Ratio to deposits of—	%	%	%	%
Advances	64.8	63.7	61.1	61.5
Investments	32.7	36.0	35.9	35.7
Cash	9.1	8.7	10.6	11.1

A study of the profit and loss account of the Bank shows that expenses other than interest paid have gone up by Rs. 12.01 lakhs to Rs. 54.06 lakhs and interest paid less markedly by Rs. 5.75 lakhs to Rs. 52.38 lakhs. Of the increase in expenses, as much as Rs. 9.35 lakhs is accounted for by staff (salaries, allowances and provident fund) and Rs. 1.06 lakh by rent, taxes, lighting and insurance. Depreciation, including repairs to Bank's property, has been increased from Rs. 1.57 lakhs to Rs. 2.18 lakhs.

The changes in the balance-sheet items more clearly reflect the impressive performance of the Bank in the year under review. The turnover of the Bank, as indicated by the balance-sheet total, shows an expansion of Rs. 89.40 lakhs. The deposits of all categories have recorded a handsome increase. Of the expansion of Rs. 178.07 lakhs in aggregate deposits, the shares of fixed and savings deposits are Rs. 93.71 lakhs and Rs. 65.85 lakhs. The current deposits, however, have increased only slightly by Rs. 18.51 lakhs. Over the year the advances have moved up from Rs. 10.90 crores to Rs. 12.24 crores representing a rise of 12 per cent. The proportion of secured advances to total advances has recorded a rise from 90 per cent in 1958 and 1959 to 84 per cent in 1960, which is a welcome feature. Investments, on the contrary, have been reduced from Rs. 7.35 crores to Rs. 6.17 crores, and the ratio of investment to deposits has declined from 36 per cent to 32.7 per cent. Further, as the Bank's deposits expanded substantially, even more than the growth in advances, the Bank did not have to rely on borrowings from other banks to meet the growing demand for funds from its clients and such were *nil*, as against Rs. 146 lakhs in the previous year. The Bank's capital at Rs. 47.21 lakhs is supplemented by reserves of Rs. 42.50 lakhs. Thanks to the judicious policy pursued by the Bank to rep'enish its reserves, the reserves have doubled themselves between 1957 and 1960.

The Bank continues to open new offices. Thus, during 1960, it opened in all eight new branches, bringing its total branches to 140. In addition, the Bank absorbed one bank functioning in Kerala State, namely, the Asiatic Mercantile Bank Limited having branches at Trichur and Ernakulam. Another noteworthy feature of the Bank's working is the unique investment service, which it has pioneered. Under this scheme, a separate department of the Bank gives expert financial guidance to investors, so that they may be able to invest their surplus funds in sound and remunerative shares and securities. It is stated that the response to the scheme, especially from the middle class investors, has been very encouraging.

STATE BANK OF HYDERABAD

FIRST DIVIDEND AFTER NATIONALISATION

ENCOURAGING progress is disclosed by the report of the State Bank of Hyderabad (General Manager: Mr. Satya Dev, Hyderabad) for the twelve months ended 31st December 1960. The Bank has been functioning as a subsidiary of the State Bank of India with effect from 1st October 1959. The profit has staged an impressive rise from Rs. 5 lakhs (for 1959) to Rs. 9.15 lakhs. This improvement is due to the substantial rise in the quantum of advances and the better terms on which the Bank granted accommodation to trade and industry. The balance sheet total shows a rise of Rs. 2.31 crores to Rs. 24.24 crores. The deposits have, however, shown only a modest rise from Rs. 18.79 crores to Rs. 19.40 crores. The quantum of advances has gone up by more than 33 per cent to Rs. 10.71 crores. As a result of this, the Bank's gross income has recorded an expansion of Rs. 11.23 lakhs to Rs. 101.37 lakhs and, as the expenses and interest paid to depositors did not rise by the same proportion, the Bank fared much better in 1960 than in the previous four years. The Directors have thus succeeded for the first time since the nationalisation of the Bank in declaring a dividend, albeit only at the modest rate of 6 per cent subject to tax, or a net return of 4.2 per cent. This dividend requires a sum of Rs. 3 lakhs. The Directors have transferred Rs. 1.85 lakhs to the general reserve (as against Rs. 1 lakh in 1959). In addition, the staff pension fund and the staff welfare fund have been provided with Rs. 1.20 lakhs and Rs. 50,000 respectively.

The progress of the Bank since 1957 can be seen from the following comparative table:

(In lakhs of Rs.)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount	76.30	68.90	55.03	51.64

Investments	48.8†	48.0	31.6	22.6
Cash	8.3	18.4	26.6	27.3

† Only the unencumbered portion is taken into account.

As noted earlier, the gross income has risen from Rs. 90.14 lakhs to Rs. 101.37 lakhs during the year under review. The increase in gross income is primarily due to the enhanced earnings by way of interest and discount which went up by Rs. 7.20 lakhs to Rs. 76.30 lakhs. The income from commission and exchange has risen by Rs. 4.11 lakhs, to stand at Rs. 22.97 lakhs. The expenses of the Bank (interest paid and other outgoings) have increased more slowly from Rs. 82.69 lakhs to Rs. 99.83 lakhs. Thus, the increase in gross income is of the order of Rs. 11.23 lakhs which is comfortably higher than the rise in the total outgoings. This explains the distinct improvement in the profit margin of the Bank from 5.5 per cent to 9 per cent.

The relatively modest rise in deposits is in tune with the general trend of banking and so also the vigorous expansion in advances and bills. The credit ratio has jumped up from 42.7 per cent to 55.2 per cent but it is very much below the general average. The investments ratio is still actually near 50 per cent, the liquidity ratio being as high as 56.6 per cent. These figures suggest that the Bank could have provided more credit than it did.

The Bank's capital is unchanged at Rs. 50 lakhs, and is supplemented by reserves aggregating Rs. 28.85 lakhs.

The Bank has continued to extend its activities to new trading centres in Andhra Pradesh. During the year under review, it opened nine additional offices and upgraded two pay offices into full-fledged branches. A noteworthy feature of the Bank's activities is the grant of credit against the security of warehouse receipts, such accommodation has risen from Rs. 6.58 lakhs to Rs. 18.22 lakhs. The Bank has relaxed the terms and conditions against warehouse receipts and simplified them to encourage a wider use of the warehouses. The Bank is also giving special attention to the needs of small-scale industries. Following the agency agreement concluded with the Andhra Pradesh State Financial Corporation, the Bank will be acting as the agent of the Corporation for dealing with the applications of small-scale industries.

STATE BANK OF MYSORE

RESULTS IMPRESSIVE

THE accounts of the State Bank of Mysore (General Manager: Mr. A. Krishna Murthi, Bangalore), which is functioning as a subsidiary of the State Bank of India with effect from 1st March 1960, for the ten months ended 31st December 1960, give sufficient ground for the inference that the Bank's progress, since nationalisation, has been satisfactory. The profit of the Bank for the ten months' period amounted to Rs. 28.05 lakhs, as against Rs. 23.65 lakhs for the whole of 1959. The gross income at Rs. 106.10 lakhs (as against Rs. 109.25 lakhs in 1959) cannot be considered as worse, when it is realised that it pertains to only ten months. For the full year, the proportionate gross income could have amounted to Rs. 126 lakhs. The following figures regarding income from interest and discount, commission and exchange, expenses, interest paid, depreciation, and profits, etc. would give a fair idea of the working of the Bank since 1957. The figures for 1960, being only for ten months, are not strictly comparable. Even so, they would be helpful for appraising the progress of the Bank.

(In lakhs of rupees)

	For 10 months 1-3-60 to 31-12-60	For the year ended 31st December		
		1959	1958	1957
Gross income	1,06.10	1,09.25	97.25	82.73
Interest and discount	86.81	94.61	84.84	69.84
Commission and exchange	17.22	12.50	10.58	11.50
Interest paid	46.41	50.51	43.46	29.20
Expenses	29.68	33.55	30.72	28.04
Depreciation	1.06	1.54	1.50	1.42
Profit	28.05	23.65	22.58	24.08
Provision for taxation	12.50	4.50	3.60	4.00
To reserves	3.40	3.29	4.75	12.96
,, bonus to staff	3.85	3.80	3.44	3.20
Dividend	7.50 (D. 9%)	11.50 (D. 23%)	8.00 (D. 16%)	8.00 (D. 16%)
Carry forward	0.80	5.82	4.76	1.87

It will be observed from the above statistics that the Bank's profit margin has gone up substantially from 21.6 per cent in 1959 to 26.4 per cent. This is due to the sharp increase in income from interest and discount as well as from commission and exchange. The two outgoings, interest paid and expenses, have fortunately not risen commensurately. The slightly better margin between the interest rates on deposits and the rates charged to the borrowers has obviously helped the Bank to earn handsome profit. But the accretion in the profit has not benefited the shareholders, as a large slice of the profit has been utilised for the provision for taxation which has been almost trebled from Rs. 4.50 lakhs to Rs. 12.50 lakhs. The payment of bonus to staff has taken up Rs. 3.85 lakhs, which is only slightly higher than the previous year's appropriation for this purpose. The amount transferred to reserve is also only a shade higher at Rs. 3.40 lakhs (as against Rs. 3.29 lakhs in 1959). There has been a marked cut in the rate of dividend from 23 per cent for 1959 to 9 per cent per annum. This is due to two reasons. The larger provision for taxation is one; the other is the constitution of the Bank as a subsidiary of the State Bank which has brought about an increase in the capital of the Bank by reducing the reserves. Capital now stands at Rs. 1.00 crore as against Rs. 50 lakhs in previous years. Thus the dividend is on a capital which is higher by 100 per cent. Even after making allowance for this fact, the dividend level is lower.

The substantial progress made by the Bank is more clearly revealed by the variations in some of the items in the balance-sheet. The following table shows at a glance the trends in deposits and the disposition of funds:

(In lakhs of rupees)

	As on 31st December			
	1960	1959	1958	1957
Capital	1,00.00	50.00	50.00	50.00
Reserves	68.40	1,00.00	96.71	91.96
Deposits	19,94.21	19,58.59	16,72.14	12,88.22
Borrowings from banks	44.75	47.00		80.00
Advances	12,48.54	11,47.06	10,04.57	9,79.44
Investments	5,82.88	5,60.26	6,35.90	4,22.38
Cash	1,16.23	2,14.25	2,37.50	1,10.57
Balance sheet total	26,72.50	25,81.45	21,94.13	17,00.40
Ratio to deposits of—	%	%	%	%
Advances	62.3	58.6	60.1	76.0
Investments	43.2	43.9	30.8	30.4
Cash	5.8	10.9	14.1	8.6

The balance-sheet total has moved up from Rs. 25.81 crores to Rs. 26.73 crores. On the liabilities side, the deposits have registered an expansive level of Rs. 19.94 crores. The fixed and savings deposits have increased by Rs. 61 lakhs and Rs. 32 lakhs respectively, but current deposits have declined by Rs. 55 lakhs. On the assets side, the advances and bills discounted and purchased show an accretion of Rs. 98 lakhs to Rs. 12.43 crores with the result that the credit ratio has gone up from 58.6 per cent to 62.3 per cent.

The investment portfolio shows only a nominal rise from Rs. 8.60 crores to Rs. 8.63 crores. Borrowings from other banks are a shade lower at Rs. 44.75 lakhs. The Bank thus seems to have relied mainly on the expansion in its deposit resources to meet the rising demand for accommodation for its clients.

The Bank has continued its programme of branch expansion, opening nine new branches in the year under review. This brings the total number of offices to 52. In addition, the Bank has obtained licences for opening two more branches from the Reserve Bank of India. In accordance with the Government's directive, the Bank has been giving special attention to financing small-scale industries; during 1960, it gave financial assistance to 104 small-scale units in all, accounting for a total credit limit of Rs. 36.27 lakhs. The Bank is also increasing its advances against warehouse receipts.

SURVEY

(Concluded from page 527)

the problem of expanding their exports will become even more difficult in the coming years.

The new stress on securing the co-operation of businessmen by the Government is understandable, coming as it does soon after the publication of the figures of exports for the whole year 1960, which are none too satisfactory. The foreign exchange earnings from exports of merchandise amounted to no more than Rs. 635 crores—an amount which is Rs. 8 crores less than the previous highest amount earned as early as in 1957. This is in depressing contrast to the expansion in the world export trade as a whole.

While exports have thus been lagging behind, imports have been making a strident advance. They reached Rs. 1,000 crores last year and the adverse balance of trade rose from Rs. 264 crores in 1959 to Rs. 365 crores—or a trade deficit of exactly Rs. 1 crore per day. It is true that, in 1957, the adverse balance of trade was heavier still—Rs. 382 crores to be precise—but in that year India still had foreign balances of the order of Rs. 293 crores, as against the irreducible minimum of only about Rs. 158 crores now.

Apart from the slow rate of growth of exports, in general, it is a matter for no little concern that the performance of India's major traditional commodities should have fallen short of expectations. In particular, tea, jute goods and cotton textiles, which together account for 50 per cent of India's exports, have been confronted with various difficulties. Pointed attention to these difficulties was drawn by Mr. K. P. Goenka, in his presidential address at the aforesaid meeting. While he had no grudge against the policy of diversifying the pattern of exports, he maintained that, for a long time to come, the traditional items had to be relied upon for the bulk of earnings from exports. To some extent, the difficulties in the way of exports of traditional commodities, he granted, were due to factors beyond human control, but he stressed that "there is no doubt that our own fiscal measures have not been helpful in making Indian goods more competitive in world markets." Dealing in particular with the problem in the way of exports of tea, Mr. Goenka observed as follows:

"For the past several years, the various trade delegations that had gone abroad as well as the associations of tea trade and industry had been urging the removal or reduction of the excessive burden of taxation on tea and also to intensify publicity in foreign countries, particularly in Britain, our biggest market, but action in these directions has not been prompt or effective. I welcome the reduction of export duty on tea as announced in the latest Central Budget, but, at the same time, the excise duty on tea has been steeply raised and since the latter is not refundable, the encouragement to export is not appreciable. I feel that as in most other commodities, the excise duty on tea should also be refundable. Moreover, Government has not yet taken a decision in regard to the levy of a single, simple and consolidated tax on tea. A study recently undertaken by the World Trade Department has brought out the importance of certain other steps to be taken for export promotion, such as improvement in the yield per acre, supply of more fertilisers, development of new markets and avoidance of further increase in costs of production unless they were directly related to productivity."

Mr. Goenka's suggestions for helping producers and exporters of tea deserve sympathetic consideration at the hands of the authorities, especially in view of the declining trend in exports of Indian tea. Exports of tea were lower at Rs. 120 crores in 1960, which compares unfavourably with Rs. 126 crores in 1959 and Rs. 137 crores in 1958. In this connection, Mr. Goenka urged that there should be better co-ordination between the Ministries of Finance and Commerce and Industry. He appealed to the Government not to impose fresh taxation on raw materials and industrial products which have a potential overseas market. He made the notable suggestion that both the Ministries should examine the desirability of introducing tax incentives for export promotion more or less on the lines prevailing in Japan, West Germany and elsewhere. In the absence of positive assistance of this nature, it will be futile to expect any substantial improvement in exports simply by asking businessmen to shoulder the responsibility for stepping up exports. What is of compelling urgency now is that necessary environments should be created in the economy, which will enthuse businessmen to put in their best efforts to expand production, bring down costs, improve quality and launch effective propaganda and salesmanship. There is, indeed, no short cut to export promotion.

The Flying Sherpa

AIR-INDIA's own cargo service, The Flying Sherpa, between India and U.K. via the Middle East and Europe.

The Flying Sherpa is a specially designed Super Constellation freighter aircraft with a total capacity of 12 tons. It has double doors and reinforced flooring for the uplift of heavy and bulk cargo.

Pressurized and heated cabin for livestock, with trained attendants on board.

Ideal for imports of heavy machinery and spare parts at attractive charter rates. Please apply.

ECONOMIC TRENDS IN WESTERN EUROPE

U.N. SURVEY SUGGESTS SOLUTION TO U.S. PAYMENTS PROBLEM

"THE West European economy prospered in 1960—the second year of vigorous expansion. Like the early phase of the preceding boom, the past two years have been distinguished by four major features: a vigorous growth of both export and domestic demand, high elasticity of supply, relative stability of prices and an easy reserve position in most countries." These opening sentences of the *Economic Survey of Europe in* 1960, prepared by the Secretariat of the Economic Commission for Europe, puts, in succinct form, the outstanding features of the economic trends in West Europe during the past year.

Whereas overseas export demand slackened in the course of the year, domestic demand—private investment in particular—was generally buoyant and few sectors of West European economy, according to the *Survey,* were affected by the measures of restraint adopted very early in the upswing. Output responded more flexibly to surging demand than was generally expected. During the year as a whole, the rate of increase in total and industrial output was faster than that achieved from 1958 to 1959, thanks to productivity-raising investment, which continued to grow, and important sectoral shifts of manpower. While it is true that the very high rate of industrial expansion moderated from the second to the third quarter, the upturn in the fourth quarter in a number of countries, adds the *Survey,* points to a continuing upward course.

In many countries, the tight labour market, generating mounting wage pressures, caused renewed concern about the possible imminence of a wage-price spiral. But there is not enough evidence as yet to determine whether the recent or prospective wage increases exceed the rate of growth of productivity. Exports from West European countries to the U.S. and the primary producing countries declined in the course of the year, and the short-term outlook is not promising. But intra-West European trade was maintained at a high level and most West European countries have large enough foreign exchange reserves to withstand some worsening in their balance of trade.

The outstanding occurrence of 1960, according to the *Survey,* was the *apparent* rather than *real* foreign exchange crisis of the U.S., caused largely by short-term capital movements. It threw into the limelight the potential threat that such movements can pose to Western payments system under present conditions and underlined the external drawback of discount rate policies which are pursued primarily for purposes of internal balance. Domestic developments in W. Europe, too, cast further doubt on the efficacy of interest-rate policy as a means of restraining excess demand.

"Dollar Crisis in Reverse"

The *Survey* devotes considerable space to a diagnosis of what it calls the "dollar crisis in reverse," certifies the exact state of health of the dollar and makes some suggestions for easing the strain on it. It notes that a tendency towards increasing deficit in the U.S. balance of payments—with its obverse in a growing surplus in the balance of West Europe and West Germany in particular—had been evident for some years. That the problem exploded into a brief crisis in 1960 was, in a sense, "paradoxical." For the basic U.S. balance of payments situation improved substantially, as compared with the exceptionally adverse situation of 1959; and there was evidence, too, of some movement towards equilibrium in the balance of payments of West Germany. The explanation for the paradox lies partly in the lagged confidence reactions in international financial circles and partly in the effects, on international short-term capital movements, of the use of interest policy for domestic purposes in the major countries.

The dollar crisis of 1960 has been generally attributed to a fundamental imbalance in the Western payments system, of which an ever-growing surplus in the West German balance of payments and ever-growing deficit in the U.S. balance of payments appear as the central features. West German balance of payments during the fifties shows a gain of international liquid assets of nearly DM 30 billion, resulting from a very large current account surplus, quite inadequately offset by capital exports. The U.S. balance of payments accounts, on the other hand, reveal a steadily declining current account surplus during the period. From nearly $12 billion in 1947, the surplus declined to *nil* in 1959 and showed a loss of international liquid assets of over 20 billion during the period 1951-60.

The ever-rising flow of Western (chiefly U.S.) military expenditures themselves contributed to the rise in West German commercial surplus until 1957 and have almost entirely offset its fall since then. In 1960, they accounted for almost two-thirds of W. Germany's current account surplus. These military expenditures are, according to the *Survey,* almost wholly responsible for the present imbalance in West Germany's balance of payments. This situation, the *Survey* points out, should be borne in mind, when West Germany is alleged to be playing the part of the "bad creditor country" for which the U.S. was reproached during the inter-war years. As long as these military expenditures are, in economic terms, a datum and, as long as they constitute a drain on the U.S. balance of payments, they represent a problem for the Western payments system to which some adjustments must be made. But the problem should be recognised as arising not primarily from a maladjustment of comparative cost conditions in Western countries, but, not unlike the reparations problems of the twenties, though in reverse, from the introduction into the payments system of a large and indigestible politically motivated factor.

A Possible Solution

The *Survey* suggests a novel solution for tackling this problem, created by military expenditures. According to it, even if the volume of these outlays and West German refusal to assume their cost are accepted as political facts, a compromise solution on the lines of the wartime lend-lease arrangement is feasible. It maintains that, if the U.S. continued to finance these expenditures in dollars and the West German Government agreed to place equivalent amounts each month in frozen dollar accounts, the current burden placed on the Western payments system by these outlays would be eliminated. The U.S. would, no doubt, still accumulate foreign liabilities, but, since these would not be subject to sudden withdrawal, they would not need to cause concern. Another advantage would be that the West German Government would escape the domestic political difficulties involved in assuming financial responsibility for these military expenditures and might, at a later stage, be willing to negotiate a disposal of its frozen dollar assets, perhaps even to the point of making a substantial portion available for aid to developing countries.

If this suggestion were not acceptable and if U.S. military expenditures in West Germany continue on the present scale and the West German balance of payments has to be adjusted to them, there are, in the opinion of the *Survey,* only two other alternatives, namely, either the West German commercial surplus must be eliminated or W. German capital exports must be further increased to the point where they balance the commercial surplus as well as military receipts. The authors of the *Survey* hope that 1961 and 1962 may bring about such adjustment in both ways. They also believe that there is no likelihood of a revaluation of the Deutschemark (this belief has turned out to be unfounded, as is shown in a later paragraph), a course which the West German authorities have consistently rejected. Nor, indeed, according to them, is it easy to make a case for revaluation, now that the surplus is almost entirely attributable to military receipts. Further trade liberalisation will hardly make significant inroads into the trade surplus, for the forces behind protection of domestic agriculture are strong, and West German commitments under the Rome Treaty are certain to lead to a rise, rather than a fall, in West German tariffs on industrial imports.

On the other hand, West Germany has clearly come to the end of the period during which rapid growth and stability could be reconciled by drawing on large reserves of labour. Wages have recently been rising faster than productivity. Even official determination to resist domestic inflation is unlikely to avoid increased pressures of domestic demand on the balance of trade and some decline in competitive superiority, which W. German exports enjoyed during the exceptionally favourable conditions of the fifties. Hence it would be surprising, avers the *Survey,* if the downward trend in West German commercial surplus witnessed during the past three years did not continue.

Contrary to the expectation of the *Survey,* the Deutschemark has been revalued by 4.76 per cent with effect from Monday 6th March. This, however, does not affect the conclusions in the previous paragraph. If anything, it adds further weight to that conclusion, for the revaluation of the Deutschemark will only serve to accelerate the downward trend of W. German commercial surplus.

Another factor which works in the same direction is the prospect of larger West German aid to developing countries which that country has agreed to provide. If the development fund, now formed, is treated not as a "once-for-all" effort but supplemented by a programme of regular aid and larger direct foreign investment by German industry, argues the *Survey,* the gap in the external accounts could be substantially closed.

Modified Picture

Tracing the post-war developments of the United States' balance of payments, the *Survey* presents the other side of the picture. It points out that, when military expenditures are taken out of the balance of payments on current account, the picture of a steadily deteriorating U.S. balance of payments is greatly modified. It is true that the huge U.S. commercial surpluses of the late forties were not repeated in the fifties and that the overall balance on the current and long-term capital account has been in deficit throughout the past decade. But there is little evidence, the *Survey* points out, of a continuing worsening of the U.S. commercial balance that might be ascribed to declining competitiveness of American industry. On the contrary, subject to considerable fluctuations, due not so much to business fluctuations in the U.S. in the past as to extraneous factors such as the post-Suez export bulge and the unusual circumstances of 1959, the U.S. commercial balance has more than held its own.

Nor have private overseas investment and Government loans and grants expanded unduly in relation to the commercial surplus. The picture is, however, spoiled—leaving short-term capital movements aside—by U.S. military expenditures. Over the decade of the fifties, they have almost exactly equalled in the aggregate the total loss in international liquidity experienced by the U.S. The *Survey* admits that to present the U.S. balance of payments situation in this way is somewhat arbitrary, because, in one sense, these military expenditures have been no different from American purchases abroad. While they remain part of U.S. policy and have to be financed by the U.S., the resulting overall deficit, however, poses an economic problem that has to be solved somehow. It is, again, important to recognise that the source of the difficulty is political rather than economic, if only to caution against wrong policy conclusions.

Not Alarming

Even when the U.S. military commitments are taken for granted, the *Survey* maintains, the disequilibrium in its balance of payments is not alarming and should be capable of gradual correction over a period of years. The current accounts surplus in U.S. balance of payments should be restored, sooner or later, to a level at which it covers an outflow of long-term capital (both private investment and Government loans and grants) commensurate with the responsibilities of the richest country in the world which is the U.S. This could be achieved partly by the acceptance by the relatively rich countries of Western Europe (and other parts of the world) of something nearer their fair share of the burdens of both aid to underdeveloped countries and joint defence responsibilities and partly by a gradual improvement in the commercial balance of payments of the U.S. to be secured, not by any drastic measures in a setting of expanding world trade, but by further trade liberalisation in the rest of the world and by greater export consciousness among American business firms.

In fine, according to the *Survey,* there is no "dollar problem in reverse" so urgent as to call for a radical solution. It, however, concedes that the events of 1960 have demonstrated that the U.S. balance of payments must not only be healthy but also *appear* healthy in the eyes of nervous foreign owners of dollar balances. Emphasising this point, it observes:

"It is most important that the underlying soundness of the United States balance of payments position be appreciated both within and without the United States. Within, so that there shall be no resort to destructive panic measures. Without, so that there shall be no repetition of the confidence crisis in international financial circles which played a major part in the money muddles of 1960."

HOW LABOUR CAN BE ATTRACTED TO MILLS

CAMPAIGN FOR LIMITING IMPORTS REVIVED

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 14*th March*

A CALL to Lancashire cotton trade to end the era of "dark satanic mills" and replace them with every modern incentive to recruit labour was made by Mr. P. J. Blake, Chief Personnel Officer of Fine Spinners' and Doublers' Ltd., at the Cotton Board's spring productivity conference held at Southport. "It seems to me," he said, "that this phrase has done a real disservice to our industry—a kind of signature tune in reverse, building up over the years in the public mind a gloomy and miserable image of the places in which we spin, weave, or otherwise go about our businesses."

There was no need, Mr. Blake said, for colour schemes to be miserable and gloomy. The workers' opinions, especially the younger ones, mattered. "Don't forget," he told the conference, "that the youngsters of today have grown up among the modern ideas of decoration in their schools. They will feel quite happy with magenta doors and ceilings in panels of different pastel shades." In order to attract recruits to the mills, he urged that their approaches should be tidied up and brightened with flower beds, window boxes or shrubs in tubs. The entrance through which the operatives passed should be just as imposing as the office entrance, and once inside the mill a show-case should be installed to display the company's products and garments made from the yarn or cloth produced on the mill machinery.

Mill Amenities

Air conditioning was another essential, Mr. Blake continued, and mill amenities should include sufficient accommodation to give the operatives a chance to clean up at the end of the day. "They take a poor view of going home covered with fly and dust which proclaims them mill girls for all to see," he added. Some ideas, he pointed out, might be considered "eccentric," but they drew attention to the mills as a form of employment. "May be it is stretching the argument a good deal to think of a mill cat as a mill improvement," he said, "but the odd puss or two roaming round the mill usually have quite a following of fans among the workers. I believe there is a mill with a small aviary near the entrance. A few little budgies can quite easily brighten things up. Fish tanks may fit equally comfortably into the context, but it probably wouldn't be wise to go much further."

"We firmly believe," Mr. Blake continued, "that we are at a stage now at which the trade as a whole must find ways and means of attracting to it a worthwhile flow of youngsters. We have got to convince the lads and lasses, young and old, and in all walks of life, that there is a new spirit abroad in the cotton trade which is sweeping away the old notions and ideas. There are far too many potential workers or parents or teachers of potential workers who believe that we have little to offer them. The crucial part is to convince them that we have set our houses in order now, however belatedly."

Royal Exchange Bid

Stockholders in the Manchester Royal Exchange Ltd. have now been advised by the Board to dispose of their holdings or accept the offer made by City Centre Properties Ltd., the London group controlled by Mr. Charles Clore and Mr. Jack Cotton. This follows the announcement that City Centre Properties have acquired more than a 50 per cent interest in the Exchange. In a statement, the Directors say that they cannot recommend stockholders to retain their holdings out of a sense of loyalty to the Board. They suggest that the stockholders should consult their business advisers as to the best course to adopt in their individual circumstances.

Mr. Dennis N. Midwood, the Chairman, observes: "The Board still do not know the actual percentage acquired by City Centre Properties except that it exceeds 50 per cent. We are gratified with the support we have received, but we felt that stockholders should be notified of the position as soon as possible."

The cash and share exchange deal puts a value of more than £2,500,000 on the Manchester Royal Exchange Ltd. The Company consists of a valuable site in the centre of Manchester and includes numerous offices, shops and the city's air terminal.

More Contraction Danger

It becomes difficult to escape reiterated discussion of the import situation in practically every report now being made, whether by the heads of companies, spokesmen for official organisations, trade unions or unattached observers. On all sides, concern is expressed at the possibility of even larger inroads being made on the home market in cotton textiles by the huge arrivals of goods from abroad. What began as merely a whisper is now being openly said—that, if the Government allows completely unrestricted flow of Asian imports, a further contraction of the industry is inevitable.

Such an unqualified view is expressed by Mr. Oliver L. Jacks, in his final statement as Chairman of Ashton Brothers and Co. Ltd., before his retirement. The time factor, he asserts, is extremely important, as the Hong Kong agreement is due to end early next year, while the Government re-equipment scheme covers machinery ordered up to the end of 1962. The full impact of modernisation will, therefore, not be felt before 1964.

In line with some other companies which have read "the writing on the wall," Ashton Brothers has lately been concentrating on the production of specialities to the exclusion of the cheaper plain fabrics coming from Asia. At the same time, the firm has virtually maintained its export trade, in contrast to the general trend. An improvement, says Mr. Jacks, has been recorded in shipments to all the E.F.T.A. markets except Norway, and a freer business has also been done with members of the Common Market.

Foreign Machinery Wanted

One aspect of the re-equipment programme, which has not perhaps received the publicity it deserves, is the problem encountered by forward-looking firms which have been trying to buy their textile machinery requirements abroad. "No obstacle should be placed in the way of a spinner or manufacturer who wishes to install the most up-to-date labour-saving equipment so as to maintain his competitive position in foreign markets," says Mr. Jacks, "yet present regulations apparently exclude the factor of labour economy when applications for duty-free importations are under consideration. Since price is a primary factor in obtaining export business, the Government could best assist industry by lending the maximum encouragement to the installation of machines which will lower production costs."

Returning to the theme of cloth arrivals, the trade union viewpoint, as put forward by Mr. J. W. Whitworth, Secretary of the Operative Spinners' Amalgamation, is almost alarmist in character. "We are firmly of the opinion," he says, "that, unless action is taken, and taken soon, to limit these imports, the present prosperity of the industry will be undermined, with its consequences of short-time working and possible mass unemployment."

Short-time working is already in operation in the doubling section, with heavy imports of doubled yarn the main contributory factor. The Yarn Doublers' Association has declared that no company can be expected to invest capital in new machinery, unless there is some reasonable degree of stability for the future—an opinion apparently shared by Mr. Whitworth, who adds: "The consequences to the employees of this logical reaction by the companies is serious, but what is equally alarming to the trade unions is that this may well be the forerunner of similar setbacks in other sections of the industry."

Trading With Africa

One of the few consolations available for Lancashire shippers of cotton textiles in 1960 was the fact that purchases made by several African territories showed some increase. These, in fact, were the only instances where an improvement in overseas trade was secured, the countries involved including South Africa, Nigeria, Ghana, and Sierra Leone. Political and economic conditions in the African continent are, needless to say, in the melting pot and it would be unwise to suggest that this more encouraging trend would be maintained while the outlook remained so obscure. On the other hand, indications are not lacking that the purchasing power of the native, no less than the white African population, is being steadily raised.

Many of the trade reports from industrial areas in Africa carry references to the pressure for supplies obviously coming from the local population, who have money to spend on consumer goods such as textiles. Basically, however, the continent is still predominantly agricultural, so that crop failure or successes play an overwhelming part in creating purchasing power. This situation is unlikely to be altered in the foreseeable future.

On the other hand, the gradual industrialisation of such countries is equally certain to follow and already there are plenty of instances of factories being built to provide local employment and cater for the domestic market. The latest of these is a textile mill being erected in the western region of Nigeria, aimed at employing nearly a thousand local workers. Target production is 18 million yards of cloth annually and operations are expected to start in about a year's time. The mill will have spinning, weaving, bleaching, printing and finishing capacity. Nigerian cotton will be used for the whole range of its products.—*All Rights Reserved.*

IDEAS IN BLINDS

Householders reluctant to buy venetian blinds because of the cost will appreciate a Dutch range now being marketed in the U.K. Retailing at 30s for an average sized room, modern and luxurious in appearance and of proven wearing quality, these can be bought complete with fixing screws and installed in ten minutes. Thousands of ultra-fine slots keep out excessive heat and glare and, thanks to the unique construction, cleaning is reduced to an absolute minimum, and dust being shaken clear when the blind is raised or lowered.

Sleeping bag or quilt at the pull of a zip .... this is one of the newest possibilities in household textiles that are being made in Britain. Easily opened out for airing or quick drying, the bag can be used as a quilt for a double bed if desired. Supplied with matching pillow and attached pillow case, it is available in navy, bush green, tan, blue or tomato.

MILLS *VERSUS* POWERLOOMS

By P. K. Bhaumik

Deputy Director (Economics), Office of the Textile Commissioner

THE article "Mills *versus* Powerlooms," which appeared in *Commerce* dated 25th February 1961, has, in brief, reviewed the Indian Cotton Mills' Federation's recent publication, *Third Plan Targets for Handlooms, Powerlooms and Mills.* However, the main controversial issues discussed in the report of the Federation and pointedly brought out in your article are the relative claims of cloth production by the handloom and powerloom sectors and the position of official statistics in this regard. In the recent past, some similar controversial issues were also brought out by a correspondent in the *Times of India.* It is also noticed that the same set of data has found place in the Federation's independent study referred to above. It is not correct, as stated by you, that the office of the Textile Commissioner has accepted the position by remaining silent in the matter. We, therefore, recall our Press release in this regard dated 28th November 1960 wherein it was mentioned among other things, that steps were under way to conduct All India Surveys to assess the quantum of production in the handloom and powerloom sectors of the textile industry. Sample surveys have already begun in six different States to assess the production in the handloom sector. Other States are expected to be covered shortly. While some learned correspondents have recently criticised handloom and powerloom statistical data, they have not yet thrown any independent and reliable set of data. What they have done is mere use of the incomplete statistical data furnished by the industry to the Government for estimation of the entire field or the population, as they are usually called.

Difficulties of Getting Statistical Data

As you may be aware, there are as many as 27 lakhs and odd handlooms in the country widely distributed throughout the length and breadth of the country. Handloom industry is primarily a household one. Therefore, it is very difficult, if not impossible, to contact all these households regularly for purposes of collecting statistical data. Even if such a scheme is visualised, this will need a very gigantic organisation involving a lot of public money. Thus, in the early years of the All-India Handloom Board, when there were other pressing problems to be tackled on a priority basis, the Handloom Board had to rely on the empirical formula based on yarn delivered to the market for estimation of handloom production. This empirical formula was arrived at on the basis of yarn consumed by powerloom and handloom sectors respectively during the yarn control days. It may also be pertinent to reproduce here what the Federation's original study says in this regard: "Although the division of yarn between handloom and powerloom sectors in the proportion of 76 per cent to 14 per cent may have been correct when this method of calculating the production of two sectors was first introduced. . . ." When the handloom sector got a larger share of the additional cloth requirement during the second Five-year Plan, the All-India Handloom Board realised (long before it was realised by the Federation) the need for collecting statistical data on a direct and systematised basis. For this purpose, the All-India Handloom Board appointed an Expert Committee with a representative from the Central Statistical Organisation, Cabinet Secretariat, to advise it in this regard. The Expert Committee recommended collection of handloom data on a certain sample basis and this report has been published by the All-India Handloom Board along with its fourth annual report.

The Government of India has approved of the various recommendations of this Expert Committee and authorised the Handloom Board to give the necessary financial assistance (25 nP per registered loom) to the various States for purposes of collecting statistical information. So far, the statistical schemes have been sanctioned for nine States having with them 18 lakh commercial looms. This covers 70 per cent of the commercial looms in the handloom industry. The statistical schemes for the remaining States are now under process and it is hoped they will be sanctioned very soon. It will thus be seen that the Government did not wish to rely permanently on the estimated production in the handloom sector based on yarn availability on a certain percentage basis. However, estimation on yarn basis, as mentioned earlier, has to continue till the present statistical schemes are fully implemented by all the States so as to get an overall estimated production in the handloom sector in the interim period. So, the charge of deliberateness or complacency in this regard is not correct. When these statistical schemes, as mentioned above, are fully implemented by the various State Governments, there will be a continuous flow of reasonably accurate statistical information, to the extent possible, on sampling basis. Size of the samples needs to be limited, because of administrative and financial considerations.

Powerloom Industry

At the beginning of the second Five-year Plan, the powerloom industry was known to consist of about 6,000 units, having with them 27,000 and odd looms. As this industry is also widely scattered and the majority of the units (about 5,000) are of smaller size having less than five looms working on cottage basis, the response from the units for furnishing statistical returns, *although statutorily required*, remains very poor due to the fact that most of the owners are illiterate and they cannot fill the return. With a view to facilitating the filling up of the returns, return forms were supplied in various regional languages; despite this, the response still remains very poor. You may, perhaps, be aware that the present response to getting production returns relates to a mere 600 units, as against the expected returns of 6,000 units having 27,000 and odd looms. Perhaps, the Federation is not aware of the total frame of the powerloom industry from whom production returns are expected *statutorily* and the actual number of returns received. On unit basis, the response now works out to no more than 10 per cent.

Valid Estimation Procedure Needed

As the structure of powerloom industry is manifold, considering its varied size, and as the production returns submitted by the industry are very scanty and, therefore, incomplete, it is statistically impossible to estimate the overall production with any *known precision* based on this truncated and incomplete data made available by the industry to the Government. The returns received, it may be noted, are statistically non-random, coverage being poor, and, what is more, they are not coming proportionately equally from units of all sizes. Because of these obvious limitations, this office never attempted to estimate powerloom production on this basis. However, for public information this incomplete data, as made available by the powerloom sector from time to time, was published in our *Bulletin*. As it was recently noticed that this information is not properly understood in many quarters, the publication of this information has been withdrawn. In passing, it may be mentioned about our *Statistical Bulletin* that its timely publication entirely depends on timely receipt of the production returns from the mill sector. Although the scheduled date for furnishing these returns is 10th of each month, it is noticed that many mills continue to send these returns as late as by the end of the month.

Coming back to the estimation procedure, the inadequacy of the estimation procedure adopted by the Federation may be illustrated from the following:

Instead of estimating the powerloom production from the incomplete information supplied by the industry, if we first try to estimate the handloom production from the equally incomplete information as given in the Federation's publication, to which you have also referred, we will get another estimate of powerloom production on a residual basis. The Federation's data in respect of handlooms as referred to above is reproduced below for ready reference:

Year			* Average number of looms reporting (lakhs)	Production (Million yds.)	Average annual production per loom (yds.)
1956	...	...	2.52	239.6	951
1957	...	...	4.50	359.6	799
1958	...	...	6.48	463.8	717
1959	...	...	6.18	374.7	606

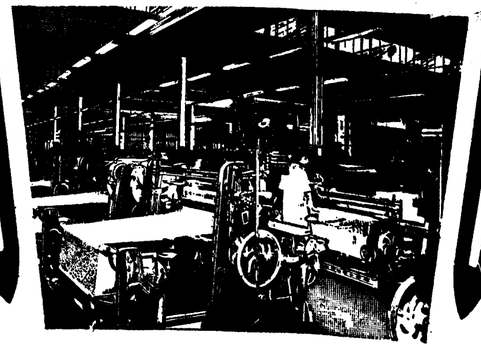
* This relates to total handlooms including both active and idle. (Asterisk ours.)

Lower productivity noticed in the later years is due to existence of proportionately more idle looms in the reporting fold. From the above table, it will be safe to take the average loom production to be at 800 yards per annum (inclusive of both co-operative and non-co-operative folds) and it is known that there are altogether about 23 lakh commercial looms in the country (excluding about 5 lakh domestic looms for which a lower productivity can be assumed); on this basis, the total production in the handloom sector would come out in the neighbourhood of 2,000 million yards. The overall aggregate production of cloth in the decentralised sector including both powerloom and handloom, according to the Federation's study, is of the order of 2,165 million yards on the basis of 90 per cent of yarn delivered to the market being consumed by handlooms and powerlooms together (here for total production, the Federation, obviously, has no objection even today to reckon the empirical formula on yarn basis). Thus, the estimated cloth production in the powerloom sector on a residual basis will now come to a bare figure of 165 million yards. This amply demonstrates the weakness and inadequacy of a linear estimation procedure adopted on scanty, incomplete and unplanned data.

It may also be mentioned, in this connection, that the Central Board of Revenue are also collecting output data for all excisable commodities. Powerloom units having five looms or above bear excise duties. The excise authorities while collecting excise levies collect information regarding production, clearance, etc., and they have got a network of field agency for the purpose of contacting individual powerloom units as and when necessary for collection of revenues. The excise authorities also collect statistical information from the units outside the excise fold in order to keep a vigilant eye on their growth. From the information available from them, it is noticed that the total production in the authorised sector of the powerloom industry may not exceed 300 and odd million yards. This figure also, incidentally, more or less tallies with the estimated figure based on the empirical formula on yarn basis.

BOMBAY, 2nd *March* 1961.

THE SWATANTRA BHARAT MILLS
AT DELHI



LIGHTING BY PHILIPS

The Swatantra Bharat Mills, one of the well-known D.C.M. Group of Textile Mills, have used Philips lighting. The Management of this mill has been so impressed with the performance of Philips lighting that they have, as before, relied exclusively on Philips to refit the entire unit, covering the large area of over 3½ lakh square feet and maintaining the high efficiency of nearly 5,000 workers.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

PHILIPS quality lighting for ultimate economy

PHILIPS INDIA LIMITED

Announcing the start of another foreign exchange saving project:

TATA P&H
EXCAVATORS

Tata Engineering & Locomotive Company Limited have the pleasure to announce the commencement of the progressive manufacture of Tata-P&H Excavators with the collaboration of the well-known American firm of Harnischfeger International Corporation.

Initial manufacture will be of the Tata-P&H Model 955A of 2½ cu. yds. capacity. From the very start, as much as 58% of the value of the unit will be manufactured in India. (Units will be ready for delivery ex Telco Works, Jamshedpur from December, 1961).

Tata-P&H equipment will be distributed in India by Voltas Limited who have a nation-wide service and spare parts organisation.

SOLE DISTRIBUTORS:
VOLTAS
VOLTAS LIMITED

TATA ENGINEERING & LOCOMOTIVE COMPANY LIMITED, BOMBAY

INDIA AND WORLD SUGAR ECONOMY

CHANCES OF EXPORTS TO U.S. IMPROVING

IT is now almost certain that India will export sugar to the U.S., though details regarding the quantity that will actually be sold, the price payable for it, the mode of payment and the delivery period, as well as the question whether the exports will be a regular feature every year are still not known. The U.S. has, of course, not so far agreed to import Indian sugar, but the two-member delegation (Mr. D. D. Puri and Mr. M. N. Pittie, President and Vice-President, respectively, of the Indian Sugar Mills' Association), which recently returned from the U.S. after exploring the possibilities of sugar exports to that country, seems to be convinced that the chances of such exports are very bright. It would appear that the Indian sugar industry and the Government are depending upon Mr. Elsworth Bunker, the retiring U.S. Ambassador in India, who left for the U.S. on Thursday this week, after a four-year stay in India. Mr. Bunker has full sympathy for India and, with the enormous influence he commands among the sugar interests in the U.S. and official spokesmen, he can surely be expected to help India secure a permanent quota in the U.S. market.

The most important issue connected with the sale of Indian sugar to the U.S. pertains to the price. Mr. A. M. Thomas, Union Deputy Minister for Food and Agriculture, stated in the Lok Sabha last week that, if the U.S. were to grant an export quota for Indian sugar, the loss would be considerably less, about Rs. 7 per maund (exclusive of excise duty and cane cess) as against the loss of Rs. 13 per maund currently being incurred on exports to other destinations. Mr. Thomas stated that the total U.S. consumption of sugar was 8.41 million tons per annum, of which only 4.20 million tons were produced domestically, and asserted that, if a quota was granted to India, the "country will be in a position to supply the type of sugar required by the U.S."

U.S. Sugar Act

That the prospects of India getting a share of the sugar market in the U.S. are quite encouraging will be evident from the nature of the amendments to the U.S. Sugar Act, 1948, proposed in a Bill moved in the U.S. Congress by the Chairman of the House of Representatives Agricultural Committee. By seeking to amend the Act in such a way as to relieve the President of the obligation to buy any part of sugar sold formerly by Cuba from any country with which the U.S. has no diplomatic relations, the Bill excludes the Dominican Republic from a share of Cuban quota. Further, the Bill specifically directs the President to consider, while redistributing the quota given to Cuba, the claims of countries in the Western hemisphere and of countries purchasing American agricultural commodities. This provision will help India to get a quota along with West Indies (British and French), Brazil and Australia, provided an understanding can be reached with the U.S. Government on the question of price. Another factor in favour of India is the inability of some of the countries to fulfil the obligation of special quotas earmarked after the embargo on Cuban sugar. According to a recent report from Washington, the Administration can allocate at its discretion about 1.2 million short tons of sugar to countries during 1961. In India, it may be noted here, the supply position of sugar is very comfortable. The estimated total supply available in the current season (November 1960-October 1961) is as much as 3.3 million tons, as against the anticipated domestic requirements of 2.3 million tons and the 100,000 tons released for exports to destinations other than the U.S.

The anxiety of both the powers-that-be and sugar circles in India to secure as big an export quota as possible in the U.S. is understandable, considering that the scope for India competing effectively in world markets is very limited, in view of the surfeit of supplies and low prices abroad. In the London market, for instance, sugar is now quoted at no more than Rs. 357 (£26¾) per ton, as against the Indian price of about Rs. 1,035 (£78) ex-factory, or a difference of Rs. 678. Even after the full remission of excise duty and cane cess together amounting to Rs. 343, the loss on exports will come to Rs. 135 per ton. It will be actually a little more if regard is had to the cost of freight, insurance, interest and handling charges.

The recent move of the International Sugar Council to reduce supplies reaching the free market in 1961 by about 150,000 tons through a further cut of 2½ per cent to 82½ per cent in the basic export tonnages of member-countries and a further quantity of 700,000-850,000 tons through its decision not to redistribute any shortfalls of allotted quotas to other members has not led to any improvement in prices. Even if the Council effects a further cut of 2½ per cent in export quota, thereby reducing the total to the lowest permitted level of 80 per cent., no significant rise in prices is expected, in view of the huge undisposed stocks lying with the producing countries. Here is what the Food and Agricultural Organisation of the U.N. says in its monthly bulletin on agricultural economics and statistics:

"The upward trend in the world production of sugar, interrupted by adverse weather in 1959-60, will be resumed in the present season. Consumption, however, is growing at a slower rate and the tendency is for stocks to rise. Furthermore, as the major gains in production are expected in the importing areas, the volume of sugar moving into international trade may decline in 1961. . . . The dominant aspects of the world sugar economy have affected prices adversely. Representative quotations declined by about one-sixth in the period August-December 1960 and show no signs of recovery in the immediate future."

Production and Consumption

Preliminary estimates for the current season (1960-61) place the aggregate world sugar production at 54.25 million metric tons —an all-time peak—as against 50.21 million tons in 1959-60, representing a rise of as much as 4.04 million tons. Consumption, however, is expected to be higher by only 2.30 million tons at 51.00 million tons. The area-wise statistical position of world sugar is indicated below:

(In million metric tons—raw value)

Region	Production		Consumption	
	1960-61	1959-60	1961	1960
Asia (excluding Mainland China)	7.4	6.9	7.5	7.3
China, Mainland	1.4	1.3	2.0	1.5
Cuba	6.0	5.9	7.0	6.8
Other Latin American Countries	11.6	11.1		
U.S.S.R.	7.0	6.5	7.5	7.0
United States	2.8	2.6	8.6	8.5
Western Europe	8.9	7.8	11.2	10.9
Eastern Europe	4.1	3.1	2.8	2.8
Africa	2.8	2.6	2.8	2.7
Others	2.6	2.6	1.6	1.6
Total ..	54.0	49.9	51.0	49.1

It will be seen from the above table that sugar production has gone up quite significantly in Western Europe, by as much as 23 per cent. All the countries, with the exception of Italy where the area under sugar-beet was restricted, have shared in the increase. Production in Soviet Russia and Eastern Europe is also estimated to be higher by 13 per cent. The rise in output in the U.S. is relatively small, in spite of the removal of area restrictions. The position regarding the sugar crops of other regions is summed up below:

Cuba: The final size of the crop will depend very largely on the number of technical factors and policy decisions the combined effect of which cannot yet be properly assessed. It is tentatively anticipated that the crop will be higher by about 100,000 tons.

Other Latin American countries: Most of them expect larger crops, the largest absolute increase being in Brazil. Production in Argentina is, however, said to have suffered a setback on account of damage caused by frost.

Asia: Improvement expected is modest. Production in India is stimulated by higher cane prices paid to farmers. Cane plantations in Taiwan have recuperated from the typhoon damage of last season.

Turkey: Output continues to increase.

Indonesia: Structural problems continue to disturb the sugar industry.

Africa: Production is expected to be less entirely because more than half the crop in Mauritius has been lost as a result of cyclones.

Reviewing the trend of world sugar consumption, the F.A.O. *Bulletin* points out that offtake of centrifugal sugar continues to rise, mainly under the influence of increasing population and larger disposal incomes, though the rate of increase has tended to decline in the last few years. In higher income areas, we are told, sugar consumption is nearing the saturation level and, in the low-income countries, the early increases appeared larger in relative terms, owing to the very low initial consumption level. Nevertheless, it is stated the less developed areas continue to show better prospects for expanding sugar consumption, in view of the greater response of consumption to rising incomes at low levels of income. The *Bulletin*, however, feels, on a comparative study of production and consumption figures, that, if present trends persist, the problem presented by the disparity between production and consumption will become increasingly serious.

The F.A.O. *Bulletin* expects that the expected large increase in production in some major importing areas during 1960-61 will tend to reduce the volume of world trade in sugar during 1961, while the new trade flows, resulting from the recent purchases of Cuban sugar by China and Soviet Russia, will have the opposite effect. It, therefore, concludes that the reduction in international sugar trade may well be considerably smaller than the decline in the import requirements of traditional importers would lead one to expect.

SUGAR STATISTICS

The production of sugar during February 1961, was 490,000 tons, as against 473,000 tons during the corresponding month of last season. This brings the total production for the season 1960-61 upto the end of February to 1,788,000 tons, as against 1,613,000 tons produced last season by this date.

The offtake of sugar from factories during the month of February 1961, was 174,000 tons, as against 157,000 tons during the corresponding month of last season. The total despatches including despatches for exports upto February end were 654,000 tons, as against 629,000 tons by the same date last season.

The closing stocks of sugar with factories as on 28th February 1961, were 1,675,000 tons, as against 1,125,000 tons on the same date last season.

12 - 27 April 1961

MILAN TRADE FAIR

According to the opinion of the experts, the world's greatest international sample market
14,000 exhibitors - Over a million samples - 54 participating Countries - Buyers from five continents.

TRAINING OF TECHNICAL PERSONNEL

NEED FOR CO-OPERATION BETWEEN GOVERNMENT AND INDUSTRY

THERE is no exaggeration in the view unanimously endorsed at the "conference of development aid experts" recently held at Berlin that the training of man-power is the greater need of developing countries. The conference, which was sponsored by the German Foundation for Developing Countries with the assistance of the Ford Foundation, was attended by a large number of experts from countries of Asia, Europe and America. India was represented by Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research. Delegates included Mr. Paul G. Hoffman, Managing Director, U.N. Special Fund, and Mr. B. R. Sen, Director-General of F.A.O. A resolution passed at the conference emphasised the crucial importance of training of manpower in the following words:

"Training of skilled workers in the developing countries is the most important aspect of the aid to these countries and consequently such training is of far greater importance than the investment of capital goods."

It is obvious that machines, without men to operate them, can be of little use. In fact, the entire pace of Plan progress could be held up, if properly trained men are not available in sufficient numbers. That shortage of technical personnel could act as a crippling bottleneck is clearly borne out by the experience of Hindustan Steel. Paucity of technical skill has caused delay in the completion of all the three steel projects and the working of completed departments according to schedule. The delay, it is reported, will be as much as one year in the case of Rourkela, six months in the case of Bhilai and a few weeks in the case of Durgapur.

Since the shortage of skilled personnel is not confined to this country alone but is a world-wide phenomenon, the scope for recruitment of staff from abroad is also limited. This is also confirmed by the experience of Hindustan Steel which still needs about 70 experts for its Rourkela plant alone. It is reported that although the Company is prepared to offer higher pay to attract German steel experts and technicians, it is not able to get the requisite personnel.

Shortage World-wide

In an earlier issue of this journal (*vide* page 322 of *Commerce* dated 25th February, 1961), we referred to the shortage of technical personnel in Western Europe and Britain. The United States is no exception to this. In fact, that country now presents the spectacle of mounting unemployment on the one side and acute scarcity of skilled workers on the other. According to *Time* news magazine, even in such critical jobless areas as Detroit, jobs are going abegging for lack of skilled workers to fill them. The U.S. industry is hard put to find enough trained men and the problem is getting worse. For every hundred skilled workers which the country had in 1955, it will need 122 in 1965 and 145 in 1975. Yet the training programme in the U.S., according to the aforesaid journal, is not yielding enough craftsmen to replace those who retire. Almost every good industrial concern has apprenticeship programmes but they are sufficient to cover only one-tenth of the craftsmen needed for the 1960s. Lack of interest among students in apprenticeships and management apathy are said to be the principal reasons for the failure of supply of skilled personnel to catch up with demand. A study of employment training in the heavily industrialised New Jersey, undertaken by the U.S. Labour Department, showed that only 16 per cent of the companies had any kind of training programmes.

If this be the situation in so highly developed a country as the U.S., the apathy of employers in India is understandable but not excusable. Barring a few progressive concerns, the vast majority of industrial firms in this country do not have any kind of training programme. The Government has consequently been forced to bear the brunt of the burden. Many still seem to regard the provision of training facilities as the sole concern of the Government. It is perhaps for this reason that the Ministry of Labour and Employment has decided to enforce, through legislation, an apprenticeship scheme which will make the training of a specified number of apprentices obligatory on all employers. It is, however, not known as to when this legislation will be introduced. Even the draft Bill has not been published.

Unlike the employers, the Government and the Planning Commission have shown a welcome awareness of the importance of providing adequate training facilities for technical personnel. In addition to engineering colleges, technical institutes and polytechnics for turning out degree and diploma-holders in engineering, emphasis has also been laid on creating facilities for training personnel below the degree and diploma levels. Thanks to the importance given in the plans on technical education, there has been a rapid increase in the number of colleges and polytechnics and their annual intake. The number of engineering colleges has increased from 49 in 1950 to 97 in 1960 and their annual intake more than trebled from 4,119 to 13,165 during the same period. The number of polytechnics has more than doubled, from 86 to 1950 to 197 in 1960 and the annual intake has quadrupled from 5,905 to 24,020 in 1960. The following table indicates the growth of technical educational institutions in the country during the years 1950-60:

	Colleges			Polytechnics		
	Number	Annual intake	Outturn	Number	Annual intake	Outturn
1950	49	4,119	2,198	86	5,903	2,478
1955	65	5,888	4,017	114	10,484	4,499
1960	97	13,165	5,310	197	24,020	10,397

It is evident from the above table that there is a wide gap between the annual intake and the outturn, both in the case of engineering colleges and polytechnics. If this could be narrowed by a more careful selection of students and higher standards of instruction, the same number of institutions could turn out a larger number of qualified young men.

The requirements of engineering personnel in the different sectors of the economy in the third Plan period and probable supply have been estimated by the Planning Commission in the Draft Outline of the Third Plan as follows:

	Degree-holders		Diploma-holders	
	Demand	Supply	Demand	Supply
Civil	12,500	16,700	40,000	40,000
Mechanical ..	11,500	13,000	17,500	16,500
Electrical	11,000	12,700	14,000	12,500
Telecommunication .	2,500	2,100	500	400
Chemical	2,300	2,300	..	..
Metallurgical ..	1,100	1,000	800	100
Mining	1,800	1,500	4,000	2,500
Others	2,800	2,400	3,300	4,000
Total ..	45,500	51,700	80,100	76,000

It will be seen that, if the supply were of the magnitude estimated above, the Plan demand for degree- and diploma-holders will be generally met; surpluses and shortages will be marginal and capable of adjustment as the Plan proceeds. The demand for degree- and diploma-holders during the fourth Plan period, however, is estimated at 75,000 and 120,000 respectively, as against a supply of 57,000 degree-holders and 94,000 diploma-holders on the basis of existing training facilities. For meeting the entire demand, additional training facilities for about 18,000 graduates and 20,000 diploma-holders have to be provided during the third Plan period.

Training of Craftsmen

Sufficient supply of adequately trained craftsmen is no less important than availability of engineers and technologists. The Planning Commission estimated, in the Draft Outline, that for the industrial and other programmes, there will be need for about 750,000 craftsmen in en-

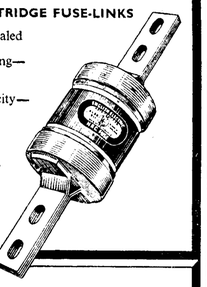
'ENGLISH ELECTRIC'

HIGH RUPTURING CAPACITY HEAVY DUTY

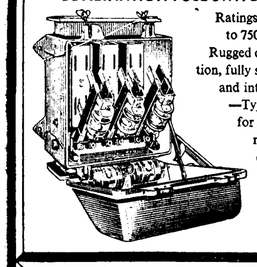
FUSEGEAR

H. R. C. CARTRIDGE FUSE-LINKS

Hermetically sealed construction—Non-deteriorating—ASTA certified for 35 MVA rupturing capacity—Visible indication of operation—Ratings up to 300 amps.



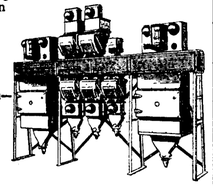
COMBINATION FUSE-SWITCHES



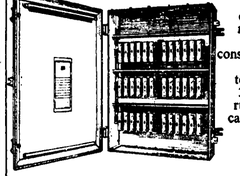
Ratings from 30 to 750 amps—Rugged construction, fully shrouded and interlocked—Type tested for 35 MVA rupturing capacity.

COMBINATION FUSE-SWITCHBOARDS

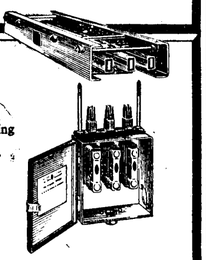
Incorporating Combination Fuse-Switches upto 750 amps—Robust and compact construction—Readily modified and extended—Type tested for 35 MVA rupturing capacity.



DISTRIBUTION FUSE-BOARDS



Robust, dust and moisture proof construction—Type tested for 35 MVA rupturing capacity—Ratings from 15 to 100 amps.



Flexibility of power distribution—Can be installed without disturbing existing layout or production—Avoids chasing of floors for ducting—Approved by Fire Insurance Authorities.

OVERHEAD BUSBAR EQUIPMENT

A complete range of distribution equipment manufactured at the Madras Works of The English Electric Company of India (Private) Ltd.

CRISIS IN COAL MOVEMENT

RESULT OF DEFECTIVE TRANSPORT PLAN

THE second Plan targets of coal production, namely, 45 million tons in the private sector and 15 million tons in the public sector in 1960-61, will not be fully achieved. It is estimated now, on the basis of production trends in the first quarter of 1961, that the private sector will have produced nearly 44 million tons in the whole of 1960-61 while the public sector will have contributed just under 9 million tons in the same year. There will thus be a shortfall of about 7 million tons as compared with the target, though this shortfall is somewhat lower than the 9 million tons anticipated last year. This happy result may be attributed to the speed-up of work in the N.C.D.C. collieries in the latter half of 1960-61.

While all this is good in so far as it goes, it is, indeed, distressing to find that the enthusiasm displayed by the industry in the closing months of the last year of the second Plan has all but run out. The reason for this setback is not far to seek. It is to be found in what Mr. S. B. Goenka, Chairman, Indian Mining Federation, has called "the most frustrating problem of shortage of transport"—a problem which is making it very difficult for even the existing tempo of production to be maintained, let alone its acceleration. While speaking over the week-end at the forty-eighth annual general meeting of the Federation, Mr. Goenka revealed how bad the position was—with the stocks of coal lying at the pitheads having mounted from month to month "till almost literally they have become mountainous." According to his calculations, at the end of 1960 unmoved coal carried by all the collieries in India amounted to 3.4 million tons, out of which just over 3.0 million tons were accounted for by the Bengal and Bihar coalfields, the corresponding figures for 1959-end being 2.7 million tons and 2.5 million tons. These stock figures cover both the public and the private sectors, the share of the private sector, proportionate to the raisings, being heavier than that of the public sector. But, even after discounting the difference, the disadvantages of the private sector will be found to be greater, for coal stocks in terms of locked-up capital means a much more acute problem to the private than the public sector. Huge stocks of coal piled up at pitheads, undergoing deterioration, entail higher cost of production and loss in efficiency. Shortage of transport and, consequently, slower movement of coal will thus cause losses as much to the collieries as to the industries which are forced to slow down production. How some industries have been affected in recent years would need to be illustrated. Production of ammonium sulphate at Sindri, for instance, fell to 2.85 lakh tons in 1959-60 from 3.30 lakh tons in the previous year. This decline was chiefly due to the poorer quality of coal supplies which, too, were not adequate. Production of pig iron at Rourkela during the months of April-August 1960 was less than 30,000 tons per month, as against the rated capacity of 60,000 tons per month at that time. This unsatisfactory performance, according to the Public Accounts Committee of Parliament, was due to the fall in coal supplies, for the daily receipt of coal even during the period of low production of pig iron at Rourkela had not been equal to the daily consumption. At Bhilai as well as at Jamshedpur and Burnpur, the position was no less unsatisfactory.

Wagon Shortage a Fact

Mr. Goenka, therefore, did well to deal with the controversy about the shortage of wagon supply for the movement of coal. The facts presented by him relate to the requirements of wagons for the movement of coal and the actual performance by the railways—facts which should help remove the confusion created by the statements and counter-statements made by various bodies, official and non-official. The position is brought out in the following passage from Mr. Goenka's presidential address:

"It is now known that the total production of coal during 1960 was approximately 52 million tons. After deducting collieries' own consumption, including that for boilers, and also coal despatched by road, the total amount of coal to be despatched by rail and the total number of wagons which are required for the movement of coal are matters of simple arithmetic which can be easily worked out. After deducting collieries' own consumption, including that for the boilers which, on the average, is about 5 per cent. it comes to 49.5 million tons, and after deducting 4 per cent therefrom despatched by road, the available coal for despatches by rail, inclusive of the coal stocks of 3.40 million tons as in December 1960, comes to about 51 million tons. Taking into account the maximum carrying capacity of 22 tons for a wagon, the total wagon requirement in a year would be 2,318,181. If we divide the number of wagons by 360 days, assuming loading even on Sundays, the total daily wagon requirement would come to 6,439 wagons. I may recall, in this connection, that the Coal Controller's Organisation estimated the number of wagons that would be required daily for moving coal during the second Plan period to be of the order of 6,804 wagons. Let us now see what is the actual performance of the railways for movement of coal in the country. The daily average allotment of coal wagons for the whole year 1960 was 4,474 wagons and the daily loading average was 4,335 wagons in the Bengal and Bihar coalfields. After deducting the requirement of the outlying fields, which has been assessed at 1,000 wagons, it will be evident that there is a shortfall in the supply of wagons for the movement of coal to the extent of about 1,000 wagons daily. The position is, indeed, alarming, and it does not lie in anybody's mouth to say that slow coal movement is not due to wagon shortage."

Mr. Goenka has taken a grim view of the situation which has arisen—a situation in which many industries and homes will be half starved of their coal requirements at least for a year to come even if the utmost efforts are made from now on to improve the position. But there is little prospect of the railways being able to catch up with coal production in the near future. The implication of it, according to Mr. Goenka, is not merely that, while the collieries will go on increasing production at a steady rate, the railways will lag just a little way behind. It may even be that the failure of the railways will inevitably react on production itself and slow down its rate. Already in the public sector collieries, such a slow-down is stated to be setting in, particularly in the Kurasia mines in Madhya Pradesh and the Karanpura collieries in Bihar. This, incidentally, brings out the fact that more additional coal has been produced in the Bengal-Bihar area than from the Central India collieries as was planned—a development which underlines the unforeseen character of the transport problem in the former area.

Rearrangements

The authorities, too, have just come to realise the seriousness of the transport situation in the Bihar-Bengal area. According to the Deputy Minister of Railways, steps are being taken to step up the transport capacity for the movement of coal above Moghalsarai, which served the needs of Uttar Pradesh, from 1,900 wagons to 2,100 wagons per day with effect from 1st July 1961, and also to divert some of the Moghalsarai coal traffic for Western India by sea. Steps are also being taken to switch over some of the coal supplies from the Bengal-Bihar coalfields to the Central India coalfields, so that coal now being transported via Moghalsarai for consumers in Western India could be diverted for use in U.P., Punjab, Rajasthan and Delhi. Here it is not only a question of sufficient wagon availability but one of capacity at Moghalsarai for handling the additional traffic. The railways are, therefore, taking steps to increase this capacity so as to transport more coal above Moghalsarai. This latter effort is bound to take some time. Anything like complete relief from the present coal shortage in the U.P., Rajasthan and Punjab cannot, in the circumstances, be expected. Such improvement as is brought about in coal supplies to these States will only be marginal.

What about Western India and Madras? Here, again, the likely improvement in coal availability expected from the present official proposal to move an additional million tons of coal by coastal shipping may only be marginal. In any case, the cost of transport by sea will be greater, being double that of transport by rail. This additional cost, according to present indications, may be partly met by a Government subsidy. As far as Western India, as distinct from South India, is concerned, greater improvement in coal availability is likely to result from the proposal to move coal from the Central India collieries than from movement by coastal shipping.

Long-term Solution

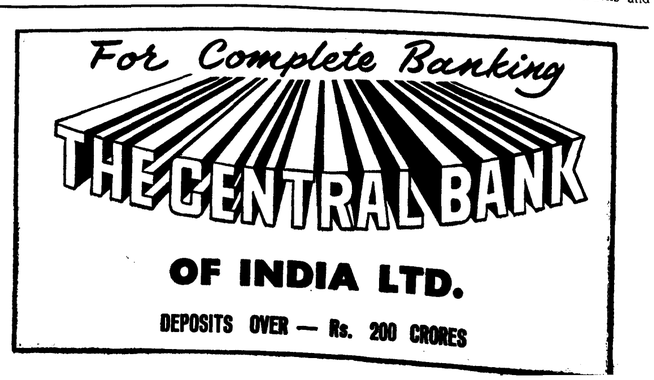
Such improvisations as are proposed at present may only bring about some short-term improvement in coal movement. Any longer-term solution will have to provide for speedier clearance of coal stocks from the pitheads and for a larger net addition to the stock of coal wagons. As for the first which alone is considered here, it would be relevant to recall that, in other countries, movement of coal from the pithead is normally guaranteed. In fact, in many places there are sufficient stable wagons available for at least two or three days in a week and there are also facilities for mechanical loading to avoid delays. It is said that the loading conditions in India—the timing for the supply of wagons, the number of wagons to be supplied and the so-called five-hour daylight loading time—are far from advantageous from the point of view of speedier clearance of coal stocks from the pitheads. As the British coal expert, invited by the Government of India last year, has stated, where a very highly mechanised colliery unit is established, it is essential that by some means or other the coal should be moved and the machinery kept running. Perhaps, in this context, Mr. Goenka's suggestion that adequate steps be taken to activise the road transport system may have to be seriously considered for action. His idea is that road permits be freely granted to the extent of the amount of cess deposited in advance by the collieries. It is also emphasised in this connection that the existing roads in the coalfields, many of which are in a scandalous state of disrepair, should be repaired and maintained in good condition as much for facilitating movement of coal by road as for the transport of sand from the river-beds to the collieries.

If, in such ways, speedier clearance of coal from the pitheads can be ensured, the way will also be cleared for a leap forward in production. As far as the private sector is concerned, it is confidently expected that, in the third Plan period, it will be in a position to achieve its target of coal production at a much lower rate of investment than the rate of Rs. 65 per ton of additional coal production annually in the public sector. But this expectation can be fulfilled only if the private sector is permitted to raise coal from the existing leasehold areas of the collieries without any restriction and if such basic requirements as adequate transport facilities, provision of assisted sidings and an economic price-structure (with a rehabilitation allowance) are met to the satisfaction of the industry.

HOUSE MOVING IN NEW ZEALAND

House moving in New Zealand is now a big business. What is novel here is that the complete house is lifted bodily from the ground and hauled by truck to its new site. One of the specialists in this tricky business is Mr. T. R. Parry, of Upper Hutt, who uses a fleet of seven Leyland Retrievers of World War II vintage. Normally, Mr. Parry's fleet of old Leylands tackle smaller buildings such as houses.

But a recent task performed by him was the removal of a 13,000 sq. ft. hangar at Rongotai Airport to a site 500 yards away. Corrugated covering and doors were removed from the hangar sides, leaving it like a giant umbrella. Four main girders supporting the roof and embedded in concrete were then cut through with an oxy-acetylene torch and the structure jacked up on to 12 trailers and trucks. Any tendencies for the structure to be lifted by wind were counteracted by welding some 50 tons of girders to the bottom of the structure and tying the hangar supports to the trucks and trailers.



NEW PRODUCTS AND PROCESSES

Air Storage System

DESIGN of a compressed air storage system required for studies in the fields of high speed aerodynamics and propulsion has been completed and detailed specifications drawn up at the National Aeronautical Laboratory, Bangalore. The system essentially consists of four cylindrical receivers each of 12 ft. diameter made of mild steel plate of thickness 1¼". Each receiver is supported on saddle supports mounted on rollers. It has a nominal length of 225 ft. and overall capacity of 100,000 ft. Temperature stabilisation of the compressed air during a blowdown is achieved by using a 75-ton tubular matrix stacked at the exit ends of the inner pair of receivers. The outer pair of receivers can be disconnected from the inner pair by means of isolating valves.

Milk Clotting Agent

Scientists of the Central Food Technological Research Institute at Mysore have successfully isolated a milk clotting agent from the latex of semi-ripe fruits of the fig variety. The clotting agent can be used in the production of cheddar and processed cheese. Large-scale trials have been carried out with the processed fig latex at the Kaira Co-operative Milk Producers' Union, Anand, and at the Regional Station of the National Dairy Research Institute, Bangalore. It has been found that fig latex is a good substitute for the commonly-used animal rennet. In India, processed cheese and animal rennet are largely imported. The total cost of cheese manufacture with the vegetable rennet (fig latex) works out to about Rs. 7.70 per kg., as against Rs. 12.22 per kg. for imported cheese.

Hardening Carbon Steel

A big advance in the hardening of carbon steels has been made by a British firm manufacturing induction heating equipment. The firm was asked to produce equipment for a company of motor car manufacturers with special application to the hardening of gears and spline shafts. The result was so successful that it has now been decided to make the equipment available to the general engineering industry. In the hardening of carbon steels the ideal result is to have the outside hard, for its desirable wearing qualities, and the core soft to be more resistant to fracture. Heating by induction is better suited to produce this effect than any other method, because it is easier to localise the heat; the heating takes place initially only on the surface of the metal while the interior is cold, and the heat is applied only where it is needed, effecting an economy in power consumption.

Radio Telemetering System

A radio telemetering system, which is particularly suitable for diesel engine and gas-turbine application, has been developed by the British Internal Combustion Engine Research Association. The new system overcomes all the disadvantages of previous methods of obtaining information from moving parts on the variation of physical qualities, such as strains, temperatures, relative displacements and the like. The B.I.C.E.R.A. system is made of transistor circuits encapsulated in an epoxy resin which cures at room temperature and gives protection against oil, dirt and humidity. Additionally it gives great mechanical strength. It has already been successfully tested in three applications—strain gauging, temperature measurement and needle-lift pick-up. The system has the advantage that connecting cables are dispensed with and it can be employed on oscillating as well as rotating parts. It is suitable for transmitted signals indicating a wide range of physical qualities.

Hydraulic Gear Pumps

A new range of hydraulic gear pumps, incorporating many advanced design features, has been developed by Joseph Young and Sons, Lancashire. The units are of the constant displacement type and are primarily intended for heavy duty applications involving either continuous or intermittent operation such as mechanical handling equipment, coal mining appliances, earth moving vehicles and hydraulic control systems of all kinds. There are four basic models in the new range, each being available with side or end ports. The capacities are 12.5 g.p.m. (gallons per minute), 18 g.p.m., 24 g.p.m. and 30 g.p.m., at 1,000 r.p.m. All have square flange mounting and are interchangeable. An important new feature of the pumps, which are said to be robust, precision-built, units designed to give a long and reliable working life with a minimum of maintenance, is that the direction of rotation can be changed simply by inverting the end plate. Another new development is an ingenious system of grooves formed in the end cover which relieves the build-up of pressure caused by the trapping of oil at the bottom of the gear teeth, and eliminates pressure on the oil seals and joint faces.

Fire-proof Curtain Fabric

A curtain fabric that never wrinkles, stretches, shrinks or fades, never needs ironing, is completely fireproof and can be washed, dried and rehung in seven minutes, was one of the highlights of the National Household Textiles and Soft Furnishings Fair held at Earls Court, London, from 27th February to 3rd March. Curtains in this unique material, a glass fibre, can be bought ready to hang in three drop-lengths, representing 60 per cent of average requirements, and planned to fit the normal 48 to 52-inch wide window.

Writing and Printing Papers from Mango Wood

Unbleached and bleached chemical pulps in 48 and 42 per cent yield respectively can be prepared from mango wood by the sulphate process developed at the Forest Research Institute, Dehra Dun. The pulp can be used in admixture with 50-70 per cent of bleached bamboo pulp, to produce writing and printing papers of good quality. The mango tree is found in almost all the forests of India and is widely cultivated for its luscious fruit.

Better View for Motorists

An invention based on an optical illusion which makes it possible to create a "wrap-around" effect without the use of curved glass for car windscreens has been made by a Swede, Dr. Alf Heimer, a Gothenburg physicist. The invention is based on the use of a prisma-cut 16 mm glass in the front side windows. In his experiments Dr. Heimer has used a Volkswagen in which the side stanchions between the windscreen and the side windows have been removed and replaced by narrow steel struts. Through the optical effect of the prisma-cut side-window glass the struts become invisible to the driver, who experiences the sensation of driving a car with an unobstructed 180 degree front view.

Plastics Coating for Power Dams

Tests with duro plastics for reinforcing and caulking concrete power plant dams carried out in Sweden over the past few years, have given satisfactory results, according to the Swedish State Power Board. Theoretically, says the Board, it would be possible to build dams of low-grade concrete with a tight surface layer of plastics. it is stated. The type of plastics used in the Swedish experiments has primarily been epoxy, which is claimed to have extraordinary adhesive properties, high elasticity, tensile strength and water resistance. Though still being relatively expensive, epoxy plastics are expected to become considerably cheaper over the next few years. One of the tests carried out at present concerns the Suorva dam in Arctic Sweden, which was first built in the early 1920s and extended just before the outbreak of World War II. Temperature variations have caused horizontal cracks in the concrete in the older parts of the dam, through which water is leaking. During the past summer a surface of 15 sq. m. (160 sq. ft.) on the upstream side of the dam was clad with epoxy and three layers of glass-fibre fabric. The caulking will be closely studied, early this summer when it will also become known whether the plastic coating has been able to resist the mechanical impact of the heavy ice. If the results prove satisfactory, further sections of the dam will be coated with plastics. Previous attempts to caulk the dam with reinforced or reinforced spray grouting or with moraine filling have proved unsuccessful, while the casting of a new 25-cm. (10-inch) layer of concrete outside an intermediate layer of asphalt has given good results. However, the latter method is considerably more expensive than using plastics. Experimental caulking of expansion and other construction joints and of local cracks has also been carried out by means of plastics. Moreover, sand mixed with plastics has been found to render a good putty for repairing concrete with surface defects.

Sulphur from Gypsum

Pilot plant studies undertaken at the Regional Research Laboratory, Hyderabad, have shown the possibilities of commercial production of sulphur using gypsum as the raw material. These results are of significance because we rely on imports for our requirements of this important industrial chemical. A large amount of sulphur goes into the production of sulphuric acid. Other uses of sulphur are in the manufacture of wood pulp, insecticides, rubber and in metallurgy and petroleum refining. In India, a major sulphur-bearing mineral is gypsum which occurs abundantly in Rajasthan, Gujarat and Madras. The process, developed by the Regional Research Laboratory, Hyderabad, now covered by a patent, consists of three stages: reduction of gypsum to calcium sulphide, using coke or lignite; production of hydrogen sulphide by the action of steam on calcium sulphide and combustion of hydrogen sulphide to yield sulphur. The salient features of the process are use of lower temperature 900°C compared to 1,400°C required in the conventional methods and the efficiency of the third stage (98 per cent).

A pre-design cost estimate, based on a 100-ton-a-day plant, has indicated the new process to be commercially feasible.

Wash and Wear Paper

One of the latest developments in papermaking is a twisted, knitted paper that can be boiled, washed or dry-cleaned and re-used as many as 30 times. It is produced by a single mechanical operation which converts paper into yarns narrow enough to be knitted into fabrics. Suggested uses for the paper are as hats, bags and heat-shielding materials. It was developed by Ronald H. Maks, Dallas, Texas, U.S.

DEFECTS IN AGRICULTURAL STATISTICS

SOME SUGGESTIONS FOR RECTIFYING THEM

By Dr. P. S. Lokanathan

DIRECTOR-GENERAL, NATIONAL COUNCIL OF APPLIED ECONOMIC RESEARCH, NEW DELHI

[All is still not well with agricultural statistics pertaining to India. Last week, a Member of Parliament drew attention to the existence of two sets of data on food production in the 1960-61 crop year, the National Sample Survey (N.S.S.) estimate of 96 million tons and the Union Ministry of Food and Agriculture estimate of 75 million tons. There is a similar disparity in regard to consumption of food also. Who is right? Or are both wrong? In fact, such discrepancies exist in regard to almost all data relating to our rural economy. One can get an idea of the extent of these discrepancies and the reasons for them from this article which is an adaptation of Dr. Lokanathan's address at the recent annual meeting of the Indian Society of Agricultural Statistics, New Delhi. The learned author has also indicated the lines on which the agricultural statistics can be made more reliable and published expeditiously. The problem dealt with by the author is a very important one and deserves early attention at the hands of the authorities.—ED.]

SINCE the inauguration by Rashtrapati Rajendra Prasad in December 1956, the National Council has been engaged in a number of research activities, the most important of which have been the Techno-Economic Surveys of various States and supply and demand projections of agricultural commodities in India. The N.C.A.E.R., therefore, has been a large user of agricultural statistics for various purposes. I shall refer here to some of the difficulties that we have encountered (*a*) in getting reliable statistics and (*b*) in interpreting them.

If my observations are critical, I should not be understood as, in any way, minimising the great efforts that have been made in recent years to improve the quality of statistics in the agricultural field. In fact, the improvements achieved recently have been substantial. But all efforts should be directed towards securing further rapid improvements so essential for policy making.

Plans for agricultural development can be based only on reliable and comprehensive agricultural statistics. With each Plan, the economy becomes more complex and the problems of allocation of resources, the balance between different sectors of the economy and evaluation of results call for more and comprehensive data and for employment of a wider range of methods and techniques of study. The lack of essential and meaningful statistical data will cripple the efficient formulation and execution of Plans.

The progress in the application of scientific methods to agricultural research and data collection owes a good deal to the pioneering efforts of the Indian Council of Agricultural Research. Eminent agricultural statisticians who have been or are currently associated with this work have played a praiseworthy part in the progress registered in the application of statistical methods to agricultural experimentation and research particularly in the field of improving the quality of yield estimates.

The Directorate of Economics and Statistics of the Ministry of Food and Agriculture has been the chief co-ordinator of agricultural statistics and it has given valuable guidance to the States. The marked improvement in the sphere of agricultural statistics bears ample testimony to the well planned and sustained efforts made by the Directorate, and the Organisation deserves the compliments of all engaged in using agricultural statistics. Much, however, still remains to be done by way of systematisation and refinement before we could say that we have a body of usable and classified data, covering the entire range of needs in the sphere of agricultural statistics.

Many Defects

The defects in agricultural statistics are many. Complete absence of data on some important topics is a matter of serious consequence. Coverage is insufficient and data are deficient, because of lack of uniformity in definition and classification; they also suffer from non-comparability over space and time. The divergence in figures supplied by various agencies leads to defects in planning and co-ordination. The method of presentation of data is also at times defective. In addition, there are defects of tabulation and processing. These shortcomings, together with the delay in collection and publication of the data, diminish their utility to both the Government and the people.

In regard to areas, first of all, we must have complete coverage which is, as yet, inadequate. The coverage of acreage statistics was extremely limited before World War II. The former princely States did not have proper administrative machinery for the purpose. Secondly, information regarding acreage is also poor on account of historical and other circumstances. Thirdly, the National Sample Survey (N.S.S.) and the official series present data which are not comparable. Also the N.S.S. sampling procedure is, in our judgment, inappropriate for area reporting, especially as we have large reporting arrangements in most of the States. What is required now is an improvement in these arrangements rather than a switch over to a sampling technique.

There are differences between the figures of total area given by the Surveyor-General and those given in land records. In some States, e.g., West Bengal, the Punjab and Rajasthan, the geographical area, according to the Surveyor-General, is less than the area reported according to the village papers.[1] The two sets of figures are misleading. Even in the case of States where the whole State is reporting (e.g. Madras), the area figures obtained from the two sources differ.

Two series of acreage statistics are available at present, namely, (*a*) official series, and (*b*) N.S.S. series. The N.S.S. series, started very recently, relate mainly to the statistics of area under different crops.

The data in the official series are more comprehensive, but, owing to the lack of uniformity in regard to concepts used, comparison becomes difficult. The term "culturable waste," for instance, is used in different senses in different places, with the result that a considerable portion of the area at present shown as culturable waste is not really cultivable.[2]

The non-comparability of concepts and definitions creates difficulties in the way of determining land utilisation trends over a period of time.

Land-holdings

The absence of information on cultivator's holdings is another serious gap in agricultural statistics. Some information is available on this topic,[3] but it does not go far enough; they are in any case not so detailed as to enable planning at lower levels.

India is co-operating with the F.A.O. for purposes of Agricultural Census by undertaking a survey of land holdings during the 16th round of N.S.S. This survey, welcome, as it is, will provide data at regional, State and all-India levels. It is very important, however, to have data below the regional level for purposes of micro-level planning and the question of tabulating some information from village records in respect of some of the important items should be seriously looked into.

Indeed, any measure of reform which the State may wish to push through in the sphere of agricultural development can, in the final analysis, be implemented only by the cultivator himself, and the Extension agencies can advise the farmers effectively when clear statistical picture of the farm characteristics in the region is available, say, in relation to the pattern of land use, crop production, etc. Detailed and realistic planning at the macro-level also cannot be done in the absence of data on these farm characteristics. We would like to have information about Farm Management. Studies have been made under the auspices of I.C.A.R., but these studies have not been fully collated and no comprehensive account is available for the country as a whole.

Under the present land classification, the suitability of land for various purposes is not indicated, to say nothing of the economic and allied considerations that should find an important place in a system of meaningful and useful classification. In U.S.A., for example, some advanced work has been done in this regard, using income-expectancy as a criterion.[4] In the interests of agricultural planning, land use capability and some important economic considerations should be introduced in the Indian land classification system without too much delay.

Information in regard to holdings is becoming very important because of policy reasons. One would like to know more, and have more information especially in the context of legislation for ceilings, co-operative farming and so many other economic and social changes which are on the anvil as it were. Some more precise data in respect of holdings will be essential and we do not have them.

The N.S.S. also collects information on areas under different crops during the regular rounds. The estimates are given for all-India and the population zones, and are based on random sampling. There are differences in these estimates and the official estimates of area under crops. Because of the difference in methods and techniques (differences in coverage of crops/seasons, non-comparability of the experience in the field work between the two agencies, misclassification of area under the grain crop and the fodder crop, differences in the methods of allocation of area under mixed crops and possible sampling errors), followed by N.S.S. and the regular agencies, it is difficult to know the amount of unreliability in the official figures. Not to be able to assess the degree of unreliability is a pity indeed!

The pre-final estimates of crop acreages are based mainly on the impressions of the primary reporters. Sample surveys have been initiated by the N.S.S. since 1955-56 for improving the pre-final estimates, but the results are subject to large sampling errors and generally become available too late to serve the purpose in view. Of late, the results are being expedited to some extent.

Data on Yields

As in the case of acreage statistics, two series of statistics on yield are currently available, namely, the official series and the N.S.S. series. The official series relate to a very large number of crops, but the N.S.S. series is at present limited only to cereals.

Under the traditional method, subjectivity is introduced in ample measure, normal yield and condition factor both depending upon personal judgment. Besides, the average of the condition factors taken over a series of years works out at a figure less than the corresponding anna equivalent of the normal. This might suggest that estimates based on this method are underestimates; this is, however, counteracted by the fact that the normal yields which were fixed a long time ago are pitched at a higher level than what they should be. How much off the normal yield can be, may be judged from the fact that, as a result of experiments conducted, the standard outturn of ragi was lowered from 981 to 459 lbs. and of sesamum from 353 to 200 lbs. in Mysore during the quinquennium ending 1941-42.[5] This method is, however, being gradually replaced by the method of crop cutting surveys based on random sampling.

The conduct of these surveys and the supervision from outside agencies also leave a lot to be desired. The agencies for the conduct of these surveys are generally over-burdened with other duties and do not fully realise the importance of this work. Effective central supervision over State Crop cutting surveys is at present of the order of 1 to 2 per cent only; the supervision over the conduct of surveys needs strengthening and the minimum scale of supervision, both State and Central, should be such as to yield independent yield estimates at the State level.

The methods and techniques followed by various States are not uniform, for example, the type of cut is not always the same.

Statistics of yield are available at present in respect of cereals, pulses, other crops, oilseeds and fibres, and also for some of the plantation crops like tea, coffee and rubber and for some minor crops such as indigo, tapioca, etc. The absence of production estimates in respect of a number of minor crops, including fruits and vegetables, is a serious limitation. Even though the area under such crops and the quantum of production may be small, their importance from the point of view of export trade and, also, owing to the part these products play in human

FORWARD MARKETS BULLETIN

(Monthly)

Published by Forward Markets Commission Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription		Single copy	
In India	Rs. 24.00	In India	Rs. 2.50
Abroad	Rs. 40.00	Abroad	Rs. 4.00

New power in industry

On a 600-acre site at Durgapur, amidst intense activity, the scene is being set for yet another vitally important contribution to India's industrial growth—a contribution made possible through the vast technical knowledge of ACC-VICKERS-BABCOCK LTD. (A.V.B.), a new and powerful industrial group formed by The Associated Cement Companies Limited, Vickers Limited and Babcock & Wilcox Limited.

Already, considerable progress has been made in erecting this new Industrial Plant. Workshops are rapidly taking shape and foundations are being prepared for some of the most up-to-date machinery in the world. Very soon now the A.V.B. Plant will be ready to make its contribution to Indian industry, and to help Indian engineers overcome some of the difficulties which have faced them for so long.

MODERN EQUIPMENT

Some of the most up-to-date industrial equipment of its kind in the world is being installed in the new A.V.B. Plant, from the radio-active cobalt X-ray equipment capable of X-raying steel plates up to a thickness of 6" to the vast 3,000-ton hydraulic press, the largest in Asia, designed to bend steel plates of up to 5" thickness. The workshops of A.V.B. are thus fully equipped to manufacture machinery for the cement-making and mining industries, thermal power plant and industrial steam-raising equipment equal to the best in the world.

VITAL ROLES

THERMAL POWER: A.V.B. have the technical knowledge, the men and the machinery to participate in the supply of vital plant to be installed in Thermal Power Stations throughout India. They will make a notable contribution towards the target set by the Government of erecting boiler plant and thermal power plant to the value of Rs 34 crores per year by the end of the Third Five Year Plan.

CEMENT-MAKING MACHINERY: A.V.B. are already discussing projects which will enable them to supply machinery to help increase the output of cement for which the Government's target is 13 millon tons per year at the end of the Third Five Year Plan. Not only will A.V.B. help to meet the exigencies of industrial expansion but they will ultimately contribute towards the earning of valuable foreign exchange through export.

SITE STRATEGICALLY LOCATED

A.V.B. have shown considerable foresight in the location of Durgapur as their base for operation. Close to the now well-known Durgapur Steel Project, they are within what is fast developing into the industrial heart of India. They are within easy reach of India's coal and general mining centres. The Port of Calcutta is only a hundred miles away, a factor which is of tremendous advantage for the import of special raw materials.

EFFICIENT STAFF

The new company has adopted a far-sighted policy regarding the housing of the staff at Durgapur. Resulting from this the AVB housing colony which is situated but a short distance from the factory site is one of the finest in India. The houses are modern and the colony itself will be completely self-contained with its own dispensary and its own shops, parks and playgrounds. Here will live the workers of the A.V.B. group from the man of the shop floor to the skilled engineers and advanced technicians, a team that will keep a close watch on this modern plant which will harness such a vital and powerful new force to Indian industry.

8. SHRI S. RAMANATHAN.
9. SHRI M. V. VEERAPPA.

Report of the Board of Directors to the State Bank of India and the Reserve Bank of India in terms of Section 43 (1) of the State Bank of India (Subsidiary Banks) Act, 1959

PERIOD COVERED BY THE REPORT: 1st MARCH 1960 TO 31st DECEMBER 1960

With effect from 1st March 1960, the Bank has been constituted as a Subsidiary of the State Bank of India under the State Bank of India (Subsidiary Banks) Act, 1959. As a consequence, the Board of Directors was re-constituted with effect from 1st March, 1960, under Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959. The names of the Directors as on 31st December 1960 are listed in the annexure.

ACCOUNTS

The Balance Sheet and Profit and Loss Account for the period of 10 months ended 31st December 1960 as approved by the Board of Directors are annexed.

The working of the Bank resulted in a net Profit of Rs. 28,05,442.47 (including Tax deducted at source Rs. 5,68,074) which the Board of Directors have appropriated as under :—

Transfer to provision for Taxation	Rs.	12,50,000 00
Transfer to Reserve Fund	Rs.	3,40,000 00
Bonus to Staff	Rs.	3,85,000 00
Dividend for 10 months at 9 per cent. per annum (subject to tax)	Rs.	7,50,000 00
Carried forward	Rs.	80,442 47
	Rs.	28,05,442 47

The accounts of the Bank have been audited by Messrs. Fraser and Ross, Chartered Accountants, who were appointed as Auditors by the State Bank of India in exercise of the powers conferred by sub-section (i) of Section 41 of the State Bank of India (Subsidiary Banks) Act, 1959, with the approval of the Reserve Bank of India.

CAPITAL AND RESERVES

In terms of Section 7 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, the State Bank of India with the approval of the Reserve Bank of India, have fixed the Issued Capital of this Bank as on 1st March 1960 as Rs. 1,00,00,000 (Rupees One crore) divided into fully paid-up shares of Rs. 100 (Rupees One Hundred) each.

In terms of Sections 8 (1) (a) of the State Bank of India (Subsidiary Banks) Act, 1959, the State Bank of India with the approval of the Reserve Bank of India determined Rs. 50,00,000 (Rupees Fifty lakhs) as the sum which the Reserve Fund of the State Bank of Mysore shall consist of, as on the appointed day, viz., 1st March 1960.

The Capital of the old Bank was Rs. 50 lakhs and Reserves including premium on shares Rs. 100 lakhs.

DEPOSITS AND OTHER ACCOUNTS

The Deposits and other accounts of the Bank as on the day immediately preceding the date of reconstitution as a Subsidiary of the State Bank of India, viz., 29th February 1960 and as on 31st December 1960 were as under :—

	29-2-1960 (In lakhs of rupees)	31-12-1960 (In lakhs of rupees)	Difference: Increase (+) Decrease (—)
Fixed Deposits	9,71	10,32	+ 61
Thrift and Savings Deposits	2,63	2,98	+ 35
Call Deposits	1,84	1,15	— 69
Current Accounts, Contingency Accounts, etc...	5,79	5,49	— 30
Total ..	19,97	19,94	— 3

The pace of growth in the Deposits was satisfactory until about September, whereafter there was a decline, particularly in Call Deposits, because of the reduction in the rate of interest in pursuance of the directive of the Reserve Bank.

CASH BALANCES AND MONEY AT CALL AND SHORT NOTICE

	29-2-1960 (In lakhs of rupees)	31-12-1960 (In lakhs of rupees)	Difference: Increase (+) Decrease (—)
Cash with Branches and Head Office	58	51	— 7
Balances with Reserve Bank of India	59	50	— 9
Balances with the State Bank of India and other Subsidiaries..	14	15	+ 1
Total ..	131	116	—15
Balances with other Banks	21	22	+ 1
Money at Call and Short Notice	1	..	— 1
Total ..	153	138	—15

The small shrinkage in the Cash balance reflects the decrease that the Bank's Deposits have suffered while there has been a small increase in Loans and Advances.

The ratio of Cash and Bank balances to Demand Liabilities was 20.26 per cent.

INVESTMENTS

The total of the Bank's investments, which consist of Government and other Trustee Securities, recorded a small increase of Rs. 20.2 lakhs during the period covered by the report. The market value, however, was lower than the book value by Rs. 9.06 lakhs as on 31st December 1960. But, this difference has been fully provided for.

Date	Face Value Rs.	Book Value Rs.	Market Value Rs.	Difference: Increase (+) Decrease (—)
29- 2-1960	8,46,18,000	8,42,58,000	8,46,24,000	+ 3,71,000
31-12-1960	8,66,89,000	8,62,83,000	8,53,77,000	— 9,06,000

The ratio of Investments to Deposits was 44 per cent.

ADVANCES

	29-2-1960 (In lakhs of rupees)	31-12-1960 (In lakhs of rupees)	Difference: Increase (+) Decrease (—)
Loans, Cash Credits and Overdrafts	1,083	1,121	+ 38
Bills Discounted and Purchased	149	122	— 27
(i) Payable in India	142	116	
(ii) Outside India	7	6	
Total ..	1,232	1,243	+ 11

The increase in advances of a total of Rs. 11 lakhs is spread over a large number of small accounts.

The proportion of Loans and Advances to Bank's Deposit was 62.34 per cent.

PROFIT AND LOSS

The gross income of the Bank for the 10 months amounted to Rs. 1,06,10,007.51 (including Tax deducted at source : Rs. 5,68,074) as against Rs. 1,09,25,000 for the 12 months ending 31st December 1959.

After making the usual and necessary provisions, the net profit of the Bank amounted to Rs. 28,05,442.47 (including Rs. 5,68,074 being tax deducted at source) for the 10 months as against Rs. 23,05,000 (excluding tax deducted at source) for the 12 months ending 31st December 1959.

While making appropriations out of the net profits, the Board of Directors of the Bank considered that a bonus of an amount equal to two months salary which generally is the maximum bonus that public sector institutions functioning under the Central Government allow to their staff should be ordinarily payable. However, having regard to past practice they decided to sanction the payment of an additional *ad hoc* bonus of one month's salary on the present occasion.

GOVERNMENT AND AGENCY BUSINESS

The Bank was already conducting Government business as Agent of the Reserve Bank of India before it was reconstituted, under a tripartite agreement between the Government of Mysore, the Reserve Bank of India and the old Bank. This agreement lapsed on 1st October 1960 and the Government business is now being conducted by the Bank on behalf of State Bank of India in pursuance of the agreement entered into with the latter Bank in terms of Section 36 of the State Bank of India (Subsidiary Banks) Act, 1959.

Currency Chests were being managed and Treasury work conducted already in 16 places on the date of reconstitution, and Small Coin Depots in 7 Centres. Subsequent to 29th February 1960 Currency Chests and Treasury work was taken over at two more centres, bringing the total number of Branches doing Currency work to 18.

BOARD AND EXECUTIVE COMMITTEE MEETINGS

Five Meetings of the Board and Twenty Meetings of the Executive Committee were held during the 10 months ending 31st December 1960.

OFFICES OF THE BANK

Including Central Office and Head Office, the Bank had in all 43 offices as on the 29th February 1960. Names of these offices are given in the annexure. To these, 9 offices were added during the current year in the following centres :

1. Somwarpet
2. Hunsur
3. Doddaballapur
4. Shikaripur
5. Sira
6. Kuppam
7. Haveri
8. Coondapur
9. Channarayapatna

DEVELOPMENTAL ACTIVITIES

(a) Expansion Programme

In addition to the 9 Branches opened during the period under report, licences for opening two more Branches have been obtained from the Reserve Bank of India. Investigations of the business possibilities in 15 centres have been made and the opening of Branches and Pay-offices at 4 centres have been approved by the State Bank of India. Licences for opening these Branches and Pay-offices are pending consideration with the Reserve Bank of India. In terms of Section 48 of the State Bank of India (Subsidiary Banks) Act, 1959, the State Bank of India has agreed to subsidise the Bank's development programme by reimbursing to it the full amount of losses of new offices set up after 4th March 1959 for a period of 5 years and thereafter in a descending scale at 80 per cent., 60 per cent., 40 per cent. and 20 per cent. of the losses for each of the following years. The terms on which the losses have to be assessed have also been agreed upon. The Subsidy expected to be received to the end of 1960 is Rs. 0.65 lakh, the credit for which has been taken into the Profit and Loss Account of the year.

(b) Small Scale Industries

The Bank was extending assistance to Small Scale Industries in pursuance of a special arrangement even before its reconstitution. The total units that were in receipt of assistance as on the 29th February 1960 were 64 and the aggregate limit placed at their disposal was Rs. 46,11,000. During the period under report, assistance was afforded to 40 more units accounting for a total limit of Rs. 36,26,850. This brings up the total of units assisted as on 31st December 1960 to 104 and the aggregate limit available to them to Rs. 82,37,850.

(c) Warehouses

There are 12 warehouses in the State of Mysore established by the Mysore State Warehousing Corporation and the Central Warehousing Corporation in places where the Bank has Branches. Of the advances made against commodities warehoused in these centres, a major portion is by the Bank's Branches. The total outstandings against Warehouse Receipts was Rs. 10,57,268 as on 31st December 1960 (limit Rs. 20,43,950).

(d) Co-operative Institutions

The total advances made to Co-operative Institutions during the year was Rs. 66,86,550 and the number of institutions helped 23. As on 31st December 1960, the amount outstanding under this head was only Rs. 17,93,515, because of a large payment made on the last day of the month by one such institution.

STAFF

The strength of the Staff was 1,113 on 29th February 1960. At the close of the year, the strength had increased to 1,201 consequent on the opening of new Branches.

The relationship of the staff with the management was cordial and co-operative.

By Order of the Board,

A. KRISHNA MURTHI,
General Manager.

STATE BANK OF MYSORE—*(Continued)*

BALANCE SHEET AS AT 31st DECEMBER, 1960

CAPITAL AND LIABILITIES	Rs.	np	Rs.	np
1. Capital—				
AUTHORISED— 2,00,000 Shares of Rs. 100 each	2,00,00,000	00

REPORT OF THE AUDITORS

We, the undersigned Auditors of the State Bank of Mysore, appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at 31st December 1960.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office, and the Head Office and the Returns submitted by the Branch Managers, which returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair Balance Sheet, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory ; (iii) that the transactions of the Bank which have come to our notice have been within the competence of the Bank ; (iv) that the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit ; (v) that the Profit and Loss Account shows a true balance of Profit for the period covered by such account ; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with Law and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by Law.

THE CHARTERED BANK

ANNUAL STATEMENT OF CHAIRMAN, MR. V. A. GRANTHAM

IMPACT ON INTERNATIONAL TRADE OF ECONOMIC POLICIES OF UNDERDEVELOPED COUNTRIES

A COMPREHENSIVE review of the main economic trends and developments in Asia, the principal region of the operations of the Chartered Bank, is provided by Mr. Vincent Alpe Grantham, Chairman of the Bank, in his statement to shareholders circulated along with the Directors' report and statement of accounts of the Bank for the year ended 31st December 1960. In this statement, Mr. Grantham has clearly brought out the heavy dependence of the countries of the East upon foreign aid and investment for the success of their development plans and drawn attention to some serious defects in the economic policies of these countries which not only hinder the inflow of capital and technical know-how but also tend to slow down the rate of their economic growth by aggravating their difficulties. Excessive restrictions on imports by the Asian countries on balance of payment considerations may, he warns, make it increasingly difficult for them to find buyers for their own export products.

The following is the full text of Mr. Grantham's statement and by reading it one can get a fairly good picture of the state of affairs in some two dozen nations in West Asia, the Indian Subcontinent, South-East Asia and the Far East. The one hundred and seventh Annual General Meeting of the Bank is scheduled to be held at 38 Bishopsgate, London, on 29th March 1961:

"During the accounting period to which this statement relates, the Bank has continued to make steady progress and our subsidiary, The Eastern Bank Limited, has contributed to the favourable results which have been achieved by the group. Later in this statement I have reviewed recent economic and political developments which have influenced the operations conducted by both banks in the numerous countries to which the two branch organisations extend, but, before doing so, I must make a reference to the extent to which we are indebted to our staff everywhere for the favourable picture I am able to present to the stockholders. Success in banking ventures finally depends upon service to the public and the quality of that service depends largely upon professional competence at the executive centre sustained by the devotion and skill of a numerous and widely diffused establishment and the Chartered Bank group is, indeed, fortunate that it can rely so fully on the ability, integrity and zeal of those by whom it is served.

"Mr. John Shewan, an Assistant General Manager, has been promoted to the rank of Joint General Manager in anticipation of the impending retirement of Mr. G. A. Leiper, whose services we shall be very sorry to lose. The Court of Directors have appointed Mr. R. A. S. Lane to be an Assistant General Manager. Mr. Lane has served in our Eastern branches in a succession of executive appointments and has recently undertaken an extensive tour of inspection of the oversea establishment.

"Throughout its history, the Bank has maintained intimate business relations with the Australian banks and, last spring, the Chief General Manager, Mr. W. G. Pullen, visited these institutions from whom he received a warm welcome. During the autumn also Mr. Pullen undertook an extensive tour of North America and he was enabled to discuss with leaders of American and Canadian finance and industry many international economic problems in which Great Britain, the United States and Canada have a common concern. Early in 1960, Mr. G. A. Leiper undertook a tour of the Far Eastern branches and resumed his acquaintance with customers of the bank in Japan, Hong Kong and the Philippine Republic. Mr. David Beath, who was accompanied by Mr. Goldsmith, General Manager of The Eastern Bank Limited, has lately returned from a tour of the Middle East.

The Irano British Bank

"For our associate in Iran, the year under review has been a period of consolidation rather than expansion, but the proposed branch at Ahwaz, to which I referred in my last address, is now functioning successfully and a small sub-office, for the convenience of private customers, has been opened in the northern part of Tehran. Trading conditions during most of the year were difficult and the general tightness of money in the bazaar was reflected in a shortage of working funds available. However, the accounts at the end of the Iranian half-year disclosed an all round increase in business and the trading result was not unsatisfactory. A report on Iran is included in the Oversea Survey.

The Bank's Balance Sheet

"The record figure of £270,390,101 set up in last year's balance-sheet total has soon been outstripped, for the accounts now placed before you reflect the further expansion of the Bank's business by an increase of £45,813,097, producing a new record total of £316,203,198. We have also been able to maintain a high degree of liquidity as evidenced by a slight increase of 1.47 per cent in the ratio of cash to our demand and time liabilities, which now stands at 19.55 per cent.

"The fall of £2,200,280 in Current and Other Accounts is small in relation to the increase of £48,723,430 in our Fixed Deposits. Bills Payable are higher by £569,466 but there has been a reduction in our Acceptances of £2,872,556.

"Our assets are all higher, with increases of £12,795,970, £5,609,575, £1,035,300 and £27,848,337 in our Cash in Hand at Call and at Bankers, Government and Other Securities, Bills of Exchange and Advances to Customers and Other Accounts respectively.

"The Consolidated Balance Sheet total of £362,759,636 shows an increase of £45,737,927 over that of last year.

Consolidated Profit and Loss Account

"Stockholders will have noticed that we have adopted the practice of the leading banks in the City of London by making all allocations to Premises Account, Pensions and other Staff Funds, before arriving at our published profits and last year's figure has been adjusted accordingly.

"In the current year, our profit of £761,916 is arrived at after deducting £155,000 (1959—£145,000) on account of Pension Fund and Widows' and Orphans' Fund and £250,000 (1959—£250,000) on account of Bank Premises, so that, in comparison with 1959, the profit shown has been increased by £142,220.

"Next year our published profit should be compared with the published figure for 1960, viz., £761,916. In September last, we paid an interim dividend of 8 per cent, less income-tax, absorbing £245,000 and it is now proposed that, out of the balance available, a final dividend of 7½ per cent less income-tax, on a capital which has been increased during the year to £5,500,000 be now paid at a net cost of £252,656.

"We have transferred £250,000 to Reserve Funds, bringing the total of those Funds up to £5,750,000, and there remains to be carried forward a balance of profit of £506,254, an increase of £14,260 over that for last year.

Oversea Survey

"During 1960, international trade continued on a substantial scale. A rising standard of living in the world, an ever-increasing population and increased industrial development everywhere, would appear to point to continued trade expansion, but certain signs are appearing which indicate a possible halt in this trend and perhaps the most important immediate factor is the likelihood that business turnover in the United States may not increase as quickly as anticipated. Unless conditions in the American market improve in the coming year and stimulate demand for industrial raw materials, the export earnings of the primary producing Asian countries, in which the Chartered Bank group is established, must be adversely affected. Another deterrent to the growth of international trade is the chronic shortage of foreign exchange in many countries, particularly in the East, which, with a desire to protect new manufacturing industries, has led to the imposition of far-reaching import restrictions. Often these restrictive measures are imposed by force of circumstances, but one cannot view with equanimity efforts to protect local manufacturing units which have little hope of ever becoming economic propositions able to compete on equal terms in international markets. In fact, for some years, it has seemed likely that the emphasis placed on industrialisation by the younger countries in particular, and often at the expense of agriculture on which their economies depend, designed primarily to have the effect of reducing imports, may in these coming days of balanced trade, make it increasingly difficult for them to find buyers for their own export products.

"It is within this involved situation that our Government, like that of the United States and many other highly-industrialised countries, is now launching an export drive, but we find that the growing awareness in this country of the necessity to export is not, so far, being translated into efforts to find new markets. It is a common complaint by officials and businessmen in a number of Eastern countries that the United Kingdom shows little interest in their markets, which they point out is in marked contrast to the attitude of the Germans, the Japanese and others. There is undoubtedly some truth in what is said, for it often seems that either our good and usual exporters have already sufficient buyers for their products, and cannot devote the time to smaller and less known markets, or there is an instinctive feeling that too much risk is involved. Sometimes there is risk but, usually, with competitive prices and a willing buyer, means can be found to arrange shipments on a satisfactory basis and by its advice on this, and, with the knowledge of markets gained from one-hundred and ninety branches in twenty-six countries, it is felt that the Chartered Bank group should be able to do much to aid materially the efforts of our exporters.

Cyprus

"Following the successful conclusion of the prolonged negotiations between Cypriot leaders and the British Government, the Republic of Cyprus was inaugurated last August. The success of the new independent state will obviously depend on the willingness and ability of the various interests concerned to work together. If, as is hoped, a 'Cypriot Nation' is to emerge, this co-operation will be particularly necessary in the next few years when memories are still vivid of the long drawn out suffering and bitterness of the island. As it is, to obtain agreement between the two main communities, it has been necessary to devise an over-elaborate and politically expedient, will impose a heavy fiscal burden on the population.

"Economic prospects are, perhaps, more promising than might appear from the substantial trade deficit, for the Republic's export earnings, equivalent to less than half the total imports, are substantially supplemented by British Government expenditure on its armed services based on the island. To some extent, the trade deficit has been aggravated by merchants accumulating large stocks of imported goods for fear that the currency might be devalued or increased import duties imposed. Unfortunately, too, exports have suffered from the smaller supplies of agricultural products available, owing to the drought during the last two years. Financial grants to be received from the British Government between now and 1965, with the American grant recently announced of supplies of wheat and barley, should reinforce the Republic's finances until such time as the economy becomes more self-supporting.

"The new Government has wisely refrained from introducing any extreme measures to meet the economic situation with which it was confronted and is evidently hoping for a return of confidence which will be reflected in a general improvement in business. It undoubtedly realises, too, that, after the first few years of independence, it will be necessary for the Republic's economy to be self-supporting, and to achieve that substantial capital will be required for long-term development: capital which will only be forthcoming both from indigenous and foreign sources in conditions favourable to business enterprise.

Lebanon

"A special report on the social and economic situation in the country submitted to the President in September predicts a large increase, amounting perhaps to fifty per cent in the present population of one-million-six-hundred-thousand over the next fifteen years and recommends that agriculture and industry rather than commerce should receive more official attention. At present, only one-fifth of the national revenue is derived from agriculture and this year has seen below average harvests due to drought. If production is to be increased, an extension of irrigation will be needed.

"Trade continued to improve and customs receipts suggest that there is a gradual return to the volume handled before the 1958 disturbances. Modest industrial expansion, building activity and interest in the tourist trade continued throughout the year, but Beirut, in particular, needs a greatly improved road system and indications are that, because of the municipalities' low budget, the country, like many other Middle East states, is looking towards Kuwait for a long-term loan for this purpose.

"A 'transit agreement' covering goods and tourism, between the Lebanon, the United Arab Republic, Jordan and Saudi Arabia, was signed in March 1960.

"The thirty-inch pipeline of the Iraq Petroleum Company, when completed, will increase the flow of oil through Tripoli by three million tons per year.

Iraq

"The return towards normal trading conditions continued throughout 1960. Increased royalties from oil brought I.D. 95 millions to the Government, against I.D. 86.5 millions in 1959, but, unfortunately, this was to a great extent offset by another poor harvest, the third such in succession. Notwithstanding this setback, which meant very small exports of barley, and wheat having to be imported, the Government adopted a more liberal import policy. This led to some diminution of foreign assets but, with buoyant oil revenues and the promise of good grain and date harvests, there should be no foreign exchange difficulties and the long-term economic outlook is favourable.

"The intentions of Government in respect of industrial development have not yet been clearly defined, but it seems likely that heavy industry will be reserved for the public sector, with light industry in the main being left to Iraqi private enterprise. The provisional four-year development plan sanctioned at the end of 1959 provided for an expenditure of nearly I.D. 400 millions, of which the sum of I.D. 48 millions approximately was to be for agriculture, I.D. 39 millions for industry and the balance for communications, public buildings and social services. This level of expenditure seems very high and it is probable that the plan will be merged into a larger plan covering perhaps seven years.

The Gulf

"No general economic changes took place in this area during 1960. Last year, I mentioned reports that the Government of Kuwait was contemplating the issue of a separate Kuwaiti currency. The necessary decree was passed in October last and appointments to the new Currency Board have been made.

"It is understood that the Kuwaiti dinar, equivalent to the pound sterling, will not be brought into circulation until April or May at the earliest. The effects of this change on the area as a whole will be watched with interest.

"*Bahrain:* The year 1960 was uneventful, with trade on the whole rather dull owing to past overstocking. Local oil production during 1960 was steady at about the 1959 level, but, with an increase in crude imports, refining throughout rose by ten per cent. The Bahrain Petroleum Company continued exploratory marine drilling and the modernisation of Sitra Wharf to take tankers up to forty-five-thousand tons is well in hand.

"Of the Government works in progress, the deep water pier is expected to be completed in September, and the high level bridge at the Muharraq Causeway in June. Work on the new airport buildings, the Municipal buildings and roads continued.

"*Doha:* H.H. Sheikh Ali bin Abdulla Althani abdicated on 17th October 1960 and was succeeded by his son H.H. Sheikh Ahmad bin Ali, his nephew Sheikh Khalifa bin Hamad becoming Deputy Ruler and Minister of Finance.

"The year 1960 was calm and uneventful, but business was dull throughout the year, merchants generally being overstocked and short of funds.

"Oil exports were at about the same level as in 1959 and marine drilling made good progress.

"*Sharjah:* There was little change in business conditions during the year. Oil prospecting continues at Tariff.

Hadhramaut

"*Mukalla:* Business showed some slight improvement, as more merchants are now trading direct with foreign countries instead of doing their business through Aden. Oil has not, however, been found in the Northern desert, and exploration there has ceased on the breakdown of the negotiations for the renewal of the concession. On the long term, therefore, no startling change in Mukalla is probable. The Government are considering a port development project, costing approximately £400,000.

Aden

"Last year, I suggested that persistent strikes and labour unrest presented a serious challenge to the new legislative assembly, the outcome of which would be fundamental to the future of the Colony's trade and industry. It is satisfactory to record that the challenge appears to have been successfully met for the time being. Since last August, when new legislation came into force withdrawing the right to strike and setting up an industrial court for the settlement of trade disputes, there have been no strikes. This was in sharp contrast to the earlier months of the year when a serious strike in the oil refinery resulted in a setback in the Colony's trade. Fortunately figures for the second half show a marked improvement, particularly in connection with oil.

"This merely emphasises that freedom from labour trouble is essential for the well-being of the Colony, for, with no natural advantages other than its geographical situation and faced with a continuing reduction in its entrepot trade because of improved facilities in other ports in the area, Aden is becoming increasingly dependent on its oil refinery and bunkering business.

"Generally, there is a feeling of prosperity in the Colony, but this to a substantial extent stems from the expenditure by the armed forces and from a high level of activity in the building industry; favourable factors which will not necessarily continue indefinitely. Politically, it was a quieter year and, at the end of the year, it was announced that more administrative responsibility was to be transferred to elected members of the legislative assembly, an indication that the measure of self-government already introduced is working well. In the Western Protectorate, the federation whose formation I mentioned last year now comprises ten of the eighteen States in the Protectorate. As a political unit, the federation should gain in administrative authority after the Federal Government takes up residence at Al-Ittihad, the new capital. The situation on the border between the Protectorate and the Yemen has continued without incident, possibly because of internal difficulties in the Yemen.

Iran

"Despite the cut in posted prices of crude oil announced in August last, it is estimated that increased production should provide the currency with oil revenue in excess of £100 millions in the current Iranian year. The field at Gachsaran, one-hundred-and-fifty miles from Abadan, continues to be developed and is now linked by a hundred-mile gravity-fed land and submarine line with the new shipping terminal at Kharg Island which went into operation in July. This project adds substantially to Iran's capacity to export crude oil.

"Long-term Government development schemes are going ahead and one of them, the dam at Karaj, near Tehran, when completed shortly will, amongst other benefits, provide a more satisfactory water supply for the capital. Industrial developments in the non-oil sector are progressing favourably and many undertakings are expected to come into production shortly.

"On the economic side, the country is passing through a difficult period. Excessive imports over the last three years have caused balance of payment difficulties, with a consequent running down of foreign exchange reserves. For a short period in the summer, authorised dealers were forced temporarily to suspend remittances in payment of imports, as they were unable to obtain sufficient foreign exchange cover from the authorities. Throughout the year, however, Government have been progressively tightening their control, with a view to stabilising both the external financial position and the internal economy. Very high import taxes on non-essentials were imposed in September; strict regulations have been laid down prohibiting borrowings by Government departments and municipalities during the next three years; and the Bank Melli have very severely curtailed their advances to the private sector. The resultant credit squeeze is already very apparent in the Tehran bazaar but its effect in the long run will, it is hoped, be beneficial.

"The monetary and banking law of Iran, ratified on 20th May 1960, provides the authorities with important powers for the control of the internal economy. It set up the Monetary and Credit Council as the top financial authority and it provided for the splitting of the old Bank Melli into two parts: the Bank Markazi, which is now the central bank, and the new Bank Melli, which will continue to transact commercial business.

"All these measures seem to have had the approval of the International Monetary Fund, whose assistance has been obtained to bridge current exchange difficulties. There seems good reason for confidence that further financial help from international monetary authorities will be forthcoming provided Iran continues to endeavour to put its own house in order.

India

"India is now on the threshold of the third Five-year Plan, which starts in April. It is no exaggeration to say that the critical phase has been reached in the enormous task of raising, within the constitutional framework of parliamentary democracy, the living standards of a population, now estimated to number approximately four-hundred-and-thirty millions. It is generally agreed that the first and second Five-year Plans have successfully laid the foundations necessary for further economic advance, and the various criticisms so often voiced of this or that aspect of Indian planning policy must not be allowed to obscure the magnitude of what has already been achieved. Perhaps, industrial development has been allowed to outrun the supply of power and the provision of transport and is, therefore, partially nullified and no doubt undue emphasis has so far been placed on the development of heavy industry rather than increasing agricultural output, but agriculture is to receive a more prominent place in the new plan. The target for foodgrains has been raised by twenty-five million tons and a further twenty million acres is to be brought under irrigation. Soil conservation and an increased use of fertilisers are important planning features and, provided the practical work required to implement the plan is carried out, it is hoped that there will be a sufficient production of foodgrains for the country within the next five years. The Central Government will have to obtain the co-operation of the individual States in its plans as agriculture is a State subject under the constitution. The success of the third Five-year Plan, not only in agriculture but in all aspects covering industrial development, transport, power and communications, can only be relative to India's ability to raise the necessary foreign exchange, for the point has now been reached where future development is dependent upon external credits and aid funds. The comfortable cushion of foreign exchange reserves available at the beginning of the second Plan has been spent and the sterling balances are now only adequate for current needs. So far, official visits abroad have resulted in pledges covering approximately one-quarter of the external cost of the projects in the Plan, but no doubt considerably larger grants will be forthcoming as it seems clear that the Governments of the West will have to help India for many years to come. Encouraging, too, is the noticeable increase in enthusiasm, particularly from America, for investment of private capital, although Britain, privately and as a country, continues to make valuable contributions to India's development. Private investment from the United Kingdom, which in 1958 was estimated to be about £300 millions, is probably much higher now, whilst since that date official loans amount to £110 millions.

"India can itself contribute to the success of its ambitious plan by increasing exports, but can save little on imports which are now no more than sufficient to keep industry going. In time, the manufacturing industries developed under previous plans can be expected to make

a useful contribution to export earnings, providing costs can be kept down, but, for some time to come, reliance for help in this direction will have to be placed on the traditional exports, tea and jute. With the country's future development so dependent upon exchange earnings, it is all the more surprising that there should be increased interference by officialdom in commercial trading, particularly as experienced Government servants are so badly needed in the ordinary administrative duties for which their training suits them. Their handling of commercial undertakings, which can only suffer from lack of commercial training and knowledge, must prove costly to the country at a time when it can least afford it and the tendency to increase their activities is a further manifestation of the see-saw between public management and private enterprise. The private sector, which still accounts for ninety per cent of the total output of the economy, is, in the third Five-year Plan, once again to play a smaller part and only forty-two per cent of the total investment is allotted to it.

"The only other source of foreign exchange lies in India's hidden gold, but the authorities must by now despair of getting this into official hands and their endeavours seem more directed to the prevention of further hoarding by making savings more popular and curtailing the money supply. This is no doubt one of the factors enabling the Reserve Bank to go contrary to the Government's desire for cheap money; the other is an endeavour to contain inflation due to speculation, and, to achieve this, the Reserve Bank called on banks for special statutory deposits and has put considerable limitations on the amounts that banks may borrow from the central authority at bank rate against Government securities or under the bill market scheme.

"By bringing into effect a system of selective credit control, the Reserve Bank seems to have succeeded in introducing a dearer money policy without, on paper, increasing the cost of Government borrowing. This position may not continue, unless banks keep a reasonable interest differential between borrowing and lending, for, if unrealistic rates continue to be quoted for bank deposits, investors will be inclined to switch from Government securities. The quotation of unduly high deposit rates by indigenous banks nullifies the aim of the Reserve Bank, shown in its fixing of minimum lending rates, to enable those banks to make reasonable profits in order to build up their reserves. This concern of the Reserve Bank over the economic state of the indigenous banks, particularly the relation of capital and reserves both published and undisclosed, can be well understood after the banking failures in India in the current year and so can the Reserve Bank's desire that the smaller banks merge into stronger units.

Pakistan

"Sound leadership, political stability and a pragmatic approach to its problems made 1960 a good year for Pakistan. The Government continues to have the firm support of the mass of the people and progress has been made in establishing a system of semi-elective Local Government designed to inculcate a sense of civic responsibility in a population previously unaccustomed to participating in Local administration. This essay in what is termed basic democracy is seen as a move towards the restoration of some form of representative Government, but power for some time to come is likely to remain fundamentally with the Central Government. Martial law is still in force, but the Government wields its considerable powers with benevolence.

"The authorities have shown a welcome flexibility in meeting current economic problems. Foreign aid is still required, but, generally, the situation is favourable. Agricultural production has increased, partly due to weather conditions favouring crop production, but, for some years to come, the country's export earnings will continue to depend on raw jute and, to a lesser extent, cotton. It is, therefore, a little disquieting that, during 1959-60, foreign exchange receipts in respect of both these commodities showed a reduction. The recent sharp rise in world prices for jute, due to a reduced crop, is of doubtful benefit, as further impetus will be given to the efforts in the U.S.A. and elsewhere to find substitutes.

"An improvement in the level of exchange reserves has enabled the Government to liberalise imports in furtherance of its policy of reducing the price of consumer goods and of providing raw materials sufficient to keep industry operating on the basis of a one shift capacity. There has been continued expansion in industrial production and the demands made on the banks for advances in this connection, and the increased seasonal advances required for financing higher priced crops of jute and wheat, have placed all banks under strain and resulted in high rates in the inter-bank money market. An official restrictive credit policy is difficult to administer in an expanding economy with exceptional seasonal demands and, perhaps, a little more flexibility is required in the monetary management.

"In the long run, the future living standards of the population are going to depend very much on the success or otherwise of the second Five-year Plan, to which I referred last year and which came into effect last July. Laying the emphasis as it does on agricultural development, the Plan is a realistic effort to meet present needs in the light of the domestic financial resources available and of the foreign aid that is likely to be forthcoming. The emphasis in the Plan on raising agricultural production should help to avoid in future the strain imposed on the exchange reserves by continued importations of large quantities of foodgrains to meet deficiencies in home production. The official encouragement given to foreign investment and the wide scope being given to the private sector of the economy should have the effect of accelerating the already rapid industrial expansion. The reductions in company taxation announced during the past two years will also encourage enterprise. A most heartening feature of the past year has been the improvement in relations with India, the most important result of which, so far, has been the signing of the canal waters agreement.

"Last May, our Lyallpur branch moved into new office premises constructed for the Bank to give improved accommodation for our expanding business there.

Ceylon

"This time last year, there seemed reason for hoping that the general election about to take place in March would have the effect of providing Ceylon with a period of political stability, in which the new Government would have an opportunity of tackling the serious economic problems that confronted the country, but, unfortunately, a second general election was necessary in July and thus the unsettling effect of electioneering was felt for the first seven months of the year. Consequently, little or no action was taken during that time to deal with the two most serious aspects of the situation, the budget deficit and the continuing reduction in the foreign exchange reserves. The new Government, on taking office in July, was confronted, therefore, with a situation which was anything but promising and measures were taken to restrict imports and credit and to curtail foreign remittances. In the circumstances, such expedients were to be expected, as were the raising of interest rates and the tightening of hire purchase terms. It is somewhat surprising, therefore, that, despite increases in the existing rates of taxation and the imposition of a range of new taxes, the Government still finds it necessary to budget for an increased deficit. It appears unlikely that any substantial improvement will be effected in the general economic situation, until steps are taken to bring Government expenditure more into line with revenue.

"Foreign exchange reserves, which have shown a downward trend for four years, are reaching the point where there is no longer any surplus available for financing the development programme, although a more encouraging feature has been the reduction in the trade deficit shown by the latest available figures. A marked improvement in the production and shipment of tea, which is still the country's principal exchange earner, and an increase in the volume and value of rubber shipments have enabled exports to cover increased imports: not so encouraging is the fact that the increase in imports is largely accounted for by consumer goods at perhaps the expense of capital goods required for the expansion of production. Labour last year was less unruly, although it is possible that the elections have merely had the effect of postponing union demands. With freedom from strikes, the situation in the port of Colombo was a good deal better, but the freight surcharges, although reduced, have not yet been completely removed and shipping operators consider there is room for further general improvements in conditions.

"Looking to the future, the tea and rubber industries will be heartened by the Government's statement that the country would gain no advantage by nationalising estates and plantations. Having received a decisive mandate from the electorate, the Government is now in a position to put the country's trade and finances on a satisfactory footing and thus create conditions in which a programme of economic development to raise the living standards of the population might be undertaken. To achieve this, particularly in view of the present state of the exchange reserves, the Government welcomes investment of foreign capital but the high level of taxation imposed on existing foreign investment, the general uncertainty overshadowing existing business and the threats of greater participation by Government-controlled institutions in the import and export trades will not encourage potential investors, and, in these circumstances, it will be unfortunate, if the Government persists in its determination to introduce legislation to establish a State petroleum corporation, with power to acquire compulsorily the property of the foreign oil companies now operating in Ceylon.

Burma

"U Nu took office again as Prime Minister after elections held in February, in which his party gained an overwhelming majority. The outgoing caretaker Government, headed by Ne Win, had brought about many improvements in conditions in Burma, an outstanding feature being the success achieved in curbing terrorist activities in upcountry areas. This improvement in internal security, which will have to be maintained if further economic progress is to be made, enabled this bank to extend its operational area in rice milling business. In addition to financing millers in the Rangoon and Bassein area, we are now assisting customers in districts along the Prome and Mandalay railway lines.

"In this, the mainstay of our banking business in Burma, we have to meet more and more competition and the State Agricultural Marketing Board this year set aside the increased sum of Kyats 20 millions for lending to rice millers through certain indigenous banks. The Board has stated that, in order to improve the milling of rice for export, it will build twelve modern mills of one-hundred tons capacity in ten towns and will also finance the repair and modernisation of other mills owned by private millers. Most of the eleven-hundred-and-fifty rice mills in Burma were built between 1902 and 1913 or 1924 and 1939. These efforts to improve rice exports are understandable, for the country still depends on rice for seventy per cent of its export earnings, and, although production is gradually coming back to pre-war level, the area under paddy is still two million acres less than in earlier years. Fortunately, however, oversea demand seems as strong as ever and it is reported that the 1961 rice crop has practically all been sold, with buyers including China, India, Pakistan and Indonesia.

"Before the war, there were various products, apart from rice, which made significant contributions to Burma's export earnings, but, so far, progress in restoring output of these has been disappointingly slow and shipments of minerals such as tin, wolfram, lead and zinc are barely equivalent to half the pre-war level. Timber production is almost back to pre-war level, although teak output is still lagging. Petroleum production continued to increase, but at a rate insufficient to meet the expansion of domestic demand; a situation which led the Government to authorise the importation of Russian oil.

"Despite good export figures in 1960, increased imports, particularly in textiles, resulted in a reduction in the exchange reserves, which nevertheless, still remain at a comfortable level. The United Kingdom's performance in this market was disappointing: whilst its imports from Burma increased by £2 millions its exports fell by nearly £3 millions and trade between the two countries is now almost balanced at £10 millions each way annually.

"The Government has given a welcome indication that there is no intention of nationalising foreign banks in Burma, having no wish to discriminate against institutions contributing to the country's economic stability. In trade, the activities of the Defence Services Institute, an army organisation, and other State-trading agencies which continue to expand must dampen private enthusiasm and commercial activities, generally. Foreign import agencies are being transferred to Burmese nationals, although, in terms of the Nu-Attlee Agreement, the Burmese Government should consult with the British Government before action is taken in respect of British agency business. The authorities are showing themselves increasingly aware of the importance to the country's future of investment from abroad and it hardly needs emphasising that foreign interest in this field will be largely determined by the treatment of existing foreign investment.

Singapore

"The fundamental economic problem in Singapore is to provide adequate employment opportunities for a rapidly increasing population, approximately half of which is under the age of twenty-one. To meet at all successfully the coming demand, it is essential that the entrepot trade, long the mainstay of the economy, be maintained. It is unfortunate that the improvement, which I mentioned last year, in relations with Indonesia has not, so far, resulted in any significant increase in trade. From the negotiations, which are still continuing, it appears that there is a genuine desire for co-operation and now that an official trade representative from Singapore has been appointed to Djakarta perhaps agreement will be reached for a resumption of trade on a large-scale between the two States. Talks have continued between Singapore and the Federation of Malaya on a commodity common market and, if negotiations are to be successful, perhaps some modifications in Singapore's free port status will be necessary, and also a measure of co-ordination between the industrial development programmes which both Governments have in hand.

"The other important factor for the provision of employment will be the measure of progress made in Singapore's own industrial development, and, in this connection, it is promising that the Government has been strong enough to come to grips with what have hitherto been major obstacles to progress, that is, irresponsible trade union activities and bad labour relations generally. The introduction of an Industrial Relations Ordinance providing for compulsory arbitration by a special court is evidence of the Government's determination that prolonged labour disputes should not be allowed to paralyse trade and industry and prejudice local living standards by driving business enterprise elsewhere.

"The Government is also assisting by taking active steps to encourage more rapid industrialisation and a major feature of its five-year plan for capital investment is the provision of a site for an industrial estate in Jurong. This project, in which Japanese enterprise is showing interest, involves the development of an iron and steel mill and other ancillary industries. A site at Redhill is also being developed for small and medium scale manufactures and it is possible that a number of factories on this estate will be in operation within a year or so. Unfortunately, the Economic Development Board, whose proposed formation I mentioned last year, has not yet commenced operations, owing to difficulties in recruiting skilled and experienced personnel. This may now be overcome by assistance from the World Bank and the Board may soon be in action. It is not so much an abundance of planning that is required at this stage, however, but rather determined action to build and run the manufacturing units which are to produce the good quality goods for home consumption and for abroad.

"I do not think that anyone would deny that the record of the present Government in Singapore over nearly two years of office is of a high order and has shown a realistic approach to a situation, political and economic, which at times must have been far from easy to handle.

Federation of Malaya

"For the Federation of Malaya, the past year has been saddened by the death within the space of five months of two reigning Paramount Rulers. The loss of men of their calibre, well respected by all races and political parties, is a serious one to the country. In most other respects, however, fortune favoured the Federation during 1960. Abroad, the Government's decision to send a contingent to join the United Nations' forces in the Congo was evidence of growing interest and influence in international affairs. At home, the official ending of the emergency in July after twelve years, an increased trade surplus and the first overall budgetary surplus since 1956 were all notable features in an exceptional year.

"The ending of the emergency has enabled the Finance Minister to halve, in his 1961 budget, the estimate for expenditure on internal security, a fortunate saving which can now appropriately assist in financing the increasing Government expenditure required for the second five-year plan. Last year, the buoyancy of the revenue, largely because of higher export earnings, and the fact that expenditure did not reach the original estimates, produced a surplus on current budgetary account more than sufficient to cover development expenditure. Fiscally, therefore, the Federation enters 1961 in a strong position, but, as last year's prosperity in the rubber and tin industries was due to factors in international markets which may well prove to have been fortuitous, the Government is wisely taking a conservative view on future revenue. Steps have been taken to administer the tax system more efficiently, but the scope for increased revenue from income and company taxation is limited and, for a long time to come, the Federation is likely to be dependent upon the rubber and tin industries, which not only supply the major part of its revenue, but account for eighty-five per cent. of the export earnings on which the Federation's prosperity depends.

"World trends, prices of and demands for these commodities are, therefore, of vital interest to the Federation and, in the international market for rubber, prices during the year rose to a peak in May, from which time there was almost a continuous steady downward trend. This decline reflects a lack of oversea demand and, as a result, stocks in the Federation and Singapore have increased over the year. The tin industry regained much of its former prosperity and prices in the international markets were remarkably steady, notwithstanding increases in export quotas and the lifting of all restrictions in October. Another industry that is making a favourable contribution to exports is iron-ore and the year showed marked increases in production, particularly in Perak although Trengganu is still by far the largest producing area. The latest figures available show an increase of sixteen per cent. in the country's oversea trade surplus for the year and it is noticeable that the Federation's share of total Pan-American trade is also tending to rise. Fortunately, all this has been achieved with very little inflation.

"There has been considerable progress in industrial development and a wide range of industries and products are benefiting under the Pioneer Industries (Relief from Income Tax) Ordinance. The whole of the area of Petaling Jaya set aside for industry has been taken up and new industrial zones are planned in Johore, Ipoh and Butterworth. Progress in these areas will depend a great deal on adequate electrical power, largely from the Cameron Highlands hydro-electric scheme, which is ahead of schedule and is expected to cost less than originally estimated. Work on the North Klang Straits scheme to provide modern wharf facilities at Port Swettenham is now well under way and there are also proposals to improve and develop port facilities elsewhere. When these schemes are completed, the Federation will be less dependent on Singapore for handling oversea trade, but, at the present rate of progress, it will be many years before Federation ports are in a position to handle all the country's trade.

"Relations between the commercial banks and the Central Bank of Malaya continue to be excellent and there is close co-operation in this field. The Central Bank has steadily increased its influence in the country's financial affairs and among other functions has now taken over the duties of servicing the public debt. The new Currency Agreement to which I referred last year comes into force this year. This provides for the Malayan dollar continuing in circulation in the Federation, Singapore and the Borneo territories and remaining linked to sterling at the 2/4*d*. parity. The official affirmation by the Federation Government that the strength and stability of the Malayan dollar will always remain a principal objective is a welcome indication of official awareness of the importance to the Malayan currency area as a whole of one sound and stable monetary unit.

"In spite of the fall of rubber prices, the Federation enters 1961 with favourable prospects, but, in the long-term, the country's future depends very much on steady expansion of production to the extent necessary to maintain already good living standards for a population whose rate of natural increase is one of the highest in the world.

North Borneo

"Indications are that, when final figures are available, North Borneo's trade turnover in 1960 will have exceeded $400 millions; a considerable increase over 1959 figures which were themselves a record. Timber was again the Colony's most valuable export and also the largest source of Government revenue. Substantial revenue was also received from the rubber industry and, although shipments were down, world prices were good and valuable exchange was earned. The barter trade in copra with the Philippines and Indonesia continues and exports of this commodity from North Borneo have shown a satisfactory increase. Small exports of cocoa have started as a result of the development of production in the Tawau area.

"Better communications are still the prime need for the Colony's development and a good financial year has enabled the Government to intensify its policy of building new roads. One cross-country road from the east to the west coast will facilitate development of the Labuk Valley, where surveys are being aided by a United Nations' grant. Labuan airport is being brought up to full international standard and elsewhere existing airstrips are being improved and new ones provided. Port facilities, too, at Jesselton and Tawau have been improved.

"It is encouraging to find local agriculturalists taking more and more advantage of the rubber re-planting scheme and development should no longer be hindered by a shortage of unskilled labour as the immigration policy, although not an unqualified success, has enabled demand generally to be met.

"I would not wish to end this brief survey of North Borneo without adding a tribute to the late Sir Roland Turnbull. During the period of his Governorship of the Colony from 1954 until his retirement last year, Sir Roland gave unsparingly of his health and energy. It is in no small way due to his efforts and vision that the economic future of North Borneo seems to be set fair. We wish the new Governor, Sir William Goode, all success during his term of office.

Brunei

"Provision was made in the Constitution announced in September 1959 for an elected majority in the Legislative Council, but the first election was to be delayed for two years. It has now been announced that next September elections will be held for district councils, which will themselves elect the sixteen unofficial members of the Legislative Council hitherto appointed by H.H. the Sultan. There will still be a narrow nominated majority in the Legislative Council, but the new Constitution, when it is in full operation, will go a long way towards representative Government.

"Virtually, the whole of the country's earnings accrue from oil royalties, which are paid direct to the Government. Therefore, in the absence of a large-scale programme of public works to spread a proportion of these royalties among the population, there is apt to be a shortage of purchasing power locally. Last year, no new development schemes were initiated and not all those already planned were completed. In consequence, trading conditions generally have not been easy within the country. Because of falling production and the lower level of prices in international markets, the State's income from oil has been reduced, but oil reserves are estimated to be adequate for about another twenty years and the Government is in the happy position of having in addition to the oil royalties, an investment income roughly equivalent to recurrent expenditure. The present position, therefore, is more than comfortable, but in the long run, a planned programme will be necessary to develop a more broadly based economy and so lessen the present almost complete dependence on the oil industry.

Sarawak

"Rubber continues to provide more than half Sarawak's export earnings and the increased shipments in 1960, with continued favourable world prices, ensured good oversea trading figures for the second year in succession. The other substantial contribution was from timber exports which have more than doubled in value since 1958. There was some reduction in Japan's demand in the second half of the year, but world demand in general for ramin continues at a high level and prospects for the industry appear good. The tonnage of pepper exported was, on the other hand, disappointing, being only approximately half that shipped in the previous year but the difference in world prices between black and white pepper encouraged production of the latter, so that the reduction in quantity exported was offset to a great extent by the higher value of the white pepper shipments. There is evidence also that producers, aided by the Government's storage scheme, have been marketing their output more gradually and thereby obtaining better average prices.

"With exports well above normal, Government revenue from commodity duties reached a record figure last year and this allowed the appropriation of a further $25 millions for development purposes. As a result, Government has been able to approve increases in the 1959-63 programme. With recurrent expenditure tending to exceed the natural growth in revenue, and with the need to provide for increased debt charges, it has been found necessary to introduce direct taxation from the beginning of 1961.

"At present, the improvement of communications is a major feature of the development

schemes in progress. The various road projects which are being carried out will open up new areas in the hinterland and the new port at Kuching is expected to be in operation about the middle of the year. The Government-assisted coconut planting scheme launched in 1959 makes satisfactory progress and experiments are being made to see if oil palms can be successfully grown. If large-scale production of these two commodities were to prove possible, the range of products from which the Colony's export income is derived would be materially widened. Agricultural development in Sarawak is clearly the most promising line of advance for the future, particularly as the search for new sources of oil has so far proved unsuccessful. On the other hand, the mining of bauxite has continued to expand and a number of small factories ancillary to the rubber and timber industries are coming into operation.

Indonesia

"Political and economic developments in Indonesia during the year are difficult to follow, unless one has an understanding of the national aims of this still new independent nation and sympathy with its ideals. Internal politics witnessed a return towards the type of Government of the early days of the unitary state, often now referred to as the 1945 concept. This has probably meant the lessening of parliament's influence and importance, although the "Gotong Rojong" (mutual assistance) parliament, including elected members of five parties, still sits. Two parties, the once strong Muslim Masjumi party and the former socialist P.S.I. party, were banned from political activities and dissolved. Affecting both internal and external relations were the problems which have arisen over the Chinese population and their exclusion from commercial activities. Perhaps through expediency, or perhaps through a lessening in the tense relations with China, official views seem a little more tolerant towards the question of dual nationality, but there are still decided reservations on Indonesia's part in respect of the extent to which citizens of Chinese origin will be allowed to enter the national life. West Irian continues to remain a thorny international problem and increased political activity over this issue has caused an intensification of feeling against the Dutch.

"The concept of guided democracy, although political in origin, clearly influences, if not dominates, the economic scene. It would, taken to its ultimate, mean complete governmental control of the economy and finance and I can only here reiterate my views that controls and restrictions are not finally advantageous to a young, independent nation, and express my hope that, as the economy becomes stable, more and and more relaxations will be permitted. At the moment, most of the country's international business is conducted by Government or semi-Government organisations, but private enterprise is still capable of playing a large part and giving great assistance in the country's fight for economic independence if allowed to do so.

"An analysis of the country's external position suggests that exports should continue to balance essential imports and that foreign aid from a number of sources should care for industrial development. In 1960, final figures will probably show exports to be slightly down on 1959, mainly due to a reduction in earnings from petroleum and to disappointing rubber shipments at a time when good world prices were obtainable. This disappointing performance in respect of rubber may continue, unless yields are improved and costs lowered, and, to effect this, some action seems to be necessary to allay the uncertainty in the industry over the renewal of titles and to free funds now blocked in order that replanting programmes can be continued. Tin earnings have increased, following the abolition of the export quotas imposed by the International Tin Council.

"The Indonesian authorities are keenly interested in expanding existing and developing new international markets for the country's staple exports, and realise that an improved monetary situation at home will help to make their products more competitive abroad. Steps are, therefore, being taken to curb Government spending in excess of budgetary revenue and, in April, a budget was introduced in which revenue was estimated to cover expenditure. Unfortunately, thirty-seven per cent of the revenue was needed for armed forces and, until the internal security problem is finally resolved, it is going to be extremely difficult to stop official borrowing from the Central Bank and prevent further increases in the note circulation. The halting of inflation which has done so much harm to the Republic's economy, may be possible in the coming year and, if sustained, would have a decisive effect in promoting the economic recovery of, potentially, the richest country in South East Asia.

Thailand

"Politically, Thailand again enjoyed a year of internal stability, but, in the second half of the year, the situation in the neighbouring State of Laos obviously caused the Government considerable anxiety. The energetic endeavours of Field-Marshal Sarit's administration not only improved conditions generally within the country, but thereby assisted in the record exports, which allowed the retention of that rarity, a free economy with unrestricted imports. The export figures owe much to good world prices for rubber and earnings from this commodity are now greater than from rice. The tonnage of rice shipped last year was higher than in 1959, but world prices were lower and finding oversea buyers is becoming increasingly difficult and Thailand is taking steps to get rid of future exportable surpluses by improving the quality of its rice. The United States action to see that surplus American rice shipped under Public Law 480 will not be allowed to prejudice the position of exporters in South East Asia will also aid to this end.

"In common with neighbouring countries, Thailand is anxious to encourage industrial development and the country's first development plan, covering a period of six years and based on recommendations by an International Bank of Reconstruction and Development team, is to begin in October 1961. In the meantime, much is being done to publicise investment opportunities and examine proposals for industrial projects and already approval for the establishment of a number of light industries has been given. There is, however, an acute shortage of local capital, with consequent high interest rates, which prevents any enterprise of size being set up without either Government support or foreign investment. This makes it all the more important that the limited resources available be used in the development of agriculture, from which the country's foreign exchange earnings are derived, and the new plan recognises this by placing the emphasis on agriculture and communications rather than on power and manufacturing industry. The Bank of Thailand is gradually emerging as a strong independent central bank, which is essential in a country like Thailand, where politics can have a detrimental effect on the economy. The liberal exchange policy followed has, in recent years, proved vastly more effective than rigid exchange controls and the economy as a whole has benefited considerably from the absence of restrictions. Exchange rates, too, have been kept steady and credit for this is largely due to the successful operation of the Exchange Equalisation Fund, which has now been working most effectively for more than five years.

"No review of the country would be complete without mentioning the goodwill generated in all directions, including this country, by the extensive and exhausting series of royal visits carried out by their Majesties the King and Queen of Thailand.

Vietnam

"For more than six years, President Ngo Dinh Diem has been responsible for the Government of Vietnam, first as Prime Minister and then as President, and it is largely due to his firm leadership that law and order have replaced chaos, the country has been saved from communism and great strides forward have been made in agricultural and industrial development. It is perhaps all the more surprising to the outside world therefore that there was in November an attempted coup d'etat, although here again it was the President's characteristic courage and determination that was largely instrumental in overcoming the attempt to oust his Government. Although the communists did little to exploit the situation, there is no doubt that their subversive activities tended to increase during the year, but their efforts to undermine the present regime are likely to be unsuccessful unless there is a general feeling that austerity and controls are bearing too heavily on the people. The long border with North Vietnam and the survival of remnants of the private armies suppressed in 1955 makes sporadic acts of terrorism inevitable, which is perhaps all the more reason for the easing of general controls for it would be tragic if the encouraging progress made in recent years in restoring the national economy were to be jeopardised by political instability.

"An indication of the extent of this progress is the reduction in American aid, for, whereas a few years ago, export earnings represented only about twenty per cent of the import bill, in 1960, they represented about thirty-eight per cent and, with present progress, there is no reason why a year from now the figure should not be fifty per cent. This improvement in the trade situation has been brought about by the continued good exports of rubber and by a very marked increase in the exports of rice which, at 350,000 tons, makes the best year since the war and is in marked contrast to 1956, when there were no exports at all. The favourable balance of payments has been reflected in a steady rise in the exchange reserves, but, last year, American aid was cut by U.S.$30 millions and Vietnam had to pay for a wider range of imports from her own exchange earnings. It is possible that further cuts in American aid will be made in 1961, but, notwithstanding this pattern, it is hoped that Vietnam will be able to maintain her present reserves, which, at a figure of roughly U.S.$200 millions, provide the cushion necessary for the country's foreign trade.

"I have already mentioned that excessive controls are liable to cause discontent amongst the population. They will, too, stultify economic progress, if imposed too harshly on the activities of the business community and, if the industrialisation programme is to be carried through successfully, then possibly the time has arrived for some relaxation.

Cambodia

"For the Cambodian people, the year has been saddened by the death in April of King Norodom Suramarit. The late King did not nominate a successor and, following a referendum in June, Prince Norodom Sihanouk took office as Chief of State. Later, at the unanimous request of the National Assembly and Royal Council, he accepted the post of Prime Minister. The Prince is exceedingly popular with all sections of the community and under his leadership the country should continue to prosper.

"Pursuing its policy of strict neutrality between the major international power blocs, Cambodia continues to receive aid from any source, provided it is free from political conditions. The generous help so received has contributed much to the feeling of prosperity in Phnom Penh, the capital, where new building proceeds apace and roads and water supply are being rapidly improved, and in the country where better communications and new industries already in operation and will, in time, make the country less dependent on an economy based on agriculture only.

"The country's major sources of export earnings are still rubber and rice and, to a lesser extent, maize. With favourable prices in international markets, rubber shipments have increased significantly in value and the latest figures available show that the overall value of exports has been running at a higher level than in 1959. On the other hand, imports have increased to an even greater extent, particularly from France and from countries such as Japan and the Soviet bloc with which Cambodia has bi-lateral trading agreements. Foreign aid has more than covered the trade deficit, however, and the country's exchange reserves increased over the year.

"Business in Cambodia continues to give an impression of expanding prosperity and, given political stability, prospects in the immediate future would seem to be promising.

The Philippines

"By April, continuing improvement in the economic situation in the Philippines allowed the monetary authorities to embark on the first phase of a decontrol programme. This was a system of dual rates of exchange whereby the official rate of two pesos to one United States dollar was to be used for all essential imports under quota while all other imports, profit remittances, etcetera, were permitted at the "free market" rate of exchange of Pesos 3.20 to U.S.$1. Free market is perhaps a misnomer, as rates in both categories are controlled by and dealt in through the Central Bank. On these quoted rates, there was an exchange margin of twenty-five per cent, which constituted a weakness in the system, as it created too wide a gap between buying and selling rates of exchange and made black market operations possible. In September, with the international reserves once more at U.S.$200 millions, the second phase of decontrol was introduced, bringing the free market rate to three pesos to one United States dollar, widening its application and reducing the exchange margin to twenty per cent. This exchange tax, which transferred Pesos 273 millions in the year to official funds, is undoubtedly being retained as part of the Government's policy of endeavouring to control inflation. The introduction of a better flexible tax for this purpose is no doubt difficult, but the present exchange tax unduly intensifies the effects on the banks and the business community of the government's already drastic tight money policy.

"Although a favourable showing in exports, particularly sugar shipments to the U.S.A., assisted by a quota readjustment in respect of Cuba, helped to build up the international reserves, there is a growing realisation that a greater diversification of international trade is necessary. Many prominent officials visited Europe during the year in search of increased markets in that area. Determined efforts too, were made to attract foreign investment and many official pronouncements were directed to allay the fears of established and intending foreign investors. The emphasis is on joint ventures, with the foreigner holding a minority interest, but the present application of the Filipino first policy will need tempering and a foreign investment law introduced giving sufficient safeguards and guarantees to the investor if the much needed foreign capital is to come to the country.

"Industrialisation has shown continued progress and attention is being given to developing areas outside Luzon, and in Mindanao for example, the government are going ahead with schemes to provide power and communications in order to give more employment opportunities for the population of that island. Unfortunately, the Philippines was hit by a series of severe typhoons during the year which affected crops and, in some cases, reduced exportable surpluses. There are prospects of better crops for the coming year and, as the Government is now able to reduce its expenditure on capital goods and will probably obtain a very substantial loan from Japan under reparations agreement, the immediate outlook must be considered favourable.

Hong Kong

"The dominant impression the visitor receives of Hong Kong is still of a bustling, thriving community, crowding through the streets with an object in life and this impression would correctly reflect the vitality and the intensive application to the task in hand of a people that once again have given the Colony a prosperous year with increased exports and trade turnover. An indication of the remarkable industrial progress of recent years is that locally manufactured products now account for over seventy per cent of export earnings and the range of local manufactures is steadily widening and finding expanding markets abroad. There are weaknesses in the economy and the tendency of some of the new under-capitalised and ill-equipped manufacturers to lower standards of shipments may affect Hong Kong's good name in oversea markets and have serious repercussions. An example of this was to be seen in the garment industry which, after meteoric expansion, faced claims and large cancellations of orders in the middle of the year. The textile industry generally has, however, been outstanding in increasing its productive capacity and textile exports as a whole showed an appreciable rise during the year.

"There has been bitter criticism in Hong Kong of the way in which the restriction on local textile exports to the United Kingdom has worked out. The main result of this restraint, voluntarily exercised by the Hong Kong manufacturers, appears to be that an opportunity has been provided for European and other new competitors, who are in direct competition with Hong Kong manufacturers, to penetrate the British market at Hong Kong's expense. This is a vital matter for the Colony, since industrial expansion is progressing at such a pace that finding markets for the products of the additional manufacturing capacity, and in the face of keen competition from neighbouring countries, may well become a major problem in the future. Now that shortage of semi-skilled labour is tending to force wage rates up and heavier taxes may have to be faced because of increased Government expenditure and budgetary deficits, a progressive improvement in the price, quality and range of local products will be all the more important, if exports are to expand further. The Federation of Hongkong Industries, which was inaugurated at the end of the year and is representative of every substantial industry, should be of considerable assistance in this connection and should enable more organised and articulate representations to be made from the Colony, which imports considerably more from the United Kingdom than it exports.

"One of the major problems posed by the industrial expansion in Hong Kong is finding the land on which to build new factories. Industrial development continues apace at Kwun Tong and various other major reclamation schemes are under consideration by Government. Private building development continues on a most impressive scale on both sides of the harbour and has had the effect of stimulating a considerable increase in the price of land in all parts of the Colony. It is a notable achievement on the part of the Hong Kong Government that, in spite of the shortage of land and difficulties over water supplies, almost half a million refugees have been resettled since 1952 and the cost of housing them has been met from Local revenue. The Shek Pik reservoir project on Lantao Island is expected to be completed in 1963 and, meanwhile, Hong Kong is receiving a supply of water from the Shum Chun reservoir in mainland China. There are also plans for an integrated water supply for the New Territories. Consistent with this expansion in all sectors of the Colony's economy has been the large increase in the number of banks established in Kowloon and the New Territories during the past year. We ourselves opened a new office at Tsuen Wan last August and hope to open our main Kowloon office and also one at Shamshuipo shortly.

China

"Recent official announcements confirm that food crops in China, for the second year in succession, have suffered extensive damage from floods and drought. In fact, in 1960, the fall in food production from these causes has presented a real threat to the life of the people, which would have been worse but for the extent to which volunteers in the more populous areas aided the agricultural workers in their stubborn fight against threatened famine.

"The effect of these national disasters was probably the main reason for the shift of official emphasis from industrial to agricultural development. The change was, however, no doubt assisted by the completion of the industrial development associated with the second large Russian loan if we can judge by the return of Russian technicians loaned under that agreement.

"Much has been done to improve the transport system in recent years but it is still inadequate for the commercial needs of the country and to deal with emergencies, such as large movements of food from surplus to stricken areas.

"The necessity of supplementing food supplies by grain imports will impose additional strain on the country's foreign exchange reserves and thereby reduce the hoped for expansion of trade between China and countries outside the Soviet bloc. The United Kingdom's share of this increased fifty per cent during 1960 but is still only two per cent of China's total trade.

"Our Shanghai office continues to work smoothly.

Japan

"Serious disorders, largely instigated by students, in opposition to the Mutual Security Treaty with the United States led to the eventual resignation of Mr. Kishi's ministry. However, a new liberal democratic Government under the leadership of Mr. Ikeda was confirmed by the general elections in November and with a majority which showed clearly that the Japanese people as a whole repudiated the subversive elements responsible for jeopardising law and order.

"The impressive development of the Japanese economy in recent years has raised the general standard of living to an extent which was unknown in even the best of pre-war years. Once again, a record rice harvest has made the country virtually self-sufficient in this staple foodstuff, an achievement of vital importance, in view of the rapidly expanding population which has now reached ninety-three millions, and particularly meritorious in view of the scarcity of good agricultural land. Exports for the year rose to a record level, the most notable aspect of which was the doubling of shipments to the United States.

"The success of Japan's trade and industry in expanding exports has not led the authorities to minimise the stiffening competition in international markets. The reduction in European industrial costs, which is to be anticipated within the next few years as the European Economic Community comes into full operation, emphasised the importance of a progressive improvement in the quality of Japanese products and a widening of their range. The wage differential between industry in Japan and elsewhere, which is often taken as a measure of Japan's competitive advantage in international markets, is not nearly as wide as generally supposed and by no

CHARL

means all sections of Japanese industry are enjoying the present prosperity. In the shipbuilding industry, for instance, new orders are now dwindling to the point where the more progressive shipyards are finding it necessary to diversify their activities.

"In general, however, industrial capacity is still increasing and there are extensive plans for new investment in plant and equipment, which should benefit from the lower level of interest rates now in force. The remarkable effort which has been made in opening up new markets for Japanese goods all over the world still continues with undiminished vigour, while connections are also being developed with areas such as the Persian Gulf and South America, which can provide the oil and iron ore required in increasing quantities by Japanese industry.

"The recent steps taken by the United States Government to strengthen their country's payments position seems likely to have considerable adverse effects on Japan's dollar earnings and this may force Mr. Ikeda's Cabinet to tackle one of its biggest problems, which is whether or not Japan should recognise the Peking regime, with the possibility of substantial trade between the two countries eventuating.

New York

"The new President of the United States has lost no time in announcing positive policies to remedy his country's payments deficit, which has been caused mainly by the generous scale of American aid but was also considerably aggravated last year by an outflow of short-term funds to take advantage of higher interest rates in other financial centres. The loss of gold over the last three years, which has been the result of this deficit, has attracted world-wide attention and has led to much exaggerated and misguided speculation about the stability of the dollar. Such thinking does not take sufficient account of the enormous strength of the American reserve position.

"It is proposed that the burden of financing defence and economic assistance, the major part of which has hitherto been borne by the United States should be more evenly shared by allied countries with the necessary productive capacity. Any significant reduction in American Government expenditure abroad will have marked repercussions in the many countries whose economies at present benefit from it.

"In many respects, last year proved disappointing for trade and industry in the United States, because the boom, which had been so confidently predicted, failed to materialise. Nevertheless, there was a strong demand for American goods in foreign markets and the trade surplus increased from $900 millions in 1959 to $4,500 millions last year. Now that the Government has announced a renewed export drive, American competition in the international field is likely to increase, particularly as industry is not at present working at full capacity.

"Last October, the Bank's agency in New York moved to new and more advantageously situated ground-floor premises in the heart of the financial district.

Hamburg

"The political situation in West Germany is dominated by the unresolved question of Berlin's future and the outcome of the general election to be held in September. German exports and imports have continued to expand, but, so far, the differences which stand in the way of reconciling the European Economic Community and the European Free Trade Association seem as wide as ever. A considerable proportion of German trade is, however, conducted with the countries comprising E.F.T.A. and the German Government is known to be exerting its considerable influence towards bringing about agreement between the two trading groups.

"There is little, if any, unemployment in West Germany and, with wage levels and personal incomes rising and industrial expansion continuing at a rapid pace, the authorities have been at pains to check incipient inflation. Unfortunately, the orthodox expedient in such circumstances of raising interest rates caused an influx of foreign funds, which reinforced the trade surplus to the extent that the country's accumulation of foreign exchange has become a major international problem. This gave rise to conjecture as to the possibility of the exchange value of the currency being raised, but the official view is that revaluation would not be justified by what is essentially a matter of temporary imbalance. The recent lowering of the central bank discount rate will help to bring German rates more into line with those in other financial centres, but the effect may be gradual, as the general structure of interest rates in the Federal Republic is not so directly dependent on the discount rate as elsewhere.

"The increased business handled by our Hamburg agency necessitated a move last December to more modern and convenient premises.

Conclusion

"This review emphasises the extent to which most of the countries of the East are dependent upon foreign aid and investment for the success of their development plans. It indicates, too, the tendency of these countries to hem themselves in with trade and other restrictions but what it does not show is the repercussion of these policies on the ordinary trading activities of foreign business. The Chartered Bank which has operated in many of these countries for nearly one-hundred years and has always identified itself with the local economy, is prepared, as I am sure other British enterprises are, to co-operate with the authorities and assist in their national aspirations and it is all the more disappointing, therefore, to find increasing discrimination against our participation in trade and commerce. On the sanctity of existing capital and the treatment of existing commercial undertakings must largely depend the advent of new capital, for new capital can be expected mainly from those who know the territory and have confidence in it, i.e., existing investors and traders. To add to the difficulties encountered through Governmental action is the excessive competition arising from the over-banking of many cities in the area. In not all places is this as chronic as in Hong Kong, where there are now over eighty banks, but the general tendency of international banks to open branches in our territory and of small local banks to spring up overnight, often with the encouragement of large banking interests in this country, means a regrettable lowering of banking standards. This trend must finally be to the disadvantage of the country concerned, for, not only is encouragement given to the under-capitalised and often inefficient to set up industries, usually to become poor shippers and bring the country a bad name in oversea markets, but the general lowering of commercial standards may unfortunately mean losses on the part of the public."

JUST OUT

INVESTORS ENCYCLOPÆDIA

1960 EDITION

Contains details of a precise nature of most of the public limited companies in India, giving details about the date of registration, nature of business carried on, managing agents' name and address, directors and their share qualifications, details of capital and shares, capital history, share registration fees, names of auditors, period to which the accounts close, date of meeting, summary of latest balance sheet, progressive statement for last seven years giving information about taxation, depreciation, allocation to reserves, net profit, dividend declared, amount carried forward and highest and lowest prices. Also information of a general interest, viz., Government and Public Bodies Loans, Income and Super Tax, Agricultural Tax, Estate Duty, Capital Control Order, Promotions of the companies under the new set up and various other information of general interest, maps showing the location of various industries in various states.

It is also included in the above year book, the details about the procedure involved in applying for industrial license, both at State and Central Government levels, incentives available for foreign investment in India, double taxations relief, details of foreign capital participation and industrial classification of Government-controlled companies.

Industries are classified as under :—

1. Banks
2. Cements
3. Coal
4. Electrics
5. Engineering
6. Insurance
7. Investment Trusts
8. Jute
9. Mining and Chemicals
10. Miscellaneous Companies
11. Paper Mills
12. Plantings
13. Public Sector
14. Railways
15. Sugar
16. Shipping
17. Textiles
18. Vegetable Oils
19. General Information

For easy reference purpose, there are sectional thumb indexes. The sections are also interspaced with charts, graphs, diagrams and maps.

The book is thoroughly revised, enlarged and re-written from page to page.

Printed on thin Bible paper. Size: Crown Octavo.

Price **Rs. 30** (Postage Rs. 7), foreign **$10**.

BRITISH COMPANIES WORKING FOR INDIA

COMPANY LAW ADMINISTRATION'S REPORT

TRENDS IN NEW REGISTRATIONS

THE year 1959-60, for which the Department of Company Law Administration of the Union Ministry of Commerce and Industry issued the report a few days ago, had a record number of company registrations since the new Companies Act came into force on 1st April 1956. As many as 1,452 new companies were formed during the year as compared with 1,095 in the year 1958-59. The new registrations in the year under review were also the highest in eight years. This steady upward trend in the formation of new companies was, however, accompanied in the last four or five years by a steady decline in the total number of companies at work from 29,874 in 1955-56 to 26,921 in the year under review. The reason for this fall is to be seen in the rapid increase in the number of companies struck off the registers as being moribund or carrying on no business at all. However, in spite of the fall in the number of companies at work, their total paid-up capital had increased, at the same time, from Rs. 1,024 crores in 1955-56 to Rs. 1,593 crores in 1959-60.

But this increase, to the tune of Rs. 569 crores, or 55 per cent in the total paid-up capital of all companies in the period 1956-60 was largely accounted for by companies in the public sector, their share being no less than Rs. 403 crores. If, however, out of the latter figure the paid-up capital of the Hindustan Steel Company Ltd., which is a class by itself, is excluded, the total increase in the paid-up capital of the Government companies during the same period was only Rs. 102 crores, working out to an average annual increase of about Rs. 25 crores. On the other hand, the share of non-Government companies in the total increase of paid-up capital during the period was Rs. 166 crores, working out to an average of about Rs. 41 crores a year.

In terms of aggregate authorised capital, the 69 new Government companies formed during the same period (1956-61) accounted for Rs. 261.70 crores. Of these new Government companies, as many as 22 were "giant-sized" companies with an authorised capital of Rs. 1 crore and above, accounting for 96.9 per cent of the relevant aggregate authorised capital of Rs. 261.7 crores. As for new non-Government companies, as many as 4,287 were formed during the period, with an aggregate authorised capital of Rs. 496.6 crores. Of these, as many as 87 were "giant-sized" companies with an authorised capital of Rs. 1 crore and more, accounting for 63.2 per cent of the relevant aggregate authorised capital of Rs. 496.6 crores.

It may be seen from Table 1 that new "giant-sized" companies accounted for more than 50 per cent of the aggregate authorised capital of all new companies in each of the four years. The more significant trend, however, is that the aggregate authorised capital of new non-Government companies accounted for the larger part of the aggregate authorised capital of all new companies in the last three years, 1957-58, 1958-59 and 1959-60. It would appear from the statistics pertaining to the increases in both authorised capital and paid-up capital in the private corporate sector that there has been a steady revival of market confidence in recent years. Another statistical proof of the revival of market confidence is provided by the increase in the number of applications for availability of names for new companies proposed to be formed from 1,296 in 1956-57 and 1,883 in 1957-58 to 4,132 in 1958-59 and 4,108 in 1959-60. Since applications for new names of companies are indicative of intentions on the part of company promoters to set up new business undertakings, it may be broadly taken that the maintenance, in 1959-60, of the number of applications of this type at last year's level shows that promotional activities in the corporate sector have continued to remain unaffected.

The other trends emerging from the statistics presented in the report of the Company Law Administration pertain to the size pattern of new companies, the distribution of new companies according to industrial groups and the regional distribution of new companies. From Table 2 it will be seen that there are two distinct trends in continuous operation. One of these is that new companies are overwhelmingly private limited ones. And the other is that small companies, with an authorised capital of Rs. 10 lakhs and below, continue to predominate among the private limited companies. Such small companies are nearly half of even public limited companies.

It will be seen from Table 3 that, out of the total new company formations numbering 1,452 during the year under review, 614 new companies were formed for purposes of processing and manufacturing foodstuffs, textiles, leather, chemicals and other industrial goods. The total authorised capital of these companies accounted for 74 per cent of the total authorised capital of all new companies registered during the year. The proportionate share of the new companies belonging to this group of processing and manufacturing industries during the two previous years, 1958-59 and 1957-58, was 59 and 67 respectively. The trend is thus unmistakable that by far the greatest expansion has taken place in the sector of processing and manufacturing. This shows that greater enterprise has been in evidence in the sector of industrial production as such, as distinct from commerce or transport.

But the trends in regard to regional distribution of new companies formed in the period 1956-60 are not quite so encouraging. This is because new companies continue to be concentrated heavily in four States—West Bengal, Bombay, Madras and Delhi. The figures within brackets in Table 4 pertain to the relevant State in the particular region. For instance, Madras State alone accounted for as many as 345 new companies out of the 433 companies formed in the Southern region as a whole in 1959-60. In the same way, Bombay in the Western region, West Bengal in the Eastern region and Delhi in the Northern region accounted for the larger proportion of new companies formed in the respective regions. While the prevailing pattern of distribution of new registrations need not necessarily mean a corresponding concentration of factories in terms of actual location in particular areas, it must nevertheless be true that new industries continue to be concentrated in the above four States. It is noteworthy that new companies formed in the four States together in 1959-60 accounted for 81.1 per cent of all new companies formed in the country as a whole, as compared with 77.4 per cent in 1958-59, 77.7 per cent in 1957-58 and 79.5 per cent in 1956-57.

TABLE 1

Government and Non-Government Companies

(Authorised capital in Rs. crores)

	1956-57		1957-58		1958-59		1959-60

BRAITHWAITE AND COMPANY (INDIA) LIMITED

STATEMENT BY SIR JOHN BROWN

ACTIVITIES BEING DIVERSIFIED—SHORTAGE OF STEEL TELLS ON PRODUCTION

A SUCCINCT account of the present activities and expansion plans of Messrs. Braithwaite and Company (India) Ltd. is given by Sir John Brown, Chairman of the Company, in his annual statement to shareholders circulated along with the Directors' report and statement of accounts for the year ended 31st December 1960. While the structural shop at the Clive Works showed a record turnover in 1960, there was decline in production, for the third year in succession, at the wagon shop. This setback, according to him, was due to shortage of steel of weldable quality and lack of supplies of components to be imported on behalf of the Company by the Railway Board. As for 1961, he has struck a note of cautious optimism.

The following is the full text of Sir John's statement:

"In order that shareholders may be given a more detailed account of the Company's activities and its development plans, it has been considered desirable to circulate with the balance-sheet as at 31st December last and the accounts for the year then ended, this statement by myself as Chairman. It is felt that this is a more satisfactory way of acquainting the general body of shareholders with the Company's position and prospects, than through the Chairman's speech at the annual general meeting since that meeting is normally attended by only a handful of shareholders and it is possible, in a statement such as this, to deal with a number of matters more adequately than can be done in the formal statutory report of the Directors which is, of course, also circulated with the accounts.

Profits

"The profits for the year, after providing Rs. 4,01,566 for depreciation, Rs. 17 lakhs for taxation and transferring to development rebate reserve the sum of Rs. 72,859 as required by explanation 2 to Section 10(2) (vib) of the Indian Income-tax Act, 1922, amounted to Rs. 20 72,316. This represents an increase of some Rs. 3.5 lakhs over the corresponding figure for the previous year when, however, the transfer to development rebate reserve was Rs. 2.04 lakhs. As forecast in the report of the Directors which accompanied the 1959 accounts, production in the structural shop at Clive Works was maintained at a satisfactory tempo throughout the year and, in fact, resulted in a record tonnage output. So far as railway wagons are concerned, we were severely handicapped by a shortage of steel of weldable quality and by lack of supplies of components to be imported on our behalf by the Railway Board so that the tonnage output in the Wagon Shop showed a decline for the third year in succession. The other principal activity of the Company heretofore, viz., the production of pressed steel tanks, continued and towards the end of the year a record production was being obtained. As plates become more freely available from indigenous sources, it is expected that the output can be still further increased in the future. The profit for the year may be considered satisfactory, having regard to the interruptions to production in the wagon shop and to the fact that nothing was contributed to profits from the Company's Angus Works, to which I shall make more detailed reference later in this statement. The balance-sheet and the profit and loss account figures reflect the increasing scale of the Company's activities.

"You will see that an increased dividend of Rs. 2.50 per share is proposed to be paid out of the year's profits, as compared with Rs. 2.25 for the previous year. This is equivalent to a net dividend of Re. 1.75, after deducting tax at 30 per cent which, it will be noted, is still less than the net dividends totalling Rs. 2.25 paid immediately before the revised corporate tax structure was introduced. Payment of the increased dividend will still permit the transfer to reserves of Rs. 6 lakhs and a small increase in the amount to be carried forward. There is no doubt that investment in buildings and machinery during the next few years will require a lot of money and, in these circumstances, it is necessary to retain out of profits each year a substantial sum. In this connection, I would observe that the amounts transferred to reserves and set aside as depreciation during the five years ended 31st December last aggregated no less than Rs. 48.57 lakhs; during the same period the Company's capital expenditure has amounted to Rs. 43.00 lakhs.

Production, Development and Expansion

Clive Works: "The structural shop was principally engaged in the fabrication of structural steelwork for the wheel, tyre and axle plant at Durgapur and for the adjacent A.V.B. project for the manufacture of water-tube boilers, cement-making machinery and other heavy plant. Both of these orders embodied the new heavy rolled section beams, imported into India for the first time. Fabrication of the larger standard bridge spans required for railway development, particularly in North-East India, continued throughout the year but apart from the making of the necessary jigs, fabrication of our share of the steelwork for the new Brahmaputra bridge between Pandu and Amingaon was delayed through shortage of the necessary high quality steel. The same shortage retarded development of the use of welding as opposed to riveting for structural fabrication generally but nevertheless the trend towards this practice was increasingly evident during the year.

"In the first half of 1960, production in the wagon shop consisted principally of bogie underframes for railway passenger coaches. In May, we turned over to the production of the new heavy mineral wagons, popularly known as BOX wagons, each of which carries 55 tons of coal or ores. These have a vital role to play in solving the problem of transporting the huge quantities of raw materials required for the country's expanding iron and steel industry. After initial difficulties to which I have already referred, production is developing satisfactorily. We have continued to produce tank wagons of various types.

"As I have already stated, the tonnage output of railway wagons has been falling in recent years, but this has been compensated by the fact that the wagons which are being produced have a higher cost and sale value; apart from anything else, they are very much bigger and this has necessitated the extension of the production bays. This work will be completed this year but there is in addition a certain amount of balancing machinery and welding equipment required if an uninterrupted flow of work is to be achieved. We are endeavouring to obtain the necessary import licences.

"The fitting shop has been re-sited and is now equipped to serve more adequately the increasing requirements of these works. The opportunity has been taken to increase garage capacity and work is at present in hand to expand the stores. We are badly pressed for office space and extensions to the general office and to the works time office have been sanctioned, together with an extension to the workers' canteen which is necessitated by the increased numbers now being employed and also by the fact that night-shift working has increased.

Angus Works: "The Company took over the running of the Angus Works on the 1st February 1960 and the terms of a 99-years' lease have recently been agreed. It is our intention to develop these works as a first class mechanical engineering works. We have recently had a visit from our Foundry Consultants and steps will be taken to give effect to their recommendations. We have submitted or are in the process of submitting applications for licences under the Industries (Development and Regulation) Act for the manufacture of various types of cranes and we expect to receive a number of licences shortly. In addition we have applied for an increase in our licensed capacity for the fabrication of heavy structurals. We are in the process of finalising our plans for crane manufacture, which is proposed to be undertaken in collaboration with two well-known United Kingdom companies. We are also in negotiation with a foreign manufacturer of ancillary blast furnace equipment, while some useful orders have recently been received for components for machinery, the manufacture of which has been undertaken by an associate company. We have in the past year been developing the manufacture at Angus of components for the railway wagons which we are manufacturing at Clive Works. This has proved of great assistance in eliminating bottlenecks which have frequently in the past restricted wagon output through failure to obtain delivery of bought-out components.

"From the number of enquiries which we have received from foreign companies which are interested in undertaking manufacture of their products in India in collaboration with a company such as ours, it is clear that we shall have no difficulty in finding work; the problem rather is to devise a pattern of production which will ensure, as far as possible, that the maximum use is made of our machinery and that management effort is not dissipated over the production of relatively small numbers of too many products.

"We have already paid for the stocks and work in progress which we took over from the Angus Company Ltd., and are in the process of completing orders which were outstanding at the date when we took possession. Although the machinery which we have leased is in good condition, much of it is old and it will be necessary to replace some of it with modern machines to enable us to satisfy the exacting standards demanded for the products which we shall manufacture. We shall also have to extend the buildings at these works and modernise the electrical installation as well as install a range of additional machinery. Much of the preparatory work involved in all this is already in hand but it is not yet possible to state with any degree of exactness the estimated overall cost. It is anticipated, however, that during the coming year plans for the development of these works will be finalised. Our financial position is a strong one and I do not anticipate undue difficulty in raising the necessary funds for expansion.

Exports

"As was mentioned in the Directors' report for 1959, an encouraging start was made during that year with the export of some of the Company's products. Progress in this field was sustained during 1960 when an increased tonnage of plates for the manufacture of pressed steel tanks was exported. We are intensifying our export effort and in recent months have dealt with an enquiry for a bridge in Thailand as well as for railway wagons in other countries. The principal difficulties which face us as exporters are concerned with supplies of raw materials and components which are products of allied industries. I feel that if the export drive in manufactures such as your Company's is to succeed, much more will have to be done to provide manufacturers with the raw materials and components which they require at prices which are not inflated by duties and levies, which must be considered as appropriate only in the case of materials for internal consumption. Like a number of other companies endeavouring to develop new exports, it is already evident that we cannot expect to make large profits or even any profits at all on that proportion of our production which we export; but we fully accept our obligation to do what we can to augment the country's export earnings and you may be sure that we shall continue to do our utmost in this direction.

Labour

"The year that has passed has not been without its difficulties so far as relations with our labour force are concerned. This was almost inevitable in the circumstances in which we were working at times but, on the whole, there was a satisfactory measure of co-operation between labour and management and where production schedules were not met, it was more often due to lack of materials or components than to any fault on the part of our workers. To them I extend on your behalf our thanks for the part they have played in achieving the results which are before you.

"A few weeks ago we learned of the outcome of our appeal to the Supreme Court against the award by the Labour Tribunal of five months' basic wages as bonus to our workers for 1957. Our reason for contesting this award was that on an average, in respect of the year 1957, the equivalent of some 14½ months' basic wages was paid as production bonus: in the case of our lowest rated workers the equivalent was no less than 19 months. We felt that the large sum of money involved should be taken into account in determining the overall distribution of surplus between the workers on the one part and the Company and its shareholders on the other. Unfortunately, the decision of the Supreme Court was against us. I cannot, however, help observing that if bonuses on this scale are to continue, combined with the comparatively high level of corporate taxation to which we are subject, much of the incentive to management to improve production methods and so increase the earnings on the Company's fixed assets as well as the opportunities for workers to earn more from production is thereby removed. As you all know, this question of bonus to workmen has blighted employer-employee relations in India for a good many years now and I feel it is a step in the right direction that a Bonus Commission has been set up by the Government of India to go fully into the matter. I trust that the terms of reference of the Commission and also its composition, when finally settled, will enable an objective survey of the whole position to be undertaken and in particular that the effect of bonuses on the scale which I have mentioned on the ability of the industry to finance its development in the long term will be fully reviewed.

Management and Personnel

"We have for some years been building up our resources of administrative and technical personnel and we now have a young team of engineers whose pride it is to maintain the standards of workmanship for which this Company is well known. For their assistance in training some of our young men at their works in the United Kingdom, we are indebted to our friends, Braithwaite and Co. Engineers Ltd. The acquisition of Angus Works and their development imposes new demands on our senior staff and on your behalf I would assure Mr. J. E. Bingham, our Managing Director, and his colleagues that we are very grateful to them for their efforts in challenging circumstances.

"Apart from their assistance in training personnel, Braithwaite and Co. Engineers Ltd. have continued to serve us as our Technical Consultants and we are grateful to them for their advice and assistance in various directions. It was a particular pleasure to welcome back to Calcutta recently Mr. H. W. T. Hain, a former Managing Director of our Company and now on the Board of Braithwaite and Co. Engineers Ltd. Mr. Hain's visit afforded us the opportunity for a full exchange of views on the subject of future development and was most valuable.

Prospects

"We face 1961 with a satisfactory order book so far as the wagon shop is concerned, but already it is clear that the activity in the structural shop at Clive Works must be on a reduced scale for most of the year. We have plenty capacity but we are short of orders and the steel to fabricate them. However, this is, I hope, a temporary phase as a number of tenders in which we are concerned either directly or through our associates. The Braithwaite Burn and Jessop Construction Co. Ltd., have recently been opened and we have good hopes that the competitive prices quoted will result in a number of useful orders. This will absorb our drawing office staff later in the year, but I fear that none of these orders can be translated into output by the end of it.

"Our experience during the past year has emphasised the necessity for the Company to concentrate on the fabrication of the heavy and more specialised steelwork to the highest standards. Competition from the many smaller concerns entering the structural engineering field is making it difficult for an organisation such as ours which maintains a large specialist staff and a completely integrated design and drawing office to keep our costs competitive in order to obtain an adequate share of the lighter type of work. The implications of this situation are, I can assure you, engaging the attention of the management.

"We are building up our organisation at Angus Works and, while I cannot foresee a spectacular increase in turnover this year, I am hopeful that before it is out, subject to our receiving import licences for the necessary plant, we will have made substantial progress in reorganising the foundry and increasing its output as well as getting ourselves set up for the manufacture of at least some types of cranes.

"While it is early in the year to make any forecast, we would expect increased activity in the wagon shop at least to offset the reduced tempo in the structural shop and, therefore, provided raw materials and wagon components are available, to maintain our profits. It will be some years yet before we can expect that Angus Works will make any material contribution to profits, but we can foresee steady progress there. So far as the further future is concerned, from what I have already stated, you will appreciate that the policy of the Board is to achieve a measure of diversification of its activities, without, however, sacrificing the homogenity of the business or diluting standards of management and supervision."

Here's Another Way to

MAKE YOUR TRUCK TYRES LAST LONGER !

At its present maximum output the Tyre Industry in India cannot manufacture sufficient truck and bus tyres to accommodate the needs of every vehicle owner.

It is not a matter of distribution. Throughout the country, authorized Tyre Dealers have taken the proper action to ensure that tyres are allocated at the published retail prices on a strict priority basis to those whose need is greatest.

Some time will still elapse before new tyre factories start production and before the expansion schemes of the present manufacturers bear fruit.

In the meantime, what-?

WE BELIEVE that this scarcity condition can be eased if every truck tyre user takes greater care of his tyres—so that they can be RETREADED for further mileage and longer life. Remove tyres from service for retreading before it is too late!

RESULTS OF BOMBAY DYEING SATISFACTORY

AN ENTERPRISE WORTHY OF EMULATION

IN spite of a significant rise in expenses, improved trading conditions have made the results of the country's premier textile unit, the Bombay Dyeing and Manufacturing Company Ltd. [Managing Agents: Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Bombay] for the year ended 31st December 1960 quite satisfactory. The gross sale proceeds have steadily improved to Rs. 11,44.48 lakhs from Rs. 10,80.33 lakhs in the previous year and Rs. 9,57.03 lakhs in 1958. The gross sales include receipts under export incentive scheme for cloth, but the exact figure is not shown, though it is known that, in the previous year, such were Rs. 34.55 lakhs. It would have been better if the Directors had shown the receipts under this item separately in the profit and loss account, as they had done in the previous year. The receipts under other income have improved by Rs. 7.97 lakhs to Rs. 26.26 lakhs mostly on account of profit on sale of land, higher profit on sale of machinery and higher dividend on shares of National Peroxide Ltd. The dividend income from National Peroxide Ltd., which is under the same management and which manufactures hydrogen peroxide, is steadily improving, giving a return of 18 per cent for the year under review. The closing stocks at Rs. 5,52.52 lakhs are fairly high by Rs. 2,16 lakhs over the opening stocks of Rs. 3,36.52 lakhs and accounted for by an increase of Rs. 1,42.26 lakhs in raw materials (cotton, dyes and chemicals) and Rs. 68.06 lakhs in finished goods and Rs. 5.68 lakhs in cloth and yarn in process.

The expenses of the Company, which have crossed the Rs. 10-crore mark now, have increased by Rs. 60.23 lakhs to Rs. 10,10.85 lakhs. This higher increase in expenses was on account of several factors, for which the Company was not directly responsible. The increase in expenses was on account of the following factors:

1. An increase in the wage bill by approximately Rs. 10 lakhs per year on account of an additional burden of Rs. 14 crores per annum saddled on the textile industry, as the result of recommendations of the Central Wage Board to increase the wages of mill workers from 1st January 1960.

2. High prices of cotton on account of low crop of 37.50 lakh bales only as against the forecast of 52.00 lakh bales. The shrinkage of 10 lakh bales was due to unfavourable climatic conditions in the cotton-growing areas causing considerable damage and a deterioration in quality. High prices were also prevailing for imported cotton.

3. Reduction in the prices of cloth and yarn from 1st August 1960 at the request of the Government of India.

The comparative results of the Company's working for the last four years are tabulated below:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (gross)	11,44.48	10,80.33	9,57.03	8,33.01
Other income	26.26	18.29	14.70	15.48
Closing stocks	5,52.52	3,36.52	2,91.60	2,42.43
Expenses	10,10.85	9,50.62	8,31.99	7,09.36
Excise duty	35.40	44.17	49.04	28.62
Gross profit	1,24.49	1,03.84	90.70	1,10.31
Managing Agents' remuneration	6.27	6.00	5.03	8.18
Provision for—				
Depreciation	63.25	54.64	51.43	48.12
Taxation	4.50	13.30	6.50	14.32
Net profit	50.47	29.90	27.74	39.69
To reserves and provisions	29.50	7.20	20.00	45.80
Transfer from reserves	14.45	12.30	17.00	29.65
Dividends	35.14*	35.14*	25.10	25.10
	(14%)*	(14%)*	(10%)	(10%)
Carry forward	0.66	0.37	0.50	0.86

* Subject to deduction of tax.

It is noteworthy that the gross profit of the Company has improved by Rs. 20.65 lakhs to Rs. 1,24.49 lakhs. The provision for depreciation has been stepped up from Rs. 54.64 lakhs to Rs. 63.25 lakhs, but that for taxation is lower at Rs. 4.50 lakhs, as against Rs. 13.30 lakhs. The net profit at Rs. 50.47 lakhs shows an improvement of nearly 68 per cent over that for 1959. But the dividend has only been maintained at 14 per cent per annum, subject to taxation. The transfer to development rebate has taken up as much as Rs. 29.50 lakhs, instead of only Rs. 7.20 lakhs for 1959. The Directors have, therefore, had to withdraw Rs. 14 lakhs from the dividend equalisation reserve for maintaining the dividend.

The gross block of the Company has increased by Rs. 1,68 lakhs to Rs. 11,03.32 lakhs and the net block stands at Rs. 5,57.96 lakhs, the depreciation provided so far being about 49 per cent of the gross block. The increase in fixed assets has been financed by secured loans from banks, which have gone up from Rs. 1,82.24 lakhs to Rs. 3,33.74 lakhs. In spite of sharp increase in fixed assets in recent years, the paid-up capital of the Company has been stationary since 1951 at Rs. 2,50.98 lakhs all in 1,003,920 ordinary shares of Rs. 25 each. Reserves and surplus are standing at an impressive level of Rs. 3,56.93 lakhs, showing a net rise of Rs. 15.50 lakhs over the year. On the assets side, the total investments of Rs. 38.77 lakhs include Rs. 10.21 lakhs in quoted investments. Of the latter, Rs. 10 lakhs in 5½ per cent. Burmah-Shell Debentures have been sold since the end of the year. Among the unquoted investments, National Peroxide accounts for Rs. 15 lakhs and National Machinery Manufacturers for Rs. 8.58 lakhs. The current assets aggregate Rs. 6,74.66 lakhs, exclusive of investments. These are only marginally above the current liabilities at Rs. 6,63.47 lakhs.

The Bombay Dyeing has been known for its conservative management. Its annual dividends have always been modest but steady with a good part of the profit being used for expansion and modernisation. Even then, the Company could go in for the introduction of automatic looms only with the help of large bank credit and acceptance of fixed deposits which over the year have gone up from Rs. 3 lakhs to Rs. 31.08 lakhs. With bank credit costing more and with no signs of stringency in the money market easing in the near future, the Directors will do well to consider raising fresh capital from the market by the issue of equity shares in the proportion of one share for every two shares. The maintenance of dividend on the increased capital should pose no problem, as the annual obligation for development rebate will progressively go down, now that the modernisation programme is practically over.

The Company's contribution to the foreign exchange earnings of the country increased from Rs. 5.65 crores in the previous year to Rs. 6.25 crores, though the quantum of exports was lower at 59.6 million linear yards as against 63 million linear yards in 1959. This was due partly to better price realisation in the export markets, which in turn was the result of higher proportion of finished goods to the total. As against the export figures of 38 per cent finished and 62 per cent grey in 1959, the corresponding figures for the year under review are 50 per cent each. The achievements of the Company on the export front are really creditable as compared with the country's overall performance. Whereas India's cotton textile exports declined from 814 million yards in 1959 to 693 million yards in 1960, with the foreign exchange earnings remaining almost steady at a little over Rs. 54 crores, the Company was able to bring in more foreign exchange than it did in the previous year. The Company's share in India's cloth exports has increased, in terms of value, from 10.3 per cent to 11.5 per cent. The Company's performance on the export front is clear proof that India can maintain its status as one of the three largest exporters of cotton textiles, provided the cotton mill industry is allowed to modernise itself, diversify its production and improve the quality. Is it too much to hope that the example set by the Company will open the eyes of our policymakers and the rest of the millowners?

The installation of new machinery is in full swing, which during the year under review was of the value of Rs. 1,67.65 lakhs. The Company ordered during the year 576 automatic looms, out of which 468 have been already installed and gone into production. An additional 192 automatic looms have been ordered for export promotion. The mills will have 1,974 automatic looms in all, when the present capital expenditure programme is completed during the current year. With the machinery already installed and with import licences in hand for modernising the spinning department also, the Company will be able to manufacture a wider range and variety of fabrics and will be in a unique position to introduce new lines of manufacture which are likely to meet with good consumer support, particularly in export markets. In this context, the following extract from the Directors' report will be read with interest:

"The new blow room, combers, ring spinning and doubling frames will improve considerably the quality of carded yarns and introduce combed yarns for the first time in our history. This will enable the mills to produce cloth of finer and superior texture. The new automatic looms are already producing high grade damask tablecloths and napkins, fancy mattress fabrics and terry towels in a variety of patterns and colours. The addition of the open width bleaching range will not only increase the production of processed goods, but will also enable the mills to turn out high quality dyed fabrics. With the screen printing plant, it will be possible for the Company to produce furnishings, curtain material and dress fabrics in a wide range of designs.

"The Company hopes to enter shortly into an agreement with Tootal Broadhurst Lee Company Ltd. of Manchester, U.K., for the technical know-how and use of their patented crease-resistant and minimum ironing processes, under which the Company will be permitted to brand its goods with the well-known marks 'Tebilized' and 'Tebilized double tested.' Negotiations with Heberlein & Co. of Wattwil, Switzerland, have reached the final stages for the right to use their famous 'Hecowa' finish on processed goods, and Government's formal sanction is awaited.

"The Company is continuing with its plans of renovation and organisation of the various departments of its two mills. It proposes to enter into an agreement with Gherzi Eastern Private Ltd., Bombay (a subsidiary of Messrs. Gherzi Textile Organisation of Zurich, Switzerland), for a complete survey of the spinning and weaving departments of the Spring Mills, with a view to improving the layout and suggesting economies and improvements in the process of manufacture. Pending the formal execution of the contract with Gherzi Eastern Private Ltd., the technicians of that Company have already commenced work on a preliminary survey of the Spring Mills.

"Considerable renovation of the machinery of the Spring and Textile Mills has been effected during the last 10 years. Consequently capital expenditure is likely to diminish in future years."

At the current market value of Rs. 66.90, the Rs. 25 paid-up ordinary shares give a net yield of 3.6 per cent per annum.

All in all, the Bombay Dyeing is an enterprise worthy of emulation by India's businessmen. Its management has shown single-minded devotion to cotton textiles, and has tried hard to augment India's export capacity by following a farsighted policy in regard to plant re-equipment and marketing. The material reward has, of course, been relatively modest, as compared with the gains that are being made by some other cotton mills that took to other lines of manufacture, including rayon, which is causing a heavy drain on India's slender foreign exchange resources. But the blame for this rests with the Government, the policies of which have been defective in many respects. The Company's management, however, can have the moral satisfaction of having pursued policies and practices which are in the larger interests of the country and which will stand the test of time.

INVESTORS FANCY ASSOCIATED BATTERY

It will be recalled that the Associated Battery Makers (Eastern) Limited (Managing Director: Mr. H. R. Gregson, Calcutta) which is the largest producer of storage batteries in India, changed its legal status to a public limited company during the year ended 31st August 1960. The capital structure was enlarged in January 1960, in order to increase the self-sufficiency of the factory. The issued capital was increased by Rs. 68 lakhs to Rs. 118 lakhs by the issue of 6.8 lakhs equity shares of Rs. 10 each at a premium of Rs. 5 per share. Out of the issue of 6.8 lakh shares, the then existing shareholders took up 2 lakh shares, of which 0.65 lakh shares were in part payment of the Company's indebtedness on loan account to the existing shareholders, and 1.36 lakh shares were in settlement of the purchase price of the entire issued share capital of the Chloride and Exide Batteries (Eastern) Private Ltd. The balance of the issue of 4.80 lakh shares received an extremely satisfactory response from the public. It was heavily oversubscribed, the Company having received nearly 65,000 applications.

The results of the Company's working during the year ended 31st August 1960 are not upto expectations. Nevertheless, the share market has taken a bullish view of the outlook for the Company. Its hope is that, in the current and subsequent years, the Company will fare better than it has done in 1959-60.

The total sales of the Company for 1959-60 were lower by about 9 per cent to Rs. 206.23 lakhs. The year witnessed a distinct change in the pattern of the Company's production, inasmuch as there was considerable progress towards completion of indigenous manufacture of articles which had to be imported previously. The implementation of this programme met with some initial technical problems, but results began to be seen by the end of the year. In view of this, the fall in sales is not discouraging as a firm basis has been laid for the future.

The sales for the year under review, though lower than those in the previous year, are

Rs. 17.79 lakhs higher than those of 1957-58. The closing stocks are the highest on record, showing a rise of Rs. 28.30 lakhs to Rs. 86.48 lakhs which constitute nearly 41 per cent of the total sales. This should have a favourable effect on the results for 1960-61. The total expenses have risen from Rs. 160.89 lakhs to Rs. 171.66 lakhs. In consonance with lower sales, the gross profit has come down by 9 per cent, from Rs. 65.93 lakhs to Rs. 59.86 lakhs. The provision for depreciation has been stepped up from Rs. 5.38 lakhs to Rs. 7.79 lakhs, but, apparently because of lower profit, a smaller amount has been set apart for taxation, Rs. 23.77 lakhs as compared with Rs. 27.49 lakhs last year. The net profit has fallen from Rs. 33.06 lakhs to Rs. 28.30 lakhs, a drop of nearly 15 per cent. Naturally, both dividend and the transfers to reserves have suffered. The dividend has been reduced from 40 per cent (subject to tax) to 25 per cent (subject to tax). Although a part of the dividend is on increased capital, the total amount actually distributed to shareholders is lower by Rs. 0.70 lakh at Rs. 19.30 lakhs. This year's dividend of 25 per cent includes an interim of 15 per cent on the old capital of Rs. 50 lakhs and the final of 10 per cent, the latter being on the enhanced capital of Rs. 118 lakhs. The amount ploughed back has been sharply reduced from Rs. 20.83 lakhs to Rs. 5.70 lakhs, but the undistributed surplus at Rs. 8.73 lakhs is almost twice as large as the sum brought in.

The paid-up capital is in 11.80 lakh ordinary shares of Rs. 10 each, of which seven lakh shares are held by the holding company. The share premium income of Rs. 34 lakhs received on issue of 6.80 lakh shares now stands at Rs. 28.63 lakhs after setting off the expenses of the issue amounting to Rs. 5.37 lakhs. In addition, there are reserves and surplus at Rs. 60.85 lakhs, showing an increase of Rs. 10.06 lakhs over the year. The whole item of Rs. 32.26 lakhs representing unsecured loans has been wiped out following the new issue of capital. The gross block of the Company at Rs. 93.47 lakhs stands depreciated at Rs. 44.79 lakhs, so that about 52 per cent of the original cost of assets has been written down. The total investments have risen from a mere Rs. 0.10 lakh to Rs. 20.40 lakhs on account of an investment of Rs. 20.25 lakhs in the equity shares of a subsidiary company, the Chloride and Exide Batteries (Eastern) Private Ltd. The total of current assets exclusive of investments at Rs. 196.77 lakhs, is well above the current liabilities at Rs. 54.48 lakhs, showing a very healthy financial position, inasmuch as the current assets are nearly three and a half times over the current liabilities.

It is stated in the Directors' report that Exide, Dagenite and other automotive batteries, which the Company manufactures, continue to be in strong demand throughout India and that the Company achieved significant improvement in production during the year. Motor vehicle manufacturers in the country, to whom the Company is original equipment-suppliers for a number of years, continue to give strong support. The management is making every endeavour to introduce improvements in design and construction to keep the products in line with the best in world markets.

The Company has a bright future, as it is reasonably certain that the demand for its products will expand in the coming years, following the growth in road transport and industrialisation. In view of this factor, the equity shares of the Company, which were in the neighbourhood of Rs. 36 before the budget, have been receiving sustained support and the price has risen to Rs. 39.35 *cum*-dividend. In the fourteen months' time since the issue was made public, the rise in value has been about two and a half times. At the current market quotation, the net yield on this scrip works out to 4.5 per cent per annum.

ASSAM HARDBOARDS LTD.

Assam Hardboards Ltd., which has its registered office in Calcutta, has finalised its plans for the installation of a hardboard mill at Gauhati with a capacity of 15,000 tons per annum. It is understood that the Company has been granted a loan of the equivalent of Rs. 60 lakhs in dollars by the D.L.F. through the Industrial Finance Corporation of India and has also received a request from American suppliers for allotting to them equity shares worth Rs. 10 lakhs out of the proposed issue of Rs. 50 lakhs equity and Rs. 10 lakhs 9 per cent. taxable preference shares. The directors and their friends will take up equity shares worth Rs. 15.5 lakhs. The remaining Rs. 24.5 lakhs equity and Rs. 10 lakhs preference shares are available for public subscription. Mr. Lekhram Periwal and Mr. Basudeo Somani are the sponsoring directors of the Company. The fixed capital expenditure is estimated at Rs. 1 crore and the plant is expected to go into production before the end of 1962.

MYSORE SUGAR PERFORMS WELL

DIVIDEND COMFORTABLY MAINTAINED

BETTER realisation and increased earnings have been reported by the Mysore Sugar Company Ltd. (Chairman and Managing Director: Mr. Venugopal Naidu, Bangalore), for the year ended 30th June 1960. The gross profit of the Company shows an increase of about 20 per cent and stands at Rs. 34.50 lakhs, as against Rs. 28.60 lakhs for the previous year. The net profit also is a little higher at Rs. 13.60 lakhs. These profits have been arrived at after providing in the accounts a sum of Rs. 14.22 lakhs towards the payment of deferred sugarcane price at an interim rate of Rs. 4.5 per ton, pending the final determination of the exact liability on this account. This is expected to be known only on the submission of the Tariff Commission report to the Central Government and the latter's decision thereon. Further, a sum of Rs. 3.54 lakhs has been charged to the year's accounts towards deferred price for sugarcane purchased during the previous year over and above the provision made thereunder. In addition, a sum of Rs. 3.74 lakhs pertains to the amount of additional bonus for workers settled during the year. It will thus be seen that the normal performance during the year under review was encouraging and the profits would have been still more but for the aforesaid provisions.

For the year under review, the Company has provided Rs. 7.4 lakhs (Rs. 7.8 lakhs) for depreciation and Rs. 13.5 lakhs (Rs. 8.0 lakhs) for taxation. For the third year in succession, the dividend has been maintained at the rate of 30 per cent, subject to deduction of tax. Of the profits a sum of Rs. 5 lakhs has been carried to the rehabilitation reserve and Rs. 36,000 to development rebate reserve and Rs. 1 lakh to the employees' gratuity fund. The balance of Rs. 1.15 lakhs has been carried forward.

The working of the Company in the last four years is compared in the following table:

(In lakhs of rupees)

	For the year ending 30th June			
	1960	1959	1958	1957
Sales—				
Sugar and distillery products	4,41.47	3,92.11	3,80.07	2,41.23
Farm supplies	13.82	12.02	10.24	12.24
Closing stock	17.99	55.21	55.54	37.18
Expenses	2,84.20	2,53.42	2,92.33	1,85.79
Excise duty on sugar	1,14.74	1,04.26	95.84	54.22
Gross profit	34.50	28.60	35.88	11.45
Provision for—				
Depreciation	7.40	7.78	7.22	7.12
Taxation	13.50	8.00	15.00	..
Net profit	13.60	12.82	13.65	4.33
Transfer to—				
Rehabilitation reserve	5.00	5.00	5.00	..
Development rebate reserve	0.36	1.27	1.78	..
Dividend	6.54	6.54	6.54	4.36
	(30%)	(30%)	(30%)	(20%)
Carry forward	1.15	0.46	1.44	2.10
Sugarcane crushed (tons)	816,100	854,742	888,814	224,228
Sugar produced (tons)	81,550	85,771	89,930	21,513
Average recovery (%)	9.98	10.08	10.29	9.64

It will be seen that the main reason for the negligible rise in net profit is the marked rise in the provision for taxation. A noteworthy feature is that not only has the dividend been steadily maintained but also the transfer to rehabilitation reserve. Another point worthy of note is the comfortable coverage of dividend by the net profit.

Larger sales and better yield from the Company's products have been mainly responsible for the improvement in the working of the Company during the year under review. The total sale proceeds were higher by about Rs. 50 lakhs at Rs. 4.41 crores. Of this, the sale of sugar accounted for a rise of about 12 per cent. The distillery products fetched an income which was higher by about 75 per cent.

The gross block, as at the end of June 1960, is Rs. 163.27 lakhs; this has been written down in the books to as low as Rs. 55.87 lakhs, the depreciation provided being Rs. 107.40 lakhs. During the year assets of about a lakh of rupees were added (net). In addition, the capital works in progress are about Rs. 2.55 lakhs.

The current liabilities and provisions of the Company amount to about Rs. 157.07 lakhs (including the sum of Rs. 14.22 lakhs towards the payment of extra cane price for 1959-60 pending determination). This is well covered by current assets of the order of Rs. 226 lakhs. The Company had liquidated, during the year, secured loans amounting to Rs. 23.21 lakhs. Of the current assets, cash balances alone amount to Rs. 42.74 lakhs and gilt-edged investments to the tune of Rs. 32.54 lakhs.

Against a paid-up capital of Rs. 21.79 lakhs, all in ordinary shares of Rs. 10 each, the total reserves created out of the profits from time to time exceed Rs. 105 lakhs. The general reserves alone amount to over Rs. 62 lakhs, nearly three times the capital of the Company.

The Company has a plan to establish a plant at Mandhya for the manufacture of cellulose acetate. The industrial licence for this project has already been granted by the Central Government and the capacity of the plant is expected to be about 3,300 tons per annum. It is proposed to sponsor a separate company to undertake this project, which requires huge capital outlay. Nevertheless, this would be part of the programme of the Mysore Sugar Company to manufacture acetic acid from alcohol and supply the same to the proposed new company on a long-range basis.

At the prevailing market price of Rs. 58.25 *cum*-dividend, the Rs. 10 shares of the Company provide a yield of 3.8 per cent free of tax.

MADURA MILLS EARN MORE—RESERVES REPLENISHED

Keeping pace with the generally favourable trend enjoyed by the textile industry last year, the Madura Mills Company Ltd., (Managing Agents: Messrs. A. & F. Harvey Ltd., Madurai), the pioneer spinners of the South, has reported profitable results for the year ended 31st December 1960, showing a marked improvement over its working in the previous few years. The gross profit of the Company for 1960 (at Rs. 197.34 lakhs) has nearly trebled as compared with that for the previous year. The net profit is also sharply higher at Rs. 85.30 lakhs which is more than twice as much as the profit for 1959. It is necessary to add here that neither 1959 nor the two years prior to it were normal ones for the Company, as they were marked by prolonged labour troubles and its consequences, followed by adverse trading conditions. The following table shows at a glance the Company's progress in recent years:

(In lakhs of rupees)

	For the year ending 31st December			
	1960	1959	1958	1957
Sales of yarn and waste (gross)	17,40.52	12,40.01	15,37.41	13,09.22
Closing stock	1,36.52	50.85	84.67	2,15.42
Raw material consumed	11,09.14	7,85.11	9,78.35	9,64.14
Other expenses	4,61.56	3,72.17	4,68.95	4,58.67
Gross profit (+) or loss (—)	+1,97.34	+66.24	—31.08	+88.68
Depreciation	25.72	19.94	22.05	19.67
Taxation	71.71*	..	2.86	45.15
Managing Agents' commission	14.61	5.79	..	6.07
Net profit (+) or loss (—)	+85.30	+40.51	—55.99	+ 0.74
Provision for—				
General reserves	40.00	4.55	—49.07	..
Development rebate	6.38	8.33	..	..
N.I.D.C. loan redemption reserve	7.50	7.50	..	..
Dividend	26.25	21.88	..	26.25
	(15%)†	(12½%)†	..	(15%)
Carry forward	7.21	2.05	..	6.92

* Includes Rs. 1.19 lakhs relating to the previous year.
† Dividends for 1959 and 1960 are subject to tax deduction.

The Company has provided larger sums for depreciation and taxation. The provision for depreciation is higher by Rs. 6 lakhs which may, to an extent, be attributed to the additions to the block made during the year. The provision for taxation amounts to as much as Rs. 71.71 lakhs of which Rs. 1.19 lakh pertains to the previous year. In spite of the increased earnings for the year, the Directors have only slightly raised the dividend from 12½ per cent taxable to 15 per cent taxable. They have, however, prudently carried large sums to reserves which had been depleted earlier. It will be recalled that, two years ago, the Company had to meet the heavy loss of Rs. 56 lakhs suffered in 1958 by debiting it to the reserves and surplus. The whole of this depletion has been made good now.

The gratifying increase in the earnings of the Company during the year under review may be attributed to the uninterrupted working of its mills, despite cotton shortage, and the higher prices fetched for the mills' products. The gross sales of yarn and waste went up by over 40 per cent to the record sum of Rs. 17.41 crores. The closing stocks were also higher by nearly Rs. 86 lakhs. The Company earned during the year a sum of nearly Rs. 22 lakhs on account of the export incentive schemes of the Government of India, as against Rs. 10 lakhs in the previous year.

Following the additions from the profit for the year under review, the financial position of the Company has greatly improved. The following synopsis of the balance-sheet as at 31st December 1960 indicates the latest position:

(In lakhs of rupees)

Liabilities		Assets	
Capital	175.02	Gross block	687.42
Reserves and surplus	470.56*	*Less*—Depreciation	448.22
Secured loans	56.52		
Other current liabilities and provisions	185.45	Net block	244.20
		Investments	52.77
		Other current assets	594.95
		Cash	5.63
Total	887.55	Total	887.55

* Includes Rs. 1 crore as a result of revaluation of assets in 1953.

During the year under review, the net additions to the block account amounted to about

(*Continued on page 566*)

DEFECTS IN AGRICULTURAL STATISTICS

(*Concluded from page* 542)

nutrition, makes it imperative to collect reliable information regarding these products on a regular basis.

Data on yield of major cereal crops is also being collected on a sampling basis by the N.S.S. during their regular rounds through the agency of general purpose investigators who collect all sorts of data on diverse topics such as on consumer expenditure and incomes, population and over-population, family planning and farm planning and so on. This peripatetic agency does not appear to be very suitable for crop cutting surveys.

A comparison between N.S.S. estimates and the official estimates (which also are based on crop estimation surveys conducted by State Governments under the overall supervision of N.S.S.) reveals a wide divergence in the two sets of figures even at the all-India level. It is obvious that, in regard to yield, we are still very much in the sphere of uncertainty. We still do not know how much food we really produce. How much we have to import? Whether the country has sufficient for its domestic consumption, whether we can export—we have no absolutely reliable data and I think for a country like ours which had a long background of problems and statistical work, the lacuna is rather disturbing.

In respect of crop forecasts, usually two or three forecasts are issued (except in the case of wheat and cotton for each of which five estimates are issued) which contain information on area sown and quantitative estimates of the outturn expected to be harvested. Yield estimates obtained on this basis were not very reliable, as recourse had to be taken to the traditional methods of estimating the average yield, either directly on the basis of visual observation or as a product of normal yield and the condition factor. In spite of the recent improvements in the procedure for determining normal yield and the condition factor, the pre-harvest estimates of production still remain largely undependable.

With a view to imparting objectivity to these estimates, it is recommended that suitable systems of physical measurements during the various stages of crop growth be introduced;* this step would be amply justified in view of the importance of pre-harvest estimates in the context of price policies and food administration.

It is necessary to extend the scope of the all-India crop forecasts to such important crops as are not already covered and the coverage of forecasts should be extended to all areas.

An Important Lacuna

Marketable surplus has become another very crucial thing. The information about it is still inadequate. We do not have sufficient information as to what proportion of the producers have any surplus at all; it is not known as to how much is simply consumed by the subsistence farmers. We should also know what are the retail prices, wholesale prices and so on and the price data is also required to be greatly improved.

Much work has been done in regard to the difference between the price on which the farmers sell the goods and the price at which it is finally taken by the consumer, but there is no authoritative and certain information about it. We are still groping rather than being sure about it. Data on retail prices will also be helpful for several other purposes, for example, to determine the relationship between quantities demanded and the changes in relative prices.

Not much information is available on agricultural wages either. Statistics on agricultural wages are collected only from a few selected centres in the various States.

An important lacuna in agricultural statistics is the absence of data on area under the various improved agricultural inputs and practices and the extent of benefits accruing therefrom. It is very important that such work is done on a more comprehensive and regular basis to yield data on the present methods and practices and input-output coefficients for each input and practice. We know of new facilities that have been provided by way of irrigation and provision of improved seeds, fertilisers and so on and yet we have no data as to the precise amount of these inputs being utilised by different types of farmers for different crops in various regions. This is a serious lacuna. What responses have resulted from these new inputs? In the absence of such data, we have to go by guesses and by generalised ratios which may or may not hold good. The greatest obstacle in assessing the future production potential (in connection with the Study on "Long-term Projections of Supply and Demand for Selected Agricultural Products," in progress in the National Council) has been the absence of reliable and detailed techno-economic data on production aspects.

The lack of information on crops movement within the same State or principal trade blocks, has been a serious handicap, and, an unfortunate statistical lacuna.

Data on stocks and reserves of foodgrains relate only to Government stocks and offtake from the same. For commercial products like cotton, jute, etc., information on stocks held by trade is also available. Stock data ought to be collected in respect of all important agricultural commodities on a more comprehensive and regular basis.

Costs and Savings

Data on the cost of production of crops is scanty, but it is even more so in the case of livestock products for which only a very limited amount of information is available. Data on cost of production are important for purposes of price-fixation about which so much is being heard. In view of the anticipated success of agricultural development plans and the realisation of increased agricultural production, with a possible tendency for a fall in agricultural prices, the need for data which would enable a clear analysis of the interests of the producers and the need for a stable price level is apparent.

The lack of sufficient and high quality data in regard to production costs was felt by N.C.A.E.R. while working out the profitability of crops (which would determine the allocation of input-resources) and determining the expected inter-crop relationships in connection with our long-term supply projections of selected agricultural commodities.

Very little information is available at the moment in regard to savings and their disposal in the rural sector. Some data are available in the Rural Credit Surveys conducted by the Reserve Bank of India, but these give limited information for a few regions only. The problems of measurement and analysis of rural savings, and of determining the intra-sector and inter-sector flows, are quite complicated and call for the devising of suitable concepts and the use of specialised techniques and methods of data collection and their interpretation.

These problems arise because of the nature of the rural economy and the socio-economic complex of the rural population and particularly owing to the behaviourial patterns of rural people in regard to savings. That non-monetary savings in rural areas are an important part of total savings is recognised by all, but we have no means of knowing their magnitude. A study of rural saving—both in respect of monetary and non-monetary components, would be useful in the context of overall plans of economic development and social progress and particularly from the point of view of capital formation, present and potential, for achieving the goal of increased agricultural production.

There has been a general feeling that India's rural economy has sufficient margin of savings not only to finance further programmes of agricultural improvements but even to finance the expansion of the other sectors of the economy. No one has the remotest idea as to the percentage of the savings in the agricultural sector. Particularly we know that the richer landlords and larger farmers save, but it is not known as to how they dispose of their savings and so on.

In regard to investment, we have very little definite data. This can be illustrated from the fact that the Planning Commission made an estimate for the Second Plan which was so totally in variance with the like estimates made by the Reserve Bank and we must add that neither the Reserve Bank estimates nor the Planning Commission estimates are in the region of certainty.

I may add that the National Council of Applied Economic Research is undertaking a pilot survey of rural savings which is expected to throw light on most aspects of the problem. The pilot survey would be followed by a bigger survey to be launched sometime around the middle of 1961.

N.S.S.

The introduction of the N.S.S. was a welcome step inasmuch as it obviated the need to work through the States for obtaining statistics at the national level in regard to many topics, such as expenditure and consumption patterns. However, the setting up of N.S.S. has had a dampening effect on the enthusiasm for implementation of measures decided upon under the earlier plan to develop statistics at the source. A feeling was evidenced in certain quarters that any type of data can be collected through a sample survey. The net result was that the data collected through primary agencies lacked the support and confidence of those concerned, while the N.S.S. supplied estimates on an *ad hoc* basis at the national and regional levels.

At present, the situation is that both area and yield statistics are not being scientifically collected, although some beginning has been made in respect of the yield statistics. In principle, it is necessary that area be enumerated by complete coverage and not by sampling. The estimates of yield for different crops should be obtained by scientific crop cutting experiments. If the area statistics are also obtained by sampling, further errors will be introduced in the estimates of agricultural production, because, according to the sampling techniques, the errors in sample estimates of areas and sample estimates of yields will add up. Area enumeration is actually being done by complete coverage in a number of States and, where it is not so done, sample estimates of areas may be useful up to a point, but there is no justification for making sample estimates of areas under crops for the whole of India even when for a large part of the country estimates by complete enumeration are available.

While the N.S.S. is, indeed, making a great effort in our country and all of us are proud of its work and achievements, we must recognise its limitations. In the first place, while great attention has been paid to the sampling techniques and minimising sampling errors, less than necessary attention has been given to the avoidance of non-sampling errors which, indeed, are much more serious, especially in socio-economic enquiries for savings, consumption, income and so on, where the methods of enquiry have to be on household basis using personal interview techniques. Secondly, the N.S.S. attempts to do too many things at a time. It is really a multipurpose agency. While for some purposes their techniques may be found satisfactory, by the very nature of the economic data, the multipurpose agency cannot meet the requirements of specific enquiries into specific types of economic data. For this specialised purpose, different methods and techniques will have to be employed.

Expert Scrutiny Wanted

Also the N.S.S., because of its multipurpose nature, is not able to deal thoroughly and satisfactorily with particular types of information which one may seek. For example, although the N.S.S. has been collecting data on incomes, it has not been possible so far to get any idea of the income distribution in our country which is so essential for our planning. In this sense, it attempts too much and the results are too little. I would also like to recommend that a conference be convened at expert level to examine critically the methods and results of N.S.S. "expenditure surveys" and suggest improvements. Instead of repetitive once-a-year multipurpose expenditure surveys, it may, for instance, be desirable to experiment with other procedures, including continuous cross-section surveys.

The *patwari* system—a local permanent agency system—on the whole has operated well in providing acreage statistics. Experience shows that land records agency being resident (stationary) is also more suitable for obtaining information on items like the yield rate. The existing land record agency, therefore, supplemented by the agency being set up under the Ministry of Community Development appear to provide promise in the collation and collection of statistics required for successful planning.†

Several years have been lost under the wrong notion that some kind of an all-purpose sample survey will provide all the data that we need in planning and that detailed statistics at the village level are unnecessary.‡ It is high

---

* Some of the advanced countries have evolved suitable methods for this purpose. See for example, "Crop Forecasting in Japan," *Agricultural Situation in India*, March, 1959.

† This is also the view of Dr. P. V. Sukhatme. See "Statistics for Agricultural Planning: Developments in Agricultural Statistics during the last fifteen years." (Address delivered at the Twelfth Annual Meeting of the Indian Society of Agricultural Statistics at Gwalior on 28th January 1959). *Journal of the Indian Society of Agricultural Statistics*, Vol. XI, Nos. 1-2 1959, pp. 23-24.

‡ V. G. Panse "Agriculture with special reference to Statistical Aspects in the Third Plan: Symposium held during the Twelfth Annual Meeting of the Indian Society of Agricultural Statistics," *Journal of the Indian Society of Agricultural Statistics*, Vol. XI, Nos. 1 and 2. 1959, 1 and 2.

time to come to grips with the problem and thus improve our basic agricultural statistics, which at present are quite unsatisfactory.

As a minimum programme, we should try to ensure that:

(*a*) the Statistics of land utilisation and area under different crops become available in respect of the entire geographical area of the country.

(*b*) the estimates of production are made available for all the important crops, including fruits and vegetables and minor commercial crops, and are based on sample crop-cutting experiments for all parts of the country.

The above steps would help clear the confusion in the public mind where nobody knows for sure whether agricultural production has increased as planned and whether the setting of targets and the method of arriving at them have any validity.

There is no need to change radically the structure of machinery for the collection of agricultural statistics in areas where land records staff is doing the work. For the present, it would be enough to reinforce the existing machinery as was suggested in the report of the Technical Committee on Co-ordination of Agricultural Statistics presided over by Dr. W. R. Natu.

That qualified people should be appointed for the job of data collection, processing, interpretation and presentation of agricultural statistics need not be stressed here. Training on a more comprehensive basis ought to be given to the field staff engaged in the collection of agricultural statistics. This should include refresher courses from time to time. It is equally important that proper training is given to the supervisory staff. Supervision over the work of primary agencies should be improved in nature and quality. Time lag in the collection of data and its release in a usable form should be reduced.

There should be a consolidated plan for the improvement of agricultural statistics wherein the relationship of different components to each other and to the total plan should be carefully thought out and specified. It may not be possible to implement all the suggestions given here because of organisational or financial considerations. So priorities for the various measures should be worked out.

Simplification

Allied to the issue of the simplification of administrative procedure is the question of simplifying some statistical procedures; the latter is also important from the point of view of timely compilation and release of information. The estimation of data for small areas or for items of minor importance when actual figures are wanting, is an example of the type of difficulties which lead to delays in the release of agricultural statistics.

Extension of the work under schemes (sponsored by the Ministry of Food and Agriculture) launched during the second Plan, e.g., computation of index number series relating to agricultural economy, survey of culturable waste-lands, diagnostic studies for reconciliation of statistics collected by more than one agency, etc., is recommended on a more intensive basis.

Efforts should simultaneously be made to educate the officials engaged in data collection and supervision in regard to the importance of agricultural statistics; it is equally important for other officials whose co-operation is generally sought in the matter. The significance of reliable and timely information is not realised in all quarters and a change in the attitude of officials is a *sine qua non* for improved agricultural statistics. Some organisational changes would also be needed to make these effective.

The improvement in the organisation of the machinery for data collection should comprise: (i) improvement in the conditions of service—reasonable salaries, established scales of pay and security of tenure, (ii) expansion of the scheme of rationalised supervision—checking based on random sampling methods, (iii) appointment of suitable senior staff and, finally, (iv) there should be delegation of power to the proper persons.

In conclusion, I must add, in fairness to all those concerned with it, that there is a steady and consistent effort to improve agricultural statistics; we have also got a body of highly trained and competent statisticians. With these additions, we may legitimately hope that, within a very short time, our country should also compare favourably with other countries where agricultural data are more adequate and reliable.

UNION BANK OF INDIA LTD.

CHAIRMAN'S SPEECH AT FORTY-SECOND ANNUAL MEETING

INTER-BANK AGREEMENT ON INTEREST RATES NEEDS MODIFICATION

ADDRESSING the shareholders of the Union Bank of India Limited at their Forty-second Annual General Meeting held at Bombay on Monday, 20th March, 1961, Mr. K. R. P. Shroff, Chairman, dealt with the problems raised by the contraction in bank deposits in recent months. Referring to the all-India inter-bank agreement on deposit rates, he said that it was not helpful to medium-sized and small banks, as they had to compete with bigger banks for deposits on the same terms. Alluding to the new section of the Indian Companies Act dealing with the branch audit of banking companies, the Chairman stated that the Union Bank had made quite satisfactory arrangements for the audit of its branches.

The following is the full text of Mr. Shroff's speech:

"GENTLEMEN,

"The Directors' report for the year ended 31st December 1960, together with the audited balance-sheet and the profit and loss account as at that date, have been in your hands for some time and with your permission, I take them as read.

"The business of the Bank continued to be satisfactory. During the year, the Bank opened six branches, one each in Greater Bombay, Bhiwandi, Poona, Kolhapur, Delhi and Gauhati and at the end of the year the total number of branches was 17 local and 35 upcountry. Since then, we have opened branches in Nagpur, Delhi Chakla (Ahmedabad) and New Delhi. I am happy to report that we continue to receive encouraging response at both our old and new branches.

Decline in Bank Deposits

"The figures of current, savings, fixed and other deposits which were Rs. 24.60 crores at the end of 1958 and Rs. 32.17 crores at the end of 1959, stood at Rs. 28.50 crores at the end of the year under review. For over a decade, there has been a continuous increase in bank deposits. Between 1951 and 1959, the total bank deposits increased by nearly 125 per cent. This pattern continued upto August last year when the banks' aggregate deposit liabilities stood at Rs. 1,971 crores. Since then there has been a change in this trend and at the end of the year the aggregate deposit liabilities stood at Rs. 1,892 crores. This serious problem facing the banking industry on the eve of our third Five-year Plan is having serious attention of the Finance Ministry, Reserve Bank of India and both the Indian and Foreign Banks' Associations. Banks in this country will be called upon to play an increasingly important role in the third Plan and unless their resources are sufficiently strengthened, the banking structure will not be in a position to bear any additional strain. In these changed conditions, medium-size banks like ours amongst 'A' class banks, i.e., banks with deposits of Rs. 25 crores and over, are at a definite disadvantage since at present, under the all-India Inter-bank agreement on maximum rates of interest on deposits, we have to compete for deposits with bigger banks, both foreign and Indian, on the same terms. This aspect is also engaging the attention of both the Indian and Foreign Banks' Associations.

Credit Ratio Satisfactory

"The money market remained very tight throughout the year and even during the slack season the maximum reduction in bank credit was less than 4 per cent. During the year the total bank credit expanded by Rs. 216 crores and stood at Rs. 1,181 crores at the end of December 1960. The credit-deposit ratio of all banks excluding P.L. 480 deposits stood at 71.4 per cent. Despite heavy and insistent demand for bank credit, your Directors considered it prudent to keep down advances and at the end of the year 1960 our advances, including bills purchased, stood at Rs. 17.31 crores, maintaining the credit-deposit ratio of 60.7 per cent which can be considered quite satisfactory.

"We continued to keep a liquid position and cash on hand and balances with banks, together with our investments in Government and other trustee securities, aggregating Rs. 11.84 crores, bear a ratio of 41.5 per cent to the total deposits against 38 per cent in the previous year.

"Investments in Central Government, State Government and other trustee securities stood at Rs. 7.13 crores at the end of the year as against Rs. 6.92 crores at the end of 1959. Your Directors, fully realising the effect of various credit restrictive measures taken by the Reserve Bank on the security market, decided to convert longer and medium-dated securities to shorter-dated securities to the extent possible, 61 per cent of these securities mature within a period of five years, 36 per cent between five and eight years and the balance of 3 per cent after eight years but within a period of eleven years.

Expansion in Business

"Our foreign exchange business continued to develop satisfactorily and our outstanding acceptances, endorsements, etc., which mainly represent foreign letters of credit opened by us, increased from Rs. 5.53 crores to Rs. 6.13 crores at the end of the year. The outstanding contingent liabilities in respect of forward exchange contracts also increased from Rs. 4.94 crores to Rs. 7.39 crores.

"Interest and discount earned during the year rose to Rs. 1.33 crores against Rs. 1.29 crores in the previous year. Commission, exchange, etc., showed a substantial increase from Rs. 31 lakhs to Rs. 41 lakhs. Under the all-India inter-bank agreement on maximum rates of interest on deposits, the rates of interest on deposits were reduced by about ½ per cent at the end of 1959 and you will observe that the figure of interest paid on deposits at Rs. 63 lakhs was lower than that of the previous year by nearly Rs. 5 lakhs.

Increase in Staff Expenditure

"The figure of salary and allowances paid to the staff during the year under review went up from Rs. 46 lakhs to Rs. 59 lakhs and this increase of about Rs. 13 lakhs can be ascribed to the undermentioned reasons:—

(*a*) 64 per cent of the total increase is due to additional expenditure over salary and wages paid to new staff recruited for the new branches, additional hands taken up at the fag end of the year 1959 to cope up with the increase in the Bank's volume of business.

(*b*) 16 per cent is due to the increase caused by graded increments, D.A. and provident fund.

(*c*) 20 per cent by way of increase due to part adjustment in salary and allowances following the upgrading of the Bank from 'B' class to 'A' class and also due to overtime earned by the staff.

"The net profit of the year is higher at Rs. 27.15 lakhs as against Rs. 24.27 lakhs for the previous year. I can assure you that every possible effort is being constantly made by the management in keeping down the expenses, without impairing the efficiency and high standard of service rendered to our customers.

Branch Audit

"Under Section 228 of the Companies Act 1956 as amended by Section 70 of the Companies (Amendment) Act 1960, the accounts of every branch of a company have to be audited either by the company's auditors appointed under Section 224 of the Companies Act or by a person qualified for appointment as an auditor of the company under Section 226 of the Act. In order to avoid hardship, delays and heavy expenses which a company having several branches may have to undergo or incur, sub-Section 4 of the Amendment Act provides that the Central Government may exempt any branch of a company from these provisions. As

Notices

INDIAN ALUMINIUM COMPANY LIMITED

31, Chowringhee Road
CALCUTTA

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of Indian Aluminium Company, Limited, will be held at the registered office, 31 Chowringhee Road, Calcutta 16, on Thursday, April 27th, 1961, at 11 a.m., for the following purposes.

1. To receive and adopt the Balance Sheet as at December 31st, 1960, and the Profit and Loss Account for the year ended December 31st, 1960, together with the reports of the Auditors and Directors.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. As special business, to consider and if thought fit to pass with or without modification the following resolutions:

(i) As special resolution:

"That it is hereby approved that the register and index of members, the register and index of debenture-holders and copies of all annual returns prepared under Sections 159 and 160 of the Companies Act, 1956 as amended, together with the copies of certificates and documents required to be annexed thereto under Sections 160 and 161 of the said Act may, at the option of the Directors, be kept at the office of Andrew Yule & Company Limited, 8 Clive Row, Calcutta, instead of at the registered office of the Company."

(ii) As ordinary resolution:

"That the powers given to the Directors to borrow moneys on behalf of the Company by resolution No. 5 passed at an Extraordinary General Meeting of the Company held on November 12th, 1956, be limited to the sum of Rs. 15 crores."

(iii) As ordinary resolutions:

"That each Director, other than a Director in the employ of the Company, do receive as remuneration for his services under Article 104 of the Company's Articles of Association Rs. 400 for each meeting of the Board of Directors he may attend or which his Alternate Director, not being in the employ of the Company, may attend in his place or stead.

That the aforesaid resolution will have retroactive effect from January 1st, 1961."

The share transfer register of the Company will be closed from April 6th to April 27th, 1961, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 27th, 1961, or to their mandatories. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Any member of the Company who is entitled to attend and vote at the Meeting convened by this Notice is also entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,

T. D. SINHA,
Secretary.

March 6th, 1961.

The Explanatory Statement relating to Item No. 5 above in terms of Section 173(2) of the Companies Act 1956 has been forwarded to the members of the Company along with the Notice.

BRAITHWAITE & CO. (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-first Annual General Meeting of Braithwaite & Co (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday the thirteenth day of April, 1961, at 11-45 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.
2. To declare a Dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as a Special Resolution:—

"That Article 95 of the Articles of Association be deleted and the following Article substituted in its place:—

"95. Unless otherwise determined by the Company in General Meeting, each Director, other than the Managing Director, shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee of Rs. 350 per meeting of the Board attended by him subject to a maximum of Rs. 3,000 for each Director per annum and the Chairman shall similarly be entitled to receive Rs. 550 per meeting of the Board attended by him subject to a maximum of Rs. 4,800 per annum."

The Transfer Books of the Company will be closed from the 30th March to the 13th April, 1961, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such Dividend as may be declared will be made on or after the 21st April, 1961 to those members whose names are on the Company's Register on the 13th April, 1961.

By Order of the Board,

Y. S. TAYAL,
Secretary.

CALCUTTA, *3rd March*, 1961.

An Explanatory Statement pursuant to the provisions of Section 173 of the Companies Act, 1956, is annexed to the Notice convening the meeting.

HINDUSTAN LEVER LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the Company will be held at the INDIAN MERCHANTS' CHAMBER HALL, 76, Veer Nariman Road, Bombay 1, on Tuesday, 18th April 1961, at 4 p.m., to transact the following business:—

1. To receive and consider the Accounts and Balance Sheet, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration for the year ending 31st December 1961.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

The transfer books of the Company will be closed from 22nd March to 25th March 1961 (both days inclusive) and again from 12th April to 18th April 1961 (both days inclusive).

By Order of the Board,

S. H. GURSAHANI,
Secretary.

INDIA HOUSE, FORT STREET,
BOMBAY 1, *22nd March* 1961.

To all shareholders of the Company and in particular Unilever Ltd., London.

THE DURBHANGA SUGAR COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Ordinary General Meeting, being the Annual General Meeting, of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat, on the 20th day of April, 1961, at 10.30 a.m., for the following purposes:

(1) To receive and adopt the Directors' Report and Accounts for the year ended the 31st August, 1960, and Balance Sheet and Report of the Auditors thereon.

(2) To declare a Dividend.

(3) To elect a Director in place of Shri Kanhaiya Jha, who retires under Article 107 and, being eligible, offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

As Special Business

(5) To transact any other business which may be brought forward at the Meeting with the permission of the Chairman.

By Order of the Directors,

W. F. MALDEN,
Secretary.

LOHAT,
DISTRICT DARBHANGA,
9th February, 1961.

Note.—(1) A member of the Company, who is entitled to attend and vote, is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member.

(2) The Share Transfer Books of the Company will be closed from the 2nd April to the 20th April, 1961, both days inclusive.

(3) Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 20th April, 1961.

DUNCAN BROTHERS AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have sanctioned payment of an additional dividend of 1.2 per cent to Preference Shareholders of the Company in pursuance of the Preference Shares (Regulation of Dividends) Act, 1960, in respect of the year ended 31st December 1959.

This dividend will be paid on 18th April 1961 to those Shareholders (or their mandataries) whose names appear in the Company's books on 15th April 1961.

The Preference Share Transfer Books of the Company will be closed from 5th to 15th April 1961, both days inclusive.

By Order of the Board,

DUNCAN BROTHERS & CO., LTD.,

S. K. MITRA,
Secretary.

31, NETAJI SUBHAS ROAD,
CALCUTTA, *14th March* 1961.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 31st March 1961 to the Registered holders as at that date, interest due on the Preference Shares for the year ended that date at the rate of 6.131 per cent per annum calculated in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960.

Preference Share Transfer Register will be closed from 28th March 1961 to 31st March 1961, both days inclusive.

By Order of the Board,

ASPINWALL & CO., LTD.,
Managing Agents.

COCHIN, *16th March*, 1961.

SYNOPSES OF COMPANY REPORTS

Kesar Sugar Works Ltd.

THE directors of the above Company (Chairman: Mr. Tulsidas Kilachand, Bombay) presented the audited accounts of the Company for the year ended 31st July 1960.

The working of the year, after charging the amount of Rs. 70,54,732 (Rs. 51,96,987) for excise duty and Rs. 11,02,943 (Rs. 7,93,677) for cane cess, shows a gross profit of Rs. 23,75,977 (Rs. 11,23,105). After providing for depreciation Rs. 3,16,106 (Rs. 2,45,914), for development rebate Rs. 2,10,000 (Rs. 40,000), and for taxation Rs. 7,90,000 (Rs. 3,90,000) there remains a net profit of Rs. 10,59,871 (Rs. 4,47,191). After providing for taxation in respect of previous years Rs. 60,000 (Rs. 60,000) there remains a balance of Rs. 9,99,871 (Rs. 3,87,191). With the balance brought forward from the last year of Rs. 9,576 (Rs. 74,885) there is a total amount available for disposal of Rs. 10,09,447 (Rs. 4,62,076). This amount the directors recommend should be disposed as under: To payment of a dividend at 6.105 per cent i.e. 5¼ per cent as increased by 11 per cent as required by the Preference Shares (Regulation of Dividend) Act, 1960 on preference shares, subject to deductions of tax, absorbing Rs. 91,575 (Rs. 82,500) to payment of additional dividend on preference shares for the year 1958-59, at .605 per cent as required by the abovementioned act, subject to deduction of tax, absorbing Rs. 9,075, to payment of dividend at Rs. 9 (Rs. 6.00) per share subject to deduction of tax, on ordinary shares of Rs. 50 each, absorbing Rs. 4,05,000 (Rs. 2,70,000) and to transfer to general reserve fund Rs. 4,00,000 (Rs. 1,00,000) leaving a balance to be carried forward to next year's account of Rs. 1,03,797 (Rs. 9,576).

The factory started operations from the 20th November 1959. The quantity of cane crushed was 58,82,023 (42,32,944) maunds during 201 (150) days of crushing. The sugar production during the year under report was 5,65,077 (4,04,236). The recovery per cent was 9.60 (9.55). The quantity of cane crushed and the quantity of sugar produced by the Company's factory were thus much larger than the previous year and with improved recovery the result of the Company's working during the year under Report has been quite satisfactory.

Crushing for the current season has been commenced from the 10th November 1960. The area under sugarcane this year is reported to be larger as compared to last year and the prospects of crushing for the current season are considered satisfactory.

The production in the distillery increased during the year and has been the highest on record. The production would have been still higher had the factory not remained closed for some time for want of sufficient and timely offtake and also for installation of the additional plant. The work of doubling the capacity of the Distillery which could not be completed last year owing to some materials having not arrived in time is now expected to be completed this year. A large portion of the additional plant has however already been commissioned and the production of Alcohol this year is therefore expected to be higher than last year.

It was mentioned in the last year's report that a Project to manufacture Synthetic Rubber at Bareilly using Alcohol as basic raw material was sanctioned by the Government. The said Synthetic Rubber factory is being established by Synthetics & Chemicals Ltd., and to it a considerable portion of the increased production of the Company's Distillery will be supplied in future. The directors have thought it fit to invest in 60,000 equity shares of Rs. 100 each of the said Company.

India has now started exporting alcohol to other countries. The Company has invested in 4,800 equity shares of Rs. 100 each in Distillers' Trading Corporation Private Ltd. [Of these, 4,200 shares are purchased after the date of the balance-sheet.] This company has erected storage installations at Kandla Port for the purpose of exporting alcohol.

Production and sales of the Company's Chemical factory increased further during the year. During the current year, however, the Government's policy of allowing imports under export promotion scheme has affected demand of some of the chemicals manufactured by the Company.

The directors have called up the remaining amount of Rs. 10 per share on the equity shares of the Company and the equity shares have now been fully paid up.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Gross block	95,42,332
Reserves ...	20,51,626	*Less*—Depreciation ...	57,58,319
Provision for taxation ...	15,92,235	Net block ...	37,84,013
Liabilities ...	1,48,16,988	Machinery under erection ...	4,84,927
Carry forward ...	1,03,797	Stock-in-trade	1,14,26,127
		Stores, etc. ...	13,07,354
		Standing crop ...	4,00,296
		Book debts	24,33,370
		Investments	18,36,096
		Cash ...	1,32,563
Rs.	2,18,64,646	Rs.	2,18,64,646

Gwalior Sugar Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. J. P. Srivastava & Sons (Madhya Bharat) Private Ltd., Kanpur] submit the audited accounts of the Company for the year ended 30th June 1960.

After meeting the usual expenses including bonus and providing Rs. 1,76,741 (Rs. 1,98,256) for depreciation and Rs. 3,96,000 (Rs. 3,50,000) for taxation, there remains a balance of Rs. 4,50,519 (Rs. 3,39,439) to which has to be added a sum of Rs. 30,235 (Rs. 9,164) brought forward from the previous year. The amount available at credit of the profit and loss account is Rs. 4,80,754 (Rs. 3,98,603) which the directors recommend to dispose of as follows: By payment of dividend at 7.77 (7.00) per cent on 6,750 redeemable cumulative preference shares of Rs. 100 each, subject to deduction of income-tax payable by the Company and deduction of tax under section 18(3D) of the Income Tax Act, absorbing Rs. 52,448 (Rs. 47,250), by payment of dividend at 7.77 (7.00) per cent on 5,000 cumulative preference shares of Rs. 100 each, subject to deduction of income-tax payable by the Company and deduction of tax under section 18(3D) of the Income Tax Act, absorbing Rs. 38,850 (Rs. 35,000), by payment of dividend at 12.5 (10) per cent on 15,939 equity shares of Rs. 100 each, subject to deduction of tax under section 18(3D) of the Income Tax Act, absorbing Rs. 1,99,237 (Rs. 1,59,390), by transfer to development rebate reserve of Rs. 2,625 (Rs. 26,728), by transfer to reserves for redemption of redeemable cumulative preference shares Rs. 1,00,000 (Rs. 50,000) and by transfer to general reserve of Rs. 75,000 (*nil*) leaving a balance to be carried forward to next year of Rs. 12,594 (Rs. 30,235 after transferring Rs. 50,000 to dividend equalisation reserve). It will be observed that the dividend on redeemable cumulative preference shares and cumulative preference shares stands increased from seven per cent to 7.77 per cent in accordance with the provisions of Preference Shares (Regulation of Dividends) Act 1960.

The directors report that there was an all round improvement in the working of the factory This is largely reflected in the better recovery, 9.85 (9.48) per cent and marked improvement in the quantity of cane crushed, 30,90,858 (20,99,500) maunds and good realisations from the sales of sugar. The duration of the season was 143 (102) days.

The implementation of the scheme for extension of capacity of the factory has been making good progress as a result of which the factory has now attained a crushing capacity of approximately 900 tons per day. The directors are taking effective steps to implement the next phase of the extension scheme so as to achieve the full licensed capacity of 1,100 tons per day. In view of the new policy of the Central Government in the matter of licensing of additional capacity to the existing sugar factories, the directors have been encouraged to consider a further phased extension of the factory and the Company has accordingly applied to the Central Government for a licence to cover a further increase in the capacity of its factory from 1,100 to over 1,250 tons per day. The directors have also under their active consideration the financial implications of carrying out the full extension scheme of the Company and are hopeful of being able to make adequate arrangements for long term credit from its Bankers and other finance agencies.

The factory started crushing sugarcane during the current season on 5th December 1960. The prospects of the factory crushing sufficient quantity of cane and obtaining a fair recovery appear to be good. The Company's efforts to maximise production have unfortunately been retarded due to the recent Stay-in-Strike lasting eleven days carried out by its workmen on the issue of Bonus and other demands. Although the Company suffered a great deal due to dislocation and wastage of cane supplies and other acts of harassment on the part of the workers it took a firm stand and did not yield to the unreasonable demands of the workers.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,68,900	Gross block	48,72,029
Reserves ...	13,26,242	*Less*—Depreciation ...	31,28,903
Provision for taxation ...	19,31,488	Net block ...	17,43,126
Liabilities ...	58,27,918	Stock-in-trade	55,96,001
Carry forward ...	12,594	Stores, etc.	10,36,809
		Book debts ...	10,60,458
		Investments	11,40,100
		Cash	12,90,648
Rs.	1,18,67,142	Rs.	1,18,67,142

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notice

THE ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

NOTICE

THE PREFERENCE SHARE REGISTERS OF the Company will be closed from 4th April 1961 to 8th April 1961, both days inclusive.

By Order of the Board,

IMPERIAL CHEMICAL INDUSTRIES
(INDIA) PRIVATE LIMITED,
Secretaries.

CALCUTTA, *27th February* 1961.

ECONOMIC TRENDS IN WESTERN EUROPE

(*Concluded from page* 532)

Commenting on the prospects for the West European economy in 1961, the *Survey* points out that some slowing down in the pace of overall expansion is to be expected, thanks to a decline in the rate of expansion of exports. Even so, the estimated increases of gross national product are high. Exports to the U.S. are unlikely to fall below the level of the latter part of 1960 and may rise towards the end of the year if American economic activity revives. No increase in exports to primary producing countries is, however, expected; on the contrary, a decline is possible on account of the lower foreign exchange reserves of many of these countries. And with economic expansion in W. Europe continuing, the countries whose exports are concentrated on West European markets would be least affected by any temporary stagnation of overseas export demand. Total domestic demand, except perhaps in the case of the U.K., shows no sign of slackening. Again, with the sole exception of the U.K., balance of payments developments are unlikely to cause concern in any of the industrial countries of West Europe.

At the same time, the *Survey* strikes a note of warning. Although fears of renewed inflationary tendencies in a number of countries, particularly in W. Germany, may prove groundless, there is danger that the authorities, prompted by anxiety about possible price increases, may take measures which are liable, as in the period 1955-58, to retard the growth of output without checking wage increases. If this happens, points out the *Survey*, wage costs per unit of output will rise even faster for a time. If private investment were ultimately checked by excessive reliance on credit restraint to prevent a wage-price spiral, both continued growth and price stability would be jeopardised in present conditions of labour scarcity.

UNION BANK OF INDIA LTD.

(*Concluded from page* 561)

it is almost impracticable to have all the branches of the Bank audited by the Company's Auditors or other authorised persons within the available time, the Bank will be applying to the Central Government for exemption and a suitable resolution is being moved in this meeting. By virtue of another resolution, the Directors seek authority to make arrangements, in case of necessity, for audit of the branches either by the Auditors of the Company or by such other persons as are duly qualified for the purpose. I may here inform you that your Bank has made quite satisfactory arrangements for surprise inspections from time to time by the statutory auditors and other established and well-known firms of chartered accountants, of all important branches of the Bank where a major portion of the business is being transacted. In addition, the Bank has also appointed on its staff, a number of chartered accountants and other qualified and experienced officers who at regular intervals scrutinise and check accounts of all the branches of the Bank. Moreover, at big centres a system of daily internal audit by competent officers has been devised. Your Directors are, therefore, thoroughly satisfied on the control and check exercised by the head office on the branches through a system of regular and periodical audit and inspections both by statutory and other auditors as well as by the Bank's own inspection and audit teams. They, therefore, commend for your acceptance the relevant resolution under Section 228 of the Companies Act 1956 as amended by Section 70 of the Companies (Amendment) Act, 1960.

"You are requested to re-elect three of the Directors of the Company, Mr. Jal H. Mehta, Mr. Devji Rattansey and Mr. Ratilal Nathalal, who retire by rotation and being eligible, offer themselves for re-election.

"You are also requested to appoint Auditors for the ensuing year.

"I should like to record our appreciation of the services rendered by our Local Committees at Calcutta and Ahmedabad. I also take this opportunity to thank on behalf of the Board and on your behalf, our General Manager Mr. F. K. F. Nariman for the very capable manner in which he has discharged his heavy responsibilities during the year. Our thanks are also due to the Deputy General Managers, Mr. D. A. Bijoor and Mr. S. D. Pardiwalla and other officers and members of the Bank's staff at the head office and branches for the good work they have all done."

NO CHANGE IN MONEY

(From Our Own Correspondent)

BOMBAY, 22*nd March*

The conditions in the short-term money market reveal no new features. With the pressure of seasonal demand for bank funds still outstripping the available supply, there are no signs of any relief in monetary stringency. It is too early to expect the new rates of interest to bring in more deposits to banks. Some bankers are of the view that in due course the deposits are bound to expand, as a result of the measures already taken by the bankers. Further, the steps like deposit insurance, contemplated in official circles, are also expected to impart a measure of strength to the banking structure by inspiring confidence among depositors. In the meantime, the demand for funds for crop movements and tax payments (as the official financial year is drawing to its end) are keeping the interest rates firmer than ever before. The seasonal demand is not likely to taper off this year before the middle of June. The return of advances may begin to take place only much longer afterwards. The current rates of interest are as follows:

Inter-bank call money: (i) Exchange and larger Indian banks: 5¼ per cent. (ii) Other banks: 5¼ per cent.

Notice Money: 3 days or more 3 per cent.

Term deposits: (i) 3 to 30 days (inclusive): 3 per cent. (ii) 31 to 60 days (inclusive): 3¼ per cent. (iii) 61 to 90 days (inclusive): 3¼ per cent. (iv) 91 days and more but less than 12 months: 3¾ per cent. and (v) 12 months: 4 per cent.

The results of 91 days' Treasury Bills of the Government of India, sold through weekly tenders, show that the total amount offered and accepted was unchanged at Rs. 2 crores, against an invitation of an equivalent amount. The average rate of accepted tenders was also unchanged at Rs. 2.750 per cent per annum. 91-days' intermediate Treasury Bills, sold from 15th March to 17th March, amounted to Rs. 5 lakhs only. Their sales are being continued.

The Statement of the Reserve Bank of India for the week ended 17th March 1961 shows that the notes in circulation have declined by Rs. 7.99 crores to Rs. 1,971.96 crores. As the notes held in the Banking Department have gone up by Rs. 8.48 crores, the total notes issued have risen by Rs. 49.32 lakhs only. On the assets side, the foreign securities held in the Issue Department have remained steady at Rs. 128 crores. But, as balances held abroad show an expansion of Rs. 1.35 crore, the total foreign assets are higher by that amount at Rs. 160.20 crores. The deposits of the banks with the Reserve Bank have declined by Rs. 2.11 crores and are of the order of Rs. 71.76 crores. Over the week, there has been an expansion in other loans and advances of Rs. 10.57 crores, which include borrowings by the scheduled banks also. Advances against usance bills alone have gone up by Rs. 5.98 crores to Rs. 35.28 crores. A year ago, they were only Rs. 12.58 crores. It is thus clear that banks are increasingly resorting to usance bills for obtaining funds from the Reserve Bank.

The scheduled banks' statement for the week ended 10th March 1961 discloses an expansion of Rs. 6.89 crores and Rs. 58.58 lakhs in demand and time deposits respectively. Of this rise, the State Bank of India accounts for Rs. 2.58 crores. Their borrowings from the Reserve Bank of India went up by Rs. 4.33 crores, and the borrowing from the same source against usance bills expanded by Rs. 1.75 crore. The scheduled banks' borrowings from the State Bank of India of demand nature increased by Rs. 79.04 lakhs, while those of time nature actually declined by Rs. 12 lakhs. Advances and bills (bank credit) have registered a substantial increase of Rs. 14.04 crores, on top of a rise of Rs. 11.85 crores in the preceding week, bringing their total to Rs. 1,292.64 crores. A year ago, they were of the order of Rs. 1,089.17 crores only. Of the expansion in bank credit during the week under review, the State Bank's share is Rs. 6.73 crores. The investments of scheduled banks as a whole have fallen by Rs. 7.54 crores. But as the investments of the State Bank of India have dropped by Rs. 8.27 crores, those of other scheduled banks must have actually risen by Rs. 73 lakhs.

Prices in the gilt-edged market hardened further in the case of short and medium dated issues. Some institutional investors are reported to be switching from the near-maturity loans to 3 per cent and 3½ per cent short and medium dated issues, which are quoted below par. In the Central loans section, the prices of 3 per cent 1963-65, 1964 and 1966-68 have registered increases of 15 nP., 15 nP and 5 nP. respectively. The 3½ per cent 1964 first National Loan and 3½ per cent 1965 second National Plan loans closed 5 nP and 15 nP higher at Rs. 99.75 and Rs. 99.65, respectively. In the State loans section, there was keen demand from sinking fund accounts for 3½ per cent short-dateds and 4 per cent. medium-dateds. In the case of these issues, there are more buyers than sellers with the result that their prices have firmed up. Thus 3½ per cent 1962 Madhya Pradesh, 3½ per cent. 1962 Madras and 3½ per cent 1962 U.P. loans gained by as much as Re. 1.75 nP and 60 nP respectively. The 4 per cent medium-dated loans of Maharashtra, Gujarat, U.P. and Madras showed gains ranging from 10 nP to 20 nP.

In the foreign exchange market, the rupee has remained almost steady. The banks' selling rate for ready T.T. on New York has remained unchanged at Rs. 478.50 per 100 dollars, the buying rate, however, shows some weakening having moved up from Rs. 474.75 to Rs. 478.00 per 100 dollars. In the New York exchange market, in spite of the decision of the European central bankers who met recently at Basle to prevent speculators from undermining the position of the sterling and other European currencies, the sterling has shown some weakening. Thus, the latest available rates are 279.800-279.840 cents per £ for spot and 278.400-278.440 cents per £ for three months' forward. Over the week, the sterling has lost ground by 0.11 cent and 0.26 cent, respectively.

BULLION LOOKS DOWN

(From Our Own Correspondent)

BOMBAY, 22*nd March*

This has been a week of downward trend for bullion. The bears had a free reign during the major part of the week and exploited the lurking suspicion that the Government might unload a part of the silver salvaged from demonetised coins. In their attempts, they were also helped by larger arrivals, especially of silver coins, a lower offtake by upcountry centres and the persisting uncertainty about the intentions of the Forward Markets Commission in regard to the next settlement. The Commission is yet to give its consent to the application made by the Bombay Bullion Association for allowing trading in both *Vaisakh* and *Jeth* contracts. The bulls were cautious. With money and credit being extremely tight, they were in no mood to adopt an aggressive attitude. Silver saw the lowest levels of the week on Monday. Since then, there has been some recovery, but this is due more to bear covering than to buying by the bulls. Gold, however, has continued to slide down, with the lowest levels for the week having been registered today. A section of the market is apprehensive that, following the proposed relaxation of trade restrictions with Goa, arrivals of contraband gold may increase.

Arrivals and offtake of silver averaged 25 bars and 14 bars per day, as against 14 bars in the case of both last week. In gold, arrivals rose from 6,000 tolas to 8,000 tolas and offtake from 3,000 tolas to 4,000 tolas only. Over the week, there has been a loss of Rs. 2 in ready silver and of Rs. 2.25 in forward (*Chaitra*) silver. In gold, the loss is Rs. 2.20 in spot and Rs. 2.80 in forward. It will thus be seen that speculators have been extremely cautious this week, though the market is right in the midst of the usual busy season.

The following table shows the trend of the market during the week under review:

	22-3-1961 (closing)	High	Low	15-3-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	120.80	122.60	120.65	123.00
Forward:				
Chaitra*	121.55	123.15	121.40	123.35
Sovereign	95.00	95.25	95.00	95.25
SILVER				
Ready (.996 fine)	208.20	205.55	201.45	205.40
Forward:				
Chaitra†	202.95	205.45	201.30	205.20
London—	21-3-1961			14-3-1961
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	80d.	—	—	80d.
Gold	250s. 7d.	—	—	250s.7d.
New York—				
Silver	91.875 cents	—	—	91.375 cents

* 3rd April settlement. † 4th April settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COPPER AND TIN RISE, ZINC EASY

(From Our Own Correspondent)

CALCUTTA, 21*st March*

Steadier conditions were in evidence in the metal market during the week under review. The levy of excise duties on some of the products of the non-ferrous metals industry still remained the talking point in market and industry circles, and it was not yet clear if the excise duties imposed by the Finance Minister on copper and brass pipes and tubes, and copper and brass sheets and circles, and zinc sheets are applicable to these products of the rolling mills' industry, or if these products manufactured through extrusion process are also liable for the duties. Since the extrusion process of the non-ferrous metals industry is in its teens in India, and it will take several years before either it can be compared to its contemporary industry in the United Kingdom or its capacity can be increased to meet India's full requirements, the consensus of market opinion is that the extrusion process of the non-ferrous metals industry should be spared the country's "development tax" which the excise duties are stated to be. Only if an industry is fully developed and has been able to stand on its own feet, that is, without subsidy and/or without tariff protection, can it be asked to contribute to the country's exchequer.

On the London Metal Exchange, electrolytic copper opened at £223½ a ton spot and gained to close at £226. The revaluation of the Deutsche mark made buyers for the Continent a little hesitant. Locally, berry quality scrap at Rs. 468 per 100 kgs. was firm, but utensil scrap declined to Rs. 438.75 per 100 kgs. from Rs. 450. Demand was lower than usual, and although the supply position was tight the lower demand was due to recent arrivals of the virgin metal. The recent notification, which requires that zinc and copper unwrought, imported from abroad should bear (a) an indication of the country or place in which they are produced, or of the name and address of the manufacturer, or (b) where they are made by one person for another, who are both beyond the limits of India, either an indication of the maker's name or of the name and address of the person for whom they are made, was considered unwarranted by trade circles. Tin opened here at Rs. 1,287.75 per 100 kgs. and rose to close at Rs. 1,299.25. The rise was attributed to tightness in supplies. The lower rate in Bombay diverted motussil business to that centre. In London, spot tin opened at £813 per ton and after gaining to £820½ closed at £817. Electrolytic zinc opened here at Rs. 340.50 per 100 kgs. and the price fell to Rs. 331.75 to recover to Rs. 336.50. The decline was due to the resistance of buyers to higher prices. In London, electrolytic zinc closed at £88-5/8 a ton against opening of £86-1/8. Lead was unchanged here at Rs. 124 per 100 kgs. while in London the rate picked up to £87-5/8 a ton from £86¾.

COTTON FUTURES REACT TOWARDS CLOSE

(From Our Own Correspondent)

BOMBAY, 22*nd March*

The cotton futures market had a short week of only four trading days. It was closed on Friday the 17th inst. on account of *Guddi Padva*, and on Tuesday the 20th, due to *Jamshedi Navroz*. During this short period, the market ruled distinctly firm, though there was a reversal of the trend today. Earlier in the week, there were extensive short-covering by local and upcountry interests and fresh support by both mills and investors. Under pressure of persistent buying, both the maturing Jarilla April 1961 contract and Jarilla August contract firmed up. Expectation of reduced tenders was primarily responsible for the strength of the April contract. With little scope of hedging in this contract, delivery against which will start in a week's time, operators turned their attention to the August contract which rallied as a consequence and touched the highest level of its career of Rs. 605 today. Although the expectation that the enhanced duty on cloth proposed in the Budget will be removed did not materialise and the exemption of cotton yarn of 1 to 10 counts from duty granted by the Finance Minister was regarded as too inadequate to be of any help, they did not adversely affect market sentiment, thanks to the presence of other bullish factors. Prominent among these was the good demand for cloth, a steep decline in cloth stocks and strong rumours that export quotas for both Bengal *Deshi* and short-staples like Kalagin and Wagad would be announced at any moment. These rumours have not so far proved correct. The disappointment of the trade over the delay is, perhaps, reflected in the downward trend which set in towards the close of today's session. It is, perhaps, also an indication that the rise in prices was carried too far. Both the April and August contracts consequently shed their earlier gains and closed nearer the day's lowest levels. These are, however, appreciably higher than the last week-end quotations as the following table will indicate:

(In Rs. per three quintals)

	22-3-61	*High*	*Low*	15-3-61
I.C.C. Jarilla				
April 1961 ...	592.25	599.25	584.50	588
August 1961 ...	603	605	594	594.50

Demand for ready cotton was well maintained. Popular varieties such as L147, Surti, Laxmi, Vijay, Khandesh and Kalyan attracted the attention of mills who did not mind paying higher prices, in view of the brisk offtake of cloth and absence of much consumer resistance. Although about 60 per cent of the crop has been marketed, arrivals, especially from Gujerat and Saurashtra areas and the South are good. The busy season in cotton has almost come to an end. At the most, it will last 10 days from now.

Owing to rumours of export quota, shippers were interested in Bengal *Deshi*, Kalagin and Wagad. Foreign cotton was generally neglected. Some interest was noted in U.S. growths and also selected East African varieties. Egyptian and Sudan cotton attracted little attention from mills.

The Karachi cotton futures market, after having ruled subdued during the most part of the week under review, firmed up towards the close. Renewed support to the expiring March contract prompted by considerations of tenders, lifted the contract to Rs. 71 from last week's closing rate of Rs. 70.15. The May contract rallied in sympathy from Rs. 69.15 to Rs. 70. The reduction in crop estimate and some speculative support were the influencing factors.

Supply position of Pakistan cotton during the season is fairly comfortable. The crop, according to present estimate, has turned out to be not only smaller than expected but also below last year's production. The latest estimate is 1,620,000 bales (of 400 lbs.), as compared with 1,678,000 bales last year. If domestic mills absorb as much as 1,300,000 bales, as estimated, the exportable surplus will be about 320,000 bales against 473,000 bales exported last year.

The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton, prevailing at Karachi: Sind Deshi 104; Punjab Deshi 103*; 4F Roller 88.25; S.G. 89.75; L.S.S. Punjab 92.25.

Steady conditions prevailed in the Alexandria cotton futures market. Although export demand for Egyptian cotton continued to be slow, domestic mill buying and local support imparted strength to the market. Values of both the Karnak and Ashmouni contracts were well maintained. The discount rate remained unchanged.

The reduced demand for Egyptian cotton is reflected in the export sales so far during the season. Total sales up to end of February amounted to only 635,537 bales, as against 908,273 bales in the corresponding period of the previous season. The unsold crop has been hanging heavily on the market which explains the failure of the market to improve.

The following are the latest available quotations—in tallaries per lb.—from Alexandria:

Karnak: March 69.08; May 70.13; July 70.15.

Ashmouni: April 59.30; June 60.12; August 60.79.

Firm conditions continued to prevail in the Liverpool cotton futures market. Commission House buying and mill fixings found offerings inadequate. Higher spot advises offset the easier communications from New York. Both the American and American type contracts advanced. The Sudan contracts were, however, a shade easy. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple: March 14.35; May 24.85; July 25.15.

American cotton mixed growth contract: March 24.70; May 25.25; July 25.50.

Sudan: March, May and July 35.25.

Cotton futures values in New York receded during the week under review. The strength of the market witnessed during the past few weeks seemed to have spent itself. In spite of the continued firmness in spot market and the higher loan rate for the next year crop, cotton futures values declined, thanks to speculative selling prompted by favourable reports.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	21-3-61	14-3-61	7-3-61
Spot	33.35	33.25	33.20
March	—	—	32.83
May	33.12	33.37	33.25
July	33.64	33.78	33.77

FURTHER RISE IN ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 22*nd March*

The upward trend of prices of art silk yarns witnessed during the past few weeks gathered further momentum during the week under review. The Finance Minister's refusal to give any relief in respect of excise levy and import duties on rayon yarn and increased fears of shortage of supplies, thanks to the restrictive import policy were sufficient inducement for speculators to push up prices. The rise in the case of some descriptions were so steep that their prices even pierced the ceilings fixed by the Bombay Yarn Merchants' Association. In the second half of the week, however, prices receded to the ceilings, thanks to corrective selling and profit-taking. Staple fibre yarns, too, firmed up on sustained buying. Cotton yarns were steady. Prices remained practically unchanged at last week's levels. The Finance Minister's decision to exempt cotton yarns of one to ten counts and cotton carpets woven on handloom from the payment of excise duty proposed in the Budget was welcomed by the trade, though the concession was considered inadequate as long as the duty on higher counts remained.

The Textile Commissioner has notified that the allocation of indigenous art silk yarn to the art silk powerloom weaving units for the April-June 1961 period, will be made on the basis of the number of loom-shifts worked by the units during October-December, 1960. The allocation will only be made to such units as are holding valid installation permit or registration certificates to work powerlooms on art silk staple fibre yarn.

Cupressa Bemberg Yarn (60×1) April delivery, after having risen from Rs. 2,600 to Rs. 2,620, Rs. 20 above the ceiling (per 100 kg.), receded to Rs. 2,600 today. Spot Cupressa improved from Rs. 2,645 to Rs. 2,810. Foreign art silk yarns also hardened. 120 Japan rose from Rs. 1,515 to Rs. 1,556. 120 Italys were marked up from Rs. 1,488 to Rs. 1,543.

Staple fibre (40×2) April rose from Rs. 887 (per 90.72 kg.) to Rs. 994 and the June position from Rs. 870 to Rs. 930. Spot Kohinoors were done at Rs. 10.78 per kilogram, as against Rs. 10.38 last week-end. Cotton yarns, as noted above, were practically unchanged.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with the previous week.

	22-3-1961	15-3-1961
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 kg.)		
April	2,600.00	2,600.00
June	2,600.00	—
60/1 Cupressa Bemberg spot	2,810.00	2,645.00

GROUNDNUTS REACT

(From Our Own Correspondent)

BOMBAY, 22*nd March*

An important feature of trading in the oilseeds market during the week under review was the distinct pause in the rally of groundnuts witnessed in the previous few weeks. In fact, there was a marked setback in values in the groundnut section, following steadily increasing arrivals, particularly from the South. At the same time, the demand from *vanaspati* manufacturers and crushers tapered off at higher levels. Fears of probable official intervention to curb speculation in groundnuts, too, acted as a damper. Traders noted that, under the revised incentive scheme for *vanaspati* exports, announced this week, the manufacturers-cum-exporters would be allowed to import only one ton of copra (as against the previous quota of 1.7 ton) against each ton of *vanaspati* shipped. There was heavy bull liquidation in castorseeds towards the close, thanks to enlarged offerings from upcountry centres. Traders were disappointed at the protracted absence of U.S. enquiries for castor oil. With the lack of follow-up support, linseed ruled easy. The export front for linseed oil continued to be dull with Indian prices remaining distinctly out of parity with ruling world market prices. In sympathy with other seeds and oils, cottonseeds came in for selling. The sesame section, however, was well maintained as a result of continuing scarcity of supply coupled with sizable demand from the South.

In the groundnut section, Nizam bold suffered a setback of 75 nP to Rs. 54.50. Coromandels eased by 25 nP to Rs. 55.25. Oil railway receipts lost 20 nP to Rs. 22.80. Oil ex-mill reacted by 10 nP to Rs. 23.15. There was no trading in the forward contract (May 1961), since prices continued to rule above the ceiling level of Rs. 220.

In the castorseed section, although the May 1961 contract improved from Rs. 179.50 to Rs. 181 earlier in the week, it attracted selling subsequently and the quotation was pushed down to Rs. 176.87 today. Madras small initially rose from Rs. 35.12 to Rs. 35.87, but fell to Rs. 35.25 towards the close. Oil commercial, which had risen from Rs. 15.10 to Rs. 15.60, eased to Rs. 15.45.

Linseed was quite weak. Linseed May 1961 contract drifted lower by Re. 1.6 to Rs. 37.19. Bold ready gave way from Rs. 39.50 to Rs. 38.37. Oil was marked down by Re. 1.10 to Rs. 17.50.

Among cottonseeds, May 1961 contract closed lower by 75 nP at Rs. 97.25, after fluctuating between Rs. 98 and Rs. 99.50. In the spot section, Non-whites were neglected at Rs. 19.75. Whites and Berars were dull at Rs. 20 and Rs. 19.75, respectively. Cottonseed oil dropped 5 nP to Rs. 21.70.

In contrast, sesame continued to elicit sizable support. Sesame bold rose by Rs. 10 to Rs. 380 (per 250 kgs.). Oil was maintained at Rs. 29.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	22-3-1961	15-3-1961	8-3-1961
Groundnut	Rs.	Rs.	Rs.
May 1961	—	—	220.00
Nizam bold	54.50	55.25	52.75
Coromandel ready	55.25	55.50	53.50
Khandesh quality	55.25	55.25	53.25
Oil ex-mill ready*	23.15	23.25	22.25
Railway receipts*	22.80	23.00	21.90
Castorseed			
May 1961	176.87	179.50	174.12
Ready Madras	35.25	35.12	34.25
Ready Kanpur	34.12	33.50	32.37
Oil B.S.P	16.10	15.80	15.15
Oil commercial†	15.45	15.10	14.20
Linseed			
May, 1961	37.19	38.25	35.81
Bold ready	38.37	39.50	35.25
Oil ready†	17.50	18.60	16.40
Cottonseed			
May 1961	97.25	98.00	94.75
Niger seed	42.00	42.00	39.50
Kardi seed	28.50	28.50	27.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER DULL

(Messrs. Parekh and Co.)

BOMBAY, 22*nd March*

Malabar black pepper firmed up during the earlier part of the fortnight under review, in sympathy with New York and Singapore. New York spot improved to $0.50 in view of smaller stock and pressure of buying at advanced prices by grinders who in anticipation of still lower prices allowed their inventory to drop to low levels. Improvement in New York had had its reflection on India as well as on Singapore. All offers for Malabar for March shipment from $0.43½ to $0.45 were accepted. Singapore also sold fair-sized parcels at prices ranging from $0.43 to $0.44½. Grinders, having refused to follow the advance, New York dealers withdrew. Immediately on the withdrawal of foreign buyers, the growers in India and holders in Singapore came out to press. In the meantime, exporters in India went long in anticipation of further improvement in prices in New York. They bought sizable quantity from the growers who wanted to liquidate their holdings under loans. In the latter part of the fortnight, growers having remained continuous sellers at around Rs. 370 per quintal, the market became soft. Absence of fresh foreign buying had a weakening effect on the market.

Weakness in white at Singapore and monetary crisis in Malabar, following the closure of Palai Bank and the moratorium for other four or five banks in Kerala, proved a depressing factor. Though New York was reported to have bought a sizable quantity of Lampong at prices ranging from $0.43 to $0.44½ from Singapore, the market there failed to improve as stocks of Lampong were accumulating and arrivals from Sarawak improving. White and black at Singapore are nominally quoted at Str.$180 and Str.$145, respectively. As the price difference between spot in New York and shipment is increasing, there are chances of exporters from India and Singapore sending consignments to New York which on their arrival may prove a drag on the market if not disposed of earlier.

Ungarbled at Cochin, after rallying to Rs. 385, came down to Rs. 365. Garbled dipped down to Rs. 378 from Rs. 396. Calicut was continuous sellers at around Rs. 360. March delivery on the Exchange was squared up at around Rs. 383. Business in new account for May and July was very much restricted for want of speculative support. The market appears uncertain as with the proximity of monsoon, growers in India are likely to become anxious sellers. Unless some outstanding feature appears to upset the trend, it is difficult to foresee any early recovery in the prices. Bulls are spreading rumours of large buying orders from Russia and other East European countries but these have so far remained unconfirmed. The size of the coming crop of Sarawak and Lampong will be the real arbiter of the future prices of pepper in the world market. Ready pepper in Bombay is quoted at Rs. 204 per 50 kilos with demand poor.

EASIER TONE IN TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 14*th March*

Offerings in sale No. 11 held today amounted to 463,000 kilograms. Quality of teas from the Nilgiri district was barely maintained whilst a slight decline was noticeable among other teas. The market met with good general demand. Plain and low mediums, although meeting a useful enquiry, were barely steady and occasionally easier. Medium and good medium descriptions were well supported and were firm and in some cases dearer. Prices for these types inclined easier towards the close of the sale. Demand for Nilgiri teas continued very irregular. A few selected invoices sold at around last week's rates whilst others were considerably easier and at times declined by more than a rupee per klio. Flowery pekoe grades sold at firm rates whilst orange pekoes were irregularly easier. C.T.C. and legg-cut descriptions continued in demand although these sold at slightly easier rates than last.

	1961 Rs.	1960 Rs.
Low medium	4.70-4.90	4.29-4.41
Medium	4.90-5.20	4.41-4 85
Good medium	5.20-5.60	5.18-5.73
Quality	5.30-8.25	6.39-10.58

The average price realised in sale No. 11 was Rs. 5.15 per kilo, as against Rs. 5.20 a week ago and Rs. 5.67 in the correspondng sale last year.

Dust Sale No. 11: A total quantity of 252,000 kilograms was offered in Dust Sale No. 11 held on Thursday, 16th inst. A useful selection of dust was on offer. The market met with good general demand. All descriptions were in good demand and sold at firm rates. Mediums however, were in less enquiry and declined by 5 to 10 nP. There was good demand for high-grown dusts but these tended a little easier. Legg-cut and C.T.C. types sold well at firm rates.

The average price realised in Dust Sale No. 11 was Rs. 4.83 per kilo as compared with Rs. 4.87 a week ago, and Rs. 4.70 in the corresponding sale last year.

Export quota: The market remains unchanged with large sellers at ¼ nP per kilo with no buyers.

The last date for the filing of applicatons for registration of transfers of tea export quota rights in respect of the year 1960-61 is the 20th March 1961. Quota transfers will not be registered unless the necessary transfer forms from both the parties to the transfer are received by the Joint Controller of Licensing, Tea Board, Cochin.

Colombo: 7 million pounds were offered during the week. Plainer and medium descriptions were in strong demand and were dearer by 5 cents. Useful liquoring fannings were also dearer. The broken grades from Western districts met an irregular market and were often easier.

London—North Indian and other growths: In Monday's auction there was a good demand. Best liquoring Assams sold at firm rates, whilst others were irregular and sometimes declined by 1d. to 2d.

Ceylon and South Indian: 21,560 packages were offered in Tuesday's sale. There was rather an irregular market with prices generally easing by 1d. to 3d.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 12: 431,000 kilograms. Good demand at lower rates. Plain and low medium 10 to 20 nP lower. Medium and good medium 10 nP. easier. Nilgiris neglected, black leaf firm.

RELIEF TO TEA INADEQUATE

(From Our Own Correspondent)

CALCUTTA, 21*st March*

There was good demand at the internal sale held last week. Prices, however, eased following decline in quality. There was no export sale yesterday.

Trade circles noted that, while speaking in Parliament in defence of the new levies, the Finance Minister, Mr. Morarji Desai, disclosed that the recent increases in the excise duty on coffee and tea were aimed at restricting their consumption at home because of their export potential. This statement was made on 13th inst. On the 16th inst., that is, 3 days after the Finance Minister's statement—Mr. Desai worked out the increase in effect as being 1 nP for 10 cups of coffee and 1 nP for 20 cups of tea—the Coffee Board, Bangalore, which is an organisation whose activities are either controlled or looked into by New Delhi, displayed a bold two-column advertisement in a daily here carrying, *inter alia*, the following slogan: "Drink More Coffee. It is Good for You." Mr. Desai's case for lower internal consumption of the beverages and at the same time the Coffee Board's attempt to increase consumption—local it should be inferred since the propaganda advertisement appeared in Calcutta—are at best a paradox!

Such contradictions as above only go to show that whether more exports or otherwise. New Delhi desires to get more revenues from the plantation industry and from internal consumers. Apart from the above paradox, it is a poor argument that the increased duties would keep down internal consumption. It may be pointed out that *biris* and cigarettes and tobacco in any other form have been items on which succeeding Finance Ministers, including Mr. Desai have relied for increasing the revenue from excise duties year after year, and it would be interesting to know if consumption of these had fallen as result of the imposts. In conclusion, it should be said that excises on tea and coffee and other items would only increase the cost of living within the country, irrespective of whether the country earns more

from exports or otherwise. This in turn may lead to demands from industrial workers, as the vicious circle, when once let loose, goes on to move round and round. It sometimes mulcts the industry, more often the consumer, but, perhaps, seldom the Government, which, as experience has shown, only benefits in the motion!

What else can also be the conclusion from the phenomenon of actual revenue collections of the Government far exceeding original estimates? Trade and industry circles here felt that, in several heads in this year's budget also, revenues had been grossly underestimated and perhaps expenditure overestimated, in an attempt to justify the new levies whech after taking into account the concessions as announced during the week would claim about Rs. 56 crores a year.

In a statement, the U.P.A.S.I. President, Mr. H. C. Kothari, has given a studied analysis of the duty changes to justify his declaration that inasmuch as there is no drawback of excise duty on exported teas, the increase in excise duty from 5.5 nP to 7 nP, which is also payable on exportable teas, only neutralizes most of the benefit of the reduction of 9 nP per kg. in export duty. Taking the two together, the effectual decrease in export duty will be 3.5 nP for zone I, 3 nP for zone II, and 2 nP each for zones IIIA and IIIB. This only shows how wrong it is to claim that the export duty reduction means a substantial concession of 17 per cent in duty to the industry, points out the U.P.A.S.I. President.

The Calcutta Tea Merchants' Association has pointed out that the competitive position of the tea industry can be improved only by reducing the total imposition on tea, particularly on producers. Trade circles here said that, if, in fact, Government desired to increase exports and reduce internal consumption, as the Finance Minister would appear to be aiming, the only way to do it was to abolish the export duty altogether and give a sympathetic hearing to the industry's plea for increasing tea acreage. It is common knowledge that taxes on the tea industry have had an adverse effect on its finances for development and only removal of these difficulties, leading to decreasing cost of production, would result in greater competitive strength to Indian tea in world markets.

Dusts on offer during last week's internal sale amounted to 21,994 packages. There was a good general demand at lower prices. An irregular trend was recorded in C.T.Cs. Those lots having leaf were favoured, while the poorer sorts were neglected. Clean mediums, though eased by 15 nP, met with ready buyers. The small and powdery descriptions met with good support. Keen competition was offered to the good and the best C.T.Cs. whose prices increased. Orthodox teas lost by 10 to 15 nP, while the small and selected teas were firm. Legg-cut teas eased, and prices of whole leaf grades fell by 20 nP. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.20 to Rs. 6.60, medium Assam C.T.C dust Rs. 5.40 to Rs. 6.00, legg-cut dusts Rs. 4.85 to Rs. 5.20, medium Assam dust Rs. 4.65 to Rs. 5.00, and plain orthodox dust Rs. 4.55 to Rs. 4.70.

Leaf on offer amounting to 1,603 chests were irregular.

JUTE PRICES WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, *21st March*

Raw jute was offered to mills at the I.J.M.A. maximum prices and deals at these levels were also put through during the week under review. There were reports that mills who are non-members of the Association paid higher prices. However, it was considered that, since the majority of the mills are members of the I.J.M.A., the non-member mills, which are small in number, would find it uneconomic to pay higher prices. Against such a background, the I.J.M.A.'s voluntary scheme should be considered as working satisfactorily. There were a few deals in specialities, which were paid higher prices as permitted by the I.J.M.A. Since Government's threat to interfere with the movement in fibre became a reality with the measures now being taken to inaugurate a system of licensing of raw jute sellers, fibre offers at the maximum prices have increased. Reports of deals at prices higher than the maximum prices referred to above would no doubt encourage interested hoarding, but, as prices of goods have fallen, it would be meaningless for anybody to pay disproportionately higher prices for fibre. It may be noted that the vigilance of the customs authorities in Calcutta has earned the admiration of the trade. For, the customs recently seized jute goods worth Rs. 50 lakhs on the ground that the goods were being shipped without a declaration of their proper exportable value.

The possibility of Government requisitioning unsold stocks with dealers was referred to by Mr. T. Kanoria in his address at the annual meeting of the Jute Balers' Association held on Thursday last. He said that such stocks were too low and after the Government completes the allotment of these stocks, the difficulties of the industry would only increase since, in the event of requisitioning, dealers would not be permitted to buy again. Mr. Kanoria thought that the fibre availability was not as low as is reflected in the prices. He reckoned that a total of about 1.4 million bales was still lying with mill agencies dealers and growers, 3½ million bales reached mills up to February and about 500,000 bales would account for domestic consumption at raw stage This would mean that the crop would amount to 5.4 million bales. Since mills' consumption would be of the order of 6.4 million bales and import of Pakistani cuttings would amount to 400,000 bales, the actual shortage would be only 600,000 bales which would be met from stocks as at the opening of the current season. The supply position thus being none too bad, the pessimistic view of the Indian Central Jute Committee that there might not be enough jute to enable mills to carry on for the rest of the season was surprising.

Although prices of goods fell during the week, overseas buyers did not rush to the market. This was evident from the poor inquiries for liner space during the week. A fall in U.S. burlap consumption in February to 72.9 million yards from 73 million yards was reported. That U.S. stock of burlap at the end of the month had fallen to 246.4 million yards from 257 million yards showed that fresh purchases by importers had been much lower than consumption. Now that prices of goods have started to decline in Calcutta, it was believed that U.S. buyers would soon enter the market for larger quantities. Trade circles here, however, did not expect that foreign buying as a whole was likely to improve in the near future, in view of the anticipation of a bumper fibre crop. The fact that mills' output in February amounted to only 77,400 tons as against 86,200 tons in January, did not cause an uptrend, should be attributed to earlier anticipation of lower output in view of the shorter working month and the loss of production due to the strike on 13th February as protest against the reduction in working hours as from early February.

On Tuesday last, prices of goods picked up a little following the publication of a fall in mills' output in February. Although the fall had been anticipated by trade circles, prices improved. Ready B. twills rose to Rs. 200 from Rs. 199 and ready hessian 40" 10 oz. to Rs. 67.25 from Rs. 67. Overseas buyers showed little interest. On Wednesday, the news of the fall in U.S. burlap stocks, as at the end of February, led to hopes of U.S. interest for greater quantities in the near future. These pushed up 40" 10 oz. hessian to Rs. 67.50 and B. twills to Rs. 201. Local operators soon became active, but no fresh business with overseas buyers was reported. B. twills hardened to Rs. 202.50 and hessian 40" 10 oz. to Rs. 67.85 on Thursday. In the absence of following support B. twills were marked down to Rs. 200 and hessian 40" 10 oz. to Rs. 67.50 on Friday. The easier tendency took deeper roots over the week-end, when B. twills reacted to Rs. 198 and 40" 10 oz. declined to Rs. 67.00. Following the tendency shown by mills to sell as much as possible, conditions eased yesterday. Hessian 40" 10 oz. dropped to Rs. 65.75 and B. twills to Rs. 194.50. Business put through was however limited.

Fibre prices were quoted at the I.J.M.A. maximum. Scattered business with mills was reported at the maximum prices. The quotations based on the maximum prices for the different varieties are as follows against March-April delivery:

	Per maund	*Per quintal*
	Rs.	Rs.
Daissee bottoms	64.00	171.30
Northern bottoms ...	61.00	163.25
Assam bottoms	62.00	166.00
Desal	60.00	162.00
Assam tossa	62.50	167.50
Mesta:		
Jungli	58.00	155.50
Assam-Northern ...	59.50	159.50
Desal-Daissee	59.00	158.00
Indian cuttings	Rs. 306 per bale.	

"GUR" AND SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *20th March*

Sugar prices ruled quietly steady during the week at Rs. 112 to Rs. 112.50 per bag wholesale in the open market and Rs. 1.06 per *seer* retail. Sugar production was still being continued with vigour as cane supply position to factories is reported satisfactory, but some of the factories are faced with coal shortage. Factories are also faced with accumulation of stocks.

Sugar prices ruled quiet in the Muzaffarnagar market during the week, thanks to easy supply position as damaged sugar of last season's production is available in ample quantity at a discount over the control price. Factories in the district were working to their maximum capacity and week-end prevailing prices were: Rs. 108 per bag, damaged sugar Rs. 102 to Rs. 104 per bag.

Khandsari prices eased by 50 nP to Re. 1 per maund in the absence of active demand from the consuming areas. Daily arrivals of *khandsari* in Muzaffarnagar market were put at 5,000 maunds and with daily offtake of about 2,000 maunds, local stock there has mounted to 60,000 maunds, with week-end prevailing prices quoted at: *khandsari* inferior Rs. 25 to Rs. 30, superior Rs. 31 to Rs. 33, crystal Rs. 32 to Rs. 35, *boora* Rs. 33 to Rs. 36 a maund.

Ready *gur* prices ruled quiet during the week as demand is slack and consuming areas all over the country attracting supplies from the producing areas of the South where prices were comparatively lower and the quality offered was better. Daily arrivals here have gone down to about 1,000 maunds and local stock has mounted to 76,000 maunds which is about 75 per cent more than the corresponding figure last year. Loading continues restricted except on Sunday which is free loading day for all 'E' class booking and eight wagons wer despatched on that day. Week-end prevailing prices were: *gur pansera* Rs. 12.75 to Rs. 13.12, *balti* Rs. 12.87, *shakker* Rs. 14.50 a maund.

Ready *gur* prices registered a downward trend during the week in the Muzaffarnagar market due to lack of consumer demand. The *Chaku* quality lost 75 nP to Re. 1 per maund, while fall in *pansera* and *laddoo* quality was 50 nP and Re. 1.25 per maund respectively. Despatches during the week totalled 40 wagonloads and daily arrivals were about 7,500 maunds of *gur* and *shakker* and latest prices were: *gur Chaku* Rs. 14 to Rs. 15, *pansera* Rs. 13.50 to Rs. 14.50, *laddoo* Rs. 13.62 to Rs. 14.25 a maund.

Future *gur* prices moved both ways during the week, undertone was bearish in the week as bears predominated the market. *Gur Baisakh* having opened at Rs. 13.39 nP last Monday, touched the highest of the week at Rs. 13.48 the same day and then eased to touch the lowest of the season at Rs. 13.10 and is now quoted at Rs. 13.23 due to profit-taking at lowest levels. Large-scale sowing operations for cane for next season are still being carried and it is predicted that cane acreage would further increase. There is every likelihood that cane price for next season would remain stationary and this would further stimulate the sowing trend of cane.

HIDES AND SKINS FIRM

(From Our Own Correspondent)

MADRAS, *20th March*

Due to *Ramzan* holidays, arrivals of E.I. tanned hides and calves were restricted. Stocks in the market met with good clearance, and prices ruled firm. Tanners were quoting higher prices than last week against export inquiries. Supplies of cow calf, buff calf and buff hides were small and the market here also continued firm.

Inquiries for tanned goat skins other than light weights were free and prices are hardening further. Demand for sheep was good at slightly increased levels. In the London tanned skins auctions held last week, prices realised for goat skins were nearly in line with c.i.f. levels.

LABOUR

(Concluded from page 538)

gineering trades and about 350,000 in non-engineering trades. There were 59 training centres for craftsmen in 1956, with training facilities for about 10,500. The number is expected to have increased to 152, with training facilities for 43.000, at the end of the second Plan. The programme of expansion proposed for the third Plan include the creation of additional training facilities for 55,000 under the scheme for craftsmen and 14,000 under the national apprenticeship scheme. The number of training institutes is expected to be increased to about 250 by the end of the third Plan and the total outturn will be about 200,000 per annum which will very nearly meet the demand.

The success of the scheme for expansion of training facilities depends, to a large extent, on the availability of teachers and instructors of the requisite calibre and in sufficient numbers. The third Plan proposes to expand the training facility for teachers substantially. Two schemes were introduced in the second Plan period for increasing the supply of teachers. The first is the teacher-training programme under which fellowships are offered to selected graduates who are then given further training. The second is training of teachers abroad. For the training of craft instructors, four training institutes (in addition to the two already existing) are proposed to be established during the third Plan period, with a total training capacity of 1,000 per annum. The outturn of instructors from these institutions and under other schemes during the third Plan period is expected to be 8,000.

Mere quantitative sufficiency, it is needless to add, is not enough. The standard of training imparted should be high. Care should also be taken to see that the training includes adequate instruction in both theory and practice. This can be achieved only if there is close co-operation and co-ordination between the managements of training institutes and of factories in both the private and public sectors.

COMPANY AFFAIRS

(Concluded from page 559)

Rs. 45 lakhs, nearly two-thirds of which being accounted for by plant and machinery. Though there has been some delay in the delivery of machinery, the modernisation programme embarked upon by the Company continues to make steady progress. Firm orders for capital commitments placed and outstanding as at 31st December 1960 amount to Rs. 134 lakhs. Further orders under consideration approximate to Rs. 152 lakhs. No drawing has yet been made against the loan of Rs. 75 lakhs sanctioned by the National Industrial Development Corporation of the Government of India. The Company has, however, been providing for the last two years a sum of Rs. 7.5 lakhs each year towards the redemption of this loan, in accordance with the terms of the loan.

The Company would appear to have definitely left behind the unfavourable and unremunerative working which fell to its lot after 1955. The inroads made into the reserves have been made good. The fruits of heavy investments on modernisation of the mills will be felt in the coming years. It is, however, not yet certain how soon the Company will be able to return to that stage of profits when it was paying a net dividend of Rs. 3 per ordinary share of Rs. 15 each (or 20 per cent net). But investors seem to be optimistic, as witness the improvement in the market value of the scrip to the neighbourhood of Rs. 40; a year ago, it was nearer Rs. 30. At the current market value, the yield is about 4.5 per cent per annum net.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 17th March, 1961

BANKING DEPARTMENT

LIABILITIES	Rs.
Capital paid-up	5,00,00,000
Reserve Fund	80,00,00,000
National Agricultural Credit (Long-term Operations) Fund	40,00,00,000

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of November 1960 amount to 10,89 lakhs of rupees.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

GOOD AUGURY FOR THIRD PLAN

THE second Plan period has just ended and the third Plan period has begun from today, 1st April 1961. But the second Plan as such is incomplete, with quite a few projects yet to be finished. The third Plan, too, is still in the draft frame; the final version is yet to be published and presented to Parliament. Nevertheless, a serious beginning has been made by the Centre with schemes for raising funds for that Plan and brisk talks are going on with foreign countries for finding the foreign capital required. Several projects have been sanctioned in the public and private sectors alike. President Kennedy's message to Congress on foreign aid last week contains an implied approval of India's third Plan, of its aspirations and basic objectives. Although the foreign balances of India are at rock-bottom level which is less than half of the annual balance of payments deficit, the Indian Government is courageously and confidently launching the Rs. 12,000-crore third Plan. Nearly a fourth of the cost of this Plan represents expenditure in foreign exchange. If anything, this proportion may turn out to be higher and certainly not lower. Further, the price level is menacingly high and the threat of inflation is more serious than it was five years ago. The Government has had warnings in plenty from those who feel that India is essaying a task far beyond its capacity in terms of money, technical and skilled manpower, and administrative ability. At the same time, it has also had encouragement to go ahead with a plan of the aforesaid size from a large section of economists and industrialists in this country, not to mention politicians. From abroad, support has come from a group of eminent economists in the U.S. and the U.K., including the American Ambassador-designate to India, Prof. J. K. Galbraith. The third Plan has undoubtedly a larger backing of public opinion both at home and abroad than the second Plan had at its commencement.

The reasons for this favourable psychological atmosphere are well known, but they are worth recalling. In the first place, the Government's economic policies are less doctrinaire than they were in 1957. Secondly, barring a few Ministers in the Centre and the States, the others are beginning to realise the importance of the private sector for the rapid progress of the economy and are willing to recognise that one of the criteria for the success of a commercial concern is profit. Thirdly, the acute shortage of foreign exchange has opened the eyes of the Government and businessmen alike to the crucial role foreign capital can play in the economic progress of an underdeveloped country endowed with rich natural resources. Fourthly, the population pressure has become even more acute than at the beginning of the second Plan. Fifthly, there is a better understanding in the Western world of the problems confronting India and the urgency of tackling them for preserving peace and democracy in this part of the world. India's policy of non-alignment with power blocs is no longer suspect in their eyes. On the contrary, the real value of this policy has come to be keenly appreciated. There are hardly any international political problems which are capable of straining India's relations with the developed countries in both the power blocs. The powers that count in the West have completely renounced colonialism and colour bar, thereby bringing themselves closer to India. Soviet Russia and its European satellites have also sobered down. The likelihood of a crisis similar to the Suez episode, which threatened to bring about an unbridgeable cleavage between India and Britain—France is very, very remote. And, sixthly, in the developed countries, the stress on economic aid to underdeveloped nations, as opposed to military aid, is growing.

The signs that augur well for the success of India's third Plan thus outnumber those that are inauspicious. And the chances of success can definitely be enhanced, if the third Plan is modified in certain directions before it is too late. Appropriately enough, it is to this aspect that the thirty-fourth annual session of the Federation of Indian Chambers of Commerce and Industry held at New Delhi last week-end and early this week paid much attention. It formed the main theme of the presidential address of Mr. A. M. M. Murugappa Chettiar, as well as of the speeches of movers and seconders of the various resolutions adopted at the session. It is noteworthy that there was not a single speaker who wanted the size of the Plan to be cut, as has been voiced by some of the conservative-minded bank chairmen in Bombay this week. Fortunately for this country, the weaknesses in certain spheres of its economy have so clearly emerged in the last few months that they should help the Planning Commission to perfect the third Plan and avoid the pitfalls that retarded the progress of the second Plan. These weaknesses are: (*a*) shortage of power, (*b*) failure of railways to come up to expectations, (*c*) shortfall in coal production, (*d*) insufficiency of steel and cement, (*e*) stagnancy in exports, (*f*) acuteness of the problem of maintenance imports *versus* developmental imports, and (*g*) inadequacy of raw materials, agricultural and mineral alike. These deficiencies, as well as the results of the 1961 Census, analysed in a subsequent article in this issue, unmistakably warrant a re-examination of the third Plan targets, the allocation of resources to the various projects, and the shares of the public and private sectors. The presidential speech and deliberations at the Federation's meeting this week contain much useful thought and many suggestions for this purpose. There is, of course, nothing novel about them. How could they be, since the same things have been said by the spokesmen of the business community from various other platforms? But they carry added weight when officially adopted by the apex body of Indian businessmen.

Broadly speaking, the Federation's suggestions, as crystallised in the address of its President and the resolutions passed at the meeting, are: (1) agriculture must take a high place in the scheme of economic development; (2) consumer goods industries should be given greater importance than they have received; (3) the provision for power supply must be raised; (4) similarly, more sums must be earmarked for expanding all modes of transport and railways should treat road transport as an ally rather than a vicious competitor; (5) coal industry should be enabled to go ahead and all parts of India must be assured of adequate supply of this vital fuel and raw material; and (6) a larger role should be given to the private sector.

All those who wish to see that the rapid economic development of this country proceeds smoothly and with stability will find nothing to quarrel about in the aforesaid suggestions. Their implementation will require, in the first place, an appropriate frame of mind in the powers-that-be. This was aptly described by Mr. Murugappa Chettiar in the following words:

> ". . . . unless economic resources are utilised and harnessed economically, our efforts will not yield the optimum results. I do not consider the narrow sectoral approach as important or even relevant. Rather, we should focus our eyes on the total process of economic expansion and the general weal of people. To ensure the latter, economic policy must concern itself with the growth of national income and employment, the substitution of import by domestic production, improvement in techniques, etc., by sparking off the different economic incentives to save, to work and to bear risk. In the operation of this policy, it should be of less concern whether a particular project falls in this sector or that, rather than whether it can be effectively put through or not which, in its manifold effect, will not only lead the economy to a higher degree of productivity, but also to a better distribution of income."

It follows from the foregoing quotation that there should be a change in the fiscal policy that will be favourable for encouraging individual savings and self-financing by corporations. Another prerequisite is the removal of restrictions on inter-corporate investments that are now being applied through the Income-tax Act and Company Law. And the third prerequisite, which seems to have escaped the attention of the Federation, is a plan for successfully bringing down the price levels, by stages, at least to the extent to which they have gone up during the second Plan period. The Government must aim at achieving this object by the end of the third Plan period.

SOME ASPECTS OF COAL POLICY

AT least two cheering pieces of news of interest to the coal industry and the country alike were given by Mr. R. H. Wright, Chairman, Indian Mining Association, in his speech at the sixty-ninth annual general meeting of the Association held at Calcutta on 24th March 1961. The first is that the actual coal output of the private sector during the 12-month period ended 28th February 1961 was of the order of 44.5 million tons—something very nearly corresponding to its second Plan target of 45 million tons for the fiscal year 1960-61. Sardar Swaran Singh, too, who spoke at the meeting of the Association, took note of this and ungrudgingly complimented the private sector for achieving its target. It would appear from this happy result that the private sector might even have exceeded its target if the acute foreign exchange position during the second Plan period had not denied to the industry sufficient licences for the

import of spare parts and new plant and machinery.

As for the other news relating to the visit of the World Bank Team, it is heartening to know from Mr. Wright that the Team had carried out a vigorous and detailed examination of the requirements of the private sector in coal industry for expansion in the third Plan period. Here the inference is possible that the industry is now confidently looking forward to assistance from the World Bank. It may be that the figure of Rs. 28 crores mentioned by Mr. Wright in this connection will be found reasonable and necessary for financing the imports of spare parts, plant and machinery that will be required by the private sector of the industry for achieving an additional production of 17 million tons of coal per annum by 1965-66. As far as the Government is concerned, there seems to be full awareness on its part of the need to enable the private sector to get the required foreign exchange. In fact, it is already exploring the possibilities of getting foreign assistance for the purpose either from the World Bank or from other lines of foreign credit and, according to the Minister himself, no serious difficulty is likely to arise in this connection. The chances seem to be that the World Bank itself will take a rosier view of the prospects for the industry, now that it has been permitted to expand into certain proximate virgin areas.

Much, however, will remain to be done if the likely assistance from the World Bank is to be turned to good account. For instance, the recent decision of the Government to permit the industry to work non-contiguous and proximate areas would have to be promptly implemented by the issue of the licences required both to reopen collieries and to work the neighbouring areas. That the process of implementation is very slow could be inferred from a resolution just passed on the subject by the Federation of Indian Chambers of Commerce and Industry at its annual session this week. The relevant resolution points out that the implementation of the new coal policy is vitiated by serious shortcomings and avoidable delays and restrictions. The restrictions on the development of new mines for producing better grade coals are said to be particularly irksome. There is also the obstacle in the form of non-availability of power to collieries which have drawn up their expansion plans; this power shortage seems to be particularly serious in areas where the authorities have already earmarked the additional generating capacity that is being installed for other industrial requirements.

Even after these obstacles to speedy implementation of the new coal policy are removed, there will remain the vital problem of coal prices. The present price structure, it is stated, does not cover the cost of working difficult seams from which high grade coals are produced. These selected grade coals are produced predominantly in the private sector which accounts for 98 per cent of the country's output of such coals. According to one assessment, it will be cheaper to mine selected grade coals than to beneficiate low grade coals by washing them to 15 per cent ash, for the cost of the former to the consumer, even with a substantial incentive in the form of higher prices, will be much less than that of the latter. Since the private sector, unlike the National Coal Development Corporation which has so far confined itself to exploiting deposits at shallow depths, has had, and will have, to work deep and difficult seams, in old as well as new areas, the case for an economic price structure is as good as proved. Unless this price incentive is given, it would be unrealistic to expect all the collieries to exploit deep mines and difficult seams containing high grade coals, especially when many of them are in a position to make adequate profits from open-cast quarries and shallow seams. Again, unless high grade coal is mined in larger quantities, the technical efficiency of railways, iron and steel plants, fertiliser units and other industrial establishments requiring such superior coking coals is bound to deteriorate. Of course, inferior coals with higher ash content can be washed to lower ash content and thus rendered suitable for metallurgical and railway purposes. This is already being done to some extent, but the problem is one of establishing more washeries to meet all the requirements. Since, however, an adequate number of washeries cannot be established in the short term, there is really no alternative to mining high grade coal which will require no washing.

It is in this context that the question of coal prices becomes all important. If this question cannot be immediately tackled, the industry would at least have to be assured that the subsidy scheme covering deep, gassy and difficult seams will be effectively and speedily implemented to provide partial relief to collieries. It is rather distressing to know from Mr. Wright's speech that even this subsidy scheme, which will meet only a small fraction of the extra cost of working such difficult seams normally yielding high grade coal, has been unconscionably delayed in implementation. To have an idea of bureaucratic delays, it would be better to quote the following passage from Mr. Wright's speech:

> "The recommendation to subsidise difficult workings was made by the Coal Prices Revision Committee as long ago as December 1958; although it was accepted by Government in August 1959, the arrangement for the distribution of the subsidy was not finalised until October 1960, and collieries eligible for assistance submitted their claims many months ago. The finalised scheme envisages the reference of each and every application to New Delhi, where the Ministry is already overburdened, whereas the implementation of this agreed policy could so easily be undertaken by the Coal Board in Calcutta. Today, 27 months after the scheme was proposed by the Coal Prices Revision Committee, not a single colliery has received one naya paisa from the cess, already collected from consumers to the extent of well over Rs. 1 crore."

There cannot be a more depressing commentary on the way in which the Government handles matters pertaining to the coal industry. If even the subsidy scheme cannot be worked satisfactorily, it is high time the authorities recognised the need for a straight incentive in the form of a higher price for high grade coal. What is wanted is a more dynamic approach to this and other problems of the coal industry which is called upon to perform even more onerous tasks in the third Plan period than in the second. Among the other problems, the most pressing one pertains to transport—a subject on which Mr. Wright had much to say by way of constructive criticism and about which this journal has written repeatedly in recent weeks. The immediate need here is speedier clearance of pithead stocks of coal so as to enable the collieries to increase the raisings which they have been forced to restrict in recent weeks by as much as 30 per cent for want of transport facilities. There cannot be a more telling example of how the transport bottleneck, besides causing a shortage in coal supplies at the consuming ends, sooner or later brings down the rate of production itself. The various suggestions made by Mr. Wright to ease the transport situation deserve to be considered for expeditious implementation.

THE GALLOPING POPULATION

THE provisional tabulation of the 1961 Census figures has just revealed that India's population now is 438 million. This is seven million more than the population forecast of 431 million (as on 1st March 1961) made by the Central Statistical Organisation late in 1959 and 30 million more than the earlier second Plan estimate for the year 1961. This staggering figure, while it has very nearly confirmed the remarkably accurate forecast of the C.S.O., and has thus not come as a total surprise to the country, is nevertheless in the nature of a shock, for it is a painfully convincing reminder of the fact that the population has been galloping in recent years. 'Galloping' is the right word, for the decennial growth rate of population in the 1951-61 period is now shown to be 21.5 per cent, as compared with 11.0 per cent, 14.2 per cent, and 13.3 per cent in the periods 1921-31, 1931-41 and 1941-51, respectively, within the present boundaries of India. The more rapid increase in numbers in the latest decennial period could not have been caused by a higher birth rate, for the registration data relating to the reputedly good registration areas have throughout revealed an almost constant level of birth rate at 42 per thousand. The net increase in population could only have been due, on the other hand, to a steep fall in the death rate which, according to the Census Actuary's calculation, was 27.4 per thousand around 1951. That the various health development programmes like malaria eradication, B.C.G. vaccination, use of antibiotics and general improvement in medical facilities have largely brought about a reduction in the mortality rates may be rightly inferred in this context. While the present mortality trends are salutary in the sense that they will increase the expectation of life at birth to about 50 years in 1966 as compared with 32 years in 1946, they may also mean that, in that year, the country's population will be round 490 million on the assumption of a constant level of birth rate.

This assumption of a constant level of birth rate upto 1966 would be a reasonably valid one, for the results of surveys on attitude towards and practice of family planning and birth control are stated to have shown that family planning as a potential force in bringing down birth rate exists, if at all, only in highly urbanised cities. Industrialisation and consequent urbanisation, which have been the most potent factors in the decline of fertility in the Western countries, do not seem to have been of any great significance so far in bringing down fertility in India. The fact that the urban population is only 17.8 per cent of the general population in 1961 as compared with 17.4 per cent in 1951 may well be noted in this connection. Equally noteworthy is the twin fact that literacy, too, has registered only a small increase from 16.6 per cent. in 1951 to 23.7 per cent in 1961 and that female literacy continues to be far below male literacy. If literacy presupposes a certain level of education at which family planning can be more effectively propagated through persuasive literature, it is obvious that this factor is not yet operative on any considerable scale. Still, an absolute increase of about 16 million in urban population over the last decade and the fact that roughly one out of every four Indians can read and write

1961 CENSUS DATA

All India and States	Population in million	Percentage increase 1951-61	Density	Literacy Percentage
All-India	**438.0**	**21.5**	**384**	**23.7**

Punjab	20.3	25.8	431	23.9
Rajasthan	20.2	26.1	158	14.7
Uttar Pradesh	73.8	16.7	550	17.5
West Bengal	35.0	32.9	1,031	29.1
Delhi	2.6	51.6	4,614	51.0
Himachal Pradesh	1.4	21.6	124	14.6
Other Territories*	2.4	N.A.	N.A.	N.A.

* Other territories are Andamans and Nicobar, Tripura, Manipur, Laccadives, N.E.F.A., Nagaland and Sikkim.

with understanding will not be of negligible importance if from now onwards the family planning movement comes to be characterised by greater vigour and purposefulness. Even then, the movement is not likely to have any perceptible effect in the short run of five years; if anything, its effect in terms of, say, a 25 per cent fall in the birth rate can be reasonably expected only in the next quinquennium, namely, 1966-71.

It would be realistic, therefore, to proceed on the basis that India's population will be round 490 million by the end of the third Plan. To adopt this basis would be to revise certain basic physical targets in respect of food, cloth and employment, to mention only three. Since the absolute increase in rural population in the decade has been as much as 63 million and may be expected to be still greater in the coming decade in spite of further industrialisation, the problem will continue to be one of providing more employment to the rural labour force. That labour-intensive methods in agriculture, reclamation, road-building, irrigation and the like will be increasingly required, should be clear. Intensive cultivation practices, which require more labour, will also spell greater production of food and raw materials like cotton. Since more food and clothing will be needed by the end of the third Plan than what has been estimated in the Draft Outline, there is happily a note of urgency in the Planning Commission's latest proposal to appoint a study group to examine the economic implications of the population increase as revealed by the Census and to reappraise the essential physical goals of the third Plan. The mounting population pressures call for a more concerted drive not only to propagate family planning practices in the rural areas but also to mobilise the surplus manpower in projects directly connected with agriculture, reclamation, irrigation and afforestation. If, to begin with, the rural occupational statistics of the Census are expeditiously processed and made available to the planners and the public alike it will greatly help in the evolution of suitable schemes for greater rural employment and agricultural production. The Census authorities would, therefore, do well to [illegible] the publication of occupational data as a matter of [illegible] and complete it at the very earliest.

MARKET GOSSIP

Progress at Rourkela

THE Rourkela Steel Project—a monument to Indo-German co-operation—has just commissioned its wide strip mill which is its unique feature. The significance of the commencement of this line of production is that it will provide the much needed strips for the mudguards of cars and bicycles and for refrigerator bodies. With the inauguration of this mill, which is stated to be the most modern and biggest of its kind in Asia, by Prime Minister Nehru this week, the Rourkela Project is nearly completed. The word 'nearly' is advisedly used here, because, in the rolling mills section, the cold rolling mill and the hot-dip tinning plant are yet to be completed. When these two mills also go into production by the middle of this year as now scheduled, the Rs. 200-crore Rourkela Steel Project, with its integrated sections producing coke, pig iron, ingot steel, blooms and slabs, and plates, hot strips, and cold rolls, will be fully completed. The speed with which the Project has been constructed since its first blast furnace—also the first in the public sector—was inaugurated in February 1959, brings a deal of credit to German engineers as well as to the German firm of DEMAG which has designed and supplied the L.D. steel converters and the wide strip mill which is the hub of rolling mills at Rourkela. It is even more heartening to know that, by the end of 1960, the Rourkela Plant had produced 580,000 tons of pig iron, 218,000 tons of ingot steel, 80,000 tons of slabs and 11,000 tons of plates. As the different sections have been commissioned by stages at different dates in the last two years, the full production potential of the plant in terms of finished steel products (200,000 tons of heavy plates, 300,000 tons of hot-rolled medium-plates and wide strips, 170,000 tons of cold rolled sheets and strips and 50,000 tons of tin-plate per year) may not, however, be reached till next year. But next year is not far off, and many an engineering industry may now look forward to more adequate supplies of finished steel for operating to fuller capacity.

D.A.G.

By the time these lines appear in print, the decisions taken by the Development Assistance Group—D.A.G. for short—at its fourth meeting held in London from 27th to 29th March 1961, will have probably been officially announced. That these decisions are awaited with much interest in all the underdeveloped countries striving for rapid economic growth is only to be expected considering that they will constitute a major step towards "internationalisation" of all free world aid commitments. Indicative of the utmost importance attached to the deliberations of the meeting was the presence of the senior official spokesmen of member-countries—the U.S., the U.K., West Germany, France, Italy, Portugal, Belgium, Canada, Japan and the Netherlands—as well as the Commission of the European Economic Community (six-member Common Market). The U.S., for instance, was represented by Mr. George W. Ball, Under Secretary of State for Economic Affairs. And the first session of the Group was presided over by Mr. Selwyn Lloyd, Britain's Chancellor of the Exchequer. President Kennedy has evinced keen personal interest in the deliberations of the D.A.G.'s meeting, as is borne out by the following extract from his statement issued after he signed the O.E.C.D. Convention on Thursday last week:

"Next week, the Development Assistance Group, which is soon to become the Development Assistance Committee of the O.E.C.D., will meet in London. As an indication of the importance I attach to all phases of the work of O.E.C.D. I have instructed George W. Ball, our Under Secretary of State for Economic Affairs, to represent the United States at this meeting. The subject matter of this meeting represents one of the central tasks of O.E.C.D. I look forward to the development of joint approaches and joint solutions, in which each of the member-countries will assume its fair share of our common responsibility. I am confident that this meeting will represent a substantial forward step in this effort."

The D.A.G., it will be recalled, was created as a result of discussions at the special meeting of the O.E.C.C. members and associate members at Paris in January 1960. It is an informal body for consultation among nations providing aid to underdeveloped countries. It has also the important aim of stimulating the flow of capital to these countries.

At the London meeting this week, the D.A.G. members gave detailed expositions of their aid programmes and policies. There were, besides, discussions of various general questions in the field. The U.S. approach to the problem of aiding underdeveloped countries was clearly spelt out by Mr. George Ball in the working paper submitted to the meeting. The salient features of the proposal are as follows:

One per cent of the gross national product of all non-communist industrial nations should be set aside annually for aid to underdeveloped countries. In determining the amount of aid to be given, account must be taken of a donor nation's military programme contributions and balance of payments. As a general rule, the loans are to be untied (at low or nominal rates of interest), though countries with payments deficits will be allowed to tie their aid. The other details of the proposal are said to conform broadly to the programme of aid outlined by President Kennedy in his special message to the Congress and on the March, which was editorially commented upon by us last week.

The earmarking of one per cent of gross national production for aid to underdeveloped countries is along the lines first mentioned by a Harvard Study Group sometime ago. The reaction of the other members of the D.A.G. to this proposal is not known. The acceptance of the proposal, it is calculated, will yield a total world aid contribution aggregating $8,000 million annually, of which the share of the U.S. alone is put at $5,000 million. Surely, such a rate of contribution will considerably accelerate the pace of economic growth in the capital-scarce underdeveloped countries, not to speak of the fact that it will "represent a major effort to meet the challenge of aid from the communist bloc" which, though on a much smaller scale than the aid made available by the free countries, is making proportionately greater impact.

It is, indeed, gratifying to be told that, at the London meeting of the D.A.G., the representatives of Britain and West Germany assured increased aid to underdeveloped countries. The U.K.'s aid in 1961 is estimated at £180-200 million, as compared with £150 million in 1960 and £80 million in 1957-58. On behalf of W. Germany, it was revealed that plans were being drawn up for an aid fund of 5,000 million D-marks, to be made available by the end of 1962 subject to ratification by Parliament.

Considering that the countries represented in the D.A.G. have a common interest and a common responsibility in the task of ensuring world-wide prosperity, this important wing of the O.E.C.D. will doubtless tackle successfully what the U.S. President has aptly called the challenging problem of helping the less developed countries in their quest for economic growth and stability. The best tests of any aid scheme from now on will, of course, be, as our London contemporary, *The Economist*, pointedly stresses, "how wide its bounds increase, how far it makes a wide variety of currencies available, instead of vividly pre-planning who shall aid whom with what, and how far individual powers can escape from undue emphasis on particular traditional spheres of interest."

Germany and the I.M.F.

The British Chancellor of the Exchequer has just concluded his financial discussions with the German Finance Minister, Dr. Erhard, and the outcome has been a little more sequeezing out of German currency reserves for the assistance of sterling. But what the meeting has done of greater importance is to set the seal on the much larger degree of co-operation between central banks that was so strikingly in evidence after the revaluation of the German mark when sterling came so heavily under pressure.

The general thinking in London is that quite a new slant is being given to the operations of the International Monetary Fund, as a result of the quite clear cut nature of the recent and continuing movements of hot money. Usually, it is difficult to disentangle hot money movements which are due to special currency factors from those due to balance of payments factors and general confidence in currency. In the latter cases, while central banks are in principle prepared to help, they are still dominated by the traditional feeling that balance of payments problems are primarily for the countries themselves to resolve. If there is a sickness in the commerce of a country, no central bank co-operation can replace the remedial measures which that country must itself take to put its trade right.

But, in this recent instance, the vast movements of money—it is reckoned that in the first ten days after the German revaluation the Swiss alone received some 300 million dollars—are only due to extra-national factors. As a result, the I.M.F. has actually begun to think like an International Monetary Fund, and central banks seem to have been saying to themselves that it was time that a world central banking system began to operate in reality as well as in theory.

Of course, the main difficulty is the tradition of openness regarding reserves which has been built up in nearly all countries in recent years. Let us suppose, for instance, that central banks through the I.M.F. will give all accommodation necessary to cover these special money movements; the individual countries will still not be spared the embarrassment of having to disclose the effect on their individual reserves.

One example of the way in which this central bank co-operation has worked out is the action of the Swiss National Bank which, as the largest recipient of the funds switched out of sterling, took those funds in on their books only without converting into gold on the reasonable assumption that the flow would be reversed in due course. The Bank of England could have made a similar arrangement for part of the inflow of funds which the United Kingdom received last year, though not for the whole of them. But a large part of the inflow into the U.K. went to finance the balance of payments deficit.

To come back to the German position, Dr. Erhard has undertaken to repay the whole of the outstanding German debt to the U.K. in one lump sum payment right away. The gross amount is £67 million, but about one-third of this has been deposited in the U.K. for some time; so the net gold gain cannot be larger than £44 million and it is a once for all payment. Germany is also proposing to assist the international currency position by making gold or D-marks available to the I.M.F., thus enabling the latter to lend to debtor countries. Whether the amount of what will be so given will be commensurate with Germany's ability is another matter. The long-term disquieting feature is that it is doubtful whether Germany will not go on absorbing gold and dollars in spite of the revaluation.

Development Insurance Fund

Experience throughout the post-war years has strikingly demonstrated that instability in world trade of primary commodities is a major flaw in the fabric of the international economy. Violent swings, particularly steep fall in commodity prices, have been found to have serious social and economic consequences in countries which are heavily dependent on the exports of primary commodities. They affect the rate of economic development, levels of existing employment and wages and these in themselves are sufficient to throw out of gear the economy of these countries whether they are planned or unplanned. Because of its overriding importance, this problem has received considerable attention at national and international levels. The U.N. has shown special interest in the problem of instability of trade in primary commodities in view of its serious repercussions on countries which constitute a good majority of its members.

The U.N. Commission on International Commodity Trade, for instance, is expected to make a fresh examination of the problem at a meeting scheduled to be held in May next. In order to assist the Commission in its consideration of the international commodity problems, the U.N. Secretary General, Mr. Dag Hammarskjold, had appointed a group of six experts to prepare a working report. The group was asked to consider international measures of a compensatory nature—that is, those not directly affecting prices or the volume of international trade in raw materials and foodstuffs. The group's report was published early this week.

The most important recommendation, which the experts have made in their report, is that a Development Insurance Fund be established to help compensate underdeveloped countries for losses they suffer on account of wide fluctuations in their commodity exports. The Fund is to be financed by annual contributions of participating nations. The experts feel that a situation which calls for such international action on the commodity problem exists at present. The main characteristic elements of the situation are the following:

1. There has been serious instability in primary commodity markets in recent years and there is no good reason, short of international action in one form or other, for expecting the situation to change.

2. The production of, and demand for, primary commodities are not readily responsive to variations in price. It is because they operate in this setting that disequilibrating forces give rise to instability in both prices of and volume of trade in primary commodities. The impact of this instability is particularly severe upon underdeveloped countries. On an average, according to the experts, year-to-year instability in export proceeds of primary producing countries during the post-war years was in the range of 9 to 12 per cent.

3. While the trade in manufactures was expanded, the share of primary commodities in world trade has dropped and, when prices of manufactures entering international trade have edged upward, those of primary commodities have generally tended to weaken.

4. The adverse effects of instability in commodity trade, particularly on the less developed countries, are numerous. For instance, fluctuations in external purchasing power add greatly to the difficulties of maintaining stable internal economies and this sets in train a series of undesirable economic developments.

The experts maintain that existing sources of international liquidity, such as reserves of foreign exchange in the various countries supplemented by possible drawings on the I.M.F., the World Bank and the International Development Association, are not likely to offer an adequate solution to the problem of export instability. The Development Insurance Fund suggested by them represents a new and different type of approach based on the principle of insurance and is a further refinement of certain ideas considered by the U.N. Economic and Social Council some years ago.

The most feasible insurance arrangement, according to the experts, would be a kind of social insurance (unemployment insurance, for example) in which the more vulnerable participants obtain more than they contribute and the more secure participants less than they contribute. Since the export proceeds of the underdeveloped countries tend to be substantially volatile than those of the advanced countries, the former would naturally be the main claimants under the insurance scheme.

Any kind of insurance postulates the presence of a risk. The basic risk to be insured in this case is a possible decline in a country's export earnings caused by instability in its export trade. In defining the risk to be covered, the first key element in any insurance arrangement, the experts consider that the most satisfactory basis would be a shortfall in the insured country's export proceeds in any year below the average level of its exports in a recent period, the three preceding five years, for example. With a view to discouraging any attempt at manipulation of exports, it is suggested that coverage of the shortfall by insurance benefits should be only partial. This would also avoid weakening of the incentive of participating countries to adapt their economy to commodity

EQUITIES DRIFT LOWER

FRESH BUYING SUPPORT POOR

(From Our Own Correspondents)

BOMBAY, 29*th March*

EQUITIES on the Stock Exchange drifted to lower levels during the week under review, excepting on Tuesday when there was short-lived recovery. There were, of course, no bearish factors at work. But the continuance of special making-up deposits, increase in carry-forward charges at the last settlement and larger deliveries induced some of professional bulls to lighten their holdings to some extent, while fresh buying support was at a low ebb. Investors were also keeping back. Some of them were conserving their resources for taking up new issues expected in the near future, while others felt that prices were too high.

Among iron and steels, Tata Steels encountered selling and receded from Rs. 154.25 to Rs. 152.25. Indian Irons dropped 25 nP to Rs. 26.70. Mukand Irons declined from Rs. 27 to Rs. 25.75 on Monday. Thereafter, it moved up gradually and touched Rs. 26.50 today before finishing at Rs. 26.40. The net loss over the week was 60 nP.

Textiles lacked support, notwithstanding the grant of some concessions in excise duties announced by the Government and the announcement of bonus issues by some of the leading cotton mills in Ahmedabad. Morarjis fell by Rs. 11 to Rs. 342. Swans dropped Rs. 10 to Rs. 540. Shreeniwas receded by Rs. 5.50 to Rs. 265, despite encouraging results shown by the Directors' report for 1960. Khataus eased by Rs. 5 to Rs. 532.50. Gokaks and Podars shed Rs. 2.50 each to Rs. 185.50 and Rs. 152.50, respectively. Finlays lost Rs. 2 to Rs. 351. Osmans declined by a similar amount to Rs. 57. Mysores were lower by a rupee at Rs. 71. Bombay Dyeings slided back from Rs. 67.10 to Rs. 66.60, after being lower still at Rs. 66.20 on Monday. Apollos were subdued at Re. 1.48, as also Indores at Rs. 141. Standards, however, were well fancied and shot up by Rs. 50 to Rs. 1,458; they had touched a high of Rs. 1,480 at one time today. Similarly, Centurys evoked sustained speculative support and advanced by Rs. 16 to Rs. 576. Svadeshis and B.R. Cottons hardened by Rs. 5 each, the former to Rs. 262 and the latter to Rs. 40. Simplex rose by Rs. 4 to Rs. 194, Central Indias by Rs. 3 to Rs. 114 and Elphinstones by Re. 1.50 to Rs. 73. Tata Mills gathered a rupee to Rs. 48.50.

The sugar section did not depict any definite trend. Belapurs began the week at Rs. 302, as against the previous close of Rs. 300.50, and, after improving to Rs. 307, moved down to Rs. 297.50 today before finishing at Rs. 301. Walchandnagars gained Re. 1.25 to Rs. 241.25. Kesars Rs. 7.50 to Rs. 265 and Maharashtra Sugars Re. 1 to Rs. 197. Oudhs, however, were subjected to selling pressure and fell by Rs. 16 to Rs. 178. Phaltans declined by 50 nP to Rs. 149.50.

Under the impact of large offerings, cements suffered a setback to prices. Digvijays dropped Rs. 5.50 to Rs. 157. Associated Cements eased by 75 nP to Rs. 156. Ashokas shed 28 nP to Rs. 9.48. Orissas, Bagalkots and Sone Valleys lost 4 nP each to Rs. 14.32, Rs. 9.56 and Rs. 5.04, respectively.

Among Shippings, Scindias declined by 20 nP to Rs. 15.68. Great Easterns were neglected at Rs. 16. In the automobiles group, Premiers were on offer at Rs. 177.50, as against Rs. 179 last week-end. Hindustan Motors shed 32 nP to Rs. 21.36.

Engineerings were irregular. Premier Constructions fell by Rs. 15 to Rs. 205. Telcos receded by Rs. 4 to Rs. 339.50. Khandelwals dropped a like amount to Rs. 88. Kamanis shed Re. 1.72 to Rs. 18.40. Larsen and Toubros lost a rupee to Rs. 44. Mahindras eased by 72 nP to Rs. 21.52 and Texmacos by 20 nP to Rs. 22.80. But T. Maneklals spurted by Rs. 15 to Rs. 355. Alcocks strengthened by Rs. 12 to Rs. 319. Indian Tools improved by Rs. 5 to Rs. 130. Brady Engineerings rose by Rs. 3.50 to Rs. 92, Josts by Rs. 2.50 to Rs. 104.50 and Goopers by Re. 1 to Rs. 206. New Standards were firm at Rs. 191. Shivrajpurs gained 50 nP to Rs. 90.50.

Dyes and chemicals suffered a distinct setback to values. India Dyestuffs clinched down from Rs. 557.50 to Rs. 530. Alembics slumped by Rs. 17.50 to Rs. 265. Amar Dyes fell by Rs. 12.50 to Rs. 410. Dharamsis and Poly Chems dropped Rs. 7.50 each to Rs. 255 and Rs. 255, respectively. Synthetics declined by Rs. 3 to Rs. 162. Colour Chems shed Rs. 2.50 to Rs. 362.50, Dhrangadhras Re. 1.50 to Rs. 130 and Citrics Re. 1 to Rs. 63. Tata Chemicals lost 8 nP to Rs. 19. Adarsh Chemicals were quiet at Rs. 85, as also Chemo Pharmas at Rs. 28.50.

Rayon shares also drifted downward. National Rayons retreated by Rs. 7.50 to Rs. 538. South Indian Viscose receded by a like amount to Rs. 164.50. Barodas eased by Re. 1.50 to Rs. 151.50 and Gwaliors by Re. 1.25 to Rs. 47.25. Indian Rayons, however, gathered 50 nP to Rs. 74.

Among miscellaneous industrials, Anil Hardboards fell by Rs. 15 to Rs. 292.50. Laxmi Starchs decreased by Rs. 14 to Rs. 200. Bombay Burmahs receded from Rs. 625 to Rs. 605 on Monday, but recovered to Rs. 616 today, a net loss of Rs. 9 over the week. Hind Cycles were done lower at Rs. 105, as against Rs. 114 last week. Ceat Tyres dropped Rs. 10 to Rs. 300. Premier Tyres shed a rupee to Rs. 115, Robtas declined by Rs. 3 to Rs. 21.44, Voltas by Rs. 2 to Rs. 290 and Bombay Cycles by Re. 1 to Rs. 26. Wimcos and Tata Oils lost 50 nP each to Rs. 302.50 and Rs. 83.50, respectively. Philips Carbons softened by 24 nP to Rs. 18.76. Greaves Cottons were dull at Rs. 177, Jyotis at Rs. 185 and Killicks at Rs. 110. McKenzies, however, attracted good attention and advanced by Rs. 10 to Rs. 140, following the announcement of a dividend of 10 per cent, subject to deduction of tax, for the year ended July 1960 after an interval of 14 years. The last equity dividend was 6 per cent (tax-free) and that was for the year 1945-46. The dividend on first preference and second preference shares at 5½ per cent plus 30 per cent thereof (subject to deduction of tax) is also proposed to be paid.

Madras Stock Exchange

MADRAS, 28*th March*

Easy conditions prevailed on the Stock Exchange during the week under review due to stale bull liquidation and profit-taking. Teas were listless, despite reports of better offtake at auction centres. Coffees were neglected. The endorsement of the Mysore Government's decision to exclude plantations from the purview of the Land Ceiling Bill by the Joint Committee of the State Legislature failed to have any effect. In sympathy with other plantation shares, rubbers drifted lower. Textiles ruled dull in the absence of follow-up support, notwithstanding the concession in excise duty. Sugars were depressed, with the trade awaiting the final outcome of India's attempts to sell sugar to the U.S. Activity in banks and electrics was moderate. In the miscellaneous section, chemicals and cements encountered selling.

Among teas, United Niligiris dropped 17 nP to Rs. 24.50. Haileyburias declined by 15 nP to Rs. 14.95. Waterfalls and Kil Kotagiris shed 3 nP each, the former to Rs. 3.17 and the latter to Rs. 5.47. Blue Mountains were lower by 3 nP at Rs. 3.55. Periakaramalais initially improved from Rs. 4.04 to Rs. 4.06, but fell subsequently to Rs. 4.02. Peermades were quiet at Rs. 22.80, Devasholas at Rs. 30.30 and Chembras at Rs. 3.85. Lucky Valleys were unchanged at Rs. 14. The Directors of the Company have recommended a dividend of 10 per cent (taxable) for the year 1960, same as that paid in the previous year. But Nonsuchs hardened by 32 nP to Rs. 28.62. Emerald Valleys gathered 15 nP to Rs. 6.50. The Company proposes to issue 50,000 equity shares of Rs. 5 each at par to holders as on 20th April 1961 in the ratio of one for every two shares.

In the coffee section, Consolidated Coffees declined by 30 nP to Rs. 23.70. Coffee Lands eased by 25 nP to Rs. 20.85. Ouchterlony Valleys sagged by 7 nP to Rs. 4.45. Anaparais were neglected at Rs. 4.70 and Cowcoodys at Rs. 5.30.

Among rubbers, Highlands declined by 25 nP to Rs. 15.75. T.R. and Ts lost 10 nP to Rs. 9.30. Cochin Malabars softened by 8 nP to Rs. 7.97. Midlands were quiet at Rs. 12.05 and Travancores at Rs. 10.37. Malankaras, however, picked up 10 nP to Rs. 18.60.

In the textile section, Bangalore Woollens suffered a loss of Re. 1 to Rs. 204. A final dividend of 6 per cent for 1960 has been proposed, bringing the total for the year to 10 per cent, taxable. The dividend distributed was the same as in 1959. South India Viscose gave way from Rs. 172 to Rs. 171. Travancore Rayons fell by 93 nP to Rs. 39.37. Maduras lost 90 nP to Rs. 39.50. Loyals shed 25 nP to Rs. 41.75. Kotharis dropped 20 nP to Rs. 12.75. Cannanores were unchanged at Rs. 146, as also Coimbatore Pioneers at Rs. 340, Dhanalakshmis at Rs. 223 and Metturs at Rs. 367. Kannapirans were unaltered at Rs. 9.75, despite the announcement of a higher dividend of 15 per cent, taxable, for 1960, which compares favourably with 10 per cent in the previous year. Buckinghams rose by 50 nP to Rs. 205.50. The Directors of the Company have declared a final dividend of 6 per cent, making a total of 10 per cent, taxable, for 1960, same as in 1959. Radhakrishnas put on 50 nP to Rs. 30.75 on hopes of a higher dividend. Lakshmis gained a like amount to Rs. 174.

Among sugars, Cauverys were marked down by Re. 1.50 to Rs. 132.50. East India Distilleries lost Re. 1.30 to Rs. 44.20. Deccans retreated from Rs. 14.60 to Rs. 14.30. Indias wede lower by 15 nP at Rs. 12.10. Travancores were unchanged at Rs. 10.75. Mysores, however, rose by 75 nP to Rs. 59 on special support.

In the miscellaneous section, Aluminium Industries eased by 35 nP to Rs. 24.40. Ashok Leylands sagged by 23 nP to Rs. 9.57. Among cements, Indias lost 13 nP to Rs. 6.17. Andhras shed 10 nP to Rs. 10.40. Orissas were quiet at Rs. 14.10. But Dalmias gathered 15 nP to Rs. 12.20. Among chemicals, F.A.C.Ts and Metturs lost 10 nP each to Rs. 11.20 and Rs. 13.85. Mysore Chemicals were unaltered at Rs. 25.50 and Mysore Fertilisers at Rs. 11.35. Among others, Enfields were firm at Rs. 14.87. The Company proposes to issue 233,300 equity shares of Rs. 10 each. Of this issue, 33,000 shares are reserved for allotment to foreign collaborators and the balance of 200,000 shares will be issued at par to holders as on 11th April 1961 in the ratio of 4 shares for every five held.

Already over 350 firms from thirteen countries have agreed to display their products at the International Plastics Exhibition INTERPLAS 61—in London to be held from 21st June to 1st July next. Displays of fabricating and ancillary equipment demonstrated by the major machine-builders will highlight the latest advances in plastics moulding, vacuum forming, extrusion and blow moulding. The complex array of modern plastics materials will include an extensive range of typical end uses, both current and potential, and many new materials now under development. The Exhibition, sponsored by the Iliffe journals, *British Plastics* and *International Plastics Engineering* with the co-operation of the British Plastics Federation, has been held every other year since 1951.

MR. C. H. BHABHA ON INDIAN BANKING

GOVERNMENT PARTIAL TO STATE BANKS

ADDRESSING the fourteenth annual general meeting of the Indian Banks' Association, held at Bombay on 23rd March, Mr. C. H. Bhabha, the retiring Chairman of the Association, comprehensively dealt with the problems confronting the banking business. Examining the banking trends in 1960, Mr. Bhabha rightly pointed out that, even though it was a fruitful year for Indian banking and steady efforts were being made by the banks to mobilise the savings of the community and putting them into proper productive channels, the deposits of Scheduled banks showed some reduction towards the close of the year. He attributed this decline to the new policy that was followed in respect of P.L. 480 funds. As readers are aware, under the new policy, the counterpart funds which were being held with the State Bank of India, are being deposited in a special account with the Reserve Bank of India. Even the past accumulations of the P.L. funds are being gradually transferred from the State Bank of India to the Reserve Bank of India in monthly instalments of Rs. 12 crores from July 1960. While not wishing to comment on these trends, Mr. Bhabha merely stated that they are receiving the attention of the Central banking authorities.

Alluding to the upward trend in bank credit, Mr. Bhabha said that, in the context of downward trend in deposits, it imposed a good deal of strain on the total resources of the banking system resulting in the ratio of advances to deposits exceeding the normal limits. Mr. Bhabha also drew attention to the sluggish growth in the portfolio of bills discounted. In this connection, Mr. Bhabha declared that the measures of credit restraints introduced by the Reserve Bank of India, which also included curbs on the clean advances, led to certain difficulties, because many customers did not like to obtain secured advances against their fixed and floating assets. But an even more serious repercussion of the policy of credit squeeze was its effect in discouraging banks from opening new offices in the interior of the country. Pointing out how the credit and monetary stringency was adversely affecting the productive sectors of the economy, Mr. Bhabha observed that the present high rates at which the Reserve Bank was acting as a lender of last resort to the banking institutions called for very careful vigilance on the part of the authorities. He was inclined to believe that the long-term effects of these measures would not be very desirable and that they had already adversely affected the gilt-edged market. He seemed to be more concerned than the Union Finance Minister himself about the success of the Government's borrowing programme. Thus, he observed:

"Apart from the reduction in the total Government securities held by scheduled banks from Rs. 760 crores at the beginning of the last year to Rs. 650 crores at the end of the year, many small investors as well as believers in gilt-edged securities have become chary of going in for them, unless compelled by one reason or another. This may produce adverse repercussions on the large borrowing programme of the Government, particularly in the context of our big third Five-year Plan."

Laws Affecting Banks

Turning to the modifications in the legal framework within which the Banks have to function, Mr. Bhabha offered some thought-provoking comments. His fundamental opposition to banking companies being subjected to the same restrictions as apply to trading and manufacturing companies under the Companies Act is quite understandable. When a separate Banking Act is there on the statute book, avowedly intended to regulate the activities of the banks, why should the banks be forced to submit themselves to the strait-jacket of other regulatory measurers? Whatever new provisions are needed to be introduced for the purpose of checking any malpractices in the banking sector could be easily incorporated in the banking law. Two special difficulties of the banks to which Mr. Bhabha made pertinent reference relate to the branch audit of banks and the recent amendment to the Income-tax Act under which any person on payment of Rs. 10 can obtain information about the qauntum of tax paid by any assessee, including a banking company. With regard to the first,

NEWS IN BRIEF

A PROPOSAL from a Ludhiana firm for the manufacture of scooters with Japanese collaboration has been accepted by the Government of India.

An agreement has been signed between the Praga Tools Corporation and the C.E.K.O.P., an organisation of Polish machine tool makers, for collaboration in setting up a new factory at Hyderabad for the manufacture of light and medium varieties of machine tools. This is the first project to be undertaken under the Indo-Polish Economic Agreement signed in May 1960. The cost of the project is estimated at about Rs. 1.5 crores.

The three-man official committee, headed by Mr. G. Pande, former Chairman of the Hindustan Steel, is said to have favoured French "Renault" for proposed production of baby car in the public sector. The retail price of the car is estimated to be less than Rs. 6,000. The French firm has agreed to give credit for the foreign exchange component in the project. Royalty rate in respect of "Renault" is said to be more favourable than that contained in the Japanese Nissan Motor's offer.

The Central Board of Trustees of the Employees' Provident Fund has recommended to the Government of India that interest at the rate of 3¾ per cent be paid on the provident fund accumulations of subscribers for 1961-62. The Employees' Provident Funds Act now applies to 47 industries and establishments. At the end of December 1960, 2.82 million workers were getting the benefit of provident fund. The total provident fund contributions till the end of last year amounted to Rs. 258.81 crores.

The Indian rupee, which had been the currency in Kuwait for a long time, will be replaced by local Dinars from 1st April 1961. An agreement has been reached between the Government of India and Kuwait regarding the manner in which and the period over which Indian currency now in circulation in Kuwait, is to be exchanged with the local Dinars and the terms on which India's liability in sterling in respect of the notes and coins so exchanged is to be liquidated. The agreement contemplates an initial payment to Kuwait soon after the Indian notes and coins now in circulation in Kuwait have been redeemed, and the balance of India's liability will be discharged in annual instalments over a period of ten years extending up to 1971.

Over Rs. 151.5 crores of goods, the bulk from indigenous sources, were purchased by the Government through the Directorate-General of Supplies and Disposals in the period April 1960-31st January 1961. The value of purchases made from the indigenous manufacturers amounted to Rs. 122.76 crores, of which the small-scale industries accounted for Rs. 5.93 crores. The value of leather goods purchased from small-scale industries in this period was Rs. 84.70 lakhs, that of tentage items Rs. 57.19 lakhs and that of woollen hosiery Rs. 41.83 lakhs. The total value of *khadi* purchased aggregated Rs. 76.38 lakhs. The question of supplying woollen and *khadi* uniforms to some categories of Government employees was under examination. Other important items purchased from the small-scale industries in the period were: tarpaulin and water-proof goods—Rs. 31.73 lakhs, paint and varnish—Rs. 18.55 lakhs, cottonwaste—Rs. 23.58 lakhs, and bandages—Rs. 22.32 lakhs.

From Abroad

A Chinese delegation headed by Le Shuchang, Vice-Minister for Foreign Trade, is now in Ghana discussing with the Government representatives there on questions relating to the expansion of trade between the two countries.

Pakistan has raised the outlay on its second Plan (1960-65) from Rs. 1,900 crores, as originally laid down, to Rs. 2,200 crores. This was announced by Mr. Sholab, Pakistan Finance Minister, who recently returned from the U.S.

The Mutsuo Mining Company of Japan proposes to establish a mining company in Southern Rhodesia to develop tantalite and beryl mines in that country. It is currently seeking the approval of the S. Rhodesian Government for the proposal.

The U.S. Government is reported to have decided to build a 700,000-kw. capacity atomic power plant, probably the largest in the world, and to expand the plutonium-producing reactor at Hanford in Washington to produce atomic weapons, besides supplying power to consumers.

President Kennedy signed last week a legislation which sought to set apart $1,000 million for unemployment aid. The amount will be used for giving benefits to 700,000 new entrants to workless category in the U.S. and also to continue those on about 2.5 million who have already been receiving benefits.

France has lowered all customs duties by 5 per cent with effect from the 1st inst. The move is made in anticipation of the 10 per cent Common Market tariff reduction due at the end of the year. The reduction will apply to all countries, provided the new duties are not below the common external tariff of the Common Market.

The West German Government has sent a six-man trade mission to Tanganyika to examine the possibility of providing financial and technical aid for its economic development. During its one-month stay in Tanganyika, the mission will visit industrial centres and study the details of the development projects.

A G.A.T.T. working party has arrived in Rome in connection with investigations on import restrictions imposed by the Italian Government. The restrictions are considered to be no longer justifiable on the score of balance of payments difficulties. The working party consists of 15 members, representing India, the U.K., the U.S., Japan and other countries.

The African republic of Mali will receive a long-term credit of 40 million roubles (£16 million) from Soviet Russia. An agreement to this effect was signed at Moscow last week. The credit will be used by the Soviet organisations for giving technical assistance in prospecting oil, gold and diamonds. A part of it may be used for the construction of a cement factory and for improving the navigation facilities on the River Niger.

A new nickel plant of the Thompson Nickel project, put up by International Nickel Company of Canada at North Manitoba, was declared open by the Premier of Manitoba, Mr. Duff Robbin, last week. The plant is the first to combine nickel mining and processing in a single plant. It will attain the full capacity of 385 million lbs. by the end of this year, thus ranking as the world's second largest nickel manufacturing unit.

The World Bank has sent a 16-member mission to Spain to work out a long-term economic development plan for the country. The mission is headed by Sir Hugh Ellis-Rees of Britain, a former Chairman of the Organisation for European Economic Co-operation (O.E.E.C.). The World Bank will shortly send a similar mission, with Mr. Amjad Ali, a former Finance Minister of Pakistan, as Chairman, to Kuwait to advise the Government on matters relating to development.

The Olin Mathieson Company of the U.S. has announced that it is possible to make aluminium from ordinary clay as cheaply as that made from bauxite. According to the Company's process, alumina can be extracted from clay or coal shale by separating aluminium sulphite from these raw materials with the aid of sulphuric acid. It is claimed that the process will be competitive in cost *vis-a-vis* the conventional techniques.

If the U.K. joined the Common Market, it will be possible to reconcile its agricultural policies with the common agricultural policy of the Six, perhaps by retaining farm subsidies on a reduced scale. This important modification in the generally accepted version of the agricultural philosophy of the Six was put forward by Dr. Mansholt, Vice President of the Common Market Commission, who is in charge of its agriculture, at Paris last week-end.

Steel output in the U.K. reached the record level of 24.3 million tons in 1960, and the performance in the year confirmed the recovery from the 1958 recession which was under way in the fourth quarter of 1959. Crude-steel production in 1960 was, in fact, nearly 20 per cent higher than in the previous year, and about 12 per cent above the previous record set in 1957. Steel exports at 4.1 million in 1960 were also a record.

Rumania has given a £800,000 contract to the British concern, the Petrocarbon Developments, for the supply of a polystyrene plant. This is the first major order for chemical plastics plant placed with any British firm since the signing the Anglo-Rumanian trade agreement last autumn. The plant will produce a wide range of general purpose and toughened grades of polystyrene and will employ the suspension polymerisation process developed by the Petrocarbons.

In the current Geneva International Motor Show, British cars are stated to have made a big impression. Roots, spearheading the British drive by cutting prices on the whole Hillman range, have had more orders than ever this year. Rolls-Royce and Bentley claim that this is without doubt the most successful year they have ever experienced. All eight Rolls-Royce and Bentley models have been sold for a total cost of about £48,000. Among the most popular British cars with the huge crowds at the show are the Sunbeam-Alpine, and the Austin and Morris Minicars.

MR. A. S. Bam, a former Iron and Steel Controller, took over charge as the Chairman of the Tea Board on Tuesday this week.

Mr. S. K. Khan and Mr. P. J. Engineer have been elected President and Vice-President, respectively, of the Association of Merchants and Manufacturers of Textile Stores and Machinery in India for the year 1961.

Mr. Rama Row Macherla and Mr. Jaychand D. Lohade have been elected President and Vice-President, respectively, of the Federation of Andhra Pradesh Chambers of Commerce and Industry for the current year.

Mr. B. P. Agarwalla, Mr. M. Sen Gupta and Mr. S. N. Mookherjee have been elected Chairman, Vice-Chairman and Junior Vice-Chairman, respectively, of the Indian Mining Federation, Calcutta, for the year 1961.

Mr. Tulsidas Kilachand (Chairman of the Bank of Baroda Ltd.), Mr. T. D. Kansara (General Manager of the Bank of India Ltd.) and Mr. C. E. Kamath (Manager of the Canara Bank Ltd.) have been elected Chairman, Deputy Chairman and Honorary Secretary, respectively, of the Indian Banks' Association for the current year.

Mr. Howard L. Roach and Dr. Jake J. Krider, President and Vice-President, respectively, of the Soyabeen Council of America Inc., who were on a 12-day tour of India as part of their Asian tour to make a first-hand study of the fats and oils economy here, have left for Middle East and Europe, where they will make similar studies.

Mr. Charles C. Tillinghast Jr., Vice-President, International Operations for Bendix Aviation Corporation has been elected President and Chief Executive Officer and a Member of the Board of Directors of the Trans World Airlines. Mr. Tillinghast will assume his new duties on 17th April, succeeding Mr. Charles S. Thomas, who resigned as T.W.A. President last July.

Mr. Lala Karamchand Thapar, Director of Messrs. Karam Chand Thapar and Sons Ltd., Calcutta and Mr. Shriyans Prasad Jain, Chairman of the Dhrangadhra Chemical Works Ltd. and the New Great Eastern Spinning and Weaving Co., Ltd., Bombay, have been elected President and Vice-President, respectively, of the Federation of Indian Chambers of Commerce and Industry for 1961-62.

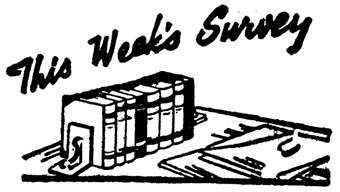
Mr. Mohie Ranjan Das has been appointed Chairman and Managing Director of Messrs. Mackinnon Mackenzie and Co., Calcutta and Bombay, *vice* Mr. G. D. Longhurst, who is retiring. Mr. Das is the first Indian to be appointed Chairman of this Company in its history of over 100 years. Joining the Company in 1933, he became member of the Board of the Company in 1957 and has been Chairman of the Calcutta Liners Calcutta/Continental and the Bay of Bengal/Japan Conferences.

The U.S. and Austria are expected to sign shortly an agreement which will delegate the administration of the counterpart funds (received from the U.S. aid) exclusively to the Austrian Government. These Funds are proceeds out of American donations given to Austria in the post-war years now lying at the Austrian National Bank, and have been used to finance investments credits, etc. In accordance with the original agreement, the appropriation of counterpart funds in Austria was subject to the approval of the U.S. which reserved a right of co-decision.

The U.S. Export-Import Bank has decided to grant a loan of $13 million to the Spanish State-owned steel plant, *Ensidesa*, for the completion of its installations in Aviles and commencement of the processing of pig iron there itself to make it an integrated unit. The Aviles plant, which has two blast furnaces already in operation (two more will be added ultimately), had received a loan of about $30 million previously from the Bank, in addition to about $12 million made available by the International Co-operation Administration.

The Government of Saudi Arabia has accepted the obligations of convertibility for its currency, as set forth in Article VIII of the Articles of Agreement of the International Monetary Fund. This step was preceded by a similar move on the part of ten other members of the Fund on 15th February 1961, and brings to 21 the total number of countries now accepting the Article VIII provisions. Under Article VIII, the members are required to avoid the use of restrictions on current payments, multiple exchange rates and discriminatory currency practices, unless they have obtained the prior approval of the Fund.

The U.K. Government has decided to set up a Department of Technical Co-operation (which will be in the charge of a Minister with the rank of Minister of State) to consider requests for aid from the Governments of the less developed countries, both inside and outside the Commonwealth. Announcing this in the House of Commons on 21st March 1961, the Prime Minister said that the new Department would take over the responsibility for the provision of technical assistance other than capital projects which is at present undertaken by the three overseas departments. It would be concerned with much of the technical assistance provided with the help of the U.K. through international organisations as well as the technical assistance given to recipient countries direct. It is hoped that the Department will start functioning before the summer recess.



LAND CEILINGS

WITH all the weight of authority it commands as the most representative and apex organisation of businessmen in this country, the Federation of Indian Chambers of Commerce and Industry has urged that the State and Central Governments should not, in the name of land reform, proceed with measures which will undermine agricultural productivity and, therefore, of industry, with serious repercussions on production and export programmes. That the Federation is considerably agitated over the land reform measures adopted by some State Governments and is greatly anxious to get the whole issue reconsidered afresh is borne out by the fact that a special resolution to the effect was adopted at its annual meeting last week-end and that the resolution was moved by the retiring President himself. In particular, the resolution emphasised the need for exempting certain categories of farms from the operation of ceilings. It said:

"... the Planning Commission has .... recommended that certain categories of farms should be exempted from the operation of ceilings, especially the efficiently managed farms with compact blocks on which heavy investment and permanent structural improvements have been made and whose break-up is likely to lead to a fall in production. It is a matter of regret, therefore that some State Governments are adopting measures which offend the principles enunciated by the Planning Commission. In this connection, the Federation has to refer to the Maharashtra Agricultural Land (Ceilings on Holdings) Bill, 1961, which seeks to apply ceiling, *inter alia*, to organised sugar farms and farms attached to sugar factories."

It is, indeed, a pleasant coincidence that, as the resolution was being adopted at the Federation's meeting (on Saturday, 25th March), the Joint Select Committee of the Mysore Legislature on the Mysore Land Ceiling Bill, which presented its report on the same day, endorsed the proposal in the Bill for excluding from the purview of the ceiling legislation all existing plantations, excepting areca and coconut, as well as the plantations (sugarcane, coffee, rubber, tea, cardamom and pepper) to be acquired in future. The Committee clearly declared: "The ceiling will not apply to land cultivated for plantation crops, land used for orchard where it constitutes a reasonably compact area, land used for specialised farms set apart for livestock breeding, dairying, wool raising and such allied operations, land used as sugarcane farms operated by sugar factories, and land utilised by an efficiently managed farm which consists of a reasonably compact area on which heavy investment or permanent structural improvements have been made, and whose break-up, in the opinion of the tribunal (to be appointed for this purpose), is likely to lead to a fall in production."

The aforesaid decision of the Mysore State Legislature to exempt plantations and sugarcane farms from the ceiling legislation is a commendable one and it is deplorable that neither the Government of Maharashtra nor the State Legislature has conceded the demand for similar exemption in this State. When the Bill was referred to the Maharashtra Legislature's Joint Committee, it was hoped that wiser counsels would prevail on the Committee and that exemption would be recommended. But this hope has completely been shattered. For the Committee, in its report submitted on 20th March, has endorsed the Government's move, though it has raised the levels of ceilings to some extent and enhanced slightly the quantum of compensation payable for the lands acquired.

The course adopted by the Maharashtra Government is, we reiterate, a retrograde one, in the fullest sense of that word. Mr. Lalchand Hirachand was certainly not exaggerating when he declared, in his speech on the resolution at the F.I.C.C.I. meeting, that the Government had set on a dangerous course and that the legislation would lead to fragmentation of holdings and lower efficiency. It would also be quite pertinent to quote here what Mr. C. H. Campbell averred at the meeting of the Bombay Chamber of Commerce and Industry last week, for he had summed up the implications of the move pithily and precisely:

"....there is one unanswerable reason why the sugar farms should be exempted. It is that the interests of agricultural production in Maharashtra and in India should be paramount and even to jeopardise, let alone diminish, the production of any well administered and expanding industry, whoever owns or runs it, should be avoided even at the cost of tidiness in land reform. I suggest the situation has its parallels with what I have described in the case of oil, coal and fertilisers. There is no disagreement about ends. Production of sugarcane must be maintained. Government have given assurances, however optimistic and theoretical they may be, about that, but let us not imagine that the landless are going to benefit from the Ceiling on Holdings Bill in so far as the sugarcane farms are concerned. These farms are to be kept as units, but run as State farms and later by co-operatives formed from the workers of the land and certain others. And to whose advantage? Will the workers of these farms be any better off than they are now? Will production be maintained in practice? Will there be any incentive still further to improve production under State farms? There will be different answers to these questions. My point is that all the answers will be guesses. Guesses are to replace facts."

Neither Mr. Lalchand Hirachand nor Mr. Campbell could be accused of having championed the cause of vested interests. The case against ceilings on sugarcane farms is pure and simple economics: The farms lend themselves admirably to the operation of cane culture as an industry with the utilisation of modern methods. This is the only effective way in which productivity of land can be maintained at the highest level possible. It is inconceivable how the application of ceiling to the efficiently managed cane farms attached to sugar mills—these farms have come to be recognised as model farms—will ensure continued high productivity. It is equally inconceivable that any social betterment can be secured when the overall economic efforts are adverse. This aspect was admirably brought out in the F.I.C.C.I. resolution. By ignoring all the protests and the sound piece of advice given sincerely by many, the Maharashtra Government is only using a move with economic implications to achieve political ends. This is deplorable in the extreme.

A WELCOME TREND

Some of the Southern State Governments have of late shown a commendable sense of realism in their approach to industrialisation of their respective States. The coalition Government of Kerala, under the inspiration and guidance of its dynamic Governor, Mr. V. V. Giri, has formulated a positive policy of encouraging the establishment of new industrial enterprises in the State and the expansion of existing ones. It has also launched a systematic campaign to advertise the attractions of Kerala to prospective entrepreneurs from outside the State. Recently, a conference was held in the City, with the support and blessings of the Government of Kerala, which aimed at giving the business community in the country a better idea of the industrial opportunities available in Kerala. The Government has also been trying, with a fair measure of success, to create conditions conducive to sustained industrial activity. For this purpose, a five-year industrial truce is being tried in the State in pursuance of which long-term agreements are reported to have been signed by the managements and workers of many industrial undertakings.

Kerala is not the only State in the South which has realised that a doctrinaire approach will only put back the clock of industrial development. Madras and Andhra Pradesh, too, have shown ample evidence of a welcome touch of pragmatism in their policy. For instance, speaking on behalf of the Government of Madras, Mr. R. Venkataraman, Minister for Industry and Labour, stated in the State Legislative Assembly, that the Government was not bothered whether new industries were started in the private or public sector. There was no time, he went on to add, for this controversy now. When the country was industrially backward, the Government could not afford to reduce the pace of development by insisting that only one sector should be encouraged. Mr. Venkataraman went one step further. He said that his Government, if continued in power, would pursue this policy during the third Five-year Plan period also and that it was even prepared to make it the main issue in the coming general elections.

Similar views were also expressed by Mr. D. Sanjivayya, the Chief Minister of Andhra Pradesh. He said that, in order to encourage new industries, his Government proposed to standardise electric power rates in the State, grant sales tax concessions and make available suitable industrial sites having all amenities on long-term lease. It was found, according to Mr. Sanjivayya, that lack of an industrial climate, adequate incentives and facilities for financial and technical aid were responsible for the slow pace of industrial growth in his State and that the Government was determined to remove all these. It is not clear what exactly the Chief Minister had in mind when he said "lack of an industrial climate." If he was referring to the labour situation he was perfectly correct. For labour in Andhra Pradesh is not particularly known for discipline and industriousness. There have been frequent complaints by industrialists, who have invested in the State, of labour being unduly militant and utterly irresponsible. To take but one instance, the Board of Directors of Sirpur Paper Mills Ltd., one of the largest paper mills in the country situated in Andhra Pradesh, in their annual reports to shareholders have repeatedly referred to loss of production resulting from labour unrest, serious indiscipline and acts of violence. The Government would, therefore, do well, as a first step towards promoting a better industrial climate, to be firm in handling labour. We would also suggest that the Government examine whether, as in Kerala, it could persuade trade union leaders in the State to agree to an industrial truce for a specified period.

THE SETBACK TO SINDRI

All has not been well with the Sindri Fertilisers for some time. In this mammoth fertiliser unit owned and operated by the Government of India, the total production of ammonium sulphate in the fiscal year 1959-60 was only 285,248 tons, as compared with 330,122 tons in the preceding year. The average monthly production in the five months, May-September 1960, was 22,727 metric tons, as compared with a monthly average of 24,148 metric tons in the whole of 1959-60. That the average monthly production of 27,646 metric tons in the five months, October 1960 to February 1961, is still less than the monthly average of 27,947 metric tons in the whole of 1958-59 shows that Sindri continues to work below capacity. The increase in the monthly average in the latest five-month period as compared with the preceding five-month period, however, conceals the continued decline in production from the original plant which has been in a state of disrepair. It looks as though this state of affairs will continue for another 18 months, for, according to the Deputy Minister for Commerce and Industry, it will take two to two and a half months to overhaul, one by one, the seven generators now working at a relatively low level of technical efficiency. All this is disquieting, for the decline in fertiliser production at Sindri since 1959 has meant, in effect, a lesser additional food production potential. The news about the unsatisfactory state of affairs at Sindri is also no less disquieting than the news that India's population now, according to the provisional tabulation of the 1961 Census, is in the range of 440 million. The serious demographic situation, more than anything else, underlines the need for greater fertiliser, and thus food, production.

But what are the chances of reversing the trend of declining production of ammonium sulphate at Sindri? According to the Deputy Minister for Commerce and Industry, the gradual overhaul of generators and compressors in the factory and the supply of inferior coal have been responsible for the decline in production. Since it is said that the complete overhaul and repair of the original plant will take 18 months, it is obvious that, to that extent, this old plant will necessarily be worked below capacity during that period. Any improvement in production, at a time of phased overhaul of the plant, can come about only if at least coal of the requisite coking quality is supplied to the factory. The quality of coke is all important here, for the kind of coke produced in the coke ovens at Sindri from inferior coals in recent years has meant slower production of synthetic gas in the gas plant and thus lower production of ammonium sulphate caused by lower production of ammonia. While the Deputy Minister for Commerce and Industry has just indicated that coals of the requisite quality are now being supplied to Sindri, it is not known whether the other raw material, namely, gypsum, will also be supplied according to quality specifications. It is deplorable that the quality of gypsum supplies has deteriorated in recent years due to higher moisture content resulting from haulage in open wagons during monsoon season, lower purity ranging round 83 per cent as against 87 per cent purity in earlier years and higher silica content of 8.5 per cent as against the specified figure of 3.0 per cent. If, in these circumstances, production from the old plant continues to decline, it will not be surprising. Any such shortfall in production may or may not be made good by the new plant which, too, is not working to full capacity to produce urea and double salt.

The difficulties at Sindri are mostly of a technical nature, arising from the poor quality of raw materials. Where, thus, the technical performance of the plant originally designed to handle raw materials of specified quality has been seriously affected by their poorer quality in recent years, the management of Sindri Fertilisers may be partly absolved of blame for the decline in production. In fact, the management will be in a position to defend itself strongly before the Estimates Committee, to which the Speaker of the Lok Sabha has just referred the Sindri affair, on the ground that it had drawn attention to the poor quality of coal even by the end of 1959 and that, in its latest annual report, it has similarly drawn attention to the poor quality of gypsum supplies. But, at the same time, the Sindri management may find it difficult to give a convincing explanation of its acquiescence in the use of inferior quality raw materials which have damaged the technical efficiency of sensitive plants. Nor will it be easy for it to cover up its failure to overhaul the plants strictly in accordance with the golden maxim that a stitch in time would save nine.

The Estimates Committee will, of course, ascertain all the technical details and other relevant facts bearing on the matter—facts which may well open the eyes of the powers-that-be to the difficulties of operating industrial enterprises in the public sector. These difficulties, in so far as they pertain to technical inadequacies, poor quality of raw materials, insufficient and delayed supply of such raw materials, etc., are common to both public and private sectors. But, when the private sector draws attention to these practical difficulties, they are probably thought of as exaggerated. Now that practical difficulties of the kind will be presented before the Estimates Committee by a public sector enterprise itself, both Parliament and Government may come to appreciate the problems of private enterprise more fully. If, incidentally, the Estimates Committee's enquiries lead to an appreciation of the need for encouraging fertiliser production in the private sector on a far larger scale than is now proposed, it will be a very salutary development indeed. The compelling need now is for more fertiliser production, so that food production may keep in step with the galloping population. Of course, fertilisers alone will not do the trick, if, at the same time, progress in the field of irrigation is dreadfully slow. It will be an additional impetus to fertiliser production, especially in the private sector, if the manufacturers are satisfied that what they produce will be increasingly used by an agriculture receiving the benefits of secure irrigation on a wider scale than is the case at present.

ADVERTISING AND EXPORT DRIVE

More often than not, goods are sold but not bought. This is particularly true of international trade, which has come in for a good deal of competition especially since 1957. Price, quality, prompt delivery and sound packing are, no doubt, essential for finding ready and sustained markets for one's products. But these factors will yield better results if they are supplemented by effective salesmanship and judicious advertisements. Therefore, developing countries such as India, which are making frantic efforts to explore new avenues of export markets, have necessarily to devote special attention to win consumers abroad. This is easier said than done. What is needed is a scientific system of market research and advertising programme which will serve to link the irrepressible exporter with the potential consumer overseas. The advertising conference, held under the auspices of the Indian Society of Advertisers this week at New Delhi, was aimed at bringing home to the businessmen of this country the vital role of advertising in export promotion. Mr. Chinubhai Kilachand, a leading industrialist of Bombay and the President of the Society, in his address to the conference, drew pointed attention to the importance of advertisements for boosting India's exports. He remarked that, in the face of increasing competition, artificial restrictions on foreign trade, increases in the prices of raw materials and growing manufacturing costs, the performance of even India's traditional exports had been none too satisfactory. He felt that much greater effort was, therefore, called for "to step up exports of a wider range of goods and that, too, to a larger number of countries" than is the case at present.

There is no room for differences of opinion on the need for systematic and effective publicity for Indian goods in the overseas markets. But the value of some of Mr. Chinubhai's suggestions as to the means to be adopted for this purpose are dubious. No less a person than Prime Minister Nehru, who inaugurated the conference, categorically and quite appropriately, rejected the proposal made by Mr. Chinubhai, for the establishment of a commercial radio station. The Prime Minister added that trends in advanced countries were not in favour of commercial broadcasting. His impression was that even advanced countries were not going in for it. He revealed that a number of gadgets had been invented and were actually being used by some of them to shut off the listening part from the commercial television system as it had become a nuisance to listeners. It is regrettable that Mr. Chinubhai should have been so outdated on this point as to be reminded by the Prime Minister of the latest trends and developments in the field of broadcasting. He was certainly ill-advised in voicing an idea which has become obsolete, and certainly repugnant to sensitive minds. Commercial broadcasting is, indeed, a cheap form of propaganda quite unsuited particularly for export promotion. It may be noted here that it is not with the help of commercial broadcasting system that some of the world's adventurous exporters, such as those of Japan, West Germany, and the U.K., have penetrated into the far corners of the world. It is the efficiency of domestic production and ability to serve buyers and coupled with a vigorous export promotion drive organised by the industry and trade in active co-operation with the Governments concerned that have accounted for their success in the field of world trade. Instead of resorting to wild-goose-chase methods like commercial radio broadcasting, it would be more paying if they were to spend their resources and time on an intensive study of consumer preferences and produce goods for export on the basis of such studies.

Another suggestion made by Mr. Chinubhai relates to the establishment of a central organisation to co-ordinate the activities of all export promotion councils. It is not quite clear what kind of co-ordination he has in mind. It must be remembered that the problems facing textiles, engineering goods, or spices in the export markets are of a different nature and, therefore, need to be dealt with separately. Besides, no authentic account has yet been given on how far these export promotion councils themselves have been useful in relation to the money spent on them. If a new administrative machinery is to be created, it should at least be preceded by a dispassionate assessment of the exact contribution these councils have made towards export promotion so far. The suggestion made by Mr. Chinubhai is not novel. It will be recalled that a suggestion to establish a central organisation for export promotion had been suggested five years ago by the Export Promotion Committee (Chairman: Mr. V. L. D'Souza). This has not been accepted by the Government so far, presumably because it thinks that the present centralised direction given by the Directorate of Export Promotion and Export Promotion Advisory Council, etc., is adequate. This observation is meant neither to discredit the existing export promotion councils—some of them, the Engineering Export Promotion Council, for instance, are indeed doing good work—nor to belittle the importance of Mr. Chinubhai's suggestion. What is sought to be stressed here is that no new machinery need be added to the multiplicity of organisations already in the field, until and unless it is found to be absolutely necessary and capable of yielding a return commensurate with the expenditure incurred on it.

UNDER SECRETARY TO GOVT. OF INDIA
3 APR 1961
PUBLIC DEPARTMENT

Your
Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than 909 offices waiting to serve you throughout India.

STATE BANK OF INDIA
INDIA'S LEADING BANK.

SISTA'S-58-47

ON THE ARENA

By The Archer

Company Finance

WRITING from Delhi, the financial correspondent of a leading newspaper has stated that Government proposes to regulate company finance in the third Plan period on the basis that reliance on loans from banks should not be unduly large, and, in any case, they should not exceed twice the sum mobilised by way of share capital. It is believed that the policy of insisting that a reasonable ratio of loan to equity finance be maintained in industrial undertakings is the result of the present state of the capital market, in which there is pronounced avidity for equity participation among the public, on the one hand, and very tight credit conditions in the banking system, on the other. The Company Law Department is reported to be of the view that the difficulties felt by banks in recent months in regard to meeting the needs of industry is the result of their policy, which has been in force for the last few years, of encouraging industries to borrow from them even for a part of their capital requirements. The practice which was in force in the twenties and thirties whereunder no commercial bank of good calibre would sanction credit limits for an industrial enterprise until it had reached the stage of production, and thereafter, only for working capital needs, that is, against raw materials, processed goods in stock or in transit for marketing, etc., has been a thing of the past for some years now. As a result, many companies have come into being with just enough capital for purchase of land and erection of buildings, and have been finding it necessary to ask their bankers to pay for machinery pending collection of fresh calls of additional capital. It would appear that one reason mentioned in Government circles for the change of policy in regard to regulation of company finance is that an unduly high ratio of loan to equity capital can make the yield to the lending banker unfair as compared to that for the shareholder. This reasoning is cock-eyed, and is based on the assumption that a company can make large profits with the aid of large loans bearing relatively low rate of interest, that the credit system should have strained itself to grant the loans, and that the risks undertaken by the equity participants are comparatively less than those borne by the lending institutions. These fallacious reasonings apart, one may straightaway admit that the move to insist on new companies providing themselves (in staggered manner) with enough equity and preference share capital to go through phased programmes of establishment of the enterprises without recourse to bank finance is a very wholesome one, all the more necessary in the years to come when banks are likely to be faced with chronic paucity of funds in their hands.

The policies pertaining to the regulation of equity capital, preference capital and loan capital, should be related essentially to their financial implications. To start with, an enterprise should be launched with *adequate* resources—adequate in the complete sense—to be able to pay for land, buildings, equipment and machinery without any loss of time, and such resources should be raised in the form of capital from shareholders. What proportion preference capital should bear to equity issue is largely a question of assessment on the basis of individual requirements and working, but, broadly speaking, a ratio of one-third preference to two-thirds equity may be considered reasonable, bearing in mind the facts that (a) cumulative interest has to be paid on preference capital from the day of subscription, as a second charge on disbursable profits, the first being full depreciation on all fixed assets, (b) it may be possible, at some period of affluence, to discharge preference liability, and therefore provision should be made for the right of repayment, (c) equity capital will wait for its return till the profit-earning stage is reached, and is thus the wisest form of capital from the point of view of an honest *entrepreneur*, (d) social justice and the philosophy of a Welfare State demand that the equity distribution should be thoroughly broadbased and there should be no concentration of shares in select hands or groups. Loan capital is in a sense the antithesis of equity capital, for it will bear interest from the date of availability, and provision has to be made for its amortisation in annual instalments even prior to making provision for depreciation or preference dividend.

A classic example of how faulty financial arrangements can create considerable difficulties to a good venture is given in the Report of the Tariff Commission (1959) on price fixation of acetate yarn produced by Sirsilk Ltd. As on 30th September 1958 (provisional), this company had an equity capital of Rs. 94.27 lakhs, as against a loan capital of Rs. 317 lakhs and preference capital of Rs. 200 lakhs. The value of the block assets was Rs. 573.68 lakhs which included a sum of Rs. 120.60 lakhs being pre-production expenses capitalised. The result of this unbalanced capital structure was that, every year, the Company had to provide for interest on and amortisation of loan amounting to about Rs. 32 lakhs; no interest had been paid since the beginning. There was, in addition, a contingent liability of Rs. 48.59 lakhs, being accumulated dividend on preference shares, while every year Rs. 12 lakhs were added to this figure. No provision had been made for depreciation on fixed assets which was in arrears to the extent of Rs. 312.28 lakhs. There was also a carry-forward of loss to the tune of Rs. 6.48 lakhs. The Company was started with great expectations of quick profitability in two or three years, and the decision to have a small equity capital base was taken, as plenty of loan finance was forthcoming, and it was confidently expected that the loans would be repaid in a short period, whereafter the return to the shareholders would be handsome. Indeed, such might have been the case but for the political upheavals that took place in Hyderabad, changes in management, technical teething troubles, etc; but these only go to show that theoretical assumptions relating to time factor and profitability can land enterprises in extremely uncomfortable situations and that, once financial liabilities start accumulating, what were woods once become dense shrub jungle, and getting out of them call for heroic efforts of enterprise.

The moral of all this is threefold. To *entrepreneurs*, I would say, get as much equity capital as you can, planning right from the start on the basis of self-sufficiency, and do not resort to loan finance, except for very temporary periods and transitory purposes. To commercial banks, I would say, do not enter into the field of long-term industrial finance, but restrict your lending arrangements to industrial enterprises for their working capital needs and normal business requirements. There is a very thin dividing line between medium-term loans and long-term loans and the former have acquired, more and more, the nasty habit of sliding into long-term commitments with unsavoury repercussions on liquidity. Finally, to the Government of India, I would say, let not policy decisions be based on hunches of your (undoubtedly highly qualified) officers, but only after the careful scrutiny of returns obtained from individual enterprises established during the last seven years, furnishing (i) the amount of equity and preference capital issued at different periods, (ii) the amount of industrial finance obtained as loans on long-term basis, (iii) the amount of bank loans or other private loans obtained with details of repayment, (iv) the total amount of funds spent from date of laying the foundation-stone to date of start of production, (v) the balance-sheets at the end of each year with details of appropriations and allocations, (vi) the details of financial arrangements with commercial banks for working capital and other business requirements, (vii) other proposals for amortisation of deferred payment loans and other commitments. It should not be difficult to obtain these returns at short notice and it should be a simple matter for a set of trained chartered accountants to draw conclusions from a survey of this type. I have used the word 'hunch' in the last sentence, because it is nothing short of that to presume that an industrial venture can make big profits on loan capital (even at low rate of interest) if the loan has to be repaid by regular amortisation, as against collection of adequate equity capital which will wait for its dividend for a reasonable period, unless the venture is in a position to make fantastic and unrestricted profits.

Wanted: A S.P.C.B.

I vote for the establishment of a society for the protection of cruelty to bankers. I have been seeing some of them during the past few weeks, looking very worried, running round in circles like dogs chasing their own tails and exhausting themselves in such locomotion. All of them are agreed that something must be done to stop the decline in scheduled banks' deposits, which, according to the Chairman of the Indian Banks' Association, registered a fall of Rs. 68 crores between December 1959 and December 1960, of which Rs. 38 crores was in time deposits and Rs. 30 crores in demand deposits. Bankers seem to feel that an increase in interest rates for deposits might stop the decline, but I doubt it. It is easy to see that there has been a definite swing from the conventional method of depositing savings in banks to the newly discovered method of investing in company shares, buying and selling being taken up as an absorbing and remunerative hobby by most people who have such savings—pensioners, professional men and women, landowners and such like. To them, the yield from interest-bearing deposits does not provide the hedge that they require to protect them from the continued fall in purchasing power of the rupee from inflation.

The dog chasing its tail technique comes into the picture when you see all banks, including the State Bank of India, increasing their interest rates for deposits, and the various categories of banks below the A plus groups, the A class, B class and lower class banks, all increasing their rates a little more than their more affluent leaders, and then coming out with proposals to increase their lending rates, which is, of course, inevitable to meet higher operational costs. But increase in lending rates might drive away good borrowers to the bigger banks whose rates are somewhat lower, leaving the troublesome ones behind. On top of all this comes the reported desire of Government to have a tight money policy, which, perhaps, will mean a slow-down of the Bill Market scheme, leaving bankers in a jam. On the one hand, they cannot call up their advances, for such a move might precipitate a crisis, and, on the other, they cannot liquidate their holdings in Government securities, as that will mean much loss, and, if they cannot borrow from the Reserve Bank of India, where will they be?

The Chairman of the Bank of Baroda seems to think that everything is so screwy in the trend of deposits,—a slow-down, a preponderance of small amounts, and more of them in the rural than in the urban centres—that banks should think of opening branches in rural areas and face the consequential increase in operational costs. I am not sure if this will be a solution to the problem, but I see one merit in it, namely, a few poky little branches in the behind the beyond may provide good punishment stations to lazybones among the staff and, even if they indulge in cries of "*Zindabad*" and "*Muradabad*," their voices may be so far away that they will not be heard.

Ambassador-designate J. K. Galbraith

Professor Galbraith is reported to have asked for his assignment as the only one in which he was interested, out of intellectual curiosity. In an off-the-record article which he wrote recently (the on-the-record policy statements will follow after his arrival in India), he criticised U.S. Agencies of the previous administration in Washington for stressing that U.S. aid should be channelled more through the private sector than through the public sector. In his view, the form of Indian economic development is an internal affair and should not be influenced, directly or indirectly, through aid programmes. For a start, this is eminently satisfactory *vis-a-vis* our concepts of mixed economy, but we must remember that Prof. Galbraith is a hard hitter and an uncompromising critic of all factors which lack a positive social purpose. While we have reason to remember his recent remarks on "Post Office Socialism," we might also note one or two observations of his in *The Affluent Society*, such as:

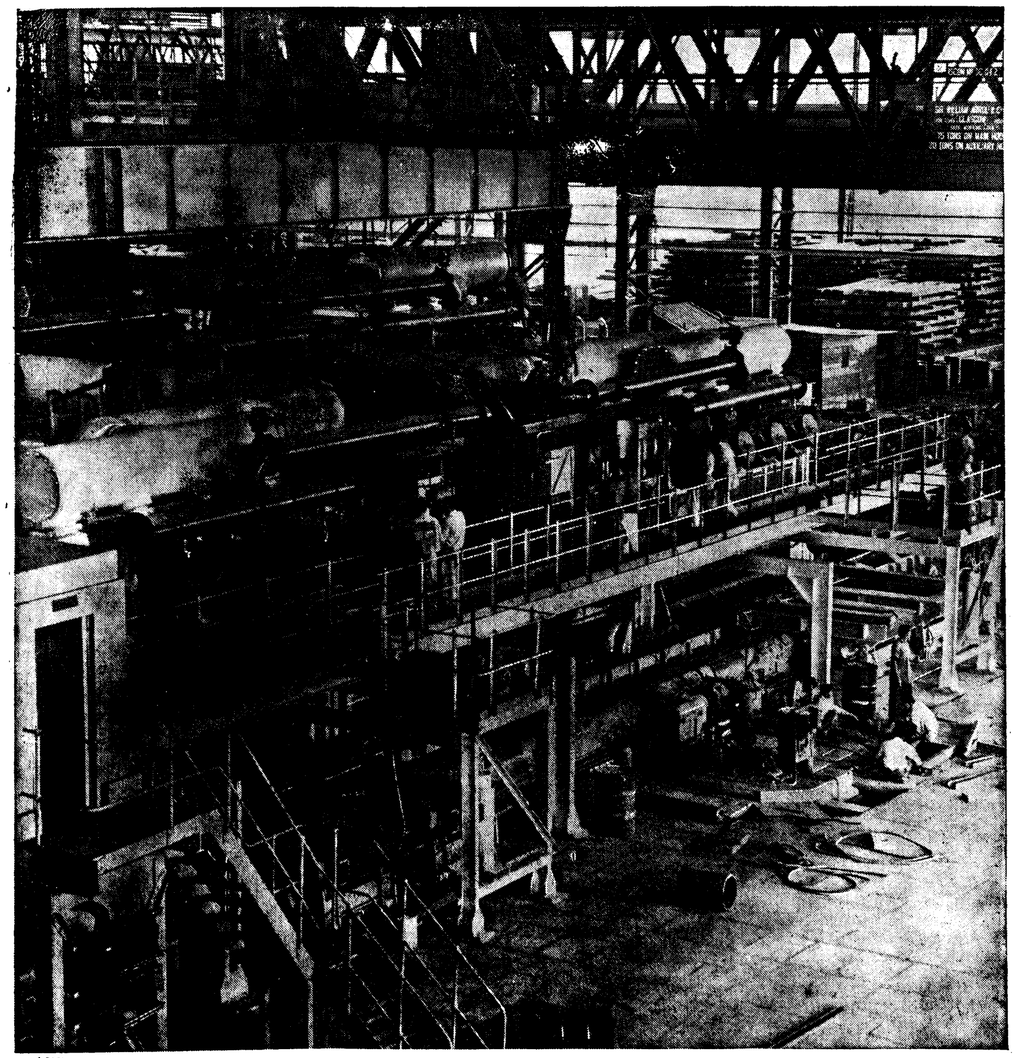
"To the landless worker in an Indian village, one of the world's most unfortunate individuals, unemployment is not even a misfortune. It is his normal fortune." (Page 107.)

"Poverty, grim, degrading and ineluctable, is not remarkable in India." (Page 333.)

Do our planners agree that our poverty is ineluctable?

A MISPRINT

In Archer's comments on "Alarm Chains in Trains" appearing in these columns last week, the word "responsibility" in paragraph three, twelfth line from the bottom should be "irresponsibility." That part of the sentence should read thus: "there would be less of irresponsibility in both sectors."



AHEAD OF SCHEDULE ONCE MORE

Durgapur's 24" Medium Section Mill has beaten the target date and has now commenced rolling. It will produce a range of products required for structural work and for the railways.

This is the fourth unit of the Rolling Mill plant at Durgapur Steelworks and the fifth and final unit—the Merchant Mill—is also well on the way to completion.

LESSONS OF 1960 MONEY MUDDLE

EUROPEAN ECONOMIC SURVEY ON EFFICACY OF INTEREST RATE POLICY

REVIEWING the trends in West European economy in the past year, the *Economic Survey of Europe*, 1960, prepared by the Secretariat of the Economic Commission for Europe (briefly referred to in our last issue) characterises the foreign exchange crisis of the U.S. as the outstanding occurrence of 1960. The crisis brought into the limelight the potential threat that short-term capital movements, which largely brought about the crisis, could pose to Western payments system and underlined the external drawback of discount rate policies which are primarily pursued for maintaining internal balance. The *Survey* is of the view that even domestic developments in the countries of W. Europe strengthened the doubts on the efficacy of interest rate policy as a means of restraining excessive demand.

The cause of the U.S. payments crisis, according to the *Survey*, was a combination of two factors, first, speculation in favour of the D-mark (and gold) against the dollar and, second, the difference between W. European and U.S. interest rates brought about by reliance on monetary policy for domestic purposes in divergent domestic economic conditions. Since both the factors happened to work in the same direction—and the flows caused by interest rate differentials reinforced the fears and hopes of the speculators—it is impossible to say, according to the *Survey*, how much of the flow of hot money should be attributed to each. The first factor, namely, speculation in favour of D-mark against dollar was a typical case of delayed reaction. Speculation against dollar provoked by the deterioration of U.S. balance of payments during 1959, developed during 1960, while the U.S. balance of payments was already improving. Few are likely to have expected a devaluation of the dollar in terms of other currencies, but there were renewed rumours of a revaluation of the D-mark and renewed hopes among seasoned campaigners for an increase in the world price of gold that the U.S. might devalue the dollar in terms of gold. By the end of the year, speculative hot money flows, induced by these speculations, had subsided after patently demonstrating the risks to which complete freedom of international financial transfers exposes the main international financial centres.

The second factor, namely, interest rates differentials, arose from the simultaneous use of an active interest-rate policy in West Germany and the U.K. to restrain domestic booms and, in the U.S., to counter the gathering recession. In W. Germany the official discount rate was raised from 2.75 per cent to 4 per cent in the last quarter of 1959 and further to 5 per cent in April 1960. In November, the rate was reduced to 4 per cent and again to 3½ per cent in January 1961. In London, the Bank rate was raised from 4 per cent to 5 per cent in January 1960 and 6 per cent in June, though the rate was lowered to 5½ per cent in October and to 5 per cent in December 1960. In the U.S., on the other hand, the discount rate was reduced from 4 per cent to 3½ per cent in June 1960 and to 3 per cent in August. As a result of these changes, during the most part of the second quarter of 1960, short-term funds invested in Treasury Bills could earn more than twice as much in London as in New York.

The *Survey* observes that the problems raised by this experience represents a new and disturbing aspect of the difficulties of reconciling external and internal balances which have been a major issue of economic policy throughout the fifties. It probes this problem deeper in the light of last year's experience and suggests its policy implications for the future.

Not a New Problem

The effect of domestic discount rate policy on international short-term capital movement, it points out, is not, in itself, a new problem. It was, for instance, implicit in the operations of the Bank Rate policy of the Bank of England even before 1914. Another aspect, namely, money "flowing uphill," led to the abandonment of traditional discount rate policy during the inter-war period. 1960, it is said, has furnished new object lessons, because discount rate policy now operates in an institutional and policy environment which is more normal than in the inter-war years, but very different from pre-1914 days.

The Bank of England's pre-1914 Bank Rate policy was an adjunct to the operation of the gold standard. A rise in the Bank Rate was prescribed for a situation of external deficit almost regardless of the state of internal balance. In such a situation, the rise in the Bank Rate would both attract international short-term funds and induce domestic monetary contractions which, on the basis of flexible costs and prices, would contribute to external balance through price adjustments. Discount rate policy thus aimed at external balance and was liable to disturb internal balance.

When attempts were made, after 1925, to revive the use of discount rate policy, according to these principles, the main difficulty, particularly after the onset of the depression, proved to be that a rise in the Bank Rate came increasingly to be interpreted as a danger signal, because, instead of attracting short-term capital, it led to disequilibrating speculation on a possible devaluation of the threatened currency. During the last few years, discount rate policies has again been used intensively, but with the important difference, namely, that its chief aim has been internal balance. As a major weapon of monetary policy, it has been used, in varying degrees, in conjunction with fiscal policy for domestic stability. In some countries, especially the U.K., the position has allowed favourable short-term balance of payments effects to be hoped for at the same time. In others, however, discount rate policy has been used just as readily, even though the effects on external balance were bound to be undesirable.

U.K's Experience

The U.K. has had to face, in recent years, a problem of domestic inflationary pressures coupled with strains on the balance of payments which were, at least in part, due to these same pressures of excess demand. In this situation, the advocates of an active interest rate policy, observes the *Survey*, were on firm ground, because, whatever its merits as a domestic policy instrument, any effects of resulting interest differentials on British balance of payments were likely to be favourable. An inflow of short-term funds attracted by higher interest rates in London, would help to cover temporary balance of payments deficits.

In W. Germany and the U.S., on the other hand, the opposite has been true. Discount rate policy in the former country has been used for domestic restraint in a situation of fundamental balance of payments surplus. In such conditions, a rise in interest rates, aimed at restraining a domestic boom, caused disequilibrating international short-term capital movements because the resulting interest differentials attracted an inflow of funds. These capital movements, by aggravating existing balance of payments pressures, provoked further speculative movements. In the U.S., the same phenomenon was experienced in reverse. Domestic monetary policy was aimed at providing some stimulus to business at home in a situation where the balance of payments was under pressure. Here, again, an active domestic interest rate policy induced disequilibrating short-term capital movements both through interest differentials and through speculation.

Divergent Effects

The effects of discount rate policy on external balance in 1960 were, therefore, in principle, favourable to the U.K. but unfavourable to W. Germany and the U.S. The short-term capital movements caused by discount rate policy, designed primarily for domestic ends, also reacted rather unfavourably on the monetary situation in all the three countries. All flows of short-term capital induced by discount rate policy tended to defeat the objects of that policy. In W. Germany and (to a less extent) in the U.K. high interest rates calculated to enforce domestic monetary restraint induced in flows of short-term funds which increased domestic liquidity. In the U.S., on the other hand, easing of interest rates, intended to relax domestic restraint, promoted outflows which directly diminished domestic liquidity and indirectly, through their balance of payments effects, inhibited resort to other expansionary measures. In other words, according to the *Survey*, the experience of the past year suggests that an active interest-rate policy for domestic objectives is liable to be rendered partly self-defeating through its effects on international short-term capital movements.

Implications For Policy

The *Survey* then goes on to examine the implications of this experience for future monetary and economic policies. An active interest rates policy designed to cause equilibrium in the domestic sphere, it maintains, has nothing to fear from the balance of payments effects of induced international capital movements if the country's external accounts (and those of other major countries) are close to structural equilibrium. A possible remedy for the problems which arose in 1960 might, therefore, be found in more determined efforts to correct structural disequilibria in the balance of payments position. No doubt, the underlying W. German-U.S. imbalance made the effects of divergent discount rate policies much worse in 1960 than they would otherwise have been. But it is unrealistic to expect, avers the *Survey*, that the balance of payments of the major trading countries will not, from time to time, exhibit temporary or even more lasting disequilibria due to factors other than domestic business fluctuations. In these circumstances, the disadvantages of short-term capital movements induced by adoption of active discount rate policies for domestic purposes cannot be avoided. Moreover, too severe domestic fluctuations are equally damaging to the case for an active discount rate policy.

The experience of the inter-war years had shown conclusively that attempts to cure severe balance of payments difficulties, caused by violent domestic fluctuations, by adopting an active discount rate policy are certainly doomed to failure, since the resultant short-term capital movements will be disequilibrating. Viewed thus, the discount rate policy for establishing domestic balance emerges as a doubly "fair weather system." Its repercussions on short-term capital movements can be dismissed as harmless, only if external imbalances are mainly due to domestic fluctuations and provided these fluctuations are not too great.

Exchange Control

A second line of approach to the problem, according to the *Survey*, is exchange control. It argues that, in principle, quite a strong case can be made out for a return to drastic exchange controls specifically to prevent disequilibrating short-term capital movements. The Bretton Woods Conference had accepted the need to prevent such movements as the one clear-cut exception to the general desirability of freedom in international trade and finance and incorporated not only the right but also the obligation to impose exchange control for this purpose in the Charter of the I.M.F. There is, the *Survey* points out, no reason to believe that the advantages of freedom for international short-term capital movements outweigh the disadvantages. Unfortunately, the post-war experience has shown how difficult it is to enforce effectively exchange control for this purpose. Whenever there are exchange controls, the traders have found effective ways and means of escaping them through "leads and lags," that is, shortening and lengthening in the credit terms on ordinary commercial transactions.

An Alternative

A possible alternative to exchange control, suggests the *Survey*, is a widening of the margins within which exchange rates are permitted to move. The solution suggested here is not equivalent to a fluctuating exchange rate, but only a slight expansion in the present rate of margin. It is said that even a margin as small as 3 to 5 per cent should do much to discourage international movements of short-term capital induced by interest differentials. Provided adequate forward-exchange facilities are made available to enable traders to escape the exchange risk, the disadvantages of such a modest degree of exchange flexibility would, in the opinion of the *Survey*, be small. If, however, both these do not commend themselves to the countries concerned, there is a third alternative. And this is that short-term capital movements in response to divergent domestic discount rate policies might be discouraged by measures designed to weaken the link between domestic interest rates and the international money markets. This, in effect, was the purpose of various steps taken by W. German, Swiss and U.S. authorities last year. Thus, in West Germany, the central bank tried to discourage the inflow of money in several ways: by the imposition of specially high minimum-reserve ratios on foreign-owned bank deposits and a ban on interest on such deposits, by prohibition of purchases of Government securities by foreign residents, and by special inducements to western German banks to leave their liquid funds abroad. The Swiss central bank, by agreement with the commercial banks, secured the imposition of three months' notice of withdrawal and a commission charge—negative interest—on foreign deposits with Swiss banks. The United States Federal Reserve Board, in the last months of 1960, tried to reduce medium and long-term rates without widening still further the international differentials in short-term rates. Yet, experience has shown that this approach too runs into practical difficulties. In so far as the flows of funds are a flight from a particular currency, attempts by other countries to repel the inflows merely concentrate the flows on centres which have not taken measures or, in the last resort, on gold. It is believed that measures taken by West German and Swiss authorities in June and August 1960 contributed to the larger flows of speculative funds to London in the summer and to the gold panic of October.

Another Question

Another question raised by the adverse repercussions of interest-induced short-term capital movements on the efficacy of domestic monetary policies themselves, the *Survey* points out, is whether the liquidity of the domestic economy cannot, to a greater degree, be insulated from the effects of international short-term capital movements. One possible way of doing this is to ensure that the monetary authorities obtain direct control, wherever possible, over any short-term funds attracted by higher interest rates. This is, in effect, the position in the U.K. where overseas short-term capital is largely invested in Treasury Bills. That too, however, does not provide a perfect solution for even such investments may have indirect expansionary effects on domestic liquidity, besides inflating the cost of interest charges which have to be borne by domestic taxpayers. Nevertheless, the *Survey* considers the price worth paying, as the balance of advantage will be in favour of the country concerned. How much can be done in these various ways to minimise the hot money difficulty is problematical. If, and to the extent that the problem remains insoluble, it presents a factor weighing heavily in the balance against reliance on active interest rate policy for internal balance.

Objections to Interest Rate Policy

One of the major objections to adoption of interest-rate policy as an instrument of restraint has been that it tends to discriminate against investment in favour of consumption, for, of all forms of consumption, only expenditure on durables is at all affected by changes in the terms of credit. Interest-rate policy has been thought to have the further disadvantage, from the point of view of growth, of tending to discriminate against long-term and development investment in favour of quick-yielding investments many of which have a much lower social priority. Even those who have acknowledged these long-run disadvantages, have argued that, in conditions of inflationary boom, not only consumption but also investment needs to be restrained. Although not unaware of the possible conflict between internal balance and growth, they believe that the short-run need to avoid inflation may be overriding. But the experience of 1960, especially in the U.K. and W. Germany, points out the *Survey*, tends to strengthen doubts about the usefulness of interest-rate policy even as a short-term measure. It, however, concedes that these doubts about the efficacy of an active interest rate policy as a positive instrument of short-term policy in no way constitute a case for stable, low-interest rate. On the other hand, it maintains that a policy of permanently "cheap money" is quite incompatible with effective control of inflation. It is suggested, rather, that interest-rate policy should be treated as an adjunct and support of direct measures of liquidity control and budgetary measures with interest rates reflecting relative changes in supply and demand in the capital market.

Non-Bank Financing

An important point brought out by the *Survey* is that, following the creation of non-bank financial intermediaries, such as hire purchase finance companies, investment banks, trusts, housing and other mortgage institutions, the new issue market, and trade credit, in the post-war years, and the consequent declining share of the ordinary banking system in total business credit, the traditional forms of direct controls on bank credit (conventional or legal reserve requirements, for example) have become less effective than they were expected to be. Invariably, such restraints have been offset by expansion of credit by non-bank financial intermediaries.

After studying the experience of the W. European countries and the U.S. which have endeavoured to restrain inflation through monetary controls in various ways, the *Survey* has drawn three conclusions: first, effective measures of direct control over the major non-bank financial intermediaries are needed; second, once these controls are available, interest rate policy can and should be relegated to its proper place as a subsidiary, and largely passive, adjunct of direct liquidity controls—and third, even with these improvements, monetary policy cannot be expected to provide an effective instrument of policy for internal balance, unless strongly supported by a determined use of fiscal policy.

FIRE — MARINE — ACCIDENT

INDIAN BANK'S GOOD PROGRESS

DIVIDEND MAINTAINED

THE progress made by the Indian Bank Ltd. (Secretary: Mr. G. S. Sundaram, Madras) during the year ended 31st December 1960 as reflected in the statement of accounts for that year, is quite satisfactory. Though its profit has not improved as sharply as in the preceding year, its gross income has registered an expansion of Rs. 18.68 lakhs to Rs. 285.67 lakhs. This suggests that its turnover must have been of a high order. The income by way of interest and discount has gone up by Rs. 13.82 lakhs to Rs. 229.67 lakhs. Commission and exchange earned has also improved from Rs. 46.91 lakhs to Rs. 51.02 lakhs. The expenditure, other than interest paid, has risen by Rs. 14.29 lakhs, and the interest paid to depositors has actually declined by Rs. 1.61 lakhs. The profit (before providing for taxation) has staged a rise of Rs. 3.48 lakhs to Rs. 40.32 lakhs. Between 1957 and 1960, the Bank's profit has almost doubled itself.

After making the essential provisions, which will be indicated presently, the Directors have decided to maintain the dividend unchanged at the level of 15 per cent (taxable) paid for 1959. The net dividend of 10.5 per cent is less than the tax-free dividend of 15 per cent and 13 per cent declared for 1957 and 1958, respectively.

The progress of the Bank since 1957 is indicated in the following comparative table.

In lakhs of Rupees

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount earned	2,29.67	2,15.85	1,80.36	1,43.17
Commission and exchange	51.02	46.91	44.15	44.15
Other income	4.98	4.22	5.54	5.54
Interest paid	1,14.87	1,16.48	1,07.76	1,07.76
Expenses	1,25.34	1,11.05	98.48	98.48
Depreciation	3.14	2.62	2.50	2.50
Profit	40.32	36.84	21.31	21.31
Provision for taxation	23.00	23.00	6.50	6.50
To reserves	4.00	1.00	7.30	7.30
To other appropriations	0.31	0.50	0.30	0.30
Dividend	12.45	12.45	8.64	8.64
	(D. 10% +B 5%)*	(D. 10% +B 5%)*	(D. 10% +B 3%)	(D. 12% +B 3%)
Carry forward	1.36	0.80	0.61	2.04

	As on 31st December			
	1960	1959	1958	1957
Capital	82.99	82.99	66.24	66.15
Reserves	88.32	84.02	98.02	1,00.00
Deposits	39,48.06	43,92.73	40,93.17	35,21.02
Borrowings from other banks	4,47.13	1,55.25		
Advances	27,26.87	28,84.67	23,14.53	19,97.54
Investments	15,01.81	14,38.03	14,19.36	10,03.54
Cash balances	4,98.90	4,99.66	6,34.92	8,18.37
Balance-sheet total	54,37.89	56,83.54	50,12.20	44,69.05
Ratio to deposits of—	%	%	%	%
Advances	69.0	65.7	56.5	56.7
Investments	28.6†	29.2†	34.7†	28.5†
Cash	12.6	11.4	15.5	23.2

* Subject to deduction of tax.
† Only unencumbered investments.

It will be observed from the above table that the Directors have substantially stepped up the amount transferred to reserve from Rs. 1 lakh last year to Rs. 4 lakhs. The Bank's building account is also credited with a larger amount, namely, Rs. 31,000, as against Rs. 20,000 in the previous year.

Coming to the balance-sheet items, it is seen on the liabilities side that total deposits have shrunk by Rs. 4.45 crores to Rs. 39.48 crores. Of these, only current deposits have gone up and that, too, only by Rs. 30.79 lakhs to Rs. 12.90 crores; fixed and savings deposits have suffered a decline of Rs. 146.83 lakhs and Rs. 71.36 lakhs, respectively. The Bank has another classification, namely, short-term deposits which, too, have contracted by Rs. 211.80 lakhs. Borrowings from other banks have risen from Rs. 1.55 crores to Rs. 4.47 crores. This has enabled the Bank to maintain its business at a relatively higher level than would have been possible with depleted deposits. Thus, on the assets side, the advances show a decline of only Rs. 1.58 crores to stand at Rs. 27.27 crores. As deposits have declined more sharply, the advances (to deposits) ratio has shown an improvement from 65.7 per cent to 69.0 per cent. The investments also have increased from Rs. 14.39 crores to Rs. 15.02 crores, but the ratio of unencumbered investments to deposits has fallen slightly from 29.2 per cent to 28.6 per cent, due to the larger borrowing from other banks.

The capital of the Bank is unchanged at Rs. 82.99 lakhs, and is surpassed by reserves amounting Rs. 88.32 lakhs. The Bank opened three new branches in 1960.

The Rs. 100 fully paid-up shares of the Bank are quoted on the Madras Stock Exchange at Rs. 170 c.d. On the basis of the current dividend, they give a net return of 6.57 per cent per annum.

SMALL RELIEF IN EXCISE DUTIES ON COTTON TEXTILES

ADMINISTRATION MADE EASIER

THE plea of millowners for relief in additional taxation on the cotton textile industry imposed in the Central Budget for 1961-62 has been conceded to some extent by the authorities. The credit for this partial success must go to the Chairman and Vice-Chairman of the Indian Cotton Mills' Federation. They held a series of meetings with the Finance Minister, the Commerce Minister and other official spokesmen at New Delhi on 22nd March and convinced them of the justness of their case. In the light of the discussions at these meetings, the Government of India has announced certain modifications in the proposals. The Committee of the Federation has fully endorsed them and taken decisions with regard to the consequential changes to be made in the price regulation scheme.

An important modification announced by the Government relates to the excise duty on cloth manufactured on automatic looms. The Finance Minister had proposed a surcharge of 25 per cent on such cloth. It has now been decided to exempt from payment of surcharge the first 70 per cent of the production of automatic looms. Further, it has agreed to refund the surcharge on the part of cloth which is exported out of the remaining 30 per cent output. One wonders whether the Government cannot abolish the surcharge a together, especially considering that the cost of installing automatic looms is pretty high. True, if the mills export 30 per cent or more of their cloth production from automatic looms, they will not have to pay any excise duty on such production. But does this not entail several administrative difficulties, since the same type of cloth woven in the same mills on automatic looms and plain looms and then exported is to bear excise duty at different rates? Fairly elaborate arrangements will have to be made not only by mills but also by shippers to show separately the varieties and quantities of cloth manufactured on automatic looms which are exported outside. So far as the consumer is concerned, the surcharge of 25 per cent on the 30 per cent of automatic loom cloth production will not lead to an increase in price, because the mills have given the assurance that they would bear the incidence themselves and not pass it on to the consumer. What this half-hearted concession amounts to is this: The Government thinks that the margin of profit on cloth made on automatic looms is higher and that it must have a part of that profit. But no attempt should be made by mills to pass on the burden to consumers. Again, the Government wants the industry to use the improved productivity arising from automatic looms for earning foreign exchange and not for pleasing domestic consumers.

Excise on Yarn

Another important modification covers yarn. The Government has agreed to compound the duty on yarn produced and consumed in the same mills for the manufacture of cloth into a duty on cloth at the uniform rate of 1.2 nP per square metre for all categories. Exported cloth will be exempted from this duty. As regards sales in internal markets, it has been decided that 0.2 nP per square metre should be borne by the mills and 1.0 nP is to be passed on by amalgamating it with the excise duty stamped on cloth. The resulting rates of duty per square metre to be stamped on grey cloth will, therefore, be at the rate of 47.7 nP for superfine, 34.6 nP for fine, 16.7 nP for higher medium, 13.7 nP for lower medium and 11.3 nP for coarse varieties.

By raising the excise duty on all categories of grey cloth thus, the Government has made the mill sector collect still more taxes from the public. May be, this is an easier method of collecting the tax than the levy on yarn, the administration of which would have caused considerable dislocation in production arrangements of a modern mill and a lot of inconvenience and harassment to the managements of mills, as well as to excise officials. And may be, the increase of 1 nP per square metre in excise duty on cloth is negligible. But the additional revenue that the Government gets will come to as much as Rs. 5.20 crores. The Government could easily net in this money if only the yarn sold by mills in the market—otherwise known as "free yarn"—were to be subjected to excise duty at an appropriate rate. This principle is already being followed in regard to staple fibre and all rayon yarns. The Finance Minister had himself stated in his budget speech that the step (imposition of specific duty on mill-made cotton yarn) would bring within the excise net hosiery and certain other fabrics which did not bear any duty. One fails to understand as to why the handlooms, the powerlooms and the hosiery, net and other knitted fabrics manufacturers should not be made to shoulder the tax burden by paying an excise duty on all the yarns supplied to them.

The Cotton Mills' Federation has decided that the mills should bear the increased cost of production through the levy of duty on coal tar dyes (15 per cent *ad valorem*), caustic soda and soda ash. There will, therefore, be no change on this account in the ex-mill prices of processed cloth, and the excise duty to be stamped on processed cloth will be inclusive of processing surcharges at the rates levied by the Government, namely, one naya paisa for bleaching, 3 nP for dyeing, printing, mercerising and other chemical processing, and 6 nP for shrink-proofing and organdie processing, all rates being per square metre. The attention of the mills has been drawn to the fact that the prices and dimensions of cloth meant for internal consumption are to be stamped in terms of per linear metre only.

Cloth Stocks

The stocks of both processed cloth and higher medium cloth lying in bonded warehouses of mills as on 28th February 1961 will have to pay duties at enhanced rates. Since, however, it is not practicable to get the stocks back from the warehouses, reopen the bales and re-stamp cloth with new duties, the mills are permitted to recover from merchants duties at new rates, and it will be in order for merchants to pass on the higher incidence to the buyer by calculating it at the rate (per square metre) of 1.8 nP on grey higher medium cloth, 0.4 nP on bleached higher medium counts, 1.2 nP on dyed and printed fabrics, and 2.4 nP on shrink-proofed or organdie processed cloth of all categories.

All this still leaves open procedural questions such as those pertaining to the date from which the Excise Department will collect yarn compounded duty on cloth, the rates to be levied on fents, and the method of recording and charging production on automatic looms. But the mills have been asked immediately to carry out the instructions regarding stamping, etc.

The foregoing account will reveal that the changes which the Government has agreed to make in the budget proposals are only of a modest nature and will not afford any significant relief to the consumer. The total additional revenue accruing to the Exchequer during 1961-62 is estimated at nearly Rs. 10 crores, Rs. 5.20 crores under yarn excise and Rs. 4.72 crores under enhanced duty on medium 'A' fabrics and processing surcharges. It is calculated that the price of cloth will be higher by an average of 3 to 4 per cent. How heavy is the incidence of excise on mill cloth has been well brought out by the Cotton Mills' Federation in the course of an interesting brochure entitled *Facts Relating to Cloth Prices* published by it a fortnight ago. The brochure gives the following figures:

(In crores of rupees)

Year	Basic excise duty including handloom cess	Additional excise duty in replacement of sales tax	Total
1955-56	28.10	..	28.10
1956-57	51.86	..	51.86
1957-58	64.00	..	64.00
1958-59	57.40	5.22	62.62
1959-60 (Revised)	48.00	20.49	68.49
1960-61 (Budget)	48.00	20.49	68.49
1960-61 (Revised)	37.85	19.96	57.81
1961-62 (Budget)	47.92	19.96	67.88

The brochure recalls that the sharp increase in the excise burden on mill cloth in September 1956 had been justified on the ground that it was necessary to inhibit the consumption of cloth till the balance between supply and demand was restored, and observes: "While no effective steps were taken to help the mills to raise their output, the increased excise, which was primarily designed to restrain consumption, was not suitably scaled down in time, although the growing food problem had begun to reduce the demand for cloth. The crushing character of the impost was belatedly realised and, when remedies were applied in the scope of a slightly reduced excise, the smooth working of the industry had already been upset. In this connection, the brochure gives the following statement relating to the revenue contributed by the mill sector to the Central and State exchequers:

	Rs. crores
Income-tax and super tax	10.49*
Excise duty on cloth	47.92
Additional excise duty in replacement of sales tax ..	10.96
Excise duty or staple fibre	0.71
Excise duty on fuel oil	0.61
Cess on cotton consumed	0.13
Sales tax on raw materials and stores consumed	4.58
Electricity duty	0.74†
Municipal taxes	1.143
Total ..	86.25

* Relates to 1958-59. † Relates to Bombay State. § Relates to Bombay City.

The brochure has sought to acquaint the public with the facts relating to cloth and yarn prices. Since enough has been written about these facts in our issue, it is unnecessary to refer to them again. Suffice it to say that the industry has practically no control over the important elements in the cost of production, namely, prices of cotton and mill stores and wage bill, and that the industry is suffering from cost inflation, which has led to low profitability. It is, therefore, finding it hard to attract new capital for purposes of rehabilitation and modernisation. The brochure has admirably highlighted, once again, the fact that the most vital need is to achieve higher production of textiles which alone will help prices to be kept at reasonable levels. This would, as the Federation's Chairman, Mr. Krishnaraj M. D. Thackersey, emphasises in his foreword to the brochure, call for a judicious allocation of production targets among the mills, the handlooms and the powerlooms.

EXCISE ON WOOLLEN GOODS

The only concession to woollen industry announced by the Union Finance Minister in his reply to the Lok Sabha debate on the budget was the grant of full drawback of excise duty on woollen yarn used in woollen carpets. And so, the imposition of an *ad-valorem* excise duty at 10 per cent on worsted yarns and 5 per cent on woollen yarns, with the exception of yarns spun from shoddy wool, remains unchanged. The woollen industry is somewhat surprised that the Finance Bill provides for the levy of excise duty on *ad-valorem* basis, whereas the Minister had clearly stated in his budget speech that "it is proposed to levy a small specific duty on mill-made cotton and woollen yarn."

In a statement issued jointly to the Press, the All-India Woollen Mills Association and the Federation of Woollen Manufacturers in India have urged the imposition of excise duty on the basis of weight (specific) and not on that of value (*ad valorem*). The acceptance of the plea, it is said, will eliminate various difficulties regarding the valuation of goods. It has been worked out by the industry that a specific duty at the rate of 23 nP per pound on worsted yarns and 4 nP on woollen yarn will fetch the required revenue of Rs. 35 lakhs. In order to avoid the difficulties of composite mills, it is suggested that the weight of yarn used in manufacturing cloth and hosiery goods by these mills should be worked back to the yarn stage from the finished weight of cloth and hosiery goods at the clearance point. The industry has also pleaded for (a) option to spinners to pay the duty on spindle shift worked (instead of on their production), as in the case of cotton, rayon and silk fabrics; (b) exemption from duty on the yarn produced from 100 per cent Indian wool on the ground that such yarn is used mainly to manufacture carpets, which are exported mostly by poor people; and (c) drawback of duty on yarn exported as well as on yarn used in the manufacture of fabrics meant for export.

On its part, the small sector of the woollen industry feels that the levy of excise duties on coarse woollen yarn and rugs will hit people with low incomes. In a letter to us, Mr. M. Ananthagets in Bangalore, puts the additional incidence of the levies at Re. 1.71 per coarse rug costing Rs. 11. This is worked out as follows:

	nP
4 lbs. of coarse woollen yarn at Rs. 2 per lb. for the manufacture of 1 rug at Rs. 5 per cent excise duty	40
Coarse woollen rug costing Rs. 11:	
Excise duty at 6¼ per cent	69
Additional excise duty at 5 per cent ...	55
Cess at 1.9 nP per square metre	7
	Re. 1.71

Since the incidence is heavy, the plea is made that coarse woollen yarn of 60 counts and below and coarse woollen rugs costing less than Rs. 13 be completely exempted from payment of excise duty.

CONCESSION TO ART SILK MILLS

As a sequel to the representations made by the art silk weaving industry, the Government of India has announced a reduction in the basic rates of import duty on art silk yarns, from Rs. 5.10 per kg. to Rs. 4.45 for yarns below 75 deniers, from Rs. 3.70 to Rs. 3.15 for 75 to 100 deniers and from Rs. 3.10 to Rs. 2.75 for yarns above 100 deniers. The countervailing import duty rates however, continue at the levels mentioned in the Finance Bill, the actual rates per kg. on the aforesaid three denier groups being Rs. 3.00, Rs. 2.25 and Re. 1.50, respectively.

REDUNDANCY SCHEME IN FINISHING

COST WILL CERTAINLY BE HEAVIER

From Our Special Correspondent

MANCHESTER, 21*st March*

MANCHESTER LETTER

EVEN those people in the trade who are closely connected with the affairs of the reorganisation scheme in the finishing sections have confessed themselves baffled by certain of the developments which have taken place since the plan was first put forward last August. The slow rate of scrapping and the response from the trade to the opportunities for disposing of surplus plant was in marked contrast to the big rush to dismantle machinery under the earlier scheme. Perhaps understandably, the Cotton Board has been forced into adopting a secretive attitude about the progress of the scheme, broken only occasionally by brief and inconclusive statements about the percentage of capacity accepted for scrapping. It was obvious at the end of January that the Government targets had barely been reached and that a great deal depended on how the realisation companies conducted the negotiations which were still proceeding with interested parties.

The fact that the margin was so narrow clearly gave those firms which were hesitating on their scrapping policy a big bargaining point in the final stages of their discussions. The realisation companies had power to offer better terms than the basic Government rates and it must be assumed that the sellers were in a very strong position. All this is amply borne out in the statement made by Mr. James Ewing, Chairman of Bradford Dyers' Association, who disclosed the latest position prior to any official announcement being made by the authorities. "To the best of my knowledge, the Government's minimum figure in each section has been achieved," he said, "and the overall minimum has just been reached. This means that plant representing approximately 20 per cent of the piece finishing industry's total capacity will be scrapped under the scheme, which is a disappointing result, as it has long been our conviction that the elimination of 25 to 30 per cent of capacity was required."

Cost to be Heavier

The cost of the redundancy plans in finishing to those remaining in the trade will certainly be heavier in ratio than those incurred by firms in the spinning and weaving branches. The same system is being adopted, whereby the Government pays two-thirds of the compensation for scrapping—but only on the basic rates. The amounts paid by the realisation companies over and above the basic rates have to be met wholly by the trade. Compensation to displaced workers is also the entire responsibility of the remaining firms, who will contribute by an annual levy. Much rests on how generous the realisation companies have been in their final efforts to induce the laggards to enter the scrapping arena. It is fair to assume that the payments made to the final few will be well above the basic rates, but Mr. Ewing's assessment of the situation is very drastic. He goes so far as to suggest that the final outcome may be that all firms continuing to operate may have to pay two-thirds of the cost of the compensation under the statutory levy, while the Government's share may be as low as one-third!

Uncertainty Over Modernisation

Some of the problems facing those responsible for making important decisions about re-equipment are pin-pointed by Mr. S. S. Hammersley, Chairman of Cotton and Rayon Spinners, Ltd., in his annual report. Although he refers specifically to the particular mills in the group, the attitude is one which must find a ready response among many other firms which are contemplating modernisation. "We have before us," he says, "the date-lines of July 1962, before which orders for new machinery must be placed, and July 1964, before which new machinery must be installed, if we are to take advantage of the Government grant of 25 per cent of the cost of re-equipment."

The factors governing the choice, as outlined by Mr. Hammersley, are:—(1) Experiments made with the latest machinery indicate that the cost per spindle is at least twice as great as standard re-equipment costs in 1959; (2) there is no knowledge of the wage rates which the mills would be required to pay to attract sufficient labour for the full utilisation of this machinery, if and when it is installed; and (3) it is known that export markets are to be subjected to increased tariff barriers but the trade does not know whether its home market is to receive any measure of protection.

Owing to labour shortages, many firms in Lancashire have been unable to build up production to the same extent as the Cotton and Rayon Spinners group, which increased its output by about 30 per cent above the previous year. "The pretext of late deliveries has been the reason assigned by some merchants and manufacturers for ordering large quantities of imported yarns and cloth from countries with low wage rates and able to obtain more efficient machinery utilisation than Lancashire can," says Mr. Hammersley. "These complaints about late deliveries are largely special pleading." Lancashire, he continues, can produce all the yarn and cloth required, but not at the low price of present imports, if the mills are restricted to working their machinery fewer hours than any other textile producing country in the world.

No Throat-cutting Urged

It may not be entirely a coincidence that two big cotton organisations have decided to hold their 1961 annual meetings in Japan during the same month. Osaka is to be the venue in May of conferences promoted separately by the International Cotton Federation, representing the millowners, and the International Cotton Advisory Committee, representing producers and distributors of the raw material. These events and their timing have received due prominence in the series of statements despatched to the All-Japan Cotton Spinners' Association from many parts of the world in its assessment of international textile conditions. The importance of the meetings, it is suggested, lies in their fundamental acceptance of the basic question: "How can the textile industries in the East and West live and prosper together without cutting each other's throats?"

Among the messages reaching Japan on this occasion is one from Dr. Mario Ludwig, Director of the International Cotton Federation, who points out that, for the first time in history, the two world "cotton parliaments," one industrial and the other governmental, will assemble in the major textile industrial nation of the Far East. Japanese cotton leaders, he adds, have in recent years given many indications of their statemanship and sound judgment. Their restraint, as far as the volume of export trade is concerned, the "mothballing" of excess capacity and the efforts to banish the copying of textile business are only a few examples.

Constructive Moves Ahead?

The ground for a "rapprochement" between the cotton textile industries of East and West is well prepared, Dr. Ludwig asserts. The climate is properly conditioned for a constructive discussion of the mutual problems and existing difficulties. Another contributor from Britain is Lord Rochdale, Chairman of the Cotton Board, who writes on the effect and progress of the reorganisation of the Lancashire trade. "The British cotton industry," he says, "because it was, up to the first world war, the oldest and largest of all textile industries, has been the most seriously affected by the adjustments which have had to be made as new textile industries emerged in what were once mainly agricultural countries. During the last two years, it has made what I sincerely hope and trust will be the last major re-adjustment which will be necessary."

Lord Rochdale, too, is convinced that the key to the future prosperity of the established textile industries of both East and West lies in fostering goodwill and an appreciation of each other's problems. "Lancashire's experience since the first world war underlines the dangers of over-expansion of a particular industry within a nation's economy," he points out and says: "With industrialisation taking place throughout the world at such astonishing speed, no country can expect more than a short-lived advantage, if it concentrates too great a part of its resources on too narrow a range of products. I believe that Japan, like Britain, has recognised this fact and I trust it will also be appreciated in the newly emergent countries of the world."

Smaller Mill Output

Output in Lancashire mills during January was distinctly lower than in the same month a year ago. Then, it will be recalled, the redundancy schemes in spinning and weaving had not been completed and every effort was being made to use all available machinery to cope with the almost unprecedented demand which had arisen during the previous autumn. The volume of yarn spun, at 14,210,000 lbs. weekly, was higher than in December but represented a fall of more than 1,000,000 lbs. on January 1960. Both cotton and man-made fibre yarns were involved in the reduction in output. A similar situation arose in the manufacturing section where cloth woven amounted to a weekly average of 37,240,000 yards. This was more than 1,500,000 yards higher than in the previous month but compared with 39,740,000 yards produced weekly in January 1960. Again the fall was equally split between both cotton and man-made fibre cloth.

Virtually no change took place in the number of operatives on the books of employers. The manpower total declined by only 30 to 184,760, but this was due to a revised method of computing the labour force in waste spinning, which has now been brought into line with the other sections in counting part-timers as halves. Slight increases were reported in the labour force in single spinning and weaving, but manpower in doubling fell to below 16,000 for the first time for many years past.

Empire Cotton Supplies

The quantity of raw cotton grown in the countries covered by the British Cotton Growing Association, which comprise the Sudan and the Commonwealth, but not India and Pakistan, showed a small decline in the 1959-60 season. The total, however, exceeded 1,500,000 bales for the second year running. The main features were a reduction of 56,000 bales in Uganda and Tanganyika and a fall of 15,000 bales in South Africa. These setbacks were to some extent offset by increases in the Sudan and Aden. Long-staple cotton grown in the Sudan, in fact, reached the highest level yet recorded, because of further areas brought under cultivation in Gezira. Crop variations, as is almost inevitable, were mainly the result of weather conditions and pests, to which all agricultural products are exposed.

Always of interest to Lancashire spinners is the minute, but highly important, crop grown in the West Indies. Continued uncertainty as to prices last season resulted in a further drastic reduction in both acreage and output of Sea Island cotton. The acreage fell from over 10,000 to barely 6,000 acres and production of only 2,236 bales was the lowest for very many years, being little more than half the previous season's crop.

Trade With South Africa

The withdrawal of South Africa from the Commonwealth is unlikely to have any immediate important effect on trading activity in the Lancashire area, according to industrialists. Although it is estimated that firms in the region did business worth over £20 million with Union buyers last year, the change in status is mainly political and will have little economic effect on the trend of transactions. Among those who believed that the position would be virtually unaltered was Mr. Frank Rostron, former President of the Manchester Chamber of Commerce and a Director of Ferranti Ltd., the Oldham electrical firm. "Trade benefits between this country and South Africa are mutual," he declared, and said: "The Union could cancel those preferential privileges which Britain enjoys but they are hardly likely to do so."

In 1960, United Kingdom exports to South Africa exceeded £150 million and goods worth £100 million were imported from the Union. Cotton cloth shipments from Lancashire mills aggregated more than 40 million yards at a value of £4,700,000. South Africa has lately been the second biggest market for Lancashire-made cotton textiles, and it is hoped that no interference with this level of shipments will take place as a result of the change in the situation.—*All Rights Reserved.*

THIS IS ONLY AN ANNOUNCEMENT, NOT A PROSPECTUS. APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS

A copy of the Prospectus together with documents required to be endorsed on or attached to under Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, West Bengal.

CONSENT OF THE CENTRAL GOVERNMENT has been obtained to this issue by an order a copy of which together with all amendments thereto is open to public inspection at the Registered Office of the Company.

LICENCE FROM THE CENTRAL GOVERNMENT has been obtained for the establishment of this new Industrial undertaking, a copy of which together with copies of all orders amending the same is open to public inspection at the Registered Office of the Company.

CERTIFICATE OF COMMENCEMENT OF BUSINESS has been obtained on 10th September 1958.

Applications will be made to the Calcutta and Bombay Stock Exchanges for permission to deal in and for official quotations for the Shares of the Company.

The subscription list will open at the commencement of banking hours on 3rd April 1961 and will close at the close of banking hours on 15th April 1961 or earlier at the discretion of the Directors but not before the close of banking hours on 5th April 1961.

The Company has been promoted by Messrs. SHREE BAIDYANATH AYURVED BHAWAN PRIVATE LIMITED, 1, Gupta Lane, Calcutta-6. They obtained for the Company a Licence dated 4th December 1956, from the Government of India under the Industries (Development and Regulation) Act, 1951 for the establishment of this new integrated Paper Mill in Bihar with a manufacturing capacity of 15,000 tons per annum of Writing and Printing Papers and Pulp required therefor.

ASHOK PAPER MILLS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

UNITED COMMERCIAL BANK LTD.

SOLICITORS

MESSRS. KHAITAN & CO., Solicitors, 1-B, Old Post Office Street, Calcutta-1.

AUDITORS

1. MESSRS. S. VAIDYANATH AIYAR & CO., Chartered Accountants, Thapar House, 124, Janpath, New Delhi.
2. MESSRS. THAKUR & CO., Chartered Accountants, 2, India Exchange Place, Calcutta-1.

OBJECTS

The main object of the Company is to manufacture and deal in all kinds of pulp, paper, paperboards and paper products, and the particular immediate object is to construct and erect near Darbhanga (State of Bihar) a factory for the purpose of manufacture and production of 15,000 tons per annum of Writing and Printing Papers and necessary Pulp therefor.

SITE

The Pulp and Paper Mills will be located at (RAMESHWARA NAGAR) about five miles to the south of Darbhanga township in North Bihar.

Land measuring about 320 acres is under acquisition proceedings as per Declaration and Memorandum of Agreement published in the Bihar Gazette Extra-Ordinary dated 10th September 1960, and will be delivered to the Company soon.

RAW MATERIALS

The main fibrous raw materials to be used are sugarcane bagasse and bamboo. Some quantities of Sabai grass will also be used.

The large number of sugar mills in the vicinity of the site of the proposed Mills can supply adequately the present and future requirements of bagasse for the Mills. The Company has entered into an agreement with The Darbhanga Sugar Co., Ltd., Lohat, situate within 25 miles from the Mills, for supply of at least 18,000 tons per annum of bagasse.

PROSPECTS

There is a great demand for paper in the country at present. The demand is likely to increase in future. Considering the capacity of the existing concerns in India the prospects for paper industry are quite bright.

START OF THE MILLS

The Mill is expected to go into production in 1963.

PROFITS

The potentiality of the Paper Industry in India for earning profits is appreciably high. Having the advantage of up-to-date plant and machinery and modern methods and processes of manufacture, the Company should have substantial savings in the costs of production. The Directors are, therefore, of the opinion that on the basis of the existing prices and market conditions, and in the absence of any unforeseen circumstances, the Company should be in a position to make sufficient profits so as to pay reasonable dividends to the Shareholders after meeting all costs and overheads.

IMPORT LICENCES OBTAINED: FOREIGN EXCHANGE ARRANGED

The Company has been granted by the Government of India Licence for import of machinery valued at Rs. 255 lakhs C.I.F. from France and Rs. 50 lakhs C.I.F. from the U.S.A. respectively.

PLANT AND MACHINERY

Messrs. ETUDES ET MATERIELS POUR L'INDUSTRIE DU PAPIER ET DE LA CELLULOSE (EMPACEL) Paris, France, reputable French Consultants and Engineers, have signed an agreement dated 23rd September 1959 with the Company for supply of major portion of plant and machinery and for the design and layout of the entire plant.

Messrs. EMPACEL have undertaken to guarantee the output of the whole integrated pulp and paper plant using a variable combination of bagasse, bamboo and sabai grass, with a 24 hours production capacity of 50 long tons of good commercial grade Writing and Printing Papers.

TECHNICAL COLLABORATION: ERECTION; PLANT MANAGEMENT

The Company has entered into a separate agreement dated 23rd Septemper 1959 with Messrs. EMPACEL for the erection and installation of the whole plant.

Messrs. EMPACEL have also undertaken to depute trained and qualified Engineers for the purpose of erection of the Mills, planning and supervising the entire erection work who will remain at the Mills till the fulfilment of the guarantees for the erection, performance and production.

FOREIGN INVESTMENTS: DEFERRED PAYMENTS

Messrs. COGEMIC have agreed to invest Rs. 30,00,000 (Rupees thirty lakhs) in the Share Capital of the Company by subscribing 3,00,000 Equity Shares of Rs. 10 each. These Equity Shares will be allotted to them against payments by them to Messrs. EMPACEL of an equivalent amount against the delivery of the plant and machinery to be supplied to the Company by Messrs. EMPACEL.

The Company has obtained reasonable terms of payment from Messrs. EMPACEL for the plant and machinery of £17,25,000 (pound sterling seventeen lakhs and twenty-five thousand) equivalent to approximately Rs. 2,30,00,000. The sum of £15,00,000 (pound sterling fifteen lakhs) equivalent to approximately Rs. 2,00,00,000 is payable in ten equal six-monthly instalments the first of which being payable nine months after the date of consignment of the last shipment of the plant and machinery. The balance of £2,25,000 (pound sterling two lakhs and twenty-five thousand) equivalent to rupees thirty lakhs will be paid to Messrs. EMPACEL by Messrs. COGEMIC in French Francs in France.

Permission has been granted by the Exchange Control Department, Reserve Bank of India, for the above foreign investment. The said two agreements of the Company with Messrs. EMPACEL and the said one agreement with Messrs. COGEMIC have been approved by the Government of India and France.

GUARANTEE OF DEFERRED PAYMENT AND LOAN OF Rs. ONE CRORE BY THE I.F.C.

The Industrial Finance Corporation of India has agreed to guarantee on behalf of the Company to Messrs. EMPACEL the payments of the instalments of the aforesaid deferred payments and of the interest thereon aggregating to £17,70,000 (pound sterling seventeen lakhs seventy thousand) but not exceeding Rs. 2,36,00,000 (Rupees two crores thirty-six lakhs).

The Company has received also the I.F.C.'s sanction for a loan of Rs. one crore and the necessary documents therefore are expected to be executed in due course. The rate of interest is 7% per annum with rebate facility of ½% in case of due and punctual repayments of the respective instalments by the Company.

CAPITAL OUTLAY

The Capital outlay is estimated as follows:—

	Rs.
1. Land, Buildings etc.	75,00,000
2. Plant, Machinery and equipments and spares including freight, customs dues, insurance, import duty, erection expenses, etc.	4,52,75,000
3. Other fixed assets	5,00,000
4. Preliminary and Issue expenses including brokerage and underwriting commission	8,00,000
5. Provision for contingencies	4,25,000
6. Working capital	50,00,000
Rs.	5,95,00,000

UNDERWRITING COMMISSION

Underwriting and/or guaranteeing commission at the rate of 2½% of the face value of the shares underwritten or guaranteed is payable to the Underwriters and Guarantor.

BROKERAGE

A brokerage at the rate of 10 nP per Equity Share and Re. 1 per Preference Share will be paid on allotments in respect of application forms bearing the Stamp of a Bank or a member of recognised Stock Exchange.

APPLICATIONS AND SUBSCRIPTION FOR SHARES

Application for Equity Shares must be made for a minimum of fifty shares or a multiple of fifty shares and application for Preference Shares must be made for a minimum of five shares or a multiple of five shares.

Application for shares must be made on the application Form enclosed with the Prospectus or on a printed copy thereof and must be delivered, accompanied by the full amount payable on application, to any of the Bankers to the Company at their Offices set out on the back of the Application Form during banking hours on any working day before the close of the subscription list. The application money must be paid separately for each application by cheque or bank draft. Money Orders and postal orders shall not be accepted. Cheques drawn on Banks at places other than those mentioned in the Application Form must include a sum (minimum 75 nP) at the rate of 25 nP per cent of the amount remitted to cover Bank commission and charges.

Copies of the Prospectus and Application Form can be had from the offices of the Brokers as mentioned herein and of the Bankers at Calcutta, Bombay, Madras, Delhi, Ahmedabad, Allahabad, Bangalore, Nagpur, Lucknow, Patna and Muzaffarpur.

N.B.—The Company is happy to announce that the land for the Mill Site has been acquired by the Government of Bihar and delivered to the Company.

PRICE OUTLOOK FOR U.S. COTTON

UPWARD TREND IN PROSPECT

COMMENTING on the reaction in mill circles to the agreement signed between India and the U.S. under which India would import 300,000 bales of U.S. cotton under P.L. 480, we pointed out, in *Commerce* dated 18th March 1961, that the mills and trade were not enthused over the prospect of importing more U.S. cotton. There are, as we pointed out, at least two reasons for the lukewarm reception to the news. First, mills do not have the same difficulty in securing ample supplies as they had at this time of year last season. Second, cotton imported under this agreement will mostly be of short staples of 1" and below which is not attractive price-wise for Indian spinners to go in for it in a big way. The current trends in U.S. cotton are, nevertheless, of interest to millowners in India as they have to compete in export markets for cloth.

The most important development of the year which has a direct effect on U.S. cotton prices, is the announcement on 22nd February, of higher support rate for the 1961-62 crop and higher export subsidy rate for U.S. cotton with effect from 1st August. Although the new support rate and the higher export subsidy will be effective only from next season, they have already influenced the price trend of American cotton in New York and Liverpool. In New York, both spot and future prices rallied soon after the announcement. The trend has been consistently upward since then, as will be evident from the following table:

(In cents per lb.)

	23-3-1961	28-2-1961	21-2-1961
CURRENT CROP:			
May	33.35	33.00	32.83
July	33.85	33.54	33.33
NEW CROP:			
October	34.47	34.10	33.80
December	34.78	34.34	34.09
New York spot	33.45	32.90	32.55

The higher support rate and enhanced subsidy have also affected the Liverpool cotton market where both spot and futures prices of cotton have displayed a firm trend. The spot price of American one inch middling cotton, a standard grade of cotton, has risen since the announcement and, at the present price of about 24.10 pence per lb., it is 65 points higher than a month ago and is the highest since December 1958.

The new support rate is 82 per cent of the January parity price of 38.83 cents, as against 70 per cent for the present season. The effect of the new rate is to raise the minimum support price by 3 cents a pound which is counterbalanced by the rise of 2½ cents in the export subsidy from 6 cents to 8.50 cents per lb. so that the export price will show a net rise of only ½ cent per lb.

These two measures, according to the Department of Agriculture, have a twofold advantage to foreign countries. First, textile mills abroad would be able to buy the same American cotton that U.S. mills use at 8.5 cents per lb. less. This will give their finished goods an advantage over the products of U.S. mills. Second, cotton cultivation in other countries is likely to be stimulated, since the cost of U.S. cotton exported, notwithstanding the subsidy, will probably be still 1.5 cents higher than the prevailing world price of 24 cents a pound.

Foreign buyers of U.S. cotton, however, do not believe that the 8.5 cents subsidy will make the export price cheaper than the domestic price by the full amount of the subsidy. This is because the Department of Agriculture did not specify whether this new subsidy will be payable in cash or whether, like the current subsidy, it will be in the form of payment in kind certificates redeemable by the holders only by purchases of C.C.C.-owned stocks. C.C.C. stocks are expected to be sold, after 1st August 1961, at 115 per cent of loan or market price as determined by the C.C.C., whichever is higher. Consequently, if the new subsidy is payable in kind only, the fact that it will be redeemable only through the purchase of cotton at 115 per cent of loan, or more, will deflate the subsidy rate to just over 7 cents per lb. only. Further, considering that only undesirable or unpopular qualities may eventually remain available with C.C.C., the true value of the subsidy, it is said, could well fall below 7 cents. To that extent, therefore, the actual export price will be higher than what the 8.50 cents per subsidy rate suggests. In view of the doubts expressed in trade circles as to the exact value of the 8½ cents subsidy to be effective from 1st August, the U.S. Department of Agriculture has given an assurance to exporters that a real value of 8½ cents will be maintained and that, if necessary, there will be a combination of cash payment and payment-in-kind in order to preserve this principle.

A clarification of several other details of the new policy is, however, yet to be made. Traders are now inclined to believe that the minimum support prices are not based on any specific percentage of the January parity figure but simply fixed *ad hoc* in cents per lb., regardless of percentage and therefore not subject to further alteration if the parity figure changes between January and August. Further, the final figure of support for middling inch has not yet been determined. The figure of 33.04 cents at average location (that is, 82 per cent of the January parity of 38.83 cents) was given as a guidance. Opinion is, therefore, still divided on the likely effects of the new policy on the price of U.S. cotton in world markets. There is, however, general agreement that prices will go up, but by how much cannot be predicted at present.

The statistical position of cotton too seems to favour an upward, rather than downward, trend of prices. With the general recovery in textile industry throughout the world, production and consumption of cotton have moved much more closely into balance in recent years. This change in the statistical position had already induced a firmer tone in cotton even before the support rate was announced. The latter has given a fillip to the upward trend which is unlikely to be reversed in the near future, unless, of course, textile activity both within and outside the U.S. slackens.

ANNOUNCEMENT

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

have pleasure to announce that, in pursuance of their objective to promote savings and encourage rural deposits

THE INTEREST RATES ON SAVINGS BANK ACCOUNT

in all their offices

HAVE BEEN RAISED

as from the 1st April, 1961, as under:—

FROM 2½% TO 3%

T. R. KRISHNASWAMI,
General Manager.

COTTON CONSUMPTION

Preliminary figures relating to consumption of cotton by mills in India show that during the first five months of the current 1960-61 season, that is, from 1st September 1960 to 31st January 1961, Indian mills consumed 2.18 million bales of cotton (of 400 lbs. each), as compared with 2.17 million bales in the corresponding period of the previous season. The following table indicates the monthly consumption of Indian and foreign cotton during the period:

(In lakh bales of 400 lbs. each)

		Indian Cotton		Foreign Cotton	
		1960-61	1959-60	1960-61	1959-60
September	1960	3.14	3.96	1.11	0.42
October	„	2.93	3.95	1.23	0.40
November	„	3.17	3.84	1.18	0.37
December	„	3.52	4.08	1.07	0.41
January	1961	3.64	3.93	0.86	0.43
	Total ..	16.40	19.76	5.45	2.03

It is evident from the above table that, while consumption of Indian cotton is steadily improving, thanks to ample supplies, that of foreign cotton is correspondingly declining. Nevertheless, foreign cotton consumption during the five-month period was more than double that in the same period last season.

JUTE GOODS OUTPUT AND DESPATCHES

FUTURE DEPENDS ON AVAILABILITY OF ADEQUATE RAW JUTE

JUST three months have passed since the current calendar year began, so that it is too premature to forecast with any degree of certainty as to what would be the level of jute goods output for the whole year. But reports available regarding the quantity of goods actually produced so far point to the possibility of a setback to production. The total output of gunnies in the first two months of 1961 is estimated at no more than 163,600 tons, which compares unfavourably with the 172,200 tons produced in the corresponding period of 1960. The declining tendency is attributable to shortage of raw jute and the high levels of prices for the raw material. There are surmises that the jute crop will turn out to be bumper in the 1961-62 crop year, but it is too early even to speculate about it. Even assuming that a much bigger crop than in the 1960-61 season will materialise, it will not be of much help for the 1961 calendar year. For mills will start receiving the 1961-62 season crop of jute only after August 1961. The present shortage of raw material will, therefore, restrain production of jute goods almost upto the fourth quarter of 1961.

During the first two months of 1960, the fall in jute goods production had occurred solely in hessians; their output was lower by as much as 16,800 tons at 56,100 tons. The fall was made good to some extent by the rise of 4,100 tons in sacking and of 3,600 tons in other manufactures; the actual production of these two categories during January-February 1961 was 88,600 tons and 18,900 tons, respectively. This improvement may not persist in the coming months, in view of the reduction in the working hours of mills having more than 220 looms from 45 to 42½ a week with effect from 30th January 1961 and the continued sealing of 12 per cent of looms. The fall in the total production of all jute goods in March and subsequent months may, therefore, be even more perceptible.

Production of Sacking Higher

The drop in the output of hessian, in particular, is a continuation of the trend noted last year (1960), when it amounted to 422,200 tons, as against 458,000 tons in 1959. If, despite this sharp setback, the total production of jute goods was higher at 1,667,000 tons, as against 1,051,500 tons, the increase was due to the marked expansion of 37,000 tons in the output of sacking and of 14,400 tons in other manufactures, as is indicated below:

Production of Jute Goods

(In tons)

	Hessian	Sacking	Others	Total	Equivalent Jute consumption (In bales)
1957	414,300	548,700	66,900	1,029,900	6,158,000
1958	407,100	598,400	72,900	1,051,500	6,145,000
1959	458,000	608,700	80,300	1,051,500	6,127,000
1960	422,200	649,700	104,200	1,667,100	6,224,000
Jan. to Feb., 1961	56,100	88,600	18,900	163,600	946,800
Jan. to Feb., 1960	72,900	84,500	15,300	172,700	1,018,000

The downward trend in the production of jute goods must not only be arrested but energetic measures should be taken to step it up as soon as opportunity permits. Otherwise, the country would, as Mr. N. L. Kanoria, the retiring Chairman of the Calcutta Jute Fabrics Shippers Association, aptly warned, in his speech at the Association's annual meeting last week, be in "very real danger" of losing the confidence of customers abroad and, worse still, losing their customers to suppliers of alternative packaging materials or to bulk handling. As the table at the end of the article shows, exports of jute goods suffered a distinct setback in 1960, the actual shipments being 771,500 tons, as against 864,300 tons in 1959. This was due, among other causes, to a steep increase in prices. How important is export business to the prosperity of the jute industry will be evident from the fact that, out of every 100 tons produced, as much as 70 to 75 tons are sold outside, thereby earning for the country quite a bit of much precious foreign exchange.

The performance of jute goods export trade during 1961 was examined in some detail by Mr. N. L. Kanoria. His analysis reveals that the major decline in hessian exports occurred in the case of Argentine and the U.S., "which," to quote him, "have kept out of the market as far as possible owing to the high prices and attempted a wait and see policy." Argentine took only 36,162 tons, as against 51,470 tons in 1959, and the U.S. 194,588 tons, as against 205,172 tons. The offtake by Canada and the U.K., two other large consumers of hessian, showed little or no change. The drop in exports was steeper in sacking goods. The loss was accounted for mainly by China, hit by one of the worst famines in its history, and, to some extent, by Burma and a few West Asian countries. The exports to Soviet Russia, United Arab Republic, Cuba and some of the West European countries were, however, better. Exports to Australia, India's biggest export market for sacking, were well maintained as compared with 1959.

In the opinion of Mr. Kanoria, the West Asian and African countries offer great potentiality for increasing exports of Indian jute goods. He says: "Once the political climate in these areas is more settled and their economic position is strengthened, by planned efforts to improve the living standards of the masses, the demand for jute goods should rise considerably. This will present a unique opportunity to Indian shippers to explore and cultivate vast new markets. But, as India no longer enjoys a monopoly in the production of jute goods, imagination and drive on the part of Indian shippers will be called for in order to capture this business."

More Urgent Now

The need for setting the export trade in jute goods on a sound and solid footing is more urgent now than even before, what with the competition from Pakistan (which is continuing to follow an active policy of increasing its jute loomage), growing resort to bulk handling and expanding use of paper and plastic bags. No effort must be spared to enhance the competitive capacity of Indian jute goods in world markets through quantitative and qualitative improvement in production, as well as maintenance of stable, reasonable prices. To quote Mr. Kanoria again:

"It is high time that a proper assessment was made of the causes of the present unsatisfactory state of affairs and long-term remedies devised. The problem is likely to be even more complicated if we go on chasing illusions and fail to take practical steps in the right direction. I venture to say that, from the long-term point of view, the jute industry and trade need nothing so much as, first, a substantial increase in the production of raw jute by improving the yield per acre; second, a guarantee of minimum prices to the cultivators so that they are given sufficient inducement and incentive to raise their output; third, the creation of a buffer stock of raw jute on which the industry can fall back in times of adversity; and, fourth, a policy of production based on anticipated demand, instead of production after demand has materialised."

UMESH YOGA DARSHAN
(First Part)
In Four Languages: English, Hindi, Gujarati and Marathi
(Author: Shri Yogiraj Umeshchandraji)
An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.
It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.
Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART
A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.
Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES
are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered
An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.
Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS. APPLICATIONS FOR SHARES ARE INVITED ON THE BASIS OF PROSPECTUS.

Licences have been obtained from the Central Government for effecting substantial expansion to this existing industrial undertaking at Calcutta for manufacture of different types of Wood Working Saws, Slitting Saws, Slotting Cutter, Tool Bits and Hacksaw Frames, of which copies are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting the licences the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the prospectus with all the relevant documents has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Subscription List will open at the commencement of banking hours on Saturday, the 8th April 1961 and will remain open upto the close of banking hours on Saturday, the 22nd April 1961. The Directors at their discretion may close the subscription list earlier but not before the close of banking hours on Monday the 17th April 1961.

MESSRS. N. L. ROY & CO., 7, Lyons Range, Calcutta.

AUDITORS

MESSRS. G. BASU & CO., Chartered Accountants, 6, Hastings Street, Calcutta.

OBJECTS OF THE COMPANY

The Company was incorporated on 14th May 1951 with the objects mentioned in the Memorandum of Association of the Company and in particular to manufacture and/or fabricate Wood Screws, Screws, Wire Nails or other allied and/or associated products including ferrous and non-ferrous articles of any size, description or specification and to prepare for the market, sell, export or otherwise deal with the same for any purpose for which the same may be used.

HISTORY OF THE COMPANY

Steel & Allied Products Ltd., was incorporated in Calcutta on 14th May 1951 as a Private Company and started with a pilot plant, the manufacture of Wood Screws towards the end of 1952. Successful operation of the pilot plant led to its triplication in 1956 after the Company had been converted into a Public Company in 1954.

The Company commenced the manufacture of Hacksaws towards the end of 1957 with Plant and Machinery purchased from Sandvikens Jernverks Aktiebolag together with their technical assistance. Towards the middle of 1960, Tool Bits was added to the manufacturing programme of the Company.

The achievements of the Company are reflected in the profits that it had earned and distributed among its shareholders—as will be apparent from the Auditors' report—in spite of restricted production during the initial stage.

IMPORT LICENCE

The Government of India has already issued Import Licences for the import of requisite Plant and Machinery for manufacture of different types of Wood Working Saws, Slitting Saws and Slotting Cutters and other machineries for the expansion of our existing capacities from Sweden, West Germany, Switzerland and Italy. Only a few of the Licences for import of machineries for these expansion projects are awaited.

PLANT AND MACHINERY AND TECHNICAL COLLABORATION

The complete Wood Working Saw Plant will be acquired from Messrs. SANDVIKENS JERNVERKS AKTIEBOLAG, the world-famous Swedish manufacturers, under a deferred payment agreement, which includes, *inter alia*, provisions for technical assistance, supervision of erection of the plant, putting the plant into operation and training of Indian personnel for which a sum of Sw. Kr. 3,52,000 is payable.

OTHER PLANT AND MACHINERIES

Additional machineries required for the manufacture of Wood Working Saws are being secured from other Swedish manufacturers as also from other sources according to the advice of Sandvikens. Plant and Machineries for the manufacture of Slitting Saws, Slotting Cutters, Metal Cutting Band Saws and Hacksaw Frames, including the expansion of our present installations for Hacksaws and Tool Bits are being secured by Direct negotiations with the manufacturers and/or importers.

BUSINESS PROSPECTS VIS-A-VIS MARKET POSSIBILITIES

The Directors have carefully weighed the prospects of the additional capital outlay envisaged for this expansion project. On a conservative estimate of sales it is estimated that the gross turnover after one year of completion of this project alone would be Rs. 40 lacs per annum approximately. It is expected that there will be no difficulty in disposing of the entire production as the demand for Wood Working Saws in the country is estimated to be well over 2 crores of rupees, more so as a result of the rise in the tempo of industrialisation. Furthermore, the high quality of products the Company expects to turn out as a result of technical collaboration with Sandvikens of international repute, can be exported to the neighbouring countries.

At present, import of some items of Wood Working Saws is restricted to 12½ per cent while other items are restricted to 50 to 60 per cent. By the time the Company is scheduled to go into full production it is expected that there will be total ban in the importation of all the different items of Wood Working Saws.

Thus in the result it can be expected that a reasonable dividend would be available to the shareholders participating in this issue.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

Minimum subscription in respect of the present issue on which the Directors will proceed to allot, is Rs. 9,55,000, being the whole of the share capital now offered for subscription.

The capital outlay required for this project will be as follows:

Building, Water Supply, Sanitation, Electric Installation and other fittings		Rs. 5,50,000
Cost of Plant, Machinery and Equipments, including technical assistance fee and installation expenses—	Rs.	
To be imported	6,30,000	
To be locally procured	6,35,000	
		12,65,000
Other Fixed Assets including cost of Furniture, Motor Car, etc.		60,000
Expenses of the Issue		25,000
Working Capital		10,00,000
	Rs.	29,00,000

SOURCES OF FINANCE		Rs.
Out of the present issue		9,55,000
Loan from Industrial Finance Corporation of India		10,00,000
Deferred Payment		2,55,000
Loan from Bank		6,90,000
(An application has already been made to the Industrial Finance Corporation of India for sanction of the above loan.)	Rs.	29,00,000

EXPENSES OF ISSUE AND BROKERAGE

Brokerage will be paid to Brokers at Re. 1 per share on allotments made in respect of applications bearing their stamps. The total brokerage so payable is estimated at Rs. 7,000.

Total expenses of the issue are estimated at Rs. 25,000 and will be paid by the Company.

INTEREST OF DIRECTORS

(1) Mr. S. K. Mazumdar, the Managing Director of the Company, is interested in (a) the remuneration payable to him as the Managing Director of the Company, and (b) the interest payable to him in respect of an unsecured advance of Rs. 19,000 made by him to the Company.

(2) His Highness Maharaja Sir Pratap Chandra Bhanja Deo, the Chairman of the Company, is interested in (a) the interest payable to him in respect of an unsecured advance of Rs. 7,08,088 made by him to the Company, (b) the rent payable to him in respect of the factory land leased to the Company, of which he is the owner and (c) the 1 per cent commission on the net profits of the Company payable to him subject to the approval of the Central Government and the Industrial Finance Corporation of India.

(3) No other Director of the Company is interested in the Company in any other manner except being a Director and/or Shareholders of the Company.

MATERIAL CONTRACT

The following contracts not being in the ordinary course of business, which are material, have been entered into by the Company:

(1) **An agreement with Messrs.** Sandvikens Jernberks Aktiebolag, **Sweden,** for sale and supply of complete Wood Working Saw Plant, providing technical assistance, supervision and guidance to assembly for installation of plant, running in of the plant, providing drawing for factory layout, training Indian Labour and technicians in India and/or Sweden and providing payment for the same on deferred basis, in terms of the memorandum of agreement entered into on 6th October 1958.

(2) Agreements with Maharaja Sir Pratap Chandra Bhanja Deo for lease of additional Factory land at 2/1, Hossain Shah Road, Calcutta, dated 12th January and 19th July 1960.

(3) Agreement with Messrs. Union Bank of India Ltd., for guaranteeing deferred payment to Sandvikens Jernverks Aktiebolag, Sweden, dated 6th May 1960.

(4) Agreement with Shri S. K. Mazumdar dated 28th January 1961 appointing him as the Managing Director of the Company for a term of five years from 1st July 1959, at a remuneration of 5 per cent of the net profit of the Company, subject to a minimum of Rs. 30,000 per annum and with all powers for conducting the business of the Company subject to the supervision and control of the Board.

INSPECTION

A printed copy of the Memorandum and Articles of Association of the Company, Licences issued by the Central Government for substantial expansion of the existing Factory, Import Licences in respect of Plant, Machinery, etc., copies of material contracts listed herein, the report of Auditors, consent of the Central Government to the appointment of the Managing Director, and copies of the Balance Sheets and Profit and Loss Accounts of the Company for the last five years can be inspected at any time on working days during usual office hours at the Registered Office of the Company from the date of publication of this Prospectus until the date of closing of the subscription list.

APPLICATION FOR SHARES AND ALLOTMENT

Application for shares must be for a minimum of 5 shares or a multiple of 5 shares and must be made in the form accompanying the Prospectus, which can be had from the Company's Bankers or Brokers or from the Company itself.

The application forms duly completed must be lodged together with the sum of Rs. 50 per share applied for, with the Union Bank of India Ltd., at any of its offices at Calcutta, Bombay, Madras, Delhi, Kanpur, Ahmedabad, Nagpur, Bangalore, Cochin, Hyderabad and Gauhati or with the Company at its registered office at 17, Brabourne Road, Calcutta-1.

The remittance should be made by cheque or draft payable on any Calcutta Bank and in case of outstation cheques bank-collection commission shall be added at the rate of 25 nP per cent. All cheques or drafts shall be crossed and made payable to "Steel & Allied Products Ltd., New Issue Account."

Allotment will be notified by despatch of an Allotment letter but Directors reserve the right of accepting or rejecting any application in whole or in part without assigning any reasons whatsoever. Should any application be rejected in whole or in part, the whole or the balance of application money shall be refunded but Bank Commission payable, if any, shall be paid by the applicant.

Share Certificates will be issued in exchange of letters of allotment within six months of the date of allotment.

Dated, the 24th March, 1961.

Notice

McKENZIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-fifth Annual General Meeting of the Company will be held on Saturday, the 22nd day of April, 1961, at 4-00 p.m. (S.T.), at the Registered Office of the Company, Sewri, Bombay-15, to transact the following business:—

(1) To consider the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st July, 1960.

(2) To declare dividends on Ordinary and Preference Shares as recommended by the Directors in the Report.

(3) To elect a Director in the place of Shri Maneklal Premchand, who retires by rotation and is eligible for re-election, and to consider and, if thought fit, to pass the following resolution as an ordinary resolution, of which special notice has been given as required by Sections 190 and 281 of the Companies Act, 1956:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Shri Kaneklal Premchand, who has attained the age of 71 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(4) To elect a Director in the place of Shri R. D. Birla, who retires by rotation and is eligible for re-election, and to consider and, if thought fit, to pass the following resolution as an ordinary resolution, of which special notice has been given as required by Sections 190 and 281 of the Companies Act, 1956:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Shri R. D. Birla, who has attained the age of 69 years and who retires by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(5) To appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,

PURSHOTAMLAL JHUNJHUNWALA,
Managing Director.

BOMBAY, 24*th March* 1961.

Note:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

(2) The dividends, when declared, will be made payable at the Bank of India Ltd., Fort, Bombay-1, on and after the 12th day of May, 1961. Dividend Warrants will be posted to the respective shareholders whose names stand on the respective registers as on 22nd day of April, 1961.

(3) Explanatory Statements as required by Section 173(2) of the Companies Act, 1956, are annexed hereto, in respect of item Nos. 3 and 4.

(4) Notice is hereby given that the Transfer Books of the Company will remain closed from 10th April 1961 to 22nd April 1961 both days inclusive.

(5) Change of address, if any, should be notified to the Company immediately.

Explanatory Statement Annexed to the Notice

Item 3 of the Notice.

Shri Maneklal Premchand, who retires by rotation and is eligible for reappointment, has attained the age of 71 years, he having been born on 7th September, 1889. Hence, he cannot be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from a member intimating his intention to move the resolution, as set out in the said item. Shri Maneklal Premchand joined the Board of Directors of the Company in 1928. He has wide and varied experience and during his association with the Company as Director, he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

Item 4 of the Notice.

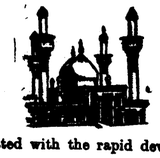
Shri R. D. Birla, who retires by rotation and is eligible for reappointment, has attained the age of 69 years, he having been born on 4th May, 1892. Hence, he cannot be appointed a Director of the Company except by a resolution, in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from a member intimating his intention to move the resolution, as set out in the said item. Shri R. D. Birla joined the Board of Directors of the Company in 1946. He has wide and varied experience, and during his association with the Company as Director he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

By Order of the Board,

PURSHOTAMLAL JHUNJHUNWALA,
Managing Director.

BOMBAY, 24*th March*, 1961.

A tale of Twenty-two Cities



From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

Registered Office: "INDIAN BANK BUILDINGS," 17, NORTH BEACH ROAD, MADRAS-1

To be placed before the shareholders at the ensuing Fifty-fourth Annual General Meeting to be held on 7th April, 1961, at the Registered Office of the Bank, "The Indian Bank Buildings," 17, North Beach Road, Madras-1.

DIRECTORS' ONE HUNDRED AND SEVENTH REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December 1960. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 40,32,080.89 and together with the sum of Rs. 80,143.18 carried from the previous year's account, makes a total of Rs. 41,12,224.07.

	Rs.	np.
3. Out of this sum, the Directors have made the following interim appropriations :—		
An ad-interim dividend at the rate of 5 per cent and a Bonus of 2½ per cent. (subject to deduction of tax at the prescribed rates) was paid which absorbed	6,22,500	00
To transfer to Sinking Fund	2,00,000	00
The Directors now recommend that the following further appropriations may be made :		
To pay a final dividend of 5 per cent. and a Bonus of 2½ per cent. (subject to deduction of tax at the prescribed rates) thereby making the dividend and bonus for the year amount to 15 per cent.	6,22,500	00
To provision for taxes	23,00,000	00
To transfer to Sinking Fund	30,988	00
To transfer to Bank's buildings account	1,36,236	07
To carry forward	41,12,224	07

4. The Bank rate remained unchanged at 4 per cent.

5. Offices of the Bank were opened during the year at Muthialpet (Madras) Neyveli, Vishakapatnam and Willingdon Island.

6. In accordance with Articles 92 and 93 of the Articles of Association of the Bank read with Section 256 of the Companies Act, 1956, four Directors, Messrs. R. Sundram Iyer, T. S. Kachapikesa Mudaliyar, Kumararajah M. A. M. Muthiah Chettiar of Chettinad and R. K. Venkatachalam retire this year by rotation and they, being eligible, offer themselves for re-election.

7. Sri K. Arunachala Mudaliar resigned his seat on the Board on 2nd December 1960. In his place, Sri C. Ramasubban was co-opted as a Director on 20th January, 1961.

We have audited he above Balance Sheet of the Indian Bank Limited as at 31st December 1960 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches other than those in in Malaya and Singapore. The accounts of the Branches in Malaya and Singapore were audited by auditors qualified under the laws of those countries and appointed by the Board of Directors before the Companies (Amendment) Act 1960 came into force. The Bank has applied for necessary exemption to the Central Government. We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit ;

(b) Such information and explanations have been found to be satisfactory ;

(c) The returns received from the Malayan and Singapore branches have been found adequate for the purpose of our audit ;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank ;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required, subject to the note appended to the Balance Sheet.

(f) In our opinion,
(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1960,
(ii) the Profit and Loss Account gives a true and fair view of the Profit and Loss for the year ended that date and shows a true balance of profit for the period covered by the audit ; and
(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and returns.

CHAIRMAN'S SPEECH

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

RECORD PRODUCTION AND PROFITS

MR. J. M. LALL ON THE ROLE OF RETAINED PROFITS

THE following is the full text of the speech delivered by the Chairman, Mr. J. M. Lall, at the Twenty-fourth Annual General Meeting of the Alkali & Chemical Corporation of India Ltd., held at Calcutta on Wednesday, 22nd March 1961:

"GENTLEMEN,

"The audited accounts and Directors' report have been in your hands for sometime, and with your permission, I shall take them as read.

"The results shown by these accounts need no emphasis from me; the figures speak for themselves as evidence of the most successful year in the Company's history so far. How have these highly satisfactory results been achieved?

Production

"In the year under review we had the benefit of a full year's production of polythene granules for the first time. The polythene plant, you will remember, has an installed capacity of 3,500 tons but, largely as a result of a methodical, scientific study of the working of the plant, we were able to achieve an output of 4,000 tons. A notable increase was also achieved in the output of paints and here again scientific study of the processes and increased efficiency in production planning were largely responsible. Even more paint could have been produced had it been possible to import a larger quantity of raw materials. We must expect this scarcity of imported materials to continue and we are, therefore, constantly seeking and evaluating raw materials produced in this country.

"While the major increases in production have come from the two plants I have mentioned, all other plants also contributed.

Sales

"Sales which, as you know, are made through our selling agents, Imperial Chemical Industries (India) Private Limited, kept pace with this increased production and the final figures achieved were Rs. 5.4 crores, as against Rs. 3.4 crores in the previous year. Throughout the year, demand for all our products was in excess of our ability to supply and a ready market exists for any increases in output which we are able to achieve this year. An important part in the development of demand for our products, and particularly such materials as polythene and high quality paints, is played by the technical service organisation of our selling agents which provides a comprehensive service to all our customers and helps them to use our products economically and with good and sound technical results.

Appropriations

"Let me turn now to the proposals your Directors have made as to the use to which the available surplus of approximately Rs. 88.5 lakhs is to be put. They have recommended allocations of Rs. 48 lakhs to reserves and Rs. 39.2 lakhs to dividends.

"Some of you may well ask why the Board have not recommended distribution of a larger part of the profits in dividends. The Board considered this matter very thoroughly and in their deliberations were guided by the following factors:

(*a*) Last year we withdrew from the dividend equalisation account Rs. 13.8 lakhs, the entire amount standing to the credit of that account. In addition, a sum of Rs. 10 lakhs was withdrawn from general reserves to make up the amount required for dividend on ordinary share capital. The Board are of the opinion that these withdrawals should now be made good and the reserves brought up to levels commensurate with the Company's activities.

(*b*) The Company's indebtedness to banks stood at Rs. 1.24 crores at the end of the year.

(*c*) We have on hand a large programme of expansion which will require about Rs. 6 crores during the next three years or so.

(*d*) A progressive but consistent dividend policy is essential for the strength of the Company and prestige of its stock in the market.

"Your Directors believe that self-generation of resources is as important for the growth of a company as it is for the economy of a country. In reaching the 'take-off' stage, as the modern economist puts it, retained profits have a very important role to play. Nevertheless, your Board are fully conscious of their duty to the shareholders and hope that you will not regard a dividend of 12 per cent, before tax, as inadequate.

"The provisions in the recent Budget, if accepted by Parliament will materially affect your Company in the current year and in the future. Apart from the reduction from 25 per cent to 20 per cent in development rebate and increases in duty on the import of plant and machinery, substantial new excise duties have been imposed on polythene and caustic soda, and the duty on paints has been increased. For the year to September 1960, your Company paid excise duty amounting to approximately Rs. 12 lakhs. For the current year, which will only have seven months of the new and enhanced duties, the excise bill will be Rs. 45 lakhs and, for a full year's operations, the total excise duty may amount to as much as Rs. 70 lakhs. As you will appreciate, no company can absorb such a large debit and the bulk of this must perforce be passed to consumers. We must realise, however, that competition in these products is growing and to increase prices to recover such a large amount from consumers is not likely to be easy.

"I would like, at this stage, to refer briefly to the delay which occurred in the payment of the half-yearly preference dividend which normally occurs in April and October of each year. The withdrawal of Section 18(3E) of the Indian Income-tax Act, 1960, raised certain difficulties in connection with the payment of preference dividends and there arose also considerable uncertainty as to Government's intentions regarding the treatment of tax-free preference dividends. In these circumstances, your Board thought it prudent to defer payment until the position was clear beyond doubt, but this clarification took a long time to achieve and amending legislation was not passed until the end of 1960. A full year's dividend has now been paid in conformity with this legislation but my colleagues and I would like to express to preference shareholders our regret at the considerable inconvenience which was caused to them.

"All our shareholders will, I think, be glad to hear that we have now been able to arrange with our bankers that all future dividends can be paid at par at any of their branches.

Prospects

"So much for the past. What of the future? Production and sales in the current year have been satisfactory so far and in line with the increased targets which we have set ourselves. Methodical studies of the working of each of our plants and improvements in preventive maintenance are enabling us to increase production still further. In our caustic soda business, Government has taken note of our difficulties arising from the substantial rise in the price of salt and has acted promptly to authorise us and other caustic makers to charge a higher price.

"I referred in my speech last year to our plan for making various chemicals for the rubber industry at Rishra at a cost of Rs. 2 crores. Work is proceeding steadily on this project.

"I have already referred to increases in output of polythene granules achieved by the application of work study techniques without any additional capital investment. Demand for polythene in India has grown so quickly that it has become urgently necessary to extend our capacity. Government has now agreed that we may expand our capacity by more than two and a half times and this expansion is being pushed forward as matter of the highest priority. As with the first plant, our technical consultants are Imperial Chemical Industries Limited, London, and I would like to record our gratitude for the prompt and effective help which they have given and are giving us, in order to bring this extra capacity into production within the shortest possible time.

"I have also referred to the substantial increases which we have been able to achieve in the output of our high quality paints. Despite this, demand within India is increasing so rapidly as a result of the country's general industrialisation, that it is urgently necessary to put in a substantial increase in capacity. This extra capacity will enable us to meet internal demand and, what is equally important, help us to expand the valuable export business in paints which we have been able to develop over the last year or so. Our proposals to increase our paints capacity are at present under discussion with the Government and we have every hope that the outcome will be successful.

"In addition to these projects we are also actively investigating plans to increase our production of chlorine, caustic soda and hydrochloric acid.

"These plans for new projects or substantial expansion of existing projects are made possible largely because of the readiness of our associates in the U.K., Imperial Chemical Industries Limited, to provide sterling finance for the import of plant and machinery.

"Shortage of foreign exchange is one of India's major problems. I know that the Government of India are doing everything possible to find a solution to this problem and are meeting with a fair measure of success in arranging Government-to-Government or World Bank loans. I would like to suggest, however, that the private sector of the economy also is playing a very important role in this endeavour. Willingness of foreign private investors to come into a country without any political pressures is indicative of the strength and stability of the economy of the country. Admittedly, the aggregate of such foreign private investment in any one of the years of the second Plan is small in comparison with governmental aids but I maintain that the real effect of this foreign private investment in these years is seen not in the quantum but in the climate it has created. Governmental thinking overseas must be influenced to quite an extent by the independent expression of confidence by the foreign private investor.

Staff and Workers

"May I turn now to the most valuable asset which your Company possesses, although you will not find it in the balance-sheet: I refer of course to our staff and workers, without whose loyal support and conscientious work, machines, no matter how efficient or well designed, can achieve nothing.

"Throughout the year we have laboured to build up a team spirit and a sense of common purpose among all sections of our employees. On the whole these efforts have been successful and the relationship between management and workers has been reasonably good. Differences there have been, and still are, but they are all, in my view, capable of a right and just solution if they are approached by both sides in a spirit of goodwill and with a genuine desire to find agreement. That such solutions should be found and found quickly is of importance not only to the employees themselves, to the Company and to its shareholders but, above these three, to the country as a whole.

"During the year we were able to complete improved amenities for our workers by building

First and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with three branches in London.

IP6051

IRRIGATION AND POWER IN SECOND PLAN

UNION MINISTRY'S REVIEW OF PERFORMANCE

IN the report for 1960-61 just issued by the Union Ministry of Irrigation and Power, there are to be found some interesting details which add up to a more or less complete picture of physical performance in the fields of irrigation and power in the second Plan period. As far as irrigation is concerned, it is claimed that, as a result of the various measures taken to speed up the utilisation of irrigation potential created by the major and medium projects of the first and second Five-year Plans, there has been a marked improvement in the utilisation of irrigation benefits towards the latter half of the second Plan period. From the figures compiled for the report, it is seen that, in the first Plan period, an additional area of 2.9 million acres was brought under irrigation by major and medium projects and that, in the second Plan period, a further additional area of 6.1 million acres will have been brought under irrigation from such projects. These figures, it is stated, represent actual utilisation in terms of net irrigated acreage which means the actual area irrigated irrespective of the number of crops grown on that irrigated area. A consolidated picture of new irrigation potential and its utilisation is given in the following table:

(In million acres)

End of year	Potential at channel outlets for gross irrigation	Utilisation	
		Gross	Net
1955-56	6.5	3.3	2.9
1956-57	7.3	4.1	3.4
1957-58	8.1	5.7	4.9
1958-59	9.6	6.4	5.9
1959-60 (estimated)	11.7	8.6	7.4
1960-61 (anticipated)	14.0	10.5	9.0

It may be worked out from the above figures that, whereas actual utilisation represented only about 50 per cent of new potential at the end of the first Plan, as much as 75 per cent of the new potential will have been actually utilised by the end of the second Plan. If the estimates of utilisation for the last two years of the second Plan turn out to be true, it will be a very creditable performance indeed. But, at the same time, it must be remembered that this performance is under major and medium projects only. If the progress of irrigation from all sources is considered, the results do not seem to be so very flattering. In this context, it may be recalled that the net area irrigated from all sources at the end of 1950-51 (that is, at the beginnning of the first Plan) was 51.5 million acres. In 1957-58, the latest year for which the Union Ministry of Food and Agriculture has just published the statistics pertaining to irrigated area, the net area irrigated from all sources was 57.1 million acres. These figures must be deemed reliable, for they are based on the returns of the State Revenue Departments which maintain the irrigation statistics and records.

It would appear from these figures that the increase in net irrigated area between 1950-1951 and 1957-58 was to the tune of 5.6 million acres. If the Irrigation Ministry's figure, in the above table, of 4.9 million acres of additional net irrigated area in 1957-58 is deducted from the said 5.6 million acres, it is found that only 0.7 million acres of additional area must have been irrigated from tanks, wells and other minor irrigation sources. This figure of 0.7 million acres, which is an index of poor performance in the field of minor irrigation, can only mean that either the vaunted progress therein is very much exaggerated or the development of new minor irrigation sources has been accompanied by the non-use or disuse of older sources. Since thus *practically* no *net* addition to the area under minor irrigation is taking place, it may be broadly estimated that the entire net irrigated area in the country in the end-year of the second Plan will be in the neighbourhood of 61 million acres only, representing just 19 per cent of the net sown area. At this rate of progress, one wonders how many Five-year Plans will be required to bring at least 50 per cent of the entire cultivated area under irrigation. It may also be noted here that the expenditure incurred on major and medium irrigation projects alone in the 10-year period (1951-61) will have come to a total of about Rs. 750 crores and that the amount required in the third Plan period for completing the major and medium schemes taken up in the first and second Plans will be about Rs. 470 crores. This latter figure of Rs. 470 crores on account of major and medium projects only is included in the total outlay of Rs. 635 crores envisaged under the irrigation head in the third Plan.

The report of the Ministry of Irrigation and Power is more notable for the succinct account it has given of the progress in the field of power generation. At the end of the first Plan, according to this review, the installed generating capacity of power plants in the country was 3.4 million kw. The second Plan, as originally formulated, provided for an increase of 3.5 million kw. in installed generating capacity. Of this, 2.9 million kw. was planned in the public sector, 0.3 million kw. in the private sector and 0.3 million kw. in self-generating industrial establishments. The Plan also envisaged the construction of 35,000 miles of high voltage transmission lines and an adequate number of transformer stations and the electrification of about 10,000 villages. This programme had, however, to undergo some changes from time to time, mainly because of the paucity of foreign exchange for import of plant and equipment, resulting in curtailment of the target by 1.2 million kw.

During the first four years of the second Plan, the installed capacity rose only by about 1,387,300 kw., bringing the total by the end of 1959-60, to 4.80 million kw. (comprising 3.87 million kw. in the public and private sectors and 0.93 million kw. in the self-generating industries). A total of 895,000 kw. will have been added in 1960-61, that is, in the fifth and last year of the second Plan. The total generating capacity added under the second Plan will thus come to 2,282,800 kw. as against the original target of 3,500,000 kw. As for transmission lines and rural electrification, it is noteworthy that 36,000 miles of 11 kV and above lines were constructed in the first four years of the second Plan and about 11,000 villages (each with a population below 10,000) will have been electrified by the end of that Plan.

As for the third Plan, the proposed power schemes, involving a total revised outlay of Rs. 1,112 crores, are expected to add about 7.6 million kw. (3.7 million kw. from hydro schemes and 3.9 million kw. from thermal schemes) to the installed generating capacity, raising it to 13.3 million kw. at the end of the Plan. The additional capacity to be created includes 2.8 million kw. to be yielded by schemes continuing from the first and second Plans. The transmission network is proposed to be extended by about 80,000 circuit miles of 11 kV and over. It is estimated that about 20,000 small towns and villages will also be electrified during the third Plan.

It may be mentioned here that power development in the 10-year period (1951-61) has involved an outlay of Rs. 720 crores in the public sector, Rs. 70 crores in the private sector and Rs. 40 crores in self-generating industrial establishments. In all, therefore, an outlay of about Rs. 830 crores was made during the 10-year period for adding 3.4 million kw. to installed generating capacity. It is a moot question whether an additional generating capacity of 7.6 million kw. can be added in the third Plan period with an outlay of no more than Rs. 1,110 crores. Further, unless the private sector's share of Rs. 50 crores or so in the proposed outlay is increased and that sector is permitted to expand existing plants and establish new ones, the country may be heading for a relatively greater disappointment than in the second Plan period when the original target of 3.5 million kw. of additional generating capacity had to be cut down to 2.3 million kw. There can be no room for complacency in this basic field of power.

SEA WATER CONVERSION PLANT IN THE CARIBBEAN

St. Thomas, a tourist centre in Virgin Islands in the Caribbean, will have, by the end of this year, a sea water conversion plant, designed by Bechtel Corporation, an international engineering firm. The plant is presently under construction and will cost $2.5 million. It is designed to remove all traces of salt from sea water and supply 275,000 gallons of perfectly pure drinking water per day at a cost of $1.75 per 1,000 gallons.

Sea water will be purified in the plant by the multi-stage flash process. In this process, the incoming salt water is heated by low pressure steam and is passed through a number of successive compartments or stages in a large evaporator tank. As the heated salt water goes from stage to stage, it losses some of its heat, dropping approximately two to three degrees (Fahrenheit) at each stage. As the temperature drops, a part of the water evaporates. This water vapour, completely free of salt, is condensed in each stage and the condensate is extracted from the final compartment. It is then pumped to a community reservoir for distribution to homes, hotels and other users.

The St. Thomas plant will use a total of 28 stages of distillation. Steam for heating the salt water will come from two 30,000-lb. per hour boilers. The plant has been designed in such a way that it will be possible to add another water treatment section at a later time without having to enlarge the Steam supply phase. When completed, the conversion plant will be very nearly automatic in operation. Only two men will be required to keep it running.

The St. Thomas plant, incidentally, will be useful in the generation of electric power as a sideline. Part of the steam which the plant will require for purification of the salt water will be used to drive a Worthington Corporation (U.S.A.) turbine-generator. This will turn out about 2,500 kw. of power for domestic and commercial use in St. Thomas and also for driving the pumps and other electrically driven equipment in the conversion plant.

PARSONS TURBO-GENERATORS

Four 500,000-kw. single-line turbo-generators are to be supplied by Messrs. C. A. Parsons and Co. Ltd. of Newcastle-upon-Tyne to the Central Electricity Generating Board of the United Kingdom, according to a Press release issued by the Company. These four machines alone are equivalent to an increase of more than six per cent. in the total capacity of generating plant at present installed in that country. The value of the order, which will include the associated feed-heating plant and turbo-driven boiler feed pumps, will be about £13 million.

This new order will make a total of six machines of 500,000 kw. capacity (and over) to be constructed by Parsons for service in the U.K. and overseas. One of these a 550,000-kw. machine, was the first of such a size to be ordered in Great Britain and is to be installed in the Thorpe Marsh Generating Station in Yorkshire. It will be commissioned early in 1963. Another 500,000-kw. machine under construction now, is intended for installation in the Colbert Steam Plant of the Tennessee Valley Authority of the United States. This machine will be the largest ever to be exported by any country.

'DRACONE' CONTAINER FOR SEA TRANSPORT

The Dracone Developments Ltd., London, has just tested in Southampton waters a 200-ft. 'Dracone,' containing 100,000 gallons of kerosene. This, the latest 'Dracone,' is a flexible, towed container for sea transport and is coated on the outside with neoprene synthetic rubber which resists abrasion, flex fatigue, sunlight, ozone, salt water and grease. It is two hundred feet long and ten feet in diameter. It is made of woven nylon, proofed on the inside with acrylonitrile rubber and coated on the outside with neoprene synthetic rubber manufactured by Du Pont Company. The nylon material, with its inside proofing and outside coating, has a thickness of 0.237 inch.

This 'Dracone' can carry any liquid that is more than two per cent lighter than sea water. There is no need for an air space to keep it afloat and thus no risk of an explosive mixture building up inside. When loaded, it has a freeboard above the water level of 22 inches and a draught of 63 inches, carrying a liquid load of 350 tons. When empty, it weighs 6.3 tons. Filling is done through one connection at the tail end and unloading is carried out by suction pump.

ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

(*Concluded from previous page*)

more quarters for them, and arranging for subsidised accommodation in the West Bengal Government's housing project at Baidyabati.

Training Schemes

"Training is, of course, of vital importance to your Company and indeed to the country as a whole at this time of rapid development. To help meet the need for trained fitters and the like we have established a Craft Apprentice Training School, the aim of which is to provide your Company with a steady supply of skilled craftsmen. We have also undertaken to train such men, on behalf of the Government of India, as a contribution to the country's needs. Our policy of appointing Indian staff to responsible management positions has been assiduously pursued and I am happy to be able to report to you that, with the exception of the Technical Director at Rishra, the entire management of that complex chemical manufacturing site is in the hands of Indian staff and they are discharging their responsibilities most efficiently.

"We had the privilege, a few weeks ago, to welcome to Rishra Mr. S. P. Chambers who is now the Chairman of Imperial Chemical Industries Limited, London. You will, I know, be pleased to hear that he was greatly impressed by all he saw at your factory and paid particular tribute to the high morale and enthusiasm which he found there.

"These then were the achievements of your Company in the year ended September 1960. The years ahead hold out a great challenge to all who are concerned with the development of a vigorous and prosperous chemical industry in this country. They will bring their problems and their difficulties but they will also, I am sure, bring great achievements. In the building of this chemical industry your Company has an important part to play. We face that future with sober confidence."

NOTE: This does not purport to be a record of the proceedings.

THE CASE FOR INDUSTRIAL PARTNERSHIP—A THEORETICAL APPROACH

By B. N. Mehrotra

THE term "worker-participation" has gained wide currency in recent years, but the idea is not a new one. It had enthusiastic supporters in the past as well. In its elementary form, it has been practised in a number of countries for the last four decades. The Second World War gave impetus to it. The emergency caused by the war highlighted the importance of human element in industry. It required a national crisis to remind us of the "man behind the wheel," but, fortunately, the interest in this aspect of labour-management relations survived the war and, practically in every country, the workers are being associated in one form or another with the general operation of the industrial undertakings. Various terms are used to represent this idea such as Joint Consultation, Co-determination, Auto-management, etc. The names borne by the agencies executing the idea and the quality and content of 'participation' also vary from country to country; but the underlying idea is always the same.

Worker-participation is expected to serve certain definite purposes in a modern society which can be broadly classified under two heads—economic and social. Economic purposes are: to increase production, enhance productivity and improve industrial relations. Social purposes are: to recognise the dignity of man as man, to save the worker from the inferiority of status, to satisfy his urge for self-expression and to make democracy really democratic. Each one of these purposes is important in itself and they are all closely related.

Productivity

Nations live as they produce. In the ultimate analysis, a nation's standard of living is determined by the amount of goods and services that it is capable of producing. Productivity is the key to industrialisation of underdeveloped countries. Productivity is a function of many factors, such as technological development, quality of raw material, efficiency of management, attitude of labour, etc. The last factor is now receiving considerable attention and a vital problem facing all managements is: How to get the most out of their men?

In the early stages of industrial revolution, the management followed the policy of coercion and threat. The workers were coerced to do the day's work under threats of severe penalties. It is not surprising that that policy worked. The worker knew that the only alternative to the employer's threatening and dictatorial attitude was unemployment and starvation. This philosophy is now completely out of date and outmoded. The workers can no longer be driven to higher output by fear of the sack. High morale and high productivity go hand in hand. In actual practice the theory of creating a fear of unemployment was discarded long ago. The inhuman treatment to which the workers were subject stirred the conscience of men. A number of factors, prominent among which were the pressure of public opinion, the awakening of labour, the recognition of the right to collective bargaining and State regulation of conditions and terms of employment drastically curtailed the arbitrary powers of management. The search for other methods to secure workers' maximum co-operation led to the 'discovery' of "incentive methods." It was believed, and rightly so, that workers will be tempted to more and better work by higher wages and other economic benefits and a number of incentive schemes and gain-sharing plans were evolved. The carrot worked better than the stick. But in the present-day world even these monetary incentives are proving inadequate for the purpose. Money is not everything. Men want to be happy in the earning of money. In advanced countries, the workers take higher wages and other economic benefits for granted and the possibility of earning a little more provides no temptation. In underdeveloped countries financial incentives still have some limited utility. Incomes are low and standard of living miserably poor. Monetary incentives, therefore, cannot be altogether ignored. Moreover, it is always better to rely on several incentives working in the same direction rather than on one single incentive.

Human Behaviour

Human behaviour in industry is influenced by a complex of economic, psychological and social forces. There are certain broad drives which profoundly influence human conduct. The more important of these are: man's sense of dignity, the need for the esteem of others, the instinct of survival, the desire for security and social consciousness.[1] The important thing is to give men a sense of purpose, a sense of status and function and a feeling of participation. Efficiency can only be obtained if the workers can be induced to accept responsibility for helping to make it efficient; but they cannot be expected to undertake that responsibility, unless they are entitled to play some part in the determination of that responsibility. If the workers realise that the industry belongs to them as much as to the owners of capital, they will throw their heart and soul into the work. This realisation can come only if they are treated as partners in industry. Where workers are totally excluded from policy-making, they may have to watch the mistakes of management and avoidable wastes as silent spectators without any right to intervene to improve matters. This feeling was expressed by a mine worker in the following words: "My employer does not give us wages and bonus simply saying his business has a deficit. If he would try to explain us the reasons for the deficit and how large it is, we would spare no efforts to solve the problem.[2] Such a situation is obviously not conducive to healthy co-operation between employers and employees.

The association of workers with management to increase production is necessary not only on psychological grounds but also on technical grounds. It provides the management with an opportunity to benefit by the collective and cumulative wisdom of workmen. It may be said that the enterprise which has in employment a number of technical experts can expect nothing new or useful from an ordinary worker. This view, however, is not correct. The man on the spot is expected to know better. "All push buttons and gimmicks of automation will never replace the robust commonsense and acumen of man—the worker." Moreover, two opinions are always better than one. No one can think of everything and it is unwise to refuse the help of several hundreds of active brains who spend their days right next to the job. "Mind your business" or "you are paid to work and not to think" attitudes damp the enthusiasm of the workmen. The result is "the sapping of the fountain of initiative and flow of ideas."

"Second Industrial Revolution"

The last decade has witnessed some important technological developments which will have profound repercussions on the whole field of productivity. I refer to the discovery of nuclear energy and the movement towards automation. Both of them go together. The significance of this development can be judged by the fact that even competent observers describe it as "Second Industrial Revolution." The movement is bound to grow, because of its manifold advantages, but, at the same time, it will raise a host of technical and human problems such as the transfer of workmen displaced as a result of the introduction of automatons to the new jobs, the retraining of men, reclassification and re-evaluation of jobs, the determination of a new wage structure, etc. In addition to these, there will be some social problems. As Elton Mayo observed, "When groups change ceaselessly as jobs and mechanical processes change, the individual invariably experiences a sense of loss." (Elton Mayo—*Social Problems of an Industrial Civilisation.*)

The future prosperity depends on a successful solution of these problems. Can the industry meet this challenge single-handed without the co-operation and consent of those who are affected by the proposed changes? Men are by nature conservative and their resistance to change is proverbial. There is always the fear of the unknown. "With no opportunity to participate in a discussion of the proposed changes or to co-operate in introducing new methods, workers will fear that their interests will suffer for a change." (Lester R. A.—*Economics of Labour.*) This resistance and fear can be toned down only by a co-operative effort on the part of labour and management. If the workers are taken into confidence, the matter is discussed with them and their opinion on the possible courses of action is sought, some solution acceptable to both parties is bound to emerge. Any attempt to solve these problems in an arbitrary manner will disturb industrial relations most gravely.

It will not be out of place to mention that, after the First World War, nationalisation of the means of production was strongly advocated as the best method for securing workers' co-operation. But the experiments in nationalisation since the Second War and the manner in which nationalised industries have been functioning have not justified this optimism. The productivity in public enterprises is not higher nor are the industrial relations better. Nationalisation has not brought about any fundamental change in the psychology of workers. The change of heart hoped for has not come about. The plain truth is that the workers' attitude to work has not much to do with ownership; it is more a function of the quality of management. If management is democratic, the relations will be cordial and the workers' morale high; if it is autocratic, there will be confusion and chaos. "Management by consent" is a more effective and more reliable method than nationalisation for securing workers' wholehearted co-operation.

An Essential Prerequisite

The establishment and maintenance of harmonious relations between employers and employees is an essential prerequisite for productive efficiency and industrial progress. Apparently, industrial conflicts arise because of a clash of interests between the two main working groups in industry, that is, owners of capital and suppliers of labour; yet, there are other aspects of the problem which are equally, if not more, important. Psychological and social factors have as much bearing on the problem of industrial relations as the economic factors; recent trends indicate that these other factors are actually getting the upper hand and the economic forces are being relegated to the background. Till very recently, it was generally believed that "industrial antagonism" was caused by economic distress. But now we find that, even in its absence, a surprising amount of unrest prevails. Discontentment is rather more among the higher paid workers. The steel workers of U.S.A.—the highest paid in the world—are reported to be the most 'aggressive.' Crosland's analysis is that "antagonism has not an economic but a sociological origin ... resentment against social inequality ... the discrepancy between the new economic and the old social status."[3] The worker of today in the developed nations has a larger income, a better standard of living and a higher economic status than was the case a decade or two ago. He is conscious of this improvement in his economic position. As a citizen also he has equal rights. But when he goes to the factory, he finds no change in his status; he is still a "wage earner." He finds it difficult to reconcile himself to this glaring contrast in his status between the hours of work and the hours of leisure. The result is resentment and discontentment. There is thus a clear case for reducing, if not eliminating altogether, non-pecuniary inequalities and removing the disparity between the workers' economic and social status. This can be done by giving the worker the status of partner in industry. Kind and sympathetic attitude is not enough. "Mere benevolence," said Lord Leverhume, "deriving from no principles other than a sentimental feeling of sympathy for the worker was worse than useless." The main thing is "to play square with them. They do not want you to do things for them; they like to join in doing things with you." As a partner, therefore, he should be given a share in the determination of managerial policies.

Workers' association with management will also eliminate an important cause of many a conflicts, that is, misunderstanding and misrepresentation. If there is no direct communication between management and workers, they are bound to believe in "a lot of rumours and are hopelessly misinformed." Acting on inadequate and incorrect knowledge, they develop an attitude of hostility. If there is a regular system through which the workers can collect information and verify facts, conflicts based on rumours and hypothetical fears will easily be avoided.

Social Purpose

It is not for economic reasons alone that worker-participation is advocated. In its social purposes, the concept is far more ambitious. Industry, as a dominant factor in our society, has a social obligation to those whom it employs.[4] An institution can justify its existence only if it is consistent with the full and free development of human personality. One of the deepest rooted of all human desires, according to Walpole, is the recognition of dignity of man as man. "It is not a matter," he points out, "of a man being accorded the privilege, although an employee, of stating a complaint or offering a suggestion, but of having a recognised responsibility for doing so, because he is an employee and therefore a joint partner in the enterprise in which he is investing not money but his life."[5] The modern economic system will be judged not merely by economic results but in philosophic terms—in terms of what it can do to the dignity of men and quality of their lives. "The workers' claim to be consulted by management," Flanders believes, "is fundamentally a moral one. It rests on its merits regardless of economic results. As human beings, they have dignity and are entitled to "self-respect." (Allen Flanders—*Trade Unions.*) Human dignity is enhanced through democratic participation in the organisation. Workers are very sensitive to anything and everything that affects their self-respect. They are highly "status conscious." For example, at the coal pits, where there were no baths, the miners complained not about the appalling physical condition but about the appalling social condition. Their (baths') absence was seen as a social stigma rather than a physical inconvenience.[6] This question of status, G. D. H. Cole considers as the most important and pleads that the worker must be rescued from the inferiority of status. "The need of the individual for status and function," observed J. A. C. Brown "is the most significant of his traits and, if this remains unsatisfied, nothing else can compensate for its lack." There is a natural desire on the part of every person to assert his individuality and make his presence felt. His feelings are deeply injured, if he is treated as if he did not matter, as if he was a mere 'cipher.'

The "mass production world revolution" has depressed the worker's technical status at work. He has become just one more "sloppily designed machine." The factory system has deprived the workman of the pleasure and pride of workmanship. The product does not reflect his personality. Repetitive and monotonous productive processes make the work dull and lifeless. The worker must be compensated for this "spiritual loss"—the loss of psychic satisfaction. If we can succeed in developing in the worker a feeling of belonging, he will certainly be compensated, partly if not wholly.

Industrial democracy is described by the Planning Commission as a prerequisite for the establishment of a socialist state. Cole expressed almost similar views when he stated "recognition of this partnership is an essential element of a socialist society resting on the basic principles of social equality. Equality in its essence is a matter more of social status than the abolition of differences in income."[7] We may, therefore, say with some justification that, if the socialist pattern is to be realised in practice in our country, industrial democracy should become a living phenomenon.

India and Underdeveloped Countries

India is a sovereign democratic republic; we want to build an economic and social order based on the values of freedom and democracy. Efforts are being made to establish democratic institutions; reliance is placed on the village *panchayat* and village co-operative to make effective village democracy possible. If properly conceived and directed worker-participation can also become an important instrument for strengthening our infant democracy. Industry is a part of democracy and democracy is made up of human beings. "No society," emphasised Cole, "can rest on a really democratic basis, unless it applies the democratic methods to its industrial as well as to its political affairs."[8] A situation in which people are called upon to obey instructions and execute policies which were framed without their consultation and consent is "basically undemocratic and wrong." Democracy means participation. It is not enough to be told that one is ruled by law and not by discretion; what matters is the feeling that he had played some part in the formulation of laws by which he is governed.

EXPORTS MOVE UP AT SNAIL'S PACE

TEA AND COTTON TEXTILES FALL

EXPORTS from India rose from Rs. 621 crores in 1959 to Rs. 635 crores in 1960—an increase of just 2 per cent., which compares unfavourably with 7 per cent. in the previous year. Imports rose at a faster pace from Rs. 887 crores to Rs. 1,000 crores, the rate of increase being as much as 13 per cent., as against just less than 3 per cent. in 1959. With the rate of growth of imports outstripping exports, the adverse balance of trade rose markedly from Rs. 266 crores in 1959 to Rs. 365 crores. In 1960, the adverse balance of trade was thus the highest, with the exception of 1957 when it had touched Rs. 383 crores. The widening of the gap last year is rather disappointing, viewed against the low level of India's foreign balances. Today, they are no more than Rs. 158 crores, as against Rs. 530 crores at the commencement of 1957. The following table shows at a glance the trend of India's foreign trade during the last five calendar years since 1956:

(Value in crores of rupees)

	Imports	*Exports*	*Balance of trade*
1960	1,000	635	−365
1959	877	621	−266
1958	864	597	−285
1957	1,026	643	−383
1956	821	619	−202

In this article, it is proposed to examine the major trends in India's export trade in 1960, based on provisional figures released by the Department of Commercial Intelligence and Statistics, Calcutta. The trend in selected items of exports is shown in Table I. The world economic activity, particularly that of India's major customers, was at a high level last year. The U.S., of course, showed symptoms of a mild business recession, but this did not have any perceptible effect on India's trade with that country. World exports rose from $101,660 million in 1959 to an annual rate of $112,500 million (an increase of over 12 per cent) by the second quarter of 1960—the latest period for which data are available. It may be interesting to note here that in 1957, the world export trade was of the order of $100,860 million.

While there has been some increase in India's aggregate foreign exchange earnings in 1960, some of its staple exports, such as tea, cotton textiles, raw jute and cotton, suffered a setback. This loss was, however, made good by handsome gains attained by a wide range of other commodities and manufactures. Among those items which put on a better performance, mention may be made of jute manufactures, iron ore and concentrates, manganese ore, spices, cashewnut kernels, chemicals, machinery and equipments, footwear, etc. Earnings from the export of jute manufactures (including jute yarn, bags, webbings, carpets, etc.) went up from Rs. 111 crores in 1959 to Rs. 142 crores in 1960. Thus, jute goods have stolen a march over tea to rank as India's largest foreign exchange earner. The larger earnings were the result of higher prices rather than any increase in quantity exported. In fact, there was a decline in the volume of exports by 6 per cent over the previous year. The rise in prices of various jute goods, varying between 30—50 per cent, was the result of an inflation in the price of raw jute caused by a pronounced fall in jute crop. There was a notable improvement in the exports of iron ore, that is, by about Rs. 3.4 crores to Rs. 16 crores, thanks to larger offtake mainly by Japan and by Czechoslovakia under long-term contracts. Exports of manganese ore rose modestly from Rs. 13 crores to Rs. 15.4 crores. Among spices, shipments of pepper went up by as much as 150 per cent to Rs. 10 crores, following shortage in world supply on account of lower production in Ceylon and Indonesia. Coffee fared better, unlike in the previous year, despite increased competition from Brazil and East Africa in world markets. Cashew kernels, one of India's leading dollar earners, brought foreign exchange to the tune of Rs. 18.4 crores, as compared with Rs. 15.2 crores in the previous year. Exports of raw tobacco were higher by Rs. 1.8 crores at about Rs. 15 crores.

Another important feature of export trade was the marked rise in export earnings from petroleum products, that is, from Rs. 3 crores to Rs. 4.7 crores. Among vegetable oils, exports of castor oil made much headway from Rs. 4.9 crores to Rs. 8.9 crores, in contrast to the downward trend in groundnut and linseed oil. Chemicals as a whole fetched Rs. 7 crores in 1960 in foreign exchange, an increase of about Rs. 2 crores over 1959. India's light engineering goods, such as diesel engines, electric fans, sewing machines also made a larger contribution to export earnings, but their share in the total exports continued to be small. Exports of iron and steel staged an impressive rally from Rs. 2 crores to Rs. 8 crores, thanks to the commencement of production in the new steel plants in the public sector.

Among the commodities, which showed a downward trend in their exports, tea and cotton textiles stand out prominently. The setback in teas was due mainly to a smaller offtake by the U.K., India's largest customer, following keen competition from Ceylon and East Africa. The fall in production of tea in North India was also a contributory factor. Export of cotton textiles, in terms of quantity, was only about 670 million yards, which is quite disappointing considered against the background of the second Plan export target at 1,000 million yards. Exports of raw cotton and raw jute were distinctly lower, on account of a marked decline in production and increase in domestic demand. The value of exports of mica came down, despite some increase in its volume, largely as a result of growing pressure of Brazilian supplies in world markets. Exports of sugar fell from Rs. 2.5 crores to Rs. 1.7 crores. The situation in respect of sugar may be recouped this year, if the efforts now being made for securing an import quota from the U.S. bear fruit.

Exports of groundnut oil suffered a perceptible setback, owing to the failure of the incentive scheme to work as in the previous year, following a pronounced rise in prices of seeds, oilcakes and also oils within the country. Linseed oil prices were out of parity with world prices during the major part of the year, and, consequently, its exports, too, declined considerably. Similarly, hides and skins, wool, silk, fish, cement, coal, paper and paperboard also sustained a fall.

Country-wise, India's major customers, such as the U.K. and the U.S., bought more than they did in 1959, thereby making good the fall recorded in trade with several other countries. The U.K. continued to be the largest market for India's goods. Its purchases from India were worth Rs. 174 crores (including re-exports) in 1960 (27 per cent of total exports), as against Rs. 172 crores in 1959. India's shipments to the U.S. rose from Rs. 95 crores to Rs. 102 crores. Japan imported from this country goods worth Rs. 34.28 crores which were almost the same as in 1959. Soviet Russia's imports from India were a shade lower at Rs. 29.94 crores, as compared with Rs. 30.05 crores. India's exports to West Germany were almost unchanged having gone up by just Rs. 3 lakhs to Rs. 19.56 crores.

Among Asian countries, India exported more to Pakistan, Afghanistan, Iran, Saudi Arabia, Iraq, Philippines, Indonesia, as also Japan. But it is disconcerting to find that most of India's immediate neighbours, such as Ceylon and Burma, as also Malaya, Singapore, Cambodia, Thailand, South Viet-Nam and Democratic Republic of Viet-Nam should have bought less merchandise from this country. The declining trend in exports to these countries is due mainly to restrictive import policies pursued by most of them, apart from keen competition from China, Japan and also the U.K. and West Germany in a wide range of products. India's exports to East Africa, Sudan and Ethiopia, too, were lower. Some of the African countries, such as United Arab Republic (Egypt and Syria), Ghana and Nigeria, however, imported more from India.

Table II on this page gives a detailed picture of the pattern of destination of India's exports in 1960, as compared with the previous year. It will be noted therefrom that about four countries, namely, the U.K., the U.S., Japan and Russia, in that order of importance, accounted for about 50 per cent of India's total exports. If we include the next half a dozen importers, namely, Australia, West Germany, Ceylon, Canada, the U.A.R. and Pakistan, the proportion goes upto 65 per cent (for all the first ten countries together). The balance of 35 per cent is shared by innumerable countries in Asia, Africa and Latin America.

TABLE I

Exports (including re-exports)

(Value in rupees lakhs)

	1960	1959
Food Materials	193,16	193,61
Of which : Tea	120,04	126,39
Coffee	6,70	6,25
Live animals and meat	1,03	93
Eggs	37	43
Fish	4,25	6,09
Fruits and Vegetables	24,71	21,01
Sugar	1,67	2,54
Oilseed Cakes	16,12	19,46
Spices (including pepper)	17,06	10,19
Pepper	10,11	4,27
Cashewnut Kernels	18,38	15,18
Tobacco	15,67	13,85
Of which : Tobacco unmanufactured	14,63	12,85
Tobacco manufactured	1,04	1,00
Manufactured goods	287,19	246,19
Of which : Textile yarn and fabrics	215,18	201,45
including, Cotton yarns	4,44	5,43
Cotton fabrics	58,43	61,56
Woollen fabrics	41	61
Jute manufactures	141,98	110,75
Iron and Steel	8,19	2,05
Cement	72	99
Glass and Glassware	27	25
Rubber manufactures	38	25
Paper and paperboard	61	72
Metal manufactures	2,24	190
Crude materials	111,28	116,85
Of which :		
Raw Cotton	10,78	16,37
Hides and Skins	10,18	10,70
Wool and other animal hairs	8,67	12,23
Silk	37	28
Jute cutting and waste	24	3,11
Oilseeds, nuts and kernels	4,37	2,62
Mica	9,81	10,81
Iron ore and concentrates	16,31	12,03
Iron and steel scrap	5,37	4,61
Manganese ore and concentrates	15,39	12,74
Mineral Fuels	5,78	7,79
Of which :		
Coal	4,09	4,76
Petroleum products	4,69	3,04
Animal and Vegetable Oils	11,09	14,77
Of which :		
Vegetable oils	9,92	13,85
including, Groundnut oil	25	5,74
Castor oil	8,85	4,92
Linseed oil	100	2,66
Chemicals	6,97	4,88
Chemical, elements and Compounds	93	68
Essential Oils	3,82	2,16
Pigments and paints	29	26
Medicinal products	1,02	84
Miscellaneous Chemicals (including plastics)	19	37
Machinery and Transport	6,06	4,15
Of which :		
Electric machinery, etc.	1,12	72
Other Power-generating machinery	3,59	3,06
Metal working machinery	6	8
Road motor vehicles	16	11
Bicycles and parts	8	12
Aircraft	1,97	34
Textile machinery	19	20
Diesel engines	25	14
Electric ceiling fans	67	32
Sewing machines	43	32
Miscellaneous Manufactures	11,60	11,40
Of which :		
Footwear	3,14	2,94
Furniture and fixtures	27	37
Total (including others)	634,87	620,73

BIRKMYRE BROTHERS LIMITED

JUST OUT

INVESTORS ENCYCLOPÆDIA

1960 EDITION

Contains details of a precise nature of most of the public limited companies in India, giving details about the date of registration, nature of business carried on, managing agents' name and address, directors and their share qualifications, details of capital and shares, capital history, share registration fees, names of auditors, period to which the accounts close, date of meeting, summary of latest balance sheet, progressive statement for last seven years giving information about taxation, depreciation, allocation to reserves, net profit, dividend declared, amount carried forward and highest and lowest prices. Also information of a general interest, viz., Government and Public Bodies Loans, Income and Super Tax, Agricultural Tax, Estate Duty, Capital Control Order, Promotions of the companies under the new set up and various other information of general interest, maps showing the location of various industries in various states.

It is also included in the above year book, the details about the procedure involved in applying for industrial license, both at State and Central Government levels, incentives available for foreign investment in India, double taxations relief, details of foreign capital participation and industrial classification of Government-controlled companies.

Industries are classified as under :—

1. Banks
2. Cements
3. Coal
4. Electrics
5. Engineering
6. Insurance
7. Investment Trusts
8. Jute
9. Mining and Chemicals
10. Miscellaneous Companies
11. Paper Mills
12. Plantings
13. Public Sector
14. Railways
15. Sugar
16. Shipping
17. Textiles
18. Vegetable Oils
19. General Information

For easy reference purpose, there are sectional thumb indexes. The sections are also interspaced with charts, graphs, diagrams and maps.

The book is thoroughly revised, enlarged and re-written from page to page.

Printed on thin Bible paper. Size: Crown Octavo.

Price **Rs. 30** (Postage Rs. 7), foreign **$10**.

Copies available at:

ONLY A MODEST RISE IN HINDUSTAN LEVER'S PROFIT

DIVIDEND SLIGHTLY HIGHER

A TYPICAL example of the effects of cost inflation is provided by the financial results of Hindustan Lever Limited (Chairman: Mr. S. H. Turner, Bombay) for 1960. The Company, as readers are aware, is one of the largest industrial concerns in India, producing soaps, detergents, *vanaspati* and several kinds of toilet preparations. During the twelve months ended 31st December 1960—the fourth year since the conversion of Lever Brothers (India) Private Limited into the present public limited company—its turnover jumped up by Rs. 436.67 lakhs to reach the impressive level of Rs. 46.22 crores. But as the cost of raw materials and other expenditures, including excise duty, also recorded sharp rises of Rs. 345.18 lakhs and Rs. 79.78 lakhs respectively, the gross profit shows only a very modest expansion of Rs. 11.19 lakhs taking it to Rs. 515.33 lakhs. In other words, an increase of nearly Rs. 4½ crores in sales has meant an increase of only Rs. 11 lakhs or a little over 2 per cent in gross profit. This increase is so small that there is nothing to feel enthused about it. Accordingly, this journal is inclined to feel that the recent rise in the market value of the Company's share is unmerited. There is no sign of the cost inflation being curbed, let alone reversed. On the contrary, the latest increase in the excise duty on toilet and *vanaspati* will only strengthen the cost inflation.

After allowing for the essential allocations: depreciation at Rs. 35.33 lakhs (as against Rs. 42 lakhs in the previous year) and taxation at Rs. 208 lakhs (Rs. 208.50 in 1959), the net profit works out to Rs. 272 lakhs. This represents an increase of Rs. 18.36 lakhs or just 7 per cent over that for the preceding year. The improvement would have been much less but for the cut of about Rs. 7 lakhs in the amount set apart for depreciation. The net profit, it will be interesting to note, is equal to no more than 6 per cent of sale proceeds. In fact, it is a shade less.

As for the appropriation of profit, the Directors have reduced the provision for staff provident fund and gratuity from Rs. 19.29 lakhs in 1959 to Rs. 17.48 lakhs. The transfer to development rebate reserve is also lower at Rs. 5 lakhs, as compared with Rs. 9 lakhs set aside last year. The provision for contingencies, which, a year ago, had absorbed as much as Rs. 17 lakhs, has received nothing this year. Thus, as compared with 1959, the total amount ploughed back by the Company to the different reserves is substantially lower by Rs. 22.81 lakhs. The distribution to the shareholders, however, has been stepped up from Rs. 133.68 lakhs to Rs. 144.82 lakhs, to give a taxable dividend of 26 per cent. as against the taxable dividend of 24 per cent declared in 1959. The net dividend works out to 18.2 per cent. and compares favourably with the tax-free dividends of 14 and 15 per cent for 1957 and 1958 respectively. One may wonder as to why the Company has raised the dividend level while reducing the share of profit ploughed back. The answer probably lies in the fact that it comes within the mischief of Section 23A of the Income-tax Act. This may be a good thing for Indian shareholders who are in a small minority, but it is a fortuitous factor and provides no protection against lean years.

The following table would give the reader a clear idea of the progress of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	46,11.80	41,75.19	36,72.99	33,19.24
Other income	10.72	15.45	13.30	9.71
Consumption of raw materials	30,04.52	26,59.34	23,86.98	21,87.23
Other expenditure	11,31.76	10,31.97	9,38.65	8,51.00
Of which—				
Salary bill	278.96	256.38	241.55	216.37
Excise duty	269.72	257.92	257.92	236.22
Gross profit	515.33	504.14	468.66	393.68
Provision for—				
Depreciation	35.33	42.00	34.66	34.34
Taxation	208.00	208.50	177.75	138.92
Net profit	272.00	253.64	151.14	122.42
To reserves	5.00	9.00	8.72	7.28
Provision for provident fund and gratuity ..	17.48	19.29	13.79	15.32
Provision for contingencies	..	17.00	..	..
Dividend	144.82	133.68	85.68	77.46
	(26%)*	(24%)*	(15%)	(14%)
Retained in business ..	104.78	74.67	44.06	22.34

* Subject to deduction of tax.

How the various products manufactured by the Company fared during the year will be evident from the following comparative figues:

(In lakhs of rupees)

	1960	1959	1958	1957
Soaps and detergents ..	19,05.36	17,83.27	16,24.00	14,31.00
(Quantity in tons) ..	(85,027)	(75,072)	(70,894)	(64,775)
Vanaspati, margarine edible fats, etc. ..	22,34.88	20,46.02	17,71.00	16,50.00
(Quantity in tons) ..	(82,286)	(82,432)	(74,436)	(69,672)
Toilet preparations ..	97.40	86.12	73.00	64.00
Glycerine and other products	167.72	149.51	122.00	107.00
Groundnut cake	116.50	114.19	83.00	67.00

It will be seen that soaps and detergents and *vanaspati* and edible fats are the principal lines of business for the Company. In both, there is keen competition and this is bound to persist for as long a period as one can foresee, a point which investors in the Company's shares will do well to bear in mind.

During the year under review, however, the Company made a substantial recovery in sales of soaps and other detergents. Due to severe competition, which Hindustan Lever had to face from its rivals, the growth in the sales of soaps and other detergents in the previous year was less marked. Another notable feature, in this connection, is the continued adoption by the Company of new techniques of sales promotion and marketing. It has just introduced, for instance, a new range of colours for Lux toilet soap. This change has been made to adjust the Company's product to the changing preferences of the consumers. In respect of *vanaspati*, the higher turnover has not benefited the Company much, because the high prices of raw materials have substantially cut down the profit margin. Hair oils, talcum powder and shaving sticks, however, made rapid progress.

The export performance of the Company was, however, not very bright. The only items whose exports displayed a most remarkable expansion were oilcake, oils and hardened groundnut oil. Their exports went up from Rs. 2.5 lakhs in 1959 to Rs. 17 lakhs. The exports of soaps and toilet preparations were maintained unchanged at their previous level, bringing in foreign exchange equivalent to Rs. 4 lakhs. In the case of *vanaspati*, the exports of the Company actually suffered a decline from 1,721 tons valued at Rs. 41 lakhs to 1,719 tons valued at Rs. 35 lakhs. Exports of glycerine registered the sharpest contraction, from 1,749 tons to 834 tons, bringing down the foreign exchange earned from Rs. 40 lakhs to Rs. 21. lakhs.

The following extracts from the Directors' report will give some idea of the Company's expansion programme:

"The Company has already obtained a licence for the manufacture of skimmed milk powder, ghee and casein. Experimental collection of milk has been started at three centres in the Etah region in Uttar Pradesh where the factory is to be located. Other preparatory work for the setting up of the factory is also making satisfactory progress.

"Investigations were made during the year regarding the possibilities of manufacturing animal feeding stuffs and, based on the findings, a pilot project has been started at Bombay since the close of the year.

"The pilot project at our Ghaziabad factory for dehydrated peas did not make the anticipated progress during the year due to the failure of the crops in the experimental farms. However, we have gained additional valuable experience in regard to all aspects of this project and we intend to proceed with it during 1961 and bring it to the planned semi-large scale."

The aforesaid plans have been one of the factors used to boost the market value of the Company's shares. But these, by their very nature, are unlikely to turn out to be the major lines of the Company's business for at least quite a few years to come.

The Company has made progress with the construction of the new head office building at Bombay, the new Engineering building at the Calcutta factory and the expansion of the *vanaspati* factory at Ghaziabad. The total estimated cost of the capital projects approved during 1960 was Rs. 40 lakhs, but the actual expenditure on projects of a capital nature exceeded this sum by Rs. 9.4 lakhs. This brings the gross block to Rs. 6.19 crores. As the depreciation provided so far amounts to Rs. 2.33 crores, the net book value of the fixed assets is Rs. 3.86 crores. The current assets aggregate Rs. 12.61 crores (loans and advances Rs. 85.97 lakhs, stores and spares Rs. 54.83 lakhs, stock-in-trade Rs. 8.27 crores, sundry debts Rs. 1.60 crore, cash Rs. 1.87 crore) and more than adequately cover current liabilities and provisions standing at Rs. 6.41 crores. The paid-up capital of Rs. 5.57 crores is supplemented by reserves and surplus amounting to Rs. 4.49 crores. The Company's Rs. 10 fully paid-up shares are quoted currently at Rs. 50.70 *cum-div.* On an *ex-div.* basis, the latest quotation provides a net yield of 3.72 per cent per annum. It may be noted in passing that, as 90 per cent of the Company's shares are held by Unilever Ltd., the floating supply of its shares in the market is always restricted. Since the scrip is regarded as a blue chip with growth prospects, it is strongly fancied by investors, thereby imparting to it a strong element of scarcity value. Consequently, the low yield on it is compensated by ready marketability.

BRADY ENGINEERING'S DIVIDEND STEPPED UP

The working of the Brady Engineering Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co. Ltd., Bombay) for the year ended 31st December 1960 was satisfactory. The proceeds from engineering work, which had remained steady since 1957, reveal a distinct improvement during the year, being Rs. 16.25 lakhs, as against Rs. 10.28 lakhs in the previous year, a rise of 58 per cent over the year. This satisfactory performance was due to a substantial rise in the output of pulley blocks and elevating trucks. The production of other lifting equipment is expected to improve further during the current year. Better results are also due to the change in the nature of work since 1959 from general engineering to a more specialised nature.

The Company, which has a well-equipped modern machine shop and foundry, has ample orders in its books. This is reflected in higher proceeds of work done and closing work-in-process. The latter item shows a rise of over 200 per cent to Rs. 3.07 lakhs. The increase in activity can also be seen from the raw materials and stores consumed which in 1960 amounted to Rs. 8.56 lakhs, as against Rs. 3.70 lakhs in the previous year or a rise of 131 per cent in a year. Other expenses have risen by Rs. 0.84 lakh to Rs. 5.46 lakhs mostly on account of a rise of Rs. 0.64 lakh in salaries and wages. The gross profit has staged a rise of 79 per cent to Rs. 4.34 lakhs. Out of the gross profits, larger provisions have been made for depreciation and taxation at Rs. 0.94 lakh and Rs. 1.32 lakh, as against Rs. 0.75 lakh and Rs. 0.37 lakh, respectively, in the previous year. Even so, the net profit has risen from Rs. 1.13 lakh to Rs. 1.74 lakh. The better results have prompted the Directors to step up the dividend from Rs. 4 per share, taxable, to Rs. 5.50 per share, taxable.

The following comparative table provides at a glance the progress of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Proceeds of engineering work ..	16.25	10.28	10.04	10.88
Work-in-process	3.07	1.01	0.71	0.58
Raw materials and stores consumed	8.56	3.70	2.47	2.92
Other expenses	5.46	4.62	3.79	3.35

† Subject to deduction of tax.

The gross block of the Company is Rs. 21.70 lakhs, on which a depreciation of Rs. 8.08 lakhs has been provided so far, bringing the net block to Rs. 13.62 lakhs. During the year, net additions to block account amounted to Rs. 1.47 lakh. The paid-up capital of the Company stands at Rs. 20 lakhs. It may be recalled here that the Company made a call of Rs. 25 per share in April 1959 by raising the paid-up value of a share from Rs. 60 to Rs. 80. Reserves and surplus stand at Rs. 3.10 lakhs. The balance-sheet of the Company presents a sound picture, inasmuch as the current assets at Rs. 16.17 lakhs are well over current liabilities aggregating no more than Rs. 6.51 lakhs.

The Directors report that the completion of First Prover Bread plant which was expected during 1960 was delayed, owing to non-receipt of essential components from the U.K. It is, however, expected to be ready by the middle of the current year. The Company at present is in possession of good orders and the outlook for the current year is promising, provided no unforeseen difficulties arise. Notwithstanding the improvement witnessed last year, it will still be true to say that the progress made by the Company has been clearly slow as compared with the achievements of the vast majority of other engineering companies in this country. Although the Company has been in existence for the last fifteen years, its sales are of modest proportions and have not reached even the level of its paid-up capital. Further, the paid-up capital itself remains partly paid upto now, whereas other engineering companies have had to supplement their fully called up capital by borrowing heavily and taking right chances to finance their rapidly expanding activities.

The Rs. 60 partly paid-up shares, which had remained neglected around Rs. 70 until recently, have shot up to Rs. 84.50 *cum-div.* On an *ex-div.* basis, the yield works out to 4½ per cent, taking the net dividend at Rs. 3.80 per share.

EXCELLENT PERFORMANCE OF NIZAM SUGAR

DIVIDEND SLIGHTLY HIGHER

THE financial results of the Nizam Sugar Factory Limited, Hyderabad (Chairman: Mr. R. D. Krishnaswamy, I.C.S., Hyderabad) for the year ended 30th June 1960 are gratifying. The gross profit has jumped up from Rs. 57.58 lakhs in 1958-59 to Rs. 112.77 lakhs—an increase of more than 95 per cent—and the net profit has more than doubled from Rs. 26.18 lakhs to Rs. 55.18 lakhs. Even as compared with 1957-58, which was a better year for the Company than 1958-59, the achievements in 1959-60 are highly remarkable. The Directors have decided to pay a slightly higher dividend at the rate of 23 per cent (taxable), as compared with the rate of 21.6 per cent (taxable) for the previous year. The net dividend, however, has not yet come up to the level prevailing before the abolition of the grossing system. Thus, after deducting tax, the net dividend for the year under review works out to only 16.1 per cent, which is lower than the tax-free dividend of 18 per cent for 1957-58 when the net profit was actually lower by some Rs. 14 lakhs. The Company could have distributed a more handsome dividend, if it had not to make a very heavy provision for taxation. Thus, in addition to the amount of Rs. 30.25 lakhs, provided for tax liability of the current year, the Directors had to allocate a further sum of Rs. 9.25 lakhs for taxation pertaining to previous years for which appeals have been filed.

In view of the higher level of profit, commission to Managing Agents has also increased substantially from Rs. 4.91 lakhs to Rs. 10.52 lakhs. Depreciation on plant and machinery, including agricultural implements, however, is slightly lower by Rs. 1.47 lakhs at Rs. 7.57 lakhs. The Directors have followed a judicious policy of conserving a sizable part of the net earnings for the year under review for future expansion and contingencies. Thus, they have transferred Rs. 26.35 lakhs to the general reserves and Rs. 51,000 to the development rebate reserve. In the previous year, no amount was set aside for the general reserves. Only the development rebate reserve was credited with Rs. 90,000 in 1958-59. In addition, the Directors have also provided this year Rs. 81,000 for doubtful debts. The proposed ordinary dividend takes up Rs. 25.39 lakhs, as against Rs. 19.87 lakhs in 1957-58. It will be noted that, though the net dividend is lower, the Company has to set apart a larger sum for this purpose.

During the year under review, the Company's farms and factory functioned satisfactorily and sugar production was higher, in spite of the fact that one crushing plant had suffered a major breakdown. The cane crushed went up from 443,219 tons to 491,777 tons and the recovery of sugar improved from 10 per cent to 10.41 per cent. The better recovery was due to improved quality of cane obtained from the Company's own farms and more efficient working. The production of sugar has registered a sizable increase from 44,336 tons in 1958-59 to 51,199 tons in 1959-60. The output of sugarcane on the Company's own farms also displayed a substantial rise from 187,513 tons to 224,407 tons and the average yield per acre recorded a marked improvement from 35.95 tons to 40.38 tons. The progress of the Company during the past three years can be seen at a glance from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June		
	1960	1959	1958
Sales proceeds of sugar, molasses etc	599.12	580.54	588.58

Sugar produced (in tons) ..	51,199	44,336	55,987
Recovery %	10.41	10.00	10.66

* Subject to deduction of tax.

It will be observed from the table that the sale of sugar and molasses has gone up from Rs. 580.54 lakhs to Rs. 599.12 lakhs. The manufacturing expenses, excluding the sugar cess and excise duty, have risen more sharply from Rs. 285.92 lakhs to Rs. 352.48 lakhs. The cane cultivation expenses and management and other expenses have, however, increased only somewhat moderately by Rs. 5.34 lakhs and Rs. 3.22 lakhs respectively. During the year under review, the factory had to pay a cane cess of Rs. 24.59 lakhs and excise duty of Rs. 146.60 lakhs. As stated earlier, there was a major breakdown in one of the sugarcane crushing plants of the Company, which affected its production for about a month. The Directors took very prompt steps to put the plant in commission again.

The Company's financial position is quite satisfactory. The paid-up capital of Rs. 145.87 lakhs comprises Rs. 12 lakhs in 48,000 five per cent (tax-free) cumulative preference shares Rs. 25 each, Rs. 23.84 lakhs in 95,348 four per cent (tax free) cumulative preference shares and Rs. 110.03 lakhs in 440,386 ordinary shares of Rs. 25 each, of which 164,700 are bonus shares. This capital is supplemented by reserves and surplus of Rs. 113.33 lakhs. The gross value of fixed assets of the Company stand at Rs. 320.25 lakhs and their net book value is shown at Rs. 127.33 lakhs, the depreciation provided being Rs. 192.92 lakhs. The total book value of investments is Rs. 3.43 lakhs, of which Rs. 2.26 lakhs are in quoted investments. The total current assets at Rs. 375.95 lakhs (stores and spares Rs. 75.04 lakhs; standing crop Rs. 60.02 lakhs, stock-in-trade Rs. 224.60 lakhs and sundry debtors—Rs. 7.23 lakhs) and bonus and advances at Rs. 206.83 lakhs, together with the investments of Rs. 3.43 lakhs, are far in excess of the current liabilities (Rs. 349.18 lakhs), provisions (Rs. 12.87 lakhs) and secured and unsecured loans (Rs. 92.66 lakhs).

The Rs. 25 fully paid-up ordinary shares of the Company are currently quoted at the Hyderabad Stock Exchange at Rs. 62 *cum-div.* On an *ex-div.* basis, this gives a net yield of 6.9 per cent per annum.

(*Concluded from next column*)

year under review. Further, to meet the increased needs of working capital, the Company has increased its bank borrowings which reveal a steep rise from about Rs. 60 lakhs in 1958-59 to Rs. 161 lakhs at the end of the year under review. The sharp increase in the borrowings of the Company is reflected in enhanced interest payments, from Rs. 4.88 lakhs in 1958-59 to Rs. 8.32 lakhs during the year under review. Apparently, with a view to reducing this heavy dependence on borrowed funds, the Company has decided to raise fresh equity capital to the tune of Rs. 50 lakhs in shares of Rs. 100 each. An application has been made to the Controller of Capital Issues for sanction. Since the Company now has an equity capital of Rs. 101 lakhs, it should be possible to give new shares in the proportion of one for two. The premium at which this issue will be made will depend on the Government's view on the subject.

The Company has recently undertaken the manufacture of industrial mouldings in its plastics factory. Further, there are plans under way for setting up a plant for the manufacture of Hammer Tips, the necessary licence under the Industries (Development & Regulation) Act 1951 for the same having been already obtained.

The current liabilities amount to Rs. 3.15 crores (excluding the debentures aggregating Rs. 1 crore which are secured on the fixed assets). These are adequately covered by current assets of Rs. 4.10 crores. In addition, that are investments amounting to Rs. 9 lakhs. The reserves and surplus aggregate Rs. 135.70 lakhs against a paid-up capital of Rs. 151 lakhs, of which Rs. 50 lakhs are in preference shares.

The Rs. 100 equity shares of the Company are currently quoted at Rs. 240. This would give a tax-free yield of 4.37 per cent at the present rate of net dividend.

WALCHANDNAGAR CUT DIVIDEND AGAIN

HEAVY BORROWINGS TO FINANCE EXPANSION

FOR the third year in succession, the earnings of Walchandnagar Industries Ltd. (Managing Agents: Messrs. Walchand & Co. Ltd., Bombay) have dwindled consequent on a fall in sugar output. The gross profits for the year ended 30th September 1960 at Rs. 51.75 lakhs is by far the lowest for the last several years. The profit for 1958-59 was Rs. 52.73 lakhs. The provision for depreciation is higher at Rs. 17.90 lakhs (Rs. 13.25 lakhs), but the taxation provision is only Rs. 45,000, as against Rs. 8.50 lakhs last year. This has evidently pushed up the net profit of the Company by about 15 per cent to Rs. 30.14 lakhs from Rs. 27.21 lakhs for 1958-59.

Once again, the dividend to ordinary shareholders has been reduced to 15 per cent taxable, as compared with 20 per cent for the previous year. This cut has been necessitated by insufficiency of profit, after providing Rs. 10.22 lakhs for the statutory development rebate and the preference dividend at 10 per cent (taxable) requiring Rs. 5.00 lakhs. After providing for the dividend on equity shares as stated above, which needs Rs. 15.15 lakhs, the balance carried forward as surplus is Rs. 1.61 lakhs only. Even in the previous year, in order to pay a taxable dividend of 20 per cent, the Company had to draw a sum of Rs. 5 lakhs from the dividend equalisation reserves. The dividend for the year under review is the lowest for the last ten years, if not more.

The following table reveals the comparative results of the Company's working in the last four years:

(In lakhs of rupees)

	1960	1959	1958	1957
Sales of sugar distillery products	291.33	348.66	315.50	247.16
Sales of sugar machinery	105.22	58.39	39.41	
Closing stock of finished goods and process	111.91	64.29	70.31	86.21
Crops in progress at close ..	67.75	58.66	48.31	45.76
Expenses	282.81	272.59	233.11	128.62
Excise duty and cess	70.41	90.79	71.27	56.27

Average recovery	11.82%	11.76%	11.66%	12.22%

* Subject to deduction of tax.

It will be seen that the Company's sugar sales were considerably less than in 1958-59 which is contrary to the general trend of sugar industry as a whole. The reason for this will be found in the lower production of sugar which in turn was the result of a reduction in the supply of cane. The average recovery, however, recorded a rise to 11.82 per cent from 11.76 per cent in 1958-59 and 11.66 per cent in 1957-58. Sales of sugar machinery, however, nearly doubled during the year under review and exceeded a crore of rupees. The Company has orders on hand for the supply of sugar machinery worth about Rs. 2.5 crores to three co-operative sugar factories.

In the course of the last few years the Company, under its ambitious expansion programmes, has added substantial assets to its stock. In the last four/five years assets at the cost of over Rs. 2 crores have been added. During 1959-60 alone, a record addition of about Rs. 80 lakhs has been made, of which plant and machinery accounts for over Rs. 50 lakhs and buildings Rs. 26 lakhs. This is all the result of various new lines of production undertaken by the Company. The gross block as at the end of September 1960 exceeds Rs. 4.26 crores, on which a sum of Rs. 1.46 crores has been provided by way of depreciation.

The large-scale expansion programmes of the Company have been financed to a great extent by the issue of debentures. In addition to the then existing 4½ per cent debentures of Rs. 25 lakhs, additional 6 per cent mortgage debentures for Rs. 75 lakhs were issued during the

(*Continued in previous column*)

RECORD POST-WAR SALES BY MODERN MILLS

EXPANSION PROGRAMME WELL UNDER WAY

THE year ended 31st October 1960 is undoubtedly the best post-war year for the Modern Mills Limited (Managing Agents: Messrs. N. Sirur & Co., Private Ltd.). During the year, there was a brisk demand for both yarn and cloth at remunerative prices. The improvement in the trading results is quite satisfactory. The sale proceeds of yarn, cloth and waste were at their highest for last ten years at Rs. 192.29 lakhs, as compared with Rs. 167.46 lakhs in the previous year and the previous high of Rs. 186.31 lakhs in 1955-56. The improvement in sales of Rs. 24.83 lakhs during the year under review was shared by yarn, cloth and waste by Rs. 4.18 lakhs, Rs. 20.47 lakhs and Rs. 0.18 lakh respectively. The closing stocks, including stock-in-process, at Rs. 83.80 lakhs, are also the highest for last ten years, as against the previous high of Rs. 67.36 lakhs last year, thus indicating increased activity. The other income of Rs. 11.13 lakhs includes receipts from premium on cotton quotas under Export Incentive Scheme of Rs. 3.54 lakhs. Thus, in two years, receipts from this item have amounted to Rs. 4.79 lakhs.

The gross profit of the Company has improved from Rs. 17.41 lakhs for the previous year to Rs. 29.12 lakhs, an improvement of Rs. 11.71 lakhs or 67 per cent. The net profit at Rs. 14.12 lakhs has improved by Rs. 2.63 lakhs after providing Rs. 7.89 lakhs more for taxation and after maintaining the provision for depreciation at Rs. 4.62 lakhs. The dividend to shareholders has been stepped up from 10 per cent to 12 per cent (both subject to tax) or an increase of Re. 1 per share. The net dividend amounts to Rs. 4.20 per share of Rs. 50 each, as against Rs. 3.50 per share for the previous year.

The comparative figures for the last four years, indicating the progress of the Company, are shown below:

(In lakhs of rupees)

	For the year ended 31st October			
	1960	1959	1958	1957
Sales of cloth, yarn and waste	192.29	167.46	170.78	162.81
Closing stocks of cloth, yarn and waste	83.80	67.36	60.05	65.29
Other income	11.13	9.87	4.60	1.62
Expenses	190.74	166.73	165.11	168.70

	(12%)†	(10%)†	(6%)	(10%)
Carry forward	0.33	0.29	0.32	0.43

† Subject to deduction of tax.

The gross block of the Company has increased by Rs. 7.91 lakhs to Rs. 151.49 lakhs and the net block stands at Rs. 76.26 lakhs, the depreciation provided being Rs. 75.23 lakhs. The investments have risen from Rs. 0.60 lakh to Rs. 2.07 lakhs mostly on account of investment in the equity shares of the Sundatta Foods and Fibres Ltd., a company belonging to the same group. As against the paid-up capital of Rs. 46.47 lakhs (all in ordinary shares of Rs. 50 each fully paid-up), reserves and surplus stand at Rs. 43.65 lakhs. The current assets, exclusive of investments, at Rs. 148.88 lakhs are well above current liabilities of Rs. 137.09 lakhs.

During the year under report, a set of Barber-Colman spooler and warper machines, costing about Rs. 5 lakhs, was installed at Mill No. 2, and brought into use. The Company has received a licence to install 144 automatic looms by way of expansion. The Company's application for acquiring more spindles, in order to feed these automatic looms and balance the production at Mill No. 2, is also under consideration by the Textile Commissioner, and it is expected to be granted as soon as effective steps are taken by the Company to install the automatic looms. A new Ruti sizing machine, which was ordered last year to augment the sizing capacity, has also just arrived and is in course of erection. The spinning department at Mill No. 1 also needs considerable renovation, and the necessary licences have been applied for to import the requisite machinery to replace the existing old machinery. The scheme of modernisation and expansion is intended to ensure better operational efficiency and achieve more economic working and larger output.

In view of the large expansion programme, a fresh issue of equity capital of Rs. 46.47 lakhs is proposed to be shortly offered at par in the proportion of one new share for every share held. The consent of the Controller of Capital Issues for this purpose has been received and the shares will be issued at a suitable date to be decided by the Directors. Over and above this right issue, the Directors consider it desirable to capitalise Rs. 23.24 lakhs from the shares premium account and general reserve and issue bonus shares at a later date. The consent of the Controller of Capital Issues for this purpose is yet to be obtained. The proposal means that one bonus share will be available for every four shares, taking into account the proposed new issue. Thus, during the course of the current year, the paid-up capital of the Company can be expected to rise from the present figure of Rs. 46.47 lakhs to Rs. 116.18 lakhs. This proposed issue has made it necessary to increase first the authorised capital of the Company. The management is availing itself of this opportunity to raise the authorised capital to Rs. 5 crores, so as to make room also for any further issues of capital, that may have to be made, as and when required, if the Company's rayon project, which is under advanced stage of negotiation with foreign collaborators, materialises. The Rayon Project for which the Company has already secured an industrial licence, is based on the raw material to be produced by the Sundatta Foods and Fibres Ltd. In view of this interest, it is the intention of the Directors to hold at least 10 per cent of the capital of the Sundatta Foods and Fibres and they have already taken the necessary steps.

At the current market quotation of Rs. 94 c.d., the Rs. 50 paid-up shares give a net yield of 4.4 per cent per annum.

STEEL AND ALLIED PRODUCTS LTD.

The Steel and Allied Products Ltd. of Calcutta has launched upon a substantial expansion programme, envisaging manufacture of different types of wood working saws, slitting saws, slotting cutters, tool bits and hacksaw frames, in addition to the present production of wood screws and hacksaw blades for power and hand uses. The programme is estimated to cost Rs. 29 lakhs, of which the foreign exchange component is Rs. 6.30 lakhs, being nearly 50 per cent of the cost of plant, machinery and equipment, inclusive of technical assistance fee and installation expenses. The major portion of the outlay, amounting to Rs. 19.45 lakhs, is proposed to be raised by way of (1) a loan (Rs. 10 lakhs) from the Industrial Finance Corporation, (2) deferred payment (Rs. 2.55 lakhs) and (3) bank credit (Rs. 6.90 lakhs). The balance of Rs. 9.55 lakhs represents the amount to be raised by the issue of 9,550 equity shares of Rs. 100 each. The existing shareholders or their nominees will be offered 2,180 shares at par as right shares and the remaining 7,370 shares will be offered at par for public subscription; the list for this issue will open on Saturday the 8th inst.

Details of the issue are given on pages 594-95. It will be seen therefrom that Messrs. Sandvikens Jernveks Aktiebolag of Sweden will supply a complete wood working saw plant on deferred payment basis, as well as plant and machinery for the production of various types of working saws, provide technical assistance, supervise erection of plant, put the plant into operation, and train Indian personnel. The gross turnover after a year of completion of this project alone is expected to be of the order of Rs. 40 lakhs annually. The wood working saws to be produced by the Company will find, it is stated, a ready market not merely within the country but also abroad. The working results of the Company for the past five years show that the sales have risen quite perceptibly, from just Rs. 4.23 lakhs in 1955-56 (year ended June) to over Rs. 34.31 lakhs in 1959-60. Following the rise in sales, the profit (after taxation) has risen from Rs. 6,571 in 1956-57 (there was a loss of Rs. 43,456 in 1955-56) to Rs. 4.89 lakhs in 1959-60. The dividend declared for the year 1959-60 was 40 per cent, as against 23 per cent in the previous year.

In view of the notable progress made by the Company and considering the encouraging demand for its products as a result of the growing tempo of industrialisation and restricted import policy, the proposed issue of the Company will doubtless prove a success.

PROFITS OF COIMBATORE COTTON BETTER

MORE SPINDLES WORKED

THE equity shareholders of the Coimbatore Cotton Mills Ltd., Singanallur, will receive a higher dividend this year, as a result of better working of the mill and higher realisation on sales during the year ended 31st December 1960. In declaring a taxable dividend of 12 per cent for 1960 the management have doubled the rate as compared with that for 1959. The profits of the Company (Managing Agents: Messrs. R. Bheema Naidu & Co.) have recorded a substantial increase for the year. The gross profit is higher by nearly Rs. 16 lakhs at Rs. 27.09 lakhs against Rs. 10.70 lakhs for 1959. This is mainly the reflection of a larger turnover of the mills' products at higher prices in a favourable market. The net profit of the Company is also higher at Rs. 13.04 lakhs which is nearly treble the previous year's profit of Rs. 4.70 lakhs. The Company has made increased provisions for depreciation Rs. 10.12 lakhs (Rs. 5.46 lakhs last year) and taxation of Rs. 2.3 lakhs (*nil*). The amount taken to the development rebate reserve is also more at Rs. 7.76 lakhs as against Rs. 3.56 lakhs a year ago. As in the earlier year, no amount has been carried forward from the profits of the Company.

The yarn market in general witnessed favourable trend during the year under review, with increasing prices and larger offtake. The realisation from the mills' production at Rs. 1.55 crores is higher by about Rs. 42 lakhs, or 38 per cent over the previous year. The Company's performance on the export front appears to have been satisfactory. The export incentive schemes announced by the Central Government with a view to promoting yarn exports have been availed of by the Company. The stocks of finished goods and goods in process were little more at the end of the year.

The comparative working of the Company in the last few years is shown below:

(In lakhs of rupees)

	1960	1959	1958	1957
Sale proceeds	155.09	113.18	82.90	81.81
Closing stocks	13.88	12.73	6.85	3.53
Raw materials consumed	97.56	82.99	57.68	49.29
Expenses	18.64	12.78	21.40	20.50
Gross profits	27.09	10.70	7.46	12.11
Depreciation	10.12	5.46	4.50	1.85
Taxation	2.30		0.11*	4.00
Managing Agents' commission	1.68	0.54	0.50	1.02
Net profits	13.04	4.70	2.46	5.74
Gratuity reserves	0.28			0.28
Development rebate reserve	7.76	3.56	1.25	
Dividends	4.82	2.10	2.13	1.98
	(12%)†	(6%)†	(6%)	(9%)

* Relates to wealth tax for 1958 in excess of provisions made and paid in 1959.
† Dividends for 1959 and 1960 subject to deduction of tax.

There was a sharp rise in the wage bill during the year. This may partly be due to the incidence of the recommendations of the Wage Board for the Textile Industry which entailed increased basic wages and dearness allowance to workers. In 1960, the salaries, wages and bonus recorded a 30 per cent increase to Rs. 17.30 lakhs. The mill was able to utilise a larger proportion of its capacity. Out of the 12,800 new spindles intended to spin cotton yarn, nearly 70 per cent worked during the year. This higher capacity resulted in increased output with the distribution of overhead costs over increased production. The management expects to put into commission the remaining 4,000 spindles before the end of June next.

The net additions to the block during the year amounted to Rs. 10.47 lakhs, of which machinery alone exceeded Rs. 9.50 lakhs. Four Reiter combers were installed in the mill and are working for the last six months. The Company has placed orders for eight American combers and they are expected shortly. The gross block as at the end of 1960 amounts to Rs. 121.98 lakhs. The depreciation provided so far on the block is Rs. 51.67 lakhs. There are also sufficient funds to the credit of the machinery replacement reserves now standing at Rs. 10.08 lakhs. The liabilities of the Company (including the gratuity reserve Rs. 2.83 lakhs) amount to about Rs. 66 lakhs, some Rs. 13 lakhs more than a year earlier. This increase in the liabilities of the Company is mainly under borrowings from the banks amounting to Rs. 42.85 lakhs (Rs. 33 lakhs). While the loan on equitable mortgage has been liquidated to the extent of Rs. 4 lakhs, the borrowings on the pledge of stocks have increased much; this has probably been necessitated to cover the working capital requirements of the Company, which must have expanded as a result of large additions to capital assets made during the year. The current assets (excluding investments) at Rs. 57.82 lakhs

(Continued in previous column)

(Concluded from next column)

do not bear adequate coverage to the liabilities of the Company. Investments stand at Rs. 5.51 lakhs of which Rs. 50,000 in National Savings Certificates and Rs. 5 lakhs are in 5,000 ordinary shares of the South India Viscose Ltd., a company with considerable promise. The reserves and surplus of the Company are about Rs. 31.66 lakhs supplementing the paid-up capital of Rs. 36 lakhs all in equity shares of Rs. 100 each. The general reserves alone stand at Rs. 9 lakhs. The Company's shares (of Rs. 100 fully paid) are currently quoted at Rs. 172 c.d. The yield on c.d. basis works out to about 8 per cent taxable, or 5.1 per cent tax-free.

THE BANK OF INDIA LTD.

FIFTY-FIFTH ANNUAL GENERAL MEETING

SIR COWASJEE JEHANGIR ASKS GOVERNMENT TO CUT EXPENDITURE ON RASH PROJECTS

INCREASED corruption and lack of efficiency and competent technical personnel in Government service were highlighted by Sir Cowasjee Jehangir, Baronet, Chairman of the Bank of India Ltd., while addressing the shareholders of the Bank at the Fifty-fifth Annual General Meeting held at Bombay on Monday, 27th March 1961. At the root of all the trouble, Sir Cowasjee declared, was the policy of the Planning Commission which had allowed its imagination to run wild without calculating the disastrous financial consequences of their rash projects. He asked the Government to reduce capital expenditure on rash projects which have no prospects of yielding good value for the money spent.

The following are extracts from the speech of Sir Cowasjee:

"LADIES AND GENTLEMEN,

"I have great pleasure in welcoming you to this our fifty-fifth annual general meeting.

"In 1960, as in other years, the Reserve Bank of India have been vigilant in their efforts towards the proper development of banking in the country. We very much appreciate the consideration which the Reserve Bank of India have extended to banks. It is no small task to endeavour to watch and guide the large number of banking units—big and small—throughout the country. I would express the gratitude of my colleagues on the Board and myself for prompt information, advice and guidance given to our Bank from time to time by the Reserve Bank of India.

Taxation

"I am personally of opinion that the recent budget is framed on a fair basis. I am sure the Finance Minister expects to be criticised whatever he does by one school of thought or the other. A pertinent question has been asked as to how the Finance Minister was to raise funds for the Government, if he did not do so by indirect taxation. My answer is that the Government should reduce their capital expenditure on rash projects which have no prospects of yielding good value for money spent. It is believed by many that this is due to the increase of corruption in the last few years and lack of efficiency and competent technical personnel in Government service. At the root of all the trouble is the policy of the Planning Commission who have allowed their imagination to run wild without calculating the disastrous financial consequences of their rash projects. Really good and efficient planning will enable the Government to spend less and to borrow less money from all parts of the world and thus reduce the demand for maintaining the high levels of taxation already imposed and for levying other taxes on all classes of the people.

"The Government were spending crores of rupees and claiming that they had raised the annual income of the common man. I do not vouch for the accuracy of this claim, but, if this is well-founded, it forms a very reasonable argument for indirect taxation. The Finance Minister must not forget that India is the heaviest taxed country in the world and that a certain class of people are made to pay almost the whole of their hard-earned income in taxation leaving little or nothing to live upon. Most of them are at present living on their capital. Highly placed officers, both in public and private enterprises, are made to pay a large portion of their hard-earned salaries in taxation leaving little for the maintenance of themselves, their families and their dependents. The only class of people that appears to be comparatively well off under present conditions is factory labour.

"The main necessities of life are food, housing and clothes. Food and housing are the responsibility of the Government. Clothing is supplied by the private sector and, although the textile industry supplies cloth to the public at a cheaper price than supplied by many countries of the world to their people, the Government insist upon lowering the prices because it only affects the private sector, but they do very little effectively to reduce the price of food or housing.

"In my last two annual speeches, I have mentioned the all-India inter-bank agreement for maximum rates of interest on deposits which the larger commercial banks, about 40 in number, other than the State Bank of India, entered into from October 1958. Changes in the maximum rates of interest were made during the year from 22nd August 1960 and from 1st October 1960. I would like to see the State Bank of India, as the largest commercial bank in the country, also joining in the agreement. I understand that the Indian Banks' Association have been making endeavours in that direction. In this connection, I have to inform you that our General Manager, Mr. T. D. Kansara, has recently been elected Vice-Chairman of the Indian Banks' Association.

The Bank in 1960

"The Bank's profit of over Rs. 103 lakhs for the year 1960 is about Rs. 20½ lakhs more than the 1959 profit of about Rs. 82½ lakhs. These figures of profit for the two years cannot be exactly compared. Part of the difference between them is because, during the bulk of 1960, tax at an appreciably lower rate than in 1959 has been deducted at source from the Bank's investment income.

"Before arriving at the profit figure, we have, as usual, made appropriate prudent provisions. Sound banking calls for the setting aside of provisions relative to our commitments. Our business is appreciably growing. Our liabilities are increasing. Prudence dictates that, in such circumstances, adequate provisions should be made at all stages.

"A final dividend of 12½ per cent, subject to deduction of tax at the prescribed rates, is proposed. This will absorb Rs. 37½ lakhs. An interim dividend of 7½ per cent subject to deduction of tax was paid in August last. The amount of that interim dividend was Rs. 22½ lakhs. The total dividend for the year is 20 per cent or Rs. 60 lakhs, subject to deduction of tax. This compares with 16 per cent, *subject to deduction of tax*, for 1959 and with 16 per cent, *free of income-tax*, for 1958. I think shareholders will be pleased at the dividend we are recommending.

"The increase in the dividend proposed for 1960 goes to offset only to some extent the reduction in the net payment caused by the changes made by the Finance Act of 1959.

Audit

"The Companies (Amendment) Act, 1960, materially amended the Companies Act, 1956. Section 228 of the main Act, as amended, makes audit of all branches of the Bank obligatory. The Central Government have power to exempt branches from being audited as required by the amended Section 228. For 1960, we applied to the Central Government for such exemption and it was granted. For 1961, we do not intend to seek any exemption. My colleagues on the Board and I are, on this point, at one with the legislature. We have a high regard for the safety provided by frequent audit.

Branches

"The Bank has a programme of considerable branch expansion.

Staff Relations

"During 1960, staff relations in the Bank have been on a reasonably tranquil basis, but difficulties have not been absent.

General Manager

"It is with great regret that I refer to the death during the year of Mr. T. R. Lalwani, General Manager of the Bank. He served the Bank for nearly 43 years, the last three years as General Manager. He enjoyed the confidence of the Board to a marked degree. In Mr. Lalwani's place, the Board have appointed Mr. T. D. Kansara as General Manager.

Local Committees and Staff

"I would express our appreciation of the aid given to us by our Local Committees at branches.

"I express our thanks to our General Manager, Mr. T. D. Kansara, for his able management of our affairs and for his unremitting application to the Bank's business. Our thanks are tendered to the staff who have assisted in the Bank's working during the year."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

LABOUR

(Concluded from page 601)

Lastly, the concept of worker-participation is comparatively more relevant to an underdeveloped country than to advanced countries. In an underdeveloped economy, the responsibility of labour increases. Due to scarcity of capital and abundance of manpower, more reliance is naturally placed on labour-intensive programmes and economic progress, to a considerable extent, depend on what labour does or does not do. It is wrong to think of economic development only in terms of more capital. Higher productivity can be obtained through better organisation of human material. An underdeveloped country cannot afford to pay higher wages and other economic benefits to secure workers' wholehearted co-operation. It has to depend on non-pecuniary incentives among which worker-participation occupies a prominent place.

These advantages of worker-participation clearly establish a case for co-operation and close consultation between employers and employees on all issues affecting the enterprise. I hasten to add, least I should be misunderstood, that worker-participation is not a panacea for all our economic and social ills. I have only attempted to place in a proper perspective all the aspects of the problem and to indicate the directions in which the concept can be fruitful and useful.

Critics Answered

The idea is, however, not without its critics. There are two main planks of opposition. First, it is pointed out that a large majority of workmen have no desire to participate and, secondly, that they do not possess the required knowledge to make any useful contribution. It will readily be conceded that the workers are mainly interested in the pay packet and most of them will not like to be bothered about managerial responsibilities. But there must be some enthusiastic and enterprising young men who will gladly undertake the responsibility and there is no reason to deprive them of the opportunity to play their full part in the administration of the undertaking. If we are convinced of the manifold advantages that will follow the introduction of such a measure, then the indifference of the general body of workmen, far from being an excuse for leaving the matters as they are, is a strong reason for desiring and trying to make them different.

To the critics who assert that democracy is not possible in industry because industrial management is a technical task which can and should be handled only by experts, there is a very simple reply: if, as an ordinary citizen, the worker is considered competent to participate in political affairs which are more complex and vital, why can he not participate in industrial matters about which he can claim to have some knowledge—at least more than what he has about political issues. Moreover, to deny the workers a share in management on the plea that they have no technical or managerial ability, no knowledge of the complex problems of business management and no administrative experience and training, shows a basic lack of understanding of the entire problem of worker-participation. Participation does not envisage an equally knowledgeable class at the very outset, nor does it imply that the workers should necessarily be associated with management at all levels and in all matters. A number of factors will have to be taken into account in determining the degree of participation and the form it should take in a particular country, industry or undertaking. But these are problems of implementation of the scheme. If approached with faith and determination, it should be possible for us to find appropriate solutions to these problems.

Notices

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-third Annual General Meeting of the Company will be held at the Registered Office of the Company at Construction House, Ballard Estate, Fort, Bombay, on Wednesday, the 26th day of April, 1961, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September, 1960.

(2) To declare dividends on Preference and Equity Shares.

(3) To appoint a Director in place of Shri Gulabchand Hirachand who retires by rotation and who is eligible for re-appointment.

(4) To appoint a Director in place of Shri Lalchand Hirachand who retires by rotation and who is eligible for re-appointment.

(5) To appoint a Director in place of Shri Phoolchand R. Gandhi who retires by rotation and who is eligible for re-appointment.

(6) To appoint a Director in place of Shri V. M. Meswani who was appointed an Additional Director of the Company and who ceases to hold office under Section 260 of the Companies Act, 1956, and who offers himself for reappointment. The Company has received a notice in writing proposing his candidature for office of Director as required under Section 257 of the said Act.

(7) To appoint Auditors for the current year and to fix their remuneration.

(8) To consider and, if thought fit, to pass the following resolution:—

"In supersession of the previous resolution, resolved that the consent of the Company under Section 293(1)(*d*) of the Companies Act, 1956, be and is hereby granted to the Board of Directors of the Company for borrowing moneys for the purposes of the Company from time to time even though the moneys so borrowed together with the moneys already borrowed by the Company and remaining outstanding or the amounts for the time being and from time to time remaining undischarged of the moneys so borrowed together with the moneys already borrowed may be in excess of the aggregate of the paid-up Capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose and provided that such excess shall not be more than Rs. 10 crores at any one time and provided further that in computing the amounts or borrowings whether already made or to be made the amounts of temporary loans obtained from the Company's Bankers in the ordinary course of business shall be excluded."

(9) To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"Resolved that approval be and is hereby given to the Company for taking advances and/or loans from Managing Agents, Messrs. Walchand & Co. Private Ltd., and their Associates, and making payment of interest on such advances and/or loans made or to be made from time to time to the Managing Agents and their Associates at such rate as may from time to time be determined by the Board of Directors."

The Transfer Books of the Company are closed as from Saturday, 25th February, 1961, to Friday, 24th March, 1961 (both days inclusive).

By Order of the Board,
S. S. BORKAR,
Acting Secretary.

JUTE

(*Concluded from page* 592)

It would be appropriate to recall here the statement of Mr. D. C. B. Pilkington at the recent annual meeting of the Indian Jute Mills Association—his speech was dealt with in detail in the course of an editorial last week—that, given a good jute crop this year, much of the loss to substitutes can be recovered. An interesting assessment of the demand for Indian jute goods was made by Mr. Pilkington. According to him, the demand can be divided into two broad categories—(1) usages where consumers can switch quickly from one material to another, the choice being determined solely by the relative price, and (2) usages where a switch from jute to a substitute would mean a conversion of existing plant.

The losses to substitutes, it is felt, will be mainly to the first type and most of the losses can be recovered, provided, of course, prices of Indian jute goods are competitive. Consumers in the second category, Mr. Pilkington says, do not lightly incur the heavy capital outlay involved in converting their plants and, provided they are not scared away by statutory controls over jute goods, indications are that most of them will stick to jute at least until they have seen how the market reacts to this year's jute crop, even though goods prices may temporarily rise still further. He, however, warns that, should any plants be converted to paper or bulk, the damage would be serious, because there would then be no return to jute. Although no such new conversions have so far been reported since the present scarcity of raw jute started, a sense of complacency should not prevail. For much will, as Mr. Pilkington stressed, obviously depend on the size of the coming jute crop and on the extent to which India can retain the confidence of its customers in the intervening months. Another short raw jute crop in succession to the one witnessed in the 1960-61 season will provide a strong backing to forces that cause a permanent loss of markets for jute manufactures.

A novel airbus service on three routes in East Pakistan has been introduced by the Pakistan International Airlines in order to provide quick transport within the Province at subsidised fares. The fare is placed at Rs. 7.50 for a short half-hour flight. The Dakota fleet, now rendered surplus with the introduction of the Fokker Friendship turbojets on the regular scheduled routes, is being used for the new airbus service.

BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extra-Ordinary General Meeting of the Shareholders of the Bengal Potteries Limited will be held at the Registered Office of the Company at 45 Tangra Road. Calcutta-15, on Monday, the 17th April, 1961, at 3-30 p.m., to transact the following items of business:—

1. To consider and if thought fit to pass the following Resolutions which shall be proposed as Ordinary Resolutions:—

A. "Resolved that consent be and is hereby given to the Board of Directors of the Company, borrowing upto a total amount of Rs. one crore (excluding temporary loans from time to time obtained by the Company from its Bankers in ordinary course of business), in excess of the aggregate of the paid-up Capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose, as the Board may from time to time deem necessary for the purpose of the Company."

B. "Resolved that this meeting approves of the reappointment by the Board of Directors of the Company of Messrs. Allied Distributors & Co., as the sole selling agents of the Company for a period of five years commencing from the 1st April 1961, at the remuneration and upon the terms and conditions contained in the agreement dated 22nd March 1961, made between the Company of the one part and the said Messrs. Allied Distributors & Co. of the other part laid before the meeting and subscribed by the Chairman of the meeting for the purpose of identification."

2. To consider and if thought fit to pass the following Resolution which shall be proposed as a Special Resolution:—

Resolved that the Articles of Association of the Company be altered in manner following:—

A. Subject to approval by the Central Government, the following Article shall be inserted after Article 96B:—

"96C. So long as any money remains due by the Company to the Industrial Credit and Investment Corporation of India Limited, the Industrial Credit and Investment Corporation of India Limited, shall have and may exercise the following rights and powers:—

"To appoint from time to time any person or persons to be a Director or Directors of the Company but so that not more than two persons shall at any time hold Office by virtue of appointment made under this Article. Any person or persons so appointed shall not be subject to retirement by rotation but may at any time be removed from office by Industrial Credit and Investment Corporation of India Limited, who may from the time of such removal or in case of death or resignation of the person appointed, appoint any other or others in his or their place. Any such appointment or removal shall be by a writing signed by the Industrial Credit and Investment Corporation of India Limited, and served on the Company."

B. Sub-clause (17) of Article 131 of the Articles of Association of the Company shall be deleted and the following new sub-clause shall be substituted therefor:—

"Article 131 (17). Subject to the provisions of the Companies Act, 1956, to delegate all or any of the powers hereby conferred upon them to the Managing Agents of the Company as they may from time to time see fit."

EXPLANATORY STATEMENTS
Under Section 173(2) of the Companies Act, 1956

Item No. 1A of the Agenda:

The Company has entered into a Collaboration Agreement with Messrs. Rosenthal Isolatoren GMBH of West Germany, for the manufacture of Porcelain Insulators.

For the purpose of giving effect to the said Agreement, the Company will have to undertake substantial expansion of the Insulator Section of its factory by installing new machinery which will require capital expenditure (including foreign exchange facilities) which is estimated at Rupees Forty-eight lakhs and Fifty thousand.

Negotiations are proceeding with Industrial Credit and Investment Corporation of India Limited of Bombay for a loan of 242.000 dollars equivalent to Rs. Eleven lakhs and fifty-five thousand, and Rs. 25 lakhs in Indian Currency.

A Resolution was passed by the Company in General Meeting on the 23rd June 1959, consenting to the Directors borrowing moneys in excess of the limit placed by Section 293(1)(d) of the Companies Act, 1956. This Resolution did not specify the total amount upto which moneys might be so borrowed by the Directors as was not necessary under the Companies Act then in force. By Section 99 of the Companies (Amendment) Act of 1960, Explanation No. 1 was inserted to sub-section (1) of Section 293 of the Companies Act, 1956 which *inter alia* provides that every resolution shall specify the total amount upto which moneys may be borrowed by the Board of Directors.

Industrial Credit and Investment Corporation of India Limited in view of the abovementioned amendment requires that another Resolution should be passed complying with the provisions of Explanation No. 1 to Section 293(1), of the Companies Act, 1956.

It may be mentioned that the proposed loan from Industrial Credit and Investment Corporation of India Limited together with the amounts already borrowed will exceed the aggregate paid-up Capital of the Company and its free reserves.

None of the Directors or the Managing Agents has any concern or interest in the abovementioned resolution, except as a Director or Managing Agents of the Company.

Item No. 1B of the Agenda:

Messrs. Allied Distributors & Co., is a co-partnership firm of which Bharat Ram Charat Ram Private Limited, Shri S. K. Agarwal, Shri R. K. Agarwal, Gupta Collective Farms Private Limited, Hindusthan Selling Agencies Private Limited and K. L. Poddar & Sons Private Limited are partners.

The said Messrs. Allied Distributors & Co. was appointed sole selling agents of the Company for a period of 5 years commencing from 1st April 1956, and the period of such appointment is to expire on the 31st of March 1961.

At an extraordinary general meeting of the Company held on the 22nd March 1961, at 11 a.m. the Company accorded its consents by a special resolution under Section 314 of the Companies Act, 1956, to the reappointment of the said Messrs. Allied Distributors & Co., as the sole selling agents of the Company for a period of five years commencing from the 1st April 1961, at the remuneration and on the terms and conditions, mentioned in the draft agreement expressed to be made between the Company of the one part and the said Allied Distributors & Co. of the other part subscribed by the Chairman of the Board of Directors of the Company at its meeting held on the 23rd February 1961 and also subscribed by the Chairman of the extraordinary general meeting held on the 22nd March 1961.

The said Messrs. Allied Distributors & Co. have also made a declaration under the provisions of Section 314(2) of the Companies Act, 1956.

INTRODUCING .....

NON-DESTRUCTIVE ULTRASONIC FLAW DETECTOR

EX: M/S. DR. LEHFELDT & CO.,
G.m.b.H. GERMANY

ECHOSKOP

could be used during works inspection, during working and manufacture, during research and development.

For further particulars write to:
SOLE AGENTS:
TOSHNIWAL BROTHERS (PRIVATE) LIMITED
198, Jamshedji Tata Road, Bombay-1
Branches: AJMER, CALCUTTA, DELHI, MADRAS.

The Board of Directors at its meeting held on the 22nd March 1961, at 11-45 a.m. after the said special resolution was duly passed, reappointed the said Allied Distributors & Co. as sole selling agents of the Company for a period of five years commencing from the 1st April, 1961 at the remuneration and upon the terms and conditions mentioned in the said draft agreement placed before the extraordinary general meeting on the 22nd March 1961, subject nevertheless to the condition that such reappointment of Messrs. Allied Distributors & Co. as such sole selling agents shall cease to be valid if it is not approved by the Company in the first general meeting held after the date of such reappointment. The said draft agreement was thereafter duly completed and executed.

The resolution therefore is for the purpose of obtaining the approval of the Company in general meeting under the provisions of Section 294(2) of the Companies Act.

Allied Distributors & Co. is a co-partnership firm and it appeared that Shri S. K. Agarwal and Shri R. K. Agarwal are sons of Lala Bishen Swarup, a Director of the Company and are sons of a brother of the mother of Lala Shri Dhar, a Director of the Company. As such they are the relatives of Lala Bishen Swarup and Lala Shri Dhar within the meaning of Companies Act of 1956.

Lala Sri Dhar a Director of the Company, is a Director and Shareholder of Bharat Ram Charat Ram Private Ltd., also a partner of Messrs. Allied Distributors & Co., Shri S. K. Agarwal and Shri R. K. Agarwal, partners of Messrs. Allied Distributors & Co. are also Directors in private companies (not concerned in this arrangement) in which either Shri Bishen Swarup or Lala Shri Dhar, two of the Directors of the Company, are Directors.

Save as aforesaid none of the other Directors of the Company or the Managing Agents has any concern or interest in the aforesaid Resolution.

Item No. 2(A) of the Agenda:

For reasons as explained in the Explanatory Statement relating to item No. 1A of the Agenda, the Industrial Credit and Investment Corporation of India Limited requires the Company to amend Articles of Association of the Company to provide for the appointment of nominee of the Industrial Credit and Investment Corporation of India Limited on the Company's Board, who shall not be required to hold qualification shares prescribed by Article 97, nor shall he be liable to retire by rotation. Under the provisions of the Companies Act, 1956, the proposed amendment of the Article by inserting the new clause 96C will require the approval of the Central Government.

Item No. 2(B) of the Agenda:

Under Sub-clause (17) of Article 131 of the Articles of Association of the Company, the Directors have power *inter alia* to delegate all or any of the powers thereby conferred upon them to any Manager, Managing Director or Managing Directors, but not Managing Agents. The Company at present has no Manager, Managing Director or Managing Directors but only Managing Agents. Further under the provisions of Section 197A of the Companies Act, 1956 as inserted by Section 55 of the Companies (Amendment) Act, 1960, no Company shall after the commencement of the Companies (Amendment) Act, 1960, appoint or employ at the same time or after the expiry of six months from such commencement continue the appointment or employment at the same time of more than one of the following categories of Managerial personnel, namely, (a) Managing Director, (b) Managing Agent, (c) Secretaries and Treasurers and (d) Manager.

None of the Directors or the Managing Agents has any concern or interest in the abovementioned resolution, except as a Director or Managing Agents of the Company.

The agreement dated 22nd March 1961, referred to in the Resolution No. 1B can be inspected by any member at the registered office of the Company, 45, Tangra Road, Calcutta, on any working day of the Company, during the hours of 2 p.m. to 4 p.m.

A MEMBER ENTITLED TO ATTEND AND VOTE AT A MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA, *Dated 22nd March*, 1961.

RAISING SUGAR OUTPUT PER ACRE
MR. D. M. DAHANUKAR'S OBSERVATIONS

THE view that only maximisation of sugar production per acre of land would enable the industry to run on economic lines and thus compete in the world market was expressed by Mr. D. M. Dahanukar, Director of the Maharashtra Sugar Mills Ltd., in the course of his speech at a reception held in honour of Mr. S. K. Patil, Union Minister for Food and Agriculture, during his visit to the factory at Tilaknagar in Maharashtra State on 18th March 1961. Mr. Dahanukar was confident that, if all the cane plantations in India, big or small, were to adopt scientific methods of farming, the production of sugar could be stepped up to four million tons annually. The surplus then, he said, could be exported and valuable foreign exchange earned. He put such earnings from the sale abroad of 300,000 tons at Rs. 20 crores.

At the outset, Mr. Dahanukar extended a hearty and cordial welcome to Mr. Patil and other guests who had responded to his invitation. Tracing the history of his Company, he said:

"In the early thirties, this Company was founded by Mr. Babasaheb Dahanukar, Chairman of this Company. In those days, this part of the country was deserted and devoid of any vegetation except for a few babul trees here and there. This town of Tilaknagar, which has sprung up here, is associated with the memory of *Lokamanya* Bal Gangadhar Tilak, who had pioneered the independence movement in our country. *Lokamanya* Tilak was also a strong advocate of the cause of industrialisation of our country. He advocated an all-round economic development of the country and visualised that, given proper encouragement and opportunities, Indian economy could become a self-sufficient one. It is not surprising, therefore, that he came to be interested in the sugar industry, an industry completely pushed to the background because of the apathy of foreign rulers. The *Lokamanya* had pleaded for Government aid, by way of protective tariff, subsidies, procurement of requisite machinery, etc. Writing in *Kesari* on 22nd September 1903, he spoke of the Government's indolence to encourage industrial development of India and said: 'India must be able to grow all the sugarcane she needs and manufacture all the sugar she requires, but this is a matter of planning and pursuing a well-defined policy of encouragement and protection.' The enthusiasm of *Lokamanya* Tilak in this regard (as reported in the *Times of India*) was so overwhelming that once he went to the extent of ordering a little machinery to experiment in producing *gur* and sugar from sugarcane juice. It is our good fortune that the Founder and Chairman of our Company, Mr. Babasaheb Dahanukar, received blessings and inspiration to start this industry from *Lokamanya* Tilak. To commemorate this ideal cherished by him and also as a mark of respect to this illustrious leader, this industrial town has been named as 'Tilaknagar.'"

Scientific Farming

Mr. Dahanukar complimented Mr. Patil on his various achievements, particularly in the sphere of food and sugar. He observed:

"Understanding the basic need of our country, you have, from time to time, urged the necessity of achieving self-sufficiency in food and of making use of the U.S. food loan only as a buffer-stock to meet any emergency. Your all-out efforts to achieve self-sufficiency in food in our country deserve all praise. After you have taken over the reins of the Food Ministry, by your most tactful approach to the problems of maximisation of sugar production, you offered incentives like excise rebate on excess production. By this practical approach, immediate results were obtained and it is gratifying to see that within a year the production of sugar has gone up from 19.7 lakh tons to about 24 lakh tons during the season 1959-60. This, indeed, is a proud record for our country. We feel that, if all the cane plantations in our country, big or small, adopt scientific methods of farming, it can reasonably be expected that our country's average production can be stepped up to four million tons. The surplus then can be exported to earn valuable foreign exchange. If we export three lakh tons of sugar, our country can earn foreign exchange to the tune of 20 crores of rupees.

"Some days back, explaining the Government's stand on a motion raised by a member of the Lok Sabha regarding production, distribution and supply of sugar, you have rightly placed your finger on the crux of the problem by stating that the long-term solution to the problem lies only in the increased production of sugarcane. Available statistics indicate that there has been a steady increase in the average as a result of which cane output is also likely to show a proportionate rise. But more than that, in order to ensure a permanent remedy, it is necessary to increase the yield of sugarcane per acre. In this context, you will be gratified to note that, with lesser area, more intensive and scientific technique adopted by our Company in cane cultivation, selection of disease-free seeds for which this company maintains a special nursery, and experimental farm, we have been able to cultivate cane economically and with encouraging results. We have long realised that the maximisation of sugar production per acre of land would alone enable the industry to run on economic lines and thus produce sugar to compete in world market. Our average per-acre production of cane and sugar during the last season was above 62 tons and 7.8 tons, respectively. A special reference must be made of the yield in some of our selected plots where production of cane and sugar was even around 80 tons of cane and 10 to 13 tons of sugar per acre, respectively. I am happy today to mention that this achievement is significant which the private sector under joint-stock companies can proudly claim."

Land Ceilings

Proceeding, Mr. Dahanukar referred to the Maharashtra Land Ceilings Bill and said:

"At the moment, our minds are deeply concerned over the State Government's Bill seeking to impose ceilings on holdings of land. The Government proposes to apply the provisions of this Bill to sugar farms of joint-stock companies. The application of this Bill will, indeed, have adverse and undesirable effects, and we are afraid, will disrupt the highly efficient sugar farms which have been developed after three decades of hard work and against risks of various hazards of Nature's pests and diseases. At a time when our unit of sugar industry has gained phenomenal achievements and peak efficiency and is being developed as a model in our country and as the second best industry in the world, it is unfortunate that the State Government should propose to apply the Lands Ceilings Bill to these companies. In fact, the State and Central Governments should be proud of such farms and they should be preserved as precious treasures of the nation.

"When I mention the sugar industry as the second best in the world, I am not giving expression to my own opinion, but it was a remark made by Mr. Henry A. Walker, Vice-President and General Manager of the American Factors Associates Ltd., Hawaii, who was on a brief visit to our factory on 2nd February 1959, after his extensive tour of the various sugar producing countries in the world. Mr. Walker was impressed with our achievements and offered to send his technical experts to our plantations for further improvements. Actually, we ourselves wanted to bring in these experts on our own account, but the Reserve Bank was very reluctant in granting even the 7,000 dollars in foreign exchange which was essential for their visit. In view of the necessity of all-round efforts to step up cane production in our country in lesser area, it would be worthwhile on the part of the Government to consider the feasibility of inviting these technicians to our country under the United Nations Technical Assistance Programme and thus making their services available to sugarcane research stations in the country and industry.

"Our research laboratory and experimental farm need special mention. Our technicians are putting in continuous efforts with all zeal, in the application of latest techniques with a constant thought of further progress. Their untiring efforts have been rewarded. I pay my tributes to our technicians for their perseverance, zealous efforts, planning with vision and imagination. With all these achievements, still our ambitions have no bounds, and we are eager to go ahead with better performance and, therefore, are looking forward to various experiments in application of hormones and others, with a view to increasing sucrose content in the sugarcane. The use of radio-active isotopes, when released by the Government for use in the field of agriculture, with the object of studying the requirements of nutrients of sugarcane is also contemplated. Methods of moisture determination with use of souquouys blocks to rationalise the use of water for sugarcane crops are some of the problems of highly intricate character, but those have been successfully solved and practised to advantage in Hawaii."

A brief review of the Company's progress was made by Mr. Dahanukar. He observed:

"Beginning with a modest production of 7,242 bags of sugar in 1934-35, the Company achieved a production of 250,846 bags in 1959-60. Similarly, in the field of agriculture, we produced 179,696 tons of cane on 3.789 acres of land in 1940-41, resulting in 188.512 bags of sugar and, in 1958-59, we produced 160.350 tons of cane on an area of only 2,495 acres which commanded a production of 191,600 sugar bags. This means that the average yield of 47.5 tons of cane per acre has increased to 64.3 tons per acre. Similarly, our production in 1943-44 was as low at 3.6 tons of sugar per acre (when pests and diseases prevailed). But due to our continuous and planned efforts, we have more than doubled it in little over a decade when we reached a sugar production of 7.8 tons per acre in 1959-60. We consider this as a significant achievement particularly when compared with the general average of only 1.5 tons sugar per acre in our country. This season, we expect to make further progress and hope to reach an estimated average of 70 tons of sugarcane on all kinds of crops and 8.5 tons of sugar per acre. This, so far as our information goes, is the highest figure ever achieved in our country on a composite and mechanised sugarcane farm."

Mr. Patil's Speech

Speaking on the occasion, Mr. S. K. Patil alluded to the issue of controls over sugar and stated:

"Sugar price has gone down, but, I am afraid, it must not go down even more than this. Many people are asking why I am keeping this control. As much as 70 per cent of the produce is controlled in the U.P., Bihar and the Punjab. If the controls exist, it is because I do not want the prices to fall. I want them (controls) in the interests of the producers, so that the producers will be getting Re. 1.62 to Rs. 2 or even more for their cane, and they can do so only if I have some controls to regulate the prices, and it is not because millowners should be assisted. I am sure that the millowners are also afraid of abolition of controls. Something will have to be done during the next few years, and whatever will be done will be in the larger interest of the industry."

Mr. Patil emphasised the need for improving the productivity of cane lands and said:

"The average per acre yield of sugarcane is 15 tons. You may talk of 60 to 70 tons per acre. There may be factories in Maharashtra giving as much as 66 tons or even 75 tons. Recently, I gave a prize to a farmer from Coimbatore who gave the highest yield of 146 tons per acre. But these are individual achievements. Even if the average yield of cane is raised by 1.4 ton or something, I would be happy. It deserves great commendation for the above farmer, and he was awarded Rs. 5,000 with a gold medal for his achievement. If we are able to produce 40 to 50 tons per acre in India, sugar will be marketable at competitive prices. The world produces 45 million tons of sugar. Of this, our production of 2½ million tons represents about 4 per cent. But, if you take the production of *gur* and *khandsari*, you will find that one-third of sugarcane is going for the production of sugar and two-thirds for the manufacture of *gur* and *khandsari*. If you take the whole thing, it comes to 10 per cent of the world production of sugarcane. It is not a small thing. . .

"For the last six months, my mind has been heavily taxed to find out some practical solution, so that the production per acre yield is higher and higher, that is, from 15-20 tons to 25 tons, with a view to making it competitive even to have some method by which at least 500,000 tons must be sold in the international market, in order that the precious foreign exchange of 50 million dollars from America must be achieved. Therefore, you must be well prepared for some sacrifice. With your technical and scientific knowledge, which has proved to be so excellent, surely you will have better results year after year, I hope, whenever such results are obtained, they should be made available to other agriculturists, so that their production, too, may go up in a similar manner. I am glad you are already doing this."

Apropos Mr. Dahanukar's reference to the Maharashtra Land Ceilings Bill, Mr. Patil disclosed that his Ministry had suggested grant of exemption to those farms which are mechanically cultivated and give maximum results, as, for instance, tea and coffee plantations, sugarcane farms, and rice and wheat fields. He, however, mentioned that there was a proviso for the exemption so suggested, namely, that the imposition of ceiling on any farms should not adversely affect production. "It is natural," he said, "that, if production remains the same, as an Agriculture Minister, I cannot say anything. I am talking here not as a politician but as a simple Minister for Agriculture." Mr. Patil alluded to the Maharashtra Government's assurance that, as a result of the inclusion of sugarcane farms in the land ceiling legislation, production of sugar would not suffer and said that he had to take the word of the Government. He added that the solution to the problems of Deccan sugar millowners did not rest with him but with the State Government.

GUJARAT STEEL TUBES LTD.

A new company, the Gujarat Steel Tubes Ltd., Ahmedabad, will enter the capital market some time in the middle of April. The Company has an authorised capital of Rs. 3 crores, but initially it intends to issue a capital of Rs. one crore only, all in ordinary shares of Rs. 100 each. Of this, Rs. 51 lakhs will be taken up by the promoters and their friends. The remaining amount of Rs. 49 lakhs divided into 49.000 shares of Rs. 100 each, will be offered for public subscription.

The main object of the Company is to manufacture galvanised steel pipes of the diameter of ¼ to 4 inches. The Company has already obtained the necessary licence to manufacture 24,000 tons of pipes annually and has also secured a loan of Rs. 45 lakhs in foreign exchange from the I.C.I.C.I. for importing plant and machinery from West Germany. It is reported that the tube mill will be supplied by the well-known firm of Mannesmann-Meer of West Germany, who will also erect and commission the plant and train the Indian staff and labour. Raw materials for the manufacture of the tubes will be supplied by the Rourkela steel plant. The Company is being established by the well-known Ahmedabad firm of Jesinghbhai Ujamshibhai which will be its managing agents, headed by Mr. Shantilal Mangaldas, a leading industrialist of Gujarat and a former President of the Federation of Indian Chambers of Commerce and Industry.

As the demand for tubes and pipes is running ahead of the supply, the promoters believe that the Company can earn reasonable profits. The plant is expected to go into production by about the middle of 1962.

The Government of Maharashtra has set up a committee to examine the system of ownership flats in all its aspects. The Committee is expected to suggest measures for preventing malpractices and irregularities and ensuring security for buyers of ownership flats. This information was given by Mr. S. G. Kazi, the State Minister for Civil Supplies, in the Legislative Assembly this week.

MONEY STILL TIGHT

(From Our Own Correspondent)

BOMBAY, 28*th March*

No new developments have occurred in the short-term money market. The demand for funds for meeting the growing requirements of industry and trade continued at a high level throughout the week. As there is no sign yet of any perceptible expansion on the supply side, the interest rates have been ruling firm at the same levels as those that prevailed last week. For purposes of record we give them below:

	Per cent.
Inter-bank call money—	
Exchange and larger Indian banks ...	5½
Other banks	5¼
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of 91-day Treasury Bills of the Government of India sold through weekly tenders showed no new features. Thus, the total amount offered and accepted was Rs. 2 crores, same as last week, against an invitation of an equivalent amount. The average rate of accepted tenders remained unaltered at Rs. 2.750 per cent per annum. 91-day intermediate Treasury Bills sold from 21st to 25th March fetched Rs. 70 lakhs. Their sales are being continued.

The statement of the scheduled banks for the week ended 17th March 1961 discloses a decline of Rs. 3.95 crores and Rs. 17.89 crores in the demand and time deposits respectively. Of this fall, the share of the State Bank of India is Rs. 14.53 crores. Thanks to the heavy pressure on the demand for funds, their borrowings from the Reserve Bank of India increased by Rs. 11.51 crores, of which Rs. 5.98 crores are against usance bills. The Scheduled banks' borrowings from the State Bank of India of demand variety expanded by Rs. 1.28 crore and those of time nature by Rs. 16 lakhs. On the assets side, the advances and bills portfolio registered a sharp rise of Rs. 14.43 crores, on top of an almost equal rise in the preceding week. This brings the total bank credit to Rs. 1,307.17 crores, as against Rs. 1,114.63 crores a year ago. Of the rise in Scheduled bank credit, the State Bank of India accounted for Rs. 2.84 crores. Over the week, the investments of the Scheduled banks as a whole have fallen by Rs. 14.98 crores, but as the investments of the State Bank of India have declined by as much as Rs. 13.24 crores, the actual contraction in this portfolio of the other scheduled banks is only of the order of Rs. 1.74 crores. The reduction in the deposits and investments of the State Bank is clearly due to the monthly transfer of P.L. 480 funds to the Reserve Bank.

Prices in the gilt-edged section hardened further during the week, on account of keen enquiries for short and medium-dated issues from certain official funds. These institutional investors seem to be switching their holdings of near-maturity securities for short and medium-dated loans. As a consequence, several Central loans have moved to higher levels. Thus, 2½ per cent 1962 and 3¼ per cent 1964, National Plan Bond Loan closed 15 nP higher each at Rs. 98.40 and Rs. 99.90 respectively, the prices of 3 per cent 1964, 1966-68, 3½ per cent 1965 and 1966 hardened by 10 nP each. 3 per cent 1970-75, 3½ per cent 1967 and 1968 went up slightly by 5 nP each. In the State loans section, the gains recorded were much greater. Thus, 4 per cent 1963, 1967, 1968, 1969, 1971 Madhya Pradesh, 4 per cent 1968 Kerala, 4 per cent 1968 Punjab, 4 per cent 1971 U.P., 4 per cent 1967, 1968 and 1969 Bihar showed gains ranging between 35 nP and 90 nP. Some of the State issues the prices of which had already moved up last week, displayed modest rises. Thus, 4 per cent 1969 Gujarat, 4 per cent 1963 and 1964 Madras, and 4 per cent 1967 and 1969 Maharashtra loans showed improvements ranging from 5 nP to 10 nP only.

In the foreign exchange market the rupee did not show any marked fluctuations. Thus, the banks' selling rate for ready T.T. on New York has remained steady at Rs. 478.50 per 100 dollars; the buying rate shows some strengthening, having moved from Rs. 475.00 to Rs. 474.25 per 100 dollars. In the New York exchange market, the pound sterling has remained steady. The latest available rates (28th March) are: 279.830-279.860 cents per £ for spot and 278.330-278.380 cents per £ for three months' forward. Over the week, the sterling has gained by 0.03 cent in the spot and lost 0.07 cent in the forward.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *27th March*

Madras kip market ruled firmer than last week. Stocks were arriving in large quantities from the tanneries and were taken up at increased prices. Inquiries from U.K. were well spread and at firm prices. Shippers were quoting very high prices and were reserved in anticipation of higher prices.

In the tanned skins section, prices ruled firm. Certain top marks in goat skins were booked at higher prices. There was good demand for heavier weights lower selections from the Continent. Prime tanned sheep ruled steady; other classes were firm.

BULLION DECLINES FURTHER

(From Our Own Correspondent)

BOMBAY, 28*th March*

There was a further drop in bullion prices during the week under review. This followed persistent selling pressure induced by the delay in the commencement of business in *Vaisakh* and *Jeth* settlements, heavy arrivals and lower advices from Calcutta. Rumours regarding increased inflow of contraband stocks also imparted weakness. The decline in prices would have been more marked but for the support lent by some interests at lower levels on hopes of enlarged demand for both gold and silver during the marriage season.

The daily average offtake of gold was unchanged at last week's level of 4,000 tolas, while arrivals were of the order of 6,000 tolas. In silver, offtake and arrivals were 16 bars and 19 bars, respectively; the corresponding figures for last week were 14 bars and 25 bars. The floating stocks of gold are reported to be around 60,000 tolas and those of silver are estimated at 600 bars.

Ready gold continued to be quoted at a discount under the forward (*Chaitra*) settlement, the actual discount today being 70 nP as against 75 nP last week end. Over the week, ready gold dropped 96 nP to Rs. 119.85 and forward Re. 1 to Rs. 120.55. The premium of 25 nP commanded by ready silver over the forward on Wednesday last gradually declined during the week and disappeared today when it was quoted on par, namely, Rs. 201.65. The actual loss over the week was Re. 1.55 in ready silver and Re. 1.30 in the forward.

Adjustment rates fixed today were Rs. 119.60 for gold and Rs. 201.65 for silver, as against Rs. 120.95 and Rs. 203.20, respectively, on Wednesday last week.

The following table shows the trend of the market during the week under review:

	28-3-1961 (closing)	High	Low	22-3-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	119.85	121.25	119.60	120.80
Forward:

Silver	91.875 cents	—	—	91.875 cents

* 3rd April settlement. † 4th April settlement.

N.B.—The quotation for gold is per 10 grams (about 0.86 tola) and that for silver is per kilogram (85.7 tolas). London and New York quota itemsare perounce.

NEW CROP GRAIN ARRIVALS

(From Our Own Correspondent)

HAPUR, *27th March*

Quiet to easy trend was witnessed in the foodgrains market during the week under review, following the commencement of new crop grain arrivals. Demand, too, was poor, as consumers expected further fall in prices as soon as new wheat reached the market. Stock position with both Central and State Governments was very sound and trade stockists were now anxious sellers.

Wheat ruled almost unchanged at Rs. 16.50 a maund for average quality and Rs. 17.75 for better farm produce. Special quality imported from Punjab was quoted at Rs. 17.50 and red inferior quality at Rs. 15 a maund. Daily arrivals were poor at about 50 maunds, but bumper crop prospects, harvesting of which would begin after ten days, acted as a check on the rising trend of prices. The weather is now sunny and is being considered best for harvesting.

Rice was stationary, thanks to easy supply position, following continued arrivals from producing areas of east U.P. Local stocks was put at 5,000 maunds and week-end prevailing prices were:—rice mainpuri Rs. 20.75; *gainda* Rs. 20; *ramjawayan* Rs. 24; *raimunia* Rs. 25.50; *basmati sela* Rs. 28 to Rs. 30; superior Rs. 33 to Rs. 37 a maund.

Gram registered a heavy fall of about Rs. 1 per maund to be quoted at Rs. 14.75 to Rs. 15 a maund for better Punjab variety and inferior quality was quoted at Rs. 14.25 a maund. Bright crop prospects and consequent easy advices from the Punjab were main influencing factors. New barley and *bejhar* began arriving in the market and prices sought lower levels at Rs. 12.50 and Rs. 11.25 a maund, respectively. Harvesting and winnowing operations were in full swing and arrivals would soon mount. Maize sought lower levels at Rs. 12.50 for best quality, as demand ran down, and *bajra* was quoted at Rs. 15 due to some demand for seed purposes. *Juwar* was depressed at Rs. 11.50 to Rs. 12.50, as local stocks mounted to 5,000 maunds, *guwar* ruled unchanged at Rs. 13.25 to Rs. 13.50.

Among pulses, peas dara declined to Rs. 9.75 to Rs. 10, as daily arrivals rose to about 1,500 maunds, and better farm produce was quoted at Rs. 12. Although some demand was reported from the consuming areas of Madras side, loading to those destinations was not available. Since the quality reaching the market was still poor, stockists were reluctant to enter the market. Arrivals would mount further, as harvesting is nearing completion and weather is favourable for winnowing operations. Peas *dal* was quoted at Rs. 12.

COTTON RECEDES

(From Our Own Correspondent)

BOMBAY, 28*th March*

The most important development of the week concerning the cotton futures market was the fixation, by the Special Committee appointed by the East India Cotton Association, Bombay, on the 23rd inst., of the tendering differences in respect of Jarilla April 1961 contract. The rates fixed are generally considered fair and just. Hence very few appeals are expected to be filed against them.

On Thursday the 23rd inst., prior to the fixation of the tendering differences, the market depicted an easy trend, thanks to selling induced by anticipation of a large volume of tenders. The actual rates fixed were, however, such as to discourage large tenders. Reacting to the news, both the Jarilla April and August contracts rallied the next day. Sentiment was also favourably influenced by the concessions announced by the Finance Minister in the excise duty on yarn and cloth. Consequently, a part of the earlier losses was made up. This trend towards a recovery was, however, reversed when the market opened on Monday, after having remained closed on Saturday owing to *Ram Navmi*. Easier upcountry advices and lower spot communications were responsible for the decline in futures prices. The downward trend of prices persisted till the close of today. The prospect of greatly increased arrival of U.S. cotton is also a contributory factor. Although those foreign growths are dearer than comparable. Indian cottons, the fact that they will swell the supplies has made mill buyers cautious and selective in their support to the market. Over the week, futures prices have declined by Rs. 7.25 to Rs. 13.

Attention is now centred round the possible volume of tenders. Although none takes a large volume of tenders for granted, tenders are expected to be more in such varieties as Buri-American, Berar 0394, Laxmi A. Jaydhar A and B, the tendering differences for which are said to be favourable to sellers.

The following table indicates the trend of prices of the contract during the week:

(In rupees per three quintals)

	28-3-61	*High*	*Low*	22-3-61
I.C.C. Jarilla:				
April 1961 ...	579.25	592.50	577	592.25
August 1961 ...	593	599	590.50	600.25

In the spot section, mill demand for ready cotton slackened. Mill buyers are inclined to postpone purchases until they get some definite indication of the probable size of tenders against the April contract. For this they have to wait till the first notice day. Nevertheless, needy mills showed interest in such varieties as Laxmi, CO2, Surti, Vijay, Khandesh and Kalyan. Prices were well maintained.

Interest in foreign cotton was mainly confined to Sudan cotton owing to its cheapness relative to comparable Egyptian cotton. Stray interests was noticed in East African varieties while U.S. cotton was neglected. It is said in trade circles that in order to expedite the import of the 300,000 bales of U.S. cotton, which India agreed to take as per the recent agreement, mills might be compelled to take up the quantity in full. For this purpose, Indian cotton quota is likely to be linked to U.S. cotton.

Export demand for Bengal *Deshi*, especially Fine and above qualities, was well maintained. Shippers bought sizable quantities, in anticipation of a quota which has yet to materialise. In fact, traders are disappointed that, in spite of the very favourable supply position of Bengal *Deshi* and the urgent need for earning foreign exchange, the Government could not persuade itself to release a further quantity of Bengal *Deshi* which the country can safely spare. Meanwhile, it is said that a Japanese trade delegation, which is expected to visit India some time later this year, will also consist of representatives of Japanese cotton traders. The latter will suggest some modification in the export policy of cotton which will include (1) issue of export quota in bulk of the beginning of every season, (2) simplify the export procedure and making it less cumbersome, and (3) provision of facilities for longer shipments. The procedure followed in respect of exports in the current season, especially the linking of exports to sales to mill in India is said to have caused much inconvenience to overseas buyers who are consequently reluctant to buy cotton on a subject-to-licence basis.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Laxmi 1,050; CO2 1,220-1,285; Kalyan 800; B.P. 52 1,320; Sudan P.L. 1,625; XP2L 1,585.

In the Karachi cotton futures market, the March 1961 contract having gone off the board on 25th March (the last known quotation for it was Rs. 72.10 as against Rs. 70 a week ago), trading interest was centred round the May contract. Consequently, it improved from the last week-end rate of Rs. 70 to Rs. 70.90 yesterday. The July 1961 contract registered a sympathetic rise from Rs. 70.15 to Rs. 70.60. Spot prices ruled fully steady.

Alexandria cotton futures market depicted a divergent trend during the week under review. While the prices of long-staple Karnak contracts were well maintained, thanks to a revival of export interest and local demand, the medium-staple Ashmouni contracts tended to recede owing to absence of foreign demand. The export price discount remained unchanged for the current week also. The latest available quotations—in tallaris per lb.—are as under, the figures in brackets being last week-end rates:

Karnak: March 69.50 (69.08); May 70.25 (70.13); July 70.70 (70.51).

Ashmouni: April 59.29 (59.30); June 59.78 (60.12); August 60.20 (60.70).

Quiet conditions prevailed in the Liverpool cotton futures market during the week. Values remained practically unchanged in thin trading. A limited volume of hedge offering and profit-taking was readily absorbed. Continued firm advices from New York failed to have any bullish effect on prices in Liverpool. The more distant positions of Sudan cotton contracts in Liverpool, however, firmed up, thanks to local support. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: March 24.35; May 24.85; July 25.15.

American cotton mixed growth contract: March 24.70; May 25.25; July 25.50.

Sudan: March 31.50; May, July 31.75.

The declining trend noted in the New York futures market last week after a period of sustained firmness proved shortlived. The market again rallied during the week under review. The bullish outlook for cotton, thanks to the higher support price for upland cotton, the enhanced C.C.C. resale price for its stocks with effect from 1st April, and the explosive situation in Laos touched off a wave of buying which pushed the contracts to higher levels. Spot prices too continued to be firm.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	27-3-61	21-3-61	14-3-61
Spot	33.50	33.35	33.25
May	33.18	33.12	33.37
July	33.72	33.64	33.73

YARNS WEAK

(From Our Own Correspondent)

BOMBAY, 28*th March*

The yarn market depicted a distinctly easy trend during the week under review. Art silk yarns encountered selling by tired bulls who had bought large quantities at high prices in the past fortnight. The reduction in the rates of basic import duty on art silk yarn announced by the Government early in the week failed to have any significant effect. The import duty per kilogram has been cut from Rs. 5.10 to Rs. 4.45 on yarns below 75 deniers, from Rs. 3.70 to Rs. 3.15 on 75-100 deniers and from Rs. 3.10 to Rs. 2.75 on yarns above 100 deniers; the countervailing import duty rates, however, continue unchanged at Rs. 3.00, Rs. 2.25 and Re. 1.50, respectively. Staple fibre yarns also came in for selling, in view of the low level of offtake from consuming centres. Cotton yarns lacked support in the absence of any encouraging development.

The Art Silk Yarn Distribution Committee of the Development Council for Art Silk Industry has decided that card holders for indigenous yarn will be allotted their balance quota of yarn, if any, for April-June 1960, July-September 1960, and October-December 1960 quarters in full. All art silk powerloom weaving units having balance quotas of yarn are required to forward their cards so as to reach the Committee not later than 5th April 1961.

Spot Cupressa Bemberg yarn (60 x 2) moved down from Rs. 2.870 to Rs. 2.755. April delivery was knocking at the official ceiling of Rs. 2.600. Among imported art silk yarns, 150 Italy shed a rupee to Rs. 1.793. 120 Italy were subdued at Rs. 1.543 and 150 Japan at Rs. 1.777. 120 Japan, however, met with special support and advanced by Rs. 14 to Rs. 1.570. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade fell by 40 nP to Rs. 15. 150 Bt. cones 1st grade eased by 9 nP to Rs. 13.46.

Staple fibre yarn (40 x 2) June delivery receded by Rs. 25 to Rs. 905. April delivery declined by Rs. 16 to Rs. 928. Spot Kohinoors lost 7 nP to Rs. 10.71. Centurys were dull at Rs. 10.58.

In the cotton yarn section, ten counts Gokaks were quiet at Rs. 21.75, while Moderns spurted by 56 nP to Rs. 19. Twenty counts New Greats were unchanged at Rs. 27.12. Thirty counts Simplex and New Greats were quoted at last week's level of Rs. 27.12 and Rs. 27, respectively. Forty counts Maduras were lower by 25 nP at Rs. 32. Sixty counts Gokaks improved by 25 nP to Rs. 51. Eighty counts Finlays and Mahindras were unaltered, the former at Rs. 82.25 and the latter at Rs. 68.68.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with the previous week.

	28-3-1961	22-3-1961
	Rs.	Rs.
Art silk yarns—		
60/1 Cupressa Bemberg (100 kg.) April	2,600.00	2,600.00
60/1 Cupressa Bemberg spot	2,755.00	2,810.00
120 Japan (per 100 kg.)	1,570.00	1,556.00
150 Japan (per 100 kg.)	1,777.00	1,777.00
120 Italy (per 100 kg.)	1,543.00	1,543.00
150 Italy	1,793.00	1,764.00
Staple fibre yarns—		
40 x 2 April (per 90.72 kg.)	928.00	944.00
40 x 2 June	905.00	930.00
40 x 2 Century (per kg.)	10.58	10.58
40 x 2 Kohinoor (per kg.)	10.71	10.78
Cotton yarns (per bundle of 10 lbs.)—		
10s Golden	19.00	18.44
20s New Greats	21.75	21.75
20s Simplex	27.12	27.12
40s Maduras	32.00	32.25
60s Finlay	66.40	66.40
80s Mahendras	68.68	68.68

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 28*th March*

For the second week in succession the oilseeds market ruled depressed with the exception of castorseeds which moved up on speculative support. Groundnuts were subjected to renewed long liquidation. Reports suggesting tight statistical position were of no avail. The *vanaspati* manufacturers and crushers declined to lend active support on hopes of a further fall in groundnut prices. There were, besides, reports from Madras indicating that the summer crop there would come to market in the immediate future. The growing supplies of oil from Nizam after the lapse of about a year, following the recent weakness in Delhi and Calcutta markets, further dampened the enthusiasm of bulls. Yet another bearish factor was the marked setback to values of *kardi* seed and oil, another edible oil, thanks to substantial arrivals from Nizam. The weakness in rapeseed, too, adversely affected the sentiment. Export business in H.P.S. was dull on account of Indian prices being out of parity with world prices. Linseed ruled distinctly easy in the absence of any overseas enquiries for oil. The domestic demand was also at a low ebb, in the wake of arrivals of linseeds from major producing centres, such as the U.P. and Nizam. The pronounced weakness in rapeseed, too, acted as a damper for linseeds. In sympathy with other edible oils, sesame turned listless. Cottonseeds gave way in the absence of follow-up support.

As already mentioned, castorseed put on a cheerful appearance this week. The spurt in castorseeds was induced by sustained buying by a prominent business house and a few shippers who expected that Brazilian supplies would taper off shortly, thereby opening out prospects for Indian castor oil in the U.S. market. There were rumours of enquiries from some Communist countries. But for larger arrivals, prices would have moved up still further.

In the groundnut section, Nizam bold fell from Rs. 54.50 to Rs. 52.50 by yesterday, but improved to close at Rs. 53.25, with a net loss of Re. 1.25 over the week. Khandesh suffered a setback of Re. 1.75 to Rs. 53.50.

Groundnut oil ex-mill closed lower at Rs. 22.60 today, as against Rs. 23.15 last week-end. Railway receipts eased by 40 nP to Rs. 22.40. There was no official trading in respect of May 1961 hedge contract, with prices continuing to rule above the ceiling level.

Among linseeds, May 1961 contract declined by 57 nP to Rs. 36.62 on stale liquidation by upcountry interests. Bold ready lost 87 nP to Rs. 37.50. Oil was marked down by a rupee to Rs. 16.50.

In the cottonseeds section, May 1961 contract fell by Re. 1.50 to Rs. 95.75. Whites sagged by 25 nP to Rs. 19.75. Both non-whites and berars dropped a like amount to Rs. 19.50.

In the sesame group, sesame bold variety was neglected at Rs. 370 (per 250 kgs.), in distinct contrast to the trend in the previous week. Sesame oil was lower by 75 nP at Rs. 28.25.

In the castorseed section, May 1961 contract rose from Rs. 176.39 to Rs. 180.50 by Friday, but moved down slightly thereafter to Rs. 179.50. Ready Madras rose by 37 nP to Rs. 35.62. Oil B.S.S., which had improved from Rs. 16.10 to Rs. 16.85, closed today at Rs. 16.65. Oil commercial gathered 45 nP to Rs. 15.90.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	28-3-1961	22-3-1961	15-3-1961
Groundnut	Rs.	Rs.	Rs.
May 1961	—	—	—
Nizam bold	53.25	54.50	55.25
Coromandel ready	53.50	55.25	55.50
Khandesh quality	53.50	55.25	55.25
Oil ex-mill ready*	22.60	23.15	23.25
Railway receipts*	22.40	22.80	23.00
Castorseed			
May 1961	179.50	176.87	176.50
Ready Madras	35.62	35.25	35.12
Ready Kanpur	33.87	34.12	33.50
Oil B.S.S.†	16.65	16.10	15.80
Oil commercial†	15.90	15.45	15.10
Linseed			
May, 1961	36.62	37.19	38.25
Bold ready	37.50	38.37	39.50
Oil ready†	16.50	17.50	18.00
Cottonseed			
May 1961	95.75	97.25	98.00
Niger seed	41.00	42.00	42.00
Kardi seed	27.75	28.50	28.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, *28th March*

Despite pressure of distressed selling by stockists who were eager to escape double levy of sales tax as the Kerala sales tax law provided for assessing closing stocks with dealers as on 31st March, the last day of the financial year, Malabar black pepper ruled steady after an earlier decline. The steadiness was due to deterioration in Laos political situation; ending of the main harvesting season in India; the belief that nearly half the production is already marketed either for export or for internal consumption; possibility of good demand from America in the near future as New York dealers have been so far buying sparingly in expection of still lower prices; and short positions created in a declining market in white and black pepper by Continental dealers.

Ungarbled at Cochin moved between Rs. 370 and Rs. 356 and garbled from Rs. 384 to Rs. 369. May delivery was held around Rs. 381. Calicut was quoting Rs. 350. Arrivals from interiors are getting poorer. Growers are resisting lower prices and are unwilling to part with the quantity unless at their price.

Singapore, after touching the lowest at Str.$170 for white and Str.$142½ for black, improved to Str.$175 and Str.$147½, respectively, in view of short-covering and under the support by the new Syndicate. The new Syndicate is reported to have among its members parties influential in Sarawak and Indonesia. They are holding majority of the stock of both black and white pepper in Singapore, as well as at the origins. It is also reported that they are allowing with a purpose a creation of short positions in world market. The Syndicate is marking time for some "firework" if the political situation in Laos deteriorates and New York grinders get excited to action which is very likely, in view of the present tightness of spot and short positions created in forward deliveries and on the New York Exchange.

New York spot is steadily held at $0.47½, with business thin, as stockists are awaiting new development.

The future of the market is uncertain inasmuch as the short positions are being created in the world's important markets. The reports of the prospect of new crop Sarawak are said to be not promising. Crop reports from Indonesia are too early to believe, but the general consensus of opinion is that the new crop will be poorer as compared with last year's, as the bumper crop, as a rule, is generally followed by a poorer crop in the subsequent year. The market is likely to turn the corner during the next few weeks, provided Singapore and India hold back in the meantime.

Ready pepper in Bombay is nominally quoted at Rs. 200 per 50 kilos, with demand thin.

EASY UNDERTONE IN TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 21*st March*

431,000 kilograms were offered in Sale No. 12 held today. Quality from all districts generally showed a seasonal decline. There was good general demand with more activity being seen from internal sources. Low medium and medium descriptions were well supported although prices were generally 10-20 nP lower. Good mediums met with less activity and registered a decline following quality. Nilgiris were again a weak feature and were irregular and easier. Black leaf brokens were well competed for and sold at about steady prices. Whole leaf grades were easier with F.Ps selling better than similar O.Ps. C.T.C. and legg cut types, although in good demand, were irregular and lower.

	1961 Rs.	1960 Rs.
Low medium	4.60-4.80	4.19-4.41
Medium	4.80-5.05	4.41-4.85
Good medium	5.10-5.45	5.07-5.73
Nilgiri B.O.P.	5.20-6.25	

The average price realised in Sale No. 12 was Rs. 4.99 per kilo as against Rs. 5.15 a week ago and Rs. 5.73 in the corresponding sale last year.

Dust Sale No. 12: Offerings totalled 219,000 kilograms in Dust Sale No. 12 held on Thursday, 23rd inst. The selection was generally a little inferior. There was good general demand. Medium descriptions were well supported at generally firm prices although the plainer types and those containing fibre were often somewhat easier. Highgrown descriptions met selective enquiry and occasional lines sold well although the majority were easier. Legg cut and C.T.C. kinds were a good feature of the market but sold at occasionally lower levels.

The average price realised in Dust Sale No. 12 was Rs. 4.87 per kilo as compared with Rs. 4.83 a week ago and Rs. 4.54 in the corresponding sale last year.

Export Quota: The price is quoted nominally at ¼ nP per kilo. The Tea Board is now closed for finalising the year's accounts and business only opens in Special Licence from 1st April.

Colombo: In this week's export sale demand was less general and there was little or no activity from South African sources. Highgrowns were irregularly easier whilst Uvas declined by 15 to 20 cents. Mediums were 10 to 15 cents easier and lowgrowns were barely steady. Liquoring fannings were also distinctly easier.

London—North Indian and other growths: In Monday's auction there was strong demand and best Assams were fully firm to dearer. Thin liquoring stalky kinds were irregular and easier. Plain broken is quoted at 3/9*d.*

Ceylon and South Indians: In Tuesday's sale there were 22,490 packages on offer of which 9,060 packages were from South India. There was less demand and prices were generally 1*d.* to 3*d.* easier with number of withdrawals.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 13.—490,000 kilograms. Good but irregular demand. Plain and low medium 10 to 20 nP easier. Medium and good medium upto 30 nP lower. Better enquiry for Nilgiri and B.O.Ps. Best quality whole leaf strong."

METALS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 28*th March*

The feature in the metal market during the week under review was that the price of lead, which had remained stationary for several months due to the comfortable supply position, recorded a marked gain following rumours that the import policy for the six months commencing 1st April would announce a cut in the import quota for lead. Demand was naturally higher. Opening at Rs. 124 per quintal, the metal steadily gained to finish at Rs. 130. On the London Metal Exchange, the price was unchanged at £67 per ton. Tin here opened at Rs. 1,289.25 per 100 kgs. and eased to Rs. 1,275.50 as arrivals improved the supply position. Further arrivals were anticipated. In London, the price closed higher on balance at £824 per ton against £817½ opening. Traders took note of the announcement by the International Tin Council that, in the second quarter beginning April also, there would

be no export restriction on tin. This was interpreted in market circles here as continued recognition by the Council that world production is now equal to demand.

Demand for non-ferrous scraps was mostly on the low side. This was due to closure of factories in several upcountry centres in Rajasthan and Punjab as a protest against the levy of excise duty on brass sheets and circles. In a representation to the Finance Minister, the Northern Indian Metal Manufacturers' Association has pointed out that the levy of excise duty on brass sheets and circles would hit hard the utensil industry which at Jagadhri, Batala, Jandiala, and Amritsar, employs thousands of workers.

Copper scrap prices firmed up during the week on fairer demand. Utensil scrap moved up to Rs. 442 from Rs. 438.75 per 100 kgs. and berry quality scrap to Rs. 474.25 from Rs. 465.50 per 100 kgs. The price on the London Metal Exchange hardened to £226 from £225 per ton, thanks to greater West German demand. Electrolytic zinc opened here at Rs. 333.75 per 100 kgs. and after being higher at Rs. 334.75 closed at Rs. 331.75.

RAW JUTE DROPS BELOW I.J.M.A. PRICE

(From Our Own Correspondent)

CALCUTTA, *28th March*

The striking feature of trading in the jute markets during the week under review was that fibre prices declined to well below the I.J.M.A. maximum prices, with sellers keen for business, and prices of goods recorded a gradual decline. Both these developments greatly impressed foreign buyers of goods and, though export business continued to be small and gunnies occupied an insignificant portion of space offering in foreign-going vessels, the omens were stated to be that the change in the market trend would stir foreign buyers to activity. That prices of fibre have now passed down the maximum levels has been hailed as a welcome development by industry and trade circles alike. However, whether this fall has been due to Government's threat of greater control is open to question. There should be no doubt that fixation of maximum prices by the I.J.M.A. and the adoption of voluntary control by mills in the membership of the I.J.M.A. set in the decline. With the decline, offers were falling. Read in this context, this week's decline in fibre prices should be attributed to firmer possibilities of a bumper crop. Heavy showers over this part of the country during the week and most of the jute districts derived benefit. These, together with the earlier rains, were considered sufficient to complete sowing operations. The high prices of fibre should be taken as a guarantee that greater land would go under jute and earlier sowing has also brought forth expectations of an earlier crop.

Those cultivators and other stockists who have been holding on to portions of their stocks in anticipation of high prices should now be convinced that the climax of the rising trend is over. Naturally, therefore, they have come out as sellers and it should be said to the credit of mills that, since they exercised greater caution and continued to buy small quantities here and there, the lower trend was sustained. Reports from Pakistan also indicated the recrudescence of good rains during the week. The recent storm has no doubt raised difficulties, but the rains have enabled sufficient progress for sowing in highland and midland areas also. The sowing in lowland areas was completed a few weeks ago. Arrivals into the Narayanganj markets recorded a handsome increase, and balers were inviting business at discounted rates. Export firsts declined by about £5 to £10 to £410 a ton, but overseas buyers rejected the offers on the plea that, unless the price declined by at least another £10 a ton, even a part of their losses on earlier purchases at highly inflated prices could not be made good. The price of cuttings was quiet at Rs. 270 a bale. Business at this price was hard to be found.

Notwithstanding the decline in prices of goods, business passing with overseas buyers remained low during the week. This naturally caused a certain amount of anxiety to traders and the industry alike. Market circles would consider that the absence of increased interest on the part of foreign buyers had been due to the need for prices to decline further. However, it was also apprehended whether this had been due to a switchover to substitutes and consumers' greater dependence on their existing stocks of jute goods. Prices of goods have declined greater in proportion to the fall in fibre prices and, at current levels, sales of goods by mills must be considered unprofitable. This is also the reason why mills have shown little interest in fibre even after the fall in prices during the week. Prices of fibre must decline further to enable economic production in mills.

This week's rapid decline in fibre prices would suggest that conditions have so changed in the course of the last two to three weeks that no further attempt at control is necessary. According to the Bharat Jute Sellers' Association, the proposal to introduce a system of licensing jute dealers should be dropped, since it felt that such a system would affect the flow of fibre and aggravate the position. After all is said and done, the time has now come for the I.J.M.A. to finalise its proposal to create a buffer-stock. With the possibility of a bumper crop, a situation where the cultivators may demand a price support scheme cannot be ruled out. If mills avail themselves of the coming bumper crop and create a buffer-stock in all earnestness, many a problem facing the industry as well as cultivators can be solved. As with the tin buffer-stock in London, the buffer-stock manager should be authorised to sell if the price moved up a certain level and to desist from selling if the price went down a floor level. The following are the opening (which are the I.J.M.A. maximum prices) and closing levels for the principal varieties of fibre during this week. The quotations are per maund of jute against March-April delivery:

	Opening Rs.	*Closing* Rs.	*Loss* Rs.
Assam bottoms ...	62.00	57.50	—4.50
Daissee bottoms ...	64.00	61.00	—3.00
Northern bottoms ...	61.00	58.50	—2.50

In the goods market, some covering business was done on Tuesday last, following which ready B. twills recovered from Rs. 194.50 to Rs. 195.00 and ready hessian 40" 10 oz. from Rs. 65.75 to Rs. 66.25. However, foreign buyers displayed only small interest. Prices on Wednesday remained unchanged. On the following day, there were reports of low interest in the U.S. burlap market and a consequent fall in prices there. Selling pressure was in evidence here and, in the absence of adequate real interest, B. twills eased to Rs. 190 and hessian 40" 10 oz. to Rs. 65.00. With the decline in fibre prices, sellers in goods increased, but buyers were out of the market. This caused a further decline in B. twills to Rs. 189, hessian 40" 10 oz. remaining unchanged at Rs. 65 on Friday. These prices were maintained over the week-end, interest from overseas buyers remaining low nevertheless. It was known earlier in the week that uneconomic working has forced the management of the Champdany Jute Mill to plan closing the mill as from 1st May. The mill's looms and workers will be transferred to the Wellington Mill under the same management. More sellers appeared during yesterday and mills invited business in forward positions. However, buyers were reserved, and this forced down B. twills ready to Rs. 182.50 and ready hessian 40" 10 oz. to Rs. 63.25. In view of anticipations regarding a bumper crop, buyers thought that the price level for forward positions must decline by several points before they could show interest. Early in the week, April-June B. twills were quoted at Rs. 193.50 to decline to Rs. 180.50. At Rs. 63, hessian 40" 10 oz. disclosed a loss of Rs. 2.50.

SUGAR SUPPLY EASY

(From Our Own Correspondent)

HAPUR, *27th March*

Sugar ruled quietly depressed to be quoted on Monday at Rs. 108.50 to Rs. 109 per bag of one quintal and retail Rs. 1.06 per *seer*. The supply position was easy, as the damaged sugar of last year's production was being sold in heavy quantity which was quoted low at Rs. 102 to Rs. 103 per bag. The market sentiment was also influenced by bleak prospects of sugar exports. Production was still in full swing in west U.P. and the mills were expected to continue their crushing season till May. Some factories, however, were facing coal shortage.

In Muzaffarnagar market, sugar continued to rule easy and reports that India was allotted an *ad hoc* export quota of 150,000 tons of sugar to the U.S. did not cheer the market. Supply position became further easy on receipt of orders to release unsold sugar for free sale in the open market. The recent statement of the Union Food Minister again belied hopes of sugar decontrol. The week-end prices were: D-29 Rs. 108 per bag, as against the controlled price of Rs. 107.69.

Khandsari showed improvement towards the week-end on brisk demand from east U.P., coupled with support from M.P., Maharashtra, Rajasthan and the Punjab. Cane crushers raised their cane purchasing price to attract cane. Daily arrivals in the Muzaffarnagar market were around 4,000 to 5,000 maunds and local stock there was put at 50,000 maunds, as against 150,000 maunds on the corresponding date last year. Week-end prevailing prices were: *khandsari* inferior Rs. 27 to Rs. 30; superior Rs. 31 to Rs. 33.50; crystal Rs. 33 to Rs. 36.

Ready *gur* registered modest gains in the week-end as daily arrivals dropped to about 500 maunds and local stock was now put at 80,000 maunds, the corresponding figure last year being 43,000 maunds. Stocks were reported heavy to the tune of 600,000 maunds in the mofussil areas. Loading continued to be restricted and, even on Sunday, the free loading day, one wagon was despatched as empties were not available. Prevailing prices were: *pansera* Rs. 13.75 to Rs. 14; inferior Rs. 13.25; *shakker* Rs. 14.87 a maund.

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *28th March*

Strong demand was in evidence at the internal sale No. 35 held here a week ago. This and the fact that the prices of the good varieties rose markedly only went to counter the argument of the Finance Minister, Mr. Morarji Desai, that the increase in excise duty was designed to reduce consumption of this beverage within the country and to release a greater quantity of tea for export. Whether exports increased or not, the increase in excise duty would bring in greater revenue to Government and it is becoming clearer and clearer day by day that the increase would fetch far greater revenue than the modest sum of Rs. 1.98 crores estimated by the Finance Minister while extending the benefit of Rs. 2 crores to the industry as a result of the cut in export duty.

Trade circles wondered whether the claim of the Deputy Commerce Minister, Mr. Satish Chandra, that India had not lost export market for tea had been made on the basis of statistics or on merely sentimental grounds designed to derive passing psychological satisfaction! For, figures now available reveal that, in 1960, India exported only 430 million lbs., as against 472.5 million lbs. in 1959. It should be noted that the decline in North East Indian output was 34 million lbs., thanks to a severe drought earlier in the season. On the other hand, South Indian production was impressively higher by about 14 million lbs. Total tea output was, consequently, lower by only about 20 million lbs. whereas exports were down by more than double the shortfall in output, that is, 42.4 million lbs.

Trade circles would very much like Mr. Satish Chandra to review his estimate in the light of the above analysis. Tea exports in 1960 earned for the country Rs. 121 crores, Rs. 5 crores less than in 1959. The fact that India's traditional customers, such as the United Kingdom and the United States, lifted less tea from India in 1960 should add to the concern being felt in trade circles here.

During the week, only little tea claimed liner space. Inquiries for space would, however, show that the industry expected export of the new season's teas to begin much earlier than usual, possibly some time next month. It was noted that the tea stocks in the U.K. increased to 152 million lbs. in the week ended 17th March from 151 million lbs. in the previous week.

Dusts on offer during the internal sale held last week amounted to 22,648 chests. There was good demand, and prices for the better varieties gained. The strongest feature of the sale was good C.T.C. teas, prices of which rose remarkably. Medium C.T.Cs were fully steady, while fibrous teas were a weak feature. Orthodox descriptions eased by 10 to 15 nP but the smaller and brighter teas were firm on better support. Legg-cut teas met with a quiet market, but the small and brighter kinds were steady. The quotations per 1 kg., inclusive of excise duty, were: good Assam C.T.C. dust Rs. 6.40 to Rs. 7.00, medium Assam C.T.C. dust Rs. 5.60 to Rs. 6.20, legg-cut dust Rs. 4.70 to Rs. 5.20, Medium Assam dust Rs. 4.55 to Rs. 4.90, and plain orthodox dust Rs. 4.55 to Rs. 4.60.

Leaf on offer, amounting to 405 chests, met with good demand.

With the sale held yesterday, the 1960-61 season's export sales came to a close. Offerings amounted to 14,331 packages, which met with strong and general demand. Prices for all kinds rose impressively. As assortments were several and the quotable teas were insufficient in quantity, no quotations were issued.

MARKET GOSSIP

(Concluded from page 579)

problems that have their origin in adverse, long-term changes in supply and demand.

The experts have suggested several alternatives for ignoring shortfalls in export earnings smaller than some agreed amount, for example, 2.5 to 10 per cent of average proceeds in three preceding years and for paying compensation equal to, say, 50 per cent of the shortfall so calculated.

Two main alternatives have been considered in regard to the terms under which claims might be settled. Under the first, the settlement would be similar to the form usual to any kind of insurance, namely, a payment in cash. The experts estimate that, if such a scheme had been in force during the period 1953-59 and, assuming compensation equal to 50 per cent of the shortfall [illegible] proceeds adjusted by a minimum deduction ranging from 2.5 per cent to 10 per cent of the base value of the proceeds, the underdeveloped countries would have had annual claims ranging, on an average, between £246 million and £466 million. For industrial and high-income, primary producing countries, claims would have averaged between $12 million and $142 million. The latter group would, however, have made a net contribution to the fund, even though this would not have been true of every individual country in the group. For the low-income primary-producing countries, the benefits, on the basis of a 2.5 per cent minimum deduction, would have covered about 40 per cent of the computed shortfall in the three years of greatest loss—1953, 1954 and 1958.

Under the second alternative, claims would be settled by payment of benefits in the form of contingent loans. Claimant countries would agree to repay compensation received in the event of their export proceeds recovering sufficiently within a stated period. A combination of these two methods is also possible, according to the experts. Thus, a part of the shortfall could be covered under the first alternative and the balance under the second.

In order to permit a steady rate of contribution, it is suggested that the proposed Fund would have to be started with an initial capital subscription large enough to enable it to face a series of bad years if necessary even at the outset. The initial subscription, in their opinion, may be the equivalent of three years' contributions.

The financial outlay involved in such a scheme, though it might appear substantial in absolute terms, is not that big relative to world trade or national income. To support benefits under the first or second alternatives mentioned above, contributions required for the period 1953-59 would have been no more than seven-tenths of one per cent of the exports of all countries, or less than one-tenth of one per cent of the gross national product of all industrial countries combined.

The experts believe that, given the necessary political acceptance, this scheme would prove to be workable in practice. They are convinced of the need for some such scheme to help primary producing countries to sustain and speed up their development efforts. For, even if more adequate compensatory financing than is now available is provided for through the I.M.F. and other agencies, such would offer no more than a partial solution to the problem of stability and growth in primary commodity trade. They concede that international action to deal directly with the problem of instability—through commodity agreements and other less formal arrangements—should have an important place in promoting stability in world trade. But such agreements, they maintain, are not likely to hasten any comprehensive contribution to the stability which is necessary for the trade and development of underdeveloped countries.

MR. C. H. BHABHA ON INDIAN BANKING

(Concluded from page 580)

the Chairman of the Indian Banks' Association stated that the present rules providing for exemption from branch audit, impose the hardship of applying for the exemption from year to year. Mr. Bhabha's suggestion that this could be easily changed to a longer period is eminently sensible. With regard to the second, he pointed out how inconsistent it was with the provisions of the Banking Companies Act. His exact observations on this point deserve to be quoted:

"This (the amendment) will enable any person, inclined to mischief, to obtain information regarding the undisclosed profits of a banking company and to give publicity to it, thereby causing much harm to the banking company, in spite of the fact that the Banking Companies Act, for very sound reasons, gives a certain amount of latitude to a banking company in publishing its profits. It is unfortunate that such long-term repercussions are not kept in mind at the time of making hasty changes in legislation. Would it be asking too much of the central banking institution and our national Government that they should consider such aspects carefully before adopting measures affecting banking?"

He is certainly not asking for too much.

Tax Exemption of Reserves

Mr. Bhabha also made another judicious suggestion, which, if accepted by the authorities, would go a long way towards strengthening the banking structure. In the case of many banking companies, it is a common experience that the present high level of taxation is reducing the profits available for appropriation. This hampers their capacity to build up adequate reserves. In order to encourage the banks to strengthen their reserves, Mr. Bhabha has recommended that a certain percentage of the gross profits which a banking company may credit to its inner reserves should be exempted from all taxes. It is a fact that such a concession is given in many economically advanced countries and has brought incalculable benefits to the nation's economy.

Unfair Methods of the State Bank

One of the major highlights of Mr. Bhabha's address was the outspoken manner in which he alleged that the State Bank of India was employing unfair methods for attracting business towards itself. Equally candidly he averred that the Government itself was extending favoured treatment to the State Bank of India and its subsidiaries in regard to the application of various legislations, as though the commercial banks were not doing work of national importance. A third point made by him on the State Bank was that it was not as helpful to commercial banks as it should be as a bankers' bank. Here is what he said on these points:

"Whilst speaking about legislation, I may mention here the differentiation made even in legislation, between a semi-autonomous corporation, such as the State Bank of India in which the Government is interested, and the other banking companies of our country. It does not seem to be quite logical that whereas the State Bank of India is allowed to acquire eight subsidiaries by enacting special legislation, no such facility is granted to other banking companies in the country. This is indeed a handicap on the latter, for which there would appear to be no reasoning. Such acquisition of controlling interests, which would develop a healthy banking system, is not unknown in countries which are developed economically on sound lines. Another feature which I may point out is the common members of the Central and Local Boards of the Reserve Bank of India and the State Bank of India. From an examination of the lists of members of the Boards, one finds that three members of the Central Boards of the Reserve Bank of India and the State Bank of India are the same and that four members of the Local Boards of the two Banks are also the same. One wonders whether this is a healthy policy especially in view of the fact that such common directorates are forbidden by law for other banking companies. Moreover, the accounts of the State Bank do not conform strictly to the provisions of the Banking Companies Act, and in making provisions and allocations, it enjoys certain facilities, which are not available to other banks. Further, on a previous occasion, I had referred to the unfairness of making gratuities paid to the members of the staff of the State Bank of India tax-free by law, while denying this benefit to the staffs of other banks, in spite of the fact that all of them do the same work. I repeat that this anomaly is unjust and should be remedied immediately and that the above benefit should be extended to the staffs of all banks.

"Furthermore, during the past year, the Indian Banks' Association on several occasions pointed out the unfair methods employed to divert business to the State Bank of India. One wonders whether such attempts could be considered wholesome for the development of banking and of our economy. It is surprising that, although the attention of the Reserve Bank of India has been drawn to this unhealthy feature, nothing has been done so far to remedy the situation. In this connection, it should be appreciated that the banking industry wholeheartedly helps all developmental plans and enterprises of the State, apart from subscribing liberally to the Government's borrowing programme year after year.

"While recognising the important role of the State Bank of India in our country's economy, I feel it necessary to express some dissatisfaction at its failure to play its proper role in relation to other banking institutions. A good deal of healthy competition by all is welcome in the banking field, but, unfortunately, one finds the attitude of the State Bank of India towards other banks somewhat unhelpful. One such distinct case, which may be mentioned, is that the State Bank of India often charges higher rates for rendering certain services to banks than to its other customers. It should not be forgotten that the State Bank of India, as the agent of the Reserve Bank, holds large balances of other banks and also enjoys free remittance and other facilities. In short, it is expected to perform the role of a bankers' bank and one feels that it should reach the stature and status consonant with this role and show its warmth and consideration to its confreres. I have no doubt that those in charge of this great institution will show the necessary foresight and readjust its policies so as to endear it to the general banking community in our country."

While it is for the State Bank to reply to Mr. Bhabha's allegations of unfair practices, this journal has no hesitation in endorsing his other observations pertaining to discrimination by the Government against banks in the private sector *vis-a-vis* the State Bank and its subsidiaries.

Bank Failures

Turning to the most crucial question of bank failures, Mr. Bhabha dwelt at some length on the various suggestions made so far for ensuring a healthy working of the banking system. Referring to the scheme of deposit insurance, the Chairman of the Banks' Association stated that, while it would impose a heavy burden on well-managed units, it was bound to inspire public confidence in banking in India. He, however, averred that the exact details of the scheme should be considered very carefully. He also thought that the strengthening of the capital structure of banking companies by suitable increases in the capital resources of the banks was sound in principle. But he wondered how the shareholders of banks would react to this proposal, as bank shares had gone out of favour with investors. He wanted this problem to be examined carefully. He maintained that, despite the faster planned economic development of India, the benefits reaped by Indian banking had not at all been commensurate with its untiring efforts to prove its worth under all conditions of stress and strain and to support official programmes and policies.

Inter-Bank Agreement on Rates

In his concluding remarks, Mr. Bhabha alluded to the inter-bank agreement on deposit rates and remarked:

"There is no doubt that the agreement has strengthened the banking structure. It has now secured support even in those quarters which had first doubted the feasibility as well as the desirability of this attempt. I may, however, point out that, for the first time in October 1960, the Reserve Bank regulated the deposit interest rates by issuing the directive that no scheduled bank shall pay interest at a rate higher than 2 per cent per annum below the bank rate on any deposit repayable at notice or on the expiry of a period not exceeding 21 days from the date of the deposit. Towards the end of February 1961, the Reserve Bank withdrew this directive. In the U.S.A., rates of interest on deposits are determined by the regulations of the Federal Reserves Board. In contrast to this, in the U.K., there are no official regulations, but by a gentlemen's agreement among banks, deposit rates have been fixed at 2 per cent below the prevailing bank rate. By and large, both these methods have proved wholesome and have in no way affected adversely the growth of deposits. Further, the competitive spirit inherent in a free economy has been kept alive in these countries by prompt and efficient service and by the grant of other facilities without any charge and even at some loss to the banks concerned. I suggest that, in India also the present system should be suitably improved so as to be helpful to the banking industry to fulfil its mission, at the same time fostering the saving habit so essential in a developing economy such as that prevailing in India at present."

The aforesaid quotation shows that, like the critics, Mr. Bhabha, too, has toned down his attitude to the agreement, in that he implies that the rates of interest on deposits should not be rigidly pegged at unattractively low levels and that they should be such as to foster the saving habit. Another implication is that he has an open mind now on the question whether it would not be desirable for the rates to be fixed by the Reserve Bank, instead of by the members of the Association, as the latter does not cover all the banks.

INDUSTRIAL CONCENTRATION: A BOGEY?

THE Constitution of India has laid down that the State shall direct its policy towards securing "that the operation of the economic system does not result in the concentration of wealth and means of production to the common detriment." This directive principle of State policy has presumably served as the basis for statements, repeatedly made by the party in power, to the effect that concentration of economic power should be prevented. The subject has, on occasion, figured in Parliamentary debates too. It is also one of the terms of reference of the Mahalanobis Committee which has been asked "to ascertain the extent to which the operation of the economic system has resulted in concentration of wealth and means of production." While this Committee is yet to finish its labours, the Estimates Committee of Parliament has just made its own contribution to the subject by suggesting "that a survey of holdings in the industrial field by the various groups of industries and business houses may be undertaken" to get an idea of the results achieved by the Development Wing of the Union Commerce and Industry Ministry in checking monopolistic tendencies. The Committee's recommendation that "positive and more concrete measures" be taken to prevent the growth of "industrial empires" is also of a piece with the usual Socialist approach of seeing the 'evil' of concentration of economic power in the private sector while turning a blind eye to the similar evil in the public sector. All this, in normal circumstances, may not be invested with any alarming significance, but in the pre-election year it is bound to be transformed into a politically exploitable issue.

As it is also a controversial issue, the Estimates Committee's full report will be awaited with interest. But pending its arrival, the most that can be done here is to examine the Committee's views and suggestions which newspapers have carried in summary form this week. What immediately strikes one in this examination is the role that is supposed to have been assigned to the Development Wing—the role of checking monopolistic tendencies. This Wing, it may be noted, discharges the primary function of assisting and advising the Ministry "in formulating and executing plans relating to the control and regulation of industries whose development would strengthen the country's economy." Presumably the Wing has something to do with the process of approving, under the Industries (Development and Regulation) Act, applications from private industry for establishing new undertakings or for effecting substantial expansion of existing ones. But this is not quite clear from the recent annual reports of the Ministry of Commerce and Industry, for it is also known that such applications are scrutinised by a Licensing Committee set up under the Industries Act. And there are also the Development Councils set up under the Act for the more important industries to discuss ways and means of accelerating progress. The Development Wing, however, discharges one specific function of forwarding, with its recommendations, to the Chief Controller of Imports the applications of Actual Users borne on its list. The Wing, thus, seems to have been discharging only a general advisory function under the Industries Act and a specific function of certifying the applications of actual users for import licences. How could the Development Wing, in discharging these functions in a period of rapid industrial development, have ever arrogated to itself the role of "checking monopolistic tendencies"?

It is, however, a different thing to say, as the Estimates Committee does, that the licensing procedure under the Industries Act should be changed for the purpose of "checking monopolistic tendencies" in future. The kind of change visualised by the Committee will make it obligatory for applicants to declare the particulars of various firms, companies or groups of industries wherein they hold interest, as also particulars of licences pending utilisation. The Committee's idea that the authorities could then select the applications of those who have no industries or relatively few industries seems to be based on the belief—as yet unverified—that there is already a lot of industrial concentration in a few hands. Even the Company Law Administration's latest factual presentation of long- and short-term trends in the corporate sector throws practically no light on this question of concentration. The only significant information contained therein pertains to companies managed by managing agencies. The position emerging from the data presented in the study is that, of the number (919) of managing agents as on 16th August 1960, as many as 776 manage only one company each, whereas the number of managing agents having ten managed companies each is just seven. While these data have only a restricted significance for the reason that most of the companies at work are under other forms of management, still they are a broad index of a probable wider distribution of industrial wealth and more even dispersal of economic power. The spectacular increase in the number of shareholders of some leading joint-stock companies since 1952 may also lend some support to the view that there is probably not much concentration even of shareholding, let alone concentration of industries in the hands of a few individuals or managing agencies.

In any case, until such time as reliable statistical surveys are completed, there will be no justification for changing the licensing procedures under the Industries Act which have been happily liberalised in some respects in the last one or two years. The Estimates Committee's view that "there could be no objection to the granting of licence to an applicant who has many industries if there are no reliable applicants from among those who have no big industrial undertakings" is tantamount to a recognition of the fact that an applicant having one or more industries is already an experienced *entrepreneur*. Where such *entrepreneurial* experience will most certainly stand a new industry in good stead, it would be patently unwise to adopt the general rule of selecting the applications of only those who have no industries or relatively few industries and then to make some exceptions to it. The rule itself should not be there, for the Estimates Committee's recommendation is obviously not based on the pragmatic consideration of accelerating industrial progress with the help, as far as possible, of experienced firms and individuals.

MODERNISING COTTON MILLS

MUCH water has flowed in the rivers of India since the Working Party for Cotton Textile Industry (Chairman: Mr. A. Ramaswamy Mudaliar) submitted its report in July 1952. To all intents and purposes, the report seems to have been pigeon-holed, for no action has been taken to give effect to its major recommendations. The only satisfaction is that the authorities have gone on repeating that they fully recognise the need for raising the cotton mills' productivity through modernisation and rationalisation! This need is all the greater now, for the deplorable conditions which obtained in the industry at the time of the first Working Party's report have since deteriorated further. It is this fact which has been forcefully highlighted in the report, presented to Parliament last week, of the N.I.D.C.'s Working Group for the Cotton Textile Industry which was presided over by Mr. D. S. Joshi, I.C.S., former Textile Commissioner and now Additional Secretary in the Union Ministry of Commerce and Industry.

The cotton mill industry is, perhaps, the only industry which has not benefited by the two Five-year Plans, thanks to the Government's non-expansion-of-capacity policy based on the dubious consideration of developing the decentralised sector and its unhelpful attitude towards modernisation and rationalisation born of its exaggerated solicitude for the cause of labour. The result of this shortsighted policy is obvious: low level of production. The *per capita* output of mill cloth is at present no more than 11.50 yards, as against 14.06 yards in 1956 and 12.50 yards in 1951. Even before the first Five-year Plan was formulated, this journal had drawn pointed attention to the supreme urgency of permitting the mill sector to augment the installed capacity, to rehabilitate plant and machinery,

and to rationalise the methods of production, in keeping with the growing pressure of demand for cloth emerging from the continuously rising trend of population and the improvement in the living standards of the masses. These words, which fell on deaf ears then, have even greater relevance today when the mill industry is handicapped by insufficient plant and machinery, much of it obsolete, by a number of weak operating units barely able to pay their way, by a smaller proportion of up-to-date machinery than in other countries, and by the fact that a large part of its capacity is not as efficiently worked as comparable machinery elsewhere.

The aforesaid handicaps have inevitably led to a loss of confidence on the part of the industry in its future. Unless these problems are tackled vigorously and without delay, the cotton mill industry will continue to decline. This aspect must be specially stressed in the context of the rapidly expanding clothing needs of the teeming millions, not to mention the importance of enhancing the industry's capacity successfully to weather the increasing competition in world textile trade. Viewed thus, the Working Group has certainly struck a note of realism when it says that "the essential needs of clothing have to be adequately and efficiently met" and that "the industry has to be geared for this." And it has also done well to drive home the point that the industry cannot count on the continued advantage on the side of cheap cotton or low labour cost, inasmuch as the unit labour costs are already very high *vis-a-vis* those in many other countries. It will be pertinent to quote here the Group's own observations:

"... Failure to modernise in time may bring about the very conditions of distress and unemployment in industry that labour is so anxious to avoid. It is a well-known fact that several mills in India today are running with old and obsolete equipment. Some of them have been in difficulties and a few have closed down altogether, resulting in total and permanent unemployment of workers in these concerns. If this state of conditions is to be prevented from spreading to other units also, then modernisation is rendered inevitable. Another factor that is relevant to this discussion is the considerable variation in technological and managerial efficiency that exists in the textile industry today. In any large industry comprised as it is of over 480 units—some of which are very large and others extremely small—some differences in efficiency and cost of production between the best and the worst units is inevitable. But this difference today is abnormally wide. While we have in India some mills which can stand comparison with the good mills in other parts of the world, there are many others whose efficiency is so low and production methods so inefficient that they are a drag on the national economy. Therefore, one of the first objectives of any scheme of modernisation should be to ensure that these inefficient units are brought up to a minimum standard of efficiency and the gap between the most and the least efficient unit is considerably reduced."

The Working Group has clearly spelt out what it means by modernisation of cotton mill industry. Modernisation, as it envisages, is not only the replacement of old machinery by new but the bringing about of those conditions and practices in industry which would enable it to be so strong and efficient as to withstand successfully competition as well as any changes in market conditions. No one can find fault with the Group for not having recommended a wholesale programme of modernising the industry lock, stock and barrel. For the implementation of any such programme would entail a heavy capital outlay, estimated at Rs. 800 crores by the Group, which the country cannot at all afford for some years to come. Even the modest programme of modernisation and rehabilitation suggested by the Group would involve a fairly large outlay of Rs. 180 crores. Of this, no less than Rs. 80 crores, the Group expects, would be raised by the industry itself from out of its own resources.

It is, however, doubtful whether even this much money (Rs. 80 crores) can, in fact, be raised by the industry over a period of five years. For, barring a few units here and there which are somewhat in an affluent financial position, the industry generally is reeling under the impact of a severe cost inflation that leaves very little margin of profit. Raw cotton continues to account for a high percentage of manufacturing cost, as much as 50 per cent. What is worse, the incidence of taxation is quite heavy, the wage bill is high, and the prices of machinery, stores and spare parts have risen markedly. Being caught as they are between cost inflation, on the one side, and voluntary pegging of prices for finished products, on the other, the capacity of the vast majority of mills to raise sizable funds for modernisation is severely restricted.

The Working Group has not indicated how exactly the industry can raise, from its own resources, the funds required for modernisation. All that it has said is merely this: "The resources are already tied up in the gross block, but the industry *may* be in a position to gather about Rs. 60 crores which, *with sustained effort*, might go up to Rs. 80 crores." (Italics ours.) But its recommendations regarding the ways and means of providing the balance of Rs. 100 crores for modernisation are happily more specific. Noteworthy here are its suggestions for ensuring grant of adequate loan capital by institutions, like the National Industrial Development Corporation and the Industrial Finance Corporation, at very reasonable rates of interest and with liberal concessions in the matter of repayment instalments.

It is not surprising, in view of the none-too-happy financial position of the Union Government, that the Group has not advocated direct help from public funds, as in the case of the British Government's £30-million aid scheme for rehabilitating the textile industry. But the Group could at least have made out a case for some relief in taxation and reasonable depreciation allowance. The prices of machinery and equipment have risen so abnormally that the present rates of depreciation allowance for income-tax purposes are too inadequate. Considering that funds have been locked up in fixed assets and large amounts are required for working capital, the need for providing, in the alternative, an appropriate allowance in textile prices for rehabilitation purposes may also be recognised. It is to be hoped that the Tariff Commission, to which the question of determining fair prices of cotton textiles has been referred, will take this factor into account.

The total foreign exchange component of the modernisation programme suggested by the Working Group is Rs. 60 crores, exclusive of Rs. 23 crores representing the cost of spare parts for existing machinery and components required by the indigenous manufacturers. The Government must readily make available the exchange required, so that the pace of implementation of the programme is not hindered frequently by lack of foreign exchange facilities. After all, it must be remembered that the cotton mill industry earns for the country quite a bit of foreign exchange every year and a large number of ancillary industries, as the Working Group has aptly stressed, depend and flourish on this major industry.

It must, indeed, be said to the credit of the Group that it has drawn attention to the inevitability of a certain amount of rationalisation in the process of modernisation. It is, however, somewhat difficult to agree with its recommendation, which has been accepted by the Government, that a suitable machinery be set up to analyse and help each individual mill to resolve its problems. May be, the problems of rationalisation differ from mill to mill. But there is no gainsaying the fact that the issue of rationalisation should be approached from the point of view of the industry as a whole by laying down some general criteria and not with reference to each unit.

Whatever be the nature of the programme of modernisation and rehabilitation, it must be emphasised in conclusion that its ultimate success will depend almost entirely on the maintenance of harmonious labour-management relations. The industry should, as the Group rightly remarks, provide (*a*) initiative to labour to contribute to the efficiency of mills, (*b*) training within the industry and (*c*) healthy service conditions for technicians. For its part, labour must lend its wholehearted support and co-operation. At the same time, the authorities, too, should give greater freedom to the mill industry by removing some of the vexatious regulations and controls, based on ideological considerations, such as those on production of certain varieties of cloth.

URBAN HOUSING

THE housing problem that confronts the country, as the latest annual report of the Union Ministry of Works, Housing and Supply says, is stupendous, for, apart from the huge carry-over shortage of about eight million housing units in urban areas, the additional demand is estimated to be of the order of some six million units in the next five years. The present shortage of urban housing accommodation, according to another estimate, that of the Bombay Housing Commissioner, is about 10 million units over the whole country, or a minimum of five million units if the dilapidated or sub-standard slummy structures are to continue, as they obviously will. Even this minimum requirement, according to him, will involve a total cost of about Rs. 4,000 crores. These are staggering (and depressing) figures, but the only consolation that the urban folks can have is that their lot is any day better than that of the ruralites who would need to rebuild completely or improve substantially as many as 50 million houses. Otherwise, the urban population, which has increased by about 25 per cent over the last decade and may well increase by a larger percentage in the next, will not cheerfully reconcile itself to the continuation of a situation in which privation and suffering is widespread. That a situation of the kind which is fraught with explosive possibilities calls for remedy within a reasonable period of time is generally recognised. But what is not so well recognised is that incentives are required for urban housing construction which is expected to take place predominantly in the private sector.

The contribution expected from this sector during the third Plan period is upwards of Rs. 1,000 crores in terms of investment, as compared with an estimated Rs. 500 crores in the second Plan period. On the other hand, the public sector will be responsible for an outlay of Rs. 120 crores in the third Plan period, as compared with Rs. 95 crores in the second Plan. These figures of public sector outlay do not include the expenditure on houses constructed or proposed to be constructed for their personnel by State Governments, by Central Government departments such as the Railways, Posts and Telegraphs, Rehabilitation, Defence, etc., and by the steel plants. If these other outlays are also taken into account by collecting the relevant data, it will be found that the total outlay on housing in the public sector has been substantially more than the aforesaid second Plan figure of Rs. 95 crores and will, again, be substantially more than the third Plan allotment of Rs. 120 crores for the purpose. Still, the position has been and will continue to be that the private sector's role in housing construction is dominant and, thus, crucial.

That this dominant role has so far been performed by the private sector in spite of certain disincentives does not mean that incentives are not required. If only it is recognised that private investment has been scared away, to some extent, by the disincentives, the need for giving certain incentives so as to draw out the potentialities of the private sector more fully will become apparent. The disincentives now in operation are said to be: (i) inadequate return on the investment due to heavy Central and State taxation, (ii) certain restrictive provisions in the Rent Control Act, (iii) existing heavy municipal taxation and levy of further betterment charges, (iv) inadequate transport facilities by rail and road, (v) lack of developed building sites with roads, water-supply mains, drainage sewers, etc., (vi) unpopular town planning schemes and delays in finalising acceptable schemes, and (vii) scarcity and high prices of essential building materials. To remove these disincentives would be to provide as many incentives. For instance, some relief in Central taxation should be possible. The restrictive provisions in the Rent Control Acts can also be modified so as to make it possible for landlords to evict tenants from old houses which would have to be rebuilt at higher costs.

Besides these, some positive incentives have also been suggested by Mr. C. R. Desai, Bombay Housing Commissioner. One of these is that, in the case of new houses carrying rent upto Rs. 100 per month occupied by low-income group families, the income accruing therefrom should be exempt from Central taxes for a period of ten years, and the local authority and the State Government concerned should give rebate of 50 per cent of the General taxes and the Urban Immovable Property tax for a period of ten years. If the suggested tax incentives are accompanied by suitable steps to make developed sites available at reasonable price and in reasonable time, they may go a long way towards drawing greater private investment into the sector of urban housing. Otherwise, the private sector in the next decade may not be in a position to perform better than it did in the last decade when its total outlay on housing accounted for about the same amount (Rs. 1,000 crores) as is now expected of it in the five-year period 1961-66 alone.

MARKET GOSSIP

Banks' Resources

MR. G. D. Birla has certainly put the finger on the right spot when he declares, in his statement to the shareholders of the United Commercial Bank presented at the annual meeting, held at Calcutta on Wednesday this week, that, with the accrual of deposits slowing down, a high level of advances has imposed a considerable strain on banks under conditions of restricted liquidity. This is a development which is rather disquieting and must be corrected at the earliest. Otherwise, there is the danger of a distinct setback to industrial and commercial activity. How can the banks go on expanding advances in the absence of a sustained rise in deposits? There is a limit, dictated by considerations of liquidity and prudence, to the ability of banks to do so. This aspect has been impressively brought out by Mr. Birla.

What is the slow pace of increase in deposits due to? The chief causes, according to Mr. Birla, are, fall in agricultural production in 1959-60, adverse movement in balance of payments position, buoyancy in Central Government revenues, perceptibly heavier tax collection and reduction in the quantum of deficit financing. Few would disagree with him when he says that, while the Government expenditure "itself should normally be expected to provide a fillip to bank deposits, the manner of financing disbursements is such as to reduce greatly the impact of Governmental payments on the rise in deposits." Nor would one greatly differ from him on the point that "the various measures of credit control instituted by the Reserve Bank may well have had the effect of diverting financial resources from the organised money market into the unorganised non-banking sector of finance."

But even with all these factors, the pace of accrual of deposits to the organised banking sector could be accelerated if the interest rates on deposits were suitably raised. A specific suggestion to this effect has also been made by Mr. Birla. He says: "If the rate of interest on deposits is raised reasonably, this will help the banks in getting more money." Mr. Birla has also thrown three other interesting suggestions which, if implemented, will help mobilise resources and channelise them into the banking system. One, money rates in the non-banking sector must be brought down through larger credits to banks by the Reserve Bank under the Bill Market Scheme and liberal lending policy by commercial banks. Two, commercial banks must be granted the same concession allowed to public financial institutions, namely, tax exemption in respect of transfers to a special reserve account of sums not exceeding 10 per cent of the total income of each year till the amount carried to the reserve fund equals the paid-up capital. And three, it is necessary to open more branches; agricultural resources must be tapped by opening small branches in rural areas.

New Import Policy

The import policy for the half-year period, April-September 1961, announced on Saturday last, has not come as a surprise to those who had closely followed the deliberations of the Import Advisory Council which met only in the first week of March. It looks as if the stubborn realities of the external financial situation with which the country is confronted today—the chronic imbalance between imports and exports and the extremely depleted reserves of foreign exchange—would not allow any scope for relaxing the existing restrictions on imports. In fact, quotas are now further slashed in respect of 127 items for established importers and the import of 20 other items are totally prohibited. The main categories for which quotas are reduced include: (1) articles manufactured from iron and steel, such as tubes, screws, rivets, tools and cutters and wire ropes; (2) electrical insulatores, cable accessories and electric motor starters; (3) chemicals; (4) motor vehicle parts; and (5) miscellaneous hardware and scientific instruments and appliances. In the case of some consumer goods, notably powdered milk, cotton piecegoods and fabrics, also the quotas have been reduced. Twenty articles, imports of which are totally banned, include various types of industrial components, spare parts and a few chemicals.

It is true that the import cuts of as many as 127 articles and the total banning of 20 articles which include important raw materials, accessories, components, and spares may reduce their availability and thus lead to some rise in the already inflated cost structure of some of the important industries. But it is heartening to note that, in applying the axe to such a wide assortment of intermediate goods and raw materials, the progress made by the indigenous industries, the existing stock with the industries, the availability of goods against rupee payment and under loan programmes have been taken into consideration. Further, it is claimed in the *communique* announcing the import policy that an attempt has been made to sustain industrial activity and to ensure adequate utilisation of installed capacities. Whether this implies that imports for more fully utilising existing capacity will be given precedence over developmental imports it is difficult to gauge. But the policy of expanding the items for which actual users' licences will be granted should be welcome to industry, although the items now included in this category, such as German silver and nickel silver and electro-medical apparatus, may only be of marginal importance. All in all, however, the broad estimate that the overall import bill for the current licensing period may be about the same as that of the October 1960-March 1961 period is hardly calculated to substantiate the official claim that the new import policy will, by itself, sustain a higher level of industrial production.

Even the new policy has had to permit a few relaxations. The most conspicuous example is the import of newsprint quota. The licences for this item will be subject to a cut of only 10 per cent on entitlement, as against 20 per cent in the last licensing period. Another welcome feature of the new policy which is calculated to benefit existing industries is the change made in the provision for licensing of emergency spare parts, which are defined as spare parts required on an immediate basis to overcome an emergency breakdown of any production machinery. Under the new policy the amount for this purpose has been increased from Rs. 750 to Rs. 2,500 in an individual case.

The manufacturers may also be expected to appreciate the extension of the basic period, which has been done with regard to a number of important items such as tools, cutters, milling cutters, industrial exhaust fans, blowers, component parts of textile machinery, bicycles and automobiles. The extension of the validity period in respect of a number of essential raw materials will facilitate production in several lines. On the procedural side, the scheme of repeat licensing introduced during October 1959-March 1960 is being continued and is expected to help the manufacturers in avoiding delays in securing essential materials.

One feature of the new import policy which has evoked wide criticism pertains to the linking of import licences with the performance on the export front. While there may be some merit in inducing industry to export more through the incentive of the grant of licences of essential raw materials, stores, spares, etc., the impact of such a policy on industries mainly catering to the home market needs to be studied continuously. It is feared that the new policy would compel industrialists to export at a loss and encourage the growth of a new class of middlemen, who would trade in import entitlements at a high premium.

The currency-wise classification of imports has been abolished and there will be no formal distinction in import licences between the dollar and soft currency areas. In normal circumstances this should have meant that the licence-holder can buy in the cheapest market and secure his goods at the most economic rates. The fact that a large part of the foreign aid is still in the shape of 'tied' credits would, however, reduce the beneficial effect of this change.

Automobile Production and Prices

The automobile industry in India produced commercial vehicles, cars, jeeps, vehicular diesel engines, motor cycles, scooters and three-wheelers of an aggregate value of Rs. 97.0 crores in 1960, as compared with Rs. 70.5 crores in the previous year. And the ancillary industries also increased their production from Rs. 7.5 crores in 1959 to Rs. 9.0 crores in 1960. The automobile and ancillary industries together were thus responsible for a total production of the value of Rs. 106 crores in 1960, as compared with Rs. 78 crores in the previous year. This was pretty good performance which was commended by Mr. Manubhai Shah, Union Minister for Industry, while inaugurating the first annual general meeting of the Association of Indian Automobile Manufacturers held early this week at New Delhi. The Minister's expectation was that, in the current year, the industry would perform still better, producing 22,000 cars, 32,000 commercial vehicles, 6,000 jeeps and 25,000 motor cycles, scooters and three-wheelers, respectively, as against 19,100, 27,500, 5,500 and 17,400 in 1960. The anticipated expansion in the production of automobiles in particular is also likely to be accompanied by a further increase in the percentage of indigenous content from the present 75. It is estimated that the indigenous content in the case of commercial vehicles will increase to 85 or 90 per cent by the end of 1962.

All this is good news. But there is no early prospect of reductions in the manufacturing costs as well as prices of the various makes and types of automobiles produced in the country. These prices, as Mr. Lalchand Hirachand, President, admitted in his speech at the meeting of the Association, are higher than those of similar vehicles produced in the more advanced countries. The unfortunate fact in this connection is that the heavy incidence of taxation on the automobile industry tends inevitably to increase the manufacturing costs. Certain enhanced rates, new levies and countervailing import duties envisaged in the Finance Bill of 1961, it is rightly feared, may have the effect of increasing the manufacturing costs and, thus, necessitating an approach to the Government for increases in selling prices. It is in this context that Mr. Lalchand Hirachand's criticism of the proposed additional imposts has been made. His considered view is that until such time as the automobile industry can secure its iron and steel castings, steel forgings and steel pressings and also machinery indigenously, the proposal to increase the duty on iron and steel manufactures from 35 per cent to 50 per cent and the duty on machinery from 10 per cent to 15 per cent will only result in an increase in the landed cost of the finished and semi-finished components, and in that of the finished product.

No exception can be taken to this view, for the effect of additional taxation will be that the reduction in prices expected from expanding production will not materialise. If a possible reduction in automobile prices were to be offset through the levy of additional taxes, the consumer would continue to suffer in spite of greater production. It has been rightly said in this connection that the ultimate satisfaction of consumers should be the principal concern of governmental policy and the primary responsibility of the industry. But if the industry is unable to discharge its responsibility towards the consumer, the Government's policy will at least be partly responsible for it. The least that the Government can and should do is to consolidate the many and different taxes on the automobile industry and make them uniform all over the country. There is also a case for the abolition of local levies imposed by municipalities and other local bodies.

Tax Burdens in Different Countries

President Kennedy's message to the Congress on budget and fiscal policy clearly indicates that, in view of the limited scope for the use of monetary policy, especially the lowering of interest rate in the context of the deficit on the external account of the U.S., greater reliance will be placed on fiscal, that is, budget and tax policies to stimulate economic growth. Detailed tax recommendations have yet to be made by the President. Although it is clear by now that the President will not make any proposal which will involve a material change in overall revenues, some tax concessions designed to stimulate economic growth are expected.

There have been frequent complaints in business and financial circles in the U.S. that the slow rate of growth of the U.S. economy, as compared with that of some other countries, has been due to the heavy incidence of taxation. The following words of a prominent U.S. Congressman, Mr. Herlong, co-author of a Bill containing a new tax formula presented to the current session of the Congress, reflects the view generally held by the critics of the present tax system:

"By use of capital-destroying tax rates and methods, we have prevented our economy from achieving anything like its potential for progress. This means that we have fewer and less productive jobs than should be available. Our total production is far short of our national capability for progress and the standard of living of our people is correspondingly less than it should be. It also means that failure to effect fundamental reform of our tax structure quickly would put in jeopardy the industrial supremacy on which our national security depends."

Several studies have been made of late in the U.S. to show how heavy is the tax burden in that country by international comparison. One of the most recent is that made by the economists of the First National City Bank of New York. On the basis of a series of comparisons of the federal income-tax rates in the U.S. with those imposed by Governments in other countries, the economists of the Bank have claimed that the U.S. has the highest personal income-tax rate in the world. They have shown that the U.S., in a list of 20 countries, has the highest marginal rate of personal income taxation (91 per cent) and, in a list of 14 countries, the highest maximum tax rate (52 per cent) on undistributed corporate profits. In respect of tax rate on corporate profits distributed as dividends, the U.S. ranked third in the list of countries having the highest tax rate arranged in descending order, the first and second places being occupied by France and the Netherlands.

The following consolidated table gives a comparison of taxation by Central Governments of corporate profits—both distributed and undistributed:

(In percentages)

Countries	Distributed as Dividends		Undistributed (Maximum)
	Maximum rate paid and withheld by corporation	Credit allowed individual shareholder	
France	62	24	50.98
Netherlands	54.95	15	47
United States ..	52	4	52
United Kingdom ..	51.25	38.75	51.25
Canada	50	20	50
Belgium	45.31	30	40
Germany	42.58	25	51
Sweden	40	0	40
Australia	40	0	40
Switzerland	35.60	27	8
Japan	35.20	17.5–25	38
Norway	30	0	34
Union of South Africa.	25	33.33–100	25
Italy	20	8	20

A few other countries of the West have in the past claimed the distinction of being the highest taxed ones. For instance, the British people have fancied themselves to be the most heavily taxed in the world. An international comparison of tax burdens contained in the latest issue of the *National Institute Economic Review*, however, shows that the tax burden in the U.K. is not as heavy as is generally supposed. Of the 20 countries whose tax burdens are compared, in seven, total taxation, as a proportion of the gross national product, is found to be higher than in Britain. Although the overall position is this, certain income groups are found to be more heavily taxed in Britain than in others. The tax burden on those earning an income of £10,000 and over a year is found to be heavier than in all the other 19 countries, whereas people earning £1,000 and below come in for lenient treatment at the hands of the tax authorities.

Zonal Curb on Wheat Goes

The restrictions on zonal movement of wheat throughout the country have been removed with effect from Wednesday the 5th inst. The move

(*Continued on page 662*)

EQUITIES MOVE DOWN

TEXTILES, HOWEVER, FIRM

(From Our Own Correspondents)

BOMBAY, *6th April*

BARRING textiles which presented a firm front, equities on the Stock Exchange generally moved down during the week. Operators noted the continuance of the restricted import policy during the first half of the current financial year, with a reduction in quotas in respect of 127 items and complete ban on import of 20 other items. There were, besides, fears that, in view of higher production cost, thanks to the probability of a heavier wage bill, dividends might not be maintained at current levels in the coming years. The continued monetary stringency also restricted investment support. Expectation of higher carryover charges and absence of any sign of improvement in the Laos situation discouraged speculative enterprise. Textiles, however, met with good support induced by the issue of bonus shares by some leading cotton mills and hopes of others following suit.

Steel shares encountered selling prompted by the report that a wage board would be constituted for the purpose of wage fixation. Even the news that production of iron and steel in March was higher, as compared with the previous month, failed to lift up values. After improving from Rs. 152.25 to Rs. 154.25, Tata Steels declined to Rs. 151.50, showing a net loss of 75 nP over the week. Mukand Irons improved fractionally from Rs. 26.50 to Rs. 26.75 but receded later to Rs. 26.25. Indian Irons, on the other hand, showed a net gain of 70 nP over the week, thanks to special support following news of higher output in March.

Textiles, as already stated, provided a bright spot. Standards spurted by Rs. 49 to Rs. 1,507, thanks to the bonus announcement. Centurys attracted buying support and rose from Rs. 576 to Rs. 596 before finishing lower at Rs. 588 due to profit-taking. The net gain over the week was Rs. 12. Tata Mills were well fancied on higher dividend expectation and spurted by Rs. 5.5 to Rs. 54. Podars gained a like amount to Rs. 158. Svadeshis were marked up by Rs. 8.50 to Rs. 270.50. Swans hardened by Rs. 25 to Rs. 565. Khataus were quoted Rs. 7.50 higher at Rs. 540, after having risen to Rs. 550. Central Indias recorded a further rise of Rs. 3 to Rs. 117. Finlays and Indores recorded a modest increase of Rs. 2 each to Rs. 353 and Rs. 143, respectively. Bombay Dyeings improved from Rs. 66.60 last week-end to Rs. 68.50. But the closing rate was a shade lower at Rs. 67.80. Gokaks firmed up by Rs. 3.50 thanks, to the announcement of a higher dividend of 14 per cent as against 6 per cent last year. Shree Niwas, however, declined by Rs. 5 to Rs. 260. Mysores receded by Rs. 3 to Rs. 68. Simplex lost Rs. 2 to Rs. 192.

Sugar shares suffered a setback in spite of sporadic support. Belapurs met with good support early in the week and firmed up from Rs. 301 to Rs. 309 but retreated thereafter to touch Rs. 296 today. Walchandnagars receded from Rs. 241.25 Rs. 236.25. Phaltans softened by Rs. 3.50 to Rs. 146. Kesars and Maharashtra Sugars, however, met with special support, the former improving by Rs. 1.25 to Rs. 266.25 and the latter by Rs. 7 to Rs. 204.

Cement shares depicted a divergent trend. Associated Cements showed a modest improvement of Re. 1 over the week, rising from Rs. 156 to Rs. 157. Orissas were fractionally higher at Rs. 14.52. But Digvijays came under selling pressure and dropped Rs. 1.50 to Rs. 155.50. Bagalkotes shed 20 nP to Rs. 9.36. Dalmias were unchanged at Rs. 12.24.

Shipping shares lacked support. Scindias declined further by 40 nP to Rs. 15.28. Great Easterns lost 24 nP to Rs. 15.76.

Engineering shares presented a mixed pattern. Premier Constructions reacted by Rs. 5 to Rs. 200. New Standards receded by Rs. 3 to Rs. 188. Larsen and Toubros shed 50 nP to Rs. 43.50. Texmacos softened by 28 nP to Rs. 22.52. Telcos, however, were well favoured and firmed up from Rs. 341.50 to Rs. 344, a net rise of Rs. 4.50 over the week. T. Maneklals were bid up to Rs. 440, as against Rs. 355 last week-end. Alcocks were unchanged at Rs. 319.

Trading in rayon shares were featureless. National Rayons moved irregularly and finished unchanged at Rs. 538. Indian Rayons declined by Re. 1.50 to Rs. 72.50. Baroda Rayons lost a rupee at Rs. 150.50. Gwaliors receded by 25 nP to Rs. 47. South India Viscose, however, improved fractionally by Re. 0.50 to Rs. 165.

Dyes and chemicals suffered a further setback. India Dyestuffs slumped by Rs. 10 to Rs. 520. Colour Chems were marked down by Rs. 5 to Rs. 357.50. Poly-Chems receded by Rs. 3 to Rs. 252. Synthetics dropped Rs. 1.50 to Rs. 160.50. Dharamsi Chemicals, both old and new, improved, the former by Rs 8.75 to Rs. 263.75 and the latter by Rs. 14.50 to Rs. 259.50 Amar Dyes was unchanged at Rs. 410.

Selected miscellaneous scrips met with support. Bombay Burmahs attracted speculative support on expectation of a bonus issue and improved from Rs. 616 to Rs. 636.50 before closing lower at Rs. 622.50 on profit-taking. Voltas gained a rupee to Rs. 291. Killicks improved by Rs. 1.50 to Rs. 108.50. Hindustan Levers gained 50 nP to Rs. 50. Ceat Tyres were unchanged at Rs. 300, while Premier Tyres dropped Rs. 2 to Rs. 113. Anil Hard Boards were unchanged at Rs. 292.50. Wimcos changed hands Rs. 2.50 higher at Rs. 305. Tata Oils were unchanged at Rs. 83.50. Greaves Cottons receded by 50 nP to Rs. 176.50. Philips shed a like amount to Rs. 18.24.

Madras Stock Exchange

MADRAS, *5th April*

Equities on the Stock Exchange ruled steady during the week under review, thanks to revival of some investment support. The import policy for the current half-year was generally welcomed on hopes that it would facilitate larger maintenance imports. Textiles made headway due to sustained upcountry buying. Teas were well maintained on encouraging advices from auction centres. Coffees and rubbers moved up in sympathy. Sugars were generally well sought after. Banks and electricals were quietly steady. Chemicals and other miscellaneous industrials put on a cheerful appearance.

In the textile section, Metturs advanced by Rs. 13 to Rs. 380. Coimbatore Pioneers were marked up by Rs. 10 to Rs. 350. Coimbatore Cottons hardened by Rs. 8 to Rs. 180. Dhanalakshmis rose by Rs. 6.50 to Rs. 212 *ex-div.* Vijayalakshmis went up from Rs. 96 to Rs. 100, following the announcement of a new issue and the dividend for 1960. The dividend of 12 per cent for 1960 announced this week compares well with 7½ per cent for 1959. The Company will issue new shares at par in the ratio of one for two shares held as on 6th May 1961. Lakshmis strengthened by Rs. 3 to Rs. 180, following the announcement of a dividend of 10 per cent to commemorate the golden jubilee year of the Company. Buckinghams strengthened by a rupee to Rs. 206.50. Adonis gathered 50 nP to Rs. 10.70, following the announcement of a maiden dividend of 8 per cent, taxable, for 1960. Kotharis picked up 12 nP to Rs. 12.87. The Directors of the Company have declared a dividend of 10 per cent, taxable, for the year 1960, same as in the previous year. Travancore Rayons rose by 63 nP to Rs. 40 and Maduras by 10 nP to Rs. 39.60. Balaramavarmas fully paids and partly paids were steady at Rs. 94 and Rs. 9.50, respectively. The Company has announced a dividend of 9 per cent, taxable, for 1960, as against 7½ per cent for 1959. South India Viscose, however, came in for selling and lost Rs. 5 to Rs. 166.

Among teas, Haileyburias and Peermades were in the limelight, with the quotation moving up by 20 nP each to Rs. 15.15 and Rs. 23, respectively. Periakaramalais were higher by 8 nP at Rs. 4.10. Chembras gained a like amount to Rs. 3.93. Neelamalais gained 5 nP to Rs. 4.69. Blue Mountains were maintained at Rs. 3.55. Parksides, however, shed 13 nP to Rs. 28.62, despite the announcement of an interim dividend of 7½ per cent for the year ending June 1961.

In the coffee group, Consolidated Coffees rose by 5 nP to Rs. 23.75. Sangameshwars improved by 4 nP to Rs. 2.40. Kumergodes and Waterfalls picked up 3 nP each, the former to Rs. 4.55 and the latter to Rs. 3.20. Ossoors were fully steady at Rs. 3.22, following the announcement of an interim dividend of 5 per cent. Coffee Lands were unchanged at Rs. 20.85. Wartyhullys lost 15 nP to Rs. 3.20, despite the interim dividend of 5 per cent announced this week.

Among rubbers, Travancores rose by 33 nP to Rs. 10.70. T.R. and Ts gathered 10 nP to Rs. 9.40 and Midlands 5 nP to Rs. 12.10. Cochin Malabars were held firm at Rs. 7.97.

In the sugar section, Indias improved by 50 nP to Rs. 12.60. Deccans rose by 20 nP to Rs. 14.50. Mysores were maintained at Rs. 59, Travancores at Rs. 10.75 and United Breweries at Rs. 115.50. East India Distilleries closed today at Rs. 43.75, *ex-div.*, as against Rs. 44.20 *cum-div.* last week-end. Among miscellaneous industrials, Textools gained 75 nP to Rs. 178.75. Parrys were higher by 30 nP at Rs. 6.10. Travancores hardened by 15 nP to Rs. 17.75 and Metturs by 10 nP to Rs. 14.10. Mysore Chemicals and Mysore Fertilisers were firm at Rs. 25.50 and Rs. 11.35, respectively. Ashok Leylands put on 2 nP to Rs. 9.75. Aluminium Industries were fully maintained at Rs. 24.70, Indian Steel Rollings at Rs. 10.62 and Standard Motors at Rs. 16.65. Ogale Glasses were steady at Rs. 5.30. The Company has raised its dividend from 8 per cent, taxable, in 1959 to 10 per cent for last year. Travancore Ogales maintained the dividend for 1960 at the previous year's level of 6 per cent, taxable, the scrip was quoted at Rs. 7.20.

INDIA FIREBRICKS AND INSULATION CO., LTD.

The India Firebricks and Insulation Company Ltd. has announced the issue of 750,000 equity shares of Rs. 10 each and 25,000—7½ per cent. cumulative redeemable preference shares of Rs. 100 each. Of this, 475,000 equity shares and 15,000 preference shares will be offered for public subscription, the balance being taken up by the promoters, directors and their friends (250,000 equity shares), as also the Company's foreign British collaborators, Messrs. Thomas Marshall and Co. (25,000 equity shares and 10,000 preference shares). The entire public issue is underwritten, among others, by the I.C.I.C. Ltd., L.I.C. and the Government of Bihar. The list for public subscription will open on Tuesday the 18th inst.

The Company has secured a licence to put up a plant to manufacture firebricks, insulating bricks, high alumina bricks and shapes. A reputed West German firm will supply machinery and equipment to the Company. It will also provide technical collaboration and train Indian personnel.

NATIONAL AND GRINDLAYS BANK

PROFIT HIGHER—DIVIDEND RAISED

SUBJECT to no unpredictable contingency, the shareholders of National and Grindlays Bank Ltd. (General Manager : Mr. G. T. Gillespie, London) can expect to receive a dividend of 14 per cent on the increased capital for the current year, as against 13⅓ per cent (on capital) proposed for 1960. This is the outlook held out by the Chairman of the Bank, Mr. J. K. Michie, in his customary annual statement to be submitted to the Bank's annual meeting on the 11th inst. The assessment is based on the belief that overall conditions for banking business in the territories where the Bank operates continue to be favourable as was the case in 1960. Indeed, the Chairman states that the Directors would not have stepped up the second interim dividend for 1960 from 6⅔ to 7 per cent making the total distribution 13⅓ per cent unless they had felt justified in promising to consolidate this rate of dividend.

The consolidated net profit of the Bank for 1960, after providing for taxation and transfers to contingency reserves, is higher at £479,276, as against £404,708 for 1959. This amount, together with the previous year's carry-forward of £301,488, gives a total of £780,764 available for distribution, as compared with £756,057 in 1959. The distributions absorb a larger sum of £277,706 than in the previous year when they took up £261,987. The allocations to premises account and reserve fund have been increased further from £125,000 and £37,582 to £145,000 and £50,000, respectively. No provision has been made for contingency reserve, whereas in 1959 a sum of £30,000 had been provided for this. After the above appropriations, the balance of £308,058 has been carried forward, as against £301,488. Of this, the amount retained in subsidiary companies is £28,274, as against £18,122 a year ago.

The salient features of the Bank's balance-sheet as at the close of the last four years are given in the following comparative table :

(In thousands of £s sterling)

	As on 31st December			
	1960	1959	1958	1957
LIABILITIES—(Main)				
Capital	3,422	3,422	2,852	2,852
Reserve funds	3,050	3,000	3,168	3,168
Unappropriated Surplus ..	280	283	287	301
Current and other accounts† ..	112,121	107,752	106,415	113,223
Fixed and short deposits ..	61,727	48,016	38,417	41,466
Acceptances for customers ..	762	401	140	899
ASSETS—(Main)				
Cash balances	32,986	16,966	20,758	20,683
Investments	90,596	29,389	27,981	28,676
Bills of exchange (including Treasury Bills)				
Advances and loans	33,925	29,466	28,504	23,686
Fixed assets	23,683	79,896	69,127	85,747
	3,837	3,935	3,840	3,814
Balance-sheet total	181,509	163,005	151,409	163,033

†Include bills payable.

It will be seen from the above figures that the advances and loans granted by the Bank have risen quite markedly, from £79.90 million to over £98.68 million, reflecting the growing demand for finance in the territories in which the Bank operates. Current deposit and other accounts are higher by more than £18 million as compared with 1959, but the pressure of demand for seasonal finance, it is said, has had the effect of reducing the Bank's liquidity. Fixed and short deposits alone at £61.73 million account for a rise of £13.71 million. Cash balances have increased by £3.94 million and investments by £1.26 million, while there has been a decline of £5.94 million in bills of exchange.

Following largely the notable rise of over £18 million in deposits and other accounts, the balance-sheet total of the Bank as at 31st December 1960 stands at the impressive level of £181.51 million, a rise of £18.50 million over the previous year. The total will be much higher in the current year. For, consequent on the merging of the business of Lloyds Bank's Eastern Branches, a further 19 branches in India, Pakistan and Burma have been added to the list of the Bank's overseas branches. During 1960, branches of the Bank were opened on full-time basis at seven more centres.

At the extraordinary general meeting on 15th November 1960, the capital of the Bank was increased from £4,562,000 (divided into 6,083,200 shares of 15*s.* each of which 4,562,500 were issued and paid-up in full) to £5,702,925 (divided into 7,603,900 shares of 15*s.* each) by the creation of 1,520,700 new shares of 15*s.* each.

NEWS IN BRIEF

HUNGARY has offered a Rs. 8-crore long-term credit for the development of India's aluminium, pharmaceutical and flour mills industries.

The Planning Commission's proposal to alllow limited private participation in the share capital of selected State undertakings is reported to have been shelved for the time being.

The annual installed capacity of the Bhilai steel plant is proposed to be raised from one million tons to 2.5 million tons. A project report for the purpose is being prepared by Soviet experts.

The Dooars Tea Research Institute, put up by the Indian Tea Planters' Association at Rupali tea estate, Hahaipatha in West Bengal, is scheduled to be inaugurated by Dr. B. C. Roy on the 8th inst.

The 50,000-spindle Kalyani Spinning Mills, established at Kalyani by the West Bengal Government, was inaugurated by Dr. B. C. Roy last week. The mill is designed to produce only fine count yarns from 60*s* to 100*s* single and folded yarn 2/80 to 2/100.

India's shipping tonnage touched 885,850 g.r.t. at the end of last month, or just short of the second Plan target of 900,000 tons. The actual tonnage will, however, exceed the target when the ships already under construction at Visakhapatnam and at foreign shipyards are put into service.

The Indian Airlines Corporation proposes to start a number of cargo services with Dakotas covering the whole country. The National Council of Applied Economic Research, on behalf of the Corporation, is already making a study of the prospects of such a scheme.

Japan has agreed to India's suggestion for fixing the price of iron ore for three successive years, instead of every year as has been the case hitherto. The price for the next three years is fixed at 82 shillings per ton for the first one million tons and 80 shillings per ton for the remainder. India supplies iron ore of about 1.75 million tons annually to Japan.

An agreement providing for Poland's collaboration in the development of coal industry in India is expected to be signed shortly between the two countries. Under the agreement, services of Polish experts will be made available to a large coal mine at Jharia for a number of years in order to acquaint the experts of the National Coal Development Corporation with more efficient and modern techniques of production.

The representatives of India and the U.S. signed on Monday this week six project agreements allocating a total sum of Rs. 46 crores, out of the loan portion of the P. L. 480 counterpart funds available to India. The agreements cover the local costs of thermal power station at Chandrapura (Rs. 20.5 crores) and Barauni (Rs. 1.3 crores), a hydro-electric project at Barauni (Rs. 6.4 crores), extension in thermal plants at Durgapur (Rs. 3.4 crores) and Kanpur (Rs. 95 lakhs) and the Trombay fertiliser plant (Rs. 13.4 crores). Repayment will be in rupees.

From Abroad

Pakistan has decided to set up a new oil refinery with an annual capacity of ¼ million tons, in East Pakistan with foreign collaboration.

Hong Kong has declined to place voluntary controls on exports of certain textiles to Canada on the lines of the restrictions already imposed by Japan. Disclosing this in the Canadian House of Commons, the Finance Minister stated that the Government would now consider "what steps need to be taken."

The South African Reserve Bank has reduced from 10 to 6 per cent the minimum reserve balances which commercial banks must maintain against demand liabilities payable in the Union. This move is expected to release about £17.5 million of statutory cash reserves when the banks and money market experience great strain as a result of transfers of Government deposits from commercial banks to the Reserve Bank for accounting purposes at the end of the financial year.

An official Bill seeking to create a Petroleum Stabilisation Board has been introduced in the Philippine Senate. The proposed Board is expected to allocate annual quotas of finished petroleum products to local distributors. Those distributors, which are not 100 per cent Filippino-owned, will have their quotas cut back to the 1957 level of trade. Caltex, Stanvac, Tidewater and Shell will be affected by the new Bill, if it receives the Senate's approval.

Two big iron ore deposits are claimed to have been discovered by Soviet geologists in the vicinity of the city of Serov in the Urals. One of these is estimated at 100 million tons. The ore body extends over a large area and, in places, is up to 90 metres thick. The other deposit consists of magnesite ore which can go into the smelting furnace without beneficiation. In the past and the beginning of this year, 43 mineral deposits, in particular, of copper and polymetallic ores have been discovered in the Urals.

The *per capita* steel supply in West Germany in 1960 was higher than in any other comparable country. Crude steel supply per head of population was 433 kgs. in the first three quarters of 1960 (the figure represents the addition of production and imports with exports deducted and changes in inventories taken into account). This was 21 per cent more than in the same period in 1959. The corresponding figures for the first three quarters was 401 kgs. in the U.S., 332 kgs. in the U.K., 229 kgs. in France and 221 kgs. in Belgium-Luxemburg.

The Chairman of the Soviet Petroleum Trading Corporation, Mr. E. P. Gurov, is currently on a tour of Tokyo. He is expected to negotiate the sale of 10 million tons of crude oil to Japan in exchange for a large quantity of steel pipes required for the construction of a pipeline in Siberia and two 35,000-ton tankers for Japan. Under the trade pact between the two countries, 1.2 million tons of Russian oil were to be imported by Japan; but this import has already been covered by the long-term import contracts concluded by the Idemitsu Kosan and Asia Oil companies of Japan.

An association agreement providing for the membership of Greece in the Common Market was signed at Brussels last week-end. The agreement is based on a customs union with an initial transition period of 12 years. The agreement contains special exceptions to protect new Greek industries from Common Market competition over a 22-year period. These cover about 40 per cent of the export trade with the Six. Both for leaf tobacco and for currants, there will be an immediate cut of 50 per cent in the Common Market countries' import duties. The duty on tobacco will be abolished completely in due course. The agreement also provides for grant of loans aggregating $125 million to Greece during the initial five years.

Finland and the Outer Seven have signed an agreement for the creation of a new free trade association, E.F.T.A.-Finland Association (E.F.A.). Under the agreement, which represents a compromise formula, Finland has been included in the Stockholm Convention, establishing the E.F.T.A. Like the original Seven, Finland will eliminate trade barriers by 1970. Finland has, however, secured two exceptions to the convention. First, while the general reductions in tariffs will be 30 per cent on 1st July next, in respect of certain selected industries, such as varnishes, polishes, leather, footwear and textiles, the percentage will be only 20. Besides, for the latter group of industries, the second reduction will not be due until 1965. Secondly, the agreement permits Finland to maintain existing quantitative restrictions on a long list of items imported from Russia. There is also a reservation concerning the liberalisation of invisible transactions. The new agreement will be supervised by a joint council comprising the E.F.T.A. Council and the Finnish delegate.

PERSONAL

PROF. J. K. Galbraith was sworn-in as the new U.S. Ambassador to India on Monday this week at Washington.

Mr. P. A. Patel, General Manager, Rajasthan Ceramic Industries Ltd., is proceeding to the U.K. and the Continent on a business tour.

Mr. A. K. Brohi, High Commissioner of Pakistan to India, left for Karachi over the week-end on relinquishing his post after 14-month term.

Mr. Jagjivandas H. Joshi has been elected President of the Indian Chemical Manufacturers' Association for the current year. He succeeds Dr. K. A. N. Rao.

Mr. B. Gopala Reddy, Minister of State for Revenue and Expenditure, has been appointed Minister of State in charge of the Union Ministry of Works, Housing and Supply.

Mr. Robert L. Garner, President of the International Finance Corporation, is due to retire on 15th October next. This post will be taken up by Mr. Eugene R. Black, in addition to his duties as the Chairman of the I.F.C. and President of the World Bank.

Mr. Subimal Dutt, Secretary to the Union Ministry of Foreign Affairs, has been appointed Ambassador of India to Soviet Russia and concurrently to Hungary *vice* Mr. K. P. S. Menon, who is due to retire soon. Mr. Dutt will assume charge of his new assignment in June next.

Mr. K. C. Reddy, until recently Union Minister for Works, Housing and Supply, formally took over charge on Wednesday this week as the Minister for Commerce and Industry *vice* Mr. Lal Bahadur Shastri, who has assumed charge as the Minister for Home Affairs succeeding the late Mr. G. B. Pant.

Mr. V. Venugopal Naidu, Chairman and Managing Director of the Mysore Sugar Company Ltd., and Mr. T. Shamanna, the Director of Industries and Commerce, Government of Mysore, have left on a tour of the U.S., the U.K. and the Continent. They will negotiate for the supply of the plant and machinery for a new project for the manufacture of cellulose acetate, sponsored by Mysore Sugars, to be located at Mandya.

EUROPE AND COMMONWEALTH

THE virtual cold war between the Common Market Six and the E.F.T.A. Seven in Western Europe has taken an exciting turn, following the U.K.'s recent announcement of its unmistakable desire to join the Six, without at any rate dissociating itself from the bonds of the Seven and the Commonwealth. The U.K. seems to be in favour of a common or harmonised tariff with the Six on raw materials and manufactured goods imported from countries other than the Seven or the Commonwealth. Still, in its eagerness to pacify the protagonists of the Rome Treaty, it is willing to make the concession of forgoing some of its own advantages derived from Commonwealth preferences. This new European policy of the U.K. has tended to raise a flutter in the dovecots of the Commonwealth coterie, for it implies the first dent in the citadel of Commonwealth preferences.

Nevertheless, there is a school of thought which believes that the changing pattern of trade relations in Europe is not of much consequence to the trade within the Commonwealth. In a spirited defence of the U.K.'s European policy, Sir Paul Gore-Booth, the U.K. High Commissioner in India, while speaking at a luncheon meeting of the Federation of Indian Chambers of Commerce and Industry over the week-end at New Delhi, observed that he did not anticipate any immediate change of direction and nature of trade with the Commonwealth, if the U.K. succeeded in entering into an association with the Six. On the contrary, he felt that, since the basic objective of the two blocs was to raise the general economic activity in Europe, this must serve to promote both increased acceptability in Europe of goods from less developed countries, such as India, and increased resources available for investment by Europe in these countries. The following passage from Sir Gore-Booth's speech elaborates these arguments:

"I may now mention a few general effects of an association in Europe on the economic prospects of the Commonwealth countries. First, such an association would, to my mind and in the mind of a great many Europeans, further strengthen the economies of the European countries. This would have two effects. In the first place, it would increase their ability to buy from the outside world. Secondly, it would, I feel, result in their being more prepared to take the risks which a more liberal attitude towards imports from the less developed countries seems to involve. Further, an association of this kind might well do something to mitigate the discrimination which will otherwise arise between some parts of Africa, associated with the Common Market, and other less developed countries in the treatment of imports into Europe of their products.

"Secondly, and I think this is very directly important, the achievement of an association would check a somewhat wasteful investment tendency prevalent at the moment. At the moment, there is a tendency for countries of the Seven to invest in the Six and the Six to invest in the Seven and third parties to invest in both, in order to ensure against a tariff barrier, difficult to surmount, between the two. This is an obvious waste of investment resources, some of which could well have come to the less developed countries. Clearly, if this possible obstacle can be removed, these resources will become available and I should have thought it was very much in the interest of less developed countries that this should be so."

Sir Gore-Booth's speech was also notable for its treatment of the more specific effects of the tariff walls in Europe on the trade with Commonwealth countries. In the case of tropical products, he felt that there was little likelihood of a disturbance in the existing channels and possibilities of trade. Referring in this connection to the agreed tariff of 16 per cent duty on coffee in the Common Market, he pointed out that in any negotiations for reducing the duty, the U.K.'s views, "which would be developed in close consultation with the Commonwealth," would be bound to have an impact on the thinking of the Six. This was quite an encouraging approach although it did not amount to an assurance on behalf of the U.K.

But in respect of the possible tariff discrimination against industrial goods, such as textiles, in which India has vital interests, Sir Gore-Booth was frankly (and understandably) not in a position to hold out any definite hope of the kind. The most he could say in this connection was that, in the interplay of negotiations, the U.K. would influence its Continental friends towards a liberal attitude. Such an attitude, he stressed, should in the end offer to India and other Commonwealth countries "a better prospect than perhaps they now enjoy of increased exports to the Continent of Europe." Since the British, as practical men, are not in the habit of making wild promises, Sir Gore-Booth's cautious approach to the question of manufactures is understandable. It is equally clear that trade blocs in Europe have come to stay. No amount of hair-splitting discussion on their merits or demerits, therefore, can succeed in putting the clock back. What the developing countries like India must do in the circumstances is to strive to step up the productivity of their own industries and raise the competitive capacity of their products in world markets. This, however, does not mean that faith in either negotiations or in the liberal-minded approach of the British be given up. It may be that even in "the most unpredictable zone" of imports of manufactures from the Commonwealth, negotiations through the good offices of the U.K. Government will be productive of some good to this country which is developing an export potential for a variety of manufactured goods.

SUGAR INDUSTRY

The case for the provision of adequate rehabilitation allowance in the fixation of prices for sugar was briefly but impressively presented by Mr. C. R. Srinivasan, Chairman of the East India Distilleries and Sugar Factories Ltd., in his speech at the annual meeting of the Company held at Madras on Thursday last week. Alluding to the 12 per cent return on employed capital allowed by the Tariff Commission, Mr. Srinivasan declared that there was no margin with which the directors of sugar companies can rehabilitate their plant at costs that would absorb depreciation allowances four or five times over. And he added: "It was precisely this point, namely, the refusal of the Tariff Commission to take this in, that urged manufacturers to prevail on Government to make a second reference. I can only hope that the Tariff Commission will see facts as they are."

One may, of course, point to the marked expansion in sugar production of late and say that the industry is earning sufficient profit. But it must not be forgotten that the production is on high-cost base over which the industry has no control, thanks to the high minimum prices fixed for sugarcane and the heavy taxes levied by the Governments (Central and State alike). Nor is the industry in a position to make adjustments in price structure, because sugar prices are subjected to control. If, therefore, the industry is to maintain a consistently high level of output at a reduced cost, it must at least be enabled to improve the productivity of plant and machinery. Such an improvement can be effected only if a reasonable amount of depreciation allowance linked to the current market prices is allowed in the fixation of sugar prices. It is these facts which Mr. Srinivasan apparently wants the Tariff Commission to bear in mind.

The sugar mills are at present carrying large stocks and the stocks are expected to be considerably heavy towards the close of the season, what with the anticipated output of 2.7 million tons. When the supplies are so abundant, there is the anomaly that controls over price and distribution continue. Mr. Srinivasan's views on the issue of control are: "To the extent that this control restricts sales, this continuation is bad, but one must, in fairness, recognise that the complete removal of control will increase the problems of arranging export of the surplus stocks and might well lead to forced sales at low prices by the financially weak units. Government's task is to retain control without allowing it to restrict offtake in any way. Furthermore, for the exports even under adverse conditions to be maintained to the extent of 500,000 tons per annum, some control of production will have to be exercised."

There is, no doubt, some substance in the argument that a complete removal of control on sugar may well lead to forced sales at low prices by the financially weak units, especially those which are greatly feeling the impact of high production costs and pegging of cane prices at a level that actually requires an increase in the ex-mill selling price of sugar. But the continued retention of controls for a long time is not conducive to the healthy growth of sugar industry or in the interests of consumers. If controls on sugar are removed, the normal forces of supply and demand will operate in sugar markets, facilitating the building up of pipeline stocks with traders; one estimate places such stocks at 200,000 tons. The removal of controls will also result in higher consumption of sugar. Further, freedom from controls to consumers will compel sugar manufacturers to improve their quality and the traders to take good care of the stocks. As for the justification of controls on the ground of exports, it must only be said that sugar exports involve, as Mr. Srinivasan himself pointed out, a large measure of sacrifice to Government revenues, factory profit and consumer prices.

D.A.G.'S DECISIONS

The meeting of the Development Assistance Group (D.A.G.), about which a reference was made in the "Market Gossip" columns of this journal last week, has just reached a number of welcome decisions—welcome from the point of view of the underdeveloped countries. The *communique* issued at the end of the meeting clearly indicates that the Group has now agreed to recommend to the member-governments, as a common objective, an increase in the aggregate volume of aid going to the less developed countries. The Group has also accepted the principle that assistance provided on an assured and continuing basis would make the greatest contribution to economic growth in the recipient countries. Another agreed decision is that more aid should be provided in the form of grants and long-term loans on favourable terms. The decision to have a full-time Chairman to co-ordinate the activities of the Group conveys that the D.A.G. means serious business.

If the aforesaid decisions are given effect to in the near future, there can be little doubt that the flow of aid to capital-hungry underdeveloped countries will expand substantially. What is more, granting aid on a continuing basis would facilitate the formulation of economic programmes in the underdeveloped countries when they know in advance what exactly the quantum of external aid will be. The suggested greater reliance on grants and on long-term credits is also calculated to bring about development in the poorer countries with a minimum of stress and strain. In fact, this approach is agreeably in accord with the conclusion of a recent study made by the economic staff of the World Bank. This study, it may be recalled, has pointed out that short-term loans, by their very nature, impose the burden of repayment too early and strain the balance of payments of the receiving countries, even before the external aid has enabled these countries to improve the productivity of their economy. This danger is all the more acute in a period of instability in international trade, when the terms of trade of the primary producing countries deteriorate, and their debt-servicing capacity is reduced.

It looks as though the developing countries cannot, for the present, hope for anything more than an assurance of continuing long-term aid. Still, the absence of a reference in the Group's *communique* to the formula, canvassed in recent months, for channelising one per cent of the gross national product of each aid-giving country to the economically backward countries is bound to come as something of a disappointment. In fact, some circles in this country have already expressed their disappointment on this score. It may be that this formula will be ultimately accepted in some form or other. After all, the Group has merely completed the preliminaries now and it is expected to finalise the details in July in Tokyo where its final meeting is scheduled to be held. It is at this meeting that the intricate problem of sharing the burden of economic aid to backward countries will be discussed. The news that in the meantime the Group has decided to study the problem of burden-sharing is an encouraging pointer to the possibility of some reasonable formula being devised. The object of this study, it is stated, is to discover whether principles can be established on the basis of which Governments might most equitably determine their respective contributions to the common aid effort, having regard to the circumstances of each advanced country. It is to be hoped that this study will pave the way for a final agreement on the exact magnitude of aid to be given by the different members of the Development Assistance Group.

WAGE BOARDS

The Union Labour Minister, Mr. Gulzarilal Nanda, announced in the Lok Sabha this week that a Wage Board would be set up for the iron and steel industry on the pattern of the Wage Boards for cotton textiles, cement, sugar,

etc. He also indicated that the question of Wage Boards for the engineering and other industries would be taken up for consideration. The Wage Board for the iron and steel industry, when constituted, will thus bring the number of industries for which wage boards have been set up to six, of which the other five are cotton textiles, cement, sugar, jute and plantations. The Wage Boards for cotton textiles, cement, and sugar have already submitted their reports. Pending the finalisation of its final report, the Wage Board for the jute industry has submitted its recommendations on the workers' demand for interim relief. A Wage Board has been set up for the tea plantations and similar boards are to be formed for coffee and rubber.

Seventy-five per cent of the cotton textile mills in the country have implemented the recommendations of the Textile Wage Board. Many cement factories have put into effect the recommendations of the Cement Wage Board and the remaining units are working out details of the implementation in consultation with labour unions.

The Government has made known its decision to make the recommendations of the Wage Board for cotton textile industry statutorily binding so that the remaining mills will also be forced to implement them. It is, therefore, a safe inference that if the recommendations of the other Wage Boards are not implemented, the Government will not hesitate to compel, by law, their acceptance. Perhaps, the fear that the Government would resort to legislation might obviate the need for such legislation.

An important point that has not yet been fully recognised by the wage-fixing authorities is the need for relating wages to productivity. The Wage Board for cement industry had stressed the need for a scientific study of workloads with a view to ensuring that a fair day's work is secured for a fair wage. The Government has accepted the recommendations of the Board and workload studies have already been initiated in selected factories. In fact, such studies should have preceded the constitution of the Wage Board and should have been the basis for wage fixation for cement workers. If the workload studies now undertaken reveal the need for readjustment of the wage level, yet another wage revision will be unavoidable.

SIR THEODORE GREGORY

In a communication to us, Prof. C. N. Vakil writes as follows on Sir Theodore Gregory:

"In your leading article entitled 'A Critique on Indian Planning,' published in your issue of 18th March, 1961, you have reviewed the recent report of Sir Theodore Gregory on 'India on the Eve of the Third Five-Year Plan' published by the Associated Chambers of Commerce. In referring to the author, you have mentioned that 'as Economic Adviser to the Government of India between 1938 and 1946, (he) had something to do with the planning effort of the later years of that period, when the late Sir Ardeshir Dalal was the Member in charge of the portfolio'.

"It will interest your readers if you publish the following correction of your statement and other relevant information. After the publication of the Bombay Plan, as it was then called, of which Sir Ardeshir Dalal was one of the signatories, Lord Wavell created the Department of Planning and Development sometime in 1944 and invited Sir Ardeshir Dalal to take charge of it. The Secretary of the Department was Sir Thomas Hutton; though known for his military career he was obviously not suited for planning. It was good, however, that Mr. H. V. R. Iengar, now Governor, Reserve Bank of India, was the Joint Secretary. Sir Ardeshir naturally expected help from the Economic Adviser, Dr. Gregory who was attached to the Department of Commerce. He was, however, surprised when in a confidential note, Dr. Gregory pointed out that Planning was not possible in India, one of the reasons being that there was no adequate data for the purpose. It was thereafter that at the request of Sir Ardeshir my services were lent by the University of Bombay to the Government of India from February 1945 for one year in the first instance, as Economic Adviser to the Department of Planning and Development. I may say that the planning effort of the period was done in spite of the adverse attitude of Dr. Gregory.

"Sir Ardeshir Dalal resigned in January 1946. I am not aware of the exact reasons, but if I may guess, he could not have been satisfied with the response that he received from the Government of India of the time. Realising that progress was not possible, I preferred to return to the University at the end of the first year in February 1946. The Planning Department was gradually wound-up thereafter."

(Prof. Vakil's comment, based on his personal knowledge of what transpired in Government circles in 1944, is welcome. But it does not amount to a correction, for it was reasonably valid on our part to presume that, as Economic Adviser to the Government, Sir Theodore Gregory had made some contribution or other to the planning effort of that period, say, by way of ideas, advice, information and the like. We certainly did not seek to convey that he had any major or decisive role to play in the sphere of planning in war-time.—ED.)

THE DIRGE OF THE
DISAPPOINTED GARDENER.

"With care the seeds of flowers did I sow
And with my own hands laboured them to grow
And this was all the harvest that I reaped
A quarter of an inch of ugly weed."

(With Apologies to OMAR KHAYYAM)

And a message:

DUNLOP WATER HOSE

can change all this,
make sprinkling a pleasure,
gardening a bliss.

DRAC-90

ON THE ARENA

By The Archer

The Unwilling Peer

THE case of Viscount Stansgate fighting a relentless battle to remain a commoner in order to retain his seat in the House of Commons brings to light the existence of extreme conservatism in a country which has always upheld the best in democratic traditions. Whatever may be the political virtues in insisting on the son of a peer continuing to be a peer and staying in the House of Lords, it seems somewhat unreasonable to make a son reconcile himself to the decision of a father to so great an extent as to submit to his expulsion from a political career of his own choice and as suits his own temperament. Time was when the honorific of a peerage was valued so enormously that it was, perhaps, unnecessary to speculate on the possibility of the progeny developing other views on the subject, but time is that values have changed, and a resilient Parliament should indeed find a way out for unwilling peers like Lord Stansgate. It would seem that there are quite a few others of his way of thinking like Lord Hailsham, Lord Banliel, son and heir to the Earl of Crawford, Lord Hinchingbrooke, son and heir to the Earl of Sandwich, and Mr. Christopher Woodhouse, younger brother of Baron Terrington. All these estimable gentlemen are reported to be backing a new Bill called the Peerage (Renunciation) Bill, sponsored by Sir Lynn Ungoed-Thomas which, if passed, will enable peers who wish to remain commoners, to renounce their peerage for life.

All this will perhaps seem very funny and meaningless to many of us in this country where titles have been prized as valuable possessions for decades as they constituted distinguishing marks of superiority over the common rabble. Such ancient and colourful titles as 'Manne-Sultan Bahadur,' 'Meharbani-Dostum' and 'Shamshere-Jung' which were relics of the Moghul days and had been recognised by the East India Company and the British Indian Government stayed put till after independence and until the abolition of the princely order. But Knighthoods and hereditary titles of 'Rajah' are still on parade, although the Government of India has withdrawn official recognition for them. The die-hards among the old title-holders are still a tenacious lot, and there continue to be in circulation some cheerful old fogeys who carry visiting cards and printed letterheads indicating pathetic honorifics like 'Rao Sahib' conferred on them in the dim distant past for meritorious services to the community as executive office-bearers of, say, a Discharged Prisoners' Aid Society, the S.P.C.A., or the King George V Memorial Fund. I know of a charming old 'Diwan Bahadur' who held an influential office after retirement from Government service, and was prepared to give much weight to any recommendatory epistle on behalf of an under-dog if only he was addressed as 'My dear Diwan Bahadur,' and if not, consign it to the w.p.b. To all such people who cling to a tradition of vanity and exhibitionism, the case of the unwilling peer is likely to seem like the antics of a crank. Which only goes to prove that it takes all sorts to make up this funny world!

• • • •

1961 Census

The British have a national anthem which invokes Divine Grace on their Sovereign. India, as republic, should devise an ancillary national anthem invoking Divine Grace on her people, for there seems to be no other source to turn to for control of the explosive situation that has been revealed by the census figures which are staggering. We have a population of 438 millions according to the provisional figures, and this indicates an increase of 21.49 per cent over the 1951 figure which is stated to have stood at 359.2 millions after inclusion of the figures relating to Jammu and Kashmir which were estimated after the census of 1951 had been completed. The 1961 figure of 438 millions include those of Jammu and Kashmir. The published figures of population, within the present boundaries of India, since 1891 and the percentages of increase during the preceding decade are as under:

1891—235.9 millions	..	—
1901—235.5 millions	..	—0.17% (decrease)
1911—249.0 millions	..	+5.7 % (increase)
1921—248.1 millions	..	—0.4 % (decrease)
1931—275.5 millions	..	+11.0% (increase)
1941—312.8 millions	..	+13.5% (increase)
1951—356.9 millions	..	+14.1% (increase)
1961—438.0 millions	..	+21.6% (increase)

The increase in the rate of growth of population from 14.1 per cent to 21.49 per cent has been explained as being due to fall in death rate, improved public health and control and eradication of diseases and no countervailing reduction in birth rate. Praise be to God in the Highest for the first two factors; as for the third, I have no words of admonition, invocation or benediction. Even if the rate of growth is arrested without a further rise, the country's population may well reach 532 million in 1971 and (perdition to arithmetic!), 650 million in 1981. Mr. Lal Bahadur Shastri does not seem to be alarmed, but I am not as stout-hearted as he is.

In the concluding chapter of his Census Report, Mr. R. A. Gopalaswami, the Census Commissioner in 1951, has stated:

> "Births will get limited to approximate parity with deaths if what has been described as 'improvident maternity' is avoided by all or most married couples. ('Improvident maternity' consists of all births to mothers who have already had three or more children, when at least one of them is alive.)"

He recommends reduction of improvident maternity from over 40 per cent which was its incidence in 1951 to under 5 per cent, and for the attainment of the target of reduction, the creation and permanent maintenance of a nation-wide organisation of maternity and child welfare services. It looks to me that, as a first step, what we need is a nation-wide publicity drive. For this purpose, the All India Radio should organise a daily programme of an hour's duration in all the regional languages, directed principally to rural areas and primarily to the agricultural and working class population, explaining the staggering implications of the census count, the state of our agricultural economy, effect of unrestricted population growth on planned industrial, economic and social progress, and the shape of things to come if we allow our children to be elbowed out of existence. Indeed, what we need is a declaration of emergency, for, at the present rate of growth, we seem to be increasing in numbers by 25,750 per day, over one lakh in four days, and over 7,70,000 per month.

Advertising Technique

Addressing the Society of Advertisers last week, the Prime Minister did not seem very enthusiastic about their activities except for their contribution to export promotion. He wondered if the process of advertising, "good as it may be or as it is in some cases, may not impinge on the production of an integrated individual or integrated community by giving far greater emphasis on the material aspects of life, which though not harmful, are not particularly good or useful." He added that it was undesirable to present pictures of beautiful women, often rather unclothed, with consumption articles in order to make them acceptable.

In this context one is inclined to reflect on the over-sophisticated culture that we seem to have borrowed from more affluent societies which results in spending more money on beauty aids, lotions, cosmetic powders and perfumes, night creams, cold creams, vanishing creams, face creams, pore creams, perfumed oils, paints and varnishes, and getting greatly interested in pictorial advertisements whose basis is the commercial exploitation of the female form. Although most of them are irrelevant, these pictorial or photographic advertisements go by the grandiose name of commercial art and hit one in the eye, especially one belonging to a society which has traditionally clung to the concept of respect for women. The theme of "artistic women" is one with which commercial advertisements play about in diverse variations, much to the delectation of the men who wish to flaunt their artistic sense. Is it because the world is essentially man-made and man-ruled that it is not the other way about, or is it because there is no such thing as a body beautiful in the human male?

In the practice of the highly sophisticated advertisement technique of modern times, a frequent casualty is social purpose. The need to inform consumers about the available supply of commodities and their prices, especially under the prevalence of a seller's market or under monopolistic production and distribution, is rarely observed as a primary duty even by advertisers who spend colossal sums of money on verbose advertisements and propaganda. As an example of current topical interest I would mention that when the price of kerosene oil was recently enhanced by retailers ostensibly to meet increased excise duty and allegedly under instructions from suppliers, but not uniformly at all places or by all retailers, there was not a single advertisement in any of the newspapers indicating the permissible scales of retail prices as approved by the oil companies. And yet, the oil companies are among the largest advertisers in the country—of their contribution to the national economy!

I have heard it mentioned as a good joke that advertisers annotate the proverb "Honesty is the best policy" as indicating that the virtue is best only as a *policy*, not as a *technique*. I recently came across three large and lucid advertisements announcing the manufacture of as many makes of transistor radio sets, and got the impression that one of them could be picked up from a dealer's shelf any day. I discovered I was wrong; the sets are in the embryonic stage and the advertisements were inserted only to generate expectancy! It looks as though one has to pine for an article before one gets it!

A Novel Suggestion

At a convention of backward classes held a few days ago in Madras, a suggestion was made by the convener that forward communities should withdraw from competition for Government jobs for the next fifteen years "as a measure of goodwill and an act of patriotism." It is reported that three Ministers of the State Government were present at the convention, of whom one supported the suggestion strongly, a second favoured it partially, and the third opposed it on the ground that it was not practical, and would create disunity in the country. To ask for a "measure of goodwill" almost to the point of self-immolation, and that from young men who have been repeatedly assured that ours was a country working for the goal of equal opportunities for all, is an insult to their practical intelligence, and an affront to their concept of 'patriotism.' And, since the suggestion was admittedly made to hundreds of young men belonging to the forward communities, who (in particular) was expected to implement it? Or was it a suggestion to the State Government to try and find a formula for imposing this self-denying ordinance on the competitors? Thinking in terms of preferment to communities has token deep root in one form or another in many of our States and it is almost impossible to foresee what varied forms of elimination it might be developed into for securing the good things of life for backward communities. It is the concession of the principle that is the initial source of trouble, and as the saying goes about floods, what does it matter if the water level sweeps one foot above the head or ten?

Karl Marx says in *Capital* that the battle of competition is fought by cheapening of commodities. Has this saying got an esoteric application in a case like the above?

A further stage in the development of the foundry forge project at Ranchi was reached, with the signing of two agreements between the Heavy Engineering Corporation and Technoexport of Prague at New Delhi last week. The first agreement is for the additional machinery and equipment and spares at f.o.b. value of Rs. 7.6 crores for increasing the output of the different plants in the project to balance it fully with 45,000 tons of heavy machine building plant. The second agreement relates to the spares meant for the machinery and equipment arranged earlier for the first stage of the project, at a cost of Rs. 77 lakhs.

The U.S. Export-Import Bank has decided to broaden its system of guaranteeing credits advanced to U.S. exporters by private commercial banks. The guarantee plan which has so far covered only exports of heavy industrial equipments will now be extended to include smaller goods. The move is designed to offer U.S. exporters the same facilities offered by the U.K. and West German Governments to their respective businessmen.

AMERICAN LETTER

THE PROS AND CONS OF MR. KENNEDY

PROPOSALS FOR PUMP PRIMING ADVOCATED

From Our Special Correspondent

NEW YORK, *1st April*

THE Kennedy Administration, in its short existence, has left both favourable and unfavourable impressions. On the plus side, there were two Ambassadorial appointments, one to India, and the other to Japan. The chief United States envoy to New Delhi is a knowledgeable former university professor who combines conservatism, liberalism and realism. The chief representative of the U.S. in Tokyo was born in Japan and speaks the language fluently. Besides, he is married to a very pretty Japanese of a very good family. The Ambassador comes from an American family.

Also, Mr. Kennedy has handled himself very well in the periodic televised Press conferences which have grown to such proportions that the somewhat large auditorium of the State Department is being used on such occasions.

The President's stand *vis-a-vis* the so-called Communist block is commendable as well. His proposal that the U.S. should increase ground forces is based on the old Roman proverb, *si vis pacem para bellum*. In the meantime, he has arranged a meeting of the Foreign Ministers of the major nations of the world and he has not shut the door to disarmament talks. He also consulted with former President Eisenhower. Boost in the armed forces may sound, perhaps, political expediency. It has, besides, minus economic connotations, such as spending of money. It is also a form of pump priming to reduce the number of the unemployed.

Although the U.S. shows signs of an upturn in the economy in many lines, other proposals for pump priming have been advocated. They include extension of the highway system, expansion of public housing, coverage of more people under the Social Security System beginning at a lower age rate. The system is in the red already, and it is likely to remain so for the next two years until higher rates come into effect progressively.

Opposition

Congressmen and Senators, even though they have many constituents who would benefit by the proposed changes in Social Security, have lent a deaf ear to nearly all of Mr. Kennedy's expansionary plans, except in the defence area. Even members of the President's own party have turned against him, or they sat on their hands and said nothing.

Essentially, the opposition to the Kennedy plans by these quarters stems from economic reasons. If enacted, the Eisenhower projected Federal surplus of $1,000 million for the fiscal year would be transformed into a deficit of about $2,000 million with all that it implies. Aside from budgetary considerations, an upturn is expected because inventories have run so low that they will have to be replenished very soon.

Foreign aid is high on the legislative agenda with replacement of existing aid agencies by one big aid administration, responsible only to the President and the Secretary of State. It has strong economic connotation.

The same can be said for such controversial measures as aid to schools, increase in minimum wages and unemployment pay. Health insurance is also being considered. Farm legislation is now proposed. Stiff opposition is certain in some quarters. In other words, Mr. Kennedy's programme may have hard sledding because of higher support.

Apropos my previous remarks that things seem to be perking up, or that they will in the future, the stock market last month turned in the best performance in many a moon.

United Nations News

At this writing, the greatest trouble spots in the world is considered by both American and foreign correspondents to be Laos. It explains the strong joint statements by British Prime Minister Macmillan and President Kennedy that the situation "cannot be allowed to continue to deteriorate." They stopped short of saying that they would seek military actions to stop military advances by Moscow which could give them not only political control of the peninsula but also access to rich natural resources and help them undersell and ruin established world markets.

U.N. delegates were pleased hearing from Mr. Harriman after his return on a special mission abroad that India's Prime Minister Jawaharlal Nehru seemed quite co-operative to communicate with Soviet Prime Minister Nikita Khrushchev asking him to accept President Kennedy's invitation for a cease-fire arrangement in Laos. In the meantime, members of the South-East Asia Treaty Organisation are also considering sending troops to Laos, according to information at the U.N. here.

The second biggest trouble spot which engages the attention of the General Assembly is, of course, Africa. Under present world conditions, it is, perhaps, inevitable that the demand would arise "Africa for the Africans." That was expected at the U.N. ever since it was started at San Francisco. But there are also thousands of Moslems who are active traders on the dark Continent. U.N. delegates ask whether they will be considered Africans or if they will be massacred just as the whites. Most deplorable is, naturally, the possibility of a further breakdown of political and economic affairs of Africa. Cuba is ignored by the U.N. for obvious reasons. The U.S. naval station is fully equipped on a war-time basis. Besides, Fidel Castro's tenure as President is held to be short.—*All Rights Reserved.*

Notice

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE OF INTERIM DIVIDENDS

THE BOARD OF DIRECTORS HAVE declared on the 29th March, 1961, the following Dividends subject to tax deduction before payment under Section 18(3D) of the Income Tax Act.

Interim Dividends for the year ending 31st March, 1961:

On First Cumulative Preference Shares @ Rs. 4% increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of Rs. 5.2%.

On Second Cumulative Preference Shares @ Rs. 2.25% increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of Rs. 2.925%.

On Preferred Ordinary Shares @ 12 nP per share, increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of 15.6 nP per share.

On 'A' and 'B' Ordinary Shares—Rs. 1 per share.

Additional Dividends for the year ended 31st March, 1960, pursuant to the provisions of the Preference Shares (Regulation of Dividends) Act, 1960:

On First Cumulative Preference Shares @ Rs. 2.4% per annum.

On Second Cumulative Preference Shares @ Rs. 1.35% per annum.

On Preferred Ordinary Shares @ 7.5 nP per share.

These Dividends will be paid on or after 5th May, 1961, to those shareholders (or their mandatees) whose names appear in the Company's books on 22nd April, 1961, as the Registered Holders of the above shares.

The Share Transfer Registers of the Company will be closed from 8th to 22nd April 1961, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LTD.,

Managing Agents.

CHARTERED BANK BUILDINGS,

CALCUTTA, *30th March*, 1961.

FALL FROM GRACE

EXTERNAL PAYMENTS POSITION

(From Our Own Correspondent)

LONDON, *30th March*

LONDON LETTER

THE Treasury has now revealed the full extent in the change in Britain's external payments position in 1960 compared with 1959. The gold inflow of £177 million over the year is almost the exact equivalent of the net deterioration in the monetary position—that is to say, it is by coincidence almost a net amount by which Britain failed to balance her incomings and outgoings over the year. But the incomings in the form of short-term capital movements alone equal some £377 million, and without these the deficit on the monetary position would have been nearly £545 million.

This figure is made up of £344 million being the deficit on trade account and £201 million being the deficit on capital account. Whether this country can afford it or not, net overseas investment appears to be of the order of around £200 million a year—it was the same in 1959—but what a fall from grace is there in the current account deficit of £344 million compared with the *surplus* of £51 million in 1959, and yet 1959 was the year in which the gold and currency reserves fell by £119 million—which just goes to emphasise the capricious nature of these gold movements. They mean utterly nothing in terms of the U.K. trade, and utterly nothing in terms of her true financial position, and yet they are the mirror on which the world fixes its eyes to see whether the currency is trustworthy or not.

In 1960 imports exceeded £4,000 million which is just about £500 million more than the previous year. Exports and re-exports exceeded £3,700 million which is £200 million better than the year before. So right away there is a worsening on visible trade account of £300 million and a deficit of £366 million. The previous year the deficit had only been £69 million. Here, in plain figures for all to see, is the true measure of Britain's problem.

Overall Deficit

In 1959 income on invisibles netted £120 million. In 1960, largely as a result of increased Government expenditure overseas, the surplus was a mere £22 million. Britain's net shipping income is a minus figure. Only interest on overseas investments, etc. which still brings in about £180 million (though each year is less than that before) and the payments for banking and commercial services manage to offset the heavy drain of Government expenditure overseas.

So 1960 closed with an overall deficit of £344 million. But private capital, in spite of all this, gaily lent about £100 million overseas and new Government loans to the less developed countries were generously increased from £49 million to £61 million, to which must be added about another £40 million of Government advances. So, to swell the deficit on current account, we have these substantial sums of capital account.

Where would the gold reserves have been if these sums had had to be met directly? Fortunately the sterling holdings of foreign countries in the U.K. were swelled by £380 million. This was offset by £156 million being sterling balances being drawn down by the I.M.F., but it did leave the total of sterling balances in London £224 million higher than a year before. An inflow of miscellaneous capital which can be identified helped Britain's position by about £120 million, but the true balancing item which held up the reserves, and indeed enabled the gold inflow to be paid for, was hot money to the tune of £377 million. It is possible to take steps to treat these capital movements as part of long-term banking transactions. It is primarily a technical problem how this is done. The real matter to which the country has to address itself is the vast deficit on current account.—*All Rights Reserved.*

A new British trade delegation (Chairman: Mr. Edward Thompson), jointly sponsored by the Board of Trade and the Federation of British Industries, will leave London early next week on a tour of South-East Asian countries, including Malaya, Singapore Thailand, Burma, Philippines, North Borneo and Indonesia. The delegation will be divided into four groups. After about a fortnight, all the delegates will assemble at Singapore for a two-day conference with the U.K. official trade representatives accredited to all the countries concerned.

UNITED COMMERCIAL EARNS MORE

CREDIT RATIO JUMPS UP—DIVIDEND SLIGHTLY HIGHER

THE results of the United Commercial Bank Ltd. (General Manager : Mr. S. T. Sadasivan, Calcutta) for the year ended 31st December 1960 are gratifying. Thus, the gross income has recorded a substantial improvement from Rs. 490.61 lakhs in 1959 to Rs. 528.98 lakhs, and the profit (before taxation) has gone up from Rs. 60.42 lakhs to Rs. 67.43 lakhs, which is the highest on record in the history of the Bank, which is only 18 years old. The Directors have continued to follow a judicious policy in regard to appropriation of profit. The rise in profit has been equitably distributed; a part to the reserves, another to staff and a third to shareholders. The provision for reserves has been stepped up by Rs. 3 lakhs to Rs. 30 lakhs and the bonus to staff absorbs Rs. 2 lakhs more at Rs. 13 lakhs. The distribution to the shareholders is better by Rs. 2 lakhs, at Rs. 24 lakhs. This latter sum gives a dividend of 12 per cent (taxable), which is only a shade higher than the dividend of 11 per cent. (taxable) for the previous year. After deducting the tax, the net dividend for the year under review is 8.4 per cent and is slightly higher than the tax-free dividend of 7.5 per cent per annum declared for 1957 and 1958.

With the receipt of Rs. 30 lakhs from the profits for 1960, the reserves of the Bank have exceeded the paid-up capital of Rs. 2 crores by Rs. 5 lakhs to stand at Rs. 205 lakhs. In view of this, the year under review may be regarded as an important landmark in the Bank's history. Few banks in the private sector in India can boast of having been able to build up such a sizable reserve within a short period of less than two decades.

The progress of the Bank since 1957 is shown in the following comparative table :

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Gross income	528.98	490.61	423.71	386.19
Interest and discount	379.00	362.39	308.80	257.24
Commission and exchange	141.73	120.94	106.55	107.67
Interest paid	252.34	246.93	217.21	163.12
Expenses	194.08	171.80	153.21	136.72
Depreciation and repairs	15.13	11.46	7.91	6.05
Profit	67.43	60.42	45.38	59.70
Provision for taxation			9.00	18.50
To reserve fund	30.00	27.00	14.00	19.00
Bonus to staff	13.00	11.00	7.25	7.00
Dividend	24.00	22.00	15.00	15.00
	(12%)*	(11%)*	(7½%)	(7½%)
Carry forward	1.47	1.04	0.62	0.49

	As on 31st December			
	1960	1959	1958	1957
Capital	2,00.00	2,00.00	2,00.00	2,00.00
Reserve fund	2,05.00	1,75.00	1,48.00	1,34.00
Deposits	88,93.87	96,67.88	78,27.97	61,07.45
Borrowings from other banks	9,32.28	4,60.07	5,76.21	34.05
Advances	61,38.50	56,25.28	45,15.94	37,69.09
Investments	33,88.29	40,78.53	35,62.87	19,94.21
Cash	9,56.71	10,09.72	8,38.86	8,28.40
Balance-sheet total	149,35.81	145,44.58	114,15.01	90,22.61
Ratio to deposits of—	%	%	%	%
Advances	69.0	58.2	57.7	61.7
Investments†	27.7	37.4	38.3	32.1
Cash	10.7	10.4	10.7	13.5

*Subject to deduction of tax.
†Only the unencumbered investments are taken into account for arriving at the ratio.

It will be observed from the table that the income, by way of interest and discount earned, has jumped up from Rs. 362.39 lakhs to Rs. 379.00 lakhs, and that from commission and exchange has registered an even sharper increase from Rs. 120.94 lakhs to Rs. 141.73 lakhs. But, at the same time, both interest paid and other expenses have gone up quite sizably, the former by Rs. 5.41 lakhs and the latter by Rs. 22.28 lakhs. The profit has, therefore, improved by Rs. 7.01 lakhs only, from Rs. 60.42 lakhs for 1959.

The changes in the balance-sheet items of the Bank are in keeping with the general trends of banking in the country as a whole. Thus, deposits has declined from Rs. 96.68 crores to Rs. 88.94 crores. Fixed and current deposits have both contributed to this fall, the former by Rs. 6.87 crores and the latter by Rs. 2.23 crores. Only saving bank deposits have recorded a rise from Rs. 7.90 crores to Rs. 9.26 crores. This is the first time since 1951 that the upward trend in the Bank's deposits has been reversed. The Bank tried to neutralise the effect of the fall in deposits on its lending activities by increasing its borrowings from other banks, which item has more than doubled from Rs. 4.60 crores to Rs. 9.32 crores. This probably explains why the interest paid at Rs. 2.52 crores is a little higher than that in the previous year, despite the shrinkage in deposits and the lower level of interest rates on deposits brought about by the inter-bank agreement. On the assets side, thanks to the rapid growth of trade and industry and the consequent increase in the demand for bank accommodation, the advances of the Bank have recorded a sizable expansion of Rs. 5.13 crores, taking them to a high level of Rs. 61.39 crores as at the end of the year under review. The credit ratio has risen from 58.2 per cent to 69 per cent. The increase in bank credit has solely been under " loans, cash credits and overdrafts," the bills discounted and purchased being a shade lower. But its collection business has made striking progress, as witness the increase in the outstanding bills for collection from Rs. 9.35 crores to Rs. 10.83 crores and in acceptances, endorsements, etc. from Rs. 26.53 crores to Rs. 31.24 crores. Investments, however, have showed a marked contraction over the year, having fallen by Rs. 7.90 crores to Rs. 33.88 crores, and their ratio to deposits, taking into account only the unencumbered investments, has declined from 37.4 per cent in 1959 to 27.7 per cent in the year under review. But as the cash ratio is higher at 10.7 per cent, the total liquid assets form 38.4 per cent of the deposits, a proportion still well above the conventional limit.

As stated earlier, the reserve fund of the Bank is of the order of Rs. 2.05 crores, and, with the paid-up capital at Rs. 2 crores, the owned resources of the Bank are quite substantial. The confidence of investors in the Bank is well reflected by the ruling prices of its shares (Rs. 50 each partly paid) which are currently quoted on the Bombay Stock Exchange at Rs. 90.50 *cum-div.* On an *ex-div.* basis, the shares give a net yield of 4.8 per cent per annum which is well below the yields on most of the bank shares, the general average being 6 per cent. Evidently, investors would seem to be of the opinion that the Bank could easily raise the rate of dividend further in the coming years, thereby bringing it up to the levels of the older big banks. It may be interesting to note here that, in 1960, the profit per share was Rs. 16.75, as against Rs. 15 in 1959 and Rs. 8.50 in 1950, the dividend actually distributed in these years being Rs. 6, Rs. 5.50 and Rs. 2, respectively. Another noteworthy feature is that the capital funds per share (break-up value) have risen from Rs. 65 in 1950 and Rs. 93.75 in 1959 to Rs. 101.25. The increase in the number of shareholders has, however, been only modest, from 5,645 in 1950 to 5,767 in 1960 ; actually, the number is a little lower as compared with more recent years ; in 1957, for instance, the Bank had as many as 5,883 shareholders. But it must be stated that even the latest number is quite large, viewed from Indian standards.

(*Concluded from next column*)

namely, interest paid and other expenses, increased sharply by Rs. 6.67 lakhs and Rs. 11.94 lakhs, respectively, the profit has risen only slightly. Further, the amount charged to depreciation has almost doubled from Rs. 4.33 lakhs in 1959 to Rs. 8.31 lakhs. As reserves have absorbed Rs. 2.93 lakhs (as against Rs. 2.90 lakhs in the previous year) and the payment of bonus to staff has taken up Rs. 5.77 lakhs (Rs. 5.46 lakhs in the previous year), the Directors have merely succeeded in maintaining the dividend unchanged at the previous year's level of 4.3 per cent (taxable). After deducting the tax, the net return to shareholders works out to 3.01 per cent As the Rs. 10 fully paid-up shares of the Bank are being quoted at a heavy discount at Rs. 5.12 *cum-div.*, the yield on them on an *ex-div.* basis comes to 6.2 per cent per annum.

Thanks to the pressure of demand for funds resulting from the increased tempo in the economic activities in the country, the advances have jumped up by Rs. 4.11 crores to stand at the impressive figure of Rs. 31.62 crores, taking the credit (to deposits) ratio to 61.1 per cent. as against 57.7 per cent in the previous year. Investments which are shown at or below market value, have declined a little, by Rs. 86.59 lakhs to Rs. 16.79 crores. But cash balances have gone up by over a crore of rupees, which, together with the unencumbered portion of investments, give a liquid assets ratio of 45.7 per cent.

UNITED BANK OF INDIA'S FIRST DECADE

NOTABLE EXPANSION IN DEPOSITS

IN these days, when there is a lot of talk of amalgamation as a solution to the problem of sub-standard small banks, it would be useful to recall the formation of the United Bank of India Ltd. in 1950 through an amalgamation of four banks in Bengal, with the full consent and blessings of the Reserve Bank of India. The four Bengal banks were then more or less in the same plight as the small banks in Kerala, Madras and other States of India are today. In that year, too, one of the Bengal banks—the Nath Bank—could not be salvaged and had to be forced into liquidation in the same way as the Palai Bank. Full ten years have gone by and it is gratifying to find that the United Bank of India Ltd. has now grown into a full-fledged, strong bank of Bengal, with branches in several other parts of India. The depositors, the staff and the shareholders of the four banks, which had been in difficulties, following the partition of Bengal were saved and disaster was averted. Thanks to a devoted Board of Directors, under the chairmanship of Dr. N. N. Law, and the energetic Chief Executive, Mr. B. K. Datta, Managing Director, the Bank has now attained a position of great strength and is able to render significant service to the country's economic progress.

The United Bank of India has made impressive progress during the first decade of its existence. Its deposits have almost doubled, from Rs. 26.90 crores as at the end of 1950 to Rs. 51.74 crores at the close of 1960. Its advances have risen by nearly 130 per cent from about Rs. 14 crores to Rs. 31.62 crores. It has opened 24 new branches, many in places where modern banking facility was absent or either inadequate. Further strength has been imparted to the Board of Directors by the addition of Mr. S. Gupta, a Managing Director of Martin Burn and a former Secretary and Treasurer of the State Bank of India, and Mr. S. N. Ray (I.C.S., Retd.) who was the Chief Secretary to the West Bengal Government and is now Chairman of the West Bengal State Electricity Board.

The progress of the Bank since 1957 can be seen at a glance from the following tabulated statement :

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount	2,15.59	1,97.58	1,70.55	1,45.22
Commission and exchange	39.02	34.42	33.72	31.75
Other income	15.20	14.56	15.03	12.83
Interest paid	79.15	72.48	62.00	52.05
Expenses	1,01.95	1,50.01	1,36.06	1,15.68
Depreciation	8.31	4.33	7.01	5.86
Profit	20.40	19.75	14.15	16.21
Provision for taxation				4.92
To reserves	2.93	2.90	3.45	3.25
To bonus to staff	5.77	5.46	2.83

§ Only the unencumbered portion is taken into account.

An outstanding feature of the Bank's working in 1960 is the continuation of the upward trend in deposits. Contrary to the general trend of scheduled banks as a whole, the Bank's deposits were able to register a bigger increase than in 1959. This enabled the Bank to increase its advances without having to deplete its liquid assets ; the latter have actually gone up, the inter-bank borrowings at the end of the year being only fractional. On the earnings side, too, the performance during the year under review is satisfactory. The Bank's profit (before taxation) has staged a modest rise from Rs. 19.75 lakhs in 1959 to Rs. 20.40 lakhs. But this increase does not fully reflect the substantial improvement in turnover. The income from interest and discount, for instance, has expanded by Rs. 18.01 lakhs to Rs. 215.59 lakhs and that from commission and exchange by Rs. 4.60 lakhs to Rs. 39.02 lakhs. But as the two outgoings,

GALLOPING INFLATION SOUNDING THE SIREN?

INADEQUATE AND ECCENTRIC SUPPLIES ROOT CAUSE

By Prof. S. Kesava Iyengar

LOUD claims of thumping success achieved during the first and second Plan periods apart (in his Budget Speech, the Union Finance Minister has claimed 33 per cent increase in agricultural production and 66 per cent in industrial output), a careful study of production figures leads to the irresistible conclusion that we have been planning for a drift, much more than drifting towards planning. The central problem today is the acceleration in runaway prices, particularly of consumer goods. "Holding the price line" has been much talked of but with little success. Monetary and fiscal policies have been resorted to with a view to checking prices, but the predominant cause for the price spiral is the utter inadequacy of consumer goods, durable and non-durable, and raw material for consumer goods industries, either locally produced or imported. A few relevant indices are given below, but these suffer seriously from defects like unrecognised black market prices, irrational weightages, and the non-inclusion of several items like fruit, vegetables, fish, meat, milk products and the building industry. In the U.S.A. and U.K., they have a general production index including agriculture and industry, although agriculture is more seasonal than industry. Here in India, the index of agricultural production is based on 1949-50 at 100, and the index of industrial production on 1951 (calendar year). It is surprising that, even after 10 years of planning, these indices have not been amalgamated or at least worked on one common base year. Again, such indices do not go far in throwing sufficient light on the root problem for two reasons. Many essential consumer goods were produced in very small quantities in 1950-51, and even high sounding index numbers for 1959 do not mean much progress so far as social welfare is concerned: 300 per cent of 1 is only 3. Secondly, such indices bear no relation whatever to consumption targets that can be considered as respectable for the nation, particularly with regard to items like food, clothing and housing.

Agricultural Production

With all these handicaps and limitations, the following figures present quite a dismal picture of limping production which deserves careful attention at the hands of planning authorities:

TABLE I

Index of Agricultural Production

(1949-50=100)

Item	1958-59	1959-60	% increase: annual average
Foodgrains	130.1	124.3	2.43
Oilseeds	138.4	122.6	2.25
Fibres	175.0	145.2	4.52
Plantation crops	130.0	131.1	3.11
General	133.3	127.2	2.72

It is impossible to understand how Mr. Morarji Desai claimed an increase of 33 per cent when the actual figure is 27.2 only. The annual average increase is derived by dividing the total increase in index numbers by 10, because that is the intervening period between 1949-50 and 1959-60. Wheat bargains with U.S. and glorification of the Food Bank concept are pleasing, but the sorry tale presented by the last column cannot be ignored: anything below 5 per cent annual average increase in agricultural production would not be worth planning for, because the working army marches on its stomach, and non-food crops are the raw material for several consumer goods industries: numerous such units are not working to full capacity like cotton textiles, power units and sugar mills.

Industrial Output

So far as industry is concerned, broad categories are plant and machinery, industrial raw material, durable and non-durable consumer goods, food, clothing and house room forming part of the last class. In some cases, the same item might be classed under more than one category. Index numbers for the whole of 1960 are not available for many products, and monthly indices may not represent annual trends. Therefore, annual indices for 1959 are used for calculation in Table II, the last column showing average annual percentage increase over a block of eight years. The improvement is only 51.9 per cent over eight years, but the Union Finance Minister has claimed 66 per cent which may be passed only as wishful thinking. These indices have been arranged in ascending order, and the overall impression is that drift, not planning, characterised production programmes during the past ten years. On the producer goods side, electricity (and gas and steam), iron and steel, and cement showed fair progress, but this was at the expense of consumer goods like cloth and tea (important earners of foreign exchange) as also sugar, although consumer goods industries like ammonium sulphate, bicycles, sewing machines and paper did not languish. The production of iron ore was promising arithmetically, but connoted so much loss of investment potential at home: iron ore exports, actual and contracted, have sharply increased, a tendency which is contradictory to the special emphasis on iron and steel production.

TABLE II

Index of Industrial Production

(Calendar year 1951=100)

Item	% increase over eight years	Average annual % increase
Gold	—27.0	—3.37
Jute sacking	— 3.2	—0.40

Ammonium sulphate	618.2	77.29
Bicycles	767.0	95.87
General	51.9	6.49

Snail's Progress

Reasons for this snail's progress and eccentric improvement along different lines, with no reference either to the country's potential resources or the development of the national standards of life to a decent level, is a further testimony to our planning for a policy of drift during the last ten years. Reasons are not far to seek. First, the planners have proved very niggardly in setting hopelessly low levels as normal standards of consumption, without reference to calorific or vitamin contents of food, and minimum requirements of cloth and housing, or without reference to international standards. As is generally the law of nature, achievements fall short of targets, and it is no wonder that the average annual percentage increase during the last decade has been so low as 2.43 per cent with regard to foodgrains, and 0.39 per cent with regard to cloth. About fruit, vegetables, fish and meat, we have no statistics, nor have we any with regard to residential house construction. In the name of planning, there has been too much of restriction and pin-pricks on domestic private industry, from licensing to taxation, with the result that a great deal of saving has added to hoards. Thirdly, overinvestment on heavy industries involving burdensome foreign exchange liabilities, led to merciless curbs and prohibitions on imports of consumer goods and even industrial raw material. The proof of this lies in several consumer goods industries suffering from unused capacity. Fourthly, it is a complex job to reconcile a socialist society with imports of foreign private capital and enterprise, but there has been a distinct change for the better of late in Government agreeing to a people's car industry with German aid, a watch industry with the help of Japan, the tyre industry financed substantially from the U.S.A., apart from the foreign capitalist finance of Durgapur and Rourkhela. A mixed economy and a socialist society cannot be yoked to advantage. Management of public enterprises has proved inefficient, and, at times of emergency (as in the case of fertilisers and oil refineries), the Government does not

UNDER SECRETARY TO G...

STATE BANK OF TRAVANCORE

ALL-ROUND IMPROVEMENT

THE results of the State Bank of Travancore (General Manager : Mr. T. R. Krishnaswami, Trivandrum) for the year 1960 make encouraging reading. The total deposits of the Bank have jumped up by Rs. 130.23 lakhs to stand at the impressive figure of Rs. 8.27 crores, as compared with an expansion of Rs. 36.72 lakhs only in the previous year. Advances have also registered a substantial improvement of Rs. 54.09 lakhs in 1960, on top of a rise of Rs. 35.19 lakhs in 1959. The increase in the volume of business is clearly reflected in the expansion in income by way of interest and discount which has risen from Rs. 41.96 lakhs in 1959 to Rs. 45.45 lakhs in 1960. Income from commission and discount has increased less sharply from Rs. 4.06 lakhs to Rs. 4.83 lakhs. But, as expenses other than interest paid have risen by just Rs. 1.80 lakh to Rs. 13.90 lakhs and as interest paid has actually declined from Rs. 19.71 lakhs to Rs. 17.76 lakhs, the profit (before providing for taxation) has staged a smart improvement from Rs. 9.95 lakhs in 1959 to Rs. 13.53 lakhs in the year under review. After making necessary allocations, the Directors have declared a dividend of 5 per cent (taxable) as against *nil* in the previous year. The net dividend works out to 3.5 per cent and is still lower than the tax-free dividend of 5 per cent distributed by the former Travancore Bank in the years 1957 and 1958.

The provision for taxation has been stepped up from Rs. 5.15 lakhs to Rs. 6.25 lakhs, while the amount transferred to reserve is less by Rs. 54,000 at Rs. 1.46 lakh. The bonus to staff absorbs Rs. 0.70 lakh; no bonus was given in 1959-60. The Directors have not made any provision for gratuity, unlike in the previous year when the gratuity account was credited with Rs. 1.64 lakh.

A bird's-eye view of the progress of the Bank since 1957 can be had from the following comparative table :

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959†	1958†	1957†

Cash	29.5	25.8	27.1	28.9

† The figures relate to the Travancore Bank Ltd.
* Subject to tax.
†† Only unencumbered portion is taken into account.

As indicated earlier, the total deposits of the Bank have gone up by Rs. 130.23 lakhs. Of this rise, saving bank deposits account for Rs. 106.39 lakhs, and current account deposits for Rs. 51.56 lakhs, whereas fixed deposits have actually fallen by Rs. 27.72 lakhs. The improvement in aggregate deposits is, perhaps indicative of the increased public confidence in the Bank, consequent on it having become a subsidiary of the State Bank of India with effect from 1st January 1960. Thanks to the extension in limits granted to the aluminium, tyre and rubber, and chemicals industries, as well as to the better utilisation of limits by other borrowers, the Bank's advances have jumped up from Rs. 356.14 lakhs to Rs. 410.23 lakhs.

The expansion programme of the Bank is progressing smoothly. Thus, during the year under review, the Bank opened seven new offices and licences for opening six additional offices have been obtained from the Reserve Bank of India. The Bank has investigated business potentialities at 17 centres.

MODERNISATION OF COTTON MILLS

GOVERNMENT ACCEPTS WORKING GROUP'S MAIN RECOMMENDATIONS

THE Government of India has accepted the main recommendations of the Working Group for the Cotton Textile Industry, 1960, appointed by the National Industrial Development Corporation in 1959. The Working Group which was asked to study the rehabilitation and modernisation needs of the cotton textile industry, has recommended, in its report just published, a modest scheme of modernisation and rehabilitation estimated to cost Rs. 180 crores. Of this, Rs. 80 crores, it has suggested, could be raised by the industry itself out of its own resources and the balance should be provided by public financing institutions like the National Industrial Development Corporation, Industrial Finance Corporation or similar bodies set up for financing development of industries in the country. The Government has accepted this recommendation and proposes to review constantly the position during the third Plan period so as to expedite the pace of modernisation, rehabilitation and diversification of the cotton textile industry. The Government has also accepted the Working Group's suggestion for setting up a Textile Mills Standing Advisory Group or Committee, consisting of top level representatives of management, labour and technicians to examine causes of closures, losses and unsatisfactory working of less efficiently run textile units. The proposal that five new units with a capacity of 25,000 spindles and 500 looms each and equipped with up-to-date types of machinery should be permitted to be set up for production of faultless, quality cloth entirely or largely for export has also been accepted.

Some of the other recommendations of the Working Group, especially those relating to the part to be played by the N.I.D.C. and other financing agencies in the modernisation and rehabilitation of the textile industry and the suggestion for the creation of a "closure fund" out of which payments could be made to scrapped units as a sort of compensation are under consideration of Government.

The Working Group, it may be recalled, was appointed in August 1959 under the chairmanship of Mr. D. S. Joshi, the then Textile Commissioner. It was asked to study the need for rehabilitation and modernisation of the textile industry and, in particular, to examine the extent of finance necessary, foreign exchange required, the amount which would be provided by the industry and how the balance of the needs may be met from public or private financing agencies, including the N.I.D.C. The Working Group, after an exhaustive study of the question of rehabilitation and modernisation of the industry and all the aspects relevant to it, has recommended the scheme referred to in the beginning.

Level of Modernisation

One of the problems which the group had to consider was the level of modernisation. Its findings in this connection is that modernisation to the maximum possible extent is not feasible, because of the vast amount of finance involved and also because of the large percentage of the labour force that would be thrown out of employment. On the other hand, failure to modernise, it recognises, may bring about the very conditions of distress and unemployment in industry that labour is so anxious to avoid. The level of rehabilitation and modernisation from a national point of view should be governed by three factors: (1) the finance available, (2) the degree of labour displacement, and (3) the need to ensure a minimum standard of efficiency in all units. Taking these three factors into consideration, the working group maintains that there should be a minimum level of modernisation in all units—a level below which no unit should be allowed to exist. Mills which have reached or even exceeded this level of modernisation may also modernise further, provided they have the necessary financial resources and are in a position to accomplish modernisation by following the principles laid down at the Fifteenth Labour Conference.

The level of modernisation envisaged by the Working Group is a modest one which is nearer the minimum level. If the entire organised sector of the mill industry of the present size were to be set anew, according to the Working Group, the cost would be in the neighbourhood of Rs. 800 crores which may be taken as the desirable maximum. Since this has been ruled out in view of the limiting factors regarding both finance including foreign exchange and labour, the Working Group has estimated, in different ways, the cost of modernisation at a bare minimum level. Whichever way the problem is approached, the total figure reached is between Rs. 150 and Rs. 200 crores. The Working Group, therefore, considers that an estimate of about Rs. 180 crores would be a fair guide for the purpose of planning for finance for rehabilitation and modernisation. The programme would entail an annual expenditure of Rs. 30 to Rs. 35 crores during the third Five-year Plan period.

Machinery Required

The Working Group has estimated the proportion of machinery which would have to be imported for the purpose of modernisation. At present, production of the indigenous textile machinery is of the value of about Rs. 10 to Rs. 12 crores per year. It is expected that at least 75 per cent of the machinery requirements at the end of the third Plan would be met by indigenous manufactures. Manufacture of automatic looms will be started shortly. Taking all these factors into consideration, the Group estimates that Rs. 60 crores worth of machinery would have to be imported during the third Plan period ending 31st March 1966 for the purpose of modernisation and rehabilitation. This is exclusive of spare parts for the existing machinery and components required by the indigenous manufacturers of textile machinery which are estimated to cost Rs. 23 crores.

Sources of Finance

The Working Group calculates that, of the estimated cost of Rs. 180 crores, the industry will be in a position to gather a maximum of Rs. 80 crores from its own resources, including borrowings from directors, banks, etc. The balance has to be found for the industry by way of loans from the N.I.D.C., the Industrial Finance Corporation and similar bodies. These financing institutions, it is recommended, should adopt a liberal loan policy. They might also issue sizable amounts by way of equity capital to mills. The possible lines of liberalisation of the terms and conditions of loans suggested by the Group are the following:

Loans may be granted to the extent of cost of machinery installed, construction of new sheds and buildings, compensation to redundant workers and for working capital.

Loans may be granted subject to overall security being available (market value of the block being taken into consideration) and ensuring efficient management.

Conditions such as restricting companies' investments in other concerns and restricting the rights of withdrawing loans advanced by the directors/managing agents may not be imposed.

A climate should be created so that, by and large, all companies who are in need of finance for rehabilitation and modernisation of the mills come forward to the N.I.D.C. for financial assistance.

Legal mortgage may not be insisted upon.

Equitable mortgage or simple deposit of title-deeds may be considered adequate.

Procedure of searching titles, etc., may be made less elaborate.

The pressure on the finances of mills on account of interest having to be paid on the loans could be eased, suggests the Working Group, by readjustment of recovery of interest in such a way that the total interest during the period of pendency of the loan calculated at the prescribed rate will be recovered without causing initial burden to the industry. In this context, the Working Group's comment on the repayment capacity of the mills will be read with interest:

Repayment Capacity

"The turnover of the industry as a whole is round about Rs. 450 crores. The best year for the industry in the recent past was 1956, when the gross profit before allowing for depreciation and taxation worked out to about 9 per cent of the sales. Out of this, the depreciation on the existing machinery would absorb 3 per cent. leaving the remaining 6 per cent of the turnover as net profit, subject to taxation. Taxation will be about 45 per cent of this or, in other words, another 2.75 per cent will be absorbed, leaving a balance of 3.3 per cent as net profit on the sales. On the equity capital, this will work out to 13 per cent which will be available as dividend, reserves, etc. . . .

". . . How far this profit will suffer a reduction on account of the extra liability which will fall on the industry on account of the payment of interest on the borrowings for rehabilitation and repayment of loan instalments. This liability may roughly be worked out on an average of about 10 per cent per annum spread over a period of 15 years on the total borrowing of about Rs. 156 crores. If we take only the first five years, this percentage will be 11.6 in the first year, 11.4 in the second year, 10.9 in the third year, 10.7 in the fourth year and 10.3 in the fifth year. On an average, during the next five years, the liability will be about 11 per cent or about Rs. 16.5 crores per year. . . .

"Working out, on the basis of the net profit after allowing depreciation on the existing assets for the year 1956 of Rs. 27 crores per year, it seems clear that the margins for depreciation, taxation, and profits are small."

It would, therefore, be necessary and advisable, according to the Working Group, for N.I.D.C. and public financing agencies to issue sizable amounts by way of equity capital to mills. It is also obvious that simultaneously mills will have to reduce costs in all directions.

The possibilities of obtaining external finance have also been examined by the Group. According to it, individual agreements by units with their opposite numbers for supply of machinery on credit terms present certain difficulties. It, therefore, considers that, for any tangible results to be achieved, a small committee, consisting of representatives of the industry and Government, should explore and assess the probabilities of securing assistance in different foreign countries.

Closed and "Sick" Units

The question of closed and "sick" units has been specially considered by the Group. At present, there are 39 mills accounting for a total capacity of 680,000 spindles and 11,170 looms, representing about 5 per cent of the total installed capacity of the industry, which are remaining closed. Out of these, 20 mills with 236,000 spindles and 2,900 looms are fit only to be scrapped and so cannot be revived. The question of rehabilitating and bringing back to life the remaining 19 mills, which account for 450,000 spindles and 8,200 looms, should be investigated. It is recommended that the law should be suitably amended so that, in the case of mills whose plant and machinery are irretrievably worn out and outmoded, compulsory scrapping may be enforced. The Working Group is of the view that some inducements should be offered for old units to go out of existence. For this purpose, it has suggested a "closure fund" for paying compensation at the rate of Rs. 10 per spindle and Rs. 400 per loom to such units. This amount should be found by levying some kind of licence fee or premium on new licences for expansion. This is possible in its opinion because there will be need to license additional capacity in the industry during the third Plan period.

Exporting Mills

The minimum economic and workable unit of a textile mill, according to the Working Group, should have at least 12,000 spindles and 300 looms. While this is the absolute minimum, it suggests that the industry should, as far as possible go up to the level of 18,000 spindles and 400 looms in due course and a still higher stage of 25,000 spindles and 500 looms. In fact, the Group has recommended that as an experimental measure, five units with a capacity of 25,000 spindles and 500 looms each and equipped with up-to-date types of machinery, including processing equipment, should be established for producing cloth largely, if not exclusively, for export. The total capital cost of each such unit is estimated at Rs. 2 crores. Each such unit should produce, on a three-shift basis, 15 million yards of cloth per annum, the major portion of which should be compulsorily exported. The necessary licence for establishing these units should be given to such *entrepreneurs* in the private sector as are willing to abide by these conditions. As regards finance for these units, it is suggested that, if the private investors do not respond to the extent necessary, the question of Government or public financing agencies contributing some specified percentage of the share capital should be considered. Highly rationalised spinning mills, which agree to all the terms and conditions regarding exports, may also be allowed to participate in the scheme, subject to adequate safeguards.

Rationalisation

The Working Group recognised that any measures of modernisation must inevitably entail some step towards rationalisation. It has been estimated that 15 per cent of the labour strength is likely to be rendered surplus during the next five years as a result of rehabilitation and modernisation proposed by it. Even if this percentage were to be 20, according to the Group, the problem of absorption of these workers would not be serious because natural wastage of labour resulting from death, old age, superannuation, etc. alone will account for 3 per cent per year. It will help to reduce the size of the problem of surplus labour if provision is made for suitable gratuity on superannuation and compensation for loss of employment result-

COTTON BOARD ON SCRAPPING SCHEME

FINISHING SECTOR QUALIFIES FOR GOVERNMENT FINANCIAL HELP

From Our Special Correspondent

MANCHESTER, *28th March*

MANCHESTER LETTER

LANCASHIRE'S textile finishing works have, after all, qualified for financial help from the Government in reorganising the industry. Preliminary figures had indicated that the bleaching, dyeing and printing sections of the trade had earmarked sufficient machinery for scrapping under the reorganisation scheme to qualify for Government assistance, but the figures included machinery which was still the subject of negotiation and there was just a possibility that more sections might still fall short of the scrapping target.

Any lingering doubts were dispelled by the Cotton Board's announcement that machinery for processing 560,820,000 yards of cloth have been entered for scrapping under the scheme; the minimum target set before the Government would agree to pay two-thirds of the cost of compensation was 534,500,000 yards. All the various sub-sections also passed the target and qualified for Government assistance. The machinery to be scrapped in bleaching has a capacity of 75,850,000 yards (the target was 68,200,000 yards), dyeing, raising and finishing 382,990,000 yards (target 284,200,000 yards), and machine printing 101,971,000 yards (88,800,000 yards). The Board also announced that machinery for dealing with 30,890,000 lbs. of yarn had been accepted for scrapping under the yarn processing scheme where the minimum set was 25,200,000 lbs. before the Government would pay two-thirds of the cost of compensation.

"Anti-Dumping Legislation Inadequate"

With the likelihood of a period of difficult negotiations ahead on the question of large-scale imports of Commonwealth and other cotton textiles into Britain, Mr. Philip Lees, President of the Master Cotton Spinners' Federation, warned that there must be an upper limit covering arrivals of yarn, cloth and made-up cotton goods. "We are not prepared, even if it were practicable, to try to compete by depressing wages and conditions to the level of Eastern countries. It is clear that the present anti-dumping legislation is hopelessly inadequate in form and slow in operation," he said in his presidential address to the annual meeting. Firms which had decided to remain in business under the cotton reorganisation scheme had prepared major modernisation and re-equipment schemes and many orders for new machinery had been put in. "But every month is precious and the volume or orders for equipment would increase enormously if a satisfactory settlement can be reached regarding the import situation for a number of years ahead," said Mr. Lees. The voluntary agreement with Hong Kong, which sets a ceiling on the Colony's cotton shipments to the U.K., is due to lapse at the beginning of 1962 and the agreements with India and Pakistan a year later.

Discussing the need to secure the maximum efficiency in the use of machinery and manpower, Mr. Lees said that many union officials had "co-operated splendidly" on the question of works study, but there were others who did not seem to be fully aware of the advantages that could be gained. "Further opposition is so shortsighted as to be irresponsible," he said, and added: "Only by full co-operation between management and unions can we defeat fair competition from the Continent and come so close to prices quoted by Far Eastern countries as to make it no longer worthwhile for them to exploit our home market. The alternative is further contraction and closing down of mills which could and should be kept open."

European Market Integration

A call for continued efforts at Government level to overcome obstacles in the way of a fully integrated market for the whole of Western Europe is being made by the cotton industries in the various European countries linked either with the "Six" or the "Seven." It follows a conference between delegations representing the cotton and allied textile industries of the European countries, called to consider the prospects of an economic link between the European Economic Community and the European Free Trade Association.

The International Federation of Cotton and Allied Textile Industries announced from its Manchester headquarters that the conference welcomed the proposals for harmonising the tariffs fixed by the two organisations on imports from countries outside the trading areas. This, said the Federation, would be an important first step towards a fully integrated market. They felt that it would be possible to harmonise the tariffs so far as goods produced by the cotton spinning and weaving industries and allied textile fibres were concerned. The variations, generally speaking, were not excessively wide except in the case of man-made fibres. In this instance, special consideration would be needed.

The Federation statement said that the Zurich conference felt that such tariff harmonisation would constitute one of the basic measures with which a link between the E.E.C. and the E.F.T.A. could be formed. It would permit the mutual reduction and eventual abolition of tariffs between the two groups, as soon as problems of origin control, deflections of trade and a co-ordinated commercial policy were solved. It added that the unrestricted flow of imports from countries with completely different economic and social structures, multiple exchange rates or state controlled economies and those which practise dumping, remained the chief threat to the prosperity and even to the existence of the European textile industries. It urged the need to establish a co-ordinated European policy in these matters and said that in the immediate future a system based on quantitative import restrictions provided the only practical solution.

Smaller Shipments—In and Out

The pattern of overseas trade returns this year is very much "the mixture as before," now that the February figures are to hand. Slight variations in the individual movement of imports and exports can be observed, but the trend of growing arrivals and dwindling shipments has not really altered. February being in any case a short working month, accurate comparisons with recent periods are difficult. It is, for example, too early yet to attempt to assess whether arrivals of cloth from abroad have passed their peak or to suggest that a slight lull is in progress. Imports last month, however, were a little lower than in February 1960, whereas throughout last year each monthly total was well in excess of the 1959 level. Due to the big arrivals in January, however, the current 1961 total of 143,692,000 square yards is much higher than the 115,477,000 square yards entering British ports during the same period last year.

A notable feature of this trade is that, although the quantity of grey cloth secured from overseas has increased from 95,422,000 square yards to 113,138,000 square yards, the arrivals of finished fabric have shown a much larger proportionate rise—from 20,055,000 square yards to 30,554,000 square yards. Grey cloth imports from India are slightly down at under 41,000,000 square yards and those from Pakistan are distinctly lower at only 3,773,000 square yards against 11,898,000 square yards. In contrast, arrivals from Japan have gone up from 6,247,000 square yards to 10,813,000 square yards, while the big advance in purchases from "other foreign countries" has continued, last year's level of under 13,000,000 square yards being lifted to nearly 35,000,000 square yards.

Export trade in cotton cloth is still in the doldrums and the two-monthly total has barely exceeded 53,000,000 square yards, as against nearly 59,000,000 square yards in the same period last year. The major outlets of Australia, South Africa, Rhodesia and Nyasaland have all taken smaller quantities of goods, but these losses have to some extent been offset by gains in shipments to Sierra Leone, Ghana and Nigeria.—*All Rights Reserved.*

TEXTILES

(Concluded from previous page)

ing from rationalisation. It also suggests that third-shift working should be encouraged to enable speedier rehabilitation and modernisation. In any case, the Working Group feels that the time has come to cry a halt to any further recruitment of workers in this industry. It suggests that a rigid badli list should be maintained in each area and persons should be put in this list only through Employment Exchanges. Simultaneously, a decasualisation scheme should be applied so that one could take stock of the position to ensure that workers found surplus are found alternative jobs. The Group has also endorsed the recommendation of the Textile Enquiry Committee (1958) that some machinery should be devised to settle questions of rationalisation unit by unit.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

CONSENT OF THE CENTRAL GOVERNMENT has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A LICENCE has been obtained from the Central Government for the establishment of this new Industrial Undertaking at Merar and Hesla Villages of District Hazaribagh, Bihar State, of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A COPY OF THE PROSPECTUS together with the copies of the documents specified therein as required under Section 60(2) of the Companies Act 1956, has been filed with the Registrar of Companies, Maharashtra State, for registration.

APPLICATION WILL BE MADE to the Bombay Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

THE SUBSCRIPTION LIST will open at the Commencement of Banking hours on 18th April 1961 and will close at the close of Banking hours on 28th April 1961 or earlier at the discretion of the Directors but not before the mid-day of 21st April 1961.

INDIA FIREBRICKS & INSULATION CO., LTD.

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

AUTHORISED CAPITAL:

	Rs.
7,50,000 Equity Shares of Rs. 10 per share	75,00,000
25,000—7½% (free of Company's Tax but subject to tax deducted at source at prescribed rate from time to time) Cumulative, Redeemable Preference Shares of Rs. 100 per share, with option to subscription to and conversion into Equity Shares	25,00,000
Total	1,00,00,000

ISSUED CAPITAL:

7,50,000 Equity Shares of Rs. 10 per share	75,00,000
25,000—7½% (free of Company's Tax but subject to tax deducted at source at prescribed rate from time to time) Cumulative, Redeemable Preference Shares of Rs. 100 per share, with option to subscription to and conversion into Equity Shares	25,00,000
Total	1,00,00,000
(i) The Promoters, Directors, their friends, associates and the signatories to the Memorandum have subscribed for 2,50,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 25,00,000	25,00,000
(ii) Messrs. Thomas Marshall & Co. (Loxley) Limited, having their Registered Office at Storrs Bridge Works, Loxley, Near Sheffield, England, have been allotted 25,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 2,50,000, and 10,000—7½% (free of Company's Tax but subject to tax deducted at source at prescribed rate from time to time) Cumulative, Redeemable Preference Shares of Rs. 100 each to the aggregate value of Rs. 10,00,000 credited as fully paid-up for consideration other than cash as hereinafter mentioned for their services to the Company as Technical Collaborators and Consultants	12,50,000
	37,50,000

PRESENT ISSUE:

	Rs.
Now offered for cash at par for public subscription : 4,75,000 Equity Shares of Rs. 10 each	47,50,000
15,000—7½% (free of Company's Tax but subject to tax deducted at source at prescribed rate from time to time) Cumulative, Redeemable Preference Shares of Rs. 100 each, in terms of the prospectus	15,00,000
Total	1,00,00,000

The entire public issue, viz , 4,75,000 Equity Shares of the aggregate value of Rs 47,50,000 and 15,000 Preference Shares of the aggregate value of Rs. 15,00,000 now offered to the public has been underwritten.

The Company has agreed to the firm allotment of 1,00,000 Equity Shares of Rs. 10 each of the nominal value of Rs. 10,00,000 to the "Life Insurance Corporation of India," Bombay, against underwriting arrangements with them.

TERMS OF PAYMENT OF ABOVE SHARES

EQUITY SHARES:

On application .. .. Rs. 2.50 per share
On allotment .. .. Rs. 2.50 per share

The balance of Rs. 5 in such calls as may be determined by the Directors, provided that no call shall exceed Rs. 2.50 and that there shall be an interval of at least one month between any two calls.

PREFERENCE SHARES:

On application .. .. Rs. 25.00 per share
On allotment .. .. Rs. 25.00 per share

The balance of Rs. 50 in such calls as may be determined by the Directors, provided that no call shall exceed Rs. 25 and that there shall be an interval of at least one month between any two calls.

The share certificates will be issued within nine months from the date of allotment.

The consent in writing of the abovenamed Bankers, Solicitors, Auditors, Brokers for the issue to act in their respective capacities has been filed with the Registrar of Companies, Bombay, along with a copy of the Prospectus as required under Section 60(3) (b) of the Companies Act, 1956. The same have not been withdrawn.

OBJECTS OF THE COMPANY

The Company was incorporated on the 21st April 1960 at Bombay generally for the purposes of carrying on all or any of the objects or purposes mentioned in its Memorandum of Association. The particular immediate object is to carry on business in refractories and with that end in view to construct and erect near Ranchi Road Railway Station, District of Hazaribagh in the State of Bihar in India a plant or factory for the purpose of manufacture and production of firebricks, insulating bricks, high alumina bricks and shapes.

PROSPECTS FOR THE REFRACTORY INDUSTRY

With the rapid progress of industrialisation coupled with the development of the Iron and Steel Industry under the second and third Plan periods the refractory industry has received considerable impetus. All industrial operations involving application of high temperature are very much dependent on refractory materials. Besides Iron and Steel, a wide range of industries like Ferro-Manganese, Cement, Glass, Potteries, Ceramics, Soda Ash, etc., need refractory materials. Refractories consist of various types such as Fire-clay, Silica, Basic, High Alumina, Insulating Materials, Fire-Cement and Mortar and Dead-Burnt Magnesite. All these fall in the range of the Company's scope of activities.

India is believed to possess considerable deposits of Fireclay, Bauxite, Magnesite, Silica and Felspar, Dolomite which are the principal raw materials required for the manufacture of refractories. India's requirements of refractories are so large that the existing indigenous manufacturing capacity is unable to cope with them. As a result, large amounts of foreign exchange are being ex-

pended on imports. The Government of Bihar have already granted a certificate of approval to the Company for mining leases on 3rd January, 1961.

When production of all these varieties of refractories goes up to the required capacity i.e. about 1.2 million tons dependence on the import of these materials would have been largely eliminated.

FOREIGN COLLABORATION AND PLANT AND MACHINERY

Shri Badri Narain, one of the Directors of the Company, opened up negotiations with Messrs. KERAMISCHE INDUSTRIE—BEDARFS—KOM.—GES. PAUL GATZKE, BERLIN, Charlottenburg 1. OTTO—Allee, 22-24 (West Germany), a reputed firm of manufacturers of Refractory Plants and equipments and an agreement has been reached by which, besides erecting the complete plant in 18 months and provision of technical assistance during erection and for three years from the date of lighting-up, the West German firm would train Indian Technical Staff in their factory and also give a guarantee for plant performance and against faulty erection.

Simultaneously with these preceding negotiations in respect of the purchase and import of plant from Messrs. KERABEDARF, West Germany, Shri Badri Narain negotiated with Messrs. Thomas Marshall & Co., (Loxley) Ltd., Loxley, Near Sheffield, England, for the benefit of their "Technical Know-how" and collaboration. This negotiation resulted in an agreement which provides that, besides the normal assistance in surveying and analysing raw materials, scrutiny of drawings of plant, machinery and buildings—the collaborators would assist in commissioning the plant in the production of different kinds of refractories including insulating refractories and Carbon bricks and training Indian personnel in plant operations and plant management. It is noteworthy to mention here that this Company has been authorised and permitted under the terms of the agreement to use all trade marks, trade literature and also the use of the name of "MARSHALLS" in all their products. The Company by this Agreement has been appointed the sole selling agent for the products manufactured by the Technical Collaborators in England and sold to India and the Company has appointed the Technical Collaborators its sole selling agents so far as the exports overseas are concerned.

The approval of the Government of India has been obtained for this Technical Collaboration agreement.

PROFITS

On the basis of the existing prices the Directors are of the opinion that in the absence of any unforeseen circumstances, the estimated profits, after providing for dividends on Preference Shares and allocation to reserve, are such that the Company should be in a position to pay reasonable dividends on the issued Equity Shares, once satisfactory manufacture of the products has been established.

INDUSTRIES LICENCE

Industrial Licence No. L/34(2)/7/60 L. IND dated the 8th July 1960 under the Industrial (Development and Regulation) Rules 1952 (as revised) has been issued by the Central Government for the establishment of the industrial undertaking.

PLANT SITE AND POWER

The plant will be located in the Merar and Hesla Villages near Ranchi Road Railway Station where a railway siding to serve the proposed factory would be constructed in due course. It is intended to acquire under the aegis of the Government of Bihar 350 or more acres of land for the purpose of the Company. Out of this, the Government of Bihar have already acquired for the Company blocks of land admeasuring approximately 106.20 acres. Adequate electric power will be available from the Bihar State Electricity Board and the Damodar Valley Corporation. The site is on the bank of the River Damodar thus ensuring ample supply of water at the proposed factory.

CONTRACTS AND AGREEMENTS

Agreement dated the 25th March, 1961, with Shri Mahavirprasad R. Morarka, appointing him as the Governing Director of the Company, subject to the approval of the Central Government. This position does not carry any remuneration.

Agreement dated the 25th March, 1961, with Shri Badri Narain, appointing him as the Managing Director of the Company, subject to the approval of the Central Government. This position carries a remuneration by way of commission at the rate of 2½% of the net annual profits of the Company, subject to a minimum of Rs. 3,000 per month as salary effective from the 1st September, 1960. Applications for approval under Section 269 of the Companies Act for the above appointments have already been made.

TECHNICAL COLLABORATION AGREEMENT
Dated 12-10-1960

MACHINERY AND FACTORY

The Company has already obtained Import Licence No. 998395 dated 9-8-1960 for Rs. 54 lacs. The Plant and Machinery are expected to start reaching the Factory Site by or about October 1961 and the Plant is expected to go into production by the end of 1962.

MINIMUM SUBSCRIPTION AND CAPITAL OUTLAY

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 62,50,000.

	Rs.
(a) Land, buildings and cost of engineering acquisition and construction of plant and machinery and other facilities such as railway siding, water supply etc.	2,01,19,900
(b) Cost of "know-how" and Technical Collaboration services (by issue of Equity and Preference shares)	12,50,000
(c) Expenses of the issue, i.e., preliminary expenses ...	5,00,000
(d) Working capital	49,27,000
(e) Pre-operating expenses ...	13,53,500
Rs.	2,81,50,400

The capital structure of the Company as envisaged in the prospectus is as follows:

	Rs.
Equity shares	75,00,000
Preference shares	25,00,000
Rs.	1,00,00,000

Applications made for the following loans from The Industrial Credit and Investment Corporation of India Limited, Bombay, in foreign currencies and the Industrial Finance Corporation of India, New Delhi, in rupees, have been approved and are as follows:

(a) The loan in foreign currencies equivalent to from I.C.I.C.I. Ltd.	54,00,000
(b) The rupee loan from I.F.C.	85,00,000
Rs.	1,39,00,000

It is intended that the balance of Rs. 50,50,400 and any increase there may be in the actual cost over the estimated cost of plant and machinery will be raised as required, by loans from Company's Bankers and if necessary, from other sources, including the Directors and their friends.

PREFERENCE SHARES

Preference Shares will confer upon the holders thereof, besides the right to a fixed cumulative preferential dividend to accrue from the date of allotment at the rate of 7½% per annum (free of Company's Tax but subject to tax deducted at source at prescribed rate from time to time) from out of the profits of the Company, the right to subscribe to Equity shares of equal value at par within a period of four years from 30th September, 1962. Preference shareholders who have not exercised the option mentioned hereinabove before 30th September, 1966 shall be eligible to get their Preference Shares converted into Equity Shares at the time of redemption and such of the Preference Shareholders who have exercised their option by the 30th September, 1966, but not in full shall be eligible to exercise their option to get their Preference Shares converted into Equity Shares to the extent of their not having exercised their option.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½% of the nominal value of 15,000 Preference Shares and at the rate of 2½% of the nominal value of 4,75,000 Equity Shares underwritten, is payable to the said underwriters.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a bank or a recognised broker.

Brokerage on the same basis is payable to the Underwriters in addition to the underwriting commission on all allotments in respect of applications made or procured by them and bearing their respective stamps.

APPLICATION FOR SHARES

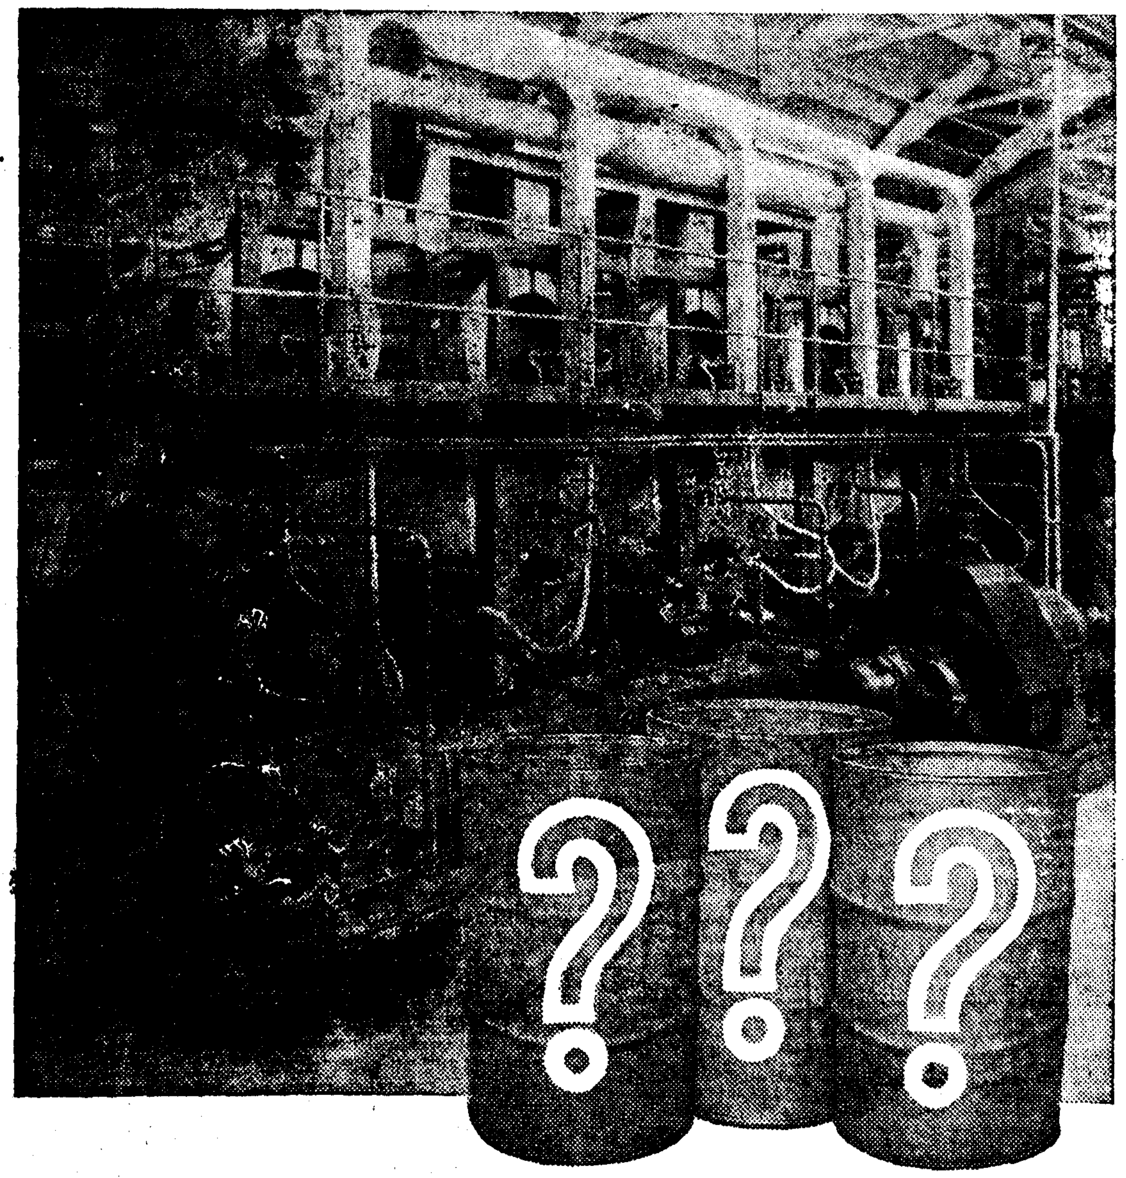
Application for Equity Shares must be for a minimum of 50 shares or multiples thereof.

Application for Preference Shares must be for a minimum of 5 shares or multiples thereof.

All application forms properly completed must be lodged together with amount payable on application before the closing date of the subscription list to the following Banks, viz.,

1. State Bank of India, 2. The Bank of India Ltd., 3. The Bank of Baroda Ltd., 4. United Bank of India Ltd. and 5. Devkaran Nanjee Banking Co. Ltd. at any of their main Branch Offices at the following places:

AHMEDABAD, BOMBAY, CALCUTTA, DELHI, KANPUR, MADRAS, NAGPUR, PATNA and RANCHI.

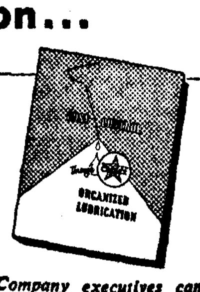


Take the guesswork out of Lubrication...

Chances are you do not use the right lubricant in the right quantity for the right machine. You may be replacing too many costly parts and writing it off as a normal maintenance expense. It isn't really—it is the result of faulty lubrication practices.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay · New Delhi · Calcutta · Madras

CAL.8.61.P.

HUGE CAPACITY IN CONFECTIONERY INDUSTRY LYING IDLE

MEASURES TO ENSURE FULLER UTILISATION

AMONG the industrial consumers of sugar, the confectionery industry occupies quite an important place. It is true that the actual consumption of sugar by this industry is just 15,000-20,000 tons annually, but it must be stressed that, to the extent the confectionery industry expands and develops, it helps push up the consumption of sugar in various forms. The scope for such expansion is, indeed, vast, as is evident from the fact that the *per capita* consumption of confectionery in India is a bare 1.3 oz., as against an intake of 4 ozs. per week in the U.K. and against a sale of 21,500 million lbs. of hard confectionery worth about $407 million in the U.S. (in 1941).

Viewed thus, it is disquieting to hear that a considerable part of the industry's installed capacity continues to remain idle. The quantity of confectionery actually produced by the 44 units in the organised sector in 1960 was 13,000 tons, whereas the total capacity was more than 51,000 tons. The output of 13,000 tons no doubt well exceeds the second Plan target of 10,000 tons, but there is, as Mr. P. Mohanlal, President of the Indian Confectionery Manufacturers' Association, warned in the course of his speech at the recent annual meeting of the Association held at New Delhi last week, absolutely no room for complacency. It may be noted here that a target of 25,000 tons has been proposed for the third Plan. "Our efforts," to quote him, "should be directed towards utilisation of more and more of the idle capacity, which is possible only by a substantial increase in the demand for quality confectionery both within the country and outside."

Prices must be Reduced

The question, however, is as to how the demand for confectionery can be stepped up so long as the prevailing high prices which are accounted for by the high cost of various raw materials persist. Stating that the industry had no control over this factor, Mr. Mohanlal urged that any appreciable increase in the domestic demand for confectionery could be created only by a drastic reduction in prices. In this connection, he reiterated the plea for sugar supply at a subsidised price or remission of tax on sugar used for making confectionery products. He observed:

"One of the basic raw materials of the industry accounting on an average for about 45 per cent of the total production cost is sugar, the cost of which is as high as Rs. 40 per maund in India, as against approximately Rs. 15 ruling in world markets. In certain foreign countries such as Australia, sugar for industrial purposes as, for instance, use in the preserved fruit industry, is supplied at a subsidised price. A similar policy should be followed in India also in respect of sugar supplies to the confectionery industry. This would enable this industry to reduce its production cost and thereby create an increased demand for its products. If, however, this is not found possible, the least the Government should do is to exempt sugar utilised in confectionery manufacture from all internal taxes, as is the practice in various foreign countries. The principle underlying this proposal is already being acted upon by the Government of India in the case of a number of excisable commodities such as power alcohol, cotton fabrics, tea waste, etc., when used for industrial purposes. What is desired is only an extension of this policy to sugar utilised by the confectionery industry. This would enable this industry to reduce the price of its products to a considerable extent, as excise duty on sugar now amounts to Rs. 10.70 per maund. Apart from this, the various State Governments should also grant remission of cane cess in respect of sugar used in confectionery manufacture, which would further reduce the price of sugar to the industry by another Rs. 2 per maund."

Mr. Mohanlal also emphasised the importance of establishing a stable and permanent export market in neighbouring countries. As he recalled, the country used to export sizable quantities of confectionery products to these countries until 1948-49. The loss of the markets since then has been mainly due to the inability of the industry to compete effectively with their confreres in other countries on account of the comparatively higher cost of manufacture. He urged the Government to arrange for sugar supplies, at the price at which it is exported, in respect of confectionery intended for export, as well as to enable the exporters of confectionery products to obtain their requirements of indigenous raw, packing and wrapping materials at comparable world prices by persuading the producers of these materials to supply the same at subsidised prices. He also suggested for the consideration of the Government that the various concessions available in respect of confectionery exports such as rebate on tin plate, railway freight, sugar subsidy and drawback of excise and import duties on raw materials used, etc., should be clubbed together and passed on to the exporter concerned at one point and in one instalment. "This," he said, "will eliminate procedural delays and enable exporters to effect shipments in a smooth and efficient manner. This will also give them an idea as to the total amount available for meeting the loss on exports."

Preventing Spurious Production

The need for curbing manufacture of confectionery with ingredients of doubtful quality under unhygienic conditions was once again highlighted by Mr. Mohanlal. He averred:

"Although the enactment of the Prevention of Food Adulteration Act by the Central Government in 1954 was a welcome measure and was received with much satisfaction by your Committee with the hope that the enforcement of its provisions would act as a check on the manufacture of spurious and impure brands of confectionery, it is rather unfortunate that this objective could not be achieved so far mainly due to the failure of the State Governments to enforce the provisions of this legislation. The result has been that a large number of unorganised and small manufacturers still continue to flood the markets with their cheap products by using colours, essences and other ingredients injurious to health. As confectionery has achieved an important place in the list of food articles in view of its high nutritional value, and is universally in demand, specially among growing children, it is very necessary in the larger interests of national health that spurious brands of confectionery not conforming to the food laws of the country, are not allowed to be sold in the market and appropriate action is taken to enforce this very useful legislation."

In this context, Mr. Mohanlal warned against the serious effects of the proposed deletion of brilliant black BN, acid magenta 11, blue VRS, red 6B and red FB from the list of permitted colours. He feared that the deletion would cause serious handicap to manufacturers by adversely affecting the shelf life of the product in reference to the colour of the same, severely restrict the quality range and variety of colours attainable in the end confectionery product, and result in a further switch-over from the consumption of quality and wholesome confectionery to that of bazar confectionery, as the hand-made confectioners do not hesitate to use attractive and bright colours. He, therefore, appealed to the authorities to reconsider the matter.

A reference was also made by Mr. Mohanlal to the difficulty experienced by certain confectioners in getting supplies of their requirements of certain materials at fair and reasonable prices. He emphasised the need for adequate and regular supply of tin plates at fair prices; liberal imports of replacement machinery; necessary facilities to import the full requirements of printed waxed paper from abroad till such time as the quality of indigenous product attains a satisfactory standard; and grant of licences for import of skimmed milk powder. The points raised by Mr. Mohanlal would have been appreciated better if he had given some statistical details regarding the actual requirements of the materials concerned and their currently ruling market prices.

GROW MESTA WITH SUGARCANE

Grown on the periphery and along the water channels of a sugarcane field, a crop of mesta (*Hibiscus cannabinus*) can yield 4 to 5 maunds of fibre per acre. This has been established after years of intensive field work by an agricultural scientist in Madhya Pradesh. The object of the experiments was to find ways of supplementing the income from a major cash crop by that from another, cultivated simultaneously on the same land.

The cost of mesta production is generally low, because it is a hardy crop, does not demand much tending and care and seldom fails. The cost of producing mesta as a border crop on a sugarcane plantation will be lower still for no separate land preparation will be necessary. At a very little cost, therefore, the cane grower can earn about Rs. 200 per acre from a *seer* or two of mesta seeds sown on the borders and along the irrigation channels of his field.

SUGARCANE PRICES

The Government of India has announced its decision to continue the present sugarcane prices for the ensuing season (that is, November 1961-October 1962). Accordingly, the basic minimum price payable by vacuum farm sugar factories will be Re. 1.62 per maund for delivery at the gate of the factory, that for cane delivered at outstation producing stations connected by rail being Re. 1.50 per maund. No decision has, however, been taken as to the deferred payment related to the price of sugar realised by factories, evidently because the whole question of evolving a suitable formula to link the price of cane with that of sugar is now being examined by the Tariff Commission.

UNITED COMMERCIAL BANK LIMITED

EIGHTEENTH ANNUAL GENERAL MEETING

MR. G. D. BIRLA URGES EXPANSION OF BANKING SYSTEM'S RESOURCES

THE urgency of mobilising resources and channelling them into the banking system so as to meet the growing needs of an expanding economy was highlighted by Mr. G. D. Birla, Chairman of the United Commercial Bank Limited, in his statement circulated to shareholders at the Eighteenth Annual General Meeting of the Bank held at Calcutta on Wednesday, 5th April 1961. One way of attracting money into the banking system, Mr. Birla declared, was to bring down money rates in the non-banking section through liberal credits to banks by the Central Bank under the bill market scheme and a liberal lending policy by commercial banks. He added that, at the same time, interest rates on fixed deposits with the banks should be raised to wean away funds from the unorganised sector and attract fresh funds from the public. He strongly urged the extension to commercial banks of the concession in favour of public financial institutions providing long-term finance whereby they are enabled to claim a reduction in respect of transfers to a special reserve account of sums not exceeding 10 per cent of the total income of each year till the amount carried to the reserve fund equals the paid-up capital. Such an extension, he said, would enable the banks to strengthen their inner reserves.

The following is the full text of Mr. G. D. Birla's statement:

"GENTLEMEN,

"You will notice from the Directors' report and the accounts of the Bank for the past year now before you that, while the profits have maintained their upward trend and show a satisfactory expansion, our deposits were somewhat down after the rapid increases of the past years.

Deposits

"The deposits at the end of 1960 at Rs. 68.94 crores showed a decline of Rs. 7.74 crores, as against a rise of Rs. 18.40 crores in 1959. The fall is attributable to withdrawals of funds for business purposes, the sustained demand for bank credit and continued stringency of money practically throughout the year. The deposits of the Bank, however, have started going up since the date of the balance-sheet.

Cash and Securities

"Cash on hand and with banks and money at call and short notice were Rs. 9.57 crores and represented 10.8 per cent of the deposit liability. In 1958 and 1959, we made substantial purchases of Government securities with a view profitably to investing funds which would otherwise have remained idle, but, during the year under review, we reversed the process in order to make funds available for advances to our customers. As a result of the realisation of part of our investments, our portfolio of Government securities, shares and debentures declined from Rs. 40.79 crores to Rs. 33.88 crores. There was a further vigorous demand for funds towards the close of the year which was met by resort to loans from the Reserve Bank of India against Government securities and bills.

Advances and Bills

"Our advances rose over the year from Rs. 36.57 crores to Rs. 42.47 crores, while our bills discounted and purchased showed a small reduction from Rs. 19.68 crores to Rs. 18.91 crores. The Bank has been providing credit facilities to various types of small-scale industries. The number of industrial units to which credit facilities have been made available is over 650 of which individuals and partnership firms number nearly 550 and joint-stock companies make up the remainder. The total of limits sanctioned is of the order of Rs. 4 crores and the actual availments exceed Rs. 2.50 crores.

Liquidity

"Our quick assets, viz., cash and free Government securities amounting to Rs. 35.00 crores formed 39.4 per cent of our total deposits. The total of our liquid assets consisting of cash on hand and with banks, money at call and short notice, unencumbered Government securities and bills amounted to Rs. 53.91 crores and represented 60.6 per cent of our deposit liability as compared to 67 per cent twelve months ago.

Profit and Loss Account

"The year's working has resulted in a further rise in profits. This is due in a large measure to the higher average total of our advances and bills throughout the year, the operation for a full year of the reduction in interest rates on deposits which took effect from 1st September 1959 and the increase in the lending rate brought into effect under direction from the Reserve Bank of India in October last. The improvement of porfits attributable to these influences was partially offset by the lock-up of funds in special deposits with the Reserve Bank of India which could otherwise have been used to liquidate the higher-interest-bearing loans from the central banking institution.

"The small rise in charges for interest on deposits and borrowings is due to the higher average level of borrowings from the Reserve Bank of India over the greater part of the year, while working expenses like salaries and other operating costs have continued to rise.

"The increased profits have enabled the Board to transfer Rs. 30 lakhs to the reserve fund and thereby raise it to Rs. 2.05 crores, which is Rs. 5 lakhs more than the paid-up capital of the Bank, and, at the same time, it has been possible to increase the rate of dividend to shareholders from 11 per cent to 12 per cent per annum, subject to tax. The amount allocated for bonus to staff has also risen from Rs. 11 lakhs to Rs. 13 lakhs.

Reserve Fund

"The year 1960 will be remembered as a landmark in the Bank's history, as at the close of this year, the Bank's reserve fund exceeded its paid-up capital. This reserve fund is built up entirely out of the profits within 18 years of the Bank's existence—that too in spite of heavy taxation. It is always the policy of the Directors to strengthen the reserves of the Bank to safeguard the interests of the depositors. I am thankful to the shareholders for their restraint in being content with modest dividends in the early years of the Bank's career to enable the Bank to build up the reserves in order to strengthen its financial position. This is not to say that the shareholders have been starved of reasonable dividends, because, with growing prosperity, the Bank has paid progressively higher dividends.

Industrial Growth

"During the year under review, industrial production grew at an accelerated rate. In the first ten months of 1960, industrial production showed a rise of 11.5 per cent, as compared with 8.7 per cent in 1959 and 1.7 per cent in 1958. The basis of calculation of these index figures themselves requires to be re-cast, inasmuch as it is felt that the weightage given to some of the older industries is not justified in the present circumstances and that the many new industries which have come into existence have not been assigned the importance that is rightly due to them. A provisional re-calculation by foreign experts of the index on a more rational basis would appear to indicate that the increase in production in the first ten months was not 11.5 per cent but 15 per cent.

Money Supply

"Money supply with the public at the end of 1960 was Rs. 2,630 crores, made up of Rs. 1,885 crores of currency with the public and Rs. 745 crores of deposit money, that is, demand deposits of the public with all the commercial banks. The increase in currency was Rs. 144 crores, while the increase in deposit money was only of the order of Rs. 70 crores. Analysing the expansion of money supply in terms of bank credit, there was a sharp rise of Rs. 236 crores in the public's net indebtedness to banks which contrasts with a sizable decline of Rs. 107 crores in 1959. The rise in bank credit to Government was only Rs. 43 crores in 1960, as compared with Rs. 246 crores in 1959. The gold and foreign exchange reserves, inclusive of the balances of Government of India abroad, declined in 1960 from Rs. 387.54 crores to Rs. 319.05 crores. The contractionist effect of the reduction in bank credit to Government and the decline in foreign balances has been severe and is reflected in the reduced liquidity of the banking system.

Money Market

"The monetary climate in 1960 was far from comfortable and, for the best part of the year, the banking system had to operate under various restraints. Credit conditions were stringent, unrelieved by even occassional ease, and there was no sign of any downward tendency in advances during the second half of the year which, by tradition and past experience, is considered as the slack season. Bank credit rose rapidly, as usual, during the first four months of the year and, thereafter, the volume of credit continued, without contraction, at the peak figure of the year right up to the middle of December when the new season's demand made itself felt and advances, once again, resumed their upward trend. The increase in bank credit during January-April 1960 amounted to Rs. 165.89 crores, while, during the same period, the deposit resources of the banks failed to grow to a corresponding extent but rose only by Rs. 102.56 crores. Whereas in 1959 bank credit shrunk by Rs. 97.5 crores in the slack season, there was no such contraction in the slack season of 1960; the return of funds from agricultural and other seasonal advances was obscured by the intervening increase in industrial advances. The exhortation addressed to banks by the Reserve Bank of India in April 1960 to bring about a reduction of Rs. 110 crores in advances by the following October proved impossible of fulfilment by most banks. Borrowings from the Reserve Bank of India and the State Bank of India reached the peak figure of Rs. 96.26 crores in March 1960, as against Rs. 76.65 crores in March 1959. But, whereas in 1959 the banks were practically out of debt with the Central Banking Institution by June, the experience of 1960 was quite otherwise. During the slack season of 1960 the average borrowings of the scheduled banks from the Reserve Bank of India and the State Bank of India were Rs. 46.90 crores, as against Rs. 10 crores in 1959.

Credit Curbs

"Early in March 1960, the Reserve Bank of India, presumably somewhat anxious about the size of the expansion in advances during the 1959-60 busy season, came to the conclusion that there was excess liquidity with the banking system. Consequently, banks were required to maintain with the Reserve Bank of India special deposits amounting to 25 per cent of new deposit resources accruing with them after the specified date. Two months later, in May, the additional deposit requirements were raised to 50 per cent of new accruals. The selective credit controls of the Reserve Bank by directive ensured that banking finance was not available, or was available only upto specified limits, against particular commodities. At the same time, the Reserve Bank of India made it clear that the object of the new measures was by no means to deny bank finance for legitimate productive enterprises. Since industrial production, in fact, grew stridently during the year, the expansion in the advances of the banking system can be seen to have been fully justified. But, with the accrual of deposits slowing down or ceasing altogether to take place, the fact that advances were sustained at a high level imposed a considerable strain on banks under conditions of restricted liquidity.

"By September 1960, it was clear that the banks would be quite unable to bring about a contraction of advances of the order of Rs. 110 crores as desired by the Reserve Bank of India. Indeed, bank credit, which had gone up to Rs. 1,130.38 crores on the last Friday of April, rose still higher to Rs. 1,133.82 crores on the last Friday of September. In this knowledge and with the 1960-61 busy season not far off, the Reserve Bank introduced a fresh set of monetary measures. Banks were directed, with a view, no doubt, to inducing some voluntary restraint on would-be borrowers, that they should raise the average rate charged for their advances by half per cent and prescribed a minimum of 5 per cent for advances. Secondly, on the analogy of regulation Q of the Federal Reserve Board's rules to which I have in earlier years made reference, the Reserve Bank of India set a ceiling on the rates of interest that banks could pay on very short deposits for periods of less than 21 days or repayable at 21 days' notice or less. Thirdly, the Reserve Bank of India also fixed quotas upto a maximum of which alone banks would be permitted to borrow at the bank rate of 4 per cent. Thereafter, in two slabs, the rate of interest payable on borrowings from the Reserve Bank of India was raised to 5 per cent and 6 per cent. This, in effect, set up a three-tier bank rate. Hence, with the level of commercial banks' borrowings from the Reserve Bank of India relatively high for the season, the new regulations induced a fresh wave of disinvestment in Government securities accentuating the weakness in the gilt-edged market already brought about by the mass of State loans pressed for sale on an unwilling market. The investment of scheduled banks in Government securities declined from Rs. 787.52 crores in December 1959 to Rs. 744.86 crores in May in the first phase of disinvestment followed by a further decline to Rs. 633.47 crores in the second phase following the credit curbs. The running down of investments to a low level in relation to deposits would by itself act as a brake on the willingness of banks to sustain the continued upswing of advances except to the extent that the bill market scheme affords relief.

"Since the turn of the year, in view of the pressure upon the resources of the banking system, the Reserve Bank has defrozen the special deposits which had been maintained. However, all that this meant was that, in the relevant week, banks were enabled to reduce their indebtedness to the Reserve Bank of India.

Trend of Deposits

"The fact of the matter is that the deposits of commercial banks are not rising as fast as they should to meet the growing needs of an expanding economy. In fact, of late, they are tending to become stagnant. In this situation, the banks are stretching themselves to their utmost to meet legitimate demands, seasonal and otherwise, of industry and commerce and in so doing are allowing liquidity steadily to go down. Between 31st March 1955 and 31st March 1959, currency in circulation increased by Rs. 424.10 crores, while demand and time liabilities of scheduled banks rose by Rs. 692.41 crores without making allowance for the distortion introduced by the impact of P. L. 480 funds which upto May 1960 flowed into the State Bank of India and which thereafter has not only ceased to flow in but past accretions of which are being diverted to Reserve Bank of India in agreed instalments. Through this fast growth of deposits, the ratio of deposits to notes in circulation went up to 100 per cent. In fact, in June 1959, for the first time in Indian banking history, the total deposits of scheduled banks at Rs. 1,737 crores exceeded the currency in circulation of Rs. 1,714 crores. The trend, however, has now been reversed and the pace of increase in deposits is slower than that of note circulation.

"There have been normal deflationary factors at work. Firstly, agricultural production in 1959-60 was down, owing to climatic conditions. The production of foodgrains was about 5 per cent less than in the previous year, while the outturn of cash crops like cotton, raw jute and oilseeds declined substantially. This setback in the income of the agricultural sector has its inevitable repercussion on deposits.

Balance of Payments

"Secondly, the adverse movement in our balance of payment position gives room for thought; the growth of our exports, in spite of programmes of export promotion, is disappointing, while imports continue to rise. The contractionist influence of a balance of trade deficit is felt, not through a drop in active notes in circulation, but through a decline in bank deposits and a chain of changes in Government deposits and Reserve Bank's holding of Government securities in the Issue or Banking Departments. It seems probable that such an influence was indeed felt during 1960, and that this was the second reason why bank deposits failed to grow at a rate corresponding to the expansion in advances.

"In the third place, Central Government revenues have proved buoyant. The revised estimates for 1960-61 disclose a considerable increase in Government's revenue, union excise duties being expected to fetch Rs. 15 crores more and taxes on income going up by Rs. 22 crores. Such perceptibly heavier tax collections, it is not to be doubted, will prove to be an additional drain on deposits.

"In the fourth place, the very buoyancy of Central Government revenues enabled a reduction in the quantum of deficit financing. Thus, while Government expenditure itself should normally be expected to provide a fillip to bank deposits, the manner of financing of the disbursements was such as to greatly reduce the impact of the governmental payments on the rise in deposits.

"Lastly, it may be permissible to suggest that the various measures of credit control instituted by the Reserve Bank of India may well have had the effect of diverting financial resources from the organised money market into the unorganised non-banking sector of finance. There are reasons to believe that, upto a year ago, the non-banking sector was losing ground and the organised institutions gaining in strength and influence, but it would appear that this trend has now been reversed with detriment to the deposits of the banking system. Neither the Government nor the Reserve Bank of India would welcome such a diversion of resources to the non-banking sector, for, to the extent that the non-banking sector gains in strength, the credit measures of the Government or the Reserve Bank of India will prove even less effective than they have been in recent years.

Mobilisation of Resources

"Everyone realises the vital need to provide not only working capital to industry but also its reasonable medium-term requirements of credit, but the resources of the banking system are inadequate and resort to central bank credit, which can never be a substitute for bank deposits, is discouraged through penal rates of interest and anti-inflationary credit curbs. Demand for bank credits is running at a high level and has outstripped money supply. Lending rates of banks may, therefore, well rise rather than be held at present levels. Banks are being asked not to restrict lending for productive purposes, but, clearly, there is a limit, dictated by considerations of liquidity and prudence, to their ability to go on expanding advances in the absence of a sustained rise in deposits.

"So, if industry is to develop to the full extent and stature visualised in the third Five-year Plan, it will be necessary to take steps to mobilise resources and channel them into the banking system. A solid basis for growth of deposits over a period is increased agricultural, industrial and mineral production. But, apart from this long-term objective, the existing resources should be mobilised. From the response to the new capital issues made in 1960 and on a sample analysis of the applications made, it would appear that a new class of investors is taking interest in new flotations, and this would point to the existence of a considerable amount of untapped resources in the country. This should be gathered and not allowed to go into the non-banking sector or be diverted in the form of direct deposits with industrial concerns or non-banking financial institutions.

"One way of attracting money into the banking system is to bring down money rates in the non-banking section. Through liberal credits to banks by the Central Bank under the bill market scheme and a liberal lending policy by commercial banks, money rates in the unofficial markets could be brought down, and thereby the diversion of funds into the unorganised market could be stopped and the flow of funds thereto reversed. At the same time, interest rates on fixed deposits with the banks should be raised to wean away funds from the unorganised sector and attract fresh funds from the public.

Inner Reserves

"In the recent budget of the Central Government, the Finance Minister has made a valuable concession in favour of public financial institutions providing long-term finance whereby they are enabled to claim a reduction in respect of transfers to a special reserve account of sums not exceeding 10 per cent of the total income of each year till the amount carried to the reserve fund becomes equal to the paid-up capital of the institution. I strongly urge an extension of this concession to commercial banks so that they may be enabled to strengthen their inner reserves. This will have the effect of making banking institutions impregnable.

"Favourable conditions such as elimination of double taxation of dividends should be created for the establishment of Unit Trusts as a medium of saving, so that small savings could be attracted into the capital market and a broader basis of ownership created for industry and finance.

The Third Plan

"The third Plan has got a tremendous task before it. The total investment is expected to be about Rs. 10,000 crores, out of which Rs. 4,000 crores is assigned to the private sector. In order that the private sector may be able to accomplish this assignment, it is essential that there should be availability of adequate finance for the purpose of new investment. The rate of interest is important but not as much as the quantum of available finance. I would, therefore, suggest that we take all necessary fiscal and monetary measures to hold the price-line, bearing in mind always that anything that constitutes an obstacle to production is not going to help us in fighting inflation. The pivot of the whole question, thus, is increased production. This requires investment and adequate finance. Scarcity of finance ultimately must lead to restricted production and consequently to higher prices.

"It would be prudent to keep all these important points before us, because sometimes, in our zeal, we adopt a remedy which defeats its own object. I would, therefore, state that, while the credit restriction policy in the beginning was wise, latterly it was overdone. And the time has now come when we should review the whole position.

"Sufficient finance could not be supplied by banks to industry unless it has got adequate deposits. I have a feeling that the inflow of money into the bank's coffers will be encouraged only by the liberal outflow of it—a well-regulated outflow for productive purposes.

Reserve Bank's Role

"The question, therefore, is which step—lending with a view to attracting deposits or waiting for deposits before lending—is to be taken first. In the present circumstances, the only way is for the Reserve Bank to liberalise the policy of accommodating the commercial banks in respect of bills and allow them to lend freely for industrial purposes. This, in the ultimate analysis, will bring in new deposits. Assistance by the Reserve Bank under the Bill Market Scheme, *inter alia*, will enable the banks to meet the growing demand of funds for industrial development. This may put up the advance-deposit ratio of the banks but would keep their liquidity intact.

"Secondly, if the rate of interest on deposits is raised reasonably, this will help the banks in getting more money.

"Thirdly, it is necessary to open more branches. And in this respect, a planned policy by commercial banks in consultation with the Reserve Bank for at least two years ahead would be very wise.

"Fourthly, it is essential to tap the agricultural resources which can only be done by opening small branches in rural areas. There are difficulties about it. These difficulties have to be tackled.

"The Plan, in order to become a success, has to be supported by all sections of the economy, that is rural, urban, commercial, financial and so forth. The banks have to play an important part in making the Plan a success and the means suggested above, if adopted, would go a long way to create a more balanced and healthy situation."

Note: *This does not purport to be a record of the proceedings at the annual general meeting.*

ITALY'S STATE-OWNED OIL AGENCY

EDGING ITS WAY INTO INTERNATIONAL OIL TRADE

[This article examines the scope and scale of the Italian State-owned Ente Nazionale Indrocarburi (E.N.I) *which, with its natural gas production and oil interests in Italy, is extending its activities overseas in several directions. The E.N.I., it may be recalled, made an offer some months back for participation in India's oil exploration, particularly in the Assam and Kutch areas. The offer was presumably on the lines of E.N.I.'s operation in Iran, Egypt, Libya and Morocco, where the respective Governments have 25 per cent financial and technical participation in exploration and production. In the context of this offer, this article may be read with interest for the light it throws on the structure of the E.N.I. and the nature of its operations.—*Ed.]

THERE are now forty or more oil concerns in the free world, large and small, which are either State-owned or in which the State has a substantial if not dominant stake. Their number has grown in recent years. They have widely varying relationships with their respective national governments ranging from close day-to-day control to virtually complete autonomy. Some are active in all sectors of the oil business and most confine themselves to operations within their own country. A few have extended their operations beyond their national boundaries. The Italian E.N.I. is one of these few but is unique in being wholly State-owned and having a distinctive approach to commercial issues. Now the dominant factor in the oil (and natural gas) industry in Italy, it has in recent years made excursions into the oil industry overseas which have been striking in their boldness though not as yet in actual achievement.

Ente Nazionale Idrocarburi was created in 1953 by the Italian Government as a state agency to absorb all the State's existing oil and natural gas interests. These embraced its direct majority holding in A.G.I.P.—now 60 per cent with 20 per cent held each by two State insurance bodies—which was founded in 1926 by the Mussolini regime as a national importing, refining and distributing company and was destined to be an integrated oil company. E.N.I. also took over the State's majority holding in A.N.I.C. founded in 1936 to operate the new hydrogenation plants at Leghorn and Bari. It also absorbed the wholly State-owned S.N.A.M., formed in 1941 to work the natural gas pipeline and distribution system in northern Italy. After the Second World War, in order to get help in the reconstruction of the plants, A.G.I.P.—which also operates the group's tankers—entered into a refinery partnership with B.P. in respect of the Porto Marghera refinery, while A.N.I.C. entered into an equal partnership with Jersey Standard (S.T.A.N.I.C.) in respect of the Bari and Leghorn plants half of whose crude oil requirements are, under new agreements made last year, supplied by each partner. These three plants (Porto Marghera and Bari are to be expanded) at present account for about 85 per cent of the refining capacity in Italy in which E.N.I. has a stake. E.N.I. itself created in 1953 the wholly State-owned A.G.I.P. Mineraria to serve primarily as the oil and gas exploring and producing company of the group, and in December 1956 A.G.I.P. Nucleare was set up jointly by A.G.I.P. Mineraria and S.N.A.M. to undertake the study and production of nuclear energy. Nuovo Pignone, the group's main plant and engineering company, is owned jointly by A.G.I.P., A.G.I.P. Mineraria and S.N.A.M.

The Dynamic President

The five major operating companies with their sixty or so subsidiaries and partnerships comprise, by and large, E.N.I.'s interests. E.N.I. itself remains essentially a holding and controlling body personified in its now very well-known President, Signor Enrico Mattei. With his blend of high patriotism, political experience, bold enterprise, boundless energy, keen sense of the value of personal publicity and with the surprising number of directions in which he is extending E.N.I.'s interests. Signor Mattei has in recent years certainly brought E.N.I. well on to the international oil map. But the public image he has built up of E.N.I. seems somewhat oversize if matched against the fact that his group is still only a very small producer of crude oil and at present itself sells no more than four to five million tons of petroleum a year, mostly in Italy, a large part of which comes from the U.S.S.R. Signor Mattei makes speeches with much more frequency than leaders of very much bigger oil concerns, and has been bold not only in criticising well-accepted ideas but has embarked on ventures which more widely experienced operators would have rejected.

A.G.I.P. has long been the arch-competitor in the Italian oil market of which, overall, A.G.I.P. holds about a 20 per cent share. Other marketers regard some of its selling activities as unnecessarily aggressive, and some of its extravagant capital investment, notably on service stations, is puzzling to those accustomed to the conventional norms of oil distribution. Some of his competitors believe that Signor Mattei, thwarted in one or two of his major ambitions, not least in his desire for E.N.I.'s inclusion in the Consortium in Persia, is bent on asserting his claim to a place in what he regards as the major oil companies' club. Be that as it may, he is an advocate of extending Government-to-Government dealings in oil, and probably does not mind being regarded as the *enfant terrible* of the international oil industry.

Pursuing The Unusual

However, E.N.I., as already mentioned, still has very little crude oil production of its own. It is exploring at home but now produces in Italy and Sicily only about 300,000 metric tons of crude oil a year while its natural gasoline production from its big natural gas output (now about 5.800 million cu. metres a year) in the Po Valley is about one-quarter of this quantity. Its own entitlement to Egyptian crude oil from its slightly more than 20 per cent stake in Compagnie Orientale des Pétroles would, on the basis of last year's production, now bring it some 400,000 tons a year, but it imports about three times this volume of crude from C.O.P.E. Its production in Sicily, now comparatively insignificant, is destined to rise by 1964 to perhaps some three million tons a year, to match the projected capacity of the complex of refining, chemical and other plants to be built near the Gela oilfield, the first two units of which will be ready in two years' time.

This is a novel kind of venture that will give value to crude oil which, for quality reasons, is otherwise virtually unusable and well exemplifies Signor Mattei's admitted pursuit of social purpose in many of his activities. To this too may be attributed, in part, his departure from the conventional 50:50 arrangements in respect of any future crude oil production in the several overseas countries where the group is, or will be, searching. As a consequence of E.N.I.'s shareholding partnership with the local Governments (who may get, via taxation and the dividends on their 50 per cent shareholding, up to 75 per cent of the profits) he believes that the countries concerned will find more contentment than in the usual 50:50 arrangements. On the other hand, of course, in such ventures (though E.N.I. will bear the whole cost of unsuccessful exploration) it will have to provide much less capital than it otherwise would, so that the benefit is not wholly one-sided.

Beyond Italy

E.N.I.'s only rewarding overseas production venture so far is its 20 per cent partnership in C.O.P.E.'s crude oil production in Egypt. It has, however, entered into a partnership for oil production with the State-owned National Iranian Oil Company, but there is as yet no confirmation of the rumour that it has found oil in an offshore area in the Persian Gulf. There are also partnerships respectively with the Governments of Morocco, Sudan and Tunisia, including in these three latter cases partnership arrangements for refining plants still to be built. E.N.I. has also undertaken to build a refinery in Ghana. It is exploring for its own account in Somalia, and has obtained areas in Libya and a preliminary exploration permit in Syria. As a Government-owned entity it is precluded from acquiring areas in most of Latin America. It is embarking on its own account upon the construction of a pipeline from Genoa to Aigle in Switzerland linked to an Italo-Suisse's refinery there, and will also possibly build another line to, and one or even two refineries in, Southern Germany. It has formed subsidiaries for marketing in several West European countries and in Africa. Outside Italy it now has marketing interests in Somalia, Eritrea and Ethiopia and has a small marketing stake in Libya.

Somewhat incongruously, Signor Mattei has on more than one occasion attacked the pricing of crude oil. He has also advocated, though very vaguely, some kind of multilateral plan to reconcile the interests of producers and consumers. And in Italy, A.G.I.P.'s aggressive marketing practices and its unnecessary price-cutting that springs partly from E.N.I.'s large imports of Russian oil (made despite Mr. Mattei's avowed anti-communism) had done much to undermine market prices for products and therefore of crude oil prices. The recent contract by E.N.I. to import 12 million tons of Russian oil over the next four years is likely to make things worse. The usual result of A.G.I.P.'s price-cutting has been that other distributors in Italy have had to follow suit, determined to keep their acquired share of the Italian market. They have not, however, followed A.G.I.P.'s latest cut in the retail selling price of gasoline to a figure even below that recommended by the Government. A point of resistance may now have been reached to A.G.I.P.'s puzzling behaviour for which it offers no justification.

Features of Its Own

Much of the forcefulness of E.N.I. springs from the high degree of independence, in policies and in deeds which it enjoys. As a State-owned body it has no critically minded individual shareholders to worry about and Signor Mattei's political influence is well able to meet any parliamentary criticism. Many advantages flow from its virtual monopoly of oil and gas exploration in the Po Valley (it recently made important discoveries of gas in Southern Italy) and its highly profitable production of natural gas is a pillar upon which all other activities of E.N.I. can, and do, lean. From this has come the big stake in petro-chemicals which it has created in Italy, notably its large plants at Ravenna. E.N.I. submits its financial accounts annually to the Minister for State Participations and these are laid before the Italian Parliament. But like many holding companies' accounts, these do not reveal the profitability or the financial position of the separate operating companies and to many they appear mystifying. E.N.I.'s accounts for April 1960 show its own (holding company) net profit of Lire 4.6 milliard, or say £2.6 million. This figure was of the same order as the total dividends received by E.N.I. from four of its five main operating companies but coming mostly from S.N.A.M. and A.G.I.P. Mineraria. For the year ended April 1959 the net profit announced was virtually the same. Sixty-five per cent of E.N.I.'s earnings go to the State Treasury, 20 per cent is transferred to ordinary reserve, and 15 per cent goes to technical research and training.

If E.N.I. does not make any massive contribution to the State coffers, nor does it rely upon them. There is a measure of self-financing within the operating companies, and E.N.I. has been able to raise its own loan funds on the Italian market. The group's consolidated balance at 31st December 1959, showed that the funds provided by the Italian Treasury as capital amount to Lire 36.9 milliard while minority shareholders in the group have an interest of about Lire 32.5 milliard. But medium- and long-term loans and bonds amount to no fewer than Lire 236 milliard and bank borrowing to nearly Lire 50 milliard.

Many Critics

Direct financial returns are not, of course, the only criteria of E.N.I.'s achievement or of its value to the Italian economy. Its home and overseas operations create work for Italian personnel and demand for Italian goods. Its own plant and equipment associated companies are exporters of petroleum and other equipment and E.N.I. companies undertake contract work abroad. Drilling contracting undertaken in Spain, France and Argentina, the supply of pipeline materials to Persia, Pakistan, India and Brazil, work and materials for the refinery in Jordan and the sale of synthetic rubber and fertilisers to China, are recent examples of activities which help Italian exports of skill, equipment and manufactures. The recent deal for Russian oil included the supply of Italian pipe and synthetic rubber. With whatever qualifications one may make, there can be no doubt as to E.N.I.'s vigour as a going venture. Its critics in Italy—and it has many—say that as a State enterprise with no responsibilities to individual shareholders, with but little public accountability, and enjoying various tax privileges, E.N.I. too often discards ordinary business considerations and exerts undue political influence in its own favour, an outstanding instance being the favoured position it enjoys under Italy's Petroleum Law. E.N.I.'s critics also aver that, given its virtual monopoly in the Po Valley and its exemption from royalties and concession rents there, it overcharges for its natural gas in the north and uses these profits to cut oil prices. Natural gas bears less than half the taxes borne by fuel oil but selling prices are more or less the same. Another criticism is that E.N.I. exports capital and skill of some highly speculative ventures whereas these resources would be better used at home directly to raise the country's general level of production and standards of living.

But, critics notwithstanding, no Italian Government, whatever its complexion, is likely to be much displeased with an organisation which, although with as yet little concrete results overseas, is edging its way into the international oil trade and so (except for the recent entry of other Italian companies in Libya) alone gaining for Italy a place in a difficult but expanding sector of international trade where American, British, Dutch, French, Belgian, and to some extent German, interests have made their mark. E.N.I.'s recent acquisition (through Cori) of exploration areas in Libya is some consolation for Italy's failure to look for oil there during its 30 years' occupation of the country, while the stakes in Egypt and the Persian Gulf betoken Italian re-entry into Middle East oil after the sale in 1937, owing to its lack of financial resources, of A.G.I.P.'s majority holding in Mosul Oilfields' concession in Iraq.

The Test of Time

To make agreements is one thing; to carry out the work and gain the hoped-for results is another. Today's surplus crude oil productive capacity and increasingly sharp selling competition has altered the optimistic mood that prevailed in 1957 when E.N.I. ventured into Persia and the Persian Gulf. To undertake to search for oil in Morocco, Sudan and Tunisia, is even more speculative, but this has served as bait to gain from the local Governments refining rights which can be used to force an entry into the local market. These and other recent plans for penetration into oil refining and marketing in areas where there are already well-established marketers presage tough competition which may prove unrewarding and even expensive for E.N.I. To realise success is never as easy as planning for it and, in the nature of things, E.N.I. is going to have some disappointments somewhere which its political opponents at home will not be slow to invoke. It has big capital commitments ahead. For the four years 1960-63 it has projects calling for capital investment of some Lire 500 milliard. Its high dependence on borrowing for both its past and its future expansion is a weakness which, under some circumstances, could handicap its growth. Nevertheless, given a modicum of good luck which it is entitled to expect, and while the forceful Signor Mattei is left there by the Government to guide its fortunes, E.N.I. seems likely to remain a harrying competitor, if not a thorn in the side, of many large and small oil companies for some considerable time ahead.—(*By Special Arrangement with the* Petroleum Press Service).

RESEARCH ON TIN IN 1960

The Tin Research Institute's Annual Report for 1960 covers the activities of the Institute at Perivale, Middlesex, England, and of its offices in the United States, Canada and six European countries. Some thousands of industrial users of tin received technical advice and help during the year and the report mentions the main types of inquiries in five categories listed as: tinplate, tin alloys, solders, electrodeposition and compounds of tin. In furtherance of this help to consumers of tin in all countries, many thousands of technical publications were sent to inquirers.

The report deals item by item with the progress of the researches in the various departments of the Institute. Among the new lines of work mentioned are: tin as a deliberate addition to steel and also in cast iron; aluminium-tin bearings; studies on tin-titanium-oxygen and on tin-titanium alloys; the structure of electrodeposited alloys; bright electrotin deposits; the reactivity of surface zones in steel strip used for tinplate; the influence of tin on the hardness of silver; and discoveries in the field of organotin chemistry.

NEW PRODUCTS AND PROCESSES

New Nickel Steel

A REVOLUTIONARY new 18 per cent nickel alloy steel with unmatched toughness at the highest strength levels of traditional alloy steels has been discovered and developed by scientists of The International Nickel Company, Inc. The discovery—made at the Company's Bayonne, New Jersey, Research Laboratory—paves the way for a new family of high-strength "Mar-aged" steels with advanced engineering design possibilities for civilian and defence applications involving exceptionally high pressure and stress. It is claimed to be the only known material which has the ability to achieve a yield strength in excess of 250,000 psi while maintaining a nil ductility temperature below —80 deg. F. Another outstanding characteristic of 18 per cent nickel steel is its excellent notched tensile strength which exceeds 400,000 psi—(measured under the most severe test conditions with a notch radius .0005"). Tests have shown that this new alloy possesses a remarkable resistance to delayed cracking when exposed to a severe corrosive atmosphere in a highly stressed condition.

The new steel develops its high strength while maintaining unmatched ductility and toughness by means of a remarkably easy heat treatment involving age-hardening of martensite. This treatment has been given the abbreviated description of "mar-aging." The mar-aging treatment is noteworthy because of its extreme simplicity. With proper finishing temperature off the mill followed by air cooling to room temperatures, the treatment consists merely of holding for about three hours at 900 deg. F. and air cooling. Solution annealing at 1,500 deg. F. prior to mar-aging is optional. Quenching is not required, and full properties can be developed in heavy sections with no distortion problems. The new steel has a nominal composition of 18 per cent nickel, 7 per cent cobalt, 5 per cent molybdenum and less than .5 per cent titanium with a maximum of .05 per cent carbon. Higher and lower tensile strength can be obtained by modification of this basic composition. There are indications that high strength levels of up to 500,000 psi or even higher may be achieved in this type of steel. A 10-ton commercial heat has been produced by air melting in an arc furnace, and ingots as large as 23 inches by 42 inches from this heat have been rolled into plate on conventional steel mill equipment. Eighteen per cent nickel steel can be readily produced in all commercial shapes. Unusually low work-hardening tendencies permit extensive cold forming and shaping with ease. The machining characteristics of the steel are excellent both as rolled and even as fully hardened. The 18 per cent nickel steel the makers claim can be readily welded by either manual or automatic methods. Sound crack-free welds are achieved, even on material in the fully heat-treated condition, without preheating. Post-weld maraging restores the softened heat-affected zone of the parent plate to full strength and establishes in the weld metal properties closely approaching those of the base plate.

Multi-purpose Porous Plastic

A multi-purpose porous plastic has been developed by Porous Plastics Ltd., England. Known as Vyon, its chief characteristic is its permeability—air, liquid, smoke or gas will pass freely through its surface. It also has the merit of being light in weight, flexible and tough, having considerable tensile strength. It used for filtering acids it will not corrode. It can also be welded. And it is hygienic—suitable for use with food handling equipment—and is inexpensive. It is made from high density polyethylene and the degree of permeability can be adjusted to the users' requirements. It has already been used for many industrial, scientific and medical purposes, but its potential range of uses is unlimited. Extensive tests for its use in orthopaedics were made at the Royal National Orthopaedic Hospital in Middlesex, England. One of the merits for Vyon in this field is that it permits the passage of water vapour and thus allows the evaporation of sweat—in other words, a plastic that breathes! It is also used most successfully in the manufacture of flail arms for poliomyelitis patients. Like many other British industrial inventions the plastic resulted from efforts to solve quite a different problem. It was produced as a result of a search for a new material for separators for batteries. This problem being solved, it was realised after further developments that the new material would have a wide range of other uses and the firm responsible for its origination has set up a separate company to deal with the product.

Delivery Vans that Climb Stairs

A lightweight truck which "walks" up and down stairs has been developed by a U.K. firm. It has been specially built to ease delivery, up steps and staircases, of such loads as safes, refrigerators, stoves and filing cabinets. For loads of up to 2 cwt. it cuts the normal handling team from two to one. And above that weight, to its limit of 10 cwt., its use greatly reduces the element of fatigue to delivery men and consequently increases their turnround. It has been found that in the British market, where it has immediately proved popular, it pays for itself within a short time. The truck is a development of the conventional sack truck design with the addition of flexible tracks which operate in conjunction with the wheels when steps or stairs are being negotiated. The principle is that the truck lays its own track and then rolls over it. It has been built to combine maximum strength with minimum weight and is manufactured from strong aluminium alloys and steel. Special care has been taken in the design to guard against damage to carpeted stairs.

MADURA MILLS COMPANY LIMITED

DR. M. A. MUTHIAH CHETTIAR'S SPEECH AT ANNUAL MEETING

TEXTILE WAGE BOARD AWARD RAISES OPERATING COSTS

IN his speech at the Annual General Meeting of the Madura Mills Company Ltd., held at Madurai on 27th March 1961, Dr. M. A. Muthiah Chettiar, Chairman of the Company, pointed out that implementation of the Textile Wage Board Award had materially increased the operating cost of the Company. In spite of this, he said, the Company was able to improve its export performance. The progress in the sphere of rehabilitation and modernisation was slow, according to him, due to factors beyond the control of the Company. The following is the full text of Dr. Chettiar's speech:

"GENTLEMEN,

"The report of the Directors and the audited accounts of the Company for the year ended 31st December 1960, having been circulated in the prescribed manner, I propose, with your permission, to take them as read.

"As had been forecast, the raw material supply position throughout the country during most of 1960 was acute. The total growth for the 1959-60 cotton season, which ended on 31st August 1960, was 38.35 lakh bales, against a consumption requirement of 51.05 lakh bales. Prices were at an all-time high, and it was very difficult indeed to obtain cotton of the proper quality or at the right price. I am glad to be able to say that despite these constant difficulties we were, with the timely help of supplies of American short-staple cotton, able to maintain both production and quality.

"Much of the credit for concluding a settlement on the many problems which arose from implementing the recommendations of the Textile Wage Board must be given to the patient and untiring efforts of the Minister for Labour in Madras. Nevertheless, the additional payments amounting in all to nearly Rs. 22 lakhs, some of which were retrospective to 1st January, materially increased our operating costs. Although there was also a clause in the settlement regarding rationalisation, I am sorry to have to report to you that, so far, little or no progress has been made in discussions with labour on this aspect.

Price Fixation

"Demand for our products was excellent throughout the year. I am particularly pleased to be able to tell you that we have improved upon last year's performance in the export market, and in fact earned over Rs. 2 crores of valuable foreign exchange. In India, prices in the markets began to rise alarmingly in the middle of the year, and we made efforts to introduce a measure of stability. Part of the rise of course was fully justified, resulting, as it did, from the increases in raw material and labour costs to which I have already referred. Our efforts did not meet with the success we had hoped, and, in due course, Government decided that it was necessary to take a hand. The result was an agreement on price ceilings for all mills. While this took no account of the monthly increase in dearness allowance, nor of the premium usually available to quality products such as ours, the latter disadvantage was, to some extent, compensated by a continued steady demand in excess of our production. As you will be aware, as a final result of negotiations over price fixation with Government, the industry agreed to a reference to the Tariff Commission with a view to arriving at yarn and cloth prices fair to producer and consumer alike.

Bonus Agreement

"Towards the end of the year, the Supreme Court considered and gave its decision on our appeal against the award of bonus payable on the profits of 1957. The measure of success can be gauged by the transfer of Rs. 12,07,192 to general reserve out of the provision made in 1958 and now no longer required. I am happy to be able to tell you that a bonus agreement has been signed with twenty-one of the twenty-three unions, covering the three years to 1962, and that agreement was also reached on the bonus for 1959 of one month's average earned basic wages. Let us all hope that this long-term agreement will call a halt to the disputes which have been so frequent, and enable management and labour to work in greater harmony.

"Reference has been made in the Directors' report to the rather slow progress of our rehabilitation and modernisation programme. Let me assure you that no efforts are being spared to increase the pace of carrying this out, delays which occur are beyond our control. Nevertheless, I am sure you will agree with me that the figures are still impressive—a total of nearly Rs. 4 crores, of which over half should be on site by the end of this year. Some of the machinery which is imported is already on the water, and is routed both to Tuticorin and to Calcutta, ports, the latter being for our Tyre Cord factory at Serhampore. Further plans are under consideration by your Directors, in extension of the massive scheme already on hand.

Accounts

"On the accounts themselves, I would like briefly to draw your attention to the gratifying reduction in bank borrowing particularly when read with the satisfactory increase in current assets. The heavy drain which the general reserve suffered in 1958 has now been completely neutralised, but you will readily appreciate from the size of the figures for modernisation, etc., the continued need to conserve resources so as to provide the necessary funds to meet these commitments. The assistance of a loan of Rs. 75 lakhs from the National Industrial Development Corporation which we had hoped to finalise during 1960, has, I am sorry to tell you, not yet been received, in spite of the best efforts of both the N.I.D.C. and ourselves. I would, however, hasten to assure you that the delay is procedural only, and will undoubtedly be overcome shortly. I would also ask you to notice the adjustment in the Managing Agents' commission, which arises mainly because of the change in the depreciation allowance under the Finance Act 1960 granting a full year's depreciation to plant installed for more than 180 days. The provision for taxation includes a sum of Rs. 1,18,500 due on the profits to 31st December 1959, this has arisen because the tax loss carried forward from 1958 accounts has now been reduced by the Supreme Court's award on bonus for 1957, thereby leaving a small taxable profit in the 1959 accounts.

Future Prospects

"Looking to the future, I believe there is every reason to be hopeful. The recent budget, which imposed excise duty on yarn, except for hank yarn below 40s count, will increase the cost to the purchaser, particularly of our industrial products, and the Excise Department's supervision, while being necessary to conform to the new law, has unavoidably made the administration more complex and difficult.

"Before concluding, I must express the Board's appreciation of the efforts of the staff and other employees which contributed so very greatly to these satisfactory results. With their continued efforts behind us I feel sure that we can look forward to the future with sober confidence."

Note.—*The above does not purport to be a report of the proceedings of the meeting.*

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA,

We, the undersigned Auditors of the State Bank of Travancore appointed under Section 41(1) of the State Bank of India (Subsidiary Banks) Act, 1959 do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1960.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Head Office and the certified returns from Branches, which Returns have been incorporated in the above Balance Sheet and Accounts, and report :

(i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory ;

(iii) that the transactions of the Bank which have come to our notice have been within the competence of the Bank ;

(iv) that the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit ;

(v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account ;

(vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and

(vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

THE UNITED COMMERCIAL BANK, LIMITED

(INCORPORATED ON 6TH JANUARY, 1943).

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their Eighteenth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1960.

The net profit for the year, after providing for taxes and for all known and anticipated charges, and including Rs. 1,04,096.00 brought forward from the previous account, amounts to .. .. Rs. 68,46,870 98

The Directors have transferred Rs. 30,00,000 to the Reserve Fund and provided Rs. 13,00,000 for bonus to staff. They now recommend the payment of a dividend at Rs. 6.00 per share, subject to deduction of tax, which will absorb Rs. 24,00,000 leaving an unappropriated balance of Rs. 1,46,870.98 to be carried forward.

The Reserve Fund of the Bank now exceeds the paid-up capital and stands at Rs. 2,05,00,000.

The working of the Bank during the year was satisfactory and profit showed an improvement over the previous year's figure.

Stringent conditions prevailed in the money market almost throughout the year.

During the year branches of the Bank were opened at Bhopal, Durgapur, Kota, Maligaon (Gauhati), Mandvi (Bombay), Nagapattinam, Puri and Ranchi.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

The Directors retiring by rotation under Article 92 of the Bank's Articles of Association are Mr. I. P. Goenka, Mr. Y. N. Mafatlal, Mr. R. L. Nopany and Mr. M. L. Tapuriah, who offer themselves for re-appointment.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

On behalf of the Board,
G. D. BIRLA,
Chairman.

CALCUTTA, 1st *March*, 1961.

		(vi) There is a liability for outstanding bills, not certified by the architects, in respect of the Bank's buildings.		
		(vii) Additional demands of Rs. 2,61,316.77, Rs. 2,55,451.06 and Rs. 1,46,265.70 were raised for assessment years 1953-54, 1954-55 and 1955-56 respectively by the Income-tax Officer assessing the Bank in India by adopting a totally new method. Appeals have been filed against these assessments. A similar issue for the previous year (viz. assessment year 1952-53) where a demand of Rs. 25,75,850.29 was raised has been decided in favour of the Bank by the Income-tax Appellate Tribunal upholding the method adopted all along which issue has not been agitated further by the Department. Accordingly, no provision has been made for the demands referred to above and provision for all years to date has been made on the basis adopted all along in the past and accepted by the Department.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1960, and the annexed Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

We report that :

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns ;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

OBJECTS, BRIEF HISTORY AND FUTURE PROSPECTS OF THE COMPANY

The Company was established for the purpose set out in the Memorandum of Association and it is at present a leading Metallurgical Engineering unit in India specialising in the manufacture of non-ferrous alloys, non-ferrous castings—both rough and machined. The progressive record of the Company's activities is reflected from the Company's sales and services figures quoted below for the last three years:—

	Rs.
1958	68,34,884
1959	98,61,137
1960	1,44,12,438
	(provisional)

With the increase in the industrialisation of the country and emphasis being placed on the indigenous production of engineering components and plants, the demand for the products of the Company is rapidly increasing. It is estimated that as against the total current estimated consumption of four major non-ferrous metals, viz., copper, zinc, lead and aluminium of 65,000, 60,000, 26,000 and 45,000 tons respectively, the consumption by the end of the Third Five-Year Plan would be in the neighbourhood of 1,70,000, 1.85,000, 65,000 and 1,00,000 tons respectively. Being a premier unit in its line, the Company looks forward to participate in the substantial increase in business which is likely to materialise in the coming years.

Quite apart from the existing lines of manufacture, the Company has undertaken other Projects after obtaining necessary Industrial Licences from the Government of India to manufacture Resign Cored Solder, Pressure Die Casting, Zinc and Aluminium Base Alloys, Tilting Pit and Rotary Furnaces, Iron Castings, Dies for Plastic Injection Machines, Milling Machines, etc.

As has been outlined above, the activities of the Company in its traditional lines of business are steadily on increase. There is also very large uncovered internal demand for the new items of production proposed to be undertaken by the Company. With the Company's development plans and expansion projects gradually materialising, the prospects of growth in the earning capacity of the Company are very encouraging.

DIVIDEND

BARRING ANY UNFORESEEN CIRCUMSTANCES THE DIRECTORS HOPE TO PAY A MINIMUM DIVIDEND OF 10% ON THE INCREASED CAPITAL OF THE COMPANY FOR THE YEAR ENDING 31st DECEMBER 1961. THE BENEFIT OF THIS DIVIDEND WILL ALSO BE AVAILABLE IN FULL EVEN TO THE SUBSCRIBERS TO THE PRESENT ISSUE.

FACTORY

The Company's plant is situated at 44 and 103/24/1 (Upper) Foreshore Road, Sibpur, Howrah, West Bengal, on leasehold lands acquired from the Port Commissioners, Calcutta, and the area of the land at present occupied is approximately 206 cottahs, which includes a big plot of land measuring 129 cottahs very recently acquired to carry out the expansion programme.

MANAGING DIRECTOR

At present Shri Ghanshyamdas Binani is the Managing Director of the Company and application to the Central Government has been made by the Company for the approval of his appointment as Managing Director for a period of 5 (five) years. He is associated with the Company since 1949 and is the Managing Director thereof for the last four years.

DIRECTORS' INTEREST

The Directors will be interested in the remuneration payable to them as fees for the Meetings attended, travelling expenses, if any, for the purpose and a commission of 1 per cent to be shared equally amongst all the Directors (excluding the Managing Director). The Managing Director of the Company will in addition to the fees for the meetings attended and travelling expenses, if any, for the purpose, be interested in the remuneration payable to him as Managing Director.

The Directors and the Managing Director will further be interested to the extent of the Shares subscribed for by and to be allotted to them in the Company.

UNDERWRITING COMMISSION

The Underwriters will be paid an underwriting commission at 2½ per cent of the nominal value of the shares underwritten by them.

BROKERAGE

Brokerage at 1 per cent will be paid on all allotments made in respect of application bearing the stamp of a Bank or Brokers who are members of the recognised Stock Exchanges. Brokerage on the same basis is payable to Underwriters in addition to the Underwriting Commission, on allotments in respect of applications made or procured by them and bearing their respective stamps.

CAPITAL OUTLAY AND WORKING CAPITAL

The requirements of the Company are as under:—

		Rs.
(i)	Working Capital	7,00,000
(ii)	Estimated cost of building and structures on the plot of land taken on lease recently for installation of Machinery and shifting of Machine Shop ...	5,00,000
(iii)	Purchase of Raw Materials to feed the new Plants and Machinery	10,50,000
(iv)	For paying the value of imported new Plants and Machinery	11,00,000
(v)	For repayment of Loans ...	10,00,000
	Rs.	43,50,000

The minimum cash amount required immediately in the opinion of the Directors is Rs. 33,50,000, out of which the Directors and their friends have already taken shares worth Rs. 12,00,000 and this amount has been utilised to repay the loan and to meet the other requirements of the Company. Thus, the balance amount of Rs. 21,50,000 is raised by the issue.

INSPECTION OF DOCUMENTS

Copies of Prospectus and the necessary documents mentioned therein are open for inspection at the Registered Office of the Company during business hours.

APPLICATION FORMS

Copies of the Prospectus and Application Forms may be obtained from the Registered Office of the Company, Brokers, Bankers to this issue and Underwriters.

NATIONAL AND GRINDLAYS BANK LIMITED

MR. J. K. MICHIE, CHAIRMAN, REVIEWS PROGRESS OF BANK'S ACTIVITIES

HIGHER DIVIDEND ON INCREASED CAPITAL LIKELY

THE Annual General Meeting of National and Grindlays Bank Limited will be held on 11th April 1961 at the Bank's premises, 24, Bishopsgate, London, E.C.2. In the course of his statement, circulated along with the Directors' report and accounts for the year ended 31st December 1960, Mr. J. K. Michie, Chairman, says that, whatever the political future, sound banking is a necessity to economic life and "it is that which we aim to provide." Indeed, Mr. Michie agrees with those who argue that sound economics backed by a stable banking system is a necessary background to any country and any Government and should have a high priority. The Board of Management, he declared, do not take a pessimistic view of the future. He tells the shareholders that they can expect, *subject to unpredictable contingency, to receive* 14 per cent dividend on the increased capital for the current year.

The following is the full text of Mr. Michie's statement:

"The principal event in our record of 1960 is not reflected in the balance-sheet—the acquisition by us of the Eastern business and branches of Lloyds Bank Ltd. and, as a part of that bargain, the acquisition by Lloyds Bank Ltd. of just under 25 per cent of our capital. This mutually agreeable arrangement was ratified by you at an extraordinary general meeting held on 15th November 1960. As you will see, it has added 19 to our list of branches and, as will emerge, it means an increase of around £50 million in the total of our next balance-sheet.

"Another concomitant effect was the strengthening of our Board by the addition on 1st January of Sir Jeremy Raisman and Lord Lloyd, appointments which fall to be confirmed at the annual general meeting. Sir Jeremy is Deputy Chairman of Lloyds Bank and both are distinguished names in the realm of Commonwealth affairs. At the same time, Mr. C. Gardner, Chief Manager of Lloyds Bank Eastern Department, joined our executive staff as an Assistant General Manager and Mr. R. J. S. Marsh as Assistant Manager.

Preparation for Merger

"A great deal of time and thought was given to preparation for this merger of interests and your General Manager, Mr. Gillespie, and I have just returned from tours much of which we did in concert, though his was the more comprehensive and strenuous. Our visits covered the principal branches of the combined Bank in India, Pakistan and Aden. In addition, Mr. Gillespie visited Ceylon.

"Our journeys, although covering a wider field, were undertaken with the particular object of seeing that, in every possible respect, the merger should get off to a good start and that there should be no misunderstandings about our future policy in the minds of either our constituents or our staff.

"I am glad to report that our impressions were without exception favourable. Our combined staffs have from the outset shown a most admirable team spirit, while our constituents appreciate that the merger means additional strength to the Bank. There is, too, a realisation in India and Pakistan that banking should be inherently as strong as possible and this was reflected in expressions of approval of the merger made to us by many individuals, including members of the banking fraternity.

"To replace Mr. Lely whose resignation took effect at the termination of the last annual general meeting, we invited Mr. Neville Wadia, Chairman of the Bombay Dyeing and Manufacturing Company Ltd., to join the Board which he did in June last. Mr. Wadia's family connection with the Bank goes back two generations and dates from the earliest days of our branch in Bombay and his wide knowledge of the economy generally and of the industry of India will be of great value to the Board and to our Managers in India. His appointment now falls to be confirmed by you at the annual general meeting and I confidently recommend him.

"The total of our consolidated balance-sheet at 31st December 1960 was £181,551,921—an increase of £18,516,333 over the previous year. The growing demand for finance in the territories in which we operate, the reasons for which I refer to later, has resulted in an increase in advances of just under £19 million. Current, deposit and other accounts are over £18 million higher, but this pressure of demand for seasonal finance has had the effect of reducing our liquidity ratio.

"At £479,276, our net profit was £74,568 higher, reflecting the overall more favourable conditions for banking which obtained in our territories in 1960 in comparison with the previous year—which in turn showed an improvement over 1958.

"Subject to necessary reservations in respect of East and Central Africa and Burma, this better climate for banking generally seems likely to continue and, as a consequence of this view, we have increased our second interim dividend for 1960 from 6¼ per cent to 7 per cent, making the total distribution for the year 13¾ per cent. Further, this action would not have been taken unless we had felt justified in promising to consolidate this rate of dividend—you can, therefore, expect, subject to no unpredictable contingency, to receive 14 per cent on the increased capital for the current year.

National and Grindlays Finance and Development Corporation

"The net profit for the year was £10,152, the reduction being accounted for by the higher rates of interest paid on its borrowings from the Bank.

India

"What particularly struck Mr. Gillespie and myself in our journeyings through India is the surge of industrialisation which is going on, with, it seemed, increasing momentum. The reasons behind this expansion are all excellent and legitimate and, in most cases, the capital in so far as cover for land, buildings and plant are concerned seems to be available. But it is the provision of 'working' capital to carry stocks and outstandings which to our minds poses a real difficulty and, unless more money can be found by or for the banking system, *it seems to me* it will be put under considerable strain within the nert twelve months.

"I know this aspect of the third Five-year Plan is appreciated by the Reserve Bank, which has already taken certain measures to increase the resources of the banks by the release of the special deposits which had been called for in March and May 1960 and by the extension of their Bill Market Scheme for the rediscounting of bills on behalf of banks, although on an escalator scale of interest. The Reserve Bank has also taken steps to strengthen and thereby to increase confidence in banking in India generally—it having unfortunately suffered a setback last autumn. These steps include the merging of some of the smaller banks with stronger units.

"But somehow the hidden cash balances of India must be drawn into the banking system and through it put to work if the latest Five-year Plan is to be—as it must be—a success.

"When it is realised that the total of bank deposits in all India at 30th June 1960 was only Rs. 1,946 crores or £1,459,000,000—or an average sum *per capita* estimated at Rs. 55—it will be realised what the scope and the necessities are, and progress is painfully slow. The portents, therefore, are of a continuance of tight money conditions in the foreseeable future.

"Naturally we are doing all we can to attract further deposits, but our branch system sets limits to our potential progress.

"During 1960, India's external reserves fell by Rs. 68 crores to Rs. 319 crores.

"The Reserve Bank rate remained at 4 per cent throughout the year.

"Tea has had a favourable experience somewhat marred by drought in Assam, though this was largely compensated by good crops in South India areas. Internal consumption continues to rise and the reduction of the export duty by 17 per cent, announced in the 1961 Budget, should benefit exports by making Indian tea prices more competitive in world markets.

"Jute manufacturers and shippers have had an exciting and a difficult year caused by the tremendous rise in prices in India and Pakistan in October last, consequent on the then disclosed shortage of raw jute. These conditions may well react to the detriment of the trade as a whole for consumer countries will be apt to look for substitute materials rather than be at the mercy of such vagaries in cost.

Pakistan

"The impetus of President Ayub's administration continues to be felt and is reflected in a general feeling of confidence individually and nationally.

"The major and much the most important work now in progress is the five rivers water scheme known as the Indus Basin Projects with its tremendous potentials in extending agriculture and, by desalinisation of land, improving it. What I have already said about jute applies even more so to Pakistan where the crop is comparatively a much bigger factor in her economy. The percentage of the crop consumed internally continues to grow.

"For identical reasons, the need for an expansion of bank deposits is at least as urgent as in India; indeed, the ratio of deposits to population is somewhat lower, but that may be in some degree a consequence of the traditional Muslim objection to accepting interest.

"The State Bank rate has remained at 4 per cent and, as I have indicated, money is scarce and, relative to current bank lending rates, expensive.

"External assets of the State Bank of Pakistan rose by Rs. 6 crores during the year.

Ceylon

"Both politically and financially, Ceylon has had a disturbed year.

"Two general elections have been held, the eventual result being a victory for Mrs. Bandaranaike's Sri Lanka Party.

"Despite reasonably good prices for tea and rubber, although other exports were not so fortunate, Ceylon's external resources again fell during 1960—by Rs. 207.6 million—to a figure of Rs. 481.2 million and drastic measures are now being taken to reverse this continued loss by restriction of imports and by raising the Central Bank rate to 4 per cent from the previous inadequate basis of 2½ per cent.

"As I have said before, Ceylon's natural wealth is such that a commonsense economic policy followed consistently would soon put matters right and it is hoped that neither panic nor discriminatory measures will be adopted and that the present penal rates of taxation will be moderated. For these are not the ways to attract foreign investors to the country or indeed to retain existing non-indigenous investment.

"Mercantile Credit Ltd., the Colombo hire-purchase company in which this Bank has an interest, did an expanding business in 1960 and good results are expected. This year import and credit restrictions are almost certain to reduce the volume of trade covered by hire purchase.

Burma

"The pattern of events described last year has continued under U Nu's A.F.P.F.L. Party.

"Burma's foreign exchange reserves rose during the first half of 1960 but were lower by £5½ million by the end of the year, as a result of certain capital disbursements, including a repayment to the International Monetary Fund. There was an increase of rice exports to 2,000,000 tons—which nevertheless is still only about 60 per cent of pre-war figures. Increased internal consumption doubtless partly accounts for this disparity.

"During 1960, the Government of Burma exercised its option to acquire an increased share of the capital of the internal oil industry now run as the Burma Oil Company (1954) Ltd. and its holding is now 51 per cent.

"The attitude to foreign companies operating in Burma continues fundamentally unchanged, although a recent Ministerial Mission to Europe has expressed the wish to encourage new capital to set up industries in the country. The two policies can hardly be said to run parallel.

Aden

"Lack of rain adversely affected the 1960 cotton crop which fell below expectations. However, the prosperity of Aden very largely depends on the activity of the port as a bunkering centre and on the operation of the refinery. In the absence of labour troubles for most of the year, both were fully employed—in fact, the prompt handling of ships is now a pressing problem which is to be met by new installations in the coming year.

"Recently we opened another sub-branch in the Maalla area, bringing the total of our offices to five. We have also been given a licence to operate at Al-Ittihad, the capital of the Federation of Arab Amirates of South Arabia, when this comes into being.

Africa

"For once a generalisation about the considerable area of the Continent of Africa in which we operate appears to be justified.

"From the Somali Republic in the North to Southern Rhodesia in the South since I last addressed you, the political scene has experienced, or is in process of, radical change, and to such an extent that, in several areas, politics completely govern and over-shadow economics.

"Of necessity I am writing while an election under the Lancaster House Constitution is being held in Kenya; while the political future of Uganda is uncertain and when a state of crisis exists in the affairs of both Southern and Northern Rhodesia and of the Federation as a whole. The present picture may well be altered by the time this is despatched to you; I hope for the better.

"The High Commission territories of Kenya, Uganda and Tanganyika, as you know, have a common currency and through the High Commission are linked in regard to transport, communications, customs and excise. Under the leadership of Sir Jeremy Raisman, a three-man Commission recently reported on the working of the High Commission and expressed the view that the present customs system under which Kenya, Uganda and Tanganyika in effect form a common market is beneficial to all three territories and strongly recommended that it should be continued. They also recommended a redistribution between the territories of the income accruing to the High Commission.

"The most serious aspect of the economic picture of this area and which has arisen directly out of political uncertainties is the emigration of European and Asian capital that has taken place over the past ten months. This is reflected in a substantial fall in bank deposits accompanied by a tendency for advances to increase, while the overseas assets of all the banks fell sharply.

"In September last, the banks took steps to stem and reverse this movement by offering higher rates for deposits and by increasing their lending rates to a somewhat less extent, but, while the rate of erosion has slowed down, it has not yet ceased, and it is becoming increasingly difficult to see how the trade and commerce of the area will be financed unless some method is found for providing banks with additional funds and short-term money.

Last year, excepting the cotton crops of Uganda and Tanganyika, yields of the main

FORWARD MARKETS BULLETIN

(Monthly)

Published by Forward Markets Commission Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1960.

LONDON, 9th *March*, 1961.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiary dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on that basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiary so far as concerns members of National and Grindlays Bank Limited.

COOPER BROTHERS & CO.,

agricultural products were excellent although coffee prices continued to decline, but particularly in Kenya drought conditions have recently been prevalent and that must put a further strain on the banking system. Budgets, too, are causing anxiety for apart from other reasons the development of democratic forms of Government is invariably found to be an expensive process.

"In Zanzibar, I am glad to say, a sound policy of marketing its large stocks of cloves has been followed and these are now down to manageable proportions.

Federation of Rhodesia and Nyasaland

"Apart from politics, 1960 was a good year for Southern Rhodesia. The tobacco crop was excellent and there was an increase in the value of minerals produced.

"Similarly, Northern Rhodesia benefited from steady and remunerative copper prices.

"The Federation again had a favourable balance of trade which it is estimated will be over £50 million. The Federal Government have just decided to ban the export of capital by residents of the Federation. Other classes are not affected.

"The Bank of Rhodesia and Nyasaland rate was raised from 4½ per cent to 5 per cent in August, mainly to check the increasing demands on the banks for advances. In the circumstances, we are pleased to have been able to maintain our business and to improve results.

"In August last, we opened a branch at Kitwe, Northern Rhodesia.

Republic of Somalia

"With the granting of independence to the Somaliland Protectorate, followed by its immediate union with Italian Somalia, our branches at Hargeisa and Berbera are now in the Republic of Somalia. The currency of the old Protectorate is still the East African shilling, and our branches act as agents for the East African Currency Board. The shilling is, however, being withdrawn during the next few months and replaced by the Somalo. The activities of our branches have not been affected by the political changes and last year's results were satisfactory.

General

"While it is apparent from what I have written that all is by no means plain sailing, it is also true to say that your Board and Management do not take a pessimistic view of our future, otherwise, we should neither have increased our dividend nor have increased the number of our branches and sub-branches from 94 to the present total of 141 in a period of just over a year. We continue to believe that, whatever the political future, sound banking is a necessity to economic life, and it is that which we aim to provide. Indeed, I agree with those who argue that sound economics backed by a stable banking system is a necessary background to any country and any Government and should have a high priority.

"What continues to puzzle me in regard to this country, and I am sure causes concern in many minds, is our apparent inability to achieve a worthwhile favourable balance of trade, in spite of what is to all intents and purposes full employment. It is all very well to argue that the British people prefer 'the good life' to a higher level of savings, but, in the world of today, the problem by no means ends there. We must either have more money to invest abroad, to lend to our Commonwealth friends and particularly to emerging nations, or see our influence and our trade with them steadily wane.

"We incline to claim that we are a special repository of wisdom on international affairs and that others have always been glad to have our counsel, but I feel that would be a more valid argument were we to prove ourselves more successful and more able to help them financially. There is much in the Russian claim that the cold war is now becoming an economic one.

"Finally, our staff—and that includes those we have recently absorbed—have given and are giving us enthusiastic and loyal service and that applies from our General Manager right down the line.

"When Mr. Gillespie and I were recently on tour, we took occasion to meet as many of the staff as was possible and I hope that the friendly exchanges we had—*inter alia* with our Union officials—will bear good fruit."

PRAGA TOOLS CORPORATION LIMITED

CHAIRMAN, MR. S. RANGANATHAN, ON EXPANSION SCHEMES

TECHNICAL COLLABORATION WITH FOREIGN FIRMS

ADDRESSING the Sixteenth Annual General Meeting of the Praga Tools Corporation Ltd., held at Hyderabad on 27th March 1961, Mr. S. Ranganathan, I.C.S., the Chairman, dwelt at length on the expansion schemes undertaken by the Company. He drew particular attention to labour trouble, which manifested itself in such ugly forms as rioting and assaulting of officers, and the consequent decline in the monthly rate of production. He, however, hoped that the workers would not resort to such actions now that a committee had been appointed to examine their demands.

The following is the full text of Mr. Ranganathan's speech:

"GENTLEMEN,

"Since we met last on 19th September 1960, another year, really nine months, of the Company's working is now ready for review. This period ended on 31st March 1960. Under the amended Company Law the annual general meeting of the shareholders of the company should be held within a period of six months from the close of the accounting period. Our office will have to be strengthened to meet this new situation and this is being done. As a Government company our accounts have also to be audited by the Auditor-General and this again requires to be done within this short period. We are suggesting to the Auditor-General as well as to the Company's statutory auditors that they should consider undertaking concurrent audit in order to save time.

"The audited statement of accounts together with the Directors' report thereon have been with you for some time. This year, as suggested by the Government of India, we have also sent you a simplified balance-sheet and profit and loss account, so that those who are very busy and cannot find the time to go through the complete balance-sheet could gain a clear picture of the Company from the simplified data we have given. With your permission I shall take the accounts and the report as read.

New Lines of Production

"When I addressed you on the occasion of the last annual general meeting held on 19th September 1960, I referred briefly to the details of the expansion scheme which your Company was planning. We are glad to report that technical collaboration agreements have been signed with three British firms. The first is with Messrs. Kearney and Trecker-C.V.A. Ltd., of Hove, Sussex, for the manufacture of their well-known range of drill chucks in India. The second is with Messrs. F. Pratt and Co., Ltd., Halifax, for the manufacture, in India, of their range of lathe chucks, pneumatic chucks, magnetic chucks and pneumatic vices. This is a range which should prove very useful to the steel processing industry, as, without these appliances, the machine tools, by themselves, would not be adequately useful. The third agreement is with Messrs. A. A. Jones and Shipman of Leicester, for the manufacture of their cutter and tool grinders in India by your Company. This is a new item to be taken up by the machine tool industry in India and your Company would be the first in the field.

"As you may have read in the Press, the Polish Government have offered a credit to the Indian Government of Rs. 14.3 crores and out of this the Government of India has earmarked one crore for your Company for the purpose of equipping a complete machine tool plant. You would have seen from statistics given that only 20 per cent of our production relates to machine tools; it is the Government of India's intention that our Company should increase the output of machine tools from its present level of about Rs. 12 lakhs per annum to Rs. 120 lakhs per annum. For this huge expansion, the Polish Government would be supplying a major portion of the plant on credit.

"As a first step in this collaboration with the Poles, they have been asked to prepare a complete project report for a machine tool plant, capable of turning out a certain quantum of machine tools per annum. Negotiations have been going on with CEKOP, an organisation in Poland which undertakes the design and supply of complete plants, and I am glad to report that, on 24th March 1961, that is, last Friday, our General Manager signed, on behalf of our Company, an agreement with CEKOP for the supply of this project report at a cost of Rs. 2.5 lakhs. We expect the project report to be in our hands by about September next, but, in the meanwhile, discussions are going on between the respective technicians to enable your Company to book firm capacity in Poland against their 1962 production for the supply of certain general purpose machine tools required for the machine tool plant.

Labour Troubles

"The working results for the nine months period ended 31st March 1960 have not been as encouraging as we had expected. The average production per month does not measure up to last year's performance. As indicated in the Directors' report, this is largely due to the unsettled labour conditions that prevailed in the factory. I had mentioned, on the last occasion, the rioting which took place inside the factory on 27th November 1959 and again in May 1960. In May 1960, some officers of the Company were actually assaulted. I would have preferred not to bring back to memory these unpleasant occurrences, I do so, however, as I feel that the labour has not yet quite settled down and there is still talk of strikes, etc. I shall be the last person to say that labour should not ask for, in an appropriate manner, or be given what is their legitimate due, having regard to all relevant factors. But to create a state of uncertainty in regard to continued and increasing production or about peaceful conditions being available to work in, is not the best way of setting about this business. I do hope that labour will pay heed to this advice and recognise that, in this Board of a Government company, there is really no interest which would wish to deny them their fair share, out of their own production. Having said this, I shall not go into the details of the demands that have been pressed for, from time to time, sometimes, openly flouting mutually accepted settlements, the methods adopted to capture power by rival unions, etc. I shall mention only that your Board has appointed a sub-committee to go into certain demands now made. This sub-committee has met several times and is now currently discussing this subject with the union. I hope the Board will soon have proposals that will be acceptable to labour, that will be within the Company's means and finally that the proposals will ensure a fairly long period of settled conditions which could be utilised to maximise production and take in hand the large expansion schemes with confidence.

"After making the necessary adjustments for depreciation, development rebate, etc., the balance-sheet shows a surplus of Rs. 3,72,667. Your Directors have proposed that this surplus should be carried forward and I feel sure you would find this proposal acceptable.

Stock Evaluation

"The Comptroller and Auditor-General, in his comments, has again invited our attention to the necessity to revise the method of evaluating the stock of finished goods. This has not been possible in the year under review but the revised method is being adopted in the accounts of 1960-61 and consequent on this a certain amount of write-off is expected. In the circumstances, your Board of Directors feel that it would be a prudent step not to distribute the very small surplus the present balance-sheet discloses; it would be more appropriate to get the revaluation of finished goods done on the proper basis in 1960-61 before considering any distribution of dividends. Although the financial position is thus only of a marginal balance having been reached, I feel optimistic about the trends and, given the wholehearted support by labour, the Company should be able to register a leap forward in the next year or two.

"Before I conclude, I wish to thank my colleagues on the Board for their active co-operation and guidance in all our deliberations. I also wish to express my appreciation to the officers and staff of the Corporation, particularly those loyal workers who strove to restore a sense of responsibility in the organisation during a difficult period."

N.B.—*The above does not purport to be the report of the proceedings of the sixteenth annual general meeting of the Company held on 27th March* 1961.

UNDER SECRETARY TO ... 10 APR 1961 PUBLIC DEPARTMENT

THE BANK OF MAHARASHTRA LIMITED

CHAIRMAN, MR. V. P. VARDE REVIEWS RECENT TRENDS IN BANKING

DEPOSIT INSURANCE SCHEME WELCOMED

SOME problems of the banking industry came in for extensive comment by Mr. V. P Varde, Chairman of the Bank of Maharashtra, at the Twenty-sixth Annual General Meeting of the Bank held at Poona on 28th March, 1961. Mr. Varde welcomed the deposit insurance scheme, notwithstanding the heavy burden it might put on banks. The intangible benefits it would provide to the banking system, by way of restoration of the confidence of the public in banks, he declared, would be worth the cost. Referring to the raising of the interest rate on savings deposits by the State Bank of India from 1½ per cent to 2½ per cent, he observed that this was done all of a sudden without considering the repercussion of the change on other banks. He added that in view of its size and the special position it occupied in the banking structure, the State Bank should function in such a way as to assist the younger and smaller banks in the country to grow into sound institutions. The following is the full text of Mr. Varde's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you most cordially to the annual meeting today. The twenty-fifth report of the Board of Directors and the audited statement of accounts for the year ended 31st December, 1960 have been in your hands for some time, and, with your permission, I shall take them as read.

Silver Jubilee

"You are aware that 1960 was the silver jubilee year for the Bank. The occasion was celebrated at a principal ceremony at Poona on 18th December 1960 under the presidentship of the Chief Minister of Maharashtra State, Shri Yashwantrao Chavan. The Bank was indeed privileged to receive encouragement and guidance from Shri Chavan on this occasion. Similar celebrations were held in 1961 at Nagpur, Bombay and Aurangabad. At Nagpur, the function was presided over by the Finance Minister of Maharashtra State, Shri S. Wankhede. At Bombay, Shri C. D. Deshmukh, who was at one time Governor of the Reserve Bank and then Finance Minister of India, presided over the function. At Aurangabad, the function was presided over by the Maharashtra Minister for Irrigation and Power, Shri Shankarrao Chavan.

"The silver jubilee year was marked by certain important developments. A new issue of Rs. 8 lakhs of capital was made by the Bank and this was oversubscribed by the existing shareholders of the Bank, reflecting your confidence in the Board of Directors of the Bank. As a result of this issue, the issued and subscribed capital of the Bank stands at Rs. 40 lakhs, as compared with the authorised capital of Rs. 50 lakhs.

"For the silver jubilee year, the Board of Directors have recommended a special silver jubilee bonus for shareholders at the rate of 2 per cent in addition to the normal dividend of 9 per cent, which is the same as last year. Both these are of course subject to tax. I am sure you will welcome this bonus dividend for the the silver jubilee.

Special Funds

"The Board have also decided this year to constitute two special funds to which I would like to draw your special attention. A provision of Rs. 50,000 out of profits has been made for the purpose this year. It is intended of course to make further contributions to these funds annually. Of the total provision of Rs. 50,000, the sum of Rs. 40,000 is proposed to be put into an Industrial Development Fund, whose general object will be to assist the small man attempting to make a start in business. The formation of this fund is an earnest of the Bank's desire to contribute to the industrial development of Maharashtra in general and to encourage the small industrialist in particular. The balance of Rs. 10,000 is to be allocated to a Staff Benefit Fund. The broad idea of this fund is to provide for the urgent and special needs of the members of the staff and their families. This fund is, of course, in addition to and quite independent of the various direct benefits that the members of the staff are entitled to directly. The Board are eager to do whatever is possible for the benefit of the staff. That is why this fund has been created. Further contributions will be made to this fund also from year to year. I may point out that no rules have been made as yet for the use of these funds. I would welcome suggestions from you with regard to the way in which these funds should be used in the light of their general objects explained above.

"I have great pleasure in informing you that the Reserve Bank has issued a foreign exchange licence to the Bank during the year. The Bank has now entered upon this class of business as well. A further mark of the confidence of the Reserve Bank in the Bank of Maharashtra was provided by the selection of this bank as the bank with which the Bank of Nagpur was to be merged. The scheme of amalgamation drawn up by the Reserve Bank for this purpose has been approved by the Government of India and has already come into effect. The assets and liabilities of the Bank of Nagpur have been taken over by us with effect from yesterday. I am very happy that we shall be paying the depositors of the Bank of Nagpur in full. Your Board have spent a great deal of time and effort in arranging the amalgamation. Though some problems still remain, the Bank of Maharashtra will be strengthened by the merger.

"I would like to discuss briefly at this stage some of the important problems facing the banking system during the year. The banks have been perturbed by the slowing down in the pace of growth of deposits during 1960. Various factors have been responsible for this change. It seems to me that some of these factors were: (1) a slowing down in the volume of deficit financing, (2) some loss of confidence in the banking system as a result of the Palai Bank failure, (3) attraction of funds to the industrial houses, which are accepting deposits directly, (4) a similar attraction of funds into small savings, where interest rates are high and tax-free, (5) the relatively low interest rates maintained by the banks on term deposits during this period in spite of monetary stringency.

Deposit Insurance

"In this context, I cannot but welcome the proposal to introduce a scheme of deposit insurance in the country. It will no doubt put a heavy burden on costs of all the banks in general and of this Bank in particular. The intangible benefits which it will provide to the banking system in the shape of a restoration of confidence may, however, be worth the cost. The assurance which it will give to the depositor of the safety of his funds will, in any case, be welcome. In certain cases at least it may in fact safeguard the small depositor when his bank fails. The scheme is, however, no substitute for measures to strengthen the banking system. The Reserve Bank is already taking steps to weed out unsound banks and ensure that those which continue in existence are run along sound lines. In this context, one would be justified in asking that the premium rates should be kept as low as possible so that the banks may not have to carry an unnecessarily heavy burden.

"It is obvious from what I have said above that the banking system is passing through a period of stresses and strains. It has, therefore, to adjust its policies to meet the requirements of the situation, without sacrificing any of the principles of sound banking. If the banks are to function along sound lines in these circumstances, they must be able to get advice and guidance from the Reserve Bank. They must be encouraged to consult the Reserve Bank on their problems. Past experience in this direction has not been very happy. I am sure that the moratorium now forced on certain banks could have been avoided if they had been guided properly during the past decade. The small banks, I do maintain, have a role to play and the soundness of a bank does not depend upon its size. It seems, however, to have been decided that small banks cannot prosper and we have to bow to the inevitable trend of amalgamations and the creation of bigger banks. I myself particularly regret the disappearance of small banks in Maharashtra, as I have frequently advocated in the past the development of such banks in the interests of small and medium scale industries. I, therefore, take the opportunity of assuring the investing public and entrepreneurs that every attempt will be made by the Bank of Maharashtra to fill the void created by the elimination of many small banks.

Amalgamation

"I need not say that the Bank of Maharashtra has always tried to follow sound traditions of banking. It has, therefore, co-operated with the Reserve Bank in all measures aimed at strengthening the banking system. I would like to state on this occasion that the Bank of Maharashtra is prepared to play its role in helping the development of Indian banking by taking over such banks as the Reserve Bank would like it to. It is abundantly clear from what I have said above that I regret that need should arise for the amalgamation of such banks; but if these banks cannot stand on their own feet, amalgamation may provide a solution for their problems. In such cases, the Bank of Maharashtra, with its sound traditions and strength, can take over such banks to the benefit of banking in the State. The taking over of the Bank of Nagpur, to which reference has been made above, was arranged with these principles in mind.

Unhealthy Competition

"I have to make a reference here to a rather delicate question. Recently, the State Bank of India raised its interest rate on savings deposits from 1½ per cent to 2½ per cent. This was done all of a sudden and without consideration of the effects this step would have on the other banks. The State Bank of India has remained aloof from the Indian Banks Association and its actions do not seem to take into consideration the interests of the other banks in the country. The Sate Bank is the largest bank in the country and occupies a special position in the banking system. It should, therefore, function in such a way as to assist younger and smaller banks in the country. Unhealthy competition between it and the other banks should be avoided. The effect of the increase in interest rates by the State Bank has been to bring about a similar increase in the rates of the other banks. The costs of the other banks have thus increased substantially. There may not be corresponding benefit to the banking system.

"It might be useful, at this stage, to refer to another unhealthy development in the banking field. Some of the larger banks approach the clients of smaller banks with a view to weaning them away from the latter. Such action cannot but affect the development of the banking system. There is plenty of scope for all the banks. It would be better for the banking system if such practices were given up.

"It is normally my practice to deal at some length with developments in the Indian economy. As I have devoted greater attention than usual to the problems of the banking system, which are more directly of interest to us, I propose to take it for granted that you are aware of the salient features of recent developments in the Indian economy.

Bill Market

"There is, however, one point to which I should refer because it affects us as bankers. I mean the stringency in the money market. This is mainly on account of the requirements of rapid industrialisation—which needs larger working capital for raw materials and current assets. Also, the conception of lending has now undergone a change. Formerly, the banks were lending according to the available resources at their command, but now the new conception is that the creditworthy borrower—whether the agriculturist or the industrialist—has to be financed for creditworthy uses. That makes an ever-increasing demand on the banking system and imposes a special responsibility on bankers. One solution that occurs to my mind to liquefy the advances of banks is the creation of a genuine bill market. The industrialist at present supplies goods on credit for two to three months according to the practice of the trade and gets himself reimbursed against it from his bank. This leads to a constant pull on the

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

(INCORPORATED IN ENGLAND—THE LIABILITY OF MEMBERS IS LIMITED)

SIXTY-THIRD ANNUAL GENERAL MEETING

MR. C. R. SRINIVASAN'S REVIEW

PRESIDING over the Sixty-third Annual General Meeting of the shareholders of The East India Distilleries and Sugar Factories Limited held at Madras on Thursday, 30th March 1961, Mr. C. R. Srinivasan, Chairman, said:

"GENTLEMEN,

"It is with much pleasure that I welcome you to this the sixty-third annual general meeting of the shareholders of this Company. The accounts for the year ended 30th September 1960, together with the Directors' report thereon, have been in your hands for the statutory period and, with your permission, I will take them as read. You will have observed that, during the year under review, there have been no spectacular advances, but steady progress has been maintained on all fronts. Equally, during the year in which we now are, 1960-61, and in 1961-62, I do not foresee more than steady and sustained progress. In effect, it may well be reckoned as a period of consolidation, if it is borne in mind that we shall be paying interest on the loans raised to finance our ammonium phosphate factory at Ennore and it will only be in the latter part of 1961-62 that we may expect to start receiving compensating revenue coming in from this project.

Company's Progress

"I think it would be appropriate, if I take this opportunity of reviewing the progress your Company has made since the war, and more particularly since 1956. Over this period, the Company's growth has certainly been considerable. In 1948, the year in which the management and control were transferred to India, our capital and reserves totalled £706,736 and our total assets were £1.6 million. At the end of the financial year 1955-56, during which the purchase of the ordinary shares of Parry and Company Ltd. took place, the consolidated capital and reserves of the Group rose to £1.8 million and the total assets to £5.2 million. On 30th September last, these figures were £3.28 million and £7.4 million, respectively. During the same period, the Group excess of current assets over current liabilities has risen from £304,000 in 1948 to £1.56 million on 30th September 1960.

"These figures tell their own story of expansion and needless to say that shareholders' interests have benefited accordingly. Bonus issues have been made and the dividend has been maintained at a satisfactory level. Progressively the emphasis on the Group's expansion has been on the industrial sector and, more and more, the pattern of our business is changing. As a result of this policy, we have been forced with great regret to dispense with some of our agency representations, in order to concentrate more of our finance and management resources on the administrative problems which are tied to the Group's industrial progress.

Problems of Sugar Industry

"Today we own a large and efficient sugar factory at Nellikuppam, crushing over 2,000 tons of cane per crop day and producing, over a season, more than 30,000 tons of white sugar. I am proud to say that the factory is as efficient as any other in India, and continues to show us a satisfactory return on our capital employed there. It is perhaps desirable to draw your attention to the problems which face the sugar industry in this country and South India in particular. The Government of India, in its present phase of expanding economy, is naturally most concerned about the exchange-earning potentials of every industry. The potentials of this industry have not been overlooked, especially after our experiences in 1956 and 1957 under fortuitous conditions. Today, we have an excess of production over consumption of the order of 500,000 tons per annum. Many of you, I expect, will be familiar with the economics of exporting this surplus to foreign countries willing to pay only current world prices; in other words, to pay prices that will yield about Rs. 400 per ton ex-factory. I hope the representatives of the industry currently negotiating for the sale on favoured terms to the United States of America will be able to report some success. Whatever the measure of success, let it be remembered that it involves a large measure of sacrifice also—sacrifice to Government revenues, to factory profit and to consumer prices.

Controls

"Despite the surplus of sugar available, we have the anomaly that control over price and distribution continues. To the extent that this control restricts sales, this continuation is bad, but one must, in fairness, recognise that the complete removal of control will increase the problems of arranging export of the surplus stocks and might well lead to forced sales at low prices by the financially weak units.

"Government's task is to retain control without allowing it to restrict offtake in any way. Furthermore, for the exports even under adverse conditions to be maintained to the extent of 500,000 tons per annum, some control of production will have to be exercised. It may not generally be realised that the cane for the 1961-62 season is already in the ground. The earliest that action taken this year can be effective will be in the 1962-63 season and delay beyond the end of this calendar year would mean one more year's delay with heavily increasing stocks. That the internal offtake may well catch up during the course of the third Five-year Plan is not beyond the bounds of reason, but, until it does, the industry will have this difficulty to face.

"Sugar producers in the South have benefited from the fact that their total production has been less than the demand and the price has been generally fixed by the cost of the sugar procured from North India; in other words, there has been a freight advantage which must inevitably disappear when the production in the South equals consumption. In common with other factories in South India, this Company has shared the freight advantage with the cane growers, so that it is only a relatively small part of the reduction in price that I anticipate will fall on this Company. The balance, I am afraid, will fall on the cane growers in terms of a reduced bonus on the cane price.

Sugar Price

"Finally, the whole question of sugar price is at present before the Tariff Commission. A report was published in April 1960 which divided the country into four regions, the Southern region comprising the States of Andhra Pradesh, Madras, Mysore and Kerala. The Tariff Commission states that a fair return for the industry is 12 per cent on employed capital within which to meet commitments under bonus and gratuity, interest on borrowed capital, dividend on preference shares, Managing Agents' commission and income-tax and, to quote the Commission's words, 'finally leave a residue to a large majority of the units in all the regions to declare reasonable dividends.' Obviously there is no margin with which Directors of sugar companies can rehabilitate their plant at costs which will absorb depreciation allowances four or five times over. It is precisely this point, namely, the refusal of the Tariff Commission to take this in, that urged manufacturers to prevail on Government to make a second reference. I can only hope that the Tariff Commission will see facts as they are. Meantime, dependent on the price fixed, we have a contingent liability on the cane crushed since November 1958 under the price linking formula announced earlier and still hanging in mid-air. For this, provision has been made in the accounts, but there is no means of knowing if this provision is adequate, for we do not know the extent of the ultimate liability, should it eventuate.

"Our Pottery and Chemical Works at Ranipet, which represent the other part of our old-established industrial business, continues to expand and, in pottery particularly, expansion has been considerable over the last few years. Development has been particularly significant in the case of sanitaryware for which, against the background of India's constantly improving standard of living, there is a growing—and I believe—stable market. We are now in the process of arranging for the installation of yet a third kiln in our Pottery Works involving an outlay of about Rs. 22 lakhs, and I hope shortly to be able to announce to you also the conclusion of an agreement for technical co-operation with a British manufacturer of sanitaryware, whose name enjoys world-wide repute.

Fertilisers

"But our largest expansion in recent years has undoubtedly been in the field of fertilisers. Up to date, the bulk of our trade has been the preparation and selling of conventional mixtures suited to particular soils and crops, and of straight superphosphate, and, while I believe our business in these lines will continue, we have, in order to keep abreast of the times and maintain our leading position, to ensure the availability of compound fertilisers which, in the more advanced countries, have virtually replaced the ordinary mixtures.

"As I told you last year, with these thoughts in mind, we ordered a complete ammonium phosphate factory from Messrs. Simon-Carves of Stockport, England, and this is now under construction at Ennore, about eight miles north of Madras. The situation is excellent, work is progressing according to plan, and I have every reason to believe that, subject to no unforeseen obstacles cropping up, the factory will be in production by the middle of 1962. In its first stage, it will produce about 50,000 tons of fertilisers. By modern standards, this is a relatively small output, but it would be as well to compare it with our present annual turnover in fertilisers of all description, including superphosphate from our subsidiary, Andhra Fertilisers Private Ltd., which is in the neighbourhood of 160,000 tons per year. From this you will see that the Ennore Factory will make quite a substantial contribution to our turnover, but there is no doubt that it would be in the best interests of the Company, if the size of this plant and its output could be doubled. With this object in mind, the plant has been laid out in such a way that the additional equipment required to double the capacity can be installed with the minimum inconvenience and your Directors have already started to consider ways and means by which this expansion may be undertaken.

"Additionally, we have just been advised, along with two very well-known American collaborators, of the issue of a licence from the Government of India to erect a fertiliser factory at Visakhapatnam in the State of Andhra Pradesh, to produce more than 300,000 tons of fertiliser per year. In this case, a substantial part of the capital is being found by our American friends, International Minerals and Chemical Corporation of Skokie, Illinois, and California Chemical Company of San Francisco so that our own contribution, although considerable to us, will be small relative to the total capital required. A new company will be promoted in India for the purpose and the public will be invited to participate in the issue in ample measure. Our association in the new company will be clear cut and we bring to the consortium a ready-made fertiliser sales organisation which, suitably expanded, will be available to market the new factory's output. Negotiations with our American friends—to whom I would like to pay this tribute, that they have been most co-operative and understanding—have also been based on our having adequate representation on the Board of the new company. The new company will be Director-managed. This new enterprise marks a great step forward, and I am sure shareholders will share the satisfaction of the Board that we have, in these various ways, been able to consolidate our leading position, in the private sector, in the manufacture and sale of fertilisers.

Finance for Expansion

"All these items of expansion have required, or will require, further finance and as you know a successful 'Rights' issue of ordinary shares was made last September and is reflected in the balance-sheet now before you. In addition, we have arranged the following loans which are being drawn upon as required:

The Commonwealth Development Finance Co., Ltd.	£600,000	=	Rs. 80,00,000
The State Bank of India		=	Rs. 180,00,000
Simon-Carves Limited	£275,157	=	Rs. 36,68,760

"These four items of finance were required specifically for our own new fertiliser factory at Ennore and we are confident that the contribution of equity capital which we have to make to the new Visakhapatnam Fertiliser Factory, to which I have referred to above, will be provided from our own resources.

"To complete the picture of our fertiliser activities, I would mention that the acid and superphosphate plant of our subsidiary, Andhra Fertilisers Private Ltd., at Tadepalle in Andhra State, came into production in November 1960. This plant is designed to produce 50,000 tons of superphosphate per year, for which there is a ready sale in Andhra. While we have experienced the usual teething troubles, the plant can stand comparison, for design and efficiency, with any other similar plant in India. I have been surprised recently to note that remarks have been made in some quarters to the effect that Andhra is being neglected by industrial companies whose head offices may be in other States and, in particular, we appear to be regarded almost as if we were foreigners! I very much deprecate these examples of parochialism. I would remind our good friends in Andhra that this Company and its subsidiary, Parry and Company Ltd., were established with a head office in Madras long before Andhra and Madras became separate States. We have always regarded Andhra, Madras, Kerala and Mysore as the main areas of our operation and the fact that Parry & Co. Ltd. has for many years managed a sugar factory at Samalkot, the fact that we have now established a superphosphate factory at Tadepalle, and finally the fact that we are partners in the enterprise to set up a very much larger fertiliser factory at Visakhapatnam should, apart from the existence for very many years of branch offices in the main cities in Andhra, convince any reasonable person that we are very far from failing to play our part in the industrial development of Andhra.

Central Budget

"It is customary for me to include in this speech some remarks regarding the budget. I am happy to note the budget has generally been well received, and while necessarily austere, has on the whole distributed the burden of additional taxation in even measure. The real test is its reaction on the price level and a lapse of time is necessary to be reassured on this point. Meanwhile, I welcome the adjustments made in taxation of inter-company dividends and the reduction of the tax on royalties payable to foreigners, which will surely encourage the inflow of outside capital which is sorely needed, if we are to achieve the targets of the third Five-year Plan. The tax concession to short-term technical personnel is also welcome. I further welcome the reduction of the rate of tax on bonus shares and express the hope that next year it may be possible for the Finance Minister to take one further step forward and abolish the tax altogether.

"The industrial pace in India today is faster than anything we have previously experienced. We shall, however, always strive to keep in step and, if possible, one step ahead. It follows, therefore—and here I am looking well into the future—that, as soon as we have achieved some measure of consolidation after our two recent fertiliser developments, we shall almost certainly have to consider further programmes of expansion which will again require additional capital and one of which I have already mentioned, namely, the doubling of the capacity of the Ennore Factory, and, when that time comes, I am confident that the goodwill and co-operation of shareholders will be forthcoming in ample measure.

"I conclude these remarks by expressing the sincerest appreciation of the Board of Directors of the excellent work put in during the year under review by all members of the staff and labour, and I personally wish to add to this my thanks to my co-Directors who have sustained me with excellent advice and co-operation."

The Directors' report and the accounts for the year ended 30th September 1960 were adopted and a final dividend on the increased ordinary share capital of the Company at the rate of 14-2/7 per cent subject to deduction of Indian tax, was declared for the year ended 30th September 1960 payable on 30th March 1961.

Messrs. C. R. Srinivasan, T. S. Krishna and A. M. M. Murugappa Chettiar were re-elected to the Board and the Auditors, Messrs. Lovelock and Lewes, were reappointed.

N.B.—This does not purport to be a report of the proceedings of the general meeting.

ADMINISTRATIVE PROBLEMS OF THIRD PLAN

HIGH DEGREE OF EFFICIENCY NEEDED FROM TOP TO BOTTOM

By Tirth Raj Sharma, M.Com., Ph.D.

THE third Five-year Plan, like the first and the second plans, has its own problems and prospects. But one thing is important, namely, the resources needed for the Plan have to be generated by the Plan itself. This will automatically require efficient and timely execution of all the Plan programmes, which alone can generate increased production and additional resources, as well as an efficient and effective administrative machinery to implement various policies for the mobilisation of these resources. Broadly speaking, administration, no less important than any other problem, appears to be the keystone of the arch of the third Plan.

Ours is a mixed economy and a large private sector co-exists with a rapidly expanding public sector. It is neither a completely free market economy uninterrupted by the Government nor is it a totally planned economy, where all the economic decisions are taken by the Government itself. We have a segment of economy called the private sector in which the function of the Government is mainly restricted to regulatory devices and another segment, the public sector, where the Government is itself the policy-maker and the administrator. We may define the tasks of administration in the third Plan as consisting of (*a*) the efficient execution of projects in the public sector, (*b*) ensuring timely implementation of the plan targets relating to agriculture, small-scale industries and social services, and (c) mobilisation of resources. For the proper performance of these administrative tasks, we require sufficient trained personnel, on the one hand, and an efficient administrative set-up, free from corruption and other potent evils, on the other.

In regard to the public sector undertakings, it is evident that the scope of the public sector has increased steadily during the first and second Plans. Although the contribution of public enterprises to the national plan is quantitatively small at present, it has to become much more significant in the third Plan. It is now an accepted proposition that the maximum economic returns should be secured from all public enterprises. To ensure that these surpluses will be fully realised and will become available for development in accordance with the national plan, action has to be taken along two main directions.

Freedom of Action

In the first place, the managements of public enterprises should have sufficient freedom of action and should be able to function in all their operations with considerable speed. For this, there should be adequate delegation of administrative and other powers from the Government, Central or State as the case may be, to the boards of enterprises, from the boards to the general manager and at different levels within the management itself. Probably this has been and will remain, at least for some time to come, the most neglected aspect of industrial and social administration of the country. The maintenance of proper relationship between the State and its various projects has assumed considerable importance during the last few years. It has not yet been realised that the fullest autonomy combined with the completest control is absolutely essential. Instances are not lacking where behind a facade of autonomy, companies and statutory corporations have been run as if they were Government departments. The practice of constituting the Board of Directors completely with or a majority of, Government officials has led to serious complaints, irregularities, administrative delays and gross inefficiency. It is not enough to say that, even in such advanced countries like England, a right balance between the autonomy of the public corporations and their public accountability has not been achieved. We have to direct our efforts to achieve it by evolving right conventions and proper attitudes, so that the entire machinery of control may be rationalised from top to bottom and Parliament may exercise its vigilant control over these gigantic enterprises as the owner and the custodian of the consumer's interest.

In the second place, as is emphasised in the Plan, there is need for a systematic audit of physical performance in all public enterprises, both in the construction stage and subsequently. For the purpose of ensuring that the physical assets created are commensurate with the original estimates and designs in the construction phase, it is suggested that there should be independent units to carry out test checks of performance in a limited number of cases. It is further added that, as a rule, these units might exist within the projects themselves, so that they could assist the responsible authorities in enforcing efficiency, economy and integrity at every point. There is no doubt that such a system of internal independent audit, which falls beyond the normal scope of the functions of the Auditor-General, will be a wise step towards achieving the objects set out in the charter or memorandum of association. But it is also important that an effective use of accounting and operational statistics, now known as "management accounting" as a tool of management, would be a prerequisite for the setting up of a more specialised and permanent machinery of audit. Our Prime Minister pointed out a few days back that, when the country was trying to advance in a "biggish" way, there must be a system of accountancy combining audit and performance. In this matter, too, the public sector should give a lead to the private sector. Besides this, it would also be worth trying to carry out an impartial study of all these projects. As a regular course, a team of experts drawn from leading manufacturing establishments from within the country as well as from abroad should be used to go into the working of these units. Such a body would definitely be in a position to suggest improvements and make recommendations in matters of accountancy, audit and physical performance.

Delegation of Power

Another important task of administration relates to carrying out the economic decisions efficiently in agriculture and small-scale industries. Undoubtedly, the decisions relating to improvement in the productivity of land ultimately rest with the farmers themselves, but the Government can help them by supplying credit, technical know-how and other basic materials required for improving agricultural productivity. This clearly involves a regular flow of information form the Government to the farmer and *vice versa*, so that the Government may know about the kind of help that the farmer needs. And for this a rationally conceived machinery of administration with adequate powers at different levels becomes a prerequisite.

Here, again, delegation of power must go hand in hand with decentralisation of responsibility. The Balwantrai Mehta Committee was of the opinion that the present district boards do not have the tradition or resources to take up developmental work. The Committee recommended the establishment of *panchayat samities* at the block level in the community development and N.E.S. areas with a *zila parishad* at the district level to co-ordinate their activities. The second Plan emphasised the need for creating a well-organised democratic structure of administration in which village *panchayats* would be closely linked with popular organisations at a higher level. The National Development Council has examined certain proposals in this regard and has agreed that the foundation of any democratic structure had to be democracy in the village. The two institutions which makes effective village democracy possible are the village *panchayats* and the village co-operatives. The first step, in any area, therefore, should be to establish the network of institutions needed at the village level. Democratic institutions at the district, block and village level should be viewed as parts of one connected structure of administration. Against the background of these considerations, the National Development Council affirmed the objective of introducing the democratic structure of administration within the district above the village level and approved of the general principle of giving responsibility for development to representatives of the people within the village, leaving the precise manner in which the principle should be applied to be worked out by each State according to its conditions.

Special Responsibility

Thus, special responsibility has devolved upon the *panchayats*, co-operatives and *panchayat samities* for the implementation of the development programme in the block. The establishment of these *samities* and co-operatives will undoubtedly make the task of administration much easier in dealing with the smallest of villages. They will be the primary agencies for carrying out the Community Development Programme which aims at the improvement of all aspects of rural life through the efforts of the people. If the *panchayats* and *panchayat samities* are expected to give special attention to measures for raising the level of living of the less privileged sections to the level of other sections in the country, the co-operatives will improve the productive apparatus in the country, generate enthusiasm among the villages for the Plan and pave the way for the creation of a new social order, in which the traditional life of the village community will have been restored.

The role of *panchayat samities* and co-operatives is specially important in the mobilisation of resources and in the implementation of development schemes. A major test to be applied is the manner in which each *panchayat samiti* makes the effort to mobilise local man-power and other resources and seeks the co-operation of the people of the area, while an essential objective of the co-operative movement is the inculcation of the habit of thrift and saving among the people of a particular area, so as to meet all the requirements of credit needs of the members. Thus, the task of administration becomes quite significant in regard to the mobilisation of resources for the plan. The essence of planning is to ensure that adequate real resources are mobilised for the programme of development and to maintain a balance between resources likely to be available and the claims to be made on these resources. For this purpose, too, the administrative machinery has to be effective, efficient and vigilant.

Training

It is usually held that mobilisation of manpower resources through the action of the executive authority of the Government may well amount to regimentation. But the village co-operatives themselves can effectively take up a number of schemes of development, the man-power requirements of which can be provided by the village itself. No doubt, the co-operatives can be in a position to stimulate the savings habit among their members and improve the collection of small savings. But it is a well-known fact that the lack of adequate managerial and organisational skill has been an important factor that has hampered a lot the progress of co-operative movement in this country. It must be clearly realised that any programme of expansion of the co-operative movement has to be preceded by energetic action in the direction of imparting training to the personnel of the co-operatives. If this still remains to be a neglected

aspect in the third Plan period, it will definitely prove to be a real bottleneck in the execution of the Plan programme.

As for the setting up of institutions at the district, block and village levels, it is significant to note that a number of States have already enacted legislation for their establishment and other States are likely to enact similar legislation before the commencement of the third Plan. The establishment of *panchayat raj* is a most significant step forward and represents the fruition of a general approach which was urged in both the former two Plans. The basic idea underlying this seems to be good, but it must be noted that, in the last few years, the experience gained from the working of these *panchayats* has been far from satisfactory. It has given rise to class conflicts, caste distinctions, group rivalries and party feelings. The system itself has no or little impact on the lives of the common people of the village community. It is only through the development of proper attitudes and well-directed efforts that the mass of the people can begin to feel visible signs of change and there can be a sense of participation and the necessary enthusiasm to carry forward the common task waiting ahead.

"Administration" Defined

The present administration is very often defined as:

> Present administration=British administration —efficiency+corruption.

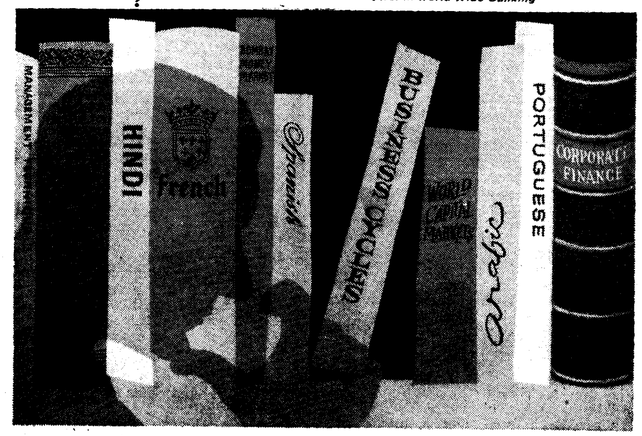
This formula provides, to some extent, a correct definition of the country's administration. The administrative machinery is corrupt, on the one hand, and inefficient, on the other. These are the basic weaknesses which are visible in the entire sphere of administration. How to remove them has been an important issue. The administration can inspire confidence among the people only by being honest and efficient. There has been a widespread feeling that corruption in administration has increased in the last few years at all its levels. It is irrelevant to say that the scope for corruption at higher levels is much more limited than at lower levels. Wherever and at whatever form it is, strictest measures need to be taken to root it out. This will require a cadre of responsible and honest officers free from corrupt practices and above party politics. Vital changes of spirit and character are absolutely essential and more sustained efforts are called for in this direction during the third Plan period.

Lastly, a few words about efficiency. It is essential that the administrative personnel carry out their duties efficiently and without any waste. The administration should accept the democratic decisions of the decentralised agencies and should try to cultivate the spirit of co-operation which will bridge the gulf between the ruler and the ruled. Instances are not unknown where administrative delays have been responsible for the rampant inefficiency in the Government departments. There is the lack of urge on the part of officers to do things quickly. The main reason for such delays, as is often advanced, is the complicated system of Government where responsibility is so spread out as not to touch anybody. The officers should not merely pass orders and take the path of least resistance, but should have the courage to take the initiative so that delays may be reduced to the minimum.

This involves another big problem of decentralisation of authority and delegation of powers from the top level to the lower levels of administration. Decentralisation or delegation is not so important as the execution or exercise of such a power. "Power corrupts and absolute power corrupts absolutely." Power in the hands of those who are technically untrained and incompetent leads to a lot of exploitation and its misuse. Probably, the country is new to this significant phenomenon. Here, again, we have to exercise a lot of caution and care. Some of the States, like Rajasthan and Andhra Pradesh, which are trying this historic experiment in *panchayat raj*, have not been perceptibly successful, if not totally a failure. The Organisation and Methods Division of the Secretariat is taking some concrete steps to improve efficiency at that level and similar arrangements are called for at the lower levels during the third Plan period. Thus, the execution of the Plan is, to a large extent, a matter of efficient organisation. It would be poor organisation to employ wastefully the scarce resources of executive personnel available to the administration.

How many languages should your banker speak ?

The FIRST NATIONAL CITY BANK of New York
First in World Wide Banking



You'll enjoy a unique plus when you bring your CITIBANKER in on your financing deliberations. Naturally, your CITIBANKER is fluent in the language of your business. But also, because his everyday job has world-wide dimensions, he talks to international businessmen around the world, in THEIR OWN TONGUES about Commerce and Finance. When you plan to explore new markets or more imaginative financing, get the benefit of the broader perspective that First National City's world-wide organisation provides. Call your CITIBANKER in Bombay or Calcutta.

Over 160 Branches in 30 countries

BRANCHES throughout India, Pakistan, Ceylon, Burma, Aden, Somali, Zanzibar Island, Kenya, Uganda, Tanganyika Territory and Northern and Southern Rhodesia.

The Bank conducts all classes of Banking and Exchange Business throughout the world. Trusteeships and Executorships are undertaken.

Bombay Branches: 90, Mahatma Gandhi Road; Mint Road (Corner of Mint Road and Sir P. M. Road): 270/272 Dr. Dadabhoy Naoroji Road (Lloyds Branch); 21/29 Princess Street (Lloyds Branch).

LUXURY OF TOO MANY PUBLIC HOLIDAYS

MR. C. H. BHABHA EXPRESSES CONCERN

THE unusually large number of holidays in March 1961, which have made it perhaps the shortest working month of the year, has again brought to the fore the question whether a developing country like India can afford the luxury of so many holidays. During the past month there were as many as six holidays, excluding Sundays. If account is taken of Saturdays, which are half-holidays, the total number of holidays during the month works out to 12, that is, about 40 per cent of the number of days in the month. Although the incidence of holidays is not as high every month as in March this year, there is no doubt that the total number of holidays in a year in this country is the highest in the world. The Prime Minister, Mr. Nehru, whenever he gets the chance, never fails to remind the people that, at a time when every nerve of the nation needs to be strained to increase production and improve the standard of living of the people, to think of leisure is sinful. And he himself has set an example by following for years an eighteen-hour workday. But, ironically, the Government which he heads has not done enough to reduce the number of holidays in the country. While it is true that the number of public holidays for the Central Government employees other than railway and postal employees has been reduced since 1960 to 16 or 17 from the previous 23 in a year, still the fact remains that the number of paid holidays in this country is substantially higher than in the West. As far as commercial employees of banks, insurance companies, etc. are concerned, they continue to enjoy the same number of holidays as before. This is all the more deplorable especially because the case presented by Dr. P. J. Thomas, in his resolution in the Rajya Sabha two years back, for a drastic reduction in the number of public holidays has still greater validity now in the context of the national effort required for implementing the third Plan. The following passage in the Second Central Pay Commission's report has also not lost its validity in spite of the reduction, referred to above, in the number of holidays for the Central Government employees.

"Compared with other countries, about which we have information, there are certainly far too many public holidays in India: in none of those countries does the number of public holidays exceed nine as against 23 for the office staff and 14 to 16 for the generality of factory and other similar staffs here. The public holidays available to industrial workers in the U.K. are usually only six. It is true that in some Western countries a five-day week has been introduced in offices and even factories, but the hours of work within the shorter week are generally not fewer than those worked by comparable employees under our Central Government, and thus, in effect, employees here continue to have more holidays."

A Bold Lead

The Punjab Government, alone among the State and Central Governments, had the courage and the wisdom to reduce, as early as in 1959, the number of public holidays in the State to 12, as compared with 31 to 33 days allowed by most State Governments. The schedule of work as well as the number of working hours were also rationalised with the result that the number of working hours increased by about 25 per cent from 1,348 to 1,710. The Central Pay Commission commended this bold step, especially the reduction in the number of public holidays, as worthy of emulation by other State Governments.

As for commercial establishments, the present unsatisfactory position in respect of holidays equally calls for remedy. In this connection, Mr. C. H. Bhabha, Chairman of the Indian Banks' Association, has rendered a distinct service in calling attention to the large number of bank holidays in this country at the recent annual meeting of the Association held in Bombay. Quoting statistics of days and hours worked, Mr. Bhabha pointed out that the number of hours of work for bank employees in India was the lowest among the advanced countries while the number of public holidays enjoyed by bank employees in the country was the highest. For instance, he pointed out, the number of public holidays was eight in Belgium, nine in Denmark, 10 in U.K. and Norway, 12 in Sweden, 14 in Italy, 15 in West Germany (plus holidays on every third Saturday of each month) while it was as high as 25 in India. The number of days of privilege leave, to which bank employees are entitled every year, was also larger in India. The number was only 14 in U.S.A., 18 in U.K. and 18 to 24 (according to age groups) in W. Germany, while it was as high as 30 in India for employees of 'A' and 'B' class banks and 22½ for employees of 'C' and 'D' class banks. The number of working hours per week was only 36½ in India, as compared with 43¾ in W. Germany, 42 in the U.K. and 40 in the U.S.A. As a result of these, the number of hours bank employees work in India was only 1,610, as against 1,970 in W. Germany, 1,950 in the U.K. and 1,920 in the U.S.A. Commenting on the situation, Mr. Bhabha observed:

"When the urgent need of our country is to bring about as rapid economic development as possible, it is very unfortunate that among the countries mentioned above, India has the smallest number of hours of work every year for its bank employees. In my opinion, this aspect of banking in India should be considered seriously so that it may fulfil its role properly in the larger interest of our national economy."

Untenable Arguments

The usual arguments advanced against raising, or for reducing, the working hours in India are that the climatic conditions in this country are such as to make work more exhausting than in countries having temperate climates, that extension of working hours beyond a certain point brings only diminishing returns and increased absenteeism and thus becomes self-defeating and that employees should be enabled to have increased leisure for his personal enjoyment, cultural pursuits as well as for the maintenance of health and efficiency. After examining all these arguments and all the relevant circumstances, including climatic conditions and social environment, the Pay Commission, it may be recalled, came to the conclusion that the weekly hours of work of office staff in the Government are on the low side, that claims usually made about heavier strain of work on office staff are exaggerated and that an increase of working hours would be justified. It, however, did not recommend raising of the working hours in the hope that more intensive effort would be put in during the present hours, thus leading to the same result as extension of hours. What the Pay Commission said of Government offices is also true of banks and other commercial establishments. As the Commission rightly pointed out, increased leisure becomes valuable only when the rewards of leisure become more important than the fruits of additional labour. The stage of struggle for a minimum wage needed for a living just above the subsistence level is, perhaps, not the one at which provision of increased leisure, beyond the requirements of health and efficiency, should be the ground or the justification for reduction of working hours. On the other hand, until economic conditions improve substantially—and this can happen only when production increases as a result of more and better effort—what is required is not shorter but longer working days. A country whose *per capita* income is among the lowest in the world surely cannot afford the luxury of its factories and commercial establishments being closed for periods longer than the absolute minimum required to maintain the health and efficiency of the employees.

LABOUR SITUATION

The shift in emphasis from legislation in labour matters to co-operation between parties under Government auspices has been one of the special features of industrial relations in recent times, according to the annual report of the Union Ministry of Labour for 1960-61. The report says that, as a result of a review of the labour policy pursued in the second Plan, it is felt that, while Government's intervention in industrial disputes in the context of planning is unavoidable to a certain extent, real progress can be made only by the development of co-operative arrangements by the parties themselves in response to the changing needs.

The year under review, according to the report, brought tangible results to the working class through the implementation of recommendations of the Wage Boards for cotton textile and cement industries. The recommendations of the Textile Wage Board have been implemented by about 75 per cent of the units in the cotton textile industry. Attempts to secure acceptance of the recommendations by the remaining units are continuing, and, if necessary, suitable legislation will be promoted for the purpose. The recommendations of the Cement Wage Board are also in the process of implementation. The study in regard to workload suggested by the Wage Board, is in progress in a few selected cement factories by the Chief Advisor of Factories.

The report says that the Code of Discipline continued to exercise a restraining influence on industrial unrest by promoting an awareness of mutual obligations among the parties. The tripartite Implementation Committees at the Centre and in the States have been responsible for bringing about settlements in a number of complicated disputes. As a result of efforts made by the Central Implementation machinery, the number of cases settled out of court increased from 41 per cent in 1959 to 54 per cent in 1960. While in 1959 the time-loss was 7.8 million man-days, 1959 registered a decline of about 2.2 million and 1960 a further decline of about 1 million. Considering the increase in the number of industrial workers, the decline, the report maintains, is indicative of greater industrial peace during 1960.

In the field of labour legislation, a number of amendments to existing enactments were carried out either for the purpose of plugging loopholes in the existing legislation or for securing effective implementation. The Indian Trade Unions Act, 1926, and the Plantations Labour Act, 1951, were amended, and the scope of the Employees' Provident Funds Act was extended to cover small establishments employing a minimum of 20 workers. The Motor Transport Workers Bill, 1960, when passed into law, will regulate matters like hours of work, spread-over, overtime, leave with wages, etc., of workers in motor transport undertakings; while the Maternity Benefit Bill, 1960 seeks to reduce the disparities in benefits under the different Maternity Benefit Acts in the country.

The Employees' State Insurance Act was extended during the year to cover about 16 lakhs of workers in 112 centres. Roughly, one-third of this number has been covered along with their families. The Employees' Provident Funds Act, 1952, which initially applied to six industries, covered 4 industries by the end of December 1960, and the number of workers getting the benefit of provident fund was 28.2 lakhs.

The report of the Second Agricultural Labour Inquiry, carried out during 1956-57, was published during the year. In view of the changes in concepts and definitions, the results of this inquiry and the preceding agricultural labour inquiry cannot be strictly compared in all their details. However, adds the report, from a critical examination it would be seen that the picture presented by the second inquiry is perhaps not as gloomy as might appear at first sight from the bare statistics recorded. During the year, there was no significant change in the number of Joint Management Councils set up in various units to promote the scheme of labour participation in management. The workers' education programme, however, launched in 1958, made steady progress under a semi-autonomous board—the Central Board for Workers' Education.

Notices

ISAAC HOLDENS (INDIA) LIMITED

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE register of members and share transfer books of the Company will be closed from 20th April to 6th May 1961, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO., LTD.,
Managing Agents

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has declared an additional dividend on the Preference Shares in the Company in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 in respect of the year ended 30th September, 1960, and also sanctioned payment of dividend on the same for the half-year ending 31st March, 1961.

The dividends will be paid on or after the 20th April, 1961 to those shareholders whose names appear on the Register of Preference Shareholders on the 18th April, 1961.

The Register of Members and Share Transfer Books for Preference Shares will be closed from the 10th April, 1961 to the 18th April, 1961, both days inclusive.

By Order of the Board,
A. G. GIDLEY,
Secretary.

12, MISSION ROW,
CALCUTTA-1, *1st April*, 1961.

CHEMICALS MAKE HEADWAY

MR. SHAH TELLS INDUSTRY TO BE COST-CONSCIOUS

DESPITE several handicaps, such as shortage of raw materials and imported machinery, India's chemical industry has given a good account of itself during the last decade of planning. Industries which have made substantial progress include sulphuric acid, soda ash, caustic soda, calcium carbide, titanium dioxide, phosphatic and nitrogenous fertilisers, penicillin and hydrogen peroxide. Besides, a wide range of new industries have come into being; these include heavy soda ash, hydrosulphite of soda, industrial explosives, dyestuffs and pigments, polyethelene, saccharine, nicotinic acid, procaine hydrochloride, vitamins A, C, B_6, B_{12}, organic chemicals and fine chemicals. In addition, ambitious schemes are on hand for the manufacture during the third Plan period, of such chemicals as intermediates for synthetic drugs and dyes, streptomycine, phenol, methanol, carbon black, synthetic detergents and synthetic rubber. Thus, while about ten years ago, India was virtually "bottlers and processors" of imported drugs, it is now fast becoming self-sufficient in respect of several basic chemicals and intermediates. Already, the total value of chemicals manufactured in India is Rs. 435 crores, as of 1960. This may be compared with Rs. 340 crores in 1959 and only Rs. 120 crores five years ago. The following table brings out in this connection the trend of increase in production of certain selected chemicals:

(In thousand tons)

	1960 (January-October)	1959	1956
Sulphuric acid	300	269	165
Caustic soda	81*	66	39
Soda ash	110*	94	84
Chlorine liquid	26*	24	15
Bleaching powder	5*	5	5
Bichromates	5*	4	3
Superphosphate	276*	250	81
Ammonium sulphate	314*	339	339
Copper sulphate	3	3	2
Zinc oxide	7	7	6
Paints and varnishes	40	54	42
Glycerine (refined)	5	4	3
Calcium carbide	8*	4	3
Alum	4	5	3
Potassium chlorate	3	3	2
Industrial alcohol ('000 bulk gallon)	45,000†	12,200	7,883
Power alcohol ('000 bulk gallon)	40,000†	7,524	10,243

* In metric tons. † Litres.

All this progress of the chemical industry was not confined merely to the quantum of output, for, as Mr. Manubhai Shah, Minister for Industry, observed in his inaugural speech at the Indian Chemical Manufacturers' Association, held at Bombay last week, there was also marked improvement in the quality of indigenous products. In fact, he added, the quality of Indian chemical products was second to none of the foreign products. It is probably this quality factor that seems to have enabled the industry to increase its exports from Rs. 5 crores in 1959 to Rs. 7 crores in 1960.

Research

While Mr. Shah complimented the industry on its steady progress in various fields, he also made it clear that there was still room for improvement. In this connection, he advised the industry to set up a co-operative research organisation, which would serve to step up the efficiency of the industry. He gave an assurance to the industry that the Government of India would consider granting aid to the tune of Rs. 55 lakhs annually, or even more, for such a research unit. Another important suggestion Mr. Shah made was that the industry should co-operate to establish plants for the fabrication of chemical equipments and components within the country, instead of depending on imports. He emphasised that it was the moral and national duty of every industrialist to see that the prototype of imported unit was built within the country, if possible with further improvement, for subsequent projects. Drawing attention to another major lacuna in the development of chemicals, Mr. Shah said that the growth of coal-based chemicals was too slow. He suggested that every State should have at least a small coke oven battery which would provide a wide range of by-products for the chemical industry.

Mr. Shah made a fervent plea to the industry to be cost-conscious lest it be priced out of international markets. Admittedly, prices of several chemicals in India are not competitive. Analysing the causes of relatively higher prices, Dr. K. A. N. Rao, the retiring President of the Association, observed that this was due to higher cost of inorganics, dependence on imported basic raw materials subjected to higher import duty than the finished products in many cases, the small size of several manufacturing units and, consequently a lower standard of efficiency. Dr. Rao added that the excise duty imposed recently on certain chemicals, dyestuffs as well as patent and proprietary medicines had adversely affected the industry. While the Government had all along been impressing on the manufacturers the need for holding the price line, such duties increased the cost of these items to the consumer not only because of direct levy but also because of the increase in cost of supplies from ancillary industries like chemical raw materials, glass, paperboard, cellophane paper, etc. The classification of patents and proprietary medicines, according to him, was also defective. The Association had already represented to the Union Ministry of Finance for a reduction in the excise duty and for proper classification. Dr. Rao also referred to the shortage of coal, cement and electric power required by the industry.

Procedural Delays

A common complaint of the business community is the procedural delays involved in the sanctioning of licence applications by the Ministry of Commerce and Industry and the Development Wing. The Government, no doubt, has been alive to this problem and it has introduced several measures to minimise the delay. There are, however, still loopholes which can be overcome if earnest efforts are made. Referring in particular to the difficulties faced by the industry seeking foreign collaboration, Dr. Rao observed as follows:

"For securing a licence to start a new industry, where foreign collaboration is envisaged and imported capital equipment is necessary, three separate sanctions have to be obtained from Government: (1) a licence under the Industries (Development and Regulation) Act, (2) approval of collaboration terms, and (3) import licence for capital equipment where such import is necessary. When a company submits an application for an Industries Act licence, it is advised by the Ministry to forward an import licence application for capital equipment to the Chief Controller of Imports and Exports at the same time. In practice, no action is taken by the C.C.I. and E. until after an Industries Act licence is granted and the Capital Goods Committee sanctions the import of capital equipment and the Foreign Collaboration Committee approves of the terms of collaboration where it is necessary. Even in the Ministry, it is only after the Licensing Committee has submitted its recommendation that the C. G. Committee takes up consideration of the other aspects of the scheme. It is believed that even the Licensing Committee would examine the foreign exchange required for import of capital goods and the collaboration terms before recommending the grant of an Industries Act licence. Such being the case, it is for consideration whether all these three stages may not be taken up more or less at the same time, so that the delay in implementing a project may be reduced."

Dr. Rao's suggestion for the expeditious processing of applications for collaboration deserves to be examined by the authorities for implementation. It is to be hoped that avoidable delays of the kind mentioned by Dr. Rao will not hamper the steady growth of the chemical industry.

(*Concluded from next column*)

receive regular visits from the U.K. and Continental manufacturers. It is recommended that the Reserve Bank of India should consider favourably applications from reputable manufacturing organisations for their representatives to visit foreign markets for the purpose of promoting export trade.

5. Commercial secretaries in Indian embassies be advised to submit to the Government a detailed list of the countries where biscuits are imported as well as the annual value of such imports. Such information will be useful in order to gauge potential markets that exist in the respective countries.

The Government of India is making every effort to diversify the pattern of export trade by encouraging export of new industrial manufactures. Mr. Khanna's suggestions, viewed thus, are of added significance and deserve to be given due consideration by the Government of India and Reserve Bank.

INDO-PAK TRADE

Following a review of trade between India and Pakistan under the limited payments agreement signed in 1959 by the representatives of the two countries at New Delhi last week, it has been decided to raise the total value of mutual trade for next year to Rs. 12 crores, including the carry-over (Rs. 3.5 crores) from the unfulfilled part of the amount fixed for last year. The current year's value of trade under the agreement continues to be the same as for last year, namely, Rs. 8.2 crores or Rs. 4.1 crores either way. There was a sizable shortfall in trade under the limited payments agreement last year. As against the ceiling of Rs. 4 crores, India's imports from Pakistan under the limited payments agreement were only about Rs. 2.3 crores in return for goods worth Rs. 2.6 crores.

PROGRESS OF BISCUIT INDUSTRY

PLEA FOR IMPORTS OF MORE MACHINERY

THE biscuit industry has made rapid strides in the last few years. The total output of the industry rose from only 11,578 metric tons in 1955 to 20,069 metric tons in 1959, and further to 23,372 metric tons last year. (These figures exclude "service biscuits" manufactured for Defence Forces.) It is estimated by the Development Council for Food Processing Industries that the domestic demand for biscuits will go up to 25,000 tons by the end of the third Plan. Already, the industry has an annual installed capacity of 30,000 tons on a single-shift basis. If the last year's rate of growth of output is maintained, the industry will have passed the 25,000-ton mark in the current year. The future development of the industry will, therefore, depend largely on its capacity to compete in world markets and secure assured markets for Indian biscuits abroad. The industry, of course, has made some progress in this regard, the value of total exports having gone up from Rs. 2.44 lakhs in 1959 to Rs. 2.55 lakhs in 1960.

Indian biscuit manufacturers are relatively late-comers in the field of world trade and, therefore, have to compete with their counterparts from several advanced countries, such as the U.K. and Australia. It is, therefore, imperative that the Indian industry should spare no efforts to increase its efficiency and reduce the cost of production. Much leeway has to be made up in this field. Machinery installed in most of the factories, for instance, is obsolete and worn out. As pointed out by Mr. A. C. Khanna, President of the Federation of Biscuit Manufacturers of India, at the annual meeting of the Federation held at New Delhi on the 1st inst., machinery and equipments of many units are in such a bad condition that it is more economical to replace the entire machinery rather than the damaged parts, which again are generally not available, as the foreign manufacturers have ceased to produce such parts for obsolete machinery. Mr. Khanna observed that biscuit machinery manufacturers abroad were introducing automation. He added that some of the biscuit manufacturers in the U.K. had electrically-controlled plants, which automatically feed in correct sequence and proportion flour and other ingredients into one end of a bake-house and turn out biscuit at the other. According to him, the industry would need imports of machinery worth about Rs. 30 lakhs during the two years 1961 and 1962. Mr. Khanna called upon the Government to sanction this modest amount for the renovation of the industry. In view of the dire need for modernisation of the industry, it is to be hoped that the Government will consider Mr. Khanna's suggestion sympathetically.

Export Promotion

Mr. Khanna revealed that Indian exporters had been quoting prices lower by 30 to 40 per cent, as compared with domestic prices. If then Indian biscuits have not made much headway abroad, this may be due to the fact that "dealers there prefer to buy well-established brands, popularised after several years of continuous advertisement and propaganda." This only highlights the need for concerted measures for export promotion on the part of Indian exporters and Government. In this connection, it will be interesting to hear from Mr. Khanna certain suggestions for promoting exports. His suggestions are as follows:

1. Sugar and flour used in the manufacture of biscuits for export be supplied at subsidised rates or rebate be allowed on the difference between the internal prices and the prices prevalent in the competing countries, such as the U.K. and Australia.

2. After repeated representation, the Reserve Bank of India has agreed that the rate of commission admissible for foreign agents be raised from 5 per cent to 7½ per cent, but this too is not adequate since we understand that biscuit manufacturers in other countries are allowing their agents abroad a higher rate of commission, that is 10 to 15 per cent.

3. The manufacturers may be allowed to remit for publicity and advertisement, money upto 10 per cent of the sales abroad. All our European competitors regularly advertise in foreign markets, even though they have been established there for the past 50 years. It is, therefore, still more necessary that at least similar facilities be made available to our members.

4. Over the past years, we have experienced exceptional difficulty in obtaining foreign exchange for our representatives who are sent to visit overseas markets, and, if we are to promote our export trade, personal touch with established foreign dealers is essential. In the initial stage, our representatives be permitted to contact and appoint overseas customers or agents who are accustomed to

(*Continued in previous column*)

E.I.D.'S SALES AT ALL-TIME HIGH LEVEL

FINANCIAL POSITION VERY SOUND

THE East India Distilleries and Sugar Factories Limited (Secretaries: Parry's Holding Private Ltd.) is one of the leading sugar producing companies in India with a wide variety of other activities as well. The Company's sugar plant has a capacity to crush 2,200 tons of cane per day and the sugar is produced on double sulphitation process. The Company has a distillery which manufactures various kinds of spirits required for industrial and medicinal purposes. It also owns chemical, ceramics and fertiliser works.

The year ended 30th September 1960 was a fairly good one for the Company. The crushing season was longer—182 days, as against 173 days in the previous year—the quantity of cane actually crushed being 344.648 tons, as against 326,394 tons. Consequent on enlarged crushing operations and in view of a further improvement in the average recovery per cent of sugar (from 8.32 in 1957-58 and 8.67 in 1958-59 to 8.92 in 1959-60), sugar production was higher by 2,468 tons at 30,775 tons. However, the average quantity of cane crushed per day was below the installed capacity to the extent of 300 tons.

The sale proceeds of the Company have touched an all-time high of £11,168,000 in 1959-60, as against £10,472,000 in the previous year and the previous high of £10,851,000 in 1957-58. Other income has also increased from £668,000 to £721,000, due to the expansion of diversified activities. The increase in receipts, however, has been offset by the rise in expenses from £9,744,000, to £10,354,000, with the result that the profit margin has receded from 8.32 per cent to 8.02 per cent. Thus the gross profit shows only a small increase of £24,000 to £896,000. After providing £381,000 for taxation (as against £407,000 in the previous year), the net profit stands higher by £46,000 at £393,000. The total dividend on ordinary shares is slightly lower at 21-3/7 per cent subject to taxation, as against 20 per cent paid in the previous year, but it must be noted that the final dividend of 14-2/7 per cent is on increased capital, following the issue for cash of 550,050 new ordinary shares of £1 each.

There is some difference in the figures relating to the net profit of the East India Distillery. For instance, as against the profit of £331,000 shown in the last year's report, the figure for previous year in the current year's accounts shows an amount of £386,000. Again, the profit of the Holding Company for 1958-59 as shown in this year's report is £338,000, as against £283,000 mentioned in the report for 1958-59. The discrepancy is probably due to the change in the figures for the previous year made in order to conform to the lay-out of the accounts for the current year.

The comparative working of the Company for the last four years is indicated in the following table:

(In thousands of £s sterling)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	11,168	10,472	10,851	10,217
Other income	721	668	514	50
Expenses	10,354	9,744	9,986	9,545
Excise duty on sugar ..	693	524	587	867

* Subject to deduction of tax.
† Interim dividend only after deduction of tax.
§ Subject to payment of final dividend on preference capital.

The balance-sheet shows the increase in the ordinary share capital from £550,000 to £1,100,000 to finance the expansion programme of the Ennore Factory. As already stated, the Company issued 550,050 ordinary shares of £1 each at a premium of 10s. to both ordinary and preference shareholders in the proportion of 11 shares for every 15 ordinary and preference shares held. The share premium account has increased by £275,000 to £355,000. The total reserves of the Company, excluding reserves for future taxation, have gone up from £1,474,000 to £1,861,000. The gross block stands at £1,991,000. As the depreciation provided so far amounts to £1,188,000, the net book value of the fixed assets is £803,000. The financial position of the Company is very sound inasmuch as the current assets (inclusive of investments) at £6,347,000 are well above the current liabilities of £3,675,000 to the tune of £2,672,000; the excess a year before was £1,730,651. A large part of the increase in excess is due to the inclusion in cost and bank balances of the proceeds of the share issue which had not been utilised at the end of the year.

The Directors' report gives some idea of the progress made by the Company in spheres other than sugar production. Sales of spirit, carbonic acid gas and chemicals were at the usual level. In the ceramics division, the year under review was largely free from interruptions to production arising from kiln breakdowns and, therefore, production, sales and profits were maintained at an extremely satisfactory level and made a substantial contribution to Group profits. The emphasis on quality has been maintained. Raschig rings, the production of which was started in 1958, found a good market during the year.

Turnover in the fertilisers division was larger than in the previous year. The increase would, however, have been more marked if the allotments by the Government of nitrogenous fertilisers for incorporation in Parry fertiliser mixtures had been sufficient to meet the expanding demand. Construction work has now commenced on the new ammonium phosphate factory at Ennore near Madras. Substantial progress has been made and production is scheduled to start in June 1962. In merchanting business, the emphasis has remained on the sale of products manufactured in India. During the year, steps were taken to streamline the sales organisation with a view to reducing the amount of capital employed in this side of the business and to offset the tendency towards narrower margins of profit.

The Company has so revised the Articles of Association as to fix the preference shares dividends at 9 per cent taxable, as against 7 per cent tax-free in previous years. It has already made payment at the revised rate for the two years ended 30th September 1960.

The £1 ordinary shares of the Company are currently quoted at Rs. 44.20 and, on the basis of a net dividend of Rs. 2 per share, the net yield works out to 4.5 per cent.

(*Concluded from next column*)

pany had provided for depreciation a sum of Rs. 28.26 lakhs. In addition, the capital works in progress amounted to Rs. 1.04 lakh.

In 1948, consequent on revaluation of fixed assets, with a view to bringing its book value on a par with the then prevalent market value, a sum of Rs. 7.65 lakhs pertaining to the appreciation in the value of block was adjusted in the books by creating a revaluation of fixed assets reserve at Rs. 6.15 lakhs and crediting the balance of Rs. 1.50 lakh to the capital reserves. In view of audit objections in regard to the provision of depreciation on the value of assets, the Company has written down the value of fixed assets by wiping out the revaluation of fixed assets reserve (Rs. 6.13 lakhs) and debiting the capital reserves by Rs. 1.50 lakh.

The reserves and surplus aggregate over Rs. 56 lakhs, which compares well with the paid-up equity capital of the Company amounting to Rs. 20 lakhs. The general reserves exceed Rs. 14.5 lakhs and the sums at the credit of mechanisation reserve (Rs. 21.5 lakhs) and building reserve (Rs. 8.9 lakhs) are adequate.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 43.62 *cum-div.* On an *ex-div.* basis, the approximate yield works out to 9 per cent subject to taxation.

PERMANENT MAGNETS LTD.

Permanent Magnets Ltd. has announced that all formalities in regard to the purchase of land in Borivli, Greater Bombay, have been completed and that possession of the land will be taken shortly. Construction work at the site is scheduled to commence by the middle of next month and be completed by the end of December 1962. Orders for the purchase of machinery and equipment will be placed within three or four weeks, and they are expected to come into India by the end of January 1962. The plant is expected to go into production towards the close of April 1962.

ORISSA MINERAL'S RESULTS SATISFACTORY

RESERVES STRENGTHENED

DESPITE increased earnings, particularly from iron ore sales, the gross profit of the Orissa Mineral Development Company Ltd. [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] for the year ended 30th June 1960 was a shade lower at Rs. 31.65 lakhs, as against Rs. 31.95 lakhs for the previous year. But the net profit is higher at Rs. 17.37 lakhs, as against Rs. 14.66 lakhs. This is due largely to the notable reduction in tax liability, the provision actually made being not more than Rs. 8.40 lakhs, that is Rs. 3.10 lakhs less than that provided in 1958-59. The sum allocated to depreciation is, of course, higher at Rs. 3.59 lakhs, as against Rs. 2.92 lakhs. The net profit is arrived at after adjusting in the accounts for the year a sum of Rs. 2.87 lakhs pertaining to 1958-59. Notwithstanding the handsome improvement in net profit, the Directors of the Company have only maintained the dividend at the previous year's level of 36 per cent taxable, for they have perhaps considered it prudent to strengthen the reserves. Thus, more than half of the net profit—Rs. 9.95 lakhs—has been set apart for reserves. A sum of Rs. 1.11 lakh has been carried forward, as against Rs. 88,340 in 1958-59.

Encouraged by the expanding needs of the steel plants in both private and public sectors, the Company has stepped up its raisings of iron ore. The output in 1959-60 was higher at 702,000 tons, representing an increase of about 20 per cent over the previous year. Despatches also registered an improvement of over 100,000 tons. It is, however, unfortunate that the full advantage of the increasing demand for iron ore raised by the mines, could not be availed of by the Company as the railways could not ensure necessary transport facilities. Similarly, the acute wagon shortage hindered the quick movement of ore from the mines to the docks for being exported. The output and sales of manganese ore and manganese dioxide declined during the year. The Company's deposits of manganese dioxide ore are stated to be nearly on the verge of exhaustion. Even so, there has been an increase of 12 per cent in the sales proceeds of the Company.

The performance of the Company in the last four years is depicted in the statement below:

(In lakhs of rupees)

	1960	1959	1958	1957

*Subject to deduction of tax.

In the course of the last three years, the liabilities of the Company have increased by over Rs. 20 lakhs. During 1959-60 alone, the Company borrowed about Rs. 5 lakhs from banks to meet its working capital. The total liabilities at the end of June 1960 amounted to about Rs. 75 lakhs. As against these liabilities, the current assets exceed Rs. 68 lakhs, supplemented by investments, mainly in the shares of sister concerns, of about Rs. 43 lakhs. The holding of the Company in the Bolani Ores (Private) Ltd., an associate concern under the same Managing Agents, alone exceeds Rs. 34 lakhs. Considering the heavy liabilities and financial needs of the Company to meet its own requirements, the investment of heavy sums in outside securities would appear to be a little on the high side. The working of Bolani Ores (Private) Ltd. is stated to be satisfactory and despatches of ores to the Durgapur Steel project commenced in April 1960. Another partnership firm in which the Company had interest is the Eastern Shipping Syndicate which ceased its activities since August 1957. The dissolution proceedings are in progress.

The net additions to block during the year amounted to Rs. 12 lakhs, of which the cost of earth-moving equipment was Rs. 8.6 lakhs. On a gross block of Rs. 68.91 lakhs (after revaluation of fixed assets) at the end of June 1960, the Com-

(*Continued in previous column*)

BRAITHWAITE & COMPANY EARNS MORE

DIVIDEND RAISED AGAIN

BRAITHWAITE and Company (India) Ltd. (Chairman: Sir John Douglas Keith Brown) had very satisfactory trading conditions during the year ended 31st December 1960. Production in the structural shop at Clive Works was well maintained throughout the year, with a record tonnage of 11,990, as against 6,488 tons in 1959. Production of pressed steel tanks was also well maintained and a further increase is considered likely as plates become freely available from indigenous sources. In regard to railway wagons, however, the Company was severely handicapped by a shortage of weldable quality steel and lack of supplies of components to be imported on its behalf by the Railway Board; the output in the wagon shop declined for the third year in succession to 7,563 tons, as against 8,157 tons in the previous year, 10,572 tons in 1958 and 12,685 tons in 1957.

In contrast to the recession in activity noted in 1959, the achievements of the Company during the year under review are quite noteworthy. The contracts invoiced and in progress have risen by Rs. 37.37 lakhs to Rs. 754.08 lakhs. The gross profit, as a consequence, has improved, albeit slightly, from Rs. 38.44 lakhs to Rs. 42.47 lakhs. After providing Rs. 4.02 lakhs for depreciation and Rs. 17 lakhs for taxation, the net profit shows a rise of Rs. 2.15 lakhs to Rs. 21.45 lakhs. The dividend has been stepped up again from 22½ per cent to 25 per cent subject to deduction of tax. Net dividend works out to Re. 1.75 per share, as against Re. 1.575 in the previous year.

The table below shows at a glance the working of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

† Subject to deduction of tax.

N.B.—In 1958, the Company paid a dividend of Re. 1 per share (or 10 per cent) for the two years 1954 and 1955, in order to avoid the mischief of Section 23A of the Indian Income-tax Act.

The financial position of the Company is very sound. As against the paid-up capital of Rs. 56.60 lakhs (all in ordinary shares of Rs. 10), reserves and surplus aggregate Rs. 80.52 lakhs. The net addition to reserves and surplus during the year is Rs. 7.30 lakhs. The net block, including capital work-in-progress, has increased from Rs. 66.16 lakhs to Rs. 72.81 lakhs. The total depreciation provided since December 1955, when the assets were revalued amount to Rs. 16.49 lakhs. Investments amount to Rs. 18.50 lakhs, of which quoted investments account for Rs. 10.81 lakhs and unquoted investments for Rs. 7.69 lakhs. The market value of quoted investments is fractionally above the book value. The total current assets (Rs. 132.11 lakhs) exceed total current liabilities (Rs. 86.30 lakhs) by as much as Rs. 45.81 lakhs.

During the year, the Company took over the Angus Works on a 99 years' lease and satisfactory progress has been made to develop it as a first class mechanical engineering factory. The Company has applied for permission to undertake manufacture of various types of cranes as well as to increase the licensed capacity for the fabrication of heavy structurals. The manufacture of components for railway wagons at this works has removed to a great extent the bottlenecks which have restricted wagon output frequently in the past, due to failure to obtain deliveries of bought out components. Plans for the developments of the works are expected to be finalised in the current year.

The structural shop at the Clive Works was principally engaged in the fabrication of structural steelwork for the wheel, tyre and axle plant at Durgapur and for the adjacent A.V.B. project for the manufacture of water tube boilers, cement making machinery and other heavy plant. Production in the wagon shop consisted mainly of bogie under-frames for railway passenger coaches and the new heavy mineral wagons, popularly known as Box wagons. It is satisfactory to note that, though the tonnage output of railway wagons is falling in recent years, the wagons produced have a higher cost and sale value.

The exports of some of the Company's products were sustained during 1960. An increased tonnage of plants for the manufacture of pressed steel tanks was exported. The Company is intensifying its export effort and has in recent months dealt with enquiries for a bridge in Thailand as well as for railway wagons in other countries.

As for the prospects for the current year, Sir John Brown, the Chairman of the Company, observes:

"We face 1961 with a satisfactory order-book so far as the wagon shop is concerned, but already it is clear that activity in the structural shop at Clive Works must be on a reduced scale for most of the year. We have plenty of capacity, but we are short of orders and the steel to fabricate them. However, this is, I hope, a temporary phase, as a number of tenders in which we are concerned either directly or through our associates, the Braithwaite, Burn and Jessop Construction Company, Ltd., have recently been opened and we have good hopes that the competitive prices quoted will result in a number of useful orders. This will absorb our drawing office staff later in the year, but I fear that none of these orders can be translated into output by the end of it.

"Our experience during the past year has emphasised the necessity for the Company to concentrate on the fabrication of the heavy and more specialised steelworks to the highest standards. Competition from the many smaller concerns entering the structural engineering field is making it difficult for an organisation such as ours which maintains a large specialist staff and a completely integrated design and drawing office to keep our costs competitive in order to obtain an adequate share of the lighter type of work. The implications of this situation are, I can assure you, engaging the attention of the management.

"We are building up our organisation at Angus Works and, while I cannot foresee a spectacular increase in turnover this year, I am hopeful that, before it is out, subject to our receiving import licences for the necessary plant, we will have made substantial progress in reorganising the foundry and increasing its output as well as getting ourselves set up for the manufacture of at least some types of cranes.

"While it is early in the year to make any forecast, we would expect increased activity in the wagon shop at least to offset the reduced tempo in the structural shop and, therefore, provided raw materials and wagon components are available, to maintain our profits. It will be some years yet before we can expect that Angus Works will make any material contribution to profits, but we can foresee steady progress there. So far as the further future is concerned, from what I have already stated, you will appreciate that the policy of the Board is to achieve a measure of diversification of its activities without, however, sacrificing the homogeneity of the business or diluting standards of management and supervision."

The current market quotation for Rs. 10 paid-up shares is Rs. 36.87 *cum-div.* On an *ex-div.* basis, the yield works out to 4.9 per cent, taking the net dividend at Re. 1.75 per share.

J. K. STEEL FORGES AHEAD

The working results of J. K. Steel Limited (Managing Agents: J. K. Industries Private Limited) for the year ended 30th June 1960 are very encouraging. In spite of the 71-day illegal strike (from 18th September to 27th November 1959), the gross profit of the Company has gone up by nearly 64 per cent, from Rs. 18.03 lakhs in 1958-59 to Rs. 29.65 lakhs in 1959-60. The rise has followed a marked increase in sales (including packing and forwarding charges) which amount to Rs. 126.42 lakhs, as against Rs. 96.64 lakhs in the previous year and Rs. 57.83 lakhs in 1957-58. Thus, in two years, sales have more than doubled, quite a notable achievement indeed.

Against an increase of 30 per cent in sales, expenses have risen by only 19 per cent from Rs. 90.51 lakhs to Rs. 107.87 lakhs. Consequently, the gross profit, as already stated, has gone up by nearly 64 per cent to Rs. 29.65 lakhs. Out of the profits, provision for depreciation has been made at Rs. 6.02 lakhs (Rs. 5.12 lakhs in 1958-59) and taxation absorbs Rs. 7.30 lakhs (Rs. 2.02 lakhs). After excluding these sums as well as the Managing Agents' commission of Rs. 2.36 lakhs, the net profit for 1959-60 comes to Rs. 13.97 lakhs, as against Rs. 9.74 lakhs in the previous year. The enlarged profit, together with the writing back of Rs. 5.59 lakhs, on account of excess provisions for depreciation in previous years, has enabled the Directors to transfer to general reserves a larger sum of Rs. 14.30 lakhs, provision in the previous year being Rs. 12.30 lakhs, and to step up the dividend from 12½ per cent to 20 per cent, subject to deduction of tax.

The paid-up capital of the Company is Rs. 30 lakhs: Rs. 10 lakhs in 10,000 seven per cent cumulative redeemable preference shares of Rs. 100 each and Rs. 20 lakhs in 200,000 ordinary shares of Rs. 10 each. As against this, reserves and surplus amount to Rs. 38.92 lakhs. The net block stands at Rs. 59.92 lakhs, after providing Rs. 17.92 lakhs for depreciation. The total investments have risen from Rs. 6.24 lakhs to Rs. 8.28 lakhs, including the investments of Rs. 2.50 lakhs in 50,000 ordinary shares of Straw Products Ltd., on which Rs. 5 each have been paid up. The share of quoted and unquoted investments is Rs. 6.14 lakhs (market value Rs. 6.43 lakhs) and Rs. 2.14 lakhs respectively. The total of current assets at Rs. 78.86 lakhs (inclusive of investments) are well above the current liabilities aggregating Rs. 69.85 lakhs.

The closing stocks have increased by Rs. 12.37 lakhs or over 50 per cent to Rs. 36.92 lakhs. But the rise is accounted for not by finished goods but by raw materials and stock-in-process. This indicates that the Company has thought it better to increase the inventory, in view of higher trading prospects. The supply position of raw materials for the cold rolling wire rope plants has improved, resulting in a higher level of production. Import of wire ropes and cold rolled strips are still being allowed. Every effort is being made by the Company to impress upon the Government the need for further restriction on imports of these products.

In their report the Directors state that the expansion schemes in hand are being pursued. The Company has obtained licences for the manufacture of mild steel wires from the existing available capacity of its plant and for doubling the capacity of the wire rope plant.

The shareholders who had applied for the shares of this Company in 1959 have every reason to feel satisfied not only at the satisfactory rate of dividend for two years but also at the appreciation in share value. The current market quotation for Rs. 10 paid-up shares stands at Rs. 27.50 *cum-div.* On an *ex-div.* basis the net yield works out to 5.3 per cent, taking the tax-free dividend as Re. 1.40 per share.

LYNX MACHINERY LTD.

A new public limited company under the name Lynx Machinery Ltd. has been formed with Mr. C. C. Desai, I.C.S. (retd.), as Chairman, to take over the partnership firm of Lynx Machinery Company as a going concern. The Company, since it was established in June 1957, has been manufacturing concrete vibrators, concrete mixers, roller pan mixers and other equipments used in the building and construction trade. The progress of the Company has so far been quite satisfactory, the total value of production having touched Rs. 18.54 lakhs in 1959-60, as against only Rs. 6.6 lakhs in 1958-59 and Rs. 2.79 lakhs in 1957-58. The new Company plans to diversify production by undertaking manufacture of other items, such as engines, cranes of all types, grinders and tools. It has secured the technical collaboration of several reputed foreign manufacturers on royalty basis. The collaboration extends to making available to the Company blueprints and technical know-how in the manufacture of their respective products in India and the use of their established brand names. The foreign firms concerned are: 1. R. A. Lister and Company Ltd., England, (for the manufacture of D and B type engines), 2. E. P. Allam and Company (India) Private Ltd. in association with E. P. Allam and Company Ltd., England (for the manufacture of Allam range of concrete vibrators), 3. Demag-Zug G.m.b.H. of W. Germany (for the manufacture of overhead travelling cranes Goliath cranes, etc.), 4. Schiess-Defries of W. Germany (for the manufacture of overhead travelling cranes, Goliath cranes, etc.), 5. Flexible Drive and Tool Company Ltd., England (for the manufacture of flexible shaft machines and allied engineering tools), 6. Ofu-Lynx Private Ltd., in association with Ofu-Ofenbau Union G.m.b.H. of W. Germany (for the manufacture of Ofu furnace parts), and 7. Poly Techna of Czechoslovakia for the manufacture of Skoda diesel engines.

The Company has announced the issue of Rs. 60 lakhs (600,000 equity shares of Rs. 10 each). Of this, only half (Rs. 30 lakhs) is offered to the public, the balance being taken up by the promoters, directors, their friends and associates. The capital will be used for financing the purchase of the Lynx Machinery Company and the import of plant and machinery for the expansion of the Company for which it has secured the permission of the Government of India. List for public subscription will open on Tuesday the 18th inst.

ANNOUNCEMENT

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

have pleasure to announce that, in pursuance of their objective to promote savings and encourage rural deposits

THE INTEREST RATES ON SAVINGS BANK ACCOUNT

in all their offices

HAVE BEEN RAISED

as from the 1st April, 1961, as under:—

FROM 2½% TO 3% P.A.

T. R. KRISHNASWAMI,
General Manager.

PROGRESS OF SEN-RALEIGH ENCOURAGING

ISSUE OF FRESH CAPITAL LIKELY

FOR the second year in succession, the outout of complete bicycles by Sen-Raleigh Industries of India Ltd., Calcutta (Secretary: Mr. K. D. Ganguli), has registered a substantial improvement, which is clearly reflected in the notable increase in sales proceeds from Rs. 293.57 lakhs in 1958-59 to Rs. 358.38 lakhs during the year ended September 1960. Despite such an improvement, the gross profit of the Company has risen by just Rs. 11.23 lakhs to Rs. 44.50 lakhs. This is evidently because of the increased cost of raw materials consumed, the value of which has gone up from Rs. 158.36 lakhs in 1958-59 to Rs. 203.14 lakhs in 1959-60, as well as the rise in other expenses from Rs. 98.41 lakhs to Rs. 117.40 lakhs. Consequently, and in view of the heavy provision for depreciation (Rs. 20.01 lakhs which is more than double the amount allocated in the previous year), the net profit has increased by a bare Rs. 31,000 to Rs. 24.04 lakhs. The Directors have not made any provision for taxation, excepting that a sum of Rs. 45,000 has been deducted from the gross profit for 1959-60 on account of the tax (30 per cent) payable on preference dividend for the year 1958-59, in accordance with the Preference Shares (Regulation of Dividends) Act 1960.

The Directors have reconstituted the various reserves. Thus the building fund has been merged with capital reserves and the reserve for machinery replacement and rehabilitation with the general reserve. A new reserve, called taxation equalisation reserve, has been created and Rs. 10 lakhs have been transferred to this reserve. The development rebate reserve, the general reserve and the reserve for repayment of loan get Rs. 1.18 lakhs, Rs. 3 lakhs and Rs. 2.75 lakhs respectively, as against Rs. 9.88 lakhs, Rs. 3 lakhs and Rs. 2.75 lakhs in the previous year. In other words, this means that a total of as much as Rs. 16.93 lakhs, or more than two-thirds of the net profit, has been ploughed back for the future expansion of the Company. Dividend on ordinary shares has been maintained at the previous year's level of 8 per cent (taxable). After deducting the tax, the net dividend works out to 5.6 per cent which is less than the tax-free dividend of 6 per cent declared in the years 1956-57 and 1957-58. It is thus clear that the shareholders have not yet begun to enjoy the benefit of improved working results of the Company.

A synoptic view of the progress of the Company since 1957 can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sales proceeds	358.38	293.57	212.85	196.58

† Subject to deduction of tax.

The Company is making steady efforts to employ larger and larger quantity of indigenous raw materials and this has enabled it to step up the output of its bicycles. The Company has also succeeded in expanding the production of certain friction parts, the raw materials for which are available within the country. The demand for the Company's products is running ahead of supply. But the biggest single factor still hampering a further expansion of bicycle output is the lack of suitable steel in sufficient quantity, with the result that the factory continues to rely largely on imported steel. Even here, the Company, along with many other importers of steel, was unable to obtain the metal from the Eastern European countries, since the switching of licences in two different currency areas, namely the Eastern European countries and the U.S.A., created complications.

In spite of these difficulties, the Company is going ahead vigorously with its plans of expansion. It has obtained industrial sanctions from the Union Government for the manufacture of house service metres and bicycle dynamo lamps as well as for the expansion of the production of chains. The Directors have stated that the Company's plans for obtaining the requisite additional finance for these schemes will be made known to the shareholders in due course.

The Company has made an addition of Rs. 21.51 lakhs to the block account on top of an increase of Rs. 73.81 lakhs in the previous year, taking the total value of the block account to Rs. 276.13 lakhs as at 30th September 1960. The depreciation provided so far aggregates only Rs. 72.20 lakhs, so that the net book value of fixed assets is of the order of Rs. 203.93 lakhs. The current assets at Rs. 257.82 lakhs (stocks of stores and raw materials Rs. 104.26 lakhs, materials-in-transit, inventories, work-in-progress Rs. 103.39 lakhs, sundry debtors Rs. 17.96 lakhs and cash Rs. 16.28 lakhs, loans and advances Rs. 15.88 lakhs) and investment at Rs. 8.54 lakhs together are less than the secured and unsecured loans and current liabilities amounting to Rs. 313.43 lakhs. The net assets are only Rs. 156.85 lakhs, comprising paid-up capital of Rs. 100 lakhs, and reserves and surplus of Rs. 56.85 lakhs. It would thus appear that there is ample scope for the Company to raise fresh equity capital.

The Rs. 10 fully paid-up shares of the Company are currently quoted at Rs. 26.25 *cum-div.* as against Rs. 20.24 a year ago. On an *ex-div.* basis, the net yield works out to 2.1 per cent per annum. Nevertheless, the shares of the Company are well fancied by investors, in view of excellent growth prospects.

BINANI METAL WORKS

The Binani Metal Works Ltd. which was incorporated as a private company on 25th February 1941 and was converted into a public company on 16th March this year, has announced the issue of Rs. 21.50 lakhs, comprising 215,000 equity shares of Rs. 10 each at par. The Directors and their friends have agreed to take Rs. 1.90 lakhs made up of 19,000 shares of Rs. 10 each, the balance of Rs. 19.60 lakhs (196,000 shares) will be offered to the public. The subscription list will open on Monday the 10th inst. and close on the 15th inst. or earlier as may be decided by the Directors, but not earlier than the 13th inst. The amount payable in respect of each share is to be paid in full on application. The entire issue has been underwritten by the Bank of Baroda Ltd. Details of the proposed offer appear on pages 642-643.

With the above issue, the paid-up capital of the Company will increase from Rs. 18.50 lakhs to Rs. 40.00 lakhs. The authorised capital is Rs. 50.00 lakhs.

The Binani Metal Works is a leading metallurgical engineering firm in India specialising in the manufacture of non-ferrous alloys, and non-ferrous castings both rough and machined. The chief consumers of the Company's products are the Indian railways as well as some other industrial users. The Company's sales have registered a very substantial improvement in the last seven years from Rs. 52.73 lakhs in 1954 to as much as Rs. 144.12 lakhs in 1960. In addition to the existing lines of production, the Company has secured necessary industrial licences for the manufacture of resin cored solder, pressure die casting in zinc and aluminium, base alloys, oil fired rotary and crucible furnaces, iron castings, plastic injection moulds for plastic industry and milling machines —all of which have an assured market in the country, what with the continued development of industries and the increasing emphasis on the expansion of indigenous production of engineering goods. The Company possesses the requisite technical know-how for the efficient production of these items.

The Company has no debenture or other loan capital outstanding at present. It has, however, an overdraft account of the order of Rs. 19.80 lakhs secured by the hypothecation of raw materials and finished goods stocks.

In view of the satisfactory working of the Company in the past and considering the bright prospects in coming years, the proposed issue will doubtless meet with success. The Directors are confident of paying a minimum dividend of 10 per cent on the increased capital for the year 1961. Those who subscribe to the proposed issue will also be entitled to this dividend.

The Company has on its Board of Directors a competent team of experienced industrialists headed by Mr. G. D. Binani, a well-known businessman of Calcutta.

SYNOPSES OF COMPANY REPORTS

Maharashtra Sugar Mills Ltd.

(*Managing Agents:* M. L. Dahanukar & Co. Private Ltd., Bombay.)

Annual General Meeting—27th April. Dividends payable on or after 11th May.

Working Results :	For the year ended 30th September (In thousand rupees) 1960	1959
Sales	2,92,79	2,81,15
Closing Stock	72,48	16,02
Gross profit	65,75	59,59
Transfer to Managing Agents' commission	6,09	5,42
Transfer to Depreciation	4,60	3,96
Transfer to Development rebate	28	1,41
Transfer to Taxation	16,00	15,50
Net profit	38,78	33,30
Adjustments	1,62	3,17
Appropriations:		
Total available balance	40,40	36,47
Transfer to reserves	11,00	6,00
Transfer to proposed dividends (Taxable)		
Ordinary	28,35 (42% p.a.)	28,35 (42% p.a.)
Transfer to proposed dividends (Taxable).		
Preference	50 (7% p.a.)	50 (7% p.a.)
Carry forward	55	1,02

Note.—Adjustments include the balance brought forward from last year and profit on sale of investments if any.

Extracts from the Directors' report: The working of the factory has been good and high standard of efficiency has been maintained both in the factory and farm. Sugar produced was of superior standard and it was well received in the market. The recovery per cent of sugar has been higher and as a consequence the production of sugar during the year under report has surpassed all previous records of the Company. The performance of the Company's distillery has also been satisfactory.

The directors inform that they are expanding the factory to higher capacity and the proposal for same has been approved by the Government of India. The Company may require for this expansion an aggregate finance of about Rs. 30 to Rs. 35 lakhs. On completion of the expansion the period of the crushing season will be shorter and it would enable the factory to complete the crushing when the sugarcane contains optimum sucrose content. This would result in higher recovery and increased production.

The Central Government continued to regulate the release of sugar stock for sale in the market throughout the year and a new scheme of distribution control was adopted by the State Government. This has at times resulted in large accumulation of sugar stock entailing strain on the working finance.

The plant and machinery has been maintained in good condition. The standing sugarcane crops are progressing well.

Accounts in brief as at 30th September 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	72,50,000	Gross block —Depreciation ...	1,56,07,253 70,66,935
Reserves and surplus ...	60,27,024	Net block ...	85,40,318
Other liabilities ...	1,28,25,944	Current assets ...	1,51,59,610
		Investments	17,68,392
		Cash ...	6,34,648
	Rs. 2,61,02,968		Rs. 2,61,02,968

Cawnpore Sugar Works, Ltd.

(*Secretaries and Treasurers:* The British India Corporation Ltd., Kanpur.)

Annual General Meeting—27th April. Dividend: Nil.

Working Results :	For the year ended 31st October (In thousand rupees) 1960	1959
Sales	3,56,47	3,96,40
Closing Stock	86,45	25,24
Gross profit	20,25	13,08
Transfer to Remuneration to Secretaries and Treasurers	10	
Transfer to Depreciation	6,70	6,30
Transfer to Taxation	10	
Net Profit	13,35	6,78
Adjustments	1,28	2,72
Net deficit balance carried forward	—4,18‡	—16,86

N.B.—Adjustments include profit on sale of fixed assets and other credit items relating to previous years.

‡ This amount is arrived at after taking into account the provisions made for development reserve and expenses and the loss brought forward from the previous year.

Extracts from the Directors' report: The improvement in the trading results over the previous year has been chiefly due to greater quantities of cane crushed at the three factories in U.P., although the recovery was not as good as that of last year due to poorer quality of cane available. The relative figures for cane crushed and extraction, are as under:—

	Cane Crushed Mds.	Yield per cent.
Marhowrah Factory ..	21,64,607 (24,58,881)	10.18 (10 39)
Gauri Factory ..	27,41,394 (26,10,426)	10.37 (10 45)
Padrauna Factory ..	40,23,926 (32,98,729)	9.11 (9 28)
Kathkuiyan Factory ..	30,07,414 (32,91,761)	9.40 (9.60)

Figures within brackets relate to previous year.

The cane crop for the season 1960-61 and the supplies thereof so far have very satisfactory, and it is expected that the production will be at an increased scale at all the four factories.

Due to lack of funds, it has not been possible to carry out the proposed schemes for raising efficiency of Padrauna and Kathkuiyan factories to the extent planned. A sum of Rs. 11,06,037 was, however, spent over additions and overhaul at these factories, and this has resulted in greatly enhanced efficient working of the factories.

Marhowrah Distillery continues to work satisfactorily. A major part of the proposed expansion work at this Unit—referred to in the previous report—has been completed, and the question of further improving its earning capacity is receiving close attention.

It is expected that with the improvements made at the Company's sugar factories, as well as the distillery, the working for the year 1960-61 would record further appreciable improvement and it is anticipated that notwithstanding the increased wage bill and the loss brought forward, there will be a surplus at the end of the year. Since the close of the financial year under review, a capital expenditure of approximately Rs. 2 lakhs has been approved by the directors.

The Company's title in respect of Padrauna factory is still not absolutely clear. The special appeal filed by the previous owners against the order of the single judge, rejecting their writ petition challenging Company's title over the properties, has not yet been decided by the High Court.

In pursuance of Section 330 of the Companies Act, 1956, Messrs. Begg, Sutherland & Co. Private Ltd., ceased to be managing agents of the Company with effect from 15th August 1960 and The British India Corporation, Ltd., have been appointed as the secretaries and treasurers of the Company. This does not, however, involve any material change in the management of the Company as the technical and administrative set up remains unchanged, thereby ensuring continuity of policy and efficient management.

Accounts in brief as at 31st October 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block —Depreciation ...	1,76,06,330 1,00,81,364
Reserves ...	77,17,253		
Other liabilities ...	1,26,74,883	Net block ...	75,24,966
		Block-in-progress ...	6,17,135
		Current assets ...	1,50,91,107
		Investments	2,56,346
		Cash ...	4,84,659
		Loss c/f ...	4,17,923
	Rs. 2,43,92,136		Rs. 2,43,92,136

The Andhra Sugars Ltd.

(*Managing Agents:* Ranga Rao & Co., Tanuku.)

Carry forward	25	23
Sugarcane Crushed (Tons)	108,524	132,234
Sugar produced (Tons)	111,620	129,208
Recovery per cent	10.29	9.77

N.B.—Adjustments include the amount brought from the previous year, credits relating to previous years written back and transfer from reserves if any.

Extracts from the Directors' report: During the year under report, the factory commenced sugarcane crushing on 4th December 1959 and stopped on 2nd April 1960. The sugarcane crushed during the season was 1,08,524 tons and sugar manufactured was 1,11,620 bags with a recovery of 10.29 per cent, as against 1,32,234 tons cane, 1,29,203 bags sugar and 9.77 per cent recovery of the last season. The quantity of cane crushed during the season was less, but the recovery was higher than that of the previous season. As stated in the last directors' report, the steps taken by the Directors for improving the quality of the cane by encouraging the ryots to take to plantations with approved seed canes from the seed cane farms (developed under free supply of manure scheme to the seed farms by the factory) and the vigorous propaganda and the scheme of time-scheduled plantations have had their effect to some extent in increasing the quality of the cane. The cane growers have realised the benefits of the scheme and the Directors feel that the cane growers are gradually coming forward to take advantage of this scheme. But every cane grower has not come forward to do so, since the jaggery prices were ruling very high during the season. So, in spite of the best efforts of the Directors, and even in spite of the Directors paying Rs. 4 extra per ton of sugarcane supplied to the factory, much cane could not be attracted to the factory. This is a matter which is beyond the control of the Directors as the high ruling prices for the jaggery during the season were more attractive to the sugarcane growers than the price, including the extra rate offered by the sugar factories to them. As a result the Company could get only 1,08,524 tons during the year 1959-60 and it had to close its factory much earlier. During the current season, the jaggery prices have come down and the Directors expect to crush more than 1,50,000 tons of cane for the season 1960-61.

The sulphuric acid and superphosphate machinery have been imported and the superhosphate factory has gone into production on 30th September, 1960. The sulphuric acid plant, could not be completed by 30th September, 1960 due to the late receipt of some acid resisting lining materials etc. But the sulphuric acid plant has also gone into production in February, 1961. The industrial alcohol plant machinery is being received; the buildings are nearly complete and the plant is expected to go into production before 30th September 1961. Acetic acid and acetic anhydride plant buildings are under construction and the machinery is to be shipped from March to June in 1961 and the plant is expected to go into production in 1961. The caustic soda plant machinery is due for shipments from April 1961 onwards and the plant is likely to go into production in early 1962. Apart from the imported machinery for the sulphuric acid and superphosphate plants, most of the other indigenous plant and machinery have been fabricated in the workshop and both the sulphuric acid and superphosphate plants have now gone successfully into regular production, without experiencing any teething troubles. The import licence for the spun pipe and malleable pipe fittings and railway castings plant is still awaited from the Government of India.

The Company issued 6¼ per cent cumulative Redeemable preference shares to the tune of Rs. 30 lakhs. This issue was fully subscribed and the shares were allotted on 1st October 1960.

Accounts in brief as at 30th September 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Gross block —Depreciation	1,13,99,115 33,48,654
Reserves and surplus ...	28,30,153		
Other liabilities ...	98,71,164	Net block ...	80,50,461
		Current assets	71,44,409
		Investments	2,20,000
		Cash ...	2,86,447
	Rs. 1,57,01,317		Rs. 1,57,01,317

Premier Tyres Ltd.

(*Managing Agents:* Indo Orient Agencies Private Ltd. Bombay.)

First Annual General Meeting: 11th April 1961.

Extracts from the Directors' report: The Company having been incorporated on the 19th October 1959 the accounts for the first period of its working have been made from 19th October 1959 up to 31st December 1960, being the date ending the financial year. Subsequent annual accounts will be made up for the financial year ending 31st December.

During the period under review, the Company has earned a sum of Rs. 2,27,557 by way of interest on deposits with the banks and Rs. 8,302 as transfer fees. Of the total expenditure amounting to Rs. 5,15,451, the directors have transferred a sum of Rs. 4,85,391 as being the expenditure incurred during the construction period, leaving a balance of Rs. 30,060 as expenses for the year. After making a provision of Rs. 1,02,500 for taxation, a balance of Rs. 1,03,299, being the profit, is carried forward to next year.

The first call of Rs. 25 per share on equity and preference shares was made on the 28th November 1960 payable on or before the 19th January 1961. As the amount of first call was due payable after the close of the year, the total paid-up capital is shown after adjusting the call money due in respect of such first call.

Lands and Factory.—The Company has acquired through the Government of Kerala land admeasuring about 35 acres for building the factory, and after excavation and levelling of the land having been completed and plans and layouts for the factory having been made, the construction work of the factory commenced in August 1960. The construction work of the factory has been progressing satisfactorily to schedule.

Machinery.—Machinery have started arriving from abroad and it is expected that the bulk of the imports of plant and machinery will be completed by the middle of 1961. Subject to contingencies and conditions beyond their control, the directors hope to be able to go into production by the end of the current year.

Expansion.—An application has been submitted to the Government of India for expansion of the Company's production capacity and the negotiations in that behalf are in progress and it is expected that this application will meet with favourable response. The directors have also submitted an application to the Government of India for the manufacture at their factory at Kalamassery, V belts, fan belts and other industrial beltings for which there is a vast and lucrative market in India. The negotiations for this are satisfactorily progressing and the directors are confident of having this additional activity materialised very soon. In this connection, they are happy to record that their Technical Collaborators, Messrs. Dayco Corporation, who are the most reputed and largest manufacturers of V belts in the world, have readily extended their offer of technical collaboration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	95,65,750	Gross block —Depreciation	22,82,068 11,962
Reserves and surplus ...	1,03,299		
Other liabilities ...	2,28,233	Net block	22,70,106
		Book debts	8,183
		Cash ...	66,47,947
		Expenditure during construction	4,85,391
		Miscellaneous expenditure	4,85,655
	Rs. 98,97,282		Rs. 98,97,282

GALLOPING INFLATION SOUNDING THE SIREN?

(*Concluded from page 627*)

appear to know its own mind, or, at any rate, contrary statements have been glaring. The schedule of priorities has not only been flexible but elastic!

Behaviour of Prices

Of late, there has been a lot of discussion on "holding the price line at the present level." The Government benches appear not to worry about the spurt in consumer prices. They seem to think that they have already taken adequate steps to arrest prices and stabilise them more or less at present levels: the third Plan has not taken into consideration any probable further soaring of prices. There are others very much concerned with price trends during the last five years, and they prognosticate that, during 1961-66, the indices of wholesale prices and cost of living may rise by at least another 50 per cent, indicating even now the beginnings of galloping inflation, in view of the fact that the authorities failed miserably in controlling prices between 1955-56 and 1960-61. Table III is worked out from original sources:

TABLE III

Behaviour of Wholesale Prices, Consumer Index and National Income in U.S.A., U.K. and India.

Country	Period	Average annual increase in Wholesale prices	Average annual increase in Consumer prices	Average annual increase in national income at current prices Period	Per cent
U.S.A. ..	11 years	1.75% (1947-49 =100)	2.42% (1947-49 =100)	10 years	7.33
U.K. ..	5 years	N.A.	2.88% (Jan. 17, 1956=100)	10 years	8.55
India ..	5 years	7.89% (1955-56 =100)	6.25% (1955-56 =100)	first 4 years of second Plan	8.03 (at 48-49 prices)

Wholesale prices increased on the average annually at 1.75 per cent in the U.S.A. during eleven years, the consumer index by 2.42 per cent during the same period and the national income at current prices by 7.33 per cent. during ten years. In the U.K., the wholesale price index is not available, the retail price index works at 2.38 per cent during the last five years and the National income at current prices increased annually on the average by 8.55 per cent during ten years. In both these countries, wholesale and consumer prices show a slow raise of 2-3 per cent indicating adequate supplies or successful controls or both. But the national income at current prices increased at a much higher rate of 7-9 per cent per annum, signifying that the *real* incomes of the two countries improved substantially after allowing the due margin for slight upward tilts in prices. In the case of Germany and Japan, the price indices were stabilised even better, and the real national incomes shot up phenomenally as compared with even the U.K. and U.S.A., but figures are not available under the heads in Table III. The situation in India is quite the other way; though the authorities cannot deny that they have been trying to hypnotise themselves and the people into a halo of imaginary stability. The price indices have shot up during the past five years annually by 7.29 per cent (wholesale) and 6.25 per cent (consumer), and yet the proconsuls at New Delhi have been calmly declaring that "the price line would be held more or less at the present levels"! They have forgotten that the two indices were at 92.5 (1952-53 base) in 1955-56, and at 96 (1949 as base) in the same year, and the latest figures are 126.2 and 126, respectively! Economic growth without price stability would be something like the ecstasy of possessing the moon in one's own mirror: the degree of unreality and false exultation would be the same in both cases.

So far as the national income at constant prices is concerned, the Indian performance has not only been unsatisfactory but positively despondent. As shown in Table III, the average annual increase between 1955-56 and 1959-60 works at 3.03 per cent (at constant prices). Since the wholesale and consumer price indices rose by 7.29 and 6.25 per cent, respectively, the national income at 1948-49 prices showed a much smaller annual rise. It should not be surprising, if, *really*, there was a net decrease in national income between 1955-56 and 1960-61 (figures of national income are not available at current prices during 1959-60: no figures are available for 1960-61). A rise of 1 or 2 per cent per annum in price indices is generally passed as congenial to economic activity, but Prof. A. C. Pigou thinks that anything beyond 2 per cent per annum must be considered as a harbinger of galloping inflation which has the same deadening effect as galloping consumption.

Table IV confirms the figures given in Table III with regard to the stability of wholesale prices in three other countries as well, proving that there are other countries like West Germany, Japan and Canada which have succeeded in stabilising wholesale prices marvellously well in spite of the fact that economic growth has been exceptionally speedy in those countries. In the face of the achievements in these five countries, Mr. Morarji Desai and Mr. S. K. Patil have little reason to congratulate themselves on economic stability in India.

TABLE IV

Wholesale Price Index (1953 *as base*)

Country	1958-59	1959-60	July 1960
Canada	104	105	105
Germany	106	106	106
Japan	98	100	100
United States	108	109	109

Cost and Wage Indices

Figures are not available with regard to the wage index (all workers) in the U.S.A. and India, but the U.K. figures are enlightening. Table V shows how, in addition to fairly stable retail prices, the average wage level has been raising at a progressive rate, the difference between the two rates having been 4.2 per cent in 1957, and 8.8 per cent in December 1960.

TABLE V

Retail Price Index and all Inclusive Wage Index in U.K.

Retail price index: January 17, 1956=100.
All inclusive wage index: January 31, 1956=100.

Year	Retail price index (based on monthly averages)	All inclusive wage index (based on weekly wage rates)
1957	105.8	110.0
1958	109.0	114.0
1959	109.6	117.0
1960	111.9*	120.7†

* December 20. † December 18.

What does it mean? Is there wage-induced inflation in the U.K.? Certainly, there is none. It may be argued that the rise in wages between 1956 and 1960 must lead to price inflation during 1961-65 in that country, but that would be only of academic interest. With an efficient system of supplementing home production with adequate imports and of controls at key points, the U.K. has been successful in steadily and quickly raising the *per capita* income implied in the growth of the wage level, and maintaining at the same time the purchasing power of the pound sterling almost intact. The slogan in Germany during World War II was: "the purchasing power of the mark is sacrosanct next only to winning the war: coin clippers should be hanged."

Hope Told a Flattering Tale

Hope lies in the Indian Parliament and the public giving due value to the facts and figures given in this article. Without a recovery of the rupee to the 1955-56 level, the third Plan should prove a wild-goose chase. Is this all planning towards a policy of drift, or a policy of drift towards planning? The experiences of the third Plan period alone can tell.

BANK OF MAHARASHTRA LIMITED

(*Concluded from page 647*)

banks' liquidity. If these current assets could be turned into bills accepted by the parties, the current assets will be self-liquidating. We can then have a real bill market instead of the present one which is just turning the cash credit account into bills to be renewed from time to time. One difficulty that comes in the way of introducing this system is perhaps the higher stamp duty. The point, therefore, requires to be examined; but the genuine bill market has to be encouraged.

"I would now proceed directly to the results achieved by the Bank during 1960. These must be considered highly satisfactory. The Bank's deposits rose during the year from Rs. 13.26 crores to Rs. 15.14 crores. This gain of 14.2 per cent, following one of 25.6 per cent in 1959, came during a year in which deposits of the banking system as a whole were relatively stagnant. This must be considered a sign of the growing confidence of the public in the Bank, which has acquired a definite status in the region which it serves. Some part of the growth of the Bank's deposits must be credited to the steady programme of branch expansion followed by the Bank. During the year, the Bank opened only one branch at Vile Parle in Greater Bombay, bringing the total number of branches of the Bank to 52. The branches opened by the Bank during earlier years made rapid progress during 1960 and contributed their share to the increase in the total deposits of the Bank. The Directors have decided to open new branches at four other places at an early date. It should be noted that the number of branches of the Bank will increase as a result of the merger of the Bank of Nagpur with it. I would like to express my belief that a well organised programme of branch expansion at a steady pace is the best instrument for expanding bank deposits in the long run, though it must necessarily proceed at a slow pace, since a new branch takes some time to stand on its own feet.

High Liquidity Ratio

"The Bank has always followed the practice of maintaining a high liquidity ratio. Though this means that the earnings of the Bank are relatively low, such a high ratio is necessary to maintain stability, particularly when one takes into consideration the area which the Bank serves. The importance of safeguarding the position of the Bank in this way is highlighted by recent developments in the banking system. With minor changes from the previous year, the figures in the balance-sheet reflect this general policy of maintaining rather high liquidity.

"From the profit and loss account, you must have noted that an increase of Rs. 5.26 lakhs in interest paid was accompanied by an increase of Rs. 12.67 lakhs in interest earned. The gross margin, therefore, increased from Rs. 23.36 lakhs in 1959 to Rs. 30.77 lakhs in 1960, that is by Rs. 7.41 lakhs. Almost the whole of this increase in gross margin was absorbed by the increase in establishment costs which mounted by Rs. 7.22 lakhs to Rs. 30.49 lakhs. The bulk of the increase was under cost of management. The net profit, however, increased from Rs. 7.72 lakhs in 1959 to Rs. 9.50 lakhs in 1960 because of an increase in other sources of earnings from banking business.

"Provision for taxation in 1960 amounted to Rs. 3.50 lakhs. As usual, your Board decided to strengthen the reserve fund by appropriating Rs. 2.00 lakhs out of the profit for this purpose. This may be compared with Rs. 1.60 lakhs appropriated for this purpose in 1959. Your Board are of the opinion that this policy of appropriating a large share of the net profits to the reserve fund will have to be pursued vigorously at least until reserves equal the share capital. With the provision for 1960, general reserve fund now stands at Rs. 16.60 lakhs. The issued capital of the Bank, as pointed out earlier, now stands at Rs. 40.00 lakhs. I might point out that as Rs. 50,000 have been allocated out of profits to the two special funds, to which reference has been made earlier, the total contribution to reserves for 1960 amounts really to Rs. 2.50 lakhs. The size of all reserves at the end of the year is, therefore, Rs. 17.10 lakhs.

"As mentioned earlier, your Board have recommended a normal dividend of 9 per cent, subject to tax for 1960, the same as in 1959. Your Board have also recommended a special silver jubilee bonus at the rate of 2 per cent, subject to tax. The dividend is payable on 64,000 shares only. The total amount absorbed by the dividend payment is Rs. 3.52 lakhs.

Staff Relations

"Staff relations during the year have been good. I must extend my heartiest thanks to all members of the staff for their co-operation in carrying on the work of the Bank. I must express our special thanks to the General Manager, Shri C. V. Joag, who has given devoted attention to his duties. Before concluding, I deem it my pleasant duty to thank my colleagues on the Board, members of advisory committees at the branches and you, gentlemen, for the support in building up this institution. I also thank the numerous depositors, clients and well-wishers of the Bank for their support in the past and request them to continue the same in future. The Board have tried to conduct the affairs of the Bank in consonance with the high ideals with which the Bank was started and in line with the high traditions that have been built up during the last quarter of a century. I would like to personally thank you all for your continued confidence in the Board, which has enabled it to proceed with vigour. Thank you."

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *5th April*

There has been no notable change in the conditions of the short-term money market this week. With the busy season in full swing, monetary stringency is very acute. The demand for funds for tax payment and financing of crop movements continues to be high, but the supply of loanable funds with the banks has not increased. Interest rates, therefore, are ruling firm. For ready reference, they are given below:

	Per cent.
Inter-bank call money—	
Exchange and larger Indian banks ...	5½
Other banks	5¾
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-day Treasury Bills of the Government of India sold through weekly tenders show that the total amount offered and accepted was Rs. 2 crores, against an invitation of an equivalent amount. The average rate of accepted tender was 2.750 per cent per annum, same as in the previous week. There were no sales of 91 days' intermediate Treasury Bills from 29th March to 4th April. The sales, however, were resumed today.

The Reserve Bank of India's statement for the week ended 31st March 1961 discloses a substantial expansion of Rs. 16.04 crores in notes in circulation, bringing the total to Rs. 1,984.74 crores. As the notes held in the Banking Department have declined by Rs. 16.25 crores, the total notes issued have fallen by Rs. 20.61 lakhs only. On the assets side, foreign securities have gone down by Rs. 5 crores, and balances held abroad by Rs. 12.30 crores. The total foreign assets are thus lower by Rs. 17.30 crores at Rs. 136.25 crores. Over the week the deposits of the bank with the Reserve Bank have receded by Rs. 3.62 crores to Rs. 87.96 crores. Other loans and advances have registered a rise of Rs. 12.33 crores, including borrowings by the scheduled banks. Advances against usance bills are higher by Rs. 8.24 crores at Rs. 45.39 crores. A year ago, they amounted to no more than Rs. 15.21 crores. This clearly shows that the banks are relying to a great extent on usance bills for securing accommodation from the Reserve Bank.

The Scheduled banks' statement for the week ended 24th March 1961 reveals that demand deposits advanced by Rs. 17.66 crores, while time deposits declined further by Rs. 3.51 crores. Due to stringency in the money market, borrowings of Scheduled Banks from the Reserve Bank of India increased by Rs. 4.33 crores. Of this increase, Rs. 1.87 crores are against usance bills. Their borrowings from the State Bank of India of demand nature also went up, though modestly by Rs. 9.34 lakhs. Borrowings of time variety from the same source, however, fell by Rs. 20 lakhs. Advances and bills (bank credit) jumped up by Rs. 9.88 crores, on top of a rise of Rs. 14.43 crores in the last week, taking the total bank credit to Rs. 1,318.05 crores, as against Rs. 1,127.08 crores a year ago. Of the rise of Rs. 9.88 crores in Scheduled bank credit, the State Bank of India accounts for Rs. 3.11 crores. The investments of the Scheduled banks as a whole expanded by Rs. 73.42 lakhs. But as the investments of the State Bank of India improved by Rs. 2.03 crores, the investments of the Scheduled banks other than the State Bank of India actually declined by Rs. 1.30 crore.

In the gilt-edged section, the prices of a few Central loans showed some improvement. 3 per cent 1966-68 funding loan closed 10 nP higher at Rs. 96. 3 per cent 1970-75 first development loan improved by 20 nP to Rs. 91. 3½ per cent 1965 and 1967 National Plan bonds both gained 5 nP each. The Reserve Bank's move to put up the buying rates of 2½ per cent 1961 and 2¾ per cent 1962 loans had no perceptible effect on their prices because the ruling quotations of these loans were already at the enhanced rates. In the State loans section, prices remained unchanged.

In the foreign exchange section, the rupee remained steady throughout the week. The banks' selling and buying rates for ready T.T. on New York remained unchanged at Rs. 478.25 and Rs. 475.00 per 100 dollars, respectively. In the New York exchange market, the pound sterling gained some further ground. The latest available rates are: 279.870-279.900 cents per £ for spot and 278.340-278.370 cents per £ for three months' forward. Thus, over the week, sterling has gained 0.04 cent in spot and 0.01 cent in forward.

LINSEED DECLINES

(Messrs. A. Bradley & Co.)

CALCUTTA, *3rd April*

Ready linseed declined further by over Re. 1 per maund and reached about the level of forward which was held fairly firm. There was increased activity by crushers for forward deliveries, but sellers were reserved at lower prices.

There was some activity in the oil market for forward deliveries with the decline in prices, but sellers were very cautious and not inclined to do much at lower prices till the new crop arrivals of seeds are in full swing.

The oilcake market was dull. Export prices were still unworkable, only local business being transacted for ready goods.

The latest quotation for ready seeds is Rs. 26.25 per maund.

BULLION "JETH" SETTLEMENT

(From Our Own Correspondent)

BOMBAY, *5th April*

The important development of the week is the commencement of trading in gold and silver *Jeth* (June) settlement with effect from Wednesday 29th March, while the *Vaisakh* (May) settlement has been skipped over. The Bullion Association, it will be recalled, had sought the permission of the Forward Markets Commission for starting licences in both the settlements simultaneously. But the Commission approved trading only in *Jeth* settlement in pursuance of the amendments made by the Central Government to By-laws 72 and 88 of the Bullion Association. Trading is subject to the same terms and conditions of special margin as are applicable to the *Chaitra* settlement. If the price of silver in *Jeth* contract exceeds Rs. 187 per kg., a margin shall be payable by the longs who have outstanding positions of more than 160 bars at the rate of Rs. 600 per 10 kgs. on their holdings beyond the exemption limit. With regard to gold, if the rate exceeds Rs. 111 per 10 grams, a margin penalty would be payable by longs at the rate of Rs. 35 per 10 grams on all their holdings beyond 30 kgs. The traders shall have to submit daily to the Association the extent of their net outstanding position.

The denial of official permission for business in *Vaisakh* settlement induced selling pressure which brought about a drop in values on Wednesday. A recovery was, however, in evidence on Friday, 31st March, due to short-covering. The recovery gathered further momentum on Saturday, following reports of enlarged offtake from North India. Thereafter, the sentiment of the market was again affected, thanks to delay in the revival of seasonal marriage demand, rumours of large contraband arrivals, fears regarding sale of silver by the Calcutta Mint. It was reported that about 2.150 tolas of gold valued at Rs. 2.80 lakhs were seized by the Customs authorities from the British liner *Circassia*. Consequently, both gold and silver drifted downward. Today's closing rates were much lower than those at the end of last week.

A feature of trading in the bullion market was the imposition of margins in both silver and gold. On Wednesday, 29th March, the bulls in silver *Chaitra* settlement were required to pay a special margin at the rate of Rs. 750 per bar, since the *badli* payable by bears for transferring commitments from *Chaitra* to *Jeth* settlement was more than Rs. 2—Rs. 2.40, to be precise. Despite the margin, the *badli* widened to Rs. 3.10 on Friday and further to Rs. 3.15 yesterday, when the *Chaitra* settlement went off the board at Rs. 202.35. The margin was applicable in the remaining sessions also. In gold, the bears were in a predominant position on Friday, 31st March. They tried to extract higher carry-forward rates from bulls who sought to switch over from *Chaitra* to *Jeth* settlement. Since the rate widened from 40 nP to 85 nP, a margin of Rs. 8 per 10 grams became effective on bears in *Chaitra* settlement. The rate of margin was raised to Rs. 20 on Monday the 3rd inst., following the increase in carry-forward charge to Re. 1.10. The *Chaitra* settlement ran out on the same day at Rs. 119.75.

Adjustment rates fixed today were Rs. 119.25 for gold and Rs. 201.95 for silver, as against Rs. 120.95 and Rs. 201.65, respectively, on Tuesday last week.

The daily average arrivals and offtake of gold during the week were higher at 8,750 tolas and 4,750 tolas, as against 6.000 tolas and 4.000 tolas, respectively, in the previous week. In silver, offtake and arrivals were lower, the former at 8 bars, as against 16 bars, and the latter at 15 bars, as against 19 bars. The floating stocks of gold are estimated at 50.000 tolas and those of silver are reported to be around 700 bars.

The following table shows the trend of the market during the week under review:

	5-4-1961 (closing)	High	Low	28-3-1961 (closing)
GOLD				
Ready (.99 fine)	Rs. 118.50	Rs. 120.30	Rs. 117.65	Rs. 119.85
Forward:				
Chaitra*	119.75§	120.60§§	119.45	120.55
Jeth**	119.05	121.35	118.55	—
Sovereign	93.50	94.75	93.50	94.75
SILVER				
Ready (.999 fine)	199.50	203.65	198.85	201.65
Forward:

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *3rd April*

There was no appreciable change in the kip market. Madras levels ruled higher than importers' ideas, rendering export trading difficult. Buff calf touched 80d. for top marks and 70/72d. for next best marks. Tanners were active buyers in raw centres.

Owing to high prices quoted by E.I. tanners of goat skins, trading was selective during the week. Tanned sheep was unchanged.

In the German tanned skins public auctions, prices obtained for goat skins were unchanged to 6d. advance over c.i.f. levels, while sheep skins were neglected.

FURTHER FALL IN COTTON

(From Our Own Correspondent)

BOMBAY, *5th April*

Cotton futures ruled distinctly easy during the week under review. Although tenders against the Jarilla August contract were lower than expected, the market showed a sagging tendency. This was mainly attributed to the reported reluctance of 'long' interests to 'weigh over' cotton and their willingness to settle their outstanding commitments at a discount. Dull conditions in the spot market, the Textile Commissioner's threat to requisition some Southern crops if their prices did not come down and the failure of the anxiously awaited export quota for Bengal *Deshi* to materialise also imparted weakness to the market. It was only on Saturday that a firm trend was in evidence, thanks to the meagre volume of tenders (200 bales of 216F) issued against the April contract. The firmness, however, proved to be short-lived. The trend of prices was reversed in the subsequent sessions for reasons mentioned earlier. Tenders aggregating only 100 bales of 216F issued on Monday, the second notice day, failed to influence the market favourably. In fact, there was heavy selling by local and upcountry interests, which led to a break in the values of both contracts. The August contract, in particular, was subjected to heavy speculative selling pressure and it suffered a sharp setback. The spread between the two contracts, as a consequence, narrowed down in the course of the week from Rs. 13.75 to Rs. 8. The following table indicates the trend of prices of the contracts during the week:

(In rupees per three quintals)

		5-4-61	*High*	*Low*	28-3-61
I.C.C.	Jarilla				
April	1961	571.50	584	571.50	579.25
August	1961	579.50	595.75	578	593

Trading in the spot market was featureless. Turnover was limited because very few mills had unutilised cotton quota. Those that had quota preferred to wait in expectation of a fall in prices. Needy mills, however, covered their requirements of such popular varieties as L.147, CO2, Laxmi, Khandesh, Kalyan, Wagad and Kalagin at lower prices.

Despite the delay in the quota release for Bengel *Deshi*, shippers continued to cover sizable quantities of this growth in anticipation of quota. Demand for foreign cotton was subdued. Barring some enquiries for Sudan and East African cotton, interest in foreign cotton was limited. Stray buying was reported in Syrian cotton. Mills were not interested in U.S. cotton. They are, however, anxiously waiting how the Government proposed to import 300,000 bales of U.S. cotton agreed to under the recent agreement between India and the U.S.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Hubli Laxmi 1.040; CO2 1.250; Wagad 745; L.147 1,033; Khamgaon Sudan G4L 1,485; Sudan XG 3L 1,541; B.P. (UNUG) 1,335.

Cheerful conditions prevailed in the Karachi cotton futures market during the week. N.T.R.G. May contract showed sustained firmness, thanks to the keen speculative support and investment buying attracted by the contract, following the expiry of the March contract on 25th March. From Rs. 70.90, the May contract improved to Rs. 72.20. The July position moved up in sympathy from Rs. 70.60 to Rs. 71.90. Spot prices were firm. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 193; Punjab *Deshi* 101; 4F Punjab Roller 88.35; S.G. 93.35; L.S.S. Punjab Roller 90.85; S.G. 95.35; N.T. Roller 93.85; S.G. 98.35; 289F Punjab Roller 96.35; S.G. 103.35.

Cotton futures in Alexandria scored handsome gains during the week. Both the Karnak and Ashmouni contracts met with support and were marked up. Buying based on expectation of a revival of foreign demand and local mill fixation was responsible for the firmness. The rise would have been more marked but for the keen competition from Sudan, which continued to act as a deterrent to buying. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 70.25; July.

Ashmouni: April 59.75; June 60.20; August 60.35.

Cotton futures in Liverpool receded during the week under review. Cheaper U.S. offers and lack of local demand induced selling which found buyers limited. Prices consequently suffered a setback. Advices from the yarn and piecegoods market were easy. The March deliveries of the American and American type contracts went off the board on the 31st March. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 27.70; July 24.95; October 24.10.

American cotton mixed growths contract: May 25.10; July 25.30; October 24.55.

Sudan: May, July, September 31.75.

Quiet conditions prevailed in the New York cotton futures market during the week. Prices tended to recede more due to lack of support than to selling. The steady increase in certified stocks and larger offerings by stockists discouraged buying. Over the week, futures prices showed small losses evenly distributed among the various delivery months. Spot prices, however, ruled steady.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	4-4-61	27-3-61	21-3-61
Spot	33.50	33.50	33.35
May	33.15	33.18	33.12
July	33.68	33.72	33.64

NO CHANGE IN YARN IMPORT POLICY

(From Our Own Correspondent)

BOMBAY, *5th April*

There was nothing of import to the yarn market in the import licensing policy for the current half-year announced by the Government of India early this week. For the policy maintains the *status quo* in regard to imports of art silk yarn, contrary to the fears expressed by some that further restrictions on imports might be imposed. Immediately after the policy was announced, art silk yarns tended to move up. Subsequently, however, prices drifted downward, following rumours regarding grant of actual users' licences to the extent of two-thirds of the value of licences issued previously as an advance for the current licensing period, as well as advance licences to exporting units against exports. Staple fibre yarns ruled listless in the absence of any change in import policy. Prices generally were lower. Cotton yarns were quiet in the absence of any fresh development.

The Bombay Yarn Merchants Association and Exchange Ltd. removed the ceilings fixed for Cupressa Bemberg yarn and 40 JP yarns. It, however, raised the rate of margin on overtrading to Rs. 200 per case of 100 kgs., with free limit to Rs. 200 per case of Cupressa Bemberg and 25 cases of 25 cases of Cupressa Bemberg and 25 cases of 40 JP yarn. Traders are awaiting the outcome of the discussions which the rayon interests had with the Union Finance Minister regarding the budget proposals affecting art silk yarns. It is hoped that the Finance Minister would concede the demand of these interests for some relief in import duty on yarn.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with the previous week.

	5-4-1961	28-3-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.) April	2,800.00	2,800.00
60/1 Cupressa Bemberg spot	2,755.00	2,755.00
120 Japan (per 100 kg.)	1,556.00	1,570.00
150 Japan (per 100 kg.)	1,763.00	1,777.00
150 Italy (per 100 kg.)	1,543.00	1,543.00
150 Italy	1,763.00	1,763.00
Staple fibre yarn—		
40 x 2 April (per 90.72 kg.)	920.00	938.00
40 x 2 June	892.00	906.00
40 x 2 Century (per kg.)	10.55	10.68
40 x 2 Kohinoor (per kg.)	10.55	10.71
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	19.00
20s New Great	21.75	21.75
30s Simplex	27.12	27.12
40s Madura	31.75	33.00
60s Finlay	66.40	66.40
80s Mahendras	66.66	66.66

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *5th April*

The oilseeds market ruled easy during the week under review, with the exception of groundnuts which displayed a firm tendency, though early in the week, there was a setback due to pressure of supplies of other edible oils such as rapeseed and mustard. With the recovery in prices of rapeseed subsequently, groundnuts too moved up. Prices at upcountry centres were higher than local prices. Crushers and *vanaspati* manufacturers also made some purchases. Today groundnuts touched the highest of the week, but the business put through continued to be moderate, thanks to overall tight supply position. Castorseeds began the week on a cheerful note, due mainly to covering business by shippers in anticipations of some inquiries for castor oil from communist countries, but turned weak subsequently, as some bulls liquidated a part of their holdings, following heavy arrivals. Prices of Indian castor oil being out of parity with world prices, traders did not expect any immediate inquiries from the U.S. and the U.K. The sesame section was listless. Linseeds were quite easy, thanks to pressure of new crop. The reported decision of the Government of India to release 50,000 tons of linseed oilcake (and also 15,000 tons of coconut oilcake) for export to all permissible destinations during the period April-September 1961 failed to have any effect. Exports against these quotas will be licensed freely by all shippers without any restrictions on maximum shipment by an individual shipper. Cottonseeds ruled easy in sympathy with raw cotton.

The Board of the Bombay Oilseeds and Oils Exchange has decided to allow trading in new contracts in all the important oilseeds with effect from the 8th inst. The existing margins and other restrictions are expected to be maintained for the new crop contracts too.

In the groundnut section, Nizam bold fell initially from Rs. 53.25 to Rs. 51.51, but recovered to Rs. 54.50 today with a net gain of Re. 1.25. Coromandel closed higher at Rs. 54.75, as against Rs. 53.50 last week-end. Oil ex-mill eased from Rs. 22.60 to Rs. 22.30, before improving to Rs. 23. The May contract, which had been unofficially ruling above the ceiling level (Rs. 220) for the last three weeks, was quoted at Rs. 230 today.

Castorseed May 1961 contract finished lower at Rs. 177.62, as compared with Rs. 179.50 last week-end. Ready Madras lost 25 nP to Rs. 33.37. Ready Kanpur shed 12 nP to Rs. 33.75. Oil commercial shed 20 nP to Rs. 15.70.

Linseed bold ready fell by 25 nP to Rs. 37.25. Linseed oil dropped 30 nP to Rs. 16.20. May 1961 contract declined from Rs. 36.62 to Rs. 36.31 earlier in the week, but moved up subsequently to Rs. 36.84.

In the cottonseed section, May 1961 contract suffered a setback of 75 nP to Rs. 95. Whites shed 5 nP to Rs. 19.70. Non-whites and Berars were both quiet at 19.50.

Dull conditions prevailed in the sesame section. Bold variety was neglected at Rs. 370 (per 250 kgs.). Sesame oil was unchanged at Rs. 28.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	5-4-1961	28-3-1961	22-3-1961
Groundnut	Rs.	Rs.	Rs.
May 1961	220.00	—	—
Nizam bold	54.50	53.25	54.50
Coromandel ready	54.75	53.50	55.25
Khandesh quality	54.75	53.50	55.25
Oil ex-mill ready*	23.00	22.60	23.15
Railway receipts*	22.85	22.40	22.80
Castorseed			
May 1961	177.62	179.50	176.87
Ready Madras	33.37	33.62	33.25
Ready Kanpur	33.75	33.87	34.12
Oil S.S.S.†	16.70	16.65	16.10
Oil commercial†	15.70	15.90	15.45
Linseed			
May 1961	36.84	36.62	37.19
Bold ready	37.25	37.50	38.37
Oil ready†	16.20	16.50	17.50

May 1961	95.00	95.75	97.25
Niger seed	42.00	41.00	42.00
Karsi seed	28.25	27.75	28.50

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER STEADIER

(Messrs. Parekh and Co.)

BOMBAY, *5th April*

Distressed selling with a view to avoiding double sales tax in Kerala State having been finished on the 31st ultimo, Malabar black pepper became steadier, though business continued to be thin, owing to intervening holidays and lack of foreign inquiries. Garbled was quoted at Rs. 374, while ungarbled found buyers at Rs. 363. May delivery improved from Rs. 381 to Rs. 390 and July from Rs. 392 to Rs. 400. Business in the later position was conspicuously thin, as there were few sellers. Calicut was quoted at Rs. 355, with smaller arrivals. During the week, New York was reported to have bought Malabar black for March and early April shipment from $0.42½ to $0.43.

Stock of Malabar black pepper as on 1st April is estimated at 10,000 tons, of which about 5,000 tons will be required for home consumption till the end of October, thus leaving 5,000 tons only as exportable surplus as per the data available from knowledgeable quarters. Opinion as to the final production of Malabar black pepper for the year 1960-61 is divided. One quarter puts it at 24,000 tons and the other at 21,000 tons. We have taken the mean figure at 23,000 tons for statistical purposes:

	Tons	Tons
Estimated carry-over from 1959-60	1,000	
Estimated production 1960-61	23,000	
		24,000
Less:		
Export during November 1960	950	
,, ,, December 1960	1,820	
,, ,, January 1961	1,250	
,, ,, February 1961	2,900	
,, ,, March 1961 (estimated) ..	2,000	
Plus estimated offtake for the inland consumption during the first 5 months	5,000	13,980
Total stock available as on 1st April 1961		10,070
Less: Estimated requirement for inland consumption from April to October 1961 (If the prices are higher, the inland consumption may be reduced to 4,000 tons)		5,000
Available for export as from April to October 1961..		5,070

Out of this quantity of 5,070 tons, there are possibilities of East European countries and Russia taking about 2,500 tons during the coming months, thus leaving the balance of 2,570 tons for export to the U.S.A. and other countries for the remaining months of the seasonal year. (Past record shows that generally Russia and other East European countries buy about 6,000 tons per year.) Usually, the U.S. imports 11,000 tons of black pepper from April to December from all origins, mainly from Singapore and India.

As the stock in India is considered to be insufficient for the autumn requirements of the U.S. Canada and other Continental countries, the future of pepper will depend upon the attitude of Singapore. The control of the world pepper market is now onwards being passed into the hands of Singapore and Indonesia.

Since April 1960, America has been buying hand to mouth. It has taken something like 1,500 tons less than the usual average import during January to March. New York dealers shall have to replenish their stock before the autumn to meet its usual requirements. Autumn is considered to be the best seasonal months in the U.S. At present, there is tug-of-war between New York and supplying countries. One is trying to put down the other. The market appears to be marking time, as approach by both bulls and bears is cautious.

Business was sparse at Singapore, owing to intervening Easter holidays. Prices were firmly held at Str.$145 for black and Str.$180 for white, there being no selling pressure, as almost all the stocks are in strong hands.

Spot in New York, after maintaining a level of $0.47½ for a week, came down to $0.47 under pressure of arrivals. But informed quarters say that this is a passing phase. There are chances of improvement in the premium of spot over shipments as soon as the pressure of arrivals is over.

It is too early to estimate the size of new crop in Sarawak and Lampong. Yet, the informed quarter from Kuching places its first tentative estimate at 8,000 tons (Sarawak pepper) and that from Sumatra places Lampong at 10,000-12,000 tons only.

The present trouble spots like Laos, Congo and West Irian in the world's politics are being watched closely by Singapore and other origins.

In Bombay, ready pepper is nominally quoted at Rs. 200 per 50 kilos.

TEAS DECLINE

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *28th March*

A quantity of 490,000 kilograms was offered in Sale No. 13 held today. Quality in general showed no change compared to last week but there were a few invoices showing slight improvement. The market met a good but irregular demand. Plain and low medium descriptions met useful support but registered a decline of 10 nP to 20 nP whilst mediums and good mediums were in some cases easier by upto 30 nP. There was better demand for high-grown and best liquoring whole leaf grades were a strong feature of the sale. There was useful demand for a small selection of C.T.C. and legg-cut types on offer. Whole leaf grades were firm whilst there was less demand for tippy teas.

	1961	1960
	Rs.	Rs.
Low medium	4.55-4.70	4.20-4.30
Medium	4.70-4.90	4.30-4.65
Good medium	4.95-5.30	4.85-5.60
Nilgiry B.O.P.	Rs. 5.25-8.05	

The average price realised in sale No. 13 was Rs. 4.93 per kilo as against Rs. 4.99 a week ago and Rs. 5.91 in the corresponding sale last year.

Dust Sale No. 13 : 205,000 kilograms were offered in Dust Sale No. 13 held on Wednesday, 29th inst. A fair selection of dusts was on offer. The market met a good general demand. Residuals and low medium descriptions were easier by 5 to 10 nP, mediums and good mediums meeting a better support are quoted about steady. Best liquoring dusts were irregular and often sold at lower rates than last. C.T.C. and legg-cut types were in good demand and were firm.

The average price realised in Dust Sale No. 13 was Rs. 4.73 per kilo as compared with Rs. 4.87 last week and Rs. 4.59 in the corresponding sale last year.

Export Quota : The price is quoted nominally at ¼ nP per kilo.

Colombo : 668,000 pounds were offered during this week. There was less general demand. Highgrown teas from the Western districts were easier. Better liquoring B.O.Ps declined considerably although corresponding fannings were in better demand. Low growns were in good demand at firm rates. At the off-grade sale liquoring fannings sold well whilst others were generally easier. Dusts were irregular ; the best kinds selling at rates below last.

London.—North Indian and other growths : Monday's auction met with fair general demand. Poorer descriptions from Dooars were easier whilst others were firm.

Ceylon and South Indians : 25,433 packages were offered in Tuesday's sale of which 7,971 packages were from South India. There was good demand particularly for better liquoring teas which are quoted fully firm. Others were irregular and easier.

RAW JUTE RECEDES

(From Our Own Correspondent)

CALCUTTA, *4th April*

Prices of both raw jute and jute goods were steady at lower levels during the week under review. Fibre continued to be offered at below the I.J.M.A. prices and earlier in the week a further decline in fibre prices was recorded. At the lowest levels, mills exhibited buying interest and some deals were put through. Following this, prices tended to rise fractionally, but soon receded. More interest was shown in goods and a fair volume of business was transacted. This, again, was only a temporary phase and on the eve of Easter and the week-end holidays interest dwindled and prices moved down.

Satisfaction was expressed at the success of the I.J.M.A. voluntary maximum price scheme but this was considerably aided by rains in most jute districts in both India and Pakistan and the consequent anticipation of a bumper crop. A further decline in prices was reported in the Narayanganj market and this was attributed to good progress in sowing in Pakistan's midland areas. The price of cuttings declined to Rs. 235 a bale from Rs. 270. After the *Id* festival, arrivals into Narayanganj market tended to decline. This should be attributed to the fall in prices.

On Tuesday last, northern bottoms in Calcutta declined from Rs. 58.50 a maund to Rs. 56.00 and daisee bottoms from Rs. 61.00 to Rs. 59. On the following day, northern bottoms recovered to Rs. 56.50 and daisee bottoms to Rs. 59. These rates were maintained on Thursday, although buying support was meagre. Arrivals recorded a decline but this feature did not lend support to prices.

In the goods market, ready B. twills opened at Rs. 182.50 but on Tuesday fell to Rs. 177 in the

absence of adequate buying interest. At this time, reports of the falling trend in the U.S. burlap market were received. In New York, spot hessian 40" 7½ oz. fell to 11.25 cents per yard from 11.40 cents, and the heavier quality to 15.10 cents from 15.50 cents. Reports from Dundee were also discouraging. For, it was stated that, because of high prices, consumers were turning to substitutes. The jute industry there was thought to have lost much skilled labour. On Wednesday, some buying interest was in evidence in the local market, as the low prices attracted buyers. Following a few deals, prices rose, with B. twills recovering to Rs. 179 and hessian 40" 10 oz. to Rs. 62.50. When prices rose, buyers withdrew and on Thursday, B. twills receded to Rs. 177 and hessian 40" 10 oz. to Rs. 61. The market remained closed from Friday. The reopening on Monday was on a quiet tone, soon, however, local buying interest developed and prices began to move up. Hessian 40" 10 oz. thus closed steadier at Rs. 62.00 and B. twills at Rs. 179.00.

TEAS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, *4th April*

Prices during last week's internal sales eased. This was in line with quality, but there was good demand. Dusts on offer totalled 22,994 packages. Medium C.T.Cs recorded an irregular trend. Thus, while the poorer lots, particularly the fibrous ones, eased by 20 nP. the best liquoring sorts were firm at about last rates. Prices for the small and bright lines were higher. The best C.T.Cs were steady. Orthodox teas were supported at 10 to 15 nP below last rates. Legg-cut Dooars were firm. The small and bright lines in this category sold well. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.40 to Rs. 7.00, medium Assam C.T.C. Rs. 5.55 to Rs. 6.20, legg-cut dust Rs. 4.60 to Rs. 5.10, medium Assam dust Rs. 4.50 to Rs. 4.80, and plain orthodox dust Rs. 4.40 to Rs. 4.55.

Leaf on offer amounting to 483 chests met with good demand at irregular prices.

Finance for capital goods and the need to procure more fertilisers would be the problems of Darjeeling planters if they were to realise the target of 20 per cent increase in tea production under the third Plan. These subjects were referred to by Mr. C. W. Emmett in his presidential address to the annual meeting of the Darjeeling branch of the Indian Tea Association held at Darjeeling on 18th March. Mr. Emmett said that, although the target was realisable, he was concerned at the poser if the tea would retain the Darjeeling characteristics.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *4th April*

Base metals, which had been fully steady in the earlier part of the week following apprehensions of import cut, turned quiet in the later part of the week under review, since the import policy announced on 1st April maintains the *status quo* in regard to the major base metals, copper, zinc, lead and tin. This had been a disappointment to those who had been seeking an increase in the imports of the different metals. A concession termed as minor in the policy has been the inclusion of German silver and nickel silver scrap in the list of items for import by actual users. At the same time, established importers will no longer be allowed to import these two scraps including their semis. The change announced in regard to the import of copper and brass scrap has been welcomed by the established traders inasmuch as it is a recognition of their useful role in distribution. The change in regard to copper scrap is that quota licences will be valid for import of copper unwrought. Established importers will sell the virgin copper thus imported to permit-holders only, at prices not exceeding 3½ per cent margin over the landed cost. Quota holders of brass scrap can now import unwrought copper and zinc or spelter unwrought. These changes have been welcomed, although this would mean a reduction in the margin of profit permitted from 5 per cent to 3½ per cent. It is to be hoped that permit-holders for the copper imported by the established traders would be mainly the small-scale consumers who are not permitted to import copper direct.

Prices of copper scrap moved up following apprehensions of shortage in view of the country's increased consumption. The berry quality scrap moved up to Rs. 476.50 per quintal from Rs. 462.58, and utensil scrap from Rs. 443.00 to Rs. 453.00. On the London Metal Exchange, in view of the approaching Easter holidays the price eased from £226⅞ per ton to £223¼. Following more arrival, the price of tin eased from Rs. 1,275.50 to Rs. 1,238.00, to close at Rs. 1,250.00. Tin in London was firmer at £825 per ton for a time but eased to close at £823. The firmness earlier was attributed to the rising trend in Singapore. Virgin lead closed here at Rs. 130, which was Re. 1 lower than the opening rate. Electrolytic zinc opened at Rs. 331.75 and eased to Rs. 326.75 per 100 kgs.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, *3rd April*

Sugar prices eased during the week, thanks to comfortable supply position. Damaged sugar of 1959-60 season is being sold in the open market at Rs. 100 to Rs. 104 per bag, while dry sugar was being quoted at Rs. 108 per bag of one quintal and retail Rs. 1.06 per seer. The Government of India is anxious to arrange exports even at a loss in order to earn foreign exchange, but export prospects are still bleak. Production, however, was still being carried on in all the factories here in west U.P. as cane supplies were adequate, but some factories were reported to be experiencing shortage of coal.

Sugar prices were also depressed during the week in the Muzaffarnagar market as damaged sugar of last year's production was being sold heavily. Prevailing prices are: Rs. 108 per bag dry, damaged and damp Rs. 100 to Rs. 104 per bag.

Khandsari prices ruled quiet during the week in absence of fresh incentives. Demand too was slack. Production was being continued while some units have closed for want of cane supplies. Production on the whole would be much lower than last year. Prevailing prices on Monday were: *khandsari* inferior Rs. 26 to Rs. 29; superior Rs. 31 to Rs. 33.50; crystal Rs. 33 to Rs. 36; boora Rs. 33 to Rs. 36; galawat Rs. 22.50; old Rs. 22 to Rs. 27 a maund.

Ready *gur* prices registered modest gains during the week as daily arrivals dropped to an average of 200 maunds. Loading is restricted, except on Sundays when free loading is allowed but demand is slack. Local stock is heavy, at about 76,000 mds., as against 41,000 mds. on the corresponding date of last year and 88,000 mds. in 1959 when pansera *gur* was quoted at Rs. 16.12 and Rs. 18.75 a maund respectively, as against prevailing price of Rs. 13.75 to Rs. 14 a maund. Total arrivals of *gur* during the current season here were 4.68 lakh maunds, as against total arrivals of 5.87 lakh maunds and 6.61 lakh maunds in 1959. Sowings of cane for next season is being done and land recently vacated from *rabi* crops is being utilised for such sowings.

Gur prices ruled quietly steady in the Muzaffarnagar market as daily arrivals dropped to about 5,000 mds., but loading continued to be restricted and week-end prevailing prices were: *Gur* Chaku Rs. 13 to Rs. 15.50; pansera Rs. 13 to Rs. 14; laddo Rs. 14.50 to Rs. 15.50; rusket Rs. 7 to Rs. 10; shakker dara Rs. 14.50 to Rs. 16; shakker masala Rs. 17 to Rs. 18 a maund.

FOODGRAINS ARRIVALS LARGE

(From Our Own Correspondent)

HAPUR, *3rd April*

Quiet conditions were witnessed in the foodgrains market during the week. Larger arrivals of new *rabi* crop exerted pressure on prices. Expectations of bumper *rabi* crop and large buffer stocks with the Government of India and heavy supplies from U.S.A. under long-term P.L.-480 agreements were additional depressing factors.

Wheat prices here recorded modest fall during the week to be quoted on Monday at Rs. 16.50 a maund for dara quality and Rs. 17.50 for better farm produce. Wheat imported from Punjab was lifted at Rs. 16.50 to Rs. 17 while inferior red quality found buyers at Rs. 14.25 a maund. Daily arrivals of wheat from rural areas were small at about 50 mds., harvesting of wheat has begun here and new wheat would begin to reach the market after a fortnight. Sunny weather now is favourable both for harvesting and winnowing operations. Rice prices were consequently almost at a standstill, inferior quality, however, recorded a downward trend, thanks to better supply position and continued arrivals from east U.P. Week-end prevailing prices were:—rice mainpuri Rs. 20.50, ramajwayan Rs. 24, raimunia Rs. 25.50, *basmati* sela Rs. 28 to Rs. 30, superior Rs. 32 to Rs. 36, *gainda* Rs. 19.75 a maund.

Gram prices continued to be subdued. Week-end ruling prices were Rs. 14.50 to Rs. 14.75 a maund for Punjab variety, inferior quality was being sold at Rs. 14 a maund. Local stocks were poor at 1,500 mds., buy expectations of large arrivals from Punjab mainly influenced market trend. Barley and bejhar sought lower levels and were quoted at Rs. 11.12 and Rs. 10 per maund, respectively. New produce grain is reaching the market in small quantities. Maize was not in demand even at the low price of Rs. 11.50 to Rs. 12.50 a maund. Jowar was quoted fractionally lower at Rs. 11.50 to Rs. 12.50 a maund, while guwar prices were steady at Rs. 13.25 to Rs. 13.50 a maund. *Bajra* was quoted at Rs. 17 a maund due to some demand for seed purposes.

MARKET GOSSIP

(Concluded from page 619)

is mainly a sequal to the improvement in the wheat crop position. Wheat production during this season is expected to touch a peak of 10.0 million tons, as against 9.7 million tons in 1959-60 and 9.8 million tons in 1958-59. Mr. S. K. Patil, Union Minister for Food and Agriculture, disclosed in the Lok Sabha this week that the main factors that influenced the Government to take the above decision were bright prospects of the coming *rabi* crop, availability of large stocks of foodgrains in Central reserves, heavy import programme from abroad and "relatively low prices of wheat" prevailing in the country. The decision must be widely welcomed. For any curbs on free movement of wheat when supply position is comfortable will only result in built-in slump in the major producing States and artificial scarcity conditions in deficit areas.

The supply position of wheat as well as other foodgrains has no doubt improved, but it would appear to have had no perceptible effect on prices so far, as is evident from the following table which shows the prices of foodgrains now ruling at Hapur as compared with those in the beginning of 1961 and a year ago:

(In Rs. per maund)

Foodgrains	Latest available	Beginning of the year	A year ago
Rice Basmati	29	28.50	32.50
Wheat	18.75	18.50	18.75
Gram	14.50	17.00	12.37
Maize	12	14.12	11.12
Jowar	12.50	13.00	12.25
Peas dara green	10.25	13.50	10.25
Moong	22	19.00	19.00
Arhar	12	13.50	14.25
Barley	11.50	12.75	11.00

It will be seen from the above table that, except rice which has tended to recede and wheat which remains unchanged, other important foodgrains are quoted higher than the prices prevailing at this time last year. The present price situation thus gives no room for complacency. With the abolition of control on inter-zonal wheat movement, it remains to be seen whether the prices of this commodity will be stabilised at a reasonable level. As for rice, it is gratifying to be told by Mr. Patil that, if the supply position continues to be so good as now, there is every prospect of the restrictions on it being removed.

Transatlantic Air Fares

Following almost on the heels of the decision of the B.O.A.C. to reduce its transatlantic cargo rates, three American airlines—Pan American World Airways, Trans World Airlines and the Seabound and Western Airlines—recently proposed to bring down the North Atlantic general cargo rates with effect from mid-April 1961. These rate cuts will be based on weightbreaks and not on the current outmoded and expensive commodity rate system. (Here the 'weightbreak' system is to be clearly distinguished from the 'commodity rate' system: the former provides that the heavier the shipment the lower the rate per pound, while the latter provides special rates for specific goods.) Under the proposed rates, a 100-pound shipment between New York and London, for instance, would cost $68.40, as against the current rate of $94.95. A bigger load of 16,000 pounds will secure a reduction of 62 per cent.

But alongside the above plans of important British and American airlines to reduce their freight rates, a movement in the opposite direction has also been mooted recently in Paris for raising the rates. Following the urgent requests from some European airlines to hold an emergency session of the International Air Transport Association to discuss the question of raising the air fares in Europe, a special private meeting of European airlines started deliberations on 23rd March 1961. The initiative of suggesting the upward revision of air fares has primarily come from the smaller European carriers, who have in the past been strong opponents of fares reductions. These smaller airlines have been alarmed at the continually rising costs. The decision of the U.K. Ministry of Aviation to raise landing fees at its airports by about one-third with effect from 1st April 1961 has particularly come as a shock to them. Under the new landing costs tariff, a Comet 4B will have to pay a basic rate of about £59 to land at London airport, if the flight originates within Europe, as against the prevailing rate of £44.

The smaller European airlines are particularly worried because the Cannes Conference of the International Air Transport Association held last autumn had taken the unprecedented step of deciding that the current rates would remain unchanged till 1st April 1963. The smaller airlines are obviously deeply concerned over the prospects of the present rates continuing for such a long period, in the face of the mounting operational costs and the steadily expanding capacity as more and more jets joined the airlines fleets.

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of November 1960 amount to 10.89 lakhs of rupees.

INDUSTRIAL DISPUTES (All-India)

Month	Number of disputes‡	Total of Average Number of workers involved	Number of man-days lost
1957*	1,630	889,371	6,429,819

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

CONCENTRATION OF ECONOMIC POWER—BUT WHERE?

IT is common knowledge that the desire to succeed in General Elections and occupy seats of power, including those in the rows reserved for the Opposition in Parliament and State Legislatures, is the cause for the speeches and actions of most politicians which aim at running down the big businessmen. India is a country of have-nots and a democracy with adult franchise. Big business offers a convenient target for winning the affections of the masses. Jealousy is a human weakness and politicians in this country are becoming quite adept at exploiting it in a subtle fashion for their own benefit. The more one thinks of the reasons for reviving the scare of huge industrial monopolies, industrial empires and concentration of vast economic power in the hands of a few businessmen, the more one is inclined to feel that it is an election stunt. A perusal of the full text of the Estimates Committee report on the Development Wing, to which we made a brief reference in these columns last week, shows that its suggestion for the prevention of the growth of industrial empires in the private sector is only incidental, its major desire being to see that small and new entrepreneurs are encouraged by the Ministry of Commerce and Industry while issuing licences for establishing new industrial units. No fair-minded person can object to this objective, provided it is sought to be attained without causing a setback to, or a slow-down in the pace of, industrial progress. Since there is nothing new in this suggestion, its reiteration by the Estimates Committee implies that the Government's actions in this regard leave much to be desired. The leftists in the Opposition and even some Congressmen openly say that the Government has permitted concentration of economic power in various ways and that a few industrial houses own most of India's industries. Some observers even go so far as to suggest that, for some years to come, no new licences should be given to the first fifteen leading industrial groups for either putting up new industries or expanding the existing ones, asking them to be content with the economic power which they already possess.

It is undoubtedly true that the leading industrial houses have been allowed not only to expand some of their existing industries but also to establish a number of new industries. But they could have been denied these opportunities only at the cost of industrial progress. Again, in the case of several industries, it is more economical to allow the existing units to expand than to permit the establishment of new units. What is, however, ignored by the critics is that a large number of new entrepreneurs has entered the field in the last 10 or 12 years and that an even larger number of entrepreneurs has expanded in size; many small businessmen and industrialists have become medium-sized; and, similarly, several medium-sized businessmen have attained the ranks of big industrialists. In the coming years, this trend is sure to gather further momentum. The task of industrialising India is, indeed, so enormous that big houses such as Tatas, Birlas, Bangurs, Jains, Thapars, Singhanias, Kasturbhais, Mafatlals and Walchands alone cannot do it. It is not suggested that their capacity to contribute further to India's industrial progress has been exhausted. Far from it. Almost every one of them must be having plans for taking up new industrial ventures under the third Plan. Still, there is bound to be scope for hundreds of new entrepreneurs.

A spirited defence of the Government's industrial policy was put up by Mr. Manubhai Shah, Minister of Industry, in the Lok Sabha this week where several Members contended that the Government had not succeeded in preventing concentration of economic power. He convincingly showed that this charge was hollow by placing the issue in its proper perspective. The most important point made by him was that one should not allow "industrial bigness" or "industrial empires" to confuse one's thinking. If a particular industrial house has grown into a big one, it does not mean that it has a monopoly in the manufacture of a particular product. As already stated, when the nation grows industrially, everybody grows with it in some way or other. That is progress. The public must realise that the country has launched on a massive programme of industrialisation and that a further growth of this bigness is inevitable. The total investment in the industrial sector by the end of the third Plan will be Rs. 5,500 crores, as against a mere Rs. 800 crores at the beginning of Independence.

Boldly declaring that there were practically no monopolies in India, Mr. Manubhai Shah said that, among consumer industries, there was not a single group which owned more than three or four per cent of national production. He did admit that there were four exceptions to this statement. One was in the manufacture of containers, the Metal Box Company of India; the next was the Associated Cement Companies in cement industry. The third was the Western India Match Company in match industry. And the fourth was Indian Oxygen in the field of industrial gases. But, in all these cases, their dominance in their respective fields is being rapidly reduced by encouraging the entry of other entrepreneurs, small and big. Today, Metal Box accounts for only 20 per cent of national production of containers, thanks to the Government's deliberate policy of licensing new units outside this particular company. Likewise, in cement, the share of A.C.C. in national production has been brought down from 64 per cent in 1951 to 30.4 per cent in 1960. By the end of the third Plan, it would be no more than 20 per cent. The monopoly of W.I.M.Co. has been brought down to 60 per cent of national production, following the coming into existence of a number of cottage units and 19 big or medium-scale units.

The position in regard to industrial gases is being examined and the Government is trying to see that more new entrepreneurs come in and produce these industrial gases. While thus ownership and control of even these four industries are being spread over a larger number of hands, it is a moot point whether from the consumer's point of view this development has been beneficial. It is a well-known fact that the cost of products made by small industrial units is higher than in the case of bigger units. India's capacity to export at competitive prices would also have been better if theoretical considerations of monopoly had not been allowed to inhibit the growth of bigger units. The Government, too, has had to forgo a sizable amount of revenue as a result of this policy.

Those who have not been satisfied with what the Government has done so far may draw some consolation from the categorical statement of Mr. Manubhai Shah that the Government "is against any type of monopoly in this country" ... it will "tolerate no growth of monopolies at all" and, "if anybody tries to do any mischief by undercutting prices, or tries to dislodge their competitors by dumping goods or indulges in price-racket by controlling the maximum production of the national economy, we shall take measures to guard against him." Again, to those who urge the appointment of a commission to check monopolies and restrict practices as in the U.K., the U.S. and certain other Western countries, Mr. Manubhai Shah's reply is in the negative, and that for a perfectly valid reason. His contention is that, whereas in those countries economic development preceded political and social consciousness, in India the social consciousness has grown, if not overrun, at a much faster rate than economic development. The House and public opinion have, therefore, been vigilant. They have supported the Government in prescribing adequate safeguards against the growth of monopolies. The Government has enough powers to prevent such a growth and attempts to rig up prices. All this is undoubtedly true. Only, this type of bureaucratic control and regulation is not a democratic substitute for the independent judiciary through which monopolies and cartels are being tackled in the West. But, for an underdeveloped country like India, which is trying to raise its living standards through a forced march, there is little choice. The Press and Parliament have to be vigilant enough to see that bureaucracy does not operate harshly and unrealistically. Since Parliament will be dominated by the majority of the ruling party, the Press, in particular, has to carry the brunt of focussing public opinion on the faults of Administration often at the risk of incurring the displeasure of the powers-that-be.

The charge that, in the issue of industrial licences, the new entrepreneurs have not had a fair deal was unequivocally refuted by Mr. Manubhai Shah. He said: "Not a single industrial entrepreneur of a new type, whatever be the definition of new, has been refused a licence." On the contrary, the Government was, he averred, encouraging new entrepreneurs to come forward. Some applicants might have been refused on the ground that the country had enough capacity in the industry which he wished to enter. But this restriction applied to old and new entrepreneurs alike. Whenever or wherever there was room for issuing licences, the newcomer was given preference. Elucidating the Government's policy a little more precisely, he observed:

> "In all the well-developed industries like cotton textiles, jute textiles, cement, paper, sugar, rayon and heavy chemicals, it is our policy to avoid any of the existing houses. Those who have got sizable investment in these industries get very few licences. As far as possible, we have avoided them; in future we are going to be more firm on this point. When these well-established industries come up—and their list can be widened—we shall try to see that only new entrepreneurs and those who do not have units in the particular industry are encouraged as compared with others."

It is to be hoped that, in applying the aforesaid principles, the Government will take a realistic attitude. If suitable types of new entrepreneurs are not forthcoming to take up a project, it should not hesitate to let existing industrialists, even if they are big, to go ahead with that project. While it is desirable to

broaden the number and range of industrial entrepreneurs, the need for increasing national wealth and employment speedily and economically is equally important, nay, paramount. It is, therefore, gratifying to hear from Mr. Manubhai Shah that the Government is not antagonistic to big industrial houses like Tatas and Birlas and that it feels that these houses have a still bigger role to play. His observations on this particular point are worth quoting:

"... There is a certain amount of inescapable entrepreneurship, better managership, better experience and skill which have also to be deployed in the service of the nation without every time being afraid of a few individuals. After all, what strength have they got? We here have got all the powers of legislation; we have all the powers of investment and finance, with a dominating public sector. ... If we do not deploy the skill of Birlas and Tatas in putting up an aluminium plant (for instance), when it is allowed in the private sector, then we are only the poorer for it."

Apparently, what Mr. Manubhai Shah means is that difficult industries, involving large capital outlay and a tremendous amount of organisation, could be left to the big industrial houses. The latter, too, could voluntarily refrain from applying for licences for small and medium-sized industrial projects, as their contribution to the growth of new entrepreneurs. One of the complaints of the small and relatively new entrepreneurs is that, when big industrial houses compete with them for projects in which they are interested and for which they have the necessary competence, they lose the race, because the foreign collaborator invariably prefers the bigger, well-known houses. There is some force in this argument, for, in view of the acute scarcity of foreign exchange, there are not many new industrial projects which can be established without foreign collaboration. This suggestion may seem to be contrary to our contention in the earlier paragraphs. But really speaking, it is not, for, to the extent the number of entrepreneurs can be increased without seriously upsetting the pace of industrial progress, there is no reason why every effort should not be made in that direction. If, after waiting for a while, the Government finds that there is no response from small or new businessmen for some of the projects that require to be implemented, it can make that fact known to the big industrial houses and allow them to take up those projects. After all, in a democracy, it is necessary for the leaders of the private sector to carry the public with them. If the party in power feels that a particular course of action cannot be helped in order to retain its popularity, what can these leaders do? As they themselves have no following in the public, they have either to educate the political leaders or to help the latter to stay in power by making such concessions as will not cause any material injury to the national welfare. It is obvious that it will be in their own long-term interests for the big industrial houses to have more entrepreneurs than there are today. They should, therefore, consider it as part of their duty to enable the existing small businessmen to get opportunities to expand their activities and to do whatever they can to attract fresh young blood to entrepreneurship.

It is, however, an exaggeration to say, as some politicians are doing, that there is heavy concentration of economic power in the hands of a few industrialists in this country. The so-called industrial empires are just pygmies as compared with the industrial concerns in the U.K. or the U.S. Nor can there be any such concentration in future for a variety of reasons. In the first place, more and more industrial concerns are being established outside, and independent of, the big industrial houses. One has only to go through the prospectuses of companies floated in recent months to find the basis for this statement.

Secondly, the Government is actively encouraging the growth of a large variety of small-scale industries equipped with power-driven modern machinery. In the last two years, as many as 48,000 new small-scale and medium industries have come up and these are exclusive of units that fall under handicrafts, *khadi* and other village industries. During this period, the number of large-scale industrial units, it may be noted, were only 2,000.

Thirdly, the public sector is very rapidly expanding in the industrial field and can, if it so desires, exercise an effective influence over the private sector for the larger benefit of the public. According to figures given by Mr. Manubhai Shah in Parliament this week, in the first Plan, the public sector investment in industries was only Rs. 60 crores; in the second Plan, it is Rs. 720 crores, a twelve-fold increase; and in the third Plan, it will be Rs. 1,550 crores to Rs. 1,650 crores, if not more. The corresponding figures for the private sector are Rs. 330 crores, Rs. 850 crores and Rs. 1,200 crores to Rs. 1,300 crores, respectively. These figures are exclusive of the investments in power projects, which have registered a phenomenal increase in the public sector. From Rs. 260 crores in the first Plan, the public sector outlay on power has gone up to Rs. 460 crores in the second Plan and will be Rs. 1,040 crores in the third Plan. As against this, investments by the private sector in power have actually shrunk. In the third Plan, such will be only Rs. 50 crores, as against Rs. 65 crores in the second Plan, though a shade higher as compared with Rs. 42 crores in the first Plan. Mr. Manubhai Shah could, therefore, well claim that "the basic instruments of production and the tools of economy are all in the hands of the community, so that we can work as guards and sentinels of the public good and for the good of the community."

And, fourthly, the Government has in its possession enormous powers for regulating the private sector from its birth to death. Prices, profits, production, movement, and distribution of goods are all under Government control. Changes in management, as well as remuneration of management, are under Government control. On top of all this, there is high incidence of taxation with a large redistributive element. In the face of all this, it is absurd to say that there is concentration of economic power in the hands of a few industrial houses. On the contrary, it would be no exaggeration to say that, if there is heavy concentration of power anywhere, it is in the hands of a few politicians. The saving grace here is that these few are dedicated leaders, truly faithful to the cause of democracy and to a united India. But these leaders are mortals and their number is steadily declining. What will happen after them? Will their successors use this concentration of power wisely and for the weal of the common people?

SUGAR SITUATION

THE sugar industry is naturally perturbed by the heavy accumulations of stocks. Reports of crushing operations in factories are very encouraging and, if the latest estimates available with the Indian Sugar Mills Association were to prove correct, sugar production in the current season (November 1960-October 1961) would touch the all-time peak of 3.00 million tons. This quantity, together with the previous season's huge carryover stocks of 550,000 tons, gives a total available supply of 3.55 million tons, whereas the actual offtake is estimated at no more than 2.20 million tons (2.10 million tons for domestic consumption and 100,000 tons for exports to countries other than the U.S.). The balance of 1.35 million tons represents the undisposable stocks that will lie with mills at the end of the season.

How serious is the problem confronting the sugar industry was described by Mr. D. D. Puri, President of the Indian Sugar Mills Association, at a Press conference at New Delhi the other day. The industry, he declared, was facing a crisis of the present magnitude for the first time in its history, with the prospect of carrying over to the next season an unimaginable stock of 1.5 million tons of sugar, for which it did not have the requisite financial resources or the storage capacity. Against this, he added, the pressure of cane supplies, specially due to severe slump in *gur* prices, continued unabated and the labour unions had served strike notices to secure the implementation of the Wage Board award. Mr. Puri also pointed out that most of the sugar mills had reached their ceiling in respect of bank accommodation and were not in a position to meet their future commitments unless some way was found to dispose of their stocks.

Few will underrate the gravity of the problem of huge sugar stocks. There is no doubt that these stocks imply immobilisation of several crores of rupees, not to speak of the problem of finding the requisite storage facilities. The need for taking some energetic action to improve the position is certainly urgent. But one wonders whether the remedy suggested by Mr. Puri for tiding over the crisis in sugar industry, namely, upward revision in the ex-factory price of sugar to the extent of Rs. 5.51 per maund, is a sensible one. As it is, the prices of sugar are high in all conscience and any further increase is bound to add to inflation, especially considering that sugar is an essential item of consumption. Moreover, a further rise in the price of sugar will prompt the cane growers to ask for still higher prices.

Looked at from the point of view of consumption also, the suggestion for enhanced sugar price is not justified. It is the continuing high prices that are chiefly responsible for the low level of sugar consumption which will, if anything, suffer a setback through an increase in its price. Mr. Puri no doubt admitted this fact, but explained it away by suggesting that prices and consumption would get stabilised. But he has apparently overlooked the point that the real solution to the problem of disposing of the huge sugar stocks lies not in raising the price but in reducing it. Such a reduction can be brought about by lowering the heavy incidence of taxation. The Central excise duty, the States' cane cess, and the municipal and local taxes together account for as much as 35 per cent of the ex-factory price of sugar. It will be recalled that the former Tariff Board had considered even 18.7 per cent (Rs. 4.62 per maund) as a high rate of commodity tax particularly for an article of food. Would it not be a better proposition to encourage consumption of more sugar through a lower level of taxation and collect a larger sum through higher consumption?

To revert to Mr. Puri's statement. He opposed any move to abolish controls on distribution unless the Government was able to regulate releases according to price variations from time to time. Otherwise, he warned, there would be a sharp decline in the internal prices which the industry would not be in a position to sustain. This attitude is somewhat surprising. Why should the industry want the Government to undertake the task of regulating releases? It would be better if such regulation could be imposed by the industry itself on a voluntary basis. As for the Government, it must build up a buffer stock of sugar which can be used to set right any maladjustment in the supply-demand situation in any particular region. It is ironical that, when the sugar supply position was tight, the industry opposed controls, whereas it wants controls when the position is highly comfortable.

The only consideration which weighed with the authorities in clamping down controls on sugar in 1959 was the need to check the spiralling of prices as a result of the tight statistical position of sugar and the all-round increase in commodity prices; the question of sugar export had not arisen then. On more than one occasion, Mr. S. K. Patil, the Union Minister for Food and Agriculture, reiterated his determination to end controls on sugar. "The sooner controls go," he observed some time last year, "the better. When the time comes, controls will not remain for 24 hours." Welcoming this statement, we had pointed out that controls must be done away with shortly after the commencement of the 1960-61 crushing season. If the Government had done it, the plight in which the sugar industry finds itself today could perhaps have been avoided. The effect of controls on sugar, as, indeed, on any other commodity, is that it restrains consumption. The experience of control days in the past fully confirms this statement. It must also be stated here that the operation of the forces of supply and demand facilitates the building up of pipeline stocks with traders, estimated at 200,000 tons.

The fears that any decontrol of distribution will lead to a sharp decline in internal prices of sugar are unfounded. There will no doubt be some fall in prices, but it will not be sharp. After all, no sugar mill will immediately proceed to make large distress sales. Nor is the argument that controls on sugar are necessary in the context of the need for export fully convincing. Sugar exports impose an additional direct burden on the consumers because of the need to give a sizable subsidy on sales of sugar abroad in the form of higher internal prices. If India succeeds in getting a quota in the U.S. market, the element of subsidy might be lower, as the U.S. pays 50-60 per cent more than the ruling world prices. Yet there will be loss of sizable rupee resources for the Government in the form of remission of excise duty and cane cess. Even assuming that India must export sugar in view of the serious plight in its balance of payments position, such exports will not cut into the quantity available for internal consumption for which the country has enough supply. Inasmuch as the difficulties in developing a profitable export trade are many, the sugar industry can expand and develop on a sound footing only if domestic consumption keeps pace with production. The restoration of normal distribution channels, accompanied by steps to reduce taxes, to link cane prices to both quality and quantity instead of to quantity alone, and to encourage sugarcane production through large-scale plantation, will surely go a long way towards boosting sugar consumption. What is wanted is courage on the part of the authorities to undo the past mistakes.

MARKET GOSSIP

N.I.D.C.

IN the course of the debate on the Ministry of Commerce and Industry in Lok Sabha this week, it was suggested by some members that there was a multiplication of long-term lending agencies in this country, resulting in waste of resources and avoidable overheads. A specific suggestion was that the National Industrial Development Corporation Ltd. (N.I.D.C.) should be wound up, as its functions could be easily performed by the Industrial Finance Corporation of India (I.F.C.). The authors of this proposal—Mr. A. C. Guha, an ex-Minister, was one of them—alleged that the N.I.D.C. was brought into existence by Mr. T. T. Krishnamachari in 1954, the then Minister for Commerce and Industry, as he had no say in the affairs of the I.F.C. and as he wanted a financing agency under his control for carrying out his projects. The implication here is that since there is no rivalry between the existing Finance Minister and the Commerce and Industry Minister, there is no need for a separate financial organisation. They further pointed out that the primary function for which the N.I.D.C. was formed, namely, promotion of new industries by the public sector in order to accelerate the pace of industrialisation, was also not being effectively performed. The third point made was that the N.I.D.C. had become an instrument through which the Ministers could favour industrialists of their choice. The fourth point was that some of the influential industrialists on the Board of Directors of the N.I.D.C. were able to get loans sanctioned for the jute and cotton mills under their control. And the fifth point was that Ministers should not be Chairman and Vice-Chairman of this body, for it was neither proper that they should be heads of autonomous bodies, nor had they the time to control its working effectively. At present, Mr. Lal Bahadur Shastri is the Chairman and Mr. Manubhai Shah is the Vice-Chairman. Now that the former has taken up the Home Ministry, it is possible that Mr. K. C. Reddy, his successor to the Ministry of Commerce and Industry, would take over the chairmanship.

There is a lot of truth in the last point. It is inconceivable that heavily worked and frequently touring Ministers like Mr. Manubhai Shah could get sufficient time to attend to the working of this body. It should, therefore, be placed under the active control of an independent paid chairman as is the case with the I.F.C. In his reply to the debate, Mr. Manubhai Shah disclosed that neither he nor his senior colleague was enamoured of chairmanship and that very soon the Cabinet would be taking a decision on this issue. The third and fourth points are in the nature of allegations, as the first one is, the difference being that the latter is only of historic importance. The allegations of favouritism and the directors sanctioning large loans for their own concerns in preference to those of other applicants are not unusual in this country; they were once made against even the I.F.C. and an inquiry committee was appointed to verify them. This is a device often resorted to by some politicians to drive businessmen out of the boards of public sector undertakings. Prominent among the non-officials on the Board at present are Dr. A. Ramaswami Mudaliar, Mr. G. D. Birla, Mr. S. P. Jain, Mr. Kasturbhai Lalbhai, Mr. B. P. Singh Roy, Mr. J. R. D. Tata and Mr. G. B. Kotak. It is, of course, not known how many of them take active interest in the working of the Corporation; significantly enough, not one of them has signed the latest directors' report and statement of accounts, which is for the 15 months ended 31st March 1960, and a copy of which was released to the public a month and a half after the annual meeting. Nor is any explanation given in the report as to why these directors, as well as quite a few others including officials, have not signed the report. It is common for companies in the private sector to give such an explanation. Be that as it may, the Estimates Committee is there to go into these allegations; indeed, it is already seized of this issue. It would appear from Mr. Manubhai Shah's reply that loans given by the Corporation to companies in which its directors are interested is only 17.4 per cent of the total.

On the question whether the N.I.D.C. should be wound up, allowing the I.F.C. to take over its lending operations, opinion is sharply divided. At present, the N.I.D.C. is providing long-term finance for modernisation and rehabilitation of cotton and jute textile industries; as at the end of March 1960, the loans given to these industries were Rs. 4.63 crores. The latest available data show that, as at 15th March 1961, the Corporation had received 193 applications for a total assistance of Rs. 67.95 crores. Of these, 86 applications for a total sum of Rs. 19.60 crores had been sanctioned. Applications rejected were 38 covering a sum of Rs. 15.64 crores, while those pending were 13 for Rs. 4.79 crores. One view is that the I.F.C. cannot give loans for rehabilitation of an old industry the machinery of which is mere junk, as it has certain statutory obligations to fulfil under its charter in regard to the collateral. The other view is that this is not an insuperable difficulty, as the Charter can easily be amended by Parliament. The issue, however, is not so simple as all that. The pros and cons have to be carefully examined, as the suggestion is not without some merit. We intend doing this in our next issue. Meanwhile, we give below a brief resume of the Corporation's work in regard to preparation of industrial projects meant to be taken up by the public sector:

The projects on which the Corporation undertook preliminary studies, were: organic chemicals and intermediates; sulphur from pyrites; raw film; second and third heavy electrical plants; foundry forge; heavy machine building; coal mining machinery; ophthalmic glass; heavy machine tools; drugs; heavy structural fabricating works; heavy plate and vessel works; phosphorus from rock phosphates; aluminium; precision instruments; pilot plants for bio-gas and fertiliser; newsprint from bagasse and rayon grade pulp. Of these, the first nine projects have already been finalised and have been established in the public sector under different corporations. For the manufacture of drugs, a new company has been registered very recently.

Some of the other projects, namely, the heavy structural fabricating works, heavy plate and vessel works, phosphorus from rock phosphates, aluminium and precision instruments, are being further processed and it is expected that public sector undertakings would be established soon in respect of these projects. The project in respect of bio-gas and fertiliser is already being carried out in the public sector on a pilot basis.

The Corporation had given up two of the projects worked out by it—these relate to newsprint from bagasse and rayon grade pulp. It is said that, in the former case, no satisfactory results were available as a result of trial experiments, while, in the latter case, it was given up because already several units were coming up in the private sector.

The Corporation has recently set up the nucleus of a Technological Consultancy Bureau for serving the various projects under study or in the process of implementation. The functions of this Bureau would include preparation of preliminary studies, investigation and selection of sites, preparation of detailed project reports and the designing of structures. For the present, its work will be confined to the public sector projects of the N.I.D.C. and the Union Ministry of Commerce and Industry.

Role of Banking Sector

There will be a wide measure of agreement over the statement of the Union Finance Minister, Mr. Morarji Desai, reported to have been made at a meeting of the Parliamentary Congress Party's Finance Standing Committee on Tuesday this week, that merger of banks is more advantageous than liquidation from the point of view of depositors. Evidently, Mr. Desai's view is based on the consideration that liquidation involves additional expenses, such as liquidator's fees, which cut into the availability of funds for payment to depositors. He is understood to have remarked: "Where corrosion in any small bank does not go beyond the extent of its share capital and assets, there should be no difficulty in ensuring that the depositors are not put to any loss in the event of merger. ... Liability for any mishandling will attach to directors as much in a bank which is merged as in the case of liquidation."

The merging of banks which are in a financially precarious position with stronger and sound banks is to be preferred to their liquidation not merely from the point of view of depositors but from the larger interest of the country as well. If the banks are to play their due role in the rapidly expanding economy, it is imperative that they must be well organised, effective and efficient. It is only then that the banking system can be expected to foster the growth of the community's savings, channel them properly, and meet the ever-increasing demand for funds from the industrial and commercial sectors. There are three basic criteria for judging the soundness of banks, namely, sizable capital funds, maintenance of reasonable liquidity and adequate profit margin. Banks must, as Dr. N. N. Law, Chairman of the United Bank of India, very aptly stressed in his speech at the Bank's annual meeting held at Calcutta on Monday the 10th inst. (extracts from his speech are published on page 709 of this issue), find out ways and means of stepping up their profitability without jeopardising the basic issues related to the question of liquidity. The basic issues as neatly summed up by him are:

1. The drift from shiftability and short-term self-liquidity needs careful watching and readjustment.

2. Banks must reduce the incidence of their expenses where possible, rationalise their rates of charges and find out newer sources of revenue. "There is," to quote Dr. Law, "an urgent need for a study of the structure of operating costs and operating earnings, with a view to achieving a better differential."

It was in this context that Dr. Law deprecated the recent upward revision in interest rates on deposits. Characterising it as "an extremely undesirable step," he said: "The banks have again postponed the opportunity of raising their low profitability. It is high time that banks took a more realistic view of the situation, kept interest rates under control, and tried other methods of improving their resources and profitability." It is true that higher interest rates on deposits will increase the expenses of banks and is likely to push up the bond rate in regard to future Government borrowings, thus adding to the burden of servicing charges which will have to be met by progressive taxation. It is equally true that the growth of deposits does not depend so much on the rate of interest as on the confidence which the banking system inspires, the availability of banking facilities and the quality of service rendered to the community. But it must not be forgotten that, when there are competing demands for whatever savings that are available in the community—a situation which is bound to persist in the next few years—one of the surest ways of attracting a large part of these savings into the banks' deposit vaults lies in bringing down money rates in the non-banking sector. Such a reduction can be brought about to a great extent by maintaining interest rates on deposits at an attractive level. The need for it is especially urgent what with prospects of reduced deficit financing, continued large adverse balance of trade and expansion in the volume of black money.

Peoples' Shares

The absence of any official denial of the Press report that the proposal to permit limited public participation in the equity capital of State undertakings has been put in cold storage for the present may be taken as an indirect confirmation of the report. The decision, if true, is somewhat intriguing especially to those who have been following with genuine interest and expectation the protracted discussions in official circles for over a year now. At one time, it was understood that the Planning Commission was favourably disposed to the proposal. In fact, it was mentioned in a section of the Press that the Commission had actually recommended acceptance of the proposal and that a concrete scheme was being formulated.

The official study group, headed by Dr. D. L. Mazumdar, Secretary, Department of Company Law Administration, which had been asked to go into the practical aspects of the proposal, expressed the view that it was worth trying in selected public sector undertakings on an experimental basis. After examining all the factors bearing on the issue of public participation in the equity capital of State undertakings, including its strategic as well as economic and psychological implications, the study group laid down some broad criteria for selecting the undertakings where the proposal could be put into practice. There are quite a few undertakings that fulfil these criteria. No one, of course, doubted that the final decision lay with the Government, but there was reason to suppose that the Government might accept the suggestion if for no other reason at least to counter the criticism that it is fostering 'Statism' even in the industrial field.

The reported decision of the authorities to pigeonhole the proposal has given rise to wide speculation on the reasons behind it. Some say that the Government and the Planning Commission have not been able to make up their minds as to whether public participation is good or bad. A few others feel that differences of opinion have cropped up even regarding the suggestion that the scheme should be based on certain principles which initially seemed to have had a large measure of support. The two principles specially mentioned are that only preference shares should be issued to the public and that only individuals should be allowed to subscribe. The opposition to the first is presumably based on fears that preference capital, by virtue of the fact that the return on it is fixed, might ultimately prove to be costlier than equity capital. Issue of equity capital is not favoured by some because they are afraid it may not meet with success, in view of the none-too-satisfactory working results of several State enterprises. It is unwise, according to them, to go by the resounding success of the new issues recently floated by some companies in the private sector. While the opposition of these critics stems from the practical consideration of the chances of success, a considerable body of opinion is said to be against permitting individuals to hold shares in State concerns on the ground that it offers a chance for interested persons fundamentally opposed to the public sector to pry into the affairs of State undertakings and exploit their shortcomings with a view to painting an unfavourable picture of public enterprises in general.

It is difficult to say what precisely are the considerations that have weighed with the Government in deciding to shelve the proposal. The alleged fear of shareholders posing awkward questions at annual meetings could not have been the reason, for such questions can be put even now by Members of Parliament, though, in respect of public corporations, Parliament exercises control only on matters of broad policy. Nor does the argument that interested parties will seek to discredit the undertakings stand to reason. Who will, after all, invest his savings in a company, whether in the public or private sector, and then try to pull it down himself? A more plausible reason is perhaps the fear that, if the experiment were to fail, the prestige of State undertakings would go down. In any case, the Government's reluctance to test the public's confidence in State undertakings will only strengthen the suspicion that all is not well even with the best of them.

Foreign Trade Policy

A heavy and complex task awaits the Committee (Chairman: Dr. A. Ramaswami Mudaliar) which has been asked to suggest measures designed to rationalise import and export policies. The Committee, which is reported to have been asked to submit its report by the end of July this year, will examine the import allocations for raw materials and capital goods and also review the efficacy of the present export promotion measures. It will inquire into the working of the import trade control with particular reference to the procedures followed in the formulation of import policy, methods for dealing with applications for import licences and organisation of the existing machinery for import control. It should thus be clear that the terms of reference of this Committee have been broadly conceived. Indeed, they cover the entire field of India's foreign trade policy so that its report may well constitute an important landmark in the formulation of right policies in the crucial third Plan period. It is not known how the Committee will set about its task. It is, however, to be hoped that the Committee will meet representatives of trade and commercial organisations or at least invite representations from these bodies before it finalises its report. The time given to it is no doubt short, though the problems which it has to tackle are common knowledge. And what is

SHARE MARKET WEAK

ALL-ROUND FALL IN VALUES

(*From Our Own Correspondents*)

BOMBAY, 13*th April*

DISTINCTLY easy conditions prevailed in the share market during the week under review. Selling was pronounced and widespread. Even textiles, which ruled firm last week, were subjected to liquidation. The statement of the Bombay Dyeing Chairman at the annual general meeting of the Company held last week-end that no bonus shares would be issued as long as the tax on bonus shares remained, gave rise to doubts whether the expected bonus issues by other mills would materialise. The high contango charges at the last settlement, heavy deliveries, and the continued stringency in money greatly chilled the enthusiasm of operators. Fresh buying support was lacking, as investors preferred to reserve funds for investment in the forthcoming several new issues. Under pressure of renewed selling, scrips in both cash and forward lists suffered a setback.

Steel shares were depressed. Tata Steels fell from Rs. 151.50 to Rs. 148.50 before finishing higher at Rs. 150, thanks to support at lower prices. The net loss over the week was Re. 1.50. Indian Irons, which were an exception to the downward trend last week, dropped 60 nP to Rs. 26.80. Mukand Irons were quoted 25 nP lower at Rs. 26.

Textiles staged a retreat. Mafatlals slumped by Rs. 45 to Rs. 870. Standards eased by Rs. 22 to Rs. 1,485. Centurys declined by Rs. 18.50 to Rs. 569.50. Kohinoors receded from Rs. 306.50 to Rs. 293—a loss of Rs. 13.50 over the week—reflecting disappointment of operators over working results of the Company for the year 1960. Finlays moved down by Rs. 12 to Rs. 341. Morarjees eased by Rs. 10 to Rs. 340. Despite higher dividend expectations, Svadeshis declined by Rs. 9 to Rs. 261.50. Phœnix eased by Rs. 6 to Rs. 137.50. Gokaks dropped Rs. 5 to Rs. 184. Central Indias and Shree Niwas shed Rs. 4 each to Rs. 113 and Rs. 256, respectively. Simplex lost Rs. 3 to Rs. 189 and Tata Mills Rs. 2.80 to Rs. 51.20. Bombay Dyeings declined from the last week-end closing of Rs. 67.80 to Rs. 65, following the Chairman's remarks on bonus issue. The close was fractionally higher at Rs. 65.30. Khataus and Vishnus, however, evoked special support and improved, the former by Rs. 6.25 to Rs. 546.25 and the latter by Rs. 9.50 to Rs. 130.

Cement shares drifted downward. Digvijays were quoted Rs. 2 lower at Rs. 153.50. Orissas softened by 20 nP to Rs. 14.32. Associated Cements, however, proved an exception, thanks to rumours of a bonus issue, and moved up from Rs. 157 to Rs. 160.75 before closing at Rs. 158. The net gain over the week was Re. 1.

Sugars were subdued. Belapurs were marked down from Rs. 296 to Rs. 283, though, later in the week, a recovery was in evidence, today's closing rate being Rs. 286. The net loss over the week was Rs. 10. The decline in Kesars was even more marked, being Rs. 18.75, the actual rate receding from Rs. 266.25 to Rs. 247.50. Phaltans shed Rs. 3 at Rs. 143. Bhopals lost Re. 1.43 to Rs. 26 *ex-div*. Walchandnagars were done at Rs. 194 *ex-right*. The Company has obtained official sanction for the issue of 50,500 shares of Rs. 100 each at a premium of Rs. 30 per share in the ratio of one share per every two shares held.

Activity in the shipping section was restricted. Scindias dropped 64 nP to Rs. 14.64. Great Easterns receded by 44 nP to Rs. 15.32.

Rayon shares encountered persistent selling. In spite of the proximity of dividend announcement, National Rayons were hammered down from Rs. 538 to Rs. 515.50. They, however, recovered to Rs. 520 today. Baroda Rayons eased by Rs. 8 to Rs. 142.50. South India Viscose changed hands at Rs. 160, as against Rs. 165 last week-end. Gwalior Rayons receded by Rs. 2 to Rs. 45. Indian Rayons found buyers at Rs. 65 *ex-right*, as against Rs. 72.50 *cum-right* last week.

Dyes and chemicals suffered a sharp setback. Amar Dyes were marked down by Rs. 20 to Rs. 390. Colour Chems slumped by Rs. 17.50 to Rs. 340. Indian Dyestuffs lost a like amount to Rs. 502.50. Polychems eased by Rs. 12 to Rs. 240. Synthetics declined by Rs. 5.50 to Rs. 155. Dhrangadhras and Citrics softened by Rs. 2 each to Rs. 132 and Rs. 57, respectively. Dharamsis shed Re. 1.25 to Rs. 262.50. Tata Chemicals were a shade easy at Rs. 19.36.

Engineering shares were no exception to the general trend. Telcos came in for heavy selling and declined from Rs. 344 to Rs. 330.50 on Tuesday the 11th inst. Thereafter, induced by rumours of a possible right issue, they recovered to touch Rs. 338.25 today. The net loss over the week was Rs. 5.75. Cooper Engineerings changed hands Rs. 4 lower at Rs. 208. T. Maneklals shed a part of the gain made last week and were quoted Rs. 15 lower at Rs. 425. Premier Constructions declined by Rs. 8 to Rs. 192. Alcocks, however, provided a bright spot and put on Rs. 7 to Rs. 326.

Miscellaneous counters, too, encountered selling and values dropped. Notwithstanding hopes of a bonus issue, Bombay Burmahs declined from Rs. 622.50 to Rs. 605.50 before finishing at Rs. 613. Wimcos receded by Rs. 9 to Rs. 296. Laxmi Starches fell by Rs. 9.25 to Rs. 190.75. Permanent Magnets lost a like amount to Rs. 67. Voltas were quoted at Rs. 276 *ex-div.*, as against Rs. 291 *cum-div.* Anil Hardboards and Ceat Tyres fell by Rs. 5 each, the former to Rs. 287.50 and the latter to Rs. 295. Premier Tyres and Killicks were both quoted Rs. 4.50 lower at Rs. 108.50 and Rs. 104, respectively. West Coast Papers shed Rs. 3.50 to Rs. 207. Tata Oils softened by Re. 1.80 to Rs. 81.70. Philips Carbons were a shade easy at Rs. 17.24.

* * * *

Madras Stock Exchange

MADRAS, 12*th April*

Equities on the Stock Exchange ruled easy during the week under review, barring textiles and a few miscellaneous industrials which evoked sustained inquiries. Teas were quiet on bearish advices from tea markets. Coffees were listless, despite the improvement in world prices on better seasonal demand. There was selling pressure in rubbers and so their prices moved down. Sugars were subjected to stale liquidation, thanks mainly to reports suggesting heavy accumulation of stocks. Banks and electricals were neglected.

In the tea section. Neelamalais receded 12 nP to Rs. 4.57. Kil Kotagiris lost 8 nP to Rs. 5.32. Chembras dropped 6 nP to Rs. 3.87. Blue Mountains and Periakaramalais were dull at Rs. 3.55 and Rs. 4.10, respectively. United Nilgiris were subdued at Rs. 24.50, Twyfords at Rs. 13.15, Devasholas at Rs. 30.30 and Haileyburias at Rs. 15.15. Peermades, however, hardened by 30 nP to Rs. 23.30. The Directors of the Company have proposed a final dividend of 15 per cent, taxable, making a total of 22½ per cent, taxable, for 1960, same as in 1959. Parksides rose by 25 nP to Rs. 28.87.

Among coffees, Consolidated Coffees eased by 15 nP to Rs. 23.60. Waterfalls shed 3 nP to Rs. 2.17. Mysores were quiet at Rs. 5.55. Anaparais at Rs. 4 and Puthuthottams at Rs. 2.67. Coffee Lands were unchanged at Rs. 20.85. Savamalais were neglected at Rs. 3.55, reflecting disappointment of operators over the announcement of a lower dividend of 14 per cent for the year ended November 1960, as against 15 per cent paid in the previous year.

Among rubbers, Midlands suffered a loss of 30 nP to Rs. 11.80. T.R. & Ts eased by 10 nP to Rs. 9.30 Cochin Malabars shed 5 nP to Rs. 7.92. Malankaras were dull at Rs. 18.60, as also Highlands at Rs. 16 and Travancores at Rs. 10.70.

In the sugar section, Cauverys fell by Rs. 4 to Rs. 128. Deccans moved down by 20 nP to Rs. 14.30. East India Distilleries rose from Rs. 43.75 to Rs. 44.05, but gave way later to Rs. 43.70, with a net decline of 5 nP over the week. Travancores were lower by 13 nP at Rs. 10.62. United Breweries were unaltered at Rs. 115.50, Mysores at Rs. 59 and Indias at Rs. 12.60.

Textiles, as already stated, were well maintained. Buckinghams spurted by Rs. 6 to Rs. 212. Janardhanas rose by Rs. 2 to Rs. 61.50. Anglo-Frenchs hardened by a like amount to Rs. 142. South India Viscos gathered Re. 1.75 to Rs. 167.65. Bangalore Woollens put on a rupee to Rs. 205, Radhakrishnas strengthened by 25 nP to Rs. 31.50. Ramalinga Choodambikais were steady at Rs. 110. The Directors of the Company have announced a dividend of 7½ per cent, taxable, for 1960; no dividend was paid in 1959. Coimbatore Cottons were maintained at Rs. 180, Coimbatore Pioneers at Rs. 350, Dhanalakshmis at Rs. 212, Premiers at Rs. 260 and Metturs at Rs. 380.

In the miscellaneous section, selected engineering scrips put on a cheerful appearance. Kirloskars rose by 20 nP to Rs. 12.90. Textools were higher by 25 nP at Rs. 179. Indian Steel Rollings moved up by 13 nP to Rs. 10.75. Standard Motors picked up 10 nP to Rs. 16.75. Ashok Leylands, however, declined by 32 nP to Rs. 9.43 and Aluminium Industries by 15 nP to Rs. 23.65. Among cements, Orissas and Andhras rose by 10 nP each, the former to Rs. 14.40 and the latter to Rs. 10.50. But Dalmias receded by 35 nP to Rs. 11.85. Travancores drifted lower by 10 nP to Rs. 8.60. Indias shed 5 nP to Rs. 6.06.

A NEW BALL-BEARING FACTORY

The joint move of the Investment Corporation of India Ltd. (belonging to the house of Tatas), the world-renowned Swedish firm of S.K.F. and its subsidiary in the U.K., Skefko Ball Bearing Company Ltd. to establish a new company for manufacturing ball bearings and tapered roller bearings is well conceived. A new company under the name of Associated Bearings Company Limited will be registered with an authorised capital of Rs. 7.50 crores. In the beginning, the Company will issue capital of Rs. 3.25 crores, of which as much as 60 per cent will be taken up by foreign collaborators and 20 per cent will be subscribed by the Investment Corporation of India, the balance of 20 per cent or Rs. 65 lakhs being offered for public subscription some time in autumn this year. For the present, the Company will be floated with an initial and promotional paid-up capital of Rs. 10 lakhs to be subscribed under mutual arrangement by the sponsoring firms.

Besides ball bearings, the Company intends to manufacture the well-known S.K.F. pendulum weighing arms, top roller bearing units for drafting system on speed frames, drawing frames and ring spring frames for the cotton textile industry. The establishment of this new ball-bearing plant with all the benefit of high-level technical efficiency associated with the firm of S.K.F. will surely meet a large part of the growing demand from the manifold industrial users of these important accessories.

A new company, called Chemicals and Fibres of India Limited, has been registered in Bombay, with an authorised capital of Rs. 10 crores, to take care of the I.C.I. manufacturing projects intended for the West Coast of India. It will be a public company in which the Indian public will be invited to participate in due course.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 13th April 1961.

NEWS IN BRIEF

THE Government of India has decided to amalgamate the Eastern and Western Shipping Corporations, both in the public sector, into a single Corporation.

India's first sulphur manufacturing plant in the public sector will be set up in the Sahabad district of Bihar State, in collaboration with a Norwegian firm.

The Ford Foundation has made a grant of $603,000 to help India's education and research on family planning programmes. This grant supplements a 1959 award of $330,000.

The first Indian-made gas turbine jet engine was switched on by Mr. V. K. Krishna Menon, Union Defence Minister, at Kanpur last week. The jet engine was designed and developed by the I.A.F. technicians of the gas turbine research centre at Kanpur.

The first diesel locomotive, incorporating the Indian invention known as "Suri Transmission," has arrived in Bombay from West Germany. This is the first of seven such locomotives which have been built by a West German firm for the Indian railways under an agreement with the Government of India.

The U.S. Development Loan Fund and the Government of India have signed an agreement covering a $10-million loan to the National Small Industries Corporation. The loan, initially approved in June last, will be utilised for procuring equipment to be made available to small-scale industries on rental-purchase plan.

The Planning Commission has decided to set up a Central Advisory Committee on Agricultural Labour. The Committee will advise the Commission on the settlement of landless workers on land and on measures to solve their other problems. Mr. Shriman Narayan, Member of the Commission, will be the Chairman of the Committee.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and Central excise duty paid on raw materials used in the manufacture of beer, toys fitted with magnets, articles made of polyvinyl chloride composition, laboratory glassware, stearic acid and aluminium articles not otherwise specified. Changes have also been made in the items relating to silk fabrics and ready-made garments, articles made from aluminium circles and sheets, glass or glassware, staple fibre yarn and iron nails.

Money remitted to India from out of the accumulated foreign profits by a person who does not reside in India and is 'non-resident' for the purposes of the Indian Income-Tax Act is completely exempt from Indian income-tax, the only exception being the money remitted to the wife residing in India. The Government of India has now decided that, if a non-resident remits any amount to his wife in India and is invested in Government securities, that money will not be included in the total income of the wife.

* * * *

From Abroad

France had a trade surplus amounting to N.F. 2,884 million in 1960, an increase of N.F. 312 million over 1959. Total exports aggregated N.F. 33,900 million and imports N.F. 31,016 million.

Brazil is understood to have entered into an agreement with Yugoslavia to import 36 ships (26 of them with a capacity of 8,500 tons each and the rest of 10,500 tons) in exchange for Brazilian export products.

The U.S. Civil Aeronautics Board has approved of the scheme for the merger of two U.S. airlines, the United Airlines and the Capital Airlines. The proposed merger is the largest in the history of U.S. aviation. The new airline will be called the United.

The Water and Power Development Authority of Pakistan has given a £1-million contract to the British company, Hunting Technical Services, for the investigation and design work connected with the control of drainage and salinity in 10 million acres in Indus Valley in West Pakistan.

Under an agreement signed last week between the Governments of Italy and the United Arab Republic, Italy has secured a contract for the erection of a E£20-million heavy oil carbonisation plant at Suez. The plant will have a capacity of two million tons of various grades of oils. It is expected to be completed in 1963.

The British National Federation of Fruit and Potato Trades has developed a fire and rust-proof and "almost indestructible" container for transporting fruits and vegetables. The container is made of polythene. A prototype of it will be demonstrated at the Federation's conference at Harrogate on the 21st inst.

The Esso (Netherlands) has decided to build a £6½-million plant for the manufacture of aromatic base products for the chemical industry at Rotterdam, Holland, in the grounds of the Esso refinery. The new plant, which will have an annual capacity of 220,000 metric tons, will be the biggest of its kind in Europe. It is expected to go into production by the middle of 1963.

Nigeria and Portugal have become members of the International Monetary Fund and the World Bank. Their quotas in the I.M.F. are $50 million and $60 million, respectively. Nigeria's subscription to the capital stock of the Bank is 667 shares with a total par value of $66.7 million and that of Portugal 800 shares aggregating $80 million.

President Kennedy has abolished the special import fees in the U.S. on groundnut oil, linseed and linseed oil, in pursuance of a report submitted by the Tariff Commission. The special fees were imposed in 1953 in order to prevent imports of these commodities from materially interfering with appropriate support programmes of the Department of Agriculture.

The French State-owned aviation company, Nord-Aviation, has been awarded a $86,000 contract by the U.S. Air Force for a design study to determine the characteristic of a turbojet-ramjet powered aircraft. Nord-Aviation is the only aircraft concern in the world to develop a ramjet-propelled machine using turbojet power for take-off thrust. This technique has the merit of fuel economies at high speed.

Soviet Russia is reported to be making efforts to produce shellac within the country. A permanent experimental station for shellac cultivation has already been set up at Sukhumi, mainly to improve the cultivation of host plants and to popularise the production of this commodity on State and collective farms. Experiments designed to acclimatise the lac-producing insects, brought from South China, have been going on since 1956 at Leningrad, Sukhumi, Patuni and Anaseuli on the Black Sea coast.

A £17-million scheme, providing for the establishment of an international Arab airline to operate on overseas routes, was approval by a conference of aviation experts from the various Arab countries held at Baghdad last week. Iraq and the United Arab Republic will subscribe 20 per cent each of the capital and Kuwait and Saudi Arabia 15 per cent each. Yemen and Lebanon have also agreed in principle to participate in the project. The scheme now awaits the final approval of the Arab Economic Council.

The world Bank has announced the grant of a loan equivalent to $8.4 million to the Protectorate of Uganda for the extension of the electric power transmission and distribution systems of the Uganda Electricity Board. Fourteen banks in the U.S., Belgium and the Netherlands will participate in the loan to the extent of $4,315,000. The loan is for a term of 20 years and bears interest of 5¾ per cent, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin on 1st June 1964. The loan is guaranteed by the U.K.

The first stage of the laying of the Commonwealth round-the-world telephone cable—one of the greatest projects of its kind ever undertaken, and estimated to cost £88 million in all—has just started from Oban, on the west coast of Scotland. This phase of the operation entails the laying of 2,100 nautical miles of cable between the Scottish west coast and New Hampden, Newfoundland (Canada), with an extension of 350 nautical miles to the mainland of Canada. The complete world project will involve the laying of some 32,000 nautical miles of cable and will take ten years.

The money value of goods and services produced in the U.K. was 6 per cent higher in 1960 than in 1959. This rise compares with 3½ per cent in 1959. Investment in plant, machinery, and buildings rose by over 9 per cent in 1960. Consumers' expenditure rose by nearly 4½ per cent, about the same as in the previous year. Both exports and imports also rose but, as in 1959, the rise in imports (nearly 13 per cent) was larger than the increase in exports (6 per cent.). The gross national product was valued at £22,292 million in 1960.

The United Nations' economic mission, which investigated the possibilities of economic development in Cyprus, at the request of the Government of this country, has suggested the implementation of a five-year Plan, entailing a capital outlay of £43 million. It has recommended grant of top priority to the exploitation of the island's water resources. Besides, it has suggested reform of land tenures and consolidation of existing fragmented holdings to improve agricultural productivity. The programme for industrial expansion formulated by the mission covers, *inter alia*, production of fertilisers cement, asbestos pipe, beer and cigarettes.

Imperial Chemical Industries of Britain has decided to put up an oil refinery for the first time in its history. The proposed refinery, which will have a capacity to process one million tons of crude oil annually, will be located on the north bank of the River Tees. It will supply light distillate, that is, naphtha, to I.C.I.'s three olefine plants at Wilton, which currently consumes about 600,000 tons for the manufacture of ethylene, used mainly to make polythene and also terylene. The Shell-Mex and the B.P., which so far supplied naphtha to the Wilton plants, will give crude oil for the new plant instead. They have also agreed to market the excess of the refinery's products after I.C.I.'s demand.

The first gas reserves in Afghanistan was found at Hodja-Gunerdag by Soviet geologists. It has been discovered in strata lying 1,618—1,621 metres beneath the surface of the earth. The analysis of the gas has shown that, besides methane, it contains a large quantity of heavy hydro-carbons. In view of this, the Soviet specialists believe that there is oil in this seam. More than 14 strata, promising as regards oil and gas, have been investigated at different depths in the area. Soviet geologists believe that the obtained data proves the possibility of industrial reserves of oil and gas in Northern Afghanistan big enough to satisfy the country's entire requirements of fuel.

Production of world rice in the 1960-61 season now promises to reach a new high level, according to the latest issue of the Commonwealth Economic Committee's *Rice Bulletin*, India's output is expected to reach 31 million tons (47 millions in paddy equivalent). In Pakistan, the second estimate puts production at 14.5 million tons of paddy, as compared with the previous record of 13.9 million tons in the last season. The *Bulletin* says that trade in rice in 1960 so far recorded substantially exceeds the total in 1959. Shipments from Burma and Thailand were large, and there was a marked expansion in exports from Cambodia, South Viet-Nam and the U.S., and those from the United Arab Republic showed a strong recovery.

A system of cultivation ensuring a yield of 35 to 40 metric centners of cotton per hectare on a large area has been developed by the All-Union Cotton Research Institute in Uzbekistan, Russia. After many years of experiments, rational schemes have been worked out for laying out cotton squares and determining the density of seeding on a hectare of land depending on the quality of soil and the depth of ground waters. These ensure earlier ripening of cotton for machine picking. Cotton plantations cover an area of 1.4 millian hectares in Uzbekistan. If the application of the latest recommendations ensures a 10 centner increase in the per-hectare cotton yield, the total increase will amount to 1.4 million tons, which is equivalent to nearly half the Republic's total cotton crop in 1960.

The Soviet Government has approved of a scheme for a project designed to lay a 1,200-mile gas pipeline in its initial phase. When completed, this pipeline, it is claimed, will be the longest and most capacious gas pipeline in the world. The new line will carry natural gas from the Gazly fields, the richest in the Soviet Union, to the industrial belt in the Urals, which is to become completely independent from all but local coal supplies. Some 30 million tons of coal annually will be replaced by natural gas, to be carried to the Ural factories and power stations by two lines of tubes of 1.02 metre diameter. Work on them is to start this coming summer, and the first stretch, from Gazly to Chelyabinsk will be completed by 1963.

PERSONAL

PROF. John Kenneth Galbraith, U.S. Ambassador-designate to India, arrived in New Delhi on the 8th inst.

Mr. Bhawanidas Binani and Mr. Radhakrishna Makharia have been elected Chairman and Vice-Chairman, respectively, of the Western India Chamber of Commerce for the year 1961.

Mr. Rasiklal Worah and Mr. N. L. Jalan have been elected President and Vice-President, respectively, of the Indian Colliery Owners' Association, Dhanbad, for the current year.

Dr. Jagan Nath Khosla, at present Ambassador of India to Indonesia, has been appointed Ambassador of India to Yugoslavia and concurrently as Ambassador to Greece.

Mr. Suku Sen took over charge as General Manager of the Bhilai Steel plant on Monday this week *vice* Mr. N. C. Srivastava, who has been appointed Director of Personnel, Hindustan Steel Ltd., Ranchi.

Mr. K. R. P. Shroff has been elected President of the Governing Board of the Bombay Stock Exchange for the current year. Mr. Kantilal Ishwarlal has been elected Vice-President and Mr. Dhirajlal Maganlal Honorary Treasurer.

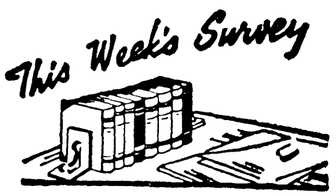
Mr. B. K. Nehru, Commissioner-General for Economic Affairs in the U.S., arrived in New Delhi on Wednesday this week for consultation with the Government of India in connection with the meeting of the Aid India Club scheduled to be held at Washington on the 25th inst.

Mr. K. K. Aalto, a Finnish expert in the manufacture of sulphuric acid, has been assigned by the U.N. Technical Assistance Operations to the Government of Mysore, for a period of one year, under the United Nations Technical Assistance Programme, to advise the Government of Mysore on the establishment of a sulphuric acid plant utilising pyrites.

Mr. John William Dixon and Mr. George Bernard Sibley have been appointed Directors of the British India Steam Navigation Company of the U.K. with effect from the 1st inst. The former was until recently General Manager of the Company and the latter was in charge of the Company's technical side and development of tanker business.

Mr. Leonard B. Rist, Director of the Economic Staff of the World Bank, has been appointed the Bank's Special Representative for Africa. He will maintain liaison with Governments and will explain to them the purposes and operating methods of the Bank and its affiliated organisations, the International Finance Corporation and the International Development Association, in the fields both of investment and technical assistance.

Mr. I. P. M. Cargill, Assistant Director of the World Bank's Department of Operations for the Far East, has been appointed Director of the Department with effect from 1st June 1961 *vice* Mr. Martin M. Rosen, who is leaving the Bank to join the International Finance Corporation as Executive Vice-President. Mr. A. Gasem Kheradjou will succeed Mr. Cargill as Assistant Director.



MR. ROBERT L. GARNER

MR. Robert L. Garner, President of the International Finance Corporation (I.F.C.), will be laying down his office on 15th October next. Although full six months are still to go for the actual retirement of Mr. Garner, it is not too early to acknowledge his distinguished contribution to the I.F.C. No other fitting tribute can be paid to Mr. Garner than the one paid by Mr. Eugene R. Black, President of the World Bank and Chairman of the I.F.C., who has observed:

"In his nine years as the Vice-President of the Bank, he brought to bear on its problems a combination of imaginativeness, financial knowledge and common sense that have left a lasting stamp on that institution. Mr. Garner brought a general measure of these same qualities to the creation of the International Finance Corporation; he was a principal author of I.F.C.'s design, built its staff, pioneered its policies and made it a going concern."

Mr. Garner has been the President of the I.F.C. since its inception on 24th June 1956. Although he reached retirement age two years ago, he agreed to serve until 1961. The remarkable progress of the I.F.C. during the brief period of less than five years has been due to a great extent to the untiring effort of Mr. Garner. The total disbursements up to the end of 1960 amounted to $29.87 million, the number of recipient countries being seventeen; India's share in this amount was $1.37 million. The investments of the I.F.C. are made in productive private enterprises in association with private capital and management and without any Government guarantee. It is clearly associated with the World Bank, but its capital and operations are separate and distinct.

The I.F.C. President has been one of the staunchest advocates of grant of liberal assistance by the economically more prosperous nations in the West to underdeveloped countries. At the same time, he has been urging the aid receiving nations to create conditions congenial to the inflow of more and more private capital. The special interest he has evinced in India's development is, indeed, gratifying. Here is what Mr. Garner said in the course of an article contributed to the 1956 Annual Number of *Commerce*: "No country today is more conscious of the problems of economic development than India, and none is faced with a more challenging task in breaking through the barriers of poverty and realising the possibilities of a better life."

While placing on record the valuable services rendered by Mr. Garner and wishing him well-deserved rest during retirement, we hope that his valuable advice will be available not only to the I.F.C. but also to the World Bank even after retirement.

RAILWAY WEEK

The Railway Week (10th to 16th April 1961), which is being celebrated this week, turns the spotlight of public attention to the vital role the railways play in the economic development of the country. Originally designed to serve the military and administrative needs of an alien government, Indian railways have since independence been called upon to play an entirely different role, that of catering to the expanding transport needs of a fast developing economy. It certainly redounds to the credit of the railways that, in spite of serious limitations, it has, by and large, been able to cope with the increased traffic thrown up by a decade of planning. The change in the general pattern and volume of traffic that has taken place can be taken as an index of the country's economic development during the period. The volume of originating freight traffic, which was 91.4 million tons in 1950-51, reached 154 million in 1960-61. The number of ton-miles more than doubled, from 26,963 million to 54,720 million. The probable volume of originating traffic is estimated to increase to 243.5 million tons at the end of the third Plan period. Passenger traffic has also shown an increase of equal magnitude, the rise during the second Plan period alone having been of the order of 26 per cent. It is noteworthy that the railways have handled this greatly increased traffic not by a commensurate expansion of rolling stock or line capacity but by more intensive utilisation of tracks, locomotives and wagons. In fact, the drive for operational efficiency and economy launched by the railways have substantially improved the utilisation of tracks and wagon capacity as is evident from the following table:

	No. of units required for moving one million net ton-miles of goods per day		Million ton-miles moved per annum per thousand running track miles
	No. of goods locos (all traction) on line (broad gauge)	No. of wagons (in tons of 4-wheelers) on line	
1938-39 ..	66	2,849	749
1950-51 ..	56	2,304	1,212
1955-56 ..	47	1,848	1,572
1959-60 ..	39	1,686	2,056

While the railways have done and are doing a splendid job, there is no room for complacency on the part of either the railway administration or the public which needs to be ever vigilant. It is true that if the railways are unable to devote more resources and attention to mitigating the hardships of railway travel, it is due partly to the greater priority accorded to goods traffic than passenger traffic. It is also true that the problems of passenger traffic have not been altogether ignored. But there is no denying the fact that much more remains to be done. Railway Week should be regarded as an opportunity not so much to take stock of the achievements in the past as to assess the magnitude of the tasks that lie ahead. If it fosters a spirit of *camaraderie* and pride in their work among railwaymen and kindle friendly interest and sympathetic understanding in the public, so necessary for the success of this great national enterprise, Railway Week will have served its purpose.

MORE ON SINDRI

The latest report of the Estimates Committee on Sindri Fertilisers and Chemicals Limited provides sufficient evidence to prove that the management of this giant plant in the public sector has signally failed in raising the production of the much-needed chemical fertiliser. The statistical data furnished by the Committee reveal that the quantity of ammonium sulphate (the principal item of production) actually manufactured has suffered a sharp setback, from 333,700 tons in 1956-57 to 285,000 tons in 1959-60; the percentage of rated capacity utilised in the latter year was 81. Similarly, the production of ammonia, raw gas and coke has come down from the levels reached in 1958-59. The reasons for the decline in output are well known for quite some time. Although the management has not published the results of the expert investigation carried out by Dr. Hussein Zaheer (who submitted his report in April 1960), it is now fairly understood that the clinkering trouble developed by generators was due to the inferior quality coke used in the manufacturing process. The coke actually utilised had a low ash fusion temperature and so it badly corroded all the gas generators. It is feared that some of the generators have actually cracked and that the rated capacity itself has been permanently reduced to 330,000 tons per annum, as against the original capacity of 350,000 tons. The Estimates Committee is clearly of the view that the generators were worked beyond the normally permissible limits in order to keep up the falling output and this has further deteriorated their technical efficiency.

The findings of the Committee with regard to the expansion scheme (involving an expenditure of slightly over Rs. 9 crores) for raising the output of urea and double salt also make sorry reading. As against the annual target of 24,500 tons of urea and 140,000 tons of double salt, the actual output from the new plant was only 4,658 tons and 22,195 tons, respectively. The shortfall is attributed to various technical difficulties, as a result of which the plant was being operated at half the load. The representatives of the Ministry of Commerce and Industry informed the Committee that the technical difficulties were due to faulty designing and unsatisfactory performance of foreign collaborators. In the interest of raising production, the defects in the expansion plants need to be rectified at the earliest.

Another serious defect in the working of the Sindri Fertilisers which the Estimates Committee has highlighted is the progressive increase in the cost of production per ton of ammonium sulphate, the actual increase over the four-year period from 1954-55 to 1958-59 being Rs. 34. As this has raised the selling price of fertilisers by Rs. 20 to Rs. 290 per ton, the economic repercussions in terms of diminished utilisation by farmers are bound to be serious for the stepping up of agricultural production. The rise in the cost of manufacture is mainly the result of enhanced railway freight, higher royalty on gypsum, enhanced prices of coal and steel, and mounting wages bill. The Estimates Committee has categorically asserted that the increase of over 100 per cent in non-technical supervisory personnel is not justifiable at a time when production is falling. It has, therefore, urged vigorous attempts to rationalise the staff strength. If this is done, at least a part of the rise in production costs will be neutralised.

The physical conditions of the plant and the output performance are disquieting. Equally disquieting is the financial record of Sindri Fertilisers. While sales are maintained more or less at the level obtained in 1958-57—Rs. 10,30 lakhs to be precise—the net profit has declined sharply from Rs. 204.7 lakhs in 1956-57 to Rs. 159.20 lakhs in 1958-59. It is also found that the ratios of total capital, net worth and net working capital to sales are on the high side. Further, the appropriation policy of the Company is obviously not based on accepted canons of financial prudence. Thus, as against the total value of plant and machinery of Rs. 16,75.7 lakhs as on 31st March 1959, the amount of depreciation provided was a bare of Rs. 88.9 lakhs. Reserves and surplus are also inadequate. They together aggregated Rs. 181.77 lakhs at the end of 1958-59, as against the paid-up capital of Rs. 17,00 lakhs. The Estimates Committee observes: "Considering that the Company has been in existence for nearly a decade, the reserves built up by the Company cannot be considered satisfactory."

It is regrettable that, in its representation to the Tariff Commission for deciding the fair price of the products, the management of Sindris has been negligent about this matter. Leaving aside the question of ploughing back sufficient reserves for expansion, the Company has also not cared to set apart enough funds for depreciation and reserves. The most glaring lapse on the part of the management of the Sindri plant which has attracted the attention of the Committee pertains to the losses due to shortage of raw materials and finished goods on physical verification which amounted to Rs. 16.7 lakhs in 1958-59. While this may not be a peculiar feature of Sindri alone, inasmuch as it may be common to all other undertakings which handle large stocks of raw materials, particularly chemical substances, there is much force in the contention of the Committee that the limits of shortages for various items should be fixed without any further delay and that the annual loss to the extent of Rs. 16-17 lakhs is well on the high side. If the declining trend of production in Sindri were allowed to persist, it would seriously affect the implementation of the development programmes in the field of agriculture.

NARMADA PROJECT

The third Five-year Plan of Gujarat has got off well, with the commencement of work on the mammoth Narmada River Valley Project on the 5th inst., when Prime Minister Nehru inaugurated it. Estmated to cost about Rs. 93 crores, the project is one of India's major multipurpose river valley schemes. It is of immense importance to the economic development of Gujarat. Although the economy of this State is predominantly agricultural in character, it is yet dependent on outside sources for almost one-third of its food requirements. Such a state of affairs is attributable to the low productivity of land, thanks, among others, to great dependence of crops on rainfall, which is either insufficient or irregular. Nor are irrigation facilities adequate, notwithstanding the efforts made during the last two Plans to harness the waters of rivers, such as Hathmati, Meshwa, Mahi, Tapi and Bhrahmani. As against the total land area of 40 million acres in Gujarat, cultivable area accounts for about 25 million acres. Even of this, the irrigated area covered no more than 1.1 million acres which, of course, compares very favourably with 150,000 acres before the first Plan. The irrigated land is only 5.6 per cent of the cultivable land in Gujarat, whereas the average for the whole country, which itself is low, is about 17.44 per cent.

The Gujarat State will thus have to go a long way to reach the all-India average. This aspect was well brought out by Mr. Ratubhai Adani, the State's Minister for Public Works, in his welcome speech. Mr. Adani revealed that altogether 50 schemes included in the second Plan now had spilled over into the third Plan, of which 45 schemes would actually be completed, while the major schemes, such as Ukai, Kadana and Narmada would take a longer period for completion.

Considering the poor utilisation of the irrigation potential in Gujarat so far, the Narmada project assumes special significance. Appropriately enough, the project is a multi-purpose one, having for its principal objectives flood control, irrigation, generation of electric power and navigation.

The project will be implemented in two stages. The first stage covers the construction of a 5,275-foot long dam across the river near the Navagam village in Rajpipala taluka (Broach district). The length of the main canal will be 212 miles. Taking off from the reservoir on the right bank of the Narmada, the Canal will irrigate over one million acres of arid lands in Baroda and Broach districts. The outlay on the first stage is estimated at Rs. 43 crores. In the second stage, the height of the dam will be raised further with a view to expanding its capacity for irrigation and also to generate 600,000 kw. of hydro-electric power annually. The extension of the project will make it possible to irrigate the distant region around the valleys of Mahi and Sabarmati rivers, as also the Rann of Kutch. An additional area of 750,000 acres is expected to be brought under cultivation in this region.

CASHEW AND SPICES

The decision of the Central Government to constitute a special commodity committee for the development of cashew and spices, disclosed by Mr. A. M. Thomas, Union Deputy Minister for Food, while declaring open the new building of the India Pepper and Spice Trade Association at Cochin, Kerala State, on Tuesday this week, will be widely welcomed. The proposed committee, we are told, will help undertake extensive plantations based on modern techniques in order to step up the production and to improve the marketing of spices and cashew kernels. Cashew kernels and spices have a significant place in the export trade of India as major dollar earners. Of late, exports of these commodities have made rapid headway. Cashew kernels, for instance, fetched a foreign exchange of over Rs. 18 crores in 1960, as compared with Rs. 15 crores in the previous year. Pepper fared still better in world markets, its total exports rising from Rs. 4 crores in 1959 to as much as Rs. 10 crores. Cardamoms moved up by about Rs. 50 lakhs to Rs. 4 crores. A noteworthy feature of export trade in these commodities is the good beginning made in exploring new markets and that without neglecting the traditional buyers.

It is difficult to say whether the upward trend in exports of cashewnut and spices will persist in the coming years for that would depend on several factors, particularly the level of production, prices and supply-demand position in world markets. This much, however, can be said, namely, that the outlook for exports is quite bright provided, of course, sustained efforts are made to maintain their competitive capacity in regard to prices and quality. For India no longer enjoys the world monopoly it held so far, since several new-comers have entered the field and are offering severe competition to Indian goods. Take the case of cashew kernels. East Africa is said to be setting up cashewnut processing plants. This development will not only affect our exports but also reduce, in due course, the supplies of raw nut to India. It may be noted here that imports of raw cashewnuts from some of the African countries average about 80,000-90,000 tons annually, a quantity which is much larger, than what is grown within the country. It is, however, gratifying that several new buyers, such as Russia and Japan, are evincing keen interest in Indian cashew kernels. At the same time, the pressure of internal consumption of cashews, although negligible at present, is expected to move up with the improvement in the standard of living of the masses. It is thus obvious that exports of cashew kernels cannot be maintained unless India expands the domestic output of raw nuts. It is not surprising, therefore, that the Planning Commission has envisaged an increase of 106 per cent in the output of raw cashewnuts during the third Plan period, that is, from the anticipated output of 73,000 tons in 1960-61 to 150,000 tons by 1965-66. The additional area proposed to be brought under cultivation of cashew is placed at 100,000 acres in Orissa, 95,000 acres in Mysore, 56,500 acres in Andhra, 20,000 acres in Madras, 10,000 acres in Kerala, 5,000 acres each in Assam and West Bengal, 1,000 acres in Madhya Pradesh and 3,600 acres in the Union Territories. Thus, cashewnut cultivation, which was confined to certain parts of Maharashtra and the South, will henceforth be extended to several new regions.

As for spices also, there is evidence of growing competition in world markets. Pepper is facing competition from Borneo and Sarawak, and cardamom from Ceylon and Guatemala. Given proper marketing arrangements and maintenance of proper quality, Indian spices may not be affected adversely in world markets. It is proposed to expand production of cardamom in the third Plan by 16 per cent to 2,260 tons annually and of pepper by 3 per cent to 30,000 tons. Side by side with the expansion of production, it is imperative that the quality of the product is at least maintained, if not substantially improved. The Central Spices and Cashew Committee of the Central Government (Indian Council of Agricultural Research) which met at Calicut last week-end did well, therefore, to draw pointed attention to the importance of promoting agricultural research to aid the growers of cashew and spices. The Committee recommended the appointment of a special committee to draw up a comprehensive scheme for the intensification of research, as well as for helping the growers in developing high-yielding strains, with requisite trade quality factors and resistance to major pests and diseases. Apart from the question of quality, there is, as Mr. E. P. Paulose, Minister for Food and Agriculture, Kerala, rightly stated, need for minimising the impact of fluctuations in the prices of these commodities.

FGI
GLOSTER
CABLES & WIRES
FOR ALL INDUSTRIAL & DOMESTIC PURPOSES

ISI
IS: 434

Every reel of Gloster VIR & CTS cable is manufactured strictly conforming to BSS No. 7 & ISS No. 434 and is stamped with the ISI Certification Mark; your guarantee.

Gloster VIR and weatherproof cables are ACCEPTED by the Fire Sectional Committee of the **INSURANCE ASSOCIATION OF INDIA** as conforming with the safety standards laid down by them.

*ON DGS & D RATE CONTRACT

During and after manufacture, every coil is subject to rigid tests and is further certified by an Inspector of the DIRECTOR OF INSPECTION (Metallurgical), Tatanagar, permanently stationed at the Works.

Right to Strike

I HAVE mentioned before in these columns of mine that, while we invite foreign experts to study our problems and give us the benefit of their advice, we do not initiate a follow-up or intelligent public discussion thereafter, with a view to correcting any mistakes that we might have made in policy matters. One such recent instance is the visit of Dr. Paul N. Prasow, American specialist in industrial relations in California University, who inaugurated a two-day seminar organised by the Madras Productivity Council and the Madras Institute of Management during the third week of March. Dr. Prasow stated that Government employees or employees in the public sector in the U.S.A. had no right to strike according to law and, if they resorted to strikes, they would automatically lose their jobs; there was no distinction between industrial and non-industrial labour in the public sector; the unions representing employees in public undertakings in America could initiate collective bargaining to settle their differences, but these unions were composed of experts and no outsiders. Unions were allowed some 'lobbying' under which process they could get into touch with members of Congress and other legislative bodies. It was the function and responsibility of elected members of the legislatures to determine the service conditions of employees in the public sector, and the Civil Service Regulations, besides being broad-based, gave adequate protection to employees in that sector.

The last strike of Central Government employees in our country and the partial paralysation of public services during its duration has brought the question of the "inalienable right of workers to strike" to the forefront. Ways and means are being investigated to wean the white-collar class among Government servants from resorting to this dangerous course. And, if a satisfactory solution has been found in so advanced an economic society as in the U.S.A., it should not be difficult to find one for India. Let me add that what would apply to Government employees should also apply to employees in banks, allied financial institutions and the Life Insurance Corporation. Employees of similar institutions in the U.K. or the U.S.A do not resort to the form of pressure which their Indian counterparts have indulged in, and one very good reason why banks in this country have to contend with heavy and continuously mounting establishment charges and working expenses is that the awards under which specified workloads, emoluments and perquisites had to be conceded have deprived the managements of any initiative towards any form of rationalisation. Without being guilty of any sweeping generalisations, I feel justified in saying that the cumulative effect of the 6½ hours' working time, the institution of overtime allowance even for periodical balancing, the grouping of all employees drawing up to Rs. 500 per month under 'workers,' the reluctance of managements to distribute preferment on the basis of merit, the recognition of mere seniority as the inviolable criterion for promotion, and the absence of any system by which it is permissible to separate the sheep from the goats has resulted in most banks having to carry enormous deadweights on their staff, with the result that quick and efficient service to the public is almost a thing of the past. Inefficiency and truculence have to be borne with fortitude by most managements, for a strike is endemic in any situation, and even the reinforced concrete structures of most banks are saturated with full-throated cries of *moradabad* raised by employees and their sympathisers on former occasions. Several banking institutions in the country have, among their senior executive staff, persons who have climbed up merely by virtue of their length of service and age, and quite a few banks display a colourful array of elderly executives who belong to the aristocracy of age, but not the aristocracy of ability, intellect or acumen. It is almost a truism to state that a senior executive who gets elevated to a position of responsibility merely by seniority and not through merit or versatility is bound to perpetuate the criterion that seniority must be the paramount consideration. Indeed, this is the most sinister aspect of what threatens to establish itself as a vicious circle.

In our anxiety to protect the rights and interests of bank employees, we have chosen to give banking the nomenclature of 'industry'; they in the U.K. still call it the 'banking system,' and yet, the bank employees there are, undoubtedly, a thriving, happy and prosperous lot, greatly esteemed by the community, and perpetually concerned with the continuing prosperity of the institutions to which they belong. Banks in India are now passing through a period of shock treatment (shocks administered by depositors, borrowers and the Reserve Bank) and there are several imponderables in the current situation. I feel that the time is opportune for a high level re-examination of all the portents, so that Indian banking is elevated to a 'system' in which the employees will team with managements in full measure, work hard and ungrudgingly, reduce operating charges, increase earnings, avoid loss, and generally, lay less emphasis on their rights, privileges and perquisites and greater emphasis on their responsibilities and obligations.

Shareholder or Depositor?

At a select and private gathering of academic people to which I was recently invited, the question was raised about the relative importance of shareholders of banks and depositors, and, unhesitatingly, the conclusion was reached that depositors were the more important of the two, as their stakes in banks were of greater magnitude than those of shareholders, Incidentally, it was also argued that the long and almost pompous speeches made by chairmen at banks' shareholders' meetings, inevitable as such meetings are under the Indian Companies' Act, tended to display disproportionate solicitude to shareholders and their interests as compared to those of depositors; that this appeared to be cock-eyed was illustrated by pointing out that, when ten shareholders unloaded their holdings, the management will not get unduly excited, but when ten large depositors withdrew their deposits it certainly would. Arising out of this, there was a serious suggestion of current topical interest and I think it important enough to mention it here briefly. Most scheduled banks have recorded phenomenal decline in deposits and are facing tight money conditions. Interest rates for deposits have been enhanced, which will result in more money having to be paid out from income. Rates for advances have also been raised, but the area over which such enhancement is possible by rule of thumb is limited, exceptions have to be made, and the resultant increased earnings are not likely to correspond to the increased payment of interest on deposits. Paucity of funds has resulted in liquidation of Government securities by banks (stated to be about Rs. 127 crores up to February 1961, as against an *intake* of Rs. 153 crores in the same period of 1959-60), and the sales must have resulted in losses which have to be provided for from profit earned. Larger borrowings from the Reserve Bank to meet existing commitments will also result in payment of more interest. The cumulative effect of these factors will be that scheduled banks will make very much less profits during 1961 than in 1960, and may adopt one of two courses, namely, reduce allocations for reserves, bad debts, writings off, etc., and make heroic attempts to maintain previous levels of dividend, *or*, make all allocations as are required for ensuring safety and lower the dividends. In the latter case, share prices will fall, a scare may be created, ugly rumours set afloat by irresponsible or mischievous elements, and runs may take place. Undoubtedly, these are possibilities of a grave nature. The suggestion, therefore, is that the Reserve Bank should come to the rescue of banks and issue a *directive* to them to cut their dividends during the current year by half (or even pass over the dividend) and use the money to make adequate provisions all round. It is expected that most banks will be happy to take shelter under this face-saving directive, which, if applied to *all* banks, will avoid the possibility of a crisis to any of them. In such circumstances, there may not be a fall in share values and, even if such a fall does take place, it will be temporary and will not affect the national economy. It seems to me that the Reserve Bank should investigate the practicability of this suggestion almost immediately and come to a decision well in advance of the half-yearly closing of accounts in June. It is, of course, understood that the suggestion does not include the State Bank of India which, apart from having a very strong position not likely to be affected materially by any of the above factors, has 98 per cent of its shares held by the Reserve Bank of India the dividend on which is utilised almost

ECONOMIC SURVEY 1961

NEED FOR MORE EXPORTS DESPERATE

(From Our Own Correspondent)

LONDON, *7th April*

THE central theme of the U.K. Government's Annual Survey of the British economy—published just a short while before the budget is due to appear—is the need, the desperate need for more exports.

LONDON LETTER

Over the year 1960, the pressure of demand for labour of all kinds (but especially of skilled labour) hardly eased; civil employment rose and personal incomes increased more than the post-war average. The effect of this increase on incomes was slightly mitigated by an increase in savings, so that consumption fell slightly. Nevertheless, industrial production remained static for the last three quarters of 1960 and the net effect was that national production was outstripped by pay increases. Though the Government analysis does not use the term, this is the classical form of an inflationary situation.

The Treasury analysis does go as far as to say that, if this process continues, pressure on costs and prices will be intensified and the country's ability to export impaired. But, indeed, this process has already been far advanced. Imports have risen much more steeply than exports, and the balance of payments worsened, so that 1960 produced an adverse balance of £344 million. It is fortunate for the U.K. that the terms of trade have remained favourable to the U.K. in comparison with those obtaining up to three years ago.

The adverse balance on current account of £344 million is not the whole story. There has been a *net* overseas long-term investment of £101 million (made up of U.K. investment abroad of £274 million and overseas investment in the U.K. of £173 million) giving a total deficit of £445 million. To meet such a deficit, it is not enough to resort to temporary expedients such as utilising hot money inflows, for these can be too readily followed by an outflow such as, in March, dropped the gold reserves by a further £62 million.

Gold Movements

Incidentally, it is worth noting that officially very little significance is now being attached to these gold movements. In 1959, the gold reserves went down over the year when the balance of payments was active and in 1960, they went up when the balance of payments was passive. Since the intake of hot money might be as high as £600 million, quite substantial gold outflows could take place as sums are withdrawn.

What is of basic significance is the growth of the economy and the part that exports play in that growth. The Survey comments:

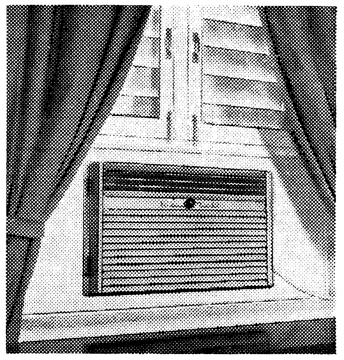
'For a country in the international position of the United Kingdom, it is axiomatic that the growth of the economy must be interlocked with the growth of exports—otherwise the balance of payments situation is bound to frustrate growth and force a reversal of direction. Endeavours by Government and industry to foster the growth of the economy will succeed only if they are also designed to improve the country's competitive power.'

How, though, is the country's competitive power to be improved and how are exports to be increased? Looking at 1961, the Survey expects further increases in real incomes, further expansion in capital investment, and, in all likelihood, a significant increase in the total domestic output. The actual size of the increase will be affected by the extent to which demand is met by additional imports, or to the extent to which additional exports create a need for further production. The Survey also notes that the world situation is favourable to an expansion of exports *provided* "if they are competitive in price and delivery, and if salesmanship is sufficiently vigorous."

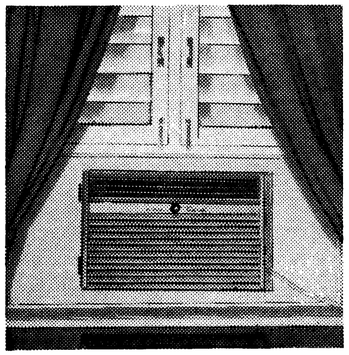
The Survey appears to suggest that all action beyond this analysis is with industry, but Government spokesmen considered that the Government was committed to intervene actively indeed to the limit of its capabilities. Government intervention would cover the encouragement of investment, employment policy and such assistance and exhortation as could be given on exports.

Your correspondent will consider the adequacy of these measures in a succeeding letter.—*All Rights Reserved.*

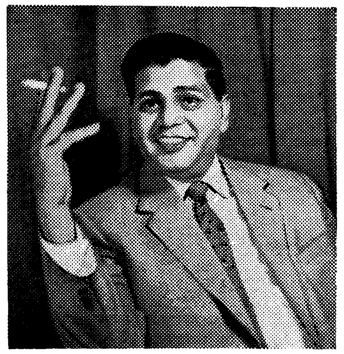
Why do I prefer it?



It has a greater cooling capacity.



Protrudes only 2½" into my room.

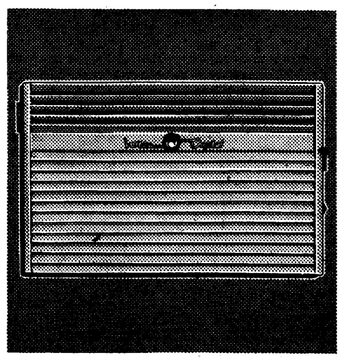


It lasts many years.

And Service is superb,

prompt, efficient and

in fact, the best in India.



Naturally—I prefer a Crystal.

A Voltas Crystal air conditioner cools a room, cuts down outside noise and allows you to work, relax, or sleep undisturbed. It creates a cool climate healthfully free of dust, damp and insects. This hardy machine, specially designed for India's difficult climatic conditions, is built to last you many years.

With a Voltas Crystal you get famous Voltas Service—the best in India.

More people buy a Crystal than any other air conditioner.

Crystal by VOLTAS

UNDER SECRETARY TO GOVERNMENT 17 APR 1961 PUBLIC DEPARTMENT

MARKED RISE IN PUNJAB NATIONAL'S PROFIT

TAXATION ABSORBS MAJOR PORTION

IN refreshing contrast to the declining trend of net earnings in the past three years, the financial results of the Punjab National Bank Ltd. (General Manager: Mr. A. M. Walker, New Delhi) for the year ended 31st December 1960 reveal a smart improvement in profit from Rs. 87.70 lakhs in 1959 to Rs. 118.04 lakhs. The level of profit is the highest on record in the last decade of the Bank's working and has been due to the marked expansion in income from interest, discount, commission and exchange. The income by way of interest and discount alone shows a rise of as much as Rs. 67.76 lakhs to Rs. 697.12 lakhs and that from commission and exchange has gone up by Rs. 39.96 lakhs to Rs. 147.87 lakhs, while income from other miscellaneous sources has declined by Rs. 34.10 lakhs to Rs. 26.17 lakhs.

The substantial improvement in earnings has, however, not benefited the shareholders by way of higher dividend, because practically the entire increase in earnings has been eaten by taxation, the provision of which has been raised from Rs. 17.50 lakhs in 1959 to Rs. 53.00 lakhs in 1960. The amount allocated to reserves is also lower at Rs. 11 lakhs, as against Rs. 20.50 lakhs in the previous year. After providing Rs. 27 lakhs for payment of bonus to staff and Rs. 1 lakh for donations, the Directors have recommended a final dividend of Re. 1 per share which together with an equivalent interim dividend, gives a taxable dividend of 20 per cent, same as that paid in the previous year. The net dividend works out to 14 per cent and this is considerably lower than the tax-free dividend of 20 per cent distributed during years 1957 and 1958.

A synoptic view of the progress of the Bank since 1957 can be had from the following comparative table:

(In lakhs of rupees)

	For the Year ended 31st December			
	1960	1959	1958	1957

* Subject to deduction of tax.
† Only unencumbered portion is taken into account.

The main reason for the substantial improvement in the earnings by way of interest discount, commission and exchange is the sharp rise in the volume of business, as is clearly reflected in the increase of Rs. 21.02 crores in advances which stood at the record level of Rs. 93.53 crores as on 31st December 1960.

On the liabilities side, the changes in deposits and borrowings from other banks are in keeping with the general trend The aggregate deposits, as already stated, declined by Rs. 1.68 crore to Rs. 139.48 crores. The various classes of deposits show a divergent trend. Thus, fixed and savings deposits have shrunk by Rs. 3.78 crores and Rs. 41 lakhs, respectively, whereas the current deposits and employees' deposits have risen, the former by Rs. 2.49 crores and the latter by Rs. 3 lakhs. In order to secure resources for meeting the expanding demand for loanable funds from clients, the Bank had to reduce its investments and to borrow more from other banks, the sum actually borrowed rising by Rs. 1.38 crore to Rs. 473.67 crores. The Bank's liquidity ratio (investment plus cash), however, stands at 38.5 per cent which is well above the minimum safety limits.

HIGHER EXPENSES AFFECT CANARA BANK

PROFIT, HOWEVER, RISES

DESPITE the marked rise of Rs. 15.72 lakhs to Rs. 172.48 lakhs in the gross income of the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Bangalore) during the year ended 31st December 1960, the profit shows a modest improvement of Rs. 2.00 lakhs to Rs. 20.30 lakhs. This has been due to the fact that the rise in income has largely been neutralised by the steep increase in expenses, from Rs. 54.49 lakhs in 1959 to Rs. 71.24 lakhs in 1960. The Bank was able to secure during the year under review larger volume of business. The income by way of interest and discount, for instance, has jumped up from Rs. 119.31 lakhs to Rs. 129.69 lakhs and that from commission and exchange from Rs. 28.16 lakhs to Rs. 32.78 lakhs. The other miscellaneous receipts including profit on sale of different assets, have also increased from Rs. 8.29 lakhs to Rs. 10.01 lakhs.

Thanks to the inter-bank agreement on deposit rates, the interest paid by the Bank has gone down from Rs. 80.83 lakhs to Rs. 78.52 lakhs, despite the accretion of Rs. 1.89 crore to the deposit portfolio during the year.

Out of the profit of Rs. 20.30 lakhs for 1960, taxation absorbs Rs. 7.65 lakhs, as against Rs. 4.75 lakhs in 1959, transfers to reserves (including Rs. 50,000 for development rebate reserve) amounts to Rs. 3.50 lakhs as against Rs. 5.00 lakhs, and bonus to staff has taken Rs. 3.10 lakhs, as against Rs. 2.40 lakhs. After making these provisions, the Directors have proposed a taxable dividend of 15 per cent on ordinary shares, which is the same as that paid in 1959. The net return to shareholders comes to 10.5 per cent a shade higher than the tax-free dividend of 10 per cent received in 1957 and 1958.

The progress of the Bank since 1957 is depicted in the following comparable table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount earned ..	1,29.69	1,19.31	91.11	62.06

* To inner reserves.
† Subject to deduction of tax.

It will be observed from the above figures that the total deposits have gone up from Rs. 28.93 crores to Rs. 30.82 crores. The savings and current deposits have improved by Rs. 1.32 crores and Rs. 1.97 crores, respectively, whereas fixed deposits have declined from Rs. 16.01 crores to Rs. 14.61 crores. The Bank's advances have expanded from Rs. 15.88 crores to Rs. 16.63 crores, but as the deposits have increased more sharply the credit ratio has declined from 54.9 per cent to 53.9 per cent. Investments have fallen from Rs. 11.85 crores to Rs. 10.22 crores, bringing down the percentage ratio of investments to deposits from 40.9 in 1959 to 33.1 in 1960. This sharp fall explains the move of the Bank to alter the composition of its assets with the object of securing more funds to meet the enlarged demand for bank loans from trade and industry.

The Bank's paid-up capital as on 31st December 1960 stands at Rs. 50.00 lakhs. In order to raise the ratio of capital to deposits, the Directors propose to increase the capital later in the current year. The reserves and surplus aggregate Rs. 56.30 lakhs.

INDIAN OVERSEAS BANK DOES WELL

DIVIDEND MAINTAINED

IN consonance with the general trend of banking profits in 1960, the profit of the Indian Overseas Bank Ltd. (General Manager: Mr. C. P. Doraikannu, Madras) has staged a smart rise of Rs. 11.05 lakhs to Rs. 44.66 lakhs. Such a rise has followed substantial expansion in the volume of business, which is reflected in the increase in gross income from Rs. 201.12 lakhs in 1959 to Rs. 226.63 lakhs in 1960. The income by way of interest and discount has gone up by Rs. 17.68 lakhs to Rs. 159.61 lakhs, and that from commission and exchange by Rs. 7.40 lakhs to Rs. 66.07 lakhs. Since the notable rise in income has not been accompanied by a corresponding rise in expenses—interest paid has risen by a bare Rs. 71,000 to Rs. 87.02 lakhs and expenses other than interest paid by Rs. 12.57 lakhs to Rs. 89.24 lakhs—the profit margin (that is the ratio of profit to gross income) has advanced from 16.7 per cent in 1959 to 19.7 per cent in 1960.

The provision for taxation has been stepped up from Rs. 12.50 lakhs to Rs. 18.50 lakhs, thus absorbing the major share of the increase in profit of Rs. 11.05 lakhs. The Directors have followed the prudent policy of raising the allocation to reserve from Rs. 7 lakhs to Rs. 10 lakhs. This takes the total reserves to Rs. 69.37 lakhs, as against the paid-up capital of Rs. 75.00 lakhs. The bonus to staff is slightly higher by Rs. 50,000 at Rs. 5.50 lakhs. After these necessary provisions and allocations, the Directors have decided to maintain the dividend at the previous year's level of 14 per cent subject to tax, giving a net return of 9.8 per cent. This dividend is still a shade lower than the tax-free dividend of 10 per cent distributed in the earlier years.

A bird's-eye view of the progress of the Bank can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Gross income ..	2,26.63	2,01.12	1,65.38	1,32.28

Cash	13.7	12.5	15.3	27.7

*Subject to deduction of tax.
† Only the unencumbered portion is taken into account.

It will be observed from the table that the deposits of the Bank have declined from Rs. 30.49 crores in 1959 to Rs. 29.29 crores. The entire decline is accounted for by fixed deposits which have contracted to the extent of Rs. 1.57 crores. The savings and current deposits have registered an increased of Rs. 18 lakhs and Rs. 20 lakhs, respectively. In order to supplement its loanable funds so as to meet the growing demand for bank accommodation on the part of trade and industry, the Bank has increased its borrowings from other banks sizably from Rs. 1.86 crores to Rs. 3.87 crores. As a result of the rapid expansion of industrial and agricultural production and the policy of extending its activities to new areas pursued vigorously by the management, advances have risen from Rs. 19.04 crores to Rs. 19.33 crores, raising the credit ratio from 62.4 per cent to 65.6 per cent. The Bank's bill business, too, has improved, as is clearly revealed by the expansion in the portfolio of bills for collection from Rs. 5.09 crores to Rs. 6.19 crores. Investments, which are shown at or below market value, have also increased from Rs. 11.38 crores to Rs. 11.54 crores, as at 30th December 1960. The Bank's liquidity ratio is as high as 39.8 per cent which is fairly above the normal requirements.

TAXATION OR EXPROPRIATION?

IMPORTANCE OF INCENTIVES TO SAVE AND INVEST DISREGARDED

By A Special Correspondent

MR. Morarji Desai's admission, in the course of the Budget debate in the Lok Sabha, that there are about 15 to 20 individuals whose tax liability amounted to 120 per cent of their income draws attention to one of the most glaring inequities of the present system of direct taxation. That the number of individuals affected is an almost infinitesimal proportion of the population and that they are very rich cannot be accepted as justification for flouting a universally accepted principle of fiscal equity. A tax system, like a judicial system, must be fair to all, whether they are rich or poor.

Even the number of individuals mentioned by the Finance Minister is misleading. If account is taken of all those who are victims of confiscatory taxation, in the sense that taxes on income and wealth amount to more than 100 per cent of income, the number will be much more than 15 to 20. And a substantially larger number is virtually prohibited to save and acquire income-yielding assets, because, if they do, the additional liability in respect of taxes on income and wealth will be greater than the additional income. In effect, this results in a marginal tax rate of 100 per cent and more, much before the effective tax rate on the entire income reaches 100 per cent.

This anomalous situation is the result of grafting an annual wealth tax on an income-tax system with very high marginal rates. Professor Nicholas Kaldor, on whose recommendations the present system of direct taxation is largely based, was fully aware of this incongruity. While proposing a wealth tax, he was insistent that, "though it is levied on the value of the principal, it is really a tax on accrual and not a tax on the principal itself—as, for example, estate duties or a capital levy are." In order to ensure that the income and wealth taxes together should have no expropriatory effect on owners of property, he desired that the top marginal rate of income-tax should be no more than 45 per cent. This salutary principle was rejected by the Government and the annual tax on wealth was introduced alongside marginal rates of taxes on income which are now 84 per cent in the case of unearned income and 80.5 per cent on earned income (after allowing for the 5 per cent increase in surcharge on earned income over Rs. 1 lakh in the Finance Bill 1961).

Tax Liability Exceeds Income

The present position is that, in the case of persons with high unearned incomes, for example, above Rs. 2.50 lakhs, the combined operation of the income and wealth taxes results in a tax liability that exceeds the entire income, with the result that the taxpayer has not only to hand over his entire income to the exchequer, but, in addition, has to sell part of his property to pay the tax in full. On the assumption of a 6 per cent average return on wealth, the position is as follows:

Income before tax Rs.	*Income and wealth taxes* Rs.	*Disposable income* Rs.
2,54,860	2,54,860	0
3,00,000	3,07,824	—7,824
4,00,000	4,25,164	—25,164
5,00,000	5,42,824	—42,824
10,00,000	11,29,164	—1,29,164

(Source: *Report on Taxation and Private Investment.* National Council of Applied Economic Research, p. 99.)

It is instructive to compare the maximum marginal rates of personal income taxation in India with those of other countries. It will be seen that, of the twenty other countries, whose rates are listed below, only two, namely, the U.S.A. and the U.K., are ahead of India and in neither of these countries is there an annual tax on wealth:

	Per cent.
United States ..	91.00
United Kingdom ..	88.75
India ..	84.00*
Puerto Rico ..	82.95
Canada ..	80.00
Ireland ..	77.50
France ..	78.00†
Netherlands ..	72.50
Japan ..	70.00
Australia ..	66.67
Belgium ..	65.00
Sweden ..	65.00
Greece ..	63.00‡
Austria ..	59.34
Italy ..	58.00
Mexico ..	32—35§
Norway ..	55.00
Germany ..	53.00
Denmark ..	52.33P
Union of South Africa ..	47.50
Switzerland ..	8.00

* For unearned income.
† Includes an 8 per cent complenatary tax on non-wage income.
‡ Includes a 3 per cent tax on investment income.
§ Tax rate applicable depends on source of income.
P Effective maximum, allowing for deductibility of previous year's tax, where income is stable.
(Source: *Monthly Letter* of the First National City of New York, January 1961.

When account is taken of income and wealth taxes, India emerges as the most highly taxed country in the world. Its tax system is the most progressive, in the sense that the tax burden on the upper income ranges is greater than in any other country. Denmark has a 110 per cent top rate, but this is ineffective, since income-tax paid in one year is deductible from taxable income in the next. The highest marginal rate of 91 per cent in the U.S.A. applies to an income almost twenty times as large as the income which attracts the highest marginal rate in India. In Norway and Sweden, where there is an annual tax on wealth, a maximum limit of 80 per cent of income is fixed for the combined burden of taxes on income and wealth. It is only in India that the tax system permits expropriation of property.

A Government that is pledged to socialist economic objectives is not likely to be impressed by the argument that this is a gross violation of the spirit, if not the letter, of the fundamental right of private property. Karl Marx would have approved of the Indian system of direct taxation, for, in the *Communist Manifesto*, he advocated a "heavy progressive or graduated income tax" as a means of making "despotic inroads on the right of property and on the conditions of bourgeois production," though one wonders whether even Marx visualised taxation beyond 100 per cent of income.

Ability Negatived

While rejecting the principle of a ceiling on income, the Government has virtually imposed such a ceiling on the income of those who own property. Rejection of a ceiling on earned income, while acquiescing, implicitly, in a ceiling on "unearned" income, is, perhaps, typical of socialist economic thinking. It is however, open to the criticism that, while recognising the importance of providing incentives to work (at least to the extent of desisting from appropriating the entire income from work), it disregards the importance of incentives to save and invest by those who are already very rich. It is obvious that, when an individual has to pay more in tax than what he earns from his property and investments, his ability to save is negative and his incentive to undertake new activities will have become enfeebled to the point of extinction. The number of those for whom such incentives are completely extinguished is considerably greater than that of the persons whose total income or more is appropriated as tax. Anyone whose marginal increment of income will attract a more than 100 per cent marginal rate of tax, that is anyone who has reached the point of diminishing disposable income with increasing wealth, will be in such a position. It is for the Government to decide whether this entire group is expendable so far as their contribution to saving and investment is concerned.

A Vicious Circle

There is another aspect of this matter. The punitive rates of tax on the higher ranges of personal income constitute an irresistible temptation to tax avoidance and evasion. It is obvious that the willingness to undergo the risk and the trouble of evasion is dependent on the profitability of successful evasion. With a marginal tax rate of 100 per cent of income or more, the gain is so large that almost any cost and risk appears worthwhile. It is common knowledge that, in the battle of wits between the tax collector and the finest legal and accounting talent that money can buy, the Government generally comes off second best. The result is a vicious circle. The higher the rates of tax, the smaller the base to which the higher rates apply. The additional revenue falls far short of expectations, with the result that rates are pushed up still higher and the tax base shrinks further. It is likely that a moderately progressive schedule of rates will result in a weakening of the present assiduous search for ways of avoiding and evading tax. The game will no longer be worth the candle. The revenue may be expected to be the same as now if not greater, because of the wider base to which the lower rates will apply and, in addition, expenditure on enforcement could be substantially curtailed.

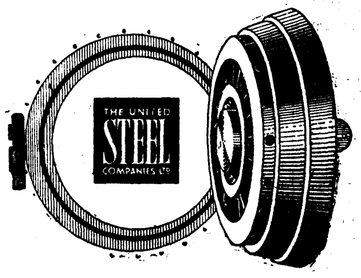
Finally, expropriatory taxation of income and wealth is hardly likely to create a favourable impression in countries from where foreign private investment is sought. Special exemption for foreign technicians and other concessions will not make up for a domestic fiscal policy which seems to reflect a strong ideological antipathy to and scant respect for private property.

Greece and West Germany have signed an agreement under which private investments in each other's countries will be mutually guaranteed against discrimination and expropriation without compensation. At the same time, the agreement will ensure the right freely to transfer earnings and repatriate the original investment. W. Germany has already concluded similar agreements with Malaya, Pakistan and Persia. The W. German Government has powers to issue German investments made abroad against political risks on a system analogous to export credit guarantees. Such insurance may be granted only in countries with which West Germany has treaties along the lines of that now concluded with Greece.

West Germany's private direct investments abroad aggregated DM 504.1 million in 1960—the lowest since 1956. With this, the total of such W. German investments abroad amounted to DM 2,928 million. Of this, about DM 1,570 million, or 53.6 per cent of the total, were invested in north, south and central America and slightly more than DM 1,000 million, or 35 per cent, in Europe. About DM 180 million went to Africa, nearly DM 105 million to Asia and DM 44 million to Australia. The U.S. and Brazil were on the top of the list of individual countries where private German capital was invested.

Bank vaults are always made of steel . . .
because steel is so dependable!

symbol of security!



Through the years Steel has come to be considered the symbol of security . . . not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries . . . the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel — Steel that will endorse her claim to economic stability . . . Steel that she can hold up to the world as a symbol of her security.

ACHIEVING PLAN TARGET FOR COTTON

EMPHASIS SHOULD BE ON IMPROVING YIELD

THE achievement of the Third Plan target of 7.2 million bales for cotton calls for more vigorous effort on the part of the Indian Central Cotton Committee and the States' Departments of Agriculture than has been made by them under the first and second Five-year Plans. The target of 7.2 million bales, to be achieved by 1965-66, represents an increase of 1.8 million bales over the revised second Plan target of 5.4 million bales; the original target was 6.5 million bales.

Past experience has amply demonstrated that despite the increase in the area under irrigation, the progress made in seed multiplication and distribution as well as supply of fertilisers, the production of this sensitive fibre continues to be highly vulnerable to adverse weather. Although scientists have not yet succeeded in controlling weather or in insulating the crop from the adverse effects of sudden shifts and changes in climatic conditions, a reduction in the dependence of agricultural operation on the exigencies of weather has been found to be possible. More irrigation facilities, adequate supply of fertilisers and distribution of better seeds could go a long way towards increasing output. In view of the limited scope for increasing the area under irrigated cotton and, considering the more pressing need for augmenting food output, the additional rise in cotton production envisaged in the third Plan should come largely from the supply of more fertilisers to cultivators, better plant protection measures, etc. So far, not more than 40 to 45 per cent of the cultivators' fertiliser requirements have been met. It is estimated that 25 per cent of the planned increase in production during the third Plan period could be obtained, if supply of fertilisers were stepped up so as to meet the demand for them in full.

In order to plan the production of cotton during the next five years on a realistic basis, it is necessary to take stock of the progress achieved in the past. This is what has been done by Dr. B. L. Sethi, Secretary of the Indian Central Cotton Committee. In the course of an article contributed to the latest issue of the *Indian Cotton Growing Review*, Dr. Sethi reviews the progress of cotton since the I.C.C.C. was established in 1921 with the object of promoting agricultural and technological research on cotton and for the improvement and development of the methods of growing, manufacturing and marketing of Indian cotton. The review reveals that the Committee, with the assistance of the State Departments of Agriculture, has effected vast improvements in the quality of Indian cotton through its research and seed multiplication schemes. It has so far financed 154 research schemes and 89 seed multiplication schemes at a total cost of Rs. 2.2 crores. The achievements of the Committee during the 20 years of its existence are highlighted below:

(i) Research schemes which are mainly concerned with the improvement of the quality of cotton, have resulted in the production of 66 improved varieties, by judicious utilisation of the techniques of selection and hybridisation. These schemes along with those for multiplication and distribution of pure seed of these varieties, have brought about the present self-sufficiency in cotton stapling upto 1-1/16".

(ii) The production of long-staple cotton (1" and above), which was 13 per cent of the production in the quinquennium 1922-27, increased to 42 per cent in 1957-58. The production of short-staple cotton decreased from 58 per cent to 17 per cent during the same period.

(iii) The production of extra long-staple cotton of 1" and above increased from 60,000 bales or 3 per cent of the crop in 1947-48 to 4.5 lakh bales or 10 per cent of the crop in 1958-59.

(iv) 'Andrews' variety of Sea Island cotton having a staple length 1¼" to 1⅜", and capable of spinning 70s counts has been successfully acclimatised on the west coast of India.

(v) The area and production of cotton which had gone down to as low as 10.6 million acres and 2.2 million bales in 1947-48 just after the partition of the country, have increased to 19.9 million acres and 4.7 million bales, respectively, in 1958-59.

(vi) The area under improved varieties increased from 48 per cent of the total in 1947-48 to 70 per cent in 1958-59. At present, there is a suitable improved variety evolved practically for every tract and the question is to expedite its multiplication and distribution to cover the whole tract.

(vii) Based on a modest estimate of Rs. 10 per acre as additional income through growing improved varieties of cotton, the total extra income to the cotton growers in 1958-59 was of the order of Rs. 13.4 crores.

(viii) The area under irrigated cotton, which was about 600,000 acres just after the partition, has increased to 25 lakh acres in 1958-59.

(ix) The average acre yield of 96 lbs. of lint cotton in the quinquennium 1922-27 rose to 102 lbs. in the quinquennium 1942-47, but dropped to 93 lbs. after partition. In 1954-55 it rose to 112 lbs. per acre while in 1958-59 it was only 102 lbs. per acre.

(x) Indian cottons, which constituted only 73 per cent of the total Indian mill consumption in 1951-52, rose to 91 per cent in 1958-59.

The following table indicates the trend and progress of Indian cotton since partition:

	1947-48	1951-52	1955-56	1956-57	1959-60
	1st year after Partition	Beginning of 1st Plan	End of 1st Plan	Beginning of 2nd Plan	Fourth year of 2nd Plan
Area ('000 acres) ..	10,655	16,198	20,230	19,803	19,252
Production ('000 bales)					
Official estimate ..	2,188	3,133	4,020	4,735	3,835
Trade estimate ..	3,020	3,881	4,698	5,086	4,000
Production staple length wise (official estimate)					
Extra Long (1" and above) ..	60	55	305	329	..
Long ..	259	363	1,272	1,559	1,674*
Medium ..	1,124	1,223	1,781	2,144	1,523
Short ..	745	992	662	707	638
Yield per acre (lbs.)—					
Official estimate ..	82	77	80	95	78
Trade estimate ..	113	95	93	102	81

*Including extra long long-staple cotton of 1" staple and above.
Note: Production during 1960-61, the last year of the second Plan, is currently estimated at 5.2 million bales.

It is evident from the above table that the yield per acre of cotton has not shown any substantial improvement. The year-to-year variation in yield both ways shows that the yield of cotton has been influenced more by climatic conditions than by changes in manurial or cultural practices. It is not denied that use of better seeds and more fertilisers did contribute to improve yield. Nevertheless, the yield patterns of Indian cotton have not been materially altered and the crop continues to depend largely on weather. This only confirms the point that higher yield is the key to increased cotton production.

ANOTHER GOOD SEASON FOR WORLD COTTON

When the final results for 1960-61 are tallied, another good season for cotton should go into the record, according to the International Cotton Advisory Committee, Washington. Although individual countries are experiencing difficulties of one form or another, the overall situation continues to be encouraging. With production at the highest level in history and despite the probability that there will be no further increase in consumption this season, there is not likely to be any increase in the end-season carryover. Not only are production and disappearance in balance, but the equilibrium has been reached at a record level in both cases.

Production during the season is estimated at 32.5 million bales (of 478 lbs. each). With the U.S. crop down slightly from last season's total, all the increase, amounting to almost a million and a half bales, has occurred in other countries. The increase in India alone, where yield per acre has recovered from last season's abnormally low level, amounts to about 800,000 bales, but production has also increased in several other major cotton producing countries—Mexico, Egypt and probably Argentina and Brazil. Proportionally, the increase in production in some of the smaller countries has been quite pronounced and record crops are being harvested in Greece, Iran, Israel and El Salvador.

The reduction in opening season stocks to 16.2 million bales as compared with 17.5 million a year earlier, however, goes a long way to offsetting the increase in production so that supply within the free world is only slightly ahead of last season's total.

Supply in the United States, including imports, is estimated at nearly 22 million bales, or about 1.6 million bales less than in 1959-60. With a record crop and increased carryover, supply outside the United States is estimated to be up by about 2 million bales. Consumption during the opening months of the season was running higher than a year ago in most countries. The decline in the United Kingdom is attributed mainly to labour shortages, though the continued growth in textile imports is still of major concern to the industry. Further gains in consumption are apparent on the Continent. Consumption in India moved fractionally lower in the first three months but there was a further marked increase in Japan. In the aggregate, it is thought that consumption outside the United States will exceed last season's record 22 million bales, but because of the sharp contraction in the U.S. industry, the total for the free world may be down slightly.

With few exceptions, the trade outlook in the Committee's opinion, is generally favourable, particularly for American-type cottons. In many countries, the bulk of the new crop has already been committed. Pakistan being the major exception; but, even here, unsold stocks in Karachi are down considerably from a year ago. Demand for Egyptian types, however, has declined appreciably, with exports from Egypt lower by over 30 per cent as compared with last season's rate.

In view of the complex price situation, it is difficult, says the Committee, to forecast trade prospects for the full season. However, given the continuance of the present level of consumption, and assuming that end-season stocks in net importing countries will remain at least at the level obtaining a year earlier, it seems likely that total exports will not be much lower than the record 15.3 million bales shipped last season. If this turns out to be the case, the United States could export up to last season's volume without adversely affecting the export trade of competing countries.

FINANCES OF TEXTILE INDUSTRY

PRODUCERS OBTAIN MORE FAVOURABLE MARGINS

From Our Special Correspondent

MANCHESTER, *4th April*

MANCHESTER LETTER

MOST of the results received so far this year from companies in Lancashire whose interests are predominantly in the cotton and allied trades have reflected the much more favourable margins now being obtained by producers in the various sections of the industry. The weight of business recorded throughout 1960 was well in excess of the turnover for nearly a decade before and companies which did not derive benefit from such a situation could hardly expect to gain ground at any other time.

Whether this trend will be maintained is, of course, a matter for conjecture, particularly in view of the lower level of activity which has prevailed, so far as fresh business is concerned, since the beginning of 1961. At all events, the financial accounts published in the first three months of this year can hardly fail to please shareholders.

In each of the different sections, the rise in profits has been unmistakable, but, in weaving particularly, the recovery has shown a marked improvement. The four manufacturing companies concerned have announced average earnings of £53,397, as against only £16,676 in the previous twelve months, and the dividend distributed has increased from 8.25 per cent to 11.5 per cent.

Higher Dividends

The nine firms engaged in spinning and weaving whose results have been published have also done well, their average profits being raised from £79,395 to £144,237. In this case, the dividend has been stepped up from 12.05 per cent to 13.93 per cent on average. Purely spinning companies have shared in the generally better conditions, and their average profit has gone up from £44,016 to £77,266. The dividend paid by these six firms has averaged 14.17 per cent, as against 12.71 per cent in the previous twelve months.

Over the nineteen firms involved, the average profit has nearly doubled. Earnings announced in the first quarter of 1961 aggregated £1,975,308, an average of £103,964 per company, as against £1,045,357 for the same firms in the previous year, an average of £55,019. The dividends distributed have by no means matched the sharp improvement in profits, as they amounted to 13.49 per cent on average, as against 11.46 per cent twelve months previously.

Latest advices from the industry contain more forebodings about the future. Although many people engaged in textiles are still optimistic, the pessimists are still raising their voices. A lull in demand will always bring out some grumbling and the current phase of inactivity is no exception.

Any accumulation of stocks is the signal for some traders to become prophets of gloom, but, in spite of occasional mention of slight surpluses, the situation does not call for undue alarm. Some people are saying that the recent spell of good weather came too soon to have much retail effect, but a continuation of favourable climatic conditions between Easter and Whit week would be of very considerable value to the industry, probably leading to a revival of replacement buying to keep machinery well engaged beyond the second half of the year.

Objectives Reached

As a result of the favourable response to the textile finishing trade's redundancy scheme, the Board of Trade has now agreed that re-equipment grants should be provided in due course for the finishing trades, as in the case of spinners and weavers. The same subsidy will be given, the rate being 25 per cent of eligible expenditure. As in the case of the earlier schemes, the Cotton Board is to act on behalf of the Board of Trade in administering the arrangements. The situation is a little more complicated owing to the fact that many finishing concerns process a variety of textile goods derived from numerous fibres. In consequence, their activities fall partly outside the cotton industry as such, and the Board of Trade is still considering the appropriate subsidy rate which should be provided in these circumstances.

The dates by which orders for new machinery must be placed to qualify for the grant and for the installation of this plant are, however, the same as those in the spinning and weaving sections. The finishers have until 9th July 1962 to order fresh equipment and get their schemes approved, while the machinery must be installed by 9th July 1964.

Small Cotton Debts

Bank advances continue to fluctuate, but the proportion of the indebtedness of the cotton trade remains remarkably steady. For some considerable time, this has been rather less than one per cent of the whole borrowings on industrial and professional account, according to figures issued by the British Bankers' Association. Cotton's share of the advances in February this year amounted to only 0.7 per cent of £3,717,483,000.

The aggregate figure was nearly £500,000,000 higher than twelve months previously and represented a rise of almost £150,000,000 on the November 1960 total. Cotton firms this year, in line with the general trend, had borrowed an additional £2,000,000 during the past quarter, bringing their advances to £25,741,000, a slight increase on the figure twelve months previously.

In the woollen trade, a similar increase took place, the amount involved at over £51,000,000 being twice as big as in cotton. Other textile interests, however, have lately had more recourse to banking facilities, their indebtedness rising from nearly £65,000,000 in November to £73,734,000 in February.

Research Stations Merger

A draft order has been laid before the British Parliament to enable the contribution of man-made fibre users in the cotton industry to the expenses of the new Cotton Industry Joint Research Association to be collected by the Cotton Board. This represents a further amendment to the Cotton Industry Development Council Order 1948.

It follows the decision to merge the two main research organisations dealing with the cotton industry and the man-made fibre industry. This was the first indication of joint collaboration between the users of the different sections under the streamlining plans launched by the redundancy proposals in spinning and weaving.

Cotton Board Chairman

The assurance that his work as Chairman of the Cotton Board will not be adversely affected by his appointment as Chairman to an inquiry into Britain's docks was made by Lord Rochdale following the official announcement of his new position in the House of Commons. The Minister of Transport has decided to establish an inquiry into the country's docks and Lord Rochdale had accepted the appointment as Chairman.

Lord Rochdale said that he recognised how enormously important efficiency in the docks system in the country was to its industries, particularly when considered in relation to the export drive. "Clearly, the work will have to be at the expense of something else," he declared, "but, so far as my chairmanship of the Cotton Board is concerned, I would like to assure my friends in the industry that I do not see it interfering with my efforts on their behalf." Lord Rochdale said that he would not have been asked to undertake the task, if the Government had felt that his work for the Cotton Board would be in any way prejudiced. "I say that, knowing as I do the great importance, they lay on an early and satisfactory solution of the problem created by the massive imports of cotton textiles from certain Commonwealth countries."

Textile Institute

The annual report of the Textile Institute for 1960 records that the organisation starts its second 50-year period with a new peak membership of 7,700. Its sections attracted more than 7,000 members to meetings last year, and membership ranges over 40 overseas countries.

Plans have been put forward for a new scholarship whose emphasis is to be on design. The annual meeting of the Institute is to be held in Edinburgh later this month when the report will be presented. One of the most important aspects of technical work referred to in the document deals with methods of testing flammability. The Technical Committee involved has been reconstituted to consider the possibility of combining the methods of testing for flammable and flame-proof fabrics, so that a single continuous scale of flammability can be used rather than two separate ones.—*All Rights Reserved.*

SPINNING PROCESS FOR CONDENSER YARNS

A new spinning system which, it is claimed, is revolutionary in the process of spinning condenser yarns, is now being marketed by a British company (William Tatham Ltd.). It enables cotton waste, after opening, to go through only a single continuous process on to the ring frame bobbins and it can be adapted for use on English and Continental systems. The quality of yarns produced on the new ring frame compares favourably with condenser yarn spun on a mule and is said to be superior to yarn produced on the conventional ring frame. The system is aimed at reducing labour and at the same time producing a yarn suitable for any given end-use. The manufacturers also claim that the new system produces a saving of 2d. per lb. weight of yarn. The machines of this system are not only cheap to install but cheap to maintain.

PLACE OF SUGARCANE IN AGRICULTURE

NEED FOR RETHINKING

By C. Muthiah

THERE has been a phenomenal growth in the production of sugar as well as *khandsari* and *gur* during the last decade. Latest statistics indicate that this substantial rise in production continues. But the achievements and prospects have inspired a mixed reaction both in the industry and outside. For some time now, prices of *gur* and *khandsari* have shown a tendency to fall rapidly, while stocks of sugar with mills have been accumulating at an increasing rate. In some quarters, a feeling has been entertained that this industry has attained a stage where it is very difficult either to stabilise or to maintain its present rate of growth. The object of this paper is to peep behind the industry and to study the growth of cultivation and production of cane *vis-a-vis* other crops such as foodgrains, oilseeds and cotton during the last decade, along with the trends in consumption of sugar, so as to form an idea about the measures needed to get rid of the so-called surplus in sugar.

The non-foodgrains crops have expanded at a higher rate than foodgrains during the last decade. While the foodgrains acreage increased by only 13.4 per cent in this period, the area under oilseeds, cotton and sugarcane (the three important crops among the non-foodgrains) registered an increase of 33.9, 58.2 and 42.9 per cent, respectively. But, if we take only the second Plan period into consideration, cane reports a higher rate of growth than even cotton. The cotton acreage during the second Plan period has been stagnating around the levels reached at the end of the first Plan period, while sugarcane acreage has improved by 17 per cent between 1955-56 and 1959-60. The latest estimate under this head for 1960-61 gives a still higher index of 157.3 (Base 1949-50=100) which reveals that this crop has registered during a short period of five years a phenomenal growth to the extent of 31.4 per cent over the acreage at the end of the first Plan period. Among foodgrains, the two important cereals, rice and wheat, have behaved differently during this ten-year period. Whereas the wheat acreage has reported an increase of over 30 per cent, the area under rice has risen only by 8 per cent. If we limit the period to the first four years of the second Plan, we find that the area under all foodgrains has recorded only a nominal increase by two points (rice 4.7 and wheat 4.00). The smaller rate of increase seen in the rice acreage as compared with that of wheat may be explained to some extent by the fact that, in South India, which has recently seen large increases in area under sugarcane, the lands which would have been put under paddy have been devoted to sugarcane.

Index of Productivity

Having seen the differential rate of growth in acreage under different crops, let us now turn towards the index of productivity which is defined as the percentage ratio of index of production to index of acreage. The index of productivity for non-foodgrains has never been above 100 except for the year 1958-59, whereas the index for foodgrains has been above 100 since 1953-54, except for one year during 1957-58. The performance of sugarcane is not much different from that of non-foodgrains and the productivity index has been generally below 100, except for the years 1954-55 and 1958-59 when it reached 105.1 and 105.6, respectively, as is evident from the following table:

Year	All commodities	Foodgrains	Non-foodgrains	Sugarcane
1949-50 ..	100.0	100.0	100.0	100.0
1950-51 ..	95.5	92.3	98.4	98.2
1951-52 ..	96.1	93.2	90.8	92.9
1952-53 ..	97.1	98.3	89.0	86.2
1953-54 ..	103.1	108.4	90.0	93.0
1954-55 ..	104.6	105.9	93.6	105.1
1955-56 ..	101.9	103.5	90.8	95.2
1956-57 ..	106.6	107.4	95.9	99.06
1957-58 ..	101.1	98.6	95.3	96.08
1958-59 ..	113.1	112.9	101.3	105.6

This seems a little perplexing, as there has been a diversion, more than proportionately, of the additional resources created, such as irrigation and fertilisers, towards non-foodgrains, notably sugarcane, because of larger returns from these crops as compared with foodgrains. It is interesting to find that nearly 16 per cent of the additional area brought under irrigation between the years 1949-50 and 1956-57 has been devoted to sugarcane. The area under irrigated sugarcane has risen from 2,462,000 acres in 1949-50 to 3,394,000 acres, whereas the total area irrigated has increased from 49,797,000 acres to 55,682,000 acres during the same period.

The increase of over 40 per cent in the sugarcane acreage between the years 1949-50 and 1959-60 without any increase in the proportion of irrigated sugarcane to total area under the crop should have been an important factor for the low productivity index seen earlier. The additional acreage brought under this crop in any particular year may be of a lower fertility than the hitherto sugarcane cultivated area. Again, the fact that the cultivation of sugarcane requires additional skill and care on the part of a new cultivator must have also been a decisive factor in the productivity remaining low. If after receiving irrigation, a cultivator switches over from wheat or *jowar* to sugarcane, his 'know-how' of sugarcane cultivation will certainly be poorer than that of the farmer growing the crop for some years. The problems created by irrigation such as the demand for larger labour input and more capital for investment on land and for carrying on the day-to-day agricultural operations seem to us as factors which have come in the way of higher productivity.

Consumption of Sugar and "Gur"

Any study on trends in sugar production and consumption in the country in recent years could profitably be divided into that of two periods. The division relates to (1) the years falling upto 1952-53 when there was control in the sale of sugar and (2) the period after that when there was no control in the strict sense of the term. During the first period, the production of sugar increased from 979,000 tons in 1949-50 to 1,497,000 tons in 1951-52 before falling to 1,297,000 tons in the subsequent year. It is, however, from 1954-55 that the industry has taken a definite trend of increase in production, preceded by a severe setback in the year 1953-54, when production fell to the low level of one million tons, a figure close to that of 1949-50.

Before going into the details of consumption of sugar and *gur*, it is pertinent to know the trends in the proportion of cane converted into sugar. The table below shows the position:

(In thousand tons)

Year	Production of cane in terms of *gur*	Production of sugar	% of col. (2) to (1)	*Gur* consumption	Consumption of sugar	Price of sugar per maund
	1	2	3	4	5	6
1949-50 ..	4,938	979	19.8	3,959	943	28.09
1950-51 ..	5,615	1,160	20.6	4,455	1,081	29.09
1951-52 ..	6,006	1,497	24.9	4,509	1,163	29.34
1952-53 ..	5,019	1,297	25.8	3,722	1,652	29.34
1953-54 ..	4,423	1,000	22.6	3,423	1,807	27.00
1954-55 ..	5,782	1,600	27.5	4,192	1,723	29.58
1955-56 ..	5,979	1,862	31.1	4,117	1,941	31.06
1956-57 ..	6,745	2,029	30.1	4,716	1,970	30.43
1957-58 ..	6,801	1,978	29.1	4,823	2,020	30.43
1958-59 ..	7,113	1,912	26.8	5,201	2,061	33.28
1959-60 ..	7,579	2,400	31.5	2,179	2,024	..
1960-61 ..	7,504	2,700	35.9	4,804	2,050	..

Notes:—

1. The assumption here is that *gur* produced during the period has been consumed which is apparently true.
2. The conversion rates from sugarcane to sugar (9.97 per cent) and *gur* (10 per cent) have been taken to be same.
3. In the first four months ended February 1961, internal offtake was only 610,000 tons. At this rate total consumption for current season would be 18.3 lakh tons. Even with the most liberal estimate for the remaining eight months the total consumption was not expected to be more than 20.6 lakh tons.

In the year 1949-50, 19.8 per cent or nearly one-fifth of the total cane produced was converted into sugar and this proportion steadily rose to 31.1 per cent in 1955-56, thereafter it declined slowly to 26.8 per cent in 1958-59. In the current season, it is expected to reach the level of 35.9 per cent. The increase in the percentage of cane supplied to sugar factories has resulted in a higher rate of growth for sugar production than for sugarcane. Between the years 1949-50 and 1960-61, sugar production has increased by about 175 per cent, as against an increase of less than 50 per cent in the production of sugarcane. Again, the increase in acreage under sugarcane (as discussed earlier, the rise in sugarcane production was achieved through extension of acreage rather than through increased yield rates) and larger and larger proportion of sugarcane offered to sugar factories had led to the Plan targets being exceeded every time, as will be seen from the following table:

(In thousand tons)

Year	Production	Plan targets	Production in excess of targets		Consumption
			Actual	Percentage	
1950-51 ..	1,116	..	..	..	1,081
1955-56 ..	1,862	1,500	362	19.4	1,941
1960-61 (anticipated) ..	2,700	2,250	450	16.7	2,050
1965-66 ..	..	3,500	..	..	..

The aforesaid situation has come about mainly due to the higher prices offered to cane growers. To some extent, the encouragement given by the Government by way of rebates in excise duty on additional production shown by the factories has also been responsible for this.

As long as controls remained, consumption was held under check. For instance, in the year 1951-52, in spite of a large production of 14.97 lakh tons, only 11.63 lakh tons were consumed in the country. Under conditions of control, what happens is that there is a backlog of underconsumption. When in 1952-53, controls were relaxed there was a sudden increase (16.52 lakh tons) in the consumption of sugar as if to compensate for the backlog and this rise was still short of the stocks carried forward from the previous years. Moreover, imports were liberally allowed during the next year and this led to a fall in prices in 1953-54 and, consequently, the consumption of sugar registered a further rise. The expenditure elasticity of demand for sugar as found from the N.S.S. Report on Fourth Round is particularly high in the income groups upto Rs. 300. The elasticity shows a steady rise from 0.018 in the income group Rs. 1—50 to 0.025 in the group Rs. 151—300. Since a very large proportion of our people falls within these income (or alternatively expenditure) brackets, it is quite likely that the substantial fall in the price of sugar must have caused further increase in its consumption.

Since 1955-56, however, consumption seems to have more or less stabilised, the increases being very nominal. Many reasons could be attributed to this stagnation in consumption. One way would be to think that, by the year 1955-56, the backlog of underconsumption existing in the community has already been met, and further increases could only be normal. Another way to look at it would be to think that the production of sugar itself was stagnant during the next three years and a sort of scarcity prevailed in the country which raised the price. The rise in price had a twofold effect. In the first instance, it has checked consumption of sugar by a large number of consumers to whom the rise in price had an income effect in the reverse order, the expenditure elasticity of demand being high. There are at the same time indications that the consumption of *gur* has increased during this period. Its consumption may have been accelerated also because of the tendency for the price of *gur* to fall as is indicated by the figures below:

Year	Gur		Sugar
	Ahmednagar	Muzaffarnagar	E-27 (2) Kanpur
1949	100.00	100.00	100.0
1950	155.9	140.9	92.4
1951	120.4	105.3	98.3
1952	58.9	61.4	97.4
1953	104.7	94.2	91.9
1954	88.3	96.9	99.6
1955	43.1	62.8	90.0
1956	66.6	67.6	90.1
1957	70.9	73.6	100.5
1958	79.3	102.7	114.0

Source: *Statistical Abstract of India* 1957-58

Secondly, the rise in the price of sugar (and the relatively higher price offered to cane growers for the cane offered to the factories) resulted in substantial increase in acreage under sugarcane during the years 1959-60 and 1960-61 and, consequently, larger delivery of cane (from 26.8 per cent in 1958-59 to 35.9 per cent in 1960-61) to the sugar factories. It is the record production of 24 lakh tons of sugar in the year 1959-60 which eventually made it necessary to carry over a huge stock of nearly 5.5 lakh tons to the current year. Production in the current season is estimated to reach an all-time record of 27 lakh tons, with consumption remaining around 20.5 lakh tons. Evidently the price is prohibitive from the consumer's point of view and was certainly meant to be so. The industry is now faced with a problem of opening the 1961-62 season with a stock of nearly 12 to 13 lakh tons.

Export

The possibilities for the export of sugar do not seem to be encouraging, as sugar production in the world at present is in abundance and the prospects of getting an assured market are also not quite bright. Moreover, the internal cost of production of Rs. 700 per ton is very much above the world market price of Rs. 400. The gap is certainly too large either to be filled up by Government subsidies or by taxing the internal consumer, through an increase in sugar prices within the country. In fact, the latter will further reduce the level of internal consumption, which is well below the norms suggested by nutritional standards.

Both from the point of view of increasing consumption within the country and for competing with other countries through higher export it is very essential that the price of sugar is brought down. Reduction in the price of sugar can be achieved in many ways. It is a well-known fact that the prices paid to the grower for his sugarcane form about one half of the cost of sugar production and there is a feeling among the consumers that they are being robbed by way of higher prices in order to pay the sugarcane growers who are well organised and in a position to bargain with the Government. A recent study conducted in the Meerut and Muzaffarnagar districts of U.P. show that the cost of production (including wages for family labour, owned bullock labour, interest on fixed capital and rent for the owned land) per maund of sugarcane in 1954-55 was only 89 nP per maund, as against the price of Re. 1.44 paid to them. This works out to a return of 209 per cent over the expenditure incurred on the production of sugarcane, whereas the corresponding return on irrigated wheat comes to only 129 per cent, the return and expenditure per acre being Rs. 210 and Rs. 163, respectively. If the sugarcane growers were also to receive the same rate of return, the price of sugarcane should have been fixed somewhere around 89 nP.

Chain Reaction

Though there is a case to reduce the price of sugarcane, it may not be feasible for many reasons. In fact, a movement has already been started to demand a further increase in the prices obtained from the present rate of Re. 1.62 per maund for gate delivery. But sugarcane prices can no more be allowed to rise without adversely affecting the consumer and the industry. A further rise in cane prices will have its own chain reaction in raising the sugarcane acreage at the cost of other crops with a likely fall in the demand for sugar from the consumers. The cane growers should be counselled to increase their profit margin through a rise in the production per acre rather than any increase in price or in acreage. One of the possible reasons for the absence of any visible increase in yield rates during the last few years, in spite of the various favourable measures available to the cultivators, is the undue expansion of acreage under sugarcane to areas which are not adequately conducive to its growth. For example, U.P. reports an average yield of about 2,500 lbs. per acre, as compared with 6,000 lbs. in Bombay and Madras, and 8,000 lbs. in Andhra Pradesh. The policy for the future should be to allow limited expansion of acreage for sugarcane and only in areas giving higher

PROBLEMS OF TEA INDUSTRY

FINANCIAL ASSISTANCE FROM GOVERNMENT WANTED

THE tea planters who heard Dr. B. C. Roy, Chief Minister of West Bengal, chiding them at the annual meeting of the Indian Tea Planters' Association held at Calcutta last weekend, for fretting too much about taxes on tea with the words, "you want to feed the cow as little as possible and, at the same time, to have from it as much milk as possible," must surely have felt that the boot was on the other foot. For in spite of the fact that the tea industry has proved to be a veritable milch cow (and not the Government as Dr. Roy seemed to imply) providing as it does the largest source of foreign exchange and employment in the country, the Government has been very niggardly in helping the industry to find its succour. The shortcomings of the official policy in regard to tea and the measures of assistance that the Government can adopt to help the industry make an even greater contribution to the economy of the country were detailed at length by Mr. Inamul Hossain, Chairman of the Association.

Mr. Hossain did well to underline the important role played by the tea industry in the country's economy. As a single industry, tea employed the largest number of men and women and earned for the country the largest amount of foreign exchange. The expansion of the industry, according to him, would give scope for providing more employment opportunities and earning still more foreign exchange. He was confident that it was possible not only to reach the third Plan target of 900 million lbs. per annum, suggested by the Working Group of the Planning Commission, as compared with 850 million lbs. set in the Draft Outline, but actually exceed it provided, of course, the Government removed the hardships faced by the industry. Unless this was done, he said, the industry might not be able to achieve the target which he termed as "modest."

Finance

The most disquieting problem confronting the tea industry, to which Mr. Hossain drew pointed attention, pertains to finance. In his opinion, the industry by itself could not raise the necessary funds for development. Hitherto, the chief source of development capital was the plough back of profits, but now there were so many demands on the profits of the industry in the shape of taxes, bonus, etc., that very little margin was left, after paying a modest dividend on the capital invested for building up development resource. There was also little scope for raising loan capital in the open market, as some of the other industries did, because tea planters had to secure the necessary working capital from banks by hypothecating crop and depositing title deeds as additional security. In the circumstance, Mr. Hossain emphasised, it was for the Government to help finance the industry to expand. The possible ways of such assistance, as listed by him, are: (1) supply of the requisite capital; (2) abolition or reduction of taxes so as to leave a bigger margin for the industry and to make tea cheaper to consumers; (3) provision of cement, iron and steel and other building materials for construction purposes required by the industry, and (4) grant of rebate in railway freight to reduce transport costs. He also suggested the creation by the Government of a tea guarantee fund to supply tea plantations the funds necessary for renovation and expansion of plant and machinery. In order that the industry may speed up and expand the replanting scheme, the Chairman urged the Government to grant a loan of Rs. 15 crores to the industry for the purpose during the third Plan period. Unless a systematic programme of replanting was started, Mr. Hossain warned, tea plantations would yield diminishing returns in the coming years.

Exports

The Chairman of the I.T.P.A. put forward a valuable suggestion to step up exports of tea. At present, he declared, the cumulative effect of a number of factors had led to rise in the production cost of Indian tea to a level which was higher than that of its competitors in export markets with the result that this country was being pushed out of foreign markets. The competitive position of Indian tea, as Mr. Hossain rightly suggested, could certainly be enhanced by the withdrawal of the export duty on tea. More effective propaganda financed from the tea cess raised from the industry would, he pointed out, also strengthen Indian tea in foreign markets. The Chairman also pleaded for the abolition of the Assam road tax, which has been held *ultra vires* of the Constitution by the Supreme Court, and the octroi duty levied by the West Bengal Government as a first step towards making tea cheaper to consumers both at home and abroad.

It will be interesting to note here the observations of Mr. Morarji Desai, Union Finance Minister, at the meeting of the Congress Parliamentary Party's Standing Finance Committee at New Delhi on Tuesday this week. Mr. Desai held out the assurance that, if necessary, the Government would come forward with further measures to encourage India's tea export. He is reported to have said: "If it is found that Indian tea is not able to compete in the international market, the Government would either further reduce the export duty on tea or allow an excise drawback on exported tea." Some members of the Committee had earlier expressed the fear that the Finance Minister's decision to reduce the export duty on tea would not help stimulate exports, since the relief was offset by the levy of additional excise duty.

Only Two Ways

The financial needs of the tea industry are large and pressing. There are only two ways of meeting them: either the industry should raise the necessary amount from its own resources or the Government should help by direct loans or grants. Since the industry, as cogently argued by Mr. Hossain, is not in a position to raise funds, there is a clear case for direct Government help. The only other alternative for Government is to give tax relief to the industry, so that it will be in a position to stand on its own for the expansion programmes without having to depend on Government.

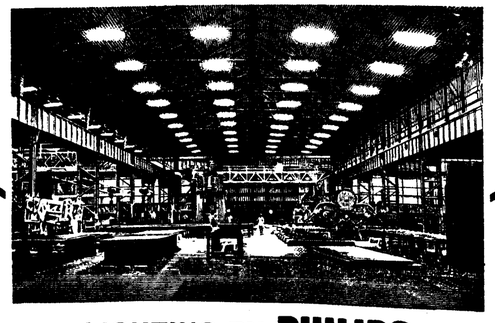
Viewed thus, it is, indeed, gratifying to hear a few words of encouragement from Mr. A. S. Bam, Chairman of the Tea Board. Speaking at the meeting, Mr. Bam, though he did not give any assurance as such of Government financial aid to the industry as suggested by Mr. Inamul Hossain, did assure the Government would do everything possible to enable the industry to achieve the third Plan production target. He said Government would be in a position to supply adequate quantity of fertilisers to tea plantations. Mr. I. F. Morris, the Chairman of the Indian Tea Association, who also addressed the meeting, stated that the present mood of co-operation among the various associations of planters in India should help the Government in formulating a uniform approach to their problem.

SYNTHETIC "NATURAL" RUBBER

Synthetic "natural" rubber is now available in development quantities in the United Kingdom from the Shell Chemical Company, 170, Piccadilly, London, W.1. First produced as a Shell product in the U.S.A., a new plant is being put up at Pernis, Rotterdam.

Natural rubber as produced from the tree is mainly a polymer (that is, a material of high molecular weight produced from the joining together of many identical smaller molecules) of isoprene. Up to recently synthetic "rubbers" were all polymers of some other molecule. Now Shell has succeeded in polymerising isoprene and so producing a very good synthetic equivalent of natural rubber. All rubbers, natural and synthetic, have their own special properties. One synthetic rubber, for example, is better than natural rubber for tyres for small cars, whereas natural rubber, having greater resilience (or bounce), is more suitable for tyres on large vehicles because the resilient action uses up energy that would otherwise appear as damaging heat. The new Shell Isoprene Rubber has the resilience of natural rubber and is at the same time whiter and flows more easily when heated. It is free from contamination.

HINDUSTAN SHIPYARD
AT VISAKHAPATNAM



LIGHTING BY PHILIPS

An area covering more than 67,000 sq. ft. in India's only shipbuilding yard at Visakhapatnam, a project of national importance, has been installed with Philips lighting to ensure round-the-clock, working efficiently and speedily. And, this has been found so satisfactory that Philips fluorescent lighting will shortly be introduced in the rest of the establishment.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

TUBE SUPPLIERS LIMITED, MADRAS

(Incorporated as a Private Limited Company on 1st August, 1955 and converted into a Public Limited Company on 25th November, 1960.)

A copy of the Prospectus has been filed with the Registrar of Companies, Madras. Licences have been obtained from the Government of India for the establishment of industrial undertakings by the Company. Copies of these licences are open to inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statement made or opinions expressed in regard to it.

The Subscription List will open at the commencement of the banking hours on the 17th day of April 1961, and will close on the 21st April 1961, at 5 p.m. or later, at the discretion of the Board of Directors.

SHARE CAPITAL

	Rs.
AUTHORISED:	
5,00,000 Equity Shares of Rs. 10 each	50,00,000
ISSUED:	
50,000 Equity Shares of Rs. 10 each	5,00,000
SUBSCRIBED AND PAID UP:	
33,000 Equity Shares of Rs. 10 each	3,30,000
PRESENT ISSUE:	
80,500 Equity Shares of Rs. 10 each	8,05,000
OUT OF THE PRESENT ISSUE:	
(a) Reserved for firm allotment in respect of application procured by the underwriters and marked for firm allotment which will be allotted in full—Equity Shares of Rs. 10 each	2,05,000
(b) BALANCE OFFERED TO THE PUBLIC FOR SUBSCRIPTION IN CASH AT PAR—EQUITY SHARES OF RS. 10 EACH	6,00,000

The amounts payable in respect of shares of the present issue are as follows :-

With application	Rs. 2.50 per share
On allotment	Rs. 2.50 „ „

The balance of Rs. 5 in two calls of Rs. 2.50 nP. per share at intervals of not less than three months between each call, the first of such calls being not earlier than three months from the date of allotment of shares. Failure to pay the allotment money or any call on a share when due, will render the share liable to forfeiture.

No shares of the present issue are to be allotted for a consideration other than cash.

Pursuant to the provisions of Section 81 of the Companies Act 1956, the Company in General Meeting has by a Special Resolution decided that the present issue of shares may be offered for subscription to the public without being offered to the existing shareholders.

80,500 Equity Shares of Rs. 10 each offered for subscription inclusive of shares reserved for firm allotment by the Underwriters have been underwritten by the several underwriters named in this Prospectus as per details given herein.

Application for shares must be for a minimum of 50 shares or multiples of 50 shares.

OBJECTS

The Company was incorporated as a Private Limited Company on 1st August, 1955, for the several purposes set forth in the Memorandum of Association and was converted into a Public Limited Company by a Resolution passed at an Extraordinary General Meeting of the Shareholders held on 14th October, 1960 and obtained a Certificate of change of name on 25th November, 1960. Therefore the Company has no necessity to obtain any Certificate of Commencement of business.

The main object of the Company is to sell and deal in Iron and Steel Pipes, Tubes and fittings materials and to manufacture, import, export and deal in all kinds of electrical bulbs, mercury bulbs, etc., and collapsible and rigid extruded tubes and sections in aluminium, ferrous and non-ferrous metals and alloys and to carry on the manufacture and sale of bricks and refractories.

HISTORY

The Company was incorporated on 1st August, 1955, and was mainly engaged in the distribution of Pipes, Cement and Sanitary Ware. The sales section for these lines were discontinued in order to concentrate the Company's efforts on the various manufacturing projects that it has undertaken.

PROSPECTS

LAMP FACTORY

The proposed lamp factory is situated at Red Hills, Polal Village, in a plot of three acres of land. The factory is on the Northern Trunk Road from Madras to Calcutta and therefore has very easy access by road. Availability of water and electric power make this location ideally suited for this industry.

The factory is designed for a production of 9,000 incandescent lamps per shift of 8 hours, the lamps being of the General Lighting Service category. The imported plant and machinery, which is all automatic, has already been acquired at a cost of Rs. 4 lakhs. Even though imported some time ago the machinery has been found to be in excellent condition on inspection. Some additional equipment will have to be purchased at a cost of approximately Rs. 1 lakh to complete the installation.

The building is nearing completion and the erection of machinery will follow shortly. The building, land and water-supply facilities are expected to cost Rs. 2 lakhs.

Some of the raw material such as filaments for this industry are to be imported. Applications have been submitted to the Government of India for the issue of the necessary Import Licence and no difficulty is anticipated in obtaining the same.

The total production for Incandescent Lamps in India is far from sufficient to meet the increasing demand. It is expected that within a short period, expansion of capacity would have to be considered. Sufficient land for such expansion is available at the site selected as also facilities for more water and power.

We are in correspondence with a leading Japanese electrical firm for technical collaboration for the manufacture of Fluorescent lamps and this project is being actively pursued.

We have also engaged the services of a very experienced and competent Consulting Engineer, Mr. S. V. Devarajan, who is a specialist in this field, to erect and commission our factory. Mr. Devarajan was responsible for the erection of the factory of the Mysore Lamps Works Ltd., Bangalore, and the Radio Lamps Works Ltd., at Karachi and at Shikohabad. Mr. Devarajan has been managing the two latter factories for several years and is considered one of the most experienced consultants in this field.

COLLAPSIBLE TUBES

A licence has been granted in the sum of Rs. 4,08,084, for the import of machinery required for the manufacture of 50,00,000 Collapsible Tubes per annum on single-shift basis. Negotiations have been concluded with M/s. Anderson and Bruun's Fabriker A/S, Copenhagen, (1) for the supply of machinery, (2) for technical assistance, and (3) for facilities to train engineers in Copenhagen at no extra charges. Anderson and Bruun's Fabriker A/S have got a world-wide reputation both in the direct manufacture of collapsible tubes and in the machinery used for the manufacture of Collapsible Tubes.

Demand for collapsible tube packaging exceeds installed capacity in India even if only the current applications for this type of packaging are taken into account. A large variety of other products such as sauces, condiments, and indigenous medicines can be successfully packaged in collapsible tubes when sufficient supplies of these tubes are made available. Manufacturers of cosmetics require large quantities and can be absorbed by any one of them. The factory will be located in Red Hills and will be built according to the suggestion of M/s. Anderson and Bruun's Fabriker A/S of Copenhagen and will be of the most modern design.

VADAPAZHANI REFRACTORY WORKS

The Company manufacture fireclay refractories. The Third Plan requirements of fireclay refractories are estimated over one million tons against the present installed capacity of 5,30,200 tons. An industrial licence under the Industries (Development and Regulation) Act for manufacture of 3,000 tons fireclay refractories per annum has been obtained. It is also intended to produce fire cement, fireclay mortar, insulating bricks and acid-proof bricks. New lines of ceramic manufacture like stoneware pipes and white glazed sanitaryware poducts as well as expansion of present lines can be taken up in due course.

PROGRESS OF WORK

The factory building has been constructed and the plant and machinery erected. The main kiln is expected to be ready by the end of April, 1961, when the factory can go into full-scale production. Electricity has been connected and installed machines have been working since January, 1961, manufacturing firebricks for construction of the main kiln.

CAPITAL COST AND WORKING EXPENSES

Capital Expenditure so far incurred is as under:

	Rs.
Land, Building and Kilns	1,00,000
Plant and Machinery	50,000
Rs.	1,50,000

Estimated requirements of working funds and cost of main kiln ... Rs. 50,000

VADAPAZHANI BRICK WORKS

There is a Brick Kiln of 24 Chambers situated in the same compound and turning out an annual production of over 25 lakhs building bricks. Plans are in hand to increase production to meet the increasing demand.

MANAGEMENT

The Management of the Company will vest with the Board of Directors, Shri V. R. Rajaratnam and Shri G. Viswanathan are Managing Directors of the Company. No remuneration is being paid to Shri V. R. Rajaratnam with effect from 1st January 1961. Shri G. Viswanathan is being paid a salary of Rs. 1,000 per month plus a conveyance allowance of Rs. 250 per month and an entertainment allowance of Rs. 250 per month with effect from 1st January 1961. His appointment is subject to the sanction of the Government of India and the Company in General Meeting.

CAPITAL REQUIREMENT AND MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment is Rs. 8,05,000 and it is intended that the proceeds of the present issue will be utilised as follows:

	Rs.
Plant and Machinery	5,75,000
Buildings	1,50,000
Towards Working Capital	30,000
Expenses of the issue	50,000

The Directors are satisfied that adequate additional working capital will be available by means of normal borrowings from Bankers.

BORROWING POWERS

Article 127 of the Articles of Association of the Company provides that the Board may from time to time, at their discretion, subject to the provisions of Sections 292 and 293 of the Act, raise or borrow any sum or sums of money for the purposes of the Company provided that the Board shall not, without the sanction of the Company in General Meeting, so borrow any sum of money which will make the amount borrowed by the Company (inclusive of temporary loans obtained from the Company's Bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose.

Article 127(2) of the Articles of Association of the Company provides that the Directors may raise or secure the repayment of such sum or sums in such manner and upon such terms and conditions in all respects as they think fit and in particular, by the issue of bonds, perpetual or redeemable debentures or debenture-stock or by any mortgage or other security on the undertaking or the whole or any part of the property of the Company (both present and future) including its uncalled capital for the time being.

The Company has no debenture. State Bank of India have sanctioned a Cash Credit Pledge limit of Rs. 4 lakhs on 14th April, 1960, to be renewed every six months against pledge of Bulb manufacturing machinery and on personal guarantee of Mr. M. A. Chidambaram, Chairman and G. Viswanathan, Managing Director of the Company and the loan has been renewed for the second time from 14th October, 1960. Interest is charged at the rate of 1 per cent over the State Bank of India advance rate with a minimum of 5½ per cent per annum. As on date the amount due to State Bank of India stands at Rs. 3,99,141.

EXPENSES OF THE ISSUE

The expenses of the present issue including underwriting commission, brokerage and Managing Brokers' remuneration are estimated to amount to Rs. 50,000 and will be payable by the Company.

UNDERWRITERS

The Shares of the present issue amounting to Rs. 8,05,000 are underwritten by the following underwriters.

	Total Capital underwritten	Capital Reserved for firm allotment	Balance offered unconditionally for public subscription
	Rs.	Rs.	Rs.
1. M/s. P. R. Subramanyam, 70-A, Stock Exchange Buildings, Apollo Street, Fort, BOMBAY-1	2,05,000	55,000	1,50,000
2. M/s. J. R. Motishaw & Co., 32, Apollo Street, Fort, BOMBAY-1	1,00,000	25,000	75,000
3. M/s. A. B. Pandit & Co., 32, Apollo Street, Fort, BOMBAY-1	1,00,000	25,000	75,000
4. M/s. G. M. Pyne, 14, India Exchange Place, CALCUTTA	1,00,000	25,000	75,000
5. M/s. Maconochie & Co., 16, First Line Beach, MADRAS-1	1,00,000	25,000	75,000
6. M/s. Somayajulu & Co., Andhra Insurance Buildings, 337, Thambuchetty st., MADRAS-1	1,00,000	25,000	75,000
7. M/s. M. R. Dhawan & Co., 4/8, Asafali Road, NEW DELHI-1	1,00,000	25,000	75,000
Total	8,05,000	2,05,000	6,00,000

In the opinion of the Directors the resources of the said Underwriters are sufficient to discharge their underwriting obligations.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½ per cent of the nominal value of the EQUITY Shares underwritten is payable to the underwriters, Messrs. P. R. Subramanyam, J. R. Motishaw & Co., A. B. Pandit & Co., G. M. Pyne, Maconochie & Co., Somayajulu & Co., M. R. Dhawan & Co., respectively, in accordance with the terms and agreement contained in their letters, from the said underwriters and the Company's acceptance of each of them.

The aforesaid letters from the underwriters setting out the agreement with them provide that in consideration of their agreement to underwrite, the said underwriters shall be entitled to such firm allotment. The names and other particulars of the said persons entitled to such preferential allotment is set out above. The period for which the option is exercisable is the period when the subscription list is open.

BROKERAGE

Brokerage at the rate of 10 nP per Equity Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a Member of a recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them, provided that the relative forms of applications bear their respective stamps.

Messrs. P. R. Subramanyam are the Managing Brokers to this issue and will be in addition entitled to a Brokerage of 5 nP per Equity Share on 8,05,000 equity shares of Rs. 10 each offered for subscription, i.e., the Managing Broker's remuneration will be Rs. 4,025.

VENDORS OF PROPERTIES AND INTEREST OF DIRECTORS

The Company purchased on 26th November 1959 from the South India Corporation (Agencies) Private Ltd., lands in area about 18.17 acres and the Brick kiln, stores and tools, etc., thereon known as "VADAPAZHANI BRICK WORKS" situated in the village of Virugambakkam village, Saidapet taluk, for a total consideration of Rs. 80,000.

Mr. M. A. Chidambaram, the Chairman and Director and Mr. V. R. Rajaratnam a Managing Director of this Company, are interested in the said sale transaction as follows:—

Mr. M. A. Chidambaram and Mr. V. R. Rajaratnam are Directors and Shareholders of South India Corporation (Agencies) Private Ltd., No. 6, Armenian Street, Madras-1. The Vendors are as such interested in the aforesaid sale transaction.

Mr. G. Viswanathan is interested in the remuneration payable to him as Managing Director of the Company which appointment is subject to the approval of the Company in General Meeting and the Government.

The Directors are interested in the remuneration paid by way of sitting fees for meetings attended besides reasonable travelling expenses.

APPLICATION AND ALLOTMENT

Application for Equity Shares must be made on the form accompanying this prospectus, further copies of which may be obtained from the Registered Office of the Company or from the office of any of the Company's Brokers or Bankers and Underwriters namely herein. It must be completed in accordance with the directions contained therein and delivered before the date of closing of the subscription list together with the remittance of the amount payable on application to:

1. The Company's Bankers at any of their Branches noted below:—(*a*) Bombay, (*b*) Madras, (*c*) Bangalore, (*d*) Coimbatore, (*e*) Delhi, (*f*) Calcutta, (*g*) Madurai, and (*h*) Tiruchirapalli.

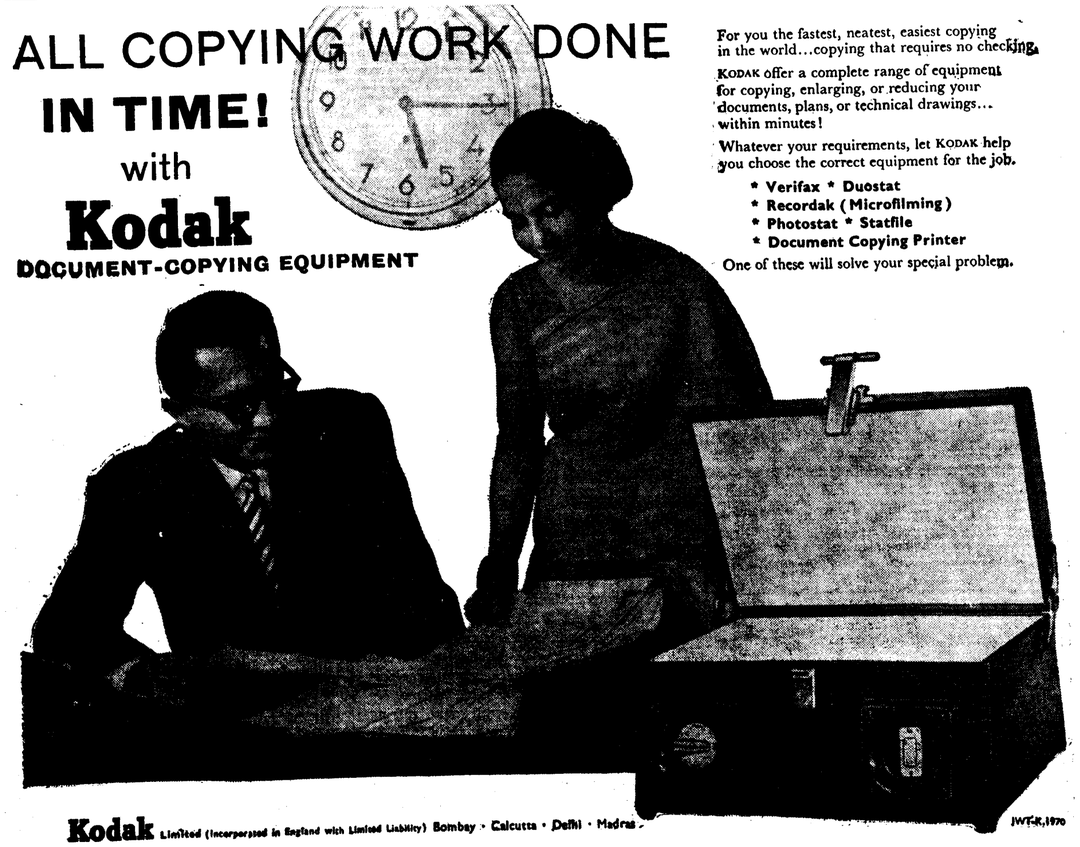
Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance deposit will be appropriated towards the amount remaining payable on the shares allotted and any balance remaining thereafter will be returned. The said refunds will be made within two months of the closing of the subscription list. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due, will render previous payments and shares liable to forfeiture.

The Shares issued shall be subject to the Memorandum and Articles of Association of the Company.

ISSUE OF CERTIFICATE

The Share Certificates will be issued within three months of the date of allotment.

Dated: 8*th April*, 1961.



THE HONGKONG AND SHANGHAI BANKING CORPORATION

FURTHER GRATIFYING PROGRESS

THE HON. MICHAEL W. TURNER'S REVIEW

THE Ordinary Yearly General Meeting of The Hongkong and Shanghai Banking Corporation was held on 10th March 1961, at the Head Office, 1 Queen's Road Central, Hong Kong. The Hon. Michael W. Turner, C.B.E., Chairman, presided. Addressing the shareholders on the occasion, the Chairman said:

"LADIES AND GENTLEMEN,

"As you will see from the accounts before you, the profit for the year amounted to $42,190,060 which is an increase of $14,055,000 over last year. This figure includes the dividends declared by Mercantile Bank Limited and The British Bank of the Middle East and, in accordance with normal banking practice, the profit has been arrived at after making transfers to the credit of our inner reserves, out of which full provision has been made for the depreciation in the value of our investments and for all known doubtful debts and contingencies.

"It is proposed that a sum of $4 million should again be written off Bank premises. After allowing for this provision and the interim dividend of £1 5s. per share your Directors recommend the payment of a final dividend of £2 10s. per share which, on the shares outstanding at 31st December 1960, amounts to $25,400,596 leaving a balance of $2,206,181 to be carried forward to next year.

Balance-sheet Features

"Turning to the balance-sheet of the Bank, the total shows an increase of $400 million over the figure for 1959. The issued share capital has increased by $16,734,750, representing the par value of shares issued during the year to former shareholders of The British Bank of the Middle East. The reserve fund has been increased by $64,813,357 and now stands at the equivalent of £15 million. This increase is made up of the transfer of $20,469,451 from the inner reserves of the Bank and the net increase on the share premium account amounting to $44,343,906.

"Hong Kong currency notes in circulation increased by $64,058,000 due to a rise in the excess note issue and this increase is reflected on the other side of the balance-sheet by a similar increase in Hong Kong Government certificates of indebtedness, current, deposit and other accounts show a rise of $218 million while amounts due to subsidiary companies at approximately $132 million, mainly represent funds placed at our disposal by Mercantile Bank Limited and The British Bank of the Middle East.

"When we turn to the assets side of the balance-sheet we find that cash in hand, trade bills discounted and investments have decreased by $69 million, $9 million and $11 million respectively. Money at call and short notice has risen by $21 million and British and other Government Treasury Bills by $71 million while advances have increased by $252 million.

"The consolidated balance-sheet, which shows the overall position of the Bank and all its subsidiary companies, includes the accounts of The British Bank of the Middle East for the first time and you will note that the total exceeds £445 million.

"On the whole, all members of our Group have had a satisfactory year and it has been very gratifying to your Directors that they have been able to recommend an increased distribution to shareholders. Unfortunately, the hope expressed by my predecessor three years ago that it would be unnecessary to allocate further sums for the purpose of writing down our British Government securities has not been realised and we were obliged to make an additional provision at the end of last year.

"For some years now, we have been conducting hire purchase finance in Hong Kong from our North Point office but the growth has been such that it was no longer convenient for this to be transacted in one of our branch offices. We therefore decided to form a subsidiary company, Wayfoong Finance Limited, with a capital of $5 million, to take over the finance and management of this type of business. This new company has been licensed as a bank and is able to receive deposits from the public. Operations commenced last July, from premises in Shell House, and the accounts have been incorporated in the consolidated balance-sheet of the Group.

Subdivision of Shares

"Shareholders will recall that, at an extraordinary general meeting last July, resolutions were passed whereby the Bank's Ordinance was amended to enable us to dispense with distinguishing numbers on share certificates, to use the common type of share transfer form and to permit the use of mechanically applied signatures. These measures were necessary, not only to simplify and reduce the volume of work which the greatly increased number of shares on our registers has involved, but also to pave the way for the proposals contained in the resolutions which will be put to you at the extraordinary general meeting to be held immediately after this meeting. For some time past, our shares have been considerably higher in price than those of most banking companies and it has been suggested that this results in many small investors being discouraged from buying them. Although there has been no sign of any lack of demand, I think it is very likely that a lower-priced share would be more widely held. Your Directors, therefore, decided that the time had come to divide the shares into smaller units and you will be asked to approve that the existing shares of $125 be subdivided into shares of $25 each and that the maximum individual shareholding should be increased from 10,000 to 50,000 shares. Provided these resolutions are passed, arrangements have been made for dealings in the new shares to start on 20th March both in Hong Kong and in London.

Chairman's Extensive Tour

"Since I addressed you a year ago, I have visited all our offices except those in the Philippines, where I intend to go later in the year, and many of the offices of Mercantile Bank Limited. In November and December I made a very interesting tour of the offices of The British Bank of the Middle East in the company of their General Manager. I was most favourably impressed with all that I saw and heard in the many places I visited and I can assure shareholders that our interests and those of our constituents are in very capable hands. I was most hospitably received by all Branch Managers and by the many friends and customers of the offices of our Group and was able to discuss on the spot the many problems and difficulties that arise from time to time. We have also kept in touch with our banking correspondents and visits were paid by some of our senior officials to both Europe and Canada during the year. Next week, I am going to Australia and New Zealand to call on the head offices of the banks in these two countries. I am sure that the personal relationships which are established by these visits are both useful and helpful in cementing the long and cordial associations between our respective institutions.

"Finally, I should like to convey our thanks to the Branch Managers of the Group and to the staff of all nationalities for their continued loyalty and efficient service.

"Ladies and Gentlemen,

"The report and statement of accounts having been in your hands for the required period I will now formally propose their adoption as presented."

At an Extraordinary General Meeting which followed, resolutions were carried to sub-divide the existing shares of HK$125 into shares of HK$25 each and to increase the maximum individual shareholding from 10,000 to 50,000 shares.

In his statement circulated to the shareholders earlier along with the accounts, the Chairman reviewed the main developments of the year and the economic conditions in the various countries where the Bank operates. Referring to India, he observed:

India

"No progress has been made in resolving the border dispute with China which continues to be a source of friction between the two countries. Some attempts were made to break the impasse, but neither the visit of Mr. Chou En Lai to New Delhi nor the examination of documentary and other evidence by officials of both countries met with any success. An understanding was, however, reached that there should be no military activity in the disputed areas, and this should at least prevent the recurrence of incidents likely to aggravate this problem. China's activities on the borders of Nepal and Bhutan and the harassment of Indian pilgrims and traders in Tibet continue to give cause for resentment.

"There is no indication of any other party being strong enough to challenge the Congress Party in the general elections due to be held next year. The differences between the various factions within the Congress Party are nevertheless becoming more open and embarrassing and although these are seen chiefly as a struggle for control of the party machine in the States, the outcome may well have an adverse effect on the future fortunes and policies of the party as a whole. Concern has been expressed in some quarters over the increasing pressure being brought to bear on the Central Government to form new territorial entities based on language or other special interests. The past year has seen the partition of Bombay into the States of Gujerat and Maharashtra, the decision to create the new State of Nagaland, increasingly vociferous compaigns for separate States for Tamils in South India and for Sikhs in the Punjab and an eruption of violence in Assam over the language issue. These manifestations of local loyalties are, I suppose, understandable in a country the size of India, but they do increase the strains between the Central and State Governments.

"Persistent inflationary trends, the expansion of the money supply and an increase in price levels over the past twelve months led the Reserve Bank of India to impose a number of restrictive measures on the banking system. While these measures were effective in reducing the volume of funds available to the banks, they were less successful in controlling the large amounts of money which were mobilised, when required, for speculation in shares and commodities, and they were subsequently relaxed to ease the pressure during the busy season. The agreement with the United States to supply seventeen million tons of foodgrains over the next four years should do much to stabilize prices and to bring down the cost of living. Nevertheless, the need to ensure supplies of this magnitude shows how far India is from solving her food problems.

"The foreign exchange reserves were under extreme pressure during the second half of the year and had declined to £114 million by the end of December. The level of industrialisation so far achieved has generated a need for more or less essential imports which is greater than can be financed by India's current earnings, despite a drive to increase her exports. Since much of the foreign aid which has been received is for projects of a capital nature, or is 'tied' to the lending country, the full weight of financing the trade gap falls on the now inadequate and diminishing foreign exchange reserves. While some cuts in imports have been made, the margin for further reduction is not large and it is becoming clear that India will require an appreciable amount of 'untied' foreign aid over the next few years to finance imports essential for the maintenance of the economy, if the momentum is not to be slowed down.

"The second Five-year Plan, due to end in March this year, has been broadly successful, but the necessary foreign exchange to cover outstanding orders placed abroad for the last year of the Plan has yet to be found. Production of food, coal and steel has fallen short of the prescribed quantities, the latter being partly due to transport difficulties. The private sector has exceeded what was expected of it by a substantial margin but the public sector has been unable to meet its targets by about 10 per cent. A draft outline of the third Five-year Plan has been published and is under discussion. Total expenditure envisaged is the equivalent of £7,650 million, about 50 per cent more than in the second Plan, but whereas India started the second Plan with foreign exchange reserves of over £500 million, these are now inadequate to cover even maintenance imports. The third Plan is dependent on external assistance to the extent of £2,400 million, of which United States surpluses under Public Law 480 are expected to account for £450 million. This proposed investment is probably not over-ambitious in terms of India's needs and her growing population and, while some of the projects are open to criticism, it is to be hoped that the lending countries will be able to provide the necessary assistance to permit India to travel one stage further along the road to eventual economic independence."

Notice

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 25th April 1961 to 8th May 1961, both days inclusive, instead of from 17th April 1961 to 8th May 1961 as notified in the Notice of the 35th Annual General Meeting dated 30th March 1961. As any dividends that may be declared at the Annual General Meeting aforesaid will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 25th April, 1961.

By Order of the Board,
P. B. SEN GUPTA,
Director and Secretary.

The annexed Notes form an integral part of these Accounts.

NOTES ON THE ACCOUNTS

1. Confirmed Credits, Guarantees and Endorsements outstanding amount in the case of the Bank to HK $571,520,167 (HK $498,599,005) and in the case of the Group to HK $1,173,517,154 (HK $805,896,556). In addition there are commitments in respect of outstanding Forward Exchange Contracts.

2. Foreign Currency Balances are converted into Hong Kong Dollars at the rates ruling at 31st December, 1960. The Sterling equivalents of the figures shown in the Accounts are converted at the rate of HK $1=1/8d.

3. The Hong Kong Currency Notes in Circulation are secured as to the Authorised Note Issues by the deposit with the Crown Agents of investments having a market value in the case of the Bank of HK $31,499,100 (HK $32,155,504) and in the case of the Group of HK $36,218,100 (HK $37,285,504) and as to the Excess Note Issue by the deposit of funds in respect of which the Hong Kong Government Certificates of Indebtedness are held.

4. Current, Deposit and Other Accounts amounting to HK $47,947,714 (HK$ Nil) in the case of the Bank and to HK $39,909,780 (HK $4,000,000) in the case of the Group are secured by the deposit of assets of the Bank and of the Group respectively.

5. Directors' Fees, London Committee Fees, Chief Manager's Remuneration and Special Administration Expenses of the Bank amounted to HK $1,105,984 (HK $1,095,165).

6. Contracts for outstanding Capital Expenditure amounted in the case of the Bank to HK $3,622,465 (HK $3,429,000) and in the case of the Group to HK $10,764,101 (HK $7,986,176).

7. There are contingent liabilities for uncalled capital in respect of certain of the Investments and Subsidiary Companies of the Bank amounting to HK $4,150,000 (HK $27,000,000).

8. The British Bank of the Middle East became a Subsidiary Company during the year and the Accounts of that Bank and its Subsidiary Company are not included in the comparative figures in the Group Accounts. At 31st December, 1960 the Bank held 99.67 per cent of the Issued Share Capital of The British Bank of the Middle East and for the purposes of the Group Accounts that Bank has been dealt with as a wholly owned subsidiary.

9. The Reserves and Undistributed Profits of the Subsidiary Companies applicable to the period since acquisition have been included with the Inner Reserves in the Group Accounts.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the annexed Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. In our opinion the said Balance Sheet with the annexed Notes gives the information required by the United Kingdom Companies Act, 1948, in the manner so required for a banking company and on the basis authorised thereby is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1960, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

We have also examined the annexed Consolidated Balance Sheet of the Bank and its Subsidiary Companies with the audited Accounts of those Companies, certain of which have been audited by other firms. In our opinion the said Consolidated Balance Sheet with the annexed Notes gives the information required by the United Kingdom Companies Act, 1948, in the manner authorised for a banking company and on that basis gives a true and fair view of the state of affairs of the Group at 31st December, 1960.

THE PUNJAB NATIONAL BANK LIMITED

HEAD OFFICE: "P. N. B. BUILDING", PARLIAMENT STREET, NEW DELHI

(Established in 1895)

DIRECTORS' 114th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1960

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.

The transactions for the year under report have resulted in a profit of Rs. 1,21,23,141.75 (including Rs. 3,18,830.32 brought forward from the previous year's account) after contributing Rs. 12,81,429.00 to the Employees' Gratuity Fund Trust. The following amounts have been appropriated for the under-mentioned purposes :—

	Rs. nP.
1. Transferred to Provision for Taxation	53,00,000.00
2. Transferred to Reserve Fund	11,00,000.00
3. Transferred to Bonus to Staff Account	27,00,000.00
4. Transferred to Charity Account	1,00,000.00
5. Ad-interim Dividend at Re. 1.00 per share paid	12,50,000.00
Total .. Rs.	1,04,50,000.00

The Directors recommend that the balance of Rs. 16,73,141.75 be disposed of as follows :—

	Rs. nP.
(a) Final Dividend at Re. 1.00 per share making the total at 20 per cent. per annum (Gross)	12,50,000.00
(b) Carry forward to the next year's account	4,23,141.75

The Directors consider that the working of the Bank has been satisfactory.

During the year 16 new offices were opened at various centres and one office was closed.

The Reserve Bank of India in exercise of the powers conferred by section 45(4) of the Banking Companies Act, 1949 prepared a scheme for the reconstruction and amalgamation of the Indo-Commercial Bank Ltd., with our Bank which was sanctioned by the Central Government under Section 45(7) of the said Act. Branches of the Indo-Commercial Bank Ltd., have been functioning as our branches under the above scheme with effect from 25th March, 1961.

The Directors retiring by rotation at this meeting are Shri Ramnath Goenka, Pandit J. N. Bhan and Shri Shital Prasad Jain, who being eligible offer themselves for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the General Board of Directors,
R. N. GOENKA,
Chairman.

27th March, 1961.

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Limited, as at 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the unaudited returns of the Bank's branches in Indian Union, Pakistan and Burma none of which were visited by us. Under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961, the Central Government by an Order dated 4th February 1961 has exempted all the branch office of the Bank from the provisions of sub-sections (1) and (3) of Section 228 of the Companies Act, 1956 in respect of the year ended 31st December, 1960.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank ;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns :

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

LABOUR PARTICIPATION IN MANAGEMENT

STRONG AND RESPONSIBLE TRADE UNION MOVEMENT, A PREREQUISITE

By Dr. J. L. Rastogi

LABOUR participation in management is a psychological approach to the problem of industrial relations. It is democratisation of factory administration in which all those constituting the firm are given wider responsibilities not only in actual performance but also in certain aspects of management. They are provided with opportunities freely to criticise the managerial policies and actions and, at the same time, to offer suggestions for improvement in working, production, techniques and welfare. In this way it brings the management and the employees in close contact with each other and enables them to pursue the industrial objective successfully and in a co-operative manner. It thus aims at removing the lacuna caused by distant relationship and a high degree of specialisation.

The meaning, scope and functions of labour participation vary in different countries according to the degree of industrialisation, quality of industrial relations, enlightenment of the management, and education and consciousness of the working class. In a wider sense, it connotes association of workers in all facets of management. They not only actively participate in affairs dealing with actual performance and labour welfare but are also represented in management boards. Thus, they take part in deciding policy matters and are associated with management of other aspects of production like purchase of raw materials and accessories, sale of finished goods, transport of goods, and arrangements for adequate finances, etc. However, this meaning is too comprehensive to be practicable, particularly in underdeveloped countries where industrialisation has just dawned, management is less enlightened and workers are illiterate, unconscious and unorganised. Even in advanced industrial countries, it has not been possible to grant labour such an extensive association with management. Management retains its sole prerogatives over matters like policy decisions, product to be manufactured, productive processes to be used, types of personnel to be employed, and those dealing with purchases, sales, transport, marketing and finance. In countries where employees have been represented in the boards of management, their representatives have often failed to participate effectively, because management itself is a specialised task and mere technical knowledge of a particular job is not enough. It calls for wider knowledge and experience, qualities of leadership and ability to co-ordinate and consolidate various factors of production, different departments of the concern, efforts of various types of personnel and various aspects of production.

Co-operation and Loyalty

In the narrow sense, labour participation implies association of labour or its representatives in advisory capacity in matters such as welfare, safety, etc. Such a definition, however, completely frustrates the very objectives of the idea, as workers do not feel any enthusiasm for their additional assignment. In fact, it is not rights and authority but additional responsibilities and recognition that are bestowed on workers or their representatives which make them co-operative and loyal.

In India, labour participation is understood as a system and/or philosophy for promoting the common objectives of labour and capital. Industry today is a co-operative venture and different factors contribute in their own way towards its success. Indeed, prosperity of each depends on the success and prosperity of the firm itself. Labour participation is a psychological device which induces workers to extend their unreserved co-operation for achieving the productive pursuits effectively.

The jurisdiction of labour participation does not extend to the resolution of conflicting interests between labour and management. Such matters, it is understood, should be covered under collective bargaining. But the processes under both remains more or less the same. Even in collective bargaining, the representatives of labour and capital negotiate the settlement of various conflicting matters peacefully and in an atmosphere of goodwill and mutual confidence, very often around the table. In fact, collective bargaining is the extension of the principle of labour participation for resolving conflicting interests and points of view.

Different countries have adopted different systems of participation to suit their own needs and circumstances. The most common methods for associating labour with the management are by inviting it to offer free criticism and useful suggestions and by formation of joint worker-management councils. Some also permit the appointment of labour representatives on boards of directors or management, but it is not very popular.

Psychological Approach

A suggestion system is like a direct democracy in which all employees directly take part in administration by offering free criticism and effective suggestions. Workers are primarily human beings capable of holding responsibilities, extending co-operation and achieving objectives. They have their own feelings and emotions, aims and aspirations and bring with them their own needs and interests and their patent and latent abilities. In order to secure their best, therefore, dignity of labour must be accepted, abilities and aspirations recognised, and needs properly and adequately served. A suggestion system aids in satisfying workers' ego and provides them with maximum opportunity for expression. To make the scheme a success, the suggestions are promptly attended to and, if accepted, adequately rewarded. It helps in enlisting workers' loyalty in two ways:

1. They are invited to offer suggestions for improvement in working of the concern, its production, technique and management. Even when any plan is chalked out or changes designed, these are widely publicised in the plant and suggestions invited. In this way, even latent abilities of workers are effectively utilised in fostering industrial objectives.

2. They are provided with an opportunity to criticise managerial policies and decisions. Thus, it enables workers to clear up their grievances, complaints and misunderstanding. Management is informed of inconveniences and needs of workers and the reasons for their frustration, indiscipline and disloyalty. An appropriate action can, thus, be taken to negative the growth of undesirable traits in them.

Even more effective device of labour participation is the formation of joint worker-management councils. These are like representative governments in which the workers choose their representatives to meet those of management around the table to discuss and promote their common interests. The number, size and jurisdiction of such councils vary from unit to unit and from country to country. In smaller establishments, only one council has proved to be effective, while, in concerns with considerable employment beside a committee at the apex, departmental and special sub-committees are formed. The jurisdiction of such councils is generally advisory, but, in some countries, supervisory and executive responsibilities have also been assigned. These councils, besides serving as a regular means of communication, have resulted in better understanding of managerial points of view and decisions on the part of employees' unions and of workers' reactions on the part of management.

Experience in India

Efforts to introduce labour participation in management in our country were made first in 1947 when the Industrial Disputes Act provided for the establishment of works committees in concerns employing hundred or more workers. They were to consist of equal number of representatives of employers and workmen. Their main objectives were "to promote measures for securing and preserving amity and good relations between the employer and the workmen and to that end to comment upon matters of their common interest or concern and endeavour to compose any material difference of opinion in respect of such matters." Within this framework, the State Governments were to make their own regulations for setting up joint committees. Accordingly, some of the States started on the new venture and works committees were set up. However, these committees, started under legislative compulsion, failed to bring about the desired results. These could change neither the outlook of management nor the attitude of labour. They were, consequently, abandoned in some, while they are still continuing in others providing much needed experience and knowledge for guidance in future.

The second Five-year Plan, again, emphasised an increased association of labour with management for achieving the industrial targets. In order to gain firsthand knowledge of the experience gained in such participation, a Study Group visited a number of European countries in 1957. The 15th Indian Labour Conference recommended the experiment to be conducted in 50 units in the private and public sectors on a voluntary basis. The Tripartite Conference on Labour-Management Co-operation in January 1958 laid down the size, constitution and other routine details for joint councils. Moreover, Draft Model Agreement regarding the establishment of such committees approved by the seminar laid down precisely the objectives, jurisdiction and responsibilities of joint councils. Accordingly, voluntary joint consultation machinery has been established so far in 24 units—seven in the public sector and 17 in the private sector.

Objectives Restated

With a view to reviewing the working of labour participation in various units and to pooling the experience gained so far, the Government of India convened another Labour-Management Co-operation Seminar in March 1960. It afforded an opportunity to representatives of various units to explain their own experiences and difficulties. In the light of accumulated experience and knowledge, objectives of worker participation in management were restated as follows:

Establishment of cordial relations between management and workers and building up understanding and trust between them;

substantial increase in productivity in the interest of management, workers and the nation;

securing better welfare facilities, etc., for workers; and

training and education of workers to understand and share the responsibilities of management.

Besides, it laid down criteria for judging the effectiveness of joint consultation in different units. The success or failure of any such scheme would be determined by examining the following:

Industrial peace (mandays lost);

increase in productivity both before and after introduction of the scheme and waste reduction;

elimination of outside intervention in disputes, i.e., the number of matters settled mutually;

the amount of general activity undertaken by the joint council;

concrete results achieved in the field of welfare;

the amount of administrative matters that have been handed over to the joint council; and

the number of meetings already held by the joint council and the attendance.

Examining from the above criteria, the scheme has definitely succeeded; particularly industrial relations and productivity have showed a marked improvement.

Works Committees Vs. Joint Councils

Thus, labour participation has been introduced in India by formation of both, statutory works committees and voluntary joint councils. Both of these are formed by equal representation of management and workers and aim at providing a regular means of consultation and to create amity and goodwill. However, the differences between these are obvious. They are:

1. Works committees have been established under statutory compulsion, while joint councils are a result of voluntary efforts. The former have been set up in undertakings employing 100 or more persons irrespective of other conditions. The latter, on the other hand, have been formed only in plants in which relations are more cordial, management enlightened and workers conscious of their responsibilities.

2. Joint councils, being voluntary, are well received by management and workers, while they are, often, hostile and suspicious towards works committees.

3. Works committees, in most of the cases, have tried to redress workers' grievances and investigate their complaints and, only in a few cases, they have tried to improve upon production, techniques, etc., and asked for employees' criticisms and suggestions. On the other hand, the latter are the more important concern of voluntary labour participation.

4. The jurisdiction of works committees is generally advisory. Their decisions are not binding on the management, even though these are unanimous. Joint councils under voluntary participation are usually given wider responsibilities, sometimes in supervision and administration of certain routine matters like safety and welfare. Their unanimous decisions are generally given effect to.

Character and Scope

Although the working of the voluntary joint machinery in India has been very short, an analysis of the set up adopted and experience gained would enable us to improve upon the scheme according to our own industrial set up, needs and circumstances. The common method for labour participation has been the formation of worker-management joint councils with equal representation. Besides the councils at the apex, departmental committees have been formed to deal with departmental problems, while sub-committees are entrusted with specific subjects like production, canteen and welfare. Suggestion schemes have been introduced only in a few plants. However, wherever such a scheme is in vogue, workers have offered a number of suggestions for improving efficiency and production and reducing waste.

Subjects and jurisdiction of joint committees vary from unit to unit. Its area extends usually to measures for improving efficiency and productivity, production problems, etc. But matters which are subjects of collective bargaining or are the sole prerogatives of management are not covered. The jurisdiction of these committees is generally advisory. But they have been given complete responsibility for certain matters which concern workers directly. Thus, they are usually responsible for administration of canteens and welfare measures and supervision of safety operations. In order to induce workers to participate more effectively, they are provided with all such information *required by them* except which is prejudicial to the interest of the firm.

Critical Analysis

No doubt, voluntary labour participation in management has helped in easing industrial tension and in improving efficiency and production in units concerned, a number of shortcomings have marred the purpose of the movement:

1. The speed of the movement is very slow. In spite of the target of 50 units in private and public sectors as set by the 15th Indian Labour Conference, it could extend only to 24 establishments. Thus, management has failed to recognise the need and contribution of such association and is not enthusiastic enough to take it up voluntarily. It is one of the reasons that works committees appointed under law have still not been discarded in some of the States.

There is a complete lack of uniformity in functions and jurisdiction of joint councils organised by different units. Their rights and responsibilities do not extend even to matters given in Draft Model Agreement approved by the 1st Labour-Management Co-operation Seminar, 1958. It gives rise to suspicion and distrust among workers in intentions of the management.

3. In spite of workers' right to receive information on a large number of items under the Draft Model Agreement, they are provided with very little information regarding the affairs of the firm. It prevents them to collaborate effectively with the management.

4. More weight has been attached to consultation around the table through the formation of joint councils rather than to the suggestion system. In such circumstances, workers participate not directly but through their representatives. Thus, their latent abilities and qualities remain largely unutilised.

5. Even where joint councils have been formed or a suggestion scheme is in vogue, due to absence of proper education and training for the purpose, they have failed to collaborate effectively with the management.

6. The jurisdiction of labour participation extends only to matters of common interest and not to conflicting interests which are called matters for collective bargaining. Thus, it has practically failed to change the outdated outlook of management and non-co-operative attitude of employees.

Causes For Slow Growth

Slow progress of the movement can be attributed to a number of causes particularly the following:

The most important cause has been the lack of proper understanding of the concept, purposes and benefits of labour participation by the management and the workers and/or unions.

Joint councils are generally thought of against the interests of the management and trade unions. Management regard them as agencies which would take away its prerogatives and undermine its authority. Trade unions, on the other hand, consider these as their rivals.

Absence of a representative union or presence of more than one union makes it difficult for joint councils to work smoothly. Because, in the former, workers' interests are not properly represented, while, in the latter, union rivalry threatens the very existence of such machinery. However, in some plants, management has succeeded in persuading rival unions to come to an understanding with regard to the selection of workers' representatives for various committees.

Any participation scheme is incomplete unless it is accompanied by collective bargaining. An effort to promote common interests cannot command effective response of workers until conflicting interests have also been satisfactorily resolved. In fact, labour participation and collective bargaining are complementary and help to promote industrial peace and maximum utilisation of resources. In Western countries, both of these are generally important parts of a voluntary collective agreement. Thus, while promoting common interests of labour and management, efforts should be made to induce them to peacefully negotiate and resolve their conflicting interests through collective bargaining.

A suggestion scheme is an integral part of any participation plan. Mere formation of joint councils cannot be effective unless associated with such a scheme. It is easy to install and more useful in making workers conscious of their worth and responsibilities and securing their loyalty. However, the success of any such scheme depends largely on the sincerity with which it is started, the promptness which suggestions are dealt with and the rewards with which they are followed. In order to ensure fairness, each suggestion must be judged by a joint committee. If found suitable, it should be accepted to benefit all rather than to exploit workers. The person whose suggestion is accepted should be promptly rewarded as a token of his knowledge, ability and service to the concern. The amount of reward for each suggestion must bear some apparent relation to the saving it results in. If any suggestion is not accepted, the reasons thereof should be immediately communicated to the person concerned. In order to induce more and more workers to offer suggestions, the scheme should be widely publicised. The progress of the scheme, number of effective suggestions made, probable economies and expected benefits to the employees should also be communicated to the rank and file frequently. Again, periodical organisation of suggestion competitions would make workers suggestion-conscious and enable them to give the best in productive pursuits.

For the success of labour participation, a clear understanding of its concept, purposes and benefits is essential. Seminars on labour-management co-operation should be held more frequently and under different agencies like the Government of India, Federation of Indian Chambers of Commerce and Industry, and Indian Institute of Public Administration to review its working in different units, pool experience and offer solutions to specific problems. The results of joint collaboration, moreover, should be extensively propagated to induce other units to begin with labour participation. Again, statutory works committees wherever in existence should be gradually replaced by voluntary joint worker-management councils.

Change in Attitude

Effective labour participation calls for a fundamental change in the attitude of management and workers' unions. Management must view it in its true perspective. It is not an agency which could undermine its authority but instead would ease its task by enlisting unreserved co-operation of workers. The rank and file should regard it as an agency to ensure justice and fair play rather than for their exploitation. Similarly joint councils are neither alternatives nor competitors of trade unions. Rather their own success largely depends on the willing co-operation of the latter.

At this juncture, education and training of particularly those who are to collaborate around the table need special attention. Technical staff, junior executives and immediate bosses must be trained in principles of human relations, co-operation and participation. Although the Central Board for Workers' Education and its regional offices are doing creditable work in the field of workers' education, special attention should be paid to the needs of those who are to represent employees in joint collaboration.

Each unit would no doubt adopt the system of participation according to its own needs and circumstances. But efforts should be made, as far as possible, to conform to the provisions given in the Draft Model Agreement—to ensure uniformity. Besides, workers should be provided with adequate information regarding the affairs of the firm, its policies and problems to make them feel like true partners in industry and enable them to participate most effectively. Again, a strong and responsible trade union movement is the *sine quo non* for the success of labour participation. Therefore, idea of one union in each establishment should be popularised. However, until such a unified unionism obtains, different unions in a concern should be encouraged to shed their rivalries and come to an understanding in this regard in the interest of their members and industrial progress. These measures would help build up a sound foundation for effective labour participation and harmonious relations—and bring about peace and prosperity to the nation.

raw materials FOR PAINTS, PRINTING INKS AND PLASTICS

SOLVENTS
Amyl Acetate
Butyl Acetate
"Cellosolve"* Solvent
Diacetone Alcohol
Ethyl Acetate
Methyl Amyl Acetate
Methyl Isobutyl Ketone

RESINS
"Union Carbide" * Vinyl resins
"Synres" resins
"Union Carbide"* silicone resins

COUPLERS
Butyl Alcohol
Methyl Amyl Alcohol

PLASTICISERS
Dibutyl Phthalate
Dioctyl Phthalate
Tricresyl Phosphate

DILUENTS
Solvent Naphtha
Benzol
Toluol
Xylol

RETARDERS
Butyl "Carbitol"*
Butyl "Cellosolve"*
"Cellosolve"* Acetate

ALSO AVAILABLE
Carbon Blacks
Formaldehyde
Maleic Anhydride
Pentaerythritol
Phenol
Phthalic Anhydride
Titanium Dioxide

INDUSTRIAL PRODUCTS SALES DIVISION

UNION CARBIDE INDIA LIMITED
Formerly NATIONAL CARBON COMPANY (INDIA) LTD.
BOMBAY • CALCUTTA • DELHI • MADRAS
*Trade marks of Union Carbide Corporation U.S.A.

NCC 3193R1
