to have compulsory adjudication in the picture. In my view, as long as compulsory adjudication exists as a machinery for the settlement of disputes, the voluntary system can hardly succeed. Unless compulsory adjudication is relegated to the background, the parties, during the periods of mutual negotiations or voluntary arbitration, I am afraid, will not place all their cards on the table but will reserve the "ace" one for the final game of compulsory adjudication. I am of the view that there is no need for the fear that there would be large-scale unrest in the industries, leading to chaos and anarchy by the total abolition of compulsory methods, for the State, as the supreme guardian of the vital services and law and order, can always have recourse to emergency legislation or ordinances. The Governor can appoint tribunals after giving opportunities to the parties to be heard and, if necessary, totally prohibit a strike or lock-out, if there is threat to the life and order of the community by such a dispute. I consider that it is compulsory adjudication that has seriously and adversely affected the healthy growth of trade union movement in the country. When the workers find that there is a machinery other than their own unions that would settle their disputes, they hardly have any faith in the necessity of it in their union. The removal of compulsory adjudication would, on the other hand, help in providing solidarity among the

(Continued on page 174)

MARKET GOSSIP

Mr. Kennedy Takes Over

AN important event of the week is the swearing-in of Mr. John F. Kennedy as the President of the United States. His inaugural address as the thirty-fifth President of the U.S. is an inspiring document that deserves to be read and re-read by all those who love the freedom of man and are anxious to preserve it. Businessmen in this country, whether they are industrialists, traders, brokers or jobbers, will, we think, find it profitable to spare a part of their precious time to read and digest the brief but really thought-provoking 1,350-word statement of President Kennedy. It is a masterpiece from the point of view of both language and ideas. President Kennedy is gentle but firm in expressing his determination to meet the challenge of international Communism. "Let every nation," he says, "know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe to assure the survival and success of liberty." Political commentators have described President Kennedy as a young man of great talents, capable of providing dynamic leadership. His inaugural address provides a sample of that quality. It is singularly free from boasts and extravagant promises. There is in it a ring of humility, politeness and devoutness, qualities which are rarely found in any of the statements issued by the leaders of Communist countries. The fervent desire for peace and the imperative necessity for disarmament have been unmistakably brought out by the President, without showing any signs of appeasement. For he solemnly affirms: "We dare not tempt them (adversaries of democracy) with weakness. For only when our arms are sufficient beyond doubt can we be certain that they will never be employed." This quotation is particularly relevant to this country, in view of the large-scale depredations of Communist China in our northern borders.

The inaugural address of President Kennedy is only a general statement of intentions and broad objectives. Even so, it contains sufficient evidence that he is fully aware of the need for narrowing the gap between the have and have-not nations, as witness the following extract therefrom:

"To those new States whom we welcome to the ranks of the free, we pledge our word that one form of colonial control shall not have passed away merely to be replaced by a far more iron tyranny. We shall not always expect to find them supporting our view. But we shall always hope to find them strongly supporting their own freedom—and to remember that, in the past, those who foolishly sought power by riding the back of the tiger ended up inside.

"To those peoples in the huts and villages of half the globe struggling to break the bonds of mass misery, we pledge our best efforts to help themselves, for whatever period is required—not because the Communists may be doing it, not because we seek their votes, but because it is right. If a free society cannot help the many who are poor, it cannot save the few who are rich."

Having quoted the foregoing, it is necessary to supplement it by one more quotation, as it reminds the have-not nations of their responsibility to ensure the liberty of man:

"And so, my fellow Americans: ask not what your country can do for you—ask what you can do for your country.

"My fellow citizens of the world: ask not what America will do for you, but what together we can do for the freedom of man."

Is Mr. Kennedy asking too much of the nations which legitimately expect to be assisted by the developed countries in their attempts to eradicate poverty, disease and ignorance? Surely not. It behoves the leaders of this country in particular—here we refer not only to politicians but also to businessmen and trade unionists—not to resort to policies and practices which have even the remotest chance of giving quarter to Communism and other reactionary forces. The specific reference to India here is not merely because we are a part of it but also because of the key position it occupies as the bastion of democracy in Asia and the responsibility that goes with it.

Cheaper Money in W. Germany

Money in West Germany has now been made not only cheaper but also a little easier. On Thursday the 19th inst., the Bundesbank Council announced a cut in German Bank rate to 3½ per cent from 4 per cent to which level it had been reduced from 5 per cent on 10th November 1960; the total cut effected within a month and a half thus comes to 1½ per cent. Simultaneously, the Council also relaxed quantitative restrictions on credit by lowering the minimum reserve ratio in respect of resident deposits by 5 per cent. of their position in October 1959. As a result of this measure, about DM 450 million out of the total "frozen" non-interest-bearing minimum reserves of banks (estimated at DM12,800 million) are expected to be released. Justifying its decisions, the Bundesbank said briefly:

"These measures have been taken exclusively with an eye on the international interest gap. It is their purpose to ward off the continuing influx of foreign exchange and to smooth the way for exports of money."

The ½ per cent cut in Bank rate has been followed by a reduction of a like amount in the rates for money market paper. The so-called "swap" premium—that is, the margin paid on forward transactions in dollars required for transfer of funds to the U.S.—has also been lowered from 1½ to 1 per cent. The revised rates in percentage for money market paper are 3⅜ for 30—59-day bills, 3½ for 60—90-day bills, 3⅝ for six-month bonds, 3⅝ for twelve-month bonds, 3¾ for eighteen-month bonds and 3⅞ for 24-month bonds.

With the reduction in West German Bank rate from 4 to 3½ per cent (the lowest level since October 1959), the gap that existed between interest rates in West Germany and other countries has narrowed down further. It may be interesting to note here that the new Bank rate in W. Germany is only ½ per cent above the corresponding rate in the U.S. Nevertheless, it is difficult categorically to say whether the move will make exports of money such an attractive proposition for the German banks as to lead to any sizable fall in Bundesbank's foreign exchange holdings. For West German economy continues to be quite buoyant and money is still dear, with banks earning as much as 8 to 11 per cent on overdrafts. Again, the bonus which German banks get for keeping money in the U.S. has been reduced, as already noted. The only possible effect that one can think of is that there will be some further flow of German banks' short-term funds to Britain. There are two factors which point to this possibility. One is that Bank rate in Britain is markedly higher than in West Germany, being 5 per cent. The second is the relaxation in hire purchase restrictions (imposed at the end of April 1960) announced by the Board of Trade on the 20th inst. The maximum repayment period on goods such as cars, radio and TV sets, furniture and domestic appliances has been increased from two years to three years, though the quantum of deposit to be made by buyers remains unaltered. But it is quite possible that, very soon, Britain, too, may reduce the Bank rate further, in order to give a stimulus to its economy, parts of which (for example, automobile industry) are experiencing a recession. The lower Bank rate in Germany may, however, act as a restraint on the influx of hot money.

Investment Habit Spreads in Oceania

The trend of attracting the small investor to the stock market is not confined to the affluent societies of the West only. It is becoming popular in rapidly developing countries of Oceania, namely, Australia and New Zealand, too. The high levels of income and employment, combined with rising price levels, are responsible for the increasing desire to invest savings in shares and stocks. The discovery of new methods of investments such as Unit Trusts and Investment Clubs have helped to direct the new urge to invest into fruitful channels. The January 1961 issue of the *Quarterly Survey* published by the Australia and New Zealand Bank, Melbourne, carries an interesting account of the spread of investment habit in Australia and New Zealand. According to the *Quarterly Survey*, in the rapidly developing countries, the expanding industrial and commercial demand for capital, which are reflected in the extension of stock exchange lists and the frequent calls by established companies for further capital through public issue of shares, has been an additional stimulus for investments. In the past decade, the growth of Unit Trusts in Australia has been remarkable. These institutions now hold £A100 million in stocks and shares. Investment Clubs, which are of comparatively recent origin, have also begun to multiply in Australia. An interesting development of the investment club idea is its application to superannuation and retirement funds.

The growth of investment habit has been encouraged by the stock exchange authorities themselves. Some stock exchanges in Australia, as in the U.S., have shown themselves willing to allow, and even sponsor, certain forms of restrained advertising by their members. The Melbourne Stock Exchange, for instance, built a public gallery in 1956 from which members of the public could witness the allegedly mysterious operations of the Exchange. Similarly, the Sydney Stock Exchange built not only a public gallery but also a television screen on which passers-by could have a glimpse of stock exchange activities. Further, in several Australian cities a regular series of public lectures on stock exchange and investment practices are conducted. These lectures, which were well attended in the past, are still said to be attracting audiences.

Further stimulus to the spread of investment in Australia has been provided by schemes of investment by instalments, sponsored by various exchanges and share brokers, whereby the individual may contribute small amounts periodically for investment in Stock Exchange securities. This is also an imitation of the system in the U.S. where it is very popular. Such schemes now exist in most cities of Australia and New Zealand. They do not involve hire purchase or term payment methods, as the investor obtains ownership only of the securities for which he actually pays by each instalment. However, time payment purchase of stock exchange securities, whereby, on payment of a 25 per cent deposit, the remainder of the cost of the shares may be borrowed at interest on the security of the shares themselves, is possible. The increasing number of five-shilling shares in the market has facilitated these developments and has also played a direct part in attracting the small investor to the stock exchange.

Giving an account of the advantages of broadening share-ownership, the *Quarterly Survey* observes:

"In addition to obvious advantages to the individual, the community as a whole can normally expect certain benefits from the wider spread of share ownership. One is the greater equality of income that would be expected to develop gradually as many citizens of moderate means supplement their incomes by investment. As an objective of political policy—long recognised as desirable in democratic countries—such economic equality is presumably of social and moral value. Combined with this trend towards greater equality, a widespread interest in the community's business activities might also be expected to encourage greater economic stability in the community, because it cements the community of interest between various sectors represented as owners, managers and employees. Economic stability probably tends to encourage political stability, and reduces the risks of sudden disruptive changes of political policy."

The emergence of the small investor and the spread of investment habit have made the supply of investment advice and information of considerable importance. For even the desirable objectives of genuine investment and stable markets will not materialise if investors are uninformed and liable to give way to mass pessimism. There are already suggestions, points out the *Quarterly Survey*, that the Australian market is more volatile than formerly, because some new investors of small means tend to panic at their first experience of a fall in market. No doubt a long period of rising prices has made investors used to continuous rise in prices, so that any reversal takes them unawares and makes them disillusioned of their investments in equities. This danger is greater if they have been attracted to investment by tempting offers of "guaranteed return" of specified percentages from securities which, by their very nature, are subject to variable returns and also variable sale value.

Safeguards against such dangers are sought to be provided in Australia through law and voluntary effort. Specific education is being provided on investment by stock exchanges and other organisations interested in share markets. Companies seeking capital are also playing their part, particularly by improved forms of financial statements. The law also plays its part. Frequent amendments to company legislation in Australia in recent years illustrate advances in this field. A major development to which investors, joint-stock companies and stock exchanges in Australia are said to be looking forward with interest is the uniform legislation on companies which all the Australian States plan to place on the Statute Book this year.

Agriculture Fails China

What effects the Chinese agricultural debacle will have on that country's export trade? All countries, which have to compete with China in the world markets, are currently asking this question. In view of the meagre data available, it is, of course, difficult to make, with any degree of accuracy, an assessment of the possible repercussions of the decline in agricultural production on the pattern of China's foreign trade. Nevertheless, it can be safely presumed that shortage of raw materials and the certain impossibility of achieving the Plan targets pertaining to textiles, hosiery, tobacco, oils and fats, sugar, etc., are sure to influence China's export trade and its purchases of agricultural products abroad. How and to what extent China's trade will be affected will, of course, depend upon the extent of the damage to the crop and Government policies.

Chinese official pronouncements about the agricultural situation have little factual content in them. But it has been admitted, in no uncertain terms, that China is threatened with one of the worst famines in its history. Emergency measures such as rationing and bulk purchases of foodgrains abroad have been initiated.

No precise idea of the extent of the crop damage or severity of shortage has been made available to the outside world by the Chinese Government. But piecing together the information that has trickled down, Western observers have tried to give some idea of the danger which threatens the country and its people.

Last December, *Peoples' Daily*, the Chinese Communist Party newspaper, reported that more than half of China's cultivated area had suffered from floods, drought and insect plagues. Later this was confirmed officially. It is estimated that the drop in production might have been about 50 per cent. The Peoples' Government had claimed that, in 1958, China had harvested a record crop of 250 million tons of grains. It was claimed that, despite unfavourable weather, production had reached a new peak of 270 million tons in 1959. Apart from the admission that the agricultural targets were not reached in 1960, actual figures of production have not been published. Estimates by Western experts had put grain production in 1958 at 200-220 million tons and that in 1959 at 190 million tons. Having regard to the extent of the damage suffered by the crop last year, the 1960 crop is estimated to have been not more than 110 million tons. The setback to other agricultural crops, too, must have been of the same order. The seriousness of this situation can be correctly gauged only if it is viewed in the context of the rapid rise in population (3 per cent per annum or 17 million a year). Further, agriculture accounts for 70 per cent of the exports with which China pays for the heavy imports of capital goods from Russia and other Communist countries.

Some foreign observers are even questioning the explanation of the Peking regime for the sharp drop in farm production. They say that the chief culprit is not weather but the system of communes which is said to have failed miserably. One cannot say how far this report is correct, but it is quite a plausible one, for the communes are basically antagonistic to human nature.

Whatever the reasons, the failure on the agricultural front is expected to have far-reaching repercussions on China's programmes of industrialisation. It will add momentum to the move towards strengthening agriculture as the firm foundation for "socialist industrialisation" which has already set in. Less emphasis is likely to be laid on heavy industries, at least until such time as agriculture is placed on strong footing.

SHARE MARKET CHEERFUL

PRICES RISE FURTHER

(From Our Own Correspondents)

BOMBAY, *25th January*

THIS week's review of the share market covers only four working sessions, since the market remained closed on Saturday (succeeding day of the end of the account period) and in view of Republic Day tomorrow. During this brief period, the market put on a cheerful appearance and there were further additions to values of several counters. The buying fervour was strengthened principally by reports of expansion programmes in industries, rising trend of cotton textile offtake, hopes regarding an early official announcement of an increase (of Rs. 25 per ton?) in retention prices for steel, and firm advices from Calcutta. The improvement in equity values would have been more marked but for the continued stringency in the money market (notwithstanding the total withdrawal of the deposit impounding scheme), the persistently increasing production cost and pre-budget uncertainties. Sugar shares, however, provided an exception to the general trend, thanks to the statement of the Maharashtra Chief Minister that sugarcane plantations attached to the joint-stock sugar mills would not be excluded from the land ceiling legislation. At lower levels today, there was scattered support to sugar shares. But the recovery was not perceptible, so that the closing rates were lower than those at the end of Thursday last week.

First class preference shares attracted some attention this week and tended to move up. Tata Powers strengthened by Rs. 5 to Rs. 1,100. Ravalgaons gathered Rs. 2.50 to Rs. 62.50. Indian Irons gained Re. 1.50 to Rs. 91, Kamanis 50 nP to Rs. 53, Indian Hume Pipes 20 nP to Rs. 56.50 and Premier Constructions (III) 8 nP to Rs. 5.32. Elphinstones were firm at Rs. 59, Gwalior Rayons (A's) at Rs. 104 and Hindustan Motors at Rs. 181.50. New Greats, however, encountered selling and declined by Rs. 5.50 to Rs. 99.50. National Rayons shed 50 nP to Rs. 69 and Madhusudans (B's) 88 nP to Rs. 5.12.

Tata Steels began the week firm at Rs. 144 and moved up thereafter to Rs. 147.50 yesterday and today before finishing at Rs. 146.75. The net gain over the week was Rs. 2.75. Indian Irons rose from Rs. 23.88 to Rs. 24.64, after being higher still at Rs. 24.72 today. Mukand Irons were well supported, the quotation advancing by Re. 1.12 to Rs. 23.24.

Textiles evoked good buying. Standards hardened by Rs. 17 to Rs. 1,022. Morarjees spurted by Rs. 13 to Rs. 328. Centurys recorded a rise of Rs. 13.50, today's closing rate being Rs. 477.50. Kohinoors jumped up by Rs. 8.50 to Rs. 277.50. Central Indias, Elphinstones and Shree Niwas strengthened by Rs. 6 each to Rs. 104, Rs. 63 and Rs. 240, respectively. Svadeshis put on Rs. 5 to Rs. 239.50. Khataus gained Rs. 3.75 to Rs. 442.50, Simplex Rs. 3 to Rs. 168, Tata Mills Re. 1.25 to Rs. 41.25 and Podars Re. 1 to Rs. 135. Bombay Dyeings improved by 50 nP to Rs. 60.60. Finlays were fully maintained at Rs. 330, as also Indores at Rs. 130 and India United at Re. 1.58.

Sugars, as already stated, encountered selling and drifted lower. Walchandnagars fell by Rs. 13.50 to Rs. 230. Belapurs receded from Rs. 313 to Rs. 290 on Friday the 20th inst. After recovering to Rs. 315 today, they finished easy at Rs. 306.50. The net loss over the week was Rs. 6.50. Phaltans dropped Rs. 3.50 to Rs. 153. Maharashtra Sugars eased by Re. 1.50 to Rs. 197. Bhopals were neglected at Rs. 29 and Changdeos at Rs. 29.50.

In the cement section, Associated Cements, which had risen from Rs. 150.75 to Rs. 151.50 early in the week, sagged to Rs. 150.50, following the Chairman's statement at the annual meeting that the official price policy for cement would affect the Company. Digvijays, however, rose by a rupee to Rs. 150. Jaipur Udyogs improved by 38 nP to Rs. 11.56. Ashokas Increased by 20 nP to Rs. 9. Sone Valleys gathered 8 nP to Rs. 484. Orissas were fully steady at Rs. 13.72.

Bank shares were generally firm. Barodas climbed up by Rs. 9.50 to Rs. 95.50. Bank of Indias advanced by Re. 1.50 to Rs. 115.50, 'A' shares improving by Rs. 2.50 to Rs. 120. Punjab Nationals gained 4 nP to Rs. 19.64. Unions were maintained at Rs. 6.32 and United Commercials at Rs. 85. But Central Banks declined by a rupee to Rs. 56, 'A' shares easing from Rs. 61 to Rs. 59.50.

Automobiles were irregular. Premiers advanced by Rs. 6.75 to Rs. 167.50, due to expansion programme and on reports that the production of vehicles in the second half of 1960 was higher at 6,375, as against 5,220 in the corresponding period of 1959, while Hindustan Motors softened by 4 nP to Rs. 19.56. In the shipping group Scindias fluctuated between Rs. 14.72 and Rs. 14.44 before winding up at Rs. 14.52. Great Easterns were unchanged at Rs. 15. India Steamships eased by 15 nP to Rs. 9.25.

Induced by renewed buying support, engineering shares continued to march forward. Alcocks rallied from Rs. 253 to Rs. 260. Coopers and New Standard Engineerings rose by Rs. 4 each, the former to Rs. 163.50 and the latter to Rs. 168. Telcos rose from Rs. 290 to Rs. 296 on Monday and, after declining to Rs. 287.50 today, finished higher at Rs. 290, same as last week. Larsen and Toubros gained 75 nP to Rs. 35, Texmacos 40 nP to Rs. 23.32 and Mahindras 20 nP to Rs. 19.60. Premier Constructions were done at Rs. 193 *ex-right*, as against Rs. 278 *cum-right* last week.

In the miscellaneous section, Premier Tyres forged ahead from Rs. 73 to Rs. 99 and Ceat Tyres from Rs. 220 to Rs. 237.50. National Rayons picked up Rs. 6.50 to Rs. 488.50; at one time on Monday, they were higher still at Rs. 496.50. Bombay Burmans hardened by Rs. 4 to Rs. 554.50, Laxmi Starenes increased by Rs. 3.25 to Rs. 164 and Indian Hume Pipes by Rs. 3.50 to Rs. 164. Wimcos recorded a rise of Rs. 2 to Rs. 259. Asian Cables gained a like amount to Rs. 109.50. Tata Oils gathered a rupee to Rs. 73.50. Gwalior Rayons and Baroda Rayons put on 50 nP each to Rs. 42 and Rs. 124, respectively. Tata Chemicals were better by 12 nP at Rs. 17.52. Killick Industries were fully maintained at Rs. 99.50. Dyes and chemicals, however, suffered a setback in their values. Amar Dyes fell by Rs. 10 to Rs. 367.50. India Dyestuffs dropped Rs. 8.75 to Rs. 425. Synthetics and Chemicals receded by Rs. 6.50 to Rs. 127. Poly Chems declined by Rs. 5 to Rs. 215. Alembics shed 50 nP to Rs. 222 and Chemo-Pharmas 25 nP to Rs. 26. Colour Chems were quiet at Rs. 307.50. But Adarsh Chemicals met with special support and rose by Rs. 6.80 to Rs. 61. Dhrangadhras gathered a rupee to Rs. 122. Tata Chemicals were better by 44 nP at Rs. 16.20.

* * * *

Madras Stock Exchange

MADRAS, *24th January*

Steady conditions prevailed on the Stock Exchange during the week under review. There was a distinct improvement in turnover, particularly in cleared scrips. The sentiment of operators was influenced favourably by firm advices from Bombay and Calcutta. Textiles put on a cheerful appearance on reports of better internal offtake. The assurance given by the Textile Commissioner that requisite supply of raw cotton would be made available to mills imparted some strength. Teas elicited good enquiries on encouraging news from auction centres. Coffees and rubbers moved up in sympathy. Banks continued to be well maintained. Sugars looked up on hopes of a notable increase in production this year, following larger cane output. Electricals ruled generally steady. Several miscellaneous industrials attracted investment support.

In the textile section, South Indias met with good enquiries and spurted by Rs. 75 to Rs. 153.50. Lakshmis rose by Rs. 3 to Rs. 151. Coimbatore Spinnings hardened by Rs. 2.50 to Rs. 44. Bangalore Woollens and Dhanalakshmis were marked up by a rupee each to Rs. 196 and Rs. 216, respectively. Madurais improved from Rs. 35.62 to Rs. 35.80 before closing at Rs. 35.75. Kotharis put on 15 nP to Rs. 12. Coimbatore Cottons were maintained at Rs. 158.50, Coimbatore Pioneers at Rs. 335, Metturs at Rs. 369 and Radhakrishnas at Rs. 29.12. Premiers, however, lost Rs. 2 to Rs. 225. Buckinghams declined by 50 nP to Rs. 196. Travancore Rayons shed 10 nP to Rs. 33.10.

Among teas, Parksides gained a rupee to Rs. 28. Periakaramalais picked up 13 nP to Rs. 3.50. Blue Mountains rose initially from Rs. 3.88 to Rs. 3.95, but drifted lower towards the close to Rs. 3.93. Peermades were steady at Rs. 22.50, as also Hallerburias at Rs. 13.85, Nonsuchs at Rs. 26.25. Twyfords were fancied at Rs. 11.90 and Devasbolas at Rs. 30.50.

In the coffee section, Consolidated Coffees put on 58 nP to Rs. 22.50. Mysores Coffees gathered 6 nP to Rs. 5.40. Ouchterlonys were maintained at the last week's level of Rs. 4.55, after touching Rs. 4.60 earlier. Coffee Lands changed hands at Rs. 18.30. Amalgamateds were firm at Rs. 13.25, Rajendras at Rs. 14 and Anaparais at Rs. 4.70.

Rubbers were also generally strong. Cochin Malabars rose by 32 nP to Rs. 7.30, following the announcement of an interim dividend of 9 per cent taxable for the year ended February 1961. Tropicals put on 25 nP to Rs. 18. Kailas hardened by 3 nP to Rs. 5.22. Thirumbadis were firm at Rs. 1.48. The Company has maintained the dividend for the year ended September 1960 at 7 per cent taxable. Many other rubber scrips were steady at last week's level: Rajagiris at Rs. 19.05, Travancores at Rs. 10.40 and Malankaras at Rs. 18. Midlands, however, eased by 15 nP to Rs. 11.15.

In the sugar section, East India Distilleries were higher by 50 nP to Rs. 40. Indias picked up 15 nP to Rs. 12.85. Travancores strengthened by 15 nP to Rs. 10.55. United Breweries rose from Rs. 132 *cum-div.-cum-right* by Thursday, before closing at Rs. 87 *ex-div.-ex-right*. Cauverys fell from Rs. 139 to Rs. 137, before closing at Rs. 138. Deccans lost 15 nP to Rs. 14.80.

Electrics were rather quiet. West Coasts were unchanged at Rs. 13.10, Vellores at Rs. 12.90 and Cochins at Rs. 10.20. Salem Erodes were quoted at Rs. 11.66, as also Ellores at Rs. 16.55, Tinnevely-Tuticorins at Rs. 11.80 and Kumbakonams at Rs. 9.90. But South Madras declined by 10 nP to Rs. 9.70.

Among miscellaneous industrials, chemicals evoked good interest. Metturs improved by 15 nP to Rs. 12.90. F.A.C.Ts and Mysore Chemicals were fully steady, the former at Rs. 9.30 and the latter at Rs. 26.10. Travancore Chemicals were fancied at Rs. 15.50 *cum-div.*, following the announcement of an interim dividend of 7.5 per cent. taxable for the half-year ended September 1960. The Company proposes to issue 20,000 equity shares of Rs. 10 each at par to shareholders of equity shares as on 1st March 1961 in the ratio of 2 for every 13 shares held. Among cements, Andhras rose by 22 nP to Rs. 10.12. Dalmias were unaltered at Rs. 11.20. Indias, however, shed 3 nP to Rs. 5.94. Among others, Ashok Leylands moved up by 45 nP to Rs. 8.65 and Aluminium Industries by 15 nP to Rs. 22.10.

A GROWING ENGINEERING ENTERPRISE

The New Standard Engineering Company, Ltd. of Bombay is a public limited company with a fully paid-up capital of Rs. 75 lakhs. Its present annual output of machine tools, industrial plants, foundry equipment, structural fabrication, signalling equipment, air compressors, etc., is valued at a little more than a crore of rupees. A growing engineering enterprise, ever diversifying its production, this Company is now in the first stage of its expansion plan aimed at manufacturing Rs. 2 crores worth of goods in 1961-62 and Rs. 5 to 6 crores worth in 1965-66. The first stage has just been inaugurated by the Chief Minister of Maharashtra at Goregaon (near Bombay City) where the complete expanded works of the Company will be located. The capital equipment for the entire works has been secured, through the State Trading Corporation, from Poland at a cost of Rs. 20 lakhs on rupee payment basis. Although the cost of this Polish equipment is stated to be 25 per cent less than that of comparable German equipment, it is admitted that its standard of performance is somewhat inferior to that of the latter. This, however, does not detract from the fact that the New Standard Engineering Company has been fortunate in getting a wide range of equipment on a relatively cheap package contract including the layout of the plant. Although the Company has had no other choice in the matter of equipment, it is worthy of note that it has been able to secure the technical collaboration of five foreign firms—two German, two British and one Italian—for the manufacture of a new range of equipment like blow room machinery, pneumatic power hammers, electric furnaces, etc. Mr. J. V. Patel, Managing Director, who founded the enterprise in 1939 with a bare capital of Rs. 15,000, has every reason to be proud of its present dimensions.

When the first stage, namely, the structural shop, gets into full production, nearly 8,000 tons of structurals, overhead cranes, industrial plant and machinery, pressure vessels for chemical industry, oil extraction plants, etc., will be manufactured in a whole year. This shop alone will employ 600 workers. The next stage will be the construction of a modern foundry, with an annual capacity of melting 50,000 tons of grey iron castings and 3,600 tons of steel castings. This foundry will have more than 1,000 workers and use the cupolas and electric furnaces manufactured by the Company's own workshops. It will manufacture castings for machine tools, diesel engines, automobiles, textile machinery, etc. In the subsequent stages, a heavy machine tool plant with a forging plant will be set up for the manufacture of pneumatic power hammers and drop forges in collaboration with Messrs. B. & S. Massey Ltd. of Manchester; textile machinery manufacture will be taken up in collaboration with two German firms; and low frequency electric furnaces will be manufactured in collaboration with an Italian firm. It is also proposed to establish an industrial estate, as part of the Goregaon works, to promote the growth of small-scale industrial units. A polytechnic, providing suitable training to batches of over 200 trainees at a time, will be an adjunct to the Works. And the proposed industrial housing colony at Goregaon will complete the Company's expansion plan. The last three schemes—industrial estate, polytechnic and housing colony—reflects the imaginative and enlightened approach of the Company's Board of Directors. Perhaps, the greatest merit of the entire project will be its ultimate employment potential of upto 5,000 persons—a factor which, incidentally, shows that a whole range of engineering industries, using the iron and steel produced by the steel plants, can provide far greater employment at far less capital outlay than the latter.

PERMANENT MAGNETS LTD.

For the first time in India, permanent magnets, which are widely used in the making of telephones, phonograph pick-ups, railway signalling equipment, etc., will be manufactured by a factory at Borivili in Bombay early next year. This pioneering project has been sponsored by Permanent Magnets Ltd., a new company, in collaboration with the well-known Italian firm of Messrs. Centro Magneti Permanenti. The annual production capacity of the factory will be 180 tons (or about 3.6 million finished permanent magnets) valued at approximately Rs. 70-72 lakhs. Production of this order involves imports of Rs. 13 lakhs worth of nickel, cobalt, aluminium, electrolytic copper and pure iron. When in full production, the factory will meet the entire domestic requirements which are at present imported. Provision is being made to expand the capacity in keeping with the rising trend of demand. The sponsors are also working on a scheme to manufacture in the same factory "very special" alloy steels.

The aggregate capital outlay on the project is put at Rs. 25 lakhs, inclusive of Rs. 15.7 lakhs representing cost of equipment. The foreign exchange component of equipment is Rs. 14.3 lakhs, of which Rs. 12.5 lakhs are proposed to be met from a loan under negotiation with the Industrial Credit and Investment Corporation. The outlay will be met by the issue of 25,000 equity shares of Rs. 100 each, the authorised capital of the Company being Rs. 100 lakhs. The signatories to the Memorandum of Association, Directors and their friends will take up between themselves Rs. 10.71 lakhs and the foreign collaborators have agreed to contribute Rs. 2.91 lakhs; the collaborators will also be allotted Rs. 1.10 lakh worth of equity shares without cash consideration as compensation for technical know-how. The balance of Rs. 10.29 lakhs (10,290 shares) will be offered to the public. The subscription list will open on Monday, 6th February next.

NEWS IN BRIEF

THE two-year Indo-Pakistan trade agreement, signed in March last, will be reviewed by representatives of the two countries at a meeting in New Delhi next month.

The moratorium granted by the Government of India last month to the Indo-Commercial Bank Ltd., Mayuram, Madras, which was due to expire on the 24th inst., has now been extended by two more months.

The final draft of the third Five-year Plan is expected to be presented to Parliament by the middle of April next. Meanwhile, tentative suggestions are said to have already been given to the Central and State Governments regarding the schemes to be undertaken in the first year of the third Plan.

The Pande Committee on the project for the manufacture of "economy car" in the public sector is expected to submit its report in April. According to the proposals now received by the Committee, it is considered feasible to produce a small car at an ex-factory price of about Rs. 5,000.

The Tariff Commission has undertaken an enquiry into the pricing policy of indigenous manufacturers of fire-fighting equipments and the questionnaires for producers and consumers prepared in this connection are ready for issue. Those who want copies of the questionnaire are required to specify whether they are producers or consumers.

Both production and internal consumption of jute goods established fresh peak levels in 1960, according to the Jute Balers' Association. Total output was 1.07 million tons (as against 1.05 million tons in 1959), comprising 422,200 tons of hessian (453,000 tons), 540,700 tons of sacking (503,700 tons) and 104,200 tons (89,800 tons) of other goods. Internal consumption rose to 266,200 tons—the highest touched so far.

Oil India Private Ltd. has awarded to the British concern, Messrs. Whessoe Ltd. of Darlington, a contract for the supply and erection in Upper Assam of the plant required to condition crude oil before it is pumped through the 720-mile-long pipeline from the Nahorkatiya oilfields to the new refineries at Nunmati and Barauni. The contract, which was open to international tender, is valued at about £900,000.

The Union Ministry of Transport has issued a Press note, describing the current position regarding orders for the Hindustan Shipyard. Of the required orders for four vessels during 1961, the shipyard, it is said, has already secured two. The other two orders are expected to be placed very shortly. It is also expected that eight more orders will be placed on the yard during 1961—six by the Government shipping corporations and two by private shipping companies. These orders would keep the yard busy up to the end of 1963.

Out of the aggregate aid amounting to $50 million made by Canada under the Colombo Plan in the current year, the share of India alone is $22.8 million. The aid to India includes supply of aluminium, copper and nickel ($11.7 million), wheat ($7 million) and aid of $3.5 million to the Kundah hydro-electric project in Madras and $600,000 for the atomic reactor at Trombay. Wheat has already been sent, while metals are expected to be sent shortly. India will supply counterpart funds of a value equivalent to the Canadian contributions, to be spent on the projects concerned.

The Great Eastern Shipping Company of Bombay has signed an agreement with a Japanese firm, the Hitachi Shipbuilding and Engineering Company, under which the latter will build two big cargo motor-ships of 12,700 deadweight tons each for the Bombay firm. The ships, with a speed of 16.5 knots, will cost £851,000 each and are scheduled to be delivered respectively in January and February 1962. This is the biggest single shipbuilding contract signed between the two countries so far. As regards payment, the Great Eastern will borrow 85 per cent of the necessary foreign exchange through a private arrangement with a mercantile bank in London, while the Indian Government is understood to have agreed to release the remaining 15 per cent from its own foreign exchange funds. Under the terms of the contract, 5 per cent of the price of the ship will be paid when the export licence is obtained by Hitachi (expected in about a fortnight), 5 per cent at the time of keel laying, another 5 per cent at the time of launching and the balance of 85 per cent on delivery.

The census of population in the snow-bound areas has been completed, and the count in the rest of the country starts on 10th February. Provisional figures available from the snow-bound areas of the Punjab, Himachal Pradesh, Jammu and Kashmir and Uttar Pradesh put the population at 880,660, more men (52 per cent) than women (48 per cent)—459,911, as against 420,749. The percentage of women in individual areas is 48 in Jammu and Kashmir and Uttar Pradesh, 49 in the Punjab and 50 in Himachal Pradesh. On an average, 10 men and one woman out of every 100 persons are literate. Literacy in the Uttar Pradesh area is the highest, being 24 per cent, followed by 14 per cent in Himachal Pradesh, 13 per cent in the Punjab and six per cent in Jammu and Kashmir. In Anantnag tehsil of Jammu and Kashmir, there is not a single literate person in the population of 503. Literacy among women is very limited, only two per cent, except in the case of Jammu and Kashmir, where it is 0.2 per cent. Statewise, the population in the snow-bound areas is: Himachal Pradesh 395,333, Jammu and Kashmir 300,622, the Punjab 178,694 and Uttar Pradesh 6,011.

The Government of India has reconstituted the Technical Advisory Committee in the Department of Company Law Administration. The reconstituted committee will function for a two-year period. Besides Mr. D. L. Mazumdar who will continue to be the Chairman of the Committee, the other members are Messrs. N. R. Mody, S. P. Chopra, G. Basu, J. D. K. Brown, C. C. Shah, C. C. Choksi, J. M. Lal and P. L. Tandon. Simultaneously, the Government has reconstituted the Research Programme Committee attached to the Company Law Administration Department. The Committee's function is to advise the Department on the most fruitful lines along which statistics and other data on companies, now available, can be processed and analysed to serve as a basis for formulation of policy. During the last two years, this Committee has sponsored several research publications on different aspects of company management and finance. Besides the Secretary of the Department of Company Law Administration who will act as the Chairman, the members are some leading chartered accountants, economists and the Director of Statistical Research, Reserve Bank of India.

The Textile Commissioner has clarified for general information that the cancellation of the notification dated 29th September 1960, fixing a flat pattern of production for weaving, hosiery and knitting yarns for all the worsted spinning mills in the country, has been synchronised with the issue of orders to individual mills fixing a pattern of production of different types of worsted yarn, namely, weaving, hosiery and knitting, for them. The overall pattern of production envisaged in the original notification, according to him, has been generally ensured by the issue of orders to individual mills. The issue of orders to individual units was warranted by considerations of technical equipment, past performance, etc. Apropos the report that the price of 2/22s yarn from 70s top had dropped during September-November on account of the issue of the notification referred to above, the Textile Commissioner says: "This yarn is used principally by the hosiery industry and the ex-factory prices of the different varieties of hosiery yarn have been statutorily fixed. The overall pattern of production for different types of yarn generally remaining the same, although the flat pattern of production has been withdrawn, the weaving industry is ensured of the same availability of yarn as was envisaged under the original notification."

The Uttar Pradesh Government has fixed minimum rates of wages for adult employees of tea plantations in the Almora and Garhwal districts of the State. The rates are one rupee per day or Rs. 26 per month for plantations in Berinag and Chowkorie areas in Almora district and 66 nP per day or Rs. 17.16 for plantations in other areas of Almora and Garhwal districts. The month shall be of 26 days. The rates include basic wages, dear food allowances and the cash value of concessions in respect of supplies of essential commodities. The wage fixation follows the U.P. Minimum Wages Advisory Board's recommendations made in March 1958. An enquiry preceding the consideration of minimum wages by the Board had revealed that 46 per cent of plantation workers of these districts, barring those of the Berinag and Chowkorie areas, got less than Rs. 10 a month and in some cases the wages were as low as one and a half anna a day. The market rate of wages for unskilled workers at the same time varied from 12 annas to Rs. 2 a day in these areas. At the time of the survey, nearly 400 labourers were employed by ten tea estates in Almora and Garhwal districts. The Government is also considering the recommendation of an enquiry committee for revision of minimum wages fixed earlier for various employments.

From Abroad

The Ceylon Government has decided to lift the ban on exports of fresh coconuts, which was imposed in 1957. Exports of fresh coconuts will, however, be limited to 30 million nuts a year.

Russia has renewed its agreement with the Diamond Corporation, the De Beers subsidiary of the U.K., under which the Corporation is the sole agent for the sale of Soviet diamonds in the non-communist world. The agreement will be valid for one year. Details of terms have not been made known.

Indonesia has called upon the big three foreign oil companies operating in the country, namely, Shell, Stanvac and Caltex, to contribute a part of their profit to the nation's first eight-year development plan. The Plan, envisaging a total expenditure of $5,500 million, was inaugurated on the 21st inst.

XXVIII INTERNATIONAL AGRICULTURAL FAIR

Novi Sad—Yugoslavia

from 29th April to 8th May 1961

PERSONAL

HER Majesty Queen Elizabeth II arrived at New Delhi on Saturday last week, accompanied by the Duke of Edinburgh, on a goodwill tour of India lasting for about four weeks.

Mr. Ranchhoddas Jethabhai and Mr. Hasham Premji have been elected President and Vice-President, respectively, of the Rice Merchants' Association, Bombay, for the current year.

Dr. Aurelio Cerletti, head of the Medical and Biological Department and a member of the Board of Management of Sandoz Ltd., Basle, Switzerland, has arrived in India on a business-cum-lecture tour. He will represent the parent Company at the official opening ceremony of the new Sandoz factory near Thana, Bombay, on 4th February 1961.

Messrs. T. V. Baddeley, Krishnaraj M. D. Thackersey, Neville N. Wadia, G. D. Somani, M.P., Ramnath A. Podar, Radhakrishna Ramnarain Ruia, M. L. Tapuriah, S. P. Jain, Arvind N. Mafatlal, Naval H. Tata, Babulal Puranmal Bubna, F. H. Kemple, C. H. Campbell, Chandrakant Mulraj Khatau, J. J. Ashar, A. N. Haksar, Pallonji Shapoorji Mistry, Pratapsinh Mathuradas and Gopikisan Piramal have been elected to serve on the Committee of the Millowners' Association, Bombay, for the year 1961.

West Germany has agreed to grant a credit of D.M. 150 million to Pakistan, following the visit of President Ayub Khan to that country last week. The amount will be used for financing the first two years of Pakistan's second Five-year Plan. The loan will be given from the development loan fund, which is being set up by the Government by drawing the capital from various sources.

Representatives of the silk industry from 24 countries, including India, will attend the Eighth Congress of the International Silk Association to be held at London from 12th to 16th June 1961. The subjects that will be discussed at the Congress include action to prevent misuse of the term "silk," methods of forecasting cohesion of raw silk during processing, estimation of supplies of raw silk needed to meet developments in world trade and publicity campaigns of various kinds.

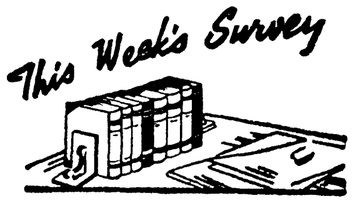
Sharply rising imports of jute products into West Germany forced a large jute processing plant to close down and dismiss its workers, according to a report from Bonn. Imports of jute products (of which a large part comes from India and Pakistan) rose to DM 36 million during the first nine months of 1960, which were higher by 57 per cent, as compared with the corresponding period of 1959 when they aggregated DM 23 million. Imports now account for 42 per cent of the West German output of jute products, as against 29 per cent in 1959.

The Government of Ceylon proposes to implement three schemes to develop tea industry. These cover (*a*) establishment of State-owned estates to compete with private plantations, (*b*) opening of over 2,000 peasant colonies to plant tea, each peasant getting two acres of land and a house, and (*c*) "collectivisation" of the process of manufacture. The Government is also considering the possibility of setting up a Rs. 15-lakh factory to manufacture crystal tea. It has already stopped exports of tea seeds to India and China.

Common Market countries increased their imports by 24.7 per cent and their exports by 21 per cent during the first three quarters of 1960. Imports rose to $21,740 million, as against $17,431 million in the same period in 1959. Exports rose from $17,918 million to $21,684 million. The six countries together had a foreign trade deficit of $56 million, as against a surplus of $487 million last year. The E.F.T.A. countries recorded a 17.6 per cent rise in imports and a 10.8 per cent rise in exports during the same period. Their foreign trade deficit increased from $2,162 million in 1959 to $3.378 million in 1960's first nine months.

The U.K. Government proposes to make a fresh representation to Ceylon against the latter's Bill which seeks to empower the Government to acquire petroleum installations through a Ceylon Corporation financed by Government capital and to fix the price of petroleum products. Both the British and U.S. Governments had already expressed their concern to the Ceylon Government about the implications of the measure. But the Ceylon Government does not seem to be reconsidering the proposed legislation. The oil companies affected by the Bill are Shell-B.P., Stanvac and Caltex, which have fixed assets, such as installations, pipelines and transport in Ceylon worth about £3.5 million. At present, Shell-B.P. handles about 80 per cent of the total oil trade of about one million tons a year, the balance being shared by the other two companies.

The first plant in Britain to make polypropylene, the lightest of all commercially available plastics, is now in full production at Wilton, England. It is the latest to be included in the huge complex of chemical plants on the 2,000-acre site of the Imperial Chemical Industries at Wilton, which, so far, has involved a capital expenditure of more than £120 million. Polypropylene is yet another of a variety of materials which are produced from the great oil cracking units which I.C.I. has set up on the site. The Company is now marketing its own brand under the name of *Propathene*. It will stand up to a great range of temperatures, is highly resistant to oils, fats and greases, is easy to mould and extrude and gives articles good strength and finish. It is used at present for household appliances, hospital-ware, textile accessories, toys, radio and television components and chemical plant valves and closures, though its range is capable of considerable extension.



AUTOMOBILE ANCILLARY INDUSTRIES

THE All-India Automobile and Ancillary Industries Association, like the Development Council for Automobiles, Automobile Ancillary Industries and Transport Vehicle Industries, is less than two years old. It has been in existence for the last 14 months and, at its first annual general meeting over the week-end at Bombay, it could report a membership of 62 units out of the 90 ancillary units licensed under the Industries (Development and Regulation) Act. These units seem to be medium-scale ones, for the more numerous small-scale units are outside the Industries Act and thus, probably, not members of the Association. The performance of the ancillary industry (in which there were only 45 units in 1958, accounting for a total output valued at Rs. 5 crores) has greatly improved in the last two years with the licensing of 45 new units. Many of these newer units have gone into operation, producing not only more of the previous ancillary items but also some new items like starter motors, dynamos, electrical accessories, wheels and rims, and dashboard instruments. All the older and newer units together (excluding the ones producing batteries, tyres, tubes and ball bearings) accounted for a total production of Rs. 7.5 crores in 1959 and Rs. 9.0 crores in 1960. If the output in the small-scale sector is also taken into account, it is estimated that, in the last year, the entire ancillary industry produced goods worth Rs. 13 to Rs. 14 crores.

It should not be difficult for the industry to achieve a production of about Rs. 20 crores per annum in the next two years, as suggested by Mr. Manubhai Shah, Union Minister of Industry, who spoke at the Association's annual meeting. The increase in the allocation of foreign exchange to the ancillary industry from Rs. 1.8 crores in 1959 to Rs. 2.8 crores in 1960 has no doubt been substantial. But, if it is kept at the same level in the current year also, it may not be sufficient for a higher level of production. As the ancillary industry helps save a lot of foreign exchange by reducing the need for imported automobile components and parts, its own requirement of foreign exchange in the early years of its development may have to be more liberally provided for—say, at a third of the value of its estimated annual production in the next two years. The Association's plea for fixation of production targets for the main ancillary items and allocation of foreign exchange on capital as well as current account on that basis seems to be reasonable for the added reason that the industry will have to meet the service and maintenance requirements of the ever-increasing fleet of motor vehicles, tractors, stationary diesel engines, road rollers, etc.

It is not surprising that the Minister for Industry did not say anything definitely on the Association's suggestion that there should be a demarcation between the items to be exclusively manufactured by the main vehicle producers and those by the ancillary industry. The automobile industry has thus far developed on a verticle basis, in that each manufacturer has been trying to produce the various components himself, including those which are normally expected to be bought from the ancillary industry. This factor, like the absence of mass production, is calculated to increase the costs of production of automobiles now manufactured by four producers in the private sector and one in the public sector. The Minister's suggestion that each automobile manufacturer should set up an ancillary division to promote ancillary production in the small-scale and medium-scale sectors is only a partial solution to the difficult problem of uneconomic automobile production. The Minister referred with pride to the increasing indigenous content of the motor vehicles under production by comparing the c.i.f. price of the imported components (both finished and semi-finished) with the ex-factory cost of the vehicle in India. The present indigenous content is 51 per cent. for Standard Ten, 64 per cent. for Fiat 1100, 76 per cent. for Ambassador, 74 per cent. for Jeeps, 80 per cent. for Dodge-3 ton 165" W.B. truck, 77 per cent. for Mercedes-Benz 165" W.B. truck, and 66 per cent. for Leyland Comet 163". It would be interesting to know from the Commerce and Industry Ministry what is the relative contribution of the ancillary industry to the respective indigenous content of Indian automobiles. Such a break-up of the indigenous content may well lend added weight to the case for greater complementarity between the automobile industry proper and the ancillary industry.

AID FROM WORLD BANK AND I.D.A.

India can safely count on the World Bank and its affiliate, the International Development Association (I.D.A.), for large-scale financial assistance for the third Five-year Plan. This is the impression one gets from the observations which Mr. Joseph Rucinski, leader of the Bank mission, made at a Press conference in New Delhi last week. Mr. Rucinski could not, of course, possibly be expected to indicate the exact quantum of assistance. But he did hold out the assurance that the Bank would play a constructive role in ensuring that a sufficient number of "bankable" projects are prepared to facilitate its own operations and co-ordination with the members of the consortium (otherwise known as the Aid-India Club). It may be noted, in passing, that the main objectives of the World Bank's mission to India have been to prepare a report for consideration by the consortium at its meeting scheduled to be held at Washington early in April and to examine the projects for which the World Bank and the I.D.A. can extend aid. Besides the five original members of consortium (U.S., U.K., W. Germany, Canada and Japan), Sweden and Switzerland, we are told, have also been approached to join it. Italy, France and the Netherlands, too, are expected to come in.

The World Bank's assistance for the third Plan, according to Mr. Rucinski, would cover projects in both the public and private sectors. The most important among the former are railways, power schemes in the D.V.C. and Bombay areas, and development of Calcutta Port and a subsidiary port near it, that is, Haldia. In the private sector, the Bank is expected to give assistance to programmes designed to raise coal and steel output. The Industrial Investment and Credit Corporation, which helps industries in the private sector, may also be assisted. As for the aid from the I.D.A., Mr. Rucinski gave the following information:

"The problem of providing road transport is becoming more and more important. One of the main questions is the development of highways. If this project is worked out, it will fit in quite well with the overall projects which we intend to finance through the I.D.A. The I.D.A. finances a certain percentage of costs of projects. It is a tremendous field in which the needs of the national highways, provincial highways and district highways have to be met. While we cannot go into the details at this stage, I can only say that it can form a basis for I.D.A. operations. One of the Bank experts is coming to India shortly to see the highways in the various States. The second possible field for I.D.A. operations will be the agricultural sector. We have received from the Government of India a number of suggestions and hope that the Bank experts on agriculture will investigate some of these. They cover things like land reclamation, small irrigation projects and drainage which directly affect agricultural production as well as rural electrification."

To the extent the I.D.A. renders assistance to India, the balance of payments position will ease in the coming years. The I.D.A. assistance will particularly help the implementation of the less remunerative but essential projects such as roads, small irrigation, land reclamation and rural electrification. The I.D.A. loans, as readers are aware, are more flexible than World Bank loans. The I.D.A., for instance, will finance to a certain extent the cost of the project (foreign exchange and local currency components), whereas the World Bank finances only the foreign exchange costs. Again, the I.D.A. loans are for much longer periods (at least 15 years) than the Bank. What is more, the loans will be free of interest, there being only an administrative charge (yet to be determined).

WORKS COMMITTEES

The one-day seminar on Works Committees held in Bombay City on the 22nd inst., under the auspices of the Central Board of Workers' Education, should go some way towards helping both management and labour to take more interest in the functioning of Works Committees, which are intended for the discussion and settlement of day-to-day grievances of workers and promotion of measures for securing amity and good relations between them and management. If these Committees have not proved a success in this country, it is because of the inadequate appreciation of their importance and the lack of the right attitude towards them.

It is now generally conceded that Works Committees have been a failure in this country. This is because both employers and workers have somehow come to look upon Works Committees with suspicion. They are, of course, not opposed to the objective of Works Committees, but there seems to be considerable misunderstanding of their exact scope and functions. Seminars like the present one are therefore of great educative value and can do much to clear up the misconceptions and transform Works Committees into effective instruments for promoting good labour-management relations.

Inaugurating the Seminar, Mr. R. L. Mehta, Joint Secretary, Union Ministry of Labour, observed that Works Committees were the first step towards associating workers with management. They would also help restore to workers the individuality, dignity, self-respect and interest in their work which the transition from small-scale business to the complicated industrial structure of today had destroyed. If these committees had been only partially successful in this country the fault lay, explained Mr. Mehta, with both employers and employees. He advised the employers not to look upon Works Committees as encroaching upon their domain as controllers of industry. His advice to trade union leaders was that they should not regard these Committees as rivals to their unions. The greatest danger to Works Committees, he warned, was likely to come not from without but from within, in the shape of disunity and dissension among the employees. It was this danger, more than anything else, which was likely to imperil the future prospects of Works Committees.

Apprehension that Works Committees will weaken unions has been one of the principal reasons for trade union leaders not showing much interest in their working. This fear is not warranted, because the Committees are not supposed to deal with subjects which fall within the purview of collective bargaining. The Tripartite Committee appointed by the Indian Labour Conference to go into the functions of Works Committees had drawn up an illustrative list of subjects which they should normally deal with. The list included (1) conditions of work such as lighting, ventilation, etc., (2) amenities such as drinking water, (3) safety and accident prevention, (4) adjustment of festival and national holidays, (5) administration of welfare and fine funds, (6) educational and recreational activities, and (7) implementation of decisions arrived at meetings of Works Committees. Such major questions as wages and dearness allowance, bonus and profit-sharing, rationalisation and fixation of work-loads, retrenchment and lay-off, incentive schemes, etc., which are settled by mutual negotiation and collective bargaining, were classed as questions outside the scope of Works Committees. If this classification is observed in practice, the apprehension in the minds of workers could surely be dispelled. Above all, Works Committees can succeed only if trade union rivalries are kept out of their sphere.

COCONUT INDUSTRY

Significant though has been the place of coconut in the Indian economy as one of the important sources of fat used both for edible and industrial purposes, adequate attention has not been given to the promotion of its cultivation and development. It was only a few years ago that the Central Government began to display some interest, but its efforts have yet to make an impression on the industry's progress. It is not, therefore, surprising that there has been a substantial shortfall in coconut production during the second Plan period. In his address at the annual meetings of the Indian Central Coconut and Arecanut Committees at Madras, Mr. V. Shankar, Special Secretary to the Ministry of Food and Agriculture, who is also the President of the two Committees, disclosed that the achievement in the production of coconut and arecanuts would be less than 50 per cent of the targets fixed for them in the current Plan. The output of coconut is expected to be of the order of 3,700 million nuts in 1960-61, as against the target of 8,700 million nuts. If we follow the Planning Commission's figures (as is given in the Draft Outline of the third Plan), actual production in 1958-59 was 4,455 million nuts and is expected to be higher at 4,500 million nuts in 1960-61, which compares with 3,800 million nuts at the end of the first Plan. It is possible that the figures given by Mr. Shankar for 1960-61 are the revised estimates and perhaps more reliable than those given in the Draft Outline. In any case, it is obvious that, whichever figure is taken into account, the conclusion that actual performances at the end of the second Plan will fall far short of the target is not vitiated. If the figure mentioned by Mr. Shankar is accepted, it will be seen that production in the last year of the second Plan is lower than that even at the last year of the first Plan.

The inevitable result of lower production in the face of growing demand has been a sharp increase in prices, which is detrimental to the interests of consumers of coconut oil. The latest available rate for coconut oil at Cochin, for instance, is Rs. 261 per quintal, as against about Rs. 216 a year ago. Imports are restricted but, in view of the shortfall in domestic production, the Government has found it necessary to permit large imports. In the nine months ended 30th September 1960, for instance, the value of these imports was as sizable as Rs. 9 crores, which compares with about Rs. 12 crores for the whole year 1959.

In the rest of the world, the position of coconut oil and copra is in striking contrast with that of India. Thanks to a comfortable supply position, following a handsome increase in production in Ceylon, the Philippines and Malaya, prices have sharply come down. Philippines copra, for instance, is quoted (as of mid-January 1961) at $171½ per ton, as against $265 a year before. In the London market, coconut oil (Straits 3½ per cent) is quoted at £93½ per ton, as compared with £134½ twelve months earlier. The higher prices in India in the face of lower prices elsewhere in the world place consumers in India at a great disadvantage. They constitute one of the reasons for the growing inability of Indian maufacturers to compete abroad.

The State Governments concerned have been indifferent to the need for developing coconut production for which several States are well suited. Of late, however, steps are being taken to make amends for past lapses. In Madras, for instance, waste lands in coastal Ramnathapuram district are being parcelled out to landless poor families and repatriates from Ceylon at the rate of five acres per family. Some financial assistance is also being given. Mr. M. Bhaktavatsalam, the State Minister for Agriculture, who inaugurated the aforesaid meetings, observed that this scheme was becoming popular, and therefore, the Government proposes to draw up a more comprehensive programme of extending coconut cultivation over 10,000 acres in the coastal areas of Ramanathapuram and Tirunelveli districts. He hoped that the Central Committee and the Union Government would give substantial assistance to this venture.

Some of the doctrinaire policies followed by the Governments have certainly contributed much to the setback in coconut production. The scare of ceiling on land holdings seems to have already made the owners of coconut plantations chary of investing in this enterprise. Mr. Shankar did well to draw particular attention to this question. He favoured the exemption of coconut plantations from the proposed legislation in States on ceiling on land holdings. There is hard common sense in Mr. Shankar's stand, as ceilings will only tend to retard productivity by forcing well-managed plantations to be broken into small ones. This "reform" will engender among the existing owners a sense of despair and negligence, which in turn will lead to a deterioration in the productivity of coconut trees. Apart from exempting coconut plantations from land ceiling legislation, the expansion of coconut cultivation will depend on the provision of adequate fertilisers, irrigation facilities and credit to needy cultivators. Measures for eradication of pests and plant diseases should also be given high priority.

PRODUCTION BEYOND LICENSED CAPACITY TO BE PERMITTED

The Government of India has decided to permit increase in production in manufacturing units beyond the licensed capacity, provided the additional production is achieved within their foreign exchange allotment. This step has been taken to encourage further industrial production in the country. When the increase in production beyond licensed capacity is achieved, this should be brought to the notice of the Ministry of Commerce and Industry and the Development Wing for purposes of regularisation and registration.

It may be recalled that the Government had taken steps to simplify the licensing procedure and facilitate a higher level of industrial production. In February 1960, it announced a list of 49 industries in respect of which licences for setting up fresh capacity would be issued freely. Subsequently, in June 1960, it was decided that, in cases where production could be increased without installing additional plant or machinery, except balancing equipment, the requisite licences should be granted without prior reference to the Licensing Committee.

PULL AND PUSH

(From Our Own Correspondent)

LONDON, 20th *January*

THE Government's announcement this week of an easing of the restrictions on Hire Purchase is, of course, another way of saying that credit is to become easier—not only on consumer goods but on articles such as motor cars, aircraft and ships, all of which have been affected by the previous restrictions. These articles can now be purchased on three years' terms. The general supposition is that this easing will be followed by a further reduction in Bank rate and the fact that the German Bank Rate has just been cut from 4 per cent to 3½ per cent, the lowest level since October 1959, adds strength to this view. Yet, although this easing on credit can help industrial investment, it is recognised that its main impact will be on the consumer goods industries—it is a way of trying to revive public demand for domestic and engineering equipment and private motor cars, all of which industries are working on short time. But this is the puzzling aspect of the whole matter, for the Chancellor has only recently warned against inflation and it is difficult to see how the easing of consumer credit reinforces this warning.

LONDON LETTER

We are now in the season of Bank speeches, and the Chairman of Lloyds Bank Ltd., Sir Oliver Franks, who was also a member of the Radcliffe Committee on Banking, has had some very pertinent things to say on this matter of regulating the economy by financial controls. Like all good bankers, he dislikes direct financial controls which operate indiscriminately on all credit operations. He obviously resents that £25 million of Lloyds Bank cash should have been sterilised by the Bank of England in special deposits, and he sees nothing improper in countering the increase in special deposits by a reduction in the Bank's investment portfolio by £81 million to cushion the impact of advances. Actually Lloyds Bank advances increased in 1960 by £69 million, as compared with an increase of £121 million in the previous year. But these increases would not have been possible if Lloyds had not got rid of some of its gilt-edged.

Sir Oliver accepts the general analysis that the economic boom has "gone off the boil" and that there is the danger of the country heading for another period of stagnation, such as that which followed the end of the boom in 1954. He agrees with the Government that "there was a clear danger, if these trends (of 1959) continued, that (the economy) would soon be overloaded again as it had been throughout the years of inflation and intermittent sterling crises up to 1957." He is therefore one with the Chancellor of the Exchequer on the need to contain the level of home demand, because, he says, "the buoyant home market diverts some resources away from exports and blunts the incentive to businessmen to look for markets abroad. Reducing the pressure of demand will not produce exports automatically, but it is a necessary condition of an export drive."

But the analysis completed, Sir Oliver appears to disagree with the Government on the correct course of action. He disagrees with financial restrictions which he says serve merely to restrain demand without, in the short run, producing those effects on the economy which are also part of the prescription. The effects to which he refers are to produce the lowering of costs and a more efficient deployment of economic resources. Accordingly, and in order to *encourage investment* while restricting consumer spending, he would like to see the mechanism of the Budget more freely used. Thus, instead of restricting credit, he would like to see taxes increased and, above all the purchase tax, because the latter restricts the sale of goods even to people who do not pay income-tax.

In the U.K., something like 60 per cent of the spendable income belongs to people with less than £750 per annum and only 5 per cent of the spendable income to those with more than £2,000 per annum. Hence, a restriction on spending must be directed towards the goods themselves rather than to particular income groups.

There is no doubt that Sir Oliver's prescription, namely, to devise means for restricting private spending and increasing investment spending, is right when the country's need is to both avoid inflation and expand investment. But how does this make sense with the Government's lifting of restrictions on Hire Purchase which, although admittedly they cover ships and aircraft as well as consumer durables, will increase consumer demand and not investment demand. Once again, the Government appears to be looking at the whole question of economic control in over-simplified terms. Short time is growing in industry, yet, at the same time, the danger flag of inflation remains unfurled and the Chancellor urges an export drive. It simply does not add up to a policy at all.—*All Rights Reserved.*

WORLD BANK BORROWS FROM WEST GERMANY

The World Bank has arranged to borrow the equivalent of about $196 million from the Deutsche Bundesbank (the Central Bank of Germany). The borrowing replaces World Bank note issues aggregating $148 million in U.S. dollars and D.M. 200 million (equal to about $48 million) now held by the Bundesbank, which are due to mature over the twelve months beginning 16th January 1961.

As evidence of its indebtedness to the Bundesbank, the World Bank will issue notes dated 16th January 1961 and bearing interest at 3½ per cent a year. The new notes will be divided as follows: $75 million of U.S. dollar notes and D.M. 100 million of Deutsche Mark notes maturing on 1st August 1964; and $73 million of U.S. dollar notes and D.M. 100 million of Deutsche Mark notes maturing on 1st February, 1965.

The average maturity of the new notes is three years and ten months. The issues to be retired have an average remaining maturity of seven months.

THE CENTRAL BANK OF INDIA, LIMITED

(ESTABLISHED DECEMBER, 1911)

Head Office: **MAHATMA GANDHI ROAD, FORT, BOMBAY-1**

Authorised Capital	Rs.	6,30,00,000
Subscribed Capital	Rs.	5,77,50,000
Paid-up Capital	Rs.	3,15,00,000
Reserve Fund and other Reserves	Rs.	4,07,64,000
Deposits as at 31-12-1959	Rs.	1,80,63,64,000

DIRECTORS:

SIR HOMI MODY, K.B.E. *(Chairman)*,
COOVERJI HORMUSJI BHABHA, Esq. *(Vice-Chairman)*,

ON THE ARENA

By The Archer

Committee to Step Up Savings

THE National Development Council has decided that, while the present financial limit of the third Plan should be Rs. 7,500 crores for the public sector, the physical programmes included in it should be for Rs. 8,000 crores. Of the gap of Rs. 500 crores between the financial and physical targets, Rs. 122 crores will be in the States sector and Rs. 378 crores in that of the Centre. It is intended that this gap should be covered to the extent that additional resources are raised, and that the balance, if any, should be carried over to the next Plan. It would seem that, arising out of this position, the Chief Ministers of States have attached great importance to the need for stepping up savings and have demanded that a committee should be set up to study all aspects of the matter. Accordingly a committee has been constituted with two Chief Ministers, a State Finance Minister, a State Planning Minister and the Union Deputy Minister of Finance. A representative each of the State Bank of India and of the Planning Commission are also in the Committee to which a representative of the L.I.C. may also be co-opted.

Judging by the composition of the Committee, I fear that its deliberations will be conducted on conventional lines and concluded with a report containing high-sounding exhortations to all sectors of society to contribute their utmost to savings, and *hukums* to all strata of public servants to engage themselves in concerted drives to achieve stated targets in their areas; there may be even a few shields and certificates of merit offered to the most successful among them. This ugly and uncouth word 'drive,' which crept into parlance during the war years when large sums of money were required to finance the Government's war efforts, has continued to stay to indicate the type of effort expected of revenue officials who are placed in charge of propaganda and mobilisation. It invokes an imagery of large groups of people in indolent quadrupedal motion, being driven from behind by shrieking and swearing propagandists, with prods in their hands, charging, poking and gesticulating, until the 'target' is reached. It corrupts both the giver and the collector, the former contributes only to seek relief from harassment and the latter gathers and asks for more only to save himself from embarrassment. The total achievement is, usually, not very spectacular. One has only to recollect what has been happening in past years as a result of 'drives' for State Loan subscriptions when large chunks of securities were offered in distress sales at a rupee or two below par, almost immediately after closure of the loans, to realise that the conventional method of employing intensive persuasion (almost bordering on compulsion) results only in fouling the climate. The case in regard to National Savings or Plan Certificates is also not far different when 'drives' are undertaken to achieve 'targets.' The practice of money incentives up to five per cent of face value being offered to prospective subscribers to get their applications routed through persons who had been given targets to complete is reported to have established itself in certain areas in the country. It will be bad for planned progress if this pre-investment *baksheesh* gets eventual recognition as legitimate rebate.

The point I wish to emphasise at this stage is that some new and positive steps should be taken to attract savings to Treasury Deposit Receipts, National Plan Certificates and the like, something which would veer investors to these types of securities as against the blind rush towards new equity issues far in excess of requirements for investment. On a former occasion I touched on this feature and mentioned that among middle-class investors there was persistent fear of inflation eroding into their savings and that, as a means of providing a hedge against such erosion, more and more people were taking chances on heavy subscriptions to new growth equities with hopes of securing allotments and quickly realising some capital appreciation. The threat to the real value of money in terms of its capacity to procure, at a future date, goods and services of the same quantum as at present, is so real in the minds of people nowadays that some new incentive should be offered to bring them round to invest in small savings schemes in a big way with confidence that there is reasonable protection against erosion through inflation. Such an incentive could be provided by instituting a system whereby the principal of each bond or certificate or security will be made repayable on date of redemption with an increase which will be based on the wholesale price index and cost of living index to which the principal was tied at the time of issue. If, however, instead of an increase in the index numbers there was reduction, and the real value of money had appreciated correspondingly, a clause could be inserted to the effect that there shall be a reduction in the amount repayable.

Index-tied loans have been in vogue in the Scandinavian countries and banks, and are reported to be still prevalent in Finland. When index-regulated bonds were introduced in that country in 1944-45, the index clause was worded as follows:

> "The amounts due for repayment, on each occasion, on the bonds mentioned in paragraph 1 above shall be increased by as many tenths of hundredths as the index figure for wholesale prices of domestic goods during the last month of March exceeds the figure of December 1944, counted in full tenths of one hundredth. If the index number mentioned above decreases and is lower in the last month of March counted in full tenths of one hundredth, than, in December 1944, the amounts due on the bonds shall be reduced correspondingly."

In 1953, Finland emitted a loan of five milliard marks and, since 1954, an index clause has been included in most of its Government loans. The indices used are the wholesale price index and cost of living index to which the principal amount of the loans and, in most cases, also the interest, have been tied. The interest rates have ranged from 5 to 8 per cent and the life of the loans from five to twenty years. Due to the fact that the rates of interest paid on these loans have been well above the rate allowed on savings and deposit accounts, the index-tied loans have been much in demand and the quotations have been fairly firm. According to special laws promulgated in this connection, the yields on and capital value of index-tied Government bonds are exempt from tax.

It would seem that an arrangement somewhat on the above lines will be fair enough under present conditions in this country. If Government is confident of arresting inflation and bringing down prices, it can get the benefit of the appreciation in the real value of money. If, however, it is unable to so conduct its affairs as to avoid inflation, it should, in accordance with its professed solicitude for the economic well-being of the people (the Welfare State concept), be prepared to protect them from the risk of the losses which they will incur when lending their private savings to the community. In any case, practically every person who has some money saved for the future is inflation conscious, and deeply critical of Government's policies which do not make adequate provision for the uncertainties of money value. The only way to bring out savings for purposeful utilisation in the country and to encourage further saving and less spending would be to provide indemnifications tied to indices. The Committee to step up savings has been constituted "to study all aspects of the matter." The most important aspect is what I have stated above. Will it study this aspect? Or will it get into the usual rut of suggesting new posters, booster advertisements, weeks for savings drives, and colourful *tamashas*, pageants and parades?

* * * *

Another Raspberry

Dr. Thomas Balogh, Fellow of Balliol College, Oxford, who worked for sometime as U.N. Consultant on inflation in Latin America, has just completed a two-month study of planning in India. He views India's economic situation as extremely precarious because of the disparity between the tremendous growth of population and the tardy rate of increase of national savings. He greatly appreciates the quality of economic thinking in this country which, in his view, is higher than in any other country he has seen, but (and the *but* is a hefty one) he declares that the idea of producing a low-cost "people's car" in India is absolute madness. What a raspberry from another distinguished foreign economist!

Significantly enough, these views are reported in a leading newspaper in a column adjacent to the one wherein the news item relating to the defence of the small car project in the National Development Council by Messrs. Morarji Desai and Lal Bahadur Shastri is also mentioned. The critics of the small car project are stated to include Messrs. Sriman Narayan, T. N. Singh, both members of the Planning Commission, and Mr. C. Subrahmanyam, Madras Finance Minister. (May God bless them!) They made the point in the context of the need for mobilising savings instead of encouraging people to fritter away their incomes on luxury items. Mr. Morarji Desai is reported to have stated that a small car produced for Rs. 6,500 could also be exported. (What a hope!) Mr. Lal Bahadur Shastri was of the opinion that the availability of a cheap car would have a tremendous psychological effect on the middle-classes, that the transport problem was increasing and that it was necessary for people to travel fast—by car and scooter. This is a new one from Mr. Shastri and I did not know that he concerned himself about psychological effects in taking economic policy decisions. Or was he misquoted? Could he have referred to the "pathological" effect? In the ultimate analysis, what the Government attempts to satisfy is the bourgeois vanity of the upper middle classes, and it is a very debatable point whether investment should be undertaken to increase the number of public transport conveyances or the number of privately-owned cars. Surely, the former will be more in keeping with the concept of the socialist pattern of life.

The Jha Committee has stated that the total demand for passenger cars in India is less than what some of the more economic producers of cars in overseas countries turn out in a single factory in one month. It is implied in this statement that the manufacture of passenger cars by an additional unit (while there are already three in number) is economically very unsound. The Jha Committee has also stated that the demand for cheap cars can be assessed only at 10,000 per annum. It is very doubtful if that demand will be a continuing one. It might fizzle out after absorption of the initial output as it will depend on several imponderable factors such as, to mention only two, the capacity of the mythical middle-class to save during inflation, and the acceptability of the type of car that will be produced. Does the Commerce and Industry Minister honestly believe that the decision to pursue so doubtful and controversial a project as the manufacture of baby cars is socially justifiable when investment undertaken to increase public transport buses will serve larger numbers at much cheaper rates?

The agitation for a cheap car or baby car can be no more disturbing to Government than the agitation for cheap motor fuel or cheap electric motors, fans, refrigerators, electric pulverisers and similar durable consumer goods. Indeed, a greater social purpose will be served if capacity was established for the manufacture of millions of cheap refrigerators which will help in conserving food, vegetables and milk for the middle-classes. It will be more in keeping with our philosophy of social justice, if we endeavoured to provide every family in the income group of Rs. 300 to Rs. 500 with cheap appurtenances like refrigerators, pulverisers and the like. If Messrs. Morarji Desai and Lal Bahadur Shastri can defend investment on manufacture of chocolates (and quite rightly too), they may, with confidence, vote for investment on labour-saving electrical gadgets, but not a people's car —a car of the people, manufactured for the people, by the people! What a slogan!

* * * *

The Benefits of Foreign Travel

The Finance Minister of Madras has indeed benefited by foreign tour. He has suggested that we should work longer hours and commence our working days earlier, say, at 9 a.m. instead of at 11 a.m., and all because they do even better in Germany. It is a pity that he has not suggested that we should cut down on our holidays also. The British people work from 42 to 46 hours per week and enjoy less than a quarter of the statutory holidays that we take off. And Britishers have established an affluent society which can withstand shocks which will perhaps pulverise us. It is, indeed, a pity that our so-called national pride has only resulted in producing a generation consisting mostly of introverts. It will be good for the country if more and more of our Ministers go abroad and see for themselves that the prosperities of the affluent societies are not the result of 'miracles,' but due to hard work, a deep realisation of social justice and a deeper recognition of the true values of life.

Medium Section Mill—Bloom reheating furnace and Mill run-in table

Construction and operation proceed side by side at Durgapur Steelworks ISCON's Medium Section and Merchant Mills—the final unit of the Rolling Mills Plant—are now well on the way towards completion. Three Mills were commissioned earlier last year and are in operation. The two new Mills will make a considerable addition to Durgapur's productive range.

BRITISH BANKING TRENDS

EFFICACY OF CREDIT RESTRAINTS QUESTIONED

LOWER LIQUIDITY RATIO ADVOCATED

THE results of most of the prominent British banks for 1960 distinctly reveal the impact of restrictive credit policies adopted by the Government of the United Kingdom. In order to meet the growing threats of inflationary pressures, the monetary authorities in the U.K. had raised the Bank rate in January 1960 from 4 to 5 per cent. In the month of April, controls on the terms of hire purchase were reinstituted and it was announced that, in two months' time, the clearing banks would be required to lodge special deposits with the Bank of England. Accordingly, on 28th April 1960, the clearing banks in England were asked to keep one per cent of their gross deposits with the Bank of England. Similarly, the banks in Scotland were told to keep ½ per cent of their gross deposits with the Bank of England. A lower rate was chosen for Scotland on the ground that it was a depressed area, needing more funds for development. The U.K. Budget for 1960-61 was also neutral in character, leaving the balance between Government expenditure and revenues almost unchanged. The Budget was thus designed not to have any expansionist effect on the economy. In June, the Bank rate was further raised to 6 per cent and a second call for special deposits was made, increasing the rate to 2 per cent. It was also stated that public investment in 1961-62 would be held down to the same level as in 1960-61. All these measures, intended to bring about internal and external stability, were bound to have far-reaching repercussions on the structure and pattern of the assets and liabilities of the clearing banks.

Advances Expand at Slower Rate

The results of Lloyds Bank Ltd. for the year 1960, for instance, show that there was a marked diminution in the rate of growth of its advances—the increase during 1960 being only £69 million, as against £121 million in the preceding year. In the case of Martins Bank Ltd., too, the advances recorded a rise of only £23.28 million in 1960 over the level reached in 1959, the corresponding increase between 1958 and 1959 being £37.19 million. Another noticeable consequence of the restrictive credit policies was that, during 1960, the deposits of British banks did not increase commensurately with the expansion under advances. In the case of the District Bank Ltd., for example, in the early months of 1960 bank deposits were running at a considerably higher level than in the corresponding months of 1959, but the normal seasonal expansion in the autumn months did not take place, a circumstance which may be attributed in some measure to the success of the Government's efforts to fund more of its debt. In addition, the pull of interest rates had drawn funds from the banking system into Treasury Bills, Tax Reserve Certificates, deposits with local authorities and hire purchase finance houses. Other British banks also show similar trends as regards their deposit accounts. The current, deposit and other accounts of Martins Bank Ltd., increased by £12.92 million in 1960, whereas between 1958 and 1959, the increase was of £23.24 million. The advances of Barclays Bank Ltd. moved up sharply from £569 million in 1959 to £714 million in 1960, while the deposits of the customers increased only from £1,550 million to £1,616 million in the same period.

Investments

The investment portfolio of most banks showed a uniform impact of the contractionist monetary measures. To meet the immobilisation of the lending resources caused by the calls for Special Deposits, most of the banks were compelled to liquidate their investments in gilt-edged securities. Lloyds Bank Ltd., for instance, reduced its gilt-edged investment portfolio by £81 million during the year 1960. The investments of the District Bank Ltd. showed a further depletion of £23 million in 1960. Barclays Bank Ltd. had also to sell a large amount of its holdings of Government securities with the result that its investments stood at 20 per cent of its deposits at the time of closing the accounts, a proportion which is a historical low.

The net earnings of most of the banks, however, showed a distinct improvement. The profit of Lloyds Bank for 1960 at £4.60 million is £1.18 million higher than that for the preceding year. The net earnings of Martins Bank Ltd. at £1.42 million for 1960 compare favourably with £1.16 million for 1959. The net profit of the District Bank Ltd. for 1960 at £1.08 million shows an improvement of £0.22 million over that for the preceding year. In the case of most banks, the increase in the absolute volume of advances had enabled the banks to augment their net earnings. Another contributory factor, of course, was the policy of dear money. Under this policy the banks, clearly, had to pay more interest on deposits but they earned much more on loans, advances and bills. On the whole, higher interest rates did not mean lower profits for British banks. To some extent, the increase in earnings was offset by a further rise in operating expenses. Some banks, notably Lloyds and District Banks, had to incur larger expenses on account of the upward revision of clerical and managerial salaries. Pensions were also augmented. Some banks had to incur expenditure for tightening their security measures against robberies. Special insurance policies for the staff exposed to risks of possible attacks from dacoits were written at bank's expense; various mechanical devices have been installed for giving advance warning to the staff. On the credit side, a noteworthy development having a favourable effect on the working of British banks was the passing of the Payment of Wages Act 1960, under which it is permissible by mutual agreement between employers and employees for wages, as well as salaries, to be paid by a credit to a banking account. The banks have welcomed this piece of legislation as being potentially capable of extending the banking habit among sections of the community where hitherto it has not been found to be very widespread. The banks expect that the new legislation would avoid unnecessary handling of cash and bring many new customers.

Bankers' Reactions

In their annual statements to their shareholders, the Chairmen of British banks have devoted considerable space to problems confronting the economy and the steps taken to keep inflation under restraint. Commenting on the restrictions placed on bank credit, the British bank chairmen are unanimously of the view that the Treasury took prompt measures to curtail the inflationary pressures. Sir Harold Bibby, Chairman of Martins Bank Ltd., for instance, states that "few will quarrel or want to quarrel with a Chancellor of the Exchequer on the wisdom of a touch on the brakes when the speed of the country's expansion is becoming rather higher than the country's resources can sustain." The Chairman of Barclays Bank, Mr. Anthony Tuke, is of the view that the timing of the curbs on bank credit was most opportune. He observes: "I find myself in complete agreement with those whose duty it is to make these difficult decisions, both in the nature of their action and in its time." Mr. Tuke adduces two grounds for justifying the credit squeeze. First, "the unemployment line on the chart was getting dangerously close to the vacancies line in April" and, secondly, "the advances ratio of the clearing banks as a whole had reached 45 per cent" and this situation called for some action on the part of the authorities to influence the volume of money. Sir Oliver Franks, Chairman of Lloyds Bank Ltd., has also applauded action taken by the authorities as timely and necessary. At that time the balance of payments position also indicated some deterioration, despite the persistence of extraordinarily favourable terms of trade and this deterioration was symptomatic of the excessive home demand. This demand pulled in manufactures and 'semis' such as steel-sheet from abroad in over-large quantities and, moreover, led to the consumption at home of an unduly large proportion of the indigenous production of manufactured goods. This clearly pointed to the need for appropriate measures.

Public Sector Criticised

While the need for some restraints to contain or compress the flow of spending and the timeliness of Government's action have been conceded by the bankers, they have struck discordant notes on the actual steps taken by the Treasury. Some bank Chairmen think that the Government has not applied the brakes to all the parts of the economy. Sir Harold Bibby, for example, avers that when there was need for credit to be restrained, restrictions should have been applied to all lending institutions. "It seems particularly unjust," Sir Harold categorically declares, "that controls should be applied to the activities of the banks who are utilising only about 45 per cent of their deposits in making advances to their consumers, and not to other institutions who normally spend or lend practically the whole of the amounts deposited with them by the public." He also complains that, when bank credit has been subjected to all types of restrictions, stifling private, commercial and industrial developments, "Government departments have gone on their merry way, the borrowing and spending wheels running free and fast, unimpeded by similar restrictions as a result of which the taxation remains far too high a level." But the most extensive and elaborate criticism of the restrictive credit policies, such as high interest rates, control on hire purchases, Special Deposits and their impact on the long-term growth of the British economy comes from Sir Oliver Franks, Chairman of Lloyds Bank Ltd. Sir Oliver does not question the need to contain the level of home demand. "There is ample evidence," he states, "that, if the economy becomes overloaded, the pressure of demand spills over into rising imports; and in such conditions we are less able to afford additional imports, because the buoyant home market diverts some resources away from exports." Nevertheless Sir Oliver maintains that credit restrictions are not the appropriate instruments for restraining the excess demand. According to him, the results intended and desired by the authorities in introducing the curbs on bank credit have not been accomplished. On the other hand, the measures have produced certain results which were neither intended nor desired. Even in 1955 one undesired effect of the measures of credit restrictions introduced in that year was to bring to a sudden and complete stop the expansion in industrial production which had been going on for three years previously. Similarly in 1960 one undesired effect of the credit restrictions, according to Lloyds Bank Chairman, has been to halt the growth of industrial production which was in progress since the autumn of 1958.

In support of his contention, Sir Oliver has cited the comparative figures of industrial production and exports of the Common Market countries. He observes:—"This check to

NEW PUBLICATIONS

Technique of Sales Management. By Ajit Ranjan Gupta. Published by the Indian Market Research Bureau, 1B, Old Post Office Street, Calcutta-1. Pages: 133. Price: Rs. 15

FROM the point of view of consumption, the ultimate aim of all productive endeavours, selling is as important as production. An effective sales organisation, which facilitates selling, has the same relation to a country's economy as the arteries and veins have to the human body. In this country, however, the art of selling has not developed to the extent it should have, thanks to the comparative neglect of the importance of planned selling. This book, which explains the principles and techniques of sales management, is a welcome addition to the scanty literature on the subject. The author draws extensively from his personal experience as a sales executive in Britain to give a practical angle to the problems dealt with. The book consists of ten chapters dealing with the different aspects of selling, including management of sales personnel, advertising and merchandising. A chapter on technical terms explains the common jargons used in selling in non-technical language. The text of the book is supplemented by a number of charts, graphs and illustrations. Appropriate practical examples have also been cited.

This book has a special appeal to Indian readers, because it is set against an Indian background. The publication will be of undoubted value not only to students of business management and cost accounting but also to salesmen and sales managers, who are already in the firing line, as they will surely find much ammunition in this to strengthen themselves.

Unemployment, Full Employment and India. By Dr. Nabagopal Das. Published by Asia Publishing House, Bombay. Pages : 94. Price: Rs. 8

Now in its third edition, this book, which was first published in 1946, has changed beyond recognition. In view of the changes that have occurred in facts and situations since the book was first written, the author has given new facts and made new interpretations. Further, not only have the chapters been rearranged and new ones added but there has been considerable shift in emphasis as well.

While the main thesis of the first edition of the book was that a programme of full employment was feasible and necessary for India, the central theme of the present one is that only a positive and realistic employment policy can solve the unemployment problem in the country. Even after ten years of planning such a policy, the author maintains, has yet to emerge. He points out that shortcomings of the employment policy in the first and second Plans from the point of view of employment creation and argues that the failure of planners to treat unemployment as the primary problem explains the negligible impression the Plans have made on unemployment. A positive and realistic employment policy of the author's conception is one which takes stock of the available manpower resources in the country and draws up a programme of outlay which would help to absorb the largest possible number of persons. In other words, employment creation should be the main objective and not the incidental result of the Plan. All economic and social policies of the Government should be geared to the attainment of full employment. It follows, as a natural corollary of this, that restrictive policies, which inhibit enterprise, should be abandoned. In terms of practical policy, this means, among other things, giving more opportunities for private enterprise, both indigenous and foreign, to function and expand and less emphasis on the nebulous and rather meaningless concept of social justice, at least until such time as the unemployment problem is brought down to manageable levels.

The author cannot claim any originality for this approach. He is not the first to plead for an employment-oriented Plan. A fruitful line, which he ought to have pursued, is examination of the practical ramifications and the reallocation of priorities and the readjustment of outlays they call for in the third Plan.

The wisdom of according primacy to the employment objective, if it conflicts, as it does sometimes, with the objective of higher production is also not beyond doubt. In fact, the two are not always complementary, in the short-run at least. Investments that create the maximum employment are not necessarily those that also maximises output. If, in such cases, the employment objective is given precedence over that of production, it will result in a smaller net addition to total wealth which will offset any advantages likely to result from increased employment. Employment is desirable not for its own sake but for the additional wealth it creates. The author recognises this and points out the dangers of restricting expansion in established industries to give scope for small-scale, labour-intensive industries. But he has not shown how this could be reconciled with the policy of maximising employment.

The problem, therefore, boils down to this: there is no shortcut to full employment. Increased employment opportunities arising from the planned expansion of the economy along the most productive lines alone will absorb all the unemployed. An investment programme which merely aims at creating employment without regard to its production potential can have only social, not economic, justification. It is not denied that such a programme may be desirable from the economic point of view too. But the objectives need to be clearly defined. In this context, the extended programme of public works advocated by the author to absorb the 12 million unemployed who will be unaffected by the Plan, has much to commend itself. But it is doubtful whether the suggestion to cut down the "desirable" schemes to make available Rs. 300 crores per annum to finance the programme will be acceptable to the planners and, even if it were, there is the problem of establishing and manning the necessary administrative machinery to see it through.

The chief merits of the book are its lively style, jargon-free language and simplicity of exposition which should appeal to a wide readership.

Thompson Consumer Index of Markets, First Edition, 1960. Published by Edward J. Fielden for J. Walter Thompson Company Private Limited, Bombay-1. Pages: 68.

Compiled by the Market Research Department of Messrs. Walter Thompsons, one of the world's leading advertising agencies, the book seeks to assess the market potential of a large number of Indian cities, with a view to assisting "manufacturers and distributors in establishing realistic sales and advertising targets for their products." Marketing factors of 504 cities and towns, with a population of over 20,000, have been covered by the present study. In order to assess the relative consumption potential, the authors have taken into consideration twelve factors; these are, population, population other than farm and factory labour, increase in population (1941-51), number of literates, domestic radio sets, private cars, banks, doctors, chemists and druggists, cinema theatres and their total seats and domestic consumption of electricity. On the basis of a study of such selected economic indicators, indices have been worked out for all the major cities and towns, with the figure for Greater Calcutta taken as base (100).

Some interesting results have been obtained from the study. For instance, although Ajmer and Coimbatore have almost equal population (190,000), the latter has a market potential, which is 133 per cent. greater than the former. Again, Poona, with a population of 590,000, has a potential 17 per cent greater than Kanpur, which has 20 per cent larger population.

A pioneering work in the field of marketing research in India, the book is bound to be useful to the business community. As it is not possible from available statistics to make a quantitative assessment of the sales potential of each town and city, the Market Research Department has done the next best thing, namely, to establish sales potentials in relative terms, that is, in the form of index numbers. This index method may have its limitations. As Mr. Y. B. Chavan, Chief Minister of Maharashtra, has stated in his foreword to the publication, some persons may not agree with the choice of the economic indicators that are used while others might feel that the method of calculation of index could be different. Still it has its value as a guide to businessmen in the matter of estimating sales potential in different parts of the country in broad terms.

CONCERN OVER LARGE YARN IMPORTS

BOARD OF TRADE CONSIDERING PLEA FOR HIGHER DUTIES

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 17*th January*

ACTION is now being taken to deal with some of the imports now reaching this country in quantities and at prices which appear to represent dumping on the part of Lancashire's competitors. For some time, there has been serious concern about the marked increase in arrivals of low-priced doubled yarns, described in some quarters as of "alarming proportions." As a result, the Board of Trade is considering an application that the import duties on such products should be raised.

Outlining the effect of these inroads, the Cotton Board's latest statistical review said that the general level of production in the industry was being held back only by a shortage of labour and added: "An exception is the doubling section, where short-time is being worked. Here, the heavy imports of doubled yarn are a major depressing factor. In November, doubled yarn output by weight was running about 9 per cent below the May level."

The Yarn Doublers' Association contends that the re-equipment programme in this branch is being dangerously jeopardised by the threat of low-priced imports. "No company," it declares, "can be expected to invest capital in new machinery other than in conditions where a reasonable degree of stability can be assured for the future."

Imports of doubled yarn during the whole of 1959 reached 11,200,000 lbs., valued at more than £2,000,000. In the first eleven months of last year, arrivals had reached 16,400,000 lbs. and had cost £3,250,000. In 1958, however, the total of these imports was only 5,561,000 lbs., worth £1,115,000.

In addition, a similar claim for higher duties to be imposed on supplies of corduroy cloth from Spain has been made to the Board of Trade and the manufacturers involved are hoping for a favourable reception. The same Cotton Board survey quoted above alleges "an element of subsidy or dumping in the case of imports from Spain," indicating that the Government is contemplating the placing of countervailing duties on such arrivals.

More Paid Than Received

A timely reminder that that oft-quoted £30 million "gift" from the Government has quite definite "strings" attached to it comes from Mr. Roger Lee, Chairman of the Lancashire Cotton Corporation. It should not be forgotten that the firms which elected to stay in the industry contracted an obligation to finance part of the compensation for those which decided to take their final bow. Originally, the Directors of the Corporation had estimated that their particular compensation and levies would have roughly balanced. Now the Chairman reports that their entitlement under the redundancy scheme has been received, amounting to £679,194. Levy payments, however, over the next five to seven years will cost approximately £1,000,000.

Although the Corporation's reserves are strong enough to enable the Directors to earmark this sum to a special fund set aside for the purpose, the fact should be emphasised that provision has to be made in the accounts of all companies concerned for items of this kind under the terms of the scheme. Equally important is the recognition of the sometimes conveniently overlooked 75 per cent payment of all re-equipment projects, which must accompany the 25 per cent grant from the Government.

Expenditure on Re-equipment

This leads Mr. Lee to repeat what many millowners are saying about modernisation plans and their implementation. He observes: "The only factor which causes concern is whether future trading conditions will justify the expenditure or whether textile imports will be permitted on an ever-increasing scale from countries with very low wage standards or from others who, having disposed of their normal production in a stable home market, are willing to sell for export at lower prices the product of a second or third shift."

Yet the Corporation cannot be accused of backwardness in its re-equipment policy since the war. Expenditure over the past fourteen years has amounted to £8,340,000 on the modernisation of plant and machinery and capital commitments at the end of the last financial year aggregated £1,180,000.

Further expenditure on a large scale is very desirable, adds Mr. Lee, as a result of recent improvements in textile machinery and the continuing shortages of labour. "Modern machinery can provide the same output with substantially fewer operatives," he points out, "although the high capital cost can only be justified if the new machinery can be operated continuously and for a maximum number of hours." Conditions in the industry last year were "much more heartening," says Mr. Lee. The Corporation's output of yarn during the financial year to the end of October was 20 per cent up on the previous twelve months, despite the scrapping of about one-third of the spindles controlled by the group. There are still vacancies for some 700 workers in the combine's mills.

Still in the Doldrums

Within a week, the full returns showing the extent of overseas trade recorded by British firms in 1960 should be available. After the steady decline in the volume of shipments of cotton goods which has persisted for so many years, it is rare to find even one destination in which more business has been done as compared with the previous twelve months.

Mainly through the use of imported material for processing in Lancashire, the offtake for Commonwealth West African markets actually broadened by over 27 per cent. over the first ten months of 1960 as compared with the previous year, according to the annual sectional report issued by the Manchester Chamber of Commerce. Each of the separate outlets took more cloth, comprising Nigeria, Ghana, Sierra Leone and Gambia. The volume involved was 57,490,000 square yards, as against 45,015,000 square yards.

An interesting aspect of this particular trade was the swing away from man-made fibres towards cotton which was encountered in each of these territories, continuing a process evident over the past two years. Political considerations in Africa, however, are so speculative at the moment that it would be unwise to anticipate any further advances for exporters, but last year's returns offer slight consolation in the face of so many difficulties.

The continued reduction in exports of cotton cloth to what were at one time very large importing countries is reflected in the section dealing with Latin America and the West Indies. "The references in this report to particular markets show with monotonous regularity that continued policies of industrial development, coupled with balance of payments problems, result in available funds being largely translated by one means or another into imports of machinery, transport equipment and materials for use by industry," the report says. "The opportunities for consumer goods have been poor and are likely to remain so."

This disappointing trend is also apparent in reports from the large Commonwealth markets. In the first six months of last year, for example, Japan exported more cotton cloth to Australia than British shippers could expect to send during the whole of 1960. Alarm is expressed at the further easing of import licensing controls in Australia, opening the door still wider to foreign imports.

Although cloth shipments to South Africa from this country were slightly higher last year, the report comments that no respite had been found in the extension of tariff protection to the domestic textile industry in the Union. "The creeping hand of protection continues to make it extremely difficult for United Kingdom manufacturers to plan ahead in the certainty that what they produce will not be frustrated by higher duties," it adds.

A welcome increase in the volume of cloth sent to New Zealand is, however, reported, principally due to relaxation in the import licensing restrictions. Higher receipts from sales of primary products to overseas markets enabled the New Zealand Government to apply more generous quotas. Even here, however, the threat from low-cost producing countries is still very real. Japan's share of the New Zealand market in rayon and rayon mixture fabrics has increased from 20 per cent in 1958 to about 33 per cent last year. In cotton cloth, the rise has been from 17 per cent to 23½ per cent.

Cotton Trade With India

A gravely disappointing year for exports of cotton textiles to India, Pakistan, Ceylon and Burma is recorded in the annual report of the India Section of the Manchester Chamber of Commerce. Only 870,000 square yards of cloth were shipped to India, less than a third of the small volume achieved in the first 10 months of 1959.

Intensification of import controls and withdrawal of the small quota which Lancashire has received during the past few years, led to India dropping out of the shrinking list of markets to which Lancashire traders continued to export. Although the quota was restored at the end of last year, it was at a much reduced level. Rapidly diminishing yarn exports to India were also mentioned in the report and, in the first 10 months of last year, amounted to only 200,000 lbs., as against 500,000 lbs. in the same period of 1959. Pakistan's need to continue rigid exchange control measures, makes it unlikely that British exporters will be able to get back into the piecegoods market in any volume, the report adds. Exports to Ceylon fell by 18 per cent last year as compared with 1959, but a useful amount of export business was recorded with Burma in fine cotton yarns.—*All Rights Reserved.*

INTERNATIONAL COTTON FEDERATION

The International Federation of Cotton and Allied Textile Industries has been granted liaison status with the Food and Agriculture Organisation of the United Nations. Under this arrangement, the Federation will in future co-operate closely with the F.A.O. on matters of interest to the textile industries. The Federation also enjoys consultative status (Register) with the Economic and Social Council of the United Nations. It represents the cotton and allied textile industries in all Western European countries, the United States of America, the United Arab Republic (Egyptian Region) and Japan. Its members control almost two-thirds of the world's total cotton, spindles and looms.

BONUS AND THE LIVING WAGE

ECONOMIC IMPLICATIONS OF SUPREME COURT'S DECISION

WHAT is a living wage? Can the workers claim bonus (which is generally regarded as payment made towards bridging, partially at least, the gap between the actual and the living wage) if they are being given a living wage? Is a company justified in refusing to entertain bonus claim on the ground that it is paying a living wage? Who are the claimants of the profits of an enterprise? These and other related questions, having an intimate bearing on industrial adjudication in India, came up for decision before the Supreme Court in the cross appeals filed by the Standard-Vacuum Refining Company of India Ltd. and its workmen against the decision of the Industrial Tribunal, Bombay.

The facts of the case are as follows:

Six hundred and forty-eight employees of the Company, of whom 124 belonged to the clerical category, claimed that they were entitled to receive nine months' total earnings as bonus for 1956. The Company denied the claim and contended that, though it had paid three months' basic wage as bonus for the year to the workmen, in law, they were not entitled to any bonus, because they were being paid a living wage and that therefore one of the essential conditions for the payment of bonus was absent in the case. The Industrial Tribunal, which first heard the case, held that it was not necessary to find out what the living wage was in Bombay, but, having broadly considered the contentions of the parties, held that "the wages are fair but there is still, in a large number of cases, a gap between the actual wage and the living wage and that, therefore, five months' basic wage as bonus for the relevant year was just." This award was challenged by both the workmen and the Company, the former on the ground that the Tribunal erred in not awarding a higher bonus than five months' basic wage, and the latter on the ground that, since it was paying a living wage, there was no case for awarding a bonus at all. The appeals were heard by Their Lordships Mr. Justice P. B. Gajendragadkar, Mr. Justice K. N. Wanchoo and Mr. Justice K. C. Das Gupta.

Ethical and Social Considerations

The Supreme Court dismissed both the appeals. Dealing with the contention of the Company, Mr. Justice Gajendragadkar, who delivered the judgment, observed that, if the company was serious about its contention that the living wage standard was reached in its wage structure, it should have produced more satisfactory evidence which would have enabled the Tribunal to define concretely what the concept of living wage meant in the present context. As regards the rationale of bonus, His Lordship observed that, in dealing with the bonus claims, industrial adjudication had so far proceeded on the assumption that, in the making of profits, labour made its contribution and that, since it was not receiving a living wage, it was entitled to claim that the gap between the actual and living wage should be filled by the payment of a bonus for each relevant year. The Company had no doubt relied upon this to claim that, as it was paying a living wage, it was not obligated to pay bonus at all. Dealing with this contention, His Lordship observed that, the problem of wage structure, with which industrial adjudication was concerned in a modern democratic State, involved, in the ultimate analysis, to some extent, ethical and social considerations. The advent of the doctrine of Welfare State was based on notions of progressive social philosophy which had rendered the old doctrine of *laissez faire* obsolete. In the nineteenth century, the relations between employers and employees were usually governed by the economic principles of supply and demand and the employers thought that they could hire labour on their terms and dismiss them at will subject to the terms of the contract. The theory of hire and fire, as well as the theory of supply and demand, which were allowed free scope under the doctrine of *laissez faire*, no longer held the field. In constructing the wage structure, His Lordship said, industrial adjudication did take into account, to some extent, considerations of right and wrong, propriety and impropriety, fairness and unfairness. As the social conscience of the general community became more alive and active, as the welfare policy of the State took a more dynamic form, as the national economy developed from stage to stage and as, under the growing strength of the trade union movement, collective bargaining entered the field, the wage structure ceased to be purely an arithmetical problem. Considerations of the financial position of the employer and the state of the national economy had their say and the requirements of a worker living in a civilised and progressive society also came to be recognised. It was in that sense that the social philosophy of the age supplied the background for the decision on industrial disputes as to wage structure.

Three Categories of Wages

His Lordship referred to three categories of wages which had figured prominently in labour legislation and industrial adjudication. They are: (1) the basic minimum wage which is the bare subsistence wage, (2) the fair wage, and (3) the living wage. These three concepts, His Lordship pointed out, could not be described in definite words, because their content was elastic and was bound to vary from time to time and from country to country.

Dilating upon the concept of the living wage, on which centred the Company's contention, the Judge observed that it was not a static concept. Its constituents were expanding and were bound to expand and widen with the development and growth of the national economy. It would be inexpedient and unwise to make an effort to concretise the concept in monetary terms with any degree of definiteness or precision, even if a fuller inquiry was held. Indeed, in an underdeveloped country, it would be idle to describe any wage structure as containing the ideal of the living wage, though, in some cases, wages paid by certain employers might appear to be higher than those paid by others.

The Company's claim that its wage structure had reached the standard of the living wage, which had been specified as one of the objectives of State policy by Article 43 of the Constitution and which was the ideal that the working classes hopefully looked forward to achieve, was, according to His Lordship, "bold and tall." The Company had, on the basis of the Textile Labour Committee's report, held Rs. 55 to be the monetary value of the living wage and contended that it was paying a living wage to its employees. It would be unreasonable and unsafe, His Lordship observed, to treat the conclusions of this Committee as to the monetary value of the living wage in 1940 as sound and make it the basic of wage calculations today. The method of multiplying the figure deduced by the Committee by 3.5 was materially defective. The proper approach to adopt, according to His Lordship, would be to evaluate each constituent of the concept of the living wage in the light of the prices prevailing today and thus reach a proper conclusion. This apart, the main objection against adopting the figure reached by the Committee was that, even in 1940, the said figure could not be properly regarded as representing anything like a living wage standard.

Illusory Basis

His Lordship pointed out that, though the expression "living wage standard" had been used by the Committee in its report, it was satisfied that Rs. 50 to Rs. 55 could not be regarded as anything higher than the need-based minimum wage at that time. If that were the true position, His Lordship added, the whole basis adopted by the Company in making the calculation turned out to be illusory. All that the calculations showed was that the Company was paying wages somewhat higher than the need-based minimum.

It was obvious, he said, that, between the need-based minimum wage and the living wage, there was a very long distance. Even taking the clerical category of the Company, where the average worked out to be the highest at Rs. 370.11 per month, His Lordship felt no

Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled out because of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

SUGAR SUPPLY POSITION COMFORTABLE

TRADE URGES REMOVAL OF DISTRIBUTION CONTROLS

ONCE again, the Federation of All-India Sugar Merchants Associations has urged the authorities to abolish controls on distribution and movement of sugar. In a statement issued to the Press, the *Ad Hoc* Committee of the Federation points out that such a move will be in the interests of everyone—consumers, cane growers, industry and trade. It no doubt agrees that, in the larger interest of sugar economy which is now production-oriented, the price factor is an important consideration; nevertheless, it does not find any reason why the present controls on distribution and movement should be continued. The Committee says: "In this changed context (of abundant supplies), the machinery evolved in the shape of controls to meet conditions of scarcity, which arose in 1959, is not only not necessary but is positively harmful to the sugar economy. It is now being increasingly realised on all hands that the question of decontrol of sugar is overdue and that suitable measures should be adopted to meet the requirements of the changed situation."

The above plea would appear to be quite justified. The supply position of sugar is very comfortable, thanks to the all-time peak level output of 2.7 million tons expected to be touched in the current season (November 1960-October 1961). This quantity and the previous season's carry-forward stocks of 595,000 tons together give a total available supply of 3,295,000 tons, as against the estimated consumption requirements of about 2.4 million tons. Excluding 400,000 tons needed for normal stock purposes, there will still be left a surplus of nearly 500,000 tons. Even if a large quantity is exported abroad—a highly doubtful assumption, indeed—the surplus of sugar will be rather heavy. Viewed thus, there is no exaggeration in the recent remark of Mr. D. D. Puri, President of the Indian Sugar Mills Association, that the industry is "in the throes of a crisis of sugar surplus."

Not Desirable

The carrying of huge stocks of sugar by mills is not desirable, in that it entails a large financial commitment, not to speak of the problem of storage. It is true that, in order to take care of possible shortfalls in production in future, it is necessary to build up a buffer-stock equal to at least three months' production, but this must be done by the Government, as is the case in the U.S. The value of even 400,000 tons representing normal stock requirements means immobilisation of capital to the extent of some Rs. 40 crores. Such immobilisation will mean severe hardship to mills, especially to the marginal units. Many mills will have to resort to large borrowings at high rates of interest. A number of them, therefore, may even be forced to curtail production operations drastically. Surely, it would not be conducive to the healthy growth of sugar industry, or in the interests of consumers, if a year of surplus production were to be followed by one of deficit, higher prices and controls.

One may well ask: How can decontrol solve the problem? It is, of course, difficult to give a categorical answer to the poser. But this much can be said: If the restrictions on the distribution and movement of sugar are removed, the normal forces of supply and demand will operate in sugar markets, facilitating the building up of pipeline stocks with traders. Such stocks, according to the Federation of All-India Sugar Merchants Associations, will relieve the industry of about 200,000 tons of sugar. The restoration of normal distribution channels may also result in higher consumption of sugar. It is common knowledge that, under the present distribution arrangements, sugar is not reaching the remote interior areas regularly and in adequate quantities. Again, freedom from controls for consumers will compel manufacturers to improve their quality and the traders to take good care of the stocks. At present, one does not get good quality sugar even in certain parts of Greater Bombay. It is not uncommon to come across poor quality sugar being served even in some of the expensive restaurants in Bombay City. One has also come across complaints that certain State Governments are taking advantage of controls over distribution to promote the sale of sugar manufactured by the co-operatives, the quality of which is not as good as that produced by joint-stock companies, by manipulating the issue of release orders for industrial consumers. A certain amount of competition will thus be a good thing. It will provide the much needed incentive to co-operators to get out of their slovenly habits and to improve their efficiency. Some traders are of the view that decontrol over marketing of sugar will by itself result in an increase of at least 200,000 tons in consumption, even if it is not accompanied by a fall in prices.

Scarcity Psychology Must Be Avoided

Some may argue that, once the controls on distribution of sugar are lifted, a section of millowners and traders will try to corner stocks, thereby creating an artificial shortage and rise in prices. But there is no substance in the argument. For the Government can always release from out of the buffer-stock sugar whenever prices start spiralling. As past experience has amply shown, controls over sugar, as, indeed, over any other commodity can never provide an escape from the normal law of supply and demand. The problem of ensuring adequate supplies of sugar to the consumer at a reasonable price must always be tackled from the production angle. If production is sufficient to meet demand and is carried out in an efficient manner, prices will doubtless find their normal level. All that is wanted is avoidance of the psychology of scarcity.

At present, the statistical position of sugar is not conducive to sustaining a psychology of scarcity. On the contrary, some sugar manufacturers, especially in the North, are apprehensive of decontrol, for they do not wish to see a fall in prices, as production costs are high and the price of sugarcane is pegged at a level which actually requires an increase in the ex-mill selling price, as is evident from the reference, again, of the question of fair price for the factory to the Tariff Commission. This is, of course, a difficult problem as it is the cumulative result of irrational policies that have been followed all along. A solution for it can be found only if the authorities have the courage to undo the past mistakes. The price for sugarcane must be related to the sugar contained in the cane and not to the wood in it. Further, production of sugarcane on large-scale plantation style should be encouraged.

Raising Consumption

The sugar industry can expand and develop on a sound footing only if consumption keeps pace with production. Unless internal consumption increases, the sugar industry, as Mr. Puri warned, would be affected, since there are numerous difficulties to developing a profitable export trade. Referring to the hazards of violent fluctuations from shortage to surplus, Mr. Puri said: "It is necessary to determine the stable consumption of sugar in the country.... There is plenty of scope for the growth of sugar industry in a planned manner. The need for securing an increase in the yield of sugar per acre should never be lost sight of."

Judged against this background, the move of certain State Governments to relax restrictions on sugar is to be welcomed. The Uttar Pradesh and Bombay Governments, for instance, have allowed relatively free disposal of unlifted sugar out of last quotas. The Government of Madras has relaxed, albeit temporarily, all quantitative restrictions on the issue of sugar by wholesalers and retailers throughout the State. The wholesale stockists are now permitted to sell sugar in any quantities and to any person, not merely to permit holders of permits and approved retailers. There are also no restrictions on the quantity of sugar that can be sold in retail by any person whether approved retailer or anyone else. It is, however, stipulated that sales of sugar by both wholesalers and retailers should be at prices not exceeding the wholesale and retail prices fixed by the Government. The Kerala Government is also reported to have decided partially to decontrol the distribution of sugar as an experimental measure. The consumer will be able to buy any quantity, though the prevailing "fair" price will remain in force. The decision, it is said, has been taken on account of accumulation of stocks of sugar with mills and wholesale dealers. The Gujarat Government, too, has lifted all restrictions on sugar at the retail end. It is to be hoped that controls on distribution and movement of sugar will soon be abolished throughout the country.

The Tariff Commission has taken up for investigation the question of revising the existing price-linking formula for sharing the price of sugar between sugar factories and cane growers. A special questionnaire prepared in this connection is ready for issue. Those who are interested may obtain copies of the questionnaire from the Secretary, Tariff Commission, Central Government Offices Building, 101, Queen's Road, Bombay-1.

JUTE GROWERS LOSE SEVERAL CRORES

NATION DEPRIVED OF FOREIGN EXCHANGE

By A Special Correspondent

FOR more than a year, the Government and the Forward Markets Commission have been striving to keep prices of raw jute and jute goods from rising. Though all such efforts have proved futile and prices at present are at the highest levels touched since the Korean war boom, they succeeded in delaying the inevitable price increases for several months, till the reality of the raw jute shortage became so obvious that prices could no longer be kept down.

Looking back, it is pertinent to ask what has been accomplished by these vain attempts to hold prices down to artificially low levels, which bore no relation to conditions of supply and demand and whether the outcome has not been harmful, rather than beneficial to the Indian economy. Three conclusions emerge from such a study:

First, the laudable object of stabilising prices of Indian jute goods so as to prevent foreign consumers from switching to substitutes, has not been achieved because prices have risen anyway.

Second, the Indian jute growers have been deprived of the opportunity of earning several crores of rupees.

Third, the nation has suffered a huge loss of valuable foreign exchange that could have been earned, had the free market mechanism been allowed to work. This is particularly deplorable at a time when foreign exchange reserves have fallen to the point where they are barely adequate to serve as currency reserve.

There is a tendency in official as well as other quarters to hold speculators responsible for the wholly sorry mess. Perhaps it is human nature to find someone else to bear the blame for one's mistakes. But the real responsibility lies with the authorities, whose ill-conceived and impractical policies have caused much loss to the nation.

As long ago as December 1959, reports began to circulate of an impending shortage of raw jute and prices tended to rise. Assam bottoms which stood at Rs. 26.25 per maund on 30th November rose to Rs. 32.50 on 24th December 1959. On 10th December came the first of the series of measures aimed at restraining the rise in prices by introducing imposition of special deposit margins, payable on all outstanding purchases of raw jute and jute goods, if prices rose above Rs. 29 per maund for Assam bottoms, Rs. 105.50 per 100 bags of B. twills and Rs. 41 per 100 yards of 40"×10 oz. hessian. It is instructive to compare these prices, which were then considered too high, with those on 10th October 1960, when hedge trading on the East India Jute and Hessian Exchange Ltd. was suspended and with those now ruling:

	Prices on 10-12-1959 when special deposit margins were imposed by E.I.J.H.E.	Prices on 10-10-1960 when hedge trading on E.I.J.H.E. was suspended	Current prices 20-1-1961
	Rs. nP.	Rs. nP.	Rs. nP.
Assam bottoms (Per maund)	29.00	43.50	57.50
40" × 10 oz. hessian (Per 100 yards)	41.00	51.00	62.25
B. twills (Per 100 bags)	105.50	140.00	192.00

These figures highlight the futility of the efforts to keep prices from rising. Such efforts were foredoomed to failure as obviously there was a physical shortage of raw jute.

The efforts failed but they kept raw jute prices for the most part at unrealistically low levels till October 1960. It is instructive to examine what would have happened, had the authorities refrained from interfering with the operation of market forces and allowed prices to rise much earlier.

In the first place, the gain to the cultivators would have been tremendous. It is not possible to make any realistic estimate of the magnitude of this benefit, of which they have been deprived, but it would certainly run into several crores of rupees. The lapse of several months before the price (as represented by the Calcutta quotation for Assam bottoms) crossed Rs. 50 per maund, has meant that a large amount of raw jute went out of the hands of growers by then and the benefit passed on to the foreign buyers. The effect that would have been produced on the rural economy of the jute-growing States, particularly West Bengal, by such a huge increase in cultivators' income can hardly be exaggerated.

It would not be a convincing reply to this charge to say that raw jute prices had to be prevented from rising, because, if they did, jute goods prices would rise and exports of jute goods would be adversely affected. The reply to this is that there was a shortage of raw jute, not only in India, but also in Pakistan. So jute goods would be expensive not only in India but in Pakistan and all the other countries, which depended on Pakistan raw jute to keep their mills working.

In fact, prices of Pakistan raw jute are considerably higher than those of India despite the fact that Pakistan produces a larger crop. So great is the price difference that finished Indian jute goods are actually cheaper than the equivalent weight of Pakistan raw jute. The average price of Indian jute goods today is Rs. 250 per ton lower than the Pakistan raw jute price while actually it should be about Rs. 750 per ton higher. Evidently, Pakistan is not perturbed at the rise in prices and has allowed its cultivators to enjoy its full benefits. It is surely an anomaly that India alone should strive to keep its prices artificially below world levels, thereby depriving itself of sorely needed foreign exchange, while Pakistan is obtaining the full benefit of present high prices. The following table shows a comparison of Pakistan raw jute and Indian jute goods prices:

Date	F.o.b. price of raw jute in Pakistan (Per ton)	F.o.b. price of B. twills in India (Per ton) Ready	F.o.b. price of Hessian Cloth 40" × 10 oz. in India (Per ton) Ready
	Rs. nP.	Rs. nP.	Rs. nP.
1st October, 1960 ..	1,574.00	1,392.75	1,751.66
15th October, ,, ..	2,330.00	1,826.84	2,087.66
1st November, ,, ..	2,330.00	1,777.00	2,078.70
15th November, ,, ..	2,274.00	1,772.00	1,994.72
1st December, ,, ..	2,218.00	1,787.00	2,061.86
15th December, ,, ..	2,106.00	1,717.87	1,985.40
30th December, ,, ..	2,212.00	1,851.00	2,103.00

Moreover, due to the present anomaly in price, a considerable quantity of Indian jute is being smuggled to Pakistan. It is, of course, desirable that foreign buyers of Indian jute goods should be able to obtain their requirements at stable prices but the remedy lies in higher production. In the present case, since India and Pakistan are virtually the only producers of raw jute and Pakistan is the only exporter, the jute manufacturing industry the world over will have to pay high prices for raw material. There is, admittedly, the danger that high prices of jute goods will encourage the changeover to substitute packaging materials and bulk handling. But foreign consumers of jute goods are aware that the prevailing high prices are likely to be only temporary, in all probability, they will be much lower in the next season, if there should be a bumper crop both in India and Pakistan.

In the long run, the prosperity of jute industry can be assured only by attaining self-sufficiency in raw jute at a level that would enable the industry to work to its full installed capacity. The need to assure to the grower a stable and economic price, which would provide him with incentive to cultivate jute in preference to alternative crops has been much talked about for years, but little has been done towards that end. On the contrary, the official preoccupation at all times with keeping jute prices from rising has, on occasions, depressed raw jute prices to uneconomic levels and encouraged diversion of land to rice cultivation.

If prices had been allowed to take their natural course in 1960, it is likely that mills would have earned profits, instead of the losses most of them will show for this period, when their working results come to be published. The nation would have earned more foreign exchange and the cultivator would have benefited very substantially. The effects on jute acreage and yield per acre, on the rural economy and the rate of economic development for the nation as a whole would have been apparent in a short time.

INDIA MOVES FORWARD IN NUCLEAR SCIENCE APPLICATION

EXPERIENCE ABROAD DESCRIBED AT SYMPOSIUM

THE Canada-India Reactor, which is the largest project so far undertaken in the field of international co-operation in the peaceful uses of atomic energy, was inaugurated by Prime Minister Nehru on 16th January in the Atomic Energy Establishment at Trombay. A monument to the friendly co-operation between Canada and India, it has cost about Rs. 10 crores, shared in roughly equal proportions by the Governments of the two countries. It is India's second research reactor, providing ample scope for experiments in the fields of engineering, physics, chemistry, metallurgy, and biology. At its peak power of 40 M.W. it will produce large quantities of isotopes for industrial, medical and other applications. Common among the radio isotopes that are expected to be produced for medical application are Phosphorus-32 to treat various blood conditions, Iodine-131 to diagnose various thyroid states and to treat hyperthyroidism and thyroid cancer, and Cobalt-60 to destroy tumours. The ones for industrial application will be Cobalt-60, Caesium-137 and Iridium-192 which are used for inspecting metal castings and welds for possible flaws in much the same way as radium and X-ray devices have been used heretofore. The Canada-India Reactor has also provision for testing fuel elements under conditions of flux, temperatures and pressures, for the development of power reactors which produce electricity from nuclear energy. Another related use to which a part of the C.I.R. can be put is the irradiation of experimental thorium rods. This will be of great significance to India, with her large thorium deposits, since, under neutron irradiation, thorium can be converted into the fissionable isotope uranium-233, thus opening up vast possibilities for the development of power producing reactors based on the thorium-uranium cycle.

The C.I.R. is based, with substantial modifications, on the Canadian N.R.X. reactor in operation at Chalk River since 1947. As the N.R.X. reactor is based on the heavy water moderated, natural uranium reactor system, Canadian experience todate in the field of nuclear power, too, has been confined to this system. Whether this system can be relied upon to produce economic nuclear power is a question which has been answered in the affirmative by Mr. J. L. Gray, President, Atomic Energy of Canada Limited, who described the Canadian approach to nuclear power at the symposium following the inauguration of the Canada-India Reactor. According to Mr. Gray, the Nuclear Power Demonstration station near Chalk River, which will operate later this year and produce 20,000 kilowatts of electricity, and the Douglas Point Generating Station under construction, which will produce 200 000 kilowatts when it comes into operation in 1964, justify Canadian confidence in the efficiency of the heavy water moderated, natural uranium reactor system. The foundation-stones of this confidence pertain to the validity of the physics of the system, the technical feasibility of the construction and operation of the reactor, the position of fuel development, and the reliability of cost estimates.

Canadian Approach

As for the validity of the physics of the system, it is claimed that heavy water is unsurpassed as a moderating material in thermal reactors and that it gives those using this material a substantial advantage over others in the fundamental problem of economic use of neutrons. As for the technical feasibility of the heavy water moderated and cooled pressure tube reactor, it has been substantially demonstrated in the construction of the Nuclear Power Demonstration reactor which is nearing completion. As Canadian nuclear scientists have operated heavy water systems in complicated research reactors for a number of years, they expect relatively low loss-rates of heavy water. As for fuel development, Canadian experience supports the choice of natural uranium oxide clad in Zircaloy, with short round rods grouped together in bundles. Natural uranium is the cheapest form of nuclear fuel and is physically capable of withstanding long burn-up. The extraction of maximum energy during one fuel cycle has also been amply demonstrated.

As for the cost estimates, they are stated to be reasonable and reliable, because the Douglas Point project follows the N P D. prototype for which full cost data are available. These cost estimates support Mr. Gray's conviction that the heavy water moderated and cooled reactor system holds the best promise for early economic nuclear power for Canada. The estimated construction costs of the Douglas Point Generating station are $81.5 million as the total cost of plant and $4.6 million as the cost of initial fuel including contingency and interest. Since this station is designed for a capacity of 200,000 kilowatts, the capital cost per kilowatt will thus be $430 (Rs. 2,043). The unit energy cost, based on the construction costs and using factors such as $30 per lb. for fuel cost, 100 being the number of operating staff and 15 years, 40 years and 30 years respectively for asset lives of reactor components and fuelling equipment, heavy water, and other plant (including half the fuel charge), is estimated as follows:

Average lifetime interest rate	*One-unit station* (Mills* per kw.h.)	*Two-unit station* (Mills per kw.h.)
4½	5.99	5.16
5	6.21	5.35
6	6.67	5.75

* Mill is one-thousandth of a dollar.

In terms of nP per kw.h., the unit energy cost will be as follows:

Average lifetime interest rate	*One-unit station* (nP per kw.h.)	*Two-unit station* (nP per kw.h.)
4½	2.85	2.45
5	2.95	2.54
6	3.17	2.73

U.S. Approach

The American approach to nuclear power, described at the symposium by Dr. Robert Charpie, Assistant Director, Oak Ridge National Laboratory, is to evolve a normal competitive nuclear power industry. The United States has made good progress in developing breeder-type reactors based both on thorium and uranium. The thorium-based reactor types, or 'thermal breeders' as they are called, are three—the aqueous homogeneous, molten salt, and semi-homogeneous gas-cooled systems. Reactors of each of these three types are under construction or operation in the U.S. American nuclear scientists are optimistic that each of them will be successful. This gives rise to the hope that, in the long-term, India's ample thorium reserves will turn out to be one of its most valuable natural resources. The provision for research with thorium rods in the Canada-India Reactor is, therefore, significant.

British Approach

The British approach to nuclear power is based on the graphite gas-cooled reactors, developed at Calder Hall and Chapelcross and using natural uranium. A major effort is now being made to make a success of the Advanced Gas-cooled Reactor, which is an extension of the same technology: this reactor, using slightly enriched uranium, has the potential for lower costs of generation. The present position in the U.K., according to Sir Roger Makins, Chairman, U.K. Atomic Energy Authority, is that the estimates of the cost of power from coal-fired stations to be built in the next few years are some 15 to 20 per cent. lower then the "0.6d. a unit" forecast in 1955. Since technical advances in the generation of electricity from coal and oil have led to reductions in capital costs and improvements in efficiencies in the use of these traditional fuels, nuclear power is not expected to be competitive. At the same time, the cost of power from the first two or three nuclear power stations is now expected to be substantially higher than that (0.6d. a unit) originally estimated. As against this, however, the nuclear stations recently ordered show costs very close to those which were originally forecast. Whatever be the cost considerations, Britain is going ahead with its nuclear power programme under which seven nuclear stations are at present under construction and tenders have been invited for an eighth. These alone, together with the Calder Hall and Chapelcross reactors, will bring the total nuclear power output to nearly 4,000 M.W. (one megawatt=1,000 kw.) by 1966. The target for 1968 is 5,000 M.W. in all. This shows how keen Britain is to develop nuclear power for meeting its energy requirements and this keenness is born of farsightedness. The powers-that-be in Britain realise that it will not be long before their country is faced with a serious shortage of coal and consequently an increase in the dependence on other countries for supply of fuel. They see in nuclear power the answer to their future power problem.

India, too, will have to go in for nuclear power development on a large scale for three major reasons. The first of these is that this country's coal reserves, abundant though they are, are confined to a few areas and so thermal power stations in distant locations will not be economic in their operation in the days to come when movement of coal by rail is bound to cost more. Another reason is that the country has ample thorium reserves which can be used to greater advantage for producing electricity in nuclear stations as our own research experience, coupled with that of the United States, will soon be substantial. And, above all, there is the compelling reason that in the foreseeable future the demand for power will outstrip the supply from conventional sources like hydel and thermal stations. The foundation for a supplemental source of power has, therefore, to be laid even now in the nuclear field.

WORLD ENERGY SUPPLIES: 1955-58

The Statistical Office of the United Nations has recently brought out a paper containing country-wise statistics of energy supplies in the period 1955-58. It provides data on the production, trade and consumption of energy in each of the four years concerned for approximately 160 countries with a combined population of more than 2,800 million persons in 1958. Because of the lack of reliable information on other fuels, such as wood, the data refer only to coal, coke and lignite, petroleum and its products, natural and manufactured gas, and hydro-electricity. It is seen from Table I in the publication giving world and regional aggregates, that total energy produced in the world as a whole has increased from 3,009 million metric tons of coal equivalent in 1954 to 3,795 tons in 1958, that is, by 26 per cent. But *per capita* consumption in the world as a whole has increased from 1,120 tons to 1,306 tons, that is, by just under 17 per cent. Hydro-electricity continues to be the least important source of energy, its production in the world as a whole accounting for 75 million tons of coal equivalent in 1958, as against 54 million tons in 1954. It is worthy of note that in 1954 North America and Western Europe together accounted for 76 per cent. of the world output of hydro-electricity but only for 70 per cent. in 1958. This is due to the fact that hydel power development in Latin America, Far East and Communist countries of Asia and Europe has been quite substantial.

LOCKHEED'S PROGRESS SINCE 1955

Mr. Robert E. Gross, Lockheed Chairman, said recently that more than half of Lockheed's $1.3 billion business in 1960 came from programmes developed in the past five years. He cited these highlights of Lockheed's rapid transition since 1955:

1. More than 22 per cent of the Company's 1960 sales came from Agena satellite vehicles—first ordered in 1956—and from space research. 2. Thirty per cent of 1960 sales came from Polaris ballistic missiles, conceived also in 1956. 3. Dollar values for military and civil airplanes exceeded half billion dollars in 1960. The proportion of aircraft to total sales declined from 94 per cent in 1955 to 43 per cent in 1960. Yet the reduction in dollar volume of aircraft sales was only 12 per cent—from $637 million to $560 million—since the total company sales almost doubled during the five-year period.

Lockheed has also been diversifying to add new fields to its traditional aircraft and missile-space programmes. These new areas include relatively small but important penetrations of electronics, underseas research, shipbuilding, heavy construction, architectural products and others. Agena satellites bearing the Lockheed trademark will in 1961 outnumber all satellites placed in orbit by various U.S. agencies and Russia combined in 1960.

BLUE STAR-HONEYWELL INSTRUMENTATION CENTRE

The Blue Star-Honeywell Instrumentation Centre has just been inaugurated in Bombay by Mr. T. N. Tolani, Director of Technical Education, Government of Maharashtra. This Centre, jointly sponsored by the Blue Star Engineering Company (Bombay) Private Ltd., and their principals, Minneapolis-Honeywell Regulator Company, said to be the world's largest manufacturer of instrumentation and automatic control, will impart technical training to maintenance personnel without cost, purely, as a service to industry. Honeywell have donated over a lakh of rupees worth of instruments for training purposes. According to Mr. Mohan T. Advani, Chairman of the Blue Star group, the need for this centre has arisen, because most modern manufacturing plants which have come up in recent years in India are well instrumented for automatic process control, and they require trained technical personnel for maintenance and operation of their highly complicated and sensitive instruments.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

TWENTY-FOURTH ANNUAL GENERAL MEETING

SPEECH BY THE CHAIRMAN, MR. DHARAMSEY M. KHATAU

SPEAKING at the Twenty-fourth Annual General Meeting of the Associated Cement Companies Limited held at Bombay on Friday, 20th January 1961, the Chairman, Mr. Dharamsey M. Khatau, said:

"After the steady and continuous deterioration in profits over the preceding four years, there has at last occurred some slight improvement in gross profits and net profits. Encouraged by this, and by the prospect, or at least the hope, that the Tariff Commission now examining our current and future costs will recommend a fair price and that the benefits accruing hereafter from the increase in installed capacity will not be wholly neutralised by further increases in costs, your Directors have decided to recommend a dividend at Rs. 12 per share (subject to deduction of tax). This has been done in an endeavour to reach what we consider to be the *minimum rate of dividend* to which the shareholders are entitled. Your Directors realise that this is by no means yet a fair return on shareholders' capital, having regard particularly to the fact that the shareholders have also contributed a very substantial amount of further capital by way of premium on shares paid in cash. But it is not possible to go any further in that direction just at present, because even the modest dividend now recommend as well as the rate at which it is proposed to pay bonus to our employees this year, have necessitated the heavy withdrawal of Rs. 84.50 lakhs from general reserve.

Production and Costs

"Despite the slight improvement in profits, the results of last year's working have been disappointing. In keeping with the second Plan, the installed capacity of your Company's factories in India rose from 34.42 lakh tons to 37.30 lakh tons, but despatches improved only from 31.47 lakh tons last year to 33.68 lakh tons. This was not due to any lack of demand for cement. On the contrary, the demand improved strongly since the beginning of 1960. But the shortage of railway wagons, especially since the end of May 1960, prevented us from taking full advantage of the improved demand. Moreover, your Company, along with many other industrial concerns, was adversely affected by the acute shortage of transport for coal, with the result that a number of our works were obliged to curtail production for want of coal supplies towards the end of the year under review. The transport situation continues to be grave, though the authorities concerned are doing all they can to ensure for our cement plants at least their minimum requirements of coal and adequate supply of wagons for despatching cement. We are also endeavouring to increase despatches by road transport.

"Apart from these, the increase in gross earnings has been largely offset by further increases in the cost of various materials, enhanced railway freight, a further rise in the cost of coal and power, higher incidence of labour costs etc. The incidence of depreciation was also higher on account of the high capital cost of expansion and rehabilitation projects.

"The implementation of the recommendations of the Cement Wage Board would have increased the labour costs still further but for the Government's acceptance of the Wage Board's finding that the cement industry was incapable of bearing this additional burden, and that, consequently, there was need to neutralise it by an appropriate increase in the retention price. Unfortunately, in the process of computing this higher labour cost per ton of cement, the installed 'rated' capacity has been taken as the base instead of the actual production which was considerably lower.

"The major increases in costs which have been responsible for the progressive reduction of profits have been due to factors entirely beyond the control of the Company. They have in fact been the direct consequence of Government's own fiscal, monetary, labour and welfare policies in an attempt, on the one hand, to implement the second Five-year Plan which many of us regarded as extravagant and, on the other, to move nearer to the goal of a socialistic pattern of society which, at this juncture, most of us consider impracticable.

"In view of continually rising costs," the Chairman continued, "your Company was constrained to approach the Government repeatedly since 1959 for some enhancement of the retention price. It was pointed out that the continued decline in the earning capacity of the Company, despite the substantially higher production and increased capital employed, which is amply borne out by our published accounts since 1956, was the direct outcome of increasing costs and the uneconomic retention price. The Government was well aware that your Company has always co-operated in the plans and policies of Government by readily assuming responsibility for its share in the expansion of the country's cement output, and by carrying out expansions and technical improvements with a view to keeping down production costs. Your Company has also participated in establishing a major heavy engineering project in the country in collaboration with two leading British concerns, involving very considerable investment of resources in men and money. In view of all this, one cannot but deprecate the irresponsible attitude of Government in deliberately ignoring the difficulties and needs of this basic controlled industry, and in refusing to re-fix the retention price at a level which would yield a reasonable margin of profit, and also leave something over for ploughing back into the business. Even more reprehensible was the Government's failure to implement the last Tariff Commission's recommendations concerning the retrospective operation of the enhanced retention price fixed in 1958 and the need to alter that price from time to time with every change in the cost of coal.

"In these circumstances, the decision of the Government to refer the whole question once again to the Tariff Commission for a fresh investigation is welcome, though the decision was taken after nearly two years of inaction. In effect, this means that the cement industry will have to continue to suffer, without any redress, not only the entire rise in costs which has already occurred since January 1958, but also the further rise which will undoubtedly occur until a new retention price becomes operative.

"Meanwhile, almost exactly a month ago, even before the Tariff Commission could make a start with its formidable task, came an extraordinary edict from Government. They decided, by a stroke of the pen, to compel the industry to use second-hand bags for packing cement; and this at a price so low, conceived as an *average price* for packing in new bags and used bags, that it makes the whole scheme both impossible of performance and grossly expropriatory.

"I have often wondered—lately with some anxiety—what could be the reasons for singling out the cement industry for such unsympathetic, if not indeed harsh, treatment. Can it be that, even after all these years, there is as yet no understanding in Government circles of the real needs, or the elementary 'economics' of this major, basic capital-intensive industry? Do they not want a cement industry that is buoyant and can grow with freedom and vigour to a point when shortage of cement will be a thing of the past? Or is it, quite simply, that State trading in cement, though initially highly lucrative, has lately become such an unprofitable adventure, that a desperate attempt is now being made to minimise the liability by passing back the losses in State trading to the producers? I suspect that this last point is nearest the mark; but whatever may be the true answer, I feel bound to say, with all the emphasis at my command and with a full sense of responsibility, that the recent policies of Government affecting this major industry are fraught with grave consequences to its future and to the early satisfaction of the country's urgent need for cement. I must also add that 'holding the price line' is impossible, with *planned inflation*, on the one hand, and with so many variable factors (of Government's own making) tending towards rising costs, on the other. In such circumstances, a rise in the price of cement is an unavoidable necessity if a further increase in cement production is not to be throttled.

"It is with this background that we propose to urge before the Tariff Commission that the 'fair return' on the capital employed in the cement industry should be conceived as a '*fair net distributable* return' after meeting all items of cost. In particular, we shall urge that there can be no justification—legal or equitable—for excluding from the overall 'cost' of cement either such items of *direct cost* as the full charge for packing, whether in new or used bags, and the commission payable to stockists, or such large and specific items of *overhead costs* as bonus and accruing gratuity to employees, the remuneration payable to managing agents, the statutory development rebate reserve and company taxation. To admit, on the one hand, that the industry is entitled to a fair return on capital employed, but to insist, at the same time, that from this return itself the industry should in effect meet the cost of the items to which I have just referred is a contradiction in terms. It certainly results in our being left with a net distributable return which can hardly be described as fair."

Expansion and Rehabilitation

The Chairman reported that the Company's various expansion and rehabilitation projects have made satisfactory progress. Giving details, Mr. Khatau mentioned the extensions to the Shahabad works which raised its capacity from 4.00 lakh tons to 5.65 lakh tons per annum; the modernisation and extension of the Kymore works as a result of which the capacity of the factory has been raised from 3.60 to 5.73 lakh tons per annum; the installation of the flotation plant for the beneficiation of low-grade limestone and the slag-cement plant at Chaibasa; and the slag-granulation plant at Jamshedpur. The Chairman expressed his fears that it may not be possible to commission the recently completed second dry-process kiln at Mancherial immediately due to the inability of the Andhra Government to supply the full requirements of additional power.

New Cement Works at Durg

Mr. Khatau also announced that the Company had decided to start immediately on the building of a cement works at Durg in Madhya Pradesh which was held in abeyance due to the glut in the cement market and the shortage of foreign exchange etc. The Government of India has now agreed to give high priority to this project so far as foreign exchange is concerned. This new cement works will have an initial capacity of 1.65 lakh tons of cement per annum, and in due course, will produce slag-cement using blast-furnace slag from the Bhilai steel plant.

Firebricks and White Cement

The capacity of the refractories factory at Katni was being raised from 17,640 tons to 30,000 tons per annum in view of the adequate demand for this product. The Company also marketed nearly 8,000 metric tonnes of Silvicrete white cement produced at the old Porbandar works. Since demand continued to be fairly steady despite competition from imported and local white cement, and was likely to increase in the coming years, the Company has planned to install a new 25,000-ton capacity white cement plant at Kymore.

Collieries

Mr. Khatau also said that the Company's Nowrozabad and Kotma collieries met a good portion of coal requirements at some of the cement works and the modern coal-washing plant at Nowrozabad to improve the quality of the coal produced there, is supplying enriched washed coal to the Kymore Cement Works replacing the more expensive Bengal coal to a large extent.

Machinery Manufacture

Continuing, the Chairman stated that, in line with the Government policy of encouraging the setting up of a heavy-machinery industry in India, the Company has decided to establish a well-equipped engineering works at Shahabad for the manufacture of machinery required for cement, paper and pulp, chemical industries etc. Meanwhile, the Company continues to manufacture cement machinery for its own requirements at the existing Central workshops at Shahabad.

A.C.C.-Vickers-Babcock Ltd.

The work on the construction of the Heavy Engineering Works at Durgapur in collaboration with Messrs. Vickers Ltd. and Messrs. Babcock & Wilcox Ltd. is proceeding according to schedule. The new Company is expected to go into production by the end of 1961. A.C.C.-Vickers-Babcock Ltd. have up to now issued 3,00,000 shares of Rs. 100 each and the A.C.C's share, which is 49.8 per cent of the shares so issued, amounts to Rs. 1,49,40,000.

Pakistan

The Chairman reported that the Company's factories in Pakistan continued to function satisfactorily. Remittance to India of profits earned in Pakistan continued to be banned, but the Company was allowed to remit to India the due proportion of the management and administrative charges incurred at the head office. The demand for cement in Pakistan was steadily growing and naturally, the Government of Pakistan were eager to meet this growing demand by increased production within the country. "They therefore approached us to expand the capacity of our two plants in Pakistan; but we expressed our inability to do this for want of the substantial foreign exchange resources required for the purpose."

The Chairman continued: "As the need for expanding the cement production in Pakistan was undoubted, we have been in negotiation with certain foreign interests—at first British, and now American—to transfer our factories to them on terms mutually agreeable and subject, before completion, to the approval of the Government of Pakistan and the Government of India. The prerequisites of any such transaction must be that we get a price which is fair, having due regard to all the circumstances, and that the entire sale proceeds together with our cash balances should be received by us in Indian rupees or in convertible foreign exchange. From the point of view of the Government of Pakistan, such an arrangement would be of great value because it would ensure considerable expansion of production capacity without any burden on the foreign exchange resources of the country either for the acquisition of our factories, or for their further expansion. To the Government of India also the transaction should be welcome as it would enable the release of our resources in Pakistan for investment in further expansion in India. Negotiations are proceeding satisfactorily and before they are finalised the shareholders will be approached for their approval."

Bonus Shares, Managing Agency, etc.

The Chairman stated that the Directors "have been reluctantly compelled to drop the idea of issuing bonus shares until such time as Government may deem fit to withdraw this entirely unjust imposition" (of a 30 per cent tax) "the incidence of which your Company cannot bear." Mr. Khatau hoped that the Government (in the Company Law Administration Department) will sanction the extension of the duration of the managing agency agreement to ten years and to enhance the terms as to remuneration above the "standard scale."

Labour-management Relations

Commenting on labour-management relations, Mr. Khatau observed: "Among the outstanding events of the year under review was the publication of the report of the Central Wage Board for the Cement Industry."

He said that its main recommendations had been approved by Government and had been voluntarily accepted by us. The Wage Board must be complimented on the competence with which it has worked out a clear, need-based fair wage pattern for this industry.

Continuing, Mr. Khatau said: "For this very reason your Company, without waiting either for the actual realisation of the revised retention price or the assessment of proper workloads, went ahead with the implementation of the Wage Board's recommendations at most of our works and has already paid the new fair wage in consultation with the unions at those works. I am confident that, very soon, with the co-operation of the unions concerned, we shall be in a position to implement the new wage scales at the remaining works also.

"There are, however, certain aspects of this question to which, I feel, I must draw the pointed attention of the authorities. The Wage Board has for all practical proposes ignored the importance of fair work-loads as an essential element in any fair wage fixation. This was contrary to the positive stipulation of the Fair Wages Committee, the principles of which the Central Government desired the Wage Board to follow by making a specific provision to that effect in the terms of reference.

"I imagine that, by now, we have all come to realise that the productivity of our workers is very much lower than in other industrialised countries. For reasons beyond our control we have to engage a much larger manpower force than is the case elsewhere, even in plants of equal capacity, with identical equipment and the same degree of mechanisation. Raising the wages of workers in this context, unaccompanied by a corresponding assessment of fair work-loads or a rise in productivity, becomes a dubious and somewhat self-defeating device because, in our developing economy, its inflationary result detracts from the workers' real income on which alone their standard of living can depend.

"The relegation by Government of work-load studies to a stage of secondary importance is all the more difficult to understand when the Planning Commission as well as the Government have repeatedly made it clear that higher productivity is the only sure basis of prosperity and well-being of the workers.

"However, it is at least some gain that the need for undertaking work-load studies has been accepted in principle. And although we did not succeed in persuading the Central Government to entrust the task of scientific work-load assessment to expert independent agencies having specialised knowledge of this particular type of work, Government has asked the Chief Adviser (Factories) to initiate pilot projects for intensive studies in two or three units in this industry. We are giving the fullest assistance and co-operation to this team to facilitate and expedite their work."

Appreciation

Despite the low level of profits, the Chairman said the Directors have decided to maintain the rate of bonus to all the Company's employees at the same level as last year, and the large majority of the employees in the lower scales of pay would receive substantially higher amounts of bonus this year in view of the increase in their basic wages due to the implementation of the recommendations of the Central Wage Board for the Cement Industry.

Mr. Khatau concluded with an expression of warm appreciation of the sustained hard work and wholehearted co-operation of all the Company's employees.

Note: *This does not purport to be a report of the proceedings of the annual general meeting which will be sent separately to shareholders on request.*

THIS IS ONLY AN ANNOUNCEMENT—NOT A PROSPECTUS

A copy of the Prospectus has been duly filed with the Registrar of Companies, Madras State, for registration together with the documents specified in the Prospectus, as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to the public for inspection at the Registered Office of the Company at Rajapalaiyam. It must be distinctly understood that, in giving the consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to the public for inspection at the Registered Office of the Company. It must be distinctly understood that in granting the licence, the Government of India do not taken any responsibility for financial soundness of the undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The existing Equity and Preference shares of the Company are officially listed on the Madras Stock Exchange Limited, Madras. Application will be made in due course to the Madras Stock Exchange Limited for permission to deal in the Equity and Preference shares now offered.

The Subscription List will open at 10 a.m. on Friday, the 27th January, 1961 and will close at 10 a.m. on Saturday, the 4th February, 1961 or earlier as soon as subscriptions approximating to the amount issued hereunder to the public have been received, but not earlier than 10 a.m. on Wednesday, the 1st February, 1961.

MADRAS CEMENTS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED CAPITAL:	Rs.
1,50,000 Equity Shares of Rs. 100 each	1,50,00,000
40,000 Redeemable Cumulative Preference Shares of Rs. 100 each carrying a dividend of 9.3 per cent. free of Company's tax but subject to deduction of tax at source at prescribed rates	40,00,000
10,000 Cumulative Preference Shares of Rs. 100 each carrying a dividend of 6½ per cent. net after deduction of income-tax at the prescribed rates	10,00,000
Total ... Rs.	2,00,00,000

ISSUED AND SUBSCRIBED CAPITAL:	Rs.
40,000 Equity Shares of Rs. 100 each	40,00,000
10,000 6½ per cent. tax-free Cumulative Preference Shares of Rs. 100 each	10,00,000
Total ... Rs.	50,00,000
PRESENT ISSUE:	
50,000 Equity Shares of Rs. 100 each	50,00,000
20,000 9·3 per cent. Redeemable Cumulative Preference Shares of Rs. 100 each	20,00,000
Total ... Rs.	70,00,000

RIGHTS OF PREFERENCE SHARES

The holders of Preference Shares shall be entitled to be paid out of profits which the Board of Directors shall determine to distribute by way of dividends, a fixed cumulative preferential dividend at the rate which after deduction of such amount of tax as may be prescribed from time to time under Section 18(3D) of the Indian Income-tax Act, 1922, would entitle the holder of such share to a net dividend of 6½ per cent. per annum on the capital paid up for the time being on such shares in respect of 10,000—6½ per cent. Tax-free Cumulative Preference Shares of Rs. 100 each and at the rate of 9.3 per cent. per annum free of Company's tax but subject to deduction of tax at the prescribed rate as required under Section 18(3D) of the Indian Income-tax Act, 1922, on the capital paid up for the time being on such shares in respect of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each from the date of allotment and to a right on winding-up to be paid all arrears of preferential dividends, whether earned or declared or not, down to the commencement of the winding-up and also to be repaid the amount of capital paid up or credited as paid up on the Preference Shares held by them respectively in priority to any payment in respect of Equity Shares, but shall not be entitled to any other rights in the profits or assets of the Company; subject as aforesaid and to the rights of the holders of any other shares entitled by the terms of the issue to preferential repayment over the Equity Shares in the event of winding-up of the Company, the holders of Equity Shares shall be entitled to be repaid the amount of capital paid up or credited as paid up on such shares and all surplus assets thereafter shall belong to Equity Shares in proportion to the amount paid up or credited as paid up on such Equity Shares respectively at the commencement of the winding-up. The holders of Preference Shares that have already been issued and that may hereafter be issued shall, unless restricted by the terms of the issue of such shares, rank *pari passu* in the matter of payment of dividends and return of capital.

Any further issue of Redeemable Preference Shares over and above the present issue of 20,000 Redeemable Cumulative Preference Shares of Rs. 100 each ranking in all respects *pari passu* with the existing 10,000—6½ per cent. tax-free Cumulative Preference Shares of Rs. 100 each and 20,000 Redeemable Cumulative Preference Shares of Rs. 100 each now being issued under this Prospectus will be made only with the consent of holders of not less than three-fourths of the Preference Shares.

TERMS FOR REDEMPTION OF PREFERENCE SHARES

The shares will be redeemed at par after 10 years and before 15 years from the date of issue of shares. The Company may, at their option, start redeeming the Preference Shares at par, after six years from the date of issue of such shares. The Redeemable Cumulative Preference Shares, if any, subscribed for and held by the Industrial Finance Corporation of India, New Delhi, shall be redeemed in the first instance without the draw of lots.

The Preference Shares may be redeemed all at a time or in instalments. The Preference Shares to be redeemed on each occasion shall be determined by the drawing of lots.

RIGHTS OF THE EQUITY SHARES

The new Equity Shares for all purposes shall rank *pari passu* with the existing Equity Shares of the Company.

ALLOTMENTS TO SHAREHOLDERS AND FINANCIAL INSTITUTIONS

Pursuant to Section 81 of the Companies Act, 1956, and as per resolution passed by the Company in General Meeting on 1st October 1960, authorising the offer of the present issue to the holders of both Equity and Preference Shares of the Company, all the shares under the present issue were offered in the first instance to the existing shareholders of both Equity and Preference Shares of the Company, whose names appeared on the Register of Members of the Company as on 3rd December, 1960, on the basis of one Equity Share of Rs. 100 each for every Equity or Preference Share of Rs. 100 each held by them and two Redeemable Cumulative Preference Shares of Rs. 100 each for every Five Equity or Preference Shares or a combination of both held by them.

The shareholders of the Company have subscribed for 5,289 Equity Shares and 2,941 Redeemable Cumulative Preference Shares having a total nominal value of Rs. 8,23,000 leaving a balance of 44,711 Equity Shares of Rs. 100 each and 17,059 Redeemable Cumulative Preference Shares of Rs. 100 each having a value of Rs. 61,37,000.

Out of the above, the Madras Industrial Investment Corporation Ltd. have subscribed for 27,500 Equity Shares of Rs. 100 each and 7,500 Redeemable Cumulative Preference Shares of Rs. 100 each and they have been allotted these shares in full.

The Life Insurance Corporation of India have also underwritten and subscribed for 2,500 Redeemable Cumulative Preference Shares of Rs. 100 each and these shares have been allotted in full.

THE ENTIRE ISSUE OF Rs. 70 LAKHS IS UNDERWRITTEN

The following underwriting arrangements have been made with the institutions mentioned below in respect of the quantities and classes of shares mentioned against each:

Name of the Underwriter	Redeemable Cumulative Preference Shares	Equity Shares	Total Value
			Rs.
Madras Industrial Investment Corporation Ltd.	7,500	27,500	35,00,000
Industrial Finance Corporation of India, New Delhi	10,000	..	10,00,000
Life Insurance Corporation of India, Bombay ..	2,500	7,500	10,00,000
Indian Overseas Bank Limited, Madras ..	..	7,500	7,50,000
Brokers: Jointly			
(1) Messrs. Chitra & Co., Madras ..			
(2) Messrs. Maconochie & Co., Madras ..			
(3) Messrs. Somayajulu & Co., Madras ..	..	7,500	7,50,000
(4) Messrs. Paterson & Co., Madras ..			
(5) Messrs. P. R. Subramanyam, Bombay ..			
Total ..	20,000	50,000	70,00,000

In the opinion of the Directors, the resources of the said underwriters are sufficient to discharge their underwriting obligations.

OFFER TO THE PUBLIC

The balance of the issued capital, namely, Rs. 24,27,000 consisting of 17,211 Equity Shares of Rs. 100 each and 7,059 Redeemable Cumulative Preference Shares of Rs. 100 each is offered at par for public subscription in terms of the Prospectus and is payable as follows:—

On application	Rs. 50 per share
On allotment	Nil

The balance of Rs. 50 per share will be called up at the discretion of the Directors not earlier than six months from the date of allotment.

No shares are issued for consideration other than cash.

The Life Insurance Corporation of India have also agreed to send us an open application for Equity Shares to the value of Rs. 7,00,000 which will rank for allotment on a par with other applications received from the public.

BOARD OF DIRECTORS

CONSENT

The consent in writing of the abovenamed Bankers, Brokers and Auditors of the Company to act in the respective capacities have been obtained and have been filed with the Registrar of Companies, Madras, and have not been withdrawn.

HISTORY OF THE PROJECT

The Company was incorporated on the 3rd July, 1957, for the several purposes set forth in the Memorandum of Association and in particular to undertake the manufacture of Portland Cement and other allied products. A factory has been established for this purpose at Tulukkapatti, Ramanathapuram District. An industrial licence has been obtained from the Central Government for erecting a factory with a capacity of 600 tons of Portland Cement per day, to be executed in two stages.

Large reserves of suitable limestone are available from quarries within a few miles from the factory. Suitable clay and gypsum are also available in and around the area. Extensive lands for the factory and residential buildings, both for the existing and expansion scheme, have been acquired by the Company. Plenty of water is available from Arjuna River nearby. Necessary pipelines have already been laid from the river bed to the factory site. The supply will be sufficient both for the first and the second stage of the project. The State Electricity Board have sanctioned necessary electric power to meet the requirement of the first stage of the factory and they have already made the power available. They have also assured the sanction in time of the required electric power for the second stage. The factory is located on the Madras-Cape Comorin National Highway and is well served by rail and road transport facilities. Besides, it is very near to the Tuticorin Port.

The Certificate of Commencement of Business was obtained on 31st July, 1957. The licensed capacity of 600 tons per day is to be executed in two stages, namely, the first stage having a capacity of 200/250 tons per day and the second stage having an installed capacity of 350/400 tons per day, making the total of 600 tons per day.

In accordance with the above phased programme, to finance the outlay of the First Stage, a capital issue of Rs. 50 lakhs was made. The original issue of Rs. 50 lakhs was in the form of Equity Shares both of the denomination of Rs. 100. The entire Preference capital of Rs. 10 lakhs and Rs. 30 lakhs of Equity Shares out of Rs. 40 lakhs were placed before the investing public without resort to the publication of a Prospectus, using the personal influence of the Chief Promoter, Shri P. A. C. Ramasamy Raja, the well-known Mill Magnate of Rajapalaiyam and the Managing Agents of Rajapalaiyam Mills Ltd., Rajapalaiyam, The Ramaraju Surgical Cotton Mills Ltd., and Jayaram Mills Ltd., Rajapalaiyam. The balance of Rs. 10 lakhs of Equity Shares was taken up by the Madras Government to signify their confidence in the project. Further, a long-term loan of Rs. 40 lakhs was obtained from Industrial Finance Corporation of India, New Delhi, to secure the balance of requirements.

The Company has now completed the first stage of the construction of the 200/250-ton factory. The plant and machinery were supplied by the internationally well-known firm of Messrs. Skodas of Czechoslovakia and they were erected under the supervision of their experts. The Directors are glad to state that the first stage of the project is about to be commissioned and the cement produced by the factory will be placed on the market shortly.

EXPANSION SCHEME

The Company is now issuing additional capital to find the required finance for the second stage of the project. The supply and erection of plant and machinery for the second stage are also in the hands of Skoda, who have made all arrangements for delivery by the end of 1961 and erection of the machinery according to our present schedule.

The Import Licence for the plant and machinery for the expansion scheme has already been granted by the Government of India under Rupee payment terms and it is in accordance with the terms of this licence that we have placed firm orders with Messrs. Skodas.

PLANT AND MACHINERY

The Company has entered into an agreement on 9th December 1959 with Messrs. Skoda (India) Private Ltd., Bombay, Agents of Messrs. Technoexport of Czechoslovakia, for supply of the extension plant of 350/400 tons day capacity. The entire plant and machinery including electrical drives are to be supplied by the renowned manufacturers in Czechoslovakia, Messrs. Skodas. These manufacturers of cement-making and other machinery, enjoy a world-wide reputation, particularly in the Cement and Sugar lines. They have undertaken the erection and the successful commissioning of the extension plant. The plant and machinery supplied by the above mentioned firm, Skodas, is for the wet process.

CAPITAL REQUIREMENTS

The total cost of the second stage of the project is estimated as under:—

Plant and machinery ...	...	Rs.	76.25 lakhs
Civil Constructions ...	...		27.00 ,,
Other Assets ...	...	...	9.25 ,,
Contingencies ...	...	...	3.50 ,,
Expenses for issue of shares ...			4.00 ,,
Total ...		Rs.	120.00 ,,

The requirements of working capital for the Second Stage will be about Rs. 20 lakhs.

SOURCE OF FUNDS

The total sum will be provided as under:—

By the present issue of share capital	Rs.	70 lakhs
Additional long-term loan from the Industrial Finance Corporation of India, New Delhi (already sanctioned)	Rs.	50 lakhs
Total ...	Rs.	120 lakhs

The requirements of working capital, namely, Rs. 20 lakhs for the Second Stage will be met out of the earnings of the First Stage and borrowings from banks.

PROSPECTS

It is well known that the Cement industry in India has not only seen phenomenal growth in the last twelve years but is looking forward to a period of increasing consumption of cement in the next decade. Apart from a quadrupling of capacity in a little over a decade, the industry has been allotted a target of 14 million tons during the Third Plan period. The capacity of the industry at the end of 1960 was estimated at about 9 million tons. Thus, it is safe to expect that the target will be more than achieved during the Third Plan period, though it is expected that, by this time, consumption of cement by the house-building industry will, apart from the needs of the large projects of the Third Plan, have very considerably increased. Actually, it is expected that, by the first year of the Third Plan, cement consumption will receive a new stimulus with the availability of larger quantities of steel, with the completion and coming into operation of the three steel units in the public sector. The Company's expansion scheme is, therefore, timely.

PROFITS

The Directors are of opinion that in the absence of any unforeseen circumstances, the Company will earn sufficient profits as to enable the declaration of a reasonable dividend within one year from the date the second plant goes into production.

FINANCIAL INFORMATION

The Auditors' Report dated 10th January 1961 in accordance with the provisions of the Companies Act, 1956, has been appended to the Prospectus. The Auditors have given and have not withdrawn their written consent to the inclusion of their reports in the form and context in which it appears.

EXPENSES OF THE ISSUE

The expenses of the issue, including underwriting commission and brokerage, are estimated not to exceed Rs. 4 lakhs and are payable by the Company.

UNDERWRITING COMMISSION

Underwriting Commission at the rate of 2½ per cent. on the nominal value of both Equity and Preference Shares underwritten will be paid to the underwriters.

BROKERAGE

Brokerage at the rate of 1 per cent. will be paid to the Bankers of the Company and recognised Brokers on all allotments made in respect of applications for Preference and Equity shares bearing the stamp of such Banks or Brokers. Brokerage on the same basis is payable to underwriters in addition to the underwriting commission, on allotments in respect of applications made or procured by them and bearing their respective stamps. However, no brokerage is payable on shares subscribed by the existing shareholders under Section 81 of the Companies Act, 1956 or by the Directors or by the Managing Agents or their associates and by the Madras Industrial Investment Corporation Limited.

DIRECTORS

The Articles of Association of the Company provide that the number of Directors shall not be less than three and until otherwise determined by the General Meeting, not more than fifteen, including Ex-Officio Directors. The maximum number of Directors not liable for retirement by rotation shall not exceed one-third of the total strength of the Board. The qualification of every Director, other than the first Directors, Ex-Officio Directors, and alternate Directors, Madras State Government Director, and Industrial Finance Corporation of India Director shall be his holding shares in the capital of the Company of the face value of Rs. 5,000 and it shall be his duty to comply with the provisions of Sections 270 and 271 of the Act.

Every Director is entitled to receive a sitting fee of Rs. 100 for every meeting of the Directors or of any Committee of the Directors attended by him and all reasonable travelling, hotel and other expenses incurred within India for attending and returning from meetings of the Board or a Committee thereof or in connection with the business of the Company.

BORROWING POWERS

The Directors may at their discretion raise or borrow or secure the payment of any sum or sums of money for the purposes of the Company provided that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) shall not at any time, except with the consent of the Company in General Meeting, exceed the aggregate of the paid-up capital of the Company and its free reserves.

INTEREST OF DIRECTORS

Messrs. P. A. C. Ramasamy Raja and P. R. Ramasubramania Raja, Directors of the Company, are the partners of Messrs. P. A. C. Ramasamy Raja & Co., the Managing Agents of the Company, and each of them is interested in the remuneration payable to the Managing Agents in the following proportion.

1.	Shri P. A. C. Ramasamy Raja	51 per cent.
2.	Shri P. R. Ramasubramania Raja	49 per cent.

Each of the Directors is interested to the extent of shares subscribed, allotted or to be allotted to him in the Company and in the sitting fee receivable by him for attending the meeting of the Board of Directors.

MANAGING AGENTS

Messrs. P. A. C. Ramasamy Raja & Co. have been appointed with the approval of the Central Government accorded in their letter No. 41(914)-CMN/57, dated 4th October, 1957, as the Managing Agents of the Company for a period of 15 years from 30th January 1958 on a remuneration of 10 per cent. of the annual net profits of the Company. For this purpose, the net profits are to be computed in accordance with Sections 349 and 350 of the Companies Act, 1956. In the event of inadequacy or absence of profits, the Managing Agents will be paid, as minimum remuneration for every such financial year of the Company, such sum payable in such manner, as the Central Government may hereinafter fix in this behalf.

In the event of any compensation becoming due and payable to the Managing Agents for loss of office, such compensation shall be determined in accordance with Section 366 of the Companies Act, 1956.

The partners of the Managing Agents are well known industrialists and they are associated with several successful enterprises.

Subject to the provisions of the Companies Act, 1956, and to the supervision and control of the Board of Directors, the Managing Agents shall have the Management of the whole affairs of the Company. The Managing Agents have a right of appointing not more than two Directors where the total number of Directors of the Company exceeds five and one Director, where the total number does not exceed five. Such appointees will be known as Ex-Officio Directors.

VARIATION OF RIGHTS

The rights attached to any class of shares may be varied by complying with the provisions of Sections 106 and 107 of the Companies Act, 1956.

ECONOMIC TRENDS IN BRITAIN

MAJOR AIM MUST BE IMPROVEMENT IN OVERSEAS PAYMENT BALANCE

By W. T. C. King
EDITOR, *THE BANKER*, LONDON

RECENT economic news has made it clear that the major aim for Britain's economy in 1961 must be to improve the trend of its balance of overseas payments, which has now been deteriorating for almost two years. In 1959, Britain's surplus on current external transactions as a whole had run down from the exceptionally good total of £345,000,000 earned in 1958, to £139,000,000, chiefly because the sharp rise in imports associated with the rapid expansion of domestic output had outpaced the growth of exports. Twelve months ago, it had been hoped that this adverse relationship would prove to be only temporary; that the pace of the rise in imports would slacken markedly while that of exports might be speeded up. But, in the event, both these hopes have been disappointed; the year 1960, instead of showing some improvement in the current balance, has witnessed a further deterioration.

Surplus Wiped Out

Official estimates for the full year are not, of course, available yet, but there is hardly room for doubt that they will show the current account as having dipped into the red—for the first time since 1955. During the seasonally unfavourable third quarter, there was a deficit (as provisionally estimated) of £101,000,000 in contrast to a surplus of £43,000,000 in the corresponding period of 1959. This more than wiped out the modest surplus earned in the first half of 1960, so that, for the nine months, there was a deficit of £66,000,000, as compared with surpluses of £159,000,000 and £307,000,000 in the first nine months of 1959 and 1958.

Not far short of half this deterioration occurred in the net "invisible" income (partly in consequence of a rather sharp rise in outgoings on governmental account), the trend of which is especially hard to predict. The trend of "invisible" trade, however, has lately looked a little more reassuring.

Rise in Exports Forecast

The monthly figures of exports had turned sharply downwards about the middle of last year, and many people feared that a major downtrend might be setting in. Unfortunately, the trend then became blurred by the effects on the statistics of a strike of tally clerks at the London docks. Most of these effects can now be eliminated by averaging the figures for the months September, October and November. On this basis, the seasonally adjusted monthly value of exports was £292,000,000, or substantially above the low figure of £272,000,000 recorded for July, but perceptibly below the peak monthly average of £304,000,000 touched in the first quarter of 1960.

Since the publication of these figures shortly before the holiday, City circles have been more disposed to forecast a small rise in exports rather than a further fall; the chances of any substantial rise are generally regarded as depending largely upon the still highly uncertain course of the economy of the United States of America. In the meantime, although the monthly trade returns as yet give little sign of it, many observers now expect a marked flattening in the curve of British imports.

Stock-Building

Hopes of this particular relief for the balance of payments are based chiefly upon expectations of a slowing down in the abnormal rate of stock-building that was set in motion in the domestic economy by the big expansion of output in 1959. Similar hopes, it may be recalled, were entertained early last year, but the response of stocks to changes in the rate of output has proved to be slower than had been expected. The recovery of industrial production from the low point reached in 1958 had been proceeding for twelve months before additions to stocks showed any large upturn. Then, in the final quarter of 1959, the seasonally corrected estimate of aggregate stocks held by manufacturers and distributors (including work-in-progress) rose by £100,000,000,* a larger increment than occurred in the whole of 1958 and one that contrasted with a net decline of £33,000,000 in stocks in the first nine months of 1959. The eventual turnround was, therefore, sharp; partly for this reason, it was generally supposed that stock-building would quickly decline again when the growth of production slowed down. In fact, the abnormal rate of stock-building attained in the last quarter of 1959 was actually surpassed in the ensuing nine months, when the quarterly increments were £78,000,000, £149,000,000 and £128,000,000. The addition over twelve months has thus amounted to £455,000,000, or roughly nine per cent, nearly seven times the annual rate in 1958 and 1959, and not far short of twice the rate of 1957.

During this same period, the rise in aggregate industrial output—the originating cause of the burst in stock-building—has been brought to a halt. Although the aggregate output for 1960 will show an increase of perhaps seven to eight per cent on the 1959 aggregate, the rise actually stopped last April. The seasonally adjusted index, which has risen from its low point of 105 in the third quarter of 1958 to 117 by October 1959 (1954=100), rose by only a further four points in the ensuing six months; from April to October 1960 it has been virtually steady at the peak of 121.

The continued expansion of the capital goods industries has been offset by the recession in the industries producing consumer durables and automobiles, which have been affected by the deliberate efforts to retard consumer spending, and some of them, notably automobiles, also by the contraction of export markets.

Changes Expected In 1961

The substantial change that can reasonably be expected in stock-building in 1961 should relieve the balance of payments both directly and indirectly—by reducing imports of basic industrial materials and finished manufactures, stocks of which have risen sharply in the past year, and by its more general disinflationary effects upon domestic industry. The fact that, in 1961, a smaller part of any increment of industrial output will be absorbed in additional work-in-progress and building up stocks of components, and so on, will not only reduce industry's need for imported supplies, but will enhance its capacity to export. Similarly, when judging the implications of whatever deficit is shown on the current balance of payments for 1960, it will be important to bear in mind that, during this period, the economy was supporting a major non-recurring outlay for the building up of its stocks.

Adequate allowance for this important factor will substantially improve, but cannot transform, the appearance of the external accounts. Even though it be large enough to wipe out the present deficit on current account, it certainly could not by itself restore a surplus big enough to finance Britain's net outgoings on long-term capital account—mostly for the provision of aid and loans for underdeveloped territories. During 1960, these outgoings have, in effect, been financed by the massive inflow of mobile short-term funds. Thanks to this inflow, the central gold and convertible-currency reserves of the sterling area have continued to rise in spite of the big gap represented by the deficit on the current account and the heavy outgoings on long-term capital account. Over the year 1960 as a whole, the reserves rose by £177,000,000 to £1,154,000,000, even though the United Kingdom Government had made advance repayment of its "Suez" dollar credit from the International Monetary Fund, providing £110,000,000 in dollars for this purpose, and had incurred other special capital payments to the extent of £119,000,000.

Doubtful Inflow of Funds

The tide of short-term international funds, however, now seems on the turn; or, at least, it has ceased to flow. During December, the gold reserves did, it is true, rise by a further £23,000,000. But the month's accounts were affected by large capital transactions in both directions—on the one hand, payments of £67,000,000 in dollars for the annual service on the post-World War II loans from Canada and the United States, and of £17,000,000 in dollars to the I.M.F. (being a voluntary transfer to raise Britain's gold and dollar subscription to the Fund to the standard 25 per cent of its quota) and, on the other hand, receipt of £131,000,000 in dollars for the purchase of sterling by the Ford Motor Company of Detroit in preparation for its take-over of the minority shareholdings in Fords of Dagenham (Detroit, of course, already holds a controlling interest).

It will be seen that, if these special transactions are excluded, there would have been a net decline in the reserves by £22,000,000 during the month—the first "true" decline since early 1960. This loss appears to have been due in part to normal seasonal commercial strains and in part to repatriation of Continental short-term banking funds for year-end window-dressing. It remains to be seen whether these funds will fully return; any large outflow is still regarded as improbable, but it seems that London can no longer reckon upon a continued inflow.

It, therefore, seems inevitable that the underlying disequilibrium will soon show itself plainly in the gold reserves. The monetary authorities have repeatedly declared their readiness to let gold flow out freely when the trend of short-term funds altered, so that there is no reason to expect that such an alteration would of itself precipitate the introduction of new defensive measures—for example, a new increase in Bank rate.

The reduction of the rate by a further half per cent, to five per cent, on 8th December, after the pressure of incoming funds had eased, served to underline the earlier indications of policy. This reduction, like the one conceded six weeks previously, was chiefly directed towards the falling trend of rates overseas, and, in particular, was evidently intended as a gesture of "moral" support for the United States authorities, in their task of keeping money easy to aid the domestic economy, at a time when the dollar is still under pressure internationally.

It has been made clear that this easing United Kingdom short money rates was not to be taken as any indication of intention to relax other measures of restraint on the domestic economy, in spite of the recession that has occurred in certain industries. The Chancellor has reiterated, indeed, that there can be no relaxations until it is clearly safe to make them in the interests of the economy as a whole—and the first criterion of any move must be its implication for the balance of payments. "The solid foundation for further expansion of output," Mr. Selwyn Lloyd declared recently, must be "a strong upward movement of exports."

*To afford a measure of changes in the volume of stocks, the estimates are given at 1954 prices throughout.

MADRAS CEMENTS LTD.

(*Concluded from previous page*)

INSPECTION

Copies of Memorandum and Articles of Association of the Company, Audited Balance Sheet and Profit and Loss Account for the last three financial years and the Auditors' Report referred to hereinabove, the original consent order of the Controller of Capital Issues, Licence issued by the Government of India for establishment of new industrial undertaking and copies of other contracts, agreements and documents mentioned in the Prospectus, can be inspected at any time during the usual office hours of the Company at the Registered Office of the Company for a period of 14 days from the date of publication of the Prospectus or until the Subscription List closes whichever is earlier.

APPLICATION AND ALLOTMENT

Applications for Equity and Preference Shares must be for a minimum of 5 shares.

All applications must be made on the forms accompanying the Prospectus which can be had from the Registered Office of the Company, the Company's Underwriters, Brokers and Bankers. In respect of Bankers, arrangements have been made with the following offices for receiving applications and remittances:

State Bank of India, Rajapalaiyam, Madras and Bombay; Indian Bank Ltd., Madras, all their Branches in Madras State, Bombay, Calcutta and New Delhi; Indian Overseas Bank Ltd., Madras, all their Branches in Madras State, Bombay, Calcutta and New Delhi; Central Bank of India Ltd., Rajapalaiyam, Madras and Bombay, and Rajapalaiyam Commercial Bank Private Ltd., Rajapalaiyam.

The form of application accompanied by the necessary remittance of Rs. 50 per Equity or Preference Share applied for, should be delivered to the Registered Office of the Company, Company's Underwriters, Brokers and Bankers mentioned in the Prospectus on or before the date of closing of the Subscription List.

Cheques or drafts drawn on banks at places other than those mentioned above must include bank charges at ¼ per cent. with a minimum of 75 nP. Cheques or drafts should be made payable to "Madras Cements Limited" and should be crossed. A separate cheque or draft should accompany each application.

NEW PRODUCTS AND PROCESSES

Curcumin as Colouring Agent for Vanaspati

INVESTIGATIONS in progress at the Central Food Technological Research Institute, Mysore, suggest the suitability of curcumin derived from turmeric as a colouring agent for hydrogenated vegetable oil. When powdered turmeric is extracted with alcohol, curcumin is obtained as a crude extract (7-8 per cent. of the dry powder), mixed with the oil of turmeric. Addition of the extract (0.04 per cent. on the weight of the fat) to hydrogenated vegetable oil imparts to it a pleasant acceptable colour. When added (even at 10 per cent. level) to ghee, the colour is clearly visible and responds to the lime test.

Taking the present market price of turmeric in bulk at Rs. 48 per maund (80 lb.) and reckoning the yield of crude curcumin at 8 per cent., the cost of colourisation per pound of vanaspati, inclusive of the extraction process, comes to less than 1 nP. On the basis of average production of vanaspati in the country at 400,000 tons, the country will need 2,000 tons of turmeric which represents about 1 per cent. of the total production of turmeric in the country. The addition of turmeric colour (at 0.04 per cent. level of the extract) may serve as a deterrent for the adulteration of ghee with vanaspati because it acts both as a visible and as a latent colour. It is considered desirable that the addition of sesame oil should also be continued as it will serve as an additional check. This is not affected by the presence of the turmeric colour in the suggested concentration.

Heart Examination by Telephone

Doctors may soon be able to give electrocardiograms in the patient's home easily as they now give stethoscopic examinations. Experience gained in gathering and processing data from missile and satellite flights has been adapted to this important medical programme. Details of the new technique have been disclosed by the Heart-Research Foundation Inc., of Los Angeles, U.S., and the Lockheed Aircraft Corporation which have been jointly engaged in research on the subject. One phase of the system is a miniaturised electronic transmitter weighing only three ounces which is worn around the patient's neck like a necklace or carried in a pocket. The lightweight battery-powered transmitter—the same as used on Lockheed's Polaris missile or Discoverer satellite—radios the patient's cardiograph. The signal is picked up by an FM tuner and conventional electrocardiographic machine. While this technique alone has a limited range, when coupled with a phone line the person's E.C.G. can be transmitted to almost any place in the world. By employing the radiocardiogram with the telecardiogram, electrocardiograms may one day be transmitted directly from the bedside to a computer at a medical centre in some distant city. In a matter of minutes the lightning-speed electronic calculating machine will process the data and an electrocardiographic interpretation immediately given.

An advantage of the radiocardiograph is that since the patient is free to move about "it allows us to examine his heart action during periods of actual exertion. It shows there can be constant changes in the heart action and circulatory system during the periods of exertion and the physician now can observe these changes under actual stress. Probably the most dramatic use of radio transmission of an electrocardiograph is the operating room. It was pointed out by the inventors that the miniaturised radio transmitter can be used with complete safety, permitting continuous monitoring of the patient's cardiogram during surgery. Along with the cardiogram, other vital physiologic data such as pulse, temperature, electroencophalogram, arterial and venous blood pressure and respiration rate may be transmitted. Each measurement would be on a different frequency. Another big advantage is that the transmitter is explosion-proof because of the low voltage required to operate it and, thus, can be used with many anæsthetic gases. The technique was used successfully in the case of a 72-year-old patient who underwent major surgery at a Los Angeles hospital. Throughout the post-operative course the physician was able to observe and record the electrocardiogram in his office which was several miles away.

Ethyl Chloride

Ethyl chloride or monochloroethane finds wide uses in the manufacture of tetraethyl lead, ethyl cellulose, dyes and certain drugs and as a local anæsthetic. One unit having a capacity of 32,727 tons (72,000 lbs.) per annum is already producing ethyl chloride in India, the actual production during 1958 being 30,433 kgs. Another is being set up at Hyderabad as a small-scale industry. Imports of ethyl chloride in 1958 and 1959 were valued at Rs. 38,094 and Rs. 72,920, respectively. Ethyl chloride is manufactured commercially by three methods, namely, addition of hydrogen chloride to ethylene, chlorination of ethane and the reaction ethyl alcohol with hydrogen chloride. For Indian conditions, however, the last method is most suited because of easy availability of ethyl alcohol. Based on ethyl alcohol as starting raw material and using zinc chloride as catalyst a new process for the manufacture of ethyl chloride has been developed at the Shri Ram Institute for Industrial Research, Delhi. Hydrogen chloride is fed 30 per cent in excess of the theoretically required quantity at about 130°C. No by-products are obtained. Alcohol with 90.95 per cent alcoholic content is used. Over 95 per cent of alcohol is converted to ethyl chloride and the process gives an efficiency of nearly 99 per cent. Another novel feature of the invention is an improved apparatus where optimum conditions can be maintained.

The process has been studied in a bench scale unit having a glass reactor of 3" diameter, and a production capacity of 2 lbs. of ethyl chloride per hour. The raw materials required are hydrogen chloride and ethyl alcohol. Hydrogen chloride is obtained as a by-product in certain organic chlorination processes. It can also be produced by the action of sulphuric acid on common salt. Alcohol is available from various distilleries. The equipment is simple and use of elaborate glass lined reactors is not necessary. Main equipments are HCL gas producers and a gas holder alcohol boiler reactor, refrigeration and condensing units and a boiler. These can be fabricated locally. Total capital outlay for a plant having a capacity of 300 tons of ethyl chloride per annum is estimated at about Rs. 1.87 lakhs.

Steam Turbopump

Long life, economy of space, lightness, and high rotative speed are among the advantages claimed for a new steam "turbopump" now being manufactured in Britain. A completely compact and self-contained unit, it occupies from 50 per cent. to 70 per cent. less floor space than multi-stage units of equal capacity, and is from 25 per cent to 40 per cent lighter. The "turbobump" combines a steam turbine and a centrifugal pump, the unit being capable of continuous operation at speeds from 5,000 to 10,000 r.p.m. Very low steam rates result. It is capable of delivering to boilers up to 750 gallons per minute of feed water against feed pressures to 1,100 p.s.i.g. (pounds per sq. in. gauge) and total temperatures to 900° F. and exhaust to pressures to 150 p.s.i.g.

The economy of weight and space are of paramount importance where boiler feed pumps in ships are concerned, and may be equally vital in the case of general industrial application, where they must result in big economies in initial capital outlay. Water rate is low; the steam sealed gland is practically frictionless because the moving part is always in contact with a fluid and never with a stationary solid. With pressure lubrication, the shalf floats on an oil film and does not make metallic contact with a bearing surface. Apart from dirt and lubricating oil failure, bearing life is claimed as practically limitless. Design, material characteristics and workmanship are co-ordinated to ensure a high factor of availability for each "turbopump." Each part is fabricated from a material specifically selected for strength and endurance combined with high resistance to corrosion-erosion. Precision workmanship and precise balancing of rotating parts are regarded as essentials, ordinary commercial standards not being acceptable.

Three Hundred Sound-absorbing Materials

Sound absorbing materials are being used increasingly for the control of the acoustic properties of concert halls and other auditoriums as well as noise reduction in offices, restaurants and factories. Measurements of the sound-absorption coefficients of suitable materials have been carried out for a number of years at the National Physical Laboratory in Britain. They have included most of the proprietary materials used in Britain as well as forms of special treatment and mounting. The results of these investigations are now made available for the benefit of users, manufacturers, architects and others concerned with the application and properties of sound absorbents. They have been brought together in a new booklet entitled *Sound Absorbing Materials*, by E. J. Evans and E. N. Bazley. The main section of the booklet consists of tables of the absorption co-efficients of over 300 materials measured at the Laboratory. Both the materials and the method of mounting employed are described. The materials are classified broadly according to their physical characteristics, those of the same acoustic type being grouped together. The tables are accompanied by a dicussion of the results. Recent developments in the design of sound-absorbent materials are described as well as the various types and the physical processes involved.

Mica in House Paints

Effect of addition of mica powder in exterior house paints has been investigated at Calcutta. Mica considerably improves the effective life of exterior house paints by increasing their corrosion resistance and durability. It has no detrimental effect on other useful properties like drying time, consistency or colour of the paints. The addition of mica is most beneficial in the finish coat, less in the undercoat and least in the primary coat. The maximum effect of mica addition is obtained by incorporating it in all the three coats.

Writing and Printing Paper from Balsa Wood

Writing and printing paper of good quality can be produced from balsa wood, a fast growing tree which has been successfully grown in several parts of the country. Pulp yields of about 51 per cent. have been obtained by the sulphate process at the Forest Research Institute, Dehra Dun, using 21 per cent. chemicals for cooking and 9 per cent. available chlorine for bleaching. Writing and printing papers constitute 60 per cent. of the total production of different varieties of paper and paper boards in India. It is estimated that the consumption of writing and printing papers will be of the order of 184,000 tons in 1962. Balsa wood which has been successfully grown in plantations in Kannoth in Wynaad forest division of Kerala and Topslip in South Coimbatore forest division of Madras, is the lightest and softest of all timbers grown in India.

Utilisation of Sub-standard Asbestos Sheets

Studies carried out at the Central Building Research Institute for utilisation of low-strength asbestos sheets have shown that if two sheets are doubled up with a layer of bitumen sandwiched between them, the strength of the combination becomes more than that of a single standard sheet. Asbestos cement sheets which do not conform to Indian Standards specification as regards transverse strength are unfit for use as roofing material. The double sheet can easily replace the single sheet for all purposes including roofing. Bitumen gives rigidity to the pair, absorbs shocks and provides a waterproof layer.

Storage of Ripe Arecanuts

Ripe arecanuts during storage by conventional methods (pit storage, water storage, etc.) undergo heavy microbial damage. An improved process of storage has been developed at Central Food Technological Research Institute, Mysore, by which arecanuts in husk retain their original colour of skin, fruit firmness, colour, structure, flavour and taste of edible kernel.

The process consists in blanching and steeping arecanuts in low concentrations of mixed preservatives in sealed containers. Preliminary experiments have shown that nuts in husk, stored for 2-3 months, if hygienically packed in polythene bags, have a shelf life of over a month for purposes of transport and retailing. The edible kernel after six months of storage contains preservatives well below the permissible limits. As an extension work, conditions have been established for convenient and safe storage of ripe arecanuts in husk in earthenware pots. Consumer evaluation of the 6-month stored product is said to be satisfactory.

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of The Belapur Company, Limited will be held at the Registered Office of the Company at Brady House, 12-14, Veer Nariman Road, Bombay, on Monday, the 20th day of February, 1961, at 4.30 p.m. (S.T.), to pass the following resolutions as Special Resolutions:—

I. Resolved that pursuant to Section 360 and other applicable provisions, if any, of the Companies Act 1956, the Company doth hereby approve of the sale effected by the Company on 12th October, 1960 of—

(i) 50 Equity Shares in Gangapur Sugar Mills Ltd., of Rs. 100 each to Mr. Pallonji Shapoorji Mistry, a Director of W. H. Brady & Co., Ltd., the Managing Agents of the Company;

(ii) 50 Equity Shares in Gangapur Sugar Mills Ltd., of Rs. 100 each to Mr. J. Symon, an Officer in W. H. Brady & Co., Ltd., the Managing Agents of the Company;

(iii) 50 Equity Shares in Gangapur Sugar Mills Ltd., of Rs. 100 each to Mr. F. Edwards, also an Officer in W. H. Brady & Co., Ltd., the Managing Agents of the Company; and

(iv) 50 Equity Shares in Gangapur Sugar Mills Ltd., of Rs. 100 each to Mr. J. N. Guzder, a Director of Brady Engineering Co., Ltd., an Associate of the Managing Agents of the Company, the said Brady Engineering Co., Ltd., being under the same Management as that of the Company;

at Rs. 115.88 nP per share.

II. Resolved that pursuant to Sections 261 and 281 and other applicable provisions, if any, of the Companies Act 1956, Mr. Maneklal Premchand, who is an Associate of W. H. Brady & Co., Ltd. (the Managing Agents of the Company and which Managing Agents are authorised by the Articles of Association of the Company as also by the Managing Agency Agreement to appoint two Directors on the Board of Directors of the Company) and who has attained the age of 71 years and who has sent a notice to the Company under Section 257 of the said Act signifying his candidature for the office of Director of the Company and the Company has received a special notice from some shareholders under Section 281 of the said Act, be and is hereby appointed a Director of the Company, liable to retire by rotation and it is hereby specifically declared that the age limit prescribed by Section 280 of the said Act shall not apply to him.

III. Resolved that pursuant to Section 372 and other applicable provisions, if any, of the Companies Act 1956 the investment made by the Company in the purchase of 9,100 shares in Gangapur Sugar Mills Ltd., partly held by Shakkar Udyog Private Ltd., and partly by the Directors of Gangapur Sugar Mills Ltd., and of Shakkar Udyog Private Ltd., at the rate of Rs. 115 as forming part of 26,000 shares in the said company agreed to be purchased by the Company in terms of the Agreement dated 25th August 1960 made between Shakkar Udyog Private Ltd., of the first part, Ramdayal R. Dhoot and others of the second part and the Company of the third part and which investment has not yet been made effective as the consents of (1) the Industrial Finance Corporation of India and (2) the Oriental Fire & General Insurance Co., Ltd., to the sale of the 9,100 shares by Shakkar Udyog Private Ltd., and their Directors and the Directors of the Gangapur Sugar Mills Ltd., have not been obtained under the Mortgage dated 19th June 1958 made between Gangapur Sugar Mills Ltd., of the one part and the Industrial Finance Corporation of India of the other part and under the Guarantee Agreement dated 12th September 1957 made between the Gangapur Sugar Mills Ltd., of the one part and the Oriental Fire & General Insurance Co. Ltd., of the other, be and is hereby, subject to such consents and the approval of the Central Government to the said investment being obtained, sanctioned.

By Order of the Board of Directors,
Per pro W. H. BRADY & Co., LTD.,
J. SYMON,
Technical Adviser,
Managing Agents.

Dated 18th January, 1961.

Note:—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

To the Shareholders of The Belapur Company, Limited and in particular to:—

Mr. William Abel,

M/s. Rajabali Hasom Paroo & Sons Ltd.

Annexure to the Notice

THE BELAPUR COMPANY, LIMITED

Statement of material facts and reasons in respect of the special business mentioned in the accompanying Notice dated the 18th day of January, 1961.

Explanatory Statement as Required by Section 173 of the Companies Act 1956

Item No. I: The Company purchased a large block of Equity Shares in Gangapur Sugar Mills Ltd., in order to make Gangapur Sugar Mills Ltd. a subsidiary of the Company and as such it was in the interest of the Company that there should be a sufficient representation of the Company on the Board of Directors of Gangapur Sugar Mills Ltd. The Company, therefore, out of its holding of Equity Shares in Gangapur Sugar Mills Ltd., sold 50 Shares to each of the following persons:—

1. Mr. Pallonji Shapoorji Mistry,
2. Mr. J. Symon,
3. Mr. F. Edwards and
4. Mr. J. N. Guzder

the Directors of Gangapur Sugar Mills Ltd., to qualify themselves as such Directors, as these shares were not available in the market. Mr. Pallonji Shapoorji Mistry is a Chairman of the Board of Directors of W. H. Brady & Co., Ltd., the Managing Agents of the Company, and Mr. J. Symon and Mr. F. Edwards are employees of W. H. Brady & Co., Ltd., and as such the said Pallonji Shapoorji Mistry, J. Symon and F. Edwards are associates of the Managing Agents of the Company. The sale of the said shares to each of the said associates requires the approval of the Company in General Meeting under Section 360 of the Companies Act 1956. Mr. J. N. Guzder is a Director of the Brady Engineering Co., Ltd., which being under the same Management as that of the Company is an associate of the Managing Agents of the Company. Though the Director of an associate is not an associate of the Managing Agents of the Company, yet as a matter of caution it is advisable to pass a Special Resolution for the sale by the Company of the said 50 Shares in Gangapur Sugar Mills Ltd., to him.

Item No. II: Mr. Maneklal Premchand was a Director of the Company for several years. He retired by rotation at the last Annual General Meeting of the Company held on 29th December 1960 and offered himself for re-election. As he had attained the age of 71 years a special notice under Section 281 of the Companies Act 1956 was received by the Company. The resolution for his reappointment as a Director at the said meeting was however withdrawn as it required a special resolution, he being the father of Mr. Kishore Maneklal Premchand, a Director of W. H. Brady & Co., Ltd., the Managing Agents of the Company. Mr. Maneklal Premchand has considerable business experience and was closely connected with the Company for a number of years. It is in the interest of the Company that the Board should continue to receive the benefit of his advice, guidance and experience. The Company has received notice from Mr. Maneklal Premchand signifying his candidature for the office of Director under Section 257 of the Companies Act 1956 as also a special notice from some shareholders under Section 281 of the said Act. Mr. Maneklal Premchand, being the father of Mr. Kishore Maneklal Premchand, a Director of the Managing Agents of the Company, is an associate of the Managing Agents who are authorised by the Articles of Association of the Company as also by the Managing Agency Agreement to appoint two Directors on the Board of the Company. Mr. Maneklal Premchand cannot, therefore, be appointed a Director of the Company except by a special resolution as required by Section 261 of the Companies Act 1956.

Item No. III: By the Agreement dated 25th August 1960 Shakkar Udyog Private Ltd. agreed to sell to the Company 26,000 shares in Gangapur Sugar Mills Ltd., at the price of Rs. 115 per share on the terms and conditions therein contained. Pursuant to the said agreement the Company purchased from Shakkar Udyog Private Ltd., 25,930 shares. Amongst the said shares were 9,100 shares which were held partly by Shakkar Udyog Private Ltd., and partly by their Directors and partly by the Directors of Gangapur Sugar Mills Ltd. Under the Mortgage dated 19th June 1958 made between Gangapur Sugar Mills Ltd. of the first part, Shakkar Udyog Private Ltd. of the second part and the Industrial Finance Corporation of India of the third part it was, *inter alia*, provided that Shakkar Udyog Private Ltd. and their Directors as also the Directors of Gangapur Sugar Mills Ltd., should not sell their respective holdings of shares in Gangapur Sugar Mills Ltd., without the consent of the Industrial Finance Corporation of India. By the Agreement dated 12th September 1957 made between Gangapur Sugar Mills Ltd., of the one part, Shakkar Udyog Private Ltd., of the second part, Mr. Ramdayal Raghunathdas Dhoot of the third part and the Oriental Fire & General Insurance Co., Ltd., of the fourth part it was provided that Shakkar Udyog Private Ltd., and the Directors of Gangapur Sugar Mills Ltd., would not sell their respective holdings of shares in Gangapur Sugar Mills Ltd., without their consent. Shakkar Udyog Private Ltd. have resigned their office as the Managing Agents of Gangapur Sugar Mills Ltd., with effect from 29th August 1960. The Company has agreed with the Industrial Finance Corporation of India as well as the Oriental Fire & General Insurance Co., Ltd., that upon the said Companies discharging Shakkar Udyog Private Ltd. from their obligations under the said Mortgage and the said Agreement respectively, the Company would undertake to carry out and discharge all the obligations of Shakkar Udyog Private Ltd., under the said Mortgage and Agreement. Both the Industrial Finance Corporation of India and the Oriental Fire & General Insurance Co., Ltd., are willing to discharge Shakkar Udyog Private Ltd. from their obligations under the said Mortgage and the Agreement respectively and to accept the Company's guarantee in place and stead of the guarantee of Shakkar Udyog Private Ltd. They will also give their consents to Shakkar Udyog Private Ltd., and their Directors and the Directors of Gangapur Sugar Mills Ltd., selling their respective holdings in shares in Gangapur Sugar Mills Ltd., to the Company. The Company agreed to purchase the said 26,000 shares in Gangapur Sugar Mills Ltd. so as to make Gangapur Sugar Mills Ltd. a subsidiary of the Company. Pending the grant of the consents of the Industrial Finance Corporation of India and of the Oriental Fire & General Insurance Co., Ltd., to the sale by Shakkar Udyog Private Ltd., and by their Directors and the Directors of Gangapur Sugar Mills Ltd., of the said 9,100 shares, the said 9,100 shares are not transferred to the name of the Company although the Company has paid to the respective Vendors thereof the full purchase price. The said Vendors have kept a sum of Rs. 4,00,000 deposited with their attorneys pending the grant of the aforesaid consents.

As under Section 372 of the Companies Act 1956 as amended by the Companies Amendment Act 1960 the Company cannot make investments in the shares of any other body corporate in excess of the percentages specified therein without the sanction of the Company in General Meeting and the approval of the Central Government, you are requested to accord your consent to the Company completing the purchase of the said 9,100 shares, subject to the aforesaid consents of the Industrial Finance Corporation of India and the Oriental Fire & General Insurance Co., Ltd., and the approval of the Central Government being obtained.

By Order of the Board of Directors,
Per pro W. H. BRADY & Co., LTD.,

Technical Adviser,
Managing Agents.

Dated 18th January, 1961.

THE BALLARPUR PAPER AND STRAW BOARD MILLS LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the members of the Company will be held at the Registered Office of the Company at Ballarpur, Dist. Chanda, Maharashtra, on the 22nd February, 1961 at 11 a.m., to consider and if thought fit, to pass the following Resolutions with or without modifications:

AS SPECIAL RESOLUTIONS:

1. RESOLVED:
   (i) "That the Authorised Capital of the Company be increased from Rs. 2 Crores to Rs. 2½ Crores by creation of 2,00,000 additional Equity Shares of Rs. 25 each."
   (ii) "That in clause V of the Memorandum of Association and in Article 8 of the Articles of Association, the figures 'Rs. 2,00,00,000' and '5,60,000' shall be deleted and figures 'Rs. 2,50,00,000' and '7,60,000' substituted therefor, respectively."

AS ORDINARY RESOLUTIONS:

2. RESOLVED:
   (i) "That it is desirable to raise further Capital and accordingly, it is decided that 3,43,242 Equity Shares of Rs. 25 each, in the Authorised Capital of the Company, be issued and offered by the Directors at par, in the first instance, for subscription, to the Existing Equity Shareholders of the Company, whose names appear on the Register of the Company as on 22nd February, 1961, in proportion to three Equity Shares out of this New Issue for every two existing Equity Shares held by them on that date, with full powers to make such provisions for issue of fractional certificate or otherwise as the Directors think expedient for cases of fraction."
   (ii) "That this New Issue of Equity Shares which the existing Equity Shareholders are entitled to take up, shall be offered in accordance herewith to each Equity Shareholder whose name appears on the Share Register of the Company on 22nd February, 1961, by a notice specifying the number of the New Equity Shares to which he is entitled, and limiting the time within which the offer, if not accepted, shall be deemed to be declined, and containing such terms as to payment or otherwise, as the Directors may determine."
   (iii) "That the balance, if any, of the Equity Shares not taken in response to such offer, be allotted by the Directors to the applicants for additional shares on an equitable basis with reference to the Equity Shares already held by them provided that the Shareholders who renounce their rights in whole or part, shall not be entitled to apply for additional shares. Any balance still left unallotted, may be disposed of at the ruling price by the Directors of the Company."
   (iv) "That this new issue of Equity Shares shall rank *pari passu* in all respects with the existing Equity Shares except that they shall not participate in any dividend that may be declared in respect of any period prior to the Company's financial year ended 30th June, 1961, and shall be entitled to dividend from the date of allotment on the capital for the time being paid up on such shares."
3. To pass the following with or without modification as an Ordinary Resolution under Section 294 of the Companies Act, 1956:

   RESOLVED:

   "That in compliance with Section 294 of the Companies Act, 1956, the Company doth hereby approve and consent to the appointments of the persons, firms and/or companies detailed in the Appendixes 'A' and 'B' attached and who are at present working as Sole Distributors of the Company for different areas, for sale of paper and stationery products of the Company on terms and conditions on which they are working and that the Directors be and they are hereby authorised to enter into and complete agreements with all or any one or more of them at their absolute discretion, for such periods (not exceeding five years from 1st April 1961) as the Directors may deem proper and at their discretion to cancel any one or more of such appointments, and/or from time to time to vary the terms and conditions of such appointments."

By Order of the Board,
KARAM CHAND THAPAR & BROS. PRIVATE LTD.,
Managing Agents.

CALCUTTA,
Dated the 24th January, 1961.

Note.—(i) The Share Transfer Books of the Company will remain closed from 15th February 1961 to 22nd February, 1961 both days inclusive.

(ii) A member entitled to attend and vote at the meeting, is entitled to appoint a proxy who need not be a member to attend and vote instead of himself.

(iii) Explanatory Note in respect of the above resolutions and the list of Distributors referred to in the resolution in item No. 3, have been sent to the Shareholders along with the Notice. The following are open for inspection of the members at the Registered Office of the Company during business hours:

(*a*) The sanction of the Controller of Capital Issues for this further issue of capital;

(*b*) The list of the Distributors together with their respective areas and the general terms and conditions of the Distributorship.

THE KATAKHAL-LALA BAZAR RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE fiftieth Annual General Meeting of the Members of the Katakhal-Lala Bazar Railway Company, Limited, will be held at 'McLeod House,' No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 24th day of February 1961, at 4-00 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1960, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. R. Hollander, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th February 1961 to 24th February 1961, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
(Sd.) C. HOCKLEY,
Secretary,
Secretaries & Treasurers.

3, NETAJI SUBHAS ROAD,
CALCUTTA-1.
Dated 12th January 1961.

Note:—1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

2. Payment of the proposed Dividend, if declared, will be made on or after 17th March 1961 only to those Members whose names are registered in the books of the Company on 24th February 1961 or to their mandatees.

Application for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

THE BURDWAN-CUTWA RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE fifty-fourth Annual General Meeting of the Members of the Burdwan-Cutwa Railway Company Limited, will be held at 'McLeod House,' No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday the 24th day of February 1961, at 4-05 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1960, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. S. K. Mukherjee, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th February 1961 to 24th February 1961, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

By Order of the Board,
MCLEOD & CO. LTD.,
(Sd.) C. HOCKLEY,
Secretary,
Secretaries & Treasurers.

3, NETAJI SUBHAS ROAD,
CALCUTTA-1.
Dated 6th January 1961.

Note:—Payment of the proposed Dividend, if declared, will be made on receipt of the balance subsidy from the Government of India only to those Members whose names are registered in the Books of the Company on the 24th February 1961 or to their mandatees.

Application for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

THE BOARD OF DIRECTORS HAVE DECLARED an interim dividend of 3 per cent tax-free (4.29 per cent subject to tax) on Preference shares and 6.25 per cent subject to tax on Equity shares for the year 1960-61. The dividends are payable to the shareholders standing in the registers of the Company as on 20th February 1961.

The Share Transfer Books of the Company will remain closed from 6th February 1961 to 20th February 1961, both days inclusive.

The dividend warrants will be posted to shareholders on or after 20th February 1961.

INDUSTRIAL GROWTH IN RUSSIA AND EAST EUROPE

OUTPUT EXCEEDS PLAN TARGETS

RUSSIA and East European countries, belonging to what is commonly known as the Communist bloc, entered a new phase of economic development in 1958, when these countries began to prepare new long-term plans (of five or seven years ending in 1965), within the framework of "perspective" plans over a period of fifteen years ending in 1975. In Russia and East Germany, the erstwhile plans covering 1956-60 were formally superseded during 1958 or 1959 by the announcement of new seven-year plans for 1959-65. Czechoslovakia, Hungary and Poland have announced new five-year plans (1961-65) and economic policies have already been sought to be so adjusted as to dovetail them into the long-term plans. Details of the plans in respect of Albania, Bulgaria and Rumania are, however, still to be made known.

A recent notable development in Russia and East Europe is that industrial production and investments have exceeded the annual targets in almost all countries, a phenomenon recorded in 1959 and also upto the third quarter of 1960, the latest period for which data are available. As disclosed in the *Economic Survey of Europe* 1959 (published by the Secretariat of the U.N. Economic Commission for Europe, Geneva, Price $3) industrial production in 1959 was well above the levels originally planned in Hungary and the Soviet Union, and was better by narrow margins in all other East European countries. The sole exception was Bulgaria, where industrial production rose by 20-25 per cent, as against the planned targets of 28 per cent, which was rather overambitious. The rate of growth of fixed investment, according to the *Survey*, exceeded that registered in 1958 in all countries, except Albania and East Germany, where increases of 14 per cent in outlays nevertheless occurred, "but considerable resources still remained available to improve consumption standards."

No Deceleration

The upward trend in production and investment seems to have been maintained in 1960. The latest issue of the *Economic Bulletin for Europe* (U.N. Economic Commission for Europe) points out that, despite plans to reduce the rate of growth in industrial output in 1960, there was no deceleration in most of the countries. The annual rates of expansion upto the third quarter of 1960 (of the order of 14 to 18 per cent in Bulgaria, Hungary and Rumania and 9 to 12 per cent elsewhere) represented acceleration in the pace of growth, as compared with the average rate of growth in 1959, in respect of Hungary, Rumania and Poland. In Czechoslovakia and Russia the rate of growth was maintained. Some slowing down was, however, in evidence in Albania, Bulgaria and East Germany.

The *Bulletin* points out that a general trend in all these countries in the first half of 1960 was the rapid growth of engineering output at rates well above those for all industry. This was supported by expansion in steel output at or above the planned rates in most countries. The production of pig iron and crude steel, however, slowed down strikingly in Bulgaria, following the absorption of virtually all capacity reserves in 1959, and less noticeably, in East Germany and Poland. The rapid rise in output in building materials in 1959 fell in 1960, thereby adversely affecting the growth of construction activities. Production of chemicals, a priority branch in all long-term plans, rose faster in most countries than industrial output (except in East Germany and Rumania).

The patterns of production of consumer goods "reflect the demand-supply balance for particular products." Output of durable goods is said to be rising rapidly. Production of leather goods also showed notable improvement, while that of textiles expanded relatively slowly, except in Hungary and Rumania. Food processing industries were adversely affected by the none-too-satisfactory trend in agricultural output. There were reports of scarcities in particular products, of depletion of stocks and deterioration of quality in certain products. The shortages were eliminated in some East European countries by larger imports.

A country-wise analysis of each industry's performance shows divergent trends. In Czechoslovakia, for instance, the gross industrial output was higher by 12 per cent during the first three quarters of 1960, as compared with the corresponding period in 1959. Engineerings, chemicals and metallurgical industries made significant headway. There were, however, complaints of unsatisfactory product-mix and irregular production in these industries. The production of radios and television sets lagged behind, reflecting perhaps the market conditions.

A less smooth development was reported from East Germany. The gross output rose by only 8.4 per cent during the first nine months of 1960, as compared with 13.6 per cent. rise in the preceding comparable period. Electrical engineerings continued to be the most rapidly expanding branch, but only average rates of growth were recorded by the other metal-using branches and the chemical industry. The overall output in engineerings rose by 13 per cent, but this was only 50 per cent of the targets aimed at. Shortages of imported draw plate, high-grade sheet steel and seamless tubes, are reported to have caused interruptions to production in a number of enterprises.

In the East German chemicals industry, the most important development in the first half of 1960 was the completion of the first stage of the special programme launched in 1958, with the putting into service of six new plants at the Buna Chemical Works: one chlorine electrolysis plant, a vinyl chloride plant, a polyvinyl chloride (PVC) plant, a polyacrylonitrile (PAN) plant, a water-processing plant, and a new power distribution network. The chlorine electrolysis plant will produce 6,500 tons of chlorine and 7,500 tons of caustic soda in the course of the current year, both being important requirements of the plastics and textile industries. The new PVC plant has an annual capacity of 10,000 tons.

The new plants are part of a programme aimed at accelerating the expansion of the production of plastics, supported by a Soviet credit of about DM200 million made available in the form of special material deliveries. Further installations are foreseen, which would make possible an additional annual production of 40,000 tons of PVC by 1962. The Buna Chemical Works are already the largest producer of PVC in Europe, and by 1965 the plant's yearly production is to reach 130,000 tons. Early in May, the first building stage of a sulphuric acid plant was completed at Coswig. The sulphuric acid is to be produced from gypsum deposits and the plant is to be the largest of its kind in the world. Two furnaces were put into service in June with an annual production capacity of 100,000 tons SO_3, and the same quantity of Portland cement. These capacities are to be doubled this year.

Russia

In Russia, building materials and engineering continued to be the most rapidly expanding industrial branches during the first three quarters of this year, showing increments of output of 18 and 16 per cent, respectively, over the level in the first nine months of 1959. The growth of output of building materials has nevertheless slowed down since last year, partly because gross production statistics are less affected than previously by a rising share of prefabricated components, which now provide a high and stable share of gross output. Engineering output has risen faster from 1959 to 1960 than in any of the preceding five years, and much faster than planned; but this increase has not been sufficient fully to meet the demands of the investment plan and growing, though still marginal, exports.

The other priority branch under the Seven-year Plan—chemicals—has shown a rate of growth of output this year little above the average, and the massive investments of the last 2½ years have still to produce their effects. Output of artificial and synthetic fibres rose by 13 per cent from the first half of 1959 to the same period of 1960, lagging somewhat behind the 17 per cent expansion planned for this year. Production of plastics rose by 11 per cent but, within the total, output of polyethylene, polystyrene, moulding-powder plastics and aminoplastics registered percentage increases of 56, 23, 20 and 20, respectively. Electricity generation has risen in step with the overall growth of industrial output: and the shift of primary fuel production towards the more efficient and cheaper sources of energy—petroleum and natural gas—is proceeding somewhat faster than planned in the case of petroleum, though natural gas production rose by only 29 per cent between the first half-years of 1959 and 1960, as compared with a planned increase between the two full years of 42 per cent. Among consumers' goods, an output of 1¼ million television sets, 700,000 washing machines and 386,000 refrigerators in the first nine months of this year represented increases of 33 per cent, 36 per cent and 21 per cent, respectively, over the corresponding 1959 levels. Production of watches, on the other hand, stabilised—at 19.3 million—and an output of 3.1 million radios represented only a 4 per cent rise over the January-September 1959 level. In general, the pattern of consumer goods output seems to represent an improving adaptation to consumers' demand; but this is probably not so in the case of the decelerating rise of furniture production, even though a 19 per cent increment was reported. The slower growth of food-processing this year than in 1959 reflects preceding rates of procurement from the farms, and especially the poorer harvest in 1959 than in 1958.

Productivity

The rapid growth in Russian industrial output in the first nine months of 1960 was due to a 4 per cent increase in the labour force, as against 2 per cent planned initially. Output per worker has risen at the planned rate of 6 per cent and this represents an even greater rise in labour productivity in terms of output per man-hour, since the planned reduction in the working week has been progressively implemented in the course of the year. By the end of the third quarter, hours had been reduced for about 40 million workers or around two-thirds of the total. Campaigns to raise labour productivity, increase managerial and labour efficiency and encourage overfulfilment of plans were given renewed impetus late in 1959 or at the beginning of this year in Bulgaria, East Germany, Hungary, Poland and Russia. However, remarkably large increases in industrial employment so far this year have been reported in Bulgaria, more than offsetting the effects on output of a rise in labour productivity at well below the rate planned for the whole year. In all the other countries of the region for which data are available output per worker has increased sharply, and at least at the planned rates; and in both Hungary and Rumania employment also has been above the planned levels.

In Poland, the tightening of work norms and pressure on directors of enterprises to eliminate redundant labour were the factors that held the industrial employment slightly below 1959 (in the first eight months). Labour shortages were reported in building, transport, mining, agriculture and food industries, together with a fairly general scarcity of skilled workers. In this connection, the *Bulletin* says that whereas the desirability, in the short run at least, of higher labour productivity in sectors of labour scarcity or under-utilised capacity may be obvious, in conditions of generally abundant labour in relation to available productive capacity or raw materials the concomitant of rising labour productivity in some branches of activity may be a persistence of underemployment elsewhere a slowing down of the movement of labour from agriculture or other branches of relatively low productivity to those where productivity is higher, a decrease in employment opportunities for women or juveniles, or visible unemployment. According to the *Bulletin*, such is the situation in Poland and in some other countries also. Special efforts to raise production or imports (or, at need, to reduce exports) of "bottleneck" materials, or even reduction in working hours, may be a preferable alternative in these conditions to either the creation of significant unemployment or the acceptance of deliberately delayed technical progress or over-staffing and underemployment.

KOTHARI SUGARS AND CHEMICALS

The Board of Directors of the Kothari Sugars and Chemicals Ltd. has made allotments in respect of the public issue of shares on the following basis:

Applications for 100 shares: Full allotment.

Applications for over 100 and upto 500 shares: 50 per cent of the shares applied for have been allotted but subject to a minimum of 100 shares, to be rounded off to the nearest 50.

Applications for over 500 shares: 40 per cent of the shares applied for have been allotted subject to a minimum of 250 shares, to be rounded off to the nearest 50.

Allotment letters are being posted to the allottees, and these will be received by them in the course of a few days.

This Affects You!

Proposed Land Ceilings on Sugar Cane Farms is a retrograde step that will adversely affect State Economy and You!

Maharashtra is the most successful sugar producing area in India. Total production in 1959-60 was 3,92,097 tons.

The average yield of cane from Factory Farms in Maharashtra last year was 53.25 tons per acre, about **twice the average for the whole State,** and nearly **four times the average for the whole country.**

This achievement by the Factory Farms compares favourably with the main sugar producing countries of the world.

Sugar Factory Farms in Maharashtra have been developed by the pioneering efforts of private enterprise, and have proved that this is the best method of producing quality sugar at the cheapest possible price.

So why disrupt and jeopardise this growing and prosperous industry in favour of methods yet to be proved?

YOUR WELFARE, AND THE NEED FOR CONTINUED ECONOMIC DEVELOPMENT, DEMAND THAT THE SUGAR FACTORY FARMS OF MAHARASHTRA MUST BE EXEMPT FROM THIS BILL.

If you would like to read more information on this vital subject, post this coupon today to the Deccan Sugar Factories Association, Stadium House, Block No. 2, Vir Nariman Road, Bombay-1

BIRKMYRE BROTHERS LIMITED

MADRAS CEMENTS TO EXPAND CAPACITY

PROFIT-EARNING PROSPECTS QUITE ENCOURAGING

THE move of the Madras Cements Limited to expand the production capacity of the plant from 200-250 tons to 550-600 tons per day in accordance with its original programme is a commendable one for two important reasons. In the first place, it is in keeping with the continually rising demand for cement emerging from the house-building industry, road development and a large number of industrial projects in the third Plan. Appropriately enough, the Plan target of installed capacity to be achieved by 1965-66 is fixed fairly high at 15 million tons (production target is put at 13 million tons), as against the capacity of 10 million tons (actual output of 8.8 million tons) estimated for 1960-61. Secondly, expansion of existing capacity, unlike in the case of establishment of new cement factories, eliminates a lot of preliminary and other expenses. It may be noted here that the Madras Cements has already completed the first stage of the construction of the factory with a daily capacity of 200-250 tons at Tulukkapatti, Sattur Taluk, Ramanathapuram District, Madras State. The plant is about to be commissioned and the cement produced is expected to be placed on the market shortly.

The expansion scheme of the Company is estimated to entail a capital outlay of Rs. 120 lakhs (exclusive of Rs. 20 lakhs representing working capital to be met out of the earnings of the first stage and borrowings from banks), the bulk of which is, of course, accounted for by plant and machinery. Deducting the additional long-term loan of Rs. 50 lakhs from the Industrial Finance Corporation of India, the balance of Rs. 70 lakhs is being raised by the present issue of share capital. The issue, the whole of which has been underwritten, consists of 50,000 equity shares of Rs. 100 each and 20,000 redeemable cumulative preference shares of Rs. 100 each carrying a dividend of 9.3 per cent free of Company's tax but subject to deduction of tax at source at prescribed rates. The existing shareholders of the Company have already subscribed Rs. 8.23 lakhs (5,289 equity shares and 2,941 preference shares), the Madras Industrial Investment Corporation Rs. 35 lakhs (27,500 equity and 7,500 preference), and the Life Insurance Corporation Rs. 2.5 lakhs (2,500 preference shares, besides agreeing to send an open application for equity shares to the nominal value of Rs. 7.5 lakhs which will rank for allotment on a par with other applications received from the public), or a total of Rs. 45.73 lakhs. The remaining portion of the issued capital, that is, Rs. 24.27 lakhs, consisting of 17,211 equity shares and 7,059 preference shares, has been offered for public subscription at par. The list opened on Friday the 27th inst., and will close on 4th February, but not earlier than 1st February.

Machinery From Skodas

The Madras Cements, it will be recalled, was incorporated on 3rd July 1957 as a public limited company for the purpose of establishing a 600-ton daily capacity factory to produce Portland cement. The first stage of the project entailing an outlay of Rs. 90 lakhs was financed out of a capital issue of Rs. 50 lakhs (Rs. 40 lakhs equity and Rs. 10 lakhs preference) and a loan of Rs. 40 lakhs from the Industrial Finance Corporation of India. The Madras Government took up Rs. 10 lakhs and has now instructed the Madras Industrial Corporation to subscribe Rs. 35 lakhs. The plant and machinery (including electrical drives) were supplied by the world-renowned Czechoslovakian firm of Messrs. Skodas. The supply and erection of plant and machinery for the second stage are also in the hands of Skodas who have made all arrangements for delivery by the end of 1961 and erection of the machinery according to schedule. Necessary import licence has already been granted by the Central Government under rupee payment terms and, in accordance with the terms of this licence, the Company has placed firm orders with Skodas.

The Company's factory is situated at a place which commands necessary facilities to ensure successful working. Large reserves of suitable limestone are available from quarries within a few miles from the factory. Suitable clay and gypsum are also available in and around the area. Further, the factory is assured of sufficient water-supply from the Arjuna River nearby for both the first and second stages of the project, as well as necessary electric power and transport facilities. One of the boundaries of the factory is the national highway (Madras-Cape Comorin Trunk Road) and a metre-gauge railway line runs closely, so that the Company is assured of transport communications. A railway siding from the Tulukkapatti railway station in the Madurai-Tirunelveli main line has already been laid to facilitate wagons moving into the factory. The factory is also just 60 miles from the Tuticorin Port which provides good scope for possible export of cement produced there. The Company has acquired extensive lands for the factory and residential buildings for both existing and expansion schemes.

The Company has an influential Board of Directors, consisting of leading industrialists such as Mr. P. A. C. Ramaswamy Raja and Mr. L. Alagasundaram Chettiar and the Madras Government's nominee, Mr. T. K. Palaniappan, I.A.S. In view of this and considering the advantageous location of the factory and the excellent demand for cement, the prospects of the Company earning decent profits are quite encouraging. Only, the Government has to fix a realistic ex-factory price for cement, as the commodity is fully controlled. The Directors are confident that they will be able to propose a reasonable dividend within a year after the second plant goes into production.

AUDIT OF COMPANIES' BRANCH ACCOUNTS

The Department of Company Law Administration has formulated rules under which companies may obtain exemption from the provision in the Companies (Amendment) Act regarding the audit of branch accounts of companies. The Amendment Act which has now come into force, requires the accounts of every branch office of a company to be audited either by the auditor or by a qualified person appointed by the company, unless a branch office is exempted from this requirement. The branch accounts of a company in respect of a financial year, which has ended or may end after the coming into force of the Amendment Act, have thus to be audited as required under the new provisions, unless exemption from such branch audit has been obtained.

The Companies (Branch Audit Exemption) Rules, which have now been published, provides that, where a company carrying on any manufacturing, processing or trading activity has a branch office, "the average quantum of activity of which during the relevant financial year does not exceed Rs. 2 lakhs or two per cent of the total turnover of the company (including all its branch and other offices), whichever is higher, the branch office will be exempt from the provisions of Section 228 relating to branch audit. The expression "average quantum of activity" has been suitably defined in this connection. In all other cases, it will be necessary for the company to make an application to the Central Government for exemption, stating the grounds on which it seeks exemption. Where the exemption is granted, the Central Government may lay down in its order, the period and the conditions subject to which the exemption will be granted. All such applications should be in the form prescribed under the rules and should be accompanied by the necessary documents. If any application is made for exemption from branch audit on the ground that the company has arranged for the audit of its branch accounts by a person, otherwise qualified for appointment as a branch auditor, even though such persons is an employee of the company, it will be necessary for the company, in case exemption is granted, to comply with certain conditions as is indicated below:

The company should give such a person access at all times to the books of accounts maintained at the branch office and furnish such information or explanation as he may require. Such a person should make out every year a report on the accounts of the branch office examined by him and forward it to the company's auditor. The management of the company should attach to the balance-sheet a certificate to the effect that no material change has taken place in the arrangement for internal audit of branch accounts.

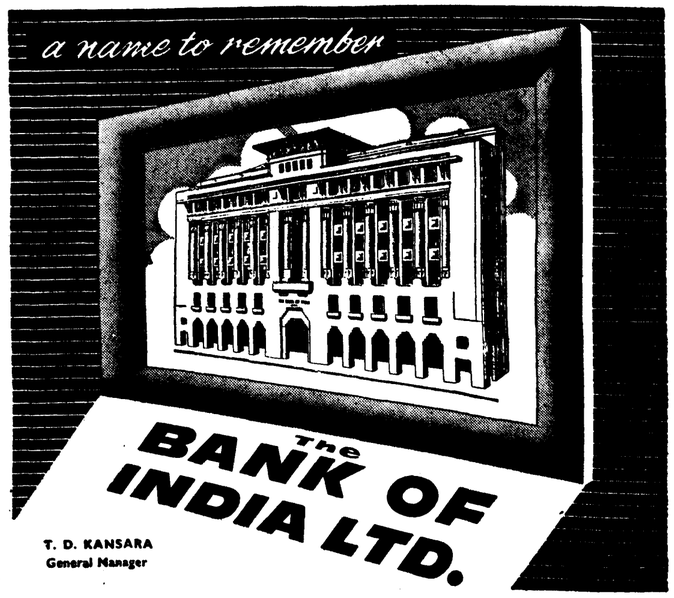
It is hoped that the provisions would encourage the larger companies to build up within their organisation sound systems of internal audit. In the case of a company engaged in any activity other than that of manufacturing, processing or trading, the rules provide that exemption from branch audit may be applied for on the ground that it has made satisfactory arrangements for scrutiny and check, at regular intervals, of the accounts of the branch office by a responsible and competent person.

MADRAS RUBBER FACTORY LTD.

The Madras Rubber Factory Ltd. proposes to offer for public subscription shortly capital amounting to Rs. 50 lakhs to meet a part of the capital requirements estimated at Rs. 220 lakhs for the manufacture of 300 000 automobile tyres and 300.000 tubes annually, besides 10 million lbs. of camelback and tread rubber, in collaboration with the Mansfield Tyre and Rubber Company of the U.S. Out of the Rs. 220 lakhs required by the Company, Rs. 120 lakhs are to be met by a loan from the U.S. Export-Import Bank, the balance of Rs. 100 lakhs representing the total issued capital (exclusive of Rs. 25 lakhs worth of shares allotted to the partners of the old firm, namely, Madras Rubbers, for taking over its entire business as a going concern as from 16th November 1950). The Mansfields of the U.S. are taking up shares of the value of Rs. 25 lakhs and the Directors and friends have contributed Rs. 25 lakhs.

The Madras Rubber was founded in 1946 and today ranks as one of the leading rubber factories in India. The factory produced goods worth Rs. 150 lakhs in 1960 and production in the current year is expected to be higher still at Rs. 200 lakhs. The total annual turnover of the Company, when the proposed factory goes into full production, will be of the order of Rs. 10 crores. It is calculated that the Company's gross profit for the year 1962 will be about Rs. 50 lakhs (net profit Rs. 25 lakhs)—Rs. 25 lakhs from tread rubber and camelback and Rs. 25 lakhs from tyres; the tyre and tube production is likely to commence by the middle of 1962. The anticipated gross profit for 1963, that is the full year of tyre manufacture, is Rs. 100 lakhs (net profit Rs. 55 lakhs).

Mr. James H. Hoffman, President of Mansfields, has agreed to join the Board of Directors, headed by Mr. K. M. Cherian, Chairman of the Press Trust of India, and a Director of other concerns. The other Directors are Messrs. D. C. Kothari, V. Emberumanar Chetty, K. M. Eapen, K. M. Mammen Mappillai, K. M. Philip, D. M. Khatau and K. C. Sood.



COMPANY MEETINGS AND DIVIDENDS

NELLIAMPATHY TEA PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala, 31st January 1961. Dividend: 13 per cent or Re. 0.26 per ordinary share, subject to deduction of tax. Transfer books remain closed from 17th to 31st January 1961, both days inclusive.

SOUTH ARCOT ELECTRICITY DISTRIBUTION CO., LTD. Annual General Meeting, Madras, 31st January 1961. Transfer books remain closed from 16th to 31st January 1961, both days inclusive.

PHALTAN SUGAR WORKS LTD. Annual General Meeting, Bombay, 3rd February 1961. Dividend: Rs. 12.00 per share, taxable. Transfer books were closed from 19th December 1960 to 17th January 1961, both days inclusive.

WOODCOTE ESTATES LTD. Annual General Meeting, Coonoor, 4th February 1961. Dividend: *Nil*. Transfer books remain closed from 28th January to 4th February 1961, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 8th February 1961. Dividend: Rs. 10.00 per ordinary share, subject to deduction of tax, payable on and after 9th February 1961. Transfer books were closed from 28th November to 20th December 1960, both days inclusive.

PUNJAB MINERALS CO., LTD. Annual General Meeting, Calcutta, 10th February 1961. Dividend: *Nil*. Transfer books remain closed from 28th January to 10th February 1961, both days inclusive.

NEELAMALAI TEA AND COFFEE ESTATES LTD. Annual General Meeting, Madras, 13th February 1961. Dividend: 7½ per cent or Re. 0.375 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 13th February 1961, both days inclusive.

SHEVEROY ESTATES LTD. Annual General Meeting, Kondappanaickenpatty, Kannankurichi, Salem, 13th February 1961. Dividend: 9 per cent or Re. 0.18 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 13th February 1961, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th February 1961. Dividend: *Nil*. Transfer books were closed from 30th December 1960 to 12th January 1961, both days inclusive.

INDIAN OXYGEN LTD. Annual General Meeting, Calcutta, 14th February 1961. Dividend: 15 per cent subject to deduction of tax. Transfer books remain closed from 28th January to 14th February 1961, both days inclusive.

KIRLOSKAR ELECTRIC CO., LTD. Annual General Meeting, Rajaji Nagar, Bangalore, 18th February 1961. Dividend: 9 per cent or Re. 0.90 per share, subject to deduction of tax. Transfer books will remain closed from 6th to 20th February 1961, both days inclusive.

KIRLOSKAR BROTHERS LTD. Annual General Meeting, Kirloskarwadi, District Sangli, 20th February 1961. Dividend: Re. 1.75 per share (net). Transfer books will remain closed from 11th to 26th February 1961, both days inclusive.

HENLEY CABLES INDIA LTD. First Annual General Meeting, Bombay, 20th February 1961. Transfer books will remain closed from 6th to 20th February 1961, both days inclusive.

SURAT ELECTRICITY CO., LTD. Interim dividend of Rs. 2.50 per ordinary share, subject to deduction of tax, for the half-year ended 30th September 1960, payable on and after 8th February 1961. Transfer books remain closed from 23rd January to 7th February 1961, both days inclusive.

OUDH SUGAR MILLS LTD. Taxable dividend of Rs. 20.00 per share, for the year ended 31st July 1960.

NEW INDIA SUGAR MILLS LTD. Taxable dividend of Rs. 3.65 per share, for the year ended 30th June 1960.

BHARAT SUGAR MILLS LTD. Taxable dividend of Re. 1.50 per share, for the year ended 30th June 1960.

CAUVERY SUGARS AND CHEMICALS LTD. Dividend of 6 per cent or Re. 6.00 per ordinary share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books will remain closed from 3rd to 17th February 1961, both days inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Dividend of Rs. 2.25 per ordinary share, subject to deduction of tax, for the year ended 30th September 1960, payable on 1st April 1961. Transfer books remain closed from 23rd January to 11th February 1961, both days inclusive.

METAL BOX CO., OF INDIA LTD. Taxable interim dividend of Re. 0.90 for the year ending 31st March 1961.

INDIA PAPER PULP CO., LTD. Taxable interim dividend of Re. 0.50 per share, for the year ending 31st March 1961. Transfer books were closed from 11th to 20th January 1961, both days inclusive.

SPENCER AND CO., LTD. Taxable final dividend of 12 per cent or Re. 1.20 per ordinary share (making a total of 18 per cent or Re. 1.80 per share, for the year), for the year ended 30th June 1960.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Taxable interim dividend of 6¼ per cent or Re. 0.625 per ordinary share, for the year ending 31st March 1961. Transfer books will remain closed from 6th to 20th February 1961, both days inclusive.

COCHIN MALABAR ESTATES LTD. Interim dividend of 9 per cent for the year ending 28th February 1961.

LABOUR

(*Concluded from page 154*)

hesitation in holding that this average was much below the standard of the living wage. He then went on to add: "In our opinion, taking the broad aspects of the concept of the living wage into consideration and bearing in mind its idealistic and expanding character it would be possible and not very difficult either to say about the given wage such as the one with which we are concerned in the present appeal, that it does not reach the standard of a living wage. We must, accordingly, hold that the claim made by the appellant that it is paying a living wage to its employees cannot be sustained."

No Rigid Formula

Dismissing the appeal of the workmen, the Judge said that it was now settled that, in awarding bonus, industrial adjudication had to take into account the legitimate claims of the industry, its shareholders who were entitled to claim a return on the investment made by them and the workmen. The Supreme Court had consistently refused to lay down any rigid formula or rule which would govern the distribution of the available surplus among the three claimants. In the present case, the Tribunal had considered all the relevant factors and had come to the conclusion that five months' bonus would meet the ends of justice. The Supreme Court, therefore, did not see any reason to interfere with the award.

It is evident from the foregoing account that the Company lost its appeal because it did not substantiate its claim to the satisfaction of the Court that its wage structure had reached the standard of the living wage. Its reliance upon the figure recommended by the Textile Labour Committee had weakened its case, because, obviously, what might have been a living wage in 1940 (which itself was doubtful) cannot now be taken as a living wage, in view of the rise in prices since then and the change in the social philosophy which form the background for the decision of industrial disputes relating to wage structure. A more relevant argument would have been that the actual wage now being paid by the Company was a living wage irrespective of what the Textile Labour Committee had recommended over twenty years back. The Company should have produced more satisfactory evidence to enable the Tribunal to define concretely what the content of a living wage meant in the present context and examine whether the wages paid by it did conform to that definition.

Unconvincing

In our opinion, the Supreme Court's judgment, too, is not convincing. It gives rise to the impression that the politician's concept of social welfare and social justice is sufficient authority for the Supreme Court to decide such issues. It is not clear from the summary of the judgment reported in the daily Press, as to why Their Lordships themselves did not decide what, in their opinion, was a living wage in 1956 or what it is now. Mr. Justice Ganjendragadkar's observations are highly philosophical and ignore economic considerations as well as the prevailing standards of salaries and wages in the country. The Supreme Court's judgment clearly implies that even a salary of Rs. 370.11 per month for clerical staff is not adequate to be described as living wage and that, therefore, an employee drawing that salary deserves to be paid five months' salary as bonus per annum. If that be the case, the employees of Stanvac are, indeed, a privileged class, for the vast majority of clerical staff, including those employed in the Supreme Court itself, are earning far less than that amount.

The implications of this judgment are clear. They are: (1) No employer, however prosperous he might be, would care to be liberal in giving a high salary to his employees, lest he should be called upon to pay large sums by way of bonus also. And (2) the system of bonus will continue indefinitely. The concept of living wage has been held as a dynamic concept, with its constituents progressively expanding. The pursuit by the actual wage of the ideal of living wage will be a perpetual one, for no sooner the actual wage reached the level which, at any point of time, is regarded as the living wage, than the latter would have shifted to a higher level. Thus, the living wage would ever remain the elusive pimpernel of industrial wages. Bonus would be a permanent system and bonus disputes would continue to plague labour-management relations. Must this state of affairs be allowed to continue?

Notices

THE AHMADPUR-KATWA RAILWAY COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE fifty-third Annual General Meeting of the Members of the Ahmadpur-Katwa Railway Company, Limited, will be held at 'McLeod House,' No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday the 24th day of February 1961, at 4-10 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1930, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. S. K. Mukherjee, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th February 1961 to 24th February 1931, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

By Order of the Board,
McLEOD & Co. LTD.,
(Sd.) C. HOCKLEY,
Secretary,
Secretaries & Treasurers.

3, NETAJI SUBHAS ROAD,
CALCUTTA-1.
Dated 6th January 1961.

Note:—Payment of the proposed Dividend, if declared, will be made on receipt of the balance subsidy from the Government of India only to those Members whose names are registered in the Books of the Company on 24th February 1961 or to their mandatees.

Application for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

MONEY MARKET FIRM BUT DULL

(From Our Own Correspondent)

BOMBAY, 24th *January*

There have been no significant new developments in the money market since our last report. The trend is one of unrelieved stringency, the inter-bank call money being quoted at 5¼ per cent. Some exchange banks, which are short of collateral to borrow from the Reserve Bank, occasionally pay even 5⅞ per cent for overnight money when the clearing goes against them. The short-term deposit rates are at the self-same levels fixed under the inter-bank agreement. There is as yet no move on the part of banks to pay more for deposits.

Sale of 91-day Treasury Bills through weekly tenders show no new features. At Rs. 2 crores, the amount offered was the same as that invited and Rs. 30 lakhs less than the applications submitted in the previous week. The average rate of accepted tenders remained unchanged at 2.580 per cent per annum. It is, however, surprising to find that, despite acute stringency in the short-term money market, sales of intermediate Treasury Bills during 18th to 21st January 1961 pulled in as much as Rs. 1,14,00,000, the yield on which is no more than 2.516 per cent per annum. The whole of this amount represents fresh money, as there were no maturities of intermediate Bills during the week under reference. The buyers of these bills must have been from the public sector, for lenders in the private sector could have easily earned substantially more by placing their surplus funds with commercial banks. Sales of intermediates are being continued.

A net decline of Rs. 15.31 crores in total deposits of banks is disclosed in the Scheduled Banks' statement for the week ended 13th January 1961. Borrowings from the banks of demand nature have fallen by Rs. 4.83 lakhs, while borrowings of time nature have registered a decline of Rs. 55.55 lakhs. The Scheduled Banks' borrowings from the Reserve Bank show a modest decline of Rs. 38.25 lakhs, but borrowing from the same source against usance bills have actually risen by Rs. 76.00 lakhs. Borrowings from the State Bank have gone up by Rs. 68.72 lakhs under demand nature and by Rs. 17.00 lakhs under time nature. Advances and bills (bank credit) have recorded a rise of Rs. 7.78 crores taking their total to around Rs. 1,209 crores. A year ago this portfolio stood at only Rs. 1,004 crores. The fall in investments witnessed in the previous week continued during the week under review—the exact fall being by Rs. 18.03 crores; this is mainly accounted for by the fall in this portfolio of the State Bank of India. Cash balances show a sharp fall of Rs. 8.01 crores.

The statement of the State Bank of India for the week ended 13th January 1961 shows a decline of Rs. 6.22 crores in deposits, whereas advances have recorded an increase of Rs. 8 crores. Money at call and short notice is steady at Rs. 1.07 crores. The total cash shows a modest fall of Rs. 1.32 crores, while there has been a contraction of Rs. 15.05 crores under investments.

The trend of the gilt-edged market is quietly steady. Turnover is greatly restricted for want of buyers. The Reserve Bank has made no change in its policy of open market operations. Excepting the loans that mature this year and the next, others are taken up by it only against a switch. Only very minor changes have occurred in prices. Among the Central loans, there has been a slight rise of 5 nP in the 3½ per cent 1967 third National Plan Bonds. All other Central loans are unchanged over the week. Among the State loans, a small rise of 5 nP has been registered in the case of 4 per cent 1969 Madras Loan and 4 per cent 1969 U.P. loan. The rest of the State loans show no variations whatever.

In the foreign exchange section, the sterling dollar rate shows only a fractional change. The latest available rate (as on 24th January) is 280.610-280.640 cents per £ for spot and 280.030-280.060 cents per £ for three months' forward. As compared with the rate as on 18th January, the spot rate shows a negligible decline of 0.06 cent.

YARNS FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, 24th *January*

The firm trend noted in the yarn market last week gathered further momentum during the week under review. Art silk yarns met with renewed buying support on apprehensions regarding depletion of floating stocks. Traders noted the recent statement of the Textile Commissioner at Bangalore that the supply position of art silk yarn was rather tight at the moment and would continue to be so for some time to come. He expressed his inability to order an increase in the number of cases made available to Bangalore and Mysore as requested by the Mysore Art Silk Yarn Merchants' Association, since the distribution of art silk yarn was being done by the manufacturers themselves and that there was no system of distribution organised by his Office. He, however, said that he would have no objection to the Association being made the agency for getting supplies of yarn allotted to small powerloom units.

Staple fibre yarns also recorded an improvement in prices. This followed support induced by reports that the authorities had deferred for consideration the proposal envisaging stamping of prices. There was also some fresh buying from certain consuming centres.

Cotton yarns ruled distinctly firm. The firmness was engendered by good enquiries from handlooms and powerlooms and encouraging advices from piecegoods markets. Several weavers were said to be inclined to cover their requirements of good quality yarn. Following these reports and on fears that the import quotas for Egyptian and East African cottons might not be large, finer counts yarns scored handsome gains.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days ago.

	24-1-1961	18-1-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupreous Bemberg (100 kg.)		
February	2,445.00	2,429.00
April	2,390.00	2,390.00
60/1 Cupreous Bemberg spot	2,425.00	2,425.00
120 Japan (per 100 kg.)	1,399.00	1,395.00
150 Japan (per 100 kg.)	1,653.00	1,653.00
120 Italy (per 100 kg.)	1,322.00	1,294.00
150 Italy (per 100 kg.)	—	1,598.00
Staple fibre yarn—		
40×2 February (per 20.72 kg.)	814.00	802.00
40×2 April (per 20.72 kg.)	807.00	—

80s Mahendra	69.69	68.68

GOLD AND SILVER TOUCH NEW PEAKS

(From Our Own Correspondent)

BOMBAY, 24th *January*

Never in the history of the bullion market before had prices touched such peaks as during the week under review. Ready gold was quoted yesterday at as high at Rs. 121.05 per 10 grams (0.85 tola) and silver today at Rs. 207.10 per kilogram (85.7 tolas). The highest levels seen last year were Rs. 117.89 and Rs. 198.18, respectively, both on 5th May. Last week's closing rates were Rs. 116.75 for gold and Rs. 202.15 for silver. The sharp rally in prices this week followed hectic buying by bulls who feared that the coming weeks would witness an acute shortage of supplies. The fears stemmed from reports suggesting excellent offtake in upcountry centres and scarcity of offerings. It was stated that a further quantity of 10,000 tolas of contraband gold was recently confiscated by the customs authorities. Even the reported move of the Calcutta bullion market authorities to convene an emergency meeting to consider measures for restraining bullish activity had no effect. Nor was the imposition of margin in silver of any avail.

The average daily offtake of gold and silver during the week was larger than in the previous week, being 5,500 tolas and 18 bars, as against 4,000 tolas and 9 bars, respectively. The average daily arrivals of gold were smaller at 4,725 tolas, as against 7,000 tolas, while those of silver was higher at 24 bars, as against 15 bars. The floating stocks are reported to be around 65,000 tolas of gold and 600 bars of silver.

A striking feature of trading in the bullion market during the week was that both ready gold and silver which were quoted at a discount under the forward for a long time were able to command a premium. The actual premium was 25 nP in gold yesterday (it was 5 nP today) and 10 nP in silver today. The discounts towards the close of last week were 50 nP and 20 nP, respectively.

In the forward section, the rate for transferring commitments from the *Maha* (31st January) settlement to the *Fagun* (March) settlement, which was against bulls early in the week (the actual rate on Thursday the 19th inst., was 50 nP), turned in their favour (that is, against bears) to the extent of 20 nP yesterday (Monday). Today, however, it again turned against bulls, the actual rate being 5 nP. In silver, both the *Maha* and the *Fagun* settlements were on par today at Rs. 206.80. Previously, the carryforward rate was against bulls, though it gradually declined from 95 nP on Wednesday last week to 20 nP yesterday (Monday). On Friday the 20th inst., the bulls in the *Maha* settlement were required to pay a margin of Rs. 150 per bar under By-law 33C(i) (A), following the rise of more than Rs. 7 from the starting rate.

The world price for gold in the London bullion market was practically unchanged at last week's level of $35.40-$35.55 per fine ounce. The U.S. gold drain continued in the week ended 18th January. The total stocks as on the 18th inst., amounted to $17,510 million, a drop of $115 million over the week. Despite firmness of world gold and good demand mainly from the Continent, ready gold in London declined from 253*s.* 1*d.* to 252*s.* 8*d.* The easiness was due to the firmness of the pound sterling *vis-a-vis* the dollar. Ready and forward silver, however, continued unaltered at 79⅛*d.* and 79⅛*d.*, respectively, as also ready silver at 91.375 cents.

The following table shows the trend of the market during the six days review:

	24-1-1961 (closing)	High	Low	18-1-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.995 fine)	120.45	121.05	117.10	116.75
Forward :

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECEDE

(From Our Own Correspondent)

BOMBAY, 24th *January*

The recovery in cotton futures witnessed towards the close of last week has proved to be a short-lived affair. The bullish factors, which had imparted strength to the market, have given way to bearish influences. Speculative support based on expectation of the third instalment of Indian cotton quota to mills and a second export quota for Bengal *Deshi*, which was responsible for the recovery in prices towards the close of last week, is conspicuous by its absence at the time of writing. Excellent crop prospects and seasonal pressure of new crop have actually prompted renewed selling. Current crop ideas centre round 5 million bales, as against 4.8 million bales a few weeks back. Some private estimates place the crop still higher at 5.2 million bales. Increased arrivals of new crop which are twice as fast as in the last season, too, are exerting a downward pressure on prices. The inability of mills to make large purchases because of the absence of unutilised quotas with them has accelerated the downward trend of spot prices. The third instalment of Indian cotton quota has not been announced till the time of writing this report.

Influenced by these factors, the I.C.C. April 1961 contract declined from Rs. 591.25 at the beginning of the week to Rs. 583.00 yesterday. Opening higher at Rs. 545.50 today, the contract improved to Rs. 586.50, thanks to short covering, before closing at Rs. 585.25. The net loss over the week is Rs. 6.75.

In the spot market, interest in popular varieties like Vijay, Digvijay, L. 147, Khandesh, Berar, Co2 is well maintained. But turnover is limited since spinners cannot make large purchases in view of the absence of quota. Expectation of a further fall in prices is also preventing mills from going in for ready lots in a big way. Consequently, prices have tended to recede. Vijay cotton was done today at Rs. 940 per candy, L.147 at Rs. 1,020 and Digvijay at Rs. 990.

Export inquiries are reported for choice Bengals and Yellow Pickings. A moderate volume of business was put through on a subject-to-licence basis this week.

Exporters are much agitated over the delay in the issue of fresh export quota. They point out that considering the crop position and the trend of mill demand and the quota so far issued, the Government's reluctance to issue even 50,000 bales more for export is difficult to understand. Even in a year of small crop, such as the last one when production of Bengal *Deshi* cotton amounted to only 287,000 bales, an export quota of 150,000 bales was issued. In the current season, namely, 1960-61, Bengal *Deshi* crop is estimated at 350,000 bales which is sufficient to meet the requirements of domestic mills, which normally do not exceed 150,000 bales per annum, in full and leave a sizable quantity for export.

Mill demand for foreign cotton this week was confined to East African growths the prices of which firmed up, thanks to the high rate quoted by shippers. Certain Sudan and Egyptian cotton also evoked the attention of mills. Current rates for selected foreign cotton (in rupees per candy of 784 lbs.) are as under: E. African B.P. 52 1,365; E. African B.P. (U.N.U.G.) 1,890; E. African Busoga 1,340; E. African Jinja 1,280; Egyptian Karnak 1,840; and Sudan G4S 1,680.

Karachi cotton futures market, after having ruled firm in the first half of the period under review, tended to look down towards the close. Earlier gains were shed and both the January and March contracts closed unchanged at Rs. 75 and Rs. 72. Export interest continued to be small and domestic mill demand slack.

Cotton futures on the Alexandria Cotton Exchange advanced on speculative support based on expectation of a revival of demand from foreign countries. Both the Karnak and Ashmouni contracts made modest gains. The favourable crop news, however, acted as a restraining influence.

Quietly steady conditions prevailed in the Liverpool cotton futures market during the period under review. In the absence of fresh developments trading was dull and inactive. A moderate volume of hedge selling was absorbed in local trade covering and mill fixation.

Cotton futures in the New York market recorded modest gains during the week. Improved trade demand and Commission House support resulted in a hardening of prices. Speculation about probable changes in farm legislation and support prices continued to be the main influencing factors.

SEEDS DRIFT LOWER

(From Our Own Correspondent)

BOMBAY, 24th *January*

The pronounced firmness of oilseeds noted last week abated during the week under review. In fact, an easy trend was in evidence, the closing prices of major seeds and oils being well below those at the close of last week. In view of the high levels touched in the previous week, local consumers were hesitant to enter into any sizable fresh commitments. Besides, there were no encouraging overseas enquiries for oils. The groundnut section ruled quiet, despite tight supply position. The maturing crop contract, having touched the ceiling level, did not evoke any interest. February 1961 contract, too, tended to drift lower on technical considerations. Spot values were slightly lower as buying by *vanaspati* manufacturers and crushers tapered off. The outlook for groundnut oil exports continued to be unfavourable.

In the castorseed section, there was some selling pressure induced by protracted absence of any U.S. enquiries for castor oil. Actually a report suggested a fresh wave of selling by Brazil in the American market. There were some arrivals of new crops.

In sympathy with other seeds and oils, linseed was easy. The decline in raw cotton values, following better arrivals, led to selling in cottonseed. Sesamum seed and oil were, however, well maintained. Offtake was quite good, while supplies were tight.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	24-1-1961	18-1-1961	11-1-1961
Groundnut	Rs.	Rs.	Rs.
February 1961	220.00	220.00	218.50
May 1961	217.00	218.00	215.75
Nizam bold	48.00	48.25	46.00
Coromandel ready	48.50	48.75	46.50
Khandesh quality	48.50	48.75	46.50
Oil ex-mill ready*	20.25	20.40	19.50
Railway receipts*	20.00	20.25	19.25
Castorseed			
May 1961	176.25	177.00	176.25
Ready Madras	34.75	35.12	34.62
Ready Kanpur	33.50	34.00	33.50
Oil B.S.S.†	15.10	15.10	15.00
Oil commercial†	14.20	14.20	14.05
Linseed			
May, 1961	35.00	35.31	35.22
Bold ready	36.75	36.75	37.25
Oil ready†	16.60	16.65	16.80
Cottonseed			
February 1961	92.25	93.50	91.50
May 1961	92.75	93.25	91.50
Niger seed	38.50	38.00	39.50
Kardi seed	26.80	26.00	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 100 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

JUTES RISE

(From Our Own Correspondent)

CALCUTTA, 24th *January*

With a rise in prices of both jute goods and raw jute, originating from the aggressiveness employed by fibre sellers and stockists, firm conditions prevailed in the jute markets during the week under review which was short by two working days on account of holidays on Saturday and Monday (*Basant Panchami* and Netaji's birthday). That overseas buyers were reserved and reluctant to buy for replenishment of stocks was only too evident from the dullness in the freight market for gunnies. Shipping space offered for gunnies was abundant but acceptance was limited. All the same, much encouragement was derived by the report that U.S. consumption of burlap in December was maintained at the November level of 72 million yards. Stocks in the U.S. at the end of December were higher by 2 million yards at 257 million yards. Reports from the U.S., following the inauguration of President Kennedy, held out hopes that the new administration would launch a programme for stimulating economic activity. This should be noted against the background that in the year taken as a whole U.S. consumption was lower by 40 million yards, as compared with 1959. Considering that it would take some time before the new administration in the U.S. could take measures for stimulating the country's economy and also that burlap consumption usually tended to fall between March and June, any immediate improvement in that country necessitating fresh purchases to show greater interest in hessian at least before the next jute season is not anticipated.

Meanwhile, during the week, sustained interest was shown by U.S. buyers. In heavy goods, Australia showed interest and further quantities of woolpacks and cornsacks were lifted. Continental interest was also in evidence. Local bazar buying in both hessian and heavy goods against covering was also a feature. Besides, purchases for coastal shipment and upcountry consumption was reported. As compared with stocks of goods with mills, the quantities that came to the hands of genuine buyers were indeed small, and were in fact no justification for the cause for in prices. The major substance of the fibre market. the rise in prices came from the fibre market. Sellers of fibre continued to demand high prices on the plea that they should utilise the current wave of shortage to make up their earlier losses. It would be remembered, that earlier in the season, thanks to the unexpected rise in fibre prices, sellers had to incur a loss of Rs. 15 to Rs. 20 a maund in meeting their firm commitments to mills. If the price is now maintained at Rs. 60 to Rs. 65 a maund, as it seems very likely, the sellers, it is stated on their behalf, would recoup all the earlier losses, since they had bought jute when the price was about Rs. 50 a maund.

In the meantime, a factor which has gone to the aid of sellers is the marked decline in arrivals of good jute. What jute is arriving is of inferior quality, which is finding ready buyers. Of the fresh arrivals, a good portion is the *jungli* variety since there has been some improvement in the transport facilities from the *jungli* districts. There have been reports justifying the view that the propensity to stock has shifted from traders to medium-scale and large-scale cultivators. This year's fibre prices are sufficient for the farmers to show an indifference to sell the remainder of their produce. Their cash position has improved by a considerable degree, and this was revealed, if need there was, when, contrary to anticipations, there were no desperate sales to meet the cash requirements of the last Puja. Mills are reported to be placing fibre to see them through for working about 12 weeks based on 42½ hours a week. However, they must keep on buying, otherwise as the season would close they would have to pay fancy prices for the fibre if the mills only desired to keep the looms in production. Judging from the fact that mills in the past had given every co-operation to sellers of jute in an attempt to minimise the latter's losses for fulfilling commitments entered into at a time when prices were lower and the hardening trend was not anticipated, it is to be expected that sellers would show similar consideration to mills and restrain pushing up prices. Further, a point to be taken note of is that all arrivals henceforth would contain a greater portion of the inferior varieties, such as *jungli* and mesta. The assistance which mills had offered to sellers when the latter were on the defensive and appealing position included extension of delivery dates, meeting a portion of the losses by settling differences at market rates, placing of high-priced contracts with those sellers who had earlier entered into the lower-priced contracts.

On Tuesday last, despite profit-taking, prices of goods were higher. Sellers were hardly available. Ready B. twills rose to Rs. 194.50 from Rs. 192.00, and ready hessian 40″ 10 oz. to Rs. 64.25 from Rs. 64. There was profit-taking on Wednesday, and buyers were reluctant to support the high prices. At the decline, some deals for near deliveries in both hessian and heavy goods were put through. B. twills moved down to Rs. 191.75 and hessian 40″ 10 oz. to Rs. 62.10. Soon reports from the U.S. that buying was likely to increase were received, and this, coupled with the local buying, pushed up B. twills to Rs. 192 and hessian 40″ 10 oz. to Rs. 62.25 on the following day. Local bazar buying was again a feature on Friday and B. twills hardened to Rs. 192.50 and hessian 40″ 10 oz. to Rs. 62.65. The market has remained closed since then.

Fibre prices were fully firm. Arrivals declined, and although the closing levels were much the same as the opening rates, this should be noted against the fall in the quality of fibre now offering. Considered against this factor, prices would appear to have closed with a substantial gain. January-February daissee bottoms opened higher at Rs. 60.50 a maund and closed at Rs. 60. Both northern bottoms and Assam bottoms at Rs. 57 and Rs. 57.50, respectively, closed Re. 1 lower on balance, but this decline should be noted against the rapid fall in quality, a phenomenon which should also be attributed to the keen demand for fibre, albeit the oft-repeated official view that the crop is more than sufficient to see the mills through comfortably until the new crop arrives.

GOOD DEMAND FOR TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 17th *January*

A smaller quantity of 435,000 kilograms was offered in Sale No. 3 held today. Quality generally showed a slight improvement over last week. Good demand prevailed throughout the sale. Plain and low medium broken grades met with useful support and were steady whilst fannings under this category met with better support and were dearer. Mediums and good mediums, especially those with improved quality, often sold at prices above last week's. There was keen competition for clean black leaf fannings, which was the strongest feature of the sale. C.T.C. and legg-cut types were well supported, although these sold at easier rates. Whole leaf grades continued firm whilst a small selection of tippy teas met with useful demand.

	1961 Rs.	1960 Rs.
Low medium	4.60-4.90	4.63-4.85
Medium	4.95-5.20	4.85-5.18
Good medium	5.25-6.00	4.96-5.40
Quality	6.00-9.10	5.40-9.04

The average price realised in Sale No. 3 was Rs. 5.11 per kilo as against Rs. 5.01 last week and Rs. 5.12 in the corresponding sale in the previous year.

229,000 kilograms were offered in Sale No. 3, held on Thursday 19th January. Quality generally showed a seasonal improvement. There was strong and general demand. Highgrowns received better support and were dearer following improved quality. Mediums and low mediums were absorbed readily at fully firm rates and were often up to 10 nP per kilo dearer with buyers following quality. Coloury mediums registered considerable advances where quality showed improvement. Residual descriptions were a strong feature and were dearer by 10 to 20 nP per kilo. C.T.C. and legg-cut types shared in general upward trend of the market and realised attractive prices.

The average price in Dust Sale No. 3 was Rs. 5.00 per kilo, as compared with Rs. 4.93 in the previous week and Rs. 4.36 in the corresponding sale last year.

Export Quota: The market remains unchanged with large sellers at ½ nP with no ready buyers.

London: North Indian and other growths:—In Monday's auction there was a good demand especially for plain teas and better Assams which came to a firm to dearer market. Thin liquoring low mediums, however, were irregular and occasionally easier but all other descriptions were steady. Plain broken pekoe remains at 3*s.* 9*d.*

Ceylon and South Indians:—In Tuesday's sale a total quantity of 22,892 packages was on offer and of this quantity 6,892 packages were from South India. The market met with good general demand. Plainer descriptions came to a steady market whilst there was some irregularity in prices realised for better liquoring teas and these were sometimes easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:—

"*Sale No.* 4:—400,000 kilograms. Market irregular. Opened barely steady for plain and low mediums, but firmed towards end. Medium and good medium strong to dearer; with quality high-grown brokens restricted, demand at lower prices. Similar fannings firm."

TEAS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 24th *January*

During last week's sales for internal consumption, the good demand in evidence pushed up prices. No export sale was held yesterday in view of the holiday in this part of the country. Although tea bookings were fair this week, they showed a fall, as compared with the previous week, suggesting the termination of the season's heavy despatches to the U.K. In the week ended 13th January, U.K. tea stocks were higher by 7½ million lbs. at 126.7 million lbs. Reports from the Mincing Lane auctions last week indicate that the decline in prices there was not only due to the increased quantity of tea on offer but also to the lack of adequate quality.

Last week's upward trend in prices of dusts offered for internal consumption, trade circles believe, is likely to be continued in the coming weeks. With the shortfall in output in 1960, tea offering for local consumption is lower. Stocks in the country are not believed to be satisfactory, and taking into consideration the fall in output, exports in 1960 amounting to 155.6 million kgs., although less by 19.1 million kgs., as compared with 1959, should be considered to have risen. For, in 1960, tea output in North-East India amounting to 527.03 million lbs. has disclosed a decline of 34.20 million lbs. An attempt to increase output in the closing months of the year was made, but for this, the fall for the whole year should have been greater. In December 1960, the output was 13.47 million lbs., or higher by 362,000 lbs., as compared with December 1959.

With the sales of tea fit for export nearing completion, the domestic sales are expected to attract greater attention in the coming weeks. Consumption within the country has increased, and with the third Plan proposing to spend large sums on capital-consuming projects, people are likely to be left with increased purchasing power. If production of consumption articles, such as tea, is not increased to keep a balance with the increased developmental expenditure, export earnings from tea would be affected. Given minimum incentives, there is no reason why the tea gardens should not be expected to increase the acreage under tea and at the same time adopt more intensive methods of planting. The tea industry has been making strenuous attempts to get New Delhi understand the problems facing it but judging from the official reticence, the Government of India does not seem to have come face to face with the realities of the industry. In a word, rationalisation of the tax structure is the minimum incentive the tea industry expects.

Dusts on offer during last week's sales for internal consumption amounted to 21,470 chests. As stated, demand was good and prices rose. Good C.T.Cs added 10 nP, but the best lots eased in an irregular trend. The small and bright teas were dearer. An irregular trend was also recorded in orthodox teas, with the brighter liquoring and the smaller teas adding in price. Leg-cut teas were fully firm. Darjeelings recorded modest gain in prices. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 5.90 to Rs. 6.40, medium Assam C.T.C. dust Rs. 5.50 to Rs. 5.70, legg-cut dust Rs. 5.15 to Rs. 5.35, medium Assam dust Rs. 5.00 to Rs. 5.30, and plain orthodox dust Rs. 4.80 to Rs. 4.95.

Leaf on offer amounting to 510 chests met with good demand. Prices were dearer.

TANNED HIDES FIRM

(From Our Own Correspondent)

MADRAS, 23 *January*

E.I. tanned hides ruled firm, while calf skins were weak. U.K. interest centred round light weight cow hides, and buffalo hides. Inland demand for cow hides inferior grades continued to be brisk. Sale to the U.K. was not profitable.

Tanned goats were quiet for light weights, and steady for other averages. Tanned sheep were unchanged.

In the German tanned skins public sales which commenced on 16th inst., demand was selective and good parcels fetched attractive prices.

Total exports from the U.K. in 1960 amounted to £3,536 million, 6 per cent higher than those in 1959. Imports rose by 14 per cent to £4.559 million. Re-exports amounted to £142 million, as compared with £131 million in 1959. It is pointed out that 1960 was a year of mixed performance for the British economy. Industrial production remained high, but particularly, near the end of the year, it did not show the rise which might have been expected. The level of national consumption, so far as can be estimated, declined as the year went on. On the other hand, fixed investment, especially in manufacturing industry, rose very rapidly in the third quarter of the year, and looks like continuing to do so. Although there have been some signs of slackening, demand for labour remains high. On the wages and prices front, while the slow upward drift of wages and prices continued in the fourth quarter, the retail price index continued to reflect price stability. The gold and convertible currency reserves continued to rise buoyantly throughout the year. They were given a boost in December by a large inflow from the American Ford Motor company of Detroit, but they have maintained a genuine rising trend over the twelve months, in spite of considerable repayment of debt to the International Monetary Fund (the net gain over the year was not far short of £200 million).

INDUSTRIAL PEACE

(*Concluded from page 142*)

workers and that alone would bring them the strength to bargain effectively.

But, at the same time, I would like to provide certain safeguards not only to face critical situations that affect the vital industries by way of emergency regulations, but, in the normal course, to avoid strikes and lock-outs in all industries, major and minor, and of this we should be unequivocally agreed and without any reservation.

Before I close, a word about inter-union rivalry. Take one instance. I am informed there are nearly 1,700 unions in the State of Kerala. For a small State, with few industries, this number is indeed too large and no doubt the formation of splinter and mushroom unions is an unhealthy development which should be checked. In bringing about industrial peace and good industrial relations, there should be the whole-hearted co-operation of all sections of labour. I would plead with the leaders of all trade union affiliations to see that a code of conduct is evolved in their inter-union relations and they accept the principle that they would not waste their time in weaning away labour from one union or the other, but, on the other hand, work towards unity at least on an industry-wise basis. My trade union friends will agree—whatever their affiliation be—that their aim is to secure the economic well-being of the workers and the improvement in their standard of living and provide them with greater scope in the task of national reconstruction.

As one with a fair degree of experience in the trade union field, I feel the need of the hour is to create a favourable atmosphere and bring about industrial peace, say, for the next five years or so, so that it could help the employers, workers and the general community to attain quick progress. I must specially tell the workers that, in the course of my long experience, I have always found that it never pays to quarrel with the management. Let us not regard them with hostility or consider their interests counter to that of the workers. In the long run, it is the workers who would gain if more and more industries are established and run successfully. The employers, too, should appreciate that, however much they invest their capital, the industry would refuse to run, if the workers refuse to co-operate. Our watchword today should be "Produce or perish." We need not worry unduly of the small details. We will be able to solve them as we go along, but our first and foremost job is to accept that we need have an industrial truce and see to it that we set an example for others to follow and a beacon-light for others to emulate.

BANKING

(*Concluded from page 150*)

economic growth, which is the unintended by-product of restrictions, is a most important consequence. It is thrown into relief if we compare the recent performances of our economy with that of our Common Market neighbours across the Channel."

Such a comparison shows that, between 1959 and 1960, the exports of the Six to the outside world rose by 22 per cent exactly twice as much as the rise in British exports in the same period. In the case of industrial production also, similar contrasts are found. From early 1955 to the third quarter of 1958—this is the period of credit restraints in Great Britain—British industrial production was stagnant, while the production in the Common Market countries went ahead by 22 per cent. The fundamental objection of Sir Oliver to the credit restrictions would be clear from the following extract from his statement:

"The general financial controls—high interest rates and credit restrictions—do not operate primarily on the right strands of demand. They strike, in the first instance, on investment spending rather than consumption spending. They not only interrupt the progress of the economy but further tend to depress the level of investment over the long run, thus retarding the much-desired rise in the standard of living. They have given us stability and solvency only at the cost of stagnation."

How then can the British economy escape from this threat of long periods of stagnation without sacrificing other desirable objectives such as internal and external stability? While Sir Oliver admits that there cannot be any magic recipe for combining growth with stability, he has suggested certain lines of thought worth exploring for achieving the above objectives. His main suggestion is that, when the overall demand is growing too fast for stability the strand of demand which should be restricted is consumer demand. The trouble with the British economy, according to him, is that it is not generating sufficient savings and the "supposed need to curb investment" has arisen only because the "will to save has not been strong enough." Sir Oliver declares that the obvious way to augment savings is to operate on consumer demand through the mechanism of the Budget. He pleads for a general agreement that, in both public and private sectors, investment expenditure should have priority over expenditures that promote consumption. He even suggests some specific measures to bring about a reduction in consumer expenditure. First, in the affluent age, the population might contribute something more as individuals and not as taxpayers, towards the cost of the welfare services. Secondly, steps should be taken to revise the prices of the products and services of the nationalised industries. And, thirdly, certain fiscal instruments such as a payroll tax and purchase tax which would restrain consumer spendings might be introduced. To the objection that his recipe would affect the ordinary man, Sir Oliver's reply is that "this is unavoidable," because the object of these fiscal measures is to restrain consumption, and it is the general population which does most of the spending. In concluding his thought-provoking statement, Sir Oliver warns that "it is impossible to achieve the general objective of restraining consumption instead of investment, putting a curb on spending rather than on saving without affecting the ordinary man."

Living Beyond Means

Sir Oliver Franks is not alone in placing the accent on budgetary measures to regulate the volume of spending in the economy. The Chairman of Barclays Bank, Mr. Tuke, too, emphasises the need for having a balanced budget as well as courage on the part of the administration to say "no" to expenditure which cannot be financed out of revenue. He boldly declares that, if Britain could go back to a truly balanced budget, many of its financial problems would melt away. While conceding that borrowing is the accepted method of paying for the wars, and that occasional budgetary deficits may be the proper treatment for a trade recession, Mr. Tuke maintains that, in a period of boom, there should actually be a budget surplus. He observes: "Even more serious than the inflationary effect is the immorality of living year after year beyond our present means. We have no right in times of peace and great prosperity to load on our descendants the cost of our present luxuries nor even of the creation of additional assets which are in one sense additional liabilities because they cost more to run."

Mr. Tuke also devotes considerable attention to measures for bringing about relaxation of credit restrictions when circumstances point in that direction. A mere change in the Bank rate, according to him, is not likely to have any marked effect on the internal situation. Even the release of special deposits may not enable the banks to lend more money immediately. Hire purchase, of course, provides scope for bringing about quick results. Mr. Tuke suggests that for expanding bank credit substantially, some flexibility should be introduced in the traditional liquidity ratio of 30 per cent. He maintains that this ratio is historically a survival from the principles of private country bankers and should not be considered sacrosanct in the present age. If the banks now accept a much wider swing in the standard liquidity ratio, it would enable them to increase their lendings generally when that is desirable, without creating embarrassment to the gilt-edged market. It would also make it possible for the banks to participate more readily in financing the expansion of the country's exports and in any future schemes for the development of overseas territories.

The leaders of British banks have also given much thought to the ways and means of stimulating their country's exports. Sir Harold Bibby, Chairman of Martins Bank, suggests that the Government should make a valuable contribution to the export drive by simplifying still more the documentation for exports. According to Sir Harold, a longer duration for E.C.G.D. guarantees and the permission to discount the guaranteed bills at the Bank of England would make export trade more widely attractive to present exporters as well as to prospective newcomers. Such discounting facilities would solve the problems of finding medium-term capital for exporters. Mr. Tuke, on the other hand, wants the Government to pay simultaneous attention to imports for bringing greater equilibrium in the balance of payments. Emphasising the need for effective action on the import front, he observes: "We must, of course, be ready to import raw materials for our manufacturing industries, but high personal spending can promote excessive importation of consumer goods." In order to restrict imports of these goods, he exhorts the Government to correct the present tendency not only by monetary restrictions and budgetary action but better still by reducing its own demand on the economy.

The Chairmen of British banks have not cared to pay any attention in their annual statements to the problems of granting capital assistance to underdeveloped countries. Their silence on this problem of the day is conspicuous and it is strange that even Sir Oliver Franks, who visited India and Pakistan last year as a member of the World Bank mission has said nothing on it. Only the Chairman of Martins Bank makes a passing reference to overseas investment and states that Britain could make investment abroad only to the extent of its current surplus on overseas account. He then proceeds to comfort himself by saying that investments out of retained profits earned by existing businesses overseas is making a substantial contribution to foreign investment. The indifference shown by British bankers to this pressing international problem which is in striking contrast to the observations made by the British Prime Minister and the Chancellor of the Exchequer in recent weeks, probably means that either they have still not outgrown their traditional conservatism or they regard the issue as not important enough to receive treatment in their annual statements.

INDIAN OVERSEAS BANK LTD.

The results of the Indian Overseas Bank Ltd. for 1960 are gratifying, the net profit (subject to audit) having gone up smartly from Rs. 35.64 lakhs (in 1959) to Rs. 44.66 lakhs. After raising the provision for taxation from Rs. 12.50 lakhs to Rs. 18.50 lakhs, a larger sum of Rs. 9.50 lakhs has been transferred to the reserve fund, as against Rs. 7.50 lakhs in the previous year. The provision for bonus to staff has been increased from Rs. 5 lakhs to Rs. 5.50 lakhs. The Directors have recommended a dividend of 14 per cent subject to tax, which is the same as last year. This would give a tax-free return of 9.8 per cent to equity shareholders and absorb a sum of Rs. 10.50 lakhs, which is Rs. 1.12 lakhs higher than in the previous year. The undistributed surplus is larger at Rs. 1.92 lakhs as against Rs. 1.26 lakhs a year ago.

CANARA BANK LTD.

The working of the Canara Bank Ltd. during 1960 has yielded satisfactory results. The net profit (subject to audit) has recorded a rise from Rs. 18.30 lakhs to Rs. 20.30 lakhs. This increase is on top of an expansion of Rs. 4.30 lakhs achieved in the preceding year. After raising the provision for taxation from Rs. 4.75 lakhs to Rs. 7.65 lakhs, a sum of Rs. 3.50 lakhs has been transferred to the reserve fund, which had received Rs. 5 lakhs last year. The provision for bonus to staff has been increased from Rs. 2.40 lakhs to Rs. 3.10 lakhs. The Directors have decided to maintain the dividend on equity shares at the last year's level of 15 per cent, subject to tax, which gives a tax-free return of 10.5 per cent. The dividend on preference shares has been raised to 5.56 per cent from 5 per cent last year. Both the dividends require an amount of Rs. 6.02 lakhs, leaving a small balance of Rs. 45,000 for carrying forward to next year. Over the year, the deposits of the Bank have increased from Rs. 28.93 crores to Rs. 30.82 crores.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of these companies which close their accounts yearly dividends shown are for their financial year.
