The Egyptian Ministry of Agriculture, in its fourth and final estimate of the 1960-61 season, has put the crop, excluding Scarto estimated at 202,200 cantars, at 10.44 million cantars, as against 10.26 million cantars in the previous estimate and last season's final figure of 9.96 million cantars. Staple length-wise breakdown of the crop is as under (in cantars): over 1⅛" 5.04 million; over 1¼" 2.36 million; over 1½" 3.04 million.

The following are the latest available quotations— in tallaris per lb.—from Alexandria:

Karnak: May 69.90; July 70.68; *Ashmouni*: June 62.55; August 62.05.

Firm conditions prevailed in the Liverpool cotton futures market during the week under review. After the sustained easiness noted in the past two weeks a technical correction was long overdue. This was sparked off by better New York advices and encouraging local mill demand. Both the American and American type contracts firmed up on trade covering and mill fixation. Sudan cotton

contracts in Liverpool ruled quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool.

American cotton 1" staple contract: May 24.20; July 24.20; October 24.05; December 24.30.

American cotton mixed growth contract: May 24.55; July 24.55; October 24.50; December 24.70.

Sudan: May. July. September 31.75.

The special reorganisation committee, appointed in December last, under the chairmanship of Lord Forster, has suggested a fundamental reconstruction of the whole framework of the Liverpool Cotton Association. The Committee has suggested that the present Association should be converted into a property company with a disposable and dividend-paying share structure and with provision for a reasonable measure of control by a new trade association. As regards futures trading in raw cotton, the Committee points out that no firm convictions were expressed by those who submitted evidence before it that a substantial revival of trading was likely. It was, however, of the view that it would be premature at this stage to take a decision to close down the market.

Cotton futures in New York recorded handsome gains during the week. The rise in the values was attributed due more to the absence of selling pressure than to any improvement in buying interest. Although the steady increase in certified stock reflected a comfortable supply position, the continued firmness of the spot market reflected in the higher spot price imparted strength to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	2-5-61	25-4-61	18-4-61
Spot	33.90	33.80	33.65
May	32.75	32.60	32.75
July	33.39	33.25	33.30

ART SILK YARNS HARDEN

(From Our Own Correspondent)

BOMBAY, *3rd May*

A proposal to make available art silk yarn under advanced licensing for export promotion is now being considered by the Government of India. This was disclosed by Mr. Manubhai Shah, Union Minister for Industry, in the Lok Sabha yesterday (Tuesday, 2nd inst.). Mr. Shah did not give any other details regarding the proposal. Rumours are, however, current in the market that it is proposed to earmark 30 per cent of indigenous output exclusively for being used to weave cloth which will be exported. Since confirmation of rumours was lacking, operators were generally not inclined to extend their commitments. Nevertheless, values of art silk yarns showed a distinct tendency to harden. In particular, imported yarns were firm on fears of reduced arrivals in the next few weeks. Staple fibre yarns tendered to move up on hopes of enlarged offtake. Cotton yarns did not show any decisive trend in the absence of any fresh encouraging development.

Cupressa Bemberg yarn (60 x 1) June delivery attracted stray inquiries and rose by Rs. 10 to Rs. 2.610. Spot Cupressa gathered a rupee to Rs. 2.646. JP (40 x 1) June contract strengthened by Rs. 42 to Rs. 2,844. Among imported art silk yarns, 120 Japan jumped up from Rs. 1.570 to Rs. 1.612, 120 Italy from Rs. 1,501 to Rs. 1,585 and 150 Italy from Rs. 1,737 to Rs. 1,785. 150 Japan was unchanged at Rs. 1,737. Among imported yarns, National Rayons 150 Bt. cones 1st grade spurted by 35 nP to Rs. 14.91. 120 Bt cones 1st grade picked up 2 nP to Rs. 15.22.

Staple fibre yarn (40 x 2) June delivery moved up by Rs. 7 to Rs. 892. Spot Kohinoors put on 7 nP to Rs. 10.52, while Centurys eased by 10 nP to Rs. 10.45.

In the cotton yarn section, ten counts Podars were quiet at Rs. 17.50 and Moderns at Rs. 18.75. Twenty counts New Greats were unaltered at Rs. 21.50, but Gokaks firmed up by 38 nP to Rs. 22.75. Thirty counts Simplex were done at Rs. 27, same as last week. Forty counts Maduras were well favoured, the quotation improving by 38 nP to Rs. 32.75. Sixty counts Finlays were quiet at Rs. 65.40, while Gokaks dropped 25 nP to Rs. 50.50. Eighty counts Finlays were unchanged at Rs. 82.25, as also Mahendras at Rs. 68.68 and Moderns at Rs. 70.80.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	3-5-1961	26-4-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)		
June	2,610.00	2,600.00
Spot	2,646.00	2,645.00
40 x 1 JP June	2,802.00	2,844.00
120 Japan (per 100 kg.)	1,612.00	1,570.00
150 Japan (per 100 kg.)	1,737.00	1,737.00
120 Italy (per 100 kg.)	1,585.00	1,501.00
150 Italy (per 100 kg.)	1,785.00	1,737.00
Staple fibre yarn—40 x 2		
June (per 90.72 kg.)	899.00	892.00
Century (per kg.)	10.45	10.55
Kohinoor (per kg.)	10.52	10.45
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	18.75
20s New Greats	21.50	21.50
30s Simplex	27.00	27.00
40s Madura	32.75	32.37
60s Finlay	65.40	65.40
80s Mahendras	68.68	68.68

OILSEEDS RECEDE

(From Our Own Correspondent)

BOMBAY, *3rd May*

Barring the castorseeds section, which ruled firm, the oilseeds market presented an easy trend during the week under review. The easiness was due mainly to the upward revision of freight rates for oilcake and meal, with effect from 1st July, announced by the Karmoham Conference Lines. The revised rate is Rs. 12 (18s.) per 1,000 kg. higher than the prevailing rate. Lack of support from crushers, who were reluctant to pay higher prices, easier advices from upcountry markets, and absence of overseas enquiries imparted weakness to groundnuts. Linseed encountered selling, following good arrivals. Cottonseed also came in for selling induced by bearish advices from cotton market. Castorseeds, however, were firm. Reports that a prominent operator, who had very large outstandings, was prepared to take delivery against castorseed May contract prompted a fairly large volume, of buying which led to a sharp rise in the quotations for this contract.

Business in groundnut futures continued to be at a standstill. Spot prices declined further on selling prompted by the proposed increase in freight rates. Nizam bold declined by 25 nP to Rs. 53. Oil ex-mill ready was a shade easy at Rs. 21.90, as against Rs. 21.95 last week.

Castorseeds May 1961 received good support and firmed up from Rs. 173.50 last week-end to Rs. 175.37 today. September contract, however, eased from Rs. 178.62 to Rs. 177.50. The decline followed switchover of purchases to the May contract. Ready lots were quoted higher. Madras quality strengthened by 50 nP to Rs. 34.75. Ready Kanpur was done at Rs. 33.12, as against Rs. 32.87 last week-end. Oil B.S.S. improved from Rs. 15.25 to Rs. 16.05.

Linseed May shed 9 nP to Rs. 36.53. September position was unchanged at Rs. 37.00. Bold ready fell by 50 nP to Rs. 35.87. Oil ready was 20 nP lower at Rs. 15.40.

Cottonseed May contract eased from Rs. 94.50 last week-end to Rs. 93 today. September contract dropped Rs. 2 to Rs. 93.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	3-5-1961	26-4-1961	19-4-1961
Groundnut	Rs.	Rs.	Rs.
May 1961	—	—	220.00
August 1961	—	—	—
Nizam bold	52.75	53.00	53.75
Coromandel ready	52.75	53.50	54.00
Khandesh quality	53.25	54.00	54.00
Oil ex-mill ready*	21.90	21.95	22.30
Railway receipts*	21.65	21.70	22.10
Castorseed			
May 1961	175.37	173.50	176.00
September 1961	177.50	178.62	180.00
Ready Madras	34.75	34.25	34.50
Ready Kanpur	33.12	32.87	33.00
Oil B.S.S.†	16.05	15.25	16.30
Oil commercial†	15.15	16.10	15.45
Linseed			
May, 1961	36.53	36.62	36.56
September 1961	37.00	37.06	36.91
Bold ready	35.87	36.37	36.25
Oil ready†	15.40	15.60	15.50
Cottonseed			
May 1961	93.00	94.50	93.75
September 1961	93.25	95.25	94.25
Niger seed	41.25	41.00	41.50
Kardi seed	25.75	26.50	27.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA SLIGHTLY EASY

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *25th April*

A total of approximately 396,000 kilograms were on offer in Sale No. 17 held on Tuesday the 25th April 1961. Quality showed a seasonal decline and this was particularly noticeable in the highgrowns. There was good demand which declined as the sale progressed. Most descriptions sold at irregular and lower rates. Highgrowns received less support and were considerably lower following the decline in quality. Good mediums continued to sell well, but at a drop of 10-20 nP per kilo on last prices. Where quality was maintained, medium, low medium and plainest sorts were steady, but those showing a decline receded by 5-10 nP. Nilgiri whole leaf grades eased considerably, whilst from other districts they were only slightly easier. C.T.C. and legg cut teas followed the general downward trend of the market.

	1961	1960
	Rs.	Rs.
Low medium	4.40-4.50	3.97-4.08
Medium	4.50-4.65	4.08-4.30
Good medium ...	4.70-5.05	4.30-4.96
Nilgiri B.O.P. ...	Rs. 4.80-5.80	

The average price realised in sale No. 17 was Rs. 4.67 per kilo as against Rs. 4.77 a week ago and Rs. 4.70 in the corresponding sale a year ago.

Dust Sale No. 17: Approximately 241,000 kilograms were offered in Dust Sale No. 17 held on Thursday, 27th April 1961. Quality showed a further seasonal decline. There was less demand which weakened as the sale progressed. Fair enquiry was seen for highgrowns which were easier following quality. Mediums came to a very irregular market and although a few selected coloury sorts sold well, the majority declined by up to 30 nP per kilo and sometimes more. Residuals were the weakest feature and sold at considerably lower levels. C.T.C. types shared in the downward trend of the market with legg cut teas declined to a lesser extent.

The average price realised in dust Sale No. 17 was Rs. 4.36 per kilo as compared with Rs. 4.54 a week ago and Rs. 4.63 in the corresponding sale last year.

Export quota: Business in special licence continues to be transacted at ½ nP per kilo. All offerings on this market are covered by valid rights.

Colombo: In this week's export sale just over 6½ million pounds were offered and there was good general demand. Highgrown brokens met less support and declined by 20 to 30 cents, whilst similar fannings were firm at last levels. Mediums were 5 cents easier, whilst uvas were lower by 5 to 10 cents. Fannings in these categories however, were often dearer. Lowgrowns and the plainest were steady.

London:—*North Indian and other growths*: In Monday's North Indian sale there was good general demand at fully firm rates.

Ceylon and South Indians: In Tuesday's sale 24,589 packages were offered of which 7,860 packages were from South India. There was strong demand and prices were often a penny to 2*d*. dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 18: 505,000 kilograms. Good general demand. Plain and low medium steady and sometimes dearer. Medium and good medium 5 to 10 nP easier. Nilgiris irregular and occasionally dearer with quality."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *2nd May*

Demand in general was good during last week's sales for internal consumption.

There were inquiries for freight for new season's tea and in fact some movement took place during the week. However, the quantities that are expected to move would remain insignificant for some time to come.

It has been well known that export of tea to the United Kingdom, India's biggest customer, has been falling. One of the reasons contributing to this is last year's fall in output in North-East Indian gardens as a result of the drought earlier in 1960. Trade circles as well as industry circles were aware that the fall in output was only a factor which gave momentum to the decline but that the declining trend was there even before that.

The tax burden on the tea industry continues to be heavy. This has added to the cost structure, and welfare legislation has only caused further deterioration in the competitive position of Indian tea in world markets. The industry has often represented to the Government of India the need for revising the tax structure on tea and give the industry some real incentive for replantation as well as bringing more land under tea. There is inadequate allotment of fertilisers. Import licences for spares are difficult to obtain, thanks to the foreign exchange difficulties.

That the problems facing the tea industry cannot be neglected without doing irreparable harm to India's power of earning foreign exchange by exporting tea becomes only too evident from a study of the Indian tea market in the United Kingdom recently conducted by Messrs. J. Walter Thompson & Co. The firm's survey reveals a gradual decline in India's share of the British tea market. It also gives the rather unpleasant information to the Indian industry and the Government of India that Ceylon's promotional campaign in the U.K. is a success which may affect India's position in the days to come. The firm has found that, although U.K.'s economy has expanded, tea consumption in the last four years has not shown any significant increase and that the tea habit among the younger age groups is giving place to other beverages.

These revelations should serve as an eye-opener to Indian Tea Board. It is also time the Government considers the industry's grievances relating to tax burden and the difficulties which the gardens face in replantation and expansion.

During the week, the Tea Board held discussions with the West Bengal Chief Minister, Dr. B. C. Roy, on the question of finding more land for tea. Without bringing more land under tea, the realisation of the target under the 3rd Plan would be difficult. About half of 333 gardens in West Bengal covering an area of 600,000 acres is small in size and does not possess land for expansion. The Tea Gardens Advisory Committee thinks about 60,000 acres of fallow land and forests can be made available to growing tea.

Dusts on offer during the internal sale held last week amounted to 23,322 packages. C.T.C. teas possessing clean leaf appearance met with strong demand, the bright lines realising higher prices. However, the very fibrous C.T.Cs. were quiet, necessitating withdrawals as the auctions came to a close. In an irregular trend, orthodox teas eased. Legg-cut Dooars were also quiet, but the few bright lines were steady. The quotations per 1 kg. including excise duty were: good Assam C.T.C. dust Rs. 6.80 to Rs. 7.40, medium Assam Rs. 4.50 to Rs. 5.20, medium Assam dust Rs. 4.35 to Rs. 4.80, and plain orthodox dust Rs. 4.25 to Rs. 40.

Leaf on offer amounting to 691 chests were irregular.

JUTES MOVE UP

(From Our Own Correspondent)

CALCUTTA, *2nd May*

Steady conditions were in evidence in the jute markets during the week under review, both jute goods and raw jute recording additions to values. Local buying against the background of the distinct possibility of block closure of mills, at least for a fortnight before August, that is, before the new crop reaches the mill stations, were the factors which led to a rise in the prices of goods, while the marked fall in fibre arrivals and the continuance of dry weather which was, however, broken by good showers a couple of days ago, as well as last night in certain West Bengal districts, lent gravity to the already serious nature of the fibre shortage and contributed to a steadily upward movement in fibre prices.

Early in the week, there were rumours of the proposal by mills of block closure. The period of the proposed closure varied from one week to four weeks. The fact that mills were not availing their quotas in order to avoid the present uneconomic prices against the background of poor inquiries for goods from abroad suggested that the rumours were based on sound conjecture. It was subsequently known that the Indian Jute Mills Association had already represented to the Government of India about the serious fibre situation. New Delhi discussions on this representation followed and the Government fully appreciated the predicament which faced the mills. However, it was agreed among I.J.M.A. representatives and Government spokesmen not to take any decision at present but to review the fibre situation later this month. It was thought that the good showers later in the week would, if followed by similar rains in Assam and Bihar districts, improve the prospects of an earlier crop. Rains were reported in Assam, but they have so far been inadequate for quickening germination. In Orissa and Bihar, sowings have been held up for want of rains. Since the crop in West Bengal is usually late, what is of importance is the need for good rains in Assam. As far as Bihar and Orissa are concerned, the crop would only be late, as sowings have not been completed so far. As regards East Pakistan districts, the crop would be earlier than usual, since these districts have had good rains at intervals. However, the possibility that Pakistan would harvest the crop earlier than usual would not alter the position in India since Pakistan mills, already faced with a shortage now, might take up all the earlier arrivals.

As stated, the arrivals of the remaining old crop stocks have declined markedly and it is not seriously suggested in any quarters that there is much yet to be disposed of. In the month of March, mills consumed 500,000 bales and arrivals fell short by 85,000 bales to consumption. Mills are estimated to have consumed 4,447,350 bales in the nine months to March this year and arrivals were short by 283,000 bales as compared to consumption. Mills' anticipated consumption in the three months to June is 1,200,000 bales, as against which arrivals are expected to be not more than 800,000 bales. In other words, the shortfall in arrivals as compared to consumption would be of the order of 650,000 bales in this season, and this is equivalent to six to eight weeks' consumption at the present rate of reduced working. Allowing a margin for a carry-forward from the last season, it is not seen how mills can avoid closure for any period less than one month. Rather than unplanned closure, it would be advantageous to the industry if a block closure for a minimum period is done. Such an event would have some effect on fibre prices and a fall in price of fibre and goods is essential for the future of the industry. For overseas buyers of goods are postponing entering into commitments for replenishment of their stocks in the hope that the coming crop would be a bumper one and that prices would move down to reasonable levels.

The optimists point out that experience has shown that a trying season is followed by a good season. All indications would justify such optimism. It would, however, be surprising if the crop starts reaching mills before August. A wider area is believed to have been sown under jute this year, but, since experience in recent years has shown that the propensity to stock has shifted from big landlords to medium-scale cultivators and that the co-operative habit has spread, it cannot be said that cultivators would rush to the market with their produce and thereby contribute to a fall in prices. All these point to the fact that mills are facing trying times and it depends a lot on the Government how it comes to a decision on proposals that mills submit to it from time to time for a solution.

During the week, the liner space that goods occupied in foreign-going vessels was far from large, and it does not appear that any visible improvement is in the offing in the near future. Foreign buyers are watching the price trend in goods keener than ever, and it is not suggested that they would decide to buy at the present high levels. Since crisis is generally followed by resolution, as prosperity by crisis and recession and depression in the case of a typical trade cycle, and the new crop is not far off, it is not expected that foreign buyers would accord any large support before the present season expires. On Tuesday last, although there was no mentionable business passed through in goods for export, prices declined a little, following selling pressure from holders and selling by mills. Ready hessian 40" 10 oz. eased from Rs. 58.75 to Rs. 57.24 and ready B. twills from Rs. 174.50 to Rs. 173. On the following day, a nominal recovery to Rs. 173.50 was recorded in B. twills, but hessian 40" 10 oz. sagged further to Rs. 57.00. However, on Thursday, interest was shown in hessian by U.S. buyers, albeit for small quantities only here and there. Local bazar dealers became active and the ready 40" 10 oz. hessian hardened to Rs. 58. In sympathy, B. twills recovered to Rs. 175.50. Covering business continued on Friday and the report of possibility of block closure by mills underlined by reports of the continued dry weather in jute districts sustained B. twills at Rs. 175.00 and hessian 40" 10 oz. at Rs. 58.50. Towards the week-end, covering business continuing, these rates were maintained. Prices during yesterday recorded sharp declines, following reports of rains during the week-end. Overseas buyers did not, however, show any interest, while mills were wanting buyers for ready and near delivery goods. Hessian 40" 10 oz. declined to Rs. 57.50 and B. twills to Rs. 171.50.

Sellers of raw jute were reserved and, though mills showed no interest in offers earlier in the week, they turned keen buyers later. Prices fell earlier, but recovered later. The opening and closing quotations for the principal varieties of fibre against April-May delivery were:

(In Rs. per maund)

	Opening	Closing	Gain
Assam bottoms ...	57.00	58.50	1.50
Daissee bottoms ...	59.00	60.50	1.50
Northern bottoms ...	56.00	57.50	1.50

KIPS QUIET

(From Our Own Correspondent)

MADRAS, *1st May*

The kip market was quiet, following patchy export demand. Arrivals were freer than last week and clearances slack, as sellers were trying to hold firm to their prices. Except for buffalo hides and lower grades cow hides light weights, other lines looked easy.

Demand for middle class sheep was strong and prices hardened, while prime sheep ruled steady. Tanned goat was unchanged, but export trading was small.

"RABI" GRAIN ARRIVALS LARGE

(From Our Own Correspondent)

HAPUR, *1st May*

Foodgrains ruled easier during the week, thanks to better arrivals of new *rabi* grains in the markets. It was expected that arrivals would mount further as winnowing and threshing operations were still in full swing. Wheat now moving freely, but, despite record rice production this year, the Government is not making any major modifications in rice zones, although some contiguous deficit and surplus States have been linked. Prices of rice this year are lower than those last year in most States. Wheat at Hapur recorded a fall of about 50 nP at Rs. 14 to Rs. 14.50 a maund for average quality and Rs. 15 to Rs. 15.50 for better farm produce. Daily arrivals were still modest at an average of 500 to 700 maunds which were being lifted by consumers. Wheat was reported to be lower in mofussil markets and a further fall in prices was anticipated by trade.

Rice ruled quiet, despite increased consumer demand, as rice was still reaching here from outside and local stock was put at 10,000 maunds. The week-end prices were: rice *mainpuri sela* Rs. 20.50; *gadda kutcha* Rs. 20.50; *ramajwayan sela* Rs. 23.50; *raimunia sela* Rs. 25; *basmati sela* Rs. 28 to Rs. 30; superior Rs. 32 to Rs. 38 a maund.

Gram registered a fall of about 50 nP a maund during the week to be quoted at Rs. 12.25 a maund for better Punjab variety, while local inferior stuff was done at Rs. 11.75 a maund. Daily arrivals of gram were about 250 maunds, part of which was being received from the Punjab. Barley arrivals were about 100 maunds daily average and prices sought lower levels at Rs. 10 to Rs. 10.50 a maund, as demand was slack. *Bejhar*, however, was steady. Arrivals were mixed with wheat also to be quoted at Rs. 10.25 to Rs. 11.25 a maund. Maize was quiet at Rs. 12.50 a maund and *bajra* was quoted slightly higher at Rs. 17 a maund, thanks to demand for seed. *Jowar* and *guwar* attracted better demand and prices improved fractionally to be quoted at: *jowar* Rs. 13 to Rs. 14.50; *guwar* Rs. 12.50 to Rs. 14.50 a maund.

In pulses, peas ruled steady at Rs. 10.25 to Rs. 10.37 a maund for *dara* quality and upto Rs. 11.25 for better farm produce. Daily arrivals were modest at an average of 1,000 maunds.

HAVE PLEASURE IN ANNOUNCING ENHANCEMENT IN THEIR RATES OF INTEREST ON DEPOSITS

Certain items of enhancement are:

Savings Bank Accounts	From 2½ to 3% p.a. (From 1-4-61)
Deposits fixed for 12 months and over but less than 24 months.	From 3½ to 4% p.a. (From 15-3-61)
Deposits fixed for 60 months and over.	From 4½ to 5% p.a. (From 15-3-61)

For further particulars please apply to the nearest branch of the Bank.

G. S. SUNDARAM,
Secretary.

Although loading was restricted by rail, stockist were main supporters, with the result that local stock swelled to 20 *khatties*. *Arhar* ruled steady a Rs. 12.25 to Rs. 13 a maund, as local arrivals were small at an average of 200 to 300 maunds and grinders were supporters. Other pulses were stagnant to be quoted at:—*Urd* Rs. 19.25 to Rs. 21; *urd dal* Rs. 24; *moong* Rs. 19 to Rs. 23; *moong da* Rs. 25; *massor* Rs. 12.25 to Rs. 14.50; *massor da* Rs. 15.25; and gram *dal* Rs. 15 a maund.

SUGAR SUPPLIES COMFORTABLE

(From Our Own Correspondent)

HAPUR, *1st May*

Sugar ruled quiet during the week at Rs. 108.5 per bag and in retail at Re. 1 per *seer* in the open market, but there were centres where sugar was not being lifted even below controlled rates. The supply position of sugar was easy, as the State Government was selling a part of its quota in the open market. Sugar production is still being continued in almost all factories, as cane supply position in factory areas is adequate. Total production of sugar up to the end of March was put at 22.90 lakh tons, as against 20.57 lakh tons in the corresponding period of last year, and closing stocks was 19.57 lakh tons, as against 14.1 lakh tons on the same date last year. Export prospects, however, were bleak, despite the Government's declaration to subsidise exports.

Sugar drifted downward in the Muzaffarnagar market, following easy supply position. It was quoted at Rs. 107 per bag for dry sugar, while damaged sugar stood as low as Rs. 99 to Rs. 10[illegible] per bag.

Khandsari was steady, thanks to good outside buying enquiry. Production has been reported to be 25 per cent less than last year, as cane supplies were very much diverted to production of sugar. Prevailing week-end prices were:—inferior Rs. 2[illegible] to Rs. 30; superior Rs. 32 to Rs. 34; crystal Rs. 3[illegible] to Rs. 36.50; special Rs. 37.25; old Rs. 22 to Rs. 2[illegible] a maund.

Ready *gur* recorded a rise of Re. 1 per maund during the week to be quoted at Rs. 16.25 per maund, while dry *kotha* was done at Rs. 15.75. Daily arrivals here were nominal at an average of 25 maunds and, as railway loading was only available by allotment, offtake in week-end was only three wagons. Besides *kotha gur* moved out to consuming areas by trucks. Local stock ran down to 65,000 maunds, the corresponding figure last year being 32,000 maunds. Ready *gur* improved in other producing areas also. Stocks of *gur* were heavy in mofussil areas from where *gur* was moving out by road to east U.P. and Punjab.

Gur ruled quiet in the Muzaffarnagar market, as demand for *chaku* quality was reported to be not very encouraging. Arrivals there, too, were poor and week-end prices were:—*Chaku* Rs. 15 to Rs. 17.25; *ladoo* Rs. 16 to Rs. 16.50; *rusket* Rs. 8 to Rs. 11.50; *shakker dara* Rs. 16 to Rs. 17; *masala* Rs. 21 to Rs. 24 a maund.

Gur futures ruled both ways during the week in narrow fluctuations, as speculators were hesitant to enter into long commitments due to early delivery date for *Baisakh*. *Ashad* was quoted at Rs. 14.97 and *Fagun* at Rs. 13.77, as against the week's opening rates of Rs. 15.03 and Rs. 13.86, respectively.

Notice

THE BELSUND SUGAR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of The Belsund Sugar Company Limited, will be held at its Registered Office at 14, Netaji Subhas Road, Calcutta, on Saturday the 27th May, 1961, at 11-30 a.m., for the following purposes:—

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include these from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of December 1960 amount to 11.33 crores of rupees.

ABBREVIATIONS. N—Nominal. (*f*) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loans not marketable. †† Rate of Interest reduced from 6 to 3 per cent. with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1936. —Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex eight instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1966 or later at the option of Government after three months' notice.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page 827*)

to close down the third and second shifts. Available supplies are said to be sufficient to meet only about 70 per cent of the power requirements.

The present power shortage, which is sure to tell upon industrial production during the year, will have served at least one useful purpose if it drives home to the authorities the need for increasing power production irrespective of whether it is done by the public or the private sector. The Government and the Planning Commission have in the past overestimated the capacity of the public sector to step up power production and have correspondingly underestimated the ability of the private sector. This is clearly borne out by the allocations for power development in the first, second and even third Plans as between the private and public sectors. Thus, while the total outlay on power development in the public sector during the first Plan was of the order of Rs. 260 crores, it was only Rs. 32 crores in the private sector. In the second Plan, while the share of the former was increased to Rs. 410 crores, that of the latter was raised to only Rs. 37 crores. The allocation in the third Plan (Draft) has widened the gap further. Thus, out of a total outlay of Rs. 975 crores envisaged under the Plan, Rs. 925 crores will be in the public sector and a mere Rs. 50 crores in the private sector. The absurdity of this meagre allocation for the private sector, whose actual performance in the field of power development, as in others, has been far better than that of the public sector, has been conceded even by the Ministry of Commerce and Industry which, fortunately, seems to be aware that its efforts to speed up industrial development will come to no purpose, if adequate power is not made available. A revision of the distribution of the Plan provision for power development as between the public and private sectors is called for if the deficiency in power supply is to be removed at least by the end of the third Plan.

Britain and Common Market

As a member of the Commonwealth, India has naturally been evincing keen interest in Britain's economic relationship with the West European nations. The interest has increased lately, thanks to reports emanating from London that Britain has almost decided to become a member or associate of the six-nation European Economic Community (E.E.C.), familiarly known as the Common Market. Although Mr. Reginald Maudling, President of the Board of Trade, denied the reports recently by characterising them as "quite inaccurate," it is believed that practically every one in the British Cabinet has now fully recognised the urgency of securing a solution not merely to the problem of Britain's relations with the Common Market but to the wider issue of European unity, which is threatened by the division between the E.E.C. and the E.F.T.A. (European Free Trade Association). The British Prime Minister and other official spokesmen have, of course, held out the assurance on a number of occasions to the effect that the interests of India and other Commonwealth countries will always be kept in mind, but there are doubts as to how effectively Britain will be able to safeguard these interests when it joins the Common Market. It looks as though the Commonwealth preference will ultimately give way. No system of trade preferences, evolved some thirty years ago, can remain unimpaired, despite the changes that have taken place in the political and economic set-up of the world.

There is no doubt that there are many in Britain who feel that the whole Commonwealth relationship will be imperilled and destroyed, if the Rome Treaty is accepted by Britain without qualification and reservation. Nevertheless, greater stress is being laid on the importance of Britain's relations with Europe rather than on that of Commonwealth relationship, as it is being increasingly felt that the consequences of Britain not joining the Common Market will be far more serious to its economy than the advantages of continued existence of Commonwealth preference. Here is what Mr. Bernard Braine, Parliamentary Under-Secretary of State for Commonwealth Relations, stated in London on 30th April when he addressed the annual conference of the Conservative Commonwealth Council:

"....If we stay out (of the Common Market), our own trade is injured not only by the new tariff discriminations of the Six but far more seriously by the stronger competition of the dynamic group in our traditional markets. If Britain were squeezed out, the capacity to expand her trade and earn a surplus to provide investment capital would be seriously reduced and there might be a decline in Commonwealth trade. It would be ironic, indeed, if our concern for Commonwealth solidarity prevents us from resolving the dilemma in Europe and that, as a consequence, we become so weakened as to be unable to hold the Commonwealth together. Clearly, we cannot allow matters to drift much longer."

Viewed thus, the lead taken by Britain in trying to reach an arrangement between the two European trade groups (E.E.C. and the E.F.T.A.) is understandable. Whether its efforts in the direction will succeed, it is difficult to say, because the problem is very complicated. Three questions stand out. In the first place, will all the E.F.T.A. members agree to Britain joining the C.M.? Secondly, will Britain succeed in devising arrangements to safeguard the privileged position of Commonwealth goods in its markets and continue in some form the official support that British agriculture is now getting? Finally, will these arrangements be such that France will not regard them as incompatible with the membership of the C.M.? For the answers to these questions, one has to await the outcome of the discussions currently going on among the officials of Britain and C.M. nations, as well as the forthcoming inaugural meeting of the newly formed E.F.T.A. Consultative Council scheduled to be held in London on the 9th and 10th inst.

It is not the U.K. and other members of the E.F.T.A. alone that are anxious to bridge the gulf between them and the C.M. countries. The latter also are equally anxious. In its latest annual report submitted to the C.M. Council of Ministers on Wednesday this week, the E.E.C. Monetary Committee has clearly underlined the indispensability of consultations by a body much larger than the C.M. and urges that this should be one of the objectives of the proposed Organisation for Economic Co-operation and Development. The Committee has no doubt expressed satisfaction at the favourable character of the economic expansion of the Six in the past year, the realisation of price stability, and the assurance of reinforced co-operation between the economic and financial policies of its members in a way that is favourable to the realisation of the Rome Treaty's objectives. But, at the same time, it draws attention to the lack of financial balance in dealings with important third-party States which play a fundamental role in the international monetary system. The Committee has accordingly emphasised the necessity for greater policy co-ordination among nations so as to ensure better orientation of capital movements. It is needless to say that such co-ordination can prevail only if the economic integration of the entire Western Europe comes into being, with due recognition of the immense importance of the Commonwealth.

Burmah-Shell's Deal

Burmah-Shell has just concluded a contract—stated to be one of the largest for petroleum products ever concluded in this country—with the Fertiliser Corporation of India (exclusively owned by the Central Government) for the annual supply of 50,000 tons of refinery gas for a minimum period of ten years. The Trombay fertiliser project, which is expected to commence production by the end of 1963 or early in 1964 at the annual rate of about 350,000 tons of fertilisers, will use the refinery gas figuring in the present contract. It is noteworthy that the Burmah-Shell gas will serve as feedstock for the manufacture of nitrogenous fertilisers by a process developed by Shell scientists themselves for production of such fertilisers using *any* petroleum feedstock. Incidentally, this process, making use of any type of petroleum feedstock, provides a solution to the imbalance problem in the oil industry in India. The Shell-Fertiliser Corporation contract which finds an outlet for the refinery gas that can be utilised in the Shell process for the manufacture of nitrogenous fertilisers is a welcome development. This, of course, cannot make up for Shell's disappointment over the refusal of the Government of India to sanction its request for expansion of its refinery capacity.

DEPRECIATION OF MONEY

The table below presents the customary annual review of comparative rates of depreciation of money, in this instance covering 43 countries, 1950-60. The shrinkage of currencies is measured, inversely, by the rise in cost-of-living or consumer price indexes as reported by the various Governments. Year-to-year indexes of living costs for 18 countries are shown in the chart.

The U.S. dollar has been shrinking at an annual rate of 2.1 per cent. Belgium, Germany, and Canada are among the industrial nations experiencing about this same rate of depreciation, one that means a loss of half the value of the currency in 33 years. Upward price pressures were measurably greater in 1950-55, but, since then, have been retarded, in Italy, the Netherlands, Japan, the United Kingdom, and Sweden.

In eight cases, the shrinkage in the value of money exceeded 10 per cent per year compounded, with results of shaving anywhere from two-thirds to 99 per cent of the buying power of the currency unit over the decade.

	Indexes of Value of Money			Annual Rates of Depreciation (Compounded)

All preference shares are taxable unless otherwise stated.

**These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 5 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2614 BOMBAY, 13th MAY 1961 PRICE Rs. 2

A WELCOME CLARIFICATION

THE statement on the role of foreign capital in India's economic development issued by the Government of India last week is more in the nature of an announcement of administrative reform than an expression of official policy on the subject. Even so, it does make a welcome advance on the existing position and also clarifies certain basic issues. Further, there was a danger that, in the absence of an authoritative statement of the Government's attitude towards foreign capital, India's case for a larger inflow of such capital might go by default. After all, there is now a world hunger for capital and nearly all the underdeveloped countries suffer from an acute shortage of capital resources. There is a worldwide race for according favourable treatment to the capital that flows from outside. India should be able to present its case with sufficient clarity in order to induce foreign investors to regard India as a sound investment risk.

India has not been slow to realise the importance of foreign capital, though actions have not always matched official intentions. However, Government spokesmen have nearly always stressed that foreign capital will receive the same treatment as domestic capital, the foreign investor will receive fair compensation in the event of nationalisation and there is no intention to place any restriction on withdrawal of foreign capital investment or remittance of profits. Indeed, the statement issued last week must be regarded as a continuation of the official policy embodied in the Industrial Policy Resolution of 1948, further amplified by the Prime Minister a year later. Mr. Nehru observed in 1949 that "Indian capital needs to be supplemented by foreign capital not only because our national savings will not be enough for the rapid development of the country on the scale we wish but also because in many cases scientific, technical and industrial knowledge and capital equipment can best be secured along with foreign capital." The report on the first Five-year Plan also emphasised that it was "of the highest importance to ensure to the foreign investor prospects of a fairly good return and certainty of fair and equitable treatment," The report went on to observe that, in view of the fact that investment of foreign capital acted as a "catalytic agent" for drawing forth larger resources for domestic investment, it was desirable that such investment should be channelled into fields of high priority. It is against this background that the latest statement deserves to be viewed.

On the purely policy front, there are two aspects of the statement which will strike a student of current economic affairs as particularly significant. In the first place, there is some softening of the rigour of the Government's policy in relation to Schedule A industries—industries which in terms of the Industrial Policy Resolution of 1956 are reserved for the State. The statement points out that, though private capital, foreign or Indian, as a rule is not being allowed in Schedule A industries, exceptions may be made "in special circumstances" where after full consideration this is found to be in the "public interest." In essence, this is a continuation of the realistic change in the Government's attitude towards private capital which has become evident in its policy according concessions to privately-owned collieries. Secondly, the statement observes that, while Indian majority-holding would be generally welcome, the ratio of foreign capital to Indian capital in joint-venture enterprises, the extent of foreign shareholding that is to be permitted in any case, etc., have necessarily to be judged on merits. This judgment, it is stated, [illegible] after evaluating the technical skills offered and after weighing the requirements of foreign exchange for the purchase of equipment from abroad and the desire of Indian collaborators to play an effective part in the company's management. This, again, is a realistic change in the Government's attitude towards foreign capital. After all, it is to be expected that in the initial stages the foreign investor will want to have substantial control over the Indian enterprise in the capital structure of which he participates. However, experience shows that, when he becomes familiar with Indian conditions, he is always prepared to share the ownership of the enterprise with Indians. If he is scared away from initial ownership, it is a distinct loss to the Indian economy.

A welcome improvement in the Government's handling of applications for setting up new enterprises has now been made. The Government has at last realised the importance of having a unified control which will cut red-tape to the minimum. It is now proposed to have a unified agency to co-ordinate all aspects of the major projects in the private sector, such as licensing under the Industries (Regulation and Development) Act, control of capital issues, terms of foreign collaboration and import licensing procedure. By streamlining the administration of these projects, the Government will have rendered a great service in the cause of rapid industrial development. So far as foreign investors are concerned, they are bound to get some real picture of India's needs in the list of industries where, according to the Government, foreign capital will be particularly welcome. It is emphasised that no foreign capital is necessary in banking, insurance, trading and commercial activities and plantations. This negative definition has, however, been supplemented by a positive reference to the fields where foreign capital would be helpful. The list which, it is stated, is illustrative rather than exhaustive, includes: iron and steel castings and forgings; iron and steel pipes; special steels; non-ferrous metals and alloys; boilers and steam generating plants; equipment for transmission and distribution of electricity; furnaces; marine diesel engines; industrial machinery including major items of specialised equipment used in several industries such as equipment required for various unit processes; ball, roller and taper bearings; speed reduction units; machine tools; tractors, earth-moving and construction machinery; plastics; industrial and scientific instruments; fertilisers; organic chemicals, fine chemicals and intermediates; industrial explosives; industrial gases; agricultural chemicals such as insecticides; dyestuffs and drugs, including the production of basic intermediates; newsprint and pulp.

There is no doubt that India has reached a stage where private foreign capital could derive considerable benefit. Social overheads are being fast built up. Indian economy is being strengthened at the base through the creation of several basic facilities. India now possesses a Government that is pledged to uphold the democratic way of life. Moreover, this country represents in economic terms a vast market. It is, however, a pity that, despite these advantages, this country has not yet been able to attract a larger inflow of foreign capital. By the end of 1959, total private capital investment in India aggregated Rs. 611 crores, as against Rs. 571 crores a year earlier. The net inflow of private foreign capital was only of the order of Rs. 1.7 crore in 1958, as against Rs. 16.8 crores in 1957 and Rs. 24.70 crores in 1956. If allowance is made for the somewhat abnormal outflow of petroleum investment in 1958—this outflow has been estimated at Rs. 24.4 crores—that year's figure would, however, be considerably higher. Even so, the net inflow is insufficient to make any great impact on our economy. It has been estimated that the total foreign exchange deficit during India's second Five-year Plan was Rs. 1,600 crores, of which Rs. 1,340 crores or about 84 per cent was met by official or institutional foreign loans. If this proportion continues into the third Plan, the estimated deficit of Rs. 2,600 crores will be met to the extent of Rs. 2,184 crores, leaving a gap of over Rs. 400 crores to be filled in by private foreign investment. Indeed, the gap may be even wider if foreign assistance is not available in the proportion in which it was available in the second Plan. In the context of this broad assessment of India's foreign capital needs, the present rate of inflow of private foreign capital is certainly very low.

It is greatly to be hoped that the statement will induce those foreign investors who are still sitting on the fence to jump boldly into the Indian economic arena. Their courage is bound to be rewarded in the end. However, it is up to the Government to see that the statement is followed by further official action. There is scope for reducing the burden of taxation on companies other than those which have made arrangements for distribution of dividends in India. Again, no time should be lost in concluding agreements with foreign countries for avoiding double taxation. It is true that India has concluded such agreements with a large number of countries including Norway, Denmark, West Germany and Japan. It is necessary to conclude similar agreements with other foreign countries. Further, the tax structure should be streamlined in order to ensure that foreign capital feels that it is really wanted in this country.

MAINTENANCE IMPORTS

INDIA'S requirements of 'maintenance' imports, as distinct from 'development' imports, in the third Plan period are going to be substantially more than what have been estimated in the Draft Outline. Such imports should be about Rs. 850 crores per annum, as compared with an annual average of Rs. 714 crores assumed in the Draft Outline, to allow industrial capacity to be more fully utilised. In reaching this conclusion, the British economist, Sir Donald MacDougall, who was associated with

the Planning Commission's Import-Export Working Group, is stated to be in broad agreement with the Group. His comprehensive paper on the balance of payments question, which has been drawn up from the long-term perspective of the fourth and fifth Plans, has also an immediate relevance for its emphasis on more maintenance imports "which could make possible an increase in production several times as great in value." This confident conclusion is based on his study of manufacturing capacity which in a number of industries is now under-utilised in varying degree.

The major findings of this study are that as many as 36 out of 94 industries working on single-shift basis utilised in 1959-60 only 60 per cent of their capacity or less and that a substantial part of the unused capacity undoubtedly reflects shortage of imported materials, components, spare parts and replacements, that is, of maintenance imports. The figures worked out by him tell their own story:

Production as per cent of capacity	No. of industries working on basis of 2 or 3 shifts	No. of industries working on basis of single shift
Over 150	1	4
„ 100 but not over 150 ..	7	16
„ 90 „ 100 ..	4	7
„ 80 „ 90 ..	7	10
„ 70 „ 80 ..	4	6
„ 60 „ 70 ..	..	15
„ 50 „ 60 ..	..	10
„ 40 „ 50 ..	2	15
„ 30 „ 40 ..	2	11
Total ..	27	94

Sir Donald has, of course, recognised that there may be reasons other than shortage of foreign exchange for this state of affairs. Inevitable teething troubles of new factories, short runs and breakdowns even in established factories, installation of capacities in excess of current needs, over-estimation of demand in some cases, and so on are other such reasons. But, by and large, it is the inadequacy of maintenance imports that seems to be responsible for the present under-utilisation of capacities particularly in industries using steel, non-ferrous metals, wood-pulp, rubber, and intermediates for certain chemicals and drugs. It is, again, in the light of this finding that the British economist has reached the conclusion that additional maintenance materials to the value of Rs. 100 crores per annum could be usefully imported to meet industry's requirements. Such additional imports, given the present level of demand for industrial goods, might increase production by anything from 15 per cent to 20 per cent, or by several times the value of the increase in imports. Over the entire third Plan period, therefore, the required increase in maintenance imports may be of the order of Rs. 500 crores. But this, of course, does not seem to cover the additional import needs that may arise from additional capacity and production planned for the third Plan period even after making allowance for the large increase planned in import-saving production which would also cover substitute indigenous materials to replace some maintenance imports. If the aggregate figure of Rs. 850 crores per annum estimated by Sir Donald for maintenance imports were to be raised to even Rs. 900 crores, it would not be wide of the mark. It would be prudent to overestimate slightly rather than to underestimate substantially in this regard and to proceed on that basis to ask for more aid to cover the additional requirements of maintenance imports as distinct from development imports.

In the ultimate analysis, the problem of maintenance imports can be permanently solved only by an increase in exports. The need for a vigorous export drive has, therefore, come in for greater emphasis and more exhaustive treatment in Sir Donald MacDougall's paper. It would not be impossible, in his view, for this country to achieve an expansion in the exports of even the three staples—tea, jute and cotton textiles—and in those of iron ore, coffee, fish, vegetable oils, etc. His view that, "if Indian products are to compete abroad without prohibitive subsidies, it is essential to go all out for maximum economic efficiency and large-scale plants, even if this means less regional dispersal of industry, more concentration of economic power and some apparent loss of employment opportunities" would need to be heavily underlined in this context. This journal, which has been pleading for some such approach, has no hesitation in subscribing to this practical view so very happily expressed by the British economist.

The implications of this view in respect of individual export commodities can also be easily figured out. In the field of jute, for instance, it would involve rapid modernisation of both spinning and weaving sections. The cotton mill industry, too, would need to be not only modernised in the same manner but released from the restrictions placed on it in the supposed interests of the handloom industry. Perhaps this kind of approach would apply equally well to leather and vegetable oil industries and to a wide range of newer industries. But it is by no means clear that there is any very great scope for restraining home demand of tea, for instance. If at all any expansion in tea exports can be brought about, it may be through appropriate measures for making it more competitive in terms of prices in foreign markets. This reasoning will apply to a wide range of products which are being manufactured for the first time in the country. A combination of measures such as drawbacks of customs and excise duties, lower prices for steel used in the manufacture of export products, additional excises on home sales and remission of taxes on exporters' profits has been suggested by Sir Donald in this connection. These measures could be a better substitute for any possible devaluation which would have widespread undesirable effects. If devaluation is not to be thought of at any time for the purpose of export promotion, the aid-giving nations would also do well to refrain from restricting imports of manufactures from India. That this approach should be adopted by the Western countries towards our textile exports to them is the theme of the next article.

ASIAN TEXTILE EXPORTS

EVEN when there were general discussions among British millowners on the possibilities of voluntary limitation by India, Pakistan and Hong Kong of their cotton textile exports to the U.K., this journal had expressed the apprehension that such a move might prompt other textile importing countries also to clamour for similar restrictions. That this apprehension was by no means exaggerated has been proved by subsequent events. Soon after the conclusion of ceiling agreements between Britain and the three exporting countries concerned, many in Western Europe began advocating limitation of textile imports. Actually, the Common Market announced sometime in 1959 that it was considering a proposal to impose a blanket ban on imports of grey cotton piecegoods from Asian, South American and Communist regions into its member-countries and their overseas dependencies. This move was followed by the plea of Canadian and U.S. textile industries for mandatory controls on textile imports. A U.S. Cabinet Committee also recently recommended import curbs. Although the American President has rejected this recommendation, it would appear that he favours voluntary ceiling agreements instead. It is, perhaps, to explore the possibility of negotiating such agreements that Mr. Kennedy has decided to convene a conference of the textile importing and exporting countries.

Meanwhile, opinion is reported to be gaining ground among textile circles in Honk Kong that limitations on exports to Britain should be abandoned after the current three-year voluntary agreement expires in February 1962. A declaration to this effect was in fact made in London the other day by Mr. P. J. Griffiths on behalf of the Hong Kong Spinners' Association, the Federation of Hong Kong Cotton Weavers and the Hong Kong Weaving Mills Association which together represent mills that account for about 90 per cent of cotton cloth shipments to Britain. If Hong Kong sticks to its current stand, the U.K.'s export ceiling agreements with India and Pakistan, it may be reasonably expected, should not also be renewed after the period covered by the agreements ends. For it will be recalled that India and Pakistan agreed to voluntary limitation of their textile exports only after Hong Kong had agreed to similar limitation. After all, India is as anxious as—in fact more anxious than—Hong Kong to step up exports of cotton textiles to Britain and other countries. But it is strange that the millowners in this country have not been bestirred by Hong Kong's move to terminate its ceiling pact with Britain after February 1962. Surely, the time has arrived for opposing the continuance of voluntary agreements to limit the textile exports of India and of any other Asian countries to the industrially advanced nations in the West.

For their part, the Western nations would do better to withstand competition from imported textiles through improvement in the efficiency of their own manufacture and through reduction of prices. It would be better still if the e countries, the cotton mills of which are functioning very largely on the basis of raw cotton imported from abroad, were to concentrate their attention more on other industries and provide an outlet for the textiles produced in the developing countries which possess the requisite raw cotton supply, manpower and other advantages. In that event, the developing countries would be able to utilise a large part of the foreign exchange earnings from textiles for the import of more machinery and equipment produced in the Western countries. If, however, the Western countries are in no mood to welcome that alternative, they should at least have the courage to own that textile imports into them have not had any serious impact on production and employment in their own cotton industry.

Any move on the part of the industrially advanced countries to get the developing countries of Asia to limit their textile exports may only have the effect of buttressing the uneconomic and inefficient manufacturers in both the exporting and importing countries. In any case, such a move is fraught with the danger of forcing the underdeveloped countries to trade more and more with Russia and other Communist countries. So, even from the political angle, what the Western countries want to do is unwise. Again, the argument that import restrictions are necessary because labour in Asian and other underdeveloped countries is cheap is untenable. For the general level of wages in a particular country usually depends, as Prof. Irving B. Kravis of Pennsylvania University very forcefully highlighted sometime ago, on how much the labour in that country can produce. The countries which enjoy high productivity per worker tend to have high income standards, while, conversely, countries where the average worker's output is low, tend to be low-income countries. It is the labour cost per unit of output and not the general level of wages that should be compared in calculating competitive advantages. On such a comparison, it will be seen that cotton mill labour in India is no longer cheap. The countries which possess natural advantages to produce cotton textiles must, therefore, be allowed to develop and step up their exports. After all, the countries in the West must recognise that the great value and the main justification for world trade lie in the fact that certain industries are able to produce at relatively lower costs in certain countries because of such advantages.

If, however, the Western countries fear that the conditions in their textile industry cannot at all be improved unless there is some understanding on the issue of imports, then the quotas for the exporting countries must at least be fixed on a realistic basis. This aspect has to be specially stressed because the annual quota fixed under the Lancashire—Hong Kong pact for this tiny island of a bare 391 square miles with a population of no more than 2.75 million is as much as 164 million square yards, whereas the quota fixed for India which is several thousand times bigger in size than Hong Kong and has a population of 438 million is only 174 million square yards. In allocating quotas to India and Hong Kong, no account has been taken of their respective productive capacities either. Why should Hong Kong, one would ask, continue to concentrate heavily on the cotton textile industry when there are so many other industries which can be established in the Colony? Moreover, Hong Kong does not grow any cotton at all. As it is, the cotton mills in this Colony are faced with the problem of securing a continuous supply of raw cotton to keep themselves going, for it is said that, at the moment, Hong Kong can obtain supplies only from Pakistan. Another relevant fact in this connection is that a sizable part of the cotton goods exported by Hong Kong represents goods imported from China and Japan and processed within the Colony.

To sum up, India can agree, if at all, to any scheme of voluntary textile export regulation on a worldwide basis only if all the other exporting countries undertake to abide by the scheme. The quota allocated to India must be a reasonable one, due account being taken of the pressing foreign exchange needs of the country in the coming years. And the licensing of exports should be done in India and not in importing countries as is being done in Britain at present.

MARKET GOSSIP

Needs of Shipping Industry

AT the annual general meeting of the Indian National Steamship Owners' Association, held at Bombay on Thursday this week, Mr. Vikramsinh Shoorji Vallabhdass, President, dealt comprehensively with the problems of the shipping industry. Some of these problems are sought to be solved by the Government, though not to the entire satisfaction of the industry. For instance, the grant of development rebate by the Finance Ministry to the extent of 40 per cent of the purchase price of ships, though welcome, does not go far enough. Although it is claimed to be modelled on what obtains in the U.K., there is some vital difference which is forgotten. For the position in the U.K. is that the development rebate granted is unconditional, whereas in India the shipping companies are required to set aside from their profits at the end of the year 75 per cent of the amount claimable as rebate. How this approach of the Government adds in a way to the difficulties of the shipping industry is better said in the I.N.S.O.A. President's own words:

"A fairly modern built cargo steamer of 10,000 to 12,000 tons deadweight costs about one crore and forty lakhs of rupees to the shipping company in these days and, if Rs. 42 lakhs have to be set aside in the very first year out of the development rebate of Rs. 56 lakhs claimable on the new acquisition, the directors of the company naturally find it difficult to face the shareholders of the company at the annual general meeting, as practically nothing is left for distribution as dividend on the investments of shareholders. In the present depressed state of the freight market, the position becomes much more embarrassing, and earnings from other vessels are also absorbed. This also acts as a deterrent in the way of modernisation and expansion of Indian owned tonnage."

The I.N.S.O.A. President's suggestion, therefore, is that, following the U.K. practice, the statutory requirement of providing the full development rebate reserve in the year in which the ship is acquired should not be insisted upon. In the alternative, the requirement could at least be relaxed so as to allow the reserve being spread over a period of six to eight years. It is regrettable that this plea has been rejected by the Union Finance Minister, Mr. Morarji Desai, while addressing the I.N.S.O.A. meeting, presumably on the ground that a comparison with the U.K. is not quite proper.

It is no less regrettable that the Finance Minister has chosen to dismiss another reasonable plea made on behalf of the shipping industry. This plea is to the effect that in the repair yards at Bombay and Calcutta, which the Government of India has acquired from foreign owners, the costs of repair work should be cut down or, in the alternative, subsidised. There is nothing unreasonable in this plea, for the yards in the U.K. and the Continent complete repairs and overhauling of a ship in about half the time taken by the yards in India and at about half the charges levied here. Indian shipping companies, which have to face intense international competition, have to bear the additional burden of excessive expenses over repairs, overhauling and survey of their vessels. If the Government expects the shipping companies to entrust repairs of their merchant ships to Indian repair yards, it should also see its way to reduce the costs of such work and the time taken for it.

The Indian shipping industry may, however, derive some comfort from the Finance Minister's general, though vague, assurances in respect of two other requirements. That the Government is keeping an open mind on the National Shipping Board's demand for an outlay of Rs. 118 crores on shipping in the third Plan period, as against the Planning Commission's allocation of Rs. 55 crores, therefor, is a welcome piece of news. It may be recalled in this connection that only last week the Informal Consultative Committee of M.Ps attached to the Union Ministry of Transport and Communications was told that the allocation of Rs. 55 crores for shipping in the third Plan was final. Now that Mr. Morarji Desai has said that the question of allocating larger funds for the expansion of shipping is under the Government's active consideration, the industry may well look forward to a fairer deal. The Finance Minister's statement that the Government has also under consideration the question of extending the duration of loans given to shipping companies should be equally gratifying to the industry. There is, *prima facie*, some reason to believe that the Finance Minister, who has otherwise bluntly dismissed the I.N.S.O.A.'s pleas in respect of development rebate, cost of ship repairs, etc., may have in mind to provide satisfaction and relief to the industry in other ways. It is to be hoped that this inference will not be belied.

Bank Credit

Both Mr. Homi Mody (Chairman of Central Bank) and Mr. Sivarama Prasad Bahadur (Chairman of Andhra Bank) covered more or less similar ground in their speeches at the annual meetings of the respective Banks. They referred in particular to the measures taken by the Reserve Bank to curb an undue expansion of credit and sought to stress that the effect of these measures had rather been disquieting. Mr. Mody was very candid in his remarks. Indeed, he warned: "The fact that the general price level continued to rise in spite of the measures adopted by the Central banking authority should serve as a timely reminder to the Government that, if they wished to maintain price stability, which is an essential prerequisite for the success of any Plan, they should not fight shy of shedding their doctrinaire attitudes and of adopting a more realistic fiscal and economic policy." On his part, Mr. Sivarama Prasad Bahadur declared that the credit control measures weakened the gilt-edged market and made it difficult for banks to meet the growing needs of an expanding economy; it also led to the diversion of resources from organised banking to unorganised markets to the detriment of banking economy.

May be, the dear money policy of the Reserve Bank has slowed down the pace of bank advances, but it would be wrong to say that the policy is not justified. For it is only such a policy that will, provided, of course, it is used judiciously, reduce demand for credit for non-productive purposes like speculation on stock exchanges and commodity markets, thereby exercising a downward pull on inflationary pressures. As we emphasised in these columns last week, unless money conditions are tight, it will not be possible to induce economy and efficiency in the use of capital. But it must also be admitted that the theory of dear money should not be extended too far to overlook the need for meeting the expanding financial requirements of the industrial and business communities as the pace of economic development gets accelerated. Even under conditions of tight money, the banks will not find it difficult to satisfy their clients' demand for funds if they make earnest attempts to gather resources which otherwise find an outlet into the unorganised banking sector. One of the most effective ways of gathering resources is fixation of interest rates on deposits at sufficiently attractive levels, accompanied by steps to open more branches, especially in the rural areas, and improve the banking services. In this task, the banks must be helped by the Reserve Bank in the form of more liberal lending under the bill market scheme and by the Government through tax concessions.

Mills' Federation Buys Cotton!

Traders in cotton are intrigued at the reported move of the Indian Cotton Mills' Federation to purchase selected varieties of cotton such as Vijay, Kalyan and Surti grown in Gujarat. While speculation about the probable size and range of future purchases by the Federation has been rife for some time now, the Federation has maintained a studied silence. The Committee of the Federation did state in the Press note issued after its last meeting on 26th April that the Federation would support the market if deemed necessary. But it did not throw any light on other details. All that it said was merely this: "The Committee of the Federation decided that a close watch should be kept on the present cotton situation and, whenever needed, the Federation should support the market by making judicious purchases so that the interest of the agriculturists could be safeguarded."

It may be noted in this connection that the cotton growers and co-operative societies of Gujarat recently made representations to the Government for remedial measures to relieve the situation created by heavy accumulations of stocks and decline in prices. They complained of slow offtake of cotton by mills and the consequent difficulty of marketing the crop. The State's Minister for Agriculture had urged the Centre to compel all mills in India to purchase 25 per cent of their quota from Gujarat or, in the alternative, to release an export quota for Wagad and Kalyan cotton. Acting, perhaps, on this suggestion, the Centre announced an export quota for 50,000 bales of 23/32" cotton; both Wagad and Kalyan qualify for export under this quota. Even so, the Federation might have feared that the Government would compel mills to lift the stocks that remain unsold with growers. The fear, it would appear, prompted the Federation to enter the market to purchase cotton.

The Federation's move has not been welcomed not only by traders but also by some millowners themselves who fear that bulk buying by the Federation will disrupt the normal trade channels and ultimately render the marketing of the crop more difficult. Many questions are being raised in trade circles about the implications of the move. Will the Federation, it is asked, for instance, confine its purchase only to Gujarat cotton or will it be prepared to step in wherever stocks accumulate and prices fall? Accumulation of stocks, it is pointed out, is not confined to Gujarat region alone. In several parts of Andhra Pradesh, too, stocks of short-staple cotton are reported to be mounting. Even if the Federation is prepared to buy cotton from all distressed areas, how long will it be able to do so and how will it dispose of the cotton so purchased?

Quite apart from the propriety or otherwise of a body like the Indian Cotton Mills' Federation directly operating in the market, there is the pertinent question whether such a policy is the best solution to the problem of mounting stocks and falling prices. If the decline in prices is due to better crop this season, it is not advisable to prevent prices from finding the level warranted by the supply and demand position. If, however, the decline is due to a temporary slackening of mill demand, the Government can certainly help growers and co-operatives societies to hold on till demand revives.

W. Germany Cuts Bank Rate Again

For some months, the West German Treasury and the Bundesbank were pulling in different directions over the question as to what should be done to stem the continued considerable inflow of foreign funds. The Treasury was all along opposing any revision in Bank rate, while the President of the Bundesbank, Herr Karl Blessing, was advocating a further reduction in the Bank rate from 3½ per cent, to which level it was brought down

(Continued on page 924)

LONDON LETTER

U.K.'S FINANCES 1961-62

(From Our Own Correspondent)

LONDON, *5th May*

NOW that the various excitements over the Budget have died down, it is worthwhile taking a look at the domestic financial picture that the Chancellor's statement presented. It is natural to concentrate, as indeed the Chancellor did himself, on the external position of the U.K., but, at the same time, it would be to underestimate Britain's financial strength, if one ignored the picture which the financial accounts of the country show.

First then, what happened in the year which has just closed? The income-tax and the other duties such as surtax, death duties, profits tax—all of which are very small in relation to the income-tax—produced a total of £3,212 million or well over half the national revenue. It is a tribute to the manner in which the Treasury is able to forecast the income accurately that this total falls short of the Budget estimate by only £61 million, or 2 per cent. Indirect taxation through customs and excise brought in £2,516 million, a shortfall of only £6 million on the estimates. Allowing for minor miscellaneous items (which, however, netted more than £20 million over the estimate), the grand total of the State's revenue was £5,934 million, or £46 million less than had been estimated in the previous budget.

On the expenditure side, the surplus of the national debt and other similar payments cost the country £798 million. Then come the enormous defence budgets totalling between them £1,596 million. Nearly half of this total is absorbed by the Airarm. The Army comes next, and the Navy nowadays comes at the bottom of the list.

The civil votes, that is, the cost of the health services, education, the various subsidies to agriculture, the general cost of Government administration at home and abroad and so forth, all these amounted to £3,393 million. These figures give a grand total of expenditure of £5,787 million which was £111 million in excess of the estimates. It is interesting to note, however, that the excesses accrued on the civil expenditure side and the defence or war votes actually absorbed less money than originally estimated.

Handsome Surplus

Thus the Government ended the year with a surplus of £147 million and, although this was only about half what had been estimated, it represents an entirely healthy position. The Chancellor of the Exchequer in modern times does not stop at this point. He looks at what are called "below the line" payments, that is, loans which the Government makes to other bodies and which are intended, in due course, to be repaid. But, since these loans do represent money being paid out if the loans made are in excess of loans being repaid, then the Chancellor argues that he is pumping money into the economy and stimulating inflation. In the year just closed, the Government paid out £969 million and received back £428 million, thus giving an excess of payments of £541 million. Taking away from this the surplus on the ordinary budget, the Chancellor remarks with despair in his eyes that the country has spent nearly £400 million more than it has received. At this stage he turns with fortitude to make his proposals for the future. For 1961-62, he estimates that revenue will rise—direct taxes up to £3,598 million, indirect taxes to £2,665 million, and the total revenue will reach £6,508 million which is nearly £600 million more than the previous year. Expenditure, he estimates, will also rise. The debt services up to £615 million, defence to £1,656 million, civil votes to £3,831 million—a total of £6,002 million or more than £200 million than the year before. But it will be noticed that he has budgetted for a handsome surplus of £506 million.

But alas, the look of despair never leaves the Chancellor's eyes, for he sees all the surplus being dissipated in an excess of loans. These are estimated to total £1,089 million for the coming year, while receipts may be £514 million. The difference, it will be noted, more than absorbs the budget surplus. And, though the deficit for which the Chancellor will have to borrow money is as small as £69 million, it is enough to make him caution continued restraint.—*All Rights Reserved.*

EQUITIES REACT AT CLOSE

STEELS SUBDUED

(From Our Own Correspondents)

BOMBAY, *11th May*

THE share market had a short week of only four trading days during the week, as it remained closed on Saturday (succeeding day of the account period ending) and Monday (*Rabindranath Tagore Jayanti*). Equities tended to ease on Friday, the opening day of the week, thanks to lack of support due to end-of-account consideration and fears of higher contango charges. The contango charges fixed on Friday, however, turned out to be lower and no change was effected in the list of shares for which special deposit havala rates were applicable. The new account opened on Tuesday (Monday being a holiday), therefore, witnessed a sharp rise in values. Sentiment was also favourably influenced by the Reserve Bank's latest survey of trends in company finances which strengthened optimism regarding the outlook for corporate earnings. The recovery in values gathered further momentum on Wednesday. But today the market again developed a sagging tendency. There was profit-taking as well as stale liquidation prompted by lower advices from Calcutta. Consequently, a part of the earlier gains was erased. Today's closing rates are generally higher than those prevailing last week, with the exception of steels which showed a net decline.

Steel shares began the week on subdued note following the news that Tata Iron and Steel Company's production during April was lower than in the previous month; the Indian Iron and Steel Company had already reported lower production for the month. They, however, attracted support after the new account opened on Tuesday and firmed up. This trend was reversed in today's trading. Tata Steels, after declining from Rs. 150.75 to Rs. 150 on Friday, recovered to Rs. 152.75 on Tuesday, but receded in subsequent sessions and closed at Rs. 150.50 today. The net loss over the week was 25 nP. Indian Irons receded from Rs. 27.50 to Rs. 27.45 on Friday and, after rising to Rs. 27.60 on Wednesday, relapsed to Rs. 27.20 today, showing a net loss of 30 nP over the week. Mukand Irons, however, attracted special support and gained 25 nP to Rs. 28.25.

Textiles were a firm feature, thanks to dividend hopes and better working results reported by a number of mills. Kohinoors forged ahead from Rs. 299.50 to Rs. 318.50 yesterday. At this level, large-scale profit-taking set in and the rate moved down to Rs. 307.50 today. The net gain over the week was Rs. 8. Centurys too attracted support and were quoted at Rs. 618.50 *ex-div.*, as against Rs. 619 *cum-div.* and Finlays at Rs. 316 *ex-div.* as against Rs. 332.10 *cum-div.* Khataus improved by Rs. 6.25 to Rs. 528.75. Morarjees strengthened by Rs. 4 to Rs. 361. Standards advanced by Rs. 27 to Rs. 1,514. Shree Niwas hardened by Rs. 3 to Rs. 270, following the Chairman's reference to the modernisation programme at the annual meeting held this week. Dividend hopes imparted strength to Tata Mills and Svadeshis, the former hardened by Rs. 2.50 to Rs. 53.50 and the latter by Re. 1 to Rs. 270. Gokaks put on a rupee to Rs. 184. Podars and Elphinstones were steady at Rs. 149 and Rs. 87 respectively, same as last week. But Bombay Dyeings were done at Rs. 63.50 *ex-div.*, as compared with Rs. 65.40 *cum-div.* last week. Simplex lost a rupee at Rs. 187 and Minervas were marked down by Rs. 5.50 to Rs. 69.50.

Cement shares were steady. A.C.Cs moved between Rs. 157.75 and Rs. 160.25 before winding up the week at Rs. 158, unchanged from last week. Digvijays attracted buyers and improved by Rs. 1.75 to Rs. 154. Orissa Cements were, however, a shade easy at Rs. 14.52.

Sugar shares were quoted higher. Belapurs spurted from Rs. 285.50 last week-end to Rs. 290.50 yesterday on keen bidding but receded to Rs. 287 today. The net gain over the week is Re. 1.50. Walchandnagars picked up Re. 1 to Rs. 203. Maharashtra Sugars rose by 20 nP, today's rate being Rs. 185.50 *ex-div.*, as against Rs. 200.00 *cum-div.* last week.

In the shipping group, Scindias attracted support on expectations of Government help to the industry and improved by 44 nP to Rs. 14.52. Great Easterns were steady at Rs. 14.80. Among automobiles, Premiers gathered 25 nP to Rs. 167.50. Hindustan Motors improved by 36 nP to Rs. 20.28.

Rayon shares presented a mixed pattern. National Rayons rallied from Rs. 521 last week-end to Rs. 534.50. Subsequently, they encountered selling and receded to Rs. 528 today. The net gain over the week was Rs. 7. Gwalior Rayons hardened by Rs. 4 to Rs. 49.50. South India Viscose firmed up by a rupee to Rs. 162. But Baroda Rayons receded by Rs. 2.50 to Rs. 128.50 and Indian Rayons by 50 nP to Rs. 63.

Dyes and chemicals staged a smart rally on sustained buying. Indian Dyestuffs shot up by Rs. 35 to Rs. 515. Dharamsis (old) advanced by Rs. 28.75 to Rs. 302.50 on rumours of a right issue. Colour Chems put on Rs. 10 to Rs. 360. Polychems hardened by Rs. 2.50 to Rs. 227.50. Amar Dyes picked up Re. 1.25 to Rs. 382.50. Alembics, however, receded by Rs 3.75 to Rs. 261.25 and Citrics by Re. 1 to Rs. 55.50.

Selected engineering shares met with support. Telcos moved up from Rs. 329 to Rs. 336, before receding to Rs. 331 today, showing a net gain of Re. 1.50 over the week. Cooper Engineerings advanced by Rs. 3.50 to Rs. 169.50. Premier Constructions were better by Re. 1.95 at Rs. 185 *ex-div.* Larsen and Toubros hardened by 75 nP to Rs. 43.25. New Standards (new) were quoted a rupee higher at Rs. 180.50. Asian Cables put on 50 nP at Rs. 109. Mahindras were unchanged at Rs. 19.76. McKenzies fell by Rs. 3 to Rs. 125. Alcock Ashdowns, however, eased by Rs. 2 to Rs. 321. Texmacos shed 36 nP to Rs. 20.12. Kamanis softened by 8 nP to Rs. 17.

Among miscellaneous industrials, Bombay Burmahs attracted good attention of operators and firmed up from Rs. 602.50 at the beginning of the week to Rs. 620.50 today. Profit-taking ensued at this level and the scrip declined to Rs. 612. The net gain over the week was Rs. 9. Jayant Papers advanced by Rs. 5.50 to Rs. 66. Killicks improved by Rs. 3.75 to Rs. 100.50 *ex-div.* Ceat Tyres gathered Rs. 2.50 to Rs. 185. Premier Tyres were a shade better at Rs. 104.50, as against Rs. 104 last week. West Coast Papers rose by 50 nP to Rs. 203.50 and Mandya Papers by 64 nP to Rs. 9.12. Hindustan Levers, however, eased by 30 nP to Rs. 47. Indian Investment Trusts were neglected at Rs. 79 as also Polsons at Rs. 177.

* * * *

Calcutta Stock Exchange

CALCUTTA, *10th May*

Interest displayed on the Stock Exchange during the week under review was at a low ebb and prices eased. There was less enthusiasm for speculative scrips, and it was apparent that investors, after the hectic activities of recent weeks, were taking a holiday. Indeed, there was no selling pressure, and no nervousness was displayed by the weak holders. Thus, the technical position should be considered good, and confidence as to the future underlined the absence of bearish activity. Weaker Bombay advices in the wake of lower Tisco production in April and the likely delay in regard to a final decision on steel retention prices for 1960-62 aided a wait-and-see attitude on the part of Calcutta operators too. Despite Bombay reports, it was hoped that the Government would soon come to a decision, without which closing of accounts for the year ended March last would present difficulties. The possibility of other aid-giving countries, the U. S. A. in particular, following U. K.'s example in giving India loan on liberal repayment and servicing terms, was being watched.

* * * *

Madras Stock Exchange

MADRAS, *10th May*

Barring plantation shares which ruled easy, the Stock Exchange depicted a fully steady trend during the week under review. There was revival of investment buying on a wide front. Operators widely welcomed the Central Government's move to streamline the existing procedures for foreign collaboration in industrial undertakings. Textiles came in for enlarged enquiries on hopes of bright prospects for the development of the industry, particularly in view of the comfortable raw cotton supply position. Despite reports of accumulation of stocks, sugar scrips ruled firm. In sympathy with the general trend, banks and electricals were also fully maintained. Miscellaneous shares put on a cheerful appearance, coal and power shortage in the region notwithstanding. Teas, coffees and rubbers were all subdued.

In the textile section, Balasubramania 'B's advanced by Rs. 7 to Rs. 125, 'A' shares being firm at Rs. 76. The Directors of the Company have maintained the dividend for 1960 at the previous year's level of 15 per cent, taxable. Lakshmis spurted by Rs. 2 to Rs. 161 *ex-div.* Coimbatore Cottons hardened by a like amount to Rs. 164. Travancore Rayons gathered 85 nP to Rs. 38.60 on speculative support. Adonis and Janardanas picked up 5 nP each to Rs. 10.75 and Rs. 13.05, respectively. Maduras closed at the last week's level of Rs. 35.90, after fluctuating between Rs. 36 and Rs. 35.80. Bangalore Woollens and Buckinghams were firm, the former at Rs. 200 and the latter at Rs. 213, as also Coimbatore Pioneers at Rs. 350.

Among sugars, Cauverys evoked good demand and rose by Rs. 2 to Rs. 132. East India Distilleries put on 14 nP to Rs. 43.70. Deccans gathered 7 nP to Rs. 13.80 *ex-div.* United Breweries were fancied at Rs. 115.50, Mysores at Rs. 59, Indias at Rs. 12.90 and Travancores at Rs. 10.60. Kirlampudis were unchanged at Rs. 77.50. The Company has passed over the dividend for the year ended June 1960 as in the previous year.

Planting shares, as stated at the outset, were easy. Among teas, United Nilgiris fell by 50 nP to Rs. 24.25. Haileyburias moved down by 25 nP to Rs. 14.50. Neelamalais shed 5 nP to Rs. 4.45. Blue Mountains closed lower by a naya paisa at Rs. 3.07, after moving both ways between Rs. 3.05 and Rs. 3.10. Periakaramalais were dull at Rs. 3.98, as also Devasholas at Rs. 30.30 and Parksides at Rs. 28.47. Peermades were unchanged at Rs. 23.30. The Directors of the Company have declared a final dividend of 15 per cent, taxable, making a total of 22½ per cent, taxable, for 1960, same as last year. Coorgs, however, hardened by 10 nP to Rs. 5.70. A dividend of 20 per cent, taxable (same as last year) has been proposed for the year ended March 1961. Chembras were higher by 3 nP at Rs. 3.83. As for coffees, Coffee Lands suffered a loss of 50 nP, today's closing rate being Rs. 18.50. Amalgamateds declined by 25 nP to Rs. 12.50. Consolidated Coffees eased by 20 nP to Rs. 22.50. Anaparais lost 8 nP to Rs. 4.42. Mysores were unchanged at Rs. 5.55. In the rubber group, Midlands dropped 5 nP to Rs. 11.50 and Cochin Malabars 4 nP to Rs. 7.67. T.R. and Ts shed 2 nP to Rs. 9.43. Travancores were firm in view of the higher dividend of 13 per cent, taxable, recommended for 1960 which compares with 10 per cent for 1959. Highlands were quoted at Rs. 16, Anandams at Rs. 14.37. Nenmenys at Rs. 20.65 and Thamarapallys at Rs. 28.

Among miscellaneous industrials, Aluminium Industries gathered 30 nP to Rs. 23.10. In the cement group, Dalmias rose by 10 nP to Rs. 12.05 *cum-div.* The Directors of the Company have maintained the dividend for 1960 at the previous year's level of 12 per cent, taxable. Andhras were steady at Rs. 6.05 *cum-div.* The Company has announced a dividend of 10 per cent, taxable, for 1960, same as that paid in 1959. Indias were unaltered at Rs. 9.05. Among chemicals, F.A.C.Ts improved by 5 nP to Rs. 10.45. Mysore Fertilisers were firm at Rs 11.25 and Mettur Chemicals at Rs. 14.12. Mysore Chemicals, however, shed 35 nP to Rs. 24.65. Among others, Ashok Leylands rose by 10 nP to Rs. 9.20. The Directors of the Company have maintained the dividend at 8 per cent for 1960. Spencers were well sought after at Rs. 24.25 on the announcement of an interim dividend of 6 per cent, taxable, for the year June 1961.

RECLAIM RUBBER

The consumption of reclaim rubber, that is, rubber produced from scrap, has shown notable expansion in a number of highly advanced countries. As compounding the reclaim is a comparatively easy process, the cost of production is lower than that of natural rubber. The reclaim rubber is stated to have higher processability with the result that in the U. S. A. and Japan such rubber is consumed to the extent of 65 per cent of the total rubber used. About 50 per cent of the output of reclaim rubber is used in tyre manufacturing and automotive industries. Another noteworthy feature of reclaim rubber is that its demand is highly stable. Even when the price of natural rubber in the U. S. was as low as $0.034 per lb., the share of reclaim in rubber consumption amounted to 60 per cent.

Even in our own country, the demand for reclaim rubber is progressively rising. The demand for reclaim went up from 3,837 tons in 1957 to 5,600 tons in 1960 and the whole of this demand is met by importing the reclaim. The main users in India are the manufacturers of battery containers and electric cables. Tyre manufacturers and several other producers of rubber articles also employ reclaim rubber. It is understood that certain articles can wholly be made from reclaim rubber in a more economical way.

The Development Wing of the Ministry of Commerce and Industry has, therefore, rightly decided to encourage indigenous enterprises in this field as it is calculated to reduce the draft on foreign exchange.

In view of the technical advantages of reclaim rubber and the growing demand for it within the country, the news that the Indian Rubber Regenerating Company, Ltd., a Kamani enterprise, proposes to set up a factory for the manufacture of reclaim rubber, for the first time in India, should be welcome. The Company, it is learnt, is established under the chairmanship of Mr. K. M. Philip, the promoter and director of the Madras Rubber Factory Limited, and is expected to enter the market with an offer of Rs. 17.15 lakhs for public subscription some time early next month. The Company has also secured a loan of Rs. 17 lakhs from the I.C.I.C.I. which will provide the required foreign exchange. The Company, it is further learnt, is likely to go into commission by the middle of 1 with an installed capacity of 2,400 tons in the 1 year on single-shift basis.

Head Office : New Delhi.

NEWS IN BRIEF

THE number of tourists who visited India in 1960 was 123,095 as compared with 109,464 in 1959.

The Employees Provident Funds Act, 1952, will be extended to the starch industry with effect from the 31st inst. The Act, applied only to six industries initially, now covers 47 industries.

Air-India International inaugurated its jet service to Nairobi with the Boeing 707 on the 4th inst. Air-India will now operate a weekly jet service between Nairobi and Bombay via Aden. In 1962, it will step up its services to two flights a week to Nairobi.

The sugar factories in Bihar State have agreed to implement the recommendations of the Central Wage Board. The increased rates of wages as well as arrears will be paid to permanent workers by 15th June and to seasonal workers by 15th July next.

The installed capacity for power generation in the country at the end of the second Plan (31st March 1961) was higher at 4.68 million kw., as against 2.69 million kw. in the beginning, according to the Informal Consultative Committee of the Ministry of Irrigation and Power. The installed capacity in the beginning of the first Plan was only 1.71 million kw.

The Export Risk Insurance Corporation has announced a new scheme of covering the risk involved in the manufacturers' supplying goods to shippers on credit terms. During the first four months of 1961 the Corporation issued 95 policies with a maximum liability of Rs. 2.34 crores, as against 82 policies of Rs. 1.67 crores in the same period last year.

A nine-man team representing the automobile ancillary industry is expected to visit Japan, W. Germany, the U.S.A. and other countries early next month to study the latest developments in the industry. The team will specially examine the relationship that exists between vehicle manufacturers and ancillary producers in regard to the supply of original equipment and distribution of products in the replacement market. It will also explore the ways of improving the quality of the industry's products.

Three pilot projects each with ten co-operative joint or collective farming societies will be started in the districts of Tirunelveli, Madurai and Ramanathapuram of Madras State during the current year. These projects form part of the third Plan programme of organising 12 projects with a total of 120 societies. A provision of Rs. 6.8 lakhs has been made for financing them in the form of loans and subsidies to societies in project areas on a fifty-fifty basis except for irrigation facilities for which the subsidy is limited to 25 per cent.

The Oil and Natural Gas Commission proposes to start trial production of crude oil at a rate of approximately 1,500 tons per day from Ankleshwar oilfield only towards the end of 1961. Pending the establishment of a refinery in Gujarat, it is proposed to transport this crude to the Bombay refineries. Negotiations in this connection are in progress between the Commission and the private sector refineries. The possibility of utilising Cambay crude by the industries in Ahmedabad and Baroda as fuel is also being considered.

A deal for the construction of an aluminium smelter at Mettur in Madras has been finalised between the Madras Aluminium Company and the Italian firm of Montecatini. The Madras Aluminium Company will give $2.52 million in share certificates to the Italian firm—$945,000 in equity shares for technical know-how, $840,000 for engineering fees and $735,000 for the cost of foreign experts and contractors' agencies engaged in construction, supervision and other services. A sum of $315,000 will also be made available in rupees for out-of-pocket expenditure for Montecatini personnel in India.

The Union Deputy Minister of Finance, Mr. B. R. Bhagat, stated in the Lok Sabha on the 4th inst. that the Government was aware that several new company issues had been oversubscribed but all that the Government had no information if some of the promoters sent applications for such shares themselves in various names. Replying to a question, the Minister pointed out that, during the boom period of 1960, some new shares were quoted in high premia, but this feature was no longer very prominent. The number and volume of new shares had grown substantially in recent months and this fact had a generally stabilising effect on the prices of new shares. The Government, he added, was continually watching the trends and would take suitable measures, as and when necessary, to arrest unhealthy tendencies.

The Government of India has decided to give prizes and certificates of merit to the best family planning clinics and family welfare workers in the country. Three prizes—first, second and third—in the form of *Tambra Patra* with a small replica for retention by the winners, will be awarded to (a) urban clinics, (b) rural clinics and (c) local bodies in the city and the rural areas in which they are located. A certificate of merit will be given to each member of the staff of the units. Certificates of merit will also be given to the next six best clinics in urban areas and the next six in rural areas. The awards will be made on an all-India basis and the assessment of the work of the clinics in the first instance will be made by the State Governments. The awards will be given commencing from 1961. The award of prizes at the State level may be decided by the State Governments.

Several applications, including those from major producers, for setting up units for manufacture of special alloy steels are under consideration and a decision in the matter is likely to be taken shortly, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel. The capacity already existing or licensed in the country for steels with a minimum of chromium, nickel, molybdenum and other alloying elements which required specialist plant is about 10,000 tons. It is estimated that the requirements will be about 200,000 tons per year by the end of the third Plan. As it takes some time for production to come upto capacity, it is proposed to licence capacity necessary to produce initially 200,000 tons a year. The Central Alloy Steel Plant will contribute about 50,000 tons and the ordnance factories will make available another 35,000 tons.

* * * *

From Abroad

The South African Bank rate has been raised from 4½ per cent to 5 per cent with effect from the 4th inst.

The World Bank has given a loan of $80 million to the Japanese National Railways for the new Tokaido Line to link Tokyo with Osaka via Yokohama, Nagoya and Kyobo.

Honduras has entered into a standby arrangement with the International Monetary Fund which authorises drawings equivalent to $7.5 million from the Fund over the next twelve months.

Britain has ratified the 21-nation Organisation for Economic Co-operation and Development. It is the third country to do so after Canada and the U.S. The new body is expected to come into being in September next.

A Bill seeking to raise the minimum wage of the U.S. worker from $1 to $1.25 an hour has been passed by the Congress. The Bill, which will be effective from 1963 onwards, covers in all 24 million workers.

The United Arab Republic will obtain a credit of £20 million from the private British firm of C. Tennant Sons and Co. This bears interest of 5 per cent and will be utilised for implementing the capital projects under its Five-year plan.

The Argentine Chamber of Deputies has approved of a treaty under which the Government gives U.S. private investors guarantees against eventual inconvertibility. The treaty, however, offers no redress against confiscations, nationalisation and expropriations.

The production of motor vehicles in Europe is estimated to be 9.5 million by 1965 when the demand will be 8 million, according to the Economic Commission for Europe. Production is expected to grow from 2 million to 3 million in West Germany, from 1.8 million to 3 million in Britain, from 1.3 million to 1.8 million in France and from 700,000 to 1.5 million in Italy.

China will purchase 136.70 million bushels of wheat and 46.70 million bushels of barley worth about $362.00 million from Canada over a period of 2½ years commencing from 1st June next. The purchase is in addition to the $10 million worth wheat and barley bought earlier this year and 2.20 million bushels of wheat worth $3.70 million purchased for shipment during March and May.

A new Bill laying down certain rules for the "social control" of banks and other financial institutions has been passed by the Odelsting division of the Norwegian Storting (Parliament). The Bill imposes a compulsory obligation on such institutions to co-operate in the implementation of the financial policy laid down by the constitutional authorities, empowers local councils to appoint one-quarter of the board of representatives of savings banks and vests similar authority in the Government in respect of merchant banks with deposits exceeding £5 million.

The U.S. Agriculture Department has announced relaxation of restrictions in barter programme rules with a view to reducing the dollar outflow in overseas Government procurement. Accordingly, the barter contractors who help procure materials for the Federal Agencies may now export Commodity Credit Corporation farm products to certain countries without any bilateral or multilateral arrangements. They will also be no longer required to specify the contracted country and commodity at the time of contract commitment.

PERSONAL

MR. Harry Routh, Chief General Manager of the Eagle Star Insurance Co. Ltd., will be retiring with effect from 31st July next, after having served the Company for forty years.

Mr. J. C. Mathur, Director-General, All India Radio, assumed charge as Joint Secretary in the Ministry of Information and Broadcasting in addition to his present duties on 6th May.

Mr. Ernest R. Breech has been elected Chairman of the Board of Trans World Airlines *vice* Mr. Warren Lee Pierson, who has decided to retire. Mr. Floyd D. Hall, Vice-President and General Transportation Manager, has been elected a new member of the Board.

Mr. G. L. Mehta has been re-elected Chairman of the reconstituted National Shipping Board for a period of two years with effect from 1st May 1961. Mr. S. K. Venkatachalam is the Member-Secretary of the Board. Mrs Sumati Morarjee, Dr. A. Ramaswami Mudaliar, Mr. Vasant J. Sheth and Mr. Damodar Mathuradas Ashar represent the shipowners, while Mr. Babubhai M. Chinai represents the trade.

Sir Saville Garner, British High Commissioner in Canada, who is to succeed Sir Alexander Clutterbuck as Permanent Under-Secretary of State at the Commonwealth Relations Office, has begun a tour of Commonwealth countries before he takes office at the end of the year. Sir Saville has left London for Australia and New Zealand. Later this year, he plans to visit Commonwealth countries in Asia and Africa.

Mr. R. W. Westbrook, Managing Director of The Metal Box Company of India Ltd. since 1958, has left for the U. K. on retirement from the Company after serving for over 25 years. Mr. Westbrook is succeeded as Managing Director by Mr. H. K. S. Lindsay, who joined the Company in 1937. Mr. Lindsay was appointed Commercial Director of Metal Box in 1951 and Deputy Managing Director in 1959.

BUREAUCRATIC DELAYS

THE finding of the Organisation and Methods Division of the Union Cabinet Secretariat that 40 per cent of the time of senior and intermediate level officials is taken up by meetings and conferences has come as a very big surprise to nobody. For it has only confirmed the doubt in the public mind whether the countless official meetings that it reads about in the daily Press are all absolutely necessary. The proliferation of meetings since Independence has been so amazing that one has begun to wonder whether one is living in an age of administration by bureaucratic meetings. The O. & M. Division's estimate of the time taken up by meetings is, on its own admission, an underestimate. It is a fair assumption to regard that, on an average, half the time of senior and middle level officials is spent in attending departmental and other meetings. Appropriately enough the O. & M. Division has suggested, in its sixth annual report presented to Parliament, that it is desirable to investigate the time, content and cost of meetings to ensure that the meetings themselves do not become a new red-tape leading to increase in costs and disproportionate waste of effort. Equally welcome is its decision to include, in its programme of work for 1960-61, a further investigation of this question. The type of subjects discussed at the meetings, the number and quality of the personnel present, their co-efficient of participation and the results achieved are some aspects which could be studied with a view to finding out if it is possible to reduce the cost in terms of executive time spent on meetings. It may be of interest to recall here that the Kennedy Administration in the United States, faced with an almost identical problem, has done away with a number of departmental committees so as to quicken the pace of administrative decision-taking.

The heavy accumulation of pending cases, which the Division has noticed, is, in part at least, the result of officials keeping themselves away from their desks. The External Affairs Ministry, for instance, had, at the end of 1960, the largest number of pending cases. And what is worse still, the number of pending cases in this Ministry has been steadily increasing year after year in the past few years. From 564 at the end of 1958, the number of pending cases increased to 631 in 1959 and 684 in 1960. This trend is not confined to the External Affairs Ministry. The figures show a consistent rise in the case of the Ministries of Scientific Research and Cultural Affairs, Defence, Commerce and Industry, Education and Community Development. On the last day of 1960 the Scientific Research and Cultural Affairs Ministry had 205 cases pending for over two years, as compared with 180 in 1959 and 100 in 1958. The Defence Ministry had an accumulation of 114 cases, Commerce and Industry 104, Education 68 and Community Development 13.

The O. & M. Division has done well to suggest that all departments, which have direct contacts with the public, should prescribe and widely advertise a voluntary time limit within which applications would be disposed of. Such time limit as would appear unreasonable should be studied by the O. & M. staff to explore the scope for improvement. The prescription of a time limit for the disposal of cases alone is not sufficient. Some kind of punishment, whether voluntary or compulsory, of Ministries or Departments, which do not come up to the mark, may also be necessary if the fixation of the time limit is to serve any purpose.

HANDLOOMS

The Government of India has decided to continue its policy of encouraging co-operative organisations in the handloom sector by giving financial and other assistance during the third Plan period. This decision is in pursuance of the recommendation made by the Working Group on Handloom Industry appointed in 1959. The Government has also accepted in principle the Group's suggestions for strengthening the share capital structure of existing co-operative societies, reviving dormant societies, and providing adequate and competent managerial staff. The details regarding the implementation of these suggestions are under examination.

From the brief version of the Government resolution published in the daily Press, it is evident that the Government has disagreed with at least one major recommendation of the Working Group, that pertaining to the rebate on sales of handloom cloth. While the Government concedes the fact that such rebates have greatly contributed to the sale of handloom cloth and that they must be continued for some time, it has very pertinently stressed that the rebates cannot continue as a permanent form of subsidy to the industry. The Group's plea for the grant of rebates as permanent subsidy to the industry is, to say the least, unreasonable. None will deny the importance of assistance to the handloom industry. But a policy which seeks to put a premium on inefficiency by penalising the more efficient units for propping up the inefficient ones will spell disaster to both in the long run. The very structure of the handloom industry is defective. Since it is labour-intensive in character, the earnings of persons who are engaged in it are low. The level of earnings can be raised only if the production operations are mechanised through conversion of handlooms into powerlooms and not by official spoon-feeding. It is regrettable that the Working Group has failed to emphasise this aspect in its report and that the Government's resolution is also conspicuously silent on the issue.

ECONOMIC ASSISTANCE BY BRITAIN

Two very recent developments in the United Kingdom are broadly in keeping with the renewed emphasis that is being laid in the West on the need for more massive and effective aid to the developing countries in different ways. In the first place, the Technical Co-operation Bill which is now before the British Parliament is a commendable step in the direction of streamlining the present machinery so as to provide more effective technical assistance as distinct from government-to-government capital aid. The purpose of this Bill is to create a new department, under a Minister of State, in the U. K. Government for taking over the entire responsibility for provision of technical aid to other and less well developed countries—a responsibility now discharged in a rather uncoordinated manner by a variety of administrative channels. It is noteworthy that the proposed new department, with a staff of about 1,000 and disposing of a budget of £30 million, is intended to serve as the main channel not only for dealing direct with the countries needing technical help but also for dealing through international organisations, especially the United Nations and its affiliated agencies. Since the basis of technical co-operation continues, by and large, to be bilateral despite the growing tendency towards groups for aid purposes like the Colombo Plan and the Special Commonwealth African Assistance Plan, a high-level administrative machinery is certainly called for if Britain is to respond effectively to calls for its assistance. The Bill seeking to set up such a kind of machinery is happily assured of early passage in Parliament, thanks to the welcome accorded to it by the Labour Opposition.

The other development, which is equally salutary, pertains to the interest taken by the British Institute of Management in the industrial growth of developing countries. At the recent conference convened by the Institute, the emphasis was vigorously laid on the need for increased British investment in the less developed countries of the world. The aim of the conference, in which several eminent British businessmen participated, was to set up a framework of reference for further study and discussions on how to increase the flow of U. K. investment abroad. The conference also considered how British companies could further pool their resources and experience in overseas development and help the poorer countries. That they will do still better in this field in the years to come may be reasonably foreseen. Already the Colonial Development Corporation has on hand 91 projects in 26 countries at a cost of £108 million. And total private U. K. investment in all countries is currently estimated to be running at an annual rate of £300 million, half of it in British territories. It is increasingly clear that British investors and entrepreneurs with their unique experience of overseas investment going back hundreds of years, are ready to offer themselves wherever the call for development comes ugently from newly emancipated or only now awakening countries. It would appear that greater interest might be displayed in the United Kingdom in the possibilities of private capital investment abroad as distinct from government-to-government capital aid. At the same time, it is reasonably certain that the British Government will play the part expected of it in the emerging pattern of aid on the basis of partnership among the advanced countries through the Organisation for Economic Co-operation and Development and otherwise—a pattern that is assiduously sought to be evolved by the Kennedy Administration.

TOBACCO

Tobacco is one of India's leading traditional export commodities. Earnings from the export of unmanufactured tobacco amounted to Rs. 14.63 crores in 1960, as against Rs. 12.85 crores in 1959. Still there is no room for complacency on the export front, for there is growing competition in this commodity in world markets. Unless, therefore, India makes efforts to improve the quality of its product and rationalise the marketing practices, it will be difficult to maintain, if not expand, its export outlets in the years to come. It is gratifying that the Estimates Committee of the Lok Sabha, in its report on the working of the Indian Central Tobacco Committee, Madras, has drawn pointed attention to the problems of and prospects for tobacco exports. The main functions of the I.C.T.C., it may be noted here, are to assist in the development of production and marketing of and research in different kinds of tobacco and its products.

The Estimates Committee has pointed out that although the functions entrusted to it include marketing, the I.C.T.C. has been paying attention to the agricultural aspect only. Even in the limited sphere of improving quality, the I.C.T.C. does not seem to have made any perceptible progress. There is no evidence that the quality of tobacco production has improved to the point of giving increasing returns to the growers. In respect of yield per acre, too, the improvement has been only marginal. In fact, the yield per acre has generally been declining since 1953-54, with a pronounced fall in 1956-57 and 1957-58. Subsequently, there has been some progress as is shown in the table below:

	Area in '000 acres	Production in million lbs.	Yield per acre lbs.
1953-54	912	600	658
1954-55	856	562	657
1955-56	1,013	668	659
1956-57	1,029	659	640
1957-58	872	531	609
1958-59	896	589	658
1959-60	934	629	673

The I.C.T.C., no doubt, has embarked on several research schemes aimed at improving the quality and yield per acre without increasing the acreage under tobacco so as not to affect food production. Although India is one of the world's largest producers of tobacco, a substantial part of this is composed of inferior varieties Cigarette manufacturers depend on imports for superior grades of virginia variety. It is, therefore, expected that the I.C.T.C., through its research progammes, will be able to popularise production of superior grades of virginia in India. This will not only bring down imports of tobacco and encourage the indigenous manufacture of superior grades for cigarettes, but also stimulate overseas demand for Indian tobacco.

Side by side with improving quality, the system of marketing should be reorganised to meet the new challenges in world markets. There is much room for improvement in the existing system of marketing of tobacco in India. The Estimates Committee has observed that there is severe competition among tobacco exporters in this country resulting in unhealthy market practices, such as undercutting of prices, which are injurious to the trade. In Andhra Pradesh, the major tobacco producing State, there are a number of tobacco associations competing among themselves. Naturally, foreign importers take full advantage of the internecine competition in India. This point has been stressed in particular by the Estimates Committee in its report on the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture. The Committee has suggested the formation of a single apex body, called Tobacco Board, on the lines of the Tea and Coffee Boards to look after the interests of tobacco exports. If there is not enough justification for a separate Board for tobacco alone, the Committee is of the opinion that the question of having a composite Board for tobacco and certain other commodities [illegible]

ON THE ARENA

By The Archer

Superb Virtuosity?

PROMINENT publicity was given last week by newspapers to a P.T.I. news item concerning an "antidote to red-tape devised by the Organisation and Methods Division, namely, red ink." It is stated that the sixth report of the Division, presented to Parliament on behalf of the Prime Minister, said that the procedure of initialling notes in red ink in respect of cases submitted after seven days by dealing assistants and clerks was introduced in a Government office in Calcutta about two years ago; this had resulted in cases being dealt with more promptly by the employees who wanted to prove that they were not less efficient than their colleagues. I wonder if all the publicity was in genuine admiration of the superb virtuosity of the O. & M. Division or in cynical derision of their scheme, as if to say, So what? It could well be the latter! Indeed, anyone who has read Charles Dickens' *Little Dorrit* is sure to be reminded of the "Circumlocution Office" where each person tries to shuffle off every act to someone else, and before anything is done it has to pass through so many departments and so much time elapses that it is hardly worth having bothered about it. It is a matter of common knowledge that much of the activity among assistants and clerks in our governmental administrative offices consists in the art of perceiving how not to do it, whatever was to be done. The traditional test of hard work and efficiency in a Government employee is how good he is at finding a difficulty for every possible solution, not a solution for every difficulty. And, when occasionally some solution is found, it is invariably because a rare type of head of the office says, with some daring (*a la* Mr. Adlai Stevenson): "Gentlemen, these are the conclusions which I have reached, so let us now find arguments for supporting them."

Lest it be said that I am unduly critical, let me draw attention to the procedure in Government offices (admitted by the O. & M. Division) that attention to references invariably emanates from below and takes the form of elaborate notings. When they finally reach the boss they are only *initialled* by him, and the implied assumption is that by the time a file travels to the top the concerned case is so severely tied up into knots that an alternative decision to the one suggested seems well-nigh impossible. The boss can only express chagrin at the delay (if any) by using his red ink pen. What the O. & M. Division has, perhaps, failed to foresee is the fact that it is far more easy and quicker to prepare notes denying the possibility of a solution to a difficulty or expeditious disposal of a case for sanction than to suggest a way out or quick execution. So that, in the race for securing black ink initials (as against red ink stigmas) the winners, or most of them, may only be adopting the easy way of saying "nothing doing" in a majority of cases. Initialling should therefore be a simple matter of routine, the boss being careful to use the appropriate ball pen for the purpose. There is, of course, the danger that concentration may be diverted from assimilating the content of the notings to calculating the retention period of the file and reaching a decision on the colour of the ink to use for initialling. But this is a calculated risk which may not vitiate the pace of disposals.

In business houses and banks 'cases' are dealt with in the reverse direction, the boss noting the decisions in a few words on the concerned references, and the assistants merely drafting appropriate replies in proper language. The use of coloured inks, each colour indicating a degree of appreciation or depreciation is not the practice, a frown from the boss is enough to send cold shivers down the spine, and a memo inserted in the service file with particulars of the misdemeanour has to be reckoned with at the time of promotion or preferment. (The O. & M. Division of Government will, no doubt, look down on these practices with horror.) A recital of what happened in a bank a few years ago may be of interest in this context. A letter was received from an upcountry agent asking for instructions in a routine matter, the letter was of a kind that should not have been written, it was much too elementary. The General Manager who saw it first wrote on it one word: "Fool"—and initialled it. The Deputy G.M. who saw it next added the phrase "I think so too," and initialled it. The Superintendent of Branches finally noted "Tell him so," and initialled it. The letter was before the Secretary who drafted all important letters, and he was very worried; drafting a letter to a senior branch agent telling him that he was considered to be a fool was not an easy exercise. But it had to be done, for that was the decision. Eventually it was done, only it took an extra ten minutes of thought. The letter was worded thus: "Your attention is invited to the note below paragraph—of Chapter—of the Bank's book of instructions, which we consider to be fool proof." The letter was duly initialled by the two intermediate bosses and signed by the General Manager, and every one was supremely happy at the good effort.

* * * *

Oh, For Some Tank Wagons!

It is reported that the Railway Board informed the Ministry of Steel, Mines and Fuel that it would need eighteen months' notice to manufacture the required number of tank wagons to move crude oil from Ankleshwar to the refineries in Bombay of the order of 500,000 tons annually or about 1,500 tons daily. The Oil and Natural Gas Commission has planned to undertake oil production towards the end of this year and has been negotiating with the Burmah-Shell and Stanvac refineries on this basis, but has been told by the Railway Board that notice of their intention having been received by it only about a month ago, it was not possible to get through the manufacture of tank wagons in time to implement the project. The Railway Board has promised to do its best; it will supply a few wagons for test refining, but not adequate for bulk processing; and it may be necessary to postpone the commercial refining of oil for several months. One intriguing report says that the railways are already committed to the provision of tank wagons to transport 750,000 tons of oil from the Nunmati (Gauhati) refinery from next year and would not like to divert any tank wagon manufacturing capacity from the North Eastern to the Western Division as the freight for the Nunmati oil is high-rated, while that for the crude oil from Ankleshwar and Cambay is at a concessional rate. Apparently, some diversion is possible but what has been committed to is profitable business while what is being offered is not so good, and so, the attitude to the transport of crude oil has become somewhat crude.

The Oil and Natural Gas budget is a mammoth affair and we have been already warned that lots of money will be sunk before their projects start yielding returns. Defective planning, or, shall we say, defective co-ordination, might result in more losses, good chewing material for the Estimates Committee and the Public Accounts Committee. But I don't expect anyone will get it in the neck for all this *faux pas*. We are a patient and philosophical people and put such things down as acts of God. Tank wagons are not the only things from the scarcity of which we suffer. For the past few weeks we have been suffering from acute shortage of air travel accommodation and the I.A.C. do not have enough planes to carry the overflowing traffic; the railways do not have enough carriages to provide for the summer exodus from Bombay and Delhi to the South and from Delhi to the cooler regions. Our transport difficulties cover a wide range of industrial products from coal and cement to all kinds of raw materials, and those who talk in terms of substituting oil firing for coal burning have started worrying about the ability of the oil companies to move oil; the high and mighty railway administration may refuse to be oiled. Descending from the sublime to the ridiculous, some of our municipal corporations do not have enough conservancy carts or trucks to remove garbage from residential localities to the refuse dumps. And so we see that the malaise of immobility has affected almost all sectors of the economy. This in itself does not cause so much worry as why no effort has been made or is being suggested to entrust the manufacture of more wagons to the private sector, and why the railways should not throw open this vast field to competitive private enterprise. One can understand municipal corporations wanting to make their own conservancy carts to encourage local small-scale enterprise, but one cannot see the point in railways being zonal and exclusive about their rolling stock.

The Bristol By-election

Mr. Anthony Wedgwood Benn (Labour) who is now officially Lord Stansgate has won the election in south-east Bristol, defeating his Conservative opponent by 23,275 votes to 10,231. Mr. Benn thanked the cheering crowds amongst his constituents for the "wonderful result," and well may he say so, for they have solidly plunked for him despite the seemingly losing fight that he is putting up for forsaking his peerage and staying in the House of Commons. It must be said to the credit of the British system of conducting elections that although the recent decisions were against him, and on their basis he was not entitled to sit in the House of Commons, he was not disqualified from contesting the elections afresh, and has thus been given an opportunity to establish the fact of his preferment by his constituency. It is, of course, a historical fact that while the Britisher is good at seeing the writing on the wall, he has invariably muddled his way through to taking correct political decisions; and, both as an admirer of the British and as a keen protagonist of individual freedom of action, I keep my fingers crossed and hope that Lord Stansgate will eventually succeed in shedding his unwanted heritage and sticking to his hard-won seat in the Commons. For, it is preposterous and indeed ridiculous that a son should be forced to inherit and retain a title which his father had accepted (especially when the title impinges on his freedom to adopt a way of life best suited to his talents and inclinations), while he is not bound to retain anything else of his father's, his properties or his religion or political persuasion or other proclivities, not even his name, if he so wishes, which he can change by a deed poll. The Bristol by-election is a verdict of the people and all students of political history will await with interest the outcome of their decision to support the stand taken by the unwilling peer.

The Suri Locomotive

Mr. M. M. Suri, an Indian railway engineer, invented and designed an almost revolutionary hydro-mechanical transmission system for diesel locomotives, securing an advantage of higher efficiency of both at different speed ranges. A German locomotive incorporating this transmission has arrived in Delhi and a Northern Railway official demonstrating it is stated to have explained to a group of newsmen that as there were no facilities for manufacturing diesel locomotive engines in the country, the Suri transmission had to be manufactured by a German firm. It is indeed a pity that, although the manufacture of diesel locomotives has been talked about for some years now and engines have been in use in several sections of our railways, no move was made earlier to establish capacity for their manufacture as in the case of automobile engines and stationary engines. The greater pity is that we had to sell the patent to a foreign country in order to get the benefit of an Indian national's scientific achievement. The trend of modern thought is that technical and economic progress is a measure of the quality of a society, and that the inability to take advantage of inventive genius is a sure measure of the incompetence of entrepreneurial venturesomeness. Even now there seems to be no sense of urgency about initiating projects for the manufacture of diesel locomotives in the country, and all that we are told is that sometime during the third Plan, workshops would be established in Hyderabad, Ranchi and Nangal to manufacture them. The diesel locomotive project does not seem to enjoy the priority which even the small car project has been given—and this indicates what our sense of priorities is like!

A loan equivalent to Rs. 27.4 crores ($57.78 million) has been sanctioned by the U.S. Government for the second stage of the Sharavathy hydro-electric project in Mysore State. Of the amount, a sum of Rs. 10.2 crores ($21.5 million) represents the foreign exchange cost to be met by the U.S. Development Loan Fund, and the balance of Rs. 17.2 crores ($36.23 million), which represents the rupee cost, will be met by a loan from the sale proceeds of U.S. agricultural commodities supplied to India. The second stage of the project covers installation of 445,000 kilowatts additional generating capacity, raising of the dam to the full 188-foot height, extension of the power house, establishment of five additional 89,000 kilowatt generators and construction of an additional 401 miles of 236 kilovolt transmission lines with appurtenant substations. It will be recalled that the U.S. Government provided a loan of $23.0 million for the first stage which is well under way.

The State-owned National Instruments Ltd., Calcutta, has entered into a technical collaboration agreement with a Japanese firm for the manufacture of single lens reflex cameras and other optical instruments. It is proposed to manufacture 1,000 cameras in 1961-62, 6,000 in 1962-63 and 12,000 in 1963-64.

ROLE OF FOREIGN PRIVATE CAPITAL

MOVE TO EXPEDITE COLLABORATION SCHEMES

(From Our Special Correspondent)

NEW DELHI, *9th May*

DELHI LETTER

AS the Indian Investment Centre, recently inaugurated to provide information and assist foreign private investors, enters upon its responsibilities, its sponsors must feel gratified that this Centre's task has been lightened considerably by the Government's special measures to clarify the existing position regarding foreign collaboration and to set up special machinery for speeding up decisions. This week's Press *communique* on the future role of foreign private investment says little that is new; it has been well known all along that the Government's policy has been to encourage participation of foreign capital and technical help in the major fields of engineering, electrical and chemical industries; some specific lines are now mentioned in an illustrative list of industries. There are, however, several others in which foreign participation has been allowed in recent years for special reasons (e.g., ceramics and glassware); the list now published takes into account the gaps in capacity which now exist in relation to Plan targets and, though not exhaustive, it shows the very wide opportunities offered for foreign investment in this country. The field in which such investment is not required is small by comparison; banking, insurance, trading and commercial operations and plantations have not been in need of either foreign capital or technical advice beyond what is available already.

Quite recently, however, the Estimates Committee complained that licences had been given to foreign units to collaborate in industries "which have already been developed in the face of difficult circumstances." Cosmetics and chocolates were mentioned as examples but in respect of the latter the facts were old, relating to 1952 when other considerations like improvement of quality of indigenous products through keener competition prevailed. It is unwise to judge this instance by the present standards of austerity. The Committee, however, went on to deprecate even the production under licences by foreign firms of several types of consumer goods like tooth pastes, face powders and other cosmetics when established Indian firms were already in the field. In most of these cases, however, the main advantage to the manufacturers was the use of a popular and familiar foreign brand, though it cannot be said that comparable standards of quality of the foreign product have been maintained. Of 21 cases of foreign collaboration listed in 1959-60, not one belonged to this category of non-essentials and the reasons given in each case for inviting foreign capital seem quite sound. The market for consumer goods is a rapidly expanding one and production of articles of established quality can avoid waste and duplication of investment that is likely if sufficient competition is to be permitted for improvement of standards.

A different kind of criticism mentioned by the Estimates Committee related to the sanction of additions to capacity when existing capacity had not been fully utilised. Ceramics, thermos-flasks and refractories were mentioned as instances. Apparently the Government had this criticism in mind while stating that the present list takes into account the present gaps in capacity in relation to targets. The Estimates Committee's view that licensing should be restricted in such a way that existing capacity is always fully utilised before fresh capacity is sanctioned not only ignores the prospects of rapid rise in demand in a developing economy but also fails to take account of the possibility that part of existing capacity may often be unutilisable economically for various reasons.

The private sector in India now entering new fields of industrial activity has been eager for foreign collaboration primarily because it will provide foreign exchange for imports of machinery and also technical advice. But its welcome has not been unqualified and the Federation of Indian Chambers of Commerce and Industry has always insisted upon the building up of local enterprise and the offer by foreign interests of a part of equity capital to Indian investors at least at some later stage of an enterprise. There is also the desire that foreign firms should utilise Indian services in banking, shipping and insurance; but there has been acceptance of the basic fact that while some such safeguards may be necessary, no discriminatory policies should be imposed against foreign private enterprise.

The present communique, except for the expression of the Government's preference for Indian majority holding, is quite vague on this aspect saying that each case will be decided on its merits. There is a clear disapproval of long-term assembling operations or production based merely on imports of intermediate products. One of the *inescapable facts* about foreign private capital is the investor's preference for direct control and hence for a majority share—except in cases where his interest is limited to the sale of machinery and provision of know-how in which minority participation may be regarded as sufficient. Another longstanding grievance about foreign investors is their reluctance to agree to exports of their manufactured products from India whenever they compete with the exports of their main producing units in the home country. In the context of the urgency for export promotion, the Government of India has naturally indicated its readiness to offer special encouragement to schemes in which exports are feasible on an economic basis, with or without the aid of the overseas marketing organisations of the foreign collaborator.

In practice, the realisation of these various objectives may present many complexities and though special machinery has been set up in the Ministry of Commerce and Industry decisions may tend to get delayed—as it happened in the case of some fertiliser projects in the last two years—because of difficult choices between rival offers or time taken for prodding foreign collaborators to accept terms agreeable to the Government. Co-ordination of decisions on industrial licensing, import permits and capital issues at least at the official level is a significant improvement on the present position and one should hope that the gain will not be offset by vacillation at the higher political levels. There has been no reliable estimate of how much new private capital has been driven away in recent years by the hindrances to prompt sanction of collaboration schemes but numerous offers have been received in respect of third Plan schemes and the present procedure for processing them speedily is therefore very timely.

Audit Report on Civil Accounts

The Audit Report on the Central Government Appropriation Accounts for 1959-60 was placed in the Lok Sabha on the last day of the budget session and the material came too late to provide ammunition to the critics of the Government's expenditure policies, though in respect of the Defence Ministry these are usually available in time. Criticism of the Government's overbudgeting figures again in this report; that savings aggregating Rs. 260 crores occurred in this year will, however, be welcomed in some quarters as indicating the existence of sufficient prudence in expenditure though not in seeking Parliamentary appropriations. Audit has long regarded as improper the preparation of estimates without a correct assessment of spending capacity; in this sense, it has deplored loose budgeting. The Government may, however, feel that in the age of planning such auditing standards should be revised since it is impossible to start on schemes without obtaining parliamentary appropriations and difficult to ensure that the full amount is spent in the same year. But the variations between budget estimates and actuals need not be always as large as the figure now shown; in several cases there was hardly any need for seeking supplementary grants. The root cause of this trouble is the desire to fulfil expenditure targets of each year fixed in accordance with a programme that could achieve the total Plan outlay and it happens that quite undue importance is attached to the figure of the outlay rather than the substance of the achievement. An indirect benefit of it is that except in one year there have been no deficits on revenue account and the total deficit financing has been well below those originally intended at the time of the budget each year. On the other hand, this is evidence that the administration's capacity for implementation is weak. If the schemes were all of the new type requiring technical know-how or foreign exchange, the shortcomings will be understandable but even the familiar kind of welfare measures regarding health, amenities for backward classes, industrial housing and slum clearance have been delayed, not for lack of funds.

If audit had also been concerned with the present manner of estimating revenue, it could have said much more about the wide margin of error in budgets—even when allowances are made for variations in yields due to changes in economic conditions. Deliberate underestimation is due presumably to a desire to find reasons for additional taxation which has generally helped in some measure to reduce the deficit on the capital side. Here again, the advantage is indirect and incidental. The budget becomes hopelessly imperfect as a guide to fiscal policy; for example, measures to restrict liquidity in the economy consequent on a given level of Government expenditure may be unnecessary to the extent there is a shortfall in spending and/or receipt of larger revenues by the Treasury than originally estimated.

The few examples of wasteful and infructuous expenditure in the audit report show that bad cases have occurred even outside the Defence Department. The All-India Khadi and Village Industries Board incurred losses in implementing schemes for which it was obviously unfitted; (after it was upgraded into a Commission) it has been reluctant to refund a profit it had made (of Rs. 21 lakhs) on Government purchases though it had earlier agreed to a no-profit no-loss basis and had even made a small payment in recognition of this principle. This Commission has not yet recovered irregular payments of over Rs. 5 lakhs. These are serious defects in an institution of this kind which are apparently being condoned in high places.

The Finance Ministry's scheme of a Silver Refinery Plant, in spite of much delay and extra expenditure, has not proved a success; after a total outlay of Rs. 10.5 lakhs, the plant has not been commissioned due to repeated failures of the furnace crucibles supplied. The news that foodgrains stocked between 1954 and 1958 in five depots had not been disposed of till March 1961 is disturbing since it shows no programme for using up stocks according to some priority in storage. The Iron and Steel Controller's Organisation has been guilty of several irregularities in fixing prices, recovery of rebates and surcharge and some of these have recurred year after year. The C.P.W.D. is again one of the departments which cannot avoid overpayments and substandard work. The tale of the 12 Viking aircraft replaced by the Indian Airlines Corporation and now kept as unsaleable causing heavy expenditure on maintenance, provides another example of improvidence at the expense of the taxpayer.

Should Ministers use I.A.F. aircraft (kept for V.I.Ps) on lines served by I.A.C. scheduled flights when they are specifically prohibited from doing so? Last year, the Public Accounts Committee made a similar complaint of I.A.F. planes being used for a Minister's visit for a mixture of party and quasi-official purposes; such criticisms do not apparently have any effect, considering the frequency with which they recur in audit reports.

AID TO DEVELOPING COUNTRIES

NEED FOR LONG-TERM COMMITMENTS STRESSED

IN the course of the last two weeks, three significant speeches were delivered—one by Mr. Luther Hodges, U.S. Secretary of Commerce, another by Mr. Dean Rusk, U.S. Secretary of State, and the third by Mr. Eugene R. Black, President of the World Bank—regarding the problems of international assistance to the less developed countries. These speeches clearly reflected the growing awareness on the part of the industrialised countries of the need to give massive economic aid to the poorer countries. Speaking at Hanover (W. Germany) on 6th May, Mr. Luther Hodges emphatically stated that aid to developing nations is a moral obligation which should be borne equitably by all the developed countries of the world. Mr. Hodges further declared that the U.S. Government attached very great importance to the obligation of the developed countries especially those with payment surpluses to contribute to an extent commensurate with their resources to the economic growth of the less developed countries.

The approach of the new U.S. Administration to development aid was elaboratory described by Mr. Dean Rusk in his address to the U.S. Chamber of Commerce in Washington last week. Mr. Rusk said that foreign aid should be regarded by the U.S. as a national necessity and that his country should accept it as a long-term commitment in the struggle to break the bonds of mass misery and promote the economic development of backward areas. The U.S. Secretary of State also stressed that the new aid should be a partnership effort in which all industrial nations of the world would have to join.

Emphasising the need for a carefully-thought-out long-range development effort in each country assisted, he observed that economic development was not an overnight matter. It was a time-consuming process requiring the steady application of resources and energy. Mr. Rusk categorically informed the U.S. Chamber of Commerce that such economic development could not be achieved by hesitant and spasmodic annual steps and that the yearly authorisation and appropriation process which governed the present aid programmes were simply not suited to the long-term economic development task of the sixties.

Marshall Aid

Referring to Marshall Aid, Mr. Rusk warned that the capital and financial assistance that had brought such brilliant success to the Marshall Plan was not, by itself, adequate to the requirements of the sixties. The Marshall Plan countries, Mr. Rusk went on to explain, were highly developed, with mature Governments and institutions. Today the advanced countries were primarily concerned with assisting nations which lacked governmental experience, the industrial base or the trained manpower of a modern country.

Describing the purpose of the aid programme in the words of George Marshall as "the revival of a working economy in the world," Mr. Rusk listed the cardinal points of the new aid programme as follows:

"First, improved and efficient administration; under the President's proposal the existing aid programmes now being administered by separate agencies will be brought under one roof under a single director.

"Second, long-term financing. The heart of President Kennedy's new programme is his request for authority to make commitments for development loans over a five-year period, rather than on the year-by-year basis under which the aid programme has been operating. This is essential to making the most effective use of each aid dollar.

"It is a necessity if the new aid administrator is to relate our assistance to long-range country plans for the attainment of self-sustaining economy, and elicit maximum help from other industrialised nations in a partnership effort to assist the underdeveloped areas of the world.

"To achieve these ends, the President has asked the Congress for authority to borrow funds from the Treasury over a five-year period. He has chosen this method of long-term financing for the aid programme principally because it has proved effective in some 22 existing lending programmes of the Federal Government, including the Reconstruction Finance Corporation and the Federal Deposit Insurance Corporation, and in the international field, the Export-Import Bank."

In his annual address to the Economic and Social Council of the United Nations, Mr. Eugene Black also reviewed comprehensively the various steps which the Bank was taking to accelerate the tempo of economic growth of the less developed countries. At the outset he declared that it was now acknowledged everywhere that much more assistance must be rendered to the less developed countries by those more fortunately placed. But he emphasised that the needs of financial assistance were of such great magnitude that it was vitally important to ensure that aid was used in such a way as to contribute to the economic growth of the recipient countries.

World Bank's Lending Activity

Mr. Black reported that the bulk of the lending of the Bank continues to be in Asia but Africa, too, accounted for almost one-third of the Bank's lending in the last fiscal year. There had also been increased lending in Latin America, a development which reflected the degree to which the Latin American countries, despite reduced prices for their products, particularly coffee, had taken hold of their internal economic affairs and brought them to an orderly state which provided a suitable basis for further economic growth. The President of the World Bank referred in the same context, to the considerable decrease in the Bank's lending in Europe. In the year ended 31st December 1960 the Bank made only one loan in Europe, of $25 million and expressed his great satisfaction that Western Europe was in a position to satisfy its own need of capital.

Adverting to the diverse activities of the World Bank in helping the less developed countries, Mr. Black informed the U.N. Economic and Social Council as to how the Bank had been occupied with bringing into being the International Development Association (I.D.A.) which has over 45 signatories, with subscription amounting to $900 million. The purposes of the I.D.A. are to provide economic development, increase productivity and thus raise standards of living in the less developed areas of the world, included in the I.D.'s membership. In fulfilling the objectives, the I.D.A. is required to finance on terms that are more flexible and bear less heavily on the balance of payments of the recipient countries than do "conventional loans." I.D.A. is viewed as a means of furthering "the development activities of the World Bank and as a supplement to the Bank's activities." Mr. Black stated that the range of the I.D.A. projects under investigation was wide, both in geography and type. They are located in Asia, the Middle East, Latin America and Africa, and they include water-supply, irrigation works, road development, fort facilities, rural electrification, telecommunication and industrial estates. Under its charter, the I.D.A. is to support projects which are calculated to contribute to the development of the country concerned, whether or not they are directly productive. I.D.A. would finance all the kinds of projects which the Bank finances and a broader range as well, including a number in which other specialised agencies of the United Nations would have a direct interest. It is learnt in this connection—though there was no reference to it in Mr. Black's speech—that the I.D.A. has decided to extend its first development credit to a Latin American country. The I.D.A. credits would be called "development credits" to distinguish them from conventional loans and these credits, at least the first ones, it is further learnt, would be repayable, most probably, in the currencies lent, rather than in the currencies of the borrower. The term of the I.D.A's first loans is also likely to be very long, covering 50 years or so, and the interest rate nominal or even non-existent.

The President of the World Bank believed that I.D.A.'s objective would be best served by limiting the availability of I.D.A. funds to countries which, for reasons beyond their control, were not able to finance a satisfactory rate of development with their own resources plus conventional financing. Thus I.D.A's borrowers could be expected to include, in addition to countries with foreign exchange difficulties, those whose foreign debt service burden over the short and medium-term was already so high that they could not prudently borrow, on conventional terms, all the external capital which they required to carry out their priority programmes. Mr. Black frankly admitted that the needs of the potential borrowers for development credits were far greater than could be satisfied with I.D.A's present resources. In this context, he expressed the hope that countries contemplating an expansion of their aid programmes might see fit to channel the additional funds through the I.D.A.

ANDHRA BANK EARNS MORE

MARKED RISE IN DEPOSITS

THE financial results of the Andhra Bank Ltd. (General Manager: Mr. T. R. Bhagavat. Masulipatnam) for the year ended 31st December 1960 are encouraging. In spite of the drop in advances from Rs. 911.38 lakhs in 1959 to Rs. 885.63 lakhs, income from interest and discount has gone up substantially, by Rs. 17.79 lakhs to Rs. 87.88 lakhs. Consequently, the profit (before taxation) has risen from Rs. 9.64 lakhs (in 1959) to Rs. 11.57 lakhs. In fact, the rise in profit would have been much larger but for the sharp increase in interest paid and other expenses, the former rising from Rs. 39.72 lakhs to Rs. 48.50 lakhs and the latter from Rs. 34.22 lakhs to Rs. 40.95 lakhs. The sizable increase in interest paid is due to the marked rise in the deposits of the Bank, from Rs. 12.90 crores to Rs. 14.79 crores, representing a rise of more than 14 per cent.

Out of the profit of Rs. 11.57 lakhs, taxation has taken Rs. 4.90 lakhs (Rs. 4.00 lakhs in 1959) and a sum of Rs. 3.35 lakhs has been transferred to the reserve fund. In addition, the gratuity reserve gets Rs. 5,000. The Directors have recommended a final dividend of 8½ per cent for the second half of 1960, which, together with the interim dividend of 7½ per cent for the first half, gives a total dividend (taxable) of 8 per cent for the whole year, same as that distributed for the year 1959. The net dividend comes to 5.6 per cent which is still slightly lower than the tax-free dividend of 6 per cent obtained by shareholders in 1957 and 1958.

Progress Since 1957

The progress of the Bank since 1957 is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount earned	87.88	70.09	59.66	51.12
Commission and exchange	12.10	12.20	9.50	8.85
Interest paid	48.50	39.72	32.56	27.20
Other expenses	40.95	34.22	30.35	26.04
Depreciation	0.70	0.74	0.77	0.67
Profit	11.57	9.64	6.48	7.05
Transfer from reserves	..	..	1.78	0.20
Provision for taxation	4.90	4.00	4.01	3.60
To reserves and other funds	3.40	2.45	1.56	1.46
Dividend	3.33	3.32	2.47	2.29
	(8%)*	(8%)*	(6%)	(6%)
Carry forward	0.04	0.10	0.24	0.02

	As on 31st December			
	1960	1959	1958	1957
Capital	41.64	41.50	41.25	40.77
Reserves	23.08	19.73	17.57	16.04
Deposits	14,78.63	12,90.04	11,41.71	9,68.20
Borrowings from other banks	1,14.29	2,80.02	50.26	70.57
Advances	8,85.63	9,11.38	6,57.19	6,19.18
Investments	5,25.78	5,12.49	4,67.18	3,45.60
Cash	2,34.55	1,74.34	1,50.44	1,54.68
Balance-sheet total	18,56.61	17,75.88	14,08.27	12,61.23
Ratio to deposits of—	%	%	%	%
Advances	59.9	70.6	57.5	63.9
Investments	35.5	21.9	36.5	28.0
Cash	15.8	13.5	18.1	16.0

* Subject to deduction of tax.

A notable feature of the liabilities side of the Bank's balance-sheet is the substantial expansion in all categories of deposits. Fixed deposits have gone up from Rs. 6.84 crores to Rs. 8.28 crores, saving deposits from Rs. 2.91 crores to Rs. 3.20 crores and current deposits from Rs. 3.16 crores to Rs. 3.31 crores. While deposits have thus increased, the Bank's advances have fallen from Rs. 911.38 lakhs in 1959 to Rs. 885.63 lakhs in the year under review, so that the credit ratio (ratio of advances to deposits) has declined from 70.6 per cent to 59.9 per cent. Investments have improved from Rs. 512.49 lakhs to Rs. 525.73 lakhs and cash from Rs. 174.34 lakhs to Rs. 234.55 lakhs. The liquidity ratio (ratio of investment plus cash to deposits), therefore, stands higher at 51.3 per cent as against 35.4 per cent in the previous year, and is well in excess of the normal requirements.

The Bank's capital at Rs. 41.64 lakhs is supplemented by reserves of Rs. 23.08 lakhs. During the last four years the reserves of the Bank have increased by more than Rs. 5 lakhs, as a result of the wise policy of transferring a part of the profits to the reserve funds followed by the management from year to year.

The Bank has continued its policy of branch expansion. A new branch was opened at Bangalore during the year, taking the total number of branches to 73. The Bank has opened another branch at Bombay in the current year.

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

REPORT OF TEXTILE MERCHANT BODY

QUOTA RESTRICTION ON IMPORTS ESSENTIAL

From Our Special Correspondent

MANCHESTER, *2nd May*

MANCHESTER LETTER

THE function of the merchant converter has been defined as "providing a bridge between the disposal of textile production in bulk and its distribution to the public through the various channels concerned." Perhaps his major problem is to assess in advance the probable extent of demand from the consumer and make arrangements to cover these anticipated requirements.

The individual firm involved must deal with substantial quantities of particular cloths, with specialist constructions often in mind. Over the wider field of the whole trade, however, the broad picture of production, imports and exports must be borne in mind, so that some balance is preserved to avoid alternating booms and slumps through excess of supplies at one time and transitional shortages at others.

The annual report of the Council of the Cotton and Rayon Merchants' Association has estimated the probable current home demand at approximately 1,600 million yards of cotton cloth annually together with about 600 million yards of man-made fibre and mixture fabrics. Production in British mills last year amounted to 1,300 million yards of cotton material and 620 million yards of man-made fibre and mixture styles. Exports took 330 million yards of cotton cloth off the available total and 55 million yards of other fabrics.

Imports Cause Excess

So we come to the crucial point of imports, which in 1960 brought additional supplies to the extent of approximately 730 million yards of cotton fabrics and 60 million yards of other types. Total available supplies were, therefore, approximately 2,325 million yards, a surplus of 125 million yards over the estimated quantity needed by the home market. Imports during the first quarter of the current year are already running at a much higher level than in the corresponding period of 1960. If maintained at that rate, they would be little short of 1,000 million yards over the full year. Such facts support only too clearly the widespread anxiety now permeating the trade.

"Confidence is essential and it must have a firm foundation, which can only be given by the continuance of quota restrictions on imports of gray, finished, and especially made-up cotton goods from Asian countries for home trade consumption," the merchants' report continues. The Association considers that the present agreement with Hong Kong has not been satisfactory because it has altered the pattern of trade, substituting finished cloth for the grey cloth arrivals, so that imports of made-up cotton goods from the Colony increased from the equivalent of 38 million square yards in 1958 to 78 million square yards in 1960.

Like practically every other organisation concerned with this problem, the Merchants' Association supports the continuation of some limitation on arrivals of Hong Kong textiles for retention in the home market. But the undertaking should not be renewed in its present form, it contends, as separate limits should be imposed on finished cloth and made-up goods, as distinct from grey cloth.

The First Quarter

Once again, arrivals of cotton goods must take precedence over the comparable figures of shipments during the first quarter of the year. The quantity of imports is now so much bigger than exports that the whole overseas trade situation has been transformed. At the end of three months of 1961, shipments of cotton cloth from British ports were no more than 82,201,000 square yards, whereas the volume of foreign materials received amounted to no less than 225,297,000 square yards.

In such circumstances, it is scarcely surprising that the market remains exceedingly apprehensive about the prospects, seeing that the voluntary arrangements with Commonwealth countries are due to expire shortly after the beginning of 1962. It is, however, significant that the major increase in arrivals of goods from abroad has occurred in those shipped from "other foreign countries," the volume being more than doubled at 54,405,000 square yards of grey cloth.

India, however, remains by far the biggest single supplier, having provided 62,574,000 square yards of grey fabric in the first quarter this year, but this is nearly 6,000,000 yards smaller than in the same period of 1960. Arrivals from Pakistan have been substantially reduced, being 5,349,000 square yards against 16,097,000 square yards last year. Although Hong Kong has sent almost the same quantity at 20.158,000 square yards, imports from other Commonwealth countries totalled 5,076,000 square yards, as against only 809,000 square yards in the first three months of 1960. Among countries outside the Commonwealth, the chief supplier has been Japan with 15,341,000 square yards of grey cloth, as against 10,131,000 square yards last year.

The cost of arrivals of cotton yarn and manufactured goods during the first quarter of 1961 was £21,464,000, as against £15,757,000 last year. Not only was there a big increase in imports of grey cloth—from 148,142,000 square yards to 176,398,000 square yards—but finished materials also showed a substantial rise, being 50 per cent higher at 48,899,000 square yards against 32,464,000 square yards.

More Export Shrinkage

Against these almost astronomical figures compared with the past, the shipments recorded in cotton cloth remained relatively light. Only in the case of certain African territories was progress made, Nigeria, Ghana and Sierra Leone all taking bigger quantities of fabric from the United Kingdom. On the other hand, South Africa, Rhodesia and Nyasaland, and Australia curtailed their imports and at the end of the first quarter of the year Australia has been usurped from her leading position, which Nigeria now occupies. The main destinations for British cotton cloth shipments to the end of March were (in thousand square yards, with 1960 comparisons): Nigeria 11,019 (8,528), South Africa 9,588 (12,029), Australia 8,619 (11,479), Ghana 7,657 (4,897), New Zealand 6,298 (6,016), and the Irish Republic 5,626 (4,396).

Cotton yarn shipments failed to reach 1,400,000 lbs. in March and total exports for the first quarter were barely 4,600,000 lbs. This showed a reduction of over 1,300,000 lbs. as compared with 1960, and underlined the very reduced export performance recorded by spinners. In contrast, the purchases from abroad in the first three months of this year amounted to 11,781,000 lbs., a rise of nearly 3,000,000 lbs. as compared with the same quarter last year.

Cotton Association's Special Report

A fundamental reconstruction of the whole framework of the Liverpool Cotton Association has been recommended by a special reorganisation Committee, set up towards the end of last year under the chairmanship of Lord Forster of Harraby. The proposals have now been submitted to members of the Association. The Committee advocates the conversion of the present Association into a property company with a disposable and dividend paying share structure and with provisions for a reasonable measure of control by a new trade association. This Association would bear a name similar to the existing one and would be financially self-supporting.

The new Liverpool Cotton Exchange Company Ltd. would operate as a separate company but would be subject to the control of the active members of the new Trade Association. Only those shareholders who are also members of the new Association would be entitled to vote at meetings of the company, so ensuring that effective control of the building remains in the hands of those actively engaged in the cotton trade. The new plan foreshadows the letting of the present market room which would considerably improve the income of the Exchange. The property company would, it is expected, be able to pay a dividend of not less than 20 per cent.

On futures trading in raw cotton, the Committee points out that no firm convictions were expressed by those submitting evidence that a substantial revival of trading was likely, but it would be premature at this stage to take a decision to close the market. On the other hand, if the market is to remain open, expenditure should be pruned to the maximum extent.

MILLS *Vs.* POWERLOOM

By B. G. Kakatkar

Honorary Secretary, Indian Cotton Mills' Federation

MR. P. K. Bhaumik, in his article publish in *Commerce* of 25th March 1961, conter that the statistics relied on in the book entitled *Third Plan Targets for Handloor Powerlooms and Mills*, published by the Indi Cotton Mills' Federation, can be interpret differently to show that the output of handloc cloth in 1960 was not 800 million yards, as es mated by the Federation, but 2,000 million yar He has made this claim with reference to t following table in the booklet:

Year	*Average No. of looms reporting (Lakhs)*	*Production (Million yards)*	*Average ann production per loom (Yards)*
1	2	3	4
1956	2.52	239.6	951
1957	4.50	359.6	799
1958	6.48	483.8	747
1959	6.18	374.7	606

Briefly, Mr. Bhaumik's claim is as follow The number of looms shown in column 2 of t table includes both working and idle loon The decline in the average output per loom, shown in column 4, is essentially due to the fa that there has been a proportionate increase the number of idle looms in the reporting fo Mr. Bhaumik further contends that, from th table, it will be safe to take the average pr duction per loom at 800 yards a year for loor both in the co-operative and non-co-operati sectors.

On the other hand, the Federation h treated all looms shown in column 2 as acti ones and has proceeded on the basis that th average annual production per active loom is indicated in column 4.

Reserve Bank Figures

The point for consideration is which these conflicting views can be accepted. In th Reserve Bank of India publication calle *Statistical Statements Relating to the C operative Movement in India*, 1958-59, the valu of the product of all the weavers' societies i 1957-58 and 1958-59 has been given as Rs. crores and Rs. 43 crores, respectively. The pr duct of the societies must include both cotto and non-cotton fabrics. The Fourth Report the All-India Handloom Board has given th price of handloom cloth in 1957 and 1958 87 nP and 89 nP per yard, respectively. On th basis, even if the entire product of the weaver societies is treated as cotton cloth, the produ tion of handloom cloth in the co-operative fol in 1957-58 would amount to 460 million yard and 483 million yards in the following year. is evident from these figures that the annu output of cotton cloth in the co-operative sectc cannot exceed 480 million yards and should b much less, if a part of the product is treated a non-cotton cloth. The Federation's estimate c such production in 1960 is 473 million yard Surely, there would have been no compariso between the Reserve Bank's statistics relatin to the value of the handloom cloth produced an the Federation's estimates of cloth output i this sector, if the number of looms indicated i column 2 of the table mentioned above consiste of both active and idle ones.

The Federation's study relating to the aver age annual production per handloom can b corroborated in other ways. The output of hand loom cloth in Mysore State is stated to hav been 16 million yards in 1959-60. If this i divided over 38,500 active looms in the co-opera tive sector, the production per active loom ir that State works out to 415 yards, while th figure assumed by the Federation for the coun try as a whole is as much as 606 yards.

There is one more point to which no re ference has been made in the Federation's book let. According to the Kanungo Committee which reported in 1954, out of 28 lakh hand looms, only 20 lakhs were working with cotton yarn, including 4.5 lakhs non-commercial looms of Assam. This leaves the number of commer cial looms working with cotton yarn at 15.5 lakhs. The Federation's study has calculated production with reference to 12 lakh handlooms in the co-operative fold and 10.8 lakhs outside that fold, making a total of 22.8 lakhs. The Federation's various conclusions on the hand loom output have been arrived at by applying the ratio of active and idle looms, and produc tion per working loom, to all the 22.8 lakh looms, instead of 15.5 lakh looms, which, if anything, should have resulted in overestimating the hand loom production.

INTERNATIONAL TEXTILE COMPETITION

DUMPING, EXPORT SUBSIDISATION AND OTHER PROBLEMS ASSESSED

By Mario Ludwig, LL.M.

Director of the International Federation of Cotton and Allied Textile Industries

[*What will be the pattern of international textile trade in the coming years? This question has assumed considerable significance in the context of the U.S. President's move to convene a world conference for seeking a multilateral agreement on textile exports and imports. Appropriately enough, aspects of world textile competition such as those relating to dumping, export subsidisation and other forms of distorted competition have been chosen as the main item on the agenda for the annual meeting of the International Federation of Cotton and Allied Textile Industries which began at Osaka, Japan, on Monday the 8th inst. The discussions on the items centered round a paper on aspects of international competition presented by Mr. Mario Ludwig, Director of the Federation. In this paper, Mr. Mario Ludwig has impressively highlighted the facts of world textile competition and stressed that "competition is the life-blood of any healthy industry, provided that it is fair and workable." In view of the world-wide interest now attached to the problem, the contents of Mr. Mario Ludwig's paper reproduced here will enable one to understand the position in its correct perspective.*—Ed.]

IN any discussion of a subject of academic interest, it is essential to give a clear definition of the concepts involved. We must ask ourselves, as an eminent Frenchman (Maréchal Foch) used to do: *De quoi s'agit-il*? What is it all about?

The concept of competition was first only seen in a national context. It was an aspect of a free national market economy, a concomitant of the unimpeded interplay of supply and demand. It was a function of prices genuinely formed in an open market, a market which was always clearly circumscribed and in which there existed conditions of near equality. The point of departure and the range within which competition was allowed to work were the same for all.

The first stage was that of monopolistic competition, under which all the means of production were assembled in one hand. One might say that, in such a situation, there could be no competition. But soon the means of production came into the hands of others and were shared by many, all within the framework of the same national economy, manufacturing under the same conditions and selling to the same groups of consumers. This was the second stage in the evolution, that of ideal or perfect competition.

The desire to increase efficiency and to do better than the other producers soon led to the use of ways and means designed to increase one's competitive position. The means of production were rationalised and put together in larger units. The trend from monopolistic to perfect competition was reversed until a new phase was attained, that of oligopolistic competition, when the means of production were controlled by a few powerful groups.

These three traditional forms of pure competition—monopolistic, perfect and oligopolistic—did not only exist on the supply side but also on the demand side, depending on the way in which the means of consumption or the purchasing power was divided among one, the many or a few. As soon as trade was carried out on a commercial scale of any significance, pure competition ceased to exist. That happened a long time ago and, since then, competition has always had its limitations and imperfections. It is now generally accepted that, in our modern economy, pure competition will never be attained any more. There are today in almost every country so many forms of governmental intervention with, and legal restrictions on, the interplay of supply and demand that the forces of competition are no longer permitted to act freely. These interventionist measures are more or less accepted as unavoidable; one merely has to think of agriculture as a case in point. Nevertheless, the ideal of competition in the original sense of the word continues to form the basis of trading in the free economies.

Workable Competition

A basic change in the philosophy underlying the free market economy is, therefore, taking place. Whilst the principle of freedom of trade and price formation through supply and demand continues to be valid and still forms the economic creed of the liberally-minded countries, certain measures of intervention have now to be reckoned with and must be reconciled with the competitive process. The task, therefore, is to make competition workable under changed conditions. Thus, the completely new concept of functional or workable competition has arisen. It means that conditions should be created which would establish a clearly defined sphere within which competitive forces would be allowed to work freely; at the same time, effects of interventionist measures, which might work against the competitive process, would be mitigated. In this way competition would become workable again, in spite of many factors and practices which have a tendency to distort it.

The preservation of this sphere of workable competition could be achieved through various measures of legislation and policy, such as, for instance, customs tariffs, import and export controls, anti-dumping legislation, anti-trust and cartel laws, taxation, investment facilities and other fiscal measures, and labour laws. So far we have considered competition in the context of the national economies. The conclusions drawn may be extended to the international economy. Indeed, when seen from an international point of view, the new features of competition stand out much more. The change that has taken place in competitive conditions becomes more clearly visible on the international scene.

International Division of Labour

In the international economy, the concept of competition was originally based on two theories; that of the international division of labour and that of comparative costs. Both theories have today lost some of their validity.

The international division of labour aims at specialisation of production. Each country should produce what it can produce best. Those goods which it does not produce should be bought from other countries. Several factors are responsible for one country being able to produce certain goods better than the other; among them are ready availability and easy access to raw materials, skilled labour, better machinery and transport facilities, a better organised distribution system and many other factors, including such vague notions as tradition.

Theory of Comparative Costs

The theory of comparative costs is based on the idea of the barter. It does not mean that country A should necessarily buy goods from country B because this country can produce the particular goods more cheaply than country A. The goods might be imported from country B, although they cost more than they would if country A had decided to make them itself. On the other hand, in exchange for these goods, country A would supply to country B goods which no one else could produce so well and so cheaply as itself. The cost advantage in the theory of comparative costs is, therefore, always relative.

A New Theory of International Trade

The theories of the international division of labour and of comparative costs were developed in the 19th century at a time when world trade was very simple; on the one side, there were the early industrial countries in Europe, where practically all industrial surplus production available for export was concentrated; on the other side, there were the overseas countries which supplied the necessary raw materials, in payment for which they took some of Europe's manufactures. There was no real world-wide competition at that time. The theories of the international division of labour and of comparative costs only applied to the early industrial countries in Europe, i.e. to a relatively restricted area of production in which economic and social conditions and standards of living were practically the same.

Today, the situation has completely changed. The industrial advance of the developing countries has entailed a geographic extension of world trade which could not be foreseen. Industrial development has progressed so far that a large number of countries with widely differing economic and social structures are now actively [illegible] port and import trading. As everyone knows, textiles are the first commodity to be radically affected by this.

The part-realisation of the very objective, which the theories of the international division of labour and comparative costs were supposed to attain, has now become the cause of their obsolescence. But there are other reasons why the current value of these theories must be qualified.

It can hardly be expected that those developing countries which have recently built up a textile industry should now reduce their activity; neither can it be expected that old-established industries, which have already greatly reduced their capacity to make room for their new and younger competitors, should continue to contract until the point of disappearance. If the theory of the international division of labour were carried to its logical conclusion, then the old industrial countries would be allowed to indulge in the luxury of pure research, leaving all manufacturing to the countries with lower costs of living and production. Obviously, the theory leads *ad absurdum*.

Moreover, it is the aim of each country to achieve a high degree of economic autonomy. There are political, strategic, economic and social reasons for this. Certain sections of the economy will be maintained and supported, even if under the theory of comparative costs they could no longer be regarded as economical producers. It is also the aim of most countries to achieve a balanced and well-diversified national economy. This is true for both the older industrial and the newer developing countries. Clearly, traditional theories no longer meet present conditions. They should be replaced by a new theory of workable competition.

Distorted Competition

Competition today appears in many forms and disguises. Basically, the competitive process is still the same, but it is linked with so many open or invisible commercial practices that it is often distorted either to the advantage or the disadvantage of those who operate on the market. Many of these practices may not, as such or in themselves, constitute a distortion of competition; much depends on the extent to which they are being applied. It is often only a question of degree whether a certain practice constitutes distortion of competition. At the same time, it is generally assumed that competition becomes "unfair" as soon as competitive conditions are distorted.

The textile trade offers a wide variety of such commercial practices which may, under certain conditions, cause a distortion of competition. I now propose to list and describe these practices one by one and to examine whether or how far they are compatible with the General Agreement on Tariffs and Trade (G.A.T.T.). On the international scene, the G.A.T.T. is, at present, the ultimate authority on the subject of competitive practices in foreign trade.

Dumping

The first and classic practice of distorted competition is that of dumping. By dumping is understood the selling of goods on the export market at a lower price than on the domestic market. Dumping could also be the case when the goods are exported to country A at a lower price than to country B, in other words, if there were discrimination in export prices. A third form of dumping, probably the most flagrant, is the export of goods at a price below the cost price. In either of the three cases the producers of the goods in question in the importing country must suffer from this practice.

Dumping could be practised over a long or a short period. It is sometimes resorted to for a brief period in order to establish a bridgehead in a new market. It is also used as a defensive measure to maintain an existing share in a market.

The concept of dumping is, as such, clear and simple. It has, therefore, been included not only in the G.A.T.T., the Rome Treaty of the European Economic Community (E.E.C.) and the Stockholm Convention of the European Free Trade Association (E.F.T.A.) but also in many national laws. Yet, the proof of dumping, on which the successful invocation of these laws depends, is extremely difficult. It is often a matter of degree ("Ermessensfrage"). Even the classic definition of dumping may not always be adequate. There may be good com-

more cheaply abroad than at home. One would have to establish what the so-called "normal domestic price" should be. Are indirect taxes (consumer sales taxes, etc.) to be included or not? How is the difference in efficiency and productivity to be measured and accounted for? When is an industry "damaged"?

In spite of the many open questions, the concept of dumping has been adopted by international commercial policy. Dumping is explicitly prohibited under Article VI of the G.A.T.T. This permits the imposition of anti-dumping or countervailing duties up to the amount of the difference between the normal domestic price and the offered dumping price. It is important to restrict the use of the term "dumping" to situations falling within the legal definition of the practice and not to apply it too sweepingly to all the other forms of distorted competition.

Direct Export Subsidies

The next case of distorted competition is that of direct export subsidisation. The exporter calculates his price in the normal commercial way but is enabled to cut his price below cost, because he receives a subsidy, i.e. financial benefits in some form, in proportion to the volume or value of his exports. These benefits may be granted either directly or indirectly, either before or after the goods have been exported. Subsidies may be paid in relation to the raw material, the semi-manufactured or the finished product.

Under the G.A.T.T. (Article XVI), such export subsidies are tolerated with certain qualifications. Although the spirit of this article is unmistakably against subsidies, considerations of political expediency probably made it necessary to accept them as inevitable. The Article lays down procedures to limit the subsidies, if and when the subsidisation is causing harm to other countries.

Subsidies play an important part in textile competition, especially in so far as they are related to the raw material. The price and conditions at which spinners may buy textile fibres (natural or man-made) may form the difference between normal and distorted competition. In the textile industry, there exist today many forms of subsidisation related to the raw material. They do not necessarily distort competition, but their nature is such that, depending on the degree and extent with which they are being granted, they could give competitive advantages which could not normally be obtained. The simplest form of subsidisation exists when the domestically grown or produced fibres are sold to the spinner at a lower price than the market price, or when imported fibres are sold to him at a lower price than the free market price.

In the case of an agricultural commodity, such as cotton, where the world market price is subject to artificial supports and stabilising measures, subsidisation may take yet another form: a cotton growing country may sell its cotton to its local mills at a price lower than that which could be obtained for the same cotton on the world market. The reverse, as everybody knows, can also be the case: a cotton growing country may support its agriculture to such an extent that it exports its cotton at a discount; in that case, the domestic mills would be at a price disadvantage and would normally receive compensation payments.

An industry might be restricted or even prevented from supplying itself with cotton from other than local resources. In that case, the local mills could be at a competitive disadvantage, if the price of the locally grown cotton were kept artificially high, i.e. above the equivalent world market level, or if that cotton were unsuitable in quality for the local spinning production. In such a case, compensation would usually be granted to the local mills for their export trade.

The man-made fibre producing industry in a country might, for reasons of development planning, be so heavily subsidised that it would be able to sell its fibres more cheaply to the domestic mills than to its customers abroad; here, too, the situation might be reversed to the disadvantage of the local mills. Most direct forms of subsidisation related to the raw material are usually followed up by compensatory payments, for the purpose of either correcting the disadvantage arising to local mills from the subsidy, or deliberately granting them a competitive advantage.

These compensation payments are usually granted to local mills only on that amount of their production which is being exported. Whether these payments distort competition is again a matter of degree. As long as the amount of the compensation does not exceed the price disadvantage at which the mills find themselves, one could hardly argue that competitive conditions were falsified. But the moment the compensation paid exceeds this price differential, then the local mills would unquestionably obtain an advantage which would not normally be due to them.

Since the assessment of this price differential is often extremely difficult and sometimes plainly arbitrary, most forms of compensation and subsidisation are criticised on the international textile scene. It is significant that Article XVI of the G.A.T.T., whilst tolerating certain forms of subsidies, designates them openly as being undesirable, provides certain measures of protection against their harmful effects (under Article VI/3) and advocates their gradual elimination.

Bonuses on Raw Materials

Somewhat different from the direct export subsidy is the practice of granting a bonus to exporters on the value of the fibre content into the exported finished textile. The cost of the raw material in the end-product may then be calculated at below world-market prices. It is chiefly the exporting firms which obtain financial benefits from this practice, not the spinners and manufacturers who have processed the fibres. These bonuses are an export incentive.

Sometimes special licences must be obtained for the import of textile fibres. An importer may not wish to import the full quota of fibres for which he received the import licence. It has happened that such import licences were sold on the black market. In countries where there are restrictions on the availability of fibres, this practice may give local spinners a definite competitive advantage. The G.A.T.T. does not contain any provisions regarding bonuses on raw materials. According to international law, however, they may be fought under existing national anti-dumping legislation.

Export Credit Facilities

Another form of indirect export subsidisation is the granting of exceptional export credit facilities at especially low rates. This practice might go so far as the granting of interest-free long-term loans for purposes of carrying out export transactions. Export credit facilities are permitted under the G.A.T.T. as long as they do not fall under any of the provisions against dumping. Yet, it could occur that available credit facilities are so vast as to give the exporter an undue advantage.

The merits or ill-effects of the practice are disputable. Among the many forms of distorted competition, this is probably the least effective. At present, the harmful effects of excessive export credit facilities are usually offset by countervailing duties.

Tax and Duty Reimbursements

It is customary for exported textiles to be exempt from taxes and duties which would have been levied at the retail level, if the goods had been sold on the domestic market (sales taxes, etc.). In some cases, the taxes and duties are paid first and are reimbursed when the goods are exported.

This practice is permitted by the G.A.T.T. (Article VI/4). It does not constitute a subsidy, as long as the reimbursement is not higher than the actual amount of the tax and duty together. It appears that tax and duty reimbursements have hardly ever been abused so as to distort competition.

Non-imposition of Taxes and Duties

Instead of reimbursing to the exporter the domestic sales taxes and duties on the volume of his exports, they might never be levied in the first place. It would then have to be ascertained that the tax and duty free goods were in actual fact exported.

This practice is also permissible under the G.A.T.T. (Article VI/4).

Reimbursement of Social Charges

Considerable cost advantages might accrue to a spinner or manufacturer if he were reimbursed a part or the whole amount of the social charges, which he had to pay, in proportion to the volume of his exports. This practice would be an indirect form of export subsidisation. It also comes near to what is called "social dumping" as will be seen later.

Under the G.A.T.T. (Article XVI), the reimbursement of social charges is not prohibited. Nevertheless, the practice may be treated in the same way as direct export subsidies. It would be desirable to have a more precise formulation of the treatment to be given to the reimbursement of social charges, since they could distort competition substantially.

Reimbursement of Non-levied Taxes

The doubtful practice has developed that local taxes, which have never been collected in the first instance, were reimbursed to exporters as if they had been paid. This constitutes a disguised (and unjustifiable) export subsidy.

Under the G.A.T.T. no preventive or defensive measures are possible. The practice has only appeared in recent years. However, the Organisation for European Economic Co-operation (O.E.E.C.) permits the resort to countervailing duties. It would be desirable if this relatively new disguise of distorted competition were also prohibited by the G.A.T.T.

Obstacles to Export of Semi-manufactures

This is a negative form of export incentive. In order to encourage exports of finished products, certain obstacles are sometimes put in the way of exporting semi-manufactures. They usually consist of higher taxation and other fiscal measures.

It is very doubtful whether this practice can be regarded as distorting competition. If it is confined to rendering the export of semi-manufactures more difficult, without giving any preferential treatment to the exports of finished products, one could hardly make a case of it. Under the G.A.T.T. the practice is permitted.

Multiple Exchange Rates

The skilful use of multiple exchange rates has become an effective way of dumping and export subsidisation. This is almost universally recognised. As a result, the G.A.T.T. provides defensive measures, if the application of the multiple exchange rates leads to either dumping (under Article VI) or to an excessive export subsidy (under Article XVI).

Premiums on Foreign Exchange Earnings

One way of encouraging export trade is the payment of premiums on foreign exchange earnings. These could be so large as to constitute either dumping or export subsidisation in the sense of the G.A.T.T. In that case, countervailing measures would be permissible.

When, as a result of foreign exchange restrictions, the mills in a country are hampered in their supply of fibres from abroad, it can occur that they receive additional foreign exchange allowances in proportion to their exports of finished textiles. This might make it worthwhile for them to sell their finished products below cost, and to recoup the loss either through the greater freedom which they would enjoy in their access to raw material supplies, or by selling the additional foreign exchange allowance on the black market. The granting of premiums or any other fiscal benefits on foreign exchange earnings, could, therefore, cause a sizable distortion of competition. Under the G.A.T.T., this practice is treated in the same way as dumping and export subsidisation.

State-controlled Export Trading

In recent years, countries with State-controlled economies and government export monopolies have emerged as particularly aggressive competitors on the world's textile markets. As far as their export trading is concerned, they are in a position to ignore the requirements of normal, commercial price calculation. Their export prices are manipulated. They often obtain additional export advantages through bilateral or triangular barter deals, which are sometimes a part of trade agreements with other countries. The laws of free international competition do not apply to exports from such countries.

Of these countries, only Czechoslovakia is a full member of the G.A.T.T. The Contracting Parties have, therefore, not yet dealt with this problem, and it is doubtful whether they will. Meanwhile, every country is free to adopt such measures against State-controlled export trading as it sees fit.

Barter Trading

Competitive advantages through barter trading are also obtained by private companies. This is an aspect of competition which has not been given sufficient attention so far. Yet many of the cases of alleged dumping may have been the result of barter deals.

It may happen that a trading company in country A buys a stock of textiles from a local manufacturer. As the same time, it imports from country B another commodity, for in-

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1960 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1960 with the books and accounts as kept at the Chief Managers' (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Section 211 (1), (3) and (5) and Section 227 (5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Managers' (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1960 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October 1960.

CALCUTTA,
20th March, 1961.

PRICE WATERHOUSE & CO.,
Chartered Accountants.

J. A. BROUGH,
Joint Chief Manager
(Eastern Branches).

PROFIT AND LOSS ACCOUNT OF THE INDIAN BRANCHES OF LLOYDS BANK LIMITED FOR THE YEAR ENDED 31st OCTOBER, 1960

SEA-ISLAND COTTON CULTIVATION

REORIENTED SCHEME TO BE IMPLEMENTED

THE progress of the scheme for the development of the Sea-Island cotton, initiated by the Indian Central Cotton Committee has not been very satisfactory. Although research and field trial of Sea-Island 'Andrews' had given encouraging results, cultivation of this cotton on a commercial scale has not met with the desired measure of success. In the light of experience gained in the past few seasons in the cultivation of Sea-Island cotton in Kerala and Mysore States the approach to this scheme has been reoriented with a view to confining the cultivation of the cotton to compact blocks in Kerala and Mysore. This was found to be necessary because it was felt that, as the cultivators in the region selected for growing Sea-Island cotton were new to cotton growing, particularly of such a delicate and sensitive crop as the Sea-Island cotton, some time had necessarily to elapse before the area under it could be extended on any large scale.

This decision is to be welcomed because failure of the initial experiments due, not so much to the unsuitability of the cotton for cultivation in these areas, but to lack of sufficient care on the part of cultivators or to lack of supervision will scare away prospective cultivators and spoil the chances of success of the whole scheme. It is an experiment worth trying, for, if it succeeds, not only could the current annual imports of about 225,000 bales of long-staple cotton, worth Rs. 30 crores, be dispensed with but the country could establish itself as one of the important exporters of this type of cotton.

Long History

Experiments in Sea-Island cotton cultivation have a fairly long history in this country. The earliest attempt to introduce Sea-Island cotton in India was made by the East India Company in 1831 in the districts of South Arcot, Salem and Coimbatore of the present Madras State and in Cudappah and Guntur of the former composite Madras State. This trial was unsuccessful. Two attempts made since then also met with the same fate. Interest in Sea-Island cotton was again revived in 1930 and exploratory trials were started. These were abandoned after some time as the results were not encouraging.

The problem of cultivation of Sea-Island cotton was again taken up by the Department of Agriculture, Madras, in 1947 and pursued with determination until it was satisfactorily solved. In 1948, the Indian Central Cotton Committee sanctioned a scheme for studying the agronomy and economics of cultivation of Sea-Island cotton. Apart from St. Vincent and Montserrat varieties, other strains were tried. It was found that the yield of Sea-Island cotton could be improved when seedlings raised ahead of the monsoon were transplanted with the onset of the rains. The crop responded well to manures and fertilisers and per acre yield was stepped up from the uneconomic level of 40 lbs. to 413 lbs. of *kapas* with proper attention to cultivation.

Spinning Tests

By 1952-53, sufficient cotton was produced in the Government farms to get its spinning value tested by the Technological Laboratory, Matunga, and a spinning mill in Bombay. The results were on the whole favourable and cotton produced in the West Coast was adjudged to be equal to the best Egyptian Karnak capable of spinning upto 120 counts. It was, however, found that this cotton, with a staple of 1½" to 1¾", would be unsuitable for any large-scale consumption by Indian mills which required types of about 1.3/16" staple. A search was thereupon made from among the other varieties grown in the varietal collection and one of them, the 'Andrews', appeared to be promising. It had a staple length of 1¼" with a ginning percentage of 30, as against 24 of St. Vincent and 28 of Montserrat, was relatively disease-resistant and in the test plots gave a high yield of 1,614 lbs. of seed cotton per acre. The trial of 'Andrews' in the cultivators' fields showed an average yield per acre on unirrigated land of 720 lbs. per acre, capable of yielding a net profit of Rs. 400 per acre.

In 1957 a scheme sponsored by Kerala and Mysore States for cultivation and large-scale development of 'Andrews' variety was sanctioned by the Indian Central Cotton Committee which was by then impressed with its field performance. The area under this cotton in 1957 was 135 acres and production was 2.5 million bales of lint. In the next year the area was increased to 1,050 acres and, in spite of adverse seasonal conditions, a total production of over 130 bales was got and this fetched over Rs. 3,500 a bale. Some individual cultivators obtained yields of more than 1,000 lbs. of *kapas* per acre and the net profit of the cultivators ranged from Rs. 280 to Rs. 1,136 an acre.

The success of the scheme will depend to a large extent on the nature and adequacy of the incentives offered and the help and guidance given in the cultivation of the cotton. In addition to supply of manures, pesticides, cash loans for cultivation expenses, etc., facilities should also be provided for the quick marketing of the crop and easy realisation of price. Effective and well directed publicity would also go a long way in inducing the cultivators, who are not familiar with new crops, to take to cotton growing.

COTTON IMPORT PROCEDURE

The procedural details in respect of the import quota for 200,000 bales of cotton announced last week-end has been notified. Out of the global quota of 200,000 bales (400 lbs. each) of cotton of staple 1-1/16" and above, 50,000 bales will be allotted to mills against their retention quota under the export incentive scheme. The balance of 150,000 bales will be distributed to the consumers of foreign cotton stapling 1-1/16" and above. Out of these 50,000 bales stapling 1-1/16" and above but below 1.3/16", will be distributed to consumers of foreign cotton on the basis of the allocation of such cottons during the last season. The balance of 100,000 bales will be distributed to the consumers of foreign cotton of 1-3/16" and above on the basis of allocation of such cotton during the last season.

Mills applying for a licence to import cotton of 1-3/16" and above are required to pay a premium at Rs. 170 per bale of 400 lbs. each, while mills applying for a licence to import 1-1/16" and above but below 1-3/16" cottons are required to pay a premium at Rs. 130 per bale of 400 lbs. each, to the Indian Cotton Mills Federation or the Southern India Millowners' Association, as the case may be.

Allotment letters will be issued by the Textile Commissioner on the basis of the figures already in his possession. On the strength of the allotment letters, licences to import will be issued by the Office of the Joint Chief Controller of Imports and Exports, Bombay, on application along with the money receipt from the Indian Cotton Mills Federation or the Southern India Millowners' Association for the payment of the premium.

In the event of any dispute about the staple length of any variety of cotton, the decision of the Textile Commissioner's Appeal Committee appointed by the Textile Commissioner under the Cotton Control Order, 1955 shall be final.

Normally, the declaration regarding the staple length as made by the importers while applying for a licence would be accepted. However, at the time of clearance, the responsibility of proof for the staple length of the cotton imported will lie on the importers who will produce satisfactory evidence, if required. In case of doubt regarding any such evidence the decision of the Textile Commissioner shall be final and binding on the parties.

STABILISING COTTON PRICES

Mr. Manubhai Shah informed the Lok Sabha on the 5th inst. that the Indian Cotton Mills' Federation had agreed to step up its purchases of cotton from the Gujarat area and Government was also considering other measures to prevent accumulation of stocks of indigenous cotton with growers and traders. He was confident that the steps already taken and which might be taken in future would relieve the situation.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

A NEW SYMBOL FOR SIMON ENGINEERING

This is the new symbol of Simon Engineering Limited, a Company which was formed in November 1960, of which Simon-Carves Limited is a Member Company.

Simon Engineering Limited is a new Company, but it represents an organisation which was founded nearly a century ago and whose activities today extend nearly to all parts of the world where engineering knowledge and technology have contributed to a better life.

It is our belief, our faith that the new symbol will be carried forward to all parts of India and the world as a symbol of engineering progress.

Simon-Carves Ltd
Incorporated in England. The liability of the members is limited.

HINDUSTHAN MERCANTILE BANK LIMITED

DIRECTORS' REPORT

TO THE SHAREHOLDERS, HINDUSTHAN MERCANTILE BANK LTD.

The Directors have pleasure in submitting to you the Audited Accounts of the Bank for the year ended 31st December, 1960, together with the Auditors' Report thereon.

The gross earning of the Bank during the period under review after writing off the irrecoverable debts aggregating Rs. 1,30,206.28 nP amounted to Rs. 11,95,034.45 nP and after providing for expenses, the net profit for the year comes to .. .. Rs. 68,239.21 nP

to this has to be added the amount brought forward from the previous Balance Sheet .. Rs. 5,518.95 nP

Total .. Rs. 73,758.16 nP

which the Directors have disposed of as follows :—

(1)	Transferred to Reserve Fund	Rs. 20,000.00 nP
(2)	Towards Income-tax for 1959 as well as for 1960	Rs. 50,000.00 nP
(3)	Balance carried forward	Rs. 3,758.16 nP
	Total ..	Rs. 73,758.16 nP

The business of the Bank during the year 1960 and the results achieved are considered to be satisfac

In terms of provisions of Clauses 90 and 91 of the Articles of Association (1) Sri Mohanlal J (2) Sri Mungturam Jalpuria and (3) Sri Manmull Bhuwalka, the Directors of the Bank retire by rotation being eligible offer themselves for re-election.

The Directors express their gratitude to the Bank's constituents, Shareholders and members of Local Advisory Committee for their continued support, co-operation, able help and guidance towards Bank's development.

The Directors also place on record their appreciation of the services rendered by the Officers and members of the staff at Head Office and Branches.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneratio

By Order of the Board,
M. L. JALAN,
Chairman.

CALCUTTA, *15th March*, 1961.

SHREENIWAS COTTON MILLS LIMITED

CHAIRMAN, MR. N. D. BANGUR, ON URGENCY OF MODERNISATION

INDUSTRY MUST BE PERMITTED TO BUILD UP ADEQUATE SURPLUS

THE number one problem of the cotton textile industry, namely, rehabilitation and modernisation of plant and machinery, figured prominently in the speech delivered by Mr. N. D. Bangur, Chairman of the Shreeniwas Cotton Mills Ltd., at the Twenty-sixth Annual General Meeting of the Company held at Bombay on Monday, 8th May 1961. The colossal amounts required for modernisation, Mr. Bangur argued, could be raised by the industry only if the Government allowed sufficient margin in cloth prices to enable the industry to build up adequate surplus. He pointed out that the present policy of the Tariff Commission of allowing only 12 per cent return on employed capital out of which, tax, bonus for labour, managing agency commission and certain other charges had to be paid, left only a meagre 4 per cent for shareholders. The following is the full text of Mr. Bangur's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the 26th annual general meeting. The audited balance-sheet and the statement of accounts have been in your hands for sometime and I hope I have your consent to take the same as read.

Results Impressive

"I would not like to repeat the details which are already given in the Directors' report about the progress of renovation and modernisation programme of your Company. You will please appreciate that the big programme of machinery replacements and renovation already carried out and still under implementation has naturally caused a great financial strain on the resources of the Company. It is, however, gratifying to find that the large amount that your Company has spent during the last few years in the replacement of plant and machinery has begun to give really impressive results as reflected in the working of the period under review. I think I can safely claim that the working results of your Company for the last year can be compared favourably with many of the progressive and modern textile units of the country and I hope and trust that, with the completion of this year's further programme of modernisation, the Company will be fully equipped to successfully compete in the production of a diversified range of latest textile varieties suitable to the growing change of pattern of cloth consumption.

"I may also like to add that the working of your subsidiary, Shree Madhusudan Mills Limited, continues to make satisfactory progress. The programme of modernisation in that unit is also proceeding according to schedule and I am glad to inform you that our application to the N.I.D.C. for implementing a further substantial programme of modernisation is being favourably considered by that Corporation. It is expected that a substantial loan will be sanctioned shortly to enable this unit to complete the modernisation of its spinning department. As you must have seen from the last year's balance-sheet, this Company has already wiped out its arears of deficit and is expected to show even better results during the current year. I am confident that your Company's investment in this unit will now begin to show fruitful results and will prove beneficial in the long run.

New Unit

"I am glad to inform you that the progress of erection work in the factory of your another subsidiary, Shree Gopal Industries Limited, at Kotah is going on satisfactorily and this unit, with a modernised equipment of 12,500 spindles, is expected to go into production very shortly. The Government of India are expected to announce the expansion programme for the textile industry in the near future and there are good prospects of Rajasthan getting a substantial quota of additional spindles and looms. Your subsidiary has already applied to the Government to increase its capacity to 25,000 spindles and I am hopeful that the Government will allow this unit to expand to its economic size. The hydro-power from the Chambal Project has been made available in this fast growing industrial centre and a number of new industrial units are taking shape. I hope and trust that this completely renovated new textile unit of your subsidiary will play its due role in the important industrial centre of Rajasthan.

Voluntary Price Control

"The textile industry has been the target of adverse criticism during the last year when the textile prices began to rise after the depression which the industry suffered during the preceding two or three years. The Indian Cotton Mills' Federation, in response to the appeals from the Central Government, introduced a voluntary system of price control from September 1960 and later on a further reduction was made from January 1961. This substantial reduction undoubtedly affected the working of the industry, specially in view of the growing increase in the cost of manufacturing. It is, however, regrettable that the consumers for whom the Government showed so much concern in pressing the industry to accept a price cut on a voluntary basis were not allowed to continue to reap the benefit of this sacrifice on the part of the industry and a number of additional levies were imposed in the last budget, which have further increased the price of cloth. The textile industry was already contributing a huge amount of about Rs. 80 crores to the Exchequer and this further additional burden of about rupees 12 crores on the industry is clearly unjustified.

Rehabilitation

"The industry is faced with the very vital problem of rehabilitation and modernisation. It has been estimated by the Working Group, that a colossal amount of the order of about Rs. 180 crores will be necessary to carry out even a modest programme of modernisation, out of which rupees 80 crores have to be found by the industry itself. This huge amount can be found by the industry only if the Government, in regulating the price structure, allows sufficient margin to the industry to enable it to build adequate surplus to meet the urgent demand of renovation and rehabilitation of its outmoded equipment. The matter of the fixation of fair prices is now under the examination of the Tariff Commission. In this connection, I would like to draw your attention to the policy that is followed by the Tariff Commission in fixing prices for the industries whose manufactured goods are controlled in the national interest. The present policy of the Tariff Commission in allowing only 12 per cent return on employed capital, which is subject to tax, bonus for labour, managing agency commission and certain other charges, hardly leaves a meagre 4 per cent for the shareholders. The impression that the textile industry has been making enormous profits is not substantiated by the study made by the Reserve Bank which clearly shows that the return in this industry is among the lowest compared to other industries. I hope and trust that the Tariff Commission will take a realistic and constructive view of the magnitude of the task with which our industry is faced.

"I have, in the end, to express my high appreciation of the very valuable services rendered by the members of our staff and labour which have contributed to such excellent results."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

HINDUSTHAN MERCANTILE BANK LIMITED—*Contd.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1960

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of Hindusthan Mercantile Bank Limited as at 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the returns of the Clive Row Branch, Calcutta, audited by us and the unaudited returns from six other branches not visited by us, which are exempt from the requirements of Section 228 of the Companies Act, 1956, by virtue of Rule 3 of "The Companies (Branch Audit Exemption) Rules, 1961," in respect of the financial year ended 31st December, 1960.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended on that date.

THE ANDHRA BANK, LIMITED

(Established 1923)

Annual Report of The Directors for the year ended 31st December, 1960.

To be presented to the Shareholders at the 37th Annual General Meeting to be held at the Registered Office of the Bank, 11/526 Cantonment Road, Masulipatnam, on Friday the 12th May 1961.

The Directors have the pleasure to submit to the Shareholders the Balance Sheet of the Bank as at and Profit and Loss Account for the year ended 31st December, 1960. The Auditors' Report is annexed.

The net profit of the Bank for the year 1960 amounted to Rs. 11,57,071.01 after payment of one month's substantive pay as Bonus to staff. Adding to this a sum of Rs. 10,300.82 nP. brought forward from the previous year's account and Rs. 651.02 nP. being excess dividends provided for the year, 1959 the total amount available for appropriation came to Rs. 11,68,022.85 nP. Certain appropriations have already been made out of this amount and we propose to make further appropriations as per details given below :—

	Rs. nP.
Appropriations made :	
Interim Dividend paid for the half-year ended 30th June, 1960 at 7½ per cent. per annum (Subject to Tax)	1,56,000 00
Transfer to Reserve Fund under section 17 of the Banking Companies Act, 1949	3,35,000 00
Provision for Taxes	4,90,000 00
Transfer to Gratuity Fund	5,000 00
Appropriations now proposed :	
To pay a final dividend for the half-year ended 31st December 1960 at 8½ per cent. per annum (Subject to Tax) making a total of 8 per cent. per annum (Subject to Tax) for the whole year which will absorb	1,77,200 00
To carry forward to the next account	4,822 85
Total .. .. Rs.	11,68,022 85

The business of the Bank during the year under review recorded satisfactory progress.

The Official rate of the Reserve Bank of India remained at 4 per cent. per annum during the year.

A Branch of the Bank was opened at Bangalore during the above period. Another Branch was opened at Bombay in January, 1961.

Under Section 256 of the Companies Act, 1956, read with Article 94 of the Bank's Articles of Association, Messrs. Majety Seshagirirao, C. Ramanadha Babu, R. V. Reddy, Directors longest in Office retire by rotation and from the next longest in Office Shri S. Ramachar has volunteered to retire and they being eligible, offer themselves for reappointment.

You are requested to appoint Auditors to hold Office till the conclusion of the next Annual General Meeting and to fix their remuneration.

24th March, 1961.

By Order of the Board,
S. R. Y. SIVARAMA PRASAD BAHADUR
Chairman.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Andhra Bank Limited as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Returns from 51 Branches audited by us and 22 Branches audited by other Auditors.

We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) the reports on the accounts of the branches audited by the other Auditors have been forwarded to us and the same have been considered in preparing our report;

(f) in our opinion and to the best of our information and according to the explanations given to us the said accounts read along with the notes appearing thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1960 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

COMPILATION OF INDUSTRIAL STATISTICS—II

MORE PRECISION NEEDED IN COMPUTING VALUE OF INPUTS

By A Statistician

TWO concepts of wages have been adopted for collecting data relating to wages. One concept of 'wages' has been taken verbatim from the Payment of Wages Act, 1936, the various provisions of which are mainly designed to ensure prompt payment of wages and regulate deductions and fines to the workers or persons employed in the industrial establishments listed in Section 2 of the Act. The definition hardly meets the needs of an industrial census or sample survey. First, the definition does not relate to the payments made for the quantum or amount of productive work done in the establishment, plant or workshop during a particular reference period, as the term 'wages' includes all the additional remuneration including termination of service benefits which become payable under any law or contract and for the payment of which no time limit has been prescribed in the law or contract. Secondly, the term 'wages' includes only those payments which would become payable if the terms of contract of employment, expressed or implied, were fulfilled. In other words, it includes all contractual payments and excludes all ex-gratia payments such as profit-sharing bonus.

According to the other concept, 'wages' have been defined to include all payments made to labour, *including contractual* and *ex-gratia payments such as profit-sharing bonus*. Entries in Part I are to be made in accordance with the latter concept, while entries in Part II are to be made according to former concept. When both the Parts (Parts I and II) are to be filled for census establishments and industrial concerns, some of the blocks in Part I become summary blocks for detailed information in Part II. It is not clear how information collected according to one concept can be transformed to another concept for summary purposes.

This anomalous position can be resolved by adopting one definition for the purposes of entries in both the Parts.

The discussion thus far has shown that there is an imperative need to evolve new concepts and definitions, so that the gap between the conceptual framework and empirical equivalents and operational definitions is narrowed down.

Skilled and Unskilled Operatives

Workers have been divided into skilled, semi-skilled and unskilled. Elaborate and detailed instructions given in para 24(4) of the Memorandum explain the theoretical concepts of each category and give operational definitions of such concepts. Considerable ingeniousness has been shown in evolving the concepts and their empirical equivalents, but it is doubtful how far these can be implemented with any degree of reasonable accuracy. The abstract qualities by which the operational definitions have been explained, leave considerable discretion to the respondents and investigators to categorise workers according to their best judgment. How far such a procedure is conducive from the standpoint of collecting reliable and complete data on a uniform basis from the establishments covered, is a question which needs re-examination.

Instructions in para 15(4) of the Memorandum explain the procedure for calculating the ex-factory net selling values of products and by-products manufactured. It is not clear from the instructions whether the ex-factory value is to be calculated at factor cost or market prices, but exclusion of excise duties from the value of production indicates that the ex-factory net selling values are to be calculated at factor cost. If it is so, the subsidies need to be added. In this connection, the Statistical Commission, U.N., has made the following recommendations:

"These different types of output should be valued as far as possible at the current ex-factory prices, with excise duties subtracted and subsidies on production (though not on sales) added."

The instructions need to be suitably amended.

In para 14 (3) of the Memorandum, the procedure of evaluating the inputs acquired from allied or auxiliary concerns has been explained. An example of a cement factory obtaining its requirements of limestone from a quarry taken on lease by paying annual amount of lease has been cited as an illustration. In footnote 6 to this para it is stated that "the purchase value of such material should be taken to be equal to the annual amount of lease money paid, plus the cost of transport or other incidental charges incurred in bringing the material to the factory." These instructions are at variance with the theoretical and conceptual framework and practical procedures employed to meet such situations.

The treatment of the materials and industrial services consumed in the manufacturing establishment would depend on the structure of industry in general and the technical, managerial and financial integration in particular. Any treatment has to take into account the facts of industries as they exist and to fit in these facts in the conceptual framework. Unless this is ensured there are always possibilities of double counting. The institutional relationship thus becomes an important consideration in the treatment of materials and industrial services consumed.

Institutional Relationship

The treatment of the quarried material would depend on the institutional relationship that subsists between a quarry or mine, and the "manufacturing establishment" which is covered under the Annual Survey of Industries. The relationship of a quarry or mine may assume the following two forms:

(a) Quarry or mine may be treated as an integral part of the "manufacturing establishment" covered under the Annual Survey of Industries.

(b) Quarry or mine may be treated as an allied establishment belonging to a multi-unit enterprise.

If the quarry or mine is considered as an integral part of the manufacturing establishment covered under the Annual Survey of Industries, all the expenses incurred in quarrying the material such as labour costs, etc. should be accounted for under appropriate headings in the relevant blocks along with similar particulars of the manufacturing establishment, the value added in the process of quarrying being reflected in the value of the final products of the manufacturing establishment.

If the quarry or mine is treated as an allied establishment belonging to the multi-unit enterprise, the quarried material should be transferred to the manufacturing establishment covered under the Annual Survey of Industries at market prices, as if purchased. It may be noted that the market prices, both actual as well as virtual, generally, though not necessarily, cover the factor payments. This procedure is in accordance with the national practices and international standards. In the Annual Survey of Manufactures, conducted by the U.S. Department of Commerce, the following procedure has been recommended:

"Include materials, etc., received from other plants of your company at the approximate market value *plus* freight and other direct handling charges."

The Statistical Commission, United Nations, has made the following recommendations in this connection in its *Proposed Revisions to the International Standards in Basic Industrial Statistics* (Paper No. E/CN3/257.):

"Valuation of commodities received should be at the delivered value (laid down cost) at the statistical unit, including the purchase price, all transport and other charges, and duties, taxes or other levies and excluding discounts, rebates, etc. allowed to the purchaser. *Goods received by the statistical unit from other units of the same enterprise should be valued as if purchased—i.e., at market prices.* In practice it may sometimes be necessary to accept the value posted to the books for the establishment." (Para 85, page 25.)

It will thus be seen that the observance of the procedure given in the instructions would lead to overestimation of value added in the manufacturing sector and underestimation in the mining sector.

Intermediate Products

In order to obtain an unduplicated figure of value added for the industry as a whole, it is necessary to make adequate provision in the form of return for the treatment of intermediate products. The following are some of the cases of intermediate products:

(i) Intermediate products produced and consumed in the same establishment in the same reference period.

(ii) Intermediate products which are produced in one reference period, but consumed in the succeeding reference period.

(iii) Final products which became intermediate products as a result of crossing the production boundary.

(iv) Intermediate products which became final products as a result of crossing the production boundary.

With the exception of intermediate products listed at item (i), no provision exists in the form of return for the treatment of other kinds of intermediate products. In the forms of return prescribed under the Industrial Statistics Act, 1942, a provision existed for the treatment of intermediate products listed at item (ii) only. This is a serious lacuna in the existing forms of return and needs to be rectified.

Gross Expenditure on Capital Account

Provision has been made in Part II of the form for reporting the capital expenditure (classified according to new and secondhand and indigenous and imported) actually incurred during the year on plant, machinery and tools bought for installations. Expenditure incurred on major additions, alterations, renovations, reconditioning and improvements which extend the normal economic life or raise productivity of physical assets, are also to be reported. No provision has, however, been made for reporting the materials, fuels, etc. consumed and labour costs incurred by the establishment in producing, manufacturing, fabricating or building capital assets for its own use in the establishment. On the contrary, in para 14 (4), it has been specifically stated that "care should be taken not to include in either Block 8 or Block 11, any material used on capital account, i.e. for addition to capital." If a correct estimate of value created or added in the establishment as a result of various manufacturing or productive activities carried on is to be framed, it is necessary to make a suitable provision for reporting the values of all materials purchased and consumed on capital account under appropriate headings as recommended by the Statistical Commission, United Nations, in International Standards in Basic Industrial Statistics (Series M. No. 17).

Value of Semi-finished Products in Stock or in Process at the Beginning and at the end of the Reference Period: No provision has been made in input blocks, as well as output blocks, for reporting values of semi-finished products in stock or in process at the beginning and at the end of the reference period. It is not clear how correct estimates of work done in the establishment during reference period can be framed in the absence of this vital information. Provision which exists in Part I for reporting value of "partly finished products" is with reference to the accounting year of the establishment which may be different from the calendar year, the reference period for the survey.

Some Comments on the Blocks in the form of return: Block (4) Part I—Details of Operation: 1. Against Item 6 in this Block is to be recorded the "Type of ownership" of the

(Continued on page 909)

CONSTIPATION AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well-known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

Don't blame nature for grey hair

"Nature has made my hair grey, Sir; what can be done?" we have heard and seen men grumbling with similar remarks But men who blame Nature for grey hair should know why one's hair becomes grey. Research has found that 90% of premature greying is mainly due to lack of hair-care, unhygienic surroundings and indiscriminate use of inferior hair oils.

"*Loma*", prepared scientifically in a most modern factory at Ahmedabad, under rigid quality control, has all the good ingredients to end grey hair. Start using "*Loma*" today and soon you will realize why millions all over India and abroad have put their confidence in "*Loma*". Remember, the name "*Loma*" spells quality - such as what you expect it to be.

Brush up with *Loma*

AMERICAN LETTER

ECONOMIC AND POLITICAL DILEMMAS

MORE MONEY GOING INTO SAVINGS

From Our Special Correspondent

NEW YORK, *5th May*

THE fiascos in Cuba, Laos and the Congo, not to mention other trouble spots in the world which the new Administration has to face, not only have had economic consequences but they have awakened the American public to domestic weaknesses. They have had, altogether, an even greater impact on the minds of the people of the United States than the firing of the original Sputnik. The image of American superiority is fading.

Economically speaking, there are indications which have not yet shown up in the lagging Government statistics. If these straws in the wind can be analysed, they mean to me that caution has taken over. Spending is still substantial, of course, but more and more money is going into savings. What in other countries would be called luxury spending, apparently, is at a standstill, if not actually declining. The stories have become private property which have been told by experts to closed sessions of U.S. Senate Committees. They confirm, more or less, what I wrote in my last despatch. The actual manpower for the invasion was left to anti-Castro Cuban forces now residing in this country. But the U. S. provided training camps and some arms and other implements of war.

While the invaders had some bombers, the U.S. refused to provide air-cover of fighters which were available readily from a nearby aircraft carrier. What was not published was that there were leaks, either through members of the American Intelligence Agency or by Cubans who could not keep their mouth shut, or disclosed deliberately when and where anti-Castro landings would be made. Hence, the defenders were waiting for the invaders at the proper time and at the proper spots. Castro-manned Soviet tanks did the rest.

Despite former President Eisenhower's warning not to turn the fiascos into witch-hunts, trying to nail responsibility on certain people for the sake of unity, the Central Intelligence Agency has come under severe public criticism. It is being blamed, for example, for not properly screening the people who work at such missile bases as Cape Carnaveral, with the implied result that Moscow knows beforehand of the U. S. plans. It speaks volumes that President Kennedy sought the advice and counsel of such conservatives as General McArthur, ex-President Eisenhower and ex-President Herbert Hoover, as well as his former running mate Richard Nixon, but he ignored completely former President Truman and his thoughts on this phase of history.

The whole situation is fraught with economic and political dilemmas. On the economic side, country after country and market after market are being taken away from the U. S. The U. S. policy seems confined to providing aid to those who oppose Communism rather than answering armed force with armed force. The specific dilemma in Cuba was and is that Castro is the legally elected head of State. This comes under the heading of the Monroe Doctrine up to a point. The other side of the story is that nobody knew that Castro would turn Communist which endangers the safety of the U.S. In the process, production in Cuba has been cut in half and misery is rising.

For Laos, the decision has been made at Washington not to counter military action with U. S. armed intervention. Instead, the surrounding countries will be helped. Whether this is right and turns out to be a mistake, only history will tell.

U. S. Economy

There were three interesting developments in the U. S. economy. In 337 reporting localities, the turnover of cheques was only one per cent higher in March than in February. In New York City, the index compiled by the Federal Reserve system fell by 5½ per cent for the month and, in six other leading financial centres, the decline was 4 per cent. People in large cities are becoming cautious.

In connection with the much debated question of unemployment, interesting Government statistics were published. In the last decade, there was a substantial boost in part-time work. In May, nearly one-fifth, or more than 12 million workers, were engaged part—rather than full-time. Most of the part-timers do so by choice, including housewives, students and semi-retired persons. Official estimates are that, by 1970, there will be almost 16 million part-time workers in industries, but only half of them on a voluntary basis.

The bleakest picture was provided by first quarter earning reports. Net income of several hundred leading corporations were nearly 20 per cent below the first quarter of 1960. The hardest hit groups were iron and steel, automobiles, as well as textiles and apparel. But stock prices which are supposed to discount the future have gone up, foreshadowing, presumably, a brighter future.

United Nations

Top delegates and correspondents seem agreed that there might be quite a few early changes in the Kennedy Cabinet and in other high level appointments. They will be camouflaged so as not to appear as scapegoats for early failures of the Administration.

The same high U.N. officials from overseas were highly pleased by the positive statements to the Press of Treasury Secretary Dillon. He insisted that all fiscal and monetary measures will be used to lower long-term interest rates and raise those of the short-terms. This, they felt, would be salutary in the international payments position of all countries—up to a point. Mr. Dillon remarked that this is planned to be done gradually without disturbing the markets, with the co-operation of the World Bank, the International Monetary Fund and other U.N. agencies.

CENTRAL BANK OF INDIA LIMITED

MR. H. P. MODY'S SPEECH AT ANNUAL MEETING

NEED FOR A MORE REALISTIC FISCAL AND ECONOMIC POLICY URGED

SPEAKING at the Fiftieth Annual General Meeting of the Central Bank of India Ltd., held at Bombay on Friday, 5th May 1961, Mr. Homi Mody, Chairman of the Bank, struck a cheerful note when he informed the shareholders that the net profit of the Bank amounted to Rs. 133 lakhs, the highest in the Bank's history.

At the beginning of his speech, Mr. Mody commented briefly on some of the notable events of the year under review. He said that there was a general upward trend in trade and industry, and notable advances were made in West Germany and Japan where production, employment and exports continued to rise resulting in substantial increases in the gold and foreign currency resources of these countries. "In Britain," continued Mr. Mody, "there was an abnormal expansion of bank credit and special measures had to be taken to deal with it and, for the first time, banks were called upon to make special deposits." "In the United States, a recession set in, the extent and duration of which are difficult to estimate. Considerable loss of gold and dollar resources took place and the balance of payments position deteriorated. The situation has since improved and the drain on the reserves has been arrested."

Industrial Production

Mr. Mody said that, in India, during the first eleven months of the year, industrial production showed a significant increase, and, despite shortage of coal, iron and steel production was up, though not to the extent of the target set. The textile industry passed through a difficult phase, owing mainly to a poor cotton crop, non-availability of raw materials at reasonable prices and a heavier wage bill. Sugar production reached a peak level of 2.42 million tons, as a result of the establishment of new factories and the expansion of the crushing capacity of existing units. Mr. Mody emphasised that the most encouraging feature of recent economic growth had been the emergence of a more broadbased industrial structure and a steady diversification of the general pattern of development.

The general price level, which Mr. Mody considers of vital importance, continued to soar. A relieving feature, however, was the fact that the price level of food articles had not gone out of hand and the upward trend had been arrested temporarily. "In respect of industrial raw materials," Mr. Mody stated, "there had been a big jump in prices and consequently the price level of manufactured articles had also moved up substantially." "The extent and seriousness of the damage," Mr. Mody said, "may be gauged from the fact that, between March 1956 and November 1960, there had been an increase of nearly 28 per cent in the general price index."

Third Plan

Touching on the third Five-year Plan, Mr. Mody expressed that, in spite of all the assurances that public opinion would be fully consulted and given due weight, the Plan had finally emerged as it was originally conceived. The total outlay on the Plan was estimated to be of the order of Rs. 11,250 crores. He, however, observed that, while the size of the Plan was equal to that of the first two Plans together, its physical proportions were likely to be smaller because of the inflated prices prevailing and further pressures on the price-level which might be expected.

Discussing the emphasis on rapid industrialisation indicated in the third Plan, Mr. Mody stated that it was certainly open to question whether, with our limited resources in materials and technical personnel, it was wise to accord such preponderance to heavy industry in our development plans. "The products of heavy capital industries," he observed, "were by their very nature incapable of absorbing all the additional purchasing power pumped into the economy, and it might legitimately be feared that such a lop-sided pattern of outlay might tend to aggravate the general inflationary pressure."

"Amongst the resources for the third Plan," Mr. Mody stated, "additional taxation had been given an important place and was expected to provide as much as Rs. 1,650 crores during the five-year period and it would be obvious to all but the planners that the country was not in a position to bear such a crushing burden and deficit financing to an extent higher than what had been estimated might have to be resorted to." Mr. Mody went on to say that by far the most important and crucial source of finance for the third Plan was foreign aid and the Plan must depend vitally on the availability of a far larger volume of foreign assistance. He was, however, doubtful whether, with all the goodwill in the world, under the present world conditions, foreign resources of the magnitude required would be made available to us. He felt that even at the best we were mortgaging the future a little too recklessly, and it was possible that the third Plan might have to be recast drastically.

Money and Banking

Dealing briefly with the main trends noticed in the monetary and banking fields, Mr. Mody said that the money supply with the public had increased during the year by Rs. 217 crores. The scheduled banks' advances had shown a steep rise of Rs. 216 crores to reach a record figure of Rs. 1,180 crores, reflecting the unmistakable impact of the growing tempo of economic activity on the banking system.

Mr. Mody at this stage pointed out the difficulties that the Bank had to face whilst meeting the heavy demand for finances. While the Bank tried to do all it could to accommodate its old customers, it had to a certain extent also to cater for its new constituents. The sugar industry was a case in point which was meeting with considerable difficulty in securing adequate finance to take care of its substantial increase in production. Mr. Mody was of the opinion that this problem could be dealt with only by a suitable revision of the policy of the Government. In the meanwhile, he suggested more liberal rediscount facilities on the part of the Reserve Bank of India to provide some relief to the industry.

Credit Control

With a view to curbing undue expansion of bank credit, Mr. Mody said that the Reserve Bank, in addition to the selective credit control measures, had resorted, for the first time, to the more direct device of variable reserve ratios, whereby they impounded and immobilised, in two stages, 50 per cent of all additional deposits secured by scheduled banks. In addition, ceilings were fixed on the limits upto which individual banks could borrow from the Reserve Bank, any excess over the ceilings being subjected to penal rates of interest. Banks were also directed not only to enforce a minimum interest rate of 5 per cent on all their advances but also to step up their average lending rate by ½ per cent. Mr. Mody warned that the fact that the general price level continued to rise in spite of these measures adopted by the Central Banking Authority should serve as a timely reminder to the Government that, if they wished to maintain price stability, which was an essential prerequisite for the success of any Plan, they should not fight shy of shedding their doctrinaire attitudes and of adopting a more realistic fiscal and economic policy.

Dealing with the balance-sheet and statement of accounts, Mr. Mody informed the shareholders that the Bank's working fund at Rs. 225 crores represented a substantial increase of Rs. 32 crores, or 17 per cent, over the 1959 figures. The gross earnings and net income amounted respectively, to Rs. 10.78 crores and Rs. 6.44 crores, as compared to Rs. 9 crores and Rs. 5.14 crores in the previous year. The net profit amounted to Rs. 133 lakhs, which is the highest in the Bank's history. Advances, too, had reached a high level and recorded a jump of Rs. 32.92 crores over the previous year.

Establishment Charges

The establishment charges continued to move up disconcertingly year after year and, over the period 1956-60, the increase has been of the order of Rs. 107 lakhs, equivalent to over 41 per cent. He said that, during the year under review alone, establishment charges went up by Rs. 32 lakhs and that, in relation to the gross earnings and net income, they absorbed as high a proportion as 34 per cent and 56.8 per cent, respectively. What was particularly a matter of concern was the fact that, despite the increase in the strength of the Bank's staff, overtime allowance should have amounted to as much as Rs. 13 lakhs during the year.

"In view of the higher profits that had been made," Mr. Mody said, "the Directors have proposed an increase over the dividend paid to shareholders last year. The interim dividend of Rs. 2.10 per share, subject to tax, already paid for the half-year ended 30th June, together with the final dividend of Rs. 2.50 per share, subject to tax, now recommended for the second half of the year, would make a total dividend of Rs. 4.60 per share, subject to tax, equivalent to Rs. 3.22 net per share. This works out to 12.88 per cent net for the whole year. In addition, it was proposed to give the shareholders a jubilee bonus of 50 nP per share, subject to tax."

Before concluding his speech, Mr. Mody thanked the Vice-Chairman, Mr. C. H. Bhabha, the General Manager, Mr. N. K. Karanjia, and the Deputy Managers, Mr. F. C. Cooper and Mr. V. C. Patel, and the other officers at the head office and branches and the members of the clerical and subordinate staff throughout the country. He also thanked the Local Advisory Committees at the various centres for the co-operation and guidance they had always extended to the Bank.

Finally, Mr. Mody expressed the hope that, as the years rolled by, it would be the good fortune of the Bank to serve the interests of the industrial and business community even more efficiently than in the past. He looked forward with confidence to greater and greater efforts on the part of one and all connected with the Bank to enhance the prestige, position and prosperity of the great institution with which all had the privilege to be associated.

SHARING OF KRISHNA AND GODAVARI WATERS

GULHATI COMMISSION'S FINDINGS MAY PAVE WAY FOR INTER-STATE ACCORD

THE inter-State dispute between Andhra Pradesh on the one hand and Mysore and Maharashtra on the other over the sharing of the waters of the Krishna and the Godavari has been accompanied in recent months by a lot of acerbity. The Andhra Pradesh stand in this dispute is that the 1951 agreement between the States concerned could be revised only after the period of 25 years stipulated therein while Maharashtra and Mysore, and also Orissa and Madhya Pradesh, have taken the stand that a revision of that agreement is necessary so as to ensure a more equitable distribution of the waters of the two rivers. So far the State Governments concerned—principally Andhra Pradesh, Mysore and Maharashtra—have not been able to reconcile their differences and come to some mutual understanding. Hence the Union Government's recent decision to set up a statutory commission for reviewing the position in respect of the availability of supplies in the Krishna and Godavari rivers. This Commission will be headed by Mr. N. D. Gulhati who, not long ago, had led with distinction the Indian delegation to the Indo-Pakistan canal waters talks.

The terms of reference of the Gulhati Commission which has been asked to submit its report by the end of November, 1961 are as follows:

(1) To report on the availability of supplies in the Krishna on the basis of annual flows at Vijayawada and other points taking into account upstream utilisation and allowing for regeneration: (i) for 86 per cent dependability as assumed in 1951; (ii) for 75 per cent dependability; and (iii) for such other criterion of dependability as may be considered appropriate.

(2) To report on the requirements of the projects on the Krishna: (i) in operation in 1951; (ii) as approved by the Government of India for execution; (iii) included in the plans but not yet approved by the Government of India; (iv) further proposed by the States; and (v) such minor schemes as may have been sanctioned upto March 1961.

(3) To report on the availability of supplies in the Godavari on the basis of annual flows at Dowleswaram and other points taking into account upstream utilisation and allowing for regeneration: (i) for 86 per cent dependability as assumed in 1951; (ii) for 75 per cent dependability; and (iii) for such other criterion of dependability as may be considered appropriate.

(4) To report on the requirements of the projects on the Godavari: (i) in operation in 1951; (ii) as approved by the Government of India for execution; (iii) included in the plans but not yet approved by the Government of India; (iv) further proposed by the States; and (v) such minor schemes as may have been sanctioned upto March 1961.

(5) To report on the feasibility of diverting any surplus supplies in the Godavari to the Krishna indicating the quantity to be diverted and the order of the cost involved.

Need for Technical Enquiry

It will be seen from the above terms of reference that the Commission will function as a technical enquiry commission. The Government of India, in setting up this Commission, seems to have recognised in effect the need for some revision in the 1951 agreement which was based on an assessment of the supplies available in the two rivers after meeting the requirements of the works then in operation and of further possible uses in the light of the then known new projects. It is pointed out that since then a number of projects on these rivers have been taken up for execution and a few more have been included in the second and third Plans. The Godavari has an estimated average annual run-off of 103,600 million cubic metres, of which 14,800 million cubic metres were utilised before 1951 and 3,080 million cubic metres would represent the additional planned utilisation with full development of the first and second Plan schemes. The Krishna has an estimated average annual run-off of 61,700 million cubic metres, of which 11,100 million cubic metres were utilised before 1951 and 22,420 million cubic metres would represent the additional planned utilisation with full development of the first and second Plan schemes. The third Plan demands on these rivers will also be there, even though no precise data are yet available on the additional planned utilisation. The Government of India has, therefore, considered it necessary to review the position in respect of water availability in these rivers with a view to determining the extent to which further demands can be met. At least one point has been officially clarified in this connection. It is that the setting up of the Gulhati Commission will not interfere with the work on the projects already sanctioned.

But the point that has not been clarified pertains to the inter-State dispute over the sharing of the waters of the two rivers. The implication here seems to be that any discussion on the question of sharing will have to await the report of the Commission. It is probably expected that in the light of the factual findings of the Commission the State Governments will see their way to reaching a workable agreement. Perhaps it is also the hope of the Government of India that the Gulhati Commission will suggest a practical scheme for diverting the waters of the Godavari (which is relatively less utilised) into the Krishna basin and that, as a consequence, the Andhra Government might be persuaded to agree to a revision of the 1951 agreement. That these expectations are, however, not likely to be fulfilled so easily may be inferred from the immediate reactions of the Andhra Government and of the Mysore Government to the setting up of the Gulhati Commission. The Andhra reactions are to the effect that the Nasik Canal, which was covered by the 1951 agreement, has already been completed by Maharashtra without any objection from the Andhra Pradesh Government and that there is no logic behind the Centre's holding in abeyance Andhra's projects like Pochampad (which was covered by the 1951 agreement) and Srisailam (which is part and parcel of the Nagarajunasagar project power schemes). And the Mysore Government's reactions, expressed by its Public Works Minister, are to the effect that the dispute on the sharing of the Krishna and Godavari waters is sought to be linked up with the possibility of improving the water resources of the Krishna and that this would mean that the basic question of an equitable distribution of the waters of the two rivers would be bypassed. The Mysore Government's stand seems to be that its Rs. 4-crore Upper Krishna project should not be held up till the Commission reports its findings and that it would seek, irrespective of the appointment of the Commission, an early remedy of the dispute before a tribunal as provided by law.

This, incidentally, raises the question of possible adjudication of the dispute. The Constitution of India, it may be noted here, has the following to say an adjudication of disputes relating to waters of inter-State rivers or river valleys.

Art. 262(1) Parliament may by law provide for the adjudication of any dispute or complaint with respect to the use, distribution or control of the waters of, or in, any inter-State river or river valley.

(2) Notwithstanding anything in this Constitution, Parliament may by law provide that neither the Supreme Court nor any other court shall exercise jurisdiction in respect of any such dispute or complaint as is referred to in clause (1).

In pursuance of the above provision in the Constitution, Parliament has already enacted the Inter-State Water Disputes Act, 1956 which provides for the constitution of an *ad hoc* tribunal, when necessary, for adjudication of disputes relating to the use, distribution and control of waters of inter-State rivers and river valleys. Under this Act, it is only the State Governments—not the inhabitants of a State—which will be permitted to refer disputes to the tribunal for adjudication. The Mysore Government's proclaimed determination to seek a remedy before such a tribunal may complicate matters for the Gulhati Commission. That the Commission must be assured of an atmosphere free from political and regional passions for its objective technical enquiries need not be over-emphasised. While the appointment of the Commission may not have been intended as a substitute for adjudication, it may still be that its labours and findings will obviate the need for adjudication and pave the way for an accord between the States concerned through mutual give-and-take. The State Governments concerned would do well to await the findings of the Commission and then try to settle matters through patient negotiations.

NEW SWEDISH NAVAL TURBINE

The prototype of a new improved steam turbine machinery for naval vessels was demonstrated on 17th April by the de Lavel Ljungstrom Turbine Company, at their Nacka workshops outside Stockholm. Featuring improved fuel economy at all speeds, lower weight and reduced space compared with other types, this first unit has been designed for an output of 12,500 s.h.p. Four more turbines of this type with an output of 35,000 s.h.p. each are at present being built in Genoa for the Italian N.A.T.O. Navy under licence from the Swedish firm.

The compact and light design has resulted in a weight per h.p. of only 1.7 kg. for the 12,500 h.p. machinery, as compared with 2.5 kg. or more for comparable units. For larger installations the rate of saving increases rapidly. The 35,000 h.p. turbines at present being built by the Italian licensees, Cantieri del Tirreno, Genoa, thus weigh about 1.5 kg. per h.p., which is probably the lightest ship's machinery of this effect so far designed anywhere.

The fuel economy is reported to be exceedingly good at all speeds, also at forced speed. The total steam consumption of the Swedish-built machinery at 3,000 h.p. cruising speed is about 3.0 kg. per h.p./h., and tests with the first Italian turbine show a steam rate of 2.89 kg. at 8,000 h.p. and 3.07 kg. at 35,000 h.p. full load.

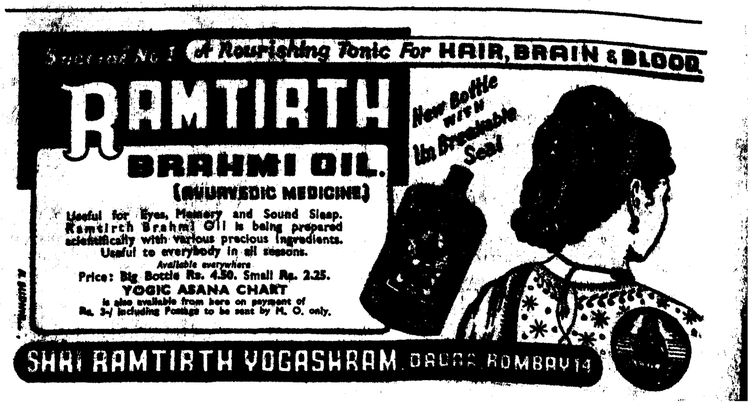
It is recalled that in the course of almost half a century de Lavel—now the de Lavel Ljungstrom Turbine Company—has equipped some 50 Swedish men-of-war with steam turbines totalling 1,500,000 h.p., in addition to a large number of tankers and other merchant vessels.

NASHTON DIFFERENTIAL POLAROGRAPH

Messrs. Nash and Thompson Ltd. of the United Kingdom have begun to manufacture their new differential cathode ray polarograph. This is a high sensitivity instrument designed for use in many different forms of nuclear, medical, industrial and agricultural research.

It can be used as an analytical tool for chemical and metallurgical examinations of many kinds. Among particular applications are soil analysis; studies of the oxygen content of blood plasma; the investigation of respiration or photosynthesis in living cells; determination of the inorganic constituents of water, minerals, paint pigments, etc. and the analysis of some organic substances such as dyestuffs. When used as a means of detecting impurities in foodstuffs, the instrument can identify traces of metals at concentrations as low as 0.02 parts per million and can carry out quantitative analyses to an accuracy $\pm 1\%$—2% in solutions containing 1 part per million of the species being investigated.

The recording instrument is housed in a case 17 inches high by 13 inches wide by 25 inches long. It is connected to the electrode stand by coaxial cables with coloured plugs and sockets for easy identification. Power supply is 110 or 220/250 volts A.C. with a voltage selector for the appropriate voltages.



NEW PRODUCTS AND PROCESSES

Electronic Yarn Inspector

AN electronic worker named "Amy," which can inspect yarn at the rate of 1,800 ft. a minute, analyse faults and group fibre flaws, has been introduced in the Northern Ireland textile industry. With a sensing device incorporating a photo-electric cell, it can detect thickening of yarn. Apart from its value in controlling the quality of yarn, the detailed analysis assists in maintaining the spinning machinery at peak efficiency. The unit developed by Short Brothers and Harland Ltd., Belfast, incorporates a fault detector as sensing device and the yarn passes through a slot in front of a photo-electric cell. Any thickening of the yarn automatically reduces the amount of light passing through the slot, and by this means the amount and length of thickening can be measured. The machine electronically grades the faults into the length groups 0 to .15 in., .15 in. to .5 in., .5 in. to 1.0 in., 1.0 in. to 2.0 in. and over, and counts the number occurring in each group. The various totals are shown on five separate counter dials. Greater lengths of yarn can be inspected economically and the increased amount of data provided is opening up new approaches to the problem of quality control. The important feature of "Amy" is not only the detection of yarn faults but the measuring of the lengths of small fibre disturbances, grading them into five different length groups and writing the number occurring in each group.

Dehumidifier

A British firm, O. N. Beck & Co., has developed a compact dehumidifier for use in industry generally which it believes will be of tremendous value in tropical countries. The Dryzair, as the unit is known is designed around a ¼ h.p. refrigeration unit and uses a chemical known as Refrigerant 12. In shipbuilding, the makers claim, the unit keeps the air dry and prevents corrosion. Perishable goods, whether stored in warehouses or ships' holds, are kept fresh. In oil tankers the correct temperature can be maintained. There are many more uses: the makers suggest the rapid drying of cement, paint, concrete and plaster, the seasoning of timber, photographic processing, and so on. Its uses in humid climates will be endless. Very little attention is needed for the Dryzair, which, although robustly constructed, is light enough to be carried by two men.

The unit operates on the principle that moisture-laden air is drawn over an evaporator and cooled to a temperature below its dew point. This condenses the moisture, which is allowed to run off to a container. The air is then passed over the condenser and the dry-bulb temperature raised. The air is further heated by means of a thermostatically controlled electric heater, and as a result dry warm air is dispersed and re-circulated. In operation, the Dryzair will extract approximately five gallons of water per 24 hours under ideal working conditions and, using the 3-kilowatt heat element fitted to the outlet grill, it will also automatically warm the air should the temperature fall below 70° F. The thermostat is locked to cut in should the temperature fall below that figure, but it can be adjusted up to its top range of 70° F.

Novel Lathe

A sliding, surfacing, and screw cutting lathe with a streamlined appearance has been produced by a U.K. firm. It is a five-inch lathe designed for general toolroom work and has the additional advantage of being suitable for training purposes in apprentice schools or vocational training establishments. The external contours of the machine have a smoothly stylised and to ensure maximum strength the bed and headstocks are formed from the strong casting. Flat bedslides are hardened and ground to give long life without wear. The main spindle is of high grade steel, mounted at each end on tapered roller bearings. It has a bore of 26 mm, and a No. 4 Morse Taper. Two infinitely-variable spindle speeds are available, the higher range (280-1,750 r.p.m.) through V belts, and the lower (38-260 r.p.m.) through gearing. Finger control of the steplessly variable drive is one of the machine's outstanding features. The saddle, with a swivelling cross slide which can be locked in any position, has a control wheel in the left hand position, and there is a device for cutting automatically the longitudinal feed.

Hot Meals From Slot Machines

The traditional English meal of roast meat and two vegetables, served piping hot, has become one of the many things that can now be obtained from a coin-in-the-slot automatic vending machine. Suitable for canteens in factories, offices and hospitals, a working model of the new machine will be on show at the Third International Automatic Vending Exhibition at the New Horticultural Hall, Westminster, London, from 15th to 19th May. The menu served can be varied daily, the meals being maintained in the machine at a temperature of about 170° F.

Stretching Device for Aluminium

A large plate-stretching machine for flattening aluminium alloy plates up to 50 ft. in length and a maximum thickness of one inch is to be installed in a U.K. aluminium plant. To be operating early next year, the machine will cost approximately £150,000 (Rs. 20,00,000) including installation. It will turn out material for shipbuilding, the transport industry and various other engineering applications.

Machine to Handle Timber

A new machine to handle and sort heavy timber is now working at a timber yard on the River Thames, in London. A man presses a foot pedal and a hoist begins to feed planks from a stack to a conveyor which sends the large boards down one side of the machine and the rest to the other. In each case the planks are carried along until the boards set at an angle to the conveyor which push them off to one of a number of "take-offs." Each take-off roll feeds the sorted timber into a number of trays, and once the required number of boards has been fed on, it is automatically passed to another part of the machine which stacks them into sets. It took five years to develop this machine, which can handle a cargo of 28,000 pieces of mixed length timber and present it in batches of up to 17 pre-determined lengths in a normal working day.

COMPILATION OF INDUSTRIAL STATISTICS—II

(*Concluded from page 902*)

factory/industrial concern covered or selected for the survey. This being a coded item, information has to be recorded according to the codes given in para 9(6) of the Memorandum. The types itemised against Items (*a*) to (*i*) in para 9(6) are not mutually exclusive and hence these cannot form a single list of codes for recording entries against item 6. Items (*a*) to (*e*) are essentially industrial or business organisations which may be started or floated to own, control, or manage a factory/industrial concern. Types listed against Items (*f*) to (*i*) are economic institutions or entities which may own, control or manage any factory/industrial concern organised according to any of the industrial or business organisations listed against Items (*a*) to (*e*).

According to this system of coding, difficulties may be experienced in classifying the following joint stock companies in the public sector which are entirely owned by the Government of India in the sense that all the share capital has been contributed by the Government of India:

(1) Bharat Electronics (P) Ltd., Jalahalli, P.O., Bangalore.

(2) Hindusthan Antibiotic (P) Ltd., Pimpri, Poona District.

(3) Hindusthan Steel (P) Ltd., Ranchi.

(4) Hindusthan Cables Ltd., Burdwan District. Rupnarayanpur.

As the present system of coding may not throw correct information relating to the pattern of organisational structure of various industries, the following classification and codes may be adopted:

Type of Organisation

(*a*) Individual proprietorship	0
(*b*) Partnership:	
Joint family	1
Others	2
(*c*) Public limited company	3
(*d*) Private limited company	4
(*e*) Public corporation (special Act of Parliament or State Legislature)	5
(*f*) Co-operative Societies	6

Type of Ownership

(*a*) Central Government.	
(*b*) State Government.	
(*c*) Local Authorities.	
(*d*) Private enterprise.	

Industrial Classification.—The industrial classification adopted needs to be revised and expanded as follows:

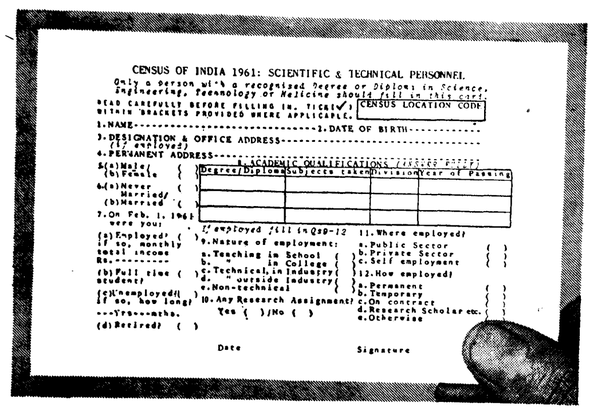
(i) The "cold storage" establishments which have been classified under "Group—209—Manufacture of miscellaneous food preparations" should be classified under "Group 720—Storage and warehousing."

(ii) The industrial classification does not make any provision for classifying the following types of establishments which are registered as factories under the Factories Act, 1948, and hence covered under the Annual Survey of Industries: (*a*) Cinema studios, (*b*) Laundries, (*c*) Water pumping stations, (*d*) Job dyeing and (*e*) Dry cleaning.

Surely, this defect needs to be removed without any further delay.

(*Concluded*)

CENSUS 1961



ARE YOU TRAINED IN SCIENCE OR TECHNOLOGY?

If you are, the enumerator would have given you a special card during the Census (10th February - 5th March).

If you have not yet filled it, please do so at once and post it. No postage need be paid by you; the addressee will pay.

The card can also be had from the Registrar-General India, Man Singh Road, New Delhi.

DA 61/23 ISSUED BY THE GOVERNMENT OF INDIA

L.I.C. AND STOCK EXCHANGE

THEIR RELATIONSHIP NEEDS TO BE REDEFINED

By A. C. K. Krishnaswami

AS a very occasional contributor to your columns may I add my endorsement to the others you have received favouring your editorial on the Estimates Committee's recommendations on the investment policy of the L.I.C.

You will recollect that, in my article on Investment Trusts in your issue dated 31st October 1959, I pointed out that "The L.I.C. is said to invest about Rs. 8 crores annually in the private sector and to sustain the value of industrial investments by its open market operations. It has been remarked elsewhere that this support is not without its disadvantages and that there are sound reasons why the L.I.C. should abstain from open market operations." I had earlier written to the Press (and my letter found publicity in September 1959 in the columns of The *Hindu*, The *Times of India*, The *Indian Express* among others) on the question of the open market operations of the Life Insurance Corporation. I may be permitted to quote the following extract:

"One would imagine that the Directors of the Corporation would sit down with the Government and negotiate an arrangement by which all the surplus investible funds of the Corporation are deposited, say every quarter, with the Government of India, at an interest of 5 per cent per annum. It could thereby free itself for its real work of spreading the insurance habit in the vast rural and industrial areas where it is not yet popular.

"It cannot *normally* be visualised that the Corporation would ever need to make any large withdrawals from Government, as, in normal circumstances, in an ever-growing business, the incoming premiums will be more than enough to meet any claims that may arise, and would still leave larger and larger surpluses for further investment. But, in any case, provision can easily be made for withdrawals, where necessary, by the Corporation from the moneys deposited with Government, particularly as even now, all the liabilities of the Corporation are backed by the guarantee of the Government.

"Government on their part, should be happy indeed to pay an interest of 5 per cent on the savings of the poor invested with it. After all, Government now get a return of 5 per cent and over on its investments on remunerative ventures like the railways, power projects, and public corporations and will do so more certainly in the future. There is much to be said for Government treating the Life Insurance Corporation specially in the matter of interest rates.

"It is demonstrably false to think of such a policy of investment as leading to withdrawal of support to the private sector. The assistance the L.I.C. gives to the private sector is, as we saw, about Rs. 8 crores per annum of investment. A large part of it, if not the whole, goes to helping the investor-speculator to cash in his holdings, and very rarely adds a penny directly to the invested funds of the private sector. By the L.I.C. refraining from direct financing of the private industry, nothing would be lost, as other Government agencies should and will inevitably come into the picture. By keeping out of the share market and making the funds available to Government for being invested—and this can be ensured by suitable directives built into the arrangement—through the Industrial Finance Corporation, Housing Finance Organisation, co-operative banks, and other State-controlled bodies, the Corporation will really be ensuring more effective deployment of funds in the private sector, than it now does

"And what is more important, the exit of the L.I.C. from the share market would do real good to the health of the market itself. No longer would an unscrupulous speculator be able to generate rumours of large purchases or unloading by the L.I.C. to stimulate or depress the market for his own ends. Nor can any finger be pointed at Government for having given tips of doubtful propriety to the L.I.C. to assist in its investments, as was done in the case of shares in the banks which the State Bank of India added to itself as its subsidiaries. Nor will it leave people wondering how soon, at this rate of acquisition, the L.I.C. will have a finger in every pie of private corporate enterprise even if it does not lead to what is termed backdoor nationalisation."

In the Market Gossip of your issue dated 29th April 1961, you comment that "majority of public opinion is, however, sharply critical of the recommendations of the Estimates Committee." It is not surprising that this is so; and, if one subscribed to "mathematical democracy," overwhelming opinion (that commands publicity) may well encourage even wider market operations by the L.I.C. with its investible surpluses. There are those company promoters and entrepreneurs who find it easy to fall into the belief that the L.I.C. is an instrument specially fashioned to prop share values in the interests of speculating investors, even as some stock brokers might find it easy to be persuaded into the view that the L.I.C. is specially created to have the honour of being among their valued clientele. It is not difficult to understand why the theory is put out that the L.I.C. has induced a measure of stability in stock markets and guaranteed against bear raids and bull rigging and should continue to do so. But what is the stability that is spoken of? A really stable market would reflect transactions in shares, which are put through at values based not merely on the basis of marketability and security but mainly on the expectations of continued regularity of adequate yields. The L.I.C.'s contribution directly or indirectly has been to help create a phenomenon in which large funds chase too few floating securities. The result of this has been to rate share prices not on yield basis—and none can gainsay that the better shares today give unrealistically low yields—but on the basis of quick and short-term capital appreciation; and this depends on the L.I.C. continuing to mop up available shares in the market.

This logarithmic progression of inflationary values that has beset the share market is certainly unhealthy and this so-called stability is very artificial. The situation reminds one, faintly enough, but definitely of what happened in the nineteen-twenties abroad. To quote from Harold Wincott's essay on Lessons in Economics, in the *Baldwin Age*:

"It all began in the mid-twenties with a boom in Florida real estate—real estate which sometimes comprised swamps and non-existent cities. It continued on Wall Street to the autumn of 1929 when it was commonplace to borrow money at an interest charge of upto 20 per cent to buy common stocks returning the purchasers perhaps 1 to 2 per cent. It ended with suicides and imprisonment and scandals for such notables as the Chairman of the New York Stock Exchange and of two of the big banks."

He also states:

"It is true that, as a result of these—and other—experiences, Britain belatedly got a new Companies Act. It is also true that the Council of the London Stock Exchange greatly tightened up its own regulations governing new issues. But so many horses had bolted by the time the stable doors were shut. And at the time few voices were raised in protest. An atmosphere not greatly different from that prevailing at the time of the South Sea bubble was met by the philosophy of *caveat emptor* and by the belief that it was nobody's job to protect fools from their folly—or to keep rogues from their prizes."

This is not to say that, under present-day conditions, such catastrophic results are easily possible. But still the picture of a new issue being oversubscribed thirty to forty times on the day of the flotation, and the shares being unofficially quoted at 300 to 400 per cent of par, before even the details of allotment are decided on, and long before a dividend can be thought of, does not suggest a very healthy state of affairs, in which the genuine investor subscribes for shares based on expectations of a reasonable and adequate long-term yield. The only remedial device that engaged attention was to restrict the right to transfer, of newly allotted shares, for specified periods and whatever merits or demerits this suggestion had, it certainly evoked a hue and cry that new issues may not find subscribers in the market under such restrictions. This rather let the cat out of the bag, making it manifest that there were more stags than genuine investors figuring in the subscription lists.

In such conditions, the entry of the L.I.C. as underwriter with firm allotment for whole or part of the issue, is, I submit, not a wholly desirable feature. Whatever role the L.I.C. was meant to play, it certainly was not this, of joining the stags in allotments and accentuating a situation of rocketting share prices. The L.I.C. has no need to hedge against inflation any more than a bank does. That inflation is or should be itself a short-term malady to be corrected by Governmental measures is obvious. The L.I.C.'s intervention in the market does contribute to inflationary tendencies in share prices rather than counteract it; its investment in real property and participation in Government schemes of housing, city improvement, industrial finance and so on will provide both a corrective to and hedge against inflation in the long-term.

Those anxious to defend the role of the L.I.C. in open market operations overlook the fact that such guarantee that the former Finance Minister gave about the L.I.C. maintaining its help to private sector finance, did not extend to assisting the speculator and stag. It is easy to find arguments for any proposition that advances self-interest—human nature being what it is. In the truly Gilbertian event of the L.I.C. diverting a part of its funds to turf speculation, you will have some votaries of the Sport of Kings hailing it as necessary and beneficial to horse breeding and animal husbandry!

And one must also recognise the fact that the Corporation, both by its inheritance and its subsequent acquisitions, has emerged as the largest single equity shareholder in many companies. It has thus thrust on it some responsibility even as regards the management. For instance, the Madras Shareholders' Association says, in its circular dated 1st February 1961:

"The *Life* Insurance Corporation of India, which is the largest shareholder in the Company, was represented at the general meeting by its own officer, who, after seeing for himself the motion for advertisement being over-ruled by the Chairman as improper and the higher offer made for the Company's property being brushed aside, still voted for the resolution, i.e., for the acceptance of the lower offer made by the eighth defendant. At a very early stage of the proceedings, the Shareholders' Association sent to the Corporation its circular and the plaint requesting them to join us and assist us in the suit. It was open to the Corporation to examine the ample material which we had in proof of our charges against the Directors. The Corporation not only refused to join us but was not even separately represented by its own advocate, in spite of the gravity of the issues involved. The Life Insurance Corporation has now emerged as the biggest shareholder in many established companies. Their voting strength has acquired a crucial character, in that, managements, if assured of the support of the Corporation, can snap their fingers at the small disorganised shareholders and put through any scheme which they like. The responsibility of the Corporation becomes all the greater to help in preventing managements from acting against the interests of their shareholders. One would expect the Corporation to act after examining the merits of each case, without any predilections or prejudices one way or the other."

This connection with Company politics is undesirable for a public institution and, if not checked now, may gradually assume larger proportions. The L.I.C. may find itself discharging duties not at all intended for it. This aspect of the matter needs careful consideration also.

If, in the present stage of our young republic, we do not safeguard our hard won freedom by insisting on standards of good Government and financial rectitude, we may have lost the opportunity for ever. It behoves Government to lay down, firmly and without delay or dalliance, very strict rules of investment of the L.I.C. funds. Government should treat the L.I.C. as it does a big bank, and call for the same canons of financial administration from both.

It is time Government lays down that the L.I.C.

1. should confine its investments only to debentures and preference shares of companies from out of the new issues, either as firm allotments in flotations, or as a stipulation in the underwriting arrangements;

2. should not indulge in open market operations;

3. should not sell, in any event, any shares in the open market except to meet a very special need, which is a practical impossibility;

4. is not to concern itself with considerations relating to stabilising or inducing health to stock-markets; and

5. should recognise in practice that, in the ultimate analysis, the best hedge against inflation lies in not contributing to it.

Notice

THE GWALIOR RAYON SILK MFG. (WVG.) COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of the Company at their meeting held on 28th April, 1961 havs declared the dividend on Preference Shares Series 'A' and 'B' for the year ended 31st March, 1961 at Rs. 8.57 per share subject to deduction of tax under Section 18(3D) of the Income-tax Act.

The dividends will be paid on or after 1st June, 1961 to those shareholders whose names appear on the Register of Preference Shares, Series 'A' and 'B' on the 20th May, 1961.

Register of Members and Share Transfer Books of the Preference Shares Series 'A' and 'B' of the Company will be closed for this purpose from 20th May, 1961 to 31st May, 1961 both days inclusive.

By Order of the Board,
V. N. BAGRODIA,
Secretary.

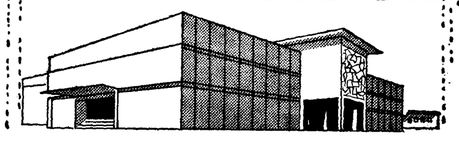
WATERTIGHT Concrete Construction



as only Impermo can make it

IMPERMO Cement Waterproofing Compound is available in powder form, convenient to use. IMPERMO is most economical: only 2% by weight need be added to cement to prevent the penetration of damp through cement mortar or concrete.

- IMPERMO renderings prevent dampness.
- Damp walls are cured by IMPERMO.
- Watertight joints can be ensured by using IMPERMO.
- IMPERMO is essential for producing water-repellent backings on which to apply coloured cement renderings.

Whatever your concrete construction, make it watertight as only IMPERMO can make it:

Tanks – Reservoirs – Basement Walls – Inspection Pits – Roofs – Cast Stone – Swimming Baths – Sewage Works – Floors – Conduits – Renderings, particularly backing coats of white or coloured cement finishes – Pools – Cellars – Garage Pits – Walls – and many others.

IMPERMO costs only Rs. 135.00 per case of 50 x 1 kilogram packets, i.e., approximately Rs. 48.00 to waterproof 100 cu. ft. of 1: 2: 4 concrete mix.

PRODUCTION OF SALT RECOVERS

NEED FOR SETTING UP A CENTRAL BOARD

SALT or sodium chloride, as the chemists call it, is not only a commodity of universal consumption but a major raw material for the alkali industry, particularly in the manufacture of caustic soda and soda ash. In 1960, the production of salt in India aggregated 3.4 million metric tonnes (92 million maunds). This represents an increase of just 8 per cent over 1959, when it amounted to 3.2 million metric tonnes. It may be recalled here that the output had suffered a distinct setback in 1959, due to unfavourable climatic conditions and also to a voluntary cut in production resorted to by producers on account of heavy accumulation of stocks. Although the improvement in output last year was gratifying, it was still lower by over 800,000 tonnes as compared with the record production of 4.2 million tonnes attained in 1958. It was also rather short of the second Plan target of 100 million maunds or 3.7 million metric tonnes set for the final year of the Plan. It may be noted, in passing, that the target of salt production in the third Plan is provisionally laid down at 6.1 million tonnes.

The following table shows the State-wise production of salt for the whole year 1959 and three quarters of 1960:

(In '000 metric tonnes)

	1960 Jan.-Sept.	1959
Bombay (Gujarat and Maharashtra) ..	1,760	1,971
Madras	454	500
Rajasthan	280	301
Andhra	208	117
Orissa	38	11
West Bengal	8	8
Mysore	3	8
Himachal Pradesh	3	4
Kerala	1	1
Unlicensed	260	257
Total ..	3,015	3,176

A notable feature of production last year was the substantial expansion attained by relatively small salt-manufacturing States, such as Andhra, Orissa and West Bengal. On the contrary, from the figures available so far, major producers, such as Gujarat and Maharashtra (which account for about 60 per cent of total output), Madras (15 per cent) and Rajasthan (10 per cent) seem to have contributed little or nothing to the increase in output last year. It is reasonable to assume that, but for fear of overproduction, these producing centres also would have stepped up their production.

Consumption Rising

Admittedly, a major part of the output is used for edible purposes. The *per capita* consumption of edible salt in India varies from 9 to 20 lbs. annually, depending on the dietary habits of different regions. The average *per capita* consumption of salt may thus be taken as 14-15 lbs. On this basis, the current consumption may be estimated at about 2.7 million tonnes (assuming that present population is 431 million). In the sphere of industries, salt is consumed by caustic soda and soda ash plants, apart from being used in processing, fish preservation, cattle feed, in the dairy and food industries, for treatment of hides and skins, etc. It is, at any rate, difficult to estimate precisely the demand from these industries. The Salt Committee (Chairman: Mr. Manubhai Shah), which examined the problems of the industry in 1958, anticipated the total industrial demand for salt to be about 1.1 million tons by 1961, with a further increase to 2.2 million tons by 1966. The Committee felt that the proportion of salt used by chemical industries would increase from 12 per cent in 1958 to 30 per cent in 1961 and almost equal the figure for edible purposes by 1966. The Committee estimated that, taking together the needs of salt for edible and industrial purposes and after providing for about 500,000 tons for exports, India's total requirement of salt would be 5.5 million tons by 1966. In view of the prospects for increase in consumption, the Committee expressed the view that over-production was only a passing phase.

The extent of recovery of by-products from salt works is also interesting in the context of salt manufacture for industrial uses. In 1960, for instance, besides the recovery of gypsum which is now being undertaken in almost all the major salt works on the West Coast and Tuticorin, the Salt Department has been exploring the possibilities of the recovery of other by-products as well. A scheme for the recovery of potassium chloride at Tuticorin has been finalised in co-operation with the State Trading Corporation and it is expected to yield about 1,100 tons of potassium chloride annually. The extension of the scheme to the major salt works in Gujarat and Maharashtra is also under consideration. A scheme for washing salt to make it suitable for industrial consumption and simultaneous recovery of sodium sulphate as a by-product submitted by a West German firm is under the consideration of the Hindustan Salt Company Ltd. The cost of the scheme is estimated to be about Rs. 62 lakhs. About 11,177 metric tonnes of sodium sulphate will be recovered annually from the bitterns and the washings. Certain specialised varieties of salt like free flowing table salt and dairy salt are now being manufactured at Sambhar by the Hindustan Salt Company Ltd.

Export Markets

The increase in production may not adversely affect the stability of the salt industry even in the short run, if adequate attention is devoted to explore steady export markets for it. Although in the 'forties India was a net importer of salt, it has now become an exporter of this commodity, thanks to increase in domestic output. In 1960, exports of salt aggregated 449,000 metric tonnes, which compare favourably with 344,000 tonnes in 1959. The following table shows the quantum of salt exports in 1960, as compared with the previous two years:

(In '000 metric tonnes)

	1960	1959	1958
Japan	434.00	324.51	272.63
Nepal	14.11	19.47	23.09
Maldives	0.06	0.26	0.78
East Africa	0.45	..	..
Other countries	..	..	0.07
Total ..	448.62	344.24	296.57

Japan, India's major buyer of salt, took a larger quantity last year, under a contract entered into by the Japanese importers with the State Trading Corporation for the supply of 450,000 long tons of salt between January 1960 and March 1961. There were also exports by private parties against contracts secured before the S.T.C. took over the salt export trade. In 1960, East Africa figured as a new buyer of Indian salt. But India's exports of salt to Maldives and Nepal were lower. Now that the S.T.C. has assumed exclusive rights for exports of this item, it would do well to examine the scope for finding new markets for it in some of the neighbouring countries, apart from stepping up its sales to Japan.

According to the latest annual report (1960-61) of the Union Ministry of Commerce and Industry, there has been no change recently in the system of cess levied from the salt industry. Cess on salt continued to be levied at the same rate as in 1959, namely, 3½ annas per maund in the case of Government factories, including the factories run by the Hindustan Salt Company Ltd. and 2 annas per maund in the case of private licensed factories with areas above 100 acres. For smaller private factories and members of co-operative societies engaged in salt manufacture, graded scale of levy as in force in 1959 continued during 1960, that is, cess was levied at one anna per maund for areas of 100 acres or less but exceeding ten acres, smaller works being exempt from the payment of cess. A statement showing receipts and expenditure during the last three years is given below:

(In lakhs of rupees)

	1960-61*	1959-60†	1958-59
Receipts			
Cess	85.00	72.54	54.72
Receipts from sale of Government salt and other receipts	17.67	14.26	83.28
Total ..	102.67	86.80	138.00
Expenditure			
Cost of establishment and contingencies.	34.80	31.18	43.54
Work	29.98	12.47	66.87
Other expenditure	2.60	6.40	32.02
Total ..	67.38	50.05	142.43

* Estimated. † Provisional.

There have been complaints to the effect that much of the cess levied is not being utilised for the development of this industry. Attention of the authorities was drawn to this aspect of the development of the industry by the Salt Committee. The Committee actually recommended reorganisation of the administrative machinery and the establishment of an autonomous body, called the Central Salt Board. The arguments put forward by the Committee in 1958 continue to be valid now, and, therefore, deserve to be quoted here:

"Most of the difficulties experienced at present by salt manufacturers, especially small ones, are due to non-execution or delay in execution of development works (including maintenance and repairs works), of which the cost is to be met from the cess proceeds under Section 4(b) (ii) of the Salt Cess Act. This Section makes expenditure on the establishment, maintenance and expansion of salt factories as legitimately chargeable to the cess proceeds. Accordingly, provision is made each year in the budget of the Salt Department for the execution of works/schemes required for the development of the salt industry. But the projects are actually taken in hand on the recommendations of the Regional and Central Advisory Boards for salt. The Committee is somewhat disappointed to note that the expenditure actually incurred on such development works during the last several years has been only a small fraction of the total amount of cess collected.

"We consider that expeditious execution of capital and maintenance works required for maintaining the present trend of salt production and its further development as also affecting improvement in the quality of salt is essential in the interest of the industry. The present procedure for execution of development works under which plans and estimates for such works are first drawn up by the department, put up before the Regional and the Central Advisory Boards for approval and submitted to administrative and Finance Ministries for sanction, and actual execution is done through the agency of the C.P.W.D. or of Salt Department has proved to be irksome and dilatory. We consider that these developmental functions should be entrusted to a Board having a certain amount of autonomy so that the schemes or projects are sanctioned and executed with minimum delay. We accordingly recommend a Central Salt Board should be set up, which, apart from advising the Government of India on the administration of the proceeds of salt cess levied and collected under Section 3 of the Salt Cess Act, 1953, should also be entrusted with the responsibility for execution of welfare schemes for salt labour and for grant of financial help in the form of loans to salt manufacturers."

Plan Schemes

Had the Government accepted the Committee's recommendations for the establishment of a Board, it would have certainly facilitated the implementation of the various schemes envisaged in the second Plan. Although no details of implementation of the various Plan schemes in respect of salt are available, a rough idea about this is given in the Reports of the Ministry of Commerce and Industry. In the Ministry's report of 1959-60, it was stated, for instance, that the sanction had been given for setting up a training-cum-production centre at Sisirganj at a cost of Rs. 58 lakhs, and was expected to be completed in 1960-61. The progress of the project, given in the 1960-61 report, is worth quoting: "The work of the establishment of a training-cum-production centre at Sisirganj in West Bengal *will be taken up as soon as the site selected for the purpose is made available by the State Government.*" The least that the Salt Department can do is to see that the project is completed at least during the third Plan period.

To take another instance. The work of shaft sinking in Draug Salt Mines (Mandi) was expected to be completed in 1960-61. But this was not realised, it is explained in the Report, "due to the difficulties encountered."

The total expenditure for the development of the industry provided for in the second Plan was Rs. 189 lakhs. But the actual expenditure would not have exceeded Rs. 45 lakhs. One of the reasons for this shortfall in expenditure seems to have been the economy drive introduced in the Plan period to save the core of the Plan. In view of the substantial increase in production envisaged in the third Plan and the compelling urgency to maintain, if not improve, the quality of the product, it is to be hoped that the Government will seriously consider the desirability of setting up a Central Salt Board, which will be able to implement expeditiously the development plans. Another important recommendation of the Salt Committee, so far shelved by the Government, relates to the release of the annual administration reports of the Salt Department for the benefit of the public. Such reports will certainly be useful to the industry and trade.

TURNOVER OF MAHINDRA AND MAHINDRA INCREASES MARKEDLY

BUT HIGHER EXPENSES REDUCE PROFIT

A FURTHER deterioration in profit in spite of a substantial improvement in sales turnover has been reported by Mahindra and Mahindra Ltd. for the year ended 31st October 1960. Thus, while sales proceeds have increased by Rs. 435.81 lakhs to Rs. 1,363.29 lakhs, the gross profit has declined, for the second year in succession, by Rs. 5.50 lakhs to Rs. 58.07 lakhs. Such an apparently paradoxical situation is not confined to the results of this Company alone for the year under review; rather it has become of late a typical feature of operations of most of those companies whose main line of business activity consists of trading in commodities. It is to be noted, that, though the Company has lately taken to the manufacture of engineering products, it still remains an essentially trading organisation and that receipts on account of dealing in iron and steel constitute a major portion of its income. Since the remuneration available on bulk handling of steel, mainly against Governmental purchases and D.L.F. loans, is very small, its contribution to total profit is insignificant in comparison to the volume of turnover. As a result, the relationship between sales and profits becomes grossly distorted and one comes across a situation where profits tend to decline, particularly during years of rising costs, against the background of apparently increased sales. The drop in revenue is attributed principally to shrinkage in steel business, fall in margins in respect of jeep vehicles sale under compulsion of Government's declared desire in the matter and termination of benefits available to the Company under provisions of Section 15C of the Indian Income-tax Act.

Owing to the fall in gross profits and higher provisions for depreciation (Rs. 13.06 lakhs in 1960, as against Rs. 11.15 lakhs in 1959) and taxation (Rs. 19.60 lakhs, as against Rs. 17.52 lakhs), the net profit of the Company has fallen by Rs. 8.63 lakhs to Rs. 24.14 lakhs. The following comparative table provides at a glance an idea of the progress of the Company since 1956-57.

(Value in lakhs of rupees)

	Year ended 31st October			
	1960	1959	1958	1957
Sales proceeds	13,63.29	9,27.48	17,66.87	24,41.27

Dividends—				
Preference	4.40*	4.95*	1.66	1.50
Ordinary	16.50 (12½%)*	16.50 (12½%)*	13.51 (22½%)	9.92 (17½%)
Carry forward	1.11	1.16	0.99	1.16

* Subject to deduction of tax.

After writing back Rs. 1.39 lakh as provisions no longer required and providing for development rebate reserve (Rs. 1.58 lakh) and gratuity (Rs. 2.72 lakhs), the Directors have recommended a sum of Rs. 20.99 lakhs towards dividends for the year and Rs. 31,000 as additional dividend on preference shares for previous years. This leaves a balance of Rs. 1.11 lakh which is proposed to be carried forward.

The declining tendency of profits and the necessity to maintain dividend on increased share capital particularly in the past three years, have seriously jeopardised the Company's ability to strengthen the reserves. In fact, no provision has been made in the accounts for 1959-60 for transfers to reserves. In the previous year, it will be recalled, a sum of Rs. 5.00 lakhs had been set apart, as against Rs. 5.50 lakhs in 1957-58 and Rs. 12.00 lakhs in 1956-57.

There was an appreciable increase in the production of jeeps and allied vehicles during the year, the total number of vehicles actually manufactured being the all-time record. The increase in production has involved substantial changes in manufacturing and assembly layouts and operations undertaken by the technical staff of the Company with satisfactory results. A notable feature has been a further rise in the indigenous content of vehicles. Thus, the body, engine, transmission, transfer case and axles of the jeep are now produced on a large scale within the country. Despite enhanced production costs, the Company has agreed with the Government in its attempt to stabilise and maintain the current prices to consumers and even a reduction of Rs. 200 was made in the retail price of a jeep in July 1960 at the special desire of the Government. The distribution of jeeps and allied vehicles reached a level of 6,499 units, as compared with 4,694 in the previous year, showing an increase of a little over 38 per cent.

The pressure on the Company's financial resources continues as, with increased turnover in the manufacturing division, inventories of raw materials as well as semi-finished and finished components must of necessity grow under present conditions. Consequently, there has been an increase of Rs. 130.25 lakhs in loans. There has been only a marginal increase in its invested funds. Other liabilities amount to Rs. 274.02 lakhs, while current assets, including investments, aggregate Rs. 949.73 lakhs. The share capital of Rs. 187.00 lakhs is supplemented by Rs. 43.68 lakhs in reserves as against Rs. 42.81 lakhs in the previous year.

Assessing the outlook for the future of the Company, the Directors point out that the demand for the jeep type vehicles continues to exceed supply. It is hoped that, with a more liberal allocation of foreign exchange, the supply position will improve. The sale of spare parts continues to show a satisfactory growth trend. Incidentally, it may be mentioned that the Company has recently received the official permission to double its production capacity to 10,000 units. As for trade in steel, the Directors expect that, despite the commissioning of the new steel plants, there will be larger demand for certain categories of steel which are not yet planned for production in the country and that the Company will be able to get a fair share of such imports.

In the direction of diversification the Company's proposal for the manufacture of a small car has received a serious setback by the Government's decision to produce such a car in the public sector. The project, on which considerable thought and time had been devoted, has now been abandoned. Further, negotiations with Messrs. David Brown Industries of the United Kingdom for the manufacture of their range of tractors have been terminated due to difference of opinion on the pricing policy. Negotiations are, however, presently under way for the manufacture of another type of tractors.

The plant of Mahindra Sintered Products Ltd., established to produce a wide range of self-lubricating bearings, is currently being commissioned. Similarly, plant and equipment required for the manufacture of pyrometers, flow meters and pressure gauges have been shipped, and these will enable the Mahindra Engineering Company Ltd., a subsidiary of the Company, to commence production during the current calendar year.

Further improvement in the working of the associated companies during the year has been witnessed, as is indicated in the following extract from the Directors' report:

"Dr. Beck & Co. (India) Ltd. has received the reaction vessel from their associates abroad and expect to get into manufacture of specialised synthetic resins for the electrical industry during 1961. Excellent progress both in manufacture and sales has been recorded. Otis Elevator Co. (India) Ltd. is presently considering a further expansion of their manufacturing capacity and the progress in manufacture and sales continue to be satisfactory. Machinery Manufacturers Corporation Ltd., of which the Company are the Managing Agents, have recently reorganised their capital structure with the approval of the shareholders and the Government. Plans for diversification are well in hand and the demand for carding engines in the textile industry continues to be satisfactory. It is anticipated that improvements will be recorded in the Company's current financial year.... Other associate units in the group continues to make progress."

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 19.76 *cum-div.* On an *ex-div.* basis, the net yield works out to 4.6 per cent per annum.

NEW SHORROCK MILLS' RESULTS IMPRESSIVE

DIVIDEND RAISED - BONUS ISSUE

FOLLOWING the pattern set by cotton mills in the Ahmedabad region, the Directors of the New Shorrock Spinning and Manufacturing Company Ltd. (Managing Agents: Messrs. Mafatlal Chandulal and Company Ltd.) have recommended the issue of new equity shares to existing shareholders in the ratio of two new shares for every five already held. The new shares are to be issued by capitalising Rs. 28.11 lakhs out of the Rs. 93.18 lakhs standing to the credit of the share premium account. This account was created only during 1960, being the difference between the net assets of the Shorrock Spinning and Manufacturing Company Ltd. taken over on amalgamation as from 1st January 1960 and the face value of the ordinary shares of Rs. 125 each issued as purchase consideration to the shareholders of the said Company. The bonus shares are to be issued, in addition to the exceedingly attractive dividend of Rs. 60 per share or 48 per cent, subject to deduction of tax, already declared. For 1959, the shareholders of the New Shorrock had received a dividend of Rs. 55 per share (Rs. 40 *plus* a bonus of Rs. 15) subject to deduction of tax, while those of the Shorrock Mills were paid a dividend of Rs. 30 per share (Rs. 25 plus a bonus of Rs. 5) subject to deduction of tax.

The higher rate of dividend for the year 1960 has been justified by further improvements in sales and profits as is disclosed in the following table.

(Value in lakhs of rupees)

	For the year ended 31st December	
	1960	1959
Sales of cloth, yarn and waste	5,39.22	4,88.58
Other income	13.40	14.54
Closing stocks of finished goods	45.13	43.32
Raw materials and stores consumed	244,.21	2,18.67
Salaries, wages and bonus	1,18.50	1,11.12
Other expenses	44.71	40.68
Gross profit	1,47.01	1,28.81
Managing Agents' commission	11.07	11.25
Provision for :		
Depreciation	18.51	15.23
Taxation	47.40	42.30
Net profit	70.03	60.13
Development rebate reserve	10.67	6.02
General reserve	15.00	10.00
Dividend equalisation reserve	10.00	12.00
Ordinary dividends	33.73 (48%)*	31.65 (45%)*
Carry forward	2,76	1.91

* Subject to deduction of tax.
† 44 per cent. subject to deduction of tax to the shareholders of New Shorrock and 30 per cent. subject to deduction of tax to the shareholders of Shorrock Mills.

The figures for 1960 given in the balance-sheet and profit and loss account are not directly comparable with those for the previous year because the former represent combined figures, while the latter pertain to the New Shorrock unit alone prior to amalgamation. In preparing the above table, therefore, the results of operations of Shorrock Mills for 1959 have been combined with those for New Shorrock so as to get composite figures which can be directly compared with the figures for 1960.

It will be seen from the table that sales, gross profit and net profit have all shown a significant improvement during the year. Thus, sales have increased by Rs. 50.64 lakhs to Rs. 539.22 lakhs, gross profit by Rs. 19.20 lakhs to Rs. 147.01 lakhs and net profit by Rs. 9.90 lakhs to Rs. 70.03 lakhs. As a result of the rise in net profit, transfer to reserves has been stepped up from Rs. 28.02 lakhs in 1959 to Rs. 35.67 lakhs in 1960.

The financial position of the Company is extremely sound. The share capital of Rs. 70.28 lakhs (all in ordinary shares of Rs. 125 each) is supported by reserves that have reached the impressive total of Rs. 205.26 lakhs, including Rs. 93.18 lakhs credited to the share premium account consequent on amalgamation. It is no wonder, therefore, that the Directors of the Company have decided to issue bonus shares.

The gross block as on 31st December 1960 is valued at Rs. 277.73 lakhs, inclusive of value of assets (Rs. 40.52 lakhs) taken over on amalgamation and addition to fixed capital expenditure (Rs. 45.64 lakhs) during the year. After deduction from this amount the accumulated depreciation of Rs. 139.35 lakhs, the net block works out to Rs. 138.38 lakhs.

Current assets, including investment, aggregate Rs. 378.50 lakhs, of which the assets other than stocks alone account for Rs. 245.41 lakhs. As against this, current liabilities (including the short-term loans) amount to Rs. 180.49 lakhs.

The fully paid-up Rs. 125 ordinary shares of the Company are currently quoted at Rs. 2,040 *cum-div.* and *cum-rights.* The net yield works out to about 2.1 per cent

RAMNUGGER SUGAR'S SALES FALL

PROFIT, HOWEVER, BETTER

THANKS to the substantial increase in the quantity of sugarcane crushed, the gross profit of the Ramnugger Cane and Sugar Company Ltd. (Managing Agents: Anderson Wright Ltd., Calcutta) for the year ended 31st August 1960 as jumped up from Rs. 13.09 lakhs in 1959 to Rs. 24.91 lakhs. The profit is, of course, calculated after taking into account the current market value of sugar stocks lying unsold with the mill as at the end of August 1960 which amounted to Rs. 49.16 lakhs, as against Rs. 10.52 lakhs a year before. The sales as such of sugar produced by the mills declined from Rs. 85.19 lakhs to Rs. 61.07 lakhs, a fall of more than 28 per cent. The expansion of sugar output and molasses is clearly reflected in the increase in excise duty from Rs. 17.72 lakhs to Rs. 22.44 lakhs and production expenses at the factory from Rs. 44.29 lakhs to Rs. 62.16 lakhs. The Company's farm output has also risen quite markedly. Consequently and since agricultural expenses have risen only modestly from Rs. 18.32 lakhs to Rs. 19.63 lakhs, the farming operations have yielded a handsome profit of Rs. 9.74 lakhs (as against a bare Rs. 1.89 lakh in the previous year) which is more than one-third of the gross profit.

Out of the gross profit of Rs. 24.91 lakhs, Managing Agents' commission has been more than doubled from Rs. 1.08 lakh (for 1958-59) to Rs. 2.25 lakhs and provision for taxation has increased from Rs. 1.95 lakh to Rs. 8.20 lakhs; provision for depreciation is also a shade higher at Rs. 3.16 lakhs (Rs. 3.12 lakhs in 1958-59). The large tax liability explains why the net profit has risen by only Rs. 4.36 lakhs to Rs. 11.30 lakhs. The net profit, together with the sum of Rs. 10,000 brought in from the preference dividend suspense account and the unallocated surplus of Rs. 59,000 carried forward from last year's account, gives a total of Rs. 11.99 lakhs available for distribution. The Directors have judiciously retained Rs. 6 lakhs for being transferred to general and replacement reserves and Rs. 50,000 to the development rebate reserve. The ordinary dividend, subject to tax, has been increased from 21.3/7 per cent for 1958-59 to 30 per cent for 1959-60, which gives a net return of 21 per cent to shareholders. The return is quite handsome as compared with the tax-free dividend of 15 per cent distributed during the years 1956-57 and 1957-58.

The comparative results of the Company's working since 1956-57 are given in the following table:

(In lakhs of rupees)

	For the year ended 31st August			
	1960	1959	1958	1957
Sales of sugar and molasses	61.07	85.19	68.85	81.71
Stocks	49.16	10.52	22.74	33.59

* Includes sales tax.
† Subject to deduction of tax.

The crushing season of the factory which started on 4th December 1959 lasted for 112 days. The quantity of sugarcane actually crushed was 2,558,490 maunds, as against 1,904,559 maunds in 1958-59. The average sugar recovery, however, declined from 10.27 per cent in 1958-59 to 9.08 per cent. Out of the total sugarcane crushed during 1959-60, the Company's own farms supplied 1,608,761 maunds or about 63 per cent, the corresponding figure for 1958-59 being 1,039,318 maunds or only 54 per cent. The Directors' report states that the performance at the farms would have been much better but for the considerable damage caused to the standing cane crop by severe floods which inundated the whole area in October 1959. The Company enjoyed the benefit of the 50 per cent rebate in basic excise duty on the sugar produced in excess of the average production during the previous two seasons; the amount of rebate actually claimed was Rs. 2.42 lakhs. The export quota of the factory was fixed at 3,460 bags.

The paid-up capital of Rs. 20.60 lakhs comprises 4,000 six per cent cumulative preference shares of Rs. 100 each and 165,982 ordinary shares of Rs. 10 each. This is supplemented by surplus and reserves of Rs. 47.62 lakhs. The net block stands at Rs. 38.29 lakhs, the depreciation provided so far being Rs. 42.50 lakhs. The Company has an outstanding secured loan of Rs. 14.52 lakhs from the State Bank of India. The current liabilities and provisions (including the secured loan of Rs. 14.52 lakhs) aggregating Rs. 50.89 lakhs are more than adequately covered by current assets at Rs. 80.66 lakhs (stores, spares, loose tools Rs. 13.92 lakhs, stock-in-trade Rs. 49.32 lakhs, standing crop Rs. 11.66 lakhs, sundry debtors Rs. 0.17 lakh, loans and advances Rs. 4.94 lakhs and cash Rs. 0.09 lakh) which shows that the financial position of the Company is healthy.

The outlook for the current season (1960-61) appears to be bright. The factory crushed 3,638,095 maunds of cane with an average recovery of 9.62 per cent; the crushing operations ended on 7th April 1961. The quantity of cane crushed and the sugar output during the season are both said to be the highest on record. There has not been any change in the prices of either sugarcane or sugar, and the incentive of excise duty rebate is being continued.

The Rs. 10 fully paid-up shares of the Company are currently quoted on the Calcutta Stock Exchange at Rs. 29.25 *cum-div.* On *ex-div.* basis and at the current rate of dividend, the net yield on them works out to 7.7 per cent.

ADITYA MILLS LTD.

The Aditya Mills Ltd., which has been granted a licence for the setting up of a cotton mill with 25,000 spindles and 500 looms at Kishangarh in Rajasthan, is expected to enter the market for funds shortly. The foundation stone of the mill was laid by Mr. Mohanlal Sukhadia on 5th February 1961. Now that necessary electric power supply has been promised, the construction of the mill is being taken in hand. The Company has already acquired 56 acres of land and it proposes to purchase additional 44 acres.

The initial project cost for 25,000 spindles only is estimated at Rs. 1.10 crore. The Industrial Finance Corporation of India has granted a loan of Rs. 50 lakhs and the balance of Rs. 60 lakhs will be raised by issue of capital. The Rajasthan Government has agreed to take shares worth Rs. 15 lakhs. Approximately Rs. 20-25 lakhs worth of shares will be offered to the public for subscription. When the project is finally completed and goes into operation, the total project cost will be over Rs. 2 crores. The Company also desires to manufacture in due course staple fibre, rayon and boards, etc.

The promoters of the Company include Mr. Bhagirath Kanoria, His Highness Maharaja Fatesing Rao Gaekwad of Baroda, Mr. Basant Kumar Birla, Mr. Surottam P. Hatheesing and Mr. Atmaram Kanoria.

SOORAH JUTE EARNS LESS

DIVIDEND MAINTAINED

THERE was a rise of Rs. 12.05 lakhs to Rs. 111.01 lakhs in the sales of the Soorah Jute Mills Company Limited (Managing Agents: Hindusthan Investment Corporation Ltd.) during the year ended December 1960 as compared with the previous year. The rise in sales was more than neutralised by the marked increase in the cost of raw materials consumed, from Rs. 41.95 lakhs in 1959 to Rs. 64.24 lakhs in 1960. Other expenses were also slightly higher at Rs. 31.11 lakhs, as against Rs. 30.83 lakhs. The gross profit is, therefore, lower by Rs. 1.09 lakh at Rs. 12.66 lakhs. Of this, managing agents' commission takes Rs. 1.05 lakh (Rs. 1.10 lakh in 1959) depreciation Rs. 2.09 lakhs (Rs. 2.64 lakhs) and provision for taxation Rs. 4.15 lakhs (Rs. 4.41 lakhs). The net profit thus comes to Rs. 5.37 lakhs, as against Rs. 5.60 lakhs for 1959. Despite reduced profit, the dividend to ordinary shareholders has been maintained at Rs. 2.50 per share subject to tax or Re. 1.75 per share net.

The following comparative table reveals at a glance the financial results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	1,11.01	98.96	1,05.03	1,10.24

Carry forward	0.22	0.84	0.69	0.40

* Subject to deduction of tax.

The working results of the Company for 1960 must be viewed against the general background of the trading conditions in the jute industry, as a result of the setback to jute crop. Jute sowings, it will be recalled, were badly affected in both India and Pakistan during the months of April and May last year on account of drought conditions which prevailed in the jute-growing belts. The latest crop estimates for India and Pakistan are 5.3 million bales and 4.5 million bales, respectively. Consequently, the disparity between the prices of raw jute and jute manufactures widened greatly. Drawing special attention to this disparity, the Directors of the Company say in their annual report that, in order to meet this serious situation created by the short supply of jute and the abnormally high price for the fibre, the Indian Jute Mills Association regulated the production of the member mills by reducing working hours and the number of working looms from time to time. The mills worked 48 hours a week from the beginning of the year till 26th December 1960, when the hours were reduced to 45 per week. They were further reduced to only 42½ hours per week with effect from the 31st January 1961.

The paid-up capital of the Company at Rs. 24 lakhs consists of Rs. 10 lakhs in 10 per cent tax-free preference shares of Rs. 100 each and Rs. 14 lakhs in ordinary shares of Rs. 10 each. Reserves and surplus stand at Rs. 14.07 lakhs. The secured loan has increased from Rs. 12.65 lakhs to Rs. 19.54 lakhs, due to higher closing stocks of both raw materials and finished goods. The gross block of the Company amounting to Rs. 75.14 lakhs stands depreciated to Rs. 20.82 lakhs after providing Rs. 54.32 lakhs for depreciation. The book value of total investments is Rs. 13.51 lakhs, of which Rs. 9.38 lakhs are in unquoted investments. The quoted investments of Rs. 4.13 lakhs are made up of Rs. 3.72 lakhs in preference shares and Rs. 0.41 lakh in Government of India loans. And so it is not surprising that its market value is lower at Rs. 40.4 lakhs. The balance-sheet of the Company reveals a sound financial position, inasmuch as current assets aggregating Rs. 45.16 lakhs are well above current liabilities amounting to Rs. 20.18 lakhs to the tune of Rs. 24.98 lakhs.

The current market quotation of Rs. 10 paid-up shares is Rs. 22.62 *cum-div.* At this rate, and having the net dividend of Re. 1.75 per share, the net yield works out to 7.7 per cent.

A.E.I.'s INDIAN SUBSIDIARIES

Viscount Chandos, Chairman of Associated Electrical Industries Ltd. (A.E.I.), in his annual address to shareholders in London recently, said that, in India, both the local subsidiaries of the A.E.I. had had a good year. Orders for manufacture in India were almost doubled. "In November," Lord Chandos said, "Mr. Nehru opened the large manufacturing plant at Bhopal for which A.E.I. are consultants to the Government of India. We are very proud to have been entrusted with this task, one of the largest of its kind that has ever been undertaken in the world. The factory is designed ultimately to employ no less than 27,000 people, and has already begun to manufacture transformers and switchgear. It will progress to the production of the largest sizes of steam- and water-powered generating plant together with equipment for the electrification of India's railways and industries. "We particularly welcome the personal link between our engineers and Indian engineers which has been further strengthened during the year."

In his general survey, Lord Chandos, who disclosed that orders received by the Company had risen from £182 million to £223 million in the year, said: "It is rather a striking fact that, in 1960, A.E.I.'s total export order for steam turbo-alternators was more than that of any individual manufacturer in the world, and greater than those of all the other manufacturers in this country put together."

The New Great Insurance Company of India Ltd. had another year of progress in 1960. The net premiums in the fire, miscellaneous and marine departments rose from Rs. 35.87 lakhs, Rs. 25.90 lakhs and Rs. 18.17 lakhs in the previous year to Rs. 42.24 lakhs, Rs. 31.99 lakhs and Rs. 19.50 lakhs respectively. The departmental reserves have substantially increased from Rs. 49.06 lakhs in 1959 to Rs. 56.62 lakhs in 1960.

The net profit, after providing for taxation, amounts to Rs. 2,75,624. The Directors have proposed a dividend of Rs. 2.50 per share, subject to deduction of tax.

I. I. TRUST'S EARNINGS IMPROVE

DIVIDEND STEPPED UP

THE annual report of the Industrial Investment Trust (Secretaries and Treasurers: Premchand Roychand and Sons, Bombay) for the year ended 31st December 1960, provides a glaring instance of how the Government's taxation policy has adversely affected the genuine interests of small-scale investors. It will be recalled that the Company was incorporated in 1933 as a management trust to bring for the first time within the reach of the small investor the chief advantage accruing solely to large-scale investment, namely, diversification of investment portfolio as a means of achieving greater safety of capital. The money subscribed by the shareholders was invested in the shares and debentures of carefully selected companies with a proven record of earning potential and dividend and interest payments over a long period of time. Everything seemed to go well till 1959 when the changes introduced by the Finance Act of that year removed the provision of grossing up of dividends so far enjoyed by corporate investors and subjected dividends and interests to a deduction of tax at source at a flat rate of 30 per cent. Whereas all shareholders in general have suffered on account of this change, the shareholders of trust companies are the worst sufferers. For they have not only to put up with a 30 per cent cut in the income of their Company, derived essentially from dividends and interest, but also to bear a similar cut in dividends distributed to them as their share of the profits of the Company.

During 1959, the gross income of the Trust from which tax was deducted at source was Rs. 1.57 lakh or a little less than 23 per cent of the total income, while the tax so deducted amounted to about Rs. 71,000 only. In 1960, however, the full brunt of the change in the mode of taxation was felt and the Company's entire income became liable to deduction of tax at source.

The following comparative table gives the salient features of the Company's operations during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Dividends and interest	7.42	6.94	7.39	7.16
Tax deductable at source	3.37	..	..	..
Other income	0.62	0.11	0.09	0.13
Expenses	0.60	0.65	0.64	0.70
Interest on loans	0.81	0.17	0.02	..
Gross profit	10.00	6.23	6.82	6.59
Remuneration to Secretaries and Treasurers	0.59	0.52	0.62	0.50
Provision for taxation	2.70	..	..	..
Net profit	6.71	5.71	6.30	6.09
Taxation for prior years	1.05	1.05	0.13	2.36
Ordinary dividends	6.20 (6.20%)*	6.00 (6%)*	6.00 (6.00%)	5.50 (5.5%)
Carry forward	0.04	0.59	1.92	1.75

* Subject to deduction of tax.

Note :—The profit figures are exclusive of capital gains and losses on realisation of investments.

Income from investment has improved by Rs. 48,000 to Rs. 7.42 lakhs net, mostly as a result of higher ordinary dividends and enhanced rate of preference dividend made to accommodate the incidence of taxation at source. It will be observed that a credit of Rs. 3.37 lakhs has been assumed for the year under review on account of the tax deducted at source to give a gross income of Rs. 10.79 lakhs subject to taxation. Accordingly, a provision of Rs. 2.70 lakhs for tax contingencies has been found necessary for the first time.

In view of the slight improvement in income and the credit taken for tax deductions, the gross profit has increased by Rs. 3.77 lakhs to Rs. 10.00 lakhs. After deducting from this the remuneration of Rs. 59,000 to Secretaries and Treasurers and providing Rs. 2.70 lakhs for tax liability, the net profit has risen by Rs. 1.00 lakh to Rs. 6.71 lakhs. As a result of higher net profit, dividend has been raised to 6.2 per cent subject to deduction of tax, as against 6 per cent distributed in 1959.

The investment portfolio of the Company is well diversified as regards both industries and companies in the same industrial group; it includes shares and debentures of banks, public utilities and industrials as well as Government securities. In no case has the book value of the investment in any particular industrial group been allowed to exceed 25 per cent of the total book value of the entire portfolio. Thus, investments in miscellaneous companies account for 24 per cent of total investments, public utilities for 15.37 per cent, and textiles for 12.95 per cent, while, in other cases, share of investment is not more than 10 per cent of the total. The following table provides an interesting comparison between the percentage-wise distribution of the portfolio in the three main categories mentioned:

	1960	1959	1958	1957
Government securities and debentures	11.85	4.32	4.47	4.90
Preference shares	16.36	17.75	15.62	15.44
Ordinary shares and stocks	71.79	77.93	79.91	79.66
Total	100.00	100.00	100.00	100.00

The approximate market value of the Trust's investments as at 31st December 1960, or in the case of unquoted investments at book value, was higher than the total book value by approximately 14.58 per cent.

The Rs. 100 fully paid up shares of the Trust are quoted at Rs. 79 *cum-div.* The net yield on *ex-div.* basis works out to 5.8 per cent.

The steady progress made by the New India Fisheries Ltd. since its inception five years ago is reflected in the working results of the Company for the year ended 31st March 1961. The Company operated its original fleet of four trawlers and landed 4,314 tons of fish valued at Rs. 26,93,026, as compared with 3,137 tons valued at Rs. 20,81,413 in the previous year. The Directors of the Company have recommended the following dividends:

(Rs. per share)

	1960-61	1959-60
Ordinary shares	12.00	—
Deferred ordinary shares	12.00	—
6 per cent tax-free cumulative preference shares	7.80	1.80
Deferred preference shares	7.80	1.80

The above dividends are subject to deductic of tax under Section 18 of the Income-tax Act.

The Company's plans for expansion of i present activities have been approved by t Government. It will now extend its sphere operations to Cochin where the emphasis will l on the capture of shrimps (prawns) for expo abroad. For financing its expansion plans, t Company proposes to raise new capital amountir to Rs. 5 lakhs by issue of equity shares of Rs. 1(each. These shares will be offered to the existir shareholders of the Company in the ratio of tw shares for every five shares held.

* Net loss after providing for depreciation.

† Final debit balance after providing Rs. 55,000 for development rebate.

‡ After deducting the loss brought forward from the previous year.

Extracts from the Directors' report: During the year under report the Company has received Rs. 4,95,000 as loan from the N.I.D.C. Ltd., out of the sanctioned loan of Rs. 10 lakhs. The Company has repaid an amount of Rs. 2 lakhs as the first instalment towards the repayment of the said loan. It has repaid a further sum of Rs. 87,743 being the amount of sale proceeds of some old machinery in terms of the agreement with the N.I.D.C. Ltd. The balance of loan outstanding as on 31st December 1960 is Rs. 23,83,302. The Company's application to the N.I.D.C. Ltd. for the second loan of Rs. 40 lakhs has not yet been finalised. In view of the changed circumstances, the directors have since revised the application and reduced it to only Rs. 25 lakhs. They hope to secure this second loan shortly.

A sum of over Rs. 9 lakhs has been spent on purchases of new machinery. The principal items of machinery installed during the year are for dyeing, bleaching and processing of cloth.

The general working of the Company had been satisfactory. In spite of several difficulties which the industry had to face in general, particularly in obtaining cotton as also abnormal rise in the price of fuel, mill stores and wages, the Company has been able to show satisfactory results. The Wage Board award was given effect to from 1st January 1960 and it is estimated that this will account for approximately a rise of over Rs. 5 lakhs in the salaries and wages bill of the Company.

The trend of the cloth prices was however rising and the Government of India felt concerned at the same and urged on the Industry to take steps to arrest and reduce the prices in the interest of the consumers. In pursuance thereof the Indian Cotton Mills' Federation has advised all the Cotton Mills in the country to adopt the price stamping during the year on the level of a formula based on prevailing prices in August 1959. At the close of the year there has been another cut in the said stamped prices imposed by the Federation under advice from the Central Government. All these restrictions have considerably handicapped the progress of this Company. Representations have been made that the mofussil mills which are not equipped with modern machinery and which have been mainly employed in coarse and lower medium counts had to suffer a great deal in the past few years and therefore, special consideration should have been made for them for obligatory price stamping so as to partially mitigate their hardships. But no special treatment was allowed to such part of the industry.

During the year under report the Ormerods Healds & Reeds Factory worked satisfactorily and had shown a profit of Rs. 74,296 out of which the Company's share of profit comes to Rs. 37,148 as per the terms of agreement.

Accounts in brief as at 31st December 1960 are as under:—

Polson Ltd.

(*Managing Agents*: Messrs. Polson Agencies Private Ltd., Bombay.)

Annual General Meeting—9th June. Dividends are payable on and after 12th June.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales (butter, coffee, casein and flour)	1,37,89	1,29,73
Closing stock	14,58	15,79
Gross profit	16,04	14,39
Transfer to Mg. Agents' commission†	1,32	1,90
,, ,, depreciation	2,67	2,24
,, ,, taxation	5,75	5,20
Net profit	6,30	5,05
Adjustments	39	48
Appropriations:		
Total available balance	6,69	6,13
Transfer to reserves	59	58
Proposed dividends (taxable) ordinary	4,05 (15%)	4,05 (15%)
,, ,, preference	1,07 (6.66%)*	1,20 (6%)
Carry forward	68	80

N.B.—Adjustments include the balance brought forward from the previous year and excess provision of income-tax of previous year written back.

† Subject to adjustment.

* Less Company's tax at 20 per cent.

Extracts from the Directors' report: The sales of the Company's products increased from Rs. 1.23 crores in 1959 to Rs. 1.38 crores during the year under review, a rise of over 12 per cent. The sales during the year show substantial increase in Butter and Casein. Unfortunately, Coffee sales indicate a drop of about Rs. 9 lakhs mainly due to the difficulties in maintaining the Company's exports of this item. A difference of opinion between Indian Government and the Government of the importing country regarding the manner of financial settlement of the transactions has resulted in the loss of the Company's export business to the tune of Rs. 11 lakhs. This will show that sale of Coffee in the internal market has gone up by about Rs. 2 lakhs.

Orders for *Butter Churn* and *Automatic Stagger Stamping Press* have been placed with the manufacturers in New Zealand and West Germany respectively before the close of the year of accounts for the total value of Rs. 1,55,460, which would be received during the current year.

After the close of the year 1960, four further equity bonus shares have been issued against sixteen fractional certificates received by the Company.

The plant and machinery at the Company's Factories have been kept in good repair and their efficiency has been continuously maintained.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,99,400	Gross block —Depreciation	66,37,217 26,51,409
Reserves and surplus ...	18,76,869		
Other liabilities ...	20,24,944	Net block ...	39,85,808
		Current assets	38,90,465
		Investments	3,235
		Cash ...	7,21,705
Rs.	86,01,213	Rs.	86,01,213

Lucky Valley (Nilgiri Hills) Tea Estates Ltd.

(*Secretaries and Treasurers*: Messrs. Matheson Bosanquet and Co., Ltd., Belmont, Coonoor Nilgiris.)

Annual General Meeting—20th May.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	8,22	7,47
Closing stock	80	81
Gross profit	2,21	1,98
Transfer to Secretaries' and Treasurers' remuneration	16	14
,, ,, depreciation	17	14
,, ,, taxation	87	79
Net profit	1,01	91
Adjustments	36	30
Appropriations:		
Total available balance	1,37	1,21
Transfer to reserves	50	35
Proposed dividend (taxable)	50	50
	(10% p.a.)	(10% p.a.)
Carry forward	37	36

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Acreage*: The total area of the estate remains the same i.e., 562.19 acres distributed as follows: Tea in full bearing 257.80 acres; tea in partial bearing 9.14 acres; fuel clearings 51.28 acres and buildings, roads, jungle and waste land 243.97 acres.

Crop: A record crop of 3,51,427 (2,60,177) pounds of made tea was secured as against the estimate of 2,45,000 lbs. The Estate cost of production of made tea for the year was Re. 1.33 against the estimated cost of Re. 1.56 per lb. The average sale price of the teas for the season was Rs. 2.34 compared to Rs. 2.76 per lb. for the previous year.

Estimates for season 1961 are based on a crop of 2,65,000 lbs. to be harvested at a cost of Rs. 157.88 per pound.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Gross block —Depreciation	9,61,424 78,039
Reserves and surplus ...	1,57,686		
Other liabilities	3,54,335	Net block ...	8,83,385
		Current assets	1,19,253
		Cash ...	9,383

Presidency Jute Mills Co., Ltd.

(*Secretaries and Treasurers*: Messrs. McLeod & Co., Ltd., Calcutta.)

Annual General Meeting—16th May. Dividends are payable on and after 1st June.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1960	1959
Total sales	1,06,96	1,14,57
Closing stock	25,42	30,56
Gross profit	7,65	10,00
Transfer to Mg. Agents' remuneration	50	79
,, ,, depreciation	3,83	3,57
,, ,, taxation	1,16	2,55
Net profit	2,67	4,09
Adjustments	74	2,53
Appropriations:		
Total available balance	3,41	6,61
Transfer to development rebate reserve	1,18	1,48
,, ,, general reserve	..	2,00
Proposed dividend (taxable)	2,00 (8% p.a.)	2,50 (10% p.a.)
Carry forward	23	63

N.B.—Adjustments include the balance brought forward from the previous year, credits relating to previous years written back, dividends forfeited if any and amounts transferred from reserves if any.

Extracts from the Directors' report: Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July 1960, have been valued at market rates.

Unfortunately sporadic labour trouble was experienced during the period under review culminating in a closure for 25 days during July and August, 1960 due to an illegal strike. However, there has been an improvement in labour relations during the current year.

The reduction in the stock position of raw jute in India at the end of June 1960, and the small Indian crop not being sufficient to allow normal working during the current season, it has been necessary to curtail production throughout the Industry to conserve jute supplies.

The prospects for the current year are not particularly encouraging and will certainly be adversely affected by the increase in overhead costs which will arise through the lower level of production.

Messrs. McLeod & Co., Ltd., resigned their office as managing agents of the Company as from 31st July 1960. At the extraordinary general meeting held on 28th July 1960, Messrs. McLeod & Co., Ltd. were appointed secretaries and treasurers of the Company for a period of five years commencing from 1st August 1960 with the approval of the Central Government.

Accounts in brief as at 31st July 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,06,800	Gross block —Depreciation	1,06,08,633 75,93,215
Reserves and surplus ...	11,64,587		
Other liabilities ...	43,50,947	Net block ...	30,15,418
		Current assets	45,76,638
		Investments	3,38,272
		Cash ...	84,606
Rs.	80,15,334	Rs.	80,15,334

Notices

1. Director, Railway Stores, Ministry of Railways (Railway Board), Room No. 337, Rail Bhavan, Raisina Road, New Delhi.
2. Director General, India Stores Department, Government Buildings, Bromyard Avenue, Acton, London W-3.
3. Director, India Supply Mission, 2536, Massachusetts Avenue, N.W., Washington 8 D.C.

Tenders will be received by the undersigned upto 12.00 Hours on the 25th May, 1961, and opened in the office of the Railway Board at 2.30 p.m. on the same day.

G. P. BHALLA,
Director, Railway Stores,
Railway Board.

NEW DELHI,
Dated 26th April 1961.

THE KIRLAMPUDI SUGAR MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting of the above named Company will be held at the Registered Office of the Company at Pithapuram (East Godavari District) on Monday the 29th May, 1961 at 2-30 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th June 1960.
2. To appoint Directors:
   (i) In the place of Sri R. P. Sinha who retires under Article 131 of the Articles of Association of the Company and who being eligible offers himself for re-appointment.
   (ii) In the place of Sri Ravu Suryarao who retires by rotation and to consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company:

   "RESOLVED—and specifically declared pursuant to the provisions of Section 281 and other applicable provisions if any, of the Companies Act, 1956 that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to Sri Ravu Suryarao who has attained the age of 81 years and who retires by rotation and that he be and is hereby re-appointed a Director of the Company accordingly."
   (iii) In the place of Sri N. R. Pandya who retires by rotation and to consider and, if thought fit, to pass the following Resolution as a Special Resolution of which Special Notice as required under Sections 261 and 281 of the Companies Act, 1956 has been received by the Company:

   "RESOLVED—and specifically declared pursuant to the provisions of Section 281 and other applicable provisions if any, of the Companies Act, 1956 that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to Sri N. R. Pandya who has attained the age of 67 years, and who retires by rotation and that he be and is hereby reappointed a Director of the Company accordingly and in accordance with the provisions of Section 261 of the said Act, as he is also an Associate of the Managing Agents."
3. To elect Auditors and to fix their remuneration for the current year.
4. To consider and if thought fit, to pass the following Resolution:—

   "RESOLVED that pursuant to Clause (*d*) of sub-section (1) of Section 293 of the Companies Act, 1956 (as amended), and all other enabling provisions (if any), the consent of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount upto which moneys may be borrowed by the Board of Directors shall not at any time exceed Rs. 150 Lacs."

(By Order of the Board),
For KUBERA SUGAR MANAGERS LTD.,

SPECIAL BUSINESS

5. To consider and if thought fit to pass with or without modification the following as an ordinary resolution:—

   "Resolved that in respect of 4% 2nd, 3rd, 4th, and 5th Cumulative Preference Shares (Tax-free) of the Company, an additional dividend at 1.71% (Gross) subject to deduction of appropriate tax be paid for the year ended 30-9-1959 out of the profits of the Company for the year ending 30-9-1959, payable to those 2nd, 3rd, 4th and 5th 4% Preference Shareholders whose names appear as such holder of shares in the Register of Members of the Company as on 19-5-1960."
6. To consider and if thought fit to pass with or without modification the following as an ordinary resolution:—

   "Resolved that this General Meeting of the Shareholders of the Company hereby gives its consent to the Board of Directors of the Company for borrowing moneys for the purposes of the Company even though the moneys to be borrowed together with the moneys already borrowed by the Company (apart from the temporary loans obtained from the Company's Bankers in the ordinary course of business) may exceed the aggregate of the paid-up capital of the Company and its free Reserves, that is to say, Reserves not set apart for any specific purpose upto a maximum limit of Rupees Two Crores (Rs. 2,00,00,000) at any time."
7. To consider and if thought fit to pass with or without modification the following as a Special Resolution:—

   (a) That in Article 10, page 7, lines 9 and 10, the words, "is confirmed. . . . holders of the shares," be substituted by the words, "with the sanction of a Special Resolution passed at a separate meeting of the holders of the issued shares."

   In the same Article and on the same page lines 16 to 15 beginning with the words, "and supported. . . . issued shares of the class," be deleted.

   (b) That in Article 13 at page 8 for the word, "new" wherever it occurs the word, "further" be substituted and in the same Article in line 4 after the word "meeting" the words "by a Special Resolution or with the sanction of the Central Government as provided for in Section 81 of the Act," be added.

   (c) That on page 10 in Article 20 line 4 after the words, "shall be made," add the words, "subject to the Rules as may be framed under the Act."

   (d) That on page 15 in Article 50 last but one line, after the words, "sent to the Transferee," add the words, "Transferor or to the person giving intimation of such transfer or transmission as the case may be."

   And in the same Article and in the same line after the word, "Transfer," add the words, "or transmission."

   And in the same Article in line 5, after the word, "Transfer," add the words, "or transmission."

   (e) That on page 16 in Article 55 line 3, substitute the figure, "18" by figure, "84."

   That in the same Article on page 17 in line 8 the words, "one month," be substituted by the words, "three months."

   (f) That on page 19 in Article 67 as amended by a Special Resolution, the words, "eight months" be substituted by the words, "six months."

   (g) That on page 20 in Article 72, line 21, the words, "nature and extent of the interest," be substituted by the words, "the nature of the concern or interest."

   (h) That on page 29 in Article 112 lines 7, 8 and 9 the words, "by himself. . . as such Director," be substituted by the words, "and no such Director shall act as a Director of the Company unless he has within 30 days of his appointment signed and filed with the Registrar his consent in writing to act as such Director."

   (i) That on page 30 in Article 116 at the end of the Article substitute, "comma" for "full-stop," and add the words "provided that not more than two months shall intervene between the last day of the calendar month in which such meeting is held and the date of the next meeting."
8. To consider and if thought fit to pass the following with or without modification as an ordinary resolution:—

   "Resolved that the Company hereby approves of the appointments and consents to the continuance as the case may be of the following as Dealers of the Company for a period not exceeding five years commencing from the dates of such appointments and for the products and the area respectively set out against each subject to any variation that may be made in the terms of their appointments including changes in Areas and Products and subject also to the conditions that the arrangements may be terminated earlier by one month's notice on either side:—

Claims on behalf of holders of shares held on blank transfer will not be entertained.

3. Explanatory Statement as required by Section 173 of the Companies Act 1956 has been issued to all Shareholders.

THE ANDHRA BANK LIMITED

SPEECH OF CHAIRMAN, MR. S. R. Y. SIVARAMA PRASAD BAHADUR

HIGHER INTEREST ON DEPOSITS AFFECTS BANKS

THE Thirty-seventh Annual General Meeting of the Andhra Bank Limited was held at Masulipatnam on Friday, 12th May 1961. In his speech at the Meeting, Mr. S. R. Y. Sivarama Prasad Bahadur, M. L. A., Rajah Saheb of Challapalli, stated that, since the banks were now forced to increase their interest rates on deposits, the year 1961 would be a "hard" year for banks in general.

The following is the full text of the Chairman's speech:

"I have great pleasure in extending to you all a hearty and warm welcome to this 37th annual general meeting of our Bank. The year 1960 opened with bright prospects and great expectations but ended with disappointments. The rift between the two power blocks continued and the tension in the world remained unabated without any hope of peace to mankind. The uncertain political conditions had their impact on the world economy. The improvement in economic conditions was not up to expectations. There was, however, no setback. Industrial development continued but at a slower pace and the price levels were kept under check through monetary methods adopted in every country. The rise in the cost of living was only small and there was improvement in living standards. There was increased economic activity in the underdeveloped countries also, though not to the same extent as in the advanced countries.

Industrial Expansion

"The trends in our country were also similar to the world trends in several respects. Industrial production was higher, giving more opportunities for employment especially in technical spheres. Agricultural production which declined in 1959-60 showed substantial improvement in 1960-61. Though the general price levels showed an upward trend and increased by about 6.5 per cent, the prices of foodgrains remained fairly stable. Unlike in the previous years, the cost of living went up only to a small extent It may be said that due to the measures taken by the Government and the Reserve Bank of India, Indian monetary conditions were satisfactorily maintained except that there was a large scarcity of foreign exchange with sluggish exports and spurt in imports. The year 1960 marks the end of the second Five-year Plan and the beginning of the third Plan with an investment target of Rs. 10,000 crores, out of which Rs. 4,000 crores are allotted to private sector. With the monetary policies well directed, banking can play a vital role in the successful implementation of the third Plan.

"The taxation proposals in the recent Central Budget increase the tax burden in the country, which is already the heaviest-taxed in the world. With the reduction in the deficit financing and the indirect taxation increasing the cost of production and cost of living, monetary conditions become stringent making it a hard job for banks to mobilise deposits and employ the same for productive enterprises.

Credit Control

"The Reserve Bank of India, in addition to selective credit controls, adopted quantitative measures to restrain the flow of bank credit. To control the boom on stock exchanges a margin of 50 per cent was prescribed for advances against equity shares. Scheduled banks were required to maintain with the Reserve Bank of India additional balances equivalent to 25 per cent of the increase in their total liabilities which was subsequently raised to 50 per cent. With the advent of the busy season, these restrictions were relaxed. It also imposed penal rates of interest on borrowings of commercial banks beyond a prescribed quota and directed them to increase their average lending rate by half a per cent. A ceiling was also placed on interest rates to be offered on certain types of call and short-term deposits, which was later withdrawn. It was thought that these measures would yield more effective results than the normal Bank rate pocedure. On the other hand they weakened the gilt-edged market and made it difficult for banks to meet the growing needs of an expanding economy. It also led to the diversion of resources from organised banking sector to unorganised market to the detriment of banking economy.

"The year 1960 was a hard year for Indian banking. With the rise in the tempo of industrial development, the demand for bank credit continued throughout the year even during the slack season, while at the same time the rate of growth of bank deposits slowed down. While the scheduled banks' credit expanded sharply by about Rs. 182 crores, the total deposit additions amounted to about Rs. 60 crores only. In 1959, bank deposits exceeded the notes in circulation but a reverse trend was noticed in 1960. These features resulted in a severe strain for banks right through the year. The higher level of bank credit during the year and the measures taken by the Reserve Bank of India in making the credit costly were responsible to some extent for the higher profits earned by the banks in the year 1960. This was, however, a temporary phase. Banks are now forced to increase their interest rates on deposits in view of the monetary conditions and the year 1961 would be a hard year for the banks in general. It is easier to pay more for deposits than to charge more on advances.

Amalgamation

"With the failure of two scheduled banks, an atmosphere of uncertainty prevailed in the banking world and the Reserve Bank of India and Government had to take steps to infuse confidence in the public and to ensure the soundness of the banking system in India. With a view to implement their policies and to have viable units, the Reserve Bank of India has launched upon a programme of amalgamation of banks. Deposit insurance scheme is also under their active consideration.

"The Indian Companies Act, 1956, which created anomalous positions for banks, was recently amended under Act No. 65 of 1960, which, though it rectified some of the difficulties found in the working of the banks, still left untouched many other ambiguous provisions. Though the Companies Act provides for seeking exemption from branch audit, your Directors do not wish to take advantage of this, as in their view a yearly audit of all the branches of the Bank by independent authorities is a desirable feature.

Rise in Deposits

"Coming to the position of our Bank, our deposits increased from Rs. 12.90 crores to Rs. 14.78 crores and our advances decreased from Rs. 9.11 crores to Rs. 8.85 crores which is a healthy feature. The investments which stood at Rs. 5.12 crores increased to Rs. 5.25 crores at the end of the year under review. The gross income increased from Rs. 84 lakhs to Rs. 101 lakhs and the net profits from Rs. 9.63 lakhs to Rs. 11.57 lakhs, after paying one month's salary as bonus to staff and making all necessary provisions. The percentage of total earnings to total working funds stood at 6.64 (last year 6.24) while the percentage of net profits to total working funds stood at 0.75 (last year 0.71). The above figures indicate a satisfactory progress in the working of the Bank for the year 1960. It has been the endeavour of your Directors to strengthen the Bank's reserves from time to time and with this view substantial amounts have been transferred to the reserve fund account. Directors have recommended a dividend of 8½ per cent for the half-year ended 1960, which with the interim dividend of 7½ per cent already declared, makes a dividend of 8 per cent, subject to tax, for the whole year.

"A branch of the Bank was opened in the city of Bangalore during the year under review and arrangements were made for the opening of a branch in the great city of Bombay which could only be finalised, and the branch opened, this year in January 1961. The opening of a branch at Bombay is the fulfilment of a long cherished desire. The Bank's building at Hyderabad, the capital of Andhra Pradesh, and at Vijayawada are nearing completion.

Labour Relations

"The relationship between the management and the staff has been cordial during the year under review and I am sure if these good relations continue and they work with zeal and enthusiasm, the Bank will grow from strength to strength to occupy a leading place among banks in India with a view to render greater service to the country.

"Before I conclude, I would like to place on record my sincere thanks to my colleagues on the Board and to Mr. Tadepalli Sriramulu, Managing Director, for their valuable services to the Bank. I also thank the General Manager and all members of staff who worked hard and served the institution with devotion. I am confident that the Bank has a great future and will maintain its traditions of service contributing its mite to the development of the country's economy."

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *10th May*

Conditions in the short-term money market were fairly tight during the week under review. The demand for funds was running at a high level, but supplies were not sufficient so that borrowers found it difficult to get their requirements in full. Consequently, the banks had to seek accommodation from the Reserve Bank of India. The interest rates remained firm at their previous levels. For purposes of record, we give them below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	5
Other banks	5
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-day Treasury bills of the Government of India sold through weekly tenders showed that the total amount offered and accepted was the same as that invited, namely, Rs. 2 crores. The average rate of accepted tenders was unchanged at 2.750 per cent per annum. 91 days' intermediate Treasury bills sold from 3rd May to 6th May were of the order of Rs. 1.08 crore, as against Rs. 2.55 crores last week. Their sales are being resumed from today upto 13th May.

An expansion of Rs. 19.95 crores in notes in circulation is disclosed by the statement of the Reserve Bank of India for the week-ended 5th May 1961, bringing the total to Rs. 2,002.38 crores. As the notes held in the Banking Department have registered a decline of Rs. 23.17 crores, the notes issued have fallen by Rs. 3.22 crores only. There has been no change in foreign securities which stood at Rs. 113.01 crores, but, since balances held abroad have gone up by Rs. 7.36 crores, the total foreign assets have risen by a corresponding amount to Rs. 130.69 crores. Deposits of banks with the Reserve Bank of India have advanced by Rs. 3.64 crores, taking up their total to Rs. 81.80 crores. The assets side shows an expansion of Rs. 3.02 crores in other loans and advances; they now stand at Rs. 128.49 crores. Of these, borrowings against usance bills are of the order of Rs. 21.40 crores. Over the week, they have gone up by Rs. 31 lakhs.

The Scheduled banks' statement for the week ended 28th April 1961 shows an increase of Rs. 6.10 crores in demand deposits and Rs. 3.32 crores in time deposits. Over the week, the deposits of the State Bank of India have declined by Rs. 1.28 crore. Their borrowings from the Reserve Bank of India have dropped further by Rs. 3.19 crores, on top of a fall of Rs. 15.55 crores in the previous week. The borrowings from the same institution against usance bills have gone down by Rs. 4.72 crores. The scheduled banks have also borrowed less from the State Bank. Borrowings of demand nature fell by Rs. 14.23 lakhs and those of time nature by Rs. 53.17 lakhs. On the assets side, advances and bills discounted (bank credit) have shrunk by Rs. 84 lakhs, bringing down their total to Rs. 1,301.12 crores, as against Rs. 1,130.38 crores a year ago. But, as the advances and bills of the State Bank have declined by Rs. 4.22 crores, the other Scheduled banks' portfolio of this item must have actually increased by Rs. 3.38 crores. The investments of the Scheduled banks as a whole have registered a substantial improvement of Rs. 24.09 crores over the week, of which the share of the State Bank alone is of as much as Rs. 21.36 crores.

The activity in gilt-edged market was restricted throughout the week. Most of the institutional investors were inclined to reserve funds for the forthcoming loans of the Central Government and so buying interest was not in evidence. Actually the prices of some securities tended to fall. In the Central section, 3 per cent. 1986 Conversion loan shed 30 nP to Rs. 73.30; 3 per cent 1963-65 dropped 10 nP to Rs. 98.65; 3½ per cent. 1964 National Plan lost 5 nP to Rs. 99.90. All other Central loans were unchanged. In the States' loan section, 4 per cent. 1969 loans of Madras, U.P. and Mysore all closed 5 nP lower at Rs. 98.35. Other States' issues were unaltered.

In the foreign exchange section, the rupee strengthened a little in relation to the U.S. dollar. While the banks' selling rate was unaltered at Rs. 478.75 per 100 dollars, the buying rate changed from Rs. 475.50 to Rs. 475.25 per 100 dollars. The pound sterling in the New York spot and three months' forward exchange sections showed a divergent trend. Thus, over the week, spot sterling declined by 0.010 cent while the forward gained 0.010 cent. The latest available rates are: 279.480-279.510 cents per £ for spot and 278.270-278.300 cents per £ for three months' forward.

METALS FIRMER

(From Our Own Correspondent)

CALCUTTA, *9th May*

Firmer conditions were in evidence in the metal market during the week under review. Greater demand in the face of limited supplies contributed to the rise in prices. The rise in the price of tin was again a feature. Demand was higher, but supplies were limited. The price opened at Rs. 1,299.00 per 100 kgs. and steadily rose to close at Rs. 1,322.75. The price on the London Metal Exchange also hardened. Higher advices were received from Singapore also. The announcement that, in accordance with the Tariff Commission's recommendation, the Metal Corporation of India would be exempt, with retrospective effect from 10th August 1958, from the obligation to reduce the price of zinc for every increase in lead price above Rs. 1,123 per ton was hailed with satisfaction. Electrolytic zinc was quoted here firm at Rs. 319.75 per 100 kgs. Demand was just normal. On the London Metal Exchange, the price eased to £83¼ a ton from £83¾. Copper scrap was in greater demand, with the berry scrap hardening from Rs. 479.50 to Rs. 482.25 per 100 kgs. and utensil scrap from Rs. 447.50 to Rs. 450.00.

MARGINS IN BULLION CONTINUE

(From Our Own Correspondent)

BOMBAY, *10th May*

The bullion market ruled easy in the first two sessions of the week under review but picked up strength on Saturday which persisted yesterday and today too. The earlier easiness was due to selling by spot houses, while fresh buying support was at a low ebb. Operators were generally inclined to feel that slack season for offtake had almost commenced. Consequently, silver suffered a setback to values. In sympathy, gold ruled dull, though ready prices tended to move up. The sentiment of the market improved on Saturday when, under the impetus of local bear-covering and firm advices from Calcutta, the white metal staged a recovery. The recovery gathered momentum in the subsequent sessions also, thanks to reports of enlarged offtake in Rajasthan and Delhi. Nevertheless, today's closing rates for silver were lower than those at the end of last week. Gold, however, was subjected to renewed selling on rumours of contraband arrivals and poor demand. Values, as a result, moved down, though a slight recovery was in evidence today.

The daily average arrivals of silver were higher than in the previous week, being 17 bars, as against 14 bars, while actual offtake was lower at an average of 16 bars, as against 20 bars. The reverse was the case in gold. Thus, the average arrivals were no more than 6,250 tolas (11,750 tolas last week), whereas offtake was slightly better at 4,500 tolas (4,250 tolas). The floating stocks are estimated at 40,000 tolas of gold and 400 bars of silver.

A feature of trading in the bullion market during the week was that the bulls in *Adhik* (first) settlement in both gold and silver were required to pay margins throughout the week. The margin, in gold, which was Rs. 8 per 10 grams on Wednesday last week, was raised to Rs. 20 on Thursday the 4th inst., since the rate for transferring commitments from this settlement to the second settlement was more than a rupee against bears; it was actually Re. 1.40. The margin was, however, reduced to Rs. 8 from yesterday, as the backwardation rate declined to 95 nP and further to 80 nP today. In silver, the *badli* payable by bears for getting commitments transferred from the first (*Adhik*) to the second settlement was more than a rupee—the actual rate today was Re. 1.45, as against Re. 1.60 on Wednesday last—margin at the rate of Rs. 300 per bar was operative on bulls in the first settlement throughout the week.

The premium commanded by ready gold and silver declined further during the week—from Rs. 2.45 to Re. 1.25 in the former and from Rs. 3.50 to Re. 1.50 in the latter.

Adjustment rates fixed today were Rs. 119.40 per 10 grams of gold and Rs. 199.10 per kilogram of silver. The corresponding rates for last week were Rs. 120.70 and Rs. 201.60, respectively.

There was a rise in the gold content in Kolar gold fields during the first quarter of 1961, according to the Chief Minister of Mysore. The ore actually milled was 151.168 tons, as against 152.738 tons in the previous quarter. The grade of ore obtained was 4.82 penny-weights, as against 4.56 penny-weights, the gold extracted being 36,421 oz., as against 34,804 oz. The total earnings were Rs. 123.34 lakhs, those in the preceding quarter being Rs. 130.15 lakhs. The continued growth of ore reserves at the planned rate and the promising results following development work both laterally and in depth in the Hatti gold mines, it is said, justifies the expectation that the mine will be in a position to produce at the rate of 1,000 tons of ore daily by September 1964, as against about 400 tons at present.

The following table shows the trend of the market during the week under review:

	10-5-1961 (closing)	High	Low	3-5-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine) ..	119.65	122.00	119.20	120.95
Forward:

New York—				
Silver	91.875 cents	—	—	91.875 cents

* 31st May settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *10th May*

In distinct contrast to the subdued tone depicted last week, cotton futures ruled firm during the week under review. The firmness was engendered mainly by the release on the 5th inst., of an export quota for 50,000 bales of cotton stapling 23/32". Although the quota was not altogether unexpected, to some sections of the trade, it was a pleasant surprise in that the announcement came close on the heels of the reported recommendation of three leading cotton trade bodies in the City (East India Cotton Association, Cotton Buyers' Association and Bombay Cotton Merchants and Muccadams' Association) that the consideration of an export quota for Kalagin and Wagad, which too qualify for export under the latest quota, be postponed for a later date. Further, strong rumours that an export quota covering 3" and 25/32" cotton was also likely and the news that the Indian Cotton Mills Federation had started buying "distressed" cotton in Gujarat led to considerable speculative buying which resulted in a sharp spurt in futures prices.

From the opening level of Rs. 567.50, Jarilla August contract advanced, thanks to support induced by quota rumours, to Rs. 569 on Friday and spurted to Rs. 575 the next day, following the announcement of the quota. The upward trend gathered momentum in the subsequent sessions and the contract touched the week's highest level of Rs. 578.50 yesterday. Opening fractionally lower at Rs. 578 today, the contract recovered the loss but relapsed to Rs. 576 on profit-taking. Renewed support, that emerged at this level, pushed up the contract again to Rs. 578 today. The net gain over the week is Rs. 10.

In the spot section, most of the popular varieties attracted only the usual interest during the first half of the week, but, on reports that the Indian Cotton Mills Federation had started buying certain varieties of Gujerat cotton such as Kalyan, Vijay, and Surti, the mills were more eager to make fresh purchases. Prices, as a consequence, hardened.

Exportable varieties, as per the latest quota, such as Kalagin, Wagad, Moglai, Kalyan and inferior varieties of Punjab cotton, were much in demand. Kalagin and Wagad were hot favourites of shippers and their prices even pierced the ceiling at one time. Staple varieties also attracted the attention of exporters in anticipation of quota.

The export quota, as noted above, was not unanimously welcomed. A section of the trade would have preferred an export quota for Bengal *Deshi* immediately and for other varieties after some time. No one, however, doubts that the quota would be absorbed soon. Export sales already concluded on a subject-to-licence basis are said to be as much as 70,000 bales, as against the quota of only 50,000 bales, so that shippers would not get more than a *pro-rata* share.

Mill demand for foreign cotton was evident in East African and Sudan cotton. Moderate interest was reported in U.S. cotton. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

L147 1,000; Kalyan 800; Gadag Laxmi 1,001; American on sample 1,255; Sudan G2L 1,525.

Karachi cotton futures ruled firm during the week. A revival of export interest and improved domestic mill demand touched off a general buying movement which led to a smart rise in futures values. N.T.R.G. May firmed up from Rs. 69.45 to Rs. 70.15. The July contract advanced from Rs. 69.95 to Rs. 70.15. Spot values too tended to harden. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 97.50; Punjab *Deshi* 95; 4F Punjab Roller 85.95; S.G. 90.95; L.S.S. Punjab Roller 88.95; S.G. 93.45; N.T. Roller 92.95; S.G. 96.95; 289 F Punjab Roller 94.95; S.G. 101.45.

The easy trend noted in the Alexandria cotton futures market last week gathered further momentum during the week under review. In spite of the release of a global import quota for 200,000 bales, demand from India was slack. European buyers too were reserved. Keen competition from Sudan continued to restrict demand for Egyptian cotton. Under pressure of selling, both the long-staple Karnak and medium-staple Ashmouni contracts receded further. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 69.02; July 69.95. *Ashmouni*: June 61.83; August 61.65.

A divergent trend was witnessed on the Liverpool Cotton Exchange during the week. While near deliveries of both the American and American type contracts were easy, the more distant positions ruled steady. The steadiness of the latter was due to higher advices from New York. Mill buying in new crop positions was also a helpful factor. The switch over of purchases from the nears to the distants and profit-taking were responsible for the easiness of the near deliveries. The Sudan cotton contracts in Liverpool were quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end quotations:

American cotton one inch staple contract: May 24.10 (24.20); July 24.15 (24.20); October 24.05 (24.05); December 24.30 (24.30).

American cotton mixed growth contract: May 24.45 (24.55); July 24.50 (24.55); October 24.30 (24.50); December 24.70 (24.70).

Sudan: May, July, September 31.75.

Fully steady conditions prevailed in the New York cotton futures market during the week. In spite of reports of a further increase in certified net stocks, values were fully maintained, thanks to support prompted by the continued firmness of the spot market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	9-5-61	2-5-61	25-4-61
Spot	34.00	33.90	33.80
May	32.75	32.75	32.60
July	33.44	33.39	33.25

COMMITTEE FOR ART SILK YARN DISTRIBUTION

(From Our Own Correspondent)

BOMBAY, *10th May*

Traders in yarn have noted the Textile Commissioner's announcement regarding the decision of the Central Government to form as a private company a rayon and synthetic textiles development corporation with its registered office at Bombay. The details regarding the functions that will be assigned to the proposed corporation are not available. The only information given in the official Press note is this: The authorised share capital of the company will be fixed at Rs. 10 lakhs, divided into one thousand equity shares of Rs. 1,000 each. The shares will be allotted only to organisations of manufacturers/exporters/traders of art silk/yarn in accordance with the proportion of their representation on the board of directors. The representation of the various art silk interests on the board of directors of the proposed Corporation shall be fabrics manufacturers six, yarn spinners six, exporters of fabrics three, yarn merchants one and Government nominees two.

Pending the establishment of the Corporation, the Government has decided to set up an advisory committee to advise the State Trading Corporation in regard to the import and distribution of art silk yarn against advance licences issued under the export promotion scheme for art silk fabrics. The Committee will also advise the Textile Commissioner with regard to the formation of the above Corporation. This Committee will hold office until such time as the proposed Corporation is formed and starts functioning.

Yarn circles are carefully examining the implications of the aforesaid move.

A firm trend was in evidence in the yarn market during the week under review. Imported and indigenous art silk yarns met with good buying support inducted by fears of a possible shortage of supplies developing in the coming weeks. It was reported that even at present there was a shortage of ready goods, since the indigenous spinning units had still not made available supplies for the current quarter. Cupressa Bemberg yarn (60 x 1), however, suffered a setback to values following nervous liquidation by some bulls who had made large purchases recently. Staple fibre yarns scored handsome gains on expectations of enlarged demand from consuming centres. Cotton yarns were firm, thanks to increase in raw cotton prices.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	10-5-1961	3-5-1961
	Rs.	Rs.
Art silk yarn—		
80/1 Cupresa Bemberg (100 kg.)		
June	2,570.00	2,610.00
July	2,617.00	2,648.00
80 x 1 JP June	2,918.00	2,802.00
150 Japan (per 100 kg.)	1,658.00	1,618.00
150 Japan (per 100 kg.)	1,750.00	1,737.00
120 Italy (per 100 kg.)	1,625.00	1,585.00
150 Italy (per 100 kg.)	1,735.00	1,785.00
Staple fibre yarn— 40 x 2		
June (per 90.72 kg.)	921.00	899.00
Century (per kg.)	10.45	10.45
Kohinoor (per kg.)	10.71	10.52
Cotton yarn (per bundle of 10 lbs.)—		
20s Modern	18.75	18.75
20s New Great	21.50	21.50
20s Simplex	27.00	27.00
20s Madura	23.00	22.75
20s Pinky	26.50	26.40
20s Mahendra	68.68	68.68

OILSEEDS RALLY

(From Our Own Correspondent)

BOMBAY, *10th May*

The oilseeds market put on a distinctly cheerful appearance during the week under review. Storseeds made further headway with May contract in the forefront. The earlier fears of heavy sellers did not prove correct and the bulls were reported to be willing to take delivery of the maturing contracts. The contango charge fell to as low as 75 nP today, as against Rs. 2.13 last week-end and Rs. 5.12 a fortnight ago. The slow pace of arrivals from upcountry centres and pronounced strength in the spot section also induced bulls to extend their commitments. The U.S. enquiries for castor oil, no doubt, continued to be silent and the immediate prospects for any revival were uncertain, with reports of sustained arrivings by Brazil in the U.S. market. But this had no effect. The Brazilian castor crop for 1961, it may be noted, is estimated at 260,000 metric tons, an increase of about 56,200 metric tons, as compared with the previous year. The groundnut position staged a smart recovery from the sluggish conditions of last week. The recovery followed support at lower levels and limited arrivals from Gujarat. There were, however, moderate supply of summer crop from the South. *Vanaspati* manufacturers and crushers absorbed fairly large quantities towards the close of the week. Incidentally, U.S. exporters have been much handicapped by non-availability of shipping space to Canada, though the Government of India has extended the date for shipment of the present H.P.S. quota from the beginning of this month to the 31st inst., it is considered doubtful whether Indian exporters will be able to honour their commitments within the stipulated time. Linseed also moved up in sympathy with castorseeds and groundnuts. Cottonseeds, too, elicited better support following firm advices from raw cotton market. Sesame was firm.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	10-5-1961	3-5-1961	26-4-1961
Groundnut	Rs.	Rs.	Rs.
Nizam bold	53.25	52.75	53.00
Coromandel ready	53.50	52.75	53.50
Khandesh quality	53.75	53.25	54.00
Oil ex-mill ready*	22.50	21.90	21.95
Railway receipts*	22.00	21.65	21.70
Castorseed			
May 1961	176.62	175.37	173.50
September 1961	177.37	177.50	178.62

BLACK PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, *10th May*

Malabar black pepper, after presenting a soft tendency owing to lack of foreign demand, steadied up on reports that Rumania bought a sizable quantity and that there were good prospects of Russia and other East European countries coming in to buy in the near future to cover their autumn requirements. Ungarbled at Cochin moved down to Rs. 370 but improved later to Rs. 375, while garbled rallied to Rs. 386.50, after receding to Rs. 380. Despite liquidation, May delivery remained fairly steady at Rs. 395. July delivery moved between Rs. 404 and Rs. 410.

Spot in New York slowly gave way to $0.45½/46 for lack of grinders' demand. Grinders are reported to be potential buyers, though they are haggling for lower price. Once when they know that sellers are firm, they will come out to buy at the prices asked for.

Singapore is firmly held. There are no changes in the prices for both white and black pepper.

Arrivals from Sarawak improved, as dealers there wanted to export as much as possible before the export duty is raised. Chinese dealers in Singapore are also reported to be clinging to their holdings and are more prone to hoarding, in view of smaller arrivals from Sarawak and Indonesia and poorer crops next year.

Ready pepper in Bombay is nominally quoted at Rs. 202 per 50 kilos.

FAIR DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *2nd May*

A quantity of 505.000 kilogrammes were offered in Sale No. 18 held on Tuesday the 2nd May. Quality showed a further seasonal decline. The market met with good general demand. Buyers showed keen interest for plain and low medium description which were steady and occasionally dearer. Mediums and good mediums met with useful support at a decline of 5 to 10 nP. There was fair support for nilgiri teas and these declined irregularly by 25 nP. A few invoices showing improvement under this category were dearer to buy. Clean black leaf descriptions were a strong feature of the sale. Whole leaf grades were generally lower with flowery pekoes receiving better support. C.T.C. types and legg-cut types were easier by 20 to 30 nP.

	1961	1960
	Rs.	Rs.
Low mediums	4.40-4.50	3.95-4.05
Mediums	4.50-4.60	4.05-4.30
Good mediums	4.70-5.05	4.30-4.55
Nilgiri B.O.P.	Rs. 4.60-6.25	

The average price realised in Sale No. 18 was Rs. 4.65 per kilo as against Rs. 4.67 a week ago and Rs. 4.34 in the corresponding sale last year.

Dust Sale No. 18: 220,000 kilogrammes were offered in dust sale No. 18 held on 4th May. Quality showed a further seasonal decline. The market met with fair demand. At the beginning of the sale low mediums and mediums were easier by 20 nP and sometimes more, but as the sale progressed prices for these types hardened. There was a good support for useful colourey mediums which were fully firm. Clean black leaf descriptions were also in good demand and sold at fully firm rates. Stalky and fibrous kinds were weak and sold at much lower rates than last. Highgrowns were well supported although these frequently sold at easier rates. C.T.C. dusts were about steady, whilst C.T.C. types and legg-cut types were fully firm.

The average price realised in Dust sale No. 18 was Rs. 4.32 per kilo as compared with Rs. 4.36 a week ago, and Rs. 4.41 in the corresponding sale last year.

Export quota 1961-62: The Government of India has authorised the Tea Board to make an interim release of tea export quota for the year 1961-62 to the extent of 33 per cent of the best crop basis of the estates, pending final extension of export quota allotment for the year. Steps are being taken to allot the above quota to tea estates as early as possible.

1960-61 special license: The market is rather quiet and at present there are sellers at ½ nP per kilo for special licence.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale No.* 19.—6,00.000 kilogrammes. Good demand. Low medium and mediums irregularly 5 to 10 nP easier. Good mediums 10 to 15 nP lower. Nilgiris irregular and easier."

ORTHODOX TEAS RECEDE

(From Our Own Correspondent)

CALCUTTA, *9th May*

The announcement that the new tea season's first sale would be held on Monday the 15th inst., caused a diminution of interest in the dusts offered during last week's sale for domestic consumption. Usually, the season's sales do not begin earlier than 15th June, preceded by a few sales of small quantities of Darjeeling teas. The earlier commencement of the regular auctions is taken as an indication of the increased nature of the crop. More of new season's teas were shipped to London during the week.

Gardens in Assam have made satisfactory progress in regard to the crop and, therefore, in the first few sales, Assam teas would predominate. Darjeelings would also be offered, but the crop in gardens of Darjeeling and Dooars districts is not expected to be as much as that of 1960-61. Clean black teas are expected to draw interest from exporters. Both the U.S.S.R. and Turkey buy at this time of the year, and these countries have already given indications of their interest in the early offerings.

North Indian teas were dearer in Mincing Lane's sales held last week. London bidders also showed greater interest in Ceylon and South Indian offerings. This underlined the need for London buyers to replenish their stocks. U.K. stocks of tea were 148 million lbs. in the week ended 28th April, as against 150½ million lbs. in the previous week.

An interim quota for 1961-62 to the extent of 55 per cent of the crop basis of tea estates would be released by the Tea Board, it was announced during the week.

Dusts on offer in last week's sales for domestic consumption aggregated 23,551 packages. Demand generally declined, but orthodox teas were better than previous weeks with the clean dusts drawing more attention. It would be remembered that, during recent weeks, orthodox types were persistently on the decline. Legg-cuts eased, but the bright lots were steady. Clean C.T.Cs declined, but the good C.T.Cs were firm to steady. The fibrous teas failed to attract buyers. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.80 to Rs. 7.20; medium Assam C.T.C. dust Rs. 5.90 to Rs. 6.30; legg-cut dust Rs. 4.50 to Rs. 5.20; medium Assam dust Rs. 4.40 to Rs. 4.80; and plain orthodox dust Rs. 4.25 to Rs. 4.45.

Leaf offerings amounted to 385 chests. Prices were irregular, despite good demand.

JUTES DECLINE

(From Our Own Correspondent)

CALCUTTA, *9th May*

A fractional fall in fibre prices and a more than proportionate drop in prices of goods were the features of trading in the jute markets during the week under review. Overseas buyers were interested only in small quantities of goods, and there were fewer inquiries for liner space for goods in the freight market. The continued dullness in the U.S. burlap market was a disappointment and the fact that prices in New York did not improve despite apprehensions of mills' closure for some time before the present season ended was taken as an indication of the determination of U.S. buyers not to support the market at the present high prices.

In the goods market, there was selling pressure and, on Tuesday last, prices eased. What business transpired was mostly on bazar account; overseas buyers showed paltry interest. Ready B. twills fell from Rs. 171.50 to Rs. 168.50 and ready hessian 40" 10 oz. from Rs. 57.50 to Rs. 56.75. On the following day, transactions of small lots in woolpacks against early delivery took place with Australian buyers. Selling pressure continued, and there was further drop in the price of B. twills to Rs. 166.50. Hessian 40" 10 oz. was quiet at Rs. 56.50. The resumption of the hedge market as from 9th May was rumoured, and this led to decline in forward rates. Over the week-end, it was known that the Forward Markets Commission is inclined to permit resumption of futures trading in jute goods for November 1961 delivery and in raw jute for December 1961 delivery as from 12th June only or any date thereafter. On Thursday, at lower levels, there was greater support from bazar dealers, and, with B. twills at Rs. 168.50 and hessian 40" 10 oz. at Rs. 56, prices were firm. Covering business in hessian was a feature on Friday, and the 40" 10 oz. was firm at Rs. 56, while B. twills eased to Rs. 164. Over the week-end, the low levels released a fresh wave of local buying and B. twills firmed up to Rs. 166 and hessian 40" 10 oz. to Rs. 56.50.

Fibre prices eased fractionally as is indicated below:

(In Rs. per maund against May delivery)

	Opening	*Closing*	*Loss*
Northern bottoms ...	56.50	56.00	—0.50
Daisee bottoms ...	60.00	59.00	—1.00
Assam bottoms ...	57.50	57.00	—0.50

MARKET GOSSIP

(*Concluded from page 883*)

from 4 per cent on 19th January 1961. With the cut of ½ per cent announced on the 5th of this month, it is clear that the view of Herr Blessing has won.

The reduction in Bank rate was considered inevitable because the 5 per cent revaluation of the German mark, effected on 6th March 1961, failed to check the inflow of hot funds into West Germany. In fact, the revaluation set afloat rumours of a further upward revision and triggered off a fresh movement of short-term funds to Germany, as is evident from the marked rise of DM 2,176 million (or nearly £200 million) to DM 32,643 million in this country's foreign reserves between the date when the D. Mark was revalued early in March and 22nd April. The persistent outflow of funds from several countries, especially the U.K. and the U.S., caused considerable strain to the international payment structure. It was with a view to easing the strain that the Central bankers who assembled recently at Basle in connection with the annual meeting of the Bank for International Settlements agreed that they would take some appropriate steps to prevent any further speculative movement of short-term funds.

The further reduction in Bank rate has been welcomed by financial circles both in the U.K. and the U.S. It will, it is pointed out, relieve the pressure on dollar and sterling. As the revised interest rate of 3 per cent is on a par with that in the U.S., there is likelihood of the U.S. reducing its short-term rate structure with a view to stimulating business spending. The repercussions on the German economy are difficult to foresee. Some feel that Dr. Erhard may not, after all, go wrong. For, according to them German industry may utilise reduced cost of borrowing for modernising its plant and machinery and bring down production costs, especially since the 5 per cent price increase in German exports consequent on the D-Mark revaluation has begun to evoke consumer resistance abroad. If this trend were to persist, the inflationary pressure, it is argued, would become more acute.

SURVEY

(*Concluded from page 886*)

sidered. There is much to be said in favour of such a suggestion, for it is bound to ensure better co-ordination than what prevails now, what with three agencies, the Directorate of Marketing and Inspection, the I.C.T.C. and the Tobacco Export Promotion Council, in the field.

In order to prevent unhealthy competition and unfair marketing practices, the Committee has advocated the resumption of sale of tobacco by auction centres in regulated markets. It is said that producers of tobacco were getting a better return for their produce when the Andhra Pradesh Government had a regulated market in Guntur, where tobacco used to be graded and sold by auction. The sale by auction was, however, suspended by the State Government, following representations from manufacturers. The Committee has also emphasised the need for encouraging producers' co-operatives for grading of tobacco. In this connection, the Committee has recommended that grading of tobacco should be done at the producers' level, as in foreign countries, and not at the export end. If the recommended measures are implemented and if, at the same time, the project, now under way, for growing superior grades of tobacco with the assistance of West German experts in selected areas of Andhra Pradesh turns out to be a success, the potentialities of this commodity as a foreign exchange earner are bound to be enhanced. Greater emphasis on the more profitable line of exporting manufactured tobacco may also bring in, quantity for quantity, greater returns than unmanufactured tobacco could.

INTERNATIONAL TEXTILE COMPETITION

(*Concluded from page 894*)

stance, coffee. It pays for this coffee not in cash but in the form of yet another product, for instance, sewing machines. Country A buys these sewing machines in a third country C and has them shipped direct from there to country B. Again it does not pay for the sewing machines in cash, but it pays by sending its stock of textiles to country C. The charge for these may be much below the original purchase price. The trading company in question can well afford to do so, as the profit which it realises on the import of coffee—paid for in sewing machines—more than offsets the loss it incurred in bartering textiles below their purchase price for sewing machines.

The effects of barter trading on textile competition are very difficult to check, especially since such deals are usually negotiated by companies not connected with the textile industry. This aspect of textile competition should be studied more closely.

The kind of competition which is meant here does not necessarily result in the specific commercial practices which we have listed so far. The problem is much more complex. This is competition which comes from so-called "low-cost countries," i.e. countries with much lower wages and standards of living and different economic and social structures than the importing countries. It is this competition which is sometimes called "social dumping" and against which protection is claimed on the grounds that labour as a cost factor in the end-product is unduly low.

Many attempts have been made to prove the case of social dumping in textiles or to put forward arguments based on lower wages and standards of living. Equally, the low-cost countries have tried to bring in evidence that their wages and standards of living are, relatively speaking, not low. Simple comparisons of wage levels have, of course, no meaning. Other factors, such as social charges and benefits, labour productivity, taxation, cost of living, real purchasing power and fringe benefits must be taken into account. Even then, it is difficult to arrive at a sound basis for comparison. It has, therefore, not been possible so far to make valid use of the social argument. This is only one aspect of wider differences in the economic and social structures of the countries concerned. For this reason, no international agreement, including the G.A.T.T., has provided any defensive means by which competition could be met on social grounds only, except by way of Article XXXV of the G.A.T.T.

Nevertheless, the existence of the problem was seen and it was felt that it should be examined in the light of the reduced validity of the theories of the international division of labour and comparative costs. As a result, the G.A.T.T. has recently placed on record that it recognises the existence of the problem of *market disruption* and provided procedures for its avoidance. Under these procedures, it will be possible to obtain exceptions from the G.A.T.T. rules, if it can be proved that a certain market for a specific commodity is in danger of being disrupted through competition from countries with widely differing economic and social structures. Cotton textiles have been chosen to form the test case.

When does market disruption occur? According to the G.A.T.T., this is the case when there is a combination of the following four elements:

(*a*) There must be a sharp and substantial increase or potential increase of imports of particular products from particular sources.

(*b*) These products must be offered at prices which are substantially below those prevailing for similar goods of comparable quality in the market of the importing country.

(*c*) There must be serious damage to domestic producers or threat thereof.

(*d*) The price differentials between the competing commodities must not arise from governmental intervention in the fixing or formation of prices or from dumping practices.

This is a new departure for the G.A.T.T. It may now become possible to deal with such problems of distorted competition for which hitherto no legal remedy was available. Significantly enough, cotton textiles are the first case to be put on trial. Whether the procedures will help to solve the problems of international textile competition, remains to be seen.

I deliberately abstain from drawing any conclusions. My task has merely been to lay down the facts of international textile competition, without passing judgment. I hope that, on this basis, a constructive discussion may take place. It is my personal belief that competition is the life-blood of any healthy industry, provided that it is fair and workable. It seems worthy of the greatest efforts to make it so.

Notices

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Wednesday, 7th June, 1961 at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1960 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.
5. *As Special Business*:—To pass, if thought fit, the undernoted resolutions:—

   (i) To consider the re-appointment of Mr. Theo Millard Bishop as the Managing Director of the Company for the further period of three years with effect from the 1st June, 1961, and, in this connection, to consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as an Ordinary Resolution:—

   "That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the re-appointment of Mr. Theo Millard Bishop as the Managing Director of the Company for the further period of three years with effect from the 1st June, 1961, on the terms and conditions contained in the draft Agreement (which was submitted to the meeting and signed by the Chairman for the purpose of identification) or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Mr. Bishop."

   (ii) To consider and, if thought fit, to pass with or without modification, the following resolution as a Special Resolution:—

   "That, pursuant to Section 370A of the Companies Act, 1956, the Company doth hereby extend the time of repayment of the loan of Rs. 3,49,202 due to the Company by Jenson & Nicholson of Pakistan Ltd., beyond the period of six months from the date of commencement of the Companies (Amendment) Act, 1960, till such time as the Board of Directors of the Company consider it necessary to enforce the repayment of the said loan."

The Share Transfer Books of the Company will be closed from the 1st to 7th June, 1961, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, *24th April*, 1961.

Note: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

An Explanatory Statement as required under the Companies Act, 1956, has been forwarded to the Members of the Company.

THE TRAVANCORE OGALE GLASS MANUFACTURING COMPANY LTD.

NOTICE

THE EIGHTEENTH ANNUAL GENERAL Meeting of the shareholders of the Company will be held at the Glass Factory premises, Registered Office, Manjummel, Alwaye, on Friday, the 9th June, 1961, at 4 p.m., to receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960, to sanction declaration of a Dividend, to elect Directors in place of those retiring and to appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from Monday the 29th May to Friday the 9th June, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy who will attend and vote instead of himself when poll is demanded and the proxy need not be a member.

By Order of the Board,
FOR OGALE BROS. (PRIVATE) LTD.,
Managing Agents,
N. P. OGALE,
Director.

MANJUMMEL, ALWAYE,
29th March, 1961.

The Dividend, when sanctioned, will be made payable on and after 11th July, 1961, to those shareholders whose names stand on the Register on Friday, the 9th June 1961.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2615 **BOMBAY, 20th MAY 1961** **PRICE Rs. 2**

LAND POLICY OF THE THIRD PLAN

THE Land Reform Panel of the Planning Commission has just made some recommendations for incorporation in the land policy of the third Plan—a policy which is fundamentally a continuation of the one laid down for the second Plan. Quite a few of these recommendations, it may be acknowledged straightway, are realistic in the sense that they have been framed in the light of experience. There is, for instance, the salutary approach which is to the effect that prolonged uncertainty on the issue of land reforms should be avoided by completing them within the third Plan period and by permitting no further changes for at least ten to fifteen years thereafter. How agreeably this is in accord with the relevant recommendation of the Agricultural Production Team sponsored by the Ford Foundation may be noted here. The need for removal of uncertainties with respect to the application of land ceilings continues to be as urgent now as when the Ford Foundation's Team reported early in 1959, for private investments in agriculture that could result in additional food production continue to be retarded. Happily, the Panel's finding that only about a million acres—representing 0.3 per cent of all cultivated lands in the country—will be rendered surplus after the imposition of ceilings confirms the general trend of proposals in States for pitching land ceilings at reasonably high and economic levels. Happily again, the recommendation that ceilings legislation should be enacted in all States by the end of 1962 has the saving merit that the state of uncertainty will be eliminated at an early date. Whatever be one's mental reservations about the wisdom of imposing ceilings on landholdings, one has also to recognise that opposition, on principle, to this reform will lose much of its force in the wake of the realisation that its possible ill-effects will be limited to a very small number of landowners and to an equally small proportion of the cultivated area.

Another salutary recommendation of the Panel pertains to the objective of peasant proprietorship. If this objective needs reiteration, it is because the idea of co-operative joint farming which has been actively canvassed by the ruling party has spread the fear that individual ownership might be ultimately eliminated. But already the cautious approach laid down by the Nijalingappa Committee on Co-operative Farming and approved by the National Development Council has partly dispelled the fear that an attempt might be made at rapid co-operativisation in the foreseeable future. The present assurance that individual ownership will continue to be maintained, taken along with the recommended definition of "personal cultivation" which provides, as before, for cultivation by labourers under the owner's supervision, should go a further way in removing doubts about the enduring character of peasant proprietorship in its broadest sense covering also owner-farming with the aid of hired labour. In any case, whatever be the wishes of the party in power, it cannot conjure away the fact that peasant proprietorship already covers more than 80 per cent of all agricultural households in the country and more than 75 per cent of the total area operated by cultivating households and is, therefore, much too widespread to be dislodged without the violent processes of a root-and-branch revolution.

Yet another recommendation made by the Panel is to the effect that compensation for land acquired after the imposition of ceilings should not exceed 40 to 50 per cent of the market value. This is a positively better formula than the one which was recommended by the Ceilings Sub-Committee of the Land Reform Panel which reported on the eve of the second Plan early in 1956. The relevant recommendation of that Committee was that "the amount of compensation should in no case be more than 25 per cent of the market value." While the compensation formula of 40 to 50 per cent of the market value, recommended by the present Panel, may be welcomed as a fairer deal, its inadequacy would still have to be emphasised. After all, payment of compensation at full market value will not be too burdensome for the State Governments, for the aggregate amount on account of the estimated one million acres of surplus land may be no more than Rs. 50 crores. If *zamindari* abolition has entailed a total cost of Rs. 670 crores by way of compensation (of which Rs. 165 crores have been actually paid by now), a relatively small amount of Rs. 50 crores on account of compensation for surplus lands to be taken over from substantial landowners after the imposition of ceilings should not be considered an impossible proposition.

Thus far the more salutary recommendations of the Panel have been highlighted to bring out the emerging realistic trends in the land policy for the third Plan. But one unrealistic feature of the suggested policy pertains to ceilings on sugar factory farms. The Panel's recommendation that any law on ceilings should hereafter apply to these farms also—as in Maharashtra and Uttar Pradesh—is contrary not only to the exemption allowed in the second Plan in respect of such farms but to the recommendation of the Panel's own sub-committee on land ceilings. It may be recalled here that, while the Ceilings Sub-Committee of the second Plan's Land Reform Panel had expressed the unanimous view that sugarcane farms owned by sugar factories did not qualify for exemption, the Planning Commission had then overruled it and specifically provided for exemption of such farms from the operation of ceilings. This time, while the Ceilings Sub-Committee of the third Plan's Land Reform Panel has favoured such exemption, the Panel has chosen to turn it down. It is to be hoped that the Planning Commission, while finalising the land reform policy, will stick to its second Plan stand on the question and provide for the relevant exemption. Mr. Shriman Narayan's reported view that, as is proposed to be done in U.P., the factories may even be allowed to continue to manage these farms to remove any uncertainty about the supply of sugarcane can hardly be considered a sensible way out, for management without ownership may still not work well in the case of large-scale farms. Incidentally, the opinions of the Congress Agrarian Reforms Committee (Chairman: Dr. J. C. Kumarappa), which reported in 1949, would need to be recalled in so far as this question is concerned. This Committee stated, *inter alia*:

> "On these (estates owned and operated by individuals or a syndicate or a joint-stock company), local labour is employed on wage basis for all operations and the supervision staff of the superior cadre is provided by people from outside. Modern technique and the most improved variety of seeds and fertilisers are used. The owner or the manager lives on the estate and supervises the operations. This type is common in Deccan sugarcane estates and tea estates of the hills."

While the Kumarappa Committee which proposed an ultra-radical programme of land reform ruled out capitalist farming as a general method of utilisation of agricultural resources because it would deprive the agriculturists of their rights in land, it had at least the courage to admit "that, if most of the processing of agricultural products is done on the farm itself and if by-products are used for suitable manufactures on the spot as is done at Walchandnagar and Ravalgaon, this problem of re-employing small holders can be alleviated considerably." "But the main difficulty in the way of any great extension of such farms," the Committee continued, "would be to find men with vision, sympathy and enterprise so necessary for such undertakings." Certainly nobody today pleads for any extension of capitalist farming in the circumstances of this country. Should not the planners recognise the wisdom of keeping intact at least the few existing estate farms with their proved advantages which even the Kumarappa Committee had recognised ungrudgingly?

I.D.A.'S FIRST LOAN

WITH the announcement of its first credit over the week-end, the International Development Association—the I.D.A. for short—has commenced active financing operations. A loan amounting to $9 million will be given to Honduras, a mountainous country of rugged terrain in Latin America, its highway development and maintenance. It has three distinct features which mark it out from the development loans hitherto made available. First, the credit is interest-free, only a service charge of ¾ per cent, annually on the amounts withdrawn and outstanding, will be made in order to meet [illegible] administrative costs. Secondly, the

repayment period is very long—fifty years. Thirdly, amortisation of the loan will begin only after a ten-year period of grace. The first payment will be due in September 1971. Thereafter, 1 per cent of the principal will be repayable annually for ten years and 3 per cent for the final thirty years.

It is evident from these terms that the I.D.A. credit to Honduras is a soft loan, although it is repayable in foreign exchange and not in local currency. But this last requirement will not be unduly burdensome to the recipient country, because the repayment period is as long as fifty years. The amount of foreign exchange which Honduras will have to find for repayment purposes will be just $90,000 annually for the ten-year period commencing from September 1971 and $270,000 per annum in the remaining 30-year period.

The terms of the first I.D.A. loan, it is stated authoritatively, are "not necessarily indicative of the general pattern of future I.D.A. credits." There is, however, some indication that more or less similar terms will govern the credits for financing the first bunch of projects. In fact, Mr. Eugene R. Black, ex-officio President of the I.D.A., himself disclosed recently in his address to the U.N. Economic and Social Council that for the first projects it had been decided to provide I.D.A. financing in the form of 50-year development credits, free of interest or commitment charge. And he also disclosed that the credits would be repayable in foreign exchange, "thus avoiding accumulation of large quantities of local currencies." But, at the same time, the exact pattern of I.D.A. credits for later projects is something that cannot be figured out now, for there may well be changes in some of the terms. Whatever be the then detailed terms, they will doubtless be flexible, bearing less heavily on the balance of payments of underdeveloped countries than do orthodox loans. The I.D.A. Charter itself is quite specific about such flexibility. It was on this question, it may be recalled, that there was a lot of discussion among economists before the establishment of the I.D.A. Some economists belonging to the school of sound money theory had argued —they continue to argue even today—that soft loans would encourage the receiving countries to indulge in inflationary policies which would undermine their economic stability. This argument is untenable, for the I.D.A. cannot be expected to grant loans unless it is satisfied that the projects for which the loans are sought are sound and essential. After all, the I.D.A. applies the same standards of project preparation and execution as the World Bank does and, in this task, it is facilitated by the fact that its affairs and those of the Bank are jointly administered.

Even if the terms of future I.D.A. credits should turn out to be somewhat less liberal, they may at least have the merit of fulfilling some of the requirements of sound money policy. For instance, if it is decided to charge some nominal interest on future loans, it will not be anything like a misfortune. After all, a loan is a loan and not a gift. It can very well carry some interest, say, 1½ to 2 per cent. Such interest will also enable the I.D.A. to augment its lendable resources in the years to come, besides instilling in the borrowing countries a sense of responsibility to make proper use of the funds borrowed. This aspect has to be specially emphasised because the capital resources of the I.D.A. are limited (just $1,000 million), as against the foreign aid requirements of the underdeveloped countries estimated at about $5,600 million a year over the next decade. The I.D.A. may, of course, enter into arrangements to receive from any member or members supplementary resources in the currency of another member, provided that the member whose currency is involved does not object. For example, the U.S. has already indicated that it might offer to the I.D.A. some of its holdings of foreign currencies arising through sales of P.L. 480 commodities. Even so, the I.D.A. can enlarge its resources to some extent by way of interest collections. It is on the size of resources at its disposal that will depend the success of I.D.A. to venture further than the World Bank is able to do in countries that have only a limited capacity to service conventional foreign debt and support development projects that hold out promise. Here is what Mr. Black himself says:

"We believe that I.D.A.'s objectives can best be served by limiting the availability of I.D.A. funds to countries which, for reasons beyond their control, are not able to finance a satisfactory rate of development with their own resources plus conventional financing. Thus I.D.A. borrowers can be expected to include not only countries whose foreign exchange situation is such that they cannot borrow abroad at all on conventional terms but also those whose foreign debt service burden over the short- and medium-term is already so high that they cannot prudently borrow, on conventional terms, all of the external capital which they require to carry out their priority programmes. It is already clear that the needs of these potential borrowers for development credits of the type which I.D.A. can provide are far greater than can be satisfied with I.D.A.'s present resources. I am hopeful that, in due course, the obvious need and I.D.A.'s record of performance will together justify a substantial increase in I.D.A.'s financing capacities. I would hope, too, that countries contemplating an expansion of their aid programmes may see fit to channel a part of the additional funds through I.D.A. Such a pooling of resources, I am convinced, is by far the most effective and satisfactory means of co-ordinating development aid."

This country, too, has a stake in the possible fulfilment of Mr. Black's hope and so looks forward to some substantial I.D.A. credits. There can be no gainsaying that its balance of payments position will ease in the coming years to the extent to which it receives loans from the I.D.A. The I.D.A. assistance will be particularly useful for the implementation of the less remunerative but essential projects such as roads, small irrigation, port facilities, telecommunications, land reclamation, rural electrification and industrial estates. Of special significance is the fact that the I.D.A. loans can be utilised to finance both foreign exchange and local currency costs, unlike the World Bank loans which are meant to cover only the foreign exchange costs. As India, to borrow Mr. Black's words, is a country whose foreign debt service burden over the short- and medium-term is already so high that it cannot prudently borrow, on conventional terms, all the external capital it requires to carry out its priority programmes, its expectations of substantial assistance from the I.D.A. are quite natural and legitimate.

NON-FERROUS METALS INDUSTRY

IN India's preoccupation with steel plants it is just likely that the case for a strong non-ferrous metals industry may go by default. The non-ferrous metals group is, of course, a motley crowd of ill-assorted metals but is not on that account any the less important than the much better known iron and steel group. Indeed, the two groups may well be regarded as complementary to each other, for, in a wide range of steel-based engineering industries, non-ferrous metals play an indispensable role. The non-ferrous sheet rolling industry, for instance, caters to the requirements of a number of ancillary industries, such as automobiles, telephones, ball bearings, radiators, electronics, electric fans, locomotives, railway carriage fittings, surgical instruments and air-conditioning equipments.

The chief handicap from which the industry based on non-ferrous metals suffers is the lack of raw materials. India, as is well known, is faced with a serious deficiency in the supply of non-ferrous metals except aluminium. Two weeks ago, a review of the problems of aluminium industry figured in these columns. While aluminium has many achievements to its credit, it is known that other non-ferrous metals, in general, and zinc, copper and lead, in particular, exist in their own right and have a very important place in the country's metal map. And yet, the fact remains that, even by the end of the third Plan, India will continue to be deficient in the supply of non-ferrous metals. As Mr. S. P. Khaitan, President of the Western India Sheet Rollers' Association, pointed out in his address at the annual meeting of the Association held recently in Bombay, the demand for all-non-ferrous metals during the third Plan is likely to show a "spectacular" rise and, except bauxite ore in which India is potentially rich, much ground has still to be covered in respect of other non-ferrous metals. An analysis of the trends in production of and demand for non-ferrous metals shows that there is a wide gap between the anticipated output and estimated demand by 1965-66. In copper, the present level of production (1960 figure) estimated at 8,910 tons is expected to go up to 36,000 tons in 1965-66, whereas the demand in that year is likely to move up to 170,000 tons; the corresponding figures for zinc are 4,000 tons, 57,000 tons and 195,000 tons. Similarly, in lead, the present level of production at 3,648 tons is likely to move up to 37,000 tons by 1965-66, whereas the demand in that year will go up to 65,000 tons. India produces no tin at all. Nor is it expected to do so by 1965-66, though India will need 8,000 tons of tin. It will thus be clear that the gap in respect of copper in 1965-66 will be of the order of 134,000 tons, in zinc 128,000 tons, in lead 28,000 tons and in tin 8,000 tons. It is this factor that underlines the need for sustained effort at improving the output of non-ferrous metals.

It is not as if the non-ferrous metals group has not so far received any attention. Only it is necessary to intensify the search for their ores, because the prospecting operations conducted hitherto have yielded only modest results. Some notable progress has been achieved in the mining of copper ore. The deposits of this ore are estimated at 8.2 million tons, with copper content ranging from 0.8 to 2.5 per cent. Further, investigations are in progress over a large area in the Alwar District of Rajasthan, Bairath and Thana Gaziakhan. The test drilling operations in South Arcot indicate bright prospects of finding deposits of copper, lead and zinc. The Sikkim Mining Corporation, which was set up in February 1960 and in which the Government of India holds 41 per cent of the share capital, has commenced work for the exploitation of copper-lead-zinc deposits in Bhotang. Production at the rate of 100 tons of ore per day is expected to commence from December 1961. Zinc and lead ores are extracted near Zawar (Rajasthan) by the Metal Corporation of India. The Geological Survey of India proposes to complete mapping operations and preliminary investigations in respect of many important minerals in Rajasthan during the third Plan. The work is expected to start this year in six districts.

Next in importance to location of new ores is the setting up of smelting and refining plant. Clearly, while prospecting should receive more attention and support, it may be necessary for this country to rely on imported ores till such time as domestic ores are located. In copper there is only one unit at present producing 8,000 tons of fire-refined copper per year. The National Mineral Development Corporation has in hand an important project, namely, the Khetri Dharibo mining project with a capacity to produce 10,000 tons of electrolytic copper involving an outlay of Rs. 13 crores. This project alone is expected to save foreign exchange to the tune of Rs. 4 crores annually. Zinc concentrates are now being sent to Japan, because India still does not possess smelting facilities. It would, however, appear that an Indian firm has finalised an agreement with two French firms for setting up a plant with a smelting capacity of 180,000 tons, while the Union Government is now reported to have decided to permit the installation of a medium-sized zinc smelter in Calcutta which would be based on imported zinc concentrates. In lead, too, it will be necessary to rely on imported lead concentrates. The Government is now reported to be engaged in considering a scheme for smelting imported lead concentrates with an annual capacity of 12,000 tons.

Given the existing shortage of foreign exchange, it will be obviously difficult to concede the non-ferrous metals industry's claim for liberal imports of raw material. But within the overall limitations imposed by the continuing shortage of raw material, it should be possible to give a modest increase in the allotment of foreign exchange the industry needs provided it is also enabled to make its contribution to foreign exchange earnings through exports of its products. Mr. Khaitan rightly emphasised that India must mobilise all its resources for export. The scope for marketing India's non-ferrous metal products is confined to certain underdeveloped countries like the Middle East, Ceylon and the Far East. In this connection, Mr. Khaitan made a few constructive suggestions for increasing the export of non-ferrous metal products. In the first place, the Export Promotion Scheme for copper and brass semis should be suitably liberalised; for instance, the insistence on firm orders of a minimum value of Rs. 1 lakh may be given up. Secondly, any rigid insistence that the exporter of copper and brass sheets should aim at 15 per cent net foreign earnings may be relaxed. Thirdly, the import of machinery that is necessary for improving the quality of non-ferrous metal products should be permitted.

In commending these suggestions to the Government we would urge the Government to remember that the non-ferrous metals industry has immense potentiality. It is capable of becoming a large source of employment. Further, as an adjunct to the engineering industry, its role is particularly significant. What is now necessary is to ensure that the industry is not handicapped by heavy taxation on the one hand and acute shortages of raw materials on the other.

MARKET GOSSIP

Share Markets Indecisive

THE share markets have been moving rather indecisively of late. Shortage of funds and tightness in money market have led to a shrinkage in the volume of business, with values of most counters tending to look down. A good portion of investible funds is tied up with new issues and the markets will continue to feel the acute need for funds until the excess over calls is released. In a falling market, it is needless to say, fresh offers only accelerate the momentum, as was, in fact, the case in the past week. There has, of course, not been any nervous selling so far, because the majority of operators are inclined to take an optimistic view about the outlook for the corporate sector. Many new industries floated in the last year or two are nearing the stage of production and, with hopes of getting adequate foreign aid, industrial progress will be accelerated further.

Investors must, perhaps, have felt gratified at the Union Finance Minister's assurance given at Madras last week-end that taxation would not be made to hurt industry and trade, inasmuch as it would be levied in such a manner that income from it would rise every year and not lessen. In the light of this assurance, his statement that there is great scope for raising additional taxation to the tune of Rs. 1,650 crores for the third Plan has not been taken note of seriously. And few will dispute his claim that resources are expanding and that revenues are also improving. The official figures relating to Central Government revenue collections for the financial year 1960-61 just released substantiate this claim. The total of revenue receipts actually received from items on which duties are levied and collected in 1960-61, the last year of the second Plan, is put at Rs. 880 crores, as against the revised estimate of Rs. 855 crores and the budget estimate of Rs. 812 crores for that year. Taking some individual heads of tax revenue, it is found that under 'Customs' the actual collection in 1960-61 was Rs. 168 crores, as compared with the revised estimate of Rs. 163 crores, under 'Union excise duties' Rs. 409 crores, as against Rs. 395 crores and under 'Income-tax' Rs. 138 crores, as against Rs. 128 crores. All these figures lend considerable weight to the oft-repeated criticism that revenue receipts are consistently underestimated, while expenditure estimates are inflated. On the basis of past year's performance, it may be safe to infer that the revenue realised from dutiable items in the current (1961-62) year will be substantially more than what is budgeted, namely, Rs. 920 crores.

Conversion Loan

The Government of India's announcement of the conversion offer for three maturing loans has not come as a surprise. With conditions in the money market being what they are, the Government has no other choice but to offer to replace the maturing loans if only to ensure that its borrowing programme does not become a flop. The Government has offered to convert 3½ per cent National Plan Bonds 1961 (First issue) which are due to mature on 1st June 1961, and 2½ per cent loan 1961 and 3 per cent Hyderabad Loan 1951-61 which are due for redemption on 1st August. These will be accepted for conversion against the issue of 3½ per cent 1967 National Plan Bonds (Third Series) second tranche. The issue price of the new loan is Rs. 98.90. The conversion of the maturing loans will be accepted at Rs. 100 for 3½ per cent 1961, at Rs. 99.75 for 2½ per cent 1961 and at Rs. 85 for 3 per cent Hyderabad 1951-61 loan. The outstanding amounts of these maturing loans are Rs. 75.29 crores, Rs. 57.01 crores and Rs. 6.59 crores, respectively, making a total of Rs. 138.89 crores. Interest on the securities tendered for conversion will be paid at the respective rates upto 31st May 1961 (inclusive). Interest on the new securities to be issued by way of conversion will be paid at 3½ per cent per annum from 29th May. Interest on these will be paid in the first instance upto 15th July and thereafter half-yearly.

The bulk of the two maturing Central Government loans is believed to have been held with the Reserve Bank. To this extent, the problem of conversion has been lessened. Even so, it is felt that the response from banks may not be encouraging, since the conversion terms are by no means attractive for them to switch over to a six-year loan, when normally banks prefer only maturities of five years.

The current market price of the existing 3½ per cent 1967 loan is Rs. 99 which gives a price differential of only 10 nP. in favour of the new tranche and may not attract large conversions at least from banks. It is, however, stated in some quarters that banks may opt to convert their existing holdings of the maturing loans to keep their investment portfolio intact. If they prefer to wait and cash their holdings on the maturity date, these quarters feel, it will create for them the problem of investing their cash. This argument may be valid only in the case of 3½ per cent 1961 loan which is due to mature by the end of this month. There are no signs of any substantial relaxation of monetary stringency as yet. They can hold on to the other two loans, which account for over 45 per cent of the total and are due for redemption only on 1st August by which time the money conditions may ease, giving them some elbow room for strengthening their investment portfolio. If the response to the conversion offer were not to prove encouraging, the Government might come in the meantime with the offer of another short-dated loan to accommodate the banks.

The choice of the 3½ per cent 1967 loan for offer of conversion is inevitable. Usually, the Government looks for a blank year if any or a light year, that is, a year when maturities are not heavy. But right from the current year onwards till 1968, there are heavy maturities. The current year's maturities are the heaviest in recent years and will be heavier still in the years to come. They will be of the order of Rs. 166 crores in 1965, Rs. 193 crores in 1966 and no less than Rs. 163 crores in 1967. If the entire outstanding loans in 1961 are converted into the new loan, the maturities in 1967 will be Rs. 302 crores, provided there are no additions next year. To the extent banks and other institutions offer to cash their holdings, therefore, the burden of maturities in 1967 will be relieved.

The present conversion offer does not complete the borrowing programme of the Government for the current year. In his budget speech in February last, the Union Finance Minister had taken credit for a public borrowing of Rs. 235 crores. The conversion facilities now announced account for only Rs. 139 crores or 59 per cent of this target. The Government may have to come to the market with a cash loan next month or in July. The general expectations are that the cash loan will be only a long-dated one.

Negotiations With Oil Companies

The negotiations in which the Government of India has been engaged for some time with foreign oil companies for the exploration and exploitation of certain oil-bearing areas in the country seem to be approaching the delicate stage of final decision. At the moment the companies which are actively pursuing the matter are stated to be the Burmah Oil Company, the Shell Company and the E.N.I., the Italian State-owned oil organisation. While the B.O.C. seems to be more interested in the Assam area, the Shell Company is understood to have taken greater interest in the Indo-Gangetic plain and the E.N.I. in the Cutch area. But it is not quite clear, as of today, whether the oil companies concerned have agreed to the Government having a 50 per cent share in the capital and management of joint oil exploration ventures. It may be that private oil companies, like the B.O.C. and the Shell, are not so very aggressively anxious like the E.N.I. (which is a new entrant in the oil field and is also a State-owned enterprise) to accept the 50-50 formula. This, however, is only a guarded inference which may or may not be borne out by the terms and conditions that may be finally agreed upon between the Government and the oil companies. It should not be forgotten in this connection that the question of crude oil prices is bound to be as much a bone of contention as the fifty-fifty formula relating to capital participation.

The final outcome of the negotiations will be watched with interest by all those who are frankly worried over the likely gap in indigenous production of petroleum crude. Certain estimates made in this context are disquieting, to say the least. The country's present (1961) demand for petroleum in terms of crude is about 8 million tons, but the gap in indigenous production of crude oil is 7.8 million tons after allowing for Digboi's output of 200,000 tons. By 1966, the annual demand for crude is expected to be of the order of 15 million tons, but there will then be a gap of about 10 million tons in indigenous production of crude petroleum after taking into account the estimated aggregate annual production of about 5 million tons (200,000 tons from Digboi, 2,800,000 tons from Oil-India's present concessions in Assam and 200,000 tons, at the most optimistic estimate, from Ankleshwar fields in the public sector) by 1966. It is this expected gap of 10 million tons in indigenous production that will have to be covered by further exploration, prospecting and exploitation in the next five years. There is, thus, plenty of scope for all in the private as well as the public sector to put their hands to the pump. Protracted negotiations and undue higgling and bargaining by the Government may mean loss of valuable time, for has it not been rightly said that procrastination is the thief of time?

One has only to recall here the practical observations made by Mr. W. E. Eadie, Chairman of the Burmah Oil Company Ltd., in a statement just issued in London on the eve of the 59th annual general meeting of the Company:

"It is, perhaps, not inappropriate for me to comment here shortly on one aspect which should be given due consideration in any study of petroleum selling prices in countries where petroleum is in short indigenous supply. In such countries, there is a very natural and understandable desire to see national petroleum reserves discovered and developed as expeditiously as possible.

"The greater the number of operators exploring for such reserves, the greater the chance of success, and it seems to me that governments wishing to encourage interested operators (whether national or foreign) should offer attractive concessions terms and should, as far as possible, provide an assurance of a fair selling price for the commodity and its products. Such a price must provide an acceptable return to the operator, taking cognizance not only of the speculative nature of the business, but also the need for a continuing search for replacement of reserves as they become depleted."

Mr. Eadie's words, of course, are not specifically addressed to India. But their relevance to conditions in this country can hardly be overlooked.

New Move By Insurers

The agreement on non-diversion of business signed this week in the City by seventeen Indian insurance companies marks the culmination of the negotiations that have been going on for quite some time now. At one stage, a suggestion was mooted that the issue of bringing together the insurance companies for their mutual benefit should be taken up by the Indian Insurance Companies' Association which was expected to evolve a suitable formula for the purpose. Although the majority of members of the Association was in favour of this suggestion, it was not accepted because of the opposition of some members who were against the Association taking any lead in the matter. The agreement now signed is the result of the voluntary efforts made by some of the companies to arrive at some kind of arrangement by which the scramble for business and unhealthy business practices could be eliminated.

The agreement, which is subject to the approval of the Boards of the respective companies, is expected to come into force on 1st July. It lays down that no company, which is a signatory to the pact, should itself try, or encourage others, to snatch off the business of member-companies. In cases where the business of one member-company has to be accepted by another, the agreement provides that it should be reinsured strictly on tariff terms to the extent of full 100 per cent with the losing companies. If, owing to the change of management or financial control, some business of one company has got to be diverted to another, it should be subject to the prior approval of a committee to be set up for the administration of the agreement; the business so diverted should, however, be compulsorily reinsured in full on tariff terms.

The agreement provides for the establishment of a formal administrative machinery in the form of a Committee consisting of three representatives unanimously elected by the companies which are party to the agreement. The Committee will keep a constant watch over the administration of the agreement and will take such measures as it considers necessary to ensure scrupulous adherence to the agreement. The signatories are said to have agreed to abide by all the unanimous decisions of the Committee.

A notable feature of the agreement is that it provides for the creation of a pool of business which will compensate any loss of, or decline in the rate of growth of, business of any member-company. Any member-company, which fails to show an increase of 10 per cent in the direct gross Indian premium income in any year, will be entitled, under the agreement to claim a corresponding share in the pool business. It will, however be liable to a proportionate share of the cost incurred by the pool as well as the claims payable. A ceiling of Rs. 5 lakhs has been put on the premium a member shall be entitled to claim from the pool in any year. Any surplus left with the pool, after the claims of members are satisfied, will be distributed among the ceding companies in proportion to the contribution made by them. This provision has obviously been made as an inducement for companies, which might fear a loss of business, to join the agreement.

The sponsors of the move believe that the agreement will eliminate such unhealthy practices as rebating and will reduce the cost of business of the companies and thereby put them on a stabler financial footing. It will also enable them to devote more attention to the development of new lines of business, as they will be freed of the worry of their business being taken away by others. Although the agreement has now been signed by only 17 companies, it is said that more have indicated their willingness to join the group. The door has, therefore, been kept open for them. The sponsors of the scheme, more than anybody else, are aware that the value of the agreement lies not in the letter but in the spirit underlying it.

The significance of the agreement lies in the fact that it is the outcome of a desire among the companies to come together in mutual interest and not the result of official pressure. It has, therefore, a better chance of success than any coercive measure foisted on insurers by the Government. But the voluntary nature of the agreement is also a source of weakness. It is not known whether the agreement has proposed any sanctions against companies which, in course of time, might deflect from it and, if so, how they are proposed to be enforced. If the member-companies honour the agreement in practice, they need not entertain any fears that their business will be grabbed by any one of them. The agreement, however, is no safeguard against the non-member companies diverting business from the members. If they do so—and there is no reason to suppose that they will not try to do it—will the members of the group choose to retaliate? It is true that the collective strength of the group is a good safeguard, but the member-companies cannot be entirely free from the fear of diversion of business. The working of the agreement will no doubt be watched with interest.

Block Closure Of Jute Mills?

There are persistent reports suggesting the distinct possibility of block closure of jute mills for sometime with a view to conserving available raw jute supplies till the arrivals of the new (1961-62) season's crop which are expected to begin not earlier than the end of July or August. A delegation of the Indian Jute Mills Association led by the acting Chairman, Mr. C. L. Bajoria, met the Union Commerce and Industry Ministry officials at New Delhi again this week and sought official permission for block closure for a fortnight either next month or in July. The official reaction to the plea is not known; the Commerce and Industry Ministry is believed to have referred the plea to the Labour Ministry, in view of the implications of a closure move on the labour situation in Calcutta especially in the context of the continuing power shortage and the consequent reduction of working hours of jute mills and other industrial units. This is the delegation's second meeting; the first was held on 27th April. At the first meeting, the delegation had pressed for the closure of mills for two weeks but was told by the officials concerned that the Government could not

SHARE MARKET EASY

SELECTIVE SUPPORT FOR TEXTILES

(From Our Own Correspondents)

BOMBAY, *18th May*

THE easy trend witnessed on the Stock Exchange towards the close of last week gathered momentum during the week under review. Support was generally lacking even at lower levels. The volume of business also dwindled considerably, thanks to the continued stringency in the money market. Although the outlook for corporate earnings continued to be good, the power shortage in most parts of the country, which still persists, gave rise to doubts whether it would not affect the profit level of companies. While these factors discouraged support, the proximity of settlement restricted activity. In the absence of support, profit-taking and tired bull liquidation resulted in a setback to values. Selected scrips, especially in the textile section, however, attracted attention on expectations of higher dividend.

Steel shares were generally subdued. Indian Irons, after rising from Rs. 27.20 early in the week to Rs. 27.35, receded to Rs. 27.10 at close, showing a net loss of 10 nP over the week. Mukand Irons declined steadily from Rs. 28.25 last week-end to Rs. 27.50. Tata Steels, however, rose from Rs. 150.50 to Rs. 151.50 on Monday before receding to Rs. 150.75 today. The net gain was 25 nP.

Textiles, except a few which firmed up on dividend announcement, receded. Standard Mills attracted speculative support prior to the annual meeting and after having extended the gains following the Chairman's statement, declined to Rs. 1,503 today as compared with Rs. 1,514 last week-end. The Chairman of the Company disclosed at the annual meeting held on Tuesday that the Company had sponsored a petro-chemical project and that the interest of the shareholders in the new venture would be fully protected. Shree Niwas were marked down by Rs. 7 to Rs. 263. Elphinstones receded by Rs. 6 to Rs. 81. Central Indias eased by Rs. 2.50 to Rs. 110.50. Gokaks dropped a like amount to Rs. 186.50. Despite the announcement of the higher dividend of Rs. 17 per share, subject to deduction of tax, as against Rs. 14 for 1959, Svadeshis receded by Rs. 2 to Rs. 268. Morarjees shed a like amount to Rs. 359. Finlays and Podars lost a rupee each to Rs. 315 and Rs. 148, respectively. Bombay Dyeings encountered selling and declined from Rs. 63.50 last week-end to Rs. 63.40 today, after having touched Rs. 63.90 on Monday. The net loss was 10 nP. Swans and Simplex were unchanged, the former at Rs. 570 and the latter at Rs. 187. Edward Textiles, on the other hand, received special support and spurted by Rs. 25 to Rs. 300. Tata Mills, too, were marked up by Rs. 4.50 to Rs. 58, thanks to the doubling of dividend from Rs. 2.50 to Rs. 5 per share, subject to deduction of tax. Kohinoors were well favoured and improved from Rs. 307.50 to Rs. 312.50. Centurys moved up early in the week from Rs. 618.50 to Rs. 626 but declined in subsequent sessions and finished at Rs. 619.50, showing a net gain of one rupee.

Sugar shares lacked support. Belapurs, after a brief spell of firmness, eased from Rs. 288 to Rs. 284 today. The net loss over the week was Rs. 3. Maharashtra Sugars lost 75 nP to Rs. 185.25. Changdeos were quiet at Rs. 25.75. Phaltans and Walchandnagars were neglected at Rs. 135.50 and Rs. 203, respectively.

Cement shares were subdued. A.C.C.s were done at Rs. 158, same as last week. Digvijays fell by Re. 1.25 to Rs. 152.75. Orissas, however, put on 8 nP to Rs. 14.60.

In the shipping group, Scindias succumbed to selling and declined from Rs. 14.52 to Rs. 14.46. New Greats lost 16 nP to Rs. 14.64. Among automobiles, Premier Automobiles declined by a rupee to Rs. 166.50. But Hindustan Motors firmed up by 62 nP to Rs. 20.96, thanks to the announcement of a higher dividend of Re. 1.20 per share, as against 90 nP per share, subject to tax, for the previous year.

Rayon shares drifted downward. Baroda Rayons receded by Rs. 8 to Rs. 120.50. South India Viscose eased by Rs. 3 to Rs. 159. Gwalior Rayons lost a rupee to Rs. 46.50. Indian Rayons were quiet at Rs. 63. National Rayons, however, gained Re. 1.50 to Rs. 529.50, after touching a high of Rs. 531 on the 13th inst.

Dyes and chemicals recorded an all-round fall. Dharamsis (old) slumped by Rs. 36.25 to Rs. 266.25. Colour Chems were hammered down by Rs. 15 to Rs. 345. Synthetics eased by Rs. 7 to Rs. 171. Alembics declined by Rs. 3.75 to Rs. 237.50. Adarsh changed hands Rs. 3 lower at Rs. 76. Citrics shed Rs. 2.50 to Rs. 53. Indian Dyestuffs lost a like amount to Rs. 512.50. Chemo Pharmas softened by 50 nP to Rs. 28 and Tata Chemicals (new) by 16 nP to Rs. 17.26. Amar Dyes, however, found buyers at Rs. 2.50 higher at Rs. 385.

Engineering shares were no exception to the general trend. Alcock Ashdowns weakened by Rs. 13 to Rs. 306. Ingersoll Machine Tools were marked down by Rs. 9.50 to Rs. 128.50. Texmacos receded by 28 nP to Rs. 19.84. Larsen and Toubros decreased by 25 nP to Rs. 42. Kamanis lost 26 nP to Rs. 16.72. Mahindras and Cooper Engineerings were neglected at Rs. 19.76 and Rs. 169.50, respectively. Jyotis, on the other hand, picked up Re. 3.50 to Rs. 185.50. New Standard Engineerings (new) put on a rupee to Rs. 131.50. Telcos moved in a narrow range and closed at Rs. 331.50, as compared with Rs. 331 last week.

Miscellaneous industrials moved down. Bombay Burmahs, after having risen from Rs. 612 to Rs. 613 early in the week, reacted subsequently to close at Rs. 609, a net loss of Rs. 3 over the week. Anil Hardboards dropped Rs. 10 to Rs. 272.50. West Coast Papers declined by Rs. 9 to Rs. 194. Jayant Papers were quoted Rs. 5 lower at Rs. 61. Wimcos receded by Rs. 6 to Rs. 271, reflecting disappointment of operators that the Chairman of the Company ruled out the possibility of a bonus issue. Permanent Magnets shed a like amount to Rs. 75. Tata Oils moved down by Rs. 2 to Rs. 73.50. Premier Tyres declined by Rs. 3.50 to Rs. 101. Ceat Tyres lost Rs. 3 to Rs. 182. Killicks and Hindustan Levers were neglected at Rs. 100.50 and Rs. 47, respectively.

* * * *

Calcutta Stock Exchange

CALCUTTA, *17th May*

In the absence of fresh incentives, depressed conditions were in evidence on the Stock Exchange during the week under review. The present cautious tendency being displayed by operators and long-term investors springs from a number of factors. First, the power shortage has affected many industries in several parts of the country and doubts if the power requirements for the growing industrial economy would be satisfactorily met in the third Plan were entertained, thereby chilling enthusiasm. Secondly, reports that production in some collieries had had to be slowed down in view of increased pit-head stocks arising from non-availability of wagons have raised doubts that the call for more production is not co-ordinated. Thirdly, the sugar industry's gallant efforts to increase production have been accompanied by the problem of huge stocks. Fourthly, with the threatened block closure of mills, the crisis in the jute industry is on the eve of entering the worst part of the present critical phase. Fifthly, although the new season's tea sales have begun well, the trade feels that, without a price reduction, which is tied up with the taxation structure and the high cost of production, it is unlikely that exports would be increased to absorb the anticipated increase in production in this year. It was significant that some foreign buyers in the auctions showed a tendency to wait.

Coals gave way on a wider front. Bengals eased from Rs. 369 to Rs. 361. Burrakurs at one time realised Rs. 20, as against an opening of Rs. 20, but closed lower on balance at Rs. 19.87. At Rs. 30.50, Equitables lost Re. 1, but Central Indias hardened from Rs. 13.10 to Rs. 13.81 but closed at Rs. 13.25. New Beerbhooms were quiet at Rs. 23, as were Dhemo Mains at Rs. 7.25. Amalgamateds realised Rs. 25, as against Rs. 26.06 earlier.

Jutes were neglected and this was evident in the poor volume of business put through. New Centrals opened at Rs. 20.37 and, after realising Rs. 20.50, lost to Rs. 19.62 before closing quiet at Rs. 19.94. Ganges at Rs. 10.12 were fractionally lower. Birlas were available at Rs. 37.12, as against Rs. 37.75. Fort Williams were on offer at Rs. 25.19, as against Rs. 25.25.

Engineering shares were depressed on apprehensions of the power shortage affecting working results. Indian Irons opened at Rs. 27.47 and gradually lost to Rs. 27.12 before recovering to Rs. 27.19. Adverse corporate rumours continued to affect Texmacos. After touching a low of Rs. 19.50, as against the opening of Rs. 20, the rate closed at Rs. 19.70, as buying support was forthcoming at the lower level. The report of a maiden ordinary dividend drew attention to Dalmia Irons at Rs. 10.12 but subsequently gave way to Rs. 10. Indian Standard Wagons were earlier steady at Rs. 103 on talks of a satisfactory dividend, but general dullness soon invaded the atmosphere and pulled the rate down to Rs. 102.

Among miscellaneous industrials, the maintenance of ordinary dividend at 27 per cent taxable against the background of expectations of a larger dividend pushed down Indian Coppers from Rs. 5.50 to Rs. 5.31, while the improvement from Rs. 20.00 to Rs. 20.44 in Hindustan Motors was attributed to expectations of a higher dividend. British Paints evoked support and at Rs. 24.50 were fractionally better. Dunlop Rubbers met with profit-taking and slipped from Rs. 50.50 to Rs. 49.10. For the same reason, Indian Cables declined from Rs. 36.75 to Rs. 36.06. From Rs. 138.50, Rallis lost to Rs. 136. Indian Aluminiums eased from Rs. 31.75 to Rs. 31.25 on fears of a glut in aluminium supplies. Alkali and Chemicals were depressed at Rs. 36.

Teas were about firm on reports of increased output. Netjans jumped from the previous rate of Rs. 36.75 to Rs. 32. At Rs. 25.75, Gillapukris gained 75 nP, Dhelakhats, though unchanged, being firm at Rs. 23. Hoograjulis hardened from Rs. 24 to Rs. 25.25, while Birparas eased from Rs. 175 to Rs. 173.

* * * *

Madras Stock Exchange

MADRAS, *17th May*

Dull conditions prevailed on the Stock Exchange during the week under review. Turnover was moderate, with price movements restricted to a narrow groove. The enthusiasm of bulls was dampened by fears of reduced production in some industries as a result of 50 per cent power cut enforced with effect from the 16th inst. Sugars were quiet as operators preferred to await the outcome of India's attempts to secure an export quota for sugar in the U.S. Coffees ruled weak, thanks to heavy stocks in India and abroad. In the miscellaneous section, cements and engineerings were subdued. Textiles generally ruled dull, barring a few select counters which scored handsome gains. Activity in teas and rubbers was also at a low ebb.

Among sugars, United Breweries came in for selling and dropped Rs. 2 to Rs. 113. Travancores declined by 25 nP to Rs. 10.25. East India Distilleries lost 20 nP to Rs. 43.50. Cauverys were neglected at Rs. 132, Mysores at Rs. 59 and Indias at Rs. 12.90. Kirlampudis, however, rose by 50 nP to Rs. 79. Although the Company has passed over the dividend for the year ended June 1960, operators appeared to have been impressed by the working results of the Company. Deccans improved from Rs. 13.80 to Rs. 13.90, but moved down subsequently to close at Rs. 13.85—a net gain of 5 nP over the week.

In the coffee section, Consolidated Coffees eased by 25 nP to Rs. 22.25. Mysores were lower by 12 nP at Rs. 5.43. Cowcoodys dropped 5 nP to Rs. 5.20. Ouchterlony Valleys shed 3 nP to Rs. 4.15. Coffee Lands were quiet at Rs. 18.50, Anaparais at Rs. 4.42 and Balanoors at Rs. 16.60.

Among teas, Parksides gathered 28 nP to Rs. 28.75. Nonsuchs improved by 20 nP to Rs. 28. Waterfalls scored a gain of 7 nP to Rs. 3.02. Blue Mountains rose by 6 nP to Rs. 3.13. Neelamalais put on 5 nP to Rs. 4.50. Highlands were dull at Rs. 15.40. The Directors of the Company have maintained the dividend for 1960 at the previous year's level of 15 per cent, taxable. Chembras were unchanged at Rs. 3.83, Devasholas at Rs. 30.30, and Peermades at Rs. 23.30.

In the rubber group, T.R. and Ts picked up 32 nP to Rs. 9.75, following the announcement of a final dividend of 5 per cent, taxable, making a total of 9 per cent, taxable, for 1960, which compares favourably with 7½ per cent for 1959. Midlands hardened by 10 nP to Rs. 11.60. Cochin Malabars rallied from Rs. 7.67 to Rs. 7.75, before closing at Rs. 7.73. Malankaras were unchanged at Rs. 18.75 as also Travancores at Rs. 10.80.

Among textiles, Metturs proved a feature, the quotation rising by Rs. 10 to Rs. 399. Vijayeshwaris advanced by a rupee to Rs. 127, thanks to the higher dividend of 16 per cent, taxable, proposed for the year 1960, as compared with only 9 per cent, taxable, distributed in the previous year. Lakshmis, too, earned a rupee to Rs. 162. South Indias rose by 50 nP to Rs. 162. Janardanas moved up by a like amount to Rs. 62.50. Maduras were higher by 35 nP at Rs. 36.25.

Among miscellaneous industrials, cements were subdued, Orissas easing by 6 nP to Rs. 14.44 and Andhras by 5 nP to Rs. 10.45. Dalmias were quiet at Rs. 12.05, and Travancores at Rs. 8.45. But Indias gathered 3 nP to Rs. 6.68. Among chemicals, Mysore Chemicals were neglected at Rs. 24.65, Mysore Fertilisers at Rs. 11.75 and Travancores at Rs. 16.70. Metturs, however, picked up 13 nP to Rs. 14.25 and F.A.C.Ts 3 nP to Rs. 10.68. Among others, Aluminium Industries sagged by 10 nP to Rs. 23 and Ashok Leylands by 7 nP to Rs. 9.13. Indian Steel Rollings dropped 5 nP to Rs. 10.10. Tube Investments changed hands at Rs. 283, Western India Plywoods at Rs. 243 and Textools at Rs. 181. Bangalore Printings were unchanged at Rs. 14.30, notwithstanding the lower dividend of 5 per cent, taxable, for 1960, as against 10 per cent for the previous year. Krishna Industrials were fully steady at Rs. 12.87. The Directors of the Company have announced a dividend of 10 per cent, taxable, for the year ended September 1960, same as that paid in the previous year.

DR. PAUL LOHMANN (INDIA) LTD.

The public issue of Dr. Paul Lohmann (India) Ltd., a new company formed in Calcutta to undertake the manufacture of a wide range of organic and inorganic chemicals, will open for subscription on Wednesday the 24th inst. The issue amounts to Rs. 30 lakhs, divided into 300,000 equity shares of Rs. 10 each. Of this, 200,000 equity shares will be offered at par for public subscription. Of the remaining 100,000 shares, 60,000 shares have already been reserved for allotment to Indian promoters, Directors as well as their friends and associates and 40,000 shares to the collaborating West German firm against supply of imported plant and machinery required for the project. Details of this public issue appear elsewhere in this issue (*vide* pages 938 and 939).

The plant to be installed by the Company on Jessore Road near Calcutta will have a capacity to produce annually 3.36 million lbs. of chemicals and fine chemicals used for electroplating, fine and sensitised paper, leather, paints and varnishes, rubber and plastics/textiles, foodstuffs, etc. The products will include, among others, acetates, albuminates, benzoates, borates, carbonates, chlorides, citrates, hydroxides, phosphates, silicates and sulphates. The total cost of the project is estimated at Rs. 30 lakhs, with the initial stage alone accounting for half of it.

The Company has entered into an agreement with the world-renowned W. German firm of Dr. Paul Lohmann, Chemische Fabrik, of Emmerthel, (Hamein-Pyrmont) for the latter's participation in equity shares and for the supply of initial services and technical assistance for the project. Another notable feature is that the Company has secured the services of Messrs. Monsanto Chemicals of India Private Ltd. as sole selling agents. In view of the shortage in India of most of the products are bound to have a ready market in the country, apart from prospects for their export.

NEWS IN BRIEF

THE Government of India has abolished controls on inter-State movement of *khandsari*, sugar candy and *bura* sugar.

The third Five-year Plan is expected to emerge in its final shape by the end of June next, according to Mr. Morarji Desai, Union Finance Minister.

India has the lowest *per capita* caloric intake of 1,800, according to the latest *U.N. Year Book*. Ireland accounts for the highest, the intake being 3,500 calories, followed by New Zealand with 3,430, Denmark with 3,350, and U.K. with 3,290.

A 50 per cent cut in the supply of power to all industries excepting cement, chemicals, tea plantation factories and rice mills has been enforced in Madras State with effect from the 16th inst. The cut in the Madras thermal area is, however, only 40 per cent.

The Government of India has accepted the "Tyagi formula" for the assessment of income-tax of small assessees with annual incomes upto Rs. 7,500. The formula is a simplified procedure for calculating income-tax by doing away with the hitherto followed system of examining the accounts of such assessees.

The all-India final estimate of dry ginger for 1960-61 puts the current year's area and production at 43,600 acres and 16,400 tons, respectively. As compared with the partially revised estimates of 41,000 acres and 15,200 tons for 1959-60, the estimates for 1960-61 show an increase of 2,600 acres or 6.3 per cent in area and 1,200 tons or 7.9 per cent in production.

A meeting of the F.A.O. Technical Working Party on Coconut Production, Protection and Processing will be held for the first time in India at Trivandrum during November-December next. It will consider the question of establishing an international bureau for co-ordination of research and for rapid dissemination of technical information on coconut among growers.

The "package programme" for agricultural development already in operation in seven States has now been extended to all the States, including some districts in Jammu and Kashmir. In this connection, the Union Government will initiate the preparatory work of selecting the additional staff, procuring and stocking of supplies, constructing rural godowns and taking measures to strengthen the co-operative credit structure.

The Reserve Bank of India has removed with immediate effect all restrictions on bank advances against wheat. It will be recalled that, on 8th February last, the Bank had relaxed control on advances against foodgrains when it reduced the minimum margin requirements in respect of all foodgrains from 40 to 35 per cent. The minimum margin requirements in respect of other foodgrains, however, remain unchanged.

A new process for the manufacture of white sugar has been invented by Prof. D. N. Ghosh of Patna University. The process, it is claimed, does not involve the usual method of using sulphur and results in the recovery of edible molasses and juice potassium as a by-product. Further, it is claimed to recover more sugar at lesser cost, as well as to introduce a new type of food material in the edible molasses enriched with body-building minerals such as iron, phosphates and calcium.

A new prototype low temperature carbonisation plant of the Central Fuel Research Institute was commissioned near Dhanbad in Bihar by Mr. Binodanand Jha, the State's Chief Minister, on the 14th inst. The cost of the plant is estimated at Rs. 10 lakhs. The semi-commercial plant produces smokeless coal and also furnishes valuable process data for designing commercial plants in India for the production of smokeless coke for domestic use.

The President has given the assent to the Bombay Industrial Relations (Gujarat Extension and Amendment) Bill, 1961. The legislation extends the Bombay Industrial Relations Act, 1946, as in force in the Bombay area, to the rest of the State of Gujarat. At present, two Acts on the subject are in force in the State—the Bombay Industrial Relations Act and the Industrial Disputes Act 1947, in the Saurashtra and Kutch areas. The present legislative measure has been promoted by the State Government to bring uniformity in law on the subject throughout the State.

The Government of India has constituted a committee to assess the working of the contributory health service scheme for Central Government employees in Delhi and New Delhi. According to the terms of reference of the Committee, a comparison has to be made of the working of the scheme with that of the medical attendance rules with regard to medical care. The Committee, therefore, invites the Government of India employees to convey their views on the medical attendance rules operating in Calcutta, Bombay, Madras, Amritsar, etc. and to make suggestions for improving the medical services at present available to them.

India will participate in the third World Congress on the Prevention of Occupational Risks to be held in Paris towards the end of this month. The object of the Congress is to enable specialists to examine various aspects of the prevention of occupational risks to enhance their knowledge of research and progress in the service of prevention. Mr. V. N. Rajan, Director-General, Employees' State Insurance Corporation, has been elected Vice-Chairman of the Congress. He will be the Chairman of one of the three committees which will examine present-day trends in research work, progress in technical discipline and progress in medical and psychological discipline.

A Central Seed Corporation is proposed to be set up by the Central Government as a registered company under the Indian Companies Act 1956. It will be an autonomous organisation with a Board of Directors, including the Government of India's representatives, the seed industry and other allied interests. The proposed Corporation will have a share capital of Rs. 5 crores divided into 500,000 equity shares of Rs. 100 each. The objects of the Corporation are to promote production of improved seed by giving financial aid, technical guidance, etc., establish suitable production and marketing organisations and sponsor training programmes in collaboration with Central and State Governments and other allied interests.

From Abroad

The Government of New Zealand is expected to extend the import licences valid until 31st December 1961, upto the end of March 1962 or even longer.

The European Investment Bank, the finance organ of the Common Market, will shortly have committed all its resources. Extra funds are to be raised by issuing bonds, first in the capital markets of Common Market countries and later from outside sources. The first issue is expected to be made within a few months.

The world air transport industry (excluding the China and Russian airlines) made only a meagre profit of $50 million in 1960 as compared with $105 million in 1959, according to the preliminary estimates of the International Civil Aviation Organisation. The fatality rate on scheduled services increased from 0.95 to 1.25 per 100 million passenger miles.

The average working time for industrial workers in W. Germany has been reduced from 49.1 hours per week in May 1955 to 46 hours in November 1960. The gross average wage, however, has risen from DM 86.52 per week to DM 129.28 in the same period. At present the regular work-week for about two-thirds of all persons employed by the W. German industry does not exceed 44 hours.

The major economic problems of all the Commonwealth countries will be reviewed at the Conference of Senior Commonwealth officials due to commence at London on Wednesday next week. The agenda for the conference include, *inter alia*, review of world economic situation, assessment of prospects for Commonwealth trade and for sterling, and consideration of the question of aid to developing countries. South Africa will not take part in the Conference.

The new regime of the Government of Iran has announced a 15-point programme including land reform, cuts in State spending, a lowering of the cost of living and anti-corruption measures. Under the new plan, prices will be lowered and imports and exports balanced. The Government will decentralise, the Provinces being given greater autonomy. Land ownership will be limited and big estates divided among the peasants. Farming methods and the tax collecting systems will be improved. It also promises cut in Government agencies' expenditure, prosecution and severe punishment of dishonest officials, strengthening of judicial systems, welfare schemes for Government employees and teachers and compulsory education.

PERSONAL

MR. S. Dutt, India's Ambassador-designate to Russia, left for Naples *en route* Moscow on Tuesday the 16th inst.

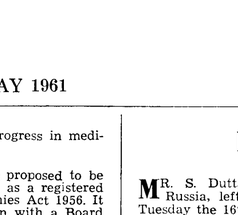
Mr. S. P. Jain has been elected President of the Indian Chambers of Commerce, Calcutta, for 1961-62.

Mr. Mohamed Yaqub and Mr. K. S. Smith, have been elected Chairman and Vice-Chairman, respectively, of the Tanners' Federation of India for the current year.

Mr. Madan Mohan Ruia and Mr. Manilal H. Patel have been re-elected President and Vice-President, respectively, of the East India Cotton Association for the year 1961-62.

Mr. S. K. Patil, Union Minister of Food and Agriculture, left New Delhi for Moscow this week on the first stage of his six-week foreign tour. He is due to visit Poland, Hungary, Czechoslovakia, Austria, and the U.S. where he will seek to obtain an export quota for Indian sugar.

Dr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company, Ltd., and Mr. G. T. Kamdar, Director, Bharat Line Ltd., Bombay, have been elected President and Vice-President, respectively, of the Indian National Steamship Owners' Association for 1961-62.



A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia; these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 *with Limited Liability.*

HEAD OFFICE: 7 King William Street, London E.C. 4.

BOMBAY OFFICE: 314 Dr. Dadabhai Navroji Road, Fort, Bombay.

Tel. Add.: BACTRIA. Telephone: 25-2267

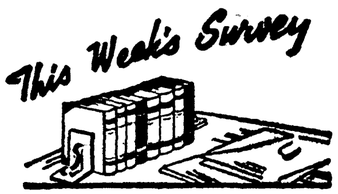
Capital and published reserves £4,473,000

ASSOCIATED WITH

THE BANK OF IRAN AND THE MIDDLE EAST

Capital Rials 250,000,000

HEAD OFFICE: TEHERAN, IRAN (PERSIA). (P.O. BOX 1680)



PLANS TO SAVE CALCUTTA

THE presidential address of Mr. Russi Mody at the annual general meeting of the Indian Chamber of Commerce held at Calcutta over the week-end covered the familiar ground of finances for the third Plan and reiterated the Chamber's approach to questions bearing on additional taxation, surpluses from public enterprises and export earnings. If the most significant observations made by Mr. Mody do not pertain to these subjects, it is because the burning question of Calcutta and its development—'reconstruction' would be a more appropriate word—has claimed his greater attention. This is a question of some very anxious interest not only to the general inhabitants of that city but to its businessmen and industrialists. Mr. Mody has, therefore, done well to focus attention on Calcutta's rehabilitation without which the further industrial and commercial progress of the city and its vast hinterland will be jeopardised.

The city's unsolved problems of congestion, housing, transport, water-supply and sanitation have all reached "the breaking point." Added to these is the scarcity of power and coal, which aggravates the difficulties of industries in the city and its environs. Unless these problems are tackled speedily and with determination, the very survival of India's largest commercial centre and metropolis will be at stake. As Calcutta is the hub of the vast industrial complex extending over India's major coal and steel belts of West Bengal, Bihar and Orissa, its problems have a wider national significance too. There is, of course, nothing new in the problems facing Calcutta. They have been there for quite a number of years. Even international experts have gone into them time and again and suggested not a few remedies. The pity is that pretty little has so far been actually done to remedy the situation. But there is currently the hope that the Calcutta Metropolitan Planning Organisation, being set up by the State Government, with the Chief Minister, as Chairman, in pursuance of a suggestion of the Ford Foundation, will mean serious business. The very creation of this Organisation is apparently prompted by the desire to tackle the manifold economic and civic problems of the city under the ægis of a single, integrated body. In effect, this will mean that the widely canvassed Master Plan—involving the scheme recommended by the World Health Organisation for providing drinking water, efficient drainage facilities and sewers in the city, as also the scheme for setting up a satellite township near Calcutta, sponsored by the West Bengal Development Corporation—will be finalised by the new Organisation. But much will depend on how soon the Master Plan is finalised in consultation with the interests concerned—the Calcutta Corporation, the suburban municipalities, owners of plots, houses and factories, port trust and railway authorities, and so on.

Even if the Master Plan on the civic side is taken up at an early date for implementation, it will not have solved the entire problem that is Calcutta unless the no less crucial question of port development is tackled with greater expedition. For it is well known that the silt formation in the Hooghly river has assumed alarming proportions, threatening to disrupt navigational facilities in what is India's major port. Over the past hundred years and more the Ganga has shown a tendency to flow more and more through its eastern arm, the Padma (now in East Pakistan). Today the Bhagirathi (Hooghly) receives water from the Ganga only for three months—during the flood season—and for the rest of the year its mouth remains high and dry. There is not enough water in the Bhagirathi (Hooghly) to flush out to sea the hundred million cubic feet of mud and sand that flow past Calcutta annually. What is worse, the tides from the sea push this silt upstream so that it is firmly deposited in the bed of the river. This is making the Bhagirathi (Hooghly) shallower every year. Whereas, before 1948, ships with drafts of 26 ft. could come up to Calcutta a number of days throughout the year, they can now come up only a few days in the year. Apart from its disastrous effect on shipping in the Hooghly, the gradual choking of the channel has made the water more saline or brackish, rendering it unsuitable for drinking and for industrial purposes.

It is now widely accepted that the only practicable solution to save the Calcutta port from extinction is to execute the Farakka barrage scheme. The scheme consists essentially of a barrage across the Ganga at Farakka, a few miles above the point where the Ganga branches into the Bhagirathi, and of a canal 26 miles long taking off from the barrage and falling into the Bhagirathi. The barrage is not an irrigation project. Its purpose is merely to divert the minimum of water from the Ganga so as to open up the Bhagirathi (Hooghly) and save Calcutta from the certain paralysis which would be otherwise caused by the salinity of the Hooghly water and the silting of the river bed. There is reason to believe that the project will get under way in the third Plan. The recently-formed Farakka Barrage Control Board, at its first meeting last week, urged both the Central and State Governments to give top priority to the project in the third Plan. The entire cost of the project, according to the latest estimates, will be about Rs. 65 crores. The project is expected to take eight years for completion, but the Board is considering the feasibility of reducing it to six years. It is reported that the World Bank may also grant a loan of about $15-25 million for the development of the port, to supplement the contributions of the Central and State Governments. The only hurdle in the way is possible delay in reaching a firm understanding with Pakistan which has expressed the fear that the project might injure navigation or irrigation in East Pakistan during the dry months when the normal water flow across the border is only 70,000 cusecs as against the flow of 2,060,000 cusecs during the monsoon period. Since India, too, depends on the navigation facilities in East Pakistan for transporting goods to Assam, it is a safe guess that the Farakka barrage scheme will be so designed as to ensure that Calcutta port is not saved at the price of damaging navigation or irrigation in East Pakistan.

ZONAL COAL DUMPS

The Federation of Indian Chambers of Commerce and Industry, it is gratifying to know, has just made a cogent and timely representation to the Coal Controller on the continuing problem of supply and movement of coal—a problem which has resulted partly from inadequate transport facilities and partly from inefficient handling of even the available transport capacity. While the idea of moving coal in block rakes has been welcomed by the Federation on the ground that it might improve the turn-round of wagons, the official proposal to have regional coal dumps in the supposed interest of movement by rakes is deemed difficult to justify. Of course, the Federation is not totally opposed to the proposed scheme of coal dumps which has been welcomed by sections of industry in States like Gujarat and Maharashtra. But, at the same time, it cannot ignore the fears and anxieties of coal merchants who, in recent weeks, have opposed the scheme of zonal dumps on the ground that distribution of coal from them to actual consumers through district magistrates or nominees of State Governments would displace the normal channels of trade and throw hundreds of coal merchants out of business. It would thus appear that a certain conflict of interests between industries needing coal badly and merchants normally engaged in its distribution has led the Federation to suggest a compromise formula to the Coal Controller.

The Federation's first proposal is to the effect that rakes or half rakes for various industrial units situated on one particular route or via, clubbing the requirements of these units together, should be formed and that these rakes be allotted at collieries served by one weighbridge. Under this suggested scheme, the rakes after starting from the weighbridge can be broken at certain fixed points from where wagons can be diverted to the consumers on the same route, as is being done even now. This would obviate the need for dumps which would involve heavy expenses by way of unloading the wagons, stacking coal in dumps and loading it in wagons and/or trucks for despatch to various destinations. If consumers are thus not forced to draw their supplies from the dumps, there will be no increase in the landed cost of coal ex-factory siding. To that extent, industries using coal will not be faced with the prospect of a rise in their cost structure.

But the Federation's idea here seems to be not that the scheme of zonal dumps should be abandoned altogether but that the consumers should not be forced to depend entirely on them. Hence its second proposal is to the effect that the scheme by coal dumps may be usefully tried as an experimental measure for consumers under Class B.R.K., Z. and S.S.1—that is, consumers who are not industrial users of coal. In these cases, dumps could be opened at selected points and the requirements of consumers met through permits from the local authorities. Under this restricted scheme suggested by the Federation, the authorities are expected to ensure judicious allocation of quotas to the customers concerned without disturbing, in the process, the present system of depot-holders at various stations. The idea here is that normal channels of coal distribution should not be upset. The Federation's scheme of coal dumps is thus cautious and restricted in scope to non-industrial users of coal. It has also the twin merit of being a compromise as well as an experiment. In view of the reasonable objections raised by coal merchants to the official scheme and in view of the Federation's considered finding that industrial users of coal may not find the dumps economic, the Coal Controller would be well advised to modify his scheme on the lines suggested by the Federation which seems to have ascertained the practical opinions of its industrial constituents before forwarding its proposals.

TEXTILE EXPORTS TO AFRICA

Indian trade missions going abroad have not unoften been prone to paint a rosy picture of prospects for exports, apparently on the basis of superficial observation. But the findings of the Indian Cotton Textile Delegation (leader: Mr. Chinoobhai C. Javeri), which recently visited North and West African countries, appear to be a departure from the usual trend. For the delegation has not hesitated to give the finding that "the future of our exports to these countries is gloomy and bleak." This observation, at any rate, is not prompted by any sense of frustration. Far from it. What is sought to be stressed is the need for vigilance on the part of both the textile industry and the Government, if India is to maintain its traditional markets for cotton textiles.

Now, what are the reasons behind India's setback in the West African textile markets? The first and foremost reason is the development of indigenous textile industries in these countries. Textile mills have already been established, for instance, in Senegal, Morocco, Ghana and Nigeria for the manufacture of greys. Expansion schemes are also under way, apart from plans for manufacturing bleached and other types of processed cloth. Some of the countries in this region have also got factories for the manufacture of blankets, towels and ready-made garments. Moreover, these industries are protected by import restrictions on the one hand and high tariffs on the other. Local production, however, is still far behind the consumption requirements of these countries. But, here again, Indian greys, drills and bleached cloth are being replaced by those from East Germany, Poland, Czechoslovakia, China and Spain, on account of their cheaper prices. Furthermore, staple fibre and rayons are competing with cotton textiles. Even in grey sheetings and other varieties, staple fibre and rayon have replaced cottons. The delegation also points out that, in many qualities of finished fabrics, staple fibre and rayon piecegoods have substituted cottons, owing to their price advantage. Besides, most of these countries, which have recently acquired independence, have overall adverse trade balances, and their economies are dependent largely upon the West which buys their primary products. Trade deficits are also sought to be minimised by entering into bilateral trade agreements. With India, on the contrary, they are regularly having adverse trade balances, because India buys little or next to nothing from them.

In these circumstances, one may ask, is there a way out for the Indian textile exporter from this queer predicament? The delegation does not seem to be unduly optimistic on this account. It has, of course, suggested a few notable measures for retrieving India's position in these markets. In the first place, it has advocated diversification of India's textile exports so as to cover prints, fancy varieties and quality cloth for which a large market exists in these countries, though here, too, there is formidable international competition. African and wax prints have a good market in West Africa, but they are not being manufactured in India. The delegation has called upon the Cotton Textile Export Promotion Council to take up the matter of producing these types in India with the Textile Commissioner, the Federation of Indian Cotton Mills and the three research associations. Secondly, the delegation has urged the Government of India to consider the question of concluding trade agreements with these countries. But the obvious difficulty here is that, as the delegation itself points out, these countries have not got the things to sell which India needs. Lastly, the delegation feels that it is advisable for India to collaborate with these countries in establishing new industries in that region. It will tend to foster goodwill and cordial relations essential for promoting trade in the future. The delegation has recommended that the Government of India or the Federation of Indian Chambers of Commerce and Industry should sponsor an Industrial Mission to visit these countries to investigate further this matter. While this suggestion is good in so far as it goes, it is doubtful if Indian industrialists will be willing and able to invest in such far-flung regions as West Africa, even if safeguards and incentives are provided to them.

RECOGNITION OF TRADE UNIONS

In his speech at the fifth annual convention of the National Federation of Indian Railwaymen, Mr. S. R. Vasavada, President of the Federation, suggested a solution to the vexed problem of recognition of trade unions. In his opinion, if a union fulfils certain conditions, the question of withholding recognition would not arise at all. These conditions, which should be well defined, are: (1) the union should have sufficient strength; (2) it should be able to maintain a sufficient number of full-time workers meaning thereby that workers should pay adequate subscription regularly; and (3) the union should accept the Code of Discipline for industries. In other words, according to Mr. Vasavada, all unions which satisfy the above-mentioned conditions should invariably be recognised. The Indian Labour Conference, too, at its fifteenth session held in Naini Tal in May 1958, discussed the question of recognition of unions and laid down certain clear criteria.

The criteria are easy to lay down but difficult to apply in practice. A host of problems crop up when they are sought to be applied. Strength of a union itself, when there are more than one union in an undertaking, as is the case in this country, is often disputed by the rival union. Verification of membership, as experience has shown, is not always easy or practicable. Neither is it possible to scrutinise the financial position of unions either because proper accounts are not maintained or because the unions themselves may resent their account books being examined by outsiders. Further, unions demanding recognition may accept the Code in principle but may not honour it in practice. Withdrawal of recognition on the ground of violation of the Code raises the complex issue of the validity of agreements entered into with unions when they enjoyed recognition.

The difficulties in the way of recognition can be attributed partly to the existence of a multiplicity of unions and their political leadership and partly to the antipathy, still shown by some employers, towards trade unions. As Mr. David A. Morse, Director-General of the I.L.O., points out in his latest report on labour relations prepared for the annual conference of the I.L.O. to be held in June next, even the employer with the best of intentions will have difficulty in recognising the right of a particular union to represent workers in collective bargaining when there are several unions claiming to represent the same group of workers. In Mr. Morse's opinion, the problem of trade union recognition is one of the most serious facing the trade union movement in the developing countries. Although more and more employers, particularly in large undertakings, accept the idea of trade unionism and successfully practise collective bargaining with their employees, there are some, according to Mr. Morse, who are still opposed to trade unionism. Their opposition stems from cultural traditions, social prejudices, mistaken concepts of the function of the employer or trade union. It is also a symptom of the employers' reaction to the type of leadership and the policies and programmes of the union with which they have to deal. This being the case, the problem of trade union recognition can be solved only when workers organise for genuine trade union reasons and develop leaders from among themselves and managements recognise that such organisation will be in the mutual interest of both parties.

KIRLOSKARVADI

Mr. Laxmanrao Kirloskar is a name to conjure with in agricultural Maharashtra, for it was he who began the manufacture of hand chaff cutters and iron ploughs in what has come to be known as Kirloskarvadi. Between 191 and now, the enterprise of Kirloskar Brother has grown from strength to strength, turning out a variety of products to serve agriculture small and large-scale industry, irrigation and public health projects, water works and the home. These products include agricultural implements, sugarcane crushers, centrifugal pumps and steel furniture. In celebrating the fifty years of its progress and achievement Kirloskarvadi neither rests on its oars nor pauses for breath, for it is buzzing with activity for further expansion.

The most important expansion project the Company has on hand is the one for manufacturing vertical turret lathes and horizontal boring machines in collaboration with the Ba lard Company of the United States and with the aid of a foreign currency loan of Rs. 2 lakhs from the Industrial Credit and Investment Corporation of India. A branch factory is also to be started shortly at Dewas in Madhya Pradesh. Kirloskar Brothers Ltd. thus poised for further expansion in the expanding economy that India is today and may well look forward to its diamond jubilee with greater hope and cheer.

GOVERNMENT OF INDIA

Further Issue of 3½ per cent. National Plan Bonds — Third Series (3½ per cent. 1967) — Issue price Rs. 98.90 per Rs. 100 (Nominal) — Repayable at par on 16th July 1967.

The holders of 3½ per cent. National Plan Bonds (First Issue) 1961, 2½ per cent. Loan 1961 and 3 per cent. Hyderabad Loan 1951-61 (H.E.H. the Nizam's Government 3 per cent. O.S. Rupee Loan 1360-70F) have been given the facility of converting their holdings into 3½ per cent. National Plan Bonds—Third Series (3½ per cent. 1967) to be issued at Rs. 98.90 per Rs. 100 (Nominal) and repayable at par on 16th July 1967.

2. Securities tendered for conversion will be accepted at the following rates :—

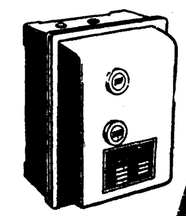
3½ per cent. National Plan Bonds (First Issue) 1961: Rs. 100 per Rs. 100 (Nominal)
2½ per cent. Loan 1961: Rs. 99.75 per Rs. 100 (Nominal)
3 per cent. Hyderabad Loan 1951-61: Rs. 85.90 per Rs. 85.71 or O.S. Rs. 100 (Nominal)

3. Interest on the securities tendered for conversion will be paid at the respective rates upto 31st May 1961 inclusive. Interest on the 3½ per cent. National Plan Bonds—Third Series (3½ per cent. 1967) to be issued by way of conversion will be paid from 29th May 1961; interest warrants for the period 29th May to 15th July 1961 inclusive will be delivered along with the new securities and thereafter interest will be paid half-yearly on 16th January and 16th July, commencing from 16th January 1962.

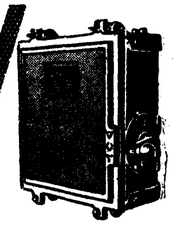
4. Applications for conversion will be received during the period 29th May 1961 to 3rd June 1961 (both days inclusive) at the following places :

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
(b) Branches of the State Bank of Hyderabad conducting Government work and those at Jaggayyapet, Manoherial, Nagarjunasagar and Sirpur Kagaznagar in Andhra Pradesh, Manwath, Purli-Vaijnath and Sailu in Maharashtra State and Shahabad in Mysore State;
(c) Branches of the State Bank of Mysore in the State of Mysore except those at Bangalore, Mangalore and Gulbarga; and
(d) Branches of the State Bank of India at Mangalore and at other places in India except at the places specified in (a), (b) and (c) above.

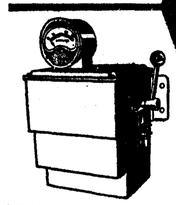
For full particulars, a reference may be made to any of these offices/branches, or Government Treasuries.



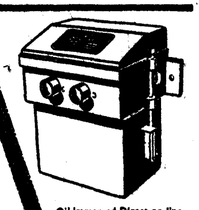
Direct-on-line Push Button operated AC Motor Control Starters upto 20 H.P.



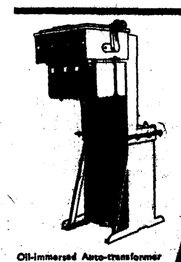
Air Break Hand Operated Star-delta Starters Type NASD/NT. For squirrel cage motors upto 20 H.P.



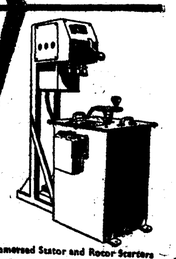
Oil-immersed Ironclad Star-delta Starters Type NSD. For squirrel cage motors upto 100 H.P.



Oil Immersed Direct-on-line Starters type OND. Max. rating 15 H.P.



Oil-immersed Auto-transformer Starters type ATS. For squirrel cage motors upto 100 H.P.



Oil Immersed Stator and Rotor Starters type OSR for A.C. slipring motors upto 200 H.P.

Problem Of Sugar—As Mr. Nehru Sees It

I AM afraid the Prime Minister has not been properly briefed about the cost of production of sugar; either that, or, the facts as they are have not been analytically presented to him. Addressing a closed-door meeting of the Congress Party legislators at Lucknow early this month, he is reported to have stated that (*a*) the greatest difficulty facing the Government was how to compete for sale of sugar in the world market, for the world market price for sugar was cheaper than in India, (*b*) wages were lower in India but prices higher and (c) India should change the technique of production and bring it in line with other countries to compete in the world market. I do not know how far this report of what is purported to have been said in a *closed* meeting can be taken as authentic, but assuming it to be so, I would say that (*a*) is correct, (b) not quite correct and (c) correct only to a limited extent. Wages may be lower taking into account what is paid to each labourer employed, but calculated in terms of per ton of sugar produced, they are not lower; the achievement in competing countries is higher, perhaps due to more modern machinery and better technique employed, and undoubtedly due to larger quantity produced, arising out of better quality of cane crushed and longer crushing season. The utilisation of by-products and waste products is also greater, and the incidence of overheads over each ton of sugar produced is much lower. The finer points in the technique of production which have a bearing on the quality of the product have been greatly improved during the past few years but there is scope for more refinement in milling results, boiling house results, sucrose balance, extraction, stores consumption and fuel consumption.

The main reason for the continuing high cost of sugar production is, by and large, historical. The sugar industry was first given protection in 1932 not so much for the sake of the manufacturing industry as for the agricultural side of it. The interests of the cane grower were of primary concern, especially to the pioneering States of U.P. and Bihar; and even today vital decisions concerning the manufacturing industry are governed by factors affecting the interests of the cane grower which are, in a sense, political. Many of the units in the sugar industry in India could manufacture sugar as cheaply as in foreign countries provided they get sugarcane of as high quality and at as low a price as in those countries. Unfortunately, however, in areas which contribute the largest volume to the total production, the quality is poor, the duration of the season is short, and the cost of cane is controlled at a correspondingly high figure. In plain words, the growth of sugar production in India has been encouraged in areas which are totally unsuited to its economic manufacture, and nothing but the operation of the economic law of survival of the fittest will induce removal of the plants to more suitable areas. At present, a variety of considerations, social, regional, political and economic (mostly irrelevant in the face of external competition) stand in the way of removing the protective control both over the price of cane and the price of sugar.

The yield of sugarcane per acre in 1957-58 was 27.88 tons in Andhra, 27.13 tons in Bombay, 25.65 tons in Madras and 24.11 tons in Mysore. The yields in U.P. and Bihar were 10.12 tons and 8.47 tons respectively. As far back as 1950 (*Report of the Indian Tariff Board*) it was pointed out that the tropical conditions of Southern India were more suitable for cane development than the sub-tropical climate of North India. In the same report it was mentioned that the corresponding figure was 75.4 tons in Hawaii, 56.20 tons in Java, 41.14 tons in Peru, 28.4 tons in Puerto Rico, 28.7 tons in Florida, 14.33 tons in Australia, 20.6 tons in U.S.A., and 17.36 tons in Cuba. The *average* in India in 1957-58 was 12.7 tons; it had steadily declined from the peak figure of 14.2 tons in 1954-55. What was done with the sugarcane cess that had been collected by the Indian States during all the previous years?

The *average* all-India percentage of sugar recovery was 9.85 in 1958-59. The figure for West U.P. was 9.49, East U.P. 9.78, Bihar 9.79, Bombay 11.46, Andhra, Madras, Mysore and Kerala 9.53, and Punjab and Rajasthan 8.63.

The average duration of the crushing season in 1957-58 was 149 days in West U.P., 132 days in East U.P., 125 days in Bihar, 187 days in Bombay, 149 days in Andhra, 200 days in Madras and 135 days in Punjab. The all-India *average* was as low as 145.

Bearing these three factors of yield, sugar recovery, and duration of season in mind (as also which of the areas were responsible for lowering of the all-India averages) we should now take note of the percentage contributions of each State to the total production of sugar in India in 1958-59. U.P. 46.44 per cent, Bihar 16.21 per cent, Bombay 16.79 per cent, Andhra 6.27 per cent, Madras 3.56 per cent, Mysore 4.44 per cent and Punjab 3.61 per cent.

In the foregoing we have the explanation before us for the problem of high price of Indian sugar. We also have the guidance necessary for establishment of new units in the industry. But we are already facing a glut in production and at high cost too. That, together with the problem of how to make the uneconomic areas continue in production without breaking any bones—their own as well as those of the country's economy—constitute tough exercises in the reconciliation of conflicting interests.

Stumer Cheques

I have just read a pathetic bit in a leading paper which says that the Delhi Municipal Corporation has been carrying a large load of stumer cheques dating from August 1958, aggregating in value some lakhs of rupees, received from taxpayers at the Karolbagh and City Zonal Offices of the Corporation. Most of them relate to the payment of arrears of house tax and property tax. The Chief Auditor who discovered the irregularity has, it would seem, asked the Municipal Commissioner to investigate why the parties concerned have not been called upon to make good the loss, and also to consider the desirability of withdrawing the facility generally. The Auditor has assumed the amount to be a total 'loss', as though it is impossible to lay hands on the people who have been playing the bouncing game, especially if they are property owners. Even otherwise, as municipal laws provide for stinging the purchasers with arrears of tax, it is beyond comprehension why the Corporation has been carrying the cadaverous material without taking distraint proceedings against the owners of the properties for over three years.

We have been talking a fat lot about the spread of the banking habit, and have also abolished the stamp fee on cheques so that there may be no impediment to the use of cheques. But the general attitude to stumer cheques is so lackadaisical that most banks do not take stern action against constituents whose cheques get frequently dishonoured. Indeed, many bank managers are so unsure of the accuracy of their ledger accounts (thanks to the low efficiency of their staff) that when returning cheques unpaid, they prefer to adopt a veneer of protection (against damages) by using such phrases as "Exceeds arrangement" or "Funds drawn against not received." The latter objection, in particular, is a pathetic understatement. In fact, most of the stock phrases like "Refer to drawer" or "Not provided for" are euphemisms, but they have, by usage, acquired the meaning that the drawer has no money in the bank sufficient to meet the cheque and is not good for temporary accommodation. Technically, a man who issues a stumer cheque can be prosecuted for cheating, although it may be hard to prove the intention. But he is undeniably an anti-social customer, and banks should join together and agree to give his like no quarter. Any lenience in treatment meted to a man who plays the bouncing game too often is doing a disservice to the community. For, as is believed to be the intention of the Delhi Municipality, the facility of making payments by cheques may be withdrawn for everyone, and the horror of having to queue at municipal counters is something the very contemplation of which is sure to send shivers down the spine.

The Boost To Morale

The subject of space probe and space conquest is too vast to permit of any specific delineation of the scope of their ultimate benefit to the human race, but there is no denying the fact that the American success at Cape Canaveral on the 5th May is a great boost to morale in the United States. "We have done it" is a slogan which the American public love, especially in any competitive effort with Russia. The who'e world has assumed for over two decades that American supremacy in technological competence was unassailable, but when Russia sent the sputnik into space and American attempts to overhaul the Russian lead ended in failure, despondency and frustration became pronounced in the United States, and the outside world began to wonder if the result of the competition between a free society and a planned society might ultimately end in an affirmation of faith in the latter. It was good, therefore, that the demon of inferiority among Americans was exorcised by Commander Shepard's exploit. The Americans themselves have admitted that Shepard's performance was *not* on all fours with that of Gagarin—it does not need a Krushchev to point out that Gagarin orbited round the world three times in 108 minutes while Shepard only probed into space at a height of 115 miles and was back on earth in fifteen minutes—and that America has not yet caught up with the Soviet in the space race. But when it is noted that this contest (or, better, competition) between Soviet Russia and the United States is not just or purely a scientific contest, but is considered by several nations to indicate the content and capacity for achievement of the kind of society in those two countries—free capitalism *versus* planned communism—the re-establishment of the sustained vitality and strength of the former is a matter for considerable satisfaction to the free peoples of the world. Nothing keeps a person on his toes as much as competition, and while complacency has been a recurring weakness with all affluent societies, America has been no exception. A race between two giants is therefore good to see, provided the objectives of the competition continue to be the establishment of peace in the world and scientific progress for preservation of mankind.

Comments in the British Press on the American exploit have taken mixed forms. There seems to be a measure of satisfaction over the fact that it will help to boost American morale. But the pedantic wisdom (it rhymes with Vedantic wisdom) which the Anglo-Saxon is always fond of showing off, has manifested itself in some of the leading newspapers paying cynical left-handed compliments. One comment is that the space flight has only proved that American rockets and guided missiles work as well as American refrigerators and motor cars, and that the cardio-vascular system of an American is just as good as that of a Russian. The small trace of wit in this piece no doubt redeems its pettiness, but the grandpapa-ism fails to realise that if an English Astronaut was sent into space from England, he will perhaps have to be recovered somewhere in Europe (there is'nt enough space in England to manœuvre him back); and when the English honour a man for daring to do his bit for his country, he would be given a peerage which would not only reduce him to impecuniosity during his lifetime, but also hang round his progeny's neck like a millstone and reduce him to political impotence in an otherwise free society.

Notice

SELECTED SATGRAM COLLIERIES LIMITED

A MEETING OF THE BOARD OF DIRECTORS of Selected Satgram Collieries Limited was held on 13th May 1961 and it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on 28th June 1961, the payment of final dividend for the year ended 31st December 1960 @ the rate of Rs. 8 per share, subject to deduction of tax, on 13,000 (old) ordinary shares and *pro rata* @ the rate of Rs. 2-62 nP on 6,500 (Newly issued) ordinary shares, payable on 20th July 1961.

DELHI LETTER

COMMONWEALTH ECONOMIC MEETING

INDIA MAY ASK FOR CONCESSIONS FROM COMMON MARKET

(From Our Special Correspondent)

NEW DELHI, 16*th May*

THE meeting of Commonwealth economic officials in London at the end of this month is of more than ordinary importance, in view of Britain's apparent readiness to join the six-nation Common Market soon as a full member. Though close economic ties with Commonwealth countries constituted a major reason for British reluctance to accept all the terms for entry into the European Economic Community, it now appears that even more serious problems will be created by British agricultural interests and by the European Free Trade Area, the latter now barely a year old. In facing these, the British Government will be considerably helped by the understanding shown by most Commonwealth countries for Britain's delicate position, and its desire to become an instrument of political and economic unity in Europe. The loss of preference for Commonwealth goods imported by Britain will not have uniform effects for all countries. Canada and New Zealand have been more critical than the rest, while India and Australia, though conscious of the possible setbacks to exports due to the abolition of preference for Commonwealth goods, would like Britain to use its improved bargaining position for securing concessions which will ease the problems of the transitional period.

Battles Over Tariffs

Some of these battles over tariffs have to be fought in the general round of tariff negotiations under G.A.T.T. due to begin soon in Geneva. The Indian representative for both the London meeting of Commonwealth officials and for the next session of the G.A.T.T. will be Mr. L. K. Jha, Secretary for Economic Affairs in the Union Finance Ministry, whose long experience in this field will be a considerable asset in both places. If the Common Market countries as a whole can be persuaded to be less discriminatory in their tariff policies to those outside and permit Britain to grant concessions to the Commonwealth analogous to those which they have been granting to their own overseas dependencies (even after they have become free), there will be no particular reason to dread the prospective changes. India, for example, fears that textiles, tea and tobacco are the commodities likely to be hit hard by the loss of preference. A new factor in the situation is the unexpected rate of growth in the trade of the European Economic Community and, so long as the total volume of imports is not a shrinking but an expanding quantity, there is less reason to fear the consequences of change. Export prices of manufactures in the Common Market will probably decline as a result of the keen competition and, if consumption levels there rise faster, the demand for imported raw materials and food products will also expand. If tariffs are kept low on food articles and beverages, exporters of these in the Commonwealth countries will be more than compensated for any decline in sales to the British market.

Solutions will not be found through general principles but only in detailed negotiations and definite indications of future trends will be available only after a long time. In any order of priorities, the future of British agriculture will claim a top position, in view of its vital importance to both the political parties. Mr. Butler, Home Secretary, recently stated at a meeting of Conservatives that a system of price support quite different from the present subsidy—such as a levy on imports—may have to be considered to protect British agriculture. These are indications that the British Government is preparing itself for making most of the adjustments needed for entry into the six-nation Common Market, in view of the economic advantages offered by such participation, especially the incentive to economic efficiency and rapid economic growth offered by the scope for competition within that group. However, loyalty to the newly-organised E.F.T.A. is proving an encumbrance, because, except Denmark (and perhaps Norway and Portugal later), all the other countries are politically neutral and cannot follow Britain into the Common Market, by accepting terms which involve some surrender of political sovereignty. Austria, Sweden, Switzerland and Finland are in this category and it is doubtful whether they will find a solution amongst themselves after Britain's exit. Professor Hallstein, Chairman of the European Economic Community, has asserted that complete acceptance of the Rome Treaty by Britain was not essential and that in any case no quick decision was expected from her.

There may thus be sufficient time and opportunity for the Government of India to press the country's claims for concessions and prepare itself for the next step where they are not adequate.

Foreign Aid

The pattern of foreign aid received by India so far and the manner of its utilisation has some important lessons when negotiations for further aid are being conducted and the Aid-India Club may be taking some decisions at the end of the month on the type of assistance to be offered by its members. The overall picture of external assistance to India at the end of the second Plan (31st March 1961) was as follows:

(Rupees in crores)

	Granted	*Utilised*	*Carryover*
Loans:			
In foreign currency	1,604.11	936.59	667.52
In rupees	253.57	93.70	159.87
Total	1,857.68	1,030.29	827.39
Grants:			
In foreign currency	256.86	229.87	26.99
In rupees	395.96	5.08	390.88
Total	652.82	234.95	417.87

It is possible that the actual utilisation will be somewhat less than is indicated above when the final accounts are settled, making the carryover larger. How much of this unutilised portion can be drawn upon until other assistance is forthcoming will depend on the progress of the particular projects to which much of the aid is earmarked. Practically all the *grants* in foreign currency to the extent of Rs. 230 crores have been utilised by way of imports of foodgrain or materials, while almost the entire rupee grants are lying unused apparently for the reason that no project for which the grant was made has suffered in execution for lack of rupees.

In respect of the loans carried over, some were specifically made for the third Plan projects (like those from the Soviet Union, Poland and Yugoslavia amounting in all to about Rs. 300 crores). In respect of the balance, difficulties in utilisation of certain foreign credits are illustrated in the following table:

(Rupees in lakhs)

	Authorised	*Utilised*	*Carryover*
U.K.	122,66	122,40	26
World Bank	194,87	172,95	21,92
U.S.A.	569,84	322,99	246,85
U.S. Export-Import Bank	95,24	35,73	59,51
Canadian Wheat Loan	15,71	15,71	..
U.S.S.R.	383,81	78,27	305,54
West Germany	122,24	113,75	8,49
Japan	27,62	11,97	15,65

It will be seen that there has been maximum utilisation of the U.K. loans most of which were general credits, besides the special ones for the Durgapur steel project and the oil pipeline loan. Next in order comes the World Bank's assistance and those still remaining to be fully utilised are the recent loans for railway projects, the D.V.C. third loan and the Koyna project loan. In regard to U.S. aid, the slow pace of utilisation of P.L. 480 assistance is quite understandable; the Development Loan Fund has offered credits on easy terms of interest and repayment, but their link with particular projects, especially non-industrial ones, has been responsible for the slower drawals. Though it is some time since the first Export-Import Bank loan of Rs. 71.43 crores ($150 million) was granted, more than half of it remains, besides the second loan of Rs. 23.81 crores. The bulk of the utilisation of about Rs. 25 crores of Eximbank loan was in the private sector, by the textile, chemical and automobile industries. Orders have, however, been placed for equipment to be financed by this assistance, the major public sector enterprise to benefit being the National Coal Development Corporation. Even these orders, however, have not exhausted the first credit and this is one sphere in which the suggestion of the former President of the Federation of Indian Chambers of Commerce and Industry for diversion of such aid to the private sector can be considered with advantage.

Even slower has been the rate of utilisation of the Soviet credits except those given for Bhilai. Not even one-sixth of the credit of Rs. 60 crores for industrial enterprises has been drawn upon; drug projects for which Rs. 9.5 crores was secured have not been progressing rapidly and Barauni credit of about Rs. 12 crores has naturally taken much time for being put to use. The rest of Russian aid has been given specifically for the third Plan. Fuller use of the earlier credits will depend on the progress of the Heavy Machine Building Plant, Coal Mining Machinery Plant, and the Korba Coalfield projects.

Hardly Justified

West German credits have been of the same magnitude as U.K.'s except for the aid for Rourkela of which a small part remains; other credits were of a general type and have been used up. On the other hand, Japanese Export-Import Bank credits (being of the same nature as the American) have taken a similarly long time for the preparation of programmes; a hitch in respect of procedure delayed orders even at the beginning. Since the credits are being made available for a wide variety of power and transport projects, besides private sector schemes, such a slow pace of progress seems hardly justified. Here again, the allocation to the private sector could, perhaps, have been larger; the high cost of equipment which was one of deterrents to fuller use of U.S. Eximbank aid by the private sector does not apply to the Japanese Eximbank credit.

Quite apart from the importance of untied credits—for maintenance imports and purchase of equipment for projects which are ready and can be implemented by both sectors—these trends in utilisation suggest the need for greater attention to flexibility in project-wise assistance. The desire to make use of the U.S. Development Loan Fund for a wide variety of public sector projects is quite understandable (except for the indirect assistance given to the private sector through the I.F.C. or the I.C.I.C.I.) but there has been some avoidable tying up with miscellaneous projects to the neglect of more urgent schemes in the private sector, for which applications had been made to the new financial institutions.

WEST BENGAL'S MEMORANDUM TO FINANCE COMMISSION

MORE DEVOLUTION OF FUNDS DEMANDED

IN an effort to secure a substantial devolution of funds from the Centre, the West Bengal Government has submitted a comprehensive memorandum to the Third Finance Commission, which is meeting the Ministers and officials of the State Government in Darjeeling next week to hear their oral representations. The memorandum, running into 86 printed pages, avers that the two previous Finance Commissions, in making their recommendations to the Union Government had failed to do justice to West Bengal and expresses the hope that at least the Third Finance Commission (Chairman: Mr. A. K. Chanda) will take a realistic view of the position of the State's economy and make appropriate modifications in the principles hitherto followed both in the determination of the percentage to be distributed and in the basis of distribution among the States. The memorandum presents the case for giving up the existing basis of population for distributing the divisible part of the shared taxes among the States. Criticising the reasoning given by the First and Second Finance Commissions to the effect that the needs of the various States were directly dependent upon population in the respective areas, the memorandum observes:

"This assumption completely overlooks the fact that needs of certain States where there are heavy concentrations of population in vast centres and the environs are much greater *per capita* than those of the other States where population is evenly distributed over a wide area and is predominantly rural in character. In West Bengal there is added complication of a high overall density of population. There is no reason to overlook the elementary fact that *per capita* cost of social overheads and services is much higher in concentrated centres of population and in densely populated States than in predominantly remote and low density areas."

The memorandum points out that the First Finance Commission reduced W. Bengal's share in the divisible pool of income-tax from 13.5 per cent to 11.25 per cent, the divisible pool having been fixed at 55 per cent of the net proceeds. The First Commission (Chairman: Mr. K. C. Neogy), it may be recalled here, had admitted the relevance of the fact of *contribution* in the distribution of shared tax, but had rightly observed that *collection* was an inadequate index of contribution. The Neogy Commission had further felt that "bases of income-creation are far more diversified and widely spread over the country than the facts of collection would seem to suggest." That the Commission did not, however, completely neglect the factor of contribution is clearly shown by its recommendation that 20 per cent of the divisible pool should be distributed to the States on the basis of collection and the remaining 80 per cent in accordance with population.

Population Criterion

With a view to expanding the divisible pool itself and thereby relieving the financial difficulties of the State Governments, the Second Finance Commission (Chairman: Mr. K. Santhanam) increased the share going to the States from 55 per cent to 60 per cent but held firmly to the view that the actual distribution of the share of each State in the divisible pool should be determined on the basis of population. The Santhanam Commission, in fact, suggested the total elimination of the factor of collection in fixing the shares of respective States, but since it wanted this change to come by stages, it recommended that 10 per cent be distributed on collection basis and the balance on population basis.

It is this criterion of population that is attacked by States like W. Bengal and (former) Bombay State, which account for 75 per cent of the all-India collection of income-tax. In its memorandum the Government of W. Bengal has furnished detailed figures to show that for every one hundred rupees collected during the year, Andhra, Assam, Bihar, Madhya Pradesh, Orissa, Punjab, Rajasthan, U.P. and Kashmir are receiving more than one hundred rupees, while the other States are receiving less than one hundred rupees. These statistics cannot be considered meaningful for the simple reason that the absolute collection of income-tax in less industrialised States is much lower than that in the relatively advanced States. Once the population basis of distribution replaces the collection basis, it is only natural that a considerable amount of income-tax collected in West Bengal, Bombay and Madras should be diverted to other States.

The W. Bengal Government is, of course, on firm ground in listing the special needs of West Bengal ranging from the general problem of unemployment to the needs of intensifying policing in the border and the highly industrialised areas, from food and relief expenditure to education and refugee rehabilitation. But such special needs could be looked after through special grants-in-aid of revenue for particular purposes.

The memorandum has also pointed out that consequent upon the receipt of income-tax from companies now being treated as corporation tax, there has been a great increase in the Central pool. The W. Bengal Government's demand that this should be made divisible is quite reasonable. The memorandum has alternatively suggested that the State's share could be easily expanded by raising the percentage of the divisible pool assigned to the States to 95 per cent as against the present 60 per cent recommended by the Santhanam Commission. The issue raised by West Bengal is of general concern to all the States. The present Finance Commission would have now to decide whether the States should be given a larger share of the divisible pool of personal income-tax to compensate for their loss on account of corporate tax—it may be recalled here that the Union Government has been giving to the States additional grants to compensate them for the loss caused by the conversion of company income-tax into corporation tax—or whether to advise the Union Government to amend the Constitution suitably to grant the States a share of the Corporation tax itself.

Union Excise Duties

In respect of Union excise duties, the W. Bengal memorandum observes that the Neogy Commission came to the conclusion that duties on tobacco, matches and vegetable products were the most suitable for distribution and had recommended that 40 per cent of the net proceeds of these duties be allocated to the States, the share of each State in the divisible pool being determined on the basis of population. The Second Finance Commission, however, reduced the proportion going to the States to 25 per cent, but compensated the States financially by bringing within the orbit of devolution the excise duties on sugar, tea, coffee, paper and vegetable non-essential oils. The West Bengal Government has urged the Chanda Commission that the correct basis of allocation should be consumption. It may be noted here that the First Commission had observed that the basis of consumption could not be adopted as the data of consumption for the respective States were not available. The Santhanam Commission went a step further and pointed out that distribution of excise duties on the basis of consumption would operate in favour of the more urbanised States which are also in a better position to raise substantial revenue from sales tax on such consumption. How the Chanda Commission will approach this question is by no means clear.

As regards sales taxation, the W. Bengal memorandum observes that per capita taxation in the State so far as sales tax is concerned is already the highest among the States in India. Besides, sales tax, there is practically no other major source of revenue, since in the initial stage of land reform receipt from land revenue and agricultural income-tax is low. Payment of compensation to zamindars and intermediaries have added further to the problem. In West Bengal the sales tax rates have been raised repeatedly and the tax collection has reached saturation point. The memorandum also points out that there is a gap of about Rs. 200 crores in the resources for financing the third Plan outlay and that this gap would be closed only if Central assistance of the order of Rs. 200 crores is given instead of the Rs. 160 crores indicated by the Planning Commission. Emphasising that there has been an inadequate appreciation on the part of the Centre of the special problems of West Bengal, the memorandum adds:

"West Bengal feels that there has been inadequate appreciation on the part of the Centre of the special problems of West Bengal in the matter of allocation of resources even from the very inception of this State due to its closest proximity to the war-front, the paralysing effect of the 1943 famine, the politico-communal turmoils culminating in the partition, the day-to-day problems of maintaining law and order along its extensive international frontier running upto 1,300 miles, and above all the States' economic malaise in the form of acute unemployment and a chronic maladjustment in the distribution of the available employment potential between the surplus local manpower and personnel flowing in from outside the State, etc., seemed to have been overlooked when immediately after Independence the Centre 'by a mere stroke of the pen' scrapped the Niemeyer Award and reduced West Bengal's shares in the divisible pool of the income-tax to only 12 per cent as against undivided Bengal's share of 20 per cent.

"The jute growing States' share in the export duty on jute goods in which again West Bengal was most vitally interested was also similarly reduced from 62½ per cent to only 20 per cent. The State Government made strong protests to the Union Government against this inequitous and arbitrary' decision and obtained an assurance that 'an arbitrator would be appointed to go into the whole question' of sharing income-tax and the export duty on jute goods. When Mr. C. D. Deshmukh was appointed arbitrator, it was found that his term of reference was restricted only to making 'some adjustments' with the result that his award increased West Bengal's share in the divisible pool of income-tax from 12 per cent to 13¼ per cent and gave West Bengal Rs. 1.05 crore as grants-in-aid in lieu of the jute export duty."

Of course, these and other problems have been mentioned in the memorandum to lend additional support to the West Bengal case for greater devolution of funds from the Centre. Some other States may have similar tales of sorrow to recount before the Chanda Commission. There are also many States which are far less industrially developed than West Bengal, Maharashtra, Gujarat, Delhi and Madras, and they too may do some very special pleading. The Chanda Commission, thus, may find it even more difficult than the previous two Commissions to satisfy the competitive demands of States.

BANK OF RAJASTHAN LTD.

The year 1960 proved to be quite a prosperous one for the Bank of Rajasthan Ltd. (General Manager: Mr. B. L. Sethi, Udaipur) in that it witnessed a distinct improvement in earnings. This followed a rise in credit made available by the Bank which was rendered possible by the substantial expansion in deposits from Rs. 492.22 lakhs in 1959 to Rs. 536.26 lakhs in the year under review. Thanks to the brisk demand for loanable funds on the part of industry and trade, resulting from the increasing tempo of industrialisation, advances went up from Rs. 190.87 lakhs to Rs. 263.29 lakhs, taking up the ratio of advances to deposits from 38.8 per cent to 49.09 per cent. Consequently, the income earned by way of interest and discount rose from Rs. 20.96 lakhs in 1959 to Rs. 24.50 lakhs and commission and exchange from Rs. 5.86 lakhs to Rs. 6.24 lakhs. This improvement in profit is remarkable when it is realised that a large part of these increases has no doubt been neutralised by outgoings in the form of interest paid and other expenses, the former having risen by Rs. 1.66 lakh to Rs. 14.81 lakhs and the latter by Rs. 1.63 lakh to Rs. 13.13 lakhs. Nevertheless, the profit (before taxation) has gone up from Rs. 2.60 lakhs to Rs. 3.36 lakhs, representing an increase of more than 29 per cent.

After providing Rs. 1.10 lakh for taxation, as against Rs. 96,000 in the previous year, the Directors have transferred Rs. 91,000 to reserve *funds*

(Rs. 53,000 in 1959) and utilised Rs. 41,000 (Rs. 37,000 in 1959) for giving bonus to staff. The balance of Rs. 95,000 is proposed to be utilised for paying a higher dividend of 10 per cent subject to tax, as against 8 per cent distributed in 1959, leaving Rs. 3,000 to be carried forward to next year. The net dividend of 7 per cent is slightly higher than the 6 per cent tax-free dividend declared in 1957 and 1958, and the taxable dividend of 8 per cent (5.6 per cent net) given in 1959.

A synoptic view of the progress of the Bank from 1957 can be had from the following comparable table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount earned ..	24.50	20.96	17.35	14.27
Commission and exchange ..	6.24	5.86	5.49	5.32
Interest paid	14.81	13.15	10.89	8.29
Expenses	13.13	11.50	9.79	8.76
Depreciation	0.79	0.68	0.58	0.36
Profit	3.36	2.60	2.33	2.75
Provision for taxation	1.10	0.96	0.90	1.04
To reserve and other funds ..	0.91	0.53	0.54	0.88
Bonus to staff	0.41	0.37	0.34	0.28
Dividend	0.95	0.74	0.55	0.55
	(10%)*	(8%)*	(6%)*	(6%)
Carry forward	0.03	0.01	0.01	0.01

	As on 31st December			
	1960	1959	1958	1957
Paid-up capital	9.24	9.24	9.23	9.23
Reserves	8.01	7.10	6.92	6.27
Deposits	5,36.26	4,92.22	4,53.74	3,81.14
Advances	2,63.29	1,90.87	1,45.70	1,81.49
Investments	2,01.77	2,29.54	1,87.13	1,02.92
Cash	1,16.67	1,18.92	2,11.03	1,35.28
Balance-sheet total	6,46.84	5,95.98	5,35.93	4,57.32
Ratio to deposits of—	%	%	%	%
Advances	49.0	38.8	32.1	47.6
Investments	37.6	46.5	30.2	26.9
Cash	21.5	24.4	46.5	35.5

* Subject to deduction of tax.

As noted earlier, the deposits of the Bank show a substantial expansion. The expansion is accounted for by all categories, fixed, savings and current. The Bank's bill business also shows a steady growth, as witness the rise in bills payable from Rs. 28.86 lakhs to Rs. 34.05 lakhs and bills for collection from Rs. 29.51 lakhs to Rs. 30.20 lakhs. On the assets side, investments have been reduced from Rs. 229.54 lakhs to Rs. 201.77 lakhs, presumably to meet the growing demand for bank funds from commerce and industry. The liquidity ratio (ratio of investments *plus* cash to deposits) has, therefore, come down from 70.9 per cent in 1959 to 59.1 per cent.

The Bank opened four new branches during the year under review. One of them is a mobile branch specially intended to cater to the needs of the suburban residents of Jaipur City.

RISE IN WORLD BANK'S RESOURCES

The reserves of the World Bank have risen by $72.8 million to $579.3 million over the nine months ended 31st March 1961, according to a report issued by the Bank on the 8th inst. The additions to reserves are made up of net earnings of $48 million which were placed in the supplemental reserve against losses on loans and guarantees, and loan commissions of $21.5 million which were credited to the special reserve. Another $3.3 million was added to the supplemental reserve representing net profit resulting from revaluation of the Bank's holdings of Canadian dollars, German marks and Netherlands guilders. On 31st March, the supplemental reserve aggregated $393 million and the special reserve was $186.3 million.

Gross income, exclusive of loan commissions, was $124.5 million. Expenses amounted to $76.5 million and included $65.3 million for interest on the Bank's funded debt, bond issuance and other financial expenses.

During the period, the Bank made 18 loans of the value of $380.6 million in Burma, Colombia, Costa Rica, El Salvador, India (2 loans), Israel, Japan (3 loans), Mexico (2 loans), Norway, Pakistan, Panama, Peru, Uganda and Yugoslavia. This brought the total number of loans to 283 in 55 countries or territories and raised the gross total of commitments to $5,561.3 million. By 31st March, as a result of cancellations, repayments and sales of loans, the portions of loans signed still retained by the Bank had been reduced to $4,059.5 million.

Disbursements on loans were $279.1 million, making total disbursements $4,200.3 million on 31st March.

The Bank sold or agreed to sell the equivalent of $154 million principal amounts of loans. As at 31st March, the total amount of such sales was $965.1 million, of which all except $69 million was without the Bank's guarantee.

Repayments of principal received by the Bank amounted to $77.3 million. Total principal repayments amounted to $796.9 million on 31st March; this included $415.2 million repaid to the Bank, and $381.7 million to the purchasers of borrowers' obligations sold by the Bank.

The outstanding funded debt of the Bank amounted to $2,182 million on 31st March 1961, reflecting a net increase of $109 million over the past nine months. In this period there was a gross increase in funded debt of $597.6 million consisting of a public bond issue in Swiss francs equivalent to $14 million; the private placement of bonds and notes equivalent to $338.5 million, partly to raise new funds and partly as refunding operations ($388 million in U.S. dollars, $142.8 million in Deutschemarks and $7.7 million in Swiss francs); the delivery of $6.8 million of dollar bonds and $33.4 million in Deutschemark notes of issues sold previously subject to delayed delivery arrangements; and $14.5 million equivalent which was added to the funded debt as a result of the revaluation of outstanding Netherlands guilder, Canadian dollar and Deutschemark bonds and notes. The gross decrease in funded debt was $488.6 million and resulted from funded debt maturing in the amount of $115 million; sinking fund and purchase fund transactions amounting to $12.7 million; and the refunding of privately placed issues equivalent to $360.9 million.

Pursuant to the increase in the authorised capital of the Bank from $10 billion to $21 billion on 15th September 1959, 61 members have doubled their subscriptions and 28 members have subscribed to $1,366.9 million in addition to their 100 per cent increase. During the past quarter Portugal and Nigeria became members of the Bank with capital subscriptions of $80 million and $66.7 million respectively, bringing total membership to 68. The subscribed capital of the Bank amounted to $20,062.9 million on 31st March 1961.

I.M.F. CREDIT TO AUSTRALIA

The International Monetary Fund has agreed to a drawing by the Government of Australia that is equivalent to $175 million in currencies held by the Fund. It has also entered into a stand-by arrangement with the Australian Government which authorises additional drawings equivalent to $100 million over the next twelve months. Australia will draw immediately the equivalent of $55 million in Deutschemark, $40 million in United States dollars, $30 million in pounds sterling, $15 million in French francs, $15 million in Italian lire, $10 million in Canadian dollars and $10 million in Netherlands guilders.

This use of the Fund is intended to support the Australian Government in the efforts it is making to improve its foreign payments position by means of fiscal, monetary and other measures. The country's payments problems stem in part from a domestic boom in 1960 which stimulated import demand and diverted to the home market some production which is normally available for export. In addition, Australia's foreign exchange receipts were unfavourably affected during that year by a fall in world market prices for some primary products, especially wool.

Since early 1960, the Australian Government has progressively sought to reduce the pressure of internal demand by policies affecting bank credit, government expenditure and taxation, while maintaining a liberal system of foreign trade and payments. These policies have recently been showing favourable results, and are being continued. There has recently been some improvement also in Australia's trading position.

The Government of Colombia and the World Bank have agreed to sponsor a survey of Colombia's transportation facilities and needs with the objective of formulating a co-ordinated transportation investment programme. The survey is being undertaken by the New York engineering firm of Parsons, Brinckerhoff, Quade and Doughlas which is sending 13 experts to Colombia. A joint Colombian-World Bank steering committee will have responsibility for the general guidance and supervision of the consultants' work, including arranging for basic information and available studies required for the purpose of the survey, and liaison between the consultants and public and private entities.

The World Bank has announced a loan of $22 million for the expansion of hydro-electric installations supplying power to the metropolitan area of Medellin, an important manufacturing centre in Colombia. The project provides for the addition of 138,000 kilowatts of new capacity to the system serving the area and the extension of transmission and distribution facilities. Four commercial banks, in the United States, are participating in the loan, without the World Bank's guarantee, for a total amount of $300,000, representing the first maturity which falls due in March 1966.

(*Concluded from next column*)

and he stressed to them the manner in which Britain's trade with the world was inevitably changing. The traditional importers of Britain's manufactures were more and not less bent on protecting their infant industries, hence the static relationship of our trade with such countries. On the other hand, the industrialised countries were tending more and more towards a greater exchange of their own specialised goods. In countries such as North American and Continental Europe, the development of living standards is increasing opportunities for first quality goods. "It is a fact," said the Minister, "that, in recent years, trade between the industrial countries of the world has risen much faster than trade between the industrial countries, on the one hand, and the primary producers, on the other."

If we go back to the Board of Trade figures and make a direct comparison between 1955 and 1960, the message becomes even more obvious. It is true that, in 1960, we exported to the overseas sterling area, £1,450 million of goods, but that figure was only 3¼ per cent higher than five years previously. To Europe we exported more than £930 million, but that figure was 24 per cent higher than five years previously. All this explains the Government's anxious searching for a formula to compensate Commonwealth preferences, on the one hand, and to placate suspicious farmers who fear that entry into the Common Market will reduce their own opportunities for profitable selling.—*All Rights Reserved.*

BRITAIN'S TRADE

THE CHANGING PATTERN

(From Our Own Correspondent)

LONDON, *12th May*

LONDON LETTER

THE Board of Trade has this week published some comparative figures of the manner in which this country's trade with different parts of the world has changed over the past five years. It is often misleading to take individual years in this sort of comparison and the figures below are the averages at each end of the period covered by the Board's review:

(Quarterly averages £ million)

	Average 1959-60	*Average* 1955-56	*Increase per annum*
Overseas sterling area ..	351	350	4
North America ..	145	98	188
Common Market (6) ..	134 } 228	112	88
E.F.T.A. (7)	94 }	81	52
Other non-sterling ..	167	142	100
Total ..	891	783	432

The trade with the Common Market countries has increased over this period by £88 million per annum, while with the overseas sterling area the increase is negligible. Equally the trade with the E.F.T.A. shows a significant increase of £52 million. Thus the trade with Europe has increased by £140 million per annum, whereas that with the overseas sterling area has been stationary.

The moral which Ministers are seeing in this is that they are more justified in pinning their hopes for an expansion in Britain's trade towards Europe than they are in pinning it on the Commonwealth. This is not to say that the Commonwealth can be disregarded, but it is to say that the existence of Commonwealth preferences should not be allowed to become a permanent reason for Britain not entering the Common Market. If it is argued that Britain's trade with the Common Market is going up anyway, so what is there to worry about, the answer is that the figures quoted, while indicating the trend to date, cannot pinpoint what is likely to happen as the Common Market becomes a closer economic entity.

Gap Widening

Only six weeks ago, the President of the Board of Trade—who is kept very busy these days propaganding Britain's efforts to get into the Common Market—said specifically to the Joint Committee of the Common Market Chambers of Commerce in Great Britain that "The gap between the two European trade groups is widening . . . . The effects of the division between the Six and the Seven have been obscured by the relatively small size of the initial tariff reductions and by the general expansion of European trade. But . . . . the diversion of trade and commerce and the distortion and duplication of investment is causing growing concern," and he went on to say that "but we should grow and prosper far less in a divided Europe than we could in a single European system."

The Government has seen the danger clearly enough and their intention is firm, though they do not yet know how to acheive it. When the same Minister spoke this week as Chairman of the E.F.T.A. Ministerial Council at the meeting of the E.F.T.A. Consultative Committee in London, he was at pains both to make clear —without using clear words—that Britain had to find her way into the Common Market, though she did not want to let down the E.F.T.A. members in the process. One of the purposes of the foundation of the E.F.T.A. was, as the Minister said, "a step towards an agreement between all member-countries of the O.E.E.C.," and he went on to say that "a solution must be found . . . . which does not jeopardise the interests either of the members of the Community or of the member-countries of the E.F.T.A. . . . . It should be possible to make special provisions to meet the difficulties of individual countries . . . . which will strengthen both the economic and political unity of Western Europe."

Last week, Mr. Maudling was making another defensive speech to trade interests who are a bit bothered by the possibilities of closer unity with Europe meaning more competition

(*Continued in previous column*)

WOOLLEN TEXTILE INDUSTRY IN INDIA

PRODUCTION CONTINUES TO BE LOW

IT looks as though the woollen textile industry will be subjected to full-fledged controls on production, distribution and prices. The Government has already fixed the percentages for production of worsted yarn for weaving, hosiery and knitting in individual mills. It has also fixed maximum ex-factory and retail prices of certain worsted hosiery goods. The mills are required to stamp prices and excise duty on the goods they produce. Further, the Textile Commissioner is vested with powers to impose price control on all kinds of woollen and worsted yarns as well as fabrics. Meanwhile, the Tariff Commission has been asked to determine the prices of the various products manufactured by the woollen industry.

The woollen industry is somewhat perturbed over the series of control orders issued by the Government. It is pointed out, for instance, that the Government has not taken into account the necessary facts and weighed them before issuing the order fixing different percentages for the production of worsted yarn for weaving, hosiery and knitting. Criticising this order, a correspondent observes as follows:

"When by such omnibus orders, the Government lays down a rule that only a certain percentage of a particular type of yarn is to be manufactured by a unit, the first thing that should be taken into consideration is the nature of the machinery installed in a particular plant. If the nature of the machinery installed in a plant is not of a type suitable for manufacturing worsted yarn for any specific purpose, any such order, in effect, becomes null and void because of the impracticability of putting the same into operation. What is sauce for the goose is not sauce for the gander. The second point to be taken into consideration is whether the pattern of market that has been built up by the labour, efforts, risks and sacrifices undertaken by the unit should be disrupted overnight by asking such a unit to switch over to other lines of production. Thirdly, what about the displacement of labour and the heavy retrenchment compensation to be paid by the mills on account of effecting such changes? These are questions that should have been gone into before an omnibus order or individual orders of the type mentioned above were passed by the Government."

Trend of Output

There is considerable force in these observations. If the woollen industry is to meet a part of the expanding domestic and export requirements of textiles in the coming years, it must enjoy a certain amount of freedom in the production sphere, as well as active encouragement and assistance from the Government. This aspect has to be specially stressed because of the continued low level of production. The total quantity of wool yarn that actually came off the spindles of mills during the year 1960 was no more than 28.0 million lbs., as against 29.5 million lbs. in 1959, a drop of 5 per cent. The output of wool fabrics was more or less maintained at the previous year's level; it was 15.23 million yards, as compared with 15.22 million yards in 1959 and 19.37 million yards in 1958. The decline in yarn output was accounted for solely by worsted and carpet yarn the production of which fell from 17.52 million lbs. in 1959 to 15.14 million lbs. in 1960, whereas that of woollen yarn rose from 11.97 million lbs. to 12.85 million lbs. The table below indicates the trend of output, month by month, of the different kinds of wool yarn during the year 1960:

(In thousand lbs.)

	Woollen yarn (including shoddy yarn)	Worsted yarn for weaving	Worsted hosiery yarn	Worsted knitting yarn	Carpet yarn	Total
January ..	889	595	126	156	118	1,884
February ..	876	534	157	112	152	1,831
March ..	880	523	201	137	210	1,956
April ..	1,082	671	195	184	226	2,358
May ..	1,141	739	256	152	205	2,493
June ..	1,093	759	254	195	200	2,501
July ..	1,173	791	294	197	219	2,674
August ..	1,308	776	280	311	194	2,869
September ..	1,227	771	323	288	200	2,809
October ..	998	654	214	246	173	2,285
November ..	1,033	581	118	190	184	2,106
December ..	1,153	431	221	178	245	2,228
Total ..	12,853	7,830	2,639	2,346	2,326	27,994

Among the yarns made on the worsted system, knitting yarn was the worst affected; the production recorded a decline of 37 per cent to 2.3 million lbs. Hosiery yarn fell by 31 per cent to 2.6 million lbs. and weaving yarn by 5 per cent to 7.8 million lbs.

Bombay and Kashmir were the only two States which showed a rise in wool yarn production. Although Bombay State recorded a decline of 4 per cent in worsted yarn, it was more than offset by the 28 per cent increase in the production of woollen yarn. In Jammu and Kashmir, wool yarn output rose by 20 per cent. Worsted weaving yarn almost doubled. An all-round fall occurred in the Punjab. Worsted yarn declined by 31 per cent, carpet yarn by 15 per cent and woollen yarn by 4 per cent. Uttar Pradesh, the biggest carpet manufacturing centre in India, produced 25 per cent more carpet yarn.

The sharp drop of 4 million yards in wool fabrics production between 1958 and 1959 was somewhat checked in 1960 when the mills turned out 15.3 million yards, as compared with 15.2 million yards in 1959. The output of worsted fabrics rose by 100,000 yards to 5.1 million yards, while that of woollen fabrics fell by 120,000 yards to 2.6 million yards. The production of mixed fabrics almost halved at 660,000 yards. The output of blankets and rugs also fell from 3.0 million yards to 2.7 million yards. The hosiery goods output rose from 400,000 yards to 660,000 yards and other items from 3.0 million yards to 3.6 million yards.

Fabrics Production

The following table gives the details of woollen fabrics production during 1960 as compared with 1959 and 1958:

(In linear yards)

	1960	1959	1958
Woollen:			
Suitings	1,529,377	1,531,800	1,729,826
Uniform cloth	927,879	1,013,782	1,200,963
Lohis	74,125	154,039	110,768
Total ..	2,531,381	2,699,621	3,041,557
Worsted:			
Suitings	4,397,100	4,339,001	5,518,825
Uniform cloth	221,309	277,964	343,709
Lohis	462,591	354,893	861,750
Total ..	5,081,500	4,971,858	6,729,278
Mixed fabrics:			
Suitings	205,017	536,124	497,344
Uniform cloth	97,277	348,037	168,547
Lohis	356,587	231,541	336,208
Total ..	658,881	1,116,502	992,099
Other goods:			
Blankets and rugs ..	2,666,016	3,014,017	4,117,647
Hosiery goods	656,667	401,918	999,134
Other items	3,608,885	2,979,880	3,290,108
Shoddy	28,234*	40,651	189,846
Total ..	6,959,952	6,436,667	8,602,735
Grand Total ..	15,231,804	15,224,748	19,365,669

* Based on the output during the first eight months of the year.

In view of the continued low level of woollen textiles production, imports of wool tops during 1960 were lower, albeit slightly, at 14.86 million lbs., as against 15.23 million lbs. in 1959, while the value was higher at Rs. 8.58 crores, as against Rs. 7.97 crores. There was, however, an increase in imports of raw wool last year, the quantity actually imported being 8.71 million lbs. valued at Rs. 1.26 crore, as against 5.33 million lbs. valued at Rs. 1.04 crore.

India exported Rs. 4.94 crores worth of carpets during 1960, as against Rs. 5.00 crores in the previous year. The decline occurred despite the marked rise of 60 per cent in exports to Asian countries (Singapore, Ceylon, Japan and Hong Kong), as well as larger shipments to Australia (more than doubled) and New Zealand (three times more). These increases were more than offset by reduced offtake by European, American and African nations, the percentage decline being 5, 12 and 6, respectively. The U.K. bought Indian carpets worth Rs. 2.55 crores, Rs. 14 lakhs less than the 1959 total. Exports to the Soviet Union also fell by Rs. 2.64 lakhs or 71 per cent. Exports to West Germany, Switzerland and Belgium, however, showed an increase.

During 1960, exports of raw wool fell by 27 per cent to 30.6 million lbs. as compared with the 1959 exports of 42.1 million lbs. The 1960 figure is the lowest since 1955. The fall in exports was due to the wide disparity between prices in Indian and foreign markets. Exporters were unwilling to follow the market down to the lower levels it touched during the year, and so sales to the traditional markets (U.S.A. and U.K.) dropped.

HANDLOOM INDUSTRY WORKING GROUP'S REPORT

The Government of India's decision on the report of the Handloom Industry Working Group was briefly commented upon in our last week's issue (*vide* page 886). The comments were based on the Press version of the decision. The official Press note, released on the 10th inst., says that the Group (was appointed in 1959) to assess the progress made by the handloom industry and make recommendations for its further development. It had also been asked to evaluate the scheme for conversion of handlooms into powerlooms as well as the handloom industry's programme in the Community Development areas. The Group consisted of Mr. V. Subramanian, Secretary, All-India Handloom Board; Mrs. Pupul Jayakar, Honorary Industrial Adviser (Textile Designs), All-India Handloom Board; Mr. D. S. Sali, Vice-Chairman, Bombay State Handloom Board; Mr. A. Mariappan, M.L.A., President, Ammapet Weavers Co-operative Production and Sales Society, and Mr. N. Ramaswamy, Deputy Secretary. The Press note observes:

"In a unanimous report, the Working Group has described the Government's policy of encouraging co-operative form of organisations for the handloom industry as 'sound' and has recommended that this policy should be pursued for the future also. The Government have accepted this recommendation fully and would continue this policy for purposes of financial and other assistance to the handloom industry during the third Plan period. At the same time, the Government hopes that the State Governments would carefully consider the Group's recommendations for rendering assistance to the weavers outside the co-operative fold through the State Finance Corporations.

"While noting with satisfaction the progress made in the formation of weavers' co-operative societies, the Working Group has pointed out certain weaknesses and shortcomings in the co-operative structure which require rectification. Recommendations have also been made for strengthening the share capital structure of the existing co-operative societies, for reviving dormant societies, for competent managerial staff, etc. These recommendations have been accepted in principle, but the details of implementation are under examination. The pattern of assistance to the co-operatives provides for financial assistance for supervisory and managerial and technical staff.

"As regards the scheme of rebate on sales of handloom cloth, the Government agree with the Working Group that this will have to be continued for some time. However, it cannot continue as a permanent form of subsidy to the industry. It was with this objective that the Government decided to effect a gradual reduction in the rate of rebate from 6 nP in the rupee to 5 nP in the first instance, so that the funds thus saved could be diverted to other more important developmental schemes, which will, in the long run, be of far greater advantage to the industry. This policy will continue to guide Government's approach to this scheme during the third Five-year Plan period.

"The Working Group has referred to the need for weavers' co-operative societies getting their credit requirements from institutional sources and has suggested that the difficulties besetting the smooth flow of credit should be removed. The scheme of extending credit through the Reserve Bank was introduced only recently. The Government is convinced that, by and large, marketing credit should be obtained through the Reserve Bank and other institutional agencies, who will be requested to investigate the difficulties and adopt measures which would result in a smooth flow of credit to the co-operatives. The Reserve Bank have already agreed in principle to extend financial assistance to apex societies for the purchase of yarn at concessional rates of interest under the Reserve Bank of India Act. They are also conducting seminars with a view to finding out the defects in the existing system."

NO TAX RELIEF FOR ART SILK INDUSTRY

The plea of the art silk industry for extending the duty exemption limit from the present four looms working one shift to the first four looms in units of upto nine looms was rejected by the Union Finance Minister, Mr. Morarji Desai, in his speech at a meeting of the art silk weaving associations held at Surat last week. The Finance Minister declared that only weavers with two powerlooms were small weavers and that exemption had been extended to four powerlooms working one shift so as to enable them to stand better in competition with bigger units with better resources. He exhorted bigger units to sacrifice a little, if necessary, for the benefit of smaller units. Mr. Desai refuted the allegation that the exemption to four powerlooms had been granted to meet the needs of the Surat industry. According to him, of the units getting the benefit all over the country, only 14 per cent were located in Surat town (which possessed about a third of the total number of powerlooms in the country). Referring to the contention that the art silk industry with a capital structure of Rs. 15 crores was bearing a tax levy of Rs. 22.50 crores, Mr. Desai said that the tax was on production and not on capital. It had been estimated that the industry's annual production was of the order of about Rs. 60 crores. He pointed out that the fact that the demand for yarn was increasing showed that the industry was in a good state. The Finance Minister charged a section of the industry with indulging in blackmarketing of allotted yarn instead of using it for its own manufacture and asked bodies like the Central Committee to come forward to take up the work of yarn distribution. Alluding to the demand for abolition or at least reduction of countervailing duty on imported yarn, Mr. Morarji said that the situation was constantly under review, though he had so far not been convinced by the plea of the manufacturers.

EXCISE ON COTTON YARN REDUCED

With effect from the 12th inst., the Central Government has reduced the excise duty on cotton yarns of counts above 40s issued in hanks by 10 nP per kg. The revised rate of duty now is 5 nP. The reduction has been effected with a view to maintaining the existing price level of ordinary varieties of handloom fabrics used by common people and to giving further relief to the handloom industry. The mill-made cotton yarn of count not exceeding 40s, if used in hanks, is already exempted from payment of excise duty.

12 MAY 1961 PUBLIC REFERENCE

COTTON BOARD AND HONG KONG

COLONY'S STAND AGAINST RENEWAL OF CEILING PACT TREATED WITH RESERVE

From Our Special Correspondent

MANCHESTER, *9th May*

MANCHESTER LETTER

WHAT might well be described as "the softening-up process" is still being used by the *textile men of Hong Kong* in their endeavours to create a suitable climate in which to start the negotiations which must inevitably follow later this year. Using as their mouthpiece a lawyer who claimed to represent various sections of the textile industry in the Colony, a straightforward attack was launched last week—an attack which was taken quite literally in many quarters. This amounted to no less than a direct statement to the effect that the Hong Kong industry had decided to end the agreement and would not consider its renewal under any circumstances. There followed a recital of the now familiar arguments, including complaints about short-time working, loss of exports and the current dearth of demand, blaming everything on the pact with Britain.

Taken at its face value, the statement might well cause dismay among those who have not followed closely the protracted negotiations which preceded the agreement and the almost continuous flow of propaganda which has succeeded its implementation. Stock exchanges marked down textile shares, Parliamentary questions were asked, political and industrial correspondents weighed in with gloomy forecasts about Lancashire's future.

Guarded Reaction

Unfortunately, the Cotton Board delayed making any comment on this pointed thrust for fully 48 hours. The Imports Committee then said, as usual guardedly, that the statement "should be regarded with reserve." It added, also rather ingenuously, that the Board had been considering the whole question of cotton textile imports for several months and was in the closest touch with the Government "which was clearly alive to the vital importance of this whole problem." So for the present the matter rests. Other shots may well be fired before the battle is joined. Nearly nine months are left before the existing arrangements expire, but, in the meantime, it must be expected that rumours will be rife and that speculation will have full play before any decision, one way or another, is reached.

Amid the frequent comment from Hong Kong, the relative silence of India and Pakistan is a source of some surprise. Traders in these countries can safely allow the Colony to do much of their negotiating for them, as their agreements run for nearly a year after the first of the Commonwealth trade pacts expires. To shippers in Pakistan, however, the rate of exports to Britain this year must be extremely disappointing, being no more than 5,500,000 yards of grey cloth in the first quarter.

To be fair to these Commonwealth suppliers, moreover, it must be admitted that their share of the grey cloth market in the United Kingdom has certainly declined—although garment imports are another matter. Cotton greys arriving from sources outside the Commonwealth in the 1958-59 period only accounted for about 25 per cent of the market; by 1960, the proportion had become one-third, two-thirds; this year there is little to choose between them. If finished goods are included, most of which come from the Continent, non-Commonwealth goods probably take preponderance. All of which goes to support the contention of those who believe that, if Hong Kong, India and Pakistan must suffer a top limit to the volume of goods they can ship to this country for retention, other suppliers too should be forced to toe the line. The Government, it seems, is against the quota system in principle, but does not object to imposing duties on selected items.

In the midst of these various "private fights," the new American President has put forward the idea of another world textile conference to straighten out the importation muddle. In theory, such a suggestion seems well worth considering, but practice, from past experience, warns that very little direct gain comes from such gatherings.

It is believed in Manchester that attempts are to be made to reopen negotiations with representatives of the Colony within the next few weeks. Pressure is mounting in Lancashire for limitations to be placed not only on imports of grey cloth from the Colony as well as India and Pakistan but that separate "ceilings" should be placed on arrivals of finished goods and garments. The Government is being pressed to introduce quotas on purchases of cotton fabrics from other countries on the same lines as those operating against China and Japan. Several Continental manufacturing areas, chiefly in Spain and Portugal, have lately been sending large quantities of cloth to Britain. In the first quarter of the current year imports of all cotton fabrics reached a new high peak of 225 million square yards, as against 180 million square yards in the same period last year.

Textile Research

Sir Cuthbert Clegg is to be the first Chairman of the Cotton, Silk and Man-made Fibres Research Association which has now been formed following the merger of the British Cotton Industry Research Association and the British Research Association. His appointment, together with that of Mr. H. A. J. Duncan as Honorary Treasurer and Mr. William Crossley as Deputy Honorary Treasurer, was announced in a statement made by the new Association which pointed out that Sir Cuthbert and his two colleagues, who held the same offices in the British Cotton Industry Research Association Council, had agreed to serve until the new Council had the opportunity of making new appointments.

A new research committee has been set up to review the present work being carried out, in order to plan a balanced programme of research to meet the pressing needs of the industry. Nine technical sub-committees will assist the levy collected by the Cotton Board, will be in this task. A research levy, forming part of the main source of the Association's industrial income. The Department of Scientific and Industrial Research will provide a grant of up to £130,000 per annum, provided the Association raises an annual income of a minimum of £345,000.

A new chemistry and finishing building is to be erected at Shirley Institute, the Didsbury, Manchester headquarters of the Association. This will have a floor area of approximately 57,000 square feet, of which 32,000 square feet will be laboratory space on two floors and 25,000 square feet will be single-storey workshop space. The construction of the new building will be carried out in two phases, the first part being completed by the end of this year or early in 1962.

Cheap at the Price

In view of the many statements which persist in emphasising the cost to the country of the reorganisation schemes in the cotton trade, few of which are challenged, it is just as well that the widest possible publicity should be given to the actual figures involved. In the case of the redundancy project in cotton finishing, for example, the contribution from the Exchequer is likely to be less than £2 million. This has been officially stated in a Government reply to questions about the response to the proposals which, as is known, was by no means as swift or as substantial as that encountered in spinning and weaving. The minimum targets, in fact, were only narrowly achieved.

It is now known that 63 applications were made for compensation for the disposal of surplus plant in which the whole of each production unit had to be scrapped. The realisation companies, set up for the purpose of stimulating the scheme through private negotiation, performed this function very satisfactorily, as 47 of the schemes were submitted through these channels. Only 16 went direct to the Cotton Board. The rate of the levy to be imposed on those firms which are continuing in the trade cannot yet be assessed. Figures will have to be worked out after the realisation companies have completed the disposal of the properties they acquired under the scheme.

Big Shipments of Plant

British textile machinery makers have no cause to be bashful about their export achievements so far this year. In the first quarter, not only has a big rise taken place in the volume of shipments abroad but the earnings from these goods have surpassed all previous records. To the end of March, plant valued at £16,550,000 was exported, as against only £12,140,000 in the corresponding period of 1960. The quantity involved was 402,966 cwt., as against 317,436 cwt. a year ago.

By far the biggest importer of such goods has been the Soviet Union, which has already taken 63,154 cwt. in the quarter, as against 161,178 cwt. in the whole of last year. Shipments in the first three months of 1961, in fact, have already equalled the total supplies sent to Russia throughout 1959. The value of current exports to the Soviet Union exceeds £2,800,000.

Among the Commonwealth nations, India and Australia are still buying fair quantities of British textile machinery, absorbing 37,120 cwt. and 26,347 cwt., respectively. Several countries in Europe have increased their purchases, notably Italy, France, Belgium and Western Germany, while shipments to Japan have been more than doubled at 21,085 cwt. In South America, Brazil and the Argentine have taken bigger quantities after a period in which shipments have been exceedingly small.—*All Rights Reserved.*

REGULATION OF STAPLE FIBRE YARN PRICES

The Committee of the Indian Cotton Mills' Federation has, in consultation with the Government, decided to regulate prices of staple fibre yarn. The following prices have been fixed for the various counts:

(In Rs. per bundle of 10 lbs.)

Counts	Ex-mill price of hank yarn	Differential for double yarn	Differential for yarn on cones
20s	28.55	3.10	2.85
30s	31.05	3.90	3.20
40s	34.05	4.50	3.50

These are net ex-mill prices. Prices should be stamped on bundles. It has also been decided that delivery of yarn against contracts entered into prior to 15th May 1961 and provided the yarn is packed and ready for delivery will be made at the contract prices. Otherwise, the above schedule of prices would be applicable.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 9th May, 1961, has been delivered to the Registrar of Companies, West Bengal for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Bankers and Brokers named below.

A Licence has been obtained from the Central Government for the establishment of a new Industrial Undertaking at Calcutta of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government do not take any responsibility for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Application has been made to the Calcutta Stock Exchange for permission to deal in shares now being offered and in due course for official quotations.

The Subscription List will open at the commencement of banking hours on 24th May, 1961, and will close at the close of the banking hours on 3rd June, 1961, or sooner or later, as the Directors may decide, but in no case the List will close before the close of the banking hours on Saturday, the 27th May, 1961.

DR. PAUL LOHMANN (INDIA) LIMITED

(INCORPORATED AS A PUBLIC COMPANY UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED: **Rs. 1,00,00,000/- divided into 10,00,000 Equity Shares of Rs. 10/- each.**
Rs. 1,00,00,000/-

ISSUED: **Rs. 30,00,000/- divided into 3,00,000 Equity Shares of Rs. 10/- each.**
Rs. 30,00,000/-

The above issue of Rs. 30,00,000/- is made up as follows :—

3,00,000 Equity Shares of Rs. 10/- each to be issued at par and equivalent to	Rs.	30,00,000/-
Out of the above issue of 3,00,000 Equity Shares of Rs. 10/- each at par, amounting to Rs. 30,00,000 -		
(1) 60,000 Equity Shares of Rs. 10/- each at par are reserved for issue to the Indian Promoters, Directors and their friends and associates	Rs.	6,00,000/-
(2) 40,000 Equity Shares of Rs. 10/- each at par are reserved for issue to the Collaborating German Firm against supply of imported Plant and Machinery required for the Project	Rs.	4,00,000/-
The balance of 2,00,000 Equity Shares of Rs. 10/- each will be issued at par to the Public	Rs.	20,00,000/-

The amounts payable in respect of Shares comprising the present offer are as follows :—

EQUITY SHARES

With Application	Rs. 2.50 nP. per Share
On Allotment	Rs. 2.50 nP. per Share
Balance (by 2 Calls of Rs. 2.50 nP. each)	Rs. 5.00 nP. per Share

The first Call shall not be made earlier than six months from the date of allotment.

No Shares shall be issued for consideration other than cash excepting the aforesaid 40,000 Equity Shares of Rs. 10/- each at par to be issued to the Collaborating German Firm against supply of imported Plant and Machinery.

UNDERWRITING

The issue to the Public, namely Rs. 20,00,000, is being fully underwritten and the names of the Underwriters and the respective amounts underwritten by them are as stated below :

	Name	Address	Amount Underwritten Rs.
1.	Place, Siddons & Gough Private, Ltd.	6, Lyons Range, Calcutta-1	5,00,000/-
2.	Triton Insurance Co. Ltd.	11-A, Lower Chitpur Rd., Calcutta-1	5,00,000/-
3.	Concord of India Insurance Company Limited	8, Clive Row, Calcutta-1	5,00,000/-
4.	Paterson & Company	22, Errabalu Chetty Street, Madras-1	4,50,000/-
5.	Harbans Singh Mehta & Co.	33, Regal Bldgs., Parliament St., New Delhi-1.	50,000/-

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

APPLICATION AND ALLOTMENT OF SHARES

Application for Equity Shares should be made on the printed form accompanying this Prospectus, further copies of which may be obtained from the Registered Office of the Company and from the Offices of the Bankers, Underwriters and Brokers.

Applications must be made for a minimum of ONE HUNDRED SHARES or a multiple thereof and in all cases must be accompanied by a remittance of the amount payable on Application. Applications must be completed in accordance with the directions contained therein and delivered before the closing of the Subscription List to any of the Head Offices or Branch Offices of the Bankers or to the Offices of the Underwriters and Brokers or to the Registered Office of the Company. The COMPANY'S REGISTERED OFFICE IS AT 23, CAMAC STREET, CALCUTTA-16.

If no Allotment be made, the Application moneys will be returned in full and where the number of Shares allotted are less than the number applied for, the balance of the Application moneys will be returned to the Applicants by Cheques either through the post or otherwise, within 60 days from the date of closing of the Subscription List.

The Share Certificates will be ready for delivery within four months from the date of receipt of the money payable on Allotment.

LOAN CAPITAL

The Company has created no Mortgages, Debentures or other Loan Capital.

FINANCIAL REQUIREMENTS

The Financial Requirements of the Company are comprised of :—

INITIAL STAGE

		Rs.
1.	Cost of land, factory and office buildings, etc.	4,50,000
2.	Cost of plant and machinery, erection and other implementative expenses	7,50,000
3.	Working capital	1,00,000
4.	Preliminary expenses including brokerage and other share issue expenses	2,00,000
		Rs. 15,00,000

SUBSEQUENT STAGE

		Rs.
1.	Expenses for additions to the factory, etc.	3,00,000
2.	Additional costs of plant and machinery, etc.	7,50,000
3.	Additional Working capital	4,50,000
		Rs. 15,00,000

MINIMUM SUBSCRIPTION

The Minimum amount which, in the opinion of the Directors, must be raised by the issue of Shares in order to provide the sums required to be provided as per paragraph 5 of Schedule II of the Companies Act, 1956, upon which the Directors will proceed to allot Shares offered by this Prospectus is ONE LAKH Equity Shares of the nominal value of Rs. 10,00,000/- to be issued in cash at par being only a part amount of this Issue, out of which Rs. 4,50,000 shall be set aside for the costs of land, factory and office buildings, etc., and Rs. 3,50,000 will be expended for the purchase and erection, etc., in part, of the plant and machinery and Rs. 2,00,000 shall be for the preliminary expenses including commission and brokerage and other expenses of this issue.

The Working capital and the balance costs of plant and machinery, etc., shall be arranged by borrowings from Banks, and also from other sources, such as financial institutions or corporations, and also by loans or advances from firms, companies, or individuals including Directors.

No sum is required for repayment of any money borrowed by the Company in respect of any of the foregoing matters and no other expenditure is estimated to be necessary.

DIRECTORS

1. **Mr. Ekkehard Lohmann,**
   Geschftsfuhrer of Dr. Paul Lohmann, Chemische Fabrik, Emmerthal, (Hameln-Pyrmont), West Germany.
2. **Mr. A. Michelsen,**
   Geschftsfuhrer of Dr. Paul Lohmann, Chemische Fabrik, Emmerthal, (Hameln-Pyrmont), West Germany.
3. **Dr. Shrirang Padmanabh Adarkar,**
   Company Director, "Dilkhoosa," Altamount Road, Bombay-26.
   Director of: Monsanto Chemicals of India Private Ltd., Alta Laboratories Ltd., East Anglia Plastics (India) Ltd., etc.
4. **Mr. Ranadeb Chaudhuri,**
   Barristar-at-Law, 34, Ballygunge Circular Road, Calcutta-19.
   Director of: National Sugar Mills Ltd., Amrita Bazar Patrika Private Ltd., East Anglia Plastics (India) Ltd., etc.
5. **Mr. Sukumar Boy,**
   Company Director,
   57, Lansdowne Road, Calcutta-25.
   Director of: The Shillong Hydro-electric Limited, The Riverside (Bhatpara) Electric Supply Co., Ltd., West Bengal Power Supply Co., Ltd., Motor & Machinery Manufacturers Ltd., National Tobacco Co. of India Ltd., Oriental Gas Co. Ltd., The West Jamuria Coal Co., Ltd.
   Vice-President—Bengal National Chamber of Commerce and Industry.
   Vice-Chairman—The All-India Manufacturers' Organisation.
6. **Mr. B. N. Sen Gupta,**
   Company Director,
   17, Lake Road, Calcutta-29.
   Director of: Planters (India) Private Ltd., Housing Estates Private Ltd., etc.
7. **Mr. S. Sen Gupta,**
   Company Director,
   20, Aswini Dutta Road, Calcutta-29.
   Director of: The Hilla Tea Estates Ltd., East Anglia Plastics (India) Ltd., etc.

TECHNICAL ADVISERS & COLLABORATORS

Dr. Paul Lohmann, Chemische Fabrik, Emmerthal, (Hameln-Pyrmont), West Germany.

SOLE SELLING AGENTS

Monsanto Chemicals of India Private Limited,
11, Sprott Road, "Wakefield House," Ballard Estate, Bombay-1.

BANKERS

1. **State Bank of India,**
   1, 2 & 3, Strand Road, Calcutta-1.
2. **Hongkong & Shanghai Banking Corporation,**

REGISTERED OFFICE

23, Camac Street, Calcutta-16.

AUDITORS' CONSENT

Messrs. Lovelock and Lewes have given and have not before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report, in the form and context in which it is included.

OBJECTS

The Company was incorporated on the 12th January, 1961, with the Objects mentioned in the Memorandum of Association, a copy of which is annexed hereto and forms a part of this Prospectus: and, in particular, the Objects of the Company are:—

To manufacture Chemicals and Fine Chemicals, such as Electroplating Chemicals, Fine and Sensitized Paper Chemicals, Leather Chemicals, Paint and Varnish Chemicals, Photographic Chemicals, Printing Chemicals, Pyrotechnical Chemicals, Rubber and Plastic Chemicals, Textile Chemicals, Food and Confectionery Chemicals, Foodstuff Chemicals, Pharmaceutical and Cosmetic Chemicals, Baking Powder Chemicals and Meat Chemicals, and especially to manufacture Acetates, Albuminates, Benzoates, Borates, Carbonates, Chlorides, Citrates, Formates, Gluconates, Glycerophosphates, Hydroxides, Lactates, Nitrates, Oxalates, Peroxides, Phosphates, Phosphoalcatates. Propionates, Pyrophosphates, Saccharates, Silicates, Stearates, Succinates, Sulphates, Sulfophenolates, Tartrates and Trisilicates.

APPRECIATION

Some of the abovementioned Chemicals are at present not manufactured in India and are being imported. Due to import restrictions, however, they are not available in sufficient quantities and this Company will be manufacturing them in India. India's manufacturing capacities for certain other items are still not adequate to meet the growing demands of the country. Moreover, some of these items have export potentials. Large-scale manufacture of all these chemicals and export thereof will enable the Company to save as well as earn foreign exchanges for the country.

With the economic development and industrial expansion, as contemplated in the Third Five-Year Plan, there is bound to be greater demands of these Chemicals in the immediate and near future.

In accordance with the manufacturing licence granted by the Government of India, this Company will, at the initial stage, be planning to produce every year about 33,60,000 lbs. of different organic and inorganic chemicals, the value whereof in retail prices shall be Rs. 1,00,00,000/- approximately.

EXPECTED PROFITS

On the above basis, the Directors are of the opinion that reasonable profits ought to be earned by the Company in the first twelve months following the installation of the machinery and equipments and from the commencement of production of Fine Chemicals; and, in the absence of any unforeseeable circumstances, the Company should be in a position to pay reasonable dividends.

TECHNICAL COLLABORATORS

The Company has entered into an Agreement for participation in the Equity Shares and for supply of initial services and technical assistances with the long-standing reputed firm of Dr. Paul Lohmann, Chemische Fabrik, of Emmerthal, (Hameln-Pyrmont), West Germany. Founded in 1886, this firm is one of the well-known chemical manufacturing concerns in West Germany. Its products have a wide market and are exported to many countries of the world. Some of the chemicals mentioned are manufactured by them in West Germany, exclusively.

With a well-equipped Research Laboratory the firm has been carrying on original researches in the preparation of salts of organic and inorganic acids as intermediate chemicals required for pharmaceutical, photographic, textile, food processing, surface preparation, artificial rubber industries etc., and, in course of its various researches, it has developed many important processes and products having special technical and pharmaceutical uses.

The Firm thus enjoys an unique position in the field of Fine Chemicals.

TERMS OF COLLABORATION

Subject to the Articles of Association of the Company and the provisions of Section 255(1) of the Companies Act, 1956, during such time as Dr. Paul Lohmann, Chemische Fabrik, shall be the Consultants, Technical Advisers and Collaborators of the Company, they shall have the right from time to time to nominate two persons to be the Directors of the Company and at any time to remove any such Director and appoint another person to be a Director in his place and to fill any vacancy otherwise occurring in the Office of such Director. Mr. Adolf Michelsen and Mr. Ekkehard Lohmann are the two such Directors appointed by Dr. Paul Lohmann, Chemische Fabrik, as their first two Directors on the Company's Board.

Under the agreement for collaboration, Dr. Paul Lohmann, Chemische Fabrik, will make available to the Company their 'Know-How' concerning the manufacture and production of Fine Chemicals referred to. The Firm and its visiting technicians from West Germany will give all possible assistance in the setting up of the Company's factory and will supervise the manufacture and production in India. Indian technical personnel will be trained in West German factories and laboratories of Dr. Paul Lohmann, Chemische Fabrik.

As consideration for the services for supplying designs of machines and drawings and 'Know-How' for the manufacture of Fine Chemicals and the formulas and information supplied and to be supplied and the assistances given and to be given in Germany by the Firm of Dr. Paul Lohmann, Chemische Fabrik, the Government of India, Ministry of Commerce and Industry, in their letter No. 23(4)/60-CH. II, dated the 12th April, 1961, have allowed the following fees, which have since been agreed to by the German Firm:—

1. A technical fee for designs of the plant and machinery as well as designs and drawings for construction of the factory in India of a total sum of Rs. 2,50,000/- in three equal annual instalments.
2. In addition, an annual payment of Rs. 25,000/- subject to taxes, for a period of seven years, in return for the benefits of research of the German Firm and 'Know-How' of new processes and manufacturing details made available to the Company.

SELLING ARRANGEMENT

The Company will have the benefits of the association, as the Company's Sole Selling Agents, of Messrs. Monsanto Chemicals of India Private Limited, a well-known business house of India, who have wide experiences as a marketing organisation.

The said Company have been marketing as Sole Distributors in India various fine and heavy Chemicals.

The Company is entering into necessary agreement with them, appointing them as the Sole Distributors and Sole Selling Agents of the Company.

LOCATION OF THE FACTORY

A suitable land on Jessore Road, near Calcutta, measuring approximately 60,000 sq. feet, with adequate facilities for supply of electricity and water has been selected by the Company as the site for its factory. The said site has already been visited and approved by the West German Collaborators who came down to Calcutta very recently to finalise arrangements.

TAX BENEFITS

The Company will be entitled to the special benefits under the Indian Income Tax Act with respect to development rebate. The Company will also enjoy the benefit of Section 15-C of the Indian Income Tax Act whereby the profits upto 6 per cent on the employed Capital will be exempted from tax for the first five years of operation.

PRELIMINARY EXPENSES

The total preliminary expenses are estimated to be Rs. 60,000/- and a sum of Rs. 1,40,000/- is estimated to be the expenses of this issue including the Underwriters' and the Brokers' Commissions. This amount will be arranged by Mr. S. Sen Gupta as provided in the Agreement hereinbefore specified upto the date on which the Company is entitled to commence business when, subject to audit, such expenses will be paid to him by the Company.

Save as provided above no amount or benefit has been or is intended to be paid or given to any promoter, Director or officer of the Company.

BROKERAGE

Brokerage will be paid to the Underwriters, Brokers and Banks at 10 nP per Equity Share of Rs. 10/- each offered to the Public, on the Allotments made in respect of Applications bearing their stamps.

UNDERWRITING COMMISSION

An Underwriting Commission of 2½% will be paid to the Underwriters in respect of the Share underwritten by them.

PROSPECTUS AND APPLICATION FORMS

Copies of the Prospectus on the terms of which alone Applications will be considered, and Application Forms may be obtained from the Registered Office of the Company OR from the Company's Bankers at their Head Offices or existing Branch Offices at Calcutta, Ahmedabad, Allahabad, Amritsar, Bangalore, Baroda, Bombay, Coimbatore, Delhi, Gwalior, Hyderabad, Indore, Jaipur, Kanpur, Lucknow, Madras, Madurai, Nagpur, Patna, Rajkot, Surat, Trivandrum, Varanasi, OR from the Company's Brokers and Underwriters.

PROBLEMS OF COTTON TRADE

PLEA FOR REVISION OF EXPORT POLICY

THE speech delivered by Mr. Madanmohan R. Ruia, President of the East India Cotton Association Ltd., at the thirty-ninth annual meeting held in Bombay on the 12th inst., reflects the renewed optimism of the cotton trade regarding the prospects for trading in cotton during the new season beginning on 1st September next. This change in sentiment is to be attributed wholly to the good crop, estimated at over five million bales (commercial) during the current season, as compared with the low output of 3.8 million bales in the previous season. The improvement in output, coupled with continued liberal imports, has restored normalcy in cotton so that the new season is expected to start on 1st September with a comfortable carryover of 2 million bales, as against the 1.25 million bales at the beginning of the present season. Mr. Ruia estimated the supply and distribution of cotton during the 1960-61 season as follows:

(In lakh bales of 400 lbs. each)

	Indian	Foreign	Total
Supply			
Carryover on 1-9-1960—			
With mills	9.61	4.13	13.74
With trade	0.19	..	0.19
Estimated Indian crop 1960-61	52.00	..	52.00
Estimated imports of foreign cotton	..	9.96	9.96
Total availability	61.80	14.09	75.89
Distribution			
Estimated consumption by mills	41.00	8.50	52.50
Estimated consumption—			
By other factories	0.50	..	0.50
By Ambar Charkha			
Estimated exports	3.00	..	3.00
Total distribution	47.50	8.50	56.00
Estimated carryover as on 31-8-1961	14.30	5.59	19.89

The optimism, however, needs to be tempered, as Mr. Ruia pointed out, by the realisation that cotton production is still pathetically dependent on weather and the improvement in production achieved in the current season could well be wiped out if the weather again takes an adverse turn (God forbid!). While the supply position of cotton is thus uncertain, consumption is steadily increasing. If, therefore, reliance is not to be placed on imports for meeting the additional demands for cotton, some positive steps, according to Mr. Ruia, are needed for getting a substantial increase in the production of cotton. No one will dispute this contention of Mr. Ruia, nor his observation that an assured and adequate supply of cotton is the only remedy for most of the ills the cotton trade is suffering from at present. But what exactly are the "positive steps" which Mr. Ruia is having in mind? On what counts the current efforts are inadequate or unsound and in what direction energies are to be exerted to increase the output of cotton? Curiously, Mr. Ruia was silent on these questions. As one of the foremost leaders of both the cotton trade and the industry, and also the Vice-President of the Indian Central Cotton Committee, Mr. Ruia may be naturally expected to offer constructive suggestions for increasing cotton output. It is no use pleading, year after year, for vigorous steps to promote production without indicating as to what steps are needed and how they should be taken.

Exports

Although, thus, Mr. Ruia had nothing new or useful to say about cotton production, he did make certain practical suggestions regarding the cotton export policy which had caused considerable irritation and confusion to traders in the current season. He referred to the different procedures followed in the case of each quota. In the first quota of 50,000 bales of Bengal *Deshi* announced in December last, exports were linked to sales of cotton to mills, a condition which was fully exploited by the mills to the detriment of exporters. The Board of the E.I.C.A. had vehemently opposed this linking of exports to sale of mills. The second quota of 50,000 bales of Bengal *Deshi*, released in February, created fresh problems for the exporters. The third quota was also not free from difficulties. Changes in the established procedure every time, Mr. Ruia rightly pointed out, threw the trade into confusion and caused considerable hardships to exporters. Mr. Ruia disclosed that the Board of the E.I.C.A. had drawn the attention of the Government to these difficulties and had suggested that the export policy, as well as the procedure thereof, be settled and enunciated at the beginning of each season, leaving only the quantity to be announced later. It was also urged by the Board that a maximum possible quantity should be announced first in early October and a supplementary quota given in February or March and, crop position permitting, a further quota be released later.

Hedge Contract

The hedge contract of the 1960-61 season had attracted a good deal of adverse comment on the ground that it was entirely divorced from the realities of the cotton situation. It is only natural that Mr. Ruia should say something in defence of it. He frankly admitted that the hedge contract was an unrealistic one but explained the circumstances which forced the Board of the E.I.C.A. to evolve such a contract. In the situation prevailing last year, when carryover was the smallest on record and the prospects for the crop were uncertain, the E.I.C.A., he said, was faced with the problem of whether to let the season go without a hedge contract at all or to have one which might work within prescribed limits and might serve such purpose as it could. The Board of the E.I.C.A. chose the latter alternative. A realistic hedge contract could be devised, according to Mr. Ruia, only if (1) there was an adequate carryover, (2) there was assured supply all through the year of the particular variety on which the contract was to be based and (3) prices were allowed to fluctuate according to the forces of demand and supply. As this position would take time to materialise, a proper and realistic hedge contract, similar to that of the days gone by, had to await the restoration of normal conditions. The Board of the E.I.C.A., he pointed out, were making every effort to keep pace with the changing times and make the contract as realistic as circumstances permitted.

Mr. Ruia did well to warn the members of the E.I.C.A. and cotton traders in general

(*Continued on page 960*)

SUGAR AND "GUR" IN THIRD PLAN

DEMAND PATTERN EXAMINED

By C. Muthiah

A VARIETY of measures have been either undertaken or suggested by the Government as well as the organisation of sugar industry, to solve the crisis that has developed in the industry owing to the huge accumulation of stocks with factories. Most of them are apparently designed primarily to be of short-term relief-giving measures. This paper is mainly intended to show that the crisis being witnessed now requires bolder measures capable of permanently removing the malady of sugar production in our country.

In order to show that the present situation in sugar industry is nothing unique but is only a preview of the things that are going to fall upon this industry, which has been nurtured till now under unhealthy conditions, it is very much essential to estimate roughly the demand for sugar (and *gur*) during the next few years. The only reliable source for making such an estimate is the various rounds of the National Sample Survey which give the *per capita* monthly expenditure on sugar and *gur* in different expenditure brackets in rural and urban areas. In the absence of any data on income and its distribution, we have to be contented with the total expenditure on all items in different expenditure levels as mentioned in these reports. Though the data needed by us are available in all the rounds, we have considered only those from the fourth, fifth and seventh rounds which had a month as the reference period, while the earlier rounds had either a year or a week as their reference periods.

Elasticity of Demand

The expenditure (or alternatively, income) elasticity of demand for sugar and *gur* as obtained from the data collected during these rounds is shown in Table I. The elasticity of demand for sugar and *gur* was found to range between 1.297 and 1.578 in the three rounds for rural areas and between 1.001 and 1.222 for urban areas. If these elasticities are weighted with the *per capita* expenditure and size of the population in each of the rounds, it is possible to obtain a single set of elasticities for rural and urban areas. This was found to be 1.38 for rural areas and 1.07 for urban areas. By weighting these two elasticities respectively with the rural and urban *per capita* expenditure and the percentage distribution of population (80 per cent rural and 20 per cent urban), the elasticity of demand for sugar and *gur* for the entire country is found to be 1.30. It is anticipated that the national income will increase by 25 per cent during the third Plan period. If this is so and if we assume the annual rate of population growth as 2.5 per cent, the *per capita* income will rise by about 22.2 per cent. It is now easy to estimate the increase in demand for sugar and *gur* at the end of the third Plan as a result of change in income by using the following formula:

$$\text{Income elasticity of demand for sugar} = \frac{\text{Percentage change in sugar consumption}}{\text{Percentage change in income}}$$

$$\therefore \text{Percentage change in sugar and } gur \text{ consumption} = \text{Elasticity of demand for sugar (and } gur\text{)} \times \text{Percentage change in income}$$

Applying this formula to one particular case, the percentage increase in demand for sugar at the end of the third Five-year Plan would be 22.2 x 1.30 or 28.86. This takes account only of the effect of increase in income. We also have to provide for the increase in demand that takes place on account of natural growth of population. During the decade 1951-61, the population of India has increased by 21.49 per cent, which comes to approximately 2.15 per cent per annum. We may, however, assume that the population would be growing at a faster rate during the next five years, say, by about 2.5 per cent per annum. If this is so, the population and, therefore, the consumption on this account would increase by about 12.5 per cent during the next years. The total increase in sugar consumption (due to the changes in incomes as well as in population), thus, comes to about 32.47 per cent. In other words, the demand for sugar and *gur* may be expected to go up by nearly one-third during the next five years.

Note: This article is in continuation of the author's earlier note in *Commerce* dated 15th April 1961, entitled "Place of Sugarcane in Agriculture—Need for Rethinking."

The figures of consumption of sugar and *gur* for the current (1960-61) season are not yet available. From the data on consumption for the last two seasons and the latest indications available from various sources, the consumption during the current season may be placed around 5,200,000 tons of *gur* and 2,000,000 tons of sugar. The corresponding figures for the previous two years are: 1958-59: 5,201,000 and 2,062,000; 1959-60: 5,179,000 and 2,024,000.

If this consumption of 7.2 million tons of sugar and *gur* is to go up by nearly one-third during the next five years, the demand for these two commodities at the end of the third Plan period may be placed around 9.6 million tons. Still it remains to estimate separately the demand for sugar and *gur*. Though this is a ticklish problem, it is yet possible to have some rough idea with the help of the trends in consumption during the last few years. The proportion of sugar out of the total of sugar and *gur* consumed varied within a narrow range of 28.1 per cent and 29.5 per cent between the years 1956-57 and 1959-60, with its average at 28.8 per cent. Assuming that more or less the same relationship would continue with regard to the consumption of sugar and *gur* during the year 1965-66, too, the consumption requirement of sugar may be placed around 2,765,000 tons and that of *gur* 6,835,000 tons.

Third Plan Targets

It is needless to emphasise that, if the prices were to remain at current levels and the national income to go up by 25 per cent, the volume of surplus with regard to sugar, found in the current year, when the production is expected to reach a record peak of 3.05 million tons, would not only continue to exist in the next five years but actually increase in size. It is, indeed, disheartening to find out that the consumption estimated at the end of the third Plan lags very much behind even the production registered during the current year. The target at the end of the third Plan for sugar and *gur* production have been fixed at 3.5 million tons and 6.5 million tons, respectively. Comparing this with our demand estimates, we find that consumption of sugar will lag behind production by about 735,000 tons, while that of *gur* will exceed its production by about 335,000 tons. If this anomaly of surplus sugar and shortage of *gur* is to be avoided, there must be a large shift in favour of sugar among consumers of *gur*, so that the proportion of sugar consumed to the total of sugar and *gur* consumption goes up from the present figure of 28.8 per cent to 32.4 per cent. Even if such a shift takes place at the current prices, there will still be about 400,000 tons of sugar over and above the internal consumption requirements. In addition to this, there will be a huge stock of surplus carried forward during each year of the third Plan. At the end of the current season alone, an unmanageable stock of nearly 1.5 million tons of sugar is expected to be carried over to the next year, if no exports are arranged for sizable quantities.

Rural and Urban Areas

It was seen earlier that the elasticity of demand for sugar (and *gur*) is lower (1.07) in urban areas than in rural areas (1.38). Such a situation may be explained by the already larger intake of sugar and *gur* in urban areas. Moreover, a majority of urban consumption is in the form of crystal sugar which at present costs nearly 2½ to 3 times the price of *gur*. Another equally important factor influencing this situation is the high cost of commodities such as milk, ghee, oil, tea and coffee which are complementary to sugar. Sugar is not usually consumed either alone or only with cheap food articles like cereals and pulses. It is, on the other hand, taken with items such as milk and ghee and, therefore, its demand is influenced largely by the prices of these articles. A perusal of Table II will show that not only the price of sugar had increased during the last few years but also the prices of tea, milk, ghee and oil.

An increase in the prices of these commodities is likely to affect the consumption of sugar more in urban areas than in rural areas, where articles like milk and ghee, etc. are available usually at cheaper rates. So, the comparatively high cost of these articles is one of the major factors coming in the way of increase in sugar consumption especially in urban areas. Another factor that would be having an adverse effect on sugar consumption is the rapid decline of *gur* prices; the index of *gur* prices which stood at 141 in October 1960, was standing at 112 in March 1961.

Only a Temporary Cure

The foregoing discussions go to show that a mere reduction in sugar prices alone will not help anyway in solving the present situation

(*Continued on page 975*)

JOINT MANAGEMENT COUNCILS

OFFICIAL REVIEW CLAIMS MODEST RESULTS

THE Union Ministry of Labour has just reviewed the working of Joint Management Councils set up in selected undertakings in the public and private sectors and brought to light some of the practical difficulties in the smooth functioning of the Councils. The Ministry's review, it may be noted, has been made at the most appropriate time, for the scheme of workers' participation in management, in furtherance of which the Joint Management Councils are being established, is now sought to be extended to more and more undertakings in the public and private sectors. In order that the existing Councils, and those that will be set up in future, may function more vigorously, it is necessary to examine how the practical difficulties revealed by the review could be eliminated.

Joint Management Councils exist at present in seven units in the public sector and 17 units in the private sector. In spite of the fact that the Union Ministry of Labour is the godfather of the scheme of workers' participation in management and that it misses no opportunity to emphasise its role and importance in promoting good labour-management relations, it is in the public undertakings that the working of the Councils is not satisfactory. What is worse, workers in public sector undertakings, according to the official review, are fast losing faith in the usefulness of Joint Councils because, in several matters, the decisions of these Councils have to be referred to the Government for final orders and no action seems to be taken on these references. This is a serious matter which deserves immediate attention. If such an impression is allowed to gain strength, it will not only lead ultimately to the failure of the Joint Management Councils in the public sector but also adversely affect the working of such Councils in the private sector. One possible solution suggested is that, in case one of the parties finds it impossible to accept a unanimous decision of the Joint Council, the party concerned should place before the next meeting of the Council the reasons for its inability to give effect to the decision. While this may serve to prevent any misunderstanding of the party's helplessness in the matter developing, it certainly will not help to implement the decisions of the Council nor to maintain its reputation as a useful body. Serious consideration must therefore be given to how the decisions of the Councils could be implemented by both the parties. The decisions of the Councils do not cover major matters of financial or other policy and one therefore fails to understand why the management should not be allowed powers to accept and implement them without having to get the Government's sanction for each and every one of them.

Opposition of Employing Ministries

While the working of the Joint Councils in the public sector undertakings has thus been unsatisfactory, the prospects for the creation of Joint Councils in additional units in the public sector are more gloomy. There are at least some employing Ministries which have serious mental reservations about the usefulness and propriety of establishing Joint Management Councils in public undertakings at present. One such is the Ministry of Oil and Mines. Mr. Malaviya, Minister for Mines and Oil, is said to be of the opinion that introduction of Joint Management Councils before the more basic needs of the workers are met would be premature. Some other Central Ministers, too, are diffident about the success of the experiment in view of the practical difficulties. While none questions the principle and the spirit behind the Joint Councils, many are sceptical about its successful functioning at the present juncture. The Ministries of Commerce and Industry, Irrigation and Power and Transport are favourably disposed to the idea although these too, it would appear, prefer to hasten slowly in the matter.

The official review has given the finding that the Councils are working fairly satisfactorily in the private sector units where they have been set up. Of the Councils set up in 17 units in the private sector, 15 are functioning smoothly. But even here, it is noted that the meetings of the Councils are held at infrequent intervals although the constitution of the Joint Councils invariably provides for at least one meeting every month. Moreover, it has been noted that the exact scope and functions of the Councils have not been fully comprehended by the representatives of both management and workers. There is said to be confusion in the minds of representatives of workers especially about the respective roles of the Joint Councils and Works Committees. It is not, for instance, realised that the latter is concerned only with the questions connected with the day-to-day working of the undertaking while the former is concerned with larger policy matters.

Lack of understanding of the exact scope of the Joint Councils is evident from the nature of the information sought or action suggested by workers' representatives at the meetings of the Joint Councils. The model agreement regarding the establishment of Joint Management Councils accepted by the first Seminar on Labour-Management Co-operation lays down the matters on which the Councils should be consulted and the subjects about which information should be placed before the Councils. According to the model agreement, the Councils should be consulted by management on matters like administration of Standing Orders and their amendment, retrenchment, rationalisation, closure, reduction in or cessation of operations. The Council shall also have the right to receive information, to discuss and to give suggestions one (1) general economic situation of the concern, (2) the state of the market, production and sales programme, (3) organisation and general running of the undertakings, (4) circumstances affecting the economic position of the undertakings, (5) methods of manufacture and work, annual balance-sheet and profit and loss statement and connected documents and explanation, (6) long-term plans for expansion, redeployment, etc., and (7) such matters as may be agreed to. It is further laid down that the Councils should be entrusted with administrative responsibility in respect of administration of welfare measures, supervision of safety measures, operation of vocational training and apprenticeship schemes, preparation of schedules of work hours and breaks and holidays, payment of rewards for suggestions received by employees and any other matters as may be agreed upon.

Such matters as wages, bonus, etc., which are subjects of collective bargaining, are to be excluded from the scope of the Joint Councils. Individual grievances are also excluded from their scope. The main object is to exclude the creation of new rights as between employers and workers from the jurisdiction of the Joint Councils. This aspect needs to be more widely publicised because there is still a fear lurking in the minds of workers and unions that Joint Councils will eliminate collective bargaining and thereby weaken the trade unions.

The problem of representation of unions on the Councils, posed by the existence or rivalry between unions, has been one of the serious obstacles in the way of the smooth functioning of the Joint Councils. In fact, in the Hindustan Machine Tools, Bangalore, the operation of the Joint Council had to be suspended because of the difficulty of deciding the conflicting claims advanced by the rival unions for representation. A satisfactory solution to this problem has yet to be found.

Not An Unjustifiable Claim

In spite of these shortcomings, the conclusion reached by the official review is that better industrial relations have come to prevail in units where Joint Management Councils have been established. The review no doubt admits that it is not possible to isolate the various factors responsible for this and to say to what extent, if at all, the improvements are the result of the introduction of the new scheme. But it points out that increased productivity, improved earnings by labour, better profits and stability of labour have followed the setting up of Joint Management Councils. This is not an altogether unjustifiable claim, although it must be pointed out that whatever gain has been made is too small to make the scheme popular. There is no doubt that much better results could be obtained if the practical difficulties in the working of Joint Councils are eliminated and a better understanding of the role and functions of the Councils is promoted. There is no harm if the extension of the scheme to more and more units is postponed until such time as the existing units have had time enough to demonstrate the utility of Joint Councils of Management in creating better industrial relations. In a difficult experiment such as this, "hasten slowly" is a wise maxim to go by.

CONSTIPATION AND PILES

Habitual constipation can cause piles or hæmorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well-known German pile remedy, contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

SISTA'S-SB-49

INDIA'S AIRCRAFT INDUSTRY

DEFENCE MINISTRY'S ROLE EXAMINED

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

OUR national Air Power depends largely upon the ability of our aircraft industry to keep our flying services, both military and civil, in the air. In time of war or even emergency, as a nation, we run the risk of having our air services as well as our Air Force grounded because the manufacturing facilities to keep them in the air are inadequate.

An aircraft industry is a vast and complex association in the art of manufacture by many hundreds of individual specialist manufacturers; no single factory can produce a modern aeroplane. The manufacture of airframes and even jet aero-engines is really the easiest part of the business, it is what goes into the airframe in addition to the aero-engine that creates the most highly technical manufacturing problems. These problems can only be handled by those who specialise in ancillary equipment design and production. To further complicate manufacture there are literally dozens of pieces of specialist equipment necessary.

In India we have only scratched the outer surface of an aircraft industry. Much has been achieved but without import of many major components our civil and military aircraft would be grounded in a very short time. Deprived of foreign supplies our Air Power would be absolutely ineffective.

This is no sudden discovery, it is a fact well known throughout aviation circles in every country. It is equally well known in India and has been for some time. At last the authorities are beginning to realise the full implications of this situation, so steps are being taken to fill in the gaps in our aircraft manufacturing resources. If these steps are being directed in the right direction is a matter of opinion.

There is a primary factor that requires early attention. Without trained technicians to man the workshops all the signed agreements to produce in India equipment for aviation will remain as worthless scraps of paper. There is far too little importance attached to the value of training personnel. The present policy is to train the bare minimum number for some project already waiting for skilled hands to bring it alive, or make it more productive. There are no spare hands for new projects, men must be trained and this usually means taking experienced hands from other projects so as to give them specialist training. But this practice weakens industry if indulged in extensively.

It takes years to train skilled labour, there is no short cut, only time on the job can experience a man. What does it matter if established engineering organisations train more men than they require, by the time they are trained new projects will have been launched which will absorb technicians in thousands. But fear of overexpenditure on training, as well as a desire to train only just the number required for some already accepted task, add up to a shortsighted policy. Also, it indicates that those in executive positions have no faith in the future, they think only of the immediate profit gains.

Hindustan Aircraft Ltd.

Hindustan Aircraft Limited is the hub of India's aircraft industry. It suffers from a top hamper of remote control directed from Ministries in Delhi. This is something that has to be overcome if the industry is to develop in a healthy manner under the umbrella of H.A.L. as the co-ordinating centre. This way India can be made independent in respect of the production of aviation equipment.

The future policy must be to distribute the multitude of manufacturing tasks throughout the industry. To confine the manufacture of all essential equipment required in aviation under the roof and management of one establishment is neither logical nor practical. Already H.A.L. suffers from too many projects in hand at one and the same time.

Even in the earliest days of aviation when aircraft were comparatively simple structures uncomplicated by highly technical equipment, when the First World War came in 1914 the Bristol Aeroplane Company sub-contracted a great deal of the work, but retained the supervision under its own control. Throughout the years since, as aeroplanes became more and more complicated, this practice has been considerably extended. So much so, that large aeroplanes today are in fact the product of several hundred different manufacturers. The aircraft designer whose name the aeroplane bears builds the keel and assembles the multitude of parts and components manufactured by others.

The task of building a large jet airliner is as exacting as building a naval destroyer and certainly no less complicated in respect of ancillary equipment that has to be fitted into it. Many diverse skills are required, no single engineering establishment can achieve production perfection in more than a limited number of equipment lines.

The Estimates Committee reviewing Hindustan Aircraft Limited in its 124th Report published in April 1961, comments in para 15: "It is obvious that adequate attention has not been paid towards development of ancillary industries by H.A.L. The Defence Secretary did not consider this to be the responsibility of H.A.L."—Exactly! Remote control from Delhi hampers the normal functioning of H.A.L. How are officials in Delhi to know what parts of an aeroplane can be more efficiently produced by a specialist sub-contractor than in H.A.L.'s workshops? Are the officials in Delhi technically trained in the art of aircraft manufacture?

This opinion expressed by the Defence Secretary is quite astonishing as he is also Chairman of the H.A.L. Board of Directors. It can only be concluded that the management in H.A.L. is not overanxious to develop the sub-contracting system, otherwise it would have clearly explained the position to its own Chairman. This is a glaring example of how official remote control of an undertaking that is functionally industrial, can confuse the policy till it becomes impossible to function in a practical manner.

This one paragraph in the Estimates Committee report explains with absolute clarity why our aircraft industry can never grow into a healthy self-sufficient group of manufacturers capable of making India independent as far as aviation equipment is concerned. This overbearing top level control is deadly.

I.A.F.'s Kanpur Project

At the present time all aircraft manufacture in the country comes under the Ministry of Defence. This has two disadvantages. First, all transactions have to be carried on along Government departmental lines. This strikes a severe blow at industrial efficiency especially in respect of purchase and sale. Secondly, if it is intended that either or both H.A.L. and the aircraft factory located within the Maintenance Command of the Air Force at Kanpur, are to sell civil aircraft, even to the Indian Airlines Corporation, the buyer will always be under a cloud of doubt in respect of delivery dates, replacement orders and the supply of spare parts in the years ahead, because the Defence Ministry must give the Air Force requirements first priority.

However courageous it may have been to undertake something no other Air Force in the world has even contemplated let alone attempted, namely aircraft manufacture, those responsible must have realised by now that the task is not quite so simple as they believed. The pitfalls already encountered and which have made themselves evident through promised first flights that have not materialised, in fact the aircraft is still some months from its maiden flight, are quite formidable. The project has yet to justify itself and it must be shown that to achieve the production the essential services of care and maintenance for the operational Air Force have not suffered due to diversion of technical manhours.

Let it be assumed that the I.A.F. Kanpur manufacturing project becomes a success. This leaves civil aviation in this country entirely dependent on the Defence Ministry controlled and operated sources of supply. The wisdom of this is open to question.

The Air Force requirements have grown out of all expectations both numerically and technically. The total existing manufacturing facilities are inadequate to meet the demand. What is more, the air power side of national defence has got to be met by an adequate supply of well-proven equipment.

This brings me to the inescapable fact that aircraft design has become so complex it is no longer practical or possible for a small team to produce an effective military aircraft. They are no longer known as aircraft, the correct name is "weapons system." This change in nomenclature alone is sufficient to indicate that each military aircraft is really designed around the "weapons system" it will have to carry to perform its intended mission.

In the old days aeroplanes were built and then guns and bombs were added to taste, like pepper and salt at the dinner table. Today, an Air Force specifies its strike force requirements for a given set of missions, the weapons to be used are detailed, the range required is known, the aircraft designer then produces an airframe with power plants to carry the whole weapons system.

Bearing in mind that supersonic speed is essential for military aircraft at altitudes up to 80,000 ft., the ancillary equipment necessary to make the cabin habitable as well as the whole thing workable, calls for the highest level of ingenuity by technicians in a number of different trades. For example, in long-range bombers even canned food suppliers come into the picture to produce special foods in special kinds of tins.

If these factors are taken into account it becomes obvious that to touch the fringe of an aircraft industry in India it is necessary to broaden our whole outlook as well as our approach to the problem of aircraft manufacture.

Suggested Solution

The obvious solution that would ensure greater efficiency in existing manufacturing facilities as well as their rapid expansion can be set down in a few words, but the implementation is quite another matter. However large the majority who will agree with the following suggestions, their weight is unlikely to tilt the scales in favour of any policy changes. This is to be deeply deplored as it means that the future of the aircraft industry in this country is far from bright.

Hindustan Aircraft Limited should be treated as an independent business organisation, left free to operate as such, enjoying the guaranteed position that it will receive substantial orders to meet Air Force requirements. Contracts to be carried through on the normal practice of costs plus, which can be checked against standard manufacturing costs of aircraft in other countries, also machinery manufactured in this country. How H.A.L. carries out the contract is not the affair of the Defence Ministry or the Air Force, always provided that the product is up to specification one hundred per cent and the price is considered reasonable.

Provided H.A.L. has capacity it should be absolutely free to indulge in aircraft manufacture for civil purposes and as well, it should be free to market its products in competition with foreign manufacturers. Although a Government-financed organisation, it would have to account for its working in a normal profit and loss account. The Government as the majority shareholder would have every right to express disapproval if the factory-group did not show a satisfactory working profit. The Board of Directors would be appointed by the Government, who in its own interest would see to it that sufficient business brains were included. One representative of the Government might be included as a sort of "watch-dog," but with no more powers than a vote on the Board as a director, and certainly not as a full-time director.

As for the factory within the Air Force Maintenance Command it is suggested that this be regarded as an incompatible marriage so a divorce should be arranged. This would strengthen the factory as well as eliminate any complications that can arise by running a business organisation with mixed civil and Air Force personnel. It would leave the Air Force free to get on with its proper job which is the air defence of the country. The exercise has already shown that given drive it is possible to develop aircraft manufacture in this country with a large percentage of the total effort found in the country. The main objective was to establish healthy competition for H.A.L., or so it has been stated. This competition would be far healthier if the two establishments are more or less working on the same basic system, which is not the case so long as the Kanpur factory remains under the command of the Air Force.

Unless some very peculiar change takes place in Government departmental practices the Kanpur factory will have to conform to Government departmental routine procedures which will be as serious a handicap to it as they have proved to be to H.A.L. The only logical way to give this new factory freedom is to release it into the sphere of business, owned and capitalised by the Government but working on a proper audited financial system.

Simple as these suggestions are, it is repeated that to carry them out is probably impossible. Here's the rub.

NEW PRODUCTS AND PROCESSES

Capsule Filling and Sealing

AUTOMATIC machines for filling and sealing powders into 12,000-14,000 capsules per hour will be exhibited by Anglo-Continental Machines Ltd., 41-42 Dover Street, Piccadilly, London W-1, at the International Packaging Exhibition, London, scheduled to be held in September. Capsules are fed in bulk to a hopper and a special block, mounted on prismatic slides, uses air-suction to divide four at a time into two parts. After division the block retains the covers, whilst the bodies are held in holes on a turntable. Block and turntable then separate but continue to rotate simultaneously and allow two sets of control "fingers" to reject all unopened and displaced capsules in both units. For filling, two micro dosing-groups measure out the powder and feed it in under compression. The bodies are then chamfered for refilling to the covers and as the block is returned to the turntable four pins press the two sections together to produce joined capsules. These are ejected into outlet tubes and all cleared holes are cleaned by vertical rotating brushes before being used again. For final sealing the capsules can be delivered automatically by conveyor plate to an independent unit where four wheels rotating in a gelatine bath (with automatic temperature-control) seal the junction of cover and body, which are then printed with a trade mark or other symbol. The process is completed by drying the capsules for about 9 minutes.

Miniaturisation of Airborne Equipment

Great Britain, who has been responsible for many modern aviation electronics developments, is still in the lead in the race to satisfy this ever-growing demand with the minimum of weight penalty. Playing a key role in the campaign against surplus weight are the transistor and other semi-conductor devices which, as well as taking the place of thermionic valves, have a variety of other important uses. Apart from their very small size—the active part can be no larger than a pin-head—transistors have other outstanding advantages: unlike thermionic valves, no heater is needed for operation, and negligible current is consumed from a single power supply of 15 volts or less. Consequently, the power generating equipment normally required for electronic devices can be dispensed with and the need for forced ventilation by power-driven blowers does not arise. Obviously, these factors represent a considerable saving of weight and space. A good example of what can be achieved is a remarkable airborne weather radar, introduced recently by Ekco Electronics, which can "see" 150 miles (240 km.) ahead of the aircraft, yet which weighs only 57 lb. (26 kg.). Another is Marconi's 60 Series receiver which is 40 times lighter than equivalent equipment using valves.

Automatic Can-sealing Machine

A machine factory at La Sarraz (Switzerland) is now engaged in putting on the market a new vacuum can-sealing machine, which offers some very big advantages over those machines which have been in use upto the present. The "Sertomatic" makes it possible to carry out, as required, the following operations: ordinary sealing, vacuum sealing and vacuum sealing with the introduction of gas, and this by merely switching from one position to another. The can remains stationary during the sealing operation, thus preventing the spilling of any of its contents, as a result of any jolts. The greatest advantage of this new machine lies, it is claimed, in its highly developed automatic qualities, as a result of which, should a preceding operation not have been effected correctly, the cycle is stopped automatically, which prevents, for example, any cans being put on the market which have been sealed without the air being removed, or before the gas is introduced into the vacuum. These advantages, as well as a great many others, including the handling security for the operator, have made of this machine something which represents considerable progress for all those industries which are obliged to distribute their products in sealed cans.

New Device for Bending Pipes

A new series of bending machines for bending pipes on site has been developed in Britain. The machines which are said to be fully portable, are capable, tests carried out have shown, it is claimed, of bending pipes of up to 18 inches outside diameter and ¼-inch steel wall thickness. The operation of the system depends on the use of a special hydraulic bending head and the use of two special riveted arms which carry clamps to fit the exact size of the pipe. The pivots are also adjustable so that they will exactly control the angle of the bend. The power for operating the hydraulic device is produced by means of an hydraulic pump, which can either be operated by an air supply which is already available, or by means of a small compressor. Special relief valves are fitted in order to prevent overloading of the equipment. It is claimed that an 18 inch by ¼ inch pipe can be bent to 15 degrees in only 10 minutes. The equipment is expected to be specially useful for both civil and mechanical engineering as well as for chemical engineering and atomic energy purposes.

Ball Bearing That Needs No Lubrication

A precision ball bearing which is said to be capable of operating up to temperatures of up to 575° Fahrenheit without the use of any conventional lubrication has been developed in the U.K. The design of the bearing is said to be such that it can be applied to all the newest types of electric motors, blowers, or synchro devices. It can also be used for fans which operate at considerably higher temperatures than those which are normally available. Previously, it is claimed, bearings of similar performance have had operating temperatures without lubrication which have been limited to about 300° Fahrenheit. The operation of the new bearings depends, it is claimed, on the use of a series of special new alloys together with certain new types of manufacturing techniques. They are expected to find applications in other fields of industry besides those already indicated for which they were originally designed.

Metal Plastics

A novel development in the plastics field is the ability being found by scientists today to fit in metallic atoms into the molecules. Some account of this work, not apparently yet available commercially, was given by K. C. Bryant, Research Manager of Monsanto Chemicals, in a paper given at the Royal Institute of Chemistry annual conference at Southampton, England. The basis of a plastic is the bonding-together, that is, polymerisation, of single molecules, the monomer. Russian scientists have succeeded in finding a way of polymerising organometallic monomers into plastics having metals such as aluminium, titanium, or zirconium, as backbones. Such plastics besides having the ordinary qualities of plastics, should be able to withstand very high temperatures, and the work is, in fact, designed for new materials for rocketry.

New Device for Timber Loading

A new timber transport unit consisting of truck, semi-trailer and loading frame which is said to cut loading time by some 50 per cent was exhibited by the large Swedish makers of trucks and buses, Scania-Vabis, at a recent show of forest transport equipment in Stockholm. Designed in collaboration with the Stockholm firm AB Inter-Cemex, the loading device can be combined with the Scania-Vabis truck types 50, 75 and 75 Super. The frames can be loaded with either 12 or 24 cu. metres (425 to 850 cu.ft.) of timber depending on the type of logs. After the frame has been loaded, it is hoisted on to the semi-trailer. The loading can take place directly after felling, since the frame can also be used as a sledge after a horse or tractor for transport to the truck.

Tweeds Backed With Plastic Foam

Firms in the Scottish tweed industry are selling woollen cloth with a backing of plastic foam. Consequently they have a material that is warm without being heavy in the winter, cool in the summer and that resists crushing. In co-operation with a firm of plastic manufacturers, the Scottish firms have been bonding their tweeds with a soft pliable foam which is based on polyurethane. Already several thousand yards of this material have gone from one plant to North America. The manufacturers say that a foam-backed coating weighing 15 ozs. per square yard is as warm as a cloth weighing 22 or 23 ozs.

Fire Alarm

An automatic and inexpensive self-contained fire alarm unit, operated by an electric current produced from a galvanic cell (as used in a car battery), and therefore independent of external sources of power supply, has been developed in Canada.

The unit contains a heat-sensitive element which, when the temperature of the surroundings rises to a dangerous level, causes, a liquid to fill up the space between two electrodes. This, in turn, operates the alarm bell.

The current produced does not last long but, it is claimed, hardly any maintenance is required and, after use, worn parts can be replaced at very low cost.

Electronic Rail Brake

Telefunken has developed a rail brake with an electronic control in order to simplify shunting operations in marshalling yards. It always takes quite a long time to make up a goods train. The wagons are first hauled to the hump and from there they roll down into the various sidings to make up the different goods trains. On each siding railwaymen must brake the wagons correctly to prevent too sudden collisions. With the aid of the rail brake control the speed of the wagons for rolling into the prescribed sidings is regulated on the hump in accordance with weight and distance to be travelled. The long oblong braking surfaces are controlled by electronic devices depending on weight. Additionally fitted Doppler radar units permit the brakes to be set on the hump in accordance with speed. The automatic unit also detects the number of wagons and axles. In practical operation time and personnel are saved.

NEW PUBLICATIONS

The Diplomacy of Economic Development. By Eugene R. Black, Harvard University Press, Cambridge, Mass., 1960. Pages: 74. Price: $3.00

SINCE the end of World War II, the flow of economic aid from different nations to different nations has played a significant part in economic development. As Christian A. Herter, the former U.S. Secretary of State, points out in the foreword to this book, the methods by which economic growth are achieved are at least as important as the growth itself.

The title of the publication is catching. The text is based on a series of lectures on "The Diplomacy of Economic Development" on behalf of the William and Clayton Lectures in 1960 at the Fletcher School of Law and Diplomacy of Tufts University. Popular in the financial world as the President of the World Bank, Mr. Eugene R. Black, there can be no better authority to advocate the role of diplomacy in economic development. The success of the techniques he advocates is illustrated in the consummation of the recent negotiations relating to the payment of compensation to Suez Canal companies and the settlement of the Indus water dispute between India and Pakistan.

The attitude of the author to the task of economic development is one of keeping a balance of hope. He distinguishes this from the assistance rendered for the rehabilitation of Western Europe under the Marshall Plan. In the Marshall Plan, there was in prospect a handy measurement, the re-establishment of substantial currency convertibility to judge when the necessary production and *per capita* income levels have been reached. The objective of present economic aid is neither limited nor concrete, since it is to help the leaders of the poor nations to lead their countrymen out of the worst of poverty. Therefore, both the policy problem as well as the operational problems are different. The author points out that, if the West is to exert a continuing and constructive influence on the historic transformation going on in the underdeveloped world, it must make a multiplicity of contacts with leaders and its people; it must seek working partnerships capable of functioning in spite of passions which bedevil normal diplomatic and economic relations. The role of development diplomacy is in this context. The strength of development diplomacy lies precisely in not becoming part of some grand design but in "illuminating choices" in the real world where economic development and social changes are interacting all the time. The development diplomat is to fill the gap between the conventional diplomat and the trader and the investor. He "should be a man with a vocation, rather than a man with immediate terms of reference." In the triple aspects of economic development—projects, planning and policy—the greatest challenge to the development diplomat will be in the planning process where there are the greatest opportunities for illuminating choices. He, therefore, calls for the creation of a corps of "development diplomats" to fill the gap between statesmen and businessmen.

Mr. Black devotes a whole talk in advocating a separate and distinct status for development aid in the policies of nations and stresses the role the development diplomat can play. He has been able to provide an insight into the various aspects of the diplomacy of economic development. A current instance of such diplomacy is the Aid to India Club. The book is a masterly advocacy of the role of "development diplomacy" in economic development.

Communist China To-day. By Dr. S. Chandrasekhar. Asia Publishing House, Bombay. Pages: 199. Price: Rs. 9.00

This book is the result of a tour of Communist China undertaken by Dr. S. Chandrasekhar, a well-known demographic expert, in the winter of 1958. The author went to China to study the economic, social and cultural changes which the Communists had brought about in less than a decade. His interests were quite wide and covered China's agriculture and communes, colleges and universities, clinics and hospitals, factories and plants and particularly her population problem and vital statistics. To study Communist China at firsthand, the author travelled a great deal in that country visiting a dozen major cities, a few villages and four communes and observed the developments not only in the social but also in the political and economic spheres. The result is that Dr. Chandrasekhar's study has become much more than a mere economic analysis of Chinese agriculture, industry and population problems, for it encompasses much that will interest the general student of Chinese affairs: the inner regimentation in people's life and thought, the ubiquitous radio and loudspeaker constantly harassing the people with Government propaganda, the extraordinary cleanliness visible everywhere compared with the sium and dirt which prevailed during the Kuomintang days, the decidedly improved position of Chinese women in the Communist society, the all-pervading influence of Russians in Chinese life and the hatred of the U.S.

It is, of course, natural that Dr. Chandrasekhar, who loves liberal institutions, should have come back sad, stifled and disenchanted. Even the honesty, which is today a conspicuous feature of Chinese behaviour internally, is, according to him, the product of fear of the regime's severe punishment than a change in personal ethics. But he is rightly impressed with the new status of women in Chinese society. Now they have become the equals of men with a vengeance—legally, politically, and economically—and started working as skilled hands in steel mills, textile factories, and so on.

In the sphere of industrialisation, the author saw a new spirit in China, an ardent and a grim determination to become an industrial power. But his conclusion about the future increase in Chinese population is almost frightening. At the present rate of increase, the population will be about 700 million in 1963 and 800 million before 1968. "With near-universal marriages and the current social attitudes that favour large numbers for their own sake and treat any talk of population pressure as neo-Malthusian nonsense, and with the absence of any widespread practice of contraception, the birth rate is bound to remain as high as it is now." And so, by 1980, China may have a thousand million people within her frontiers. The author's examination of the political implications of this demographic expansion is worthy of close attention, especially by students of Sino-Indian relations.

Salivati Newsletter Special Number. Editor: N. Salivati, C-2, Industrial Buildings, Churchgate, Fort, Bombay. Price: Rs. 5

This Special Number of *Salivati Newsletter* serves a sumptuous fare of instructive reading material. Like the *Newsletter*, which carries every week news and views on a variety of subjects of public interest, the Number covers a wide field. It is divided into four sections—economics, politics, State by State review and statistics. Among the contributors to the economics section are several eminent persons who have critically reviewed the different aspects of the Indian economy. To mention only a few of the contributors and the subjects covered, Mr. A. D. Shroff examines some aspects of planning in India, Mr. M. Ganapati, a former Resident Director of Hindustan Steel Ltd., underlines the importance of plan projects, Mr. N. Dandekar, I.C.S., draws attention to the menace of inflation and Mr. Keith Funston, President of the New York Stock Exchange, explains the decisive role which American private capital can play in the healthy development of the free world. The small though no less interesting section on politics carries five articles on some of the burning international problems. The State by State review gives a synoptical picture of the trends in the economy of each State. The utility of the publication has been considerably enhanced by the inclusion of a separate section containing as many as 48 statistical tables which provide very valuable data relating to a number of aspects such as population trends, industrial and agricultural production, employment, transport, trade and banking. One, however, wonders whether the tables could not have been compressed into a few pages, instead of being spread over as many as 74 pages.

In the course of an interesting article, Mr. N. Salivateeswaran, the Editor, has sought to assess the progress made by the second Five-year Plan. After analysing what he calls "performance and non-performance," he concludes that planning has failed to engender belief in the possibility of economic improvement and in the power of self-help, though he admits that the second Plan will prove to be a "springboard to score higher production levels and higher standards of economy during the next Plan."

Britain—An Official Handbook. 1961 Edition. Published by Her Majesty's Stationery Office, London. Available from British Information Services, Chanakyapuri, New Delhi. Pages: 579. Price: Rs. 10.80

This publication is a model of what a handbook ought to be. Like its predecessors in the series, it is a factual account of the administration and the national economy of the U.K., covering events and developments up to September 1960 and embellished with a few excellent photographs depicting certain typical aspects of British life. Set in easy-to-read type and written in lucid style, each section compresses a surprisingly large volume of factual and statistical material in a minimum number of pages. The text is supplemented by maps and diagrams and is fully indexed with a 30-page bibliography which serves as a useful guide to sources of further information.

TWO of India's leading Banks* choose WORTHINGTON air conditioning

...for year-round 'engineered climate'

The imposing new buildings of the United Commercial Bank and the Punjab National Bank at New Delhi are completely air conditioned (for summer cooling and winter heating) with WORTHINGTON Centrifugal Systems — 230-tons and 300-tons respectively.

These Banks offer not only excellent banking facilities but the right atmosphere for their patrons and ideal working conditions for their employees.

These are yet other instances where high performance and economy in operation led logically to BLUE STAR engineered WORTHINGTON installations. Whether your requirements are large or small — you will find that BLUE STAR can serve you best in 'climate control.'

THE BANK OF RAJASTHAN LIMITED

Registered Office:—**Udaipur** *Central Office:*—**Jaipur**

The Directors' Report for the year ended 31st December 1960 submitted at the Eighteenth Annual General Meeting held at the Registered Office of the Company at Clock Tower, Udaipur, on Monday, 15th May 1961.

The Directors have pleasure in submitting the Eighteenth Balance Sheet as on 31st December, 1960, and Profit and Loss Account for the year ended 31st December, 1960, together with the Auditors' Report.

Branches and Services:—During the year under report the Bank opened four new branches raising the total number to 36 including one Mobile Branch, i.e., a bank on wheels opened in Jaipur City to serve the banking needs of the residents of the suburbs where banking facilities were not in existence. Besides, two offices were opened for the collection of Water and Electricity Bills in the City of Jaipur for the convenience of the general public.

The Bank has been entrusted by the Water Works Department, Government of Rajasthan with the work of the collection of Water Bills at six places where we have our branches. Rajasthan State Electricity Board and the Amalgamated Electric Company Ltd. have also entrusted to the Bank the collection of Electricity Bills in Jaipur and Ajmer respectively.

During the year, the Government Treasury work at six branches has ceased to be transacted by us consequent on the reorganisation of Treasury arrangements in Rajasthan.

Working Funds:—The working funds have increased to Rs. 6,02,63,833 which exceed the figure of the previous year by Rs. 44,18,809.

Deposits:—The deposits have maintained steady growth. They have increased by Rs. 44,03,408 over the last year's figure and stand at Rs. 5,36,25,830.

Liquidity:—The liquid assets (Cash, Balances with Banks, Money at Call and Short Notice and Investment) of the Bank total Rs. 3,17,33,417. The ratio of liquid assets to total liability is 55.4 per cent. and compares favourably with the All India Scheduled Banks ratio of 44.4 per cent.

Investment:—The investments of the Bank amount to Rs. 2,01,76,648, 97.04 per cent. of which is accounted for by our holdings in Government and Trustee Securities 83.90 per cent. of the securities mature within 10 years.

Advances:—There was a brisk demand for advances during the year and the increased deposits were remuneratively utilised in advances raising the percentage of advances to deposits to 49.09 as compared with 40.6 per cent. of the last year. In making the advances, the traditional sound policy continues to be followed.

Profit and its Appropriation:—The net profit for the year is Rs. 3,36,202.91 and is more than that of the last year by Rs. 75,788. The sum of Rs. 1,570.11 brought forward from the previous year has to be added to it, making a total of Rs. 3,37,773.02. After making the following appropriations:—

	Rs. nP
To Reserve Fund under Section 17 ..	67,715.79
To General Reserve Fund ..	23,423.21
To Provision for Income-tax ..	1,10,000.00
To Bonus to Staff ..	41,000.00
	2,42,139.00
The Directors recommend to declare a dividend at 10 per cent. per annum subject to Income-tax ..	92,360.00
Leaving a balance of (to be carried forward) ..	3,274.02
Total .. Rs.	3,37,773.02

Election of Directors:—In accordance with Article No. 119 of the Articles of Association of the Bank, two Directors, viz., Sarva Shri Rajadhiraj Amarsinghji of Banera and Seth Pusalalji Mansinghka retired from the Board of Directors by rotation but being eligible offer themselves for re-election.

Appointment of Auditors:—You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Thanks:—The Board of Directors thank the shareholders, the Government of Rajasthan and the customers for their continued patronage and to the staff for their loyal services.

By Order of the Board,
HARI SINGH,
Chairman.

JAIPUR, 29*th March*, 1961.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Bank of Rajasthan Limited as at 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 18 branches audited by us and 23 branches audited by other Chartered Accountants. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn in accordance with the sixth schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949. We report that:—

1. We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory.
2. The transactions of the Bank which have come to our notice, have been within the powers of the Bank.
3. In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books.
4. The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with books of account and the returns.
5. In our opinion, and to the best of our information and according to the explanations given to us, *the said accounts give the information required by the Companies Act, 1956, in the manner so required* for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1960, and Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

U.K.'S ECONOMIC POLICY—A DEPARTURE

IMPLICATIONS OF LATEST BUDGET

By W. T. C. King

LONDON, 3rd May

THE outstanding happening on the economic front in Britain in the past month has been the introduction of Mr. Selwyn Lloyd's first Budget—and this promises to have an importance far transcending its implications for the economy in the short run. The Chancellor has not been content to budget simply for the immediate needs of the economy as he sees them; he has also tackled the problem of how to make fiscal instruments more effective as regulators of the economy in the future. For this reason, this Budget marks a major new departure in economic policy in Britain, and has far-reaching implications for financial policy and the use of monetary weapons. It is instructive, I think, to examine this initiative against the background and how the techniques of economic control have evolved in Britain in recent years.

The doctrine that the Government should accept responsibility for regulating the economy, especially for sustaining a high level of employment within it, was put to its first practical test, in peace-time, in Britain after the end of World War II. At that stage, it was, perhaps, natural that the authorities, in their search for the instruments of regulation, should have turned first to those operative during the war—notably the apparatus of physical control, import licensing, and rationing. So long as the physical controls could be trusted to limit expenditures through all the more important channels, the main role of taxation imposed through the Budget was widely conceived to be merely that of supporting the physical apparatus by mopping up the supposedly "unspendable" surpluses of funds. And monetary policy has offered no positive role at all—except, indeed, at the very outset, the contrary role of actually forcing long-term interest rates down, against the natural trend.

First Assault on Inflation

Bitter experience quickly demonstrated, however, that, in a democratic community, physical controls could not be operated in peace-time with the same range and effectiveness they had attained in war-time conditions. And, as the scope of these controls was reduced, the surpluses hitherto regarded as "unspendable" posed and ever-increasing threat of inflation. The Government's answer to this threat was to make the Budget, for the first time, a primary instrument of regulation. The first serious assault on inflation in post-war Britain was that made by the introduction of the principle of disinflationary budgeting—by imposing sufficient taxation not only to finance the Government's own current requirements but also to provide a surplus that would make up for the deficiency of savings in the prospective savings account of the economy as a whole. This principle was mainly associated with the late Sir Stafford Cripps in 1948-49. But at that stage, there was no attempt to buttress budgetary disinflation by deliberately turning to an "active" monetary policy. Natural forces in the capital market had, indeed, compelled the abandonment of the drive for ultra-cheap money, and long-term interest rates had begun to rise; but the Bank rate remained inert at 2 per cent, with Treasury bill rates well below it, and virtually pegged.

Revival of Monetary Techniques

In the closing years of the Labour administration, it became increasingly plain that there were limits to the effectiveness of even the most determined of budgetary drives against inflation—notably because of the disincentive effects of unduly high taxation and because of the rising proportion of it that tended to be paid out of savings, thus giving no relief from the pressures of excessive demands. More important still, it was perceived that the effectiveness of firmness in budgetary policy was being determined by undue softness in monetary policy. In the years following the election of the Conservative Government in 1951, therefore, there was a gradual revival of the monetary techniques of control. And as experience was gained in the operation of a positive monetary policy, so more reliance was put upon it for the purpose of keeping inflation in check, although the underlying aims of budgetary policy were not overtly changed. When the whole period is surveyed in retrospect, it can be seen that less was expected of it than formerly. In particular, when the state of the economy suggested that there might be scope for relaxation or stimulation, the authorities tended to give it by budgetary means; whereas, on several notable occasions when there was need for restraint, monetary rather than budgetary measures were the ones first selected to impose it.

In recent years, in consequence, it was increasingly felt that economic management might be falling into the opposite error to that experienced at the time of Sir Stafford Cripps; whereas in the early post-war years, firm budgeting had been frustrated by soft money, during the past six years or so, there have been several occasions when a firm monetary policy has been frustrated by too-lenient budgeting. At the very least, it has been almost generally agreed that, at times, too much has been asked of monetary policy. The remedy for this situation must, naturally, depend in part upon how far Governments are willing to follow firmer fiscal policies. But it also depends, as the Radcliffe Committee pointed out, on whether the available fiscal instruments are flexible enough to enable them to be used in the sort of circumstances in which monetary instruments have lately been used instead. In particular, though, in very special circumstances, the Government has been prepared to introduce an "emergency" Budget in the autumn—the last of these was in 1955—most fiscal instruments have suffered from the grave disadvantage that they could only be brought into use, or altered in their incidence, at the normal annual budget time, in the second quarter of the year. One particular tax, the purchase tax, has admittedly been varied at other times, but it operates over a comparatively limited range, and there were, in any case, other objections to leaning too heavily or too frequently upon it.

Two New Fiscal Powers

Now, in this latest Budget, the Government has taken the arguments to heart. It has admitted that the available monetary instruments all have their limitations, and that too much should not be expected of them—for example, the Bank rate, the Chancellor argued, suffered from the disadvantage that it is "not always possible to arrange that the same level suits us domestically and internationally." And variations in controls over the terms of hire-purchase contracts, though they had substantial and prompt effects, put over much of the brunt of the requisite restraint on a limited range of industries. Therefore, while not intending to dispense with any of the existing monetary regulators, the Government has sought for new ones that could equally be available for use—and with the prospect that they would act quickly—at any time of the year. Its resultant proposals, which formed part of the Budget speech and are incorporated in this year's Finance Bill, are for the provision of two new fiscal powers, either or both of which could be implemented at any time between the annual Budgets. The first of these powers, if duly conferred, will enable the Government to impose, at any time, a special surcharge or rebate, at a uniform percentage rate not exceeding 10 per cent in each direction, on all the principal existing customs and excise and revenue duties simultaneously—taxes that at present yield about £2,300 million and are mostly borne by consumers. In addition, a similar power is proposed to impose a novel form of taxation, described as a surcharge on employers, in respect of all employees covered by the National Insurance scheme—the surcharge not to exceed 4s. a week per employee. Proposals to use either of these powers would be implemented by statutory order, which could be made operative immediately but would be subject to an affirmative resolution by Parliament given within a month. If these powers are duly conceded, they will equip the Government with fiscal weapons of a potency and flexibility far surpassing anything that has ever been available in the past.

Avoiding Inflation

The new power to vary the indirect taxes, if used to the maximum extent, could increase or abate the flow of taxation to the Exchequer to the extent of some £200 million a year in either direction, and the other new weapon could add another £200,000,000 to the flow. It was claimed during the Budget debate, indeed, that these powers, when considered in relation to the existing monetary powers, would put Britain's Chancellor of the Exchequer in a stronger position to regulate the economy than any other Finance Minister in the Western world. Certainly, the mere fact that such proposals should be made shows a new determination to come to grips with the problem of avoiding inflation and a realisation of the major weaknesses from which the techniques of control have suffered in the recent past. There is a notable and instructive difference between this approach and the policy followed 12 months ago; then, it was clear, monetary policy—including higher interest rates, the new special-deposits weapon, and hire-purchase controls—was being expected to shoulder a very large part of the task of restraining an unduly rapid rise in demand, since the Budget of 1960 was almost neutral in its immediate effects—now, although there is no intention to abandon the use of monetary controls, it is unlikely that, when the primary aim is to check consumer demand, the authorities will turn first to increases in the Bank rate or even to hire-purchase controls—not, at least, unless a rather circumscribed effect is desired.

A More Pervasive Effect

A more pervasive effect on consumer expenditures could be exerted by the new power to raise indirect taxation. The new device of what would, in effect, be a payroll tax, though possibly desirable in principle as a long-range instrument to encourage industry to maximise its efficiency in labour usage, seems much less suited to be a short-term regulator of general demand. If imposed, it would influence demand through its effect on industrial costs—which means that it would have little or no effect on general expenditure unless and until it had been passed on by way of increases in prices, creating a time-lag in effective operation that would be most undesirable in a short-range regulator. This same principle also applies to a substantial part of the £80,000,000 of additional revenue expected to be collected this year as a result of immediate imposts made by this Budget; in the first instance, much of the taxation will be met at the expense of savings in the form of undistributed company profits. In other words, the immediate disinflationary impact of the Budget will be somewhat less than is implied by the fact that it imposed a net addition of £68,000,000 to this year's expected tax revenues—but this addition went to strengthen a prospective "above-the-line" or "ordinary" Budget surplus that already stood at £438,000,000; thus fortified, the ordinary surplus will be sufficient to finance all but £69,000,000 of the "below-the-line" capital expenditures, so that the Treasury's prospective borrowing requirements are likely to be covered several times over by the customary flow of funds into "National" savings securities and tax reserve certificates. This promises greatly to strengthen the authorities' hands in the management of the gilt-edged market—and also in their control over bank liquidity.

KOHINOOR MILLS COMPANY LIMITED

SPEECH OF CHAIRMAN, MR. A. N. HAKSAR AT ANNUAL MEETING

CLOTH EXPORTS TO BE STEPPED UP FURTHER

ADDRESSING the Annual Meeting of the Kohinoor Mills Company Ltd., held on 10th May 1961, at Bombay, Mr. A. N. Haksar, Chairman of the Company, stated that although the profits realised on cloth exports were only marginal, it was beneficial to export more, as that would enable the Company to earn licences for import of machinery and raw cotton. Exports during the year ended 31st December 1960 were valued at Rs. 34.97 lakhs, as compared with Rs. 22.37 lakhs in the previous year. Mr. Haksar disclosed that the Company would endeavour to step up exports further in 1961.

The following is the full text of Mr. Haksar's speech:

"GENTLEMEN,

"I am glad to report that the year under review has definitely been an improved one for your Company. The working in all sectors of the mill was better than last year and higher efficiency and production were achieved. Your Company increased the production of fine and superfine fabrics to suit consumer demand. New bleached and dyed sorts in both men's and women's wear were introduced and some of these have been popularised in the market. The Company progressively started 45,500 spindles by introducing a third shift in the spinning section of No. 2 Mill. This was done without additions to preparatory machinery. In your No. 3 Mill, screen printing was introduced and is running satisfactorily now.

Raw Cotton Situation

"The cotton year 1960 was a most difficult one. Untimely rains in most cotton producing districts adversely affected the crop quality and quantity. Early estimates of a 48 lakh bales crop had to be revised to 38 lakhs resulting in an acute scarcity of desirable qualities and a sharp advance in prices. Despite liberal imports and restrictive measures taken by the Textile Commissioner in the form of quality controls and mill quotas, cotton prices continued to advance. By the end of December, an extremely tight supply position was evident and at January end the situation was alarming. To overcome this shortage and enable mills to maintain their production, Government was forced to step up imports of foreign cotton, especially of short staples from America. Even so, stocks in mills were reduced to a minimum at the commencement of the new crop. Fortunately, the quality of the new crop was good and first estimates forecast 50 lakh bales. To stabilise the market, however, the Textile Commissioner continued the system of mill quotas and quality control. These measures, assisted by a larger crop, had the desired effect of bringing down prices and the position was much improved by the new cotton year. Your Company, like other textile units, suffered from higher prices both for Indian and imported cotton for the year under review.

Cloth Prices

"During the first half of the year, cloth movement was good and the stocks carried by the Company were reasonably low. In the second half, however, Government made it known that a reduction in cloth prices was desired. This caused uncertainty in the market and the movement of cloth became extremely sluggish. Negotiations took place between Government and the Indian Cotton Mills Federation and it was agreed to start stamping prices on cloth from 10th September 1960, on a formula based on August 1959 cloth prices. Even after this agreement was reached, Government required still further reduction in cloth prices and, therefore, uncertainty in the market continued. The final formula applicable from 1st January 1961, resulted in a still further reduction. This price reduction will obviously bring down the profit margin of all mills. It will be the endeavour of your management to make up this shortfall in profit by improving working efficiency. Until the formula was agreed, movement of cloth was nominal and, therefore, stocks at the end of the year were higher than had been expected.

"In our endeavour to earn foreign exchange both for the country's and your Company's benefit, we stepped up our exports from Rs. 22.37 lakhs last year to Rs. 34.97 lakhs. Even though we sell in the export markets at marginal profit levels, your management considers it beneficial to export with a view to earning machinery licences to modernise your mills and to obtain licences for the import of extra quantities of cotton. In the coming year, we hope to maintain and, if possible, to step up our export programme. This would, of course, depend upon market tendencies.

Yarn

"We had no problems in the marketing of sewing thread and its movement was well maintained through the year. We ventured into certain new and more paying counts of yarn, and a part of this benefit was felt during 1960. Our yarn exports for 1960 were Rs. 15.51 lakhs against Rs. 7.44 lakhs last year.

Sales and Stocks

"Our sales for both cloth and yarn continued smoothly. I have explained above the reason for an increase in stocks in December, but as the trade finally settled down in January 1961, stocks moved extremely well. I am glad to report that today our total stocks of finished products constitute only about three weeks' production. This is a very satisfactory position. It will be our endeavour to maintain low stocks and reduce them further, if possible. Our thanks are due to your selling agents who have done very well throughout this period.

Labour

"By the Central Wage Board Award 1959, the basic wages of textile workers were enhanced by an average of Rs. 8 per worker. This was the first step in a two-phased programme which was intended to give a total benefit of Rs. 10 per worker. The additional Rs. 2 will be levied in 1962. Whereas this was a benefit to the labour force in the textile industry, it was a tremendous drain on the profitability of mill units. This award, however, recognised rationalisation as a part of the total scheme. This, I feel, is a step in the right direction as the Indian textile industry can only become competitive in world markets by linking up the utilisation of rationalised labour with high production machines.

"Our relations with the *Rashtriya Mill Mazdoor Sangh*, which is the recognised labour union for our mill, were most cordial and with their help rationalisation and standardisation measures were introduced in various sectors. In all 785 posts were reduced and this without any deterioration in our labour relations. Out of this, retrenchment compensation and gratuity was paid to 547 persons and we took advantage of natural wastage to abolish the balance 238 posts. The *R.M.M.S.* gave us their full co-operation during this period and assured us of their complete assistance in future. In our No. 3 Mill, the four-looms-to-a-weaver system was introduced in half the weaving shed and to avoid unemployment and the payment of retrenchment compensation and gratuity, a second shift was started in the whole weaving shed in the middle of the year.

Machinery

"A comprehensive programme of maintenance and rehabilitation was carried out throughout the year. New machinery of the value of Rs. 37.68 lakhs was installed in your mill and we have further orders on hand for machinery worth Rs. 46 lakhs. New N.M.M. Ring Frames were received from the month of March onwards and these are being progressively erected to replace old ones. A new set of Whitin Combers was erected and are in production. The Company also installed the latest type of hot air stenter from Germany and automatic pirn winders from Holland. Most humidification systems were renovated and these have greatly improved working conditions. We have still to receive a number of modern machines which will improve the quality of your mill production. The 48 automatic looms, which we had been allotted some while ago, are now on order, but, unfortunately, no further allotments have been made. I trust, however, that, in due course, we will receive further licences to enable us to have a full shed of this machine. Your management is seeking all avenues to modernise in the best and quickest manner possible.

Scarcity of Raw Material

"For your No. 3 Mill, which is a silk and art silk unit, we have been facing the problem of non-availability of raw material. There is a great shortage of synthetic yarn in the country and sometimes very high premiums have to be paid for yarn vitally needed to keep the unit working. To solve this problem, your management has decided on a policy of export for earning licences for the direct import of the required yarn. This policy will certainly bear fruit and we hope the accounts of No. 3 Mill will show a marked improvement in 1961.

Profit and Loss Account

"From this you will notice that we have shown a gross profit of Rs. 32.18 lakhs after adding back to the net profit depreciation, taxation, Managing Agents' remuneration and development rebate totalling Rs. 24,41,572. This profit has been arrived at after payment of certain non-recurring charges which absorbed Rs. 15.91 lakhs. These constituted mainly of retrenchment compensation and gratuity paid (Rs. 6.49 lakhs and Rs. 4.50 lakhs respectively), and the payment of staggering compensation for the year 1952 amounting to Rs. 4.92 lakhs. Although these measures have reduced the profits in the year under review, there is no doubt that, in the years to come, these losses will be more than recouped and the Company will stand to benefit. You will appreciate that the actual working profit for this year was more than double that of the preceding one. This, I submit, is a reasonable achievement. I can only hope that this improvement will be maintained.

"There were a few other additional burdens the Company had to bear over and above last year. Like all other mills, we paid an additional average of Rs. 8 per worker which totalled Rs. 7 lakhs for the year. Dearness allowance was higher by Rs. 11.75 lakhs. The bonus for 1958 was also paid which amounted to Rs. 2.96 lakhs."

Note: *This does not purport to be a record of the proceedings of the annual general meeting which can be seen by any shareholder on request.*

THIRD FIVE-YEAR PLAN OF U.P.

BACKWARD AREAS NEED SPECIAL TREATMENT

By D.S. Kushwaha

ALLAHABAD UNIVERSITY

CENSUS estimates have upset many estimates of the Planning Commission. The Planners of U. P. State, however, have shown much greater accuracy in their estimates of population, for, according to the Chief Minister, there is hardly a difference of one per cent in the estimates of population put forward by the recent census and the estimate taken into account while formulating the Draft Plan of U. P. It means that the Draft Outline does not stand in need of significant changes in view of the population upsurge. One may, therefore, correctly try to see the past and future of the State in the Draft Outline of the State's Plan. It does not, however, rule out the change that may become necessary due to modifications at the Centre. It would, therefore, not be out of place to offer a few comments about it.

The Draft Outline makes candid confessions. The income of the State during the period 1950-51 to 1958-59 increased by 13.8 per cent, whereas the population in the same period rose by 13.4 per cent. The relative share of the State in the national income went down from 18.4 per cent in 1950-1951 to 15.9 per cent in 1958-59. The decline has been all round—in agriculture, industries, and enterprises, commerce and transport, and other services. With 1950-51 as the base year, the relative increase in the income of U.P. and India in various sectors shows the magnitude of decline in the year 1958-59. The relevant figures are:

	U.P.	*India*
Agriculture	115.0	128.6
Manufacturing and small enterprises	100.9	126.4
Commerce and transport	117.6	133.1
Other service	117.1	146.8

It is obvious that increase in income in the manufacturing sector and small enterprises has been the lowest. It is argued in the Draft Outline that planned investment in the Central and private projects is "based on economic calculations with a view to minimising cost. Costs are bound to be lower in areas where transport and communications are developed and power is available. Hence, other things being equal, location of both Central projects and private investments in a State is determined to a large extent by the investments made in social overheads. The logic of this process is that, as time passes, initial backwardness is perpetuated and intensified, because external economies in the case of developed States increase the gap between the comparative cost of a project in different States."

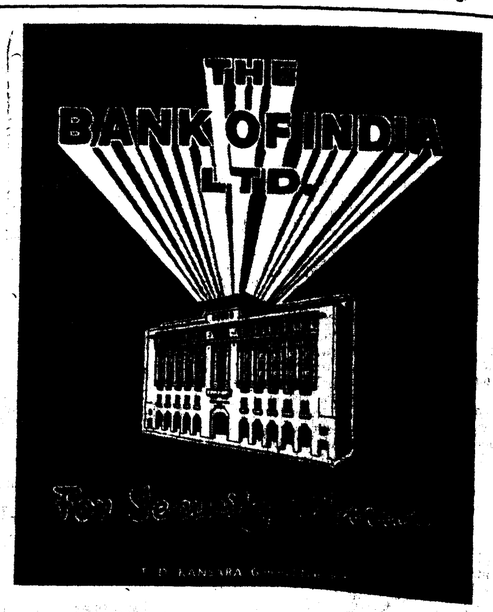
The logic of this process, in fact, is a sad commentary upon the framing and execution of Plans in the State rather than perpetuated backwardness. The above table indicates that this increase in income in transport and communication and social services has been of the order of 17.6 per cent and 17.1 per cent, respectively. This increase shows that investments in economic and social overheads have been made but have failed to reflect themselves in a corresponding increase in income from manufacturing and small enterprises. It may well be due to the fact that there could be little development in the sphere of manufacturing and small enterprises. Perhaps investments in the former, that is, social and economic overheads, though they raised the income in that sector, did not create conditions to attract the Central projects and private enterprises. Should one conclude, according to the logic of the Draft, that the improvement in income in transport and social services does not indicate a significant creation of economic and social overheads, in view of a negligible rise in the income of the productive investment sector, that is, manufacturing and small enterprises? Obviously, it does not indicate it, and it leads one to the conclusion that outlay in this sector (transport and commerce and social services) has not been properly spent or spent on ill-formulated plans, as it has failed to create such economic and social overheads as will attract necessary investment in the productive sector. It pains one to note, when one feels that the Government, as the Draft shows, knew that creation of economic and social overheads was an essential condition to develop the productive sector, that the Government failed to act in the interests of the State. It sets one athinking as to how plans are being executed and formulated. If the main fault lies in execution, the whole problem of organisation must be given proper emphasis for the third Plan.

The logic of the Draft Outline thus brings out clearly that backwardness is being perpetuated because investments in the productive sector have not been made by the Centre and private enterprise and that responsibility for the same rests on the State Government, since it failed to create such economic and social overheads as will attract necessary investment in the productive sector, that is, manufacturing and small enterprises. We understand that planning proceeds from below. The village plans constitute the district plans and the latter together constitute the Plan of the State. The State Plans submitted to the Centre are considered before drafting and finalising the all-India Plan. One wonders how the Centre has refused to take interest in making productive investments in this backward State and more so when it is wedded to a policy of regional planning. If it is the apathy and neglect of the Centre towards the State because it is backward, it defeats the purpose of economic planning in India. On the other hand, if the State Government failed to create the necessary conditions to attract the necessary investments to fight the backwardness, shall we not say that the State Government has perpetuated backwardness? Be that as it may, the State cannot escape its share of responsibility for perpetuated backwardness by advancing the clumsy argument given in the Draft. From 1950-51 to 1958-59, the people of the State have been undergoing sacrifices for planned development. When they find that the *per capita* income has remained more or less constant and planned development has resulted in perpetuated backwardness, their hopes will be shattered and conviction will grow that planning is futile.

The Draft Outline has listed 18 Central schemes for location in this State. It is heartening to note that a decision about the first in the list (an antibiotic factory) has been made. The said factory will be in the public sector and established by the Central Government at Rishikesh. Decision has also been taken about woollen industry and chipboard industry at Dehra Dun and calcium carbonate unit at Rishikesh. These will be in the private sector. A plan of industrial development of U.P. emphasises two things: (i) Available and existing raw materials must be used within the State; (ii) scientific research and exploration in the resource of the State must be carried out to make the development of new industries possible. One would like to be inquisitive whether the Government has been making adequate efforts in these directions. For example, the grass available in the Tarai area of Gonda district has been and is being used by a paper mill located outside the State. The Rihand Dam area with developed social and economic overheads offers a good site for locating a paper mill with the added advantage of nearness of raw material. A Heavy Industries Plan Committee drew up, with the assistance of subworking groups, a 15-year programme for the development of U.P. In the nucleus report on pulp and paper, there is a proposal for the establishment of a newsprint mill by the Thapars. This is good in itself. The State should seek the co-operation of such industrialists, as they will establish industries using raw materials and minerals available in the State. This is the need of the hour.

Another interesting aspect of the third Plan of U.P. is that it has marked out three areas with special problems. One special problem, broadly speaking, is of relatively greater underdevelopment. These areas are (i) Hill districts, (ii) Bundelkhand, and (iii) Eastern districts. It is a compliment to the State that its attention has at long last been drawn towards them. There are 15 districts in the Eastern Region, including Deoria, Basti, Gonda, Jaunpur, Azamgarh, Bahraich, Allahabad and Varanasi. One wonders at the logic which led to the inclusion of Allahabad and Varanasi in the Eastern districts, as there is hardly any similarity so far as underdevelopment is concerned between these two districts and the rest. They are similar to the remaining 13 districts in the same sense in which the rest of the districts of the State not included in the areas with special problems are similar. One feels all the more surprised when districts like Allahabad and Varanasi are included in areas with special problems and the most backward area of Chambal-Patti is excluded. If it was planning for areas with special problems, the area of Chambal-Patti should receive top priority for an appallingly low level of underdevelopment which coupled with the problem of law and order, has made it a depressed area in every sense of the word.

To conclude, one feels like complimenting the State Government for its boldness in confessing its shortfalls. The public is indignant, but perhaps satisfied, that for once what it felt has also been spoken and placed before it by the Government. The past is, however, past. The State of U.P. has now a new Ministry. Let us hope there will be no repetition of the past, the organisational efforts will improve, the State Government will plan for productive investment, create conditions, and strive to attract the Central and private enterprises to locate their projects in the State, underdeveloped area of Chambal-Patti will be included in areas with special problems' and the State will march forward to break the perpetuated backwardness and lift the people to higher and higher levels of living.



PRICE VARIATIONS IN RECENT YEARS

DISINFLATIONARY FISCAL POLICY MUST BE THE MAIN OBJECTIVE

By Dr. B. Natarajan

PRICE movements have important implications in a planned economy. For the realiation of the Plan objectives, it is imperative to ave a price policy where the alignment of rices secures the use of resources along the ines indicated by the given targets. Failure n this front will only result in a serious disrepancy between anticipation and actual reults. Besides, any programme of investment ust attempt to achieve a careful balance beween costs and returns. Instability of prices ould jeopardise such balancing and, in turn, ie entire Plan programme. It is in this ontext that price movements assume great gnificance.

The first Plan came into operation at a me when prices were already at a high level id the structural factors in the economy made particularly sensitive to inflationary stimuli. owever, by the time of the commencement of ie second Plan, prices had registered a consierable fall creating an optimistic mood in the arket. But the wide fluctuations in the gene-il price level since 1950-51 underlined the need r a positive price policy. Normally, the main ctors responsible for a persistent upward end in prices are a high level of public exenditure, activation of latent inflationary rces and failure of production to rise signi-antly.

Behaviour of Prices

When one analyses the behaviour of prices uring the last five years, the most striking fea-re appears to be the continuing trend of sing prices in almost all important categories ch as food articles, industrial raw materials, d manufactures. In fact, since the beginning the second Plan, wholesale prices have risen at least 25 per cent. The all-India working ss price index (1949=100) has also shot up by e same order. It is possible to gain a clear cture of the trends in the wholesale prices er the last five years from the following ble:

Index Numbers of Wholesale Prices

(1952-53=100)

	Average of weeks				
	1956	1957	1958	1959	1960
Food articles	99.0	106.8	113.0	118.2	120.3
(i) Foodgrains	89.7	98.5	102.7	103.5	102.9
Of which :					
(i) Rice	93.8	103.8	107.7	102.0	109.1
(ii) Wheat	85.7	90.3	96.8	103.4	91.2
(ii) Other food articles ..	107.1	114.1	120.1	131.0	135.5
Industrial raw materials ..	113.2	118.1	114.7	119.7	138.8
Of which :					
(i) Raw cotton	108.7	108.8	100.0	109.6	118.4
(ii) Raw jute	128.8	126.8	120.6	115.0	178.5
(iii) Oilseeds	114.9	133.4	133.6	130.9	144.9
Manufactures ..	104.9	108.0	108.2	109.7	120.8
Of which :					
(i) Cotton manufactures ..	118.8	116.2	113.0	113.5	127.5
(ii) Jute manufactures ..	94.9	97.7	97.7	97.2	115.2
All commodities	103.6	108.7	111.0	115.6	123.0

Source : *Economic Survey, 1960-61.*

It is not difficult to perceive at once that upto 1956, the general price trend was mainly governed by the upward trend in foodgrain prices which rose by 14.5 per cent since 1956. Compared to this, the rise in the case of industrial raw materials and manufactures, during the same period, was small. Further, taking a three-year period 1956 to 1959 into consideration, the conclusion which emerges is that the initial rise in prices was in the nature of a correction of the sharp decline which occurred prior to the second Plan. But a persistent upward trend in prices—marked by only occasional price falls in certain groups of commodities —which governed the market right through 1957, 1958 and 1959, suggested the operation of certain basic factors concerning supply and demand. Obviously, it was a problem of a large demand pressing against a somewhat shorter supply. The main factors which disturbed the stability of prices were the lower output of cereals in 1954-55, the rising export of industrial raw materials in 1956 and fear of lower output in the immediate future caused by drought or floods in parts of the country. Of course, there also must have been a lot of inventory build-up in view of the accelerated pace of industrial development. Rising incomes, which follow from heavy investment expenditure, stepped up consumption demand which in turn directly affected the demand and supply position.

During 1958-59, the main stimulus for price rise was provided by the steadily expanding development programme superimposed upon some decline in agricultural output. The volume of voluntary savings fell short of demand for capital, encouraging a dangerously growing reliance on deficit financing in the public sector and on bank credit in the private sector. Though it was softened to some extent by a substantial increase in imports, the pressure of demand was particularly high in the case of foodgrains and industrial raw materials which group recorded a substantial increase in prices. Since agricultural statistics are quite imperfect, it becomes difficult to account precisely for the variations in prices of particular, or groups of, commodities.

The Relieving Feature

However, by and large, it is possible to point out that in 1959 food articles other than foodgrains contributed to nearly two-thirds of the rise in wholesale prices. Also, industrial raw materials and manufactures indicated a rise accounting for nearly one-fourth of the increase in wholesale prices. During 1960, the principal feature in the price situation was the sharp rise in the prices of industrial raw materials—16 per cent—and manufactures—10 per cent. Decline in the production of raw cotton, raw jute and oilseeds in 1959-60 accounted largely for the upward trend in the prices of industrial raw materials. This, in turn, affected the price of edible oils and cotton and jute fibres. The only relieving feature was the small decline in the prices of foodgrains. The relative stability of cereal prices was the result of a fall in the average level of wheat prices by some 11 per cent.

Under such circumstances, the Government has realised the need for having a bold programme of price policy capable of striking at the roots of instability in the market. Since 1956, Government's price policy has been geared to arrest the rising trend in prices and restrain excess demand. The measures included a flexible operation of the export-import policy according to the exigencies of the situation, release of Government's stock of foodgrains for sale to the public through a network of fair price shops and resort to State trading in food grains. Thereafter, selective credit control changes in interest rates and variation in tax policy began to merit new significance.

Apart from this, the recent sharp rise in the two groups, viz., "Industrial raw materials" and "Manufactures" for the first time since 1950-51 indicates a definite need for a further reinforcement of the official policy to hold the price line through action on the monetary and non-monetary fronts.

Future Price Policy

The first objective of price policy for the next few years must obviously be to prevent or at least slow down the rise in general price level. Secondly, we must attempt to maintain parity between sectional prices such as those of foodgrains, raw materials and manufactures. This would provide the right incentives to producers in these respective lines of production.

The main operational forces in a programme of holding the general price line and reducing unwarranted rise in prices are: (*a*) a disinflationary fiscal policy; (*b*) a monetary policy which acts as a brake on speculative investments and encourages a larger flow of savings into the market, and (*c*) arranging for a further increase in output through greater technical efficiency.

No doubt, it will not be very easy to follow a strong disinflationary fiscal policy at a time when the country is embarking on a large-scale development programme. The heavy investment expenditure under various development programmes may not yield quick returns and, to that extent, the inflationary pressures in the economy will be accentuated. However, in the long run, a disinflationary fiscal policy must remain the main objective.

At the monetary level, essentially technical considerations should govern the use of monetary policy for control and reversal of inflationary trends. The objective should be to encourage savings on the one hand, and discourage socially undesirable and economically less urgent investment on the other. At present, there is still a dearth of working capital and tighter credit may have adverse repercussions on the legitimate needs of trade and industry. We have also to remember that the Indian money market has an unorganised segment not fully under the folds of Central control. An even wider problem is that of orienting credit policy to the requirements of the Plans. From all these points of view, effective control of the credit structure by the Reserve Bank assumes crucial importance.

Imports

It is, indeed, encouraging to note that the framers of the third Plan have taken cognisance of the importance of having a well-framed and well-defined price policy. Though maximum caution has been taken to consider the needs of essential consumption, in determining the investment pattern, nevertheless, imbalances between demand and supply may develop, resulting in unstable prices. This is particularly true of foodgrains prices which have repercussions on the entire price-and-cost structure. Until domestic production of foodgrains reaches the required level, imports will be a necessary adjunct in stabilising prices. Mention may be made here of the recent agreement to import 17 million tons of foodgrains under P.L.480. This will indeed act as a great stabiliser in the general price movement.

Another facet of the problem is the recent emergence of large regional disparities in prices. It calls for a positive programme of marketing and fair distribution through co-operatives. Moreover, maintenance of a reasonable parity between sectional prices is very necessary to secure a balanced price sheet. Success in this direction depends on a careful study and implementation in due course of a well-defined structure of regulatory devices which embraces such aspects as price control, zonal arrangements and fixation of maxima and minima.

The problem at present is not one of curtailing investment in order to effect a reduction in prices. What is required is a strong curb on excessive investment in speculative trade and definite measures to step up the volume of savings available for productive investment. After all, prices, incomes and costs are interrelated and they call for a skilful balancing of conflicting claims. Therefore, if the regulatory devices are to function effectively they should be manipulated in a co-ordinated manner.

TRADE NEEDS OF DEVELOPING COUNTRIES

W. EUROPE URGED TO LIBERALISE IMPORT RESTRICTIONS

A COGENT case for a thorough reorientation of the industrial policies of industrially advanced countries, commensurate with the trade needs of underdeveloped countries, has been put forward in the *Economic Survey of Europe* 1960, published by the Secretariat of the U.N. Economic Commission for Europe. In order to finance the growing needs of imports, particularly of capital goods, into the developing countries, and that too without creating chronic balance-of-payments difficulties, the developed countries are already providing some capital in the form of loans and grants to the former. The *Survey* candidly confesses, however, that the commercial policies of the developed countries have scarcely recognised the possibly more urgent need for aid to the underdeveloped countries in the form of expanding export markets for their products. The opportunity for advance planning of such aid is especially favourable in Western Europe now, when structural adjustment in the sphere of industries is already proceeding in these countries in preparation for the full-fledged Common Market and the European Free Trade Area (E.F.T.A.). This will call for more liberal commercial policies in developed countries designed to ensure freer access for exports of processed materials and manufactures from developing countries, and as a prerequisite of such liberalisation, planned adjustment in the domestic industrial structures of West European countries.

The *Survey* points out that the need for action on the part of developed countries is urgent for several reasons. First, freer access to European markets for processed materials and manufactures is necessary in the next few years for many developing countries, "not least for India, the largest and the poorest of them all." Second, no developing country will embark on building up export industries unless it feels reasonably sure that the necessary markets will not be closed to it when it has the goods to sell. Third, the developing countries will not, in fact, find it practicable to liberalise their commercial policies, unless they adjust their domestic industrial development to the prospect of an increasing exchange of their own products, mainly capital goods, for the manufacture chiefly of products of industries requiring relatively little capital or advanced technology

Import Requirements

A rough projection attempted in the *Survey* shows that the aggregate import requirements of developing countries (including all countries of Latin America, Africa and Asia, but excluding Japan, as also Mainland China, North Korea, North Viet Nam and Mangolia) will rise from about $20 billion now to perhaps $60 billion (at constant prices) by 1980. Even on the optimistic assumption that the developing countries will receive sufficient aid in the form of capital loans and grants to finance about $10 billion of these imports (in addition to the growing external debt service), this implies the necessity for the developing countries, says the *Survey*, for expanding their aggregate exports from $19 billion to about $50 billion, that is, more than two-and-a-half times in 20 years.

Demand prospects in the European and North American markets for the traditional export commodities of the great majority of developing countries, according to the *Survey*, do not promise an export expansion in any way approaching this magnitude. By 1980 these markets are unlikely to absorb more than about $20 billion worth of traditional commodity exports. Even if generous allowance is made for a vigorous development of intra-trade in these traditional commodities among the development countries, and for expanding markets in the countries of the eastern trading area, such exports are most unlikely to fill more than two-thirds of the export gap. The remaining third, that is, at least $15 billion by 1980, will have to take the form of manufactures, including the value added by processing of materials.

This should not be an impossible task, given enough determination in the developing countries and co-operation by those countries which are already industrialised. If the developing countries (in their intra-trade) and those of the eastern trading area jointly absorb one-third of these exports of manufactures, and the developed countries outside Europe (North America, Japan, Oceania) take another third, Western Europe will need to expand its imports of manufactures from the developing countries to $5 billion in 1980. If Western Europe achieves the targets of domestic economic growth to which it now looks forward, these $5 billion will represent only about 2 per cent of the increase in domestic Western European demand for manufactures that will occur in the next 20 years.

Some Suggestions

The *Survey* has suggested for consideration of the industrially advanced countries certain important measures for liberalisation of their commercial policies, "as a minimum token of spirit in which they would approach the problem and give some immediate practical help." The suggested measures are:

"(a) The inordinately high customs tariffs of some Western European countries on certain processed materials (such as cocoa powder, paste, etc.) and some finished manufactures (such as textiles and leather goods) should be reduced.

"(b) Every effort should be made to dispense as soon as possible with formal discriminatory import restrictions imposed on manufactures from Japan and Hong Kong. Although Japan is not an underdeveloped country, the treatment accorded to its exports by the developed countries is bound to be construed by the developing countries as evidence of the treatment their own exports can expect in future.

"(c) Similarly, informal restrictions on imports of 'cheap labour' manufactures maintained by some developed countries should be reviewed and determined efforts made, by domestic measures, to facilitate the movement of resources out of uncompetitive domestic industries, to hasten their removal.

(d) Closer attention should be paid to the trade needs of developing countries in the elaboration of the E.E.C. and E.F.T.A. integration schemes. In particular, preferential treatment to associated territories should be designed to benefit their long-run economic development and industrialisation, not merely their short-term export prospects for traditional commodities."

Limited Liberalisation

The advocacy of complete abolition of tariffs cannot naturally be expected to have a ready response from the industrialised countries. There is, however, much to be said in favour of the "limited and discriminating forms of liberalisation" suggested by the *Survey*. According to the proposed liberalisation, each of the industrialised countries in Western Europe might agree to abolish all tariffs and import restrictions on such exports of manufactures by individual underdeveloped countries, as do not, in any year, exceed a certain proportion, say 3 or 5 per cent, of its total imports in the previous year in that commodity. Once they exceeded the specific proportion, they would be subjected to whatever tariffs or other restrictions.

Since the limitation applies to only a small quantity (3 or 5 per cent), there is no room for any fear of unhealthy competition. At the same time, it would be precisely the kind of help that is needed to overcome the special "infant industry" disadvantages under which industrial export production in underdeveloped countries now labours. Once this special disadvantage is overcome, by export production reaching a significant scale, the special preferential treatment lapses automatically. These suggestions deserve the urgent consideration of the Western European and other highly industrialised countries, for benefits arising out of international specialisation and division of labour will be advantageous both to developing as well as developed countries.

The Japanese Cabinet has approved the outline of a programme to promote exports. The programme is designed to enable Japan to earn enough foreign exchange to pay for imports needed to implement the Government's ten-year plan to double national output. The main points are: (1) positive development of economic diplomacy with special emphasis on persuading 14 nations to withdraw their application of the G.A.T.T. "escape" clause; (2) expansion of the field to which export financing might be applied; (3) strengthening of measures to increase revenue from invisible trade; (4) efforts to expand overseas markets for Japanese goods and (5) establishment of a system for orderly export by the prevention of excessive competition and revision of the Export and Import Trading Law.

STATE ENTERPRISES IN BRITAIN

PRINCIPLES FOR PRICING LAID DOWN

THOSE who are aware of the inability of public enterprises, whether in Britain or elsewhere, to provide adequate returns on capital invested in them and to accumulate sufficient reserves for replacement and expansion of their fixed assets may well acclaim the new principles contained in the recent British White Paper on nationalised industries. It may be recalled in this connection that several authorities on British economic affairs had emphasised the point that the subsidised services and goods provided by the nationalised industries were one of the elements responsible for some distortions in the British economy. No less a person than Sir Oliver Franks, in his speech at the annual general meeting of the shareholders of Lloyds Bank had also highlighted the problem of low prices charged by the nationalised industries. He had averred that for encouraging greater savings out of the current national product, one of the chief remedies was to revise the price policy of public enterprises. Of course, there was also the opposite trend of thought as embodied in the report of the Select Committee on Nationalised Industries, which suggested that the "social service element in State industry should be clearly separated from the commercial element and subsidised directly by the Government."

In the code now announced by the British Government, the principal emphasis is placed on finding a reasonable balance between the commercial concept and the obligations of the nationalised industries towards the public. While admitting that a lower return on capital is traditional in nationalised industries owing to public pressure to keep their prices down even when costs and prices have been rising elsewhere, the White Paper nevertheless sounds the grave warning that it would be unwise to ignore the risks of damage that may be caused by such a policy to the nationalised industries themselves and to the economy generally. The White Paper maintains that if the profitability of capital development is assessed on different (and easier) financial criteria from those adopted in industry generally, there is a risk that too much of the nation's savings will be diverted into the nationalised industries. The uneconomically low level of prices of the goods and services provided by the nationalised industries may also have an undesirable effect on the demand for them, which may be artificially stimulated. Thus, the White Paper is of the clear view that the operation of nationalised industries with an unduly low rate of return on capital is sooner or later damaging to the whole economy. It must result either in higher taxation or greater borrowing by the Exchequer.

Reforming Present System

To reform the present system of pricing, the White Paper has drawn a number of clearcut principles for the guidance of future policy-making. First, the surpluses on revenue account should be at least sufficient to cover deficits on revenue account over a five-year period. In arriving at the surpluses and deficits for each year, the items normally chargeable against revenue (including interest and depreciation on the historic cost basis) should be charged. Secondly, a provision should be made from revenue to cover the excess of depreciation calculated on replacement cost basis over historic cost and allocations be made to general reserves which will be available for capital development. These provisions are also calculated to act as a safeguard against premature obsolescence and similar contingencies. The principle of making some provision from out of the revenue to cover the difference between replacement and historical cost is a salutary one, as it will secure sufficient funds for replacement. The main practical difficulty in this system of allocations would be to predict future movement of the prices of capital assets. Even so, a rough method of calculation might be helpful to the nationalised industries in reducing their dependence on the exchequer for funds required for replacement.

While following this code, the White Paper recognises, there cannot be any standard formula for all nationalised undertakings. It rightly declares that for some the objectives may be expressed in terms of progress towards an appropriate level of self-financing of their capital expenditure, concurrently with the provision of suitable contribution to reserves. For others, the objective may be in terms of a specified rate of return on capital employed. In regard to those undertakings which are expanding fast and which have relatively large capital needs, the White Paper feels that there are powerful grounds for reducing their dependence on the exchequer. In normal circumstances, the desirable level of reserves should be related to the amount of capital employed in the business. It is prudently suggested that the amount of non-commercial operations expected by the Government will be taken into account in fixing the targets of reserves and the rate of return on capital.

In the matter of fixing the prices of State undertakings, the innovation suggested in the White Paper is that the Board which has been persuaded by a Minister to modify its own proposals will have the power to obtain a written statement from the Minister of his reasons. This is calculated to enable the nationalised industries to operate on commercial lines.

What will be the effect of these proposals on the general economic situation? It is broadly felt that some price increases are implicit in these suggestions of the new code. For, if nationalised industries are to secure a higher rate of return on the capital employed by them or to plough back more funds for replacement and/or expansion, the prices of their products may have to be logically stepped up. While emphasising that reductions in costs should be the aim, the White Paper candidly admits that the industries must have the freedom to make upward adjustments especially where their prices are artificially low. As nationalised industries in Britain cover extensively the field of public utilities and key raw materials and services such as coal, electricity, gas, transport by rail and road, there may be some possibility of cost push inflation developing, as a result of the new code of financial discipline for the nationalised industries.

CENTRAL GOVERNMENT'S STORES PURCHASES

The Directorate General of Supplies and Disposals is the Central Purchase Organisation of the Government of India buying the larger requirements of all Ministries and Departments of the Central Government. Its services are also utilised often by the State Governments, River Valley Projects, Government undertakings and semi-public authorities. The D.G.S. & D. is thus not only the largest single buyer in the country but also one of the instruments for the implementation of the industrial policy of the Government with particular reference to encouraging indigenous manufacture by utilising, to the maximum possible extent, the production within the country and assisting the cottage and small-scale industries sector.

The following table will give a clear idea of the group-wise orders for stores which were placed by different Central Government departments during 1959-60:

(Value in crores of rupees)

	Indigenous	Imported	Total
Food materials	4.61	102.43	107.04
Tobacco	0.18	..	0.18
Textiles	15.88	..	15.88

CIBA RESEARCH CENTRE

At a recent Press conference, Dr. Albert Wettstein, Director of Research, CIBA Ltd., Basle (Switzerland), revealed that the Centre for Basic Research planned by CIBA of India Ltd. sometime ago had made good progress. This institute, we are told, will be devoted to genuinely basic research and not merely to development work. It is claimed to be the first of its kind to be established by private enterprise in the chemical industry. The Company has acquired 65 acres of land alongside the Western Express Highway at Goregaon in Greater Bombay, and construction of the Centre is now in full swing.

Initially, research will be conducted on dyestuffs and pharmaceuticals, including chemical and biological investigations of Indian medicinal plants and the elaboration of new synthetic medicines. Impressive buildings will be erected to accommodate, among others, departments concerned with organic chemistry, biochemistry, physical chemistry, pharmacology, bacteriology, and parasitology. The worldwide CIBA organisation has valuable achievements to its credit in these fields and the Indian Research Centre will work in close collaboration with other CIBA Research Institutes, particularly those in Switzerland and the U.S.A. It will draw on their experience and tradition of research organisation and will, thereby, be well placed to make significant contributions to India's scientific development. Outstanding Indian scientists, both in India and abroad, are being recruited to form a well-knit team. It is expected that research work will commence at Goregaon early in 1963.

RAMTIRTH (HINDI MONTHLY)

Editor: Yogiraj Shri Umeshchandraji

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

SHRI RAMTIRTH YOGASHRAM

Dadar, Central Railway, Bombay-14

Telephone: 62899

Excellent cutting performance

SAP HACKSAWS

HACKSAW BLADES

Manufactured from high quality steel. They can be used for cutting all types of steel, brass, copper, aluminium, plastics etc.

GUEST, KEEN'S SALES IMPROVE

HIGHER OPERATING COSTS REDUCE EARNINGS

THE financial results of Guest, Keen Williams Ltd. (Managing Director: Mr. H. M. L. Williams, Calcutta) for the 52 weeks ended 31st December 1960 show that although the sales proceeds have improved from Rs. 960.96 lakhs in 1959 to Rs. 966.63 lakhs in 1960, the gross profit has suffered a setback for the fourth year in succession. The actual profit was Rs. 133.16 lakhs, as against Rs. 147.16 lakhs for 1959, Rs. 155.46 lakhs for 1958 and Rs. 161.49 lakhs for 1957. In fact, the decline in profit would have been more marked but for the increase in other income from Rs. 12.75 lakhs in 1959 to Rs. 28.62 lakhs in 1960, as a result of the proposed dividend of Rs. 15.60 lakhs, subject to tax, from the Company's subsidiary, Sankey Electrical Stampings Ltd., for 1960. The setback to profit is due to the steep rise in operating costs from Rs. 806.28 lakhs to Rs. 839.92 lakhs. The profit margin (ratio of gross earnings to sales), as a consequence, has gone down from 15.3 per cent to 13.7 per cent.

Despite the downward trend in profit, the Directors have considered it prudent to make larger provision for depreciation, in view of the heavy capital expenditure for development projects, incurred during the year under review, the sum actually earmarked being Rs. 39.84 lakhs as against Rs. 27.06 lakhs for 1959. The tax liability, however, has been reduced from Rs. 35.60 lakhs to Rs. 18.40 lakhs. Even then the net profit is lower by Rs. 9.58 lakhs at Rs. 74.92 lakhs. But the amount available for distribution is higher at Rs. 85.82 lakhs, because of the amount of Rs. 4.87 lakhs being the excess provision written back from previous year and the sum of Rs. 6.03 lakhs transferred from general reserves. Out of this amount, the Directors have judiciously conserved as much as Rs. 37.82 lakhs by ploughing back to different reserves, the share of rebate reserve alone being Rs. 24.57 lakhs. The additional depreciation reserves and taxation equalisation reserve get Rs. 5.59 lakhs and Rs. 7.66 lakhs, respectively. The balance of Rs. 48 lakhs represents the distribution to shareholders in the form of dividends. The Directors had already declared, on 16th September 1960, an interim (taxable) dividend of 80 nP per share of Rs. 10 which absorbed Rs. 16 lakhs. This dividend was payable on the issued capital of Rs. 2 crores. The Directors have now recommended payment of a final dividend of 80 nP per share, subject to deduction of tax, on the increased capital of Rs. 4 crores, requiring a sum of Rs. 32 lakhs. Thus, the shareholders have received a gross dividend of 16 per cent or a net dividend of 11.2 per cent per annum, on the enhanced capital as against the taxable dividend of 24 per cent (16.8 per cent tax-free) on old capital for 1959 and the tax-free dividend of 20 per cent for 1958.

A birds-eye view of the progress of the Company can be had from the following comparative table:

(In lakhs of rupees)

	For the 52 weeks ended			
	31-12-60	2-1-60	3-1-59	28-12-57
Sale proceeds	9,66.63	9,60.96	10,34.81	9,07.06
Other income	28.62	12.76	13.17	11.58

,, development rebate reserve	24.57	33.01	8.62	..
Dividend	48.00 (16%)*†	48.00 (24%)†	40.00 (20%)	40.00 (20%)
Carry forward	Nil	Nil	Nil	Nil

* The interim dividend was on the capital of Rs. 2 crores, final dividend is on the increased capital of Rs. 4 crores.
† Subject to deduction of tax.

The results of the Company must be judged bearing in mind the fact that the installation of new rolling mills was completed only towards the end of 1960, but as the commissioning of the mills was only partly achieved, the investment has still not reached the revenue-earning stage. Considering that the Company is experiencing considerable difficulty in obtaining adequate supply of good quality steel billets, and is encountering increasing competition in traditional lines, it is gratifying that the production department has maintained the same level of output during 1960 as in the previous year.

The Company's financial position is quite sound. During the year under review, a right issue of 2,000,000 equity shares of Rs. 10 each at a premium of Rs. 18.50 per share was made on 12th November 1960, in the ratio of one new share for every one held. As the issue was fully subscribed, the share capital has doubled to Rs. 4 crores. In view of the premium of Rs. 18.50 per share, the reserves and surplus have been considerably strengthened; they now stand at Rs. 6.53 crores, as against Rs. 2.54 crores a year ago. Owing to the increased capital resources at the disposal of the Company, reliance on bank overdraft has decreased substantially from Rs. 2.44 crores in 1959 to just Rs. 31.70 lakhs in 1960. This, together with the 6½ per cent debenture stock 1966-71 of Rs. 1.50 crore secured by the first charge on Company's assets, brings the total secured loans to Rs. 1.82 crore, as compared with Rs. 3.94 crores a year ago. Besides, current liabilities and provisions amount to Rs. 2.81 crores. The total current liabilities thus come to Rs. 4.63 crores which are more than adequately covered by current assets (excluding investment of Rs. 1.78 crore) amounting to Rs. 7.11 crores. Of the investments of Rs. 1.78 crore, the ordinary shares of the Sankey Electrical Stamping Private Limited account for Rs. 1.72 crore, thanks to the transfer of Guest, Keen and Nettlefolds, holdings in the Sankey Limited to Guest, Keen and Williams Ltd. A sum of Rs. 5 lakhs is invested in the ordinary shares of Nettlefolds of India Private Ltd. The Company's gross block has been considerably increased by additions of Rs. 1.55 crore made during the year; it now stands at Rs. 8.26 crores. The depreciation provided so far amounts to Rs. 2.52 crores, bringing the net block account to Rs. 5.74 crores.

The Rs. 10 fully paid ordinary shares of the Company are quoted at Rs. 43 *cum-final-div.* On an *ex-div.* basis and taking the proposed rate of dividend, the yield on them works out to 2.6 per cent per annum, free of tax.

NEW COMPANIES REGISTERED IN 1960-61

A record number of 1,683 new companies, with a total authorised capital of Rs. 287 crores, was registered in India for the financial year 1960-61, according to latest information received by the Department of Company Law Administration from the Registrars of Companies in the various States. This is almost double the number of companies registered during the first year of the operation of the present Companies Act. The figures for 1959-60 and 1958-59 were 1,452 and 1,095, respectively. The new company registrations of 1960-61 are the highest on record after 1951-52, when the number was 1,866. The increase in the number of new company registrations from 848 in 1956-57 to 1,683 in 1960-61 is considered a remarkable development, for it signifies the resurgence and assertion of economic forces favourable to the growth of corporate enterprise in the country in recent years.

Out of the 1,683 new companies registered in 1960-61, 153 were public companies and 1,530 private companies. The corresponding figures of public and private companies for 1959-60 were 87 and 1,365, respectively, and for 1958-59, 58 and 1,037, respectively.

The total authorised capital of new public companies registered during the year was Rs. 157 crores and that of private companies Rs. 130 crores. The year was marked by a record number of big public companies whose 'issues' boomed on the stock exchanges of the country. Of the 153 new public companies, 98 were registered with an authorised capital of Rs. 50 lakhs and more each, as compared with 25 in 1959-60 and 16 in 1958-59. The number of big private companies registered was 44. As against these, 142 big public and private companies having an authorised capital of Rs. 50 lakhs and more each, 936 small public and private companies having a paid-up capital of less than Rs. 5 lakhs each were floated during the year. Thus, in number, the small companies predominated in the overall total of new company formations.

During the year under review, 17 Government companies were formed as against 23 in 1959-60 and 16 in 1958-59.

During the year, 477 companies were registered in the Eastern region, 491 in the Western region, 452 in the Southern region and 323 in the Northern region. A progressive increase has been noticed in the number of new company registrations in all the four regions during the last five years, but it has been more marked in the Southern region, where new registrations rose from 147 in 1956-57 to 152 in 1957-58, 206 in 1958-59, 433 in 1959-60 and 452 in 1960-61—a threefold increase. The Eastern region registered an increase of 40 per cent, the Western region 150 per cent and the Northern region 80 per cent.

COIMBATORE PIONEER'S SALES LOWER

SHAREHOLDERS GET LESS

A REDUCTION in the prices of yarn in accordance with the directive from the Indian Cotton Mills' Federation and the necessity to purchase foreign cotton required for spinning higher counts at a substantial premium have both been instrumental in scaling down the sales as well as the profits of the Coimbatore Pioneer Mills Ltd. (Managing Agents: Messrs. T. R. Narayanaswamy Nayadu and Co.) for the year ended 31st December 1960. The sales have declined from their all-time high of Rs. 136.24 lakhs in 1959 to Rs. 125.77 lakhs in 1960. As a result of lower sales, on the one side, and higher cost of raw materials and stores consumed and increase of Rs. 3.25 lakhs in the wage bill, on the other, the gross profit has gone down by Rs. 2.97 lakhs to Rs. 22.03 lakhs. Owing to the fall in gross profit, reduced provisions have been made for managing agents' commission (Rs. 1.69 lakh, as against Rs. 2.10 lakhs) and taxation (Rs. 7.50 lakhs, as against Rs. 8.45 lakhs). Despite such reduced provisions, the net profit has fallen by Rs. 1.60 lakh to Rs. 7.48 lakhs.

After setting aside Rs. 33,000 for statutory development rebate reserve and Rs. 1.00 lakh towards special donations, a sum of Rs. 7.43 lakhs was available for distribution, including Rs. 1.28 lakh brought forward from the previous accounting period. After transferring Rs. 4.00 lakhs to reserve and Rs. 8,000 as preferred dividends, ordinary dividends have been reduced to 16 per cent subject to deduction of tax, as compared with 25 per cent subject to deduction of tax distributed in the previous year.

The following table gives the salient features of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale of yarn and waste	1,25.77	1,36.24	1,15.33	1,14.95

Transfer from reserves	..	..	..	3.80
Development rebate reserve	0.88	2.58	1.43	1.38
Miscellaneous provisions	1.00	0.25	..	0.15
Transfer to reserves	4.00	..	..	1.00
Dividends—				
Preference	0.08	0.09	0.06	0.06
Ordinary	3.20	5.00	4.00	4.00
	(16%)*	(25%)*	(20%)	(20%)
Carry forward	0.14	1.28	0.06	0.01

* Subject to deduction of tax.

The Company's financial position as disclosed by the balance-sheet as at 31st December 1960 is sound. The share capital of Rs. 21.00 lakhs is supported by reserves amounting to Rs. 26.88 lakhs, thus giving an ordinary equity of Rs. 234.40 per share, as against the face value of Rs. 100. The current liabilities of Rs. 42.98 lakhs (including Rs. 19.45 lakhs as secured and unsecured loans) are balanced by current assets amounting to Rs. 44.69 lakhs, inclusive of investments and loans and advances. With the addition of Rs. 3.64 lakhs made during the year, the gross block is valued at Rs. 105.81 lakhs. After deducting Rs. 59.63 lakhs as accumulated depreciation, the net block works out to Rs. 46.17 lakhs or very nearly equal to the total capital funds invested in business.

Under the expansion scheme, against the licence for the installation of additional 10,000 spindles at the companies 'B' mills, eight frames of 440 spindles each were received at the close of the financial year 1960, and four more frames were in transit. The balance of ten frames will be available only after the close of the current year. Orders have been placed for the preparatory machines and the delivery of the same is likely to be made soon.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 350 *cum-div.* and give a net yield of 3.3 per cent per annum on an *ex-div.* basis.

The Directors of the Svadeshi Mills Company, Ltd., have decided to recommend the following dividends for the year ended 31st December 1960:

Ordinary shares—Rs. 17 per share, subject to deduction of tax at source (as against Rs. 14 for 1959).

Preference shares—6 per cent per annum free of income-tax (Rs. 6.50 per share gross or Rs. 4.55 net).

The annual general meeting of the Company will be held on [illegible] 1961.

PERFORMANCE OF AMBICA MILLS ENCOURAGING

FURTHER INCREASE IN DIVIDEND

THANKS to the favourable market trend for the textile industry, especially the higher prices prevailing, the upward trend in the profits of Shri Ambica Mills Ltd., Ahmedabad (Managing Agents: Messrs. Harivallabhdas Kalidas & Co., Ahmedabad), noted in the past three years persisted during 1960 also. The Company's profits have more than trebled in the last four to five years following the continuously rising sales. Consequently, the shareholders have benefited by way of enhanced dividends. The gross profit of Rs. 141.64 lakhs earned by the Company during 1960 represents a rise of Rs. 21 lakhs as compared with that for the previous year, and has gone up by 78 per cent since 1957. The level of profit might have been higher still but for the incidence of high costs and increase in wage bill as a result of the implementation of the Central Wage Board award. After providing Rs. 14.68 lakhs (Rs. 14.19 lakhs for 1959) for depreciation, Rs. 56 lakhs (Rs. 48.50 lakhs) for taxation and Rs. 10.85 lakhs (Rs. 10.70 lakhs) for Managing Agents' commission, the net profit for the year 1960 amounts to Rs. 60.11 lakhs, as against Rs. 47.51 lakhs, representing a rise of about 42 per cent over the earlier year. The reserves have been strengthened by Rs. 20 lakhs (the allocation in the previous year was Rs. 13.74 lakhs) and the development rebate takes Rs. 2.50 lakhs (Rs. 2.60 lakhs).

A bird's-eye view of the progress made by the Company in the past four years can be had from the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	5,40.22	5,25.75	4,78.21	4,07.64

* Dividends for 1959 and 1960 subject to taxation.

The larger earnings and more remunerative working of the Company have made it possible for the Directors to step up the dividends on ordinary shares to 50 per cent subject to deduction of tax as against 45 per cent distributed in 1959. The tax-free dividend works out to 35 per cent, which compares quite favourably with 25 per cent paid for the year 1957. The Company has, as in previous years, absorbed the tax liability in respect of preference shares, by grossing up the rates with a view to complying with the changes in the Finance Bill. A sum of Rs. 2.87 lakhs has been carried forward, as against only Rs. 60,000.

The financial position of the Company is quite satisfactory. The reserves and surplus at the end of 1960 aggregate well over Rs. 320 lakhs, as against the paid-up capital of Rs. 76.36 lakhs. The general reserves alone stand at Rs. 225 lakhs and a sum of Rs. 59.75 lakhs is at the credit of development and rehabilitation reserve. The capital of the Company at Rs. 76.36 lakhs is made up of Rs. 63.76 lakhs by way of ordinary shares and Rs. 12.60 lakhs in preference shares. Of this again the entire preference capital and over 92 per cent of equity capital consists of 'bonus' capital.

The current liabilities of the Company at about Rs. 125 lakhs are covered fourfold by current assets exceeding Rs. 495 lakhs, including investments aggregating over Rs. 59 lakhs. The gross block at the end of the year amounted to about Rs. 265 lakhs and has been adequately written down to Rs. 104 lakhs in the books. On top of assets amounting to Rs. 51 lakhs added in the previous three years, the net additions during the year under review exceeded Rs. 21 lakhs.

A new company under the name of Bombay Steel Tubes Ltd. has been formed for the manufacture of steel pipes and tubes and sponsored by the mill company with an authorised capital of Rs. 1 crore. Of the subscribed capital of this Company (Rs. 10 lakhs), the mill company holds at present shares of Rs. 1 lakh. A fresh capital issue is now proposed to be made by the Bombay Steel Tubes Ltd., amounting to Rs. 70 lakhs, which the mill company would be subscribing in full, with a view to making the latter a subsidiary company.

It is gratifying that the working results of the Company's subsidiary, Shri Arbuda Mills Ltd., Ahmedabad (formerly Lalbhai Tricumlal Mills Ltd.), for the year under review are very satisfactory. This Company has at last turned the corner after many years and reported a net profit of Rs. 18.94 lakhs for the year under review, as against a loss of Rs. 12.14 lakhs in 1959. This profit has helped to reduce the past losses of about Rs. 79.95 lakhs to Rs. 63.74 lakhs. The Company (Shri Ambica Mills) holds over 70 per cent of the capital of the Arbuda Mills Ltd. and its entire debenture loan of Rs. 25 lakhs. In addition, a sum of Rs. 40 lakhs has been advanced as loan on the second mortgage of the assets of the Company. The stake of the Ambica Mills in the working and prospects of this subsidiary need not be exaggerated inasmuch as half the total investments of the Company is in the subsidiary.

Following a steep rise in the security prices, the Rs. 100 fully paid up ordinary shares of the Company are currently quoted at Rs. 1,327, marking a rise of over Rs. 200 in the last two months alone. The net tax-free yield on the basis of the current quotation proximates about 2.7 per cent.

BENGAL JUTE EARNS MORE

The gross profit of the Bengal Jute Mill Company Limited (Managing Agents: Soorajmull Nagarmull) for the year ended 30th June 1960 is higher at Rs. 9.14 lakhs, as against Rs. 6.57 lakhs in the previous year. The rise has occurred, despite the fact that the total sales have remained almost unchanged at Rs. 258.44 lakhs, as against Rs. 258.57 lakhs. There has been a rise of Rs. 7.47 lakhs to Rs. 144.06 lakhs in receipts from sales of jute products and of Rs. 7.41 lakhs to Rs. 1.6 lakhs in those from soap. But these increases were offset by a drop of Rs. 15.03 lakhs to Rs. 71.21 lakhs in receipts from cast iron products and of Rs. 1.47 lakh to Rs. 9.00 lakhs in other income. The net profit after providing for depreciation and development rebate (Rs. 2.66 lakhs, as against Rs. 3.04 lakhs in 1958-59), taxation (Rs. 2.75 lakhs, as against Rs. 3.04 lakhs in 1958-59), and Managing Agent's commission (Rs. 62,170 as against Rs. 48,519) has increased from Rs. 1.16 lakh to Rs. 3.11 lakhs. The dividend on ordinary shares has been maintained at the previous year's level of 5 per cent subject to tax, or a net dividend of 35 nP per share.

The working of the Company which produces fashionable jute carpets in various shades and designs was affected in the latter half of the year under review on account of rise in raw jute prices which far exceeded the increase in the prices of finished goods, thanks to the setback suffered by the crop, the participation of Russia and China in the finished goods market and the steady offtake of hessian by the U.S. raised gunny prices throughout the year.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked with large percentages of the looms sealed. The percentage of looms sealed was: 14 upto 21-6-1959, 12½ from 22-6-1959 to 23-8-1959, 10 from 24-8-1959 to 1-5-1960, 9 from 2-5-1960 to 5-6-1960, 9 from 6-6-1960 to 4-12-1960 (over and above voluntary sealing of 100 looms), 17 from 5-12-1960 to 25-12-1960, the working hours per week in all these periods being 48, and 12 from 26-12-1960 to 29-1-1961 (45 hours per week) and 12 since 30-1-1961 (42½ hours per week). In view of compulsory sealing of looms and reduced working hours thus, the production was lower.

As against the paid-up capital of Rs. 55 lakhs consisting of Rs. 10 lakhs in preference shares of Rs. 100 each and Rs. 45 lakhs in ordinary shares of Rs. 10 each, reserves and surplus aggregate Rs. 24.25 lakhs, inclusive of Rs. 11.45 lakhs representing premium on shares account. The net block stands at Rs. 39.62 lakhs, after providing Rs. 46.38 lakhs for depreciation. The current assets amount to Rs. 219.89 lakhs, as against Rs. 222.39 lakhs in the previous year. The large cash and bank balances of Rs. 104.23 lakhs stand lower at Rs. 8.58 lakhs, due to substantial increase in loans and advances from Rs. 32.69 lakhs to Rs. 139.73 lakhs. This change has probably been made as a result of lower rate of interest on call deposits. It would, however, have been appreciated if, instead, all the secured loans had been wiped off. It seems that the Company is carrying huge liquid cash assets, though no considerable increase has been noticed in the block account or sales. This explains why the quotation for Rs. 10 paid-up ordinary shares of the Company is as low as Rs. 9.75, which gives a net yield of only 3.6 per cent on a net dividend of 35 nP per share.

In its announcement of the public issue, which appeared in *Commerce* dated 14th January 1961 (vide page 88), the Thakur Paper Mills Ltd. had mentioned by oversight the name of the broker Messrs. Amratlal Dalsukhbhai Haji, Ahmedabad.

PROFIT OF ELPHINSTONE SPINNING HIGHER

DIVIDEND RAISED AGAIN

THE sale proceeds of the Elphinstone Spinning and Weaving Mills Company Ltd. (Chairman: Mr. B. L. Jalan) for the year ended 31st December 1960 showed a drop of Rs. 13.69 lakhs. The value of cloth, yarn, leather cloth and waste actually sold amounted to Rs. 226.71 lakhs, as against Rs. 240.40 lakhs in the previous year. Notwithstanding the decline, it is heartening to note that the gross profit of the Company has registered a distinct improvement from Rs. 18.54 lakhs for 1959 to Rs. 35.83 lakhs for 1960. In 1958, it will be recalled, the Company had incurred a loss of Rs. 4.53 lakhs. As a result of the handsome rise in profit, the profitability to sales has gone up from 7.7 to 15.8 per cent. The closing stocks show an increase from Rs. 36.90 lakhs to Rs. 68.24 lakhs. In view of higher profits, the Directors have stepped up the dividend once again from 14 per cent taxable to 18 per cent taxable or a net dividend of Rs. 6.30 per share, as against Rs. 4.90 per share in the previous year.

The satisfactory results for the year under review have been achieved in face of certain adverse circumstances. These, according to the Directors' report are:

"Persistent failure of the Indian cotton crop during the last season caused a serious crisis in the supply position and indigenous cotton had, therefore, to be purchased at abnormally high prices. Prices of foreign cotton also rose during the season.

"The cost of stores and chemicals too went up.

"Heavier wage bill had to be borne on account of an increase in the basic wage of the operatives by Rs. 8 per operative effected from the beginning of the year of account, consequent on the implementation of the recommendations of the Central Wage Board. Besides, scales of pay of clerical staff had been revised upward in accordance with the recommendations of the Wage Board.

"The average rate of dearness allowance paid during the year touched a new high, breaking all the earlier records.

"A general reduction in the prices of cloth and yarn had been effected in the month of September and a further reduction in all varieties was announced in the month of December."

The Finance Bill 1961 has heaped fresh imposts on the industry by increasing excise duty on higher medium varieties of cloth by 25 per cent, levying an excise surcharge of 66⅔ per cent on the processing of all varieties and imposition of an excise of 25 per cent on 30 per cent of cloth produced on automatic looms for local markets, in addition to the excise duty on yarn. All these, it is feared, will raise the prices of textiles and partly inflate the cost of production.

The following comparative table reveals the progress of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

‡ Dividend for three years.

The total paid-up capital of the Company is Rs. 55 lakhs, consisting of Rs. 25 lakhs in 7 per cent preference shares of Rs. 100 each and Rs. 30 lakhs in ordinary shares of Rs. 50 each. The total reserves have increased during the year from Rs. 27.42 lakhs to Rs. 41.96 lakhs. The secured loans drawn from the banks as well as the National Industrial Development Corporation amount to Rs. 51.42 lakhs as against the arrangement for Rs. 109.38 lakhs. The gross block of Rs. 164.81 lakhs stands depreciated to Rs. 77.66 lakhs after providing Rs. 87.15 lakhs for depreciation. The current assets aggregate Rs. 116.93 lakhs (exclusive of investments) which are well above the current liabilities of Rs. 45.01 lakhs.

The export performance of the Company is considered very satisfactory especially in the context of the difficulty in securing supplies of suitable varieties of cotton used in the manufacture of exportable products. The exports

(*Continued on page 960*)

AZAM JAHI'S PROFIT BETTER

ARREARS OF DEPRECIATION RISE

REFLECTING a slight improvement in its working, the earnings of the Azam Jahi Mills Ltd., Warrangal (Secretaries and Treasurers: Industries (I.F.) Department, Government of Andhra Pradesh) for the year ended 30th September 1960 have registered a notable improvement as compared with the previous year, although the Company has still not got over the difficulties and setback witnessed in recent years. The gross profit for the year under review has increased four-fold, being Rs. 6.60 lakhs, as against Rs. 1.53 lakh in the previous year and only Rs. 56,000 in 1957-58. For the third year in succession, the Company has failed to make any provision for depreciation, in view of the inadequacy of profits. In addition, there are large arrears of depreciation exceeding Rs. 72 lakhs (Rs. 66 lakhs). Considering depreciation of Rs. 5.86 lakhs for the year estimated by the Company, the results for the year would actually show a meagre profit of Rs. 47,000. The net profit reported by the Company without any provision for depreciation or taxation amounts to Rs. 6.33 lakhs, as against Rs. 1.53 lakh in 1958-59.

Out of the net profit, a sum of Rs. 2.90 lakhs has been allocated to reserves as against *nil* in the previous year, and Rs. 55,000 to development rebate reserves. The dividend on ordinary shares has been maintained for the second time at the taxable rate of 4 per cent which on tax-free basis comes to 2.8 per cent. The tax-free dividend is lower than 5 per cent distributed for 1955-56 and 3½ per cent for 1956-57. A sum of Rs. 3,000 has been carried forward, same as in the previous year.

The salient features of the working results of the Company for the last four years are given below:

(In lakhs of rupees)

	For the year ending 30th September			
	1960	1959	1958	1957
Sale proceeds (gross)	2,23.04	1,70.76	1,92.02	1,66.98
Closing stock	49.09	48.95	51.24	67.27

Reserves	2.90	—1.62	..	0.15
Dividends	2.88	2.88	..	2.52
	(4%)*	(4%)*	..	(3½%)
Carry forward	0.03	0.03	0.06	0.07

* Dividends for 1959 and 1960 subject to tax deduction, 1957 tax-free.

The all-time record sales of the Company's products amounting to Rs. 223.04 lakhs mark a reversal of the depressed and downward trend witnessed in the previous year, when the gross sales dropped by over Rs. 20 lakhs last year. The larger earnings reflect the generally favourable market trend and higher prices realised on the sales of the mill's products. The steep rise in production costs and the additional burden of the Central Wage Award recommendations would appear to have cut into the profits to some extent. Raw material consumption rose by Rs. 30 lakhs and wage bill by 40 per cent during the year under review.

The liabilities of the Company have increased in the course of the last few years. The secured loans alone have gone up from Rs. 107 lakhs in 1957-58 to Rs. 128 lakhs in 1959-60, as a result of increased financial requirements of the Company due to the setback suffered in previous years as well as the need to meet its developing activities. The current liabilities at the end of September 1960 amounted to Rs. 187.02 lakhs (Rs. 171.05 lakhs in 1958-59). The arrears of depreciation, as already stated, are huge, amounting to Rs. 71.76 lakhs. These liabilities are not adequately covered by current assets which amount to only Rs. 143.75 lakhs, including investments of Rs. 22.33 lakhs. It may be mentioned that the market value of the 'quoted' securities held by the Company at Rs. 5.90 lakhs is estimated at only Rs. 1.74 lakhs.

The gross block as at 30th September 1960 amount to Rs. 204.54 lakhs, including the additions of about Rs. 11.98 lakhs during the year. The depreciation provided on these assets is only to the extent of about Rs. 68.19 lakhs. The written down value of assets as on 30th September 1960 amount to Rs. 136.34 lakhs. The management has lately embarked upon a modernisation programme for the mill which is under way. The commitment on this account exceeds Rs. 10 lakhs towards machinery on order and Rs. 1.7 lakh for capital buildings.

The paid-up (equity) capital of the Company at Rs. 72 lakhs consists of bonus issues to the extent of Rs. 54 lakhs. Against this, the reserves and surplus aggregate only Rs. 20.58 lakhs. The general reserves amount to Rs. 14.54 lakhs.

In compliance with the provisions of the Companies Act 1956, the Government of Andhra Pradesh has relinquished its position as the Secretaries and Treasurers of the Company with effect from 15th August 1960. Since then, the Company has been managed by a Board of Directors. The State Government has, however, continued its co-obligancy and the guarantee given to the bankers towards the loan to the mill Company.

The Rs. 100 fully paid-up equity shares of the Company are currently quoted at Rs. 77. The net tax-free yield on the basis of the dividend declared works out to 3.6 per cent.

KIRLAMPUDI SUGAR TURNS CORNER

Despite a fall of about 28 per cent in the sales of sugar and molasses, the gross profit of the Kirlampudi Sugar Mills Ltd. (Managing Agents: Messrs. Kubera Sugar Managers Ltd., Pithapuram, East Godavari Dt.) for the year ended 30th June 1960 shows a handsome rise of Rs. 3.99 lakhs to Rs. 11.88 lakhs, as compared with the previous year. The rise in profit has been due chiefly to increased production, as is evident from higher consumption of cane (118,160 bags valued at Rs. 59.16 lakhs, as against 108,110 bags valued at Rs. 49.39 lakhs) and substantially large closing stocks of sugar and molasses worth Rs. 52.30 lakhs, as against Rs. 35.35 lakhs at the close of the previous year. After providing Rs. 82,000 as managing agents' commission and Rs. 4.13 lakhs for depreciation, the net profit has gone up by Rs. 3.74 lakhs to Rs. 6.93 lakhs. Since the profit for the year stands adjustable against the losses of previous years, no provision for taxation has been found necessary. A sum of Rs. 4.76 lakhs has been transferred from the debenture sinking fund consequent on the redemption of the 1947-60 series outstanding debentures. A sum of Rs. 37,000 is transferred to development rebate reserve. There is left a balance of Rs. 11.32 lakhs. A large part of this balance has been utilised to cover previous losses amounting to Rs. 10.91 lakhs, and the remaining Rs. 41,000 have been carried forward. For the twelfth year in succession, the shareholders of the Company have not received any dividend. As can be seen from the following comparative table, the profit and loss appropriation account of the Company shows a credit balance for the first time in the past four years:

(Value in lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sales	1,03.87	1,44.80	1,29.87	97.23
Other receipts	0.41	0.89	0.15	0.11
Closing stocks of sugar and molasses	52.30	35.35	62.42	62.54

Carry forward	0.41	—10.91	—19.96	—19.96

The financial position of the Company has improved. The share capital is Rs. 22.96 lakhs comprising 6,000 preference shares of Rs. 100 each and 17,000 ordinary shares of Rs. 100 each, both fully called up, and reserves aggregate Rs. 6.66 lakhs. Out of the debentures worth Rs. 12 lakhs outstanding, the Company itself holds debentures worth Rs. 9.50 lakhs, leaving a balance of Rs. 2.50 lakhs in the hands of outsiders. Since the floating of debentures, the Company has followed a wise and farsighted policy of contributing regularly from current profits to a sinking fund which is eventually to be utilised to redeem outstanding debentures. Currently the sinking fund stands credited with an amount of Rs. 5.59 lakhs which is more than twice that required to redeem the debentures held by outsiders. Current assets, including loans and advances, and investments other than in the Company's own debentures, aggregate Rs. 66.03 lakhs, against which current liabilities and bank loans together amount to Rs. 75.33 lakhs. The gross block is valued at Rs. 76.33 lakhs, including Rs. 2.22 lakhs expended towards additions during the year. After deducting Rs. 34.96 lakhs as depreciation covered to-date, the net block works out to Rs. 41.37 lakhs.

The Directors of the Company consider it desirable to increase the authorised capital from Rs. 25 lakhs to Rs. 60 lakhs with a view to meeting the financial needs as and when they arise.

The Rs. 100 fully paid-up ordinary share of the Company are currently quoted at Rs. 78.50 or at a discount of Rs. 21.50 per share.

At a meeting of the Board of Directors of Philips India Limited held at Calcutta on the 10th inst., it was decided to recommend a dividend of 12 per cent, subject to tax, for the year ended 31st December 1960. The annual general meeting of the Company will be held on 26th June next.

COMPANY MEETINGS AND DIVIDENDS

GOKAK MILLS LTD. Annual General Meeting, Bombay, 22nd May 1961. Dividend: Rs. 14.00 per share, subject to deduction of tax, payable on and after 23rd May 1961. Transfer books were closed from 10th to 22nd April 1961, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Annual General Meeting, Calcutta, 24th May 1961. Dividend: Rs. 3.00 per share, subject to deduction of tax. Transfer books remain closed from 9th to 24th May 1961, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Annual General Meeting, Bombay, 25th May 1961. Dividend: Rs. 8.00 per share subject to deduction of tax, payable on and after 9th June 1961. Transfer books remain closed from 2nd to 25th May 1961, both days inclusive.

SAVAMALAI ESTATES LTD. Taxable dividend of 14 per cent or Re. 0.28 per share, for the year ended 30th November 1960. Transfer books will remain closed from 22nd to 29th May 1961, both days inclusive.

CALEDONIAN JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 25th May 1961. Dividend: Rs. 12.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 11th to 25th May 1961, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 27th May 1961. Dividend: Re. 1.40 per share, subject to deduction of tax. Transfer books remain closed from 15th to 27th May 1961, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 29th May 1961. Dividend: 18 per cent or Re. 1.80 per share, subject to deduction of tax, payable on and after 31st May 1961. Transfer books remain closed from 15th to 30th May 1961, both days inclusive.

SOUTH KARANPURA COAL CO., LTD. Annual General Meeting, Calcutta, 29th May 1961. Dividend: 2½ per cent or Re. 0.25 per share, subject to deduction of tax, payable on or after 14th June 1961. Transfer books remain closed from 15th to 29th May 1961, both days inclusive.

DELTA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 29th May 1961. Dividend: Rs. 7.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 15th to 29th May 1961, both days inclusive.

KIRLAMPUDI SUGAR MILLS LTD. Annual General Meeting, Pithapuram (East Godavari District), 29th May 1961. Dividend: *Nil*. Transfer books will remain closed from 26th May to 19th June 1961, both days inclusive.

ELPHINSTONE SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 31st May 1961. Dividend: Rs. 9.00 per ordinary share, subject to deduction of tax, payable on or after 21st June 1961. Transfer books remain closed from 15th to 31st May 1961, both days inclusive.

TROPICAL PLANTATIONS LTD. Annual General Meeting, Kottayam, Kerala State, 1st June 1961. Dividend: 8 per cent or Rs. 2.00 per share, subject to deduction of tax, payable on 29th June 1961. Transfer books will remain closed from 26th May to 1st June 1961, both days inclusive.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Annual General Meeting, Calcutta, 2nd June 1961. Dividend: 45 per cent or Rs. 4.50 per share, subject to deduction of tax. Transfer books will remain closed from 22nd May to 2nd June 1961, both days inclusive.

ASPINWALL AND CO. (TRAVANCORE) LTD. Annual General Meeting, Alleppey, Kerala State, 5th June 1961. Dividend: 4 per cent or Re. 0.40 per share, subject to deduction of tax, payable on or after 12th June 1961. Transfer books remain closed from 30th May to 6th June 1961, both days inclusive.

STANDARD COAL CO., LTD. Annual General Meeting, Calcutta, 5th June 1961. Dividend: Re. 1.50 per share, subject to deduction of tax, payable on or after 19th June 1961. Transfer books will remain closed from 25th May to 5th June 1961, both days inclusive.

COIMBATORE PIONEER MILLS LTD. Annual General Meeting, Peelamedu, Coimbatore-4, 5th June 1961. Dividend: 16 per cent or Rs. 16.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 22nd May to 5th June 1961, both days inclusive.

STANDARD MOTOR PRODUCTS OF INDIA LTD. Annual General Meeting, Madras, 5th June 1961. Dividend: 9 per cent or Re. 0.90 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 22nd May to 5th June 1961, both days inclusive.

GUEST, KEEN, WILLIAMS, LTD. Annual General Meeting, Calcutta, 6th June 1961. Dividend: Re. 0.80 per share (final dividend) on the increased capital, subject to deduction of taxation. Transfer books will remain closed from 23rd May to 6th June 1961, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Alleppey, Kerala State, 6th June 1961. Dividend: 22½ per cent or Rs. 2.25 per ordinary share (includes interim dividend of 7½ per cent or Re. 0.75 per share), subject to deduction of tax, payable on or after 20th June 1961. Transfer books will remain closed from 25th May to 9th June 1961, both days inclusive.

JENSON AND NICHOLSON (INDIA) LTD. Annual General Meeting, Calcutta, 7th June 1961. Transfer books will remain closed from 1st to 7th June 1961, both days inclusive.

KAMARHATTY CO., LTD. Annual General Meeting, Calcutta, 7th June 1961. Dividend: Rs. 5.00 per share, on 'A' and 'B' ordinary shares, subject to deduction of tax. Transfer books will remain closed from 24th May to 7th June 1961, both days inclusive.

TRAVANCORE OCALE GLASS MANUFACTURING CO., LTD. Annual General Meeting, Alwaye, Kerala State, 9th June 1961. Dividend: 6 per cent or Re. 0.60 per share, subject to deduction of tax, payable on and after 11th July 1961. Transfer books will remain closed from 29th May to 9th June 1961, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Raja Bahadur Motilal Poona Mills Ltd.

(*Managing Agents*: Mukundlal Bansilal and Sons, Bombay.)

Annual General Meeting—29th June. Dividend (final) is payable on or after 2nd July.

Working Results:

	(7%)	..
Carry forward	1	1

N.B.—Adjustments include the balance brought forward from the previous year and refund of income-tax and wealth-tax if any.

Extracts from the Directors' report: The directors are of the opinion that the results of the working are satisfactory. Large scale modernisation and renovation programme was undertaken during the last few years along with rationalisation of workload and its benefits are now being reflected in the earning of this Company.

The Mills are now fully equipped to cater to the growing demand for better quality fabrics. Further, a cloth singeing machine and one benninger mercerising range complete with caustic lye cooling and recovery plants have been recently installed. Permission for 96 automatic looms has been received.

Moreover, in order to diversify the activities of the Company, a new Engineering Division is established to manufacture drafting machines, jigs, tools, fixtures and special machines for which a licence is received from the Government of India. These engineering articles have a ready market and are in great demand. This unit has recently started production. An industrial licence to establish a paper manufacturing industry in Maharashtra State has been received from the Government of India to manufacture 3,000 tons of writing and printing paper per year. This project is seriously engaging the attention of the directors.

Since the closing of the year under report upto the date of this report one more building in the Mill has been built at an approximate cost of Rs. 2½ lakhs and machinery worth Rs. 1½ lakhs approximately has arrived. There are 26,180 spindles and 550 looms in the Company's mills.

Accounts in brief as at 31st December 1960 are as under:—

To interim dividend (taxable)	4,00	..
	(10%)	..
Carry forward	4	(—) 3,48

N.B.—Adjustments include the balance brought forward from the previous year.

* Loss after providing for depreciation.

† After deducting the loss brought forward.

Extracts from the Directors' report: After setting off the previous year's loss of Rs. 3,47,543 there remains a balance of Rs. 4,04,142. Out of this the directors at their meeting held on 30th July 1960 declared an interim dividend of Re. 1 per share subject to deduction of tax which absorbed Rs. 4,00,000 thus leaving a balance of Rs. 4,142 to be carried forward. Under the circumstances the interim dividend be treated as final. No provision for taxation has been made as the Company is not liable to pay any tax on account of the benefit of development rebate. The improvement during the year in working results resulted mainly from the increased production, less rejection and a consequent reduction in costs.

Due to Railways' booking restrictions on the outward movement, there has been accumulation of finished stocks most of which are against orders. Efforts are being made to obtain special allotment of wagons.

Finance: 4,00,000 equity shares of Rs. 10 each of the value of Rs. 40 lakhs were offered at par to the existing holders of equity shares whose names appear in the register of members on 22nd October 1960 in the ratio of 1 : 1. This fresh issue of Rs. 40 lakhs was fully subscribed, and the subscribed and paid-up capital of the Company as on date of this report is Rs. 80 lakhs.

Production Operations: Production improved during the year as it would be evident from the following statistics:

	1959 (In tons)	1960 (In tons)
Spun iron pipes	5,030 (9 months' production)	13,755
Grinding media	2,319	3,642
Alloy steel castings	538	815

There has been a marked improvement in the working of Spun Iron Pipe Plant. Moreover, as a result of experience gained by Mr. G. Kejriwal (Managing Director) in October 1960, during his visit to the leading Spun Iron Pipe Plants in the United States of America, West Germany, France etc., the working has further improved.

The production in the Spun Iron Pipe Plant has been suspended since 1st April 1961 due to shortage of low manganese, high silicon, pig iron, coke, and also due to booking restrictions. Since recently due to breakdown in the power house of the Calcutta Electric Supply Corporation, there has been restriction in power supply as well. With the availability of the raw materials and resumption of power supply to normal, the directors expect to resume production shortly.

The production in the Grinding Media Plant exceeded the installed capacity during the period under review. The Steel Casting Plant could not achieve the installed capacity of 125 tons due to delay in receiving the import licence for two Automatic Moulding Machines which are expected to be installed very shortly.

The construction of private Railway Siding was completed in March 1961 and it is expected to result in considerable saving to the Company.

Expansion Programme: Demand for company's products during the year continued to be in excess of production.

Grinding Media: The Company has been granted an industrial licence to expand the present capacity of cast steel grinding media from 3,000 tons to 6,000 tons per annum. Order for Arc Furnace of a value of about rupees five lakhs has already been placed and rupees one lakh has also been deposited with The Calcutta Electric Supply Corporation to avail supply of necessary power. These commitments have been made after the closing of the accounts of the year under review. The new capacity is expected to be achieved by the middle of 1962.

Steel Castings: The Company has specialised in manufacturing Special Alloy and Heat Resisting Steel Castings to cater the needs of cement refractory, sugar and other heavy industries. Due to import restrictions this demand is expected to rise considerably in the third Five-year Plan. Therefore, the Company has applied to the Government of India for an industrial licence to increase the present installed capacity from 1,500 to 3,500 tons of steel casting per annum.

Spun Iron Pipes: A reference was made in the directors' report for the period ending September 1959 to install two more Centrifugal Casting Machines for Spun Pipe Plant, in order to increase the production of Spun Pipes. Unfortunately, these machines could not be obtained due to various technical difficulties. As a matter of fact after reviewing the working of the latest Centrifugal Casting Machines abroad, Mr. Kejriwal has reported that the latest machines are capable of giving 200 to 250 per cent more production than the existing one with less rejection. Therefore, the Company is trying to get necessary import licence for this equipment to increase the present capacity of 14,400 tons of pipes to 50,000 tons in the first stage. The Company is negotiating for technical collaboration and financial participation with the leading Spun iron pipe manufacturers in the world in order to achieve the newly licenced capacity of 75,600 tons of Spun iron pipes per annum.

Accounts in brief as at 30th September 1960 are as under:—

,, ,, Ordinary ..	3,60	2,25
Carry forward	(12%) Nil	(7½%) Nil

N.B.—Adjustments include only excess provision for bonus.

* This figure is arrived at after adjusting the loss of Rs. 1,89,711 brought forward from the previous year.

† Includes additional dividend for 1959 at 1.95 per cent.

Extracts from the Directors' report: The Company has an allotment of 8,000 spindles for spinning yarn from staple fibre. It is proposed to construct the necessary buildings on the site of the ginning factory at Dindigul. Additional land adjacent to the existing site has been purchased. Orders for ring frames have also been placed.

According to the Preference Shares (Regulation of Dividends) Act, 1960, the stipulated dividend rate of 6½ per cent payable to the preference shareholders has to be increased by 30 per cent and consequently provision is now made for the payment of dividend at the increased rate of 8.45 per cent. Further, according to the said Act, an additional dividend for 1959 has to be declared so as to make the total dividend payable for that year equal to 8.45 per cent. Thus every member holding one preference share of Rs. 50 each will now get Rs. 2.9575 in cash and Rs. 1.2675 by credit for tax deduction for 1960 and Rs. 0.6825 in cash and Rs. 0.2925 by credit for tax deduction for 1959.

The Directors have proposed to secure a plot of land measuring acres 2.25 cents belonging to Sri R. Shantharam, an associate of the managing agents of the Company at Rs. 25,000 per acre. This plot of land is just adjacent to the Mills and is immediately required for the business needs of the Company. The directors are satisfied that the price quoted is quite reasonable and therefore recommend the purchase of this land.

Accounts in brief as at 31st December 1960 are as under:—

† This includes Rs. 7,075 being proceeds of timber and firewood sales.

Extracts from the Directors' report: *Crops and Costs*: During the year 223.006 tonnes of coffee were harvested. The comparative cost figures for the past 3 years were as follows:—

Crop	Tonnes	Estate cost of production per tonne Rs.	All-in cost per metric tonne Rs.	Points awarded
1957-58				
Arabica ..	72.647			
Robusta ..	105.516			
	178.163	1,958	2,199	2,21,615
1958-59				
Arabica ..	44.944			
Robusta ..	219.768			
	264.712	1,529	1,784	2,98,434
1959-60				
Arabica ..	66.789			
Robusta ..	156.217			
	223.006	1,761	1,982	2,65,030

Final payment has been received in respect of 1958-59 season coffee and the total payments received amounts to Rs. 2.45 per point which is equivalent to Rs. 2,762 per tonne. A bonus payment at 0.0175 nP per point has been received on 1955-56 season's coffee. The 1959-60 coffee has been valued at Rs. 2.15 per point which is equiva-

lent to Rs. 2,555 per tonne. Rs. 2.00 per point has been received to date.

The 1960-61 coffee crop is estimated at 261 tonnes to be harvested at an estate cost of Rs. 1.654 per tonne and an all-in cost of Rs. 1,848 per tonne.

The Company was incorporated on 22nd June 1931. The issued capital was increased in 1944-45 to Rs. 1,83,390 by the issue of 4.735 ordinary shares at a premium of Rs. 10 each and further increased in 1952-53 to Rs. 3,66,780 by the issue of 18,339 bonus shares of Rs. 10 each. In December 1957 the shares of Rs. 10 each were subdivided into shares of Rs. 2 each. In July 1958 a sum of Rs. 1,83,390 was capitalised from general reserve by the issue of 91,695 shares of Rs. 2 each as bonus shares in the ratio of one share for every two shares held.

Accounts in brief as at 30th November 1960 are as under:—

Extracts from the Directors' report: Finance: The Company has issued 10,000 new equity shares around the close of the year 1960 and the directors are glad to record that this issue was considerably oversubscribed. The shares so issued have since then been allotted.

Manufacturing Programme: During the year the Company's New Electrical plant went into full commission, resulting in better production as will be found translated into net increase of 13 lakhs in the sales effected.

The Company's development projects are still underway and it will take some time before full results could get reflected into higher productivity and better profits. With the completion of Jyoti Development and Research Centre, the Company will be adequately armed with modern techniques of testing its newly developed products besides developing new products. With this facility it will be possible to do some fundamental research in hydraulics, electrical rotating machines and switchgear.

The Company has successfully manufactured very complicated type of Electric Motors required for Sugar Centrifuges for Sugar Factories and has also produced a number of component parts required for production of switchgear which were hitherto imported. It also has now on its production programme various types and sizes of Hydro-electric Turbine sets. Special types of Chemical pumps and portable petrol engine driven pumps for agriculturists are some of the various items that this company is developing at present.

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: The progressive improvement in prices of yarn and cloth which was markedly perceptible during the closing months of 1959 continued to hold the field over the first two quarters of the year under report. The situation was however followed by the Government enforcing a system of voluntary controls on prices by manufacturers based on a fixed increase over the August 1959 levels of prices in order to secure a standard of fair selling prices. The measure naturally resulted in the reduction of the profit margin comparably to those realised during the first half of the year.

There was a serious outbreak of fire in two of the Mills' cotton godowns on 2nd July 1960. This resulted in the destruction of some valuable stocks of Indian cotton. Although the company has been able to obtain the necessary quota to replace the burnt stocks, it was difficult to secure equivalent quality in the market as the cotton season was almost nearing its end. The temporary repair work undertaken in two other godowns before the accident, had necessitated the transfer of some additional stocks to the godowns involved in the fire. This coupled with the difficulties of accommodating the heavy arrivals resulted in a slight under-insurance of the stocks. Besides, the quality of the cotton destroyed by the fire was generally of a superior grade to those replaced. The total loss to the Company on account of these factors is Rs. 1,28,288 and this has been written off in the profit and loss account.

The Southern India Millowners' Association of which this Company is a Member has reached a satisfactory working arrangement with the labour unions in the matter of the implementation of the recommendations of the Textile Wage Board. These recommendations were implemented during the year. The talks on rationalisation are being currently discussed by the above Association with the unions but no final decisions have yet been arrived at.

Substantial additions to the fixed assets have been made during the year. These represent the cost of a line of blow room machinery to replace the one installed in 1939; a set of latest type of U.S.A. make of combing equipment with pre-comber drawing units; carding engines; cone winder and other auxiliary machines. These together with the gradual conversion of the spinning frames to modern high draft system are all expected to improve the quality of the Company's products.

Accounts in brief as at 31st December 1960 are as under:—

Chemical and Alkali Distributors Ltd.

(*Secretary*: Mr. P. V. Sathe, Bombay.)

Annual General Meeting—6th May. Dividends are payable on or after 15th June.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	29,59	15,02
Closing stock	4,17	21
Gross profit	3,52	7,48
Transfer to depreciation	2	1
" " development rebate reserve ..	1	2
" " taxation	1,60	3,40
Net profit	1,89	4,06
Adjustments	24	48
Appropriations:		
Total available balance	2,13	4,54
Transfer to reserves	25	2,22
Proposed dividend (taxable)	1,82	2,28*
	(30%)	(45%)
Carry forward	6	9

N.B.—Adjustments include the balance brought forward from the previous year; the amount transferred from taxation reserve if any and excess provision for taxation written back.

* This includes an amount of Rs. 99,200 being bonus on the share capital at 20 per cent.

Extracts from the Directors' report: The working of the Company during the year under review was satisfactory. During the year under review, the Company received from the State Trading Corporation of India Ltd., allocation of:—Caustic soda solid 5,341 (12,627) tons; soda ash light 3,297 (7,822) tons; Hydrosulphite of soda 200 (*nil*) tons; Rongalite 'C' 200 (*nil*) tons; Sodium Bicarbonate (Technical) *nil* (100) tons; Sodium Bicarbonate (B.P.) *nil* (50) tons and Heavy soda ash *nil* (1,500) tons. The figures in backets relate to allocations for 1959.

In their last year's report the directors mentioned that the Company had entered into a contract with the State Trading Corporation of India Ltd., for import and distribution of 10,000 tons heavy soda ash. Against this contract, during the year under review, the Company imported 9,828 tons heavy soda ash, both at the ports of Bombay and Calcutta, from Japan.

The expenses of the Company during the year under review have remained at the same economic level as in the previous years, with the exception of warehousing/godown charges. This was due to the fact that the State Trading Corporation had imposed restrictions upon sales of goods and further, the offtake by consumers was slow compared with that of the previous year when the demand was good on account of favourable market conditions then prevailing.

The total sales turnover of the Company for the year ended 31st December 1960 of the goods allotted by the State Trading Corporation was Rs. 82,86,292 (as against the last year's turnover of Rs. 1,04,11,312).

Finance: To strengthen the financial position of the Company and to provide sufficient capital for the activities of the Company, the directors increased the paid-up Capital of the Company from Rs. 4,96,000 to Rs. 9,91,500 by issuing further 992 shares of Rs. 500 each at par as per the resolution passed at the extraordinary general body meeting of the Company held on the 16th January 1960.

The State Trading Corporation were pleased to return to the Company the sum of rupees two lakhs lodged with them as performance deposit and this is indicative of the State Trading Corporation's confidence in the Company's ability to discharge its financial obligations.

The Company made vigorous efforts and representation to Government and the State Trading Corporation with assistance and co-operation of the Parent Body, Messrs. Chemical and Alkali Merchants' Association, and the directors have pleasure in informing the shareholders that the Company has again been appointed distributors for Hydrosulphite of soda and Rongalite 'C' imported by the State Trading Corporation for Mercury for the Bombay region. Of late, the Company has entered into an agreement with the State Trading Corporation for import and distribution of further 10,000 tons heavy soda ash and import licence for the same will be obtained by the State Trading Corporation and endorsed in favour of the Company.

Taking into consideration the improved indigenous production of alkalis (especially caustic soda and soda ash) it is feared that the future imports of these items will be on a much reduced scale and correspondingly quantities of these items that will be allocated to the Company will be much less.

Accounts in brief as at 31st December 1960 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ..	9,91,500	Gross block	48,016
Reserves and surplus ..	2,43,644	—Depreciation	3,989
Other liabilities ..	12,78,940	Net block ..	44,027
		Current assets	22,92,536
		Cash ..	1,77,521
	Rs. 25,14,084		Rs. 25,14,084

COMPANY AFFAIRS

(*Concluded from page 957*)

accounted for nearly 27 per cent of the total sales of cloth during the year.

Additions to machinery worth Rs. 12.73 lakhs were made during the year under review, including one lap former and four Hertford combers, a hot air stenter, a cocker slasher sizing machine and a shearing and cropping machine. A back filling machine, an embossing calender machine and a ring frame with OMS drafting system have been received since the close of the year of account and a Barber-Colman winding and warping machine is in the course of being received. Orders have been placed for 48 Textima automatic looms and also a mercerising plant. An agreement has been made with the Moon Mills Ltd., Bombay, to purchase its entire existing block of lands, buildings and machinery for a total price of Rs. 35 lakhs. Further, the Directors are considering a scheme for replacement and rehabilitation of this mill after acquisition partly from the Company's existing resources and partly from an additional loan proposed to be taken from the National Industrial Development Corporation.

The Rs. 50 paid-up shares of the Company are currently quoted at Rs. 97 *cum-div.* At this price and taking the net dividend as Rs. 6.30 per share, the net yield works out to 7.2 per cent.

COTTON

(*Concluded from page 939*)

against violating the provisions of the Forward Contracts (Regulation) Act as amended last year. Mr. Ruia certainly took the correct stand in regard to the amended law when he said that, although he did not approve of some of the provisions of the law like the one which declared option business illegal, as long as the law was in force such business was illegal and should not, therefore, be indulged in. He pointed out that, in the interest of the trade itself, illegal transactions should not be done until such time as the Government could be persuaded to amend the law.

Mr. Ruia stated that the Board of the E.I.C.A. accepted the suggestion that better liaison be established between the E.I.C.A. and the cotton trade associations in upcountry centres. Accordingly, the Board had decided that the Chairmen or, in their absence, the Vice-Chairmen of some of the leading upcountry trade organisations dealing with the problems of the cotton trade be invited to attend the meetings of the E.I.C.A. Board periodically as observers when questions of broad policy concerning cotton trade are considered so that they may offer their views and participate in the discussion. The Board had therefore agreed to extend such invitations to selected upcountry trade bodies. This decision is to be welcomed for it will broad-base the activities of the E.I.C.A. and enable it to examine the issues bearing on cotton from all angles and put forward views and suggestions which are more representative of the trade as a whole. The lack of such a fully representative stand has hitherto rendered the voice of the cotton trade less effective than it would otherwise have been.

Notices

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Gillander House, Netaji Subhas Road, Calcutta-1

NOTICE IS HEREBY GIVEN THAT THE Fifty-third Annual General Meeting of the Members will be held at the Registered Office of the Company on Friday the 9th June, 1961, at 10 a.m., to transact the following business:—

PHILIPS INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

THE THIRTY-FIRST ANNUAL GENERAL Meeting of the Members of Philips India Limited will be held on Monday, June 26, 1961, at 11 a.m. at the premises of the Bengal Chamber of Commerce and Industry, Room No. 2, 6 Netaji Subhas Road, Calcutta 1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1960.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of an Annual General Meeting.

AS SPECIAL BUSINESS

To consider and if thought fit, to pass, with or without modifications, the following Resolutions:

6. *As a Special Resolution*

   "That it is hereby approved that the register of members, the index of members, the register and index of debenture-holders, if any, and copies of all annual returns of the Company prepared under Section 159 of the Companies Act, 1956, together with the copies of certificates and documents required to be annexed thereto under Section 161 of the said Act, may, instead of being kept at the registered office of the Company, be kept at the office of Jardine Henderson Ltd. of 4, Clive Row in Calcutta, the Registrars and Share Transfer Agents of the Company."
7. *As an Ordinary Resolution*

   "That instead of the authority given to the Directors to borrow moneys for the purposes of the Company by resolution No. 3(c) passed at the Extraordinary General Meeting of the Company held on October 31, 1957, the Directors be hereby authorised to borrow moneys for the purposes of the Company in excess of the Company's paid-up capital and free reserves but limited to a total amount of Rupees Ten crores."

The Register of Members of the Company will be closed from June 7, 1961 to June 26, 1961, both days inclusive. The Dividend, if approved, will be payable on and after July 17, 1961 to those shareholders whose names are on the Register of Members on June 26, 1961 or to their mandatees.

By Order of the Board
J. ZANTMAN
Director

May 18, 1961
7 JUSTICE CHANDRA MADHAB ROAD
CALCUTTA 20

Notes:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

2. Shareholders are requested to notify the Company of any change in address.

3. An Explanatory Statement as required by Section 173 of the Companies Act, 1956, in respect of the aforesaid Special Business has been forwarded to shareholders along with the convening notice.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED

(*Incorporated in England*)

DIVIDEND NO. 35

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-seventh Annual General Meeting to be held in Committee Room No. 2 of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 9th August, 1961, at 11-30 a.m., the Directors will recommend payment of a Dividend (No. 35) for the year ended 31st December, 1960 of 27 per cent (6.48 pence, i.e. 36 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 31st August, 1961 to all members registered in the books of the Company at the close of business on the 10th June, 1961.

The Registers of Members will be closed from the 12th June, 1961 to the 1st July, 1961, both days inclusive.

The profit for the year ended 31st December, 1960 was £1,307,982 (against £1,202,259 for previous year), out of which have been provided £175,000 for depreciation (£175,000 last year), £500,477 for Taxation (against £439,949), £50,625 for Development Rebate Reserve (against £56,250) and £200,000 for General Reserve (against £125,000), leaving a nett profit of £381,880 (against £406,060). With £107,121 brought in from 1959, the balance available is £489,001 (against £477,372) and after providing £370,251 for the abovementioned proposed Dividend of 27 per cent subject to deduction of Tax (Dividend No. 34 of 27 per cent subject to deduction of Tax last year—£370,251) the balance carried forward is £118,750 (against £107,121 brought in from previous year).

By Order of the Board
G. A. CARVER,
Secretary.

Gillander House,
Netaji Subhas Road,

By Order of the Board,
DUNCAN BROTHERS & CO. LTD.,
Managing Agents.

6th May, 1961.

CENTRE'S CONVERSION LOAN

(From Our Own Correspondent)

BOMBAY, *17th May*

The short-term money market did not display any new features during the week under review. Thanks to the slow pace of return of funds to banks, borrowers found it difficult to obtain their requirements. In order to take advantage of the stringency in the money market, bankers were extremely cautious and held back funds in expectation of a further rise in interest rate. Early in the week, some stray transactions were reported at 5¼ per cent, but the common rate for inter-bank call money among all sections of banks was 5 per cent per annum. Other rates remained unchanged at the levels reached in the previous few weeks. For ready reference, we give them below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	5
Other banks	5
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-day Treasury Bills of the Government of India sold through weekly tenders disclosed that, as against the invitation of Rs. 2 crores, the amount actually offered was Rs. 2.25 crores. Total amount accepted was Rs. 2 crores, at the average rate of 2.750 per cent, same as last week. 91 days' intermediate Treasury Bills sold from 10th May to 13th May amounted to Rs. 65 lakhs only, as against Rs. 1.08 crore last week. Their sales are being continued from today upto 20th May.

The Reserve Bank of India's statement for the week ended 12th May 1961 shows an expansion of Rs. 4.88 crores in notes in circulation, bringing the total to Rs. 2,007.26 crores. As the notes held in the Banking Department have gone up by Rs. 4 crores, the notes issued have increased by Rs. 8.88 crores. The foreign securities have remained unchanged at Rs. 113.01 crores, but, since the balances held abroad have advanced by Rs. 4.26 crores, the total foreign assets show a rise by a corresponding amount to Rs. 134.95 crores. Deposits of banks with the Reserve Bank have declined by Rs. 3.52 crores. On the assets side, other loans and advances have gone up by Rs. 5.31 crores to Rs. 133.80 crores. Of these, borrowings against usance bills amounted to Rs. 23.64 crores, as against Rs. 21.40 crores a week ago.

The statement of Scheduled banks for the week ended 5th May 1961 discloses a decline of Rs. 5.03 crores in demand deposits and an expansion of Rs. 21.35 lakhs in time deposits. As the deposits of the State Bank of India have contracted to the tune of Rs. 8.90 crores over the week, it is obvious that the deposits of other scheduled banks must have actually improved slightly during the week under review. Their borrowings from the Reserve Bank are a shade higher by Rs. 93.11 lakhs and those against usance bills from the same source have improved by Rs. 31 lakhs. The scheduled banks' borrowings of demand variety from the State Bank have risen by Rs. 34.35 lakhs, while those of time variety have fallen by Rs. 6.5 lakhs. The assets side show that advances and bills discounted (bank credit) have recorded only a slight increase of Rs. 73 lakhs to Rs. 1,301.85 crores. Over the week, the advances of the State Bank of India have contracted by Rs. 74 lakhs, indicating that the advances and bills discounted portfolio of the other scheduled banks was quite steady. The investments of scheduled banks as a whole declined by Rs. 15.32 crores, and those of the State Bank of India by Rs. 12.60 crores.

The outstanding development of the week in the gilt-edged market is the issue of the conversion loan by the Central Government. As was expected in market circles, in view of the stringency in money, cash subscriptions have not been solicited, but only conversion facilities have been offered in respect of the 3½ per cent National Plan Bonds (First Issue) 1961, the 2½ per cent 1961 and the 3 per cent Hyderabad Loan 1951-61 for subscribing to a further issue of the existing 3½ per cent National Plan Bonds (third series) 1967. The issue price is placed at Rs. 98.90 as against the present market rate of Rs. 99. The reissue of the 1967 loan offers a redemption yield of 3.69 per cent at the issue price of Rs. 98.90. As the market has shown a definite preference for short-dated issues, it is fair to assume that the major part of the loans will be offered for conversion. Apart from this development, the gilt-edged market was extremely listless throughout the week. In the Central loans section, 3 per cent 1986 and 3 per cent 1970-75 first development loan shed 10 nP each to Rs. 73.20 and Rs. 90.75 respectively. 3 per cent 1966-68 funding loan and 3½ per cent 1968 receded by 5 nP each. The State loans remained steady at the prices reached in the previous week.

In the foreign exchange section the rupee weakened in relation to the U.S. dollar. The banks' selling and buying rates for ready T.T. on New York went down by 50 nP each to Rs. 479.25 and Rs. 475.75 per 100 dollars, respectively. In the New York exchange market, the pound sterling eased by 0.12 cent in the spot and by 0.15 cent in the three months' forward markets. The latest available rates are: 279.360-279.390 cents per £ for spot and 278.120-278.150 cents per £ for three months' forward.

GOLD EASY, SILVER STEADY

(From Our Own Correspondent)

BOMBAY, *17th May*

An irregular trend was in evidence in the bullion market during the week under review. Thus, gold ruled easy, while silver was steady. The easiness of gold was due to the continued low level of offtake—the actual average daily offtake was no more than 4,500 tolas, same as in the previous week—whereas arrivals were larger at 7,000 tolas, as against 6,250 tolas. Even reports that contraband gold worth Rs. 70 lakhs was confiscated near Karwar failed to have any effect. Consequently, prices tended to recede. Silver was somewhat well supported, thanks to fresh enquiries from Delhi and Calcutta. A prominent bear operator was reported to be disposed to even up his sales. Small arrivals also imparted some strength. The average daily rate of arrivals was 14 bars, as against 17 bars last week. The actual offtake was more or less unchanged at 14 bars.

The bulls in *Jeth Adhik* (first) settlement in both gold and silver continued to pay margins throughout the week under review also. The margin in gold was Rs. 20 per 10 grams, since the rate for transferring commitments from this settlement to the second settlement was more than a rupee, excepting on two days when the margin was lower at Rs. 20, because the carry-forward rate was 95 nP on Friday and 85 nP today. The margin operative on bulls in silver was Rs. 300 per bar, as the *badli* payable by bears for getting commitments transferred to the *Jeth Adhik* settlement to the second settlement was more than a rupee. It was Re. 1.30 today; it was higher still at Re. 1.50 earlier.

Ready gold continued to command a premium over the *Jeth Adhik* settlement, though the actual premium today was lower at 20 nP, as against Re. 1.25 last week. Ready silver was quoted at a par with the forward, whereas it commanded a premium of Re. 1.50 last week-end.

Adjustment rates fixed today were Rs. 118.20 per 10 grams of gold and Rs. 198.35 per kilogram of silver. The corresponding rates for last week were Rs. 119.40 and Rs. 199.10.

Smuggling of gold into India continues to be on a large scale, notwithstanding all the vigilance of the Customs authorities. Estimates of the extent of smuggling vary widely. A broad idea, however, can be had from the latest report on saving trends in India published by the National Council of Applied Economic Research, New Delhi. The findings of the Council reveal that, in 1957-58, over Rs. 27 crores worth of gold was smuggled into the country. The individual saving in the form of gold in that year is estimated at Rs. 33.1 crores.

A large part of the gold smuggled into India comes *via* Pakistan from Beirut, Geneva, Macao and other places. A recent Press report from Karachi avers that gold trade in Pakistan is organised and maintained wholly on illegal basis, because import of gold has been banned since the Partition and the State Bank has not released even an ounce of gold for private consumption. Some gold of Russian origin is also said to have found its way into Pakistan *via* Afghanistan. The continued smuggling of gold is due to the high prices prevailing in India and Pakistan. It is reported that the world's highest price for gold obtains in East Pakistan—Rs. 172 per tola, as against Rs. 120.50 in India and the world price of about Rs. 41.

The world price of gold in the London market was unchanged at $35.08½ per fine ounce. Ready gold improved from 250*s.* 9½*d.* to 251*s.* 0½*d.*, following the easiness of the pound sterling *vis-a-vis* the dollar. Ready and forward silver were unaltered at 79½*d.* and 79¾*d.*, respectively, as also silver in New York at 91.375 cents. The Press report indicating the persistent pressure of Chinese silver did not have any effect.

The following table shows the trend of the market during the week under review:

	17-5-1961 (closing)	High	Low	10-5-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	118.40	119.65	118.35	119.65
Forward:				
Jeth Adhik*	118.20	118.70	118.05	118.40
Jeth End	117.35	117.70	117.05	117.60
Sovereign	94.75	—	—	94.75
SILVER				
Ready (.996 fine)	198.35	200.00	197.90	199.00
Forward:

Jeth End	197.05	197.30	195.50	196.05
London—	16-5-1961			9-5-1961
Silver Ready	79¼*d.*	—	—	79¼*d.*
Silver Forward	79¼*d.*	—	—	79¾*d.*
Gold	251*s.*0¼*d.*	251*s.*0¼*d.*	250*s.* 9½*d.*	250*s.*9½*d.*
New York—				
Silver	91.875 cents	—	—	91.875 cents

* 31st May settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS SUBDUED

(From Our Own Correspondent)

MADRAS, *15th May*

There was no appreciable change in the Madras kip market. E.I. tanners were willing to follow importers' reasonable bids, and prices declined slightly on all lines. It is hoped that lower levels would stimulate buying interest from overseas buyers, in a larger measure. There was no call for low grade cow hides from North Indian buyers and this has a depressing effect on the market. Demand for buff hides and cow calf was small.

Prices of tanned goat and sheep skins were steady, but export orders were not freely forthcoming.

COTTON FUTURES RECEDE

(From Our Own Correspondent)

BOMBAY, *17th May*

The firmness of cotton futures noted last week following the announcement of export quota for 50,000 bales of 23/32" cotton and the news of bulk buying of cotton by the Indian Cotton Mills Federation abated during the week under review. In fact, a sagging tendency was in evidence, thanks to emergence of selling by some operators who, on second thoughts, realised that neither of the two developments had so pronounced a bullish implcation as to warrant a steep rise in cotton prices. For one thing, the quota was not sufficient to wipe out the accumulated stocks of "distressed cotton" in Gujarat and other areas and, unless additional measures were taken by the Government, these cottons, it was felt, would continue to exert a downward pressure on prices. Secondly, traders were given to understand that the Federation had no intention to buy cotton regularly and that the purchases were only meant to support a sagging market at the instance of the Government. There were strong rumours suggesting the possibility of an additional export quota for Bengal *Deshi* and possibly for ¾" and 25/32" cotton but they failed to materialise. Nor were any further measures to relieve the distress of cotton growers in Gujarat taken in spite of strong representations made to the Centre through the Government of Gujarat. Reflecting these, the futures market staged a retreat. The August contract steadily declined from Rs. 578 last week-end to Rs. 567 today, a net loss of Rs. 11 over the week.

The Board of the East India Cotton Association has quite some time now been busy preparing a hedge contract for the new season. At its meeting held on Monday the 15th inst. the Board approved of a hedge contract formulated by a special Sub-committee. The salient features of the new contract are as follows:

(1) There will be one hedge contract as at present, namely, Moglai Jarilla with its basic staple length remaining unchanged at 25/32" with the only difference that the tolerance which was hitherto 2/32" has been uniformly fixed at 1/32" for all growths except Cambodia 'A' where there is no tolerance and the tendering staples continuing the same as in the current season's contract, (2) the delivery months will be February, May and August provided the Forward Markets' Commission permits trading concurrently in February and May contracts; if such a permission were not granted, delivery months may be March, May and August. The present delivery months are April and August, (3) By-law 55 should be so revised that the tendering differences could be fixed on the basis of the difference between the hedge contract rate and the spot rate of the tenderable description subject to a flat reduction of 15 per cent of such difference, (4) By-law 61 which deals with the invoicing back rate of the rejected cotton should also be revised so that invoicing back could be done at the hedge contract rate plus 50 per cent of the difference between hedge contract and the spot rate of the basic cotton, and (5) as regards by-law 64, in addition to the foregoing provisions, there should be, as at present, a penalty of Rs. 25 per candy (Rs. 7 per quintal) in case of failure to tender.

The general impression among traders is that, if the Forward Markets' Commission were to approve of this contract, it will be a more realistic one than the contract now running.

Mill demand for ready cotton was fairly well maintained. Popular varieties like L.147, CO2, Khandesh, Laxmi and Digvijay found buyers but at lower prices. Bengal *Deshi* received the attention of exporters in anticipation of quota. Kalagin and Wagad were neglected. Mill interest was also evident in American, East African, and Sudan cotton and sizable business was put through in these varieties. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri: L.147 1,000; Hubli Laxmi 986; Digvijay 940; American on sample 1,235-1,260; Sudan XG2S 1,885; G4L 1,440; B.P.52.

Steady conditions prevailed in the Karachi cotton futures market. There was moderate export demand. The usual interest was shown by domestic mills. N.T.R.G. May improved fractionally to Rs. 71, as against Rs. 70.50 last week. The July contract shaded to Rs. 70, as compared with Rs. 70.15 last week-end. Exports of Pakistan cotton from Karachi from 1st September 1960 till 20th April amounted to 411,176 bales, as against 445,297 bales in the same period last season.

Trading in the Alexandria Cotton Exchange was featureless during the week. Values moved in a narrow range in thin trading. Net changes recorded by both the Karnak and Ashmouni contracts over the week were negligible. Export sale of Egyptian cotton from the commencement of the season till 30th April 1961 amounted to 851,620 bales (of 720 lbs. each), as against 710.493 bales a month ago. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 60; July 69.90; *Ashmouni*: June 61.95; August 61.65.

In the Liverpool cotton futures market, while the near deliveries tended to ease on profit-taking, the more distant positions maintained a steady undertone. Commission House buying and local mill support were responsible for the strength of the latter. Sudan cotton contracts at Liverpool ruled steady. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end quotations:

American Cotton one inch staple contract: May 24.05 (24.20); July 24.10 (24.20); October 24.05 (24.05); December 24.30 (24.30).

American cotton mixed growth contract: May 24.40 (24.55); July 24.45 (24.55); October 24.50 (24.50); December 24.70 (24.70). *Sudan*: May, July October 31.75 (31.75).

Cotton futures in New York suffered a setback during the week. New crop months gave way on

selling prompted by the continued rise in certified cotton stocks and favourable weather news. Current crop July moved down in sympathy. Prices of ready cotton, on the other hand, ruled firm, thanks to good spinner demand.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	16-5-61	9-5-61	2-5-61
Spot	34.15	34.00	33.90
May	—	32.75	32.75
July	33.27	33.44	33.39
October	34.05	—	—

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 17*th May*

Barring linseed which elicited good support, the oilseeds market presented an easy trend during the week under review. Castorseeds were featureless, in distinct contrast to the pronounced strength noticed last week. Prices moved down. The decline followed selling induced by expectation of larger arrivals from Madhya Pradesh and Bihar in the near future, as well as the continued lull on export front, with the major buyers remaining absent from Indian market. Reports from Britain and the U.S. suggested continuing pressure of Brazilian supplies of castor oil in world markets. Business in groundnuts was confined to spots as in previous weeks. With the improvement in arrivals, particularly from the South, in the wake of only moderate offtake by *vanaspati* interests, values drifted downward. Oil suffered a distinct setback, following pressure of solvent oil from Kathiawad. Cottonseeds encountered selling in sympathy with the trend of raw cotton market.

Castorseeds September 1961 contract declined by Re. 1.12 to Rs. 176.25. May 1961 initially rose from Rs. 176.62 to Rs. 179.75, before closing on a subdued note at Rs. 177.25. The maturing (May 1961) contract, however, ruled distinctly firm. Indeed, it was quoted at a premium over the September position whereas it stood at a discount of 75 nP on Wednesday last week. The actual premium yesterday was as high as Rs. 2.48. In other words, the rate of transferring commitments from the May to September contract, which was in favour of bears last week, turned against them since Monday. The *badli* payable by them was, of course, slightly lower at Re. 1 today, when the closing quotation for May contract was Rs. 177.25, as against Rs. 176.62, the highest touched being Rs. 179.10 yesterday. Ready Kanpur lost 13 nP to Rs. 33.62. Ready Madras was dull at Rs. 35.25. Oil commercial dropped 30 nP to Rs. 14.90 and B.S.S. by 10 nP to Rs. 15.95.

Among groundnuts, Saurashtra quality moved down by 25 nP to Rs. 53.50. Coromandels were quiet at Rs. 53.50. Oil ex-mill suffered a loss of 70 nP to Rs. 21.80. Railway receipts fell by 50 nP to Rs. 21.50.

In the cottonseed section, September 1961 contract eased by 50 nP to Rs. 93.25. May 1961 contract improved from Rs. 94 to Rs. 95.50, but gave way subsequently Rs. 94.50. Non-whites and Berars were both neglected at Rs. 19, as also Whites at Rs. 19.25.

Linseed, as already indicated, put on a cheerful appearance. May 1961 contract firmed up by Re. 1.31 to Rs. 37.81. September contract rose by 75 nP to Rs. 37.84. Bold ready hardened by Re. 1.50 to Rs. 37.50. Oil gathered 35 nP to Rs. 15.75.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	17-5-1961	10-5-1961	3-5-1961
	Rs.	Rs.	Rs.
Groundnut			
Nisam bold	53.50	53.25	52.75
Coromandel ready	53.50	53.50	52.75
Khandesh quality	53.50	53.75	53.25
Oil ex-mill ready*	21.80	22.50	21.90
Railway receipts*	21.50	22.00	21.65
Castorseed			
May 1961	177.25	176.62	175.87
September 1961	176.25	177.37	177.50
Ready Madras	35.25	35.25	34.75
Ready Kanpur	33.62	33.75	33.12
Oil B.S.S.†	15.95	16.05	16.05
Oil commercial†	14.90	15.20	15.15
Linseed			
May, 1961	37.81	36.50	36.53
September 1961	37.84	37.09	37.06
Bold ready	37.50	36 00	35.87
Oil ready†	15.75	15 40	15.40

September 1961	93.25	93.75	93.25
Niger seed	43.00	42.00	41.25
Kardi seed	36.50	36.25	35.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

STAPLE FIBRE YARN PRICES FIXED

(From Our Own Correspondent)

BOMBAY, 17*th May*

There were five developments of import to the yarn market during the week under review. They pertain to excise duty on cotton yarn, fixation of prices for staple fibre yarn by the Committee of the Indian Cotton Mills Federation, sharing of additional excise duty burden between art silk yarn spinners and consumers, Finance Minister's reaction to the plea of art silk weavers for tax relief and the reported issue of advance licences for art silk yarn imports in favour of the State Trading Corporation. The relevant details are given below:

Cotton yarn: An exemption of 10 nP per kg. has been given to yarn above 40 counts if issued in hanks with effect from the 12th inst. as a measure of further relief to handloom industry; the revised rate of duty is now 5 nP kg.

Staple fibre yarn: The prices fixed by the I.C.M.F.'s Committee are as follows:

(In Rs. per bundle of 10 lbs.)

Counts	*Ex-mill price of hank yarn*	*Differential for doubled yarn*	*Differential for yarn on cones*
20s ..	28.55	3.10	2.85
30s ..	31.05	3.90	3.20
40s ..	34.05	4.50	3.50

These are net ex-mill prices. The prices should be stamped on bundles. It has also been decided that delivery of yarn against contracts entered into before 15th May 1961 and provided the yarn is packed and ready for delivery will be made at the contract prices; otherwise, the above schedule of prices will be applicable.

Excise duty on rayon yarn: It has been decided by the Government of India that 60 per cent of the increase in excise duty of 90 nP per kg. on yarn of 100 deniers and 60 nP on yarn of above 100 deniers will be absorbed by the indigenous viscose rayon manufacturers, the remaining 40 per cent being passed on and borne by the consumers of rayon yarn. It has also been decided that the price differential between the various qualities of indigenous rayon yarn will be 15 nP per kg. at each stage, the total difference between the first quality and reject quality of a particular denier of yarn being 60 nP per kg.

Rayon mills' plea: The Union Finance Minister has turned down the plea of art silk weaving mills for extension of the excise duty exemption limit from the present four looms working one shift to the first four looms in units of up to nine looms. As for abolition or at least reduction of countervailing duty on imported yarn, the Minister has said that the situation is constantly under review, though he says that he has so far not been convinced by the plea of manufacturers.

S.T.C.: It is reported that the S.T.C. will receive advance licences for imports of Rs. 1 crore worth of art silk yarn from free currency sources and Rs. 25 lakhs from rupee payment sources. The yarn so imported will be distributed to manufacturer-exporters subject to a maximum c.i.f. value of Rs. 1,500 per registered loom. An advisory committee comprising representatives of manufacturers, exporters and traders has been formed to assist the S.T.C. in implementing the scheme. It is also reported that, with a view to stimulating exports of art silk fabrics, the Union Government has agreed to the grant of an advance licence of a suitable value for the import of art silk to an art silk manufacturing concern on the condition that the foreign exchange requirements for the purpose of import of yarn will be earned by the concern through exports of finished fabrics within a specified period under the Export Promotion Scheme and will be remitted to the suppliers of yarn as and when it is earned.

In view of the prospects of large art silk yarn imports though the S.T.C., prices have generally tended to move down. Japanese yarns, however, have registered handsome gains, owing to shortage of floating stocks. Cupressa Bemberg yarn (60 x 1) also tended to look up. Business in staple fibre yarns has practically come to a standstill following the regulation of prices by the millowners' apex body. The prices fixed are said to be lower than the actual prevailing rates. Meanwhile, the Bombay Yarn Merchants Association and Exchange has fixed floor (Rs. 815 per bale) and ceiling (Rs. 915) prices for 40 x 2 June contract, suspended business in August settlement and stipulated a penalty of Rs. 10 per bale in case of non-delivery. Following representation by members, the Association decided today to raise the floor rate from Rs. 815 to Rs. 865 for staple fibre yarn (40 x 2) June contract. But the ceiling would continue at the same rate of Rs. 915. The Board further directed all its members to square up their outstanding business in June contract between floor and ceiling prices of Rs. 865 and Rs. 915, respectively, before the contract expires. No fresh trading would be permitted in the contract.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	17-5-1961	10-5-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupresa Bemberg (100 kg.)		
June	2,620.00	2,570.00
Spot	2,620.00	2,617.00
40 x 1 JF June	2,996.00	2,918.00
150 Japan (per 100 kg.)	1,787.00	1,658.00
150 Japan (per 100 kg.)	1,777.00	1,750.00
120 Italy (per 100 kg.)	1,625.00	1,625.00
150 Italy (per 100 kg.)	—	1,735.00

80s Mahendra	66.66	66.66

TEA FIRM

(Messrs. Forbes, Ewart and Figgis Private Ltd.)

COCHIN, 9*th May*

Approximately 609,000 kilograms were offered in Sale No. 19 held on Tuesday, 9th inst. Quality from all districts was barely maintained. There was an active demand. Highgrowns continued to receive fair support but at irregular and generally lower rates following quality. A few brighter invoices sold well. Good mediums were well supported and sold at irregular and slightly lower rates. The coloury sorts in this category were a strong feature and realised fully firm and some times dearer rates. Mediums and low mediums were absorbed readily at around last rates with the more fibrous kinds registering drops of 5-10 nP. Plainest sorts can be quoted about steady. A small weight of C.T.C. and legg cut sorts sold at firm rates. Whole leaf grades were generally slightly easier with orange pekoes selling well.

	1961	1960
	Rs.	Rs.
Low medium ...	4.40-4.50	3.97-4.19
Mediums ...	4.50-4.60	4.08-4.30
Good mediums ...	4.70-5.15	4.30-4.63
Nilgiri B.O.P.	Rs. 4.60-5.80	

The average price realised in sale No. 19 was Rs. 4.61 per kilo as against Rs. 4.65 a week ago and Rs. 4.41 in the corresponding sale last year. *Dust Sale No.* 19: Offerings amounted to approximately 249,000 kilograms in dust sale No. 19 held on Thursday, 11th inst. There was a good general demand. Highgrowns came to a slightly irregular market and generally sold at around last rates. Mediums were readily absorbed at fully firm to occasionally dearer rates with buyers' emphasis on the Wynaad descriptions. Residuals were the weak feature of the sale and registered a drop of 10-20 nP. C.T.C. and legg cut types received good support at firm rates.

The average price realised in dust sale No. 19 was Rs. 4.40 as compared with Rs. 4.32 a week ago, and Rs. 4.25 in the corresponding sale last year.

Export Quota: The special licence market is now very quiet and business is being transacted at 1/6 nP per kilo.

Colombo: 5¾ million lbs. were offered in this week. The quality showed a seasonal decline. The market opened to a very strong demand but prices were irregular. Highgrowns were often dearer whilst mediums were sometimes ¾ cents easier with lowgrowns firm on last levels.

London: North Indian and other growths: In Monday's auction the market was fully firm for all descriptions. Plain brokens pekoe is quoted at ¾d.

Ceylon and South Indians: In Tuesday's sale 23,751 packages were offered of which 8,100 packages were from South India. There was a strong demand and prices were generally dearer for most descriptions.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale No.* 20: 570,000 kilograms. Strong general demand. Low mediums and mediums fully firm to occasionally dearer. Good mediums 5 to 10 nP easier. Nilgiris sold at around last rates."

DUST TEA IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 16*th May*

The season's first export sale was held yesterday, and there was good demand. Prices gained as a result. Tea shipped for direct participation in London auctions is increasing.

Thus, it would appear that the new season has begun well, and it remains to be seen if a season well begun would also end likewise. Indications are that Indian tea has to overcome stiff competition in foreign markets, if exports are to be increased. Production in 1961 is expected to be substantially higher than in 1960. In the opinion of the export trade, the possibility of an increase in exports would appear to be remote, as prices are very high.

A reduction in prices has become a necessity. Mr. B. C. Ghosh, who was Chairman of the Indian Tea Planters' Association and is at present a member of the Executive Committee of the Tea Board, is reported to have stated recently that the industry was not optimistic about its future.

Dusts on offer during last week's internal sales amounted to 22,721 packages. There was good general demand but the trend was mixed and irregular. Clean C.T.Cs met with ready buyers at irregular rates, and the good varieties eased. Fibrous teas also eased. Orthodox teas eased by 15 nP, the small and bright teas receiving better support. Legg-cut teas eased. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.60 to Rs. 7.00, medium Assam C.T.C. dust Rs. 5.90 to Rs. 6.30, legg-cut dust Rs. 4.40 to Rs. 5.20, medium Assam legg-cut dust to Rs. 4.80, and plain orthodox dust Rs. 4.20 to Rs. 4.40.

Leaf offerings amounting to 815 chests met with good demand.

There was good general demand during yesterday's export auctions, offerings amounting to 20,211 packages. As expected, both the U.S.S.R. and Turkey displayed modest interest in Darjeeling teas. However, it should be said that buying was cautious and such a feature is attributed possibly to expectations of a larger output this year. Some quantities had to be withdrawn. However, support for some of the teas showed that internal buyers were active. In view of the shortfall in output in 1960, and also in view of the huge increase in internal demand, stocks are low.

The offerings consisted mostly of Darjeelings. The trend was irregular. A few grades met with buyers at prices below brokers' valuations. Withdrawals were heavy as bidders were bidding for time on expectation that prices might become more favourable as the season advanced. Plainer orthodox teas from Cachar gardens were fully steady and were the strongest feature of the sale. Dooars and Terai realised valuations. C.T.Cs were fully steady. Teas from Dooars were of an average standard for first flush manufacture. It was not surprising, therefore, that legg-cut Dooars declined by 30 nP per kg. The quotations per 1 kg. inclusive of excise duty were: plain fannings Rs. 4.70 (nominal), plain broken pekoe Rs. 4.80 (nominal), and clean plain pekoe Rs. 5.20 (nominal).

RESTRICTED BUYING IN JUTES

(From Our Own Correspondent)

CALCUTTA, 16*th May*

Although buying of both raw jute and jute goods was meagre during the week under review, prices were steady. Such a trend reflected the difficult fibre position and rumours of the inevitability of block closure by mills for at least a fortnight in the near future. Overseas buyers of jute goods were in no mood to extend their commitments, and it was thought very likely that business in this regard would be anything other than on a hand-to-mouth basis until the new season commenced and prices of fibre and goods moved down to reasonable levels. The rise in gunny stocks with mills as at the end of April by 5,400 tons to 90,400 tons should be considered a significant pointer in this regard. Hessian rose by 3,300 tons to 27,900 tons and sacking goods by 2,100 tons to 48,300 tons, but miscellaneous constructions were unchanged at 14,200 tons. Such a rise in the face of shortage was attributed to the disinclination of foreign buyers to support higher prices. The news of higher stocks negatived any spurt in prices that would have followed persistent rumours regarding the proposed block closure by mills.

With U.S. buyers continuing to keep away, any spurt in hessian prices was thought unlikely in the near future. This inference also followed from an examination of the reports of the U.S. burlap market during the week. For it was stated that the initial rise in prices in New York was not maintained, since, at higher levels, buying was restrictive. Further, dealers were reported to have exhibited a tendency to reduce their high inventories. In view of the good stock position of burlap with U.S. dealers, U.S. buyers operating in Calcutta can very well afford to wait for replenishment of their stocks until the new season. The higher stocks of goods with mills, coupled with the fall in overseas demand, has considerably aided the representation of mills to the Government of India as to the inevitability of block closure by mills.

Meanwhile, prospects of an early crop in West Bengal and Assam have increased with the recent occurrence of a number of Nor'westers accompanied by moderate to good rains. However, this possibility was not reflected on fibre prices during the week. In West Bengal districts alone, it was officially estimated that the increase in acreage under jute would be about 15 per cent to 18 per cent more than last year. There were reports, during the week, that the recent cyclone damaged the jute plants extensively in Pakistan districts and that the crop would not be as heavy as originally expected. These rumours lent strength to the local fibre market; however, it was soon known that damages had been only meagre and were confined to the lowland areas. The report from Narayanganj market that the cyclone did not affect the fibre market there was considered significant and went to show that damages had not been so severe as rumoured earlier.

In the goods market on Tuesday last, active covering business was put through. This followed the reported inevitability of bloc closure by mills and the Forward Markets Commission's refusal to permit the re-opening of futures trading immediately. Ready B. twills were firm at Rs. 167.00 and ready hessian 40" 10 oz. at Rs. 56.50. This was followed on Wednesday by rumours of heavy damages to the jute plants in Pakistan as a result of the cyclone and, though genuine business was lacking, prices moved up. Thus B. twills hardened to Rs. 169.00 and hessian 40" 10 oz. to Rs. 57.25. On the following day, ready goods were unchanged but firm, but forward goods were marked higher. However, this tendency was soon negatived since the announcement of a rise in goods in stock with mills as at the end of April soon followed. Overseas buyers continued to show little interest. On Friday, there was the report from Pakistan that the earlier fears of heavy damages to the plants could be dismissed, and that, though the full extent of the damage had not been assessed, the cyclone had affected the plants in the lowland areas only. These reports caused prices of goods to recede, and B. twills moved down to Rs. 168 and hessian 40" 10 oz. to Rs. 56.75. Over the weekend, there was the news that burlap consumption in the United States recorded a marked fall in the month of April, and this sent down ready hessian 40" 10 oz. here to Rs. 56.00. In sympathy, ready B. twills eased to Rs. 166. During yesterday local operators were active, and as a result ready B. twills firmed up to Rs. 168.00 and ready hessian 40" 10 oz. to Rs. 57.25.

Fibre prices were firm. The reported inevitability of mills to close down for some time failed to nerve any stockist in the market. Even though business passing was meagre, sellers were reserved. In fact, offerings at one time were limited to odd lots. Assam bottoms opened at Rs. 57, hardened to Rs. 58 and closed at Rs. 57.50. There was the apprehension that, despite good rains in the last week, the crop might not be so earlier as anticipated in some quarters. The strengthening of the dry spell in the last few days was pointed out as a premise for the apprehension. The price movements of the principal varieties of the old crop are indicated below:

(In Rs. per maund, for delivery against May)

	Opened at	*Hardened to*	*Closed at*	*Net gain*
Daisee bottoms ..	59.00	60.00	59.50	0.50
Assam bottoms ..	57.00	58.00	57.50	0.50
Northern bottoms ..	56.00	57.00	56.50	0.50

METALS RALLY

(From Our Own Correspondent)

CALCUTTA, 16*th May*

Following higher advices from overseas markets as well as increased demand, steadier conditions were in evidence in the metal market during the week under review. Copper scrap prices registered a modest spurt, with the berry quality quoting at Rs. 488.25 per 100 kgs. as against Rs. 482.25 a week ago. Supplies have now become more acute. Earlier there was the news that U.S. smelters had increased their price to 30 cents a lb. and it was thought very likely that they would raise the price to 31 cents a lb. in the near future. In the meanwhile, the commodity was in short supply in New York, where the good demand from Japan had eroded into stocks. Production of copper in the United States had been lower than usual in the last year, while demand had been boosted up. Consumers were desirous of replenishing their stocks. U.S. buyers naturally turned their attention to the London Metal Exchange for procuring their supplies. It was expected that the shortage would only be a temporary phase. Production is bound to catch up, and stocks held back from the market in the U.S.A. are bound to appear again. On the London Metal Exchange, the price of electrolytic copper reached a high of £243½ a ton after opening at £239½. The rise followed good demand on European and U.S. accounts.

Ready tin in Calcutta was as high as Rs. 1,366 per 100 kgs. as against Rs. 1,342.50 earlier. The rise followed good demand and the strengthening of the price trend in Singapore, thanks to the strike in the mines in Bolivia. In London, the price closed substantially higher at £859½ a ton as against £856 earlier. In mid-week, a high of £861½ a ton was touched. The increased demand of U.S. on Singapore tin was a factor which led to the London rise. Electrolytic zinc opened here at Rs. 324.75 per 100 kgs. and, although the metal continued to be in short supply, the price eased to close at Rs. 323.75 as demand fell. Also, the price was reflective of the decline of the L.M.E. quotation to £81½ a ton from £83¾. Virgin lead was as usual unchanged at Rs. 130.00 per 100 kgs.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 15*th May*

Firm tone has prevailed in linseed throughout the past week, but business has been very restricted with both buyers and sellers pausing. Both ready and forward prices have moved steadily upwards, but crushers are not showing much interest.

The oil market has remained steady in sympathy with other oils, but business has been negligible with only small local buyers showing interest. At the same time stocks with the mills have been limited.

The oilcake market has ruled quiet during the week, the offtake locally has been slow.

Quotations are as follows:—Ready/May delivery Rs. 25.87 nP per maund.

Notices

THE BOMBAY BURMAH TRADING CORPORATION LTD.

Registered Office:
9, Wallace Street, Fort, Bombay-1

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT IN pursuance of the powers granted to them by a resolution passed at the Extraordinary General Meeting held on 29th May 1958, the Directors have extended the final date fixed for the receipt of applications for consolidation of fractional certificates into whole shares of Rs. 125 each, from 31st May 1961 to 31st December 1961.

Dated at Bombay this 16th day of May 1961.

State Bank of Pakistan

Statement of Affairs for the week ended 5th May, 1961

BANKING DEPARTMENT

Liabilities	Rs.
Capital paid-up	3,00,00,000
Reserve Fund	4,15,00,000
Rural Credit Fund	1,00,00,000
Deposits:—	
(a) Central Government	2,90,95,000
(b) Provincial Governments	1,83,25,000
(c) Banks	17,81,94,000
(d) Others	133,22,17,000
Bills Payable	49,44,000
Other Liabilities	16,52,02,000
Rupees	180,94,77,000

Assets	Rs.
Notes	11,82,49,000
Rupee Coin	69,000
Subsidiary Coin	55,000
Bills Purchased and Discounted:—	
(a) Internal	....
(b) External	....
(c) Government Treasury Bills	....
Balances held outside Pakistan*	....
Loans and Advances to Governments	38,39,89,000
Provincial Governments' Debtor Balances	5,85,00,000
Other Loans and Advances	....
Investments	34,89,19,000
Other Assets	78,97,56,000
	10,99,40,000
Rupees	180,94,77,000

*Includes Cash and Short-term Securities.

ISSUE DEPARTMENT

Liabilities	Rs.	Rs.
Notes held in the Banking Department	11,82,49,000	
Notes in circulation	374,16,15,000	
Total Notes issued	....	385,98,64,000
Total Liabilities	....	385,98,64,000

Assets	Rs.	Rs.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of December 1960 amount to 11.83 crores of rupees.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. †† Rate of Interest reduced from 4 to 3 per cent. with effect from 1st June 1944. ‡ Rate of Interest reduced from 6¼ to 4 per cent. with effect from 1st April, 1936. [illegible]—Interest free for first 12 years. ‖—Interest free for first 7 years. Z—Ex eight instalments but inclusive of accrued interest. K—On September 1963 [illegible] of Government after three months' notice.

22 MAY 1961 PUBLIC DEPARTMENT

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

SUGAR AND "GUR" IN THIRD PLAN

(*Concluded from page 940*)

because of the high prices prevalent for complementary commodities such as milk and oil. Along with such a lowering of sugar prices, approximate long-term measures should be taken without losing much time in order to put the industry on competitive lines. First of all, it seems necessary to reduce the prices paid to cane growers. (The case for a reduction in their prices was dealt in detail in an article by the author in the issue of *Commerce* dated 15th April 1961. Secondly, the areas (excepting in regions which are in the sugarcane belt) which were recently brought under sugarcane should be reverted to the cultivation of crops originally grown. Thirdly, the facility of rebate on excise duty allowed on additional cane crushed should be withdrawn, because this has resulted in an undue extension of acreage under the crop in regions around the factories and in the crushing of cane which have become dried up as a result of standing in the field for a longer time.

A programme of crop planning on a scientific basis should be launched without further delay. The economy of sugar production and its competitive prices in external markets depend upon the yield rates per acre, length of the crushing season and the sucrose content of cane crushed. In spite of so many years of protection, if the industry could not make much progress in producing sugar at reasonable costs, the blame should be put equally on the growers, industry and the Government. Growers come in here because they had been clamouring for rise in cane prices very often and most of the times without sufficient basis like increase in the cost of cultivation. Industry also has a part in the game, as they could not reduce the cost of production appreciably over the last two decades. But it is the Government which should take the major responsibility for such a situation and their role is clear from the figures given in Table III.

The fifteen major States in India can be classified into four groups according to the sugarcane yield per acre in the State during the three years, 1957-58 to 1959-60. In the first group with over 5,000 lbs. per acre are the States of Andhra Pradesh, Maharashtra, Madras, and Mysore, while in the group 3,500 to 5,000 lbs. are Gujerat, West Bengal and Kerala. The last group below 2,500 lbs. consists of Uttar Pradesh, Madhya Pradesh, Rajasthan and Jammu and Kashmir. The third group includes Orissa, Punjab, Assam and Bihar.

Between the years 1949-50 and 1960-61, the proportional area in the sugarcane belt (areas reporting a yield of more than 5,000 lbs. per acre) has actually gone down from 13.0 per cent to 12.3 per cent, while, in the region with least productivity, it has registered an increase from 61.7 per cent to 64.4 per cent. In the current season, nearly two-thirds of the sugarcane acreage in the country are in regions of least productivity, while about a fifth are in areas where the yield rates are comparatively poorer, ranging between 2,500 and 3,500 lbs. In other words, about 85 per cent of sugarcane acreage is in areas which are not well suited for its cultivation. Let us now take the situation during the current as well as the previous season. Out of an increase of 563,000 acres in the areas under sugarcane during these two years, 429,000 acres or over three-fifths came from areas belonging to the yield groups below 2,500 lbs., while another one-eighth came from States which report a yield rate ranging between 2,500-3,500 lbs. As against this, only 8.5 per cent of the additional acreage originated from the sugarcane belt. For such a continued growth in sugarcane acreage in areas not well suited for its cultivation, the Government is mainly responsible, as it has been allowing such a growth without putting any restriction. Now at least the Government should come forward boldly with a legislation enforcing the cultivators to shift back a majority of the lands, which were put under sugarcane cultivation during the last two or three years, in the regions with a yield of less than 3,500 lbs. per acre, to crops which were originally grown there. Such a step, though seemingly drastic in nature, would be very profitable for the entire country as a whole. There are many crops which are better suited to these regions where the sugarcane productivity is low. For example, during 1957-58, rice yielded 841 lbs. in the Punjab as against the all-India average of 704 lbs.; wheat gave 899 lbs. as compared with 578 lbs. obtained in the country, cotton gave more than double the yield seen elsewhere. Similarly in the U.P., *tur*, groundnut and wheat are some of the crops reporting yield higher than the all-India average. The respective figures are 1,448 lbs., 980 lbs. and 655 lbs. for U.P. and 559 lbs., 662 lbs., and 578 lbs. for the country as a whole. A shift to these high yielding crops in these regions will undoubtedly result in larger production of foodgrains, oilseeds and cotton.

The permanent solution for this problem of surplus sugar should be found through the redistribution (as far as possible) of acreage under sugarcane to areas within the sugarcane belt. Such an adjustment will enable us to get a better yield per acre and thereby reduce the cost per maund of sugarcane produced. Moreover, the quality of the cane produced in these areas is quite high. For example, the sucrose content of sugarcane is highest in Maharashtra, 11.46 per cent during 1958-59, as against the national average of 9.84 per cent. Again, the number of crushing days, which is one of the important determinants of cost of production of sugar, is generally larger in this belt. The Madras factories reported 180 crushing days in 1958-59 season, as against the all-India average of only 118 days. The earlier such a dispassionate action is taken the better it would be for the sugar industry, the consumer and the country.

MARKET GOSSIP

(*Concluded from page* 927)

take any decision then and that the position would be reviewed after sometime. The issue was also considered at a tripartite meeting consisting of the representatives of jute mills, labour and the West Bengal Government held at Calcutta a fortnight ago. At this Conference, the I.J.M.A. spokesmen declared that a block closure was inevitable. On their part, the workers' representatives urged that, in case a block closure was necessary, the interests of labour should be safeguarded. They were reported to have stressed in particular that the labourers should be given lay-off compensation and that they should not be put to too heavy work to make up for the loss in output after the mills reopened. No final decision was arrived at at this Conference and the representatives, it was said, would meet again later. It is not known whether any subsequent meeting was held.

The I.J.M.A. continues to be emphatic that a block closure cannot be avoided. The only point remaining to be decided by the Association is whether all the mills should simultaneously close down for some time or whether the closure should be by rotation. A section of the jute industry prefers the closure by rotation. Some, however, ask: When there are other alternatives such as reduction in working hours or sealing of more looms till August or September, why should the I.J.M.A. persistently put forward the idea of block closure? These circles feel that, if it is for a steep decline in fibre prices that a block closure of mills is in fact intended, this can be achieved by other methods less harmful to the industry as a whole. To quote them: "After all that is said and done, fibre prices are dependent on the nature of the crop as to both quality and quantity. If, as is anticipated, the crop is going to be a bumper one, prices should give way, and mills can seize such an opportunity to build up a buffer stock." A few weeks back, it had been believed that the I.J.M.A. was pursuing the possibility of building up a buffer stock; however, nothing is being further heard about such a proposal. What is now so systematically and so often discussed is the imperative need for block closure of mills which, it is said, would only force up prices of goods; already foreign buyers are buying only in infinitesimal quantities in the hope that prices would decline and any further rise in prices may as well be a climax to the patience of foreign consumers and lead to further pushing up of substitutes and bulk handling methods.

The fact, however, cannot be disputed that the raw jute supply position is very critical. The stocks of raw jute with mills, it is feared, will dwindle to 420,000 bales by the end of June and further to 150,000 bales a month later. The monthly consumption of raw jute by mills is put at 470,000 bales and even imports from Pakistan at a heavy price is considered to be not sufficient to meet the shortage. The all-India official final estimate of jute (and mesta) crop for the season 1960-61 just released—usually the final estimate used to be published in December—places the total output at no more than 5.18 million bales, as against 5.70 million bales harvested in 1959-60 and 6.65 million bales in 1958-59. Consequent on the reduced crop, the small opening stocks (1,287,000 bales, as against 2,446,000 bales) and the low level of imports from Pakistan (600,000 bales, as against 614,000 bales), the total available supply for 1960-61 comes to 7,064,000 bales, as against 8,760,000 bales for 1959-60. Excluding the anticipated mill consumption of 6,079,000 bales, 'village consumption of 200,000 bales and export of 163,000 bales, the closing stocks with both mills and traders at the end of the season (June 1961) are expected to be just 622,000 bales.

If the jute industry, one of the principal earners of foreign exchange, is to maintain a high level of output, it is of the utmost importance that a regular and adequate supply of raw jute must be ensured. It may be noted here that the third Plan targets of raw jute and mesta output fixed to be achieved in 1965-66 are 6.5 million bales and 1.0 million bales, respectively. The target output of 6.5 million bales represents a rise of 2.47 million bales as compared with the final estimate of 4.03 million bales for 1960-61 (last year of the second Plan).

The coming season, that is, 1961-62, is expected to witness a distinct improvement in the production of raw jute. One estimate places the actual crop at more than the quantity of 5,158,000 bales harvested in 1958-59.

WEEK'S STOCK EXCHANGE TREND

GROWTH OF SAVINGS

IN a study, based not on actual field surveys but on the analysis of currently available statistical data, the National Council of Applied Economic Research has broadly estimated the growth of national savings in the decade from 1948-49 to 1957-58. A major finding of this study is that the absolute quantum of savings had increased from Rs. 320 crores in the former year to Rs. 1,210 crores in the latter. The three major categories of contributors to these savings were individuals who accounted for 80 per cent of the total, Central and State Governments which accounted for 15 per cent, and corporations which contributed the balance of 5 per cent. Another major finding is that the rate of savings in relation to national income was about 6 per cent on the eve of the first Plan and went up to 8 per cent during the first Plan period and to 10 per cent in the first two years of the second Plan. As the National Council's study covered only the first two years of the second Plan, it has not worked out the rate of savings in relation to national income during the entire period of that Plan. Incidentally, the rate of 9 per cent estimated by the Savings Committee of the National Development Council for the second Plan period may not be on the low side, if allowance is made for the rise in prices in the last three years of the Plan—a rise which should have reduced the quantum of individual savings and, thus, the rate of savings itself. If, however, the rate of savings is taken to be 9.5 per cent for purposes of broad estimation, it will mean that the absolute quantum of national savings was about Rs. 1,200 crores in 1958-59 and Rs. 1,220 crores in 1959-60.

An average of Rs. 1,200 crores by way of annual national savings during the second Plan period is probably not wide of the mark and could, therefore, be reasonably assumed, in the absence of estimates, by the National Council, for the last three years of that Plan. If the percentage contributions of individuals, Central and State Governments and corporations are applied here, the breakdown of the savings figure of Rs. 1,200 crores will be as under:

Individuals	Rs. 960 crores
Government	Rs. 180 "
Corporations (including co-operatives)	Rs. 60 "
	Rs. 1,200 "

These sectoral contributions to national savings call for clarification and comment. The contribution of the individuals' sector covers savings by the business as well as the non-business sections of that sector. But the National Council's study has not thrown any light on the relative contributions of these two sections of the individuals' sector. It may be that the sample savings surveys which are currently being carried out by the Council in rural and urban areas will be useful in assessing the respective contributions. However, pending the availability of further data, it may be possible to figure out the contribution of the business section of the individuals' sector in the light of the national income data which show that small enterprises contribute as much as factory establishments to national income. If it is broadly, though not wholly validly, assumed that small enterprises generally belong to individuals and individual households, and that factory establishments belong to the corporate sector, the guess may be hazarded that the contribution of the business section of the individuals' sector to national savings will be at least half of the contribution (Rs. 60 crores) made by the corporate sector. But that contribution, in turn, will work out to only about 3 per cent of the contribution (Rs. 960 crores) made by the individuals' sector as a whole. Here, of course, the business section has been taken to represent only small industrial enterprises as distinct from small commercial and transport enterprises.

As for the forms in which individuals' savings are effected, the National Council's finding that savings invested in physical assets (farm investment, inventory investment, building construction, non-corporate business investment, investment in transport equipment, etc.) decreased by about a fourth over the decade under study is used to lend support to the view that more of individuals' savings had been made available to other sectors for investment purposes. That individuals' savings in the form of financial assets had increased from a fifth of the total savings of individuals in 1948-49 to two-fifths in 1957-58 is, of course, a finding of some significance. But it does not necessarily convey that the private industrial sector has gained greatly by way of investments in corporate securities. The National Council's finding in this connection is that individuals' financial savings in the form of bank deposits, small savings and provident funds recorded absolute increases over the period; here the single largest and steadily rising source is the contribution to provident funds—a contribution which was only Rs. 26.0 crores in 1948-49 but round Rs. 70 crores in 1957-58. There is no reason to believe that voluntary individual savings had increased in response to any increase in the rate of return on capital. Such increases as had taken place were probably the result of changes in income and in the occupational composition of the community caused by development planning.

Sources	*Billions of rupees*	*Percentage of total saving*
Total public and private saving ..	7.50	100
Public saving from current revenue	0.70	9
Private saving channelled to the public sector	1.70	23
Other private saving	5.10	68
New subscriptions to capital of companies	0.25	3
Corporate savings	0.70	9
Increase in deposits of scheduled banks	0.40	5
Insurance companies	0.18	2
Co-operatives	0.12	2
Rural savings (largely non-monetised)	1.70	23
Other	1.75	24

But corporate savings, which can be increased greatly by appropriate inducements, do not also seem to have increased spectacularly during the decade under study. In 1957-58, for instance, such savings represented only 0.5 per cent of that year's national income, as against 0.7 per cent of national income in 1954-55. The table in column two, giving sources of domestic savings in 1954-55, is taken from the World Bank's publication on economic development in India (authors: A. J. Coale and E. M. Hoover); it will be useful in comparing the growth of savings according to sectors. It will be seen from this table that corporate savings represented 9 per cent of total national savings in 1954-55. They had come down, absolutely, to Rs. 0.60 billion in 1957-58 and, relatively, to 5 per cent of that year's national savings. It is here that Mr. R. Nurkse's pregnant observation that "the ploughing-back of entrepreneurial profits was historically the major source of capital accumulation in Western economic growth" may be pertinently recalled. His emphatic view that, "if the pattern can be repeated elsewhere, it would be an effective and almost automatic way of maximising a country's marginal saving ratio" is applicable as much to India as to other underdeveloped countries. The use of taxation to induce all businesses to retain rather than distribute earnings and accelerated depreciation allowances to make the prospect of internal expansion more appealing are clearly some of the ways by which corporate savings can be increased. Surely there is no warrant for complacency on this score, for corporate savings may not otherwise increase to the level required in the third Plan. It is a moot question whether the National Council's estimate of the corporate marginal propensity to save out of income at an average of 50 per cent could be projected, even as it has been done by Mr. Coale and Mr. Hoover on the same basis, to indicate that corporate savings will possibly rise to a level of two per cent in the sixties. What is possible may still not be probable, for there will be fiscal and other imponderables in the situation.

PRICE POLICY ISSUES

NO precise indication of the Government's mind on the price policy for the third Plan is yet available. Judging from reports from New Delhi, the Government has recognised certain broad principles that should govern such a policy. Against the background of a 25 per cent rise in prices in the second Plan period, it is hardly surprising that the Government should be anxious to prevent a similar rise in the current Plan period. Further, to let prices rise in the belief that such a rise is an inevitable price for economic expansion would be nothing short of a bankruptcy of economic ideas. Indeed, what is now required is a positive affirmation that a degree of price stability is not only not inconsistent with expansion but is an essential part of the strategy of economic development.

To say that price stability is of crucial significance to the success of economic planning is not necessarily to suggest that it is easily accomplished. In the absence of constant vigilance and prompt action to correct imbalances, it will be difficult to prevent large price fluctuations. Further, in a country like India where agriculture accounts for roughly 50 per cent of the national income, the task of ensuring stable prices becomes particularly difficult. This is because crop outturns cannot be made to order. They depend on the unpredictable monsoon. To this extent there is an element of built-in instability in India's economy. All that can possibly be done is to see how far this natural element can be prevented from unduly disturbing the price levels.

WEEK'S STOCK EXCHANGE TREND	1016

The prices of agricultural produce in general and all foodgrains in particular constitute the real core of India's price policy. As the Asoka Mehta Committee rightly pointed out, the primary need is to take specific action for stabilising the prices of foodgrains. The Committee also suggested that the way in which demand for and supply of foodgrains can be regulated is through undertaking timely and effective purchase and sale operations, arranging necessary procurement and imports and maintenance of sufficient stocks. Imports particularly under P.L. 480 have already proved helpful in stabilising food prices. It would now appear that the Government has broadly approved one major salutary step. Thus, it has been agreed in principle that minimum prices for principal food and commercial crops should be announced before each sowing season. The Government will buy in falling markets and sell when prices move up. The building of buffer stocks through procurement, State trading and distribution to co-operatives, it is reported, is regarded as a *necessary* corollary to this policy. If this report is correct, it is disquieting indeed, for it will mean large-scale expansion of State procurement and trading operations which, we are led to believe, has been practically given up in the last one year.

Yet another broad principle which the Government has recognised as necessary for maintaining the price level is that price differentials should be maintained among various commodities. It is this aspect of the Government's policy that requires some redefinition. It is not clear how the Government will arrive at these differentials; nor how it can maintain them over a period. After all, the price differentials reflect the relative differences in supply and demand position of various commodities. At any particular point of time it is the market that determines them and not the Government. It may be possible to regulate the prices of one or two commodities. But how is the Government going to prescribe what differentials should obtain as between one commodity and another? In the absence of fuller details about the Government's policy on this aspect of the problem of maintenance of price levels, it is obviously difficult to hazard any comment. It should, however, be clear that, if the Government seeks to maintain price differentials over a wide front, it will be undertaking a thankless task. It will also be a task which can never be satisfactorily performed. The best one could hope for is that the Government will limit its responsibility to the maintenance of prices in specific sectors of economy, leaving the market to determine the prices and the price differentials of different commodities.

There can, of course, be no respite from credit control measures. It is of the utmost importance that, while credit is made available for purposes of production and normal distribution, no such facility is placed in the hands of those who hoard in anticipation of a rise in prices. Only, this policy should be implemented realistically so that it could be varied to suit changes in the supply and demand position of different commodities. It will, however, be an oversimplification of the problem to suggest that credit regulation could by itself effectively hold prices in check. This is because fiscal policy could under most circumstances prove to be a factor of greater importance in influencing prices. If deficit financing and non-developmental expenditure are not held in check, credit regulation by itself would have little or no meaning as an instrument of price policy.

In any discussion of the issues of price policy it will be wrong to ignore the effect of two specific factors. In the first place, the prices of certain industrial products like steel and cement are now controlled by the Government. Unless the prices are sufficiently remunerative, the production of these commodities will suffer a serious setback. It is true that even now the Government has powers to revise the prices. But the fact is that the Government is understandably reluctant to effect changes in the prices of controlled commodities without undertaking an inquiry into their production costs. While this attitude is by and large correct, it needs to be emphasised that once Government becomes convinced of the need for raising the prices of controlled commodities, it should be prepared to permit the necessary increases in prices. Obviously, it takes a long time to complete an inquiry. Indeed, if it should be properly held, much time and thought should necessarily be devoted to it. At the same time, it is well to recognise that production must suffer till the uncertainty of price revision is cleared. The Government should not therefore hesitate to give interim increases in prices. Such increases could be given pending necessary investigations into costs and prices. Secondly, there is a case for creating an export surplus through appropriate curbs on domestic demand; the curbs may take the shape of high taxation on the output that is diverted to the domestic market. In the context of the imperative need for increasing exports, there is certainly a valid case for maintaining the prices of commodities sold in the domestic market at a level high enough to discourage consumption. But here again, some warning is needed. It may well happen that the commodities subject to special levy are unable to find an export market even when they are freed from the levies. This has already happened in the case of sugar. Clearly, a policy of discouraging domestic consumption through heavy imposts should be adopted with discrimination. If it is carried too far, it may end in the loss of the domestic market for winning some uncertain export market.

By far the most beneficial influence on price trends is the one that comes from an increase in overall production and productivity. If per-acre yields in agriculture and man-hour productivity in industrial enterprises were raised and the fruits of this improvement in efficiency were not dissipated in unduly inflated wages, it would be possible to achieve price stability without necessarily sacrificing real income. Again, it has been computed that, with the current trends in population growth at 2.25 per cent per annum, increase in output is necessary to keep *per capita* consumption at a constant level. Since this level is low and it has to be raised if planning is to be meaningful it is obvious that a rate of growth of over 2.25 per cent must be achieved. In certain sectors, this may conceivably mean a choice between current consumption and investment for future development. Moreover, it must be recognised that several development projects involve heavy expenditure and also a long gestation period before they yield results. If the inflationary significance of these projects is to be reduced, the non-developmental element in their outlays must be kept to the minimum and also the time taken for bringing the projects to profit-yielding stage should be kept down. Clearly a price policy must be regarded as an integral part of the overall economic policy. So long as the country's economic policy is realistically geared to improvement in productive efficiency in all sectors, there is no reason to fear that prices will get so far out of hand as to constitute a danger to savings and investment.

CO-OPERATIVE FARMING

THE Governor of the Reserve Bank of India, Mr. H. V. R. Iengar, did some plain speaking on the subject of co-operation with particular reference to farming when he inaugurated the sixteenth session of the Tamilnad Co-operative Conference held at Kumbakonam last weekend. Mr. Iengar commended the business-like village leadership which was sensitive to the needs of serving the community, but hastened to warn against the danger spots created by the incursion of politics and political ambition. The warning is, indeed, quite timely and pertinent. Instances are not wanting to prove that many co-operative institutions have dismally failed only because they have rubbed shoulders with associations intended to pursue political activities. How can co-operatives thrive and prosper if political considerations are constantly imported into their activities? The fundamental prerequisites for the efficiency and success of co-operatives are the co-operative-mindedness of persons at the helm of affairs, their active participation in the working of the institutions, judicious exercise of rights and scrupulousness in carrying out their obligations, and their personal qualities of commonsense, judgment and honesty.

Experience to date is that there are not many co-operative institutions in India which can claim to fulfil these prerequisites. It is in this context that Mr. Iengar's reference to the progress of co-operatives in Japan is of considerable relevance. His views are all the more valuable because they are based on the on-the-spot studies made by him during his recent visit to that country. The coverage of Japanese co-operatives is said to be 100 per cent and this sector feeds the rest of the economy instead of being dependent upon it. All this is remarkable, considering that the Japanese agricultural economy is a small-holder economy, the average of cultivated land per household being less than 2.2 acres. Mr. Iengar's study of the actual working of a primary society, an intermediate co-operative and an apex co-operative organisation has also furnished interesting additional data. The Okubu Primary Agricultural Multipurpose Society, for instance, has 289 members, capital of more than a lakh of rupees and deposits of as much as Rs. 15.88 lakhs. At the next higher level, the Kanagawa Prefectural Credit Federation of Agricultural Co-operatives, which corresponds to a central co-operative bank in India, has a paid-up capital of Rs. 27 lakhs, deposits of as much as Rs. 17.55 crores and no outside borrowings whatsoever. The apex institution, that is, the Central Co-operative Bank for Agriculture and Forestry, has capital and resources of Rs. 13.3 crores and deposits of Rs. 287.9 crores.

The aforesaid figures pertaining to three representative co-operative institutions in Japan should be sufficient to convince anybody that co-operative joint or collective farming is not necessary for the supposed purpose of bringing the economies of scale to small holders. These economies, particularly in respect of credit, marketing and supply, can be more easily brought to them through service co-operatives in India too. Ours also is a predominantly small-holder agricultural economy which, again, is a largely rice economy like Japan's. If co-operative farming has not been attempted in Japan, even though the size of holdings there is very small, the reason is obvious. As practical farmers, the Japanese have the realism and shrewdness to appreciate that intensive cultivation (which requires individual attention and interest) *plus* co-operative credit, marketing and supply can and do mean greater productivity and better returns for the farmers than any system involving pooling of land and joint cultivation. Enlightened agriculturist opinion in India also is to the effect that the real solution to the ills of the countryside will lie not in co-operative or collective farming but in a developed co-operative structure in the field of credit, marketing and supply. But the planners continue to harp on co-operative farming, albeit on a very limited scale. But fortunately the State Governments themselves seem to be frankly doubtful about the success of the co-operative farming scheme, for, in the replies sent by them to the queries of the Central Community Development and Co-operation Ministry about the possible setting up of co-operative farming societies outside the 320 pilot projects (with 10 societies each) during the third Plan period, they have stated that not more than 4,000 such societies can be organised, as against the target of 20,000 proposed by the Working Group on Co-operative Farming.

Evidently, the State Governments are conscious of the serious limitations to any ambitious scheme of co-operative farming. One such serious limitation is the paucity of adequately trained personnel to man the co-operative farming societies. By trying to form such societies without first caring to remove this limitation, the planners and the powers-that-be at the Centre are only putting the cart before the horse. It would be appropriate to recall here what a representative of the Swedish co-operative movement—which itself is now rich in financial resources, constructive ideas and impressive achievements—remarked some years ago: "If we (Swedish) had occasion to start our movement afresh and if we were given the choice between two possibilities—that of starting without capital but with enlightened membership and staff, or, on the contrary, that of starting with a large amount of capital and ill-informed members—our experience would incline us to choose the first course." The watchword, rather the lesson of too many setbacks in co-operation throughout the world is: "Train your co-operators before setting up your societies." The crucial importance of this factor was also highlighted by Mr. Iengar with reference to Japan.

The Japanese experience clearly shows that a combination of family farming, service co-operatives and liberal State aids to agriculture is the correct policy to follow for increasing crop yields and ensuring agricultural prosperity. The Central and State Governments would do well to divert, where possible, the resources earmarked for co-operative farming societies to service co-operatives. What is urgently required is energetic action to strengthen the existing co-operatives and to bring about far greater co-ordination at all levels—among extension staff, management of co-operatives and staff of the co-operative departments. Only then will the technical advice and guidance afforded by the extension agency result in efficient and scientific application of credit and farm supplies provided by co-operatives.

MARKET GOSSIP

The Export Task

THE series of discussions on export problems held by a high Central Government official with the industrial and business interests at Bombay this week underline the supreme urgency of stepping up exports. The foreign assets of India are very low, aggregating no more than Rs. 136 crores, as against Rs. 884 crores in the beginning of the second Plan and Rs. 746 crores before the first Plan commenced. These assets cannot be allowed to be depleted further. But the question is: How? It may be true that the chances of India getting large-scale foreign assistance in the next five years are quite encouraging. Even so, there will remain a substantial part of import requirements (maintenance as well as developmental) not covered by foreign assistance and they can be financed adequately only from out of additional foreign exchange earned from exports, because the scope for cutting down imports of the less important items is very restricted, nay, absent. If a reasonable amount of stability is to be ensured in the developing economy, it is imperative that the proportion of exports to national income should be fairly large.

Viewed thus, it is, indeed, depressing that there has been a distinct deterioration in India's capacity to export since the era of planning began ten years ago. The total f.o.b. value of exports has gone down from over Rs. 730 crores in 1951-52 (first year of the first Plan) to Rs. 640 crores in 1960-61 (last year of the second Plan), whereas, over the same period, the gross national income at current prices has risen from Rs. 9,970 crores to Rs. 13,700 crores. Consequently, the ratio of exports to national income has receded from 7.3 per cent to 4.7 per cent. This trend must be reversed, if the pace of economic development is not to be seriously jeopardised. But even the revised annual export target of Rs. 750 crores during the third Plan period would appear to fall short of what is required. Sir Donald MacDougall, the British economist who was associated with the Planning Commission's Import-Export Working Group, for instance, has suggested that exports would have to rise by 8 per cent per annum, as compared with an increase of 5 to 6 per cent in national income. To quote him: "The proportion of the national output exported would merely have to be restored to the level achieved half a dozen years ago."

The magnitude of the export task is thus great and, unless the Government, industry and trade play their part properly, no worthwhile progress can be achieved. In his talks with the representatives of the All-India Exporters' Chamber in Bombay on Monday this week, Mr. K. R. F. Khilnani, Joint Secretary, Union Ministry of Commerce and Industry, certainly struck a note of realism when he said that the real thing the Indian manufacturers and exporters should do was to produce quality goods, create confidence in foreign buyers, and organise intensive salesmanship and publicity programmes. But all these will not be of much avail, if the prices of our exports are uneconomic. The ability of the country to sell its goods in world markets is essentially conditioned by price and quality. It is these two factors which together constitute the prime key to export promotion and not dynamic salesmanship, however important it may be. There is no doubt that Indian goods can compete effectively abroad provided an all-out effort is made to ensure economic efficiency and low costs even if they conflict with other considerations. The recognition of this factor by the authorities is, to borrow the phrase of Sir Donald MacDougall, the vital need for a rapid and massive increase in exports. The industries, particularly those which have been India's principal earners of foreign exchange, must be given all encouragement and assistance to modernise their equipment and rationalise their production processes. The exporters also deserve proper incentives and support. The latest decision of the Export Risk Insurance Corporation to extend its cover to credit given by manufacturers and private financing institutions to exporters is certainly well-conceived, in that it will enable the exporters to get better terms from their suppliers and to pass on the benefit of such terms to their clients abroad.

Insuring Bank Deposits

The Central Government has announced its decision to initiate immediate action for the implementation of a scheme for the insurance of bank deposits. The relevant Press note issued by the Finance Ministry on Wednesday the 24th inst. says:

"It is proposed that, for this purpose, a separate autonomous corporation should be set up with the Governor of the Reserve Bank as its chairman, who will be assisted by a small board consisting of one of the Deputy Governors of the Reserve Bank of India, a representative of the Central Government and at least one non-official. The Corporation will have an authorised capital of Rs. 5 crores which will be allotted entirely to the Reserve Bank. The deposits in all commercial banks functioning on the date of the introduction of the scheme, other than the State Bank of India and its subsidiaries, will be insured under the scheme. It is considered that, in view of the special position of the State Bank of India and its subsidiaries, it is not necessary that the deposits of these banks should be covered by the scheme; these State-associated banks will nevertheless, be required to contribute to the funds of the Corporation. The limit of amount of individual deposits insured and the rate of premium will be fixed by the Corporation with the approval of the Central Government and may be varied from time to time in the light of experience gained. It is expected that, to begin with, individual deposits to the extent of not less than Rs. 1,000 will be guaranteed under the scheme. The actual figure will be determined by the Corporation after it has been formed. A Bill to give effect to these proposals is under preparation and it is intended that it should be introduced in Parliament during the next session."

Since the details are yet to be finalised, it is premature to comment on the adequacy or otherwise of the measure. This much, however, can be said, namely, that the scheme will be of very modest proportions, covering less than one-fifth of the total deposits. It is believed that the maximum sum proposed to be insured for a deposit holder in a bank is no more than Rs. 1,500 which, as we had pointed out on an earlier occasion, is too small an amount for the scheme to be of use for that type of middle-class people who badly need such protection.

Representations To Finance Commission

The Indian Chamber of Commerce, Calcutta, has just forwarded to the Third Finance Commission (Chairman: Mr. A. K. Chanda) a memorandum pleading for greater devolution of funds from the Centre to the States. The major plea advanced by the Chamber is to the effect that the allocation of the divisible pool of income-tax as between the State Governments should be worked out on the basis of a weightage of 50 per cent to population and a weightage of 50 per cent to collection. The Chamber has suggested that not only collection of tax from the respective States but also the value of their output of industrial goods and raw materials be taken into account. How the last-mentioned factor of industrial and raw material production is relevant in this context is by no means clear. The Chamber's suggestion in regard to excise duties is that more commodities now subjected to excise could be included in the divisible pool. Here again, the plea is for less weightage to population basis and more weightage to the factors of collection from, and consumption of the relevant commodities in, the respective States.

The Bengal National Chamber of Commerce, too, in its representation to the Commission, has pleaded for a weightage of 50 per cent to the factor of collection. But this Chamber has gone a step further and pleaded for the following:

(i) Increase of the divisible pool itself to represent 80 per cent of the entire yield of income-tax.

(ii) Transfer of at least 25 per cent of the proceeds of *all* the basic union excise duties to the States on the basis of consumption in the respective States of the commodities concerned.

It would appear that both the Chambers have had the special needs of West Bengal in general and Calcutta in particular in mind while advancing their pleas before the Chanda Commission.

Expense Limit For Insurers

The Indian Insurance Yearbook, 1959, a summary of which has been just released to the Press, tells, *inter alia*, the same old story of a large number of insurers contravening the provisions of Section 40C of the Insurance Act—the section which seeks to limit the expenses of insurers. Thus, according to the *Yearbook*, a larger number of groups (parent and subsidiary companies taken together) of non-Indian insurers contravened the provisions of the said Section, although the number of groups of Indian insurers violating the section was less in 1959 than in the previous year. Seventy-five per cent of the group which contravened the provisions in 1958 were administered warning in terms of Section 64M(2) of the Act. Out of a total of 129 groups of both Indian and non-Indian insurers who transacted business in 1959, 25 groups contravened the aforesaid provisions four or more times during the period 1954-59 and 21 of them were warned once or more during the years 1954 to 1959. From the aggregate experience of all insurers for all classes of business during the period 1957 to 1959, it was found that, although the actual expenses incurred were less than the basic limits in 1957, they exceeded the limits during both 1958 and 1959. That the quantum of expenses has little relation to the volume of business is evident from the fact that the groups of insurers, who spent less than the basic limits fixed as per Rule 17E of the Insurance Rules, 1939, wrote the same proportion of the total gross premium income in India during 1959 as they did in 1958.

Why is it that, in spite of repeated warnings administered by the Controller of Insurance, a large number of insurers are still found to be violating the law limiting expenses? Insurers are certainly not a less law-abiding lot than others engaged in any other section of business or industry. The explanation lies in the arbitrary and unrealistic nature of the formula limiting the expenses of management under Section 40C of the Insurance Act. In fact, successive chairmen of the Indian Insurance Companies Associations (Bombay and Calcutta) and other leaders of the Insurance industry had in the past urged a revision of the formula so as to make it more realistic. There is a large section of insurers who believe that the present formula is a major factor responsible for the scramble for business and the resulting malpractices which have been the bane of insurance in the country. The wisdom of relating the permissible expenses to the gross premium, as is the case under the present formula, has been questioned time and again. For instance, in his speech at the thirtieth Annual Meeting of the Indian Insurance Companies' Association, Bombay, held in 1958, Mr. P. U. Patel, the then Chairman of the Association, observed:

"Making the direct gross premium income as the sole criterion for judging whether a particular unit is economically run or otherwise is, in my opinion, contrary to all accepted canons. That the formula works unnecessary hardships to several insurers and is far from sacrosanct is admitted by different sections of the trade. I would perhaps go further and say that doubt on this particular point is not even a permissible speculation. To assume that a company which complies with Rule 17-E is definitely better and more economically managed than another unit which, for various reasons, fails to comply with this provision, is not a proposition so obvious as it looks at first sight. I am not aware of any other country which treats the direct gross premium income as the sole criterion by which the efficiency and economic running of an institution is to be measured."

That the formula fixing the quantum of allowable expense is an abitrary one has been apparent and admitted by almost every section of insurers. The need for a revision of it has also been recognised. Twice at least in recent years the Executive Committee of the General Insurance Council had appointed sub-committees to go into the question. The issue is said to be still under the consideration of a sub-committee at present. But so far, nothing has materialised. It is true that opinion as to what should be the basis on which the limit of permissible expenses should be fixed is not as unanimous as the view that the present formula needs revision. It is to be hoped that the newly-reconstituted Executive Committee of the General Insurance Council will take up the matter forthwith and see that a more satisfactory basis for limitation of expenses is devised. Only then, perhaps, will there be a decline in the number of insurers contravening the provision of Section 40C.

Future Of I.M.F.—Bernstein Plan

A number of suggestions have been put forward in recent months to reform the international payment system. The difficulties encountered by the United States in the sphere of international payments have highlighted the urgent need for reforming the existing international financial institutions. Some authorities in the U.S., notably Professor Triffin, even went to the extent of suggesting the transformation of the I.M.F. into a central bank for the world, accepting deposits of local currencies from Fund members and extending credit to them whenever some of the countries ran short of foreign exchange.

The latest essay in the same field is the proposal recently put forward by Mr. Bernstein, a former research director of the I.M.F., who at present enjoys high standing among European central banks as an international financial consultant. Mr. Bernstein's proposal is divided into two parts. The first is concerned with quotas that now govern each country's drawing rights from the I.M.F. In this connection, Mr. Bernstein has suggested that the U.S. and Britain should take the initiative in considering their maximum I.M.F. drawing rights as part of their reserves. As these rights, which normally amount to 125 per cent of a country's quota, are $1,950 million in the case of the U.K. and $5,700 million in the case of the U.S., it would be easy to see that Bernstein's proposal would clearly augment the reserves of these two countries. According to his scheme, the I.M.F. should allow the members to use their entire drawing rights from the Fund automatically. Mr. Bernstein has, however, quite discreetly suggested that countries should draw only modest amounts from the I.M.F. whenever they are losing either gold or foreign exchange. If Mr. Bernstein's plan is accepted—and there are more odds in its favour as compared to the two rival proposals of Professor Triffin and Mr. Stamp—it would bring into existence a large pool of international liquidity without any revolutionary change in the I.M.F.'s constitution. It would also bring that institution much closer to the scheme originally envisaged by Lord Keynes during the last war.

The second set of suggestions made by Mr. Bernstein is clearly aimed at providing a defence against speculative and other capital movement that may threaten any of the world's leading currencies. These difficulties would be met by setting up a separate Reserve Settlement Account, the resources for which would come principally from its larger members, who would purchase notes or debentures up to a specific amount, carrying a gold guarantee. Under this scheme, a country (for example, Germany under the present circumstances) would be asked to take up its subscription, if its own reserves were increasing and another country needed its currency to meet a major outflow of funds. If the creditor country itself were to go into deficit (for example, the United States at present), it would be able to redeem its notes and the whole transaction would go into reverse. Mr. Bernstein thinks that, if the U.S. were to agree to subscribe up to $3,000 million of such notes, the U.K. $1,500 million and the Western European countries and Japan $3,500 million altogether, his proposal would be able to meet any contingencies that could arise.

It may be noted that Mr. Bernstein's proposals are not very novel and the recent tacit agreement among European central bankers at Basle, under which they have informally consented to stockpile each other's currencies, has much in common with the Bernstein plan. But the merit of his Plan is that it would be less dependent on the whims of the central bankers and the credit provided would also carry a gold guarantee.

Knowledgeable financial circles in European countries seem to feel that there is a greater likelihood that Mr. Bernstein's proposal would be accepted in the forthcoming meeting of the I.M.F. in Vienna during September next. Mr. Jacobsson's ideals resemble most closely the Bernstein Plan, as the Director-General also wants to conclude stand-by agreements with the central banks of the major industrialised countries, which would open lines of credit in their own currencies. This is calculated to augment the Fund's resources to help countries facing balance of payments difficulties.

It is reported that West Germany's delegate to the Vienna meeting may also support the

SHARE MARKET FIRM

ALL-ROUND SPURT IN VALUES

(From Our Own Correspondents)

BOMBAY, *24th May*

IN refreshing contrast to the hesitant and sluggish trend noted last week, equities on the Stock Exchange ruled distinctly firm during the week under review. On the last day of the previous settlement itself, signs of a change in sentiment were clearly discernible. The lower contango charges and slight relaxation in special deposit margin at Friday's settlement, together with the improvement in the money market conditions, provided a green signal for a rally. On Monday, the opening day of the new settlement, bulls tried to hold the market in their grip, while the bears were busy cornering their positions. There was also sizable fresh support from investors. The expectation that the Special Committee appointed by the Stock Exchange to study the question of special *havala* deposit rates might suggest abolition or at least substantial modification of these rates also imparted considerable strength to the market. Encouraging dividend news and optimism regarding the outlook for corporate earnings, too, fanned the bullish fervour. The scrips in both cash and forward lists, as a consequence, staged an impressive rally. The popular speculative scrips like T.E.L.Co., Bombay Burmah and Standard Mills were particularly sought after by speculators.

In the steel section, Tata Steels were in the limelight. Hopes of higher dividend and enhanced retention prices for steel induced sustained buying, the quotation jumping up from Rs. 151 at the beginning of the week to Rs. 158.75 today. The high level attracted profit-taking and the rate eased to Rs. 156.75 but rose again to Rs. 157.50 towards the close. The net gain over the week is Rs. 6.75. Indian Irons slowly but steadily advanced from Rs. 27.10 to Rs. 27.95 today before finishing lower at Rs. 27.75, showing a net rise of 65 nP over the week. Mukand Irons improved early in the week from Rs. 27.50 to Rs. 28.50 before finishing at Rs. 28.25 today.

Textile shares attracted good attention of operators, thanks to improvement in cotton supply position and encouraging offtake. Standard Mills spurted by as much as Rs. 73 to Rs. 1,555 *ex-div.*, as against Rs. 1,503 *cum-div.* last week-end. Centurys evoked heavy speculative buying and rallied from Rs. 622.50 early in the week to Rs. 647.50 on Monday and to as much as Rs. 674 today. The finish was, however, lower at Rs. 670. Even then, today's closing is Rs. 50.50 higher than last week-end rate. Khataus were marked up by Rs. 32.50 to Rs. 560. Kohinoors advanced from Rs. 312.50 to Rs. 326 today before receding to close at Rs. 321. The net gain over the week is Rs. 8.50. Shree Niwas strengthened by Rs. 9.60 to Rs. 260 *ex-div.* as against Rs. 263 *cum-div.* last week-end. New Greats hardened by Rs. 7.50 to Rs. 212.50. Simplex improved from Rs. 187 last week-end to Rs. 194 on Monday before easing to Rs. 193, a net gain of Rs. 6. Svadeshis gathered Rs. 5.50 to Rs. 273.50. Swans rose by Rs. 5 to Rs. 575. Finlays increased by a like amount to Rs. 320. Central Indias put on Rs. 3 to Rs. 113.50. Mysores picked up Rs. 3.70 to Rs. 72. Bombay Dyeings opened at Rs. 63.50 and increased to Rs. 65 today, the net gain over the week being Re. 1.60.

Sugar shares were well supported. Belapurs spurted from Rs. 284 to Rs. 294 today. Profit-taking attracted by this level resulted in a decline to Rs. 290 at close. Phaltans hardened by Rs. 4.50 to Rs. 141. Maharashtra Sugars changed hands Rs. 3.75 higher at Rs. 190. Oudh Sugars strengthened by Rs. 3 to Rs. 185. Walchandnagars were done at Rs. 192 *ex-div.* against Rs. 292.50 *cum-div.* last week.

In the cement group, A.C.Cs rose from Rs. 158 to Rs. 163.50 today before finishing at Rs. 162.25, recording a net gain of Rs. 4.25. Digvijays hardened by Rs. 2.75 to Rs. 155.50. Orissas, however, were a shade quiet at Rs. 14.56, as against Rs. 14.60 last week-end.

Trading in shipping shares was influenced by the general buoyancy. Scindias put on 84 nP to Rs. 15.24. New Greats found buyers 56 nP higher at Rs. 15.20. Among automobiles, Premiers spurted by Rs. 5 to Rs. 171.50. Hindustan Motors attracted speculative activity and improved to Rs. 21.60, a net rise of 64 nP.

Rayon shares were well fancied. National Rayons were in the limelight and rallied, on persistent buying, from Rs. 529.50 last week-end to Rs. 564 today. The finish was, however, lower at Rs. 561. The net rise over the week is Rs. 31.50 Baroda Rayons firmed up by Rs. 9.50 to Rs. 130. South India Viscose rose by Rs. 6 to Rs. 165. Gwalior Rayons strengthened by Rs. 3 to Rs. 51.50.

Dyes and chemicals recovered to some extent the losses suffered last week. Amar-Dyes (old) jumped up by Rs. 25 to Rs. 410, the new shares rising by Rs. 3.50 to Rs. 380. Indian Dyestuffs advanced by Rs. 17.50 to Rs. 530. Dharamsis hardened by Rs. 13.75 to Rs. 280. Alembics put on Rs. 5 to Rs. 262.50. Poly-Chems were pushed up by Rs. 7.50 to Rs. 237.50. Synthetics were done at Rs. 173, as against Rs. 171 last week. Tata Chemicals improved by 68 nP to Rs. 19.60. Chemo Pharmas and Dhrangadhras were steady at Rs. 28 and Rs. 127.50, respectively. Colour Chems, on the other hand, declined by Rs. 1.25 to Rs. 343.75. Kemp and Co. lacked buyers and receded by Rs. 3.75 to Rs. 311.25.

Engineering shares generally moved up. Telcos were a hot favourite. Keen bidding took the scrip from the last week-end rate of Rs. 331.50 to as high as Rs. 369 today before finishing the session Rs. 3 lower. The net gain over the week is Rs. 34.50. New Standards (new) were marked up by Rs. 3.50 to Rs. 185. Alcock Ashdowns found buyers Rs. 2 higher at Rs. 310. Cooper Engineerings gathered Rs. 2.50 to Rs. 172. Larsen and Toubros gained Re. 1.75 to Rs. 44.75. Kamanis improved by 28 nP to Rs. 17 and Mahindras by 48 nP to Rs. 20.24.

Miscellaneous industrials too scored handsome gains in values. Bombay Burmahs elicited speculative support and rallied from Rs. 609 to Rs. 647.50 today before closing at Rs. 641. The net rise over the week is Rs. 32. Voltas were well favoured, the quotation advancing by Rs. 22 to Rs. 293.50. West Coast Papers hardened by Rs. 5.50 to Rs. 199.50. Jayant Papers picked up Rs. 3 to Rs. 64. Tata Oils found buyers Rs. 3.50 higher at Rs. 77. Ceat Tyres strengthened by Rs. 4.25 to Rs. 136.25. Premier Tyres put on a rupee to Rs. 102. Killicks improved by Re. 1.50 to Rs. 102. Hindustan Levers were better by 50 nP at Rs. 47.50.

* * * *

Madras Stock Exchange

MADRAS, *23rd May*

In the absence of any encouraging development, the Stock Exchange displayed listless conditions during the week under review, though there were some signs of buying support towards the close, particularly for textiles in sympathy with the trend in the Bombay market. Most counters were lower on balance as compared with last week. Fresh investment support was lacking, as a good part of the funds continued to be locked up in recent issues and the funds, it was felt, would be released only after some weeks. The rates of interest charged by banks were also generally high. Teas ruled easy on reports of growing competition in world markets. Coffees were dull in view of the persistent low level of prices for the commodity. Rubbers moved narrowly, only a few scrips eliciting enquiries. Sugar shares encountered selling. In contrast, textile shares made much headway, reflecting operators' confidence as to the future of the industry. In the miscellaneous section, chemicals were particularly weak.

Among teas, Nonsuchs dropped 10 nP t Rs. 27.90. Chembras shed 3 nP to Rs. 3.80. Ki Kotagiris were neglected at Rs. 5, Peermades a Rs. 23.30 and Waterfalls at Rs. 3.02. Devasholas however, put on 20 nP to Rs. 30.50. Parkside rose by 10 nP to Rs. 28.85. Blue Mountain gathered 6 nP to Rs. 3.19. In the coffee group Anaparais receded by 32 nP to Rs. 4.10. Ouchter lony Valleys softened by 5 nP to Rs. 4.10. Con solidated Coffees retreated from Rs. 22.25 t Rs. 22.15 before closing at the last week's level Coffee Lands were quiet at Rs. 18.50, as also Balanoors at Rs. 16.60 and Cowcoodys at Rs. 5.20 Rubber shares were better. Midlands rose by 10 nP to Rs. 11.60. Pullangodes improved by 6 nP to Rs. 1.85. Cochin Malabars initially slipped from Rs. 7.73 to Rs. 7.71, but improved subsequently t Rs. 7.75 with a net gain of 2 nP over the week.

In the sugar group, United Breweries came in for renewed selling and declined by Rs. 3 to Rs. 110 Cauverys lost a rupee to Rs. 131. Deccans shed 5 nP to Rs. 13.80. Mysores were quiet at Rs. 59 But Indias were firm at Rs. 12.90, thanks to the announcement of a higher dividend of 14 per cent taxable, for the year ended September 1960, as against only 12½ per cent distributed in the previous year. East India Distilleries rose by 37 nP to Rs. 43.87.

Coimbatore Pioneers provided a bright spot in the textiles section, the quotation advancing by Rs. 10 to Rs. 360. Metturs and Cannanores were marked up by Rs. 3 each to Rs. 402 and Rs. 152, respectively. Coimbatore Cottons rose by Rs. 2 to Rs. 166. Maduras scored a gain of 50 nP to Rs. 36.75. Travancore Rayons fell initially from Rs. 38.50 to Rs. 37.75, following news of 20 per cent dividend announced for 1960 (same as last year), (which fell short of market expectations. But they recovered later to Rs. 39 on hopes of a new capital issue for expansion of the Company. Radhakrishnas hardened by 50 nP to Rs. 31.25 on the news that the Directors had recommended a dividend of 12 per cent, taxable, for 1960, which compares well with 9 per cent distributed in the previous year. Palani Andavar 'A's were maintained at Rs. 250 and 'B's at Rs. 300. The Directors of the Company have declared a dividend of 50 per cent, taxable, for 1960, as against only 30 per cent in 1959. Lakshmis were, however, quiet at Rs. 162, as also Bangalore Woollens at Rs. 200 and Buckinghams at Rs. 213.

Among miscellaneous industrials, Mysore Chemicals suffered a setback of 65 nP to Rs. 24. Mysore Fertilisers eased by 10 nP to Rs. 11.15. F.A.C.Ts dropped 3 nP to Rs. 10.65. Metturs were dull at Rs. 14.25. Travancores were, however, higher by 3 nP at Rs. 16.75. Among cements, Indias fell by 3 nP to Rs. 6.05. Dalmias and Travancores were fancied at Rs. 12.05 and Rs. 8.45, respectively. But Andhras improved by 5 nP to Rs. 10.50. Among others, Western India Plywoods lost a rupee to Rs. 242. Aluminium Industries changed hands at Rs. 23 and Indian Steel Rollings at Rs. 10.10. Jeewanlals were maintained at Rs. 8.08. following the announcement of a final dividend of 1 per cent, making a total of 4½ per cent, taxable, for 1960, as compared with 2½ per cent, taxable, for 1959.

* * * *

Calcutta Stock Exchange

CALCUTTA, *23rd May*

Barring a few features on interested buying at lower levels and a late rally in clearing shares, the Stock Exchange ruled listless during the week under review. Business put through was restricted, as fresh funds for investment were not forthcoming. The new share issues and calls have absorbed a good portion of funds and, with the number of new entrants on the Exchange in the past one year having increased markedly, floating stocks have reached the verge of becoming excess in relation to floating funds. Generally prices moved down and the technical position became all the healthier. Good corporate news and prospects for the near future did prevent short-selling, but, in view of tight money conditions, lower levels would have attracted great support. The meagre activity shown by the L.I.C. is to be attributed to the Government's loan programme, although market circles considered that the present time was very appropriate for the L.I.C. to purchase equities in view of their attractive low levels.

KOTHARI CABLES AND ELECTRICALS

An industrial licence has been granted to Messrs. Kothari and Sons of Madras, a leading South Indian business house, for the setting up of a factory with capacity to manufacture 3,000 tons of A.C.S.R. (Aluminium Conductors Steel Reinforced) and 18 million core yards of P.V.C. and other wires annually. The proposed factory will be situated near Madras. The total capital outlay on the project of the Company, called Kothari Cables and Electricals Ltd., is estimated at Rs. 65 lakhs, including Rs. 40 lakhs fixed capital and Rs. 25 lakhs working capital. The major portion of this outlay, amounting to Rs. 40 lakhs, will be being raised by way of loans (a sterling loan of Rs. 8 lakhs and a rupee loan of Rs. 17 lakhs).

The new Company is expected to have already entered into an agreement with a reputed foreign company for the supply of know-how, plant and equipment for the project. Besides, the foreign firm will be investing a substantial part of the foreign exchange required for this project. It will also contribute Rs. 12 lakhs equity capital. The remaining portion of equity capital, that is, Rs. 28 lakhs, will be raised by Messrs. Kothari and Sons. The new factory is expected to go into production by January next.

Notice

NOTICE TO THE MEMBERS OF THE DURBHANGA SUGAR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the Maharaja's Office Building in Darbhanga, Bihar, on the twenty-first day of June, 1961, at 10.30 a.m., to consider and, if thought fit, to pass the following Resolutions which will be proposed as Special Resolutions:—

1. That the Capital of the Company be increased from Rs. 30,00,000 to Rs. 60,00,000 by the creation of 3,00,000 new equity or Ordinary shares of Rs. 10 each.
2. That the Memorandum of Association of the Company be altered in the manner following, namely:—

   In Clause 5 the words "the capital of the Company is Rs. 30,00,000 divided into 3,00,000 shares of Rs. 10 each" shall be deleted and there shall be substituted the following:

   "the capital of the Company is Rs. 60,00,000 divided into 6,00,000 shares of Rs. 10 each."
3. That the Articles of Association of the Company be altered in the manner following, namely:—

   In Article 3 the words "the share capital of the Company is Rs. 30,00,000 divided into 3,00,000 shares of Rs. 10 each" shall be deleted and there shall be substituted the following:

   "the capital of the Company is Rs. 60,00,000 divided into 6,00,000 shares of Rs. 10 each."

The Register of Members and the Transfer Register will be closed from the 10th June to the 21st June, 1961, both days inclusive.

Any member who is entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Directors,

THE DURBHANGA SUGAR COMPANY, LIMITED,
W. F. MALDEN,
Manager.

LOHAT
DISTRICT DARBHANGA,
12th May, 1961.

NEWS IN BRIEF

THE next session of the *Lok Sabha* will begin on 7th August, 1961 and of the Rajya Sabha a week later.

The Central Excise Reorganisation Committee has extended the time limit for submission of replies to its questionnaire upto 31st July, 1961.

As a result of the agreement between the Government of India and the Government of Nepal on the Gandak Irrigation and Power Project, the Government of India has set up a Co-ordination Committee to establish a forum for discussion of problems of common interest in order to expedite decisions for the early completion of the project.

The Select Committee on the Income-tax Bill 1961 has extended the time for sending memoranda on the Bill from 25th May to 12th June 1961. Public bodies, associations or individuals desirous of submitting memoranda on the Bill for the consideration of the Committee are required to send 30 copies of each memorandum to the Secretary, Lok Sabha Secretariat.

The Government of Gujarat has announced that in respect of acquisition of lands, the joint-stock companies or co-operative societies have to pay only 25 per cent deposit in advance instead of the entire cost of the land acquired, including all compensation, damage, costs and other charges as at present, the deposit being payable either in cash or in approved Government securities.

The "Giprostanok" Institute of Moscow has just completed the blue-print of the plan for the surgical instruments plant in the public sector to be built on the banks of Adyar river in Madras. The proposed plant will manufacture every year 2.5 million surgical instruments of about 180 different types, including highgrade steel pincers, scissors, needle-carriers, anti-hæmorrhage clips, aneets and syringes.

Associations concerned with the regulation and control of business relating to forward contracts are required to apply for registration to the Forward Markets Commission within six months from 28th December 1960, the date on which the Forward Contracts (Regulation) Amendment Act, 1960, came into force. The procedure for registration of such associations is laid down in the Forward Contracts (Regulation) Amendment Rules, 1961, published in the *Gazette of India Extraordinary*, Part II, Section 3 of sub-section (ii) dated 15th May 1961. Associations recognised under Section 6 of the Act need not apply for registration.

A giant 16,000-ton Russian oil tanker, carrying over three million gallons (11,000 tons) of petroleum products for the Government-owned Indian Oil Company (I.O.C.), steamed into Visakhapatnam Port on 18th inst. This is the first shipment of Soviet oil to reach Andhra Pradesh—but the sixth to reach India—under the Indo-Soviet trade agreement. Previous shipments have been unloaded at Bombay and Cochin only. The I.O.C. has till now imported over 18 million gallons (65,780 tons) of vital refined petroleum products (12 million gallons of superior kerosene and 6 million gallons of high speed diesel oil) from the U.S.S.R. at favourable rates. Payment for these imports are being made by the I.O.C. to the Soviet Union in non-convertible Indian rupees only.

The Government of India has decided to extend, with effect from 30th June next, benefit of compulsory contributory provident fund under the Employees' Provident Fund Act to hotels and restaurants and to establishments engaged in the storage or transport or distribution of petroleum or natural gas. The benefit is applicable to establishments which employ twenty or more persons. Recently, the benefit was extended to the starch industry. Up to the end of 19th December 1960, the total number of exempted and unexempted establishments covered by the Act was 8,131 and the number of subscribers in such establishment was 2,819,000; the total accumulations of provident fund in exempted and unexempted establishments were Rs. 19.45 crores, excluding refunds.

The Government of India has decided to give a reward of Rs. 500 to persons who supply information leading to the discovery of tin, copper, lead, zinc, bismuth, nickel, mercury antimony, cobalt, arsenic and elemental sulphur, asbestos (chrysotile variety), borax and coking coal. If the deposits need detailed exploration, an additional sum twice the amount of reward will be paid and, if the exploration proves that the deposit is economically workable, another reward up to Rs. 10,000, depending upon the reserves and quality, might be paid. No reward, however, will be given for any deposit which does not hold promise of commercial value. The discoverer, who claims a reward for a new mineral deposit shall have no special or preferential claim for the mineral concession over the area for the discovered mineral deposit.

* * * *

From Abroad

Australia has sold 3.7 million bushels of wheat to Egypt for the first time in nearly 10 years.

The Finnish Parliament has passed the proposal for Finland's affiliation to the European Free Trade Association. This will come into effect from 1st July next.

The Ceylon House of Representatives passed the Peoples' Bank Bill on the 16th inst. The Bill provides for the setting up of a State-owned bank to extend credit facilities to the rural population.

The Export-Import Bank has decided to lend $62.3 million to the Government of Philippines for the construction of an integrated steel mill. The credit will finance equipment and engineering services from U.S. suppliers.

Ceylon and Bulgaria have concluded a mutually preferential trade agreement and a payments pact providing for reciprocal credit, both valid for one year. Ceylon will supply tea, rubber and coconuts, while Bulgaria will supply, *inter alia*, machinery, textiles and sugar.

As a result of the agreements reached in Montreal, Canada, by members of the International Air Transport Association recently, the Pan American World Airways will slash transatlantic cargo rates from 1st September next. The revision in cargo rates is expected to increase the cargo traffic for all airlines by 50 per cent.

In a bid to help Brazil solve its pressing economic problems and to permit the Government to meet the crisis of inflation, the U.S. and other creditors of Brazil have put together a sum of $1,000 million "package" in financial assistance. This sum includes about $608 million new credit from the U.S. Government and the I.M.F.

All branches of foreign firms in Pakistan and other undertakings having a foreign interest have been ordered to report to the State Bank by 30th June next their liabilities and assets as on 31st December 1960. This information is being collected under the International Monetary Fund and Bank Act 1960 with a view to determining Pakistan's international investment position.

The British Government will contribute £7.25 million by way of loans for the development of Malta dockyard which is estimated to cost £8.06 million. An agreement to this effect has now been reached between the Government and Messrs. C. H. Bailey (Malta) Ltd. The first phase of the plan is expected to be completed by 1963. The expanded dockyard will take tankers upto 85,000 tons deadweight, and will include all major works of conversion except the enlargement of the No. 2 Dock.

The Brazilian trade delegation currently touring Eastern Europe has so far concluded $800 million worth of long-term trade agreements, according to Sr. Dantas, the leader of the delegation. The countries covered by the agreements include Yugoslavia, Albania, Rumania, Bulgaria and Hungary. Accordingly, Brazil will buy agricultural machinery, oil drilling equipment, tubes, chemicals, newsprint and pharmaceuticals in exchange for coffee, cotton, rice, iron ore and vegetable oils.

Wages increased faster than productivity in W. Germany during 1960. In the first quarter of 1960, production per employed person in the industry was 11.8 per cent and the average income 7.6 per cent higher than in the same period in 1959. However, in the fourth quarter, production rose only by 4.2 per cent while the income per employed person increased by 10.9 per cent. For the whole of 1960 the average increase in production per employed person was 7.3 per cent as against an average rise in income by 9.9 per cent.

A master plan has been prepared by the Negev Phosphate Co., a Government-controlled concern, for the exploitation of Israel's phosphate deposits. The plan envisages production of 200,000 tons of calcinated phosphates per annum for the manufacture of concentrated phosphoric fertiliser and animal foodstuff additives. Phosphoric fertiliser and food additives are to be produced at a combined rate of 140,000 tons a year. It also provides for the construction of a £3 million soda ash plant with an annual production capacity of 60,000 tons.

INCREASING FACILITIES BY THE EXPANDING BANK

THE BANK OF MAHARASHTRA LIMITED

Estd. 1935. Regd. Address: 1177 Budhwar, Poona City

Now 3 per cent

Increased Interest Rate for special Savings Deposit scheme.

New easy rules.

Every Rupee deposited in this Bank helps the economic development of Maharashtra.

Sixty-six Branches

Poona City	7	Vidharbha	16
Bombay & Suburbs	11	Mysore State	3
Other centres in Maharashtra	19	Andhra Pradesh	1
Marathwada	7	Madhya Pradesh	2

SPECIAL FACILITIES

- Travellers' Cheques in Sterling and Dollar Currencies.
- Agencies in all important cities of the world.
- All facilities about Foreign Exchange.
- Safe Deposit Vaults in 11 Branches besides the Head Office.

The Bank has distributed the usual 9 per cent dividend and 2 per cent Silver Jubilee Bonus to the Shareholders for the last year.

C. V. JOAG,
General Manager.

(Paramount Ltd.)

PERSONAL

SARDAR Swaran Singh, Union Minister for Steel, Mines and Fuel, returned to New Delhi on Sunday this week after a ten-day visit to Japan.

Mr. Nagendra Bahadur, Joint Secretary of the Union Ministry of Commerce and Industry, has been appointed a Director of the State Trading Corporation.

Sir W. Gunn, Chairman of the Australian Wool Bureau, has been elected Chairman of the International Wool Secretariat Board. Dr. J. G. Van De Wath, Chairman of the South African Wool Board, and Mr. Acland, Chairman of the New Zealand Wool Board, have been elected Vice-Chairmen.

Mr. V. Satyamurti, Regional Director, Department of Company Law Administration, Eastern Zone, has been transferred to Delhi as Deputy Secretary in the Department of Company Law Administration. Mr. S. Venkataraman has been appointed in his place.

The Brazilian Coffee Institute has passed the 1961-62 shipping regulations based on an estimated marketable crop of 36 million bags, of which 18 million bags are expected to be exported. Coffee will be divided into two series, namely, market and retention. The market series, in turn, is comprised of four quotas—fine quality, good description, co-operative and common. On the other hand, the retention series will be composed of, besides good description and common quotas, the non-exportable coffee also.

A residential centre for export studies for top management is being opened in June next at Sundridge Park, Kent, U.K. It is organised by the Sundridge Park Management Centre, in consultation with a special advisory panel set up by the Federation of British Industries. The Centre will provide intensive training at top level for Britain's exporters, mainly intended for export directors and senior executives concerned. Courses will last for three weeks and will be repeated at regular intervals throughout the year.

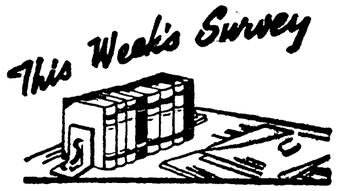
The Government of Ceylon has finalised plans for setting up a corporation to import and distribute oil in Ceylon. The proposed Corporation is expected to commence business before the end of the year. A Government delegation will visit Russia and West Asian countries to negotiate the purchase of oil for the Corporation. These countries have already made firm offers of oil in exchange for Ceylon's tea, rubber and coconut products.

A new step towards overcoming Britain's shortage of skilled technicians has been announced by the Ministry of Education. It is a part-time engineering course for boys of 15 and 16 who show promise of being able to fill skilled jobs in industry. The course will be introduced in technical colleges throughout the country in the autumn and in it the boys will need to study technical subjects for about 240 hours a year. The idea is that employers should give the boys time off from work to attend classes. The course will provide an introduction to both mechanical and electrical engineering.

In order to develop trade within the European Free Trade Association the Chamber of Commerce Organisations of all the E.F.T.A. countries have agreed to establish the E.F.T.A. Association of Commerce. The Association will meet from time to time to discuss matters of mutual interest. Its members will seek to work out practical solutions for any difficulties which restrain the expansion of trade either within the Seven or with other countries. The first meeting of the Association is expected to be held towards the end of the year. Its secretariat is situated at the Association of British Chambers of Commerce in London.

Exports of the West German industry accounted for DM 40,000 million or an export rate of 15.5 per cent of the industry's total turnover in 1960 as against an export rate of 15.1 per cent in the previous year. The slight increase is attributed to the inclusion of Saar industry sales in the overall W. German industry statistics as from the beginning of 1960. Manufacturers of investment goods held the first place among the Federal Republic's export industries with exports worth DM 21,000 million, or 53 per cent of the total exports of industrial goods. Sales abroad of machinery and vehicles together accounted for about one-third of the overall industrial exports. Shipbuilders reached the highest export rate with 62 per cent of their total sales.

Plans for the establishment of three nuclear reactors at Karachi, Lyallpur and Chittagong are being studied in Pakistan. The Karachi reactor with a capacity of 125 million mw.h., is expected to cost roughly Rs. 25 crores. The capacity of the two other reactors is put at 100 million mw.h. each. These reactors will be based on imported uranium. A final report on these projects is expected to be submitted by the Atomic Energy Commission to the Government in August next. The Commission has already entered into negotiations with the World Bank for necessary finances and has obtained the services of three U.S. consultants to advise on the feasibility or otherwise of the projects. The feasibility report is likely to be submitted to the Commission in June next. Meanwhile, the Commission has finalised plans for the setting up of a Nuclear Reactor Institute near the new capital site in Islamabad and two research laboratories at Lahore and Dacca.



FEDERATION ON L.I.C. INVESTMENTS

IN a communication addressed to the Union Finance Minister, Lala Karamchand Thapar, President of the Federation of Indian Chambers of Commerce and Industry, has questioned the basic postulates underlying the recent recommendation of the Estimates Committee of the Lok Sabha that the entire investible funds of the Life Insurance Corporation of India be taken over by the Government as an unfunded debt. The Federation's argument is that the suggested change in policy will be a retrograde step from the point of view of planned effort, of management of corporations and of the policyholders themselves. The Committee of the Federation supports in full measure the stand taken by the Finance Ministry on the question in its evidence before the Estimates Committee. The Ministry, it may be recalled, had strongly opposed making over the funds of the Corporation to the Government on the ground that (1) it would make the Corporation static and keep down bonuses, (2) it was against the promise that funds would be made available to the private sector and other assurances given in Parliament.

The main case put forward by the Estimates Committee for divesting the L.I.C. of the function of investment, according to the Federation, is built upon four basic reasons. They are:

1. That the various requirements of diversification, development, social advancement and furtherance of the interest of the community as a whole could be better served by Government with the help of the funds provided by the L.I.C. for the Plan than could be done by the Corporation itself.

2. That there is a real danger that L.I.C.'s purchases in the share market may lead, directly or indirectly, to speculative activities.

3. That with the passage of time, the business will increase to such an enormous extent that the L.I.C., whose main purpose is to procure insurance business and render service, may not be able to devote sufficient time and care also for ensuring the most advantageous investment of the large funds without detriment to its main work and that the Chairman of the Corporation himself stated that, if the investment work is taken away from the Corporation, the Directors will be rid of a lot of bother.

4. Investments in stocks and shares lead to allegations and aspersions which, though they might not be justified in most cases, yet may do little to increase the prestige of the Corporation.

The first point, according to the Federation, is based on a misunderstanding of the objectives of the Plan. The Estimates Committee, it points out, seems to consider that only those funds which are directly spent by the Government serve the Plan purposes and not others which are invested by the public directly in productive ventures. The suggestion made by the Committee, by way of what the Federation calls a "concession to the private sector," that the Government should provide, through some other financing agencies, a part of the funds taken over from the L.I.C. for the development of new industries or the expansion of existing ones, the Federation points out, suffers from the very defect which the Committee has found in the L.I.C. directly investing in stocks and shares. "What we fail to understand," it declares, "is that, if direct investments in stocks and shares by the L.I.C. lead to allegations and aspersions and also to speculation, how the other financing agencies or the results of the decisions of these agencies will be immune from them."

Regarding the last point (No. 4 above), the Federation avers that it is a very naive argument to suggest that the service aspect of the Corporation could be improved if it is freed of the worries of investment. For it is not the same person or set of persons that are looking after the investment portfolio and the rendering of service to policyholders, although it is true that the Chairman and the Board of Directors may have the ultimate responsibility for both.

There is another matter which, in the Federation's opinion, is fundamental to the investment policy of the Corporation, namely, the interest of the policyholders. The primary concern of the Corporation, it says, should be to guard and promote the interest of the policyholders. The suggestion of the Lok Sabha body that the Government may take over the entire funds and pay a "minimum" rate of interest, the Federation maintains, is basically unfair to the policyholders because it denies them the benefit of rising yields from investment in equities in an expanding economy.

It is evident from the above summary of the Federation's arguments that its main objection to the Estimates Committee's suggestion is based on the fear that (*a*) it will diminish the flow of funds to the private sector and (*b*) that it will reduce policyholders' bonus. As we pointed out in a leading article in our issue dated 22nd April, 1961 (*vide* page 725), these fears are unfounded. The Estimates Committee has nowhere suggested that the flow of funds to the private sector should be reduced. Its contention is that the L.I.C. is not the most appropriate agency for promoting industrial development by channelling investments whether in the public or private sector or for achieving the various objectives of nationalisation of life insurance such as diversification of investment, economic development, social advancement and furtherance of the interest of the community as a whole. It is difficult to disagree with this eminently sensible argument. There is no question here of the Government being asked to go back on its promise, for what is suggested is that a more appropriate body be entrusted with the investment of the L.I.C.'s funds for furthering the objectives of nationalisation. The private sector's share could still be maintained or increased and the assurance given by Mr. C. D. Deshmukh at the time of nationalisation of life insurance could thus be kept.

The apprehension expressed by the Federation that if the Government takes over the funds of the L.I.C. and gives interest at a predetermined rate to the Corporation to meet its obligations to the policyholders, the bonus rate on with-profit policies will be affected is also not warranted. For investment in stocks and shares forms only a small percentage of the total investments of the Corporation. This being so, is a slight decline in the earnings from funds hitherto invested in stocks and shares going to make so much difference to the surplus as to wipe out the bonus or reduce it substantially? The Chairman of the L.I.C., it may be recalled here, told the Estimates Committee, that at present the Corporation got a return of about 3½ per cent net, excluding refund of income-tax, on its investment as a whole. He also informed the Committee that a 3 per cent return was sufficient to meet the liabilities of the Corporation. The Committee did not suggest that the interest fixed be only the minimum required just to meet the liabilities of the Corporation; in fact, it favoured the payment of something more. It would thus appear that even if the L.I.C. funds are taken over by the Government, the return to the Corporation may not be materially affected.

STATE TRADING CORPORATION

The State Trading Corporation has already made some inroads into the normal channels of distributive trade. The spokesmen of Government have, of course, repeatedly stated that the S.T.C. would be concerned mainly with India's trade with communist countries. But in actual practice, it has extended its activities, including export, import and distribution, far beyond the role originally assigned to it. Representatives of trade and industry have spared no pains to impress upon the Government the damage done to the cause of India's foreign trade by the S.T.C.'s intervention. It is, therefore, an unpleasant surprise to hear that the blueprint for a further expansion of the S.T.C. is getting ready in Government circles. The S.T.C., we are told, is preparing a memorandum, amending several provisions of the existing memorandum of association, under which it was set up in 1956. The new memorandum apparently seeks to define the exact scope and powers of the organisation, but in this process a larger and more effective role is sought to be conferred upon it, apart from delegating to it a greater degree of autonomy. Changes made in the memorandum are designed, it is said, mainly to overcome many of the audit objections raised in regard to the various functions assigned to it only in general terms in the original memorandum.

Outstanding features of the new memorandum are its provisions investing the Corporation with powers to act as agents or trustees of a company, to invest and deal with the funds of the Corporation, to make loans or give credit to persons or companies on such terms as may seem to it expedient. In respect of investment, the S.T.C. has already limited powers under clause III of the original memorandum, which empowers it "to subscribe for take or otherwise acquire, or hold share, stock debentures or other securities of any other company." The new memorandum defines the scope of the provisions clearly. It says that the S.T.C. will be free "to subscribe for, take or otherwise acquire and hold shares, stock, debentures, or other securities of any other company having objects altogether or in part similar to those of the Company, or carrying on any business capable of being so conducted as directly or indirectly to benefit the Company." The amended clause will admittedly enable the S.T.C. to participate in export houses or any other similar institutions set up for promoting foreign trade. This provision is helpful to the extent that the S.T.C. may be able to supplement the resources of private parties in expediting the export trade. There are, however, obvious difficulties in the way. The bureaucratic machinery of the S.T.C. moves slowly and sluggishly, which in turn, may sap the vitality of the private trade—an essential prerequisite for maintaining and developing our export trade in a highly competitive world market.

This is equally true of the new provision added to the memorandum, seeking to ensure close co-operation of the private industries. The new provision empowers the S.T.C. "to amalgamate, enter into partnership or into any arrangement for sharing profits, union of interest, co-operation, joint venture, joint marketing or reciprocal concession or for limiting competition with any person or company." If the new memorandum receives the approval of Government, nothing will prevent the S.T.C. from even setting up its own subsidiaries for export promotion or import of industrial raw materials. The impact of these new moves is not bound to be appreciable in the immediate future. The cumulative effect of the proposed measures, designed to strengthen the S.T.C. may, however, be further encroachments on the legitimate interests of private trade in the long run. The additional powers asked for by the S.T.C. imply that it cannot function in a mixed economy like ours as smoothly as a State trading organisation can in communist countries.

WEST GERMAN AID

India and other underdeveloped countries will doubtless welcome the West German Government's development aid policy enunciated recently. The full details of the policy are not available, but, as can be gathered from scattered Press reports, the policy is so oriented as to ensure a considerably large flow of aid to the needy countries. The policy not only gives priority to private development assistance but also envisages sizable public aid in special cases. Indeed, the West German Government has announced certain concrete steps designed to promote private initiative in the development aid field wherever possible. They include, among others, (*a*) tax preferences for investments in developing countries as provided under the 1961 taxation law now awaiting final Parliamentary approval; (b) credit to private firms from Government-controlled funds; (c) grant of State guarantees to investors to cover political risks; and (*d*) conclusion of investment promotion agreements with the aid-receiving nations. Special attention, we are told, will be devoted to interest small and medium-sized enterprises in assisting developing countries to build up similar industries of their own.

The latest move of the West German Government to give a boost to assistance given by private enterprises is certainly well conceived. These enterprises, it is needless to stress, are far better suited than official agencies to help quicken the pace of economic progress in underdeveloped countries. The West German Government is quite explicit on this point, as witness its remark: "Private initiative connected with the passing over of technical knowledge and the establishment of human contacts to the inhabitants of developing countries is expected to produce the best possible results in each individual case where development aid is needed and given." Although this is a general observation it has particular relevance to India in view of the greater and greater incursion of the State into the economic field. Also, the efforts of West Germany to facilitate a larger flow of private aid must be reciprocated by the underdeveloped countries which have to maintain a favourable a climate as possible for such a flow.

As for public aid, the West German Government's policy lays down that

used for giving credits if the size of the projects concerned and the risks involved in participating in them exceed the capacity of private enterprises or if, for other reasons, private firms cannot be expected to engage in the financing of such projects. This applies, for example, to the construction of hospitals, roads, waterways and power dams. The Government does make it clear that financial assistance will be given in the first place for individual projects, but it is gratifying that it has held out the assurance that it will participate in financing long-term development programmes, provided they have been thoroughly examined and are economically sound and reasonable. The participation, it is stated, will usually be arranged on international basis as in the case of Indian and Pakistan schemes. Such long-term commitments by aid-giving nations will greatly help the aid-receiving nations in implementing programmes without disruption in the middle. A special responsibility to seek assistance only for projects which are economically sound and reasonable is, of course, cast on the countries in need of assistance. The developing countries cannot obviously afford to shirk this responsibility which, after all, will ultimately be to their own advantage.

EXPORT OF CHEMICALS

The family of chemicals and pharmaceuticals has, of late, assumed a significant place in the industrial economy of India, with the steady growth of a wide range of basic chemicals, intermediates and finished products during the second Plan period. The third Plan envisages further expansion of existing industries and diversification of production lines. Some of the India-made chemicals, it is claimed by both industry and Government, compare well with foreign products in respect of quality. No wonder, then, that export earnings from chemicals have shown steady improvement in recent years. In 1960, export of chemicals amounted to Rs. 697 lakhs, as against Rs. 502 lakhs in 1959 and Rs. 450 lakhs in 1958. Satisfactory as has been the trend in exports, chemicals nevertheless account for only a minor share in the total export trade of the country.

In view of the sustained development of chemicals within the country, it should be possible as well as necessary for India to look out for new market outlets abroad. In this connection, the report of the chemicals delegation, which visited British East Africa and Middle East (West Asia) recently, should be particularly welcomed. The delegation, led by Mr. R. Chakravarthy, was sponsored by the Chemicals and Allied Export Promotion Council and it visited West Pakistan, Iraq, Iran, Kuwait, the Lebanon, Sudan, British East Africa and Aden. The delegation, in its report, expresses view that there is great scope for promoting the export of a variety of Indian chemical products to these countries. Some chemicals, such as B.H.C., D.D.T. and other insecticides, bleaching powder and ammonium chloride are in good demand in these countries Among the large number of other products for which, according to the delegation, there may be a potential market in West Asia and East Africa, are varnishes and paints, dyestuffs, vegetable oils, essential oils, soaps and pharmaceuticals.

While recognising that some of these products are in short supply in India itself and that their domestic prices are substantially higher than those quoted by others in these export markets, the delegation has recommended the export of these goods in gradually increasing quantities, even if it involves some subsidy. The element of subsidy suggested by the delegation does not seem to be a healthy thing, for it can at best be only a palliative, and not a permanent remedy for problems facing exports of chemicals. Instead of looking forward to artificial remedies, the industry should try to become distinctly more conscious of its cost of production and quality. The delegation, of course, is not unaware of the need for bringing down prices and improving quality. It has pointed out in unmistakable terms that the potential markets for Indian chemicals cannot be exploited unless Indian prices are more competitive and the quality of goods better. There is nothing new in this approach which is applicable to all our exports in general. In the case of chemicals, there is the additional need for efficient inspection and certification of exports. The delegation's recommendation that a special organisation be established for strict pre-shipment inspection of chemicals is, therefore, a sound one.

U.S. CURRENCY LAW

By now several countries in the world, industrially advanced as well as less developed, have abandoned the proportional reserve system. India too, it may be recalled, twice amended the Reserve Bank of India Act at the height of the foreign exchange crisis in 1956 and 1957 to reduce the "gold and sterling securities" cover requirement. The latest instance of an advanced country which is intending to do away with the gold cover requirement in respect of internal money supply is the United States. At present, the Federal Reserve System is still under an obligation to maintain a gold reserve equivalent to 25 per cent of its notes and deposit liabilities. The retention of this provision, which clearly immobilises a major part of the U.S. gold supply, may partly be due to the powerful feeling in some orthodox sections of opinion in the U.S., which, even today, consider the requirement of a specific gold backing for domestic money supply as an essential prerequisite of monetary stability.

But the balance of payments crisis resulting in the heavy drain on the American gold reserves in the past year and a half has now provided an appropriate background for the Kennedy Administration to propose a permanent change in the currency system. The recent report of the Research and Policy Committee of the Committee for Economic Development also strongly justified the abolition of the requirement of the 25 per cent gold cover for internal money supply. President Kennedy

ON THE ARENA

By The Archer

The Dowry Prohibition Bill

THE passage in Parliament of the Dowry Prohibition Bill has merely achieved a formal declaration that the practice of demanding and extracting dowry is an offence. If, as some people believe, it is claimed that a norm of social conduct has been established or that a reawakening of social conscience has taken place, the claims are just pompous. On the other hand, it is disturbing to realise the grave drawbacks and dangers in a society which, by its very nature and design, fails to submit to economic forces until and unless a change is legally imposed on it. In a resilient and dynamic society the rights and wrongs of social conduct are not necessarily defined by legislation; and legislation is no remedy for social evils. The massive onslaught of economic forces usually generates a whole series of social urges in much quicker time and with greater ease than legislative enactments. But this postulates a society which is not a slave to tradition and prefers economic survival to martyrdom for ideas. A society which clings to outmoded ideas or practices with pathetic fortitude even in the face of economic impotence, but seeks relief by outlawing those ideas or practices through State legislation, is puerile by nature and deceitful in design.

Judging from the course of events in Parliament during the passage of the Bill it would seem that the predominant view (that served as motive force for support to it) was that the offer of dowry implied that women were sold like goods and chattels in the marriage market. This concept is intriguing, for normally speaking, sale of a commodity does not take place except for payment *in return* and not with payment *in addition*. It is only when one takes a decrepit horse to a *pinjrapole* for keeps that one has to offer a sum of money for its maintenance. The payment of dowry is not on par with a *pinjrapole* contribution, and the giver of dowry should therefore feel superior as the purchaser of a husband for his daughter. Unfortunately, however, the compelling necessity to do so, the bargaining which often precedes the negotiation and the outbidding of rivals, inevitably generates an inferiority complex in the benefactor and a superiority complex in the beneficiary. That there can be no legislative solution for such sordid factors is unassailable as long as gifts which constitute dowry form part of the conventions which are associated with sacramental marriages. By incorporating in the Bill the explanation that dowry does not include any presents made at the time of marriage to either party in the form of cash, ornaments, clothes or other articles, the gate is left wide open for unlimited extraction; the provision that these gifts would come under the ban if it was *proved* that they were demanded as "consideration for the marriage" is one that will not only be by-passed in every case, but will assuredly bring the legislation into contempt. It is indeed a measure of our political immaturity that we are eager to take credit for laws which we deliberately formulate with illusory potency so that it will be broken by everyone to whom it is an impediment, and will be a dead letter in a year or two. And, in all this process, we conveniently ignore the baneful effect of having on the Statute Book a number of enactments which are invariably broken; the habit of treating laws with contempt does not appear to occasion the slightest worry among those whose job it is to enforce them.

It is nothing but wishful thinking to believe that legislation of this kind will give a lead to society, for, in such matters society is schizophrenic. The desire to collect unearned income is one that is primordial in most human beings, and as long as the man with a number of sons can sit pretty and acquire easy money for his progeny, he is not bothered about such tiresome considerations as maintaining social decorum or avoiding social opprobrium, especially when custom, tradition and sacramental convention are all in his favour. In this regard the conformists invariably give the horses' laugh to the reformists; the latter may have the law and social conscience and the entire gamut of high thinking in their favour, but who cares?

Abatement of the evil of child marriages took place more as a result of relaxations in the social code than through compulsions of the Sarda Act—those relaxations in the social code took place partly through the operation of economic forces and partly through the gradual emancipation of women. The social need for early marriages vanished and the system died a natural death. Similar influences should start operating on the dowry system when alone it will commence to disintegrate—influences which will extinguish the taboos of castes and communities and also establish the concept of marriage as a personal arrangement between a couple, and not between two families. It is only when marriages are planned, arranged and negotiated by parents that dowries are demanded, cash, ornaments, clothes and other articles are exchanged and bitterness generated from transfer of property under duress. Planned and negotiated marriages may take time to die, but die they must, as more and more young men and women develop minds of their own, the taboos of society are brushed aside and the endogamy of castes and communities are thrown to the winds. Legislation will not bring about these wholesome changes, but the stress and strain of modern life, social, political and economic, will.

Trouble For The Small Car Project

Felix Wankel's 'miracle' engine is expected to provide cheaper cars than were ever manufactured. It is a tiny petrol-fed rotary piston engine which has no valves, no connecting rods, no crankshafts, weighs only 24 pounds, and develops 29 horsepower. Both the Curtiss-Wright Corporation and Daimler-Benz are reported to have acquired licence rights for the manufacture of the engines on mass-production scale. It is also stated that four other firms, two German, one Japanese and another foreign, are seriously interested in commercial production of the engine. It seems clear therefore that in about three years from now, cars fitted with Wankel's rotary piston engines may be in the market elbowing out other conventional models and opening a new chapter in the history of automobile production.

What is of particular interest to us, in the context of our contemplated (or should I say, decided?) baby car project, are the following factors: The new engine is lighter, smaller, more economical, cheaper to manufacture, and has a better performance than the current conventional models. It has no units moving back and forth or up and down like pistons, connecting rods, valves, springs, rocker arms and transmission parts. It can achieve very high speeds and can take changing revolutions with alacrity and without spluttering. It is robust and can run on almost any fuel from 43 octane petrol to 100 octane and also on diesel. It runs more smoothly and with less vibration than the normal piston stroke engine. The starter is directly connected with the engine so that the latter turns out at high speed at the touch of the starter.

Now what are we going to do? Should we go ahead with our Small Car project—the car of the people, for the people, by the people—or should we wait and watch? Should we buy up a secondhand and outmoded plant from overseas and embark on production, investing a sizable amount of our scarce resources on the venture, with the very doubtful prospect of achieving success both in manufacture as well as affording "psychological satisfaction" to our car-crazy bourgeois middle class—or should we look out for the writing on the wall? Judging from the fact that some of the world's leading manufacturers of automobiles are somewhat worried about the possibility of revolutionary changes taking place in the industry and enormous modern plants becoming obsolete, I should think we try to follow the precept in that proverb which says something about angels being cautious where non-angels dare.

I have just been re-reading the Jha Committee's Report on the Automobile Industry and find that in paragraph 4.3 of Chapter IV it is stated that the two basic deficiencies which constitute chronic reasons for the high costs of automobiles in India are low volume of demand and outmoded machinery. Even so, we seem to have taken the decision to accept an obsolete plant offered by a foreign automobile producer and go ahead with the project for making small cars. Is it because it is proposed to have a vintage model running out of our assembly lines, or is it that we should maintain the tradition of discarding all advice tendered by expert committees? The answer could well be the latter, for I find that in paragraph 4.4 of Chapter IV the Jha Committee has stated that the total demand for passenger cars in India being less than what some of the more economic producers of cars in overseas countries turn out in a single factory in one month, it would be desirable to provide for competition among existing units by expanding their productive capacity than by establishing new units. The Jha Committee was thus against the proposal to manufacture a new type of car, and yet the decision was exactly the opposite. It would be of interest to note that in 1960 the Fiat Company in Italy manufactured 530,655 cars of all models of which 194,397 were exported. Our target for cheap cars, according to the Jha Committee, is 10,000 per annum. What's wrong, one may say, for cannot a cat look at a king?

* * * *

Statistical Jokes

I take this bit from a Madras newspaper. The President of the Hindustan Chamber of Commerce stated, when inaugurating its annual meeting at which the Finance Minister was present, that the proportion of taxation to national income in India is nearly 9 per cent, compared to 28 per cent in the U.K., 33 in U.S.A., 27 in Germany, 25 in France, 22 in Italy and 21 in Japan. Commenting on these statistics, the Finance Minister stated that it would seem that there was great scope for taxation to be further raised in this country and he would use the statistics conveniently. I hope the episode ended as a joke, and it is good to believe accordingly. But it shows how dangerous it is to connect statistics with the wrong terminals—the fuse blows off.

The Common Market is contemplating to set up a $50 million fund to stabilise the export incomes of its associated States in Africa. A proposal to this effect has been made by Mr. M. Lemaignen, member in charge of territories. The proposed fund will make advance payments to African States when the market prices of their exports fall below reference prices fixed on the basis of prices in the preceding few years. These States will make repayments when the market prices rise above the reference prices. The majority of trade done by the African associates of the Six will not, however, come under the scheme, because France is already giving aid to its former colonies by buying their exports at prices well above world prices.

RESOURCES FOR THE THIRD PLAN

DIFFERENCE IN SAVINGS ESTIMATES OFFERS NO GUIDE TO POLICY

From Our Special Correspondent

NEW DELHI, *22nd May*

DELHI LETTER

THE gap between the extremist and the realist in regard to resources for the third Plan which has been large seems to be widening further, according to reports of variations in their respective estimates. The Perspective Division of the Planning Commission is continuously stretching all available resources —although only on paper—to show that the larger the Plan the better; this is bound to be popular in a political sense since State Governments can continue to believe that none of their ambitious schemes has been kept out of the Plan—at least until the elections are over. The Union Finance Ministry is notoriously conservative in these matters and few who have followed its technique of budgeting in the last decade will agree that its gross underestimates of revenue were only a sign of desirable prudence. Even if this much is admitted, one cannot avoid deprecating the tendency to assume that total resources for the public sector may possibly amount to Rs. 8,450 crores—far in excess of the large outlay demanded by States' representatives at the last meeting of the National Development Council in January. The Finance Ministry, on the other hand, is now feeling less confident about the target of market borrowing and the expected surplus from public undertakings; it is obviously averse to acquiescing in a plan whose fulfilment may compel resort to deficit financing considerably in excess of the limit of Rs. 550 crores so far accepted in all quarters as reasonably safe.

These differences came to the fore at the recent meeting of the Savings Committee of the N.D.C. last week in the capital and will no doubt be discussed again when the N.D.C. meets at the end of the month. There are some who are not averse to making a cut in the Plan later on if circumstances require it—as was done in the second Plan—though there is a risk that work on schemes included on the basis of optimistic estimates may be taken up even if they are not of high priority, making their abandonment difficult at a later stage. To pacify State Governments who are opposed to any cut in their plans even if they exceed the allotted target of outlay, it is now proposed that they should make efforts to find more resources from current revenues to make up the entire deficit. These assumptions have very little validity since the shape of States' finances in the next five years will not be known with any definiteness until the Finance Commission makes its award and determines the extent of budgetary support they deserve in view of the problems of increasing emoluments of State employees, growing maintenance expenditure on completed plan schemes and servicing of old debt.

Optimistic Assumptions

This imponderable factor may yet excuse some of the optimistic assumptions of States' resources, but not the additional taxation of Rs. 610 crores and market loans of Rs. 300 crores in addition to the Centre's efforts to raise resources under these two heads. The Finance Ministry's conservative resources ceiling of about Rs. 7,400 crores for the public sector's outlay includes these already large estimates. Further jugglery with these figures by the Perspective Division appears to have yielded additional resources of about Rs. 900 crores; the sources of its knowledge regarding future trends in non-Plan expenditure are probably trustworthy but the public has no means of judging whether defence expenditure will rise or not. Even on an issue like the surpluses of public enterprises, on which the facts are fairly well known, there is wide divergence in the estimates of the likely yield. The Steel Ministry's inability yet—in spite of the long time it has had to consider the problem—to furnish even approximate figures of surpluses and of accumulations in the equalisation fund proves that there is hardly any reliable basis for the more optimistic estimates. Future pricing policies on which they depend have not become clearer than before.

Apart from the intrinsic merits of rival calculations, there is something unseemly about a quarrel over different estimates between various departments of the Planning Commission and the Government. Statisticians, and economists who rely on them, have been often accused of proceeding from fabricated data to foregone conclusions and all evidence now points to a formal ratification by the N.D.C. at its next meeting of the more ambitious physical plan, with some pontifical statements about making larger efforts to raise resources in view of the pressure of population and the need to step up the rate of development.

Foreign Aid

A major hopeful factor in the situation is the improved prospects for foreign aid since the last meeting of the Aid India Club and the discussions since then by the West German Government with Indian and World Bank officials on the extent to which it can improve upon its earlier offer. Mr. Lyndon Johnson's visit has also been useful in reinforcing the faith in the value of the American initiative, although there are two major uncertainties owing, first, to the attitude of U.S. Congress on the issue of appropriations for more than a year at a time, and secondly, to U.S. insistence on a matching contribution from other Western members of the Consortium plus the World Bank. West German attempts to treat existing short-term credits as aid for the second Plan and their subsequent conversion into long-term credits as aid for the third Plan (in view of the balance of payments support provided thereby) has seemed very odd in the context of the great expectations from this country. The process of persuasion may be very long; U.S. authorities may remain firm on their condition of equivalent aid by Europe and Japan not only to induce greater flow of capital but also to ensure that the strain on the dollar is not aggravated by large-scale American aid which may be used for purchases from Europe. Dr. Erhard's latest assurance to Mr. Eugene Black that West Germany will go to the limit of her capacity leaves the position still vague.

The joint Press *communique* issued in New Delhi after the U.S. Vice-President's talks with Mr. Nehru reaffirms the "hope that American aid to the new Plan will be both substantial in amount and effective in form." There is also implied American appreciation, if not approval, of the social objectives behind Indian planning —"that the benefits of economic advance must accrue to those who need help most"—though only land reform and universal free and compulsory education were mentioned in this connection. The other most important common point was the development of electric power and rural electrification; "the development of power generating capacity has been an especially important area of American aid" says the *communique*, and indicates that the third Plan demands for power may also be met largely with similar U.S. assistance. In the context of the ambitious, though still inadequate, power target of 13.2 million kw. for the third Plan and the widespread shortages now experienced in this country, it is indeed welcome news.

This will add support to the ambitious planners and their case may be further strengthened by a study released last week by the National Council of Applied Economic Research estimating the rate of savings in India as 10 per cent of national income, instead of 8 per cent assumed hitherto by the Planning Commission. If the difference was due merely to the omission by the latter of such things like private investments in agriculture, the immediate importance of this finding to the outlay target will not be much. It would only mean that the rate of growth in agriculture has been and will be sustained by a much higher level of investment than that included in Plans and that the concerned Ministries' allocations of a little more or less for achieving specific targets are not playing the decisive role often claimed for them.

Even granting, however, that investment of the order of Rs. 100 crores in agriculture should be added to the total, the result will be an increase in the estimated investment in the private sector and, though the Plan as a whole may become big as a result, the nicely balanced ratio between the public and private sector outlays—which seems to be integral to the socialist pattern—may be upset. This finding, therefore, is of dubious advantage. The issue whether there was underestimation of savings in the Planning Commission or overestimation by the National Council will continue to be debated in recondite phrases about methodology; as yet the difference between the two estimates, though significant enough, offers no guide to policy. For example Dr. Lokanathan considered that since taxation was related to income and not to savings, he could not say whether the results of the study supported the case for more taxation. If the champions of the public sector, who wish to see it grow relatively and absolutely, wish that Government should lay its hands on more of these savings, the latter can only tax or borrow and, failing adequate response to either method can indulge in more deficit financing on the specious plea that it is one of the ways of tapping the savings of the community. A significant, though not new, aspect of the study is the low share of the corporate sector in the total savings but here again political imperatives will stand in the way of measures to remedy the shortage.

In this asmosphere of increasing courage in planning, the Government and the Commission have both become daring enough to raise the target of exports for the plan period by Rs. 300 crores. Uncharitable critics may say that this was the only way by which the grossly underestimated foreign exchange needs of the Plan could be reconciled with the (under-) estimated requirements of the foreign aid; this view will be strengthened by the absence of any fresh schemes of export promotion. An average level of exports of Rs. 750 crores will involve strenuous efforts but since there are some experts—like Sir Donald MacDougall—who think that this target should be doubled by the end of the fourth Plan any efforts in the direction of fulfilling this modest initial target is quite desirable and necessary. A very wide range of measures will be needed to provide incentives as well as to restrict internal consumption; no one is clear about them and, as usual in such cases, the responsibility of giving meaning and content to this programme may be passed on to a committee. Immediately the outlook is clouded by the uncertainties of British entry into the Common Market and consequent loss of preference in the U.K. market. The value of the decision is largely psychological since it breaks with the long tradition of (what one journal recently characterised as) "export-fatalism."

SURVEY

(*Concluded from page 983*)

himself had hinted at some such change, when immediately on assuming office, he categorically stated that the entire gold supply—now of the order of $17 billion—stood behind the present parity of the dollar. Behind this bold pronouncement, there was the manifest intention to dispel any speculative apprehension of dollar devaluation and thereby to impart stability to its exchange value. But the Kennedy Administration could not repeal the gold cover provision at once because in the midst of the foreign exchange crisis such alteration in the Federal Reserve Act might have touched off a panic reaction, culminating in further worsening of the situation.

Now that the balance of payments situation has improved considerably—the deficit for the first quarter of the current year being at an annual rate of $1,000 million as against $4,000 million in the previous quarter—and the gold drain has been replaced by gains, albeit only slight, the Kennedy Administration has discretely introduced in the House of Representatives to repeal the gold backing clause of the Federal Reserve Act. The measure, if passed, is expected to free gold worth about $11,000 million and is calculated to strengthen the external parity of the dollar to a considerable extent. The passage of the Bill is, however, not likely to be smooth, as some currency diehards would be stubbornly resisting any change.

The Multer Bill is also expected to arouse a good deal of controversy, as another provision of the Bill seeks to authorise the Government, in response to a request from the President, to pay higher interest rates on new securities sold to foreign governments and central banks, as a defence against the loss of gold through transfer of foreign funds. But even this provision is expected to be challenged by a powerful section in the Congress, which is opposed to any kind of concessional treatment to foreigners.

AMERICAN LETTER

SIGNS OF UPTURN IN U.S. ECONOMY

GOVERNMENT'S TAX PROPOSALS LOOKED UPON WITH DISFAVOUR

(From Our Special Correspondent)

NEW YORK, *19th May*

REPORTS from all parts of the country now speak of signs of an upturn in the economy. But there are so many "ifs" and "buts" attached to these *pronunciamenti* that one cannot help but wonder—to use the American vernacular—whether the optimism is not a bit "whistling in the dark" to revive courage which certainly is missing at least in some sectors of the United States economy. Most economists, in other words, use double talk. The Federal Reserve people, for example, say: "There are growing indications that the low point of the recession may now have been passed." The next paragraph is devoted to an analysis of the obvious fact that an inventory build-up which is now quite imperative would provide a boost. But the central bank not only questions the degree of the boost but also suggest that even greater production and greater productivity would in all likelihood leave unemployment at a higher level than during previous periods of recovery because of the large number of persons expected to enter the labour force.

Owing to the growing maturity of the baby crop of the last war, it is expected that, from here on, about 1.3 million additional people will be seeking work. It is felt, therefore, that the task of generating new job opportunities will be large. That is one reason why hardly anybody dares to predict how vigorous the coming upswing, now predicted, will be. Will it just be a temporary push or an advance over a longer period of time?

Gains Maintained

Preliminary indications are that the March gains in certain lines have been maintained in April. Figures for the first quarter as a whole did not look too encouraging. The total output of goods and services fell by $4,000 million, from the level of the preceding quarter, to $499,500 million. Thus, the drop in the gross national product since the spring 1960 peak of $5,500 million is 1 per cent.

The decline in the 1957-58 recession was 3½ per cent, in 1953-54 is amounted to 2½ per cent and in 1948-49 to 3½ per cent. It was, indeed, a mild recession, if the past tense can be employed. All figures are based on compilations of the President's Council of Economic Advisors. These, of course, have many ramifications.

In recent weeks, industrial production has risen somewhat, but a large part of this increase was due to Government expenditures. It was of benefit to such lines as steel, furniture and household appliances. Construction activity, too, has shown a gain in the first time in three months. Private housing starts moved up noticeably.

Personal income is in a special category. It reversed itself in March, rising $3,400 million over the February rate. The latter on an annual basis brought the total to $409,600 million, just slightly under the rate attained in October last. However, a part of the monthly boost in March was attributable to the disbursement of National Service Life Insurance dividends. Without that factor, the increase would have been only $1,700 million, primarily the result of higher wage and salary payments. March pay-rolls were up by $1,000 million, the first monthly increase since July.

So far as the employment picture is concerned, the trend of recent years continues. About 55 out of 100 workers now earn their livelihood in service jobs, as against 36 per cent in 1920. Under the classification of services fall trade, Government, transportation, public utilities, finance, insurance and real estate. The balance falls under the group of goods which means manufacturing, agriculture, construction and mining.

Consumer outlays would be the most significant force in a real upturn. High personal savings and the recent decline in hire-purchase debt (instalment credit outstanding) suggest that personal spending could be increased substantially, if there would be popular will to spend more. But the situation is confused and people are cautious which is borne out by the relative stability in consumer prices. Avoidance of price boost will be a crucial factor. Only a reasonable approach by both labour and management can avoid higher prices, not to mention tax policies of the Government. In passing, it may be said that the tax proposals of the Kennedy Administration, at least a good many of them, are looked upon with disfavour as fostering inflation rather than stability.

Hearings on the President's tax proposals will begin some time in June. The general appraisal of the plans of the new Administration in the financial, foreign and other fields is that the U.S. is heading to the left, not the right. The trend, which may also be called socialistic, has inflationary implications to many.

Stock Markets Booming

The securities markets are booming. Manipulations on the American Stock Exchange are now being investigated by the Securities and Exchange Commission at Washington. Money is pouring into securities at a feverish pace. The most disturbing element is speculation in the lowest priced stocks. Most of the equities have no record and they are being bought not on the merit of performance and past record, but just because they are cheap and may produce get-rich-quick situations.

Stock market loans are now exceeding $5,000 million in April, for the first time since 1929, and preliminary indications are that the rise has been continuing throughout May. Bank loans are the only public evidence of the recent upsurge in spectacular borrowings, and they suggest that the stock market has absorbed $500 million of fresh credit during the past six weeks. This is a dangerous situation.

There is also uneasiness about foreign policy. President Kennedy's trip to Canada, while cordial, did not assure Washington of the support of Ottawa in the new "help Latin America" programme. Meanwhile, the Cuban explosion has been fortified by Premier Castro's support on the part of General Trujillo of the Dominican Republic. Misgivings are also expressed over the hastily arranged meeting at Vienna between President Kennedy and Premier Khrushchev. There are fears that it will be used as an international propaganda platform for Communism. No wonder, there is an air of caution in the air.—*All Rights Reserved.*

(*Concluded from next column*)

precisely what problems would arise and, on the other hand, consideration was being given to the preferences being enjoyed by U.K. exports to some Commonwealth countries. The Six were, therefore, already convinced that Britain was sincere in not holding the Commonwealth as an excuse against association.

As for agriculture, the Six themselves were considering ways in which their policies might have to be adapted to the needs of the component parts. Indeed, the British Minister of Agriculture has already warned U.K. farmers that they cannot indefinitely expect help in the form of tariffs and help in the form of subsidies. It is clear that great efforts are now being made by the Government, not entirely paralleled by the efforts being made on the other side—since General de Gaulle is lukewarm—to discover a means of closer association with the Common Market. But it was equally clear that there are still no precise plans except that something ought to be settled urgently. There is a significant reason for this—opposition in this country among manufacturers is becoming mobilised. Not only that but the uncertainty about what will really happen is playing increasingly on the nerves of industry. Industrialists neither know what competition they will have to face at home nor what potential market may be opened to them in Europe. It now looks as if matters will be brought to a head shortly, failing which the Government will stand accused by business interests in this country of dereliction of duty in not coming to a decision one way or the other.—*All Rights Reserved.*

EAST, WEST AND CENTRE

BRITAIN ANXIOUS TO JOIN COMMON MARKET

(From Our Own Correspondent)

LONDON, *19th May*

LONDON LETTER

THIS week the President of the Board of Trade, Mr. Maudling, has opened the British Trade Fair in Moscow and, just before his departure, his Assistant made a speech in Sheffield to some of the people who would be engaged in exporting goods to a potentially expanded Russian market. Anglo-Soviet trade has never hitherto reached anything like the levels contemplated by the various trade agreements. On the one hand, Russian imports have largely consisted of Colonial or Commonwealth products rather than British products and, on the other hand, U.K. importers have found it difficult to get satisfactory prices out of the Soviet Union for the staples of that country.

The British Trade Fair is intended to elevate trade exchanges between the two countries to a new, higher level. But Mr. Maudling's opening speech in Moscow carried in itself no enthusiasm. He has told the Russians that trade has two purposes—to strengthen a country's economy and to contribute to friendship between peoples. The second point is one normally paid lip service to in the exchanges between countries; the first is apparently a bone of contention. There have been criticisms of Anglo-Soviet trade on the grounds that it would strengthen the Russian economy and that was not a good thing. The only answer from the advocates of increased trade is that it also presumably strengthens the British economy.

One has to turn to the comments made by Mr. Maudling's Deputy in this country to discover what Britain really can offer the Soviet Union as a result of this Trade Fair: "... at the moment, several complete factories are being erected in various parts of the Soviet Union as a result of contracts placed with British firms... particular emphasis will be laid on those products which the Soviet foreign trade organisations have in the past indicated their willingness to buy." But Mr. Erroll concluded by saying that he did not really think very much was likely to come of all this, although the precise words he used were: "... we should take a realistic view of the situation in these markets." Mr. Maudling conveyed the same impression by the things he has not said in Moscow. All in all, we can safely conclude that the British Government is not really bothered about the expansion of East-West trade.

Irrevocably Committed

And this is because they have increasingly on their mind, the expansion of trade with the Centre—the area that lies in between Eastern and Western Europe. Under the guise of a general resolution concerning the relations between East and West, the Lord Privy Seal (the Deputy Foreign Secretary) addressed himself to what he called the country's fundamental problem: "What are to be the relations of ourselves, the Commonwealth and the E.F.T.A. partners with the new Europe which is emerging?" And thus for the first time the Government presented Parliament and the country with its policy and its ambitions towards the Common Market. Now the Government are irrevocably committed to union with the Six. Mr. Heath said that we could see now (if we kept outside the Common Market) "... the dangers which face us of decline in political influence in the world at large and with the Commonwealth."

The Government see that our trade with Europe has expanded greatly in recent years; they realise that the common tariff around the markets of the Six and the gradual abolition of their internal tariffs would both tend to diminish Britain's trade with Europe and tend to strengthen Europe's competitive power with the rest of the world. Mr. Heath admitted that closer relationship between the U.K. and the European Economic Community would carry some disadvantages, but, against this, he saw formidable political and material advantages to be gained from closer association. He then explained that the problems that remain are still those concerning the Commonwealth and domestic agriculture; that imports from the Commonwealth were being examined to see

(*Continued in previous column*)

PROTECTION OF BANK DEPOSITORS—I

BANKING PRACTICES NEED CAREFUL AND EFFECTIVE SUPERVISION

By L. R. Suneja

IT is a fundamental principle of banking that protection for the bank depositor must come from sound banking assets. The skill and honesty of bank managements have a most important bearing upon the safety of deposits. Barring some catastrophic upheaval in the economic life of the community such as prolonged and acute depression, good bank management will adequately protect both the depositor and the shareholder. Because proper management is so essential to successful bank operation and because the public interest is so closely tied up with successful banking, the Government has seen fit to interfere to a varying extent in banking affairs in every part of the world. In our own country, Governmental interference has become very involved under the Banking Companies Act as well as the law governing the Reserve Bank of India. There has grown up an enormous mass of minute regulations, the majority of which are designed to safeguard the depositors. They include the regulation of the volume of capital and reserves and the type of loans and investments; the examination of banks' affairs by representatives of the Reserve Bank of India; and the return and publication of balance-sheets. There are, however, two varieties of attempts to protect depositors which may be well examined here. They are guarantee of deposits and segregation of thrift deposits.

A Prime Consideration

Two forms of bank credit are used as medium of exchange, namely, bank notes, of which an example is the note issued by the Reserve Bank of India and bank deposits utilised by means of cheques. The protection of the note holders has always been a prime consideration in banking and various means of protection were developed during the course of the nineteenth century to safeguard their interests. In practically all countries, Government statutes require a specific security as well as reserves to be kept against guarantee issued by the note issuing institutions. Besides, the notes are obligations of the Government and as such their payment is guaranteed.

This is not true of the second form of bank credit, namely, bank deposits. There are few countries which legally require certain and specific reserves to be kept against deposits. In our country, all scheduled banks must keep a reserve of 5 per cent against immediate demand liabilities and a reserve of 2½ per cent against time deposits. The reserves of the scheduled banks, it will be recalled, must be kept in the vaults of the Reserve Bank of India. In no instance is a security required against deposit liabilities in addition to the reserve requirements.

Banks in U.S.

Many American people, however, felt that the banks in the United States should go further in safeguarding the depositors and, as early as in 1829, the State of New York enacted a law to guarantee all the debts of banks located therein, which, of course, included deposits of the banks. This system was called the Safety Fund System, and the banks were assessed the sums necessary to maintain the guarantee fund. The heavy losses incurred thereby, because of inefficient and dishonestly managed institutions, and as a result of the panic of 1837, caused the early repeal of many sections of the Act establishing this system, so that, finally, only the notes of the issuing bank were protected by the Safety Fund. After the panic of 1893, a movement was again started to guarantee deposits, but it failed to achieve any tangible results in the form of legislation. Modern experience on the guarantee of deposits in the U.S. followed the panic of 1907.

The year 1908 saw the inauguration of a compulsory system of bank deposit guarantee in the State of Oklahoma, followed by guarantee legislation in seven other States—Kansas (1909), Nebraska (1909), Texas (1909), Mississippi (1914), South Dakota (1915), North Dakota (1917) and Washington (1917). Thus eight States in the U.S. tried a system of guarantee in some form or other. The results of these experiments were such as to dampen the enthusiasm of people who had previously advocated the plan. In times of good business and upto the depression beginning in 1920, they worked well. However, bank failures became so numerous during and after this depression that, in every case, the burden became too great and the system collapsed. One banker put it: "The well-managed institutions were penalised, whilst wildcat banking was encouraged. Some of the banks in Oklahoma placed in conspicuous parts of their building signs to the effect that deposits were guaranteed by the State and then by offering large interest rates attempted to induce depositors to place their funds in the institutions. These so-called bankers in turn would utilise the funds thus secured in making reckless loans. The conservatively managed institutions would have to stand by, because they could not afford to pay depositors a higher rate of interest, nor could they extent credit recklessly as their unscrupulous competitors did.

Note: The views expressed in this article are the author's own and his employers are not concerned with this.

Reasons for Failure

Discussing the reasons for the failure of the bank deposit guarantee laws in Texas, one writer summarised them as follows:

The plan made too many banks and too few bankers. All kinds of incapable people tried to start a bank under the protection of the Fund.

The system did not increase deposits nor build up the banks. Instead, it gave a sense of false security. People looked to the Fund for protection and paid no attention to the soundness of the banks themselves nor to the ability of their managers.

Prosecution of bank wreckers and crooks was made impossible. The depositors got their money from the Fund, so they were not particularly interested in prosecuting the unscrupulous or incompetent men who caused the banks to fail.

Such an unsound system of banking weakened the financial structure of the entire state.

Guarantee of Deposits

In discussing the question of guarantee of deposits, one must first ask what is to be attempted and what is to be the standard for measuring the probable results. Such a far-reaching matter as a guarantee of deposits on a nation-wide scale can be justified only upon the basis of public good. What, then, is a proper standard for measuring the public good involved? Obviously, it is not to be found merely in the fact that a guarantee system might shift the burden of losses from the backs of banks' depositors to someone else. It may be contended that bank depositors, as individuals, must take their chances of loss along with other lenders and investors. To make a case for guarantee system, it is necessary to show with reasonable certainty that the economic system would actually reap some net gain over and above the gain it would realise without such guarantee. This, in turn, involves several questions:

1. How may a guarantee system be expected to affect the quality of banking practice and the fundamental strength of the system?
2. Will it favourably or unfavourably affect the ability of the banks to serve the nation?
3. Is there sufficient reason for taking such extraordinary measures to protect bank deposits when creditors in other businesses receive no such protection?
4. Will the direct burden involved in guaranteeing deposits be intolerable to those who will assume it?

Many have contended that the insurance of bank deposits will lead to bad banking, since it puts poorly managed and weak banks on the same competitive level for deposits and business as well-managed, sound, strong and conservative institutions. Without guarantee of the deposits, the depositor, in order to safeguard his deposits, is expected to inquire into the character and the ability of the management and the safety of the bank before he trusted his savings into its care. Under a system of deposit insurance, the depositor no longer needs to investigate an institution concerning the experience, reputation and policy of the management, or its strength and soundness. His deposits will in any case be protected against loss, he feels. Therefore, with all deposits equally well protected the public will patronise the banker who pays the higher interest rate. This in turn would result in competition which would be disastrous to sound banking.

Cogent as this reason undoubtedly is, its validity is necessarily based upon the assumption that depositors (a) are able to choose their bankers intelligently that they are able to distinguish between a sound and conservatively managed institution and not one so managed; and (b) choose their banking connections solely because of a fancied security of deposits and interest payments.

Helplessness of Depositors

As to the first assumption, the fact is that most depositors are not in a position to judge either the quality of the management or the soundness of the institution. It is no secret that the imposing statement of assets and liabilities is quite as successfully used by the unscrupulous and unsound banker as by the better bankers and that the public in general is entirely incapable of making any use of such statements in determining where to place its deposits. The depositors of the Palai Central Bank, which has recently suspended payment, are *eloquent* testimony of the helplessness of the average depositor. Moreover, the dangerous competition of banks offering higher interest on deposits has confronted the conservative bankers for many years. Undoubtedly these considerations tend to support the contention that the depositor even with no guarantee, is quite unable to distinguish between sound and unsound banks.

The inter-bank agreement limiting the interest paid on deposits, which exist in our country, is further evidence that such a danger exists even in the absence of a guarantee system. In general, it seems fair to conclude that, with a guarantee system, the small depositor will be no more inclined to patronise the unsound banker than before. The larger depositor is probably no more impressed by interest payments than he is by the opportunity to maintain banking connections with institutions which are in a position to give him adequate service, sound financial aid and guidance. Here the sound banker of established reputation is quite as well off under a system of guarantee as without such a system. He can still reap the reward of his experience and sound judgment.

Supervision

To offset possible tendencies towards lax banking induced by a uniform system of guarantee on deposits, there must be more careful and effective supervision of banking practices. Such improvements are needed in any event. Obviously effective means are required for weeding the banking world of individuals who engage in shady and unsound practices. A guarantee system strengthens the hands of the supervising officials in managing difficult cases. Without it, the officials are reluctant to take any strong measures against bankers violating the law and the rules of sound banking practice for fear of unfavourable consequences to the credit standing of the banks in a country. Under a system of guarantee, this need not be an issue, and the supervising officials may with impunity order the institution closed and its affairs wound up or may compel the withdrawal of offending officials with resultant savings to both the depositors and the shareholders. It should be remembered that, without a guarantee system, the main method which we have for ridding the community of incompetent bankers is to let them fail. This method will not be eliminated under a guarantee system. The unsound and incompetent bankers can fail quite as eventually under a guarantee system as without it. Conversely, the rewards of the sound banker in the form of profits derived from long and successful practices will remain. It is fair to conclude that the objection that a guarantee system will ruin the banking system by enabling the weak, incompetent, or irresponsible banker to gain at the expense of the sound, conservative and able banker is less important than it might appear at first consideration.

It is not out of the point to mention that bank supervision by public officials is distinctly an American institution. In virtually every other country, the chief, and sometimes the only, reliance is on the self-supervision and auditing conducted by the banks themselves. In India, however, supervision of some kind has been exercised by the Reserve Bank of India since the enforcement of the Banking Companies Act of 1949. The basic purpose of bank supervision is to safeguard the public interest in the safety of the banking institutions of the country. The soundness of each bank, its compliance with the law, and the degree to which it fulfills its obligation to render service are the more specific objectives of public supervision. There has been in the U.S. an increasing tendency for supervisory authorities to serve as leaders in improving banking techniques as clearing houses for assembling, interpreting and disseminating banking data and information and aids to legislative bodies in enacting solitary banking loss.

Effects of Guarantee

The second question with which we are confronted is the probable effect of a system of guarantee of deposits on the functioning of the banking system. In answer to this, one need only draw upon the experience of the American attempt to guarantee deposits where it is found that runs on banks were practically abolished. It certainly restored confidence in the American banking system in the darkest days of its history. The argument that the deposit guarantee system will encourage reckless banking is met by the thorough system of examinations set up and the power of the Corporation to terminate insurance for unsafe and unsound banking practices.

Public Advantage

The third question raised is this: Is there any real public advantage in a guarantee system which shifts the risk from the shoulders of the depositors to someone else? As a corollary to this, we may ask another question. Is the shock to a community resulting from the loss of depositors' funds of sufficient importance to justify an attempt to cushion it through some form of insurance? Not long ago, the President of an important American bank is reported to have said in opposition to guarantee of deposits: "There is no more reason to guarantee banks that are not run well than there is to guarantee department stores or industrial concerns that are badly run."

This remark is a bit misleading, for it implies that a guarantee of bank deposits constitutes a guarantee of the bank. Such an interpretation is inacurate. By guaranteeing the deposits, no attempt is made to guarantee that the banking venture will turn out profitably for the shareholders. If the bank is not soundly operated, the shareholders stand to lose with the system of guarantee as readily as without it. The real question is whether or not the community welfare is so intimately tied up with the continued functioning of its banking system and the safety of its bank deposits that it is desirable to lessen the shock by spreading the loss. Another person who has witnessed the paralysis which seizes the depositors on a bank failure realises that this is at least a reasonable question, not to be dismissed by sweeping generalities. The salutary effect on the economic life of the country as a whole for abolishing runs on banks and reducing the shocks from bank failures suffered by a particular community can hardly be denied. Although different in its implication, its immediate results are similar to those of fire insurance, the essential advantage of which lies in the reduction in the shock by spreading the loss.

Financial Burden of Guarantee

The last question is an important one. Will the burden of bank failure be so great as to bring down the good bankers with the bad? This, of course, assumes that the burden is to rest on the bankers themselves. Obviously the burden of bank failure must be borne by someone regardless of whether or not there is a guarantee system, a point which is often overlooked. The experience of the eight American States that tried a guarantee system was so unfortunate as to lead many to believe that the guarantee of deposits on a sound and equitable basis was impossible. These historical experiences made many to believe that the guaranteed plan is inherently fallacious and based on erroneous premises and assumptions. It has proved to be one of these plausible, but deceptive human plans that in actual application only serve to render worse the very evil they seek to cure. Without exception the guarantee system worked well in fair weather but was unable to stand the load of general depression. The burden placed upon the bankers who remained solvent became intolerable and resulted in the eventual abandonment of the attempt in all States. As a result of this unfortunate experience, it is even assumed that deposit guarantee of any sort is doomed to failure. But the causes which led to the collapse of the guarantee system tried in the eight States are not fully considered. These failures were due to inadequate supervision of the system in several instances and inability of individual States to furnish adequate diversification of risk.

(*To be continued*)

HINDUSTAN COMMERCIAL BANK EARNS MORE

The financial results of the Hindustan Commercial Bank Limited (General Manager: Mr. S. S. Rachhpal, Kanpur) for the year ended 31st December 1960 are gratifying. Thus, the turnover of the Bank, as indicated by the total income and the credit extended to trade and industry, is substantially larger. Advances have recorded a sizable expansion of Rs. 76.06 lakhs to Rs. 480.60 lakhs. Consequently, the income by way of interest and discount earned has risen by Rs. 5.20 lakhs to Rs. 32.27 lakhs and that from commission and exchange by Rs. 1.45 lakh to Rs. 9.57 lakhs. The two outgoings, that is, interest paid and other expenses have risen markedly, the former by Rs. 1.42 lakh to Rs. 17.16 lakhs and the latter by Rs. 5.04 lakhs to Rs. 25.46 lakhs, reducing substantially the profit margin for the year under review. The profit (subject to taxation) has, therefore, improved only modestly from Rs. 4.16 lakhs in 1959 to Rs. 4.48 lakhs. The profit would actually have been larger at Rs. 7.04 lakhs, but for the appropriations to meet shortfall on redemption and sale of securities purchased in 1945-46 at above par (Rs. 1.25 lakh) and to write off the loss (to the extent of Rs. 1.40 lakh) in respect of preference shares purchased in 1945 from a company, the capital of which was written down under orders of reconstruction scheme passed by the Calcutta High Court.

The Directors have provided Rs. 8.000 for taxation, as against Rs. 18.000 in 1959, and a sum of Rs. 4.50 lakhs has been credited to the doubtful debt suspense and reserve account. The Bank has, therefore, not been able to give any dividend to shareholders for the thirteenth year in succession.

The deposits of the Bank as at the end of 1960 stood at Rs. 694.87 lakhs, showing a contraction of Rs. 15.45 lakhs over the year. In order to make good the setback to deposits, the Bank has had to rely on borrowed funds; its borrowings from other banks have gone up from Rs. 48.80 lakhs in 1959 to Rs. 76.25 lakhs. Thanks to the brisk demand for bank credit on the part of the trade and industry, following the higher tempo of industrialisation during 1960, the Bank's advances, as already stated, have gone up appreciably from

INTERNATIONAL TEXTILE PROBLEMS

U.S. NOT IN FAVOUR OF TARIFF BARRIERS OR MANDATORY RESTRICTIONS

THE annual conference of the International Federation of Cotton and Allied Textile Industries, held at Osaka in Japan a fortnight ago, was an appropriate occasion for a comprehensive review of the position, problems and prospects of the world cotton textile industry. Delegates and observers from sixteen countries attended the six-day conference which concluded on the 14th inst. The discussions at the conference were held against the background of the controversy that has been going on for quite sometime now over exports of cotton textiles from some of the developing countries and the insistent demand of the textile industry in many Western countries for restricting textile imports. The conference noted that the textile industry was rapidly developing in many Asian countries such as India and Pakistan, where long-term plans for expansion and modernisation are in progress mainly for supplying the domestic markets. Apprehensions were, however, expressed that there existed a possible danger of disruption of certain individual markets, if a considerably large part of their production were used for exports to obtain foreign exchange. The danger, it was felt, was particularly applicable to importing countries where textile goods from India and Pakistan received preferential treatment.

The conference admitted that both India and Pakistan have substantial domestic markets, exports accounting for only a small part of the total production, but pointed out that the position was different in the case of Hong Kong, another major textile producing country in Asia. In the opinion of the conference, Hong Kong produces far more cotton textiles than needed domestically and exported large quantities not only of goods produced within the Colony but also of textiles imported from other countries. Several other countries in South-East Asia have ambitious plans for expanding their cotton textile industries, though the objective of these plans is to cater to the expanding domesic demand rather than to export markets.

In Africa, the cotton textile industry is developing at a slow pace and it is considered unlikely that it will make any serious impact on the international textile situation in the near future. In Latin America, most countries are striving for self-sufficiency and strictly limited imports. In China, the cotton textile industry has shown spectacular expansion and the country has become one of the largest potential exporters of textile goods. The total capacity of the industry at present is 10 million spindles. In Eastern Europe, the textile industry has developed in a normal way and the volume of exports from these countries have not had any severe impact on world markets. The Federation, however, concedes that, since the textile industries of communist countries are part of a system of State-controlled economies and Government export monopolies, the danger of a sudden increase in textile exports for other than purely commercial reasons at manipulated prices is always imminent.

Federation's Statement

The Federation has issued the following statement on the conclusion arrived at from its discussion of the major problems and aspects of international textile competition:

1. The Federation points to the danger of an excessive concentration, expansion or reliance on the textile industry in any one area, which, in the long run, must be to the detriment of the economies of those areas themselves.

2. The Federation stresses the need for a continuation and intensification of technical research into new yarn and textile processing methods, new end-use development, market expansion and promotion of textile consumption as a counter-balance to the many other demands made on the purchasing power of the public.

3. The Federation advocates the creation of such conditions in its member-countries as are favourable to the continuation and intensification of the already great efforts which are being made towards a technical modernisation and rationalisation of existing productive capacity.

4. With regard to raw cotton policy, the Federation advocates once agin an early return to a one-price system for raw cotton in world markets. This is essential for a proper functioning of futures trading and for making hedging practicable.

5. The Federation notes that a large variety of commercial practices and manipulations are currently in use which tend to distort normal conditions of competition in the international textile market. It expresses the view that it is essential to eliminate such practices as may lead to a distortion of competition in the international textile trade.

6. While recognising fully the aspirations of developing countries, the Federation is of the opinion that the disruption of established textile industries and possible further threats to their existence must be brought under control. It stresses that the established cotton and allied textile industries should continue to produce mass manufactured goods in order to ensure their continued viability.

The Federation has felt that, if necessary, some restrictions will have to be introduced to avoid international conflict between textile industries. The Federation has advised its members to study with their Governments the plan put forward by President Kennedy for an international conference to promote stability and avert conflict in the textiles industries.

U.S. Attitude

It is noteworthy in this connection that, in spite of the textile industry's plea to limit imports, the U.S. Administration has shown a more understanding attitude towards the question of textile exports from underdeveloped countries than the Governments and industries of most other textile manufacturing countries which are members of the Federation. The President has already rejected a Cabinet Sub-Committee's suggestion for curbs on import of cotton textiles into the U.S. He seems to prefer a system of multilaterally accepted voluntary quotas rather than unilateral mandatory restrictions. The U.S. Administration frankly admits that, if the underdeveloped countries do not find ready markets for textile exports, they would be unable to earn the much-needed foreign exchange and that a part at least of the foreign aid given to them would be frustrated. It believes that a co-operative effort, involving both industrialised nations and underdeveloped nations, is needed to meet this situation. The industrialised nations, in its view, must be prepared to absorb some textiles manufactured in underdeveloped countries and to accept competition from these countries in their traditional markets. On their part, the underdeveloped countries should be prepared to use restraint in order to avoid disruption in international textile trade. The whole question is expected to be taken up for consideration at the forthcoming meeting of the G.A.T.T. In the course of the exploratory talks which Mr. George W. Ball, the U.S. Under-Secretary of State for Economic Affairs, had recently in London with the representatives of the Governments of the European countries, Canada, and Hong Kong, he is reported to have reiterated that the U.S. did not want to impose any tariff barriers against textile imports.

The countries which are expected to face a textile export problem, arising from the opposition of manufacturers in the advanced countries against imports, are India, Pakistan, United Arab Republic and Formosa. Exports from Hong Kong and Japan, too, would be affected, but these countries are not underdeveloped and hence the effect of a fall in exports on their economies will not be as grave as that in the case of other countries. The following table indicates the trend of cotton textile exports from the leading producing countries during the past four years:

(In million yards)

	1960	1959	1958	1957
India	721.8	850.2	468.1	879.6
Japan	1,424.6	1,263.0	1,245.8	1,468.4
France	521.1	406.2	308.8	317.8
U.S.A.	486.5	472.7	467.4	590.4
Holland	340.0	308.4	287.1	260.1
U.K.	327.1	347.4	384.1	455.8
Hong Kong	305.9	235.2	196.7	196.8
Germany	280.3	242.7	149.1	217.6
Belgium	276.4	217.7	139.0	224.4
Spain	188.8	67.7	18.4	30.7
Portugal	180.2	123.7	123.7	127.7
Czechoslovakia	146.8	137.5	126.8	138.9
Italy	114.4	90.5	101.1	106.5
Pakistan	93.9	42.0	4.1	10.3
Poland	83.4	40.6	28.8	69.7
Switzerland	63.0	92.1	56.6	58.5

To revert to the question of restriction on textile imports. It appears that, at the London textile talks, it was agreed by the representatives of the participating countries that the problem was how to work out an arrangement which would permit the more advanced countries to accept imports on a rising basis but slow enough not to disturb the home industry. It is needless to add that, whatever the agreement arrived at finally, any arrangement, which seeks to restrict exports from underdeveloped countries, will put a break on the pace of their economic development and neutralise the assistance given to them by the developed countries. It is to be hoped that the latter would bear this in mind when the problem comes up for discussion before the forthcoming meeting of the G.A.T.T.

WORLD RAW COTTON SITUATION

I.C.A.C.'S SURVEY

THE 1960-61 world cotton season, which is fast drawing to a close, marks a turning point in the international cotton situation, according to the International Cotton Advisory Committee, Washington. In its annual report covering the 1960-61 season presented to the fourth session of the I.C.A.C. held at Tokyo this week, the Committee points out that the present season has been a favourable one for cotton although, with production likely to exceed disappearance, stocks as on 31st July 1961 should increase, thus reversing the trend witnessed during the past four seasons. Any increase, however, it hastens to add, will only be a modest one. Production during the season set a new record, but all the increases have occurred outside the U.S. In the U.S., lower yields more than offset the small increase in acreage, and production declined by a quarter of a million bales. In the aggregate, the increase in production in other countries by about 1.75 million bales of 478 lbs. each has been attributed to larger area sown to cotton than to higher yield. Although total acreage was only slightly higher than in 1959-60, the expansion in acreage in certain countries, notably Mexico, Brazil and some of the smaller producing countries, has been considerable. Also, although average yield shows a marked increase, this is confined to relatively few countries. The increase in production more than offset the decline in opening stocks so that supply during the season is estimated to be higher than in any of the three previous seasons.

Aggregate consumption, according to the I.C.A.C., may show a fractional decline to 30.5 million bales from the record high level of 31 million bales in 1959-60. The reduction has occurred mainly in the U.S. where, thanks to the downtrend in textile production, consumption during the full season is expected to be one million bales lower at 8 million, as against 9 million bales in 1959-60. As has happened in the past, the trend of consumption in the other main textile manufacturing countries has been the opposite of that in the U.S. With the major exception of the U.K., consumption in almost every instance is running ahead of that a year ago. In Western Europe, the upswing in textile activity is attributed to the boom in the economy, the marked expansion in cotton textile exports and replenishing of the supply lines.

In Japan, consumption is expected to reach a new high since the end of the war and should return to almost the pre-war level. Yarn and cloth production in the smaller consuming countries in Asia and the Far East continues to advance. In India, the imported cotton supply position is expected to pave the way for an increase in cotton consumption.

Exports

As regards exports, the I.C.A.C. predicts that, in spite of the continuing high level of consumption, exports will probably decline. The main reason for this is the fact that the heavy purchasing for stock, a salient feature of the trade situation last season, is not likely to be repeated. Other things being equal, this would result in a net decline in trade of by at least a million bales while, if there were any reversal of stock policy in cotton importing countries, the effect could be magnified.

The cotton situation in Eastern Europe, U.S.S.R. and China, according to the Committee, shows certain changes this season. Calculated on a residual basis, the opening carryover probably increased but against this there has been a marked decline in production in both the U.S.S.R. and China and for the first time since the end of the war supply has declined. Unless consumption in these countries decline this could lead to some increase in demand for cotton from other countries. As far as can be determined, according to the Committee, exports of cotton to these countries during the first half of the season were running ahead of a year ago in spite of a marked fall in shipments from Egypt. Imports of cotton from the U.S.S.R. by the rest of the world have been more or less on a par with the 1959-60 rate.

HESITANT BUYING OF TEXTILES

OUTLOOK FOR INDUSTRY AFTER THIS YEAR DISTINCTLY OBSCURE

(From Our Special Correspondent)

MANCHESTER, 16*th May*

INTERNATIONAL competition in textiles, if not exactly hitting the headlines in the Press world, is certainly a major topic of discussion in informed circles where businessmen meet. In two cities, thousands of miles apart, where textile affairs are much to the fore, the matter has been raised at high level within the past few days.

MANCHESTER LETTER

From the headquarters of the Silk and Rayon Users' Association, only a few miles from London, a warning has come that other countries may assail the tariff barriers which at present offer protection to British textiles when discussions take place for a revision of the General Agreement on Tariffs and Trade. The Council of the Association has urged the Government "in the most forceful possible terms" that the present rates of duty should be retained. "It would seem to be singularly ill-timed to agree to reductions in rates of duty when public money has so recently been spent in an attempt to modernise and reorganise the industry," the annual report declares. The removal of many quota restrictions on the importation of textiles and clothing into this country just over 12 months ago caused a big increase in arrivals last year—a fact which needs no elaboration. As the report points out, imports of fabric do provide some work for British finishers and makers-up, but purchases of foreign made-up clothing merely restrict employment in this country.

Tariff reductions arising from the introduction of the European Free Trade Area have already been reflected in bigger shipments of textiles into the United Kingdom from Switzerland and Austria. "Any further concessions," the report warns, "can only have the effect of accelerating the ominous influx of textiles from abroad to the continuing disadvantage of the British textile industry."

Distorted Competition

Meanwhile, across the world in Asaka, Mr. Mario Ludwig, Director of the International Cotton Federation, was describing the effects of distorted competition to delegates from many countries at the annual meeting of the Federation, the first to be held in Japan. Traditional theories of what constituted "fair" and "unfair" competition were no longer applicable, he said, and should be replaced by an entirely new concept of trading practices.

In view of past experience, it is not altogether surprising that cotton textiles have been chosen as the first test case in an investigation on the subject of "market disruption" to be undertaken under the auspices of the G.A.T.T. This new departure opens up all sorts of interesting possibilities in dealing with the complex system of rivalry between countries which have widely differing economic and social structures.

Old Order Changeth

Historically, as Mr. Ludwig pointed out, world-wide competition did not exist in the nineteenth century. European industrial countries were accustomed to export their surplus and received in return raw materials from other areas. Output was restricted to a small number of countries in which standards of living were practically the same. The complete change in the situation arising from the industrial advance of developing countries has brought a geographic extension of world trade which could not then be foreseen.

It can hardly be expected, Mr. Ludwig said, that developing countries which have recently built up a textile industry should now reduce their activity. Nor can it be expected that old-established industries, which have already reduced their capacity to make room for their new and younger competitors, should continue to contract until the point of disappearance.

Investment in Textiles

Despite the constant flow of gloomy forecasts, which suggest that the trade in Lancashire is facing one of its periodical recessions, due mainly to uncertainty over the future flow of goods from abroad, the strength of textile shares, like so many other equities on the stock markets, has not yet been shaken. Investors are being buoyed up by the eminently satisfactory profit-earning capacity of those firms which have reported so far this year, and it must be admitted that the yields on many of these shares are generous. Some hestitation in buying may have lately occurred, but the undertone is still firm.

Practically all industries are subject to fluctuations, and the cotton and allied trades have been prone to wide variations in the past, but the general trend of stock market prices has a considerable effect on sentiment as a whole. In this connection, the views expressed by a leading firm of Manchester stockbrokers in its latest monthly bulletin are of considerable interest. "We may be only at the beginning of the most revolutionary adjustment in investment psychology which has ever been experienced in this country," the report says. "Such a change would involve an upward adjustment in share prices of very great magnitude—a bull market to make all past bull markets pale into insignificance."

Reference is made to the "extremely great technical strength" which has been pushing the market forward for some time. It is suggested that many investors may have to abandon their previous standards of judgment and preconceived ideas about the relationship between income and capital or about the present value of future income. It would, perhaps, be unwise to predict that textile shares—always considered a rather speculative venture—would do more than reflect such a pronounced upward trend as is forecast. In any case, the very substantial rise which has already taken place in the value of ordinary stock in those companies which have survived the redundancy programmes in the spinning and weaving trades may to some extent have been discounted.

Tables of comparative textile share prices often comprise either the very big cotton combines or the smaller single-unit concerns in the spinning trade. For an illustration of how the reorganisation scheme has affected a number of other predominantly producing companies, the following representative list has been drawn up:

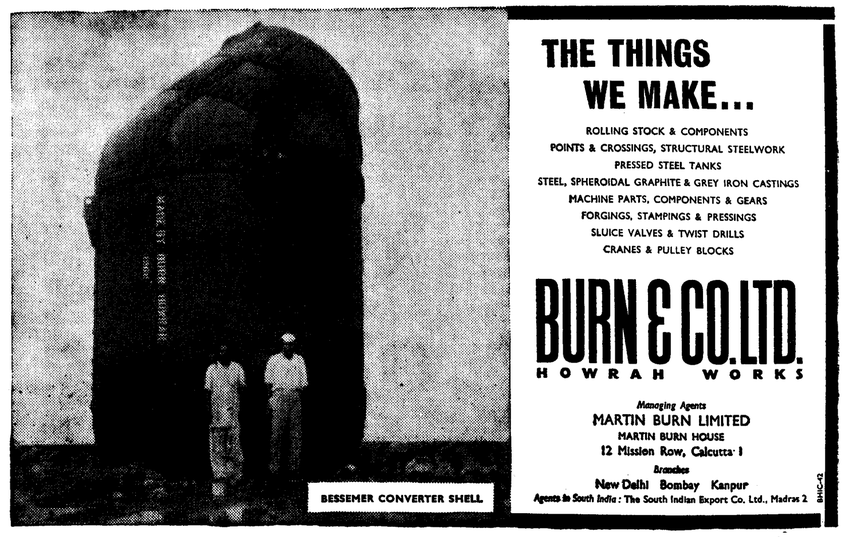
	Denom.	*March 1959*	*Dec. 1959*	*May 1960*	*May 1961*
	Sh.	*Sh.*	*Sh.*	*Sh.*	*Sh.*
Armitage & Rigby ..	20	46	69-3	38-3 (b)	50
Ashton Brothers ..	20	18-3	31	43-6	26 (g)
Barlow & Jones ..	10	15-3	19-3	22-9	31
Birtwistle & Leigh ..	5	3-3	7-6	7-3	6-3
Boardman, Marden ..	1	1-7½	4 (b)	4-9	7-3
Clegg & Orr ..	5	21 (a)	33 (a)	10	6-6 (c)
Cotton & Rayon Spgs. ..	4	5	8-7½	7 (d)	6-6
Fothergill & Harvey ..	5	3-4½	5-3	5-6	11
Hayeshaw	5	17-9 (a)	20-6 (a)	24-9 (a)	7-6
Higham's	4	6-6	12-9	14	11-6
Taylor & Hartley ..	4	2-10½	3-1	6	5 (e)
David Whitehead ..	1	1-7	2-10	3 (f)	3

(a) Before sub-division of £1 shares into 5*s.* units. (b) After one-for-one scrip issue. (c) After two-for-five scrip issue. (d) After one-for-two scrip issue. (e) After repayment of 1*s.* per share. (f) After one-for-three rights issue. (g) After two-for-three scrip issue.

Crystal gazing is a dangerous pursuit and, in view of the present wave of hesitation which is afflicting buyers of textile products, the outlook beyond the end of the present year is distinctly obscure. Most of the companies the shares of which have shown such a remarkable rise in this period have retained a large proportion of their profits for ploughing back into re-equipment for reserves. Their ability to deal with a more uncertain future should be enhanced by their conservative policy of strengthening their financial background.

Cotton Cloth Imports

Twenty-two countries each shipped more than one million square yards of cotton grey cloth to Britain last year. This is shown in the annual report of the Grey Cloth section of the Cotton and Rayon Merchants' Association which recalls that grey cloth imports for the year aggregated 596 million square yards, an increase of 135 million square yards on the 1959 figure. The report says that the increasing proportion of imported cloth now being used in the Lancashire cotton trade invariably affects the turnover of those grey cloth merchants who are solely engaged in the distribution of the products of Lancashire mills.—*All Rights Reserved.*



MEETING OF U.P. SUGAR MILLOWNERS

STATE'S CHIEF MINISTER OPPOSES EXPANSION OF CAPACITY

THE opposition of the Uttar Pradesh Chief Minister, Mr. C. B. Gupta, to the licensing of additional capacity in sugar industry, voiced at the annual meeting of the Indian Sugar Mills Association (U.P. Branch), held at Lucknow on the 17th inst., is not on firm ground. For the opposition stems from his fear that the expansion of capacity would endanger the existence of the industry when sugar consumption has become static—a fear that is clearly exaggerated. It may be true that the sugar-consuming capacity of the country is at present low, but such low consumption is due largely to the high level of prices, thanks to the heavy incidence of taxation—the total Central and State taxes together account for as much as 35 per cent of sugar price—and the high cost of the principal raw material, that is, cane. If the price of sugar is reduced to a reasonable level, the rate of consumption is bound to increase quite perceptibly, because a large section of the population which is currently consuming brown sugars (*gur* and *khandsari*) will switch over to sugar consumption. Account must also be taken of the nutritional requirement of sugar (estimated by experts at nearly 23.00 lbs., as against 13.87 lbs. assumed by the Planning Commission) and the need for earmarking a portion of output for purposes of buffer stock, not to speak of the exigency of meeting export demand. Considering these factors and the continuously rising population at 2.2—2.4 per cent per annum, how can Mr. Gupta say that the country's sugar consumption has become static?

Equally ill-conceived is Mr. Gupta's opposition to the setting up of more sugar mills in the South. He is reported to have said:

"I do not favour the issue of several licences in the South when the North has been supplying sugar to the whole country and particularly when the new licences have created overproduction in the country. What is required is to protect the industries of various regions and to make them self-sufficient without disturbing the economy of these regions. I, however, realise that the Centre has to consider the regional consciousness of various areas, but, even then, I would request the Centre not to issue further licences. Otherwise, the industry in U.P. and Bihar may be greatly endangered."

Heavy Concentration

The anxiety of U.P.'s Chief Minister to safeguard the interests of the sugar industry in his State is understandable. But he must not forget that the subtropical climate of his State is not so suitable for sugarcane cultivation as the tropical conditions of the Deccan and South India. As it is, the sugar industry is heavily concentrated in the U.P. The real problem that has to be tackled in right earnest in this State is how to enable the existing mills to work more efficiently and produce quality sugar at a lower cost. It is, indeed, gratifying to note that Mr. Gupta fully recognised the need for modernising the industry and giving help for the same, as well as the urgency of raising the per-acre output of sugarcane through better irrigation facilities, masonry wells, development schemes, better seeds, improved roads and a reformed land policy. In this connection, he disclosed that the State Government would shortly take decisions on the aforesaid matters. Incidentally, he revealed that a sum of over Rs. 6 crores had been earmarked for this purpose in the third Plan.

Apropos the issue of controls over sugar, U.P.'s Chief Minister is reported to have remarked: "Controls are necessary in a crisis of overproduction. Otherwise, cut-throat competition in prices would damage the industry irreparably, but I agree that the system of issuing distribution quotas and permits for the North where overproduction is a problem should be much more relaxed than in the South. As regards restrictions on distribution, they have already been relaxed, as 50 per cent of sugar quotas has been allowed for free distribution, while the quotas not lifted are also allowed for the same purpose."

There is not much substance in the contention that the removal of controls in the present context of highly comfortable supply position will lead to cut-throat competition in prices. Since the structure of sugar production cost has turned to be very rigid, one need not fear that there will be large-scale distress sales of sugar by mills the moment controls are abolished. So long as controls exist, the consumption of sugar cannot be expected to be maintained at a normal level which is possible only when the free market forces of supply and demand are allowed to operate. In his speech, the President of the I.S.M.A. (U.P. Branch), Mr. Sita Ram Bhawsinghka, did well to plead for the abolition of restrictions and control on the distribution of sugar in surplus years, particularly to increase the offtake. This is certainly a sensible approach to the sugar problem and marks a distinct departure from the stand taken by the Central Committee of the apex body of millowners which only recently urged the authorities to continue controls on distribution and raise the ex-factory price of sugar.

Crisis of Heavy Stocks

Mr. Bhawsinghka also referred to the crisis of heavy stock accumulations. His review reveals that the industry had produced 2.70 million tons of sugar up to the end of April 1961, as against 2.32 million tons in the corresponding period of previous season. Of this quantity, the share of Uttar Pradesh is 1.27 million tons, as against 1.16 million tons. The total closing stocks with U.P. mills as on 30th April were 1,075,000 tons, as against 932,000 tons a year before. Most of the sugar mills in the State continue to crush and some will continue next month also. The total sugar output in U.P. for the current season is estimated at 1.40 million tons, representing a rise of 180,000 tons as compared with 1959-60. Placing the aggregate all-India closing stocks of sugar at the end of the season (31st October next) at as high as 1.5 million tons, Mr. Bhawsinghka said:

"Unless a sizable portion of this (stock of sugar) is exported out of the country, it will create further complications during next year, as the godown of the sugar mills will be full and it will not be possible for them to start well in time on account of lack of finances and storage difficulties. The export of sugar involves a big loss of over Rs. 350 per ton of sugar. The industry has no resources to bear this loss, as its cost structure has been fixed rigidly by the Tariff Commission, which has allowed only about five and a half per cent net profit to the industry. The loss has, therefore, to be met by the Government. Let us hope that we will succeed in exporting a sizable quantity which alone can get the industry out of its present difficulties.

"The accumulation of stocks has created one more difficulty and that is the banks are not granting further borrowing limits to the sugar mill, as they consider that their investment in the sugar industry is already very high and the Reserve Bank will not be advancing them further money for advancing to the sugar factories. This has resulted in many cases of non-payment of sugarcane price, purchase tax and meet other obligations. It is of paramount importance that the banks should increase the limits of various sugar factories and also reduce the margin, so that the sugar factories may be in a position to meet their obligations and liquidate the arrears. The sugar industry is controlled in Northern India—U.P. Bihar and Punjab—while it is not so in the rest of the country. The Government of India release a certain quota every month for consumption within the country. The despatches of sugar from U.P. is proportionally less than from other regions. We hope that this disparity will be removed."

To the extent to which sugar is sold abroad, the problem of heavy stock accumulations will be reduced. But there is a severe limit to the capacity to sell sugar outside, that is, the wide gap between Indian and world prices even after the full remission of taxes. If India succeeds in its present attempts to get a quota in the American market, the loss on exports can be considerably cut down, inasmuch as the U.S. pays a price that is 50 to 60 per cent higher than the world price. The results of the negotiations that Mr. S. K. Patil, Union Minister for Food and Agriculture, will hold in the immediate future are, therefore, awaited with utmost interest.

As for the plea for better credit facilities from abroad for clearing stocks, U.P.'s Chief Minister stated that he fully sympathised with the plea and promised that he would move the

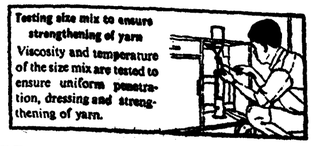
AUSTRALIA, the land of kangaroos and cricketers, is one of the 50 countries importing BINNY'S textiles.

BINNY'S fabrics are made from yarns spun only from cotton of the best quality and are dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

*Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.



Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

BINNY - a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels
Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees
etc. etc.

COLOUR

Nature's Beauty Aid!

MAN has taken his lesson from Nature... has employed many and varied processes from the brewing of dyes from herbs and leaves to the most modern scientific methods — to make his own life as colourful and gay as the variegated hues of Nature. Judging from the frescoes of Ajanta, 'colour-chemistry' in India has been an advanced science since ancient times.

Today, AMAR DYE are leaders in the indigenous manufacture of dyes — having established a name for the excellent quality of their Amarthols & Fast Bases. Intensive research and a rapid expansion programme will soon make India totally self-supporting in the requirements of coal tar dyes.

—enrich India's life with COLOUR!

TASK BEFORE PLANTATION WAGE BOARDS—I

SEVERAL BAFFLING PROBLEMS

By A Special Correspondent

THE Tea Wage Board, set up late last year, has had two meetings and a third will be held sometime this month. The Wage Boards for Coffee and Rubber are yet to be constituted. Many of the principles and procedures accepted in the case of Tea Wage Board would apply to the other two Boards and therefore employers as well as labour representatives are equally interested in establishing positions of strength in the process of discussion.

The Board is bound to face several baffling problems in the course of its labours, but the most difficult one will be reserved for the non-industrial members of the Board whose impartiality and broader sense of purpose will be constantly on test. It should cause no surprise if the representatives of labour consider their role in the Board as one of pressing for the maximum immediate advantage and if the employers regard it as their mission to resist the labour pressure. If one side approaches its responsibilities in the Wage Board with no more than the objective of merely gaining an increase and the other in defeating it and if the rest of the Board merely acts as referees, one or the other might gain; but the purpose for which the Wage Board has been set up will be defeated.

During the last fifteen years, labour progress has been accompanied, sometimes quite blatantly, with backstairs politics and pressure. Sometimes pressure is quite necessary to change a habit of the mind about employer-employee relations, social attitudes, wages and connected matters. But there comes a stage in economic development and circumstances when a more rational approach to the all-important question of wages, costs and prices is necessary. If the problem of finding its way about in a labyrinth of claims and counter-claims, aggressive and demonstrative pressures and counter-pressures, data questionable and otherwise, is to be successfully tackled, the Wage Board will require a clear and firm idea about objectives beneficial and relevant to the terms of reference. It is easy to listen to the siren call of popularity with one section or another or to take the line that, since Wage Boards are constituted to fix a higher wage, any notional increase in wages would serve the problem, though the aftermath of it might conceivably be unsettling for the economy of the industry as has happened in the case of sugar, cement and textiles.

Special Problems

There are certain factors in plantation economy which are markedly different from those with which Wage Boards in cement, jute, sugar and textiles have become familiar. Each industry, of course, has its own special problems, but, in the case of plantations, the differences from manufacturing industries are far too wide and consequential. There are certain historical, environmental and structural aspects to the economic problems of plantation industry, so that what may be normal or relevant for manufacturing industries may be wholly abnormal in the case of plantations. With this background in mind, it is quite possible for planters to boggle at a higher wage rate, perhaps quite irrationally. What matters is not the wage rate but its weight in the cost. The fears of the planters and their opposition may be groundless, but the Board might commit an even more grievous error in dismissing them as undeserving of careful consideration.

The Wage Board cannot know the full significance of the points made either by or for the labour or the employers, unless it knows the planting industry and the historical background from which both sides will speak. Its conclusions will be wholly faulty, unless it knows how and in what vital aspects plantations differ from manufacturing industries. Its conclusions can be disastrous, though they may not be sufficiently severe to cause an immediate collapse, if they have the seeming appearance of fairness but are capable of bringing gradual ruin to the industry.

In the first place, planting is an agricultural enterprise and the tea bush is a living thing, with its own reactions to environmental conditions. A plantation can be of any size from a few acres to several thousand acres and the influence of scale economy applies with increasing or decreasing force at particular levels of sizes. But this may again be modified by the location of the plantation, the productive efficiency of the plants which populate it, the elevation and quality of the crop and the efficiency of management.

The tea industry, producing a leaf crop from a hardy plant, though broadly capable of categorisation by size, plants, location and elevation, has individual variations within each classifiable group or range that will bewilder anyone who wishes to draw conclusions from representative acreages. For instance, two estates contiguous to each other and at the same elevation, may have two different rates of yields and may fetch in the market quite different prices. In other words, tea is a living thing, with its own individual tempo of growth and production, its own vigour, quality and other characteristics. It cannot be compared with a machine in a factory. This, however, is no argument that the planting enterprise engaged in tea growing cannot afford to have a reasonable wage rate for its workers. What is relevant is that the factor of wide variations inherent in such a crop should be taken into account and the wage level should allow for a wider safety margin than what might be allowed for in a manufacturing industry where so high a degree of variability is not present.

Striking Deviations

The striking deviations in the working results of two tea plantations of comparable sizes and production from each other are illustrated by the following figures of four properties for the year 1959:

	Estates I		Estates II	
	A	*B*	*C*	*D*
Acreage	886	976	458	450
Production (lbs.) ..	1,020,937	1,157,700	285,532	313,312
Yield per acre ..	1,220	1,185	631	696
Cost of production per lb.	Rs. 1.56	Rs. 1.58	Rs. 1.41	Rs. 1.40
Sale price per lb. ..	2.88	2.06	N.A.	1.58
Net profit	6,92,982	3,02,235	—85,967	94,800
Tax provision	4,62,000	3,75,000		10,000
Profit per acre	828	318	—145.6	98

N.A.=Not available. —Loss.

The estates, the figures of which are quoted above, are by no means a selection of extreme cases to prove a point. The points are best proved by drawing attention to the similarities of the basic capital asset, the planted and productive acres in the two companies. Estate B has 140 acres more tea to produce from and actually had a crop advantage of 137,663 lbs. Estate A obtained only 35 lbs. more per acre in crop than did B and in cost the handicap was 2 nP per lb. Yet, in the final result, Estate A had a net profit per acre of Rs. 828 and Estate B only Rs. 318. They had to spread these widely differing per-acre profits on a roughly comparable share capital. In case II, the per-acre yield was 65 lbs. higher for Estate D over Estate C. The cost per lb. was almost the same for the tea from both estates. But Estate D made a profit of Rs. 94,300, whereas Estate C went down with a loss of Rs. 65,967. One had a loss of Rs. 145.6 per acre and the other a net profit of Rs. 98 per acre. Taking all the four estates, the range of yield was from 631 lbs. per acre to 1,220 lbs. The cost of production ranged from Re. 1.40 to Re. 1.58 per lb., but the net profit, leaving out the loss, ranged from Rs. 98 to Rs. 828 per acre. The distances between these ranges establish not a freak or extreme case, but the most frequent to be met with within the planting industry.

Most of the tea to be found in South India falls between the States of Kerala and Madras and an analysis of holdings according to size and yield will reveal the extreme ranges of variability in the productivity of tea estates. Here are some relevant figures for 1958-59:

(Area in acres and yield in lbs.)

Size in acres	*Madras*	*Kerala*
Up to 10 acres—		
No.	3,507	1,243
Area (acres)	8,879.42	1,580.65
Yield (per acre)	638	225
11 to 150 acres—		
No.	358	111
Area (acres)	9,844.26	4,627.43
Yield (per acre)	655	373
151 to 300 acres—		
No.	30	37
Area (acres)	6,491.86	8,374.82
Yield (per acre)	810	648
301 to 500 acres—		
No.	27	25
Area (acres)	10,765	10,113
Yield (per acre)	940	880
Above 500 acres—		
No.	50	89
Area (acres)	42,413	72,353
Yield (per acre)	1,110	911

Source: *Tea Statistics*, 1959.

To take Kerala plantations alone, the average yields range from 225 lbs. to 911 lbs. Within each interval of size, there is a range just wide. Last year, several estates report yields above 1,700 lbs. per acre.

A few significant factors emerge from the figures. All along the line, at the different intervals of size, the yields are marked different not only between the different size groups, but within the same size groups between Kerala and Madras. The averages, course, conceal wide variations in yield to found within the same size groups in each State and in each District within a State. It is in the nature of the tea bush to behave different under differing conditions of altitude, wind temperature, soil, nutrition and environment and to react differently to the skill and ingenuity of the management to moderate the behaviour of the tea plant.

Tea in World Market

About 1,500 million pounds of tea enter the world trade, of which about 700 million pounds or 66 per cent, are produced in India. But India's share of the world market is only about 36 per cent. Tea had its development as a cheap beverage; for long, its main slogan and recommendation has been "the cheapest beverage next to water." Had the tea industry not been founded in the mid-nineteenth century, it is quite unlikely that it would have been in existence today. It was possible, a hundred years ago, to obtain forest and hill lands not devoted to any form of agriculture, at low lease rates and estates could be established at the low cost of Rs. 600 to Rs. 800 per acre. Today the cost of opening a new estate may well exceed Rs. 7,000 per acre, without a corresponding rise in the return on capital. The industry must reconcile the inherent contradiction between a high capital and working cost and the need to hold tea prices low enough to substantiate its claim to be the cheapest beverage next to water. If Indian tea cannot be competitive in selling prices, it cannot long survive in the world market. A drop of one per cent in India's tea export involves a loss of Rs. 1.5 crore in foreign exchange earning. An increase of four per cent in tea export earnings means one per cent gain in India's balance of trade.

Labour wages cannot stand still in a progressive economy and, in the case of the tea industry, the post-war history of increases in wages dates back to 1946. It was due for the first time to organised labour pressure in South India, and, in early 1947, there was a further improvement due to Government pressure at the Tripartite Conference on Plantations. The next round of wage increases occurred when the Madras and Kerala States introduced the Minimum Wages legislation in 1951. In 1951 the industry arrived at a negotiated wage agreement providing for a further increase in wages over the increase agreed to after the special tribunal for plantations was appointed in 1952. The increase in basic wage rate from 44 nP in 1939 to 172 nP in 1957 for a plantation worker does not convey the whole series of income and cost changes that have taken place. The shock of the increase in wages on the cost of production was moderated by the increase in production per unit of acre. There has, of course, been an increase in the price of tea, but the whole impact in production cost could have been absorbed by the price increase alone without those increases putting up the price intolerably high for the consumer.

In terms of made-tea, the yield per acre increased from 473 to 952 lbs. between 1940 and 1960. The price of tea increased from 72 nP to 196 nP per lb. during the interval and the average cost of production increased from 38 nP to 156 nP. Yet the net profit to each invested rupee of share capital which averaged 30 nP in 1940 was only 12 nP in 1960.

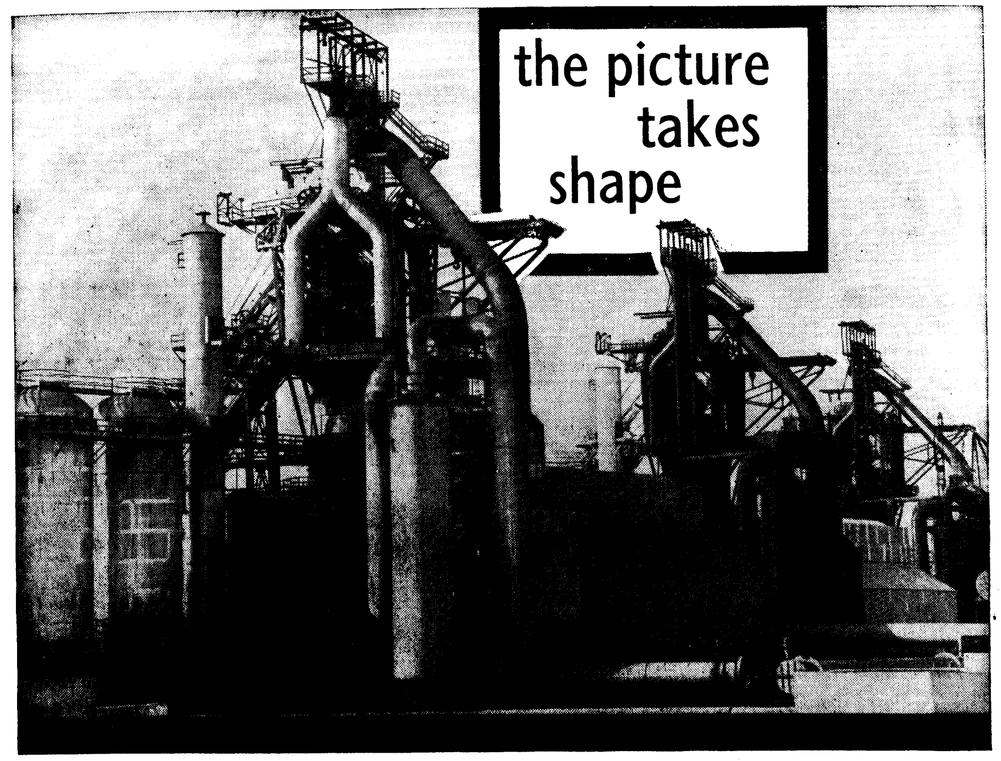
It would be unfair to place the entire responsibility for the increase in costs and decrease in return on labour. The Government, Central and States alike, has been the most persistent and voracious gnawers at the plants tion rupee. The following figures relating to tea and other plantations for the period 1951 to 1957 illustrate the progressive encroachment of taxes on profits:

Tax as Percentage of Profit before Tax

	1951-55	1956	1957
Tea plantations	88	46	60
Other plantations	57	45	49

Source: *Reserve Bank of India Survey of 780 companies for 1951-55 and 1,001 companies for 1956 and 1957.*

(To be continued)



All Iron and Steel making facilities have now been installed at Durgapur Steelworks. Rated at a daily output of 1250 tons of iron each, Nos. 1 & 2 Blast Furnaces have frequently exceeded this figure. No. 3 Blast Furnace, now ready for operation, completes the Iron making Plant. Up to date nearly 2 lakh tons of steel have been produced from the Open Hearth Furnaces which have been put into operation in the Steel Melting Shop. All the Open Hearth furnaces are now ready for operation.

17TH ANNUAL REPORT 1960

DIRECTORS' REPORT TO THE SHAREHOLDERS

GENTLEMEN,

The Directors beg to submit the audited Balance Sheet as at, and Profit and Loss Account for the year ended, 31st December, 1960.

	Rs.	nP
The working of the year, after providing for all working expenses, depreciation, etc., on furniture, motor cars, etc., and making payment of gratuity to retiring employees resulted in a Profit of	7,03,650	72
Out of which the following appropriations have been made :—	Rs.	nP
(i) to meet the shortfall on redemption and sale of Government Securities purchased in 1945-46 at above par	1,15,268	44
(ii) to meet the loss in respect of preference shares purchased in 1945 of a Company, the capital whereof was written down under orders of Reconstruction Scheme passed by the High Court, Calcutta	1,40,000	00
	2,55,268	44
leaving a Net Profit of	4,48,382	28
to which is to be added the amount brought forward from last year	12,236	30
making the total amount available	Rs. 4,60,618	58

which has been disposed of as follows :

	Rs.	nP.
Amount transferred to Doubtful Debts Suspense Reserve Account	4,50,321	81
Amount utilised for payment of taxes	8,084	78
Balance carried forward to the next year's account	2,211	99
	Rs. 4,60,618	58

2. The business of your Bank registered further improvement during the year under report. In fact considerable progress has been made by your Bank during the past five years : its deposits have increased from Rs. 492.62 lacs as at the end of December 1955 to Rs. 694.87 lacs at the end of the year under report, advances have gone up from Rs. 305.76 lacs (1955) to Rs. 480.90 lacs (1960), and gross earnings have improved from Rs. 31.35 lacs (1955) to Rs. 48.40 lacs (1960).

3. According to Article 107 of the Articles of Association of the Bank, two Directors, viz., (i) Sir Padampat Singhania, Kt., and (ii) Sardar D. Inder Singh, retire by rotation from the Board and, being eligible, offer themselves for re-appointment.

4. You are requested to appoint Auditors for the current year and to fix their remuneration.

5. The Directors express their gratitude to the Bank's constituents and shareholders for their continued confidence and support.

For and on behalf of the Board of Directors

PADAMPAT,
Chairman.

KANPUR, 31*st March*, 1961.

BALANCE SHEET AS AT 31st DECEMBER, 1960

Previous year Rs.	CAPITAL AND LIABILITIES	Rs.	nP	Rs.	nP

NOTES :—

(1) No account has been taken of the present liability in respect of future payments of gratuity to staff and various claims made by employees not acknowledged as debts and under dispute.

(2) The figures of Bank's branches in Pakistan have been incorporated in the Balance Sheet and the Profit and Loss Account at par.

(3) The classification of loans and advances does not take into account the Displaced Persons (Debts Adjustment) Act, which may have an effect on the same.

(4) The liability of the Bank in respect of taxes payable for the year 1948 and onwards in Pakistan and in respect of years from 1955 to 1959 in India has not been assessed.

(5) No provision has been made for depreciation on landed property as the estimated present values of such property, according to the management, are higher than their book value.

(ii) The General Manager, the Deputy General Manager and Inspector of Branches are allowed the use of Bank's Motor Cars free of cost.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Hindustan Commercial Bank Ltd., as at 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated (a) unaudited returns from the Bank's branches in India and Pakistan (not visited by us for the purposes of this report) certified by the respective branch managers and amended at the Head Office on the basis of the information with the Head Office and (b) accounts prepared at the Head Office based on the records of the various other branches in Pakistan which were evacuated in the year 1947.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-section (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

The Central Government have, by an order dated 21st February, 1961, exempted all the branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1960.

We report that—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank, which have come to our notice, have been within the powers of the Bank ;

(c) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns duly amended at the Head Office ;

(d) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts read along with the notes appearing therein give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended on that date.

SCOPE OF MANAGEMENT ACCOUNTING

HOW IT AIDS BUSINESS ADMINISTRATION

By Dr. G. P. Gupta

DEAN, FACULTY OF COMMERCE, VIKRAM UNIVERSITY

NOT long ago the Accountant was considered as a bookkeeper and at best one who could give the profit and loss account and the balance-sheet of business and the cost of goods manufactured and sold. An element of control came to accounts when attempts were made to control costs and wastes through the proper maintenance of accounts. Later, an integration of financial and cost records was brought about and budgeting was also adopted as an aid to financial control. Another major shift brought about by the new requirements is that the emphasis is not so much on the information to be given to the shareholders as on the information to be given to the management for administrative purposes. And with the increased emphasis on speed in procuring accounting information, it has become necessary to give the required information to the shareholders quicker than before.

The modern accountant can no longer function in a separate watertight compartment and be content with the neat and proper arrangement of the dead bones of recorded facts. He has to make contributions to the practice of management by participating in the predetermination of plans and targets, keeping a watchful eye on past performances, current operations and future trends and enabling prompt action being taken to remedy defects and difficulties. Now an accountant in any industrially advanced country is taken as an active participant in the development of increased productivity.

Origin of Idea

The idea of Management Accounting originated by the pioneering efforts of Mr. James H. Bliss, who in his *Financial and Operating Ratios in Management* propounded that "it is through the intelligent and effective use of accounting statistics that the management of a business may maintain the best contact with the details of its operations and affairs, and exercise the most effective control over them." Further in the same book he wrote that "the larger purpose in accounting and statistical work is to point out to businessmen those things in their affairs requiring their attention—the sore spots in their business—and to supply information indicating so far as possible the executive action called for." A year later, in 1924, Bliss brought out *Management Through Accounts* and prescribed therein the function of Management Accounting thus:

"The real function of all accountancy work is to render a service to business management. The service lies in placing before business executives the most complete information on their affairs analysed and interpreted so as to be readily understood and used effectively in guiding and controlling their operations and transactions more profitably, economically and conservatively."

It is clear how Bliss was thinking ahead of his time. Subsequently, it was realised by many, notably T. G. Rose, who produced his *Higher Control in Management* in 1934, that the financial data, if analysed and interpreted, can be of immense use to management.

Management accounting is any form of accounting which enables a business to be conducted more efficiently. A team of British Industrial Accountants and Managers who visited U.S.A. in 1950 under the auspices of the Anglo-American Council on Productivity, submitted their report and defined Management Accounting as follows:

"Management Accounting is the presentation of accounting information in such a way as to assist management in the creation of policy and in the day-to-day operation of an undertaking.

"The technique of accountancy is of extreme importance because it works in the most nearly universal medium available for the expression of facts, so that facts of great diversity can be represented in the same picture. It is not the production of these pictures that is a function of management, but the use of them."

From this definition it is clear that management accountancy is properly the *presentation* of accounting information in such a way as to assist management, and not the *preparation of account*. By 'presentation' is meant the adaptation and analysis of accounting information and also its diagnosis and explanation for the use of managing director. It is interesting to note that in the pamphlet on *Management Accounting* issued by the Institute of Chartered Accountants in England and Wales, in June 1954, para 39 states: "The accountant should accept the responsibility of explaining and interpreting the figures shown in his statements. This responsibility can be best discharged by designing the statements so as to emphasise what he considers to be the matters requiring attention by the management."

Thus, management accountancy is the technique of business management with the following objectives:—

1. Adequate financing on sound and well-planned basis,
2. Enduring efficiency and economy through suitable control system,
3. Effective use of reports and data skilfully presented, and
4. Co-ordination of activities into an integrated system towards successful management.

The subject is thus so dynamic and all-embracing that it pools together a wide variety of thoughts and focusses attention on the various factors that contribute to successful business management. The crux of management accounting is the integration and co-ordination of all activities towards the successful management of business as a whole. Management accountancy includes financial accounting, statistics, cost accounting and budgeting with their appropriate controls with an eye on financial forecasting.

Aid To Management

Management accounting makes it practicable to present information in such a concise understandable form as to be easily understood by the management. The accountant works out for the management details of the budget of plan, also of standards, ideal, normal or attainable, as well as the targets for the different levels of operation. Also, he interprets the performance and advises as to the further line of action—he is and has to be in living touch with the entire working.

It is the job of the accountant to see how actual performance compares periodically with the budgeted figures. It means, in other words, that the accountant supplies to the management the extent to which budget has been carried out. The techniques employed by the management accountant enable the management immediately to know whether or not the company is proceeding according to plan. He reports any divergences or variances to the top management.

POWER DEVELOPMENT IN GUJARAT

MEASURES TO OVERCOME SHORTAGE

THE Government and the people of Gujarat have set their hearts on further industrialisation of their State. There are, of course, many enterprising businessmen who can mobilise investible resources for the purpose. But it may be difficult for them to establish industries (large and medium) on any large scale in the State if its present power shortage is not removed in the next few years. The total generating capacity in the State today is only 300 M.W., but the current demand for power is known to be much more than this, though no authoritative estimate of such demand is available. Of course, the present power shortage is not the result of any shortfall in the achievement of the second Plan's target, for all the projects contemplated under that Plan for the different regions of the State have been completed, and the actual outlay on them has turned out to be Rs. 16 crores as against the allocation of Rs. 14.4 crores. Yet there is no surplus power to be carried to the third Plan for being supplied in the initial period of the Plan till the projects decided upon for the third Plan are ready. In part, at least, this situation is the result of Gujarat's creation as a separate State.

The State Government and the Gujarat Electricity Board are, of course, trying their best to remedy the situation as early as possible. The steps which have been and are being taken in this regard may be narrated here. First, the Government has taken a major step in preparing the project of the Dhuvaran power station. The capacity of this station was originally fixed at 150/187.5 M.W., but it will now be 200/250 M.W. with a firm capacity of 187.5 M.W. This station is likely to be completed by the end of 1962 or early in 1963. Secondly, the scheme for the expansion of the Ahmedabad Electric Supply Company's power house has also been approved. Orders for increasing its capacity by 30,000 kw. were placed over a year ago and, according to the Chief Minister of Gujarat, steps are being taken to increase its capacity still further by the provision of another 30,000 kw. set. The power situation in the Ahmedabad region, according to Mr. H. M. Patel, Chairman, Gujarat Electricity Board, is expected to improve by March 1962. Thirdly, to provide some immediate help to small-scale industries, the State Government has also ordered some generating diesel sets of 1,000 kw. each for South Gujarat, North Gujarat and Saurashtra areas. Fourthly, the Government has also decided to help such of those industrialists as arrange to purchase diesel power generating sets of their own. This help will be given by granting licences speedily, by getting the Financial Corporation to grant loans to the extent of 50 per cent of the cost of generating sets and by providing the development rebate available on such machinery. In all cases where the industrial concern generates its own electricity there will also be relief from electricity duty for a period of five years, which might be extended to ten years. These facilities and concessions are certainly necessary because, with mounting costs of fuel oil and coal, it would be otherwise uneconomical for industrial establishments to go in for self-generating plant which, by necessity, has to be of small size and will thus be uneconomic. Fifthly, with the setting up of an atomic power station at Tarapore, for which initial preparations are under way, the State will get 75 M.W. by the end of the third Plan period, and a further quantum of 75 M.W. early in the fourth Plan period. All the same, as Mr. H. M. Patel has just told the Committee of the Indian Merchants' Chamber, the question of further increasing the power supply in the State will have to be considered by 1962 so that the supply in the course of time would be adequate to meet the expected growth in demand.

Needs of Industries

These measures have, therefore, given rise to the hope that the power needs of industries in Gujarat might come to be adequately met during the third Plan period. All those who want to start new industries in the State, it is stated, will have no difficulty in securing the required electric energy. There will necessarily be a time-lag of three years between the time a decision is taken to start an industry and the time when the industry is ready to go into production and by that time adequate power is expected to be available. It is pointed out further that it ordinarily takes two to three years, if not more, in putting up any large-scale factory, after an idea to start one takes root; that much time is required for the various related purposes—getting the necessary licence for setting up the factory at the place one may choose, for securing the licences for ordering the required machinery, for obtaining the machinery after the order is placed, for acquiring the required land, for constructing the factory and its ancillary buildings and for erecting the machinery. Entrepreneurs are, therefore, expected to go ahead with their preparations for new ventures without being deterred by the fear that adequate power will not be available.

More immediately the supply position is sought to be improved by certain restrictions designed to economise the consumption of power. These restrictions have been rendered necessary by the rapid increase in consumption of power both in industries and in the domestic sector of the Ahmedabad region. They have been imposed with a view to ensuring that the existing plant of the Ahmedabad Electric Supply Company is not overworked. The restrictions in the use of power by industries have also been motivated by the Government's desire to ensure that power so saved could be made available to new industries which have already been set up so that the substantial investment that has gone into the setting up of such industries would not be forced to remain idle and unproductive for a considerable length of time.

Cost of Power

In the circumstances of the current power shortage in Gujarat, the Committee of the Indian Merchants' Chamber would have done well to emphasise the generation and supply aspect alone without bringing in the cost aspect in their discussions with Mr. H. M. Patel. As the Committee, however, has chosen to refer to "the relatively high cost that industries in Gujarat have to bear in respect of supply of power" and to plead for a reduction in it, Mr. Patel has had to tell frankly that thermal power is, in the nature of things, comparatively costlier than hydro-electric power and that, in spite of this, the overall burden in respect of power should not make any material difference in the cost of production of most of the industries. Mr. Patel's assurance that the Electricity Board would endeavour to rationalise the rate structure by reducing the diversity of rates in the supply of power from different generating stations in the State should be deemed good enough for the present. For the rest, industrialists—both old and new—would do well to remember, in the present conditions of power shortage, that the costliest kilowatt of electricity is what cannot be had in time.

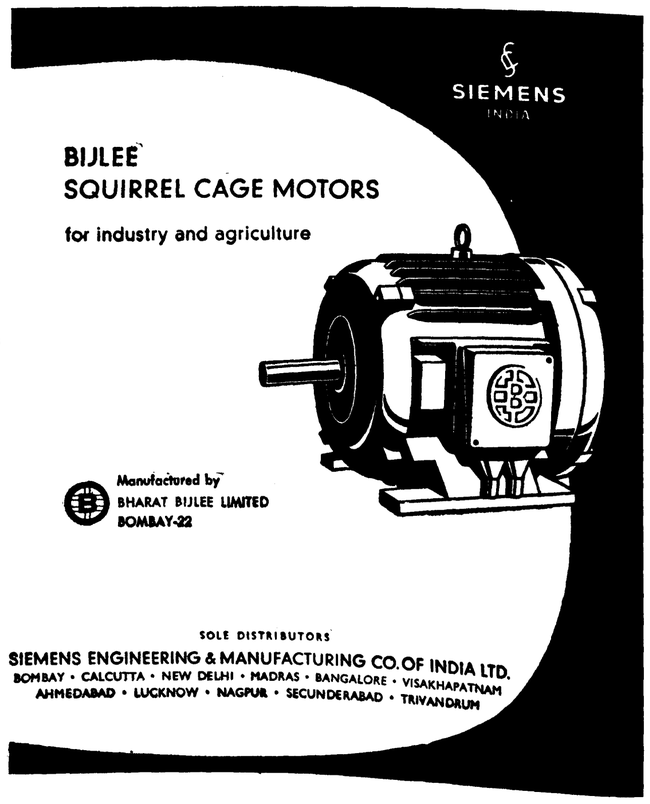
OIL-INDIA'S RECORD IN DRILLING

Oil-India Ltd., formed on 18th February 1959 as a participatory venture between the Government of India and the Burmah Oil Company, has established a drilling record both in efficiency and in economy. Average drilling time to depths between 9,500 feet and 10,500 feet has been reduced to as low as 11 days per well, which gives an average penetration of 900 feet per day.

The present estimate of average cost of drilling a well at Nahorkatiya including all charges such as construction of approach roads, rigging up operations, drilling, testing, commissioning, rigging down and depreciation together with departmental and general overheads will be about Rs. 13.1 lakhs. On an average the cost of approach roads comes to about Rs. 60,000 per well. As Oil-India is approaching its intensive developmental phase, drilling is being undertaken in remoter areas which involve larger outlays on road construction and the aim is to offset such increases in cost by efficiency and faster drilling.

Oil-India's 100th well, Nahorkatiya Well No. 86, spudded in on Wednesday, 3rd May, is now drilling well below 9,000 feet and is expected to be completed in a couple of days. Well No. 87 was spudded in on 5th May and has already reached a depth of about 8,000 feet. Out of 85 wells completed in Nahorkatiya, 61 wells or 72 per cent of the total are producers of oil, 7 give only gas, 7 proved to be dry and 10 are yet to be tested. In Moran, out of a total of 13 wells completed, 7 produce oil, 1 yields only gas and 5 are dry; the 14th well which commenced drilling on 25th April has reached a depth of 10,500 feet and will be completed soon.

With the wells already drilled and tested, Oil-India can supply nearly 2 million metric tons of crude per annum. By the time Nunmati and Barauni refineries go on stream its production capacity will increase to 2.75 or even 3.0 million metric tons. At present Digboi Refinery is drawing about 5,000 barrels per day to supplement its supply from the Digboi field of Assam Oil Company.



NEW PRODUCTS AND PROCESSES

New Technique for Applying Pesticides

A NEW technique for applying pesticides, which may prove of considerable value particularly in tropical countries, has been developed at Fisons Pest Control research station at Chesterford Park, near Cambridge, England. It is expected to reduce considerably losses of food crops throughout the world due to insects, fungi, disease, and weeds and is likely to be of particular value in protecting crops such as cotton. In this technique, developed under the direction of Dr. G. S. Hartley, the active agent is mixed with a small quantity of water containing a soap made from stearic acid and a volatile base. With this formulation, known as Lovo, the pesticide can be distributed as a fine spray and evaporation of water from droplets prevented by the action of the stearic acid. While the droplet is falling, the volatile base evaporates and releases the acid to form a greasy, protective skin round each drop. This skin also helps the droplet to stick to waxy leaves on impact, and to stay in place even when washed over by heavy rain. The Lovo formulation with fungicides was first tested on banana plantations in the West Indies and in Central Africa. The results are now being evaluated, but in some areas substantial increases in crop yields have been reported. Promising results with fungicides have also been obtained in tea plantations in India and Ceylon, and a highly successful attack with insecticides was made on an outbreak of fine-looper caterpillar in a pine forest in England.

Heavy Duty Metal Cleaning Machine

A U.K. firm, specialising in dish and bottle washing machines and metal cleaning and degreasing plant, have introduced a heavy-duty dunking machine. Pneumatically operated throughout the dunking operation the machine is intended for applications where soaking and agitation are more suitable than other metal cleaning methods. Typical of the variety of uses to which it can be put are the washing of sand from castings and the rough cleaning of cylinder blocks. The pieces to be cleaned are transferred from a feed roller conveyor to the dunking table which the operator lowers into the cleaning solution by means of a control valve. When the table reaches the bottom of the tank the dunking automatically begins immediately. A strong turbulence is started on the cleaning solution which scours all surfaces of the pieces and penetrates the recesses, loosening and removing sand, grease or other residues. At the end of the cleaning period, the operator reverses the control valve which stops the dunking action and elevates the table. The action of pushing the next batch of soiled pieces on to the table ejects the cleaned load on to a roller conveyor at the other side of the machine. A filtration system can be fitted to provide continuous filtration of the cleaning solution.

Increasing Jute Fibre Cell Length

Research at Kew Gardens, London, on jute plants treated with a plant hormone extracted from a fungus is said to have shown that the length of the fibre cells increased, on an average, about 50 per cent, and often more. The hormone is gibberellic acid, and the research work is being carried out by Miss M. Y. Stant at the Royal Botanic Gardens, Kew. Miss Stant believes that the discovery may be of major importance to producers of jute, hemp, and possibly other fibres. It is not possible, according to her, yet to estimate the economic significance, as we cannot do field crop tests here. The experimental plants were grown under glass and in conditions which are not exactly ideal. If similar increases in cell length can be obtained in the field, then, provided the cost of gibberellic acid comes down, it may be possible to make some economic use of this investigation.

PVC—Steel Laminates

One of the major British industrial triumphs of recent years—PVC/steel laminates—will be prominently featured by British Geon at Interplas, from 21st June to 1st July at Olympia, London. Steel with its intrinsic toughness and durability can now be given a permanent protective coating of PVC, available in a wide range of colours and cuts out the need for painting or finishing. For the same reasons, products made with PVC coated sheet steel require little or no maintenance. The PVC is also non-flammable, tough and long lasting. Thus PVC coated steel is ideal for a wide range of constructional and engineering purposes, as well as consumer durables such as occasional furniture. Also on the stand will be exhibits illustrating the protection of metal by dip-coating in PVC paste. This technique cuts out costly coating by hand and at the same time gives a corrosion- and abrasion-resistant coating with outstanding adhesion to the metal.

Automatic Biscuit Oven

An automatic conveyorised biscuit oven, which requires less than half the space of existing ones and is claimed to reduce baking times by 50 per cent or more has been developed by Baker Perkins of Westwood Works, Peterborough, England. Special Radiflon high frequency heating units are used in addition to normal radiated and convected heat. The application of high frequency is said to improve the control of moisture content of the biscuits and overall quality is fully maintained. Production models of the oven, which has been designed in particular for biscuit factories where there is a need to save floor space, will be available next year.

New Additive for Soft Drinks

An additive for soft drinks which will ensure a uniformly cloudy appearance and prevent flotation of essential oil is to be marketed by John and E. Sturge of Wheeleys Road, Birmingham, England. The additive, made from maize oil and light amber in colour, is stated to have a "neutral" flavour, no traces of fat and can be mixed with the essential oil to raise its specific gravity to that of the finished beverage.

The appearance and shelf-life of soft drinks is improved by the product, it is claimed, and the flavour enhanced because of uniform dispersion of essential oil through the bottle.

Testing Cloth

The strength of cloth, paper or plastic sheeting can be determined quite easily, it is claimed, by using a portable device developed by a French concern. The device, made from stainless steel, looks rather like a large pair of pliers and, says the maker, is just as easy to handle. Material to be tested is simply placed within the serrated jaws of the "pliers" and, as the handles are squeezed together, a small piston is pressed on to the cloth. The apparatus can be set at any value by setting a screw and will not harm the material provided it conforms to certain minimum requirements.

SCOPE OF MANAGEMENT ACCOUNTING

(*Concluded from page 998*)

In preparing the plan for business and in its execution subsequently, the actuals are recorded and compared at short intervals with the budgeted figures so that co-relations could be applied and other suitable measures adopted before it is too late. The latest trend is not to treat the budgets, the standards and the actuals as three distinct sets of calculations. Thus a system of accounting is evolved which secures a complete integration of budgeting and accounting including costing.

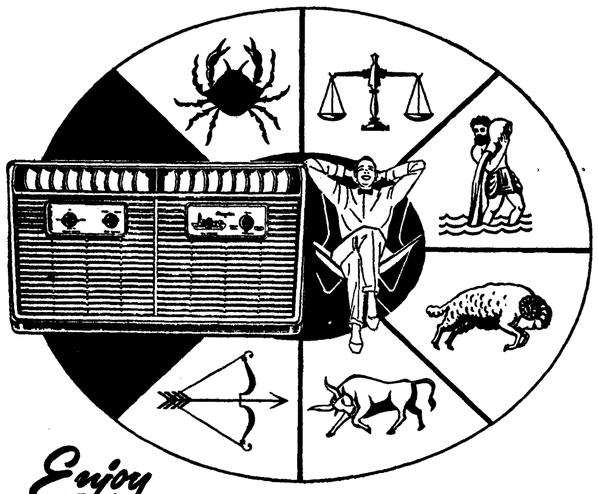
Another important aspect of management accounting is that it introduces a strong element of 'cost consciousness' in all levels of management. Budgetary control which is operated by the accountant by its very nature necessarily makes the various levels of management cost-conscious.

The purport of management accounting is to control the flow of money in business into the most profitable channels. The effective use of the capital employed in a business could be achieved by the systematic classification of profit and loss account and balance-sheet for the use of the management—which results ultimately in a scientific control over production, selling, office organisation and personnel which is essential in the modern business technique.

Management accounting helps to control the movement of funds in a business so that the spending of the funds is regulated according to the budget figures and that there is no overspending under any of the heads. Moreover, the management is kept informed of the financial position of the company every month and thereby a panoramic picture is placed before the management that will not be possible merely from the financial records.

A proper system of accounting assists not only an industrial unit in formulating its policy but also the industry as a whole. With accurate and appropriate statistics in their possession, associations could advise their members on more sound lines. There is a case for introduction of uniform accounting so that the preparation of statistics within an industry could be facilitated and at the same time be more useful.

Finally, proper accounting as well as comparable and accurate statistics and accounting information assist the country to plan more scientifically. Management accounting is the bridge between the accountant's technical and the manager's administrative work. Management accounting is both a check and aid to management. It has come to stay, and without it no business can be properly controlled.



HOW COMMUNITY PROJECTS HAVE FARED

FINDINGS OF TWO CASE STUDIES

By Prof. V. G. Ramakrishna Aiyer

HOW has the C.D. programme functioned? Has it achieved to any extent the objectives it was intended to achieve? What does it promise for the future? All persons who are interested in C.D. schemes are naturally anxious to know how it has fared in respect of these aspects of the problem. Perhaps it is not too much to say that in our Five-year Plans there is no programme which has received such universal support as the C.D. programme. It is the most important silent social revolution that is taking place in the rural sector of our economy. No doubt in a sense it is too early to be dogmatic in making a precise assessment of the results of a huge scheme with State-wide ramifications. In fact, in the early stages a good part of the time has been spent in establishing an organisational apparatus. Further, it is a scheme in which diverse factors —psychological, personal, political and administrative—are involved. They are in a sense still in a transitional stage and we can therefore make only some broad observations regarding their present working and the measures to be taken for removing the deficiencies.

Though the programme of Community Development is nation-wide, it would be more realistic to focus attention on its working in two important States in S. India, viz., Madras and Andhra, as revealed by the two case studies recently conducted by the Annamalai and Venkateswara Universities.

The C.D. programme has been in operation in Madras State from 1952-53. At the end of the first Plan (31st March 1958) 51 C.D. and N.E.S. blocks were functioning in the State. During the four years 1956-57 to 1959-60, 126 new blocks were launched, and out of these, 26 were in the pre-extension stage. Some of them were later classified as post-extensive. In 1959 (December) there were 14 C.D. and 112 Stage I, 56 Stage II blocks. These blocks were 23,664 sq. miles in extent and covered 8,998 villages with a population of 139 blocks. The progress made in the C.D. programme covers agriculture, animal husbandry, health and rural sanitation. Adult literacy was promoted by 1,533 Adult Education Centres functioning on 31st March 1959. During the last four years, 1.81 lakh adults were made literate. Social education in the form of youth clubs, farmers' unions, etc. had been initiated. To encourage women to participate in C.D. programmes, 1,271 *mahila samitis* were organised. The people's contribution from the C.D. programmes, according to official estimates, was Rs. 245.65 lakhs by way of cash, labour and other materials.

Experiment in Andhra

In Andhra the experiment is more interesting on account of the democratic decentralisation all over the State in the form of *panchayats* which now come into close contact with the community schemes. In Andhra, C.D. blocks in Stage I and II have been converted into *samiti* areas throughout the State and financial allocations have been made by the State Government, and the C.D. is expected to cover the entire State by 1963. More and more functions pertaining to local development and mobilisation of local resources, human and material, are being made over to the *panchayats* and local participation in development programmes is progressively increasing in volume and content. This can be judged by the local matching contributions in cash in some cases, and in most villages it is mainly *shramdan* or labour. This is of great psychological significance since it inspires in the villagers a sense of achieving something for the benefit of the entire local community. In some advanced stage I or II blocks, people seem to take advantage of the various avenues of assistance. The case studies show that the progress made in Andhra might serve as an example to the rest of India.

Some Deficiencies

Nevertheless the working of the C.D. schemes in Madras and Andhra reveal certain disturbing trends and deficiencies which have to be rectified in view of the great importance attached to the C.D. programmes in the Five-year Plans in order to revitalise the rural sector of the national economy.

The first difficulty is the one of securing the right type of development officers and village level workers (*gram sevaks*) who are needed in several thousands for a dynamic approach to the problem. Here is an opportunity for mobilising a considerable labour force during the period of the third Plan. At present most of the *gram sevak* people are city dwellers who have taken up work because they can find nothing better. Their training is inadequate and often consists of a few months' course which is not modified for each different region. The trained block development officers and other technical men that are expected to be supplied by the Agricultural Colleges are inadequate and the number of trained personnel has steadily declined between 1952 and 1959. The new recruits that now go into villages have no practical knowledge of helping to carry out even small irrigation works and measures to check erosion. The prejudices of class and caste unfortunately limit the whole approach to the problem. Most of the workers seldom believe in the dignity of labour themselves and some of them would not go into a paddy field for fear of mud getting on their clothes and they are reluctant to work with 'Harijans'. In fact most of the community development leaders are drawn from the bigger landlords and this tends only to aggravate the existing social tensions.

At the block level, the bureaucratisation is disturbing with the administrative staff predominating over the technical men. Further, in C.D. programmes local knowledge and co-operation and sympathy must be enlisted and this could be secured best by keeping the same men to work instead of the usual bureaucratic practice of transferring the officers in charge of the project area. In fact, continuity of effort is affected by rapid rotation of personnel. The tendency towards bureaucratisation of C.D. programmes by which orders come down from on high without regard to local needs is a thing to be avoided. There are many anomalies, e.g. propaganda for the Japanese method of rice cultivation being pushed in areas where rice occupies a very small percentage of the cultivated area or in regions where water-supplies and irrigation are inadequate. Every block without regard to local conditions receives a credit for irrigation and irrigation is provided without provision for draining which results in water-logged areas.

Another defect noticed is the prevalence of mistaken priorities. For instance, cement which is badly needed for irrigation canals, tanks and wells is lavishly used for making roads. Instances of mistaken priorities can be multiplied which reveal lack of judgment on the part of officers in charge on the relative importance of works to be done. There would certainly be a better result, if there is concentration more on strictly agricultural matters relating to increasing agricultural production.

More important than bureaucratisation and mistaken priorities is the virtual failure to secure the auto-investment of labour, the famous *shramdan* or voluntary labour. The need to encourage local efforts is one of the most essential features of C.D. movement but the amount of voluntary labour is minimal. Some classes and castes have no part or lot in C.D. programmes whose effectiveness depends on the whole hearted co-operation and support of the local community. Surplus labour of the countryside has to be tackled properly. It is feasible to encourage people of the village to give their labour for works of special benefit to them, such as schools, roads, wells, etc. Of course, it takes some organisation to get all these schemes working. There must be men of the right type to plan and work up enthusiasm, and public funds must also be provided to meet the cost of materials or skills which the village itself provide. Given such organisation, experience shows that the villagers will gladly turn to work on local public works. The idea that they will do this seems strange to townsmen with an individualistic outlook, but in a small village where everybody knows everybody else, a sense of communal effort for communal purposes may be very effective incentive to the betterment of social conditions. All the same, there are certain definite limits to what can be done in this way. In the first place the works must be of local *benefit*—the villagers will build a minor road connecting the village to a main road, but they will not build a road for all and sundry without payment. Secondly, the works must benefit the village as a whole, and must not be obviously of much greater advantage to some than to the rest.

Some programmes bear too much the mark of having been made in the capital city, and too little the influence of the countryside where most of the people live. Plans made for the country from the towns also tend to be of the spectacular kind which can be shown off to the visitors. Too much is spent on constructing a few elegant highways, and too little on a multitude of small farm-to-market roads which might add more to output.

C.D. Way to Rural Progress

Most of the deficiencies that have been brought to light can be easily rectified and it is necessary to bring better qualified people to work on these programmes since C.D. is the only way to rural progress. There must be greater efforts to win the peasants' confidence by ceasing to rely on the few rich people of the village. In fact, the movement must acquire a social conscience and appear as the promoter of village well-being. The so-called social education is now the weakest link of the C.D. programme and without widespread and correct knowledge of the movement among the local people, the whole thing will become attenuated. We must improve the technical base by giving the trained agronomist the same salary as the administrative officer who is today too much in control of the movement. Above all, the movement must lose its monolithic approach and study the local problems of each region and adapt themselves to them. This implies that there is urgent need for decentralisation purged of bureaucratic habits, and to rely more on local initiative and responsibility. The relations between *panchayats* and block development officers should be properly understood, since the latter are there to carry out the decisions and resolutions of the *panchayats* and if the non-official presidents of *panchayats* hamper the work of the block development officers, it is the people who ultimately suffer. It is from this point of view that the democratic decentralisation that has been set up in Andhra State is of particular interest and importance.

It may also be noted that in the case of the C.D. programmes a common fault is to think of development too largely of investment in concrete things, and too little in terms of investment in persons. Human capital, particularly in rural areas, is as important as material capital and the neglect of this fact is seen in the deficiency of public health and education programmes in rural areas. Measures for the improvement of diets, and for the elimination of debilitating diseases can increase productivity which is the ultimate test of success of rural programmes.

Since the C.D. programmes have been in operation for about six years, it would be interesting to know what kind of physical assets have been created in the C.D. areas for the amounts that have been spent so far. It would be of great value if, with regard to the type of assets, yearly expenditure figures itemwise and also of people's contribution separately for labour, cash and other materials are kept. The expenditure might be presented as those of block areas and non-block areas' projects, and non-project achievements should be separately maintained. But the problem is only transitional and the question would not arise when the entire country is covered by community projects and N.E.S. programmes.

In conclusion, the findings of the case studies enumerated above together with suggestions for improvement show that more case studies on a regional basis are necessary and it will help variations in approach and pattern necessary to establish the right priorities according to local conditions. The immensity of the C.D. movement and the fact that it is implemented by State Governments make it all the more necessary to make continuous research study serve as background material for further action.

ANNOUNCEMENT

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

have pleasure to announce that, in pursuance of their objective to promote savings and encourage rural deposits

THE INTEREST RATES ON SAVINGS BANK ACCOUNT

in all their offices

HAVE BEEN RAISED

as from the 1st April, 1961, as under :—

FROM 2½% TO 3% P.A.

T. R. KRISHNASWAMI,
General Manager.

STEARIC ACID

(DOUBLE DISTILLED)
Manufactured by
THE MODI VANASPATI MFG. CO.
Maharashtra State Distributors
RAMJILAL LAKHMICHAND
333, Kalbadevi Road, Bombay-2
Phone—Office: 39361 Residence: 88436
Importers, Stockists and Suppliers of:
ALL INDUSTRIAL CHEMICALS

OBTAIN **FREE** ON **PATENTS & TRADE MARKS** **BROCHURE**

Contact:
PURUSHOTTAMDAS GOKULDAS
Patent Attorneys
39D, People's Building, Ground Floor, Sir Pherozshah Mehta Road, Bombay-1.
Telephone: 258014—258172.

INDUSTRIAL IBCON CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT—
PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL
STORES ORGANISATION • CONSUMABLE STORES CONTROL
RAW MATERIALS CONTROL • FUEL AND STEAM UTILISATION
TRANSPORTATION METHODS • MECHANICAL HANDLING
PRODUCT QUALITY CONTROL • OPERATIONAL RESEARCH
WORK STUDY • BUDGETARY CONTROLS
VALUATION OF PLANT & BUILDINGS
DESIGN AND ESTIMATES OF EXTENSIONS

ON LABOUR—
METHOD AND WORK STUDY • PRODUCTIVITY INDICES
TIMEKEEPING SYSTEMS • WAGE PAYMENT SYSTEMS
JOB EVALUATION • WAGE STRUCTURES
PERSONNEL RECORDS • LABOUR POLICIES
HUMAN RELATIONS • COMMUNICATION
REORIENTATION LECTURES • FOR LABOUR AND SUPERVISION

IN OFFICES—
MANAGEMENT ORGANISATION • EXECUTIVE LEVEL WORK
CLERICAL PROCEDURE • MANAGEMENT CONTROLS
WORK MEASUREMENT • BUDGET FORECASTS
LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND

THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT

MARKET RESEARCH

PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES

TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

IBCON PRIVATE LIMITED

2, FAIRLIE PLACE, CALCUTTA 1. HEAD OFFICE: ADELPHI, 119, QUEENS RD., BOMBAY 1. BRADY'S BLDG., M. GANDHI RD., KANPUR

GEORGE OAKES BUILDING, SRI NARASIMHARAJA SQUARE, BANGALORE 2.
85 WARD PLACE, COLOMBO 7, CEYLON

ALSO IN:
U.K., PAKISTAN, BURMA, IRAQ, CHILE, ARGENTINA, BRAZIL, MEXICO, AUSTRALIA, HONG KONG.

It is in your interest to make the most of the
V. INTERNATIONAL TECHNICAL FAIR IN BELGRADE
23rd August—2nd September 1961

Exhibition of products of **MACHINE-BUILDING, METAL-PROCESSING, CHEMICAL AND ELECTRICAL INDUSTRIES**
Exhibition of the application of **AUTOMATION, ELECTRONICS AND NUCLEAR TECHNICS**
In the frame of the fair **INTERNATIONAL AUTOMOBILE SHOW, EXHIBITION OF MECHANOGRAPHIC PRODUCTS AND MACHINES FOR ANALOGOUS CALCULATING**

Applications and Information:
BEOGRADSKI SAJAM - Beograd POB 408
Diplomatic and consular representatives of FPR Yugoslavia abroad

BALANCED DEVELOPMENT OF MAHARASHTRA

JOINT-SECTOR ENTERPRISES TO BE SET UP

EVER since the birfurcation of the erstwhile Bombay State just over a year ago, the Maharashtra Government has been laying stress on the industrialisation of the Bombay City's hinterland which has remained largely unaffected by the overall development process initiated during the two Five-year Plans. Taking the overall picture, the State, no doubt, stands head and shoulders above other States in respect of industrial development. There are 8,700 factories in the State, employing about 19 per cent of the total organised factory labour in the country. Thus in statistical terms, industrial activity in the State is higher than in the rest of the country. But a closer analysis will show that this industrial activity is concentrated in Bombay City, with the State's interior regions, such as Marathwada and Konkan, remaining industrially dormant. One year is too short a period in the history of a State, and, therefore, its omissions and comissions during this period will have to be judged with this limitation in mind. Some of the policies of the State Government, as in the case of land reforms, have, of course, not been designed with particular attention to the need for stimulating initiative and enterprise in the State. There is, however, reason to believe that efforts are being made by the new administration to infuse a sense of urgency among all concerned to step up the tempo of development, and, thereby, encourage the establishment of new industries in the inferior of the State.

Power, Transport

The place of decentralisation of industries will be determined by many factors, such as availability of power, water supply and adequate transport, in which the interior of Maharashtra is in no enviable position. But with the successful execution of the various plan projects, particularly, the Koyna hydro-electric project, the situation is bound to improve in due course. The State Government can certainly help promote the trend by giving necessary incentives as well as safeguards for prospective investors in places away from the Bombay city. The proposal for establishing 'joint sector' enterprises in their context, should be welcome to the industrial community. Mr. Y. B. Chavan, State's Chief Minister, while addressing a meeting of the Maharashtra Economic Development Council on Friday last week in Bombay, disclosed that the State Government would consider the establishment of large-scale industrial enterprises in rural areas in the joint sector in which the State and private industrialists would collaborate. He pointed out that besides providing for public sector enterprises, the State's Plan would make adequate provision for participation in joint sector enterprises. It would appear that Mr. Chavan is in favour of joint projects only in such rural areas where co-operatives of rural raw material producers are not likely to be in a position to set up the industries themselves, owing to complex technology or excessive capital cost involved. It may be noted here that the suggestion of joint sector enterprises has come from certain other States, too, for implementation during the third Plan period. While there are obvious virtues in the proposed arrangement, it should not be forgotten that 'joint sector' will not mean participation of equals where the Government has major powers.

Mr. Chavan held the view that the most fruitful field for extention of modern industry to rural areas is agricultural processing industries. While, on the one hand, the processing industries would obviate avoidable energy and efforts in transporting raw materials to the urban centres of industries, on the other hand, they will provide gainful employment to the agricultural classes, enabling them to supplement their income and thereby improving their standard of living. Emphasising the need for encouraging co-operative institutions in agricultural processing, Mr. Chavan observed that the experience gained in the organisation of co-operative sugar factories in the State should provide the necessary guidance in extending the activity to other agricultural processing industries based on rural resources, both in the primary and in secondary sectors.

Industrial Estates

Another measure designed to industrialise the backward regions is the establishment of industrial estates. Facilities in the shape of developed plots with provision of factory accommodation, roads, power, water supply, etc., are being provided in industrial estates where small-scale enterprises can be attracted. Mr. Chavan urged the people to take maximum advantage of these facilities and develop small industries based on power. He added: "These units in the rural areas may serve as feeders to the large and medium units which are at present concentrated in the urban centres. A systematic effort will have to be made to decentralise production components of large and medium industries to small enterprises which can be set up in rural areas. This will link up the economy of the rural areas with that of the urban centres and curb the tendency to migrate to the cities." In this connection, he pointed out that the State Government proposed to set up regional development boards for the various regions in the State, in order to secure a balanced development of the State.

Mr. Pratapsinh Mathuradas, President of the Development Council, welcomed the move of the Government for balanced and integrated development of all regions. He, however, reminded the authorities that the concept of regional balance and dispersal of industries did not imply an approach of antipathy towards, or neglect of, the developed areas of the State. Certain industries requiring access to developed technologies, port facilities and railway lines, he added, would naturally be inclined to find their place around Bombay. He stressed that no restrictions, direct or indirect, should be imposed on the location of industries in this area. The object of balanced development in the State should be achieved, not by a negative approach of preventing a further spread of industrialisation in the developed area, but by a definite and positive approach of locating areas and building overheads in the regions, which required to be developed.

Nagpur Plan

On the subject of overheads, Mr. Mathuradas regretted that although the country as a whole had attained the "Nagpur Road Plan" target as early as in 1957, the road mileage of Maharashtra would have reached only 80 per cent of their target by the end of the second Plan. In order to improve transport facilities, he suggested various measures. They are:

1. All intermediate and minor ports should be connected by good all-weather roads.

2. Construction of new bridges and causeways should be taken up on important roads where traffic is held up.

3. All important railway stations should be connected to the main state highways.

4. State and national highways must be so constructed as to stand much greater loads than those which goods vehicles are, at present, permitted to carry.

5. The West-Coast Road known as the Bombay-Konkan-Goa Road is an urgent need as it would provide a vital link for the people of Konkan.

6. The West Coast Road should also be connected by cross-roads at as many intermediate points as possible.

7. Adequate provision should be made for the construction of bridges, causeways, etc., over the numerous creeks and rivulets crossing the roads in the Konkan area.

Adequate supply of electricity is another prerequisite both for expansion of existing units and development of new ones. Mr. Mathuradas suggested that all methods of power generation, whether conventional or otherwise, would have to be utilised and the power so generated would have to be pooled in suitable grids so as to cover the entire region of the State by providing adequate transmission and distribution network.

Dealing with the financing of the third Plan for Maharashtra, Mr. Mathuradas held the view that the scope for additional taxation in the State was little as the level of taxation was already high. It may be noted here that out of the outlay of Rs. 390 crores in the State's third Plan, Central assistance will cover Rs. 170 crores. The State Government will have to mobilise Rs. 220 crores. The State has a proud record in the matter of raising resources through small savings. In fact, the three-day conference of the officers of the State Directorate of Small Savings and those of the Regional National Savings Office held at Mahableshwar, chalked out several measures to strengthen the small savings movement towards collecting a total sum of Rs. 100 crores during the third Plan period. In 1960-61, Maharashtra raised Rs. 26 crores by way of small savings, or 25 per cent of the total for the whole of India. Mr. Homi J. H. Taleyarkhan, State Minister for Public Health, Small Savings and Tourism, who presided over the Mahableshwar conference, pleaded for the implementation of the Pay Roll Savings Scheme in the different industrial units of the State, in order to promote the small savings movement. The Century Mills has already implemented the scheme, covering 8,000 workers. The other industrial units in the State will do well to consider the scheme, which will, in turn, augment resources for the third Plan.

MOTOR INDUSTRY IN W. EUROPE

A feature of industrial development in Western Europe during the last decade has been the phenomenal growth of automobile industry. The number of passenger cars manufactured in Western Europe, for instance, rose from 1.5 million in 1953 to 4.5 million in 1960. On the contrary, production of motor cars in the U.S. ceased to expand during the same period. As a result, Western Europe has come quite close to the U.S. as producer of motor cars. In 1953, the U.S. accounted for 75 per cent of world output, whereas Europe accounted for only 20 per cent. At present, the share of U.S. has fallen to 50 per cent, while Europe's share has risen to 40 per cent.

The present tempo of expansion in Western Europe is expected to be maintained in the years to come. According to the present development plans, the combined capacity of the West European motor industry will be about 8 million passenger cars by 1965. In Sweden, the U.K. and Italy, manufacturers expect to double current production by the middle of the 1960's. At the same time, France and West Germany have plans to step up output by 10-15 per cent per annum. While the growth of W. European motor industry is spectacular, there has been some anxiety over the question whether demand—both domestic and overseas—too will increase at the same pace. Viewed against the background of cut back in production and laying off workers recently in several W. European motor car units, the prospects do not appear to be very bright. Analysing the problems of, and prospects for, the W. European automobile industry, the *Index*, the latest monthly economic review of the Svenska Handelsbanken, of Stockholm, Sweden, expresses the view that "even if net exports of vehicles from Western Europe are doubled during the next five years—which seems a rather optimistic assumption—present expansion plans may easily result in considerable excess capacity in 1965."

The demand for motor cars is rising, but not as fast as production. At the beginning of 1953, Western Europe as a whole had about 30 passenger cars per 1,000 inhabitants. At present the figure is about 70. Despite this rise, Western Europe is still far behind the U.S. where the density is at present over 300 vehicles per 1,000 inhabitants. It is estimated that the number of passenger cars in Wesern Europe will rise from 20 million units at the beginning of 1960 to about 35 million at the end of 1965, that is, at the rate of about 2.5 million a year. Besides, the demand for replacement purposes in Europe will be just over 2 million units per annum. This will mean that West European demand in 1965 will be 4-5 million vehicles per annum, as against a planned capacity of 8 million, or in other words, that a considerable portion of the European car production must be exported. It is estimated that net exports from Western Europe amounted to just over one million passenger cars in 1960. The chances of a rapid increase appear somewhat uncertain. Exports to the U.S. are expected to decline, and the prospects on other foreign markets are not very promising. The restrictive import policies and the development of domestic industries in several countries, particularly the possibility of a sizable increase in Japanese motor car production, rendered the market prospects for W. European motor cars uncertain.

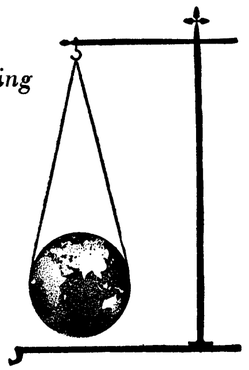
STERLING AREA EXPORTS

Sterling area exports were 6 per cent higher in 1960 than in the previous year, according to an article appearing in the latest issue of the British *Board of Trade Journal*. Total exports in the fourth quarter were, on a seasonally adjusted basis, about 2 per cent lower than in the third quarter. A fall of about 3 per cent in the exports of the oversea sterling area was offset by a rise in U.K. exports.

The 6 per cent increase in sterling area exports for the year was spread over all major areas with the exception of North America. Total imports by the sterling area for the year as a whole were 15 per cent higher than in 1959, the U.K. and the overseas sterling area showing much the same increase.

GLASS AND CERAMIC YEAR BOOK

A clear picture of the progress made by the glass and ceramic industry during the first and second Plans and its present position can be had from this *Year Book* (*Indian Glass and Ceramic Year Book*. Editor: K. R. Nambiar, 25, Bank Street, Bombay 1. Pages: 276. Price: Rs. 10) which is claimed to be the first of its kind published about the industry in this country. It provides, in a small compass, much useful information about glass and ceramics not available elsewhere. Manufacturers and traders will find extremely useful the Buyers' Guide and the list of manufacturers, suppliers of raw materials and dealers of glass and ceramics all over the country. The foreign section contains, besides brief surveys of the industry in different countries, the names and addresses of leading glass and ceramic manufacturers abroad.



Weighing the world up...

... even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

LOWER SALES AND HIGHER COSTS AFFECT PROFIT OF NATIONAL RAYON

EXPANSION PLANS WELL UNDER WAY

THE year ended 31st December 1960 witnessed a setback to the sales of the National Rayon Corporation Limited (Managing Agents: Messrs. Chinai and Company Private Ltd., Bombay) for the first time since the Company commenced operations. The actual revenue proceeds from sales in that year amounted to Rs. 717.31 lakhs, a drop of Rs. 35.16 lakhs as compared with the figure of Rs. 752.47 lakhs for 1959. The drop in sales is attributed in the Directors' report to three factors: (1) higher opening balance of stock-in-trade at the beginning of 1959 than the opening balance of the accounting year, (2) a slight loss in production due to minor breakdown in the pumping station, and (3) manufacture of yarns of finer deniers. The reduction in sales proceeds during 1960 is accounted for entirely by yarn and waste the sales of which show a marked fall of Rs. 44.28 lakhs to Rs. 715.47 lakhs, while receipts from chemicals and miscellaneous sales have risen again to Rs. 46.12 lakhs, as against Rs. 37 lakhs in the previous year, Rs. 20.87 lakhs in 1958 and Rs. 10.99 lakhs in 1957. The opening stocks of yarn and process were lower at Rs. 21.61 lakhs, as against Rs. 49.71 lakhs in the previous year.

The setback to sales, on the one side, and higher expenses and excise duty, on the other, have cut into the gross profit which has fallen from Rs. 275.93 lakhs for 1959 to Rs. 258.59 lakhs for 1960. It is, however, gratifying to note that the ratio of profitability to sales has been maintained at over 36 per cent. There has been an increase in the wage bill from Rs. 76.52 lakhs to Rs. 88.61 lakhs, due to the agreement with workers under which wages have been raised and upgraded with effect from 1st January 1960.

In view of the decline in profit, the managing agents' commission is lower at Rs. 9.80 lakhs, as against Rs. 18.97 lakhs, and provision for depreciation is reduced by Rs. 15.33 lakhs to Rs. 79.17 lakhs, while that for taxation is higher by Rs. 2.50 lakhs at Rs. 86.50 lakhs. The net profit, therefore, has gone up by Rs. 4.66 lakhs to Rs. 83.12 lakhs. The dividend to ordinary shareholders has been maintained at Rs. 22 per share subject to tax or a net dividend of Rs. 15.40. The payment of dividend on preference shares recommended is 5.55 per cent per share free of tax, as against 5.00 per cent tax-free paid in 1959, in conformity with the Preference Shares (Regulation of Dividends) Act 1960.

The table below gives at a glance the financial results of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	7,17.31	7,52.47	6,37.11	5,37.48

* Subject to deduction of tax.

The import licence for wood-pulp, which was cut by 10 per cent of the normal requirements for the second half of 1960-61 has been restored on the basis of making available rayon yarn to weaving mills at concessional rates for export promotion.

The implementation of the Company's expansion programme is well under way, as is evident from the following extracts from the Directors' report:

"The production on the twelve new spinning frames under installation, bringing the total complement to 88 frames, is likely to commence by about the beginning of June 1961.

"There has been a slight delay in pressing the tire cord plant into commission due to shortage of cement and the inordinate delay in the delivery of cables ordered out. The bulk of the foreign equipment has arrived. Orders placed for indigenous materials and equipment have been executed to a substantial extent and the installation of the machinery is taken in hand. It is expected that the plant would go into production by about the beginning of the fourth quarter of the year.

"The machinery for 100-ton sulphuric acid plant is being installed, and it is expected that it would be put into commission by about the middle of next year.

"Industrial licence for putting up a cellophane paper plant was received some time last year. A licence for the import of the equipment, application for which has already been submitted, is still awaiting disposal by the Government.

"An industrial licence for the expansion of the caustic soda plant has already been received. Application for obtaining an import licence has already been submitted and negotiations for obtaining a loan to cover the foreign exchange content of the equipment on deferred payment terms are proceeding.

"To be self-sufficient in the matter of the most important raw material, namely, rayon grade pulp, an industrial licence for putting up a 100-ton capacity pulp plant in the Mysore area has been obtained. The details are being worked out presently and negotiations are in progress for providing the necessary facilities and engineering services."

The paid-up capital of the Company is Rs. 415.36 lakhs, consisting of Rs. 174.25 lakhs in preference shares of Rs. 100 each and Rs. 241.11 lakhs in ordinary shares of Rs. 100 each. Reserves and surplus have improved by Rs. 46.67 lakhs to Rs. 207.68 lakhs. The unsecured loans have advanced from Rs. 1.77 lakh to Rs. 49.40 lakhs, on account of a loan of Rs. 32.11 lakhs from the Export-Import Bank and larger loans obtained from others. The secured loan in 5½ per cent debentures of the Company remains at Rs. 154.15 lakhs, inclusive of accrued interest.

The net block of the Company stands at Rs. 740.36 lakhs, after providing Rs. 602.53 lakhs for depreciation. The financial position of the Company is very sound, inasmuch as the current assets of Rs. 257.01 lakhs are well above current liabilities at Rs. 171.93 lakhs, showing a margin of Rs. 85.08 lakhs.

The Rs. 100 paid-up ordinary shares of the Company stand at Rs. 527.50 *cum-div.* At this rate, the net yield works out to 2.91 per cent.

GENERAL INDUSTRIAL SOCIETY LTD.

The General Industrial Society Limited has entered into collaboration with the American Gage and Machine Company, Inc., U.S.A., for the manufacture in India of various instruments, now being produced by the U.S. firm's three affiliated and subsidiary companies, namely, Size Control Company, Inc., Walsh Press and Die Company, Inc. and Simpson Electric Company, Inc. The general principle of collaboration has been agreed upon wherein the American company will participate in the equity capital of the Indian company. It will be supplying the technical know-how and the capital equipment required for setting up the plant. The Size Control Company will help the Indian company to manufacture various types of precision gauges and instruments for the laboratory, complete quality control procedures and special precision equipment for use in missiles, aircraft, ordnance and instrument fields. The Walsh Press and Die Company's assistance will be in the complete line of pure presses. The Simpson Electric Company will help in manufacturing the various electric and electronic testing equipments to meet the demand of the electrical industry, TV, radio, refrigeration, air conditioning industry, laboratory, aircraft, etc. The automotive division of this Company will collaborate in the production of various types of testing equipments required for the automobiles like ignition carburettor, general tune up, engine starters and magnetic, etc.

It is proposed to form a new Company having a capital of approximately Rs. 1 crore. The plant is expected to commence production by 1963. In the meantime the Indian company will make available for use in the country all these equipments against import licence.

The Directors of the Ahmedabad Advance Mills Ltd. have decided to recommend the following dividends for the period 1st July to 31st December 1960: Ordinary shares: Rs. 6 per share, subject to deduction tax; preference shares: 5 per cent per annum, free of income-tax (Rs. 3.25 per share gross or Rs. 2.28 net). The annual general meeting of the Company will be held on 19th July 1961.

The Directors of the Tata Mills Ltd. have recommended payment of a dividend of Rs. 5 subject to tax on ordinary shares for the year 1960, as against Rs. 2.50 for 1959. The annual general meeting of the Company will be held on 20th July 1961.

BELSUND SUGAR PRODUCES MORE

SALES, HOWEVER, DECLINE

THE increased cost of raw material following the increase of 18 nP to Re. 1.62 per maund in the minimum cane price and reduction in recovery percentage of sugar in cane have seriously affected the working results of the Belsund Sugar Company Ltd. (Managing Agents: Bangur Brothers Ltd., Calcutta) for the year ended 30th September 1960. The total quantity of cane actually crushed during the year was markedly higher at 3,507,990 maunds, as against 3,120,771 maunds in the previous year, but the production of sugar improved only modestly from 316,825 maunds in 1958-59 to 331,485 maunds in 1959-60. For the recovery of sugar was lower at 9.47 per cent, as against 10.15 per cent in 1958-59 and 10.47 per cent in 1957-58. The cost of raw materials and stores consumed has gone up by Rs. 13.50 lakhs to Rs. 71.57 lakhs.

Despite the decline in sales of sugar from Rs. 126.06 lakhs to Rs. 111.08 lakhs, the gross profit of the Company increased by Rs. 21,000 to Rs. 9.46 lakhs. But the level of profit should have been higher if account is taken of the substantial stocks lying undisposed of with the Company at the end of September 1960 valued at Rs. 35.26 lakhs as against Rs. 20.10 lakhs a year before.

The following comparative table indicates the progress of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957

* Subject to deduction of tax.

After providing Rs. 72,000 for managing agents' commission, Rs. 2.15 lakhs for depreciation and Rs. 2.80 lakhs for taxation, the net profit shows a fall of Rs. 1.76 lakh to Rs. 3.79 lakhs. In view of low profit, transfers to reserves have not been found possible save, of course, the sum of Rs. 61,000 credited to statutory development rebate reserve. The dividend on shares however has been maintained at the previous level of Re. 1.40 per share subject to tax.

The subscribed capital of the Company as at 30th September 1960 amounts to Rs. 19.49 lakhs, the whole of which consists of 259,870 ordinary shares of Rs. 7.50 each fully paid. This, together with reserves and surplus aggregating Rs. 10.16 lakhs, gives a total of Rs. 29.65 lakhs or Rs. 11.4 per share. The gross block of the Company is valued at Rs. 53.17 lakhs, including Rs. 4.49 lakhs being the additions made during the year and Rs. 4.73 lakhs representing the cost of machines under erection. Deducting from this amount the sum of Rs. 29.60 lakhs as accumulated depreciation, the net block works out to Rs. 23.57 lakhs.

Current assets (including investment, other than in the subsidiary company) and loans and advances aggregate Rs. 74.90 lakhs, against which amount liabilities (including secured and unsecured loans) are worth Rs. 75.51 lakhs. The investment in the subsidiary has a book value of Rs. 6.68 lakhs, as compared with its market value of Rs. 8.16 lakhs.

During the year under review, the Company's subsidiary, the Hindustan Wire Products Ltd., earned a profit of Rs. 1.52 lakh which has been transferred to reserves. The profit of the subsidiary so far as applicable to the shareholders of the Company amounts to Rs. 39,000, but no credit for this amount has been taken in the Company's accounts.

The current market value of the Company's Rs. 7.50 fully paid ordinary shares is Rs. 12.57 *cum-div.* On an *ex-div.* basis, the yield works out to 8.61 per cent per annum.

IMPRESSIVE SHOW BY ATUL PRODUCTS

LARGE ACCRETION TO RESERVES—DIVIDEND MAINTAINED

THE year ended 31st December 1960 has proved to be a highly profitable one for Atul Products Ltd. (Managing Agents: Messrs. Lalbhai Sons & Co. Ahmedabad), in spite of the fact that the Company lost full 15 days' production in the month of March due to shortage of coal and experienced considerable difficulties in regard to supply of raw materials. The excellent performance of the Company is clearly reflected in the substantial expansion in sales proceeds from Rs. 353.81 lakhs in 1959 to Rs. 418.95 lakhs in the year under review. The other income of the Company, which includes Rs. 14.29 lakhs being the dividends received from its subsidiaries (Rs. 14 lakhs from Atic Industries Private Ltd. and Rs. 28,800 from Ameer Trading Corporation Private Ltd.) has also risen markedly from Rs. 25.47 lakhs to Rs. 42.87 lakhs. The gross earnings have, therefore, jumped up from Rs. 110.62 lakhs to Rs. 148.98 lakhs, representing an increase of more than 34 per cent. The profitability of the Company, that is the ratio of earnings to sales, however, has increased only slightly from 31.2 per cent to 32.9 per cent, thanks to the sharp rise of Rs. 44.86 lakhs to Rs. 138.13 lakhs in other expenses.

Consequent on the higher gross earnings, remuneration to Managing Agents has been raised by Rs. 2.07 lakhs to Rs. 11.17 lakhs and provision for depreciation only a shade higher at Rs. 19.94 lakhs as against Rs. 19.72 lakhs. There has been an increase in the tax liability of the Company and in order to meet this liability, a large sum of Rs. 49 lakhs has been provided for taxation, that for 1959 being Rs. 37.50 lakhs (excluding Rs. 7.50 lakhs in respect of 1958). Even so, the net profit has gone up quite perceptibly from Rs. 36.80 lakhs for 1959 to Rs. 68.87 lakhs for 1960, representing an expansion of as much as 87 per cent. Such a perceptible improvement in profit has not, however, benefited the shareholders in the form of enhanced dividend which has been maintained at the previous year's rate of 12 per cent subject to tax. For the Directors have considered it more prudent to plough back a substantial amount of profit to strengthen reserves in view of the Company's expansion programmes. The reserves are credited with as much as Rs. 34 lakhs as against only Rs. 9.50 lakhs in 1959 and statutory development rebate reserve with Rs. 4.50 lakhs as against Rs. 3.00 lakhs. The total dividend absorption is Rs. 26.94 lakhs and the balance of Rs. 4.16 lakhs has been carried forward to the next year as against Rs. 73,000. Deducting the 30 per cent tax, the net dividend comes to 8.4 per cent which is lower than the tax-free dividend of 10 per cent distributed in 1958. Rs. 100 fully paid shares of the Company are highly fancied and are currently quoted on the Ahmedabad Stock Exchange at Rs. 556.50.

The following comparative table will give a synoptic idea of the progress of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

* Wealth tax.
† Includes Rs. 7.50 lakhs in respect of 1958.
‡ Subject to deduction of tax.

The working results of the Company for the year under review have to be judged bearing in mind the various adverse circumstances facing the Company. A reference has already been made to the loss of production in the month of March due to inadequate supplies of coal. The shortage developed in the month of October also, but the timely assistance of the Gujarat Government saved the Company from a second stoppage. Even during the current year, the Company is finding it increasingly difficult to keep all the plants running to capacity levels, due to the irregular coal supplies. Another bottleneck is insufficient supply of raw materials. The Directors' report states that the Company has never been granted sufficient import licences to utilise fully the installed capacities of various plants. The situation is rendered worse by the inordinate delays in the issue of import licences. It was as a result of these delays that the Company was not able to make any commitments for purchases and had therefore to curtail production in azo and sulphur black paints in the month of October 1960. There has been further deterioration in the situation since the beginning of this year. In fact, the Company had to close all its plants for periods varying between two and three months. Even the values of import licence granted to the Company have been cut by 20 per cent. The experience of Atul Products Ltd. thus clearly shows that some of the first class chemical manufacturing companies in the country are handicapped by the difficulty in obtaining maintenance imports which are so urgently needed to keep production at a high level. As if these difficulties are not sufficient, the Finance Act 1961 has imposed further burdens. Four intermediates used by the Company as raw materials have been subjected to increased levies.

Notwithstanding the aforesaid difficulties, the various expansion projects undertaken by the Company are being implemented satisfactorily, as will be evident from the following extract from the Directors' report.

"The phosphorus trichloride plant is now working satisfactorily. The sulfuric acid plant was put into commission in the month of July 1960 and is also now working satisfactorily although, in the case of both these plants, it has still not been found possible to utilise the full capacities. A plant for some intermediates like sodium naphthionate, sulfanilic acid is now nearing completion. A substantial part of the equipment for the BON acid plant and the caustic soda plant is on the site and the buildings for both these plants are in hand. However, the work is not progressing as was planned, on account of the shortage of cement. The Company completed a fair amount of work on the construction of a second weir on the river Par before the shortage of cement. Similarly, all the other building projects are also progressing slowly on account of the same reason.

"Projects for the manufacture of intermediates are now taking definite shape. For reasons of convenience, the Company has divided the manufacture of these intermediates into two broad groups; Ciba Ltd., Basle, Switzerland, has assumed the responsibility of general guidance and supervision of the complete scheme in the case of these groups. Ciba Ltd. have again given whatever know-how they had in the case of some intermediates; in some cases the Company has bought the know-how from Rohner Ltd., Pratteln, Switzerland. Thus, complete know-how for both the groups has now been secured. The engineering of these plants has been given to Humphreys and Glasgow Limited, London. The agreements relative to the above matters have been entered into and the work on the designing of the plants is already in hand. The Company has secured a part of the foreign exchange required for these projects by way of a loan from the Industrial Credit and Investment Corporation of India Ltd. and has approached other similar organisations for further accommodation."

"A company, known as CIBATUL Private Ltd., has now been formed in partnership with Ciba Ltd. Basle and Ciba of India Private Ltd. to handle immediately the manufacture of some urea formaldehyde plastic products and intermediates and bases for sulfadrugs. Plant designs for both these projects are getting ready."

The financial position of the Company is quite sound. The Company's paid-up capital as at 31st December 1960 is Rs. 224.97 lakhs, which is supplemented by reserves and surplus aggregating Rs. 81.74 lakhs. The outstanding borrowings (secured loans Rs. 180.03 lakhs, unsecured loans Rs. 80.34 lakhs) are of the order of Rs. 260.37 lakhs and other current liabilities and provisions Rs. 171.18 lakhs. As against these, current assets (including investments of Rs. 102.45 lakhs mainly in fully paid ordinary shares of the Company's subsidiaries) amounts to Rs. 457.83 lakhs. During the year, additions of Rs. 49.94 lakhs were made to the block account, taking the value of gross block to Rs. 405.77 lakhs on which the depreciation provided so far is Rs. 125.34 lakhs. The net block thus stands at Rs. 280.43 lakhs.

On the basis of *ex-div.* value and the proposed rate of dividend, the Rs. 100 fully paid-up shares of the Company give a net yield of 1.53 per cent per annum.

INDORE MALWA'S RESULTS SATISFACTORY

DIVIDEND RAISED AGAIN

THE trading conditions of the Indore Malwa United Mills Limited (Chairman: Mr. Kudilal G. Seksaria) improved considerably during the year ended 31st December 1960. The sales of cloth, yarn and waste improved by Rs. 32.79 lakhs or 11.3 per cent to Rs. 320.50 lakhs as compared with 1959. The increase in sales receipts was more or less offset by the rise in prices of raw cotton and higher wage bill. The wage bill increased from Rs. 80.48 lakhs to Rs. 88.13 lakhs. In the Madhya Pradesh region where the mill is situated, the wage bill has gone up by Rs. 6 per worker from 1st January 1960 in accordance with the recommendations of the Central Wage Board for Cotton Textile Industry.

The closing stocks of the Company as at the end of 1960 stand at Rs. 109.65 lakhs, as against Rs. 69.33 lakhs a year before, showing an increase of Rs. 40.32 lakhs. The major part of the increase is accounted by cotton, *kapas*, etc., the value of which has risen from Rs. 26.78 lakhs to Rs. 54.30 lakhs, due mostly to higher prices of raw cotton.

The increased gross profit of Rs. 28.58 lakhs, as against only Rs. 1.01 lakh in the previous year, has enabled the Directors to provide for arrears of depreciation and recommend an enhanced dividend of 8½ per cent taxable, as against 7 per cent taxable distributed for 1959 and 5 per cent (tax-free) for 1958. The sum actually allocated to depreciation has been provided for the years 1958 and 1959 and amounts to Rs. 10.36 lakhs. No provision has been made for taxation this year, in view of the accumulated and unabsorbed depreciation available to the Company. The income-tax assessments of the Company have been completed upto 1958. The tax demand of Rs. 12.77 lakhs in respect of past assessments for the years 1942 to 1947 has revived due to the majority judgment of the Bombay High Court. The Company, however, has preferred an appeal to the Supreme Court and has made no provision for the same, as the management is hopeful of fair chances of success.

In order to meet the fast growing demand of the decentralised sector of the industry, the Company has started producing additional yarn by working the third shift of its spinning section with effect from May 1960.

The following comparative table reveals the progress made by the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales of cloth, yarn and waste..	3,20.50	2,87.71	2,46.65	2,59.20
Closing stocks	1,09.65	69.33	75.24	92.17

Carry forward	0.16	—12.53	—12.53	—11.77

* Subject to deduction of tax.

The paid-up capital of the Company stands at Rs. 50 lakhs in 50,000 ordinary shares of Rs. 100 each. Reserves and surplus aggregate Rs. 15.05 lakhs, as against Rs. 1.97 lakh in the previous year, the increase representing the wiping off of the carried forward loss. The secured loans have increased from Rs. 90.90 lakhs to Rs. 109.53 lakhs, on account of the increase in borrowings from banks to finance cotton purchases.

The block account amount of the Company is Rs. 36.57 lakhs, after providing Rs. 131.23 lakhs for depreciation. Machineries worth Rs. 8.61 lakhs have been received and installed during the current year and orders for about Rs. 26 lakhs have been placed. The total investments of Rs. 26.26 lakhs include quoted investments worth Rs. 25.51 lakhs, market value of which is higher by Rs. 2.51 lakhs. The total of current assets (exclusive of investments) at Rs. 164.23 lakhs is more than four times the current liabilities amounting to Rs. 38.81 lakhs.

The current market quotation of Rs. 100 paid-up shares is Rs. 148 *cum-div.* The net yield at this rate works out to 4.0 per cent on an increased tax-free dividend of Rs. 5.95.

PROFIT OF STANDARD MOTORS RISES

DIVIDEND MAINTAINED ON INCREASED CAPITAL

A SUBSTANTIAL rise in turnover and handsome improvement in profits are the highlights of operations of the Standard Motors Products of India Ltd. (Acting Secretary: Mr. R. Rajagopalan, Madras), for the year ended 31st December 1960. Sales have gone up by as much as Rs. 175.49 lakhs to Rs. 389.75 lakhs, representing a rise of over 80 per cent, and the gross profit by Rs. 10.37 lakhs to Rs. 28.52 lakhs, or an increase of 57 per cent. If the profit has not risen in proportion to the expansion of sales, it is because of the enhanced cost of operation, as a result of the steady increase in the indigenous content of the vehicles, a feature that is common for the automobile industry as a whole. The heavy capital outlay in machine tools, which is incidental to the production of some of the vital and precision components, adds substantially to overhead expenses and, unless production is raised to sufficiently high levels, the unit cost of operation tends to become unremunerative. With the Governmental control on the level of production as well as the selling price of vehicles, the increasing costs have recently made serious inroads into the profit margins of automobile manufacturers. Naturally, the ratio of gross profit to the sales of Standard Motors products has declined from 8.47 per cent in 1959 to 7.32 per cent in the year under review.

Owing to higher provision for depreciation (Rs. 9.50 lakhs, as against Rs. 6.79 lakhs during 1959) and taxation (Rs. 6.60 lakhs as against Rs. 3.50 lakhs), the net profit has shown a modest rise of Rs. 4.56 lakhs to Rs. 12.42 lakhs. Insufficient profits have restricted the transfer to reserves. The statutory development rebate reserves alone has secured a slightly larger sum of Rs. 3.75 lakhs as against Rs. 3.00 lakhs, because of higher expenditure on net additions to plant and machinery. The balance of Rs. 8.67 lakhs, together with Rs. 3,869 brought forward from the previous accounting period and Rs. 1,749 being the excess provision for dividend in previous years, gives a total of Rs. 8.73 lakhs. The 6½ per cent preference dividend, the tax thereon being borne by the Company, has claimed Rs. 4.46 lakhs, as compared with Rs. 2.73 lakhs in 1959 because of the addition of Rs. 20 lakhs to the preference share capital made towards the close of 1959. Ordinary dividends absorb Rs. 4.23 lakhs on the basis of 9 per cent per share subject to deduction of tax on the 470,000 ordinary shares of Rs. 10 each. Although no change in the rate of ordinary dividends has been proposed, it is to be noted that the dividends for the year are to be paid on a larger capital of Rs. 47 lakhs, as compared with Rs. 37.90 lakhs as at 31st December 1959. The holders of the 300,000 deferred shares have failed to get any return on their investment for the second year in succession. After making the above appropriations, a balance of about Rs. 3,000 has been carried forward to the next trading year.

The salient features of the Company's working results for the year 1960, as compared with those for the three years preceding it, are given in the following statement:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	3,89.75	2,14.26	2,31.02	3,65.74
Other income	2.91	1.59	2.87	2.22

Carry forward	0.08	0.04	0.51	0.06

* Subject to deduction of tax.

The balance-sheet as at 31st December 1960 reveals that the financial position of the Company is fairly strong. The paid-up share capital of Rs. 1 crore equals the authorised capital and consists of Rs. 50 lakhs in 6½ per cent preference shares, Rs. 47 lakhs in ordinary shares of Rs. 10 each fully paid and Rs. 3 lakhs in deferred shares of Re. 1 each fully paid. The amount standing to the credit of the various reserves and the surplus stand at Rs. 24.43 lakhs. The capital funds invested in the business thus amounts to Rs. 124.43 lakhs. Against this, the gross block is valued at Rs. 135.84 lakhs and, after allowing for Rs. 39.74 lakhs as the accumulated depreciation, the net block comes to Rs. 96.10 lakhs. The current liabilities and loans from banks and other creditors amount to Rs. 100.02 lakhs. These are balanced by Rs. 127.91 lakhs in current assets, investments, and loans and advances.

The Company's production during the year 1960 reached the peak level of 3,364 vehicles. Plans have been completed for stepping up the production to 4,500 vehicles in the current year and further to 7,500 vehicles in 1963. The fulfilment of these targets will naturally depend on the licence position. Meanwhile, the Company has commenced the manufacture of a new model Standard Herald which is expected to be placed on the market in the middle of the year. This car, it is said, has been hailed with great enthusiasm in European countries, the U.S. and other places when it was introduced, and the Company looks forward to an equally enthusiastic reception in India. The current model has a two-door body. A prototype four-door body has been completed for introduction in the domestic market and is undergoing tests in England. Subject to the receipt of import licences, the four-door saloon is likely to be manufactured in India during the latter part of 1962.

A further diversification of the product line has been contemplated in the introduction of one-ton truck in the latter part of the year or early next year and this is expected to augment substantially the Company's income. Negotiations are being carried on to add such additional projects as may enhance the profitability of the Company's operations.

The present market quotation for the Company's Rs. 10 fully paid share is Rs. 16.75 *cum-div.* The yield on *ex-div.* basis works out to 3.9 per cent per annum.

ASSOCIATED RUBBER INDUSTRIES LTD.

The Associated Rubber Industries Limited (Managing Agents: Associated Agencies Private Ltd.) is engaged in the manufacture of rubber and ebonite products from natural, synthetic and lynx rubber. The products include mainly footwear, automobile components, synthetic rubber cots and aprons for textile and woollen mills and dipped latex goods like surgical gloves and prophylactics. Considering the wide and varied uses of these products, it is no wonder that the sales of the Company are rapidly expanding. They aggregated Rs. 38.30 lakhs during the year ended 31st December 1960, as against Rs. 31.94 lakhs in the previous year and Rs. 19.52 lakhs in 1958. As against the rise of 19.9 per cent in sales during 1959, the gross profit was higher by only 10.2 per cent at Rs. 7.77 lakhs, as against Rs. 7.05 lakhs. This smaller increase in profit in relation to that in turnover is due to the rising costs of raw materials, labour, power and transportation. The operating charges have increased by Rs. 4.76 lakhs to Rs. 18.32 lakhs, while other expenses have risen by Rs. 2.26 lakhs to Rs. 12.81 lakhs.

Out of the gross profit of Rs. 7.77 lakhs, the Managing Agents' commission takes Rs. 53,000, provision for depreciation Rs. 1.76 lakh and taxation Rs. 2.12 lakhs. The net profit thus amounts to Rs. 3.36 lakhs, as against Rs. 2.56 lakhs in the previous year. The dividend to equity shareholders has been maintained at 10 per cent subject to tax, or 7 per cent tax-free.

An idea of the progress made by the Company in the last four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	38.30	31.94	19.52	22.33
Closing stocks	2.48	2.10	2.93	1.90

Carry forward	0.05	0.03	0.11	0.10

* Subject to deduction of tax.

The gross block of the Company which has increased from Rs. 22.10 lakhs in 1959 to Rs. 31.11 lakhs as on 31st December 1960 stands depreciated to Rs. 20.29 lakhs. The paid-up capital of the Company has risen from Rs. 13.25 lakhs to Rs. 15 lakhs by the issue of 1,750 preference shares of Rs. 100 each during the year. The paid-up capital is now equally divided between preference and ordinary shares both of Rs. 100 each. As against the 6 per cent debenture loan of Rs. 8 lakhs, the debenture redemption reserve stands at Rs. 3.30 lakhs, of which the addition out of the profit for the year under review being Rs. 1.10 lakh. The financial position of the Company is fairly good. The current assets of Rs. 22.29 lakhs (exclusive of investments of Rs. 4.05 lakhs) are well above current liabilities of Rs. 9.43 lakhs.

It is gratifying to note that Inarco Private Ltd., a joint company with Messrs. Armstrong Cork Company Ltd., has commenced production in the new factory at Thana with effect from 20th February 1961. The production of synthetic rubber cots and aprons has, therefore, been discontinued at the Bhavnagar factory of the Company and the balance stocks of raw materials transferred to the joint company on a no-profit no-loss basis. The installation of new footwear machinery was completed in the beginning of the current year and the plant has gone into production. As a result of various efforts of the management, exports of footwear have expanded by three times during the season as compared with the previous year. The plant for dipped latex products could not be worked to its maximum installed capacity during the year, due to increasing competition in home market. The Directors have accordingly proposed to add a few more items of these products to the Company's range of products in the current year.

Although the Rs. 100 paid-up ordinary shares of the Company are listed on the Bombay Stock Exchange, no transaction was put through in them during 1960. The nominal quotation for the scrip is Rs. 105, at which rate the net yield comes to 6.6 per cent.

FRESH ISSUES OF CAPITAL

Eight companies have obtained official consent for the issue of capital of various categories. They are Arvind Mills and Raipur Manufacturing Company of Ahmedabad, Standard Mills of Bombay, Birla Jute Manufacturing Company, Delta Jute Mills Company of Calcutta, Electroflo Ltd., a new company in West Bengal, Tennur Bank Ltd., Tiruchirapalli, and Rayon Pulp Manufacturing Co., Ltd., Bombay. The details of the capital issues are as follows:

Arvind Mills: Issue of 40,000 ordinary shares of Rs. 100 each in the proportion of two bonus shares for every three shares held on capitalisation of its general reserve to a like extent. Its present paid-up capital is Rs. 86.25 lakhs, comprising Rs. 60.00 lakhs in equity shares and Rs. 26.25 lakhs in preference shares.

Raipur Manufacturing Company Ltd: Issue of 20,000 ordinary shares of Rs. 100 each as bonus shares. The Company has a paid-up capital of Rs. 40 lakhs—Rs. 30 lakhs equity shares and Rs. 10 lakhs preference shares. The bonus shares will be allotted in the ratio of two shares for every three shares held by existing equity shareholders.

Standard Mills: Issue of 43,900 equity shares of Rs. 100 each as bonus shares in the proportion of two shares for every five shares held. The paid-up capital of the Company on the date of application was Rs. 121.75 lakhs.

Birla Jute Manufacturing Company: Issue of capital of Rs. 22.81,500 in 228,150 shares of Rs. 10 each as fully paid-up bonus shares on capitalisation of the Company's reserves to a like extent. The bonus shares will be issued after the Company has completed the issue of 465,300 new equity shares of Rs. 10 each at a premium of Rs. 6 per share for which consent was obtained early in February last. The Company's paid-up capital on the date of the bonus issue application was Rs. 215.94 lakhs, comprising Rs. 91.26 lakhs in equity shares and Rs. 123.64 lakhs in preference shares.

Delta Jute Mills Company: Issue of capital of Rs. 37.10 lakhs in (i) 28,000 equity shares of Rs. 100 each at par to be issued to the holders of 28,000 equity shares in Belvedere Jute Mills Company Ltd. and (ii) 9,100 preference shares of Rs. 100 each at par as fully paid to the holders of 7,000 preference shares in the Belvedere Jute Mills Company Ltd., in exchange of the assets and liabilities of the Belvedere Jute Mills Co., Ltd. The consent is subject to the orders of the Courts approving the amalgamation of the Belvedere Jute Mills Co. Ltd. with the Delta Jute Mills Co. Ltd.

Electroflo Ltd: Issue of capital of Rs. 50 lakhs in 400,000 equity shares of Rs. 10 each and 9.2 per cent 10,000 cumulative non-redeemable preference shares of Rs. 100 each. The capital is required for the Company's scheme for the manufacture of watthour meters in collaboration with a Japanese company which will also invest in preference capital to the extent of Rs. 8.17 lakhs.

Tennur Bank Ltd., Tiruchirapalli: Issue of 400 ordinary shares of Rs. 50 each for cash at par in the ratio of one new share for every five shares held. The Bank's present paid-up capital is Rs. 1 lakh, all in ordinary shares of Rs. 50 each.

Rayon Pulp Manufacturing Co. Ltd., Bombay: Issue of capital of Rs. 50 lakhs for cash at par divided into Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in redeemable cumulative preference shares of Rs. 10 each. Of this, shares of the value of Rs. 15 lakhs would be subscribed privately and the balance by the public. The proceeds of the issue will be utilised for the manufacture of bleached rayon grade pulp.

KALINGA TUBES

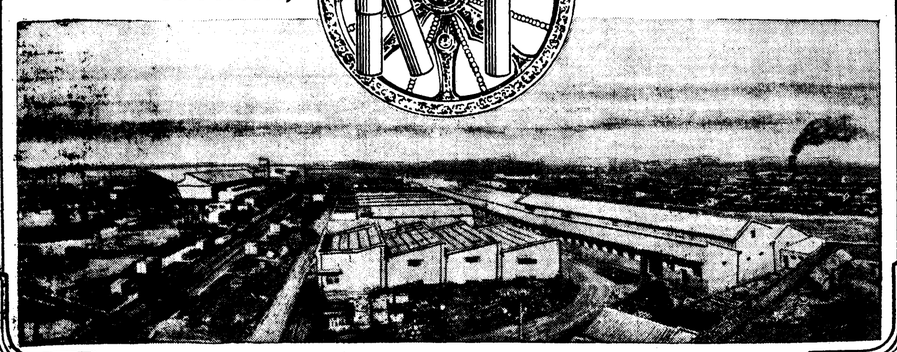
Announce the opening of their

NEW TUBE MILL

Our new mill goes into immediate production of 4", 5" and 6" nominal bore tubes to Indian Standard specifications. With the commissioning of this new mill the production target of one hundred thousand tons of tubes per annum is now attainable.

First to manufacture steel tubes and pipes in India, we were also the first to export, earning valuable foreign exchange.

CUTTACK, ORISSA



KALPANA KT. 28.

N.B.—Adjustments include the balance brought forward from the previous year.

* Loss after providing for depreciation and development reserve.
† Includes Rs. 3 lakhs transferred from general reserve.

Extracts from the Directors' report: For the year under review, for the first time in its history extending over a decade, the Company has made a loss on account of unhappy circumstances practically covering all the aspects of its activities. The continued labour troubles at Howrah resulted in its closure as from 10th December 1959 upto the 10th October 1960 for full 10 months. For the second consecutive year, the Howrah Works which represents major investment and, therefore, unit has proved to be the drain and is responsible for this year's loss. In view of continued labour problems and losses at Howrah, the company had to look for other site to undertake Transformer and Switchgear production. When the Works closed, it had large commitments with customers, suppliers, bank etc. and all of them had to wait till Works reopened.

Adverse conditions on account of power shortage reduced the Company's production demand, particularly in respect of transformers, motors and switch fuse gears. The Company was obliged to reduce production, lay off workmen and even effect retrenchment. Most of the sales was effected against such demand as was available in a competitive market at sacrificial prices. Though the Cable Works had its order books full, it had to remain closed for some months due to shortage of raw materials arising out of foreign exchange difficulties and the Governmental delay in procurement of *High Tensile Steel* under Development Loan Fund by world tenders.

The Company has commenced fabrication of machinery and equipment for establishing the new 5,000 tons ACSR and All Aluminium Conductors Plant in Rihand area. It is expected to go into production by February-March 1962. The Baroda Works commenced production during the year and has trained its workmen, manufactured and delivered over 100 transformers of its own designs to the Gujarat State Electricity Board and has shown encouraging results. The manufacture of ACSR and AAC accessories has commenced at Faridabad. In the course of this year, the range of production will be expanded. Results, are encouraging.

The Company has received on 6th April 1961 the consent from the Controller of Capital Issues for the issue of 20,000 equity shares of Rs. 100 each to be issued for cash at par.

Accounts in brief as at 30th April 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	60,00,000	Gross block	57,20,491
Reserves	1,26,639	—Depreciation	20,49,885

Travancore Ogale Glass Mfg. Co., Ltd.

[*Managing Agents*: Messrs. Ogale Brothers (Private) Ltd., Manjummal, Alwaye, Kerala State.]

Annual General Meeting—9th June. Dividends payable on and after 11th July.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	15,30	12,09
Closing stock	40	6
Gross profit	2,03	1,66
Transfer to Managing Agents' remuneration	12	10
,, ,, depreciation	87	71
,, ,, development rebate	15	15
,, ,, taxation	38	8
Net profit	51	62
Adjustments	12	10
Appropriations:		
Total available balance	63	72
Proposed dividend (taxable)	60 (6%)	60 (6%)
Carry forward	3	12

N.B.—Adjustments include the balance brought forward from the previous year and excess provision for dividend if any.

Extracts from the Directors' report: Taking into consideration the income-tax liability, the directors recommend payment of a dividend of 6 per cent, subject to deduction of tax, leaving a balance of Rs. 3,288 (Rs. 12,479) to be carried forward to the next year's accounts.

Though the production was higher by 30 per cent and the profit by 27 per cent the amount available for payment of dividend is just about the same as last year, since income-tax has to be paid in full from this year onwards on the profits earned hereafter.

During the [illegible] report, the automatic bottle plant went into [illegible] one machine was worked practically for the full year. The initial difficulties of working on an oil-fired furnace are now practically over and the directors feel confident of getting better and higher production this year. On account of shortage of steam coal, the other furnace did not give the expected full production. The Company is now planning to switch on to oil-firing for both the furnaces to get over the chronic shortage of steam coal.

The Central Government has approved reappointment of Messrs. Ogale Brothers (Private) Limited as managing agents for a further period of 5 years from 15th August 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	9,98,980	Gross block	16,98,410
Reserves and surplus	33,288	—Depreciation	7,47,136

Carry forward	58	42

N.B.—Adjustments include the balance brought forward from the previous year and other credit items such as dividends earned from companies in the same group; interest from deposits; forfeited dividends and profit on sale of fixed assets, etc.

Extracts from the Directors' report: Tea crop realised was 5,39,462 kgs. as compared with 5,18,584 kgs. in 1959. The average selling price realised was Rs. 5.09 per kg. as against Rs. 4.74 per kg. in the previous year.

Estimates for 1961 provide for a crop of 4,71,700 kgs. at an outlay of Rs. 18,69,550, including freight and sale charges. Planted area remains at 936.70 acres.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	9,00,000	Gross block	26,79,061

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report:—In pursuance of resolutions passed at an extraordinary general meeting of the Company held on 30th December 1960, the authorised capital was increased to Rs. 50,00,000 and early in 1961, 1,00,000 shares of Rs. 10 each were issued for cash at par to the members of the Company. The new shares so issued will be entitled to participate in the dividend, if any, which may be declared in respect of the year ending on 31st December 1961.

The dividend for 1960 which the Board has recommended above, will be payable in respect of the original issued capital of Rs. 5,00,000, whereas any future dividends will be payable in respect of the increased issued capital of Rs. 15,00,000.

Operations.—The production and sales of both *Switchgear* and *Electric Motors* showed a marked improvement over the previous year. The demand for these products continues to increase and steps are being taken to expand the working capacity of the Company.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

N.B.—Adjustments include the balance brought forward from the previous year; provision for wealth tax no longer required; provision for contingency not required.

* Only Rs. 407 was provided for development rebate in 1959.

† Includes supplemental dividend on 7 per cent. cumulative preference shares for the year 1959 under the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: Apart from the difficulty of supply, during the period under review, the rise in the prices of raw material has been disproportionately high to that of the goods. So far as the working of the current year is concerned, it is very difficult to give definite views, but it is expected that with a bumper new crop, the simultaneous business may be possible resulting in profit.

The resignation of Messrs. Andrew Yule & Co., Ltd., as managing agents of the Company, with effect from 1st March 1960 was accepted by the members of the Company in the general meeting held on 29th June 1960.

The directors are pleased to report to the shareholders of the Company that the modernisation of the *Hessian Section* and *Sacking Warp Section* of the Mill has been completed while the modernisation of the *Sacking Weft* is under consideration.

Accounts in brief as at 30th November 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	28,00,000	Gross block	92,72,655

Proposed dividend (taxable)	44 (2½%)	1,57 (9%)
Carry forward	20	20

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Raisings and Despatches*.—192,482 tonnes of coal were raised and 191,226 tonnes despatched compared with 190,350 tonnes raised and 203,054 tonnes despatched during the previous year. The re-opening of No. 1 Pit to work the Argada Seam was completed during this period and coal raising commenced during May 1960.

Extremely difficult geological conditions were met throughout the property which resulted in a considerable increase in the cost of the coal raised. In addition, the Company's mines were declared gassy during this period by the Mines Department who also prescribed systematic timbering throughout, both of which factors added to the cost.

Transport.—The wagon supply position was very erratic during this period but overall it will be noted that despatches nearly kept pace with raisings. Since the close of the period under review, the wagon position has deteriorated considerably and it seems likely that raisings will have to be restricted.

Accounts in brief as at 31st August 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	17,50,000	Gross block	44,92,231

MONEY EASY

(*From Our Own Correspondent*)

BOMBAY, *23rd May*

There was a distinct improvement in conditions in the short-term money market during the week under review. Supply of funds was fairly large and borrowers were in a position to secure their requirements. The inter-bank call rate, however, ruled at 5 per cent per annum, but stray transactions were reported at 4¾ per cent. Some operators felt that the higher rate would not stay for long and that, in the coming week, the inter-bank call money would be available at 4¾ per cent. Other rates remained at the previous week's levels. For purposes of record, we give them below.

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks ...	5
Other banks ...	5
Notice money:	
3 days or more ...	3
Term deposits:	
(i) 3 to 30 days (inclusive) ...	3
(ii) 31 to 60 days ...	3¼
(iii) 61 to 90 days ...	3½
(iv) 91 days and more but less than 12 months ...	3¾
(v) 12 months ...	4

The results of the 91-days' Treasury Bills of the Government of India sold through weekly tenders showed that, as against an invitation of Rs. 2 crores, equivalent amount was offered and accepted at the average rate of 2.750 per cent per annum, which is same as last week. 91-days' intermediate Treasury Bills sold from 17th to 20th May aggregated Rs. 43 lakhs, as against Rs. 65 lakhs last week. Their sales are being continued from 24th to 27th May.

A decline of Rs. 13.59 crores in demand deposits and an expansion of Rs. 11.37 crores in time deposits are disclosed by the statement of the scheduled banks for the week ended 12th May 1961. The deposits of the State Bank are only a shade higher by Rs. 20 lakhs. The borrowings from the Reserve Bank of India have gone up by Rs. 3.69 crores to Rs. 42.78 crores, and those against usance bills from the same institution by Rs. 2.24 crores. The scheduled banks' borrowings from the State Bank of India have also increased—those of demand nature by Rs. 41.41 lakhs and of time nature by Rs. 10 lakhs. On the assets side, advances and bills discounted have receded by Rs. 3.24 crores to Rs. 1,298.61 crores. A year ago, they stood at Rs. 1,135.12 crores. The advances of the State Bank declined by as much as Rs. 5.17 crores. The decline clearly shows that the advances of other scheduled banks must have actually risen by Rs. 1.93 crore. The investments of scheduled banks as a whole have expanded by Rs. 5.51 crores, and those of the State Bank by Rs. 2.44 crores.

The gilt-edged market was listless throughout the week. Demand was confined only to short-dated issues. 3 per cent 1986 (Conversion loan of 1946) declined further by 10 nP to Rs. 73.10. 3 per cent 1970-75 first development loan also shed 5 nP to Rs. 90.70. 3 per cent 1963-65 and 1964 loans however gained 10 nP each and both closed at Rs. 98.75. In the States' loan section, only 4 per cent. 1967 Bihar advanced by 25 nP to Rs. 98.25. All other States loans were on offer at the previous week's rates.

In the foreign exchange section, the rupee was slightly better in relation to the U.S. dollar. The banks' selling rate remained unchanged at Rs. 479.25 per 100 dollars, but the buying rate improved by 75 nP to Rs. 475 per 100 dollars. In the New York exchange market, the pound weakened further. The latest available rates are: 279.230—279.270 cents per £ for spot and 278.040—278.080 cents per £ for three months' forward. Over the week, the pound has declined by 0.13 cent in the spot and by 0.08 cent in the three months' forward.

FAIR DEMAND FOR TEA

(*Messrs. Forbes, Ewart and Figgis Private Ltd.*)

COCHIN, *16th May*

Offerings in sale No. 20 held today amounted to 577,000 kilograms. Quality was barely maintained. However, there were a few useful invoices on offer from the Nilgiris and Anamalais. The market opened to strong general demand which continued throughout the sale. There was keen enquiry for low mediums and mediums which were fully firm and sometimes dearer. Their fannings however met with less support. Good mediums were well supported at a decline of 5 to 10 nP per kilo. Nilgiris were well supported at a decline of 5 to 20 nP per kilo. Nilgiris were in useful demand but these were irregular and generally lower with the exception of few brighter invoices on offer which sold well. Clean, black leaf descriptions met with keen competition and were the strongest feature of the sale. Wholeleaf grades were generally easier with orange pekoes selling well. There was good support for a small selection of C.T.C. and tippy teas on offer. Quotations were:

	1961	1960
	Rs.	Rs.
Low mediums ...	4.40-4.55	3.75-3.95
Mediums ...	4.55-4.65	3.95-4.20
Good mediums ...	4.70-5.20	4.20-4.40
Nilgiri BOP ...	Rs. 4.60-5.60	

The avergage price realised in sale No. 20 was Rs. 4.60 per kilo as against Rs. 4.61 a week earlier and Rs. 4.21 in the corresponding sale last year.

Dust Sale No. 20: 247,000 kilograms were offered in the sale held on 18th inst. There was strong general demand. Low mediums were well supported and sold well at around last week's rates. There was good support for mediums which were fully firm. Good mediums, particularly those

BULLION FIRM

(*From Our Own Correspondent*)

BOMBAY, *23rd May*

The bullion market depicted a firm trend during the week under review. The firmness was engendered by poor fresh offerings and revival in demand. Some Delhi and Calcutta interests were active buyers. Consequently, prices registered a rise. The improvement would have been more marked but for the general bearish interpretation of the proposed three-monthly settlements in gold and silver. An informal meeting of the Bombay Bullion Association was held on Saturday the 20th inst. The meeting passed all the suggested amendments in the by-laws except for the trading unit of silver which was fixed at 10 kilograms, instead of the proposed 30 kilograms. The delivery months are to be *Margashar*, *Falgun*, *Jeth* and *Bhadrapad*. The maximum carry forward rates are fixed at 40 nP in gold and 80 nP in silver. Business in the quarterly contracts will commence only after the Forward Markets Commission gives its approval.

The daily average offtake of gold during the week was higher at 5,500 tolas, as against 4,500 tolas, while arrivals were slightly less, being 6,750 tolas, as against 7,000 tolas. The reverse was the case in silver. The average daily offtake was 8 bars (14 bars in the previous week) and rate of arrivals was 29 bars (14 bars). The floating stocks are reported to be around 40,000 tolas of gold and 500 bars of silver.

Adjustment rates fixed today were Rs. 119.50 per 10 grams of gold and Rs. 199.90 per kilogram of silver. The corresponding rates for last week were Rs. 118.20 and Rs. 198.35.

The *Jeth Adhik* (first) settlement in gold began the week at Rs. 118.15, as against the previous close of Rs. 118.35, and steadily moved up to touch Rs. 120.05 today. The second settlement fluctuated between Rs. 118.30 and Rs. 117.20 before closing at Rs. 118.15, as against Rs. 117.35 last week-end. The rate for transferring commitments from the first to the second settlement continued to be against bears. Actually, the rate increased from 85 nP on Wednesday last week to Re. 1.10 on Friday, and further to Re. 1.80 yesterday, so that the bulls were required to pay a higher margin of Rs. 20 per 10 grams, as against Rs. 8 previously. The carry forward rate was lower at Re. 1.65 today.

Ready gold was quoted at a premium over the *Jeth Adhik* settlement throughout the week, except for today when it was quoted at a discount of 15 nP. The closing rate was Rs. 119.75, as against Rs. 118.40 last week-end, the highest level touched being Rs. 120.05 yesterday. The premium was 25 nP on Saturday.

In silver, the *Jeth Adhik* settlement rallied from Rs. 198.35 to Rs. 200.30 before finishing at Rs. 220.25. The second settlement advanced from Rs. 197.05 to Rs. 199.35. The closing was 5 nP lower. The rate for transferring commitments from the first to the second settlement was less than a rupee against bears—it was 95 nP today, as against Re. 1.30 on Wednesday last week—and so no margin was in force.

Ready silver met with good support and rose from Rs. 198.35 to Rs. 199.95 today, though it was a shade easy at Rs. 199.90 towards the close. At this level, the discount under the *Jeth Adhik* settlement was 35 nP. On Wednesday last, it was on par.

The world price of gold in the London bullion market was slightly better at $35.06½ per fine ounce, as against $35.06¼.

The following table shows the trend of the market during the week under review:

	23-5-1961 (closing)	High	Low	17-5-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	119.75	120.05	118.25	118.40
Forward:				
Jeth Adhik*	119.90	119.65	118.25	118.20

Gold	251s. 0½d.	250s. 0¼d.	250s. 0¼d.	251s. 0½d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 31st May settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

with useful colour, were in keen demand at dearer rates. Teas from the Nilgiris district were in fair demand but these were generally lower. Residuals were again the weakest feature of the sale.

The average price realised in dust sale No. 20 was Rs. 4.41 per kilo as compared with Rs. 4.40 a week ago and Rs. 4.10 in the corresponding sale last year.

Colombo: This week's export sale met with a good demand but prices were generally easier. Teas from Western districts were substantially lower following quality. Medium descriptions from the Uva district were easier by 10 to 15 cents. However, lowgrowns were firm to dearer.

London—North Indian and other growths: There was good general demand and prices were fully firm to dearer, buyers showing more interests for best Assams.

Ceylon and South Indians: In Tuesday's sale 21,378 packages were offered. There was good but irregular demand; however prices remained generally unchanged.

COTTON FUTURES FALL FURTHER

(*From Our Own Correspondent*)

BOMBAY, *23rd May*

The cotton futures market ruled steady till Saturday but declined in the subsequent sessions. The steadiness was influenced by expectations of export quota for short-staple cotton and Bengal *Deshi*. Although there were reports that the Government was not in favour of releasing further quotas for short-staple cotton (other than Bengal *Deshi*) on the ground that the surplus was only marginal, the continued efforts made by growers and traders in Gujarat gave rise to strong hopes that the Government would at last be persuaded to allow export of some more cotton, possibly ⅞" staple. Shippers of Bengal *Deshi* also pitched their hopes high because the supply position of this cotton, according to them, warranted a further quota. The total supply of Bengal *Deshi* during the season is estimated at 393,000 bales (carry-over of 25,000 bales plus the crop of 368,000 bales). Export quotas released so far aggregate 160,000 bales. Internal consumption amounts to 160,000 bales. Even allowing for a carryover of 30,000 bales at the end of the season, there is still an exportable surplus of over 43,000 bales. Speculative buying prompted by these considerations imparted strength to the market till Saturday. The news of a record consumption of Indian cotton by mills in March 1961 further helped sentiment.

The I.C.C. August contract firmed up from Rs. 567.50 (per three quintals) at the beginning of the week to Rs. 572.50 on Saturday. This rate, however, was not maintained in subsequent sessions. The failure of the quota expectation to materialise and slackness of mill demand for ready cotton induced tired bull liquidation and speculative unloading which resulted in a setback to values. The August contract receded from Rs. 572.50 on the 20th inst. to Rs. 568.50 yesterday. This level was maintained in today's trading which was conspicuously dull. The net loss over the week was Re. 1.

In the spot section, activity was generally subdued. Mill buying was confined to selected popular varieties like CO2, L.147, Vijay, Digvijay. Stray demand was also reported for Wagad and Kalyan. Prices, however, tended to recede.

In anticipation of quota export demand was noted for ⅞" cotton and Bengal *Deshi*. Zoda and Yellow pickings were well favoured. It was officially notified on Friday that the ceiling fixed for the export of cotton 23/32" staple and below (other than Bengal *Deshi*) as per the quota announced on 5th May had already been reached.

Interest in foreign cotton centred round U.S. growths. Sizable business was put through in U.S. cotton. Sudan and East African cottons evoked moderate demand. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri: CO2 1,00; Hubli Laxmi 985; Kalyan 837; American 1,235; Sudan XG3L 1,480.

Conditions in the Karachi cotton futures market during the week remained unchanged from last week. Values moved in a narrow range and showed little net change over the week. The undertone was steady. The report that the Government of India had decided not to issue any more quota for short-staple cotton (excluding Bengal *Deshi*) was noted with interest by operators although it did not induce any speculative rise in prices. N.T.R.G. May was unchanged at Rs. 71. The July position hardened by 30 nP to Rs. 70.30. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: Sind *Deshi* 97; Punjab *Deshi* 94; 4F Punjab Roller 85.80; S.G. 90.80; N.T. Roller 92.80; S.G. 97.30; 289F Punjab Roller 93.80; S.G. 100.30.

Firm conditions prevailed in Alexandria cotton futures during the week under review. Both the Karnak and Ashmouni contracts rallied on support influenced by good foreign inquiries and renewed domestic spinner interest. Operators noted the reported decision of the U.A.R. Government to assume control of all cotton exporting firms in Egypt by acquiring 35 per cent of their share capital. Foreign buyers of Egyptian cotton consider that this step will have the effect of making Egyptian cotton dearer to them because it might bring about uniformity in the price of Egyptian cotton and deprive them of the benefit of competitive offers from Egyptian exporters which they now enjoy.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 69.65; July 70.53; *Ashmouni*: June 62.80; August 62.15.

Listless conditions prevailed in the Liverpool cotton futures market during the week. Trading was thin and price movements narrow. The intervening holidays (the market was closed on the 20th and 22nd inst.) were responsible for this lethargy. Even higher advices from New York failed to influence values. Inter-month switching and some occasional covering operations were the only feature of trading. Both the American and American type contract showed no change in quotations over the week. Sudan cotton contracts were quietly steady.

Cotton futures in New York recorded modest gains during the week under review. Speculative buying in distant positions influenced by the prospects of a poor start of the new crop led to a rally in prices. The continued firmness of the spot market also imparted strength to futures. New crop is expected to have a difficult start. April frosts, very high winds, and weevil attacks have caused early damage throughout Georgia. Wet soil had brought planting to a standstill, but about one-third of the crop has now been planted, though early stands of cotton have been reduced. Condition is reported as "fair to poor." At Lubbock there is the best subsoil moisture for 40 years, and an atmosphere of optimism prevails. A record acreage is in view. The weather is unusually warm, and cotton has been planted, although the more usual planting dates, in the

High Plains, begin around or after 10th May. For the third year running, there is a great shortage of water flow in the Central Valley of California. The flow is deficient in Nevada, due to very light snow-pack. Irrigated areas in Arizona will be restricted in their supply, and parts of Texas dependent on the Rio Grande will be short this summer. The flow of the Rio Grande, at San Marcial, is 55 per cent of normal.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

COMPULSORY "SQUARE-UP" IN STAPLE FIBRE YARN

(From Our Own Correspondent)

BOMBAY, 23rd *May*

On Wednesday last week, it will be recalled, the Board of the Bombay Yarn Merchants Association and Exchange Ltd. raised the floor rate from Rs. 815 to Rs. 865 for staple yarn (40 x 2) June contract while keeping intact the ceiling of Rs. 915, directed all its members to square up their outstanding business in the contract between the floor and ceiling prices, and made it clear that no fresh trading would be permitted in it. The steps were taken with a view to preventing a squeeze in the contract. Following these steps, business in staple fibre yarn came to a standstill. Yesterday, the Board announced its decision to square up all outstanding transactions at Rs. 915. It also *decided to permit trading* in August contract with effect from the 24th inst. without fixing any floor and ceiling rates. Goods of the specified 22 mills could be tendered in this new contract. In order to clear a squeeze the Board has permitted trading of 42 x 2 and 44 x 2 staple fibre at a premium of Rs. 25 and Rs. 50, respectively.

In the rayon yarn section, indigenous yarns, 60 x 1 Spot Cupressa Bemberg Yarn and 40 x 1 J. P. June contract tended to move up. But 60 x 1 Cupressa June contract was subjected to nervous selling which followed fears of possible large imports through the State Trading Corporation. Cotton yarns ruled dull. Transactions put through were limited and values moved narrowly.

Cupressa Bemberg Yarn (60 x 1) June contract was hammered down from Rs. 2,620 to Rs. 2,545. Spot Cupressa, however, spurted by Rs. 25 to Rs. 2,645. 40 x 1 J.P. June delivery hardened by Rs. 21 to Rs. 2,913. Among imported yarns 120 Japan shed Rs. 2 to Rs. 1,735. But 150 Japan and 120 Italy were firm at Rs. 1,777 and Rs. 1,625, respectively. Among indigenous yarns National Rayons 150 Bt. Cones 1st grade picked up 9 nP to Rs. 15.40. 120 Bt. Cones 1st grade advanced by 25 nP to Rs. 15.47.

Staple fibre yarn (40 x 2) June contract which had touched as high as Rs. 930 last week came down to Rs. 915 yesterday. All transactions will be squared up at this price. Spot Kohinoors evoked good support and recorded a rise of 16 nP to Rs. 10.87.

In the cotton yarn section, 10 counts Podars were quiet at Rs. 17.50 as also 20 counts Gokaks at Rs. 22.75 and New Greats at Rs. 21.25. Forty counts Maduras gathered 25 nP to Rs. 33. Sixty counts Finlays were well favoured and strengthed by 64 nP to Rs. 65.39. Gokaks were unchanged at Rs. 50.75. Eighty counts Finlays were dull at Rs. 81.75 and Mahendras at Rs. 68.68, while Moderns gained 10 nP to Rs. 70.10.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	22-5-1961	17-5-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
June	2,545.00	2,620.00
Spot	2,645.00	2,620.00
40×1 J.P. June	2,913.00	2,892.00
120 Japan (per 100 kg.)	1,735.00	1,737.00
150 Japan (per 100 kg.)	1,777.00	1,777.00
120 Italy (per 100 kg.)	1,625.00	1,625.00
150 Italy (per 100 kg.)	—	—
Staple fibre yarn—40×2		
June (per 90.72 kg.)	915.00	930.00
Century (per kg.)	—	10.52
Kohinoor (per kg.)	10.87	10.71
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.50	17.50
20s New Great	21.25	21.25
30s Simplex	—	27.00
40s Madura	33.00	32.75
60s Finlay	65.39	64.75
80s Mahendras	68.68	68.68

OILSEEDS STEADY

(From Our Own Correspondent)

BOMBAY, 23rd *May*

Some suggestions designed to improve the working of hedge contracts in oilseeds have been put forward by a sub-committee of the Oilseeds Exchange. An important suggestion pertains to the abolition of the existing ordinary and special margins. The Committee has also recommended that in the case of groundnut and cottonseed there should be four contracts in a year, that is January, March, June and September, while there shall by only three contracts for linseed and castorseed maturing in the month of March, June and September. In the opinion of the Committee, two contracts should remain in operation simultaneously. Further, it has suggested the fixation of ceiling rates for groundnut and cottonseed at Rs. 225 and Rs. 105 per candy, respectively, and the floor rates of Rs. 175 and Rs. 80 for the two commodities. It also wants that a range per day of Rs. 5 in case of groundnut and Rs. 3 in case of cottonseed be allowed without enforcing any special regulations. No such suggestions have, however, been made in the case of linseed and castorseed. It is believed that all these suggestions have already been forwarded to the Forward Markets Commission.

Meanwhile, the Board of the Exchange met today to consider the question of framing by-laws of delivery contracts for oilcakes. No decision was taken and the matter was postponed for consideration at a meeting convened for Saturday when a final decision is expected to be announced.

The aforesaid developments did not have any perceptible effect on the market which put on a cheerful appearance during the week, thanks to tight supply position and sustained bull support. Castorseeds made further headway, with the maturing contract (May 1961) in the forefront, buying having been banned by the pronounced shortage of spot supplies of tenderable quality. In the groundnut sector, too, the seasonal pre-monsoon setback was not in evidence. Arrivals from upcountry centres were small, while there was good demand from *vanaspati* interests and local crushers. In sympathy, linseed, cottonseeds, and sesame were fully maintained.

Castorseeds May 1961 contract rose from Rs. 177.25 to Rs. 179.25. The backwardation charge, that is *badli* payable by bears to get commitments transferred from this settlement to the distant settlement (September 1961), which was only a rupee last week-end, widened to Rs. 2.25 yesterday, when the May contract stood at Rs.179 and September contract at Rs. 176.75. Today it fell to Rs. 175. Ready Madras put on 25 nP to Rs. 35.50. Ready Kanpurs were fully steady at Rs. 33.62. Oil Commercial improved by 10 nP to Rs. 15. Oil B.S.S. rose from Rs. 15.95 to Rs. 16.05, before closing at Rs. 16.

Among groundnuts, both Coromandels and Khandesh quality rose by 50 nP to Rs. 54. Nizam bold was firm at Rs. 53.50. Oil ex-mill was higher by 35 nP at Rs. 21.85, while railway receipts was unchanged at Rs. 57. In the hedge contracts, there was no trading as in previous weeks.

Linseed May 1961 contract gathered 13 nP to Rs. 37.94. The backwardation rate was 25 nP today, as against a contango (*badli* payable by bulls) of 3 nP last week-end. September 1961 contract, however, declined by 15 nP to Rs. 37.69. Bold ready was fully maintained at Rs. 37.50. Oil hardened by 5 nP to Rs. 15.80.

Cottonseeds September contract spurted by a rupee to Rs. 94.25 and May contract by 75 nP to Rs. 95.25. Non-whites and Berars were fully firm at Rs. Rs. 19. Whites, however, shed 25 nP to Rs. 19.

Sesame bold advanced by Rs. 10 to Rs. 370 (per 250 kgs.). But sesame oil shed 25 nP to Rs. 26.75.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	23-5-1961	17-5-1961	10-5-1961
	Rs.	Rs.	Rs.
Groundnut			
Nizam bold	53.50	53.50	53.25
Coromandel ready	54.00	53.50	53.50
Khandesh quality	54.00	53.50	53.75
Oil ex-mill ready*	22.10	21.80	22.50
Railway receipts*	21.85	21.50	22.00
Castorseed			
May 1961	179.25	177.25	176.62
September 1961	177.50	176.25	177.37
Ready Madras	35.50	35.25	35.25
Ready Kanpur	33.62	33.62	33.75
Oil B.S.S.†	16.00	15.95	16.05
Oil commercial†	15.00	14.90	15.20
Linseed			
May 1961	37.94	37.81	36.50
September 1961	37.69	37.84	37.09
Bold ready	37.50	37.50	36.00
Oil ready†	15.80	15.75	15.40
Cottonseed			
May 1961	95.25	94.50	94.00
September 1961	94.25	93.25	93.75
Niger seed	42.50	42.00	42.00
Kardi seed	27.00	26.50	26.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilgrams.

TEA SLIGHTLY EASY

(From Our Own Correspondent)

CALCUTTA, 22nd *May*

Although there was good demand for dusts on offer during last week's sale for internal consumption, prices realised were lower generally. Such a trend followed from reports of higher production, which encouraged the belief that prices were likely to fall as the season progressed.

North-east Indian gardens produced 19.08 million lbs. of tea in the last month, representing an increase of 2.5 million lbs. as compared to April 1960. The crop in the early months of the last year's season was affected by a severe drought and since in the months of April, May and June more quality tea is produced, exports were affected last year. However, most gardens had good rains during the last month and the current month also, and higher output is expected for this month.

Production in South India also has been higher. In the first three months of this year, 5 million lbs. more tea were produced than the corresponding period last year.

Trade circles here do not apprehend a glut in supplies, as production during this year is only expected to make good the loss of last year. Further, it is expected that internal consumption would show a further increase.

Dusts on offer during last week's sale for domestic consumption amounted to 22,841 chests. The general demand was good. Keen competition was offered to good C.T.Cs, prices of which gained. Clean medium C.T.Cs were about steady, while the more ordinary kinds eased. Fibrous teas also eased. Orthodox teas eased by 15 to 20 nP, but among these the smaller and brighter varieties met with good attention. Although an irregular trend was recorded in legg-cut teas, teas possessing brighter liquors met with keen attention. The quotations, inclusive of excise duty, per 1 kg. were as follows: good Assam C.T.C. dust Rs. 6.60 to Rs. 7.10, medium Assam C.T.C. dust Rs. 5.90 to Rs. 6.40, legg-cut dust Rs. 4.25 to Rs. 5.10, medium Assam dust Rs. 4.25 to Rs. 4.80, and plain orthodox dust Rs. 4.05 to Rs. 4.40.

Leaf on offer amounting to 414 chests met with good demand.

JUTES RECEDE

(From Our Own Correspondent)

CALCUTTA, 22nd *May*

The quiet conditions that prevailed in the jute markets during the week under review should be attributed to lack of buying support for both jute goods and raw jute. As a result, prices fell, but with continued reports of the need for mills to close down for some time as a result of shortage of fibre, the extent of the fall was so small that overseas buyers of goods *continued to prefer buying* small quantities here and there *towards* meeting day-to-day requirements only. The fall in fibre prices was also small, although sellers of the old crop were anxious for business. However, at current levels of prices for fibre and goods, manufacture has become uneconomic and the overseas buyer is not prepared to support even the present prices which, he thinks, are too high. It need no longer be emphasised that there is a very real shortage of fibre, and simultaneous business in fibre and goods can be put through only at considerable loss to the mills. The rapid fall in the prices of jute mills shares on the Stock Exchange is an index of the extent of the grave apprehension that current disparity between the prices of fibre and goods would be reflected in the working results of mills. If mills continue to buy from the poor stocks being offered in the market, prices are bound to rise. This, in turn, would force up prices of goods, already considered prohibitive by the foreign consumers.

It is against the above background that mills have impressed on the Government of India the need for ceasing operations for some time before the present season expires. The total stocks of fibre with mills are expected to last for about six weeks more reckoning monthly consumption at the existing rate of 420,000 bales. In other words, the existing stocks would last up to the beginning of July, and assuming that the new crop begins to reach mills' stations by the beginning of August, mills would be left with no fibre for three weeks. The Government of India would be willing to agree to a block closure of mills for a period from 10 to 14 days depending upon Government's own inquiries in regard to the position of supplies of raw jute. Meanwhile, the recent power crisis in Calcutta had meant reduced working hours for a few mills. This has naturally meant increasing the cost of production, leading to greater loss. In April alone, the loss of production due to the power crisis was 3,000 tons. In addition, a number of holidays also caused a fall in production, and the cumulative result was that output declined by 8,300 tons to 79,200 tons. At a time when mills' expenses have thus increased, the recommendations of the Wage Board have also contributed to raising cost of production further. It should be noted that, despite the marked fall in output in April, stocks of goods with mills as at the end of the month fell by 5,400 tons to 90,400 tons. At the end of March, stocks were 85,000 tons and thus the total availability in April was 164,200 tons. From these figures, it follows that in the month demand for goods was in the order of only 73,800 tons. A glance at the figures of despatches for April suggests that local consumers have also begun to react to the existing higher prices. For, gunny despatches for local purposes had fallen by 10,200 tons to 20,900 tons. Despatches for export fell from 54,900 tons to 51,900 tons.

The increased stocks at the end of April considerably strengthen the case of mills for closing down for some time. Meanwhile, it has been a good augury that jute districts in Pakistan and India have reported the occurrence of good rains, facilitating sowing. In the districts where sowings had been earlier completed and germination has taken place, the plants are reported to be in good condition. The decision of the Pakistani Jute Association that sellers of the new crop might quote for July-August shipment £15 per ton and £10 per ton lower than the present prices for prompt shipment of long jute and cuttings respectively should be taken as stemming from the belief of a bumper crop. Also, overseas buyers had shown interest only at lower levels than the E.P.C. prices. It is also to be hoped that with mills finding it uneconomic to buy fibre at current prices there would be a substantial fall in prices of domestic fibre. It has been good news during the week that the damages to the standing crop in Pakistan in the recent cyclone had been too much exaggerated and that the loss is not likely to be more than 200,000 bales.

It was reported during the week that the Bihar Government proposed the setting up of two jute mills in North Bihar. If this report is correct industry circles would like to know if the decision has gone without being questioned in New Delhi. At a time when the mills already established in the country are finding it difficult to continue in production first because of increasing competition from the better-placed mills in Pakistan and secondly because of the tight fibre supply position, it cannot be understood why more mills should be established in the country. The working of mills has become so uneconomic that in recent years a few mills had had to close down and several others have had to diversify production. The search for diversification by many mills continues at present also.

On Tuesday last, following the news, according to which the Government of India had not yet come to a decision on the representation of the Indian Jute Mills' Association for a block closure of mills, prices of goods eased. Local bazar dealers were under selling pressure and some mills also showed interest in near delivery goods. Ready B. twills declined from Rs. 168 to Rs. 166 and ready hessian 40" 10 oz. from Rs. 57.25 to Rs. 56.50. As usual, overseas buyers showed meugre interest despite the fall in price. The release of figures relating to April output failed to arrest the declining trend on Wednesday, as, despite the fall in output by 8,300 tons, stocks of goods at the end of April had increased by 5,400 tons. B. twills eased to Rs. 164 and hessian 40" 10 oz. to Rs. 55.25. On the following day, prices staged a fractional improvement following some business in hessian with the United States. Government agencies showed some interest in sacking goods. As a result, hessian 40" 10 oz. recovered to Rs. 55.75 and B. twills to Rs. 165.50. There was no follow-up business, and quotations received from New York showed that prices there fell by 0.20 cent per lb. These affected the local trend, and hessian 40" 10 oz. declined to Rs. 55.25 on Friday. In sympathy, B. twills eased to Rs. 164. Over the week-end, New York prices fell by a further stage of 0.10 cent per lb. No business was done over the week-end, and the improvement in the quotation for B. twills and hessian 40" 10 oz. to Rs. 165.50 and Rs. 55.50 respectively were nominal only.

Prices for fibre fell by about Re. 1.50 per maund. Opening and closing quotations for the principal varieties of the remaining portion of the old crop are given below. Sellers were anxious for business. However, mills' counter-offers at discounted rates did not meet with response from sellers.

(In Rs. per maund against May/June delivery)

	Opening	Closing	Decline
Northern bottoms ...	56.50	55.00	1.50
Assam bottoms ...	57.50	56.00	1.50
Dalssee bottoms ...	59.50	58.00	1.50

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 22nd *May*

Steady to firm conditions were witnessed in foodgrain prices during the past week as arrivals of new *rabi* grains were still small and it was gathered that the cultivator was now retaining his produce. Under the lead given by gram, prices of all foodgrains registered gains during the week. Wheat prices at Hapur in the week-end were quoted at Rs. 14.25 to Rs. 14.75 a maund for average *dara* quality and Rs. 15 to Rs. 16 for better farm produce. Daily arrivals here were reported at an average of 1,500 maunds which were being lifted by consumers and there was now reported to be a small stock of 6,000 maunds of wheat here. Winnowing and threshing operations would soon finish and grain was now reaching the cultivator's godowns and this accounts for modest arrivals. Otherwise, wheat crop is reported to have been very good this time. Rice prices ruled quiet, thanks to continued arrivals from producing areas and demand was reported better due to hot season. Week-end prevailing prices were:—rice *mainpuri sela* Rs. 20.50, *gainda kutcha* Rs. 20.50, *ramajawayan sela* Rs. 23.50, *raimunia sela* Rs. 25, *basmati sela* Rs. 28 to Rs. 30, superior Rs. 32 to Rs. 38 a maund.

Gram prices continued firm on Punjab advices from where gram was flowing out to all consuming areas of the country. Daily arrivals here at an average of 1,500 maunds were mostly from the Punjab and local stock has swelled to 25,000 maunds. Barley and *bejhar* prices also improved in line with gram prices and arrivals of these coarse grains continued poor at an average of 150 to 200 maunds daily each. *Jowar* and *guwar* continued to attract good demand as sowings of these grains is being done mostly for fodder crops. Oats is also now reaching the market in small quantity of about 100 mds. daily and week-end prevailing prices were:—gram Punjab Rs. 13.75, local Rs. 13, barley Rs. 11 to Rs. 11.25, *bejhar* Rs. 10.62 to Rs. 11.37, oats Rs. 14, *guwar* Rs. 13 to Rs. 15.50, *jowar* brown Rs. 12, white Rs. 14.50, maize Rs. 13, *bajra* Rs. 19 to Rs. 20 a maund.

In pulses, peas superior quality continued to attract good demand and week-end offtake on Sunday was eight wagon loads to O.H.R. destinations and the Punjab. Daily arrivals were about 1,500 maunds average and local stock has mounted to 58,000 maunds. *Arhar* arrivals were also at an average of 1,000 maunds and superior quality was being lifted by grinders for *dal* and local stock is now put at 27,000 maunds. Prices of all pulses stayed steady and on Monday were quoted (in rupees per maund) peas *dara* 11 to 11.22, *farm* superior 11.50 to 12.75, peas *dal* 13, *arhar* 13 to 14, *arhar dal* 16.50, gram *dal* 16, *urd* 19.25 to 21.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 22nd *May*

Sugar prices ruled quiet during the week, thanks to easy supply position. Production of sugar here in west U.P. is still being continued as cane supplies in factory areas were still adequate and sugar production in U.P. is expected to touch new heights at 14 lakh tons. Some of the factories are likely to terminate their season by end of the month while some of them would continue even in June. Total production in the country is likely to touch the record figure of 3 million tons; the offtake, however, is expected to be static at 2 million tons. Sugar industry is faced with acute crisis due to accumulation of stocks and the Union Government is anxious to arrange exports even at subsidised rates, but export prospects were still bleak. Week-end prevailing prices were:—Rs. 106.75 per bag and retail 97 nP per *seer* in the open market.

Sugar prices ruled quietly steady during the week in the Muzaffarnagar market due to seasonal hot weather demand and upcountry inquiries and week-end prices were:—Rs. 107.25 to Rs. 107.50 per bag for dry quality and Rs. 99 to Rs. 101 for damaged stuff of the last season. Some of the factories in the area have already stopped their crushing season.

Khandsari prices were almost stationary during the week and trading too was slack. Crystal variety, however, sought lower level due to poor demand at higher levels. Week-end prevailing prices were:—inferior Rs. 27 to Rs. 31, superior Rs. 32 to Rs. 34.50, crystal Rs. 33 to Rs. 36 per maund.

Ready *gur* prices of superior quality sought higher levels during the week as there were reports still unconfirmed that *gur* is to be exported to foreign countries including Pakistan. Loading, however, here continued restricted and on Sunday which was open loading day, four wagon loads were despatched to the Punjab and Gujarat. Local stock is now put at 53,000 maunds and latest prices were:—superior dry Rs. 16.25, *kotha* dry Rs. 15.50, dry-wet Rs. 15, wet Rs. 14 a maund.

Gur prices were almost stationary during the week in the Muzaffarnagar where arrivals were now poor at an average of 1,000 maunds. Week-end prevailing prices were:—*Chaku* Rs. 15 to Rs. 17, *Ladoo* Rs. 16.50, *rusket* inferior Rs. 7 to Rs. 9.50, *rusket Chaku* Rs. 12.50 to Rs. 13, *shakker* Rs. 15.75 to Rs. 17, superior Rs. 20 to Rs. 23 a maund.

While *gur fagun* moved narrowly both ways in small scale trading, prices in *Ashad* delivery were bearish during the week. Week-end prevailing prices were:—*Gur Ashad* Rs. 14.67, *Fagun* Rs. 13.85, as against week's opening at Rs. 14.82 and Rs. 13.83, respectively, and lowest touched in mid-session at Rs. 14.60 and Rs. 13.80, respectively.

Notices

THE TRAVANCORE RUBBER AND TEA COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE 17th Annual General Meeting of the Company will be held on Wednesday the 28th June 1961, at the Registered Office of the Company Chavadi Parambu, North Commercial Canal Road, Alleppey, at 2.30 p.m., to transact the following business:—

1. To receive and adopt the audited Balance Sheet and accounts for the year ended 31st December 1960 and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect a Director.

Note: Mr. R. Sundram Iyer, the retiring Director, is now 74 years of age. Special Notice has been received and is given of the following resolution proposed to be moved:—

"RESOLVED that Mr. R. Sundram Iyer, who has attained the age of 74 years, and who retires by rotation, be and is hereby reappointed a Director of this Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

4. To appoint Auditors.
5. To consider, and if thought fit, to pass with or without modification the following Special Resolution which will be proposed as a Special Resolution:—

"RESOLVED that the following Article be substituted in place of the existing Article 85 of the Company's Articles of Association effective from 1.1.1961:—

'85. The remuneration of the Directors shall from time to time be determined by the Company in General Meeting; and the Directors shall in addition be entitled to reimbursement of out-of-pocket expenses incurred in connection with the Company's business. If any Director is appointed to advise the Company as an expert or is called upon to perform any special service in the interest of the Company the Board of Directors may specifically remunerate him as it shall think fit.'

AND RESOLVED ALSO that, with effect from 1-1-1961 until otherwise decided by the Company in General Meeting, every Director shall be paid, subject to a maximum sitting fee of Rs. 1,500 per year, a sitting fee of Rs. 250 per meeting of the Board or any Committee of the Board attended by him; and further that all out-of-pocket expenses incurred for attending meetings of the Board or Committee shall be reimbursed to the Directors."

Explanatory Statement relating to Items Nos. 3 and 5 in terms of Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company along with the Notice.

The Transfer Books and Register of Members of the Company will remain closed from 14th June 1961 to 29th June 1961 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,

THE TRAVANCORE RUBBER & TEA CO. LTD.,

Per Pro. ASPINWALL & CO. (TRAVANCORE) LTD

C. PRABHAKARAN,

Managing Agents

ALLEPPEY, 25*th May* 1961

Note: The dividend, if declared, will be paid on or after 14th July 1961 to those shareholders whose names appear in the Company's books on the 28th June 1961 or to their Mandatees.

AMAR DYE-CHEM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Seventh Annual General Meeting of the Shareholders of the Company will be held on Thursday, the 29th day of June, 1961, at 3.00 p.m. (S.T.), at 'Rang Udyan,' Building No. 1 Sitladevi Temple Road, Mahim, Bombay-16, to transact the following business of the Company:—

(1) To receive, consider and adopt the Directors' Report and audited statement of the accounts of the Company for the year that ended on 31st December, 1960.

(2) To declare dividends on Preference and Equity Shares.

(3) To appoint Directors in place of those Directors who retire by rotation.

(4) To appoint Auditors and to fix their remuneration.

(5) To pass Ordinary and Special Resolutions pursuant to Sections 359 and 369 of the Companies Act, 1956 as set forth in the notice of meeting circulated to the Shareholders with relative explanatory statement as required under Section 173 of the Companies Act, 1956.

By the Order of the Board of Directors

For AMAR DYE-CHEM LIMITED,

For AMRITLAL & CO. PVT. LTD.,

A. K. DOSHI,

Managing Director,

Managing Agents

BOMBAY.

Dated: 22*nd May*, 1961.

N.B.—(*a*) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member. Proxies in order to be effective must be received by the Company not later than 48 hours before the time for holding the meeting at which the person named in the instrument proposes to vote.

(*b*) The share transfer books of the Company will be closed from Monday the 5th day of June, 1961 to Thursday the 29th day of June 1961, both days inclusive.

(*c*) If dividends on Preference and Equity Shares as recommended by the Directors are declared at the meeting, payment will be made at the Chartered Bank, Bombay, on and after Wednesday the 5th day of July, 1961 to those Shareholders whose names appear on the Register on the 29th day of June, 1961 to whom dividend warrants will be posted at their addresses registered with the Company.

Note.—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of December 1960 amount to 11.38 crores of rupees.

Notices

HERCULES INSURANCE COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE TWENTY-SIXTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta, on Friday the Sixteenth June 1961, at 3 p.m., for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1960.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs. 31,400 to the Directors as their fees for services rendered during the year ended 31st December, 1960.
6. To appoint a Director in the place of Mr. D. C. Kothari who holds office as a Director of the Company only up to the date of this General Meeting. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:

"Resolved that Mr. D. C. Kothari be and is hereby appointed a Director of the Company."

The Share Transfer Books will be closed from the 9th June 1961 to the 16th June 1961, inclusive.

By Order of the Board,
E. K. SRINIVASAN,
Managing Director.

CALCUTTA, *22nd May*, 1961.

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 16th June 1961.

Explanatory statement as required by Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

THE CHAMPDANY JUTE COMPANY LIMITED

THE DIRECTORS AT A BOARD MEETING held today decided to recommend to the shareholders in General Meeting the payment of a dividend at the rate of 5 per cent per annum or Rs. 5/- per share for the year ended 31st March, 1961.

A notice calling the Annual General Meeting for 16th June, 1961, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2 NETAJI SUBHAS ROAD,
CALCUTTA, *18th May*, 1961.

THE ALEMBIC CHEMICAL WORKS COMPANY, LIMITED

Registered Office:
Alembic Road, Industrial Area
BARODA-3

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-fourth Annual General Meeting of the Shareholders of The Alembic Chemical Works Co. Ltd., will be held at Baroda, at the Registered Office of the Company (Alembic Road, Industrial Area) on Thursday the 22nd June 1961 at 3-30 p.m. to transact the following business:—

1. To receive Directors' Report and Audited Accounts for the year ending 31-12-1960.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors,

and to do other Special Businesses specified in the Notice posted to every shareholder.

Notes: 1. Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

2. The transfer books of the Company will remain closed from Thursday the 1st June 1961 to Thursday the 22nd June 1961 (both days inclusive).

By Order of the Board,
For RAYUMA SERVICES,
RAMAN B. AMIN,
Partner,
Managing Agents.

15th May 1961.

UNIVERSAL CABLES LIMITED

BE IT KNOWN TO ALL CONCERNED THAT as and from 15th day of May, 1961 the name of Hindusthan Woollen Mills Ltd. (Registered Office: 8. India Exchange Place, Calcutta), has been changed to Universal Cables Limited. All communications may henceforth be addressed in the name of UNIVERSAL CABLES LIMITED.

By Order of the Board,
R. K. CHHAOCHHARIA,
Secretary.

CALCUTTA,
Dated the 15th May, 1961.

SUGAR

(Concluded from page 992)

Centre to give the industry further concessions in this regard. Meanwhile, the State Government, he said, would finalise soon decisions on the industry's demands for concessions in purchase tax, cane prices and payments facilities in the light of the opinions expressed by official experts. Assuring that these decisions would remove most of the difficulties, he called upon the mills to crush all cane standing in the fields.

A disquieting feature of the U.P. Government's cane development as highlighted by Mr. Bhawsinghka is that the Government is spending very little on this work, while large amounts are being realised from sugar mills in the form of cane cess. As he rightly urged, the State Government shou'd (a) spend a larger amount for the provision of better irrigation facilities, establishment of more research work centres and improvement of roads, (b) entrust the management of mechanised State farms to the mills, and (c) link cane prices to quality and the average selling price of sugar.

BANKING

(Concluded from page 979)

Rs. 404.54 lakhs in 1959 to Rs. 480.60 lakhs, raising the ratio of advances to deposits from 56.9 per cent to 69.2 per cent. The Bank's bill business has also maintained a steady growth as is clear from the increase in bills payable from Rs. 6.42 lakhs to Rs. 6.77 lakhs and the bills for collection from Rs. 95.40 lakhs to Rs. 98.28 lakhs. Acceptances, endorsements and other obligations too, show a perceptible rise from Rs. 26.8 lakhs to Rs. 31.48 lakhs. Investments are steady at Rs. 3.08 crores, and the ratio of the unpledged portion to deposits has slightly fallen from 36.4 per cent to 33.3 per cent.

The paid-up capital of the Bank is Rs. 1.25 crore. Reserves continue unchanged at Rs. 10 lakhs, as in the years 1958 and 1959, as the Directors have again transferred a portion of the profit to the doubtful debt suspense account and not to the general or statutory reserves account.

MARKET GOSSIP

(Concluded from page 979)

Bernstein Plan, rather than the revolutionary ideas of Professor Triffin and Mr. Stamp. In fact, the Bundesbank has already announced officially its readiness to enter into stand-by agreements of the kind favoured by Mr. Bernstein and Mr. Jacobsson. However, the conditions upon which West Germany would participate in a system of stand-by credits are still in the discussion stage between the Bundesbank and Bonn, but a large measure of agreement is reported to have already emerged. Informed sources also feel that the attitude of West Germany at Vienna is likely to prove decisive because it alone can readily find the money which would be required. But two conditions might be put by Germany for taking part in a stand-by scheme: (a) it must be looked upon as a means of giving first aid to countries in balance of payment difficulties—not as a permission for running a basic deficit, and (b) Germany should not be asked to bear an unduly large part of the burden.

WEEK'S STOCK EX

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 24th May 1961.

STATES' DEMAND FOR MORE RESOURCES

NOW that the third Finance Commission has commenced its work, the chorus of demand by States for increased allocation of revenue from the Centre is again being heard. There is nothing unusual in this development, considering that, in a federal constitution, there is bound to be a demand by federating units to secure maximum benefit for themselves without sacrificing their financial independence. As the last Finance Commission pointed out, a noticeable trend in all federations has been the progressive increase in the size of federal payments to the States. This is true of this country too, for, in recent years, there has been a fairly sharp increase in the resources received by the States from the Centre. It is also right and proper that the quantum of resources transferred to the federating units and the mode of transfer should be periodically revised in the light of latest developments. After all, it is not fair that any particular scheme of devolution of resources from the Centre to the States should prevail for all time.

There are three recent developments which tend to bring out the increasing significance of federal-State financial relationship to national planning. In the first place, State expenditure is becoming vastly more important than formerly. Thus the proportion of State Governments' expenditure to national income increased from 3.9 per cent in 1951-52 to 6.3 per cent in 1955-56 and still further to 6.5 per cent in 1960-61. Secondly, their tax effort now forms a lower proportion of the total fiscal effort than in earlier years. Of the total tax receipts by the Union and the State Governments (excluding customs collections), the percentage of collections by the States declined from 45 in 1951-52 to 38 in 1960-61. Between 1951-52 and 1960-61, the proportion of the Centre's tax revenue to national income rose from 2.8 per cent to 4.9 per cent, while the similar proportion for the States rose from 2.3 per cent to 3.0 per cent. Thirdly, excise revenues are becoming increasingly important. This was recognised by the second Finance Commission when it said: "With taxes on income ceasing to be an expanding source of revenue, it is obvious that any further substantial devolution of revenue to the States by sharing of taxes will have to come from Union excises." It must be remembered that, since excise duty and sales tax hit the consumer, the one cannot be raised without affecting adversely the revenue from the other.

The major consequence of the increase in States' expenditure and of the absence of parallel increase in their revenue has been their increased dependence on the Centre. Thus in 1951-52, the State Governments spent Rs. 296 crores on revenue account; the Centre's share in this expenditure was 22 per cent. In 1960-61, the State Governments' revenue expenditure was Rs. 939 crores; the Centre's share in this was 40 per cent. In recent years, the State Governments have found it somewhat difficult to meet the responsibilities arising out of the development of urban centres. The West Bengal Government in its memorandum to the third Finance Commission has stressed that the needs of States where there are heavy concentrations of population in certain centres are much greater *per capita* than those of the other States where population is evenly distributed over a wide area and is predominantly rural in character. A similar view is expressed by the Maharashtra Government in its memorandum to the Finance Commission. It observes: "The general needs of different States have little relevance to the apportionment of shared tax revenues unless these needs could be causally related directly or indirectly to those articles which yield the particular taxes." It adds: "It is in this connection that the needs arising out of the States' special responsibilities on account of administration and the provision of socio-economic overheads to highly urbanised and industrialised pockets may, with justification, be related to the apportionment of income-tax, as it is these areas which contribute a high portion of income-tax collection. Unless the method of devolution yields some differential excess of resources, it might happen that the minimum administration and development needs in these pockets may tend to suffer with a deleterious effect on the yields of the taxes concerned for the country as a whole."

There seems to be some justice in this claim. This is borne out by the fact that, despite increased taxation, the State Governments have not been able to improve the living conditions in urban centres. It is true that urbanisation increases taxable capacity in a State, but the Maharashtra Government's case is that urban taxation has not yielded increasingly larger resources commensurate with the expenditure commitments that would be necessary to meet urban requirements. One way of meeting this special problem is to treat it as a national responsibility and to allocate resources to the States with large urban concentrations so as to enable them to meet urban requirements.

A point raised by the Maharashtra Government's memorandum is that the scheme of financial devolution from the Centre to the States should be so designed as to ensure that each State on the threshold of a new Plan is enabled to maintain the level of expenditure it has reached in the previous Plan. At the same time, it rightly urges, in effect, that each State should make an earnest attempt at mobilisation of resources. It says: "It would not be fair to the Union Government to suggest that this level of expenditure should be guaranteed to each State Government irrespective of its own effort to mobilise resources through the means that are available to it under the Constitution. Here again it is necessary to refrain from doing anything which would place a premium on the disinclination on the part of State Governments to make up their full quota of resource mobilisation. The Finance Commission may have, therefore, to assess the quantum of devolution required not only with reference to the level of expenditure to be maintained but also with reference to the efforts at resource mobilisation which the State Governments should have themselves made. It may also be necessary to scrutinise the levels of expenditure in different States in order to ascertain whether State Governments are indulging in certain kinds of expenditure which were not necessary."

A problem which certainly deserves the Finance Commission's attention is the reduction in income-tax revenue brought about by the abolition of the grossing up procedure for dividends in the 1959-60 budget. The question is how best this deficiency could be made up so that the States would not feel that they have lost in a bargain which is not of their making. The Centre now distributes additional grants to compensate for the loss caused by the new procedure in the taxation of companies. But this is by no means a very satisfactory way of dealing with the problem. The Maharashtra Government has two arguments in support of its plea for a larger devolution of income-tax revenue from the Centre to the States. In the first place, it suggests that the resources devolution should ensure the maintenance of the level of expenditure reached by the States by the end of the second Plan. If this is to be done, the States' share should require to be increased

to at least 70 per cent of the income-tax collections as they were understood prior to the amendment of the Income-tax Act. A further adjustment would become necessary in view of the change made in the income-tax structure which has resulted in the contraction of the divisible pool. This could be effected by augmenting the divisible pool by a fixed amount representing that portion which has now been transferred to corporation tax. But this method would not give the States any benefit of the growth that would take place in the size of the transferred receipts. A second method of adjustment would be to increase the States' share of the divisible pool proportionately so as to compensate them for the amounts transferred to the corporation tax. The Maharashtra Government observes that, if this method is to be adopted, even to maintain the present expenditure of income-tax devolution as recommended by the second Finance Commission, it would be necessary to increase the divisible ratio to about 85 per cent. It adds: "Unless, therefore, the divisible ratio is stepped up to 100 per cent, there would be no material increase in the extent of devolution under this tax. Even at that level, this formula might mean lesser aggregate annual amounts to the States, as collections of income-tax under the new definition may tend to grow at a lower rate than the collections now taken out of its scope."

Yet another development that has caused some difficulty for States is the increasing resort to excise duties by the Central Government. The Maharashtra Government says: "Today, Central excise has come to encompass not merely most of the commonly consumed commodities but also many of the luxury and semi-luxury goods and even some of the intermediate products and producers' goods. Except under conditions of the buyers' market, excise on consumer goods would tend to be passed on to the consumer. . . . . Beyond a limit there would be increased resistance from the trade, industry and the consumers to a simultaneous exploitation of what in effect is the same source of revenue. This means that the scope of the only elastic source of revenue available to the States is restricted by the extension of Central excise." The Government, therefore, submits that all Central excise should be shared with the States to the extent of 25 per cent. This demand seems to be valid, inasmuch as the Central Government sets great store by the expansion of excise revenue and the only effect of such expansion will be to restrict the capacity of the State Governments to raise sales tax revenue.

By far the most difficult issue is still likely to be the basis of allocation of the divisible pool among the States. In industrialised and urbanised States, there has always been a feeling that the weightage given to population is too large and that given to collection too little. The second Finance Commission gave 90 per cent weight to population and 10 per cent weight to collection. The Maharashtra Government wants the basis of allocation to be 80 per cent population and 20 per cent collection and, whatever be the decision of the Finance Commission, some States are bound to feel aggrieved. It is manifestly unfair to ignore the population basis altogether, for that would destroy the sense of national unity. At the same time, it is unwise to ignore the special difficulties caused to States by urban concentration. If the expenditure responsibilities of the States in relation to industrial centres could be isolated and assessed accurately, it would certainly prove helpful in arriving at a correct decision on the issue. But it is obviously difficult to collect and analyse the data on this aspect of the problem. Even so, there is no reason why an attempt should not be made now so that it might eventually lead to a just basis for the allocation of resources.

The controversy about basis for allocation of income-tax takes a different form when it comes to the sharing of excise revenue. A suggested basis is consumption in each State. This again is difficult to assess. The second Finance Commission decided in favour of 90 per cent on the basis of population, leaving 10 per cent for adjustment. The Maharashtra Government has suggested 90 per cent on the basis of total population and 10 per cent on the basis of urban population. The second Finance Commission was inclined to attach a large weight to population basis not because it was convinced that it was the best solution for the problem but because no other alternative seemed practicable. The Commission said:

"While it is possible to hold that consumption, if accurate data were available, may provide a suitable basis of distribution, it must be borne in mind that distribution on the basis of consumption may operate in favour of the more urbanised States which are also in a position to raise substantial revenue from sales taxes on such consumption. On the whole, we feel that it is preferable to continue population as the sole basis for distribution. But the practical effect of such distribution would now be to place a few States in a more advantageous position in relation to the rest. We felt that, in the present circumstances, a small corrective in favour of the latter States would be justified."

Nothing has happened in the intervening period to alter the stand the Finance Commission took on the subject of evolving a suitable basis for the distribution of excise revenue among States. So long as statistics of consumption in different areas are not available, it becomes necessary to go by population as the only reasonable basis. But since the problem is likely to come up again and again in future, it is only fair that a beginning should be made to collect statistics of consumption. It is bound to remain crude in the initial stages. But, in course of time, it may be possible to arrive at relatively more reliable estimates of consumption of different commodities in different regions.

WORLD TARIFF CONFERENCE

IF the 1960-61 Tariff Conference, the second phase of which began at Geneva on Monday this week, succeeds in achieving the main objective set before it, the G.A.T.T. will surely have marched one more step forward in the direction of establishing a multilateral system of free world trade and payments. The objective pertains to the reduction of tariffs between member-countries by 20 per cent through a general round of tariff negotiations. There is good reason to believe that the negotiations will prove fruitful and pave the way for initiating specific measures for the expansion of world trade. The second phase of the Tariff Conference, we are told, will provide an opportunity for new negotiations to reduce trade barriers through multilateral techniques. Many countries, including those which account for the major share of world trade, are expected to participate. It is gratifying to hear that a number of countries, hitherto not Contracting Parties to the G.A.T.T., are taking part in the Conference with a view to acceding to the G.A.T.T. as full members after the negotiations with their G.A.T.T. partners have been successfully concluded.

It would, however, appear that the second phase of the Tariff Conference may take an unduly long time to be completed, inasmuch as the negotiations on concessions will be on a product-by-product basis which, it is pointed out by many, is likely to yield diminishing results as time goes on. The latest report of the G.A.T.T., entitled *The Activities of G.A.T.T. 1960-61*, itself refers to this view. It is, therefore, encouraging to be told that the present product-by-product technique of bargaining may soon give way to the sector-by-sector technique which is now being applied by the Common Market and the European Free Trade Association.

It may be useful to recall here briefly the origin of the co-ordinated programme for the expansion of world trade. The programme was decided upon by the Contracting Parties at their thirteenth session in November 1958 and its operation was entrusted to three Committees. The first Committee was to prepare for and convene a further round of negotiations for the reduction of customs tariffs. The work of Committee II is concerned with the national agricultural policies of member-governments and, in particular, it is charged with examining the effects of agricultural protectionist measures on the flow of international trade. Committee III has before it the broad problem of the difficulties which confront the less-developed countries in expanding their export trade with the rest of the world. Such, in short, are the three channels along which the problem of trade expansion is being pursued.

Committee I has been able to tackle particular problems in the light of past history. The 1960-61 Tariff Conference opened at Geneva on 1st September 1960. This Conference is the fifth in the series. The progress made by this Conference would have been more notable if the non-tariff measures had also been made negotiable in the course of the Trade Conference. The important trading countries have no doubt accepted the principle that non-tariff measures should be negotiable, but they have expressed their inability to undertake commitments of th sort. Committee II is half-way through i work of tackling the problem of agricultur protectionism. It remains to be seen whethe as a result of the programme of consultati under G.A.T.T. auspices, a new *modus viven* for trading conditions in agricultural and fo products will emerge. As the G.A.T.T. right points out, it is both possible and essential arrive at a situation in which, while the indu trial countries are able to meet the stro political pressures for support for the agricu tural population, they should achieve this such a way as to avoid the artificial stimulati of inefficient production and to assure an e panding market for imports from the agricu tural exporting countries.

More important is the work entrusted Committee III. The success of this Committ will be judged by the extent to which the pe sistent imbalance in world trade is reduce The progress in this field so far has not bee quite encouraging. The exports from the dev loping countries have not kept pace with tho from the industrially advanced countries. Thu the average annual rise in the developing cou tries' exports during the last five-six years h not been more than 4 per cent, as compared wi the average increase of nearly 8 per ce recorded by the advanced countries. Unless th developed countries are prepared to step u their purchases of goods from the underdev loped countries, the problem of repaying th loans taken by the latter for economic develo ment will become practically insoluble. Indee the attempts of underdeveloped countries tackling their massive political, economic ar social issues will be thwarted considerably. Th G.A.T.T. report has done well to highlight in pressively the urgency of this aspect. It says:

"The thinking devoted to these problem both inside and outside the less-develope countries, has tended until recently to pla loans and capital investment in the forefron But private capital is attracted to those cou tries which have shown promise of rapi development or have rich supplies of produc for which there is a strong export deman It is clear that capital movement alone is n sufficient. More and more it is realised tha it must be accompanied by substantial expa sion in export earnings. Much depends upo an enlightened attitude on the part of th highly-developed countries in opening the markets to the products of the less-develope countries."

The use of high tariffs, restrictive fisc charges and import quotas by industrial cou tries has no real justification in view of the high level of national incomes and economi activity. Attention must be drawn in particula to the use, by some industrial countries, of fisc levies or internal taxes which have actuall been increased on products such as tobacco, te and coffee, as well as to the continued restri tions on items like cotton textiles, jute good and other simple manufactures. If the deve loped countries are really anxious to ensure steady expansion of world trade, which is a pre requisite of political stability and economic pro gress, they must adopt positive measure designed to expand the export trade of under developed countries. Two such measures ar (*a*) lowering of taxes on consumption of good originating from the less-developed areas an (*b*) reduction of high tariffs and other restri tions on imports of semi-processed and pro cessed goods from these areas. Otherwis there is the danger of the underdevelope countries being forced to trade more an more with the Communist nations. Whil the need for the adoption of positive mea sures by the developed countries for ex panding the export trade of underdevelope countries is thus urgent, it has to be stresse that the Governments of the underdevelope countries must also follow realistic policie designed to raise the efficiency of agricultura and industrial production, so that their good can be competitive in price and quality withou necessarily reducing the incomes of producers They must also reconcile judiciously their nee for revenue through import and export dutie with the need for selling their goods in a buyers market. Failure to do so will cost the under developed countries many valuable export mar kets. It may be expected that the forthcomin Ministerial meeting of the G.A.T.T., schedule to be held at Geneva towards the end of Novem ber next, will consider all these related pro blems and formulate practical solutions.

MARKET GOSSIP

N.D.C. Discusses Third Plan

AS these lines are being written, the meeting of the National Development Council at Delhi has not concluded its discussions on the third Plan. But there are in the Prime Minister's address and in the Planning Minister's speech some indications regarding the final size of the third Plan and certain other measures under contemplation. It is seen from Mr. Nehru's address that the financial target of outlay for the public sector will be finally fixed at Rs. 7,500 crores and the physical size of the Plan pertaining to that sector will be Rs. 8,000 crores or even a little more. It would appear that the Planning Commission's reappraisal of resources has not led to an increase in the financial target itself. That the resources in sight remain virtually the same as what were estimated at the last N.D.C. meeting may be seen from the tables pertaining to the third Plan in its final form elsewhere on this page. But there are some variations under individual resource heads as compared with the estimates made by the Planning Commission in January last.

The N.D.C. has suggested that measures be taken to secure for the public sector a large share of the funds of commercial banks, which are now largely invested in private sector enterprises. This suggestion is disquieting indeed. As fuller details are not immediately available, it is rather difficult to figure out the implications of the suggestion. According to a spokesman of the N.D.C., this suggestion will not involve any plea for nationalisation of banks. So far so good. How, then, will the resources of joint-stock banks be made available to a greater extent for investment in Government securities? On the face of it, the N.D.C.'s suggestion is absurd, because, even as things are, the demand for credit from the private sector cannot be fully met by the commercial banks. Whatever be the implications of the N.D.C. suggestion, at least one thing is clear. It is that the public sector is trying to enlarge its activities to such an extent that it cannot reasonably hope to secure the required resources by the usual methods. Some unusual methods like the one for squeezing funds out of the commercial banks are, therefore, thought of and that may mean greater difficulties for the private sector which is expected to play a larger role in the third Plan.

The Planning Minister's speech at the N.D.C. meeting also contains one disquieting suggestion. The idea of appointing a Taxation Inquiry Commission to reduce inequality in incomes and wealth seems to be wholly unnecessary. It is unnecessary because the integrated system of direct taxation has already an egalitarian bias and also because the Mahalanobis Committee on Income Distribution has been charged with the responsibility of examining the extent to which income disparities have been reduced under conditions of planning. The discussions pertaining to the Plan are becoming curiouser and curiouser in the pre-election year. The suggestions for the mobilisation of funds of commercial banks for investment in public sector projects, for the appointment of another Taxation Inquiry Commission and for checking the so-called monopolistic tendencies in the private sector seem to have been advanced with an eye on the coming elections. It may be well to remember that the final discussions on the Plan take place in the pre-election year when, for propaganda purposes, the accent is vociferously placed on reduction of inequalities and such other socialistic measures. To conjure up a frightening climate of socialism at election time has become a regular pastime of politicians in India.

Government-B.O.C. Agreement

The Government of India's negotiations with the oil companies for the exploration of certain oil-bearing areas in the country were referred to in these columns recently (20th May 1961). These negotiations have led to some concrete result only in the case of the Burma Oil Company. An agreement has just been signed between the Government of India and the B.O.C., under which Oil India Limited (a joint Government-B.O.C. Company) is granted an additional area of about 1,800 sq. miles for oil prospecting in north-east Assam. This area is outside the present Nahorkatiya, Hugrijan and Moran concessions of the Company. The new area is also a largely proved area for oil. A noteworthy feature of the agreement is that the Government's share in Oil India Ltd. will be increased from the present 33⅓ per cent to 50 per cent. This will mean that the B.O.C. and the Government of India will henceforward be equal partners in this enterprise. A virtual bonus has been given to the Government with the increase in the present one-third share to one-half. The foreign exchange required for the development of the new concessions will be provided by the B.O.C. and the Government will make available the required rupee finance. Another feature of the agreement is the oil pricing formula. This has been so evolved as to ensure a minimum of 9 per cent and a maximum of 13 per cent return on the equity capital. The prices will be equal to the c.i.f. price Calcutta minus a discount which will be variable, depending on the surplus or scarcity in the oil situation. The agreement may be deemed satisfactory to both the parties. For its part, the Government has succeeded in getting the 50-50 formula accepted for a joint oil exploration venture. And the Burma Oil Company, too, seems to have obtained some satisfaction on the price question.

Some details regarding Oil India Limited as it has been functioning till now may be usefully given here. The function of this Company, which is owned two-thirds by the B.O.C. and one-third by the Government of India, is to develop oil concessions in Assam in the Nahorkatiya, Hugrijan and Moran areas, and to transport the crude oil for sale to the Government refineries being constructed at Gauhati and Barauni. The authorised share capital of the Company is Rs. 50 crores (£37,500,000). The first issue of capital amounting to Rs. 12 crores was made immediately after the incorporation of the Company in February 1959 and, during 1960, there was a further issue of Rs. 9 crores. The funds derived from share capital subscriptions are being utilised for the development of the oilfields. The total amount required for that purpose is estimated at Rs. 28 crores. As on 31st December 1960, the B.O.C. had contributed Rs. 14 crores towards its two-thirds share of this requirement.

Capital Issues

Several interesting conclusions bearing on capital issues were reported to have been reached at the meeting of the Advisory Committee on Capital Issues held in the city a few days ago. The conclusions are summarised below:

Premium on shares: The policy of insisting on a premium in the issue of shares is needed to curb speculation and promote healthy industrialisation, provided it is flexible and due consideration is given to the point of view of the company concerned. The value of a right share must be reasonably split between the company and the shareholders, so that, while the position of the company is strengthened, the shareholders do not suffer any real loss.

Debt-equity ratio: A reasonable relation is to be maintained between the various components of a company's capital structure, but any ratio set should not be rigid. There is no need to distinguish between redeemable and non-redeemable preference shares in so far as debt-equity ratio is concerned.

Allotment of shares: It must be made a condition of Government's consent that the shares allotted privately should not be transferred for a period of at least three years. The Government should not impose a condition whose observance it is not in a position to enforce. The present practice of asking for an assurance should be given a fair trial.

Commission and brokerage: The company should have the discretion to pay such amounts as it may find necessary within the ceiling imposed by law. The institution of managing brokers is an accepted one in commercial circles and there is no reason why it should be discouraged by Capital Issues Control.

The reaction of the Government to these conclusions is, however, not known. Whatever it be, it has to be emphasised that the Capital Issues Control should be so administered as to ensure industrial development on sound and healthy lines.

Engineering Industries

It is unfortunate that the engineering industries in several parts, particularly in Calcutta, are reeling under the impact of a power shortage. Production has been adversely affected, resulting in loss to industries as well as unemployment and monetary loss to workers. How severe has been the impact of power shortage is clearly brought out in a survey conducted in Calcutta by the Engineering Association of India. The findings of the survey, confined to 60 factories situated in different parts of Calcutta, reveal that, during the period of shortage, the power availability has in some cases been just half. This reduction alone will, perhaps, fail to give an exact idea of the hardships inflicted. The worst affected were the firms which were compelled to work night shift. Most of the workers not used to night shift operation could not be expected to work as efficiently as in the day shift. The result was inferior quality goods at lower rate of production per worker. It also resulted in a larger rate of absenteeism. Absenteeism due to compulsion to work night shift was as high as 75 per cent in certain cases. A total of 5,668 workers had to be laid off for varying periods.

The actual loss in production, we are told, amounts to Rs. 4.64 lakhs per day. These firms represent a cross-section of the industry. There are about 820 engineering firms that might have been affected. The total loss can easily be imagined. If the daily loss sustained by eleven firms employing 500 and more workers covered in this survey is taken into account, it comes to Rs. 2.20 lakhs per day. There are about 66 firms in West Bengal, employing 500 and more workers. Thus the loss sustained by firms in this category alone will, on an average, amount to about Rs. 13.32 lakhs daily.

The situation has, of course, improved to some extent after the overhaul of the 50 M.W. generator at New Cossipore. But the industries are greatly apprehensive about the future. It has been estimated that, in 1962, the demand may be 450 M.W. With 325 M.W. being generated by the Calcutta Electric Supply Corporation, the balance requirement of 125 M.W. will have to be met from the D.V.C. and the State Electricity Board. The authorities should, as the President of the Association, Mr. K. L. Chowdhary, has urged, take stock of the situation and devise ways and means of making this much power available by next year.

Third Plan in Final Form

(In crores of rupees)

	States and Union territories	Centre	Total	Percentage
Physical targets:				
Agriculture and community development ..	969	125	1,094	14
Irrigation and power ..	1,540	180	1,870	21
Village and small industry ..	141	123	264	3
Industry, minerals, transport and communication ..	367	2,875	3,242	41
Social services	1,005	525	1,530	19
Inventories	—	200	200	2
Total	4,022	3,978	8,000	100
Financial targets:				
Agriculture and community development	948	125	1,068	14
Irrigation and power ..	1,535	127	1,662	22
Village and small industry ..	141	123	264	4
Industry, minerals, transport and communication ..	331	2,675	3,006	40
Social services	950	350	1,300	17
Inventories	—	200	200	3
Total	3,900	3,600	7,500	100

Financial Resources

(In crores of rupees)

	January decision of N.D.C.	Present estimates
Balance from current revenues (excluding additional taxation)	384	550
Contribution by railways	108	100
Surpluses of other public enterprises ..	449	450
Loans from public (net)	850	800
Small savings (net)	585	600
Provident Funds (net)	249	295
Steel equilisation fund	160	105
Balance of miscellaneous capital receipts over non-Plan disbursements	208	170
Total	2,993	3,040
Additional taxation including measures to increase surpluses of public enterprises ..	1,710	1,710
Budgetary receipts corresponding to external assistance	2,200	2,200
Deficit financing	550	550
Total	7,453	7,500

World Businessmen Meet

A highlight of the eighteenth biennial Congress of the International Chamber of Commerce at Copenhagen last week was the adoption, by the Chamber's Asian and Far Eastern Affairs Commission, of a plan to mobilise local capital and attract foreign funds for financing the economic development of the region. The plan, proposed by Mr. C. Loganathan, General Manager of the Bank of Ceylon, envisages the establishment of a Development Savings Bank. It is true that the proposal to set up such a bank stems from the basic economic realities of underdeveloped countries, namely, the urgent need for rapid economic development and consequently for accelerated domestic investment and the important role which foreign capital has to play in the developmental efforts of the countries. But, from the practical point of view, its workability is, as we had pointed out before, highly doubtful.

Another highlight of the I.C.C. session was the stress laid on the institutional and political framework for expediting the process of development. In a resolution adopted at the session, the Chamber proclaimed that private enterprise was a powerful non-political agent for expanding and using the world's resources to provide what people wanted most. It observed that the specific merits of private enterprise were its quick appraisal of needs, willingness to take risks, adaptability to change and flexibility in methods. Emphasising that the State itself needed the initiative and skill of private enterprise, the resolution called for closer co-operation of private enterprise with the Governments concerned. A forceful defence of private enterprise came from Mr. Robert L. Garner, President of the International Finance Corporation, in his speech at the session. He urged the establishment of a new international executive post with the responsibility for company policies that would strengthen the private enterprise system the world over. The function of the proposed executive post, he declared, was to appraise every company policy and action from the point of view of whether it tended to strengthen or weaken private enterprise. Besides, it should, he suggested, organise a well financed campaign designed to educate the public on the benefits conferred on the community as a whole by sound private business operation. To quote him: "Private capitalism has proved to be the most dynamic force in producing a better life for people."

These are, indeed, wise words that have very great relevance to the underdeveloped countries most of which have socialist Governments with doctrinaire ideas. Evidently, Mr. Garner must have had at the back of his mind the danger of the Governments aligning themselves against the private enterprise system when he exhorted private business in developing countries to accept local partners and stockholders, assume social responsibilities, identify itself with the community and improve the opportunities for property ownership, thus helping to create a communism-proof, property-owning middle class.

U.S. Foreign Aid

The special message on "urgent national needs" delivered by President Kennedy before the joint session of the U.S. Congress on 25th May and the draft legislation to revitalise the U.S. foreign aid programme on a long-range basis have been, as is only to be expected, hailed throughout the underdeveloped region. Mr. Kennedy has certainly given ample proof of his determination and readiness to accelerate the process of economic growth in the economically backward countries through enlarged flow of foreign assistance to them. The new message and the proposed legislation have set at rest apprehensions expressed in certain quarters to the effect that the conditions in the U.S. economy might adversely affect the aid programme.

In order to translate the aforesaid ideas into practical measures, Mr. Kennedy has forwarded a special letter and a draft legislation. In these two documents, the President has proposed to the Congress (1) an immediate five-year loan programme aggregating more than $7,300 million and (2) administration of this programme by a new single

SHARE MARKET FIRM AGAIN

MARKED RISE IN SELECT COUNTERS

(From Our Own Correspondents)

BOMBAY, 1*st June*

THE firm trend noted on the Stock Exchange last week gathered further strength during the week under review. The decision of the Exchange authorities to maintain the *status quo* in the existing special deposit *havala* rates emboldened some bulls to continue their activities with greater confidence. The possibilities of large foreign assistance from the Aid India Club and persistent rumours regarding early decision on higher steel retention prices also fanned the bullish fervour of the market. Steel shares were keenly bid, Tata Steels reaching a new high today on hopes of enhanced dividend. Textiles also displayed a firm trend. Notable gains in prices were made by several other counters, too.

In the steel section, Tata Steels staged an impressive rally, thanks to hopes of higher dividend and increased retention prices. The net rise over the week was Rs. 3.50. The closing rate today was Rs. 161, after being higher still at Rs. 161.25. Indian Irons advanced from Rs. 27.75 to Rs. 28.25, showing a net gain of 50 nP. Mukand Iron, however, shed 25 nP to Rs. 28.

Among textiles, Standard Mills forged ahead from Rs. 1,482 to Rs. 1,555 before finishing at Rs. 1,541 today. Centurys jumped up from Rs. 670 to Rs. 686 early in the week on reports that the Company had obtained official permission for bonus issue in the proportion of one share for every four shares held. At this level, profit-taking set in and the scrip receded to Rs. 675.50. The net gain over the week was Rs. 5.50. Kohinoors also received considerable bull support and spurted by Rs. 6 to Rs. 327 in the earlier sessions, but finished lower at Rs. 325.50. Bombay Dyeings registered a net gain of Re. 1 to close at Rs. 66. New Greats hardened by Rs. 5 to Rs. 217.50. Indores gathered a like amount to Rs. 154. Elphinstones rose by Rs. 3.50 to Rs. 86.60. Khataus were marked up by Rs. 17.50 to Rs. 577.50. Finlays improved by Rs. 5 to Rs. 325. Morarjees moved up from Rs. 421 to Rs. 428. Mysores put on Rs. 2 to Rs. 74. A few scrips, however, suffered losses ranging from Re. 1 to Re. 1.50. They were Simplex, Central Indias, Osmanshahis and Swadeshis. Tata Mills, Shri Nivas, Swans were all unchanged at Rs. 59, Rs. 260 and Rs. 575, respectively.

Sugar shares were dull. Belapurs lost Rs. 2 to Rs. 288. Phaltans shed Rs. 3 to Rs. 138. Walchandnagars climbed down by Rs. 15.75 to Rs. 176.25. Maharashtras declined from Rs. 190 to Rs. 184.

In the cement group, Orissas were fully maintained at Rs. 14.56 and Digvijays at Rs. 155.50 as also Bagalkots at Rs. 8.44. But Associated Cements lost Re. 1.25 to Rs. 161.

Among shippings, Scindias, which had improved from Rs. 15.24 to Rs. 15.40 on Thursday 25th May, moved down gradually and touched a low of Rs. 14.76 today. At this level, support ensued and the quotation recovered to Rs. 14.88. The net loss over the week was 36 nP. Great Easterns were subdued at Rs. 15, as against Rs. 15.36. India Steamships, however, were favoured at Rs. 8.56, as against Rs. 8.48. In the automobile section, Premier Automobiles gained Re. 1 to Rs. 172.50. Hindustan Motors increased by 84 nP to Rs. 22.44. Automobile Products put on 76 nP to Rs. 12.76.

In the rayon group, National Rayons advanced from Rs. 561 to Rs. 564.50 on 25th May. Liquidation by tired bulls took the rate down to Rs. 547 on Monday this week. Fresh support emerged again and the scrip recovered to Rs. 558.50 today before finishing at Rs. 556. The net loss over the week was Rs. 6. Gwalior Rayons spurted by a rupee to Rs. 52.50. South Indian Viscose rose from Rs. 165 to Rs. 166. Indian Rayons were firm at Rs. 63, Baroda Rayons, however, encountered selling and declined by Rs. 3 to Rs. 127.

Dyes and chemicals generally met with good support. Colour Chems spurted by as much as Rs. 31.25 to Rs. 375. Indian Dyestuffs jumped up from Rs. 530 to Rs. 552.50. Dharamshis rallied from Rs. 280 to Rs. 300. Dhrangadhras increased by Rs. 4.50 to Rs. 132. Synthetics put on Rs. 2 to Rs. 171. Amar Dyes, Citrics and Polychems were fully maintained at last week's rates of Rs. 410, Rs. 53.50 and Rs. 237.50, respectively. Adarsh Chemicals, however, failed to attract follow-up support and eased by a rupee to Rs. 101.

In the engineering section, Premier Constructions were well fancied and went up by Rs. 3.50 to Rs. 196.50. Josts spurted by Rs. 5 to Rs. 95. Khandelwals gathered Re. 1.50 to Rs. 81.50. New Standard Engineering new shares advanced by a rupee to Rs. 186. Texmacos gained 40 nP to Rs. 20.40. Mahindras were bid 52 nP higher at Rs. 20.78. Kamanis improved by 24 nP to Rs. 17.24. Alcock Ashdowns, however, were subjected to selling pressure and fell by Rs. 15 to Rs. 295. Telcos declined by 50 nP to Rs. 365.50, after being higher at Rs. 372.50 on 25th May. Larsen and Toubros lost the ground which they had recovered last week and shed Re. 1.25 to Rs. 43.50. Cooper Engineerings lost Re. 1 to Rs. 171.

A sharp rise of Rs. 41.25 to Rs. 227.50 in Ceat Tyres was the feature of trading in the miscellaneous section. Bombay Burmahs began the week at Rs. 642 and, after advancing to Rs. 651, declined to Rs. 637 the same day. Thereafter they gradually moved up to Rs. 648 yesterday but receded again to Rs. 643 today. The net rise over the week was Rs. 2. Polsons secured a handsome gain of Rs. 7.50 to Rs. 179. Issac Holdens firmed up by Rs. 5 to Rs. 16.49. Phillips put on Rs. 2.16 to Rs. 19.76. Tata Oils rose by Rs. 2 to Rs. 79. Indian Hume Pipes and Indian Coppers were fully steady at Rs. 178.50 and Rs. 5.52 respectively. Some other miscellaneous industrials, however, were subdued due to lack of buying support. Voltas receded by Rs. 2 to Rs. 291.50. Wimcos lost Rs. 3.50 to Rs. 258. Bombay Oxygens fell by Rs. 2.50 to Rs. 57.50. Hindustan Levers shed 25 nP to Rs. 47.25. Sirpurs eased by 44 nP to Rs. 16.20 and Tata Chemicals by 16 nP to Rs. 19.44.

* * * *

Madras Stock Exchange

MADRAS, 31*st May*

Equities ruled quietly steady during the week under review, barring teas, coffees and chemicals which encountered selling. The volume of business transactions was only moderate, as the operators preferred to await details regarding the deliberations of the National Development Council's meeting at New Delhi on the third Plan and the "Aid India Club" meeting at Washington. Textiles were cheerful on reports of higher output in several mills. Sugars were also well favoured. Rubbers elicited fairly good demand induced by hopes of better prospects for the industry. There was selective buying in the miscellaneous section. Teas, however, ruled easy, despite signs of some improvement in export trade of late. Coffees, too, lacked support as a result of uncertainties in marketing the commodity.

Among textiles, Cannanores were marked up by Rs. 10 to Rs. 165 *cum-div.*, following the announcement of a final dividend of 11 per cent, making a total of 20 per cent, taxable for the year ended March 1961, which compares favourably with 17 per cent distributed in the previous year. Metturs rose by Rs. 3 to Rs. 405. Lakshmis rallied from Rs. 162 to Rs. 166, before closing at Rs. 165. South India Viscose advanced by Rs. 2 to Rs. 164. Bangalore Woollens were higher by a rupee at Rs. 201. Cambodias put on 80 nP to Rs. 10.40, thanks to the dividend of 9 per cent, taxable, announced for 1960, after an interval of two years. Loyals improved by 75 nP to Rs. 40.50 and Radhakrishnas by 25 nP to Rs. 31.50. Maduras picked up 15 nP to Rs. 36.90. Buckinghams were fully steady at Rs. 213. Venkatesas were maintained at Rs. 197 *cum-div.* The Directors of the Company have declared a dividend of 30 per cent, taxable, for 1960, same as last year. Coimbatore Kamala fully-paids and partly-paids were maintained at Rs. 102 *cum-div.* and Rs. 50 *cum-div.*, respectively. The Company has declared a dividend, for the first time since 1952, at the rate of 10 per cent, taxable, for 1960. Ramakrishnas were firm at Rs. 224 *cum-div.* The Company has maintained the dividend for the year ended March 1961 at the previous year's level of 23 per cent, taxable.

In the rubber group, Travancore Rubbers put on 20 nP to Rs. 11. Cochin Malabars rose from Rs. 7.75 to Rs. 8.03 but sagged subsequently to Rs. 7.93, the net gain being 18 nP. Midlands hardened by 13 nP and T.R. and T's by 10 nP to Rs. 9.85. Pullangodes gathered 5 nP to Re. 1.90. Malankaras were steady at Rs. 18.75. Rajagiris were maintained at Rs. 18.60 *cum-div.* An interim dividend of 10 per cent, taxable, has been proposed for the year ending June 1961. Nilamburs were also firm at Rs. 16.25 *cum-div.* The Directors of the Company have announced a dividend of 15 per cent, taxable, for 1960, same as that paid in 1959.

Teas were weak. Lingapurs suffered a setback of 20 nP to Rs. 5.40 *cum-div.*, notwithstanding the proposed interim dividend of 10 per cent, taxable, for the year ended March 1961. Kil Kotagiris shed 8 nP to Rs. 4.92. Neelamalais lost 6 nP to Rs. 4.37. Periakaramalais eased by 2 nP to Rs. 3.80. Haileyburias lost a like amount to Rs. 14.35. Chembras were quiet at Rs. 3.80. Peermades at Rs. 23.30 and Parksides at Rs. 28.85. Manars were dull at Rs. 2.70 *cum-div.* The Directors of the Company have announced a dividend of 5 per cent, taxable, for the year ended March 1961, as against 10 per cent, taxable, for the previous year. Devasholas, however, put on 25 nP to Rs. 30.75 *cum-div.*, although the final dividend for 1960 announced this week was only 10 per cent, taxable, making a total of 20 per cent, taxable, for the year, as compared with 25 per cent distributed in 1959.

In the coffee group, Consolidateds came in for renewed selling and lost Re. 1.25 to Rs. 21. Ouchterlony Valleys receded from Rs. 4.10 to Rs. 3.62. Anaparais dropped 10 nP to Rs. 4. Cowcoodys shed 5 nP to Rs. 5.15, despite the announcement of an interim dividend of 10 per cent, taxable. Coffee Lands, however, put on 12 nP to Rs. 18.62. Mysores picked up 2 nP to Rs. 5.45.

Among miscellaneous industrials, Aluminium Industries hardened by 37 nP to Rs. 23.37. Ashok Leylands rose from Rs. 9.20 to Rs. 9.48 in the beginning, but gave way subsequently to Rs. 9.28. R.E.M.Co.'s put on 25 nP to Rs. 20.75. Spencers gathered 12 nP to Rs. 23.37. Standard Motors and Indian Steel Rollings were fully steady at Rs. 16.75 and Rs. 10.10, respectively. Radio and Electricals were neglected at Rs. 3.60. The Company has passed over the dividend for 1960; it had distributed a dividend of 7½ per cent, taxable, in 1959. Among cements, Indias rose from Rs. 6.05 to Rs. 6.15, before closing at Rs. 6.12. Dalmias moved up by 7 nP to Rs. 12.12. Andhras were done at Rs. 10.50. Orissas at Rs. 14.55 and Travancores at Rs. 8.45. Chemicals were subdued. Travancores eased by 50 nP to Rs. 16.25. F.A.C.Ts dropped 5 nP to Rs. 10.60. Metturs were quiet at Rs. 14.25, as also Mysores at Rs. 24 and Mysore Fertilisers at Rs. 11.15.

MARKET GOSSIP

(Concluded from previous page)

body, to be called the Agency for International Development (A.I.D.); this body will function within the State Department and be headed by an administrator with the rank of Under Secretary of State. The proposed Agency would replace the International Co-operative Administration (I.C.A.) and the Development Loan Fund (D.L.F.). The proposed rank of the A.I.D. administrator and the relationship between aid and other elements of the State Department are expected to highlight one fundamental fact: Economic development assistance can no longer be subordinated to, or viewed simply as a convenient tool for meeting, short-run political objectives. In the covering letter, the President has emphasised the long-range character of the aid programme and sought from the Congress authority in the form of public debt transactions to make available $900 million for the fiscal year beginning on 1st July next and $1,600 million in each of the subsequent four years.

The draft Bill calls for passage of two Acts—an Act for International Development, which is the long-range loan section of the Bill, and an International Peace and Security Act, the military assistance section of the Bill. The International Development Act has four major purposes: (1) To assist and support nations whose independence or stability depends upon such help and is important to its own security; (2) to provide for the U.S. share in certain programmes under multilateral auspices; (3) to provide grant assistance to the less-developed countries primarily to assist in the development of their human resources; and (4) to establish a Presidential Contingency Fund to meet the unpredictable exigencies with which the U.S. will doubtless be confronted in the coming year. It is gratifying that the Act also seeks authorisation by the Congress to make loans, repayable in U.S. dollars, to promote the economic development of less-developed countries and areas with emphasis upon long-term plans and programmes designed to develop economic resources and increase productive capacities.

Notice

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:
Gillander House, Netaji Subhas Road, Calcutta-1

NOTICE IS HEREBY GIVEN THAT THE Preference Register of Members of the Company will be closed from the 12th June 1961 to 3rd July 1961, both days inclusive, for payment of the dividend for the half-year ending 30th June 1961 on the 3rd July 1961 at the rate of Rs. 3.108 per share (being the stipulated dividend of Rs. 3.50 per share increased by 11 per cent thereof to Rs. 3.885 less Rs. 0.777 being Income-tax at the Company's rate of 20 per cent) subject to tax being deducted therefrom in accordance with the provisions of Section 18(3D) of the Indian Income Tax Act.

By Order of the Board,
STEEL BROTHERS AND COMPANY LIMITED,
Managing Agents

NEWS IN BRIEF

THE Third Finance Commission's report is expected to be submitted in the middle of December next, according to Mr. A. K. Chanda, Chairman of the Commission.

The Government of Madras has reduced the power-cut from 50 per cent to 25 per cent in areas served by hydro-electric projects and from 40 to 15 per cent in the Madras thermal area.

An Indian Trade Commission has been set up in Kuwait. Mr. N. K. Nigam, formerly Commercial Secretary in the Indian High Commission in Karachi, has taken over as Trade Commissioner.

The workers of the Hindustan Aircraft Ltd. who are drawing basic salaries upto Rs. 500 will get a production bonus of Rs. 85 for the current year, according to Mr. V. K. K. Menon, Union Defence Minister.

Production of iron ore during March 1961 was 961,000 metric tons, bringing the total output during January-March 1961 to 2.82 million tons which was higher by about 6 per cent, as compared with the corresponding period of the preceding year.

An Industrial Tribunal with headquarters at Calcutta has been constituted by the Government of India with Mr. L. P. Dave as the presiding officer. Already there are two standing industrial tribunals—one at Bombay and the other at Dhanbad.

The World Bank is to give a loan of Rs. 30 crores to the private sector of the coal industry for development works during the third Plan. A delegation of the industry, accompanied by Mr. L. K. Jha of the Union Finance Ministry, is expected to visit Washington in the near future to finalise the deal.

The next preliminary and intermediate examinations for company secretaries are to be held in October 1961. Applications for admission to the examinations should reach the Department of Company Law Administration on or before 31st July 1961. The examinations will, as before, be held in Bombay, Calcutta, Delhi, Madras, Ernakulam and Hyderabad.

The Government of India has decided to extend the benefit of compulsory contributory provident fund under the Employees' Provident Funds Act to industries engaged in petroleum or natural gas exploration, prospecting, drilling or production, and petroleum or natural gas refining. This will take effect from 30th June. The benefit is applicable to establishments which employ twenty or more persons.

An agreement for consultancy services for the Khetri copper project has been signed between the National Mineral Development Corporation and the Western Knapp Engineering Company of the U.S. Under the agreement, the project report is to be submitted by the consultants not later than the end of this year. The Khetri copper project is included in the third Five-year Plan and envisages the production of 10,000 tons of electrolytic copper annually.

The Government of India has decided to grant certain special facilities to importers for clearing shipments from West Germany and the Netherlands and making remittances for the goods concerned. This is to avoid the incenveniences caused by the recent revaluation of the W. German and Dutch currencies, as a result of which the c.i.f. value of shipments to India will be in excess of the value available under the relevant import licences.

On a representation from the various jewellers' associations and in consultation with the industry, the Government of India has decided that the export of raw aquamarine stones and emeralds cut will be allowed, without an export permit, in post parcels of 100 tolas. The Government of India, it will be recalled, had decided that raw aquamarine stones and emeralds being semi-precious gem varieties of beryl, an atomic energy material, their export should be allowed only by post parcels of 40 tolas subject to an export permit.

The Central Instructor Training Institute at Madras and the Institute for Petroleum Exploration at Dehra Dun have been allocated a sum of $612,000 and $790,300, respectively, from the United Nations Special Fund for conducting of training surveys and research projects. The two Institutes will receive a sum of $1,690,000 and $1,043,700, respectively, from the Union Government as its counterpart contribution over three years. These projects will be planned jointly by the Government of India and a specialised agency of the U.N. The Madras Institute will give training to instructors for the main industrial trades in metal working, electricity and building construction while the Dehra Dun Institute will train the specialised personnel to carry out the programmes of oil and natural gas exploration.

The Jeejeebhoy Committee appointed in 1958 to continue the work of the Chaudhuri Committee (1956) on the pay scales and allowances of class III and IV employees of major ports has submitted a unanimous report. The Committee was asked to examine the duties and responsibilities of the various posts and fit them into one or other of the pay scales prescribed under the appropriate first Pay Commission's scales. It was also authorised to devise a standard nomenclature for the posts at the major ports. The Committee's recommendations will be given retrospective effect from 1st October 1957.

Ceiling prices have been fixed for the various fertiliser mixtures in Maharashtra State. The decision to fix prices was taken at a joint meeting of the representatives of the fertiliser producing concerns and the State Government officials held in Bombay on 22nd May. The price structures ruling in the various States of the country were discussed at the meeting and a formula which will enable the Government to fix the ceiling prices of the fertiliser mixtures produced by about ten concerns in the State was evolved. The prices fixed by the Government will be displayed at the retail selling centres.

The Governments of India and the U.S. have signed an agreement by which American assistance to the Bombay Central Training Institute for Craftsmen and Instructors will be increased to a total of Rs. 37 lakhs. During the third Plan, it is expected that training facilities will be necessary for 770,000 craftsmen required by new and expanding industries. To train these craftsmen, some 20,000 instructors will be required. The Bombay Institute is one of six being set up by the Government of India for this purpose, and additionally for the simultaneous training of craftsmen. It is expected to start functioning by July 1962. The U.S. will supply shop equipment, hand tools and books and will make available the services of nine technicians to act as instructors.

The concessional rates for matches packed in boxes of 40s and 60s have been withdrawn with effect from 1st inst. It will be recalled that, in order to standardise the production of matches, the Union Government had introduced, with effect from 1st March, concessional rates of duty for matches packed in boxes of 50s. At the same time, to facilitate an easy switch-over to the production of the new standard type of match boxes, the existing concessional rates for 40s and 60s had also been allowed to continue for three months more. As a measure of encouragement to the cottage sector of the match industry which uses bamboo for making splints, the concessional rates for matches of 50s were further liberalised. In view of the special circumstances pertaining to the marketing of such matches, it has been decided to extend similar concession to the cottage sector in respect of matches of 40s produced from bamboo. This concession will be available up to 28th February 1962.

From Abroad

Two large oil deposits have been discovered in W. Siberian lowland. The first and the largest of them is the Shaimsk deposit on the bank of the Konda river in the Taiga, 350 kilometres north of Tyumen. The second oil deposit is on the bank of the river Ob, near the village of Nizhna-Vartovskoye, Tyumen region. The oil seam lies at the depth of 2,000 metres.

A "Working Group Development Aid" has been formed jointly by the Federation of German Industries, the Association of German Chambers of Industry and Commerce, the Federation of Private Banks and the Association of Wholesalers and Export Organisations in W. Germany. The object is to co-ordinate the various views on problems of development aid. It will also act as an advisory body to the Government's development committee which is responsible for the distribution of W. German development aid.

A gass pipeline which will link a big gas field discovered on the Konda River (east of the Urals Mountains) with the industrial centres of the Urals will be built in Soviet Russia. Eight gas fields have already been discovered in the lower reaches of the Ob river. The geologists expect to find great oil pools in other parts of the West Siberian lowland. Exceptionally high grade oil has been found in the Irkutsk region, also in proximity to the diamond fields in Yakutia (North-eastern Siberia). When this oil is tapped, diamond mining costs will be greatly reduced.

India, Formosa, Japan, S. Korea, Nepal, Pakistan, the Philippines and Thailand have formed an Asian Productivity Organisation with the object of providing a vehicle for co-operative action among its members and serving as a mechanism for the fullest exchange of experience and know-how, as well as functioning as a channel through which outside assistance can be directed to its members collectively.

The World Bank is sending a special mission to Chile to review the 10-year programme for the development of Chile prepared by the Chilean Development Corporation. Mr. John H. Adler, Economic Adviser in the Bank's Department of Operations for the Western Hemisphere, will be the leader of the mission. The mission will evaluate the size and composition of the programme, its financial implications and the measures and policies proposed to achieve it, examine the extent to which the financial allocations to the several sectors of the economy are supported by projects for which preliminary economic and technical studies have been prepared, and assess the work needs to be done in the way of project preparation.

PERSONAL

MR. A. P. Pant, Political Officer in Sikkim, has been appointed Ambassador of India to Indonesia. He is expected to assume charge in autumn next.

Mr. M. P. Gandhi has been elected a member of the All-India Council for Technical Education, as a representative of the Federation of Indian Chambers of Commerce and Industry.

Mr. G. V. Swaika has been elected a member of the Indian Central Oilseeds Committee to represent the Federation of Indian Chambers of Commerce and Industry.

Mr. B. Mukerji, until recently Joint Secretary, Union Ministry of Finance, assumed charge as the Second Managing Director of the State Bank of India on 24th May. He will hold office for three years.

Sir Paul Gore-Booth, High Commissioner for the United Kingdom in India, left for London on 31st May for consultation with the home Government. He is expected to return to India in the third week of this month.

Mr. Madanmohan R. Ruia, Chairman of the Indian National Committee of the International Chamber of Commerce, has been elected Chairman of the Commission on Asian and Far Eastern Affairs of the Chamber. Mr. Chentsal Rao has been provisionally chosen as the Secretary-General.

THE ANDHRA BANK LIMITED

Head Office: **MASULIPATNAM**

APPLICATIONS ARE INVITED FOR POSTS OF **INSPECTORS OF BRANCHES** FROM CHARTERED ACCOUNTANTS IN THE GRADE OF Rs. 300-25-650, WITH DEARNESS AND HOUSE RENT ALLOWANCE AS PER RULES IN FORCE. CANDIDATES HAVING GOOD PERSONALITY, BANKING EXPERIENCE AND C.A.I.I.B. QUALIFICATION WILL BE PREFERRED.

APPLICATIONS STATING AGE, QUALIFICATIONS, EXPERIENCE, Etc., SHOULD REACH THE GENERAL MANAGER, ON OR BEFORE THE 15th JUNE 1961. THE SELECTED CANDIDATES WILL HAVE TO EXECUTE A CONTRACT TO SERVE THE BANK FOR A PERIOD OF 5 YEARS.

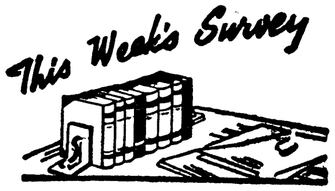
A.B. 22/Chari

"You can make your factory performance optimum"
NATIONAL PRODUCTIVITY COUNCIL
Through the courtesy of T.C.M. of U.S. Government is now in a position to provide some very useful I.C.A. publications comprising

- Series of Manuals in fields of INDUSTRIAL MANAGEMENT
- INDUSTRIAL ENGINEERING & INDUSTRIAL RELATIONS
- PLANT REQUIREMENT REPORTS • FACTORY PERFORMANCE REPORTS
- CAPITAL REQUIREMENT & OPERATING RATIO REPORTS
- COTTAGE INDUSTRIES REPORTS • INDUSTRIAL DEVELOPMENT GUIDES, Etc., etc.

Free price list may be obtained from: **Information Officer, National Productivity Council, 38, Golf Links, New Delhi.**

DA 61/151



TEA AND COFFEE

THE two plantation crops for which export targets have been fixed under the third Plan are tea and coffee. If these targets are fulfilled successfully, the aggregate shipments of tea in the last year of the Plan, that is, 1965-66, would amount to 550 million lbs., as against the 465 million lbs. exported in 1960-61 (last year of the second Plan), and those of coffee would be of the order of 38,000 tons, as against 17,000 tons. The 'if,' however, is a big one, though the targets are by no means ambitious. For much will depend on whether the Governments—Central and State—will reorient their policies in such a way as to enable the producers of these two commodities to compete more effectively in the world markets where competition from other countries is becoming keener and keener every day. It is of the utmost importance, as Mr. R. W. Thorpe, Chairman of the Nilgiri-Wynaad Planters' Association, rightly emphasised in his speech at the recent annual meeting of the Association, that the export markets abroad are carefully fostered and developed. "Steps taken towards that end," to quote him, "would be the best insurance not only against economic instability of the industry but also against impairment of the financial resources for the nation's plans through any reduction in foreign exchange."

In this context, Mr. Thorpe regretted that the downward revision in the rate of export duty on tea announced in the Central budget for 1961-62, however, well-meant, had not provided any real encouragement to exports, inasmuch as the concession had been offset by the enhancement of excise duty. Taking the instance of his own district, he mentioned that, though the district fell within Zone I and paid the lowest rate of excise duty, the relief amounted to only 5.7 per cent. Surely, his plea for "more real concessions" to the tea industry is not unjustified. The industry, it must be remembered, earns for the country much precious foreign exchange which is so urgently needed to maintain the expected increase in the tempo of economic activity in the coming years.

When the need for earning foreign exchange is thus pressing, it is disquieting to hear again and again that the coffee industry is faced with a serious crisis in marketing. Here is what Mr. Thorpe said:

"Coffee has been in difficulties for sometime now and it was a great shock to all coffee interests that Government appeared oblivious of this crisis and chose this particular time to enhance the excise duty on coffee by 33⅓ per cent. The recent revision in the rates of excise duty in respect of Robusta bringing it to the old level, though a sympathetic gesture to be appreciated, does not mitigate the rigour of the general enhancement of duty at a time when the coffee industry is faced with a serious crisis in marketing. World prices have slumped and Indian coffee has to earn foreign exchange at a great sacrifice. Internal marketing procedures would have also to be drastically reorganised, if the industry is to be saved from economic decline. ... It is, indeed, a sad commentary on the existing methods of marketing arrangements that higher productivity is rewarded with uneconomic returns."

This is certainly an impressive summing up of the whole problem. We have ourselves pointed out on more than one occasion that the Coffee Board's present marketing policies, which are woefully inadequate to cope with increased production and violent fluctuations in the world market, must be thoroughly overhauled. The United Planters' Association of Southern India has put forward several concrete suggestions to the Board for solving the problems. They cover, among others, earmarking of a minimum export quota, radical changes in export procedures, including open auctions, auctioning of some small lots of individual coffees under their estate names, introduction of testing, abolition of multi-channel system in internal market and replacement of sales tax by a Central excise duty. Mr. Thorpe did well to commend these suggestions for immediate acceptance and urge the Board "to initiate action before it is too late and ensure that the alarming decrease in the return to the grower is arrested and that he is guaranteed a reasonable return for his efforts."

Mr. Thorpe touched on the Plantation Labour Act. He sought to dispel all doubts regarding the intentions of planters in this regard. Indeed, he went to the extent of appealing to all the members to pay particular attention to the implementation of the various provisions of the Act and rules. At the same time, he requested the Plantations Inspectorate to be sympathetic and help the estates to resolve the practical difficulties with which they were faced before it was finally decided to take penal steps. This request deserves to be complied with by the authorities. Similarly, two other pleas made by Mr. Thorpe deserve acceptance, namely, special consideration for mixed estates (as distinct from pure tea estates) in matters like labour bonus and wages and relief in the phenomenal increases in assessments arbitrarily effected by different *panchayats*.

NATURAL RESOURCES COUNCIL

The paramount importance of a specialised organisation to plan continued co-ordinated studies in natural resources and to review the results obtained from time to time has been felt for a long time. It is scarcely necessary to mention that the compilation, analysis and study of data on resources make a valuable contribution to the assessment of long-range potentialities of the country's natural endowments. Such data would be very useful in determining priorities for exploiting the resources to the best advantage. True, there are in India several research bodies, but these are conducting isolated surveys of different natural resources, and there is no unified approach behind them. It is, therefore, heartening to note that the Planning Commission is considering the establishment of an organisation, to be known as the Natural Resources Council, to conduct a continuing and comprehensive survey of all the natural resources. The proposed Council, we are told, will be modelled on the lines of the Natural Resources Council in the U.S. and the "Resources Committee" of Japan. It is expected to consist of members representing the Planning Commission concerned with land, water, mineral resources, scientific research and perspective planning, as well as representatives of various organisations dealing with natural resources, such as the Geological Survey of India, the Indian Bureau of Mines, the Indian Council of Agricultural Research, and the Atomic Energy Commission. The Council will also be assisted by committees on land, water, minerals and energy in which scientists and specialists will be members.

During the first and second Plan periods, the different organisations like the Geological Survey, the Central Water and Power Commission and the Oil and Natural Gas Commission collected a wealth of information on the country's natural resources, but no systematic attempt has so far been made to collate and analyse the data with a view to using them for planning. Surely, the establishment of the new Council and the strengthening of the administrative machinery of the Planning Commission through the creation of the new post of Adviser on Natural Resources will greatly facilitate the task of undertaking fairly accurate long-term perspective planning, inasmuch as the comprehensive studies on natural resources by the proposed Council will throw considerable light on the unexploited gap, that is, the difference between known production potentialities and the present levels of production and thereby give adequate clues in raising production in several directions to meet the demand of the expanding population in the country.

INDO-U.S. TRADE

A fervent plea to the Government and people of the U.S. to import more from developing countries such as India was made by Mr. G. V. Puranik, Chairman of the All-India Manufacturers' Organisation, while welcoming the U.S. Trade and Travel Mission (sponsored by the Trade and Travel Mission of the World Trade Centre, New England, U.S.) at a joint meeting of various commercial bodies held in the city last week-end. Such larger imports, as Mr. Puranik emphasised, are possible only if the U.S. industrial and commercial policies are re-oriented commensurate with the trade needs of India and other developing countries. The U.S. has no doubt granted and continued to grant large-scale aid for the development of these countries. But, mere aid will not provide the lasting solution to the foreign exchange difficulties of developing countries. What is wanted is energetic action to promote their exports to developed nations. Mr. Puranik did well, therefore, to draw pointed attention to the need for supplementing aid with facilities for trade. This need has been impressively highlighted by the U.N. European Economic Commission in its latest report, based on an objective study of the issues involved (*vide* page 954 of *Commerce* dated 20th May 1961). The Commission clearly states that, although the report is concerned mainly with commercial policies in Western Europe, the policy conclusions apply, *mutatis mutandis*, with no less force to developed countries outside Europe, and, in particular, the U.S.

Admittedly, there is vast scope for the U.S. to be of assistance to India in this respect. The U.S. is India's second largest trading partner, after the U.K. In fact, before the last World War, there was hardly any problem in the trade between the two countries, as it was on a small scale. Since the war, especially after the era of planning began, the trade has been expanding fast. And India has a sizable adverse balance of trade with the U.S. While India's imports from the U.S. have risen from Rs. 101 crores in 1950 to as much as Rs. 240 crores in 1960, its exports to that country have not only not improved but actually tended to decline, from Rs. 104 crores to about Rs. 102 crores. The following table shows at a glance the trend of India's imports from, and exports to, the U.S. during the last decade:

(Rs. lakhs)

	Imports	*Exports*	*Balance of trade*
1960 ...	240.02	101.64	—138.38
1959 ...	217.85	95.23	—116.21
1958 ...	161.46	93.08	— 63.38
1957 ...	170.32	131.87	— 38.45
1955 ...	89.81	92.23	+ 2.42
1950 ...	101.00	104.00	+ 3.00

India's persistent adverse balance of trade with the U.S. must, of course, be attributed to the substantially large imports of capital goods for development and foodgrains from that country. The position could, however, have been retrieved to some extent, if only some of India's major exports to the U.S. had received encouragement. The specific items of exports which Mr. Puranik mentioned were processed goods of a simpler type like textiles, light engineering goods, rubber goods and plastic materials. Viewed thus, the renewed emphasis laid by the new U.S. Administration on assisting the developing countries is, indeed, reassuring and, it is to be hoped that the lead given by the U.S. would prompt other advanced countries also to chalk out positive programmes designed to provide for products from developing countries a freer access into their markets. This objective can be realised not so much by Government-to-Government negotiations as by personal contacts among private industrialists and businessmen of the two countries. The suggestion made by Mr. John T. Galvin, leader of the Trade Mission, that India should now send a trade mission to the U.S. is quite welcome. Such personal contacts, it is needless to emphasise, will pave the way for better understanding of each other's problems and promote closer Indo-U.S. economic and commercial co-operation.

WORLD BANK ON VENEZUELA

Venezuela in Latin America, though it continues to be industrially underdeveloped, has stolen a march over several other countries in so far as the petroleum industry is concerned. This country ranks today as the world's largest exporter and the second largest producer of petroleum after the U.S. The petroleum industry is the mainstay of this country's economy, contributing as it does well over half the total revenue receipts of the Government. In view of the predominant role played by the industry thus, it is but natural that some of the recent disquieting developments have caused much concern among the people. Production, it would appear, is lagging behind. The establishment of a State-owned Petroleum Corporation more than a year ago, coupled with the Government's insistence to avoid attractive discounts in petroleum exports, is believed to have caused considerable damage to the growth of domestic oil industry and trade. The existing high local taxes and costs have aggravated the misery. In 1960, the output of Venezuelan crude oil rose by only 3 per cent (to 151 million metric tons), as against the increase of 15½ per cent witnessed in the Middle East, Venezuela's major competitor in world markets. The number of wells is estimated to have gone down from 1,190 in 1956 to 440 in 1960. Again, oil company investments have declined from about 3,000 million bolivars in 1958 to 1,800 million bolivars in 1959 and further to 900 million bolivars in 1960. The effect of such a setback in the major sector of the economy on the development of the country cannot be overemphasised.

It is against this background that the report of the World Bank mission on the economic development of Venezuela, just published, assumes great significance. The mission, it will be recalled, was sent at the invitation of the Government sometime ago. It was headed by Mr. Henry R. Labouisse, former special consultant to the World Bank and now Director of the U.S. International Co-operation Administration.

In its report, the mission has advocated a four-year investment programme designed to promote economic growth. With the uncertainties now facing the oil industry, the mission says, the continued growth of the economy cannot be ensured unless measures are taken to diversify the economy and so reduce dependence on petroleum, though it admits that the required rate of economic growth can be achieved only if the petroleum industry remains in a healthy state and continues to contribute very substantial revenues to the Government. It has advised the Government to modify its petroleum policies in order to provide an incentive for companies engaged in oil industry to expand output and marketing so as to "plough back a larger proportion of profits as new investment." The three alternative measures suggested cover grant of reinvestment allowances on corporate income taxes, fixation of royalty payments on the basis of Venezuelan prices rather than on Texas prices which are less responsive to world price movements, and modification or elimination of the special exchange rate for petroleum transactions. The mission feels that, even if such changes involve a decrease in the Government's proportionate share of oil revenues, such a decrease would be more than offset by a rise in oil production and, in absolute amounts, public revenues would actually increase. The mission also recommends that, in order to restore the confidence of the private oil companies, the Government should define the future role of the publicly-owned petroleum company and clarify the present policy of denying new oil concessions to private companies.

The total land area of Venezuela, it may be noted here, is 350,000 square miles and the population is only 7.2 million. The *per capita* income averages about $600 a year, and yet half the population lives near subsistence level. This is because the vast resources of the country remain unexplored. While substantial oil revenues have made possible marked improvements in transport, health services and urban facilities, many other facilities and services necessary to broaden the base of the economy have been neglected, resulting in wasteful and low-priority investments. It is mainly to remedy this problem of misdirected investment that the mission has suggested a four-year programme. The programme envisages a 40 per cent reduction of investment in basic services such as transportation, power and communications side by side with a 25 per cent increase in Government expenditure to assist agriculture and industry.

The programme of public investment recommended by the mission calls for Government expenditure of about 7 per cent of gross national product, or an amount comparable to that which the Government has been investing in recent years. In order to finance this programme, it will be necessary for the Government to limit current expenditures and the report recommends some specific reductions. In addition, the financial plan requires a substantial increase in regular tax revenues. In this regard, the mission recommends increases in income taxes, gasoline tax, and additional excise taxes on luxury goods. While the mission advises against any substantial volume of internal borrowing by the Government, particularly from the banking system, it finds that some external borrowing is justified. The preservation of financial stability and the halting of capital flight is dependent, in the mission's view, on the adoption of such a financial plan.

The mission has urged larger expenditure on agriculture than on industry. It says that agriculture requires an injection of capital in amounts which only the Government can provide and that the quantum of rural credit should be stepped up substantially in order to encourage modernisation of agriculture. It does not, however, favour any expansion of Government investment in irrigation and drainage projects because there is still potentially productive land available which does not require expensive irrigation.

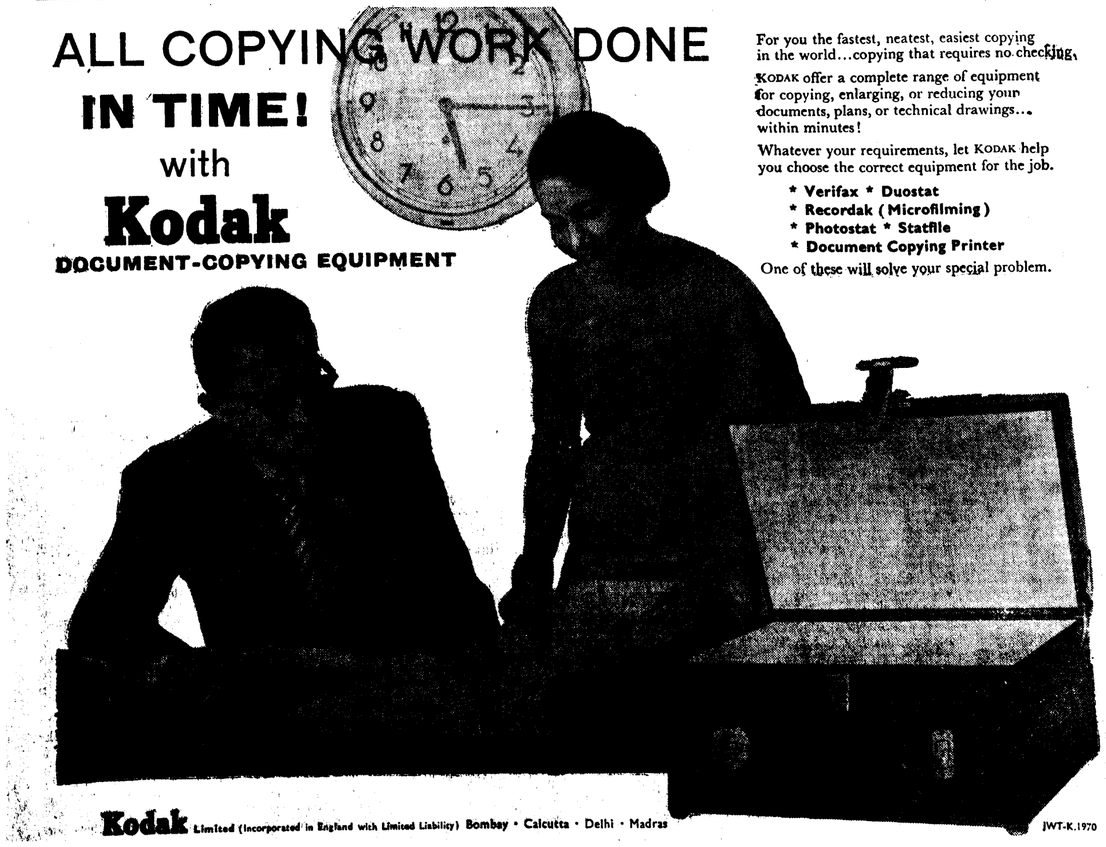
Industries are mainly in the hands of private enterprise. Steel and petrochemicals are exceptions. The mission suggests that future limits of such industries should be clearly defined so that private initiative in related fields is not stifled by uncertainties; so far as private manufacturing is concerned, the mission sees the Government's role as one of stimulation, encouragement and financial support rather than of direct operation. The mission advocates a large-scale credit programme for industry and a modification of tax and tariff policies designed to provide selective incentives for developing certain industries, particularly those with good export prospects.

The series of recommendations made by the World Bank mission must be implemented earnestly by the Venezuelan Government, if the pace of economic development is to be accelerated. Special attention must be given to policies which will contribute to a restoration of confidence in continued economic expansion. As the mission has rightly stressed, the outflow of capital, which slowed economic growth in 1960, poses a special problem and this must be overcome if the long-term development of the country is to proceed on a sound basis.

INDO-U.S. AIR TALKS

The U.S.A. and India, it may be recalled, renegotiated the bilateral Air Agreement in 1956 which provided for the usual principles of reciprocity, equality of opportunity, etc., to the airlines of the two contracting parties. Under this agreement, Air-India International began operations only last year, with an initial frequency of three a week. The U.S. airlines had at that time a total frequency of five a week through India. Mr. B. R. Patel, Vice-Chairman and General Manager of Air-India, who has just recalled these facts in a statement, has also referred to the sixth frequency granted to the U.S. airlines early in October 1960. The latest Indo-U.S. talks for a revision of the existing arrangements so as to secure more frequencies for Air-India have not been successful.

The present position is that Air-India operates five services a week, while the U.S. airlines continue to operate six frequencies through India, of which one is allowed on a temporary basis. During the latest discussions the Indian delegation asked for a daily frequency across the Atlantic for Air-India from next year and some other requirements. But the U.S. authorities, according to Mr. Patel, were not prepared to discuss any arrangements on the basis of a daily frequency for Air-India across the Atlantic. In exchange, the Indian Government was ready to give the U.S. airlines *immediately* ten frequencies through India in place of the existing six and make some other vital concessions. But it is not clear from Mr. Patel's statement whether the U.S. airlines wanted more than ten frequencies through India.



ON THE ARENA

By The Archer

Retirement Age

DR. John H. Lawrence, reputed to be an authority on radiation medicine and Director of the Donner Laboratory in the University of California. is reported to have told a meeting of scientists, held under the auspices of the Atomic Energy Commission at Bombay, that physiological rather than chronological, age should determine retirement of people from their jobs, and that physiological age could be determined by observing the rate of movement of radio-active gases, Krypton and Xenon, in and out of a person's body. According to Chambers's Twentieth Century Dictionary, Krypton is a curious gas discovered in the air by Sir W. Ramsay in 1898 and is given the atomic number 36, while Xenon is a zero-valent element numbered 54, one of the rare gases present in the atmosphere in the proportion of 1 to 170,000,000 by volume. I have no more scientific information on these gases, and accept it from Dr. John Lawrence that, while one study of a large number of normal people in the age group of 65 to 80 had shown that the rate of movement of these gases was slower in old people, a second study had shown that a large number of people who had been retained in their jobs beyond the normal U.S. retirement age of 65 to 68 "were fast gas exchangers."

Leaving aside Dr. Lawrence's theory and its application to U.S. conditions—for it will be profane to talk lightly of a learned scientist on an abstruse topic—I should think that Krypton and Xenon must be in abundant circulation in New Delhi, judging from the large number of "fast gas exchangers" there these days, occupying important positions in both sectors, which call for energy (not atomic, but human), imagination (not airy but objective), and a host of other virtues. None of these characteristics, however, seem to be manifestly present during group gatherings or discussion meetings, and yet, these gentlemen are reported to be indispensable. I have often wondered what could be the reason for their continued existence in their installed, positions and have invariably developed a pain in the neck trying to listen to their monosyllabic observations and inaudible *obiter dicta*. I can now perceive that it must be their capacity to exude gases, which, though obscure, can still overpower the silent and respectful elements in the periphery. As regards communion among themselves, I have no doubt that the sexagenarians, septuagenarians and octogenarians who are in circulation engaged themselves in exchanging a plentiful measure of gas; indeed they seem to exchange nothing else. The term cross-talk would be a misnomer in their case; it should be cross-whiff!

Would it not save much time and expense if the Company Law Administration installed a laboratory for testing the degree of gas exchange in all company directors who cross the age limit of 65 and may continue in their assignments only after a special resolution of the general body of shareholders is passed? All the eulogistic gas contained in company notices commending the special resolutions could then be verified with scientific precision.

Continuance Of English

All political animals have to suffer a lot of pushing and bullying, but Delhi has had more than a fair share of this ever since independence. Sometimes I feel sorry for Delhi, but I keep reminding myself that, as the saying goes, all is fair in love and war, and—I would add—in politics too. War is likely to be banished, sooner or later, by man's achievements in scientific and technological spheres; love, which seems to be receding to the background in the stress and strain of modern life, is also likely to give place to understanding, just that and no more, as a placid way of life. Politics, however, has always been the happy hunting ground of expediency, and will be more so in the future. "The old story over again; expediency's heel, on the neck of inclination." (Philip Barry in *You and I*: Act i.)

Let me illustrate this by recounting the story of the continued use of English. Under clause 2 of Article 343 of the Indian Constitution English is to be in use until 26th January 1965 for official purposes as it used to be before 1950. As the years rolled on, the agitation was afoot in non-Hindi-speaking areas for the retention of English beyond 1965. Delhi got pushed to the right and to the left and backwards and forwards, so much that a Presidential Order was issued on 27th April, 1960 that no restriction should be imposed, for the present, in regard to the use of English for official purposes, and that provision be made for the continued use of English even after 1965 in matters to be specified by Parliament for as long a period as was considered necessary. The Presidential Order also specifically referred to the assurance given by the Prime Minister in the Lok Sabha on 1th September, 1959 that English should be an associate language, which was the policy of the Government of India. Later, the Home Minister also made a declaration in Parliament that Government had no desire whatever to depart from the assurance given by the Prime Minister to the effect that while Hindi should be progressively developed for use as the country's official language, English would remain an associate language for official purposes for such time as the non-Hindi-speaking people in the country wanted it. Needless to say, expediency was the force behind the Prime Minister's assurance, the Home Minister's reiteration and the Presidential Order.

The non-Hindi-speaking areas were not slow to catch up on this turn of events. The Madras State Legislature passed a resolution "requesting the Central Government to undertake appropriate legislation in order to implement the assurance regarding the use of English for official purposes in the Indian Union," and the Madras Government (according to a report from Delhi) asked the Union Government what action was being taken on this resolution of the State Legislature. It is further reported that Delhi has assured Madras that appropriate legislation would be brought forward in the next session of Parliament to implement the Prime Minister's assurance about the continued use of English for official purposes even after 1965. It would seem that the Union Law Ministry was consulted on whether there was any legal or constitutional bar to introduce a Bill on the lines indicated above. The Law Ministry is reported to have replied that no legal or constitutional objection was envisaged, but that "it might look odd" to introduce legislation so far in advance, meaning that we have four more years to go before 1965 is reached.

Which only shows that the legal and administrative pandits in the Law Ministry lack the political prescience of the Union Government as a whole. Who cares, in politics, if something that is done looks "odd" or even absurd? What counts is whether the politics of the coming election which will take place in under a year from now demands quick action being taken in the next Parliamentary session so that the feelings of the non-Hindi—speaking folk in the country are assuaged. I think it was Bismarck who said once in the Prussian Chamber that "Politics is not an exact science," and the saying can be repeated for the benefit of the theorists in the Law Ministry. I can imagine the Prime Minister saying, "Odd, my foot! What is odd about advance legislation? Don't you see that it would be more odd, indeed ridiculous, if we get beaten up in the elections on this score?" And, if as I imagine, he has said this, I would add "Begad, Sir, you are quite right!"

* * * *

Drug Prices

Barring drugs and medicines like tincture of iodine, boric powder, aspirin, soda-mint and iodex, most other patent preparations and curatives, vitamins and antibiotics sell at desparate prices in the country; in large cities prices vary from one locality to another while in small towns they are unpredictable. It is bad enough that Government is not in a position to fix prices at the manufacturers' level; it is just too bad that no effective method of restraining dealers from making unconscionable profits has yet been evolved. Large and prosperous-looking drug stores charge more than the smaller ones, and the gullible public believe that quality is guaranteed in the former's stock than in the latter's. While this is not wholly true, one possile excuse which may be conceded for higher prices is that establishment charges and overheads are more for the former than for the latter, but that should be no justification for higher margins of profits; indeed, the profit margins allowed by manufacturers provide for a fair cross-section of dealers, and there can be no valid excuse for varying them. Manufacturers are expected to fix prices for their products, and though a price schedule is supplied to all retailers, there seems to be nothing preventing a retailer from selling drugs at higher prices, except, perhaps, next door competition. The incidence of drug prices falls more heavily on middle class and poorer sections of the community than on the affluent class, and it is a crime to exploit the vulnerable sectors especially when their resources are subject to heavy strain by sickness and incapacitation of, perhaps, the bread-winners themselves.

I see no reason why the enlightened few among drug manufacturers should not take recourse to stamping of prices on phials, bottles and cartons, with the understanding that a dealer may, in his discretion, sell below the marked price (forgoing a portion of profit) but *not* above. Marking of prices would also enable purchasers to compare them with those of other makes of a like product, and choose one at a lower cost, after scrutiny of the potency of ingredients, which, thanks to statutory requirement, are disclosed on the wrappers. By way of illustration, I would mention that while there are several patented preparations of calcium, vitamins A, B, C and D, folic acid, nicotinic acid, B. complex, pain-killers, tranquillisers, sedatives, antacids, absorbents, analgesic, anti-inflammatory, anti-pyretic and anti-allergic preparations, a layman gets very little opportunity to make his choice on the basis of comparative price (which is not openly revealed) or on the basis of composition, of which his physician thinks he alone is the best judge. Knowledge of pharmacopœia and pharmaceutic matters is not as esoteric nowadays as it was twenty years ago; there are lots of laymen who can give tips to physicians from personal experience, for, after all, most general practitioners owe their success to experience, achieving correct diagnosis by clinical competence and correct choice of drug by trial and error. There is therefore no reason why manufacturers of drugs and patent preparations should any longer cling to secrecy in the matter of price and publication of clinical literature. A brochure about a patent preparation marked "for use by members of the medical profession only" is as outmoded as a film scheduled for view by "adults only." In both cases the exclusive clientele are bored stiff.

Inter-Bank Agreement On Deposit Rates

I have no doubt that the members of the Indian Banks' Association and the Exchange Banks Associations in India know their business very well, but it is intriguing to find that they have not moved (or have they?) in rectifying an anomaly in the working of the inter-bank agreement on maximum rates payable for deposits. The 27 banks whose individual deposits are of the order of Rs. 25 crores and over have agreed to charge a certain set of rates for deposits and savings bank accounts. The 10 banks whose deposits are below Rs. 25 crores each have the discretion of quoting up to an extra quarter per cent more with the proviso that seven of them (viz. the State Banks of Bikaner, Hyderabad, Indore, Jaipur, Mysore, Patiala and Saurashtra) which are subsidiaries of the State Bank of India may do so if they find that their average aggregate monthly deposits have fallen below the level at which their deposits stood on 30th June 1960. These subsidiaries are adopted children of the State Bank and have acquired, in the eyes of the public, a status and importance equal to that of the principal. With the enhancement in their prestige and the discretion to quote the extra ¼ per cent they are in a position to offer severe competition to the rest of the banks and, perhaps, to the State Bank of India itself. Most parents who are old-fashioned enough to *adopt* sons know to their cost that the sons acquire, in course of time, a status superior to that of the parents. What is true of family life may well become true of Indian banking circles also!

Notice

THE CHURULIA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on 29th May, 1961, a Dividend of 3 per cent per annum, subject to deduction of tax, was recommended to be paid for the year ended 31st December, 1960.

By Order of the Board,
F. W. HEILGERS & CO. (P) LIMITED,
Secretaries & Treasurers.

THIRD PLAN TARGETS FOR INDUSTRIES

ACCENT ON ECONOMY IN INVESTMENT

(From Our Special Correspondent)

NEW DELHI, 30*th May*

DELHI LETTER

VERY few of the details of the industrial part of the third Plan have been known and discussed in recent months. The Planning Commission has been showing considerable diffidence in elaborating these particulars, though, as part of perspective planning, the long-term physical targets have been set fairly high as shown below :

Steel ingots (million tons)	17-18
Aluminium (000 tons)	160-180
Electric power (million kw.)	20-22
Coal (million tons)	170-180
Oil refining (million tons)	18-20
Nitrogenous fertilisers (million tons (N)) ..	2·0-2·2
Cement (million tons)	24-26
Machine building (Rs. crores of output) ..	1,600
Railway freight transport long distance—originating traffic (million tons)	400
Foodgrains (million tons)	125
Exports (Rs. crores)	1,300-1,400

The lack of a sufficiently bold approach to the third Plan may be explained by the insufficient resources allocated for the overheads like power and transport which will ultimately decide how much of industrial investment can be fruitful. There have been some serious shortfalls in the second Plan which have proved instructive. Though present estimates of investment in industry show an excess of 30 per cent over the original figures, it is felt that only about 85 per cent of the physical capacity proposed has materialised. The overall investment break-up is given below :

(Rs. in crores)

	Forecast under the second Plan	*Current assessment*
Metallurgical industries (iron and steel, aluminium and ferro-manganese)	502.5	770.0
Engineering industries (heavy and light)	150.0	175.0
Chemical industries (heavy chemicals, fertilisers, drugs and pharmaceuticals, coal carbonisation, dyestuffs, plastics and chemical pulp)	132.0	140.0
Cement, electric porcelain and refractories	93.0	60.0
Petroleum refining	10.0	30.0
Paper, newsprint, security paper ..	54.0	40.0
Sugar	51.0	56.0
Cotton, jute, woollen and silk yarn and cloth	36.3	50.0
Rayon and staple fibre	24.0	34.0
Others	41.5	115.0
Replacement and modernisation ..	150.0	150.0
Total ..	1,244.3	1,620.0

The reasons are various ; in the case of steel and fertilisers, foreign exchange was an important limiting factor ; in respect of heavy machinery, mining machinery and foundry forge projects, much difficulty has been felt in defining the scope of each project ; recruitment of personnel was not easy in the case of schemes for organic intermediates for dyestuffs and in oil refining, negotiations with overseas collaborators have been long drawn out owing to the Government's attempts to get the best terms. The following table indicates the production targets and performance :

	Production targets	*Actual production*
Steel, finished (million tons) ..	4.3	2.2
Nitrogenous fertilisers—in terms of nitrogen (000 tons) ..	290	110
Phosphatic fertilisers—in terms of P_2O_5 (000 tons)	120	55
Textile machinery (Rs. crores) ..	17.0	9.0
Cement machinery (Rs. crores) ..	2.0	0.6
Paper machinery (Rs. crores) ..	4.0	..
Aluminium (000 tons)	25.0	18.5
Newsprint (000 tons)	60.0	25.0
Chemical pulp (tons)	30,000	..
Soda ash (000 tons)	230	145
Caustic soda (000 tons)	135	100
Dyestuffs (million lbs.)	22.0	11.5
Cement (million tons)	13.0	8.0

The Planning Commission now admits that the period of gestation for such heavy industrial projects has proved much longer than expected, and that this points to the need for much advance planning. Increase in costs of projects is yet another factor which suggests caution ; the latest estimates for the three public sector steel projects is Rs. 620 crores (against the original in the second Plan of Rs. 425 crores) and, since there is nothing to show that this underestimation will not be repeated, the planners are now prepared to assume that the physical targets will not all be achieved by the end of the third Plan. Clear indications are given that a sizable spillover is to be expected.

Resources for Public Sector

There are some uncertainties about the resources required for the public sector in industry and minerals of about Rs. 1,808 crores (including foreign exchange of Rs. 860 crores). The actual provision against this is Rs. 1,526 crores (Rs. 1,450 crores by the Centre and Rs. 76 crores by the States ; the balance represents part of the gap between the physical and financial Plans, specially of the States. Between Rs. 200 crores and Rs. 300 crores are expected from internal resources of public undertakings, particularly steel and fertilisers. Presumably the excess of investment over targets in the second Plan period has encouraged hopes of securing additional resources to achieve the higher target of outlay.

The break-up of outlay on industries and minerals as between the two sectors in the third Plan is estimated as follows :

(Rs. in crores)

	Public sector		Private sector		Both sectors	
	Total	Foreign exchange	Total	Foreign exchange	Total	Foreign exchange
New investment—						
Minerals ..	478	200	60	28	538	228
Industry ..	1,330	660	1,125	450	2,455	1,110
	1,808	860	1,185	478	2,993	1,338
Replacement	..	..	150	50	150	50

There has been very little discussion of the details of the resources and investment of the private sector in the third Plan. Whereas the public sector will be more than doubling its investment (from about Rs. 770 crores in the second Plan), the private sector seems to have a more manageable problem of stepping up outlay from about Rs. 850 crores in the second Plan to Rs. 1,335 crores. Even so, there is likely to be a shortfall in resources. The following table shows the resources for the private sector :

(Rs. in crores)

	Original second Plan estimates	*Latest*	*Third Plan*
Loans from institutional agencies	40	80	130
Direct loans, participation by Central and State Governments and other assistance..	20	20	20
New issues	80	150	200
Internal resources (net of repayment liabilities)	380	400	600
Direct foreign credits and participation in capital ..	100	200	300
Total ..	620	850	1,250

Though these estimates show faith in the private sector's capacity to raise larger resources and expand, the Planning Commission does not overlook the changes in the situation since the beginning of the second Plan which make the private sector's position more difficult. There is nothing left in the foreign exchange reserves to draw upon (as in 1956-58) and the problems of power shortage have become more acute. In respect of replacement expenditure, progress may be slow, in view of the pressure on available resources for new investment ; the units which stand most in need of replacement have inadequate reserves and it is not expected that the N.I.D.C. will be able to provide much help, in view of the very moderate allocation for its activities.

One of the proposals for meeting this situation is a periodical review of progress and allotment of foreign exchange and credits every six months in accordance with certain priorities. This is only vaguely stated at present without apparently realising the difficulties that may arise if there are no firm assurances of foreign exchange for projects in the private sector until they are completed. More stringent tests of export promotion and import saving for new projects are likely and this may result in cutting down investment in the production of some consumer goods for the home market.

A practical approach to the definition of the Government's industrial policy has already resulted in several modifications in favour of the private sector, though there is still insistence on defining its role as supplementary and complementary to that of the public sector. Fertiliser production, reserved largely for the public sector, has been thrown open to the private sector which is expected to function in a bigger way in the third Plan. Hitherto, pig iron plants in the private sector were allowed to have capacity of about 15,000 tons ; now plants having a capacity of 100,000 tons will be permitted to be set up. In the production of drugs, dyestuffs, plastics and chemicals, both are engaged side by side, the private sector specialising in processing of bulk drugs and intermediates produced by the other.

Accent on economy in investment is noticeable in the industrial plan as now conceived. For example, importance is attached to multi-shift operation in order to close gaps between capacity and production, of which several estimates have appeared recently. In other cases, expansion of existing units will be preferred to the setting up of new units in order to reduce the capital cost per unit of output, steel being the chief example. Saving of foreign exchange through exports or economy in imports will be yet another consideration which may entitle (or disentitle) the private sector for sanction of certain projects in its field.

These various and sometimes conflicting considerations do not amount to a clear-cut order of priorities. The Draft Outline had indicated a certain order according to availability of foreign exchange resources and that will remain valid, at least for the initial part of the third Plan. Completion of projects started in the second Plan will obviously be the first priority in view of the shortfall in the targets of production indicated earlier. Heavy engineering, machine-building, castings, forgings, alloy tool, iron and steel, ferro-alloys, fertilisers and petroleum industries are listed as next and third comes the production of basic raw materials like aluminium, mineral oils and chemicals. In the last category are included the many essential articles of domestic consumption in which output will have to keep pace with rising demand. This programme for accelerating the pace of industrialisation still lacks definiteness at various points, but, within its broad framework, the private sector will be able to make a useful contribution to the extent that it can organise schemes of collaboration and long-term capital participation from abroad.

LIGHT AND SHADOW IN EXPORT TRADE

(*From Our Own Correspondent*)

LONDON, 26*th May*

LONDON LETTER

AN analysis recently made by the Board of Trade of Britain's share in world exports shows that, last year, Britain was almost the laggard among the main exporting countries of the non-communist world. The principal western European countries, North America and Japan are compared, and, while eleven of these countries increased their exports by 15½ per cent over the previous year, the U.K. increased by less than 7 per cent. Only Canada had a smaller percentage increase.

But the U.K. trade figures for the month of April confirm that this year has marked a definite improvement. If one compares the past three months from February to April with the preceding five months (this is necessary because of the dock strike in September and October of 1960 which caused exports to be delayed into later months), then there is an improvement in the balance of payments of £24 million per month, or £290 million per annum. The improvement for this year over the whole of 1960 is not quite so striking but is appreciable. It is at the rate of £220 million per annum, and April is, indeed, better after seasonal adjustments than the earlier months.

Imports Fall

Actually, the improvement has been brought about more by a fall in imports than by a rise in exports. Imports fell by about 5 per cent; the heaviest falls were in foodstuffs, but there were also substantial falls in industrial materials, semi-manufactures and basic materials. Each month has shown a sharper fall than the month preceding. Only finished manufactures showed an increase—an indication of the way in which this country's import trade is tending to shift.

Another satisfactory feature is that the falls were steepest from North America (a drop of 12 per cent) and less steep from the sterling area (a drop of 6 per cent). It is interesting to note that, from western Europe, particularly the Common Market countries, there was an *increase* in imports of 2 per cent—mainly in finished manufactures.

On the export side, shipments to Europe and the Soviet Union have risen 1½ per cent, but exports to the U.S.A. and the sterling area have both fallen. The drop in exports to the U.S.A. is particularly marked since shipments are now at about two-thirds the level of a year ago. The increase in exports to Canada is only a partial compensation.

But the most ironic aspect of the export figures is that Britain's exports to the Common Market countries should have gone up by 8 per cent (mainly in engineering products), while its exports to the Free Trade Area have *fallen* by 2 per cent. No wonder the Government are taking such a hard look at the benefits that the Free Trade Area confers on them in comparison with the advantages of being inside the Common Market.—*All Rights Reserved.*

ANGLO-SOVIET ATOMIC AGREEMENT

An agreement providing for collaboration on the peaceful uses of atomic energy between the Russian State Committee of the Council of Ministers for the utilisation of atomic energy and the U.K. Atomic Energy Authority was signed in London recently. The agreement states that the representatives of the U.K. Authority and the Russian State Committee will meet from time to time in each country alternatively to agree on the subjects and methods of collaboration to be undertaken. They will consider the possibility of assisting each other so far as lies within their powers, having regard to the laws and export policies of their respective countries, in obtaining (*a*) new scientific instruments and equipment required for forwarding the peaceful uses of atomic energy and (*b*) radioisotopes and apparatus designed for their application in medicine, biological research and industry. The agreement has already come into force and will continue for five years unless three months' notice is given to terminate it.

BRITISH TEXTILE MACHINERY

The textile machinery industry, the U.K. Board of Trade and the Department of Scientific and Industrial Research are to carry out a study of research and development in the field of textile machinery. This is one of a series of such studies of important industries in the U.K. which the Council for Scientific and Industrial Research has asked its Economics Committee to carry out. The purpose of these studies, which are made with the collaboration of the industries concerned, is to help the Council to allocate the resources for research and development which the Government puts at their disposal, so as to achieve the maximum benefit to the national economy. The industry is providing full facilities for this study, through the Textile Machinery and Accessory Manufacturers' Association and visits to manufacturers' works will be made by officers of the Board of Trade and D.S.I.R. It is expected that the study will take about a year and that the conclusions will be published.

A second reduction in United Kingdom import duties on products produced in, and imported from, the countries of the European Free Trade Association, to be introduced on 1st July is announced in an Import Duties Order published by the Treasury in London on 26th May. This order continues the work of freeing trade between the E.F.T.A. countries which is one of the basic aims of the Stockholm convention. The second reduction of import duties was brought forward from 1st January 1962 to 1st July 1961, by a decision of the E.F.T.A. Ministerial Council at a meeting in Geneva in February. It will reduce import duties on intra-E.F.T.A. trade in most industrial products—already lowered on 1st July 1960—mainly by one-eighth, that is, to about 70 per cent of the basic rates.

The International Construction Equipment Exhibition will be held at London from the 15th to 24th inst. More than 170 different companies will be represented at the Exhibition, including 50 from overseas, Belgium 2, France 6, Holland 1, Italy 3, Sweden 2, Switzerland 2, U.S. 2 and W. Germany 32.

THE INDIAN RAYON CORPORATION LIMITED

United Bank of India Building, 2nd Floor, Sir P. M. Road, Bombay-1

RE : NEW RIGHT ISSUE OF 1,05,000 EQUITY SHARES OF RS. 100/- EACH

NOTICE

MEMBERS OF THE COMPANY ARE HEREby informed that the last date for receipt of applications for Equity Right Shares has been extended upto 30th June, 1961.

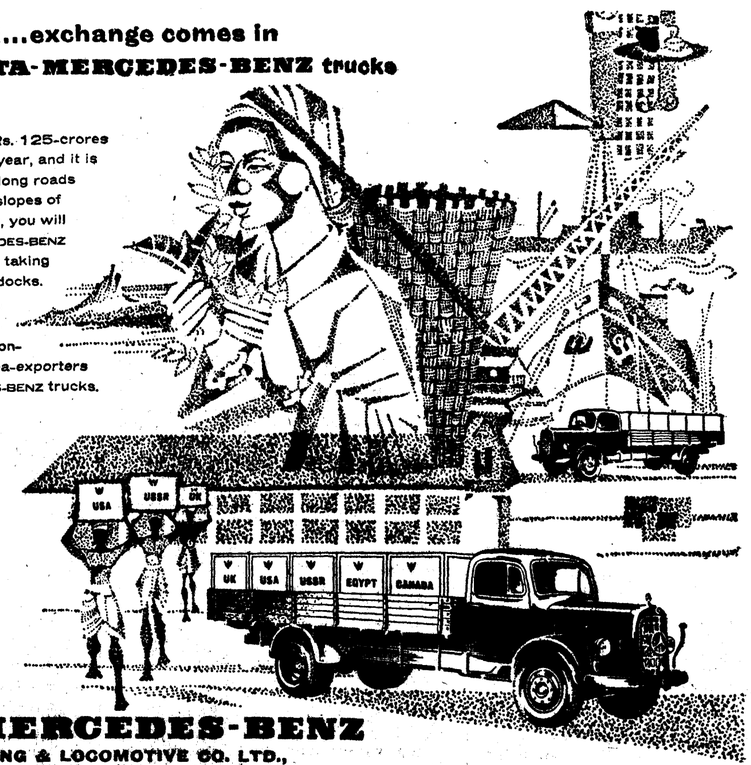
For THE INDIAN RAYON CORPORATION LTD.,
For THE VERAVAL RAYON INDUSTRIES (P) LTD.,
H. J. VAIDYA,
Director,
Managing Agents.

BOMBAY,
Dated : 20th day of May 1961.

Tea goes out...exchange comes in

helped by TATA-MERCEDES-BENZ trucks

TEA earns India over Rs. 125-crores of foreign exchange a year, and it is significant that on the long roads from the steep, green slopes of Assam and the Nilgiris, you will see more TATA-MERCEDES-BENZ trucks than any others taking this vital cargo to the docks. Taking half the world's tea towards half the world's kitchens is a non-stop job...that's why tea-exporters prefer TATA-MERCEDES-BENZ trucks.



The star that hauls a fortune

THOUGHTS ON MONETARY MANAGEMENT

SIGNIFICANCE OF HIGHER INTEREST RATES EXAMINED

THE question of evolving an appropriate monetary policy which could adequately subserve the developmental requirements of India's planned economy has been discussed by several experts in recent years. In their report to the World Bank, the "Three Wise Men" had suggested an examination of "the ways in which monetary action might be made a more effective weapon of economic policy." The Governor of the Reserve Bank of India, Mr. H. V. R. Iengar, also dealt with the role of the Bank in achieving monetary stability in the course of his speech before the Society for International Development at Madras in November last. The latest substantial contribution to the discussion of this question of monetary management has been made in a research paper in the issue of the *Tata Quarterly* of April 1961.

At the outset, the paper explains the basic approach to the problem of monetary management in an economy, where 35 per cent. of the national income is consumed by the producer or exchanged without the aid of money and where about 50 per cent. of the industrial and trading activity is financed by lenders in the unorganised sector. In this context, it is pointed out that the effectiveness of monetary control is even more limited than in foreign countries. But under a planned economy, it is not enough to aim at stability in the short run; it is also necessary to give positive assistance to the process of long-term development.

Stressing the role of monetary policy in promoting development without impairing the objective of stability, the article very succinctly explains the complex tasks of monetary policy in Indian conditions as under:

"This developmental responsibility coming on top of the 'overall' regulatory responsibility adds a new dimension to the central bank's functions. Planning also implies that progress in certain directions should have precedence over progress in other directions and calls for 'purpose-wise' control over investment. It is necessary to ensure that all legitimate productive activity in general gets the funds it needs for development. This may call for restraints in special directions, for example, unproductive or speculative activity, but not *overall* controls of the kind exercised in foreign countries for countering cyclical fluctuations in demand, investment and income. India's central problem being one of mobilising resources for development, money may be made tight but not at the expense of production. What is required, therefore, is something of a 'holding operation' or a policy of 'controlled expansion.' As the targets in the Plan are related to the country's needs rather than resources, the question is how far deficit financing can be allowed without jeopardising monetary stability. Luckily, possibilities of multiple credit creation on a given base of additional currency created by deficit financing are more limited than in foreign countries. Even so, some increase in the general level of prices is inevitable during a process of development. Besides ensuring adequate finance for productive enterprise, care has to be taken that the cost of such finance does not prove burdensome in the long run both for government and for private borrowers. As regards interest rates, therefore, the problem, unlike in foreign countries, is not one of raising or lowering the general level; it is one of operating an integrated structure taking into account diversity of purpose and borrower-class. Apart from this, changes in the Bank Rate are of less significance here than elsewhere. They may affect, to some extent, inventories but not fixed investment."

Monetary Equilibrium

The concept of "monetary equilibrium" is then explained. This concept refers to a state in which, for the community as a whole, money works satisfactorily both as a store of value and as a tool for carrying out transactions. Alternatively, it may be described as a state in which the community's intentions, in "real" terms, in respect of consumption, saving and investment can fructify without money operating as a source of disturbance. Money possesses this power of upsetting everybody's plans because the money rewards of most people are "sticky." If this were not so, if, for example, everybody's money income (and hence all prices) increased exactly and instantaneously in the same proportion as any increase occurring in the aggregate money-stream, there would be no need to have any monetary policy at all, for the actual level of the money stream (that is, general demand) would not make a change in anybody's "real" position.

In taking a view as to how far a given level of monetary demand is operating as a disturbing factor (in either the upward or the downward direction) the authorities have to attempt a judgment on (i) the price-trends, that is, the situation in commodity markets and (ii) the interest rates, that is, the position in regard to the demand for and supply of investible funds. An increase in monetary demand would be "excessive" (that is, one which needs to be curbed) if it alters the price situation in such a way as to bring windfall profits to the entrepreneurial class and an unexpected worsening of the position of people with inflexible money-incomes. In the contrary case of, respectively, windfall losses and unexpected betterment, the monetary demand would be considered deficient. Likewise, if the rate of interest is below the equilibrium rate, that is, if at that rate the demand for capital is in excess of the supply of genuine savings, and if the larger investment calls for a measure of "forced" saving through a rise in prices, the increase in money stream which makes the larger investment possible may be called excessive. The contrary case is also possible. This can be described by saying that banks are not lending out (or creating new money) fast enough; and that the rate of interest is kept above the equilibrium level; a part of the community's saving is running waste through an abnormal increase in the stocks of goods in manufacturers' and dealers' godowns or through an increase in idle capacity and manpower.

Money Income

Of course, the research paper seems to be quite aware that, in a growing economy, aggregate money income and hence generally the stock of money must also expand in the long run if monetary equilibrium is to be preserved. The paper says:

"This does not mean that money income must always be expanded at the *same* rate at which output increases, and the price-level thereby kept stable. If, for instance, output grows because of a steady increase in the stock of national capital and not because of an increase in the number of people employed, a policy of allowing money to increase as much as output would be inappropriate, for the money income of labour is likely, because of its stickiness, to record a smaller proportionate increase. Hence it would be desirable that the gains of growth should accrue to the community partly in the shape of larger total money income and partly in the shape of lower prices.

"To take another case, if the increase in output is due to an improvement in technique or organisation without much change in either the stock of capital or the numbers employed, the best policy, theoretically, would seem to be to allow prices to fall in proportion to the improvement in efficiency without any increase in total money income. If the money income of labour keeps on increasing (as it is likely to) because of increased productivity in the face of a constant total money income, it would inflict windfall losses on businessmen. Practical considerations would, therefore, again indicate a policy which allows the gains for the community to appear partly as increased total monetary demand and partly as reduced prices. On the other hand, if the growth-factors (more capital and more people) lead to increased output only at an increased average real cost (due to calling into use inferior land, materials and operative-skills), money would need to expand more rapidly than output in order that the community may not be thwarted in its attempt to set aside out of current consumption, increased resources for development."

Thus, according to the paper, there are two broad indications of the practical importance of monetary equilibrium to a society which allows its people freedom in the use of money. In the first instance, the rate of interest should be at the equilibrium level, that is, the level which matches the thriftiness of the people with the readiness of entrepreneurs to make net new investment and in the second instance, the price level is not allowed to fluctuate widely, as to generate excessive optimum among entrepreneurs and bring windfall profits over the industrial sector at large or reduce seriously the real worth of the store of value set aside by people in the form of money.

Efforts to control the general level of demand, the paper points out, encounter difficulties of three kinds. They are:

First, money is created and extinguished not by the authorities alone but also by the banks who usually have a margin within which they can operate at their own choice.

Secondly, a person's spending is related not just to the amount of money he has but also to the amount he thinks he can lay hands on by selling assets or by borrowing.

Thirdly, the amount of work the community gets out of its money stock, though it can be influenced, cannot be directly controlled. The authorities may pump more money into the economy but the community may prefer to sterilise it by "hoarding" more. At another time, while the money supply is steady, an improvement in business prospects may cause a sharp unexpected increase in monetary demand.

These difficulties clearly show why a quantitative approach to monetary management is not likely to be fruitful but may prove deceptive. For securing appropriate changes in demand in the desired direction, the monetary authorities have to decide what level of general monetary demand is desirable in a given situation. According to the article, since this will rarely be the same as the existing level, they have, in effect, to exert all the time either expansionist or contractionist pressures in lesser or greater degree. The Radcliffe Committee emphasises the importance of doing this consciously and purposively and of publicising fully the "view" taken and the reasoning on which it is based. For securing changes of demand in the desired direction, the authorities have to make as large an impact as possible on both (*a*) the availability of money and (*b*) the general state of confidence and expectations. This indicates uninhibited use of all the weapons in the armoury. All lenders (i.e. including those other than banks) can be brought within the ambit of control, and public's attitudes in respect of putting money to use can be influenced only if the authorities, besides taking adequate action at the short end (Bank Rate and operations in bills and short-dated paper), also seek purposive changes in the yield on long-dated securities.

One implication of this, it is said, is that, though the authorities may be specifically entrusted with the responsibility of seeing that sufficient funds are spared for financing outlay in the public sector, the method of financing should conform to the objectives of monetary policy. In particular, the structure of public debt—i.e. the interest rate, maturity and ownership pattern—should be looked upon as a monetary, rather than as a budgetary, problem. Finally, the public's behaviour in the monetary sphere can be influenced in the required direction to the extent (*a*) the authorities' decisions can be interpreted intelligently by the public in terms of the requirements of the situation and (*b*) a sense of assurance spreads that the objectives will be pursued firmly and with vigour. This is important, for how much the community wishes to go ahead or hold back in respect of its expenditure is an important independent factor in the course of general demand.

Policy Measures for India

Having analysed the theoretical implications of monetary policy appropriate to the conditions obtaining in India, the research paper maintains that the very backwardness of the economy makes appropriate for India the special slant to monetary management given by the Radcliffe Committee. Indigenous bankers, using their own resources, are similar to financial institutions other than banks in Britain in that the result is a "liquidity position" which calls for special attack. The lesson to be drawn is that, even if a change in the quantity of money held in the "organised" market produces its effects slowly and imperfectly in the "unorganised" sector, a firm change in the interest-rate, leading to a change in the value of gilt-edged, land and gold, is likely to have prompt and substantial effect in the otherwise inaccessible unorganised sector.

In regard to interest rate policy, the research paper emphasises the need for adopting a purposive monetary policy which would *prima facie* imply raising interest rates closer to equilibrium levels. Discussion of this matter in India tends to confine itself to the Bank Rate. But of greater importance would be an attempt to force the long rate up by reducing significantly (either at one step or gradually) the prices at which the Reserve Bank is prepared to sell Government securities. The paper is of the view that even the Bank Rate has not been used as an effective deflationary weapon. Money did not become tighter following the raising of the rate from 3 to 3½ per cent in 1951, and the inception of the Bill Market Scheme in February 1952 actually made borrowing by banks easier. The 1957 Bank Rate change came at a time when the inflationary forces in the economy had greatly enlarged the demand for capital with a corresponding increase in the profitability of bank operations. Consequently, the paper concludes, the rate was probably still too low to be effective as a force constricting the growth of bank credit.

The paper contends that the Reserve Bank's open market operations, which today aim at maintaining orderly conditions in the gilt-edged market, are mainly in the nature of accommodating the banks in their seasonal lending operations. Elaborating the need for using open

PROTECTION OF BANK DEPOSITORS—II

INSURANCE SCHEME BESET WITH SERIOUS DIFFICULTIES

By L. R. Suneja

THE attempt to develop a nationwide system of insurance of bank deposits was undertaken in the United States in connection with the Banking Act of 1933. This Act provided for two insurance plans—a temporary plan effective 1st January 1934, to be succeeded by a permanent plan effective 1st July 1934. The temporary plan provided for the insurance of deposits of all member-banks licensed to operate by the Secretary of the Treasury, and the deposits of non-member State banks whose solvency has been certified to the Federal Deposit Insurance Corporation by State Supervisory Authorities. By various amendments to the Act, the American Congress extended the temporary plan and correspondingly postponed the effective date of the permanent plan. Prior to the expiration of the extended period, however, the Congress enacted the Banking Act of 1935 which took effect from 23rd August 1935. This Act materially changed the plan provided for in the Banking Act of 1933 and placed deposit insurance on a permanent basis, limiting the insurance protection for each depositor of an insured bank to a maximum of $5,000 of his deposits. In 1950, the Congress increased insurance protection to $10,000 for each depositor and made further changes in the insurance plan all of which were embodied in a separate statute entitled Federal Deposit Insurance Act.

The Federal Deposit Insurance Corporation obtained its original capital from two sources:

(i) The United States Treasury subscribed to $150,000,000 in capital stock.

(ii) Each Federal Reserve Bank was required to subscribe to shares of stock equal to half of its surplus account as of 1st January 1933.

This latter amount was more than $139,000,000. Therefore, the Corporation's original fund represented by capital stock aggregate more than $289,000,000.

Corporation's Powers

The Federal Deposit Insurance Corporation is under the management of a Board of Directors consisting of the Comptroller of the Currency and two others appointed by the President. The Corporation is empowered to appoint examiners with power to examine all insured non-member State banks, any National Bank with the written consent of the Comptroller and any State-member bank with the written consent of the Board of Governors of the Federal Reserve System. The law directs the Comptroller of the Currency to appoint the Corporation as receiver of an insured National Bank which is closed either because of its inability to meet the demands of its depositors or for the purpose of liquidation without having made adequate provision for the payment of its depositors. The Corporation also must act as receiver of an insured State bank which is closed under like circumstances when the appointment is tendered by State Supervisory Authorities under the State law.

As soon as possible, after failure of an insured bank, the Corporation shall make available to each depositor the amount of the insured deposits, either by transferring to another insured bank under the same community, by depositing it in a new National Bank with a temporary organisation, if public interest so required, or by direct payment to depositors. If a new bank is organised by the Corporation, it may accept deposits, to be held in cash or the equivalent or to be invested in Government securities pending sale of stocks and completion of organisation or the sale of its assets and transfer of its liabilities to another insured bank.

The Corporation is subrogated to the right of the insured depositors and the closed bank to the extent that it is entitled to receive the same dividends from the proceeds of the assets and recoveries on account of stockholders' liabilities as would have been payable to the depositor on a claim for the insured deposit. The depositor retains its claim for any uninsured portion of its deposits. The Corporation, therefore, is in the position only of a general rather than a preferred creditor.

Any non-member insured bank may terminate its insured status by giving 90 days' notice. Member-banks are required to be insured whenever any insured bank is guilty of continued unsound practices or violation of law, the Federal Deposit Insurance Corporation shall notify the Supervisory Authority concerned regarding such practices or violations. If conditions are not improved within 120 days, the Corporation may give the bank at least 30 days' notice of its intention to terminate the insured status of the bank and set a time for hearing of the case. If the Corporation find the charges substantiated, it may order the termination of the Bank's insured status, give public notice of the same, and require the bank to give notice to all depositors to that effect. After the termination of insured status, existing deposits shall continue to be insured for a period of two years, and the bank is liable for the regular insurance assessment. New deposits or additions to old deposits, however, are not insured. Since National Banks and Federal Reserve members cannot remain uninsured, National Banks, under the circumstances, are put into the hands of a receiver and State member-banks must give up membership in the Federal Reserve System.

Three Major Functions

The activities of the Federal Deposit Insurance Corporation consist chiefly of three major functions:

The development and maintenance of sound banking system.

The payment of insured deposits in suspended insured banks.

The liquidation of insured banks placed in receivership.

There has been a great deal of controversy concerning the merits of deposit insurance. Much can be said on either side of the subject. There appears to be little doubt that the adoption of deposit insurance by the United States, shortly after the banking crisis, which occurred in 1933, did much to allay the fears of depositors and to restore confidence in the banks. Since its establishment, the Federal Deposit Insurance Corporation has through its powers of examination and supervision done much to encourage sound banking practice, to promote a more conservative loan and investment policy on the part of insured banks and to improve the capital structure and the general soundness of these institutions. The Corporation has done pioneering work in the field of service, training and education of bank examination. The beneficial effects of such a programme are being disseminated throughout the entire banking profession. The work of the Corporation has been preventive as well as remedial by its authority to force weak banks to merge with stronger banks. The Corporation has prevented bank failures, conserved saving and prevented losses both to depositors and the community. It is claimed that vast funds, which are hoarded by people suspicious of banks, have been drawn out of the hoards and deposited in banks.

Banks failure brings about a destruction of purchasing power and affects business conditions adversely in the area in which they occur. Through the Federal Deposit Insurance Corporation, the community has been assured that, in the event of the failure of one or more of its banks, it will not be deprived of banking facilities or of funds needed for productive. This has tended to promote more stable economic conditions in the community. The fact that the deposits are protected by Insurance Acts has a restraint on the depositors to withdraw funds from banks in times of stress. When banks are insolvent, deposits insurance enables the assets of these banks to be liquidated in an orderly manner and at the same time allows depositors to have full and immediate use of their savings.

Since its founding in 1934, the F.D.I.C. has paid a total of $343,000,000 to 1,4000,000 depositors in 439 failing banks. This has resulted in a loss to depositors of only 0.4 per cent. Of these total disbursements, the F.D.I.C. anticipates in its report for the year 1959 that it will recover $29,000,000 for the Corporation during the past quarter century.

Arguments Against Deposit Insurance

Few of the more important of the many arguments that have been presented against deposit insurance may be considered here. Probably the most telling argument brought against deposit guarantee is that "it puts all bankers on the same level making the deposits in new, inexperienced, reckless, or dishonest banks as safe as deposits in old, proved, conservative for developing goodwill and reputation for sound banking and for accumulation of substantial surpluses making liberality in extension of loans and payment of interest on deposits the chief inducements to depositors; taxing goods, competent, experienced, trained land conservative bankers in order to pay the losses wrought by the incompetent, inexperienced, untrained, and reckless bankers; giving the unscrupulous and reckless banker the competitive advantage and thereby lowering the personnel of the banking world; stimulating the establishment of new, small speculative banks since they are as safe as the old, well-established institutions; and making the public indifferent whether reckless and crooked bankers are punished or not.

Another criticism of deposit insurance is that it violates the very first principle of insurance that the premium should vary with the risk. The term "insurance," as now applied to bank deposits, is a misnomer. Strong banks insist that equal assessment irrespective of the soundness of an institution discriminate in favour of the weak and against careful management. There is much to be said for this argument. American experience shows that, while large banks have failed, the great loss to the public has come from the failure of small banks. Small banks have represented the greatest hazard. All other insurance is based on the principle that the amount of the premium should be governed by the hazard. Life insurance premiums vary with the age or health of the individual; fire insurance premium vary according to the character, condition and location of building, etc. Under the guarantee fund, all banks, good or bad, are taxed on the same basis. If insurance companies in general would apply this method to all individuals and to all buildings it would mean that the insurance companies would soon be forced into insolvency. In other words, insurance principles dictate that the element of risk must be guarded against, and this is done by differential rates, depending upon the circumstances surrounding each particular case. The insurance of bank deposits has introduced a new principle in insurance, that the premium should be based on the ability of the insured to pay rather than on the risk involved.

The insurance of bank deposits is not a substitute for sound assets are the best protection that banks can offer depositors, assets that are of such a nature that they could be equally turned into cash with little or no loss and made available to depositors on demand. Sound banking requires bankers with good training and adequate experience. Not even by the widest stretch of imagination can it be stated that a guarantee fund induces greater integrity or ability so far as the banking community is concerned and there is every reason to believe, at least judging from the experience of those States in which the law was tried that the opposite will result and that unsound banking practices will grow under such a law.

One more inequity appears to exist in the practice of assessing banks on the basis of their total deposits rather than on their insured deposits. A higher percentage of the deposits of small banks is likely to be $10,000 maximum and, therefore, insurable, than of the deposits of large institutions. The larger banks feel that the depositors in small banks are being subsidised by the larger institutions and that they are assuming disproportionate share of the cost of protecting bank deposits.

One Fundamental Objection

One fundamental objection to the system of deposit insurance is that it does not strike at causes but at effects. It perpetuates the traditional banking structure. It gives the small banks a new lease of life and puts off the day of centralised banking in a country. The guarantee of deposits is not necessary. England has not found it necessary to guarantee deposits in order to make them safe.

The Economic Policy Commission of the American Bankers Association made a careful study of the earlier experiments with deposit guarantee in the Western States of the United States. Their following observations make an interesting study:

"These lessons of experience appear to demonstrate conclusively that in practice the guarantee of deposits plan generally tended to induce an unsound expansion in the number of banks and the volume of bank deposits under its supposed protection. This was clearly connected with the indiscriminate popular confidence created towards the bank under the guarantee. Unneeded, undersized and unsound banks, as well as unqualified bank operators, were enabled to command public

MODERNISATION OF TEXTILE INDUSTRY

JAPAN'S EXAMPLE WORTHY OF EMULATION

THE need for modernisation of the Indian cotton textile industry is so obvious and urgent that most chairmen of the leading cotton *mills in the country have stressed its* urgency in their speeches at the annual meetings of their respective companies held in the past six months. The latest comment comes from Mr. N. K. Jalan, a Director of the Elphinstone Spinning and Weaving Mills Company Ltd. In his speech delivered at the Annual Meeting of the Company held this week in Bombay, Mr. Jalan pointed out that the steady decline in the export of piecegoods during the first quarter of this year was due to higher costs of Indian textile goods and intense competition they faced in foreign markets. It was necessary to restore the competitive capacity of the industry through encouragement to modernise and rehabilitate machinery so that the mills may produce quality goods and be able to sell at competitive prices in the export markets. Although the need for modernisation has been generally recognised, what little modernisation that is attempted by the industry is much too modest. Even the new machinery being installed in the place of the old ones, as Mr. Jalan pointed out, is out-of-date. For instance, while in many other countries 10" and 12" lift narrow width spinning frames had been introduced without resulting in any loss of production, in India the industry had to content itself with 8" lift spinning frames. He suggested that the Government should allow the industry to import the latest machinery available in world markets or ask the Indian textile machinery manufacturers to produce machinery of comparable standards in India. In any case, he wanted the Government to follow a liberal policy in respect of modernisation of the cotton textile industry.

Rationalisation

That such a policy will yield rich dividend in the long run is abundantly proved by the experience of some of the foreign countries which have a highly developed cotton textile industry. An idea of the streamlining and reorganisation brought about in the Japanese cotton industry can be had from a survey of the trends in Japanese cotton mill industry contained in the 1961 edition of *Textile Japan*, just published. Modernisation of production equipment and facilities in Japan, according to the survey, dates back to 1956 when the Temporary Law on the Machinery and Equipment of the Textile Industry was enforced. Under the law, any increase in the cotton spinning capacity was prohibited. This law applied not only to cotton spinning but also to all other spinning branches of the textile industry. As a result, the efforts of the industry had been concentrated not on increasing its spinning capacity but on rationalising and steamlining the production process. These included shortening of production processes, installation of high-speed automated machinery, increased use of cleaning machines, and production in large packages. The shortening of production processes involved the adoption of one-process opening and picking, two-passage drawing and one-process roving. As a result, one-process pickers, which had been installed at 26.4 per cent of all cotton spinning mills at the end of 1956, were installed at 49.5 per cent at the end of 1958 and at 55 per cent of all cotton spinning mills in Japan at the end of 1959.

Further, spinning machines with a lift of seven inches or more comprised 60.7 per cent, 73.0 per cent and 75.0 per cent, of all the spinning machines installed at the end of 1956, 1958 and 1959, respectively. Installation of high-speed, automatised machines is the key point in the effort for modernisation of production in every production process. For instance, high speed combers, with more than 130 nips per minute, accounted for 28.3 per cent, 39.3 per cent and 46.7 per cent of all the combers installed at the end of the above-mentioned years, respectively. Apart from the move for the installation of highly efficient machinery, the industry as a whole is also making special efforts to increase the productivity of labour and improve the quality of products by popularising cleaning machines and by paying special attention to the working conditions of textile workers. As a result of these efforts, the industry is becoming more and more efficient. But more important is the fact that the quality of products has improved, production of high quality goods is on the increase as a result of the modernisation of production, and the industry is now producing a large variety of products so that it can meet all sorts of demands from customers.

The average number of counts of pure cotton yarn produced in Japan has remained unchanged at about the same level since 1956, but the number is still higher than the number of counts in many other countries of the world. The proportion of combed yarn in the total production of pure cotton yarn rose from 9.7 per cent in 1956 to 10.1 per cent in 1957 and to 11.5 per cent in 1959. The proportion of shirting and sheeting in the total production of cotton fabrics fell from 33.1 to 25.5 per cent between 1956 and 1959 and that of sheeting from 6.0 to 5.5 per cent while the proportion of poplin rose markedly from 16.1 to 21.1 per cent during the same period.

Processed Fabrics

The development of dyeing and finishing techniques has resulted in a marked increase in the production of specially processed or treated cotton fabrics. Consequently the percentage of bleached, dyed or printed fabrics in total production rose from 76 in 1956 to 85.1 in 1959. Furthermore, there has been a marked increase in the amount of specially processed cotton fabrics such as resin-finished, anti-shrink, waterproof and mercerised cotton fabrics. The turnout of resin-finished cotton fabrics rose 4.7 fold in four years from 1956 to 1959.

The advances made by the industry in the techniques of manufacture have been reflected in the exports of cloth from Japan. Japanese textiles, it is common knowledge, are exported to almost all countries of the world. That country exported 1,056 million square metres of cotton fabrics in 1959 to 142 countries. Shipments to Asia, Europe, North and South America, Africa and Oceania accounted for 49.9 per cent, 11.2 per cent, 16.5 per cent, 11.2 per cent and 11.2 per cent respectively. As compared with the figures for 1954, the percentage of exports to Asia in the total declined from 65.4 to about 50 per cent but there was a marked advance in the exports to North and South America and to Oceania. The decline in exports to Asia may be attributed to the development of cotton manufacturing industries in some Asian countries and the inroads made by Communist China in these areas. On the other hand the increase in exports to countries with comparatively high income levels is claimed to be a result of a wide recognition of the quality of Japanese goods and increased demand in such countries. It is true that high quality cotton fabrics constitute an increasing proportion of the total export of cloth from Japan while the proportion of inferior qualities has been declining. Thus, export of shirtings is declining while that of poplins is increasing. In 1959, export of poplins accounted for 31.9 per cent of the total cotton goods export while that of poplins formed only 29.4 per cent. Further, the proportion of the export of unbleached cotton cloth in the total is falling while that of processed cloth is increasing. In 1959, the former accounted for only 19.5 per cent of the total. Export of made-up goods is steadily going. These facts, it is claimed, prove the superiority of Japanese manufacturing and processing techniques. That this is probably not an exaggerated claim could be inferred from the excellent quality of cloth samples attached to the publication *Textile Japan*. These samples reflect the effects of modernisation of the textile industry in Japan.

WORLD COTTON PROBLEMS

The International Cotton Advisory Committee, I.C.A.C., Washington, at the end of its Tokyo session called on the U.S. to abolish its dual price system for raw cotton to help solve a major textile industry problem. In a resolution unanimously adopted, the I.C.A.C. pointed out that the "widening difference between the domestic and export price of U.S. cotton for the next season is moving away from the desirable objective of a one price system ... and could have repercussions on the distribution of trade in cotton textiles." The I.C.A.C., while recognising the need for some measure of governmental assistance for growing industries to maintain the farmers' living standards, resolved to recommend to the Governments concerned:

(1) To avoid excessive fluctuations in the world price by holding sufficient carryover stocks to provide for contingencies;

(2) to keep the cotton price at a level "both reasonable and competitive with other fibres" and to avoid market disruption;

(3) to impose export taxes only if necessary and at a level "neither excessive nor subject to frequent changes";

(4) to announce changes in cotton policy "as far in advance as possible" to prevent world market confusion.

WEAVERS' BODY URGES IMPORT CURBS

RESEARCH MOVE TO ENCOURAGE THE SALES APPEAL OF TEXTILES

From Our Special Correspondent

MANCHESTER, 19*th May*

MANCHESTER LETTER

AS Hong Kong Government officials took part in trade talks in London, the biggest of the Lancashire cotton unions, the Amalgamated Weavers' Association, joined in the swelling chorus of concern over cotton piecegoods imports from Hong Kong and elsewhere. The Association, in its annual report, said that no unbiased observers could claim that the Lancashire cotton industry wasn't threatened with "grave injury" from the level of imports. "Probable extinction would be nearer the mark" it said. The unions urged the Government to review the whole position, not only Commonwealth imports but also those from non-Commonwealth countries which might prove to be just as dangerous. They should also draft anti-dumping legislation that had some meaning.

The report points out that, since the early part of the year, total imports from Commonwealth and non-Commonwealth countries had been running at the rate of 1,000 million yards a year, or about 70 per cent of home production. "There is little doubt that, if left alone, the figures will expand considerably during the rest of 1961. If this assumption should prove to be true, more Lancashire mills may close and others may follow as imports of cotton goods increase." Not only were India, Pakistan and Hong Kong wanting substantially to increase their exports to the U.K. but other Commonwealth countries who saw an assured duty-free, quota-free market in the U.K. would want to expand their exports. And those who were not at present producing cotton textiles would be tempted to do so.

There were reports, said the Association, that Malta might "come into the act," and it appeared that Malaya intended substantially to increase its textile production. Eire, already with American capital producing textiles for duty-free, quota-free entry into the U.K., might well extend this activity by importing Commonwealth cloth from Asia for re-export to the U.K. The report said that Spain also had spectacularly increased her textile shipments to Britain, and so had Portugal and many other countries, although not to the extent of Spain.

Vacated Cotton Mills

Industrial expansion in the Lancashire area last year in terms of additional floor-space reached record-breaking heights that are unlikely to be reached again. This view is expressed in the annual report of the General Council of the Lancashire and Merseyside Industrial Development Association. Development certificates were issued for 420 new factory building projects aggregating 19 million square feet—more than 15 per cent of the total approved since the war—and in addition new industries occupied more than 12 million square feet of cotton mill floor space vacated as a result of the textile streamlining programme.

In the past ten years, more than 350 former cotton mills have been taken over by new industries to provide jobs for 120,000 workers—a total greater than the employment provided by the mills in their former role, the report points out. Mills had been taken over by other industries for many years but never in such numbers in so short a period. Describing the past year as a "particularly successful" one for industrial development in the region, the report says that recent estimates show a likely increase of 30 per cent in capital expenditure by manufacturing industries in 1961, and this should augur well for futher expansion in the region. "It can be said that the future is a bright one," the report comments.

Diversification

Discussing the effect of diversification on the region's industrial structure, it says that this has been considerable and the process should continue for some time yet. "It would be going too far," it adds, "to state that the region's diversity yet provides sufficient safeguards to avoid high unemployment should a recession occur in one of the basic industries, but the position is so improved that Lancashire and Merseyside can look forward to the future more confident of its industrial ability to face the testing times which are part of an economy such as ours."

Long-term prospects of Bernard Wardle & Co., Ltd., the Derbyshire textile firm, are very good, Mr. Edgar G. Clegg, the Chairman, told the annual meeting. The recession in the motor car and furniture industries had affected the Company very badly for a few months, he said, and the whole of this recession had fallen in the current year. This had proved to be a most difficult period and in spite of tremendous efforts made the road back to full production had proved very tough indeed.

Although the Company was now extremely busy, Mr. Clegg said that he did not feel it would be possible in the current year to make up for the reduction in profits, which inevitably took place, owing to the fall in production due to no fault of their own. It was hoped that the steps taken and the new styles introduced would enable the Company to raise production to a very high level and the results should still be very satisfactory. There was a feeling in the motor industry that the future might see seasonal influences affecting the level of demand, but taking the overall trading position the future could be viewed with confidence and he was confident that the dividends forecast would be paid.

The new joint Research Association for the cotton, silk and man-made fibres industries is to concentrate on fostering labour-saving devices and improved textile finishing processes to encourage sales appeal. This was emphasised by Dr. W. Hill, Director of the Research Association, at a Press conference in Manchester at which the aims and objects of the merger were outlined.

The amalgamation between the British Cotton Industry Research Association and the British Rayon Research Association has been carried out three months earlier than the original timing proposed by the working party which arranged the fusion. New buildings costing £300,000, containing equipment valued at £100,000, will shortly be erected in addition to those already standing at the Shirley Institute, Didsbury, Manchester, where cotton research has been carried on for the past 40 years.

Call for Scientific Workers

Although more than 100 scientists were made redundant as a result of the merger all found new jobs according to Dr. Hill. "The call for scientific workers in such," he said, "that none of them had much difficulty in finding suitable employment. About 70 per cent of those which were declared redundant were taken on by industrial firms and the remaining 30 per cent went into technical colleges and similar organisations."

Outlining the prospects for the textile trade, Sir Cuthbert Clegg, Chairman of the Research Association, said the population of the world was increasing and the amount spent on clothing was increasing especially in the bigger underdeveloped countries. The total market was bigger, but other countries started by industrialising themselves in the textile field, causing more competition. It must be the aim of the British texile industry to produce better designs and so retain as big a share of the available market as possible.—*All Rights Reserved.*

"INDIAN SILK JOURNAL"

The April 1961 quarterly of the *Indian Silk Journal*, published by the Central Silk Board, Bombay (Editor: Mr. Mahesh Nanavaty), makes interesting reading. It contains a number of articles on the different aspects of the sericulture industry abroad and in India. Special mention may be made of three articles. They are: "Twelve Years of International Co-operation" by Mr. M. Hugues Morel-Journel, President of the International Silk Association; "Problems of Development in Indian Sericulture" by Mr. Murarji J. Vaidya, and "A Practical Approach to Indian Sericulture" by Mr. A. T. Janakiraman. A summary of the recommendations made by the Working Group on Sericulture has also been given. There are, besides, brief notes on the Third Plan for sericulture, raising bivoltine sped, silk fabrics exports and prices.

The cotton textile mills' production in April 1961 is provisionally placed at 68 million kgs. of cotton yarn and 395 million metres of cotton cloth. At the end of April 1961, the composite mills of the cotton textile industry held an estimated stock of 107,000 metric bales as unsold cloth and 121,000 metric bales as sold but not lifted.

The Government of India is considering the possibility of introducing the advanced "Tex" system for measuring yarn in place of the existing counts system. The Tex system envisages the adoption of "weight per unit length" as the mode of calculation of yarn.

TASK BEFORE PLANTATION WAGE BOARDS—II

CAN INDUSTRY AFFORD A COST INCREASE NOW?

By A Special Correspondent

LABOUR wages in plantations have all along been fixed with close relationship to wage rates prevailing in the plains whence plantation workers are drawn. This was true only till the early fifties since when earnings of estate workers have been raised well above agricultural labour incomes and round-the-year employment has been enforced. The reason for this was the introduction of minimum wages in several industries except agriculture. But this did not alter the character of plantation employment in any significant manner.

About 90 per cent of labourers employed on a tea estate work in the fields and perform tasks common to any agricultural holding. The work on a tea estate can be divided broadly into three kinds. One is concerned with field work of various kinds like weeding, forking, spraying, manuring, pruning and so on. Another deals with the gathering of the crop. The third part consists of processing, manufacturing, grading and packing the crop so as to make it fit for the market. Numerically, the largest section of the labour force on a tea estate is devoted to the harvesting of the crop and, in this particular work, women are preferred to men. According to planting opinion, women are steadier at work and, not rarely, earn more. In the factory, where less than 10 per cent of the labour on roll is engaged, the work tempo is influenced by the machines but not dominated by them. It is in field work that very little progress has been made in setting performance standards. The wages are time-rated and there exists no incentive for larger output.

With the abolition of contract labour and the *kangany* system, there is no check on the quality of work beyond what supervisors can enforce under conditions of union activity, ranging from passivity to open defiance of supervisory authority. A reform in this area is long overdue, so that wages are linked to output or quality and volume of performance, and the Wage Board would do well to turn its attention to this aspect. Planters generally complain that the men are not doing a task which a normally healthy person can complete in four hours but are demanding an even higher wage rate. Here, the workers may have a genuine complaint that it makes no difference to them whether they do good work for four hours or poor work for eight hours, because they would get the same wage. Even if the Wage Board decrees a fourfold increase in wages, it will make no difference as far as workers' output is concerned, unless a fair and workable system of incentives is introduced.

Family Workers

Plantation workers, unlike workers in urban industrial centres, have always been recruited and employed in family groups and it was not rare to find in the old days all the related families from a particular village seeking work together on the same estate. The managements favoured this trend, because they, the members of such a group, usually accepted the guidance and authority of their own elders. The location of the estates away on the hills determined the domiciliary pattern which is so distinct a feature of plantation life. The men did the field work, the women and, in the old days, the older children did the less strenuous work like plucking the tea leaves. The logical working unit was the family, though, in recent years, the younger children are dropping out of the estate rolls and are being sent to schools. This system of family workers explains why many estates had a system of creches long before it was statutorily laid down as a necessary item of welfare measure for plantations. Although the existing wage rates in plantations are the result of bilateral negotiations, in the fixing of wage earners to consumption units in 1951, the principle of employment in family units was accepted for plantations. It was then fixed at 2.25 earners for three consumption units. This rate may need modification, but the abolition of the family unit as a strong feature of employment pattern in the peculiar conditions of plantations would violently upset its economy.

Many planters are gravely concerned over the prospects of a wage increase in plantations. They foresee a cost increase which will further weaken tea's competitive position in the world market. The Wage Board would have available to it sufficiently detailed information on this question before coming to a decision. There is a pronounced paucity of statistical data for comparison with other industries. The tea industry is not yet covered by the Census of Manufactures conducted by the Central Statistical Organisation. Yet a few comparisons are permitted by selecting a group of tea companies whose published figures are available. This comparison is not a substitute for the very careful examination of a wider selection of company data, but it does show in what manner planting companies differ from other corporate industrial enterprises.

The average money earning of a plantation worker does not reveal his true income, a fact about which planters are never tired of explaining and to which the public scarcely listen. Since the workers live as a community on the estates, they enjoy certain concessions and benefits not common to any other industrial labour. Some of these concessions have found statutory sanction and others the sanction of custom and tradition. The right to rear cattle on estate land, the right to raise vegetable gardens near their houses and the right to some firewood are concessions with a money value, though no attempt has been made to fix it. But other amenities such as housing, medical aid, educational facilities, playgrounds and equipment, leave with wages and wayfare expenses, sickness benefit, maternity benefit, creches and festival holidays with wages are part of the labour cost not calculated into money wages. Yet, they form approximately 13 per cent of the ex-factory cost of tea. The wage bill of a tea estate, inclusive of bonus, provident fund contributions and gratuity payments, amounts to 45 to 48 per cent of the total cost.

Cost Elements

Any comparison of the tea industry's cost elements with those of manufacturing industries might suffer from certain errors especially because manufacturing industries are buyers of their raw materials which account for a sizable portion of their cost. The tea industry does not have to purchase its raw material, namely, the tea leaves, because they are grown by the estate which is a composite enterprise. Certain advantages are present in this arrangement to the producer, but it should be remembered that the product-value does not carry within it an element of profit on the raw material as raw material costs do for the manufacturing industries. To take the latest year for which the Census of Manufactures has been published, namely, 1958. The percentage of labour cost in the gross output value was 15.6. For a group of tea estates in South India the comparable figure was 61.2 per cent. The cost of welfare and amenities in the manufacturing industries covered by the Census was 6 per cent, whereas it was 13.6 per cent in the tea industry. The output value per person employed, covered by the Census, was Rs. 9,437 for the year 1958. Taking the best yielding estate, the ex-factory value of output per worker was no more than Rs. 1,023. The average earning per person employed on this estate was 53 per cent of the per head output value, whereas for the 28 industries covered by the Census of Manufactures it was only 15.6 per cent in 1958. What is even more significant is that the ratio of labour earning out of the ex-factory value of the output per worker has remained practically the same over a ten-year period. For the tea industry, there was a steep climb from 39 per cent in 1949.

It is of vital economic consequence to the industry to realise that, while the rate of average labour earning is only a little higher than half the earnings of labour in manufacturing industries, tea labour absorbs more than half the output value of the tea produced. A 10 nP wage increase per day can add approximately 4 per cent to the labour cost in the cost structure of tea. Can the industry afford it? By what means can labour costs be reduced while wages are raised?

Auto-financing

Those who are carefully watching the trends in plantation economics are aware of the fact that planting has practically ceased to be a seeker of new capital consent and it has to resort to an increasing measure of auto-financing. There has been no fresh planting venture during the past fifteen years, though several properties have changed hands. The plantation industry is in the unfortunate position of having its high years remembered and its low years forgotten. The Reserve Bank study shows that, during the 1951-55 period, the dividends declared by tea companies were the highest of 750 companies from some 16 industries covered. The following figures illustrate the rapid changes in the fortunes of investors in tea and other plantation crops as well as the relative instability of returns on tea investment:

	750 companies				1,001 companies			
	1951	1952	1953	1954	1955	1956	1957	1958
Tea								
Dividend as % of paid-up capital ..	12.0	6.8	16.7	34.1	16.6	16.1	10.0	10.4
Dividend as % of net worth ..	6.6	4.2	8.8	15.5	7.8	7.7	4.9	5.0
Other Plantations								
Dividend as % of paid-up capital ..	15.1	12.7	15.9	17.3	18.8	20.3	15.3	14.8
Dividend as % of net worth ..	8.5	7.7	8.6	8.9	10.2	10.8	8.5	8.5

Attention is drawn to the marked variability in the return on plantation investments in the *Trends in Company Finances* published by the Department of Company Law Administration. The following figures appear in this publication on profitability of industries

	Tea	*Other plantations*
Gross profit as percentage of sales—		
1951-55	26.8	39.8
1956	23.7	4.2
1957	12.0	2.9
Gross profit as percentage of capital employed—		
1951-55	16.9	15.9
1956	14.7	18.3
1957	7.4	13.3
Profits after tax as percentage of net worth—		
1951-55	14.3	14.0
1956	11.4	13.8
1957	3.9	9.1

Tea, according to this publication, is the least stable, next only to vegetable oils, among the industries covered by the study.

In Malaya for rubber, and in Ceylon for coconut, rubber and tea, wages have been fixed with a certain linkage with price and prosperity. This allows the wage to move up at stated increases in the price of commodities and to move down in the same manner, with a fall-back rate below which wages cannot go without fresh negotiations and agreements. This system has not been tried and would possibly not work here. That makes the wage cost a rigid factor in the cost structure for a commodity which is at the mercy of a fickle and challenging world market.

For the fixation of wages and the provision of labour welfare measure, as for taxation, plantation crops are treated on a par with other manufacturing industries. But, as an industry using land as its main productive resources, it is barely saved from disintegration by the Land Bills. Although the demand on skills, experience and exertion placed on a plantation worker does not exceed those placed on agricultural labour in the plains, a comparison in the terms and conditions of workers between plantations and agriculture would be interesting. But this need not be attempted, for an organised enterprise must offer its labour a standard of wages and welfare well above the lowest prevalent in the country. Nevertheless, care has to be taken that a wholly artificial wage rate is not introduced in isolation from economic considerations applicable to the particular industry. As the paper published by the Labour Ministry on Wage Policy says, while an increased wage rate and higher standard of living for the wage earner are the basic objectives of a progressive wage policy within the socialistic pattern "... an economic considerations warrant in the short run can only lead to disillusionment."

There are those who believe that planting belongs to the colonial era and the future lies with manufacturing industries. As planting did show in the fifties more markedly than ever in the previous 115 years, it has capacity to climb to the very top as India's leading export industry. Tea is entering an era when it has to make better use of its labour, bring about structural changes in management, rationalise operations, introduce new and high yielding plants into the field and alter the components of skills and capital in general. As farming interests in Western countries have recognised, it is important that the gain in productive efficiency should

UMESH YOGA DARSHAN
(First Part)
In Four Languages: English, Hindi, Gujarati and Marathi
(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART
A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.
Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES
are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered
An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.
Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

ELPHINSTONE SPINNING AND WEAVING MILLS CO., LTD.

MR. N. K. JALAN'S SPEECH AT ANNUAL GENERAL MEETING

COTTON MILL INDUSTRY MUST BE ENABLED TO PRODUCE AND SELL AT FAIR PRICES

HOW the cotton textile industry is suffering from the greatest disadvantage of inflated cost was forcefully highlighted by Mr. N. K. Jalan, Director of the Elphinstone Spinning and Weaving Mills Company Ltd., in the course of his speech at the Forty-second Annual General Meeting of the Company, held at Bombay on Wednesday, 31st May 1961. Mr. Jalan emphasised the need for ensuring sufficient supply of raw materials at normal rates in order to see that the industry could produce and sell at fair prices. He also emphasised that some restraint in the fiscal measures by the Government would help create conditions of steadiness and normalcy for the industry and trade. Indeed, he declared that there was every reason for the Government to come forward to reduce the high incidence of excise duty and other levies on cloth in order to help the consumers. The following is the full text of Mr. Jalan's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to this forty-second annual general meeting of your Company. The Directors' report and the audited statement of accounts have been with you for some time now and, with your permission, I shall take them as read.

"The trading conditions in cloth and yarn in local markets, which had taken a turn for the better some time in 1959, showed further improvement during the year under review. And, although the total volume of cloth exported from India was lower during 1960 than in 1959, your Company more than maintained the export percentage of its total production of cloth.

"It is gratifying to note that the profit of the Company for the year 1960 is about double as compared with that of 1959. I hope you will consider the results to be very satisfactory, especially in the face of higher costs on wages and acute shortage of cotton and stores, on the one hand, and the voluntary reductions in prices of cloth and yarn effected during the year, on the other. Stocks of cloth and yarn were higher at the close of the year as compared with 1959 on account of the uncertainty created in the local markets by the reduction in prices proposed towards the end of the year. The present stock position, however, is satisfactory.

Modernisation and Renovation

"The beneficial effects of the new machinery installed in the recent years have been reflected in the working results of the year under review. The management has under contemplation plans for further modernisation and renovation of the mill machinery. In the spinning section, about 18,000 new spindles have so far been installed in replacement of the old ones. We have a further programme for the replacement of the remaining old spindles, and also for the conversion of the existing serviceable spindles to the latest system of high drafting, and also for the conversion of existing speed frames to can feed and D-zone drafting. Orders for additional frames have already been placed with the suppliers accordingly. Order has also been placed for three high-speed draw frames for replacement of old ones.

"The Barber-Colman winding and warping machines, which were ordered for replacement of half the number of our existing winding and warping machines, are expected to arrive shortly. With a view to modernising the entire winding and warping departments, application has been made for import licences for one more set of these automatic machines. One high speed sizing machine was put into commission last year and application has been made for import licences for two more such machines. Orders have also been placed for one automatic warp tying machine and 48 automatic looms in replacement of plain looms. We have been allotted further 48 automatic looms in replacement of plain looms and another 48 as additional to the existing looms, making a total allotment of 144 new automatic looms.

"The processing section has also been progressively renovated and a mercerising Plant is expected to be received by the end of the current year.

"The working of this division remained at a satisfactory level during the year and the production was about 50 per cent higher as compared with the preceding year. Production of starch book binding cloth which enjoys a good demand in the local markets has been further developed during the year. Steps are being taken to equip this division also with the latest types of machines and a modern type of embossing calender machine has already been erected in this division.

"Unfortunately, on account of the restrictive policy of the Government for import licences for plant, machinery spares and raw materials, we have not been able to put into effect all the plans for the further development of this division for modernisation and for manufacture of new qualities. Besides, production was affected owing to shortage of chemicals. With erection of more up-to-date plants, we could have stepped up our production in order to meet the increasing demand for this article from both inland and overseas markets. The Government's plea for being cautious in granting foreign exchange for importation of machinery is not very convincing seeing that the apparent depletion will be more than compensated by increased earning of foreign exchange through exports.

Moon Mills

"As mentioned in the Directors' report, the Company has made an agreement with the Moon Mills Company to purchase their existing block of lands, buildings, and machinery including 875 looms. It has no spinning section at present and it is contemplated to make it a composite unit by introducing spinning section with the most modern types of machinery at a total estimated cost of about a crore of rupees. It is expected that the acquisition of this unit will help the Company to augment the profit-making capacity besides providing more employment.

Dividends on Preference Shares

"Under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, which came into force on 28th December 1960, the holders of preference shares would now normally be entitled to a dividend which would be lower than the quantum received by them for the year 1959. Your Directors have proposed to pay dividends on these shares so as to ensure that the shareholders will get the same net amount as they received for the year 1959. It is hoped that this step will be welcomed by the preference shareholders of the Company.

Problems of the Industry

"Although your Company has fared better than in the previous year and although other mill companies have been able to show good results for the year in varying degrees, it should not mislead one to conclude that everything is now all right with this industry and that it has embarked on the road to prosperity. In fact, this industry has continued to remain a problem industry and the problems have only increased at the present juncture.

"Unfortunately there is a general impression in the minds of the people and the Government that the cotton textile industry is making enormous profits and is, therefore, capable of bearing the burden of any amount of taxes or that any reduction in prices of its products would little affect it adversely. In fact, it is just the other way round. As mentioned by me last year from this very platform, the profitability of this premier industry of India has been proved to be the lowest in the industrial sector as disclosed in a study undertaken by the Reserve Bank of India. Besides, with the cloth and yarn prices now being regulated and the cost structure having become so very rigid, it is all the more likely that the profitability of the industry will, in fact, be lower hereafter.

"Further improvement in the level of profitability is necessary to enable the industry to modernise and rehabilitate its plant and machinery from out of the profits that it can possibly plough back from its current profits after taxation and payment of reasonable dividends.

Money for Rehabilitation

"The working group set up by the N.I.D.C. has come to the conclusion that Rs. 180 crores are required towards modernisation of the textile industry, out of which the industry itself has to find Rs. 80 crores and the balance of Rs. 100 crores is to come from Government bodies by way of loan. Accordingly, unless and until the industry is allowed to build up reserves, it will be very difficult to find money for rehabilitation. It is not proper or legitimate to say that the industry has got big reserves only by looking to the reserve funds of a few selected companies.

"There has been a steady decline in the export of cotton piecegoods during the first quarter of the current year and this should be considered as a very unhealthy development especially in the context of the necessity for the country to try to earn as much foreign exchange as possible. Declining exports are due to higher costs and competition from other countries and to circumvent these disabilities, it is necessary to restore the competitive capacity of the industry through all encouragement to modernise and rehabilitate its machinery so that the mills may produce quality goods and be able to sell at competitive prices in the export markets.

"On account of increased cost of production due to abnormal increase in wages, stores and others, Indian goods are facing serious competition in the world markets. The result is that India is losing ground and, though in 1960 on account of higher price of cloth, the value of foreign exchange earned by export of cloth was the same, the quantity exported in 1960 was lower by about 15 per cent.

"In dealing with the question of increase in wages, I do not for a moment say that the labour should not get adequate wage and that their standard of living is not to be improved, but, with increased wage and higher emoluments all round, the labour should also be rationalised to ensure competitive value of our cloth in export market.

"It is also imperative that the industry should be allowed to be modernised in order to see that India's cloth, the third most important foreign exchange earner, is not priced out of the world markets.

"Price reductions were effected twice by the industry at the instance of the Government during the latter half of the last year. It is wondered whether such expedients in the form of *ad-hoc* reductions would really help the consumer. Price variations are, after all, the result of the changes in the demand and supply situation and it would serve no useful purpose on a long-range basis to try artificial methods to check the prices.

Inflated Cost

"Inflated cost is the greatest disadvantage this industry is suffering from. It is, therefore, necessary to ensure sufficient supply of raw materials at normal rates in order to see that the industry can produce and sell at fair prices. Some restraint in the fiscal measures by the Government would also help in creating conditions of steadiness and normalcy for the industry and trade.

"Besides, to render real help to the consumer, there is every reason for the Government to come forward to reduce the high incidence of excise duty and other levies on cloth in order to help the consumer. In this context, one fails to appreciate how Government should at all have thought of increasing the rates of excise duty in the Finance Bill, 1961.

"In view of the changing pattern of consumption of essential commodities as well as rise in the standard of living of the people of India, the requirement of long-staple cotton is steadily growing. It is, therefore, most imperative that steps should be taken to produce cotton of long-staple in the country, so that the import of the same from other parts of the world can be reduced to minimum. In the last three years, the imports of long-staple cotton were as follows:

Year		*Bales* (Bales of 400 lbs.)	*Value* (Crores of Rs.)
1958	...	4,00,372	30.6
1959	...	5,33,165	34.7
1960	...	11,88,174	73.00

"The Government of India has allowed import of 3 lakh bales of American cotton for the current year which will cost the consuming mills Rs. 250 to Rs. 300 extra per candy which will mean a drain of about 3.75 to 4 crores of rupees. If machinery worth so much would have been allowed to be imported that would have gone a long way to modernise the industries and thereby establish the competitive value in the world market. Evidently, this is a glaring instance of avoidable drain of India's precious foreign exchange. On the one hand, there is a glut of stock of cotton in India on account of bumper crop and, on the other hand, American cotton is being imported. Such action on the part of the Government can hardly be reconciled.

"As you are all aware, the cultivators have got this year very poor return on their crop of cotton. This naturally will have disastrous result on future crops. The Government should, therefore, take effective steps to ensure proper return to the cultivators. It is disappointing to find that until now the yield per acre and quality of cotton have not improved appreciably.

Modernisation Outdated

"The policy pursued by the Government to give protection to the Indian machinery manufacturers leaves much to be desired. In this connection, I regret to find that, though the industry is being modernised at heavy cost, the modernisation carried out in India is outdated to a great extent. Considerable improvements have already taken place in other parts of the world. To name some such improvements, I would point out the introduction of 10" and 12" lift narrow width spinning frames without loss of any production and sliver spinning by elimination of processes, which have been adopted in other parts of the world, while, on account of the protection in India, we have to content ourselves with 8" lift spinning frames, even on which there is loss of production on account of old conventional machinery being produced today. I am rather surprised that, according to our local machinery manufacturers, 8" lift ring frames are most suitable for Indian labour, cotton and other conditions. Whenever any new advanced machines are introduced in India, we are told that our Indian labour is not competent enough to adapt to these machines. I am extremely sorry that I disagree with this viewpoint. We have rather found Indian labour adapting themselves to the latest type of machines in the shortest period. I would earnestly request the Government to examine this point and see that either the cotton industry is allowed to import the latest machinery introduced in the world markets today or advise the Indian machinery manufacturers to start producing machineries of the latest type, design and modification.

"The cotton mill industry has been continually impressing on the Government the necessity of pursuing a very liberal expansion programme in its favour, but, unfortunately, the request is not being conceded. Ultimately, we may find one day that the supply of cloth will fall short of demand.

"The Tariff Commission has fixed a gross return of only 12 per cent out of which the Company has to meet bonus, income-tax and dividends. This return is too small, particularly in the context of recent Government loans carrying high percentage of interest. Accordingly, the percentage of the return deserves upward revision.

"The industry has given several proposals for stepping up the production by several means such, as staggering of holidays and working of the mills 24 hours instead of 22½ hours by arranging relay system, I would, therefore, earnestly request the labour union to agree to these proposals, inasmuch as staggering of holidays and 24 hours' working have been adopted practically in all other industries.

"In conclusion, I have sincerely to thank my colleagues on the Board and to express my appreciation to the executives, staff and workers of the Company for the valued co-operation extended by them during the year.

"Thank you."

CONCENTRATION OF ECONOMIC POWER

BIG BUSINESS HOUSES PLAY VITAL ROLE

By A Special Correspondent

MUCH attention has recently been directed to the question of concentration of economic power. In a country where political consciousness has preceded economic development, there is the danger that catchwords of this nature may be used by those who are ideologically opposed to private enterprise and all its works to further their political ends. The danger is that even those who are more moderate and balanced in judgment may be perturbed at what appears to be a threat to the democratic values that they cherish. Monopoly has an evil reputation and even democratic countries like Britain and the U.S. have devised legislative restriction on monopolistic concentration of power. In India, the Constitution explicitly enjoins on the Government that concentration "to the common detriment" be avoided.

The facts of the situation do not appear to point towards an increased concentration of economic power in India. Empirical research on this matter is extremely meagre. Even if one accepts the findings of Mr. R. K. Hazari in his study of five big business groups (the correctness of which is open to serious doubt), he himself has admitted that his study related to a point of time and not a period of time and is therefore, useless for a study of trends. *Prima facie*, it would appear that the sort of concentration that Mr. Hazari and others of his line of thinking are worried about is on the decline. And this despite the fact that inequalities of income and wealth have probably increased, as the Mahalanobis Committee will no doubt report.

Investment in Industry

The big industrial houses have grown in size and power and their "empires" have expanded, but, considered in relation to the expansion of the economy as a whole, it would probably be found that they account for a smaller proportion of the total investment in the economy than a few years ago. According to the figures given by Mr. Manubhai Shah, Union Minister for Industry, the public sector investment in industry has increased proportionately faster than that of the private sector:

(In crores of rupees)

	First Plan	*Second Plan*	*Third Plan*
Public sector ..	60	720	1,650
Private sector ..	330	850	1,300

It is evident that the private sector accounts for a smaller proportion of the aggregate than before and, to that extent, concentration in the private sector as a whole has lessened. It means, of course, that concentration in the public sector has correspondingly increased, but this never seems to bother the critics, though it may be permitted to ask whether such concentration may not also be "to the common detriment."

The charge that the big business houses constitute monopolies in the field in which they operate, was demolished by Mr. Manubhai Shah who said that there was not a single industrial unit or industrial house which owns more than 5 per cent of the national production of consumer's goods. The four exceptions, Metal Box, A.C.C., Wimco and Indian Oxygen are losing their dominance in their respective fields, through a deliberate policy of licensing of competing units.

It is true that industrial 'empires' are not necessarily or usually confined to particular industries. The typical industrial house in India has a wide range of interests, extending over many industries. While this is undoubtedly concentration, the freedom from monopolies means that such concentration of economic power as exists in India is untainted by one of the major social and economic evils usually associated with the word. The objection is simply to 'bigness' and not that the bigness leads to restriction of competition and exploitation of consumers.

Does even this comparatively innocuous form of concentration merit drastic suppression in the form of a virtual refusal to grant licences to big industrial houses for the expansion of existing enterprises or the starting of new ventures? Licences are to be granted to such houses, we are told, only in rare cases, when no other application is forthcoming. This seems to be carrying the war against concentration beyond reason and commonsense. It is, of course, desirable that new enterpreneurs should be given every possible incentive and assistance. And they are responding magnificently. In the words of Mrs. Barbara Ward Jackson in an article on "India on the eve of its Third Five-Year Plan" (*Foreign Affairs*, January 1961). "The best news in India's first decade of planned growth is that (unlike large parts of South-east Asia or upland South America) enterprise exists, irresistibly and unquenchably, that it is growing at a speed to create a whole new climate of opinion favourable to development and to provide the interlocking expansion and external economies by which enterprise in one field assists it everywhere else."

But India is a vast country. Its population is growing at a fantastic rate and economic development is struggling desperately to keep ahead of the advancing wave of humanity. In such conditions, it does not seem the wisest course to deny the nation the advantages of its finest business talent. In the big business houses lies a wealth of experience, sound judgment, intelligence, initiative and money. Their 'empires' have not been acquired in a fit of absent-mindedness, but were built up by brains and guts and toil and sweat. They are able and willing to play their part in what the Prime Minister has called the "great adventure" of making India a modern industrialised economy. It would be a disservice to the nation and ill recompense for their past services, if they were henceforth to be stultified and confined to their existing enterprises, except in projects that are so unattractive that no one else would wish to undertake them. The field for industrial growth is big enough and entrepreneurial ability is scarce enough to leave full scope for all businessmen, big and small, as well as for the State sector. We are a long way from the time when it will be necessary to shackle one in order to give scope for the others.

After all, what is there to be afraid of? The Government surely has enough powers to check anything that it considers as smacking of anti-social behaviour. The growth of individual wealth and income to what may be considered socially undesirable levels, is effectively precluded by a tax-system under which the very rich have to part with 120 per cent of their income. The Companies Act, the Industries (Development and Regulation) Act, control of capital issues, of foreign exchange, of transport, power, wages, prices and profits ought, in all conscience, to banish the suspicion that the big business houses will get out of hand, if they are allowed to do what they are most competent and best equipped to do, for attaining the goal of rapid economic advance of the nation as a whole.

PLANTING

(*Concluded from page* 1032)

be increasingly devoted to the strengthening and improvement of productive assets instead of being wholly dispersed in wage improvements. Although wages are comparatively low in India, the cost of labour in any product is relatively high. This paradox arises from inefficient utilisation of labour, not the payment of high wages. The immediate problem which must not be overlooked is the pressure of competition which our tea must face in the world market. Wage rates should not be fixed without reference to this vital question. With the high variability in its fortunes, tea requires a higher margin of safety than manufacturing industries. The Wage Board study, if conducted realistically and objectively, will help both labour and management and, in all this, the largest beneficiary might be the country.

THE SHIVRAJPUR SYNDICATE LIMITED

SPEECH OF CHAIRMAN, MR. A. N. HAKSAR

GOVERNMENT'S MANGANESE ORE POLICY NEEDS REVISION

THE view that the question of India regaining its proportionate share of the increasing world manganese ore market or even maintaining exports at the present level would depend largely on whether the Government was prepared to reorient its thinking was expressed by Mr. A. N. Haksar, Chairman of the Shivrajpur Syndicate Limited, in his speech at the Fifty-seventh Annual General Meeting of the Company held at Bombay on Thursday, 25th May 1961. The approach to the country's manganese problem, Mr. Haksar declared, could be on two lines: first, the short-term objective should be to ensure that Indian ore did not lose any more ground for which purpose barters should be freely permitted on terms and conditions that must be well publicised, or, failing this, some other form of subsidy should be made available to the exporter. Stressing the need for Indian ore regaining confidence it enjoyed prior to Government's intervention in 1956 and the importance of price reduction, he said that the main factors resulting in increased costs in the last few years had been beyond the control of producer or exporter, as, for example, increases in royalty, railway freight, costs of machinery and spares, and introduction of labour legislation such as Employees' Provident Fund Act.

The following are extracts from the speech of Mr. Haksar:

"GENTLEMEN,

"You will recall that, on a similar occasion last year, I had given an indication that the Company's position would improve during 1959-60, owing to the opportunities provided for export of manganese ore under barter transactions. The results of the year fully bear out my expectations.

Trading Results

"Deliveries and shipments during the year under review again reached the level prevailing in 1956-57 and in 1957-58, and amounted to 92,529 tons. This represents an increase of about 30,500 tons, mainly of medium grade ore, as compared to 1958-59; at the same time, the average prices realised for your high and medium grade ores in 1959-60 were approximately the same as in the previous year. Of the total tonnage mentioned earlier, 2,400 tons represent chemical grade ore, most of which was sold to Indian manufacturers, and the balance, consisting of medium and high grade metallurgical ores, was sold for export.

"From these results, it might appear that Indian manganese ore has made some recovery since 1959 in the international market; I am sorry to say that, in fact, the position is quite the reverse and Indian ore continues to lose ground to its competitors. You are aware that, since 1956, the preoccupation in our country has been to provide the State Trading Corporation with as large a slice of the export cake as possible and, at the same time, the railways, and the State and Central Governments have also made further claims on the exporter and producer. The other producing countries, like Brazil, have taken full advantage of the opportunities thus provided to them and duly snatched away from us a major portion of our traditional markets. I will not today go into this story which is too well known to require repetition; I will try, instead, to explain how, in the circumstances, your Company was able to achieve good results in 1959-60. For this purpose, I would like to say a few words with regard to barter transactions.

Barter Transactions and Manganese Trade

"I understand that barter transactions are not normally permitted in the case of traditional export commodities; however, by about 1959, Indian manganese ore exports appeared to be coming to a standstill and, consequently, a number of barters involving ore exports were permitted by the Government on an *ad hoc* basis. Most of these barter proposals were put forward and executed by Indian importers of items such as steel, acting in conjunction with the traditional Indian exporters and foreign buyers of Indian manganese. In all such cases, the foreign suppliers of steel, etc., were able to "discount" the Indian manganese prices; this discount, in fact, represented the difference between the higher price required by the Indian exporter and the actual or market price at which ore could be sold to foreign consumers. This discount, which ranges today from 10 per cent to 25 per cent, could be taken as an indication of the extent to which Indian ore prices are uncompetitive. I should also mention that all such barter schemes have to be approved by the Government who have held that manganese ore exports against barters can only be made in the name of the State Trading Corporation.

"Coming now to the year under review, of the total deliveries of metallurgical grade ore amounting to approximately 90,000 tons, 66,200 tons were against contracts outstanding at the commencement of the year, and the balance of about 23,800 tons represented new sales. The latter were possible mainly due to the stimulus provided by barter transactions, which also enabled us to maintain our price level. In fact, a major portion of the total deliveries was directly or indirectly connected with barters.

One Serious Drawback

"Your Company's immediate prospects seem to be linked with Government policy regarding barters. These barters have helped us considerably, but one serious drawback of the policy needs, I think, to be brought to notice. As I have stated earlier, each barter proposal is considered individually by the Government, and its policy in this regard has been changing constantly even in the short period of two years. Thus, early last year, Government revised its policy and since then did not allow barters of manganese ores with phosphorus content of less than 0.18 per cent; towards the end of the same year, however, Government decided to stop barters involving any manganese ores. But, in the last few months, there have been many rumours that permission would now be given for 'special' barters involving ore. I am informed that a number of new barter proposals have, in fact, been submitted for importing steel, machinery, non-ferrous metals, fertilisers, etc., but none of these has so far been approved.

"As far as the manganese exporter is concerned, the situation today is that fresh sales are possible as and when such barters are approved, which means that sale prospects are haphazard and unpredictable, and it is almost impossible for an exporter-producer like your Company to forecast demand and plan production, which we require to do years ahead if we are to achieve maximum economy and reduce costs.

"To my mind, the approach to the country's manganese problem could be on two lines. Firstly, the short-term objective should be to ensure that Indian ore does not lose any more ground, for which purpose barters should be freely permitted on terms and conditions which should be well publicised or, failing this, some other form of subsidy should be made available to the exporter. This is, of course, a measure of temporary relief, while, from the long-term point of view, the Indian exporter should be able to stand on his own feet. This entails, on the one hand, regaining the confidence that Indian ore enjoyed prior to Government's intervention in 1956 and, on the other hand, reduction of Indian ore prices. With regard to the latter, it has been pointed out that the main factors resulting in increased costs during the last few years have been beyond the control of the producer or exporter; examples are increases in royalty, railway freight, costs of machinery and spares, and the introduction of labour legislation such as the Employees' Provident Fund Act.

"Leaving aside these matters, you may like to know that your Company has been doing its utmost to meet the challenge of this difficult situation and I would like to give an idea of some of the measures.

"Last year, I had informed you that your mine at Bamankua had to be closed down, as it was the least economic unit and I fear that we may soon have to face a similar situation regarding Pani mines. At the same time, the major expansion project concerning the development and exploitation of the third and fourth levels (350 and 500 feet, respectively, below surface level) at Shivrajpur is proceeding according to plan and this will in about one or two years begin to yield a bigger proportion of high grade ore, as compared to the present production pattern. As high grade ore fetches a better price and is also easier to market, this should help us to some extent to retrieve the situation.

"I should also like to stress the importance which we place on the beneficiation of low grade ores. Mechanical as well as manual methods of screening and jigging have been practised at your mines for several decades now and these facilities have been increased considerably in recent years. Thus in 1959-60 about 35,000 tons, or 45 per cent of our total output, resulted from beneficiation. A large portion of this was obtained by processing material from the old 'waste' dumps from which saleable ore was thus recovered economically. Such processing has also necessitated increasing use of mechanical handling and conveying equipment during recent years. These are but a few of the steps we are taking to ensure maximum economy and efficiency of operations.

Future Prospects

"Taking into account what I have stated earlier regarding the various major uncertainties confronting Indian exporters, you will appreciate that it is very difficult to make any long-term forecasts regarding your Company's prospects. Generally speaking, world demand for manganese continues to be good and is likely to improve during the year. Imports into the U.S.A. during 1960 were slightly better, at 25 lakh short tons, than in the preceding two years. During 1960, the American steel industry suffered a recession and production dropped to about 45 per cent of capacity towards the end of that year; this is now reported to be in excess of 60 per cent and further improvement is expected. Consumption of manganese ore in Europe and Japan continues at a high level, but here powerful competition from the Soviet Union has to be reckoned with.

"Taking an overall view, it seems that world demand will continue to increase, but this is unlikely to reverse the downward trend of ore prices, on account of increased production in several other countries and severe competition. I believe there is, in the circumstances, scope for the Indian manganese industry, but whether we are able to regain our proportionate share of the increasing world market, or even maintain exports at the present level, will depend largely on whether Government is prepared to reorient its thinking. In any case, I think it is only fair to warn you that according to the present indications your Company's results for the current year are likely to be most disappointing. The tonnage shipped will probably be lower as compared to last year; further, Shivrajpur ores are today being offered at prices which are lower than at any time since 1955 and the profit margin is far from adequate. This is inevitable in the prevailing circumstances.

Labour

"I should now like to say a few words about the labour situation at the mines. Relations with the workmen continued to be cordial during the year and there were no strikes or stoppages. However, differences within the recognised union assumed serious proportions and a stage has unfortunately been reached where it is not at all clear who are the authorised office-bearers of this union. Under the circumstances, the demand for bonus for the year 1958-59 remained pending for about a year and it was only last month that an agreement was reached between the Company and the representatives of the workmen whereby bonus amounting to one-eighth of the basic wages earned during the year has been paid.

"The accounts do not, I feel, require much explanation. The profits after tax amount to Rs. 13,29,883 which, you will agree, is a satisfactory result. Keeping the development programme in mind, your Board has set aside Rs. 1,42,590 to the mine development and prospecting reserve, which is thus rounded off to a total of Rs. 30 lakhs. A sum of Rs. 3 lakhs has also been transferred to the equalisation of dividends reserve and, in view of what I have said today about the uncertainty regarding the future, I am sure you will agree that this is a wise decision. The proposed dividend and bonus at the rate of Rs. 5 and Rs. 3 per share respectively, subject to deduction of tax, accounts for Rs. 8,37,110."

NOTE: *This does not purport to be the proceedings of the annual general meeting which can be seen by any shareholder on request.*

PEACEFUL USES OF SPACE RESEARCH

FIRST U.S. CONFERENCE GIVES COMMENDABLE LEAD

EVEN as nuclear research has led to a variety of peaceful applications—use of atomic energy in electricity generation and of isotopes in the fields of engineering, physics, chemistry, metallurgy and biology—space research which covers a very wide field of scientific endeavour is also bound to confer great benefits on mankind in due course. Already this extremely costly space research both in the United States and in the Soviet Union has developed and improved a wide range of techniques, including rocket propulsion, power sources, communication and other forms of electronic engineering, high-speed computation, and automation generally. The by-products of these varied technical developments will be of much importance and value in many other fields, and there are already foreseeable practical applications as in the field of communications. Obviously space research has now reached the stage when its possible peaceful applications can be seriously thought of. It is in this context that the first U.S. national conference on peaceful uses of space, held over the week-end at Tulsa (Oklahoma), and the Space Science Exhibition deserve to be warmly acclaimed.

The tremendous promise of satellites for global radio, telephone and television communications, for weather observation and for the navigation of ships has been highlighted at this conference. Some of the practical by-products of space research that have emerged or are on the horizon have also been described in a special feature just issued by the United States Information Service. These are narrated here to indicate the wide variety of practical and peaceful uses of space research. For instance, for everyday cooking, the latest pots and pans are made from pyroceram, a material originally devised for nose cones; they can be taken out of a freezer and immediately put in the hottest flame without damage. An outgrowth of rocket research, fluxless aluminium soldering is used to repair home gutters, flushings, utensils and electrical joints.

It is expected that research on the food a human being needs for space flight may lead to improved nutrition for the earthbound. The use of new synthetic foods and the provision of specific new tools for the food and agriculture industry could be of great value; for instance, infra-red blanching is highly effective in preparing foods for canning or freezing. The research for ways to re-use water aboard a spacecraft may point the way toward solving water shortages in some world areas. Space research on water recycling may also speed the answer to economic desalting of sea water.

New Materials

A finely-woven stainless steel cloth designed for parachuting spaceships back to earth, made of amazingly strong fine wire which can withstand chemical contamination and high temperatures, may find important industrial uses in inflatable buildings. New battery-powered radios and flashlights, that can be recharged by simply being plugged into an electrical outlet, use the same small nickel-cadmium battery developed to store solar energy and keep the instruments of a satellite operating.

In the field of drugs and health, concrete results have already been obtained. These include a drug, developed from a rocket propellant, to treat mental ills, and a method of rapidly lowering blood temperatures in operations. People with certain heart defects can now wear a rhythm-control device to keep their hearts beating properly while they go on living normally. This heart stimulator now miniaturised by space scientists is powered by tiny mercury batteries and can be sewn into a heart patient's body. A new electrostatic camera perfected for space vehicles, which produces movies or still "instant pictures" without any processing, could be of great value in recording a patient's condition. Such a camera, focussed on a critically ill patient, could keep vital, instantly available photographic records for doctors. Mercury-powered batteries are used in a new artificial larynx which permits people to speak who otherwise could not.

Experts say that new supersonic transport planes, now in the concept stage and based partly on the results of the U.S. X-15 rocket research craft, will hop point to point 3,000 miles or across the Atlantic in about two hours. These planes, which will incorporate some of the operating qualities of space vehicles, will fly at heights of 50,000 feet or more at 1,500 miles an hour. Rocket-launched high-speed transport planes may revolutionise the movement of freight and cargo.

Space research has produced new materials for industry—metals, alloys, fabrics and compounds. Many have longer life, greater strength and resistance to higher temperatures than presently used materials. New types of glass, for example, have been adapted to automatically filter intense light. New unbreakable and durable plastics are expected to find many uses in the home, in plumbing, for instance.

New Power Sources

New power sources being developed for spacecraft may eventually take the place of diminishing oil and coal reserves. These are solar batteries, gaseous fuel cells and lightweight nuclear reactors. The fuel cell is a continuous feed device in which chemical reaction of fuel and oxygen is converted directly into electricity without the need for machinery or working parts. Already a 30-cell portable power plant developing 200 watts has been delivered to the army and marine corps, and a 1,000-unit cell has been developed which provides 15 kilowatts and drives a tractor. In solar power, used for satellites, the sun's radiation is converted directly into electricity. Although efficiency is low in such devices, the sun is an inexhaustible energy source. Vanguard I, launched more than three years ago, it still beaming a radio signal earthward. The radio is solar-battery powered. Space-stimulated nuclear power research has produced the "S.N.A." (Space Nuclear Auxiliary) thermionic converter. Nuclear devices have the advantage of needing neither storage units nor heat sources, and seem to be more reliable than the usual forms of electrical generators. This may one day bring down the cost of large nuclear power stations to service newly-developed nations of the world where fuel resources are limited.

Another potential method is plasma power, generated through the use of hot ionised gases. This gas acts as a conductor of electricity and can be utilised for a variety of purposes. Advantages are that it is simple, rugged and efficient. Already 10 cities in the U.S. are preparing to experiment with electrical power derived from this source.

In mining of hitherto uneconomcial taconite (very hard rock) iron ores, jet drilling—"captive rockets" that melt the rocks—is actually burning holes for blasting charges. Experts say that in less than 20 years, the U.S. will be getting about a third of its ores from taconite.

These, then, are some of the possible practical applications of space research in the United States. More than 5,000 U.S. companies or research organisations are today engaged in rocket-space work and over 3,200 different space-related products have been conceived and developed thus far. If many of these products come to be manufactured on commercial scale for the benefit of mankind, the enormous expenditure that is being incurred on space research will probably be found to have been a sound and worthwhile investment. American space scientists who continue to emphasise the scientific and beneficent aspects of their methodical, though not quite spectacular, experiments are giving a truly commendable lead in a field which promises better life for man on earth.

(*Concluded from next column*)

manufacture of flat rolled steel products as the result of the technical progress achieved. The list prices of the European Coal and Steel Community are in general lower than English domestic prices. With the exception of tinplate and a few high-grade sheets they were also lower than United States prices.

Competition in the iron and steel industry has increased on the world markets recently. In its ninth full report on the activities of the European Coal and Steel Community, which has just been published, the High Authority states in conclusion that the agreed English and American export prices did not change in 1960. Moreover, the European Coal and Steel Community has withstood the pressure of competing offers in all world markets, even when they came from East-bloc countries or from Japan. This again proves that the Community is well able to compete.

STEEL IN W. EUROPE

RECORD OUTPUT IN 1961 EXPECTED

By Heinz Medefind

EVER since the European Coal and Steel Community was established in 1952, the iron and steel industry in Western Europe has shown a steady upward trend. There was an expansion—in particular of the steel market—recently such as has never been experienced before. Within the territory of the Community, which comprises six countries, namely, Belgium, the Federal Republic of Germany, France, Italy, Luxembourg, and the Netherlands, the production of crude steel reached 72.8 million tons last year, as compared with 63.2 million tons in 1959. It has increased still further during the first three months of this year, and in March it had reached its maximum so far with 6.75 million tons. On the basis of the first three months' production it may be assumed that 75 million tons will be produced this year, the Federal Republic of Germany's share in it being well over 35 million tons. This compares with 40 million tons produced in the whole territory of the European Coal and Steel Community in 1953, when the agreement concerning the Community began to show some results after it had entered into force.

All the member-countries of the Community have a share in the production records of the last fifteen months. The increase was greatest in Italy in 1960, namely, 21.5 per cent as compared with the previous year, while the average of the Community was 15.2 per cent. The works made full use of their production capacity—with the exception of Belgium where, owing to the strike, there was a loss of production of nearly half a million tons in January of this year alone. The degree of utilisation also receded a little in the Federal Republic of Germany toward the end of last year, but the fact that production had been extraordinarily high during the first quarter must be taken into consideration.

A Good Year

The European Coal and Steel Community was able to maintain its share in world steel production with a little over 20 per cent also last year. It attributes this partly to the retrograde development in the American iron and steel industry, and partly to the vigorous rise in its own production. Apart from the Community, it is Japan and other countries of the East, especially China, which are still increasing their production the fastest of all. The High Authority of the European Coal and Steel Community, which is the joint administrative authority, describes the year 1960 as being a good year on the whole for the iron and steel industries of the Community of the six countries. Altogether a remarkable equilibrium was observed, since the entire demand was met while the available production capacity was fully utilised. Only in summer was the balance somewhat upset as the result of a decline of orders from third countries. True, the balance was restored in November, but it seems that a repetition is impending. In circles of the European Coal and Steel Community it is regarded as possible, however, that the improvement which is noticeable on the American steel market will have a favourable influence on the further development.
